GLOSSARY OF DEFINED TERMS

Afilias	Claimant Afilias Domains No. 3 Limited.
Afilias' First DIDP Request	Documentary Information Disclosure Policy request submitted by Afilias to ICANN on 23 February 2018.
Afilias' Response to the <i>Amici's</i> Brief	Afilias' Response to the <i>Amici Curiae</i> Briefs dated 24 July 2020.
Amended Request for IRP	Afilias's Amended Request for Independent Review dated 21 March 2019.
<i>Amici</i>	Collectively, Verisign, Inc. and Nu DotCo, LLC.
<i>Amici's</i> PHB	Verisign, Inc. and Nu DotCo, LLC's post-hearing brief dated 12 October 2020.
Articles	<i>Amended and Restated Articles of Incorporation of Internet Corporation for Assigned Names and Numbers</i> , as approved by the Board on 9 August 2016, and filed on 3 October 2016, Ex. C-2.
Auction Rules	Power Auctions LLC's Auction Rules for New gTLDs: Indirect Contentions Edition, Ex. C-4.
Board	ICANN's board of directors.
Blackout Period	Period associated with an ICANN auction extending from the deposit deadline until full payment has been received from the prevailing bidder, and during which discussions among members of a contention set are prohibited.
Bylaws	Bylaws for Internet Corporation for Assigned Names and Numbers, as amended 18 June 2018, Ex. C-1.
CCWG	The Cross-Community Working Group for Accountability created by ICANN's supporting organizations and advisory committees to review and advise on ICANN's accountability mechanisms.
CEP	ICANN's Cooperative Engagement Process, as described in Article 4, Section 4.3(e) of the Bylaws, intended to help parties to a potential IRP resolve or narrow the issues that might need to be addressed in the IRP.

CEP Rules	Rules applicable to a Cooperative Engagement Process described in an ICANN document dated 11 April 2013, Ex. C-121.
Claimant	Afilias Domains No. 3 Limited.
Claimant’s PHB	Afilias’ post-hearing brief dated 12 October 2020.
Claimant’s Reply	Afilias’ Reply Memorial in Support of Amended Request by Afilias Domains No. 3 Limited for Independent Review dated 4 May 2020.
Claimant’s Reply Submission on Costs	Afilias’ reply dated 23 October 2020 to the Respondent’s submissions on costs.
Covered Actions	As defined at Section 4.3(b)(ii) of the Bylaws : “any actions or failures to act by or within ICANN committed by the Board, individual Directors, Officers, or Staff members that give rise to a Dispute”.
DAA, or Domain Acquisition Agreement	Domain Acquisition Agreement between Verisign, Inc. and Nu DotCo, LLC dated 25 August 2015, Ex. C-69.
Decision on Phase I	Panel’s decision on Phase I dated 12 February 2020.
DIDP	ICANN’s Documentary Information Disclosure Policy.
DNS	Domain Name System.
DOJ	United States Department of Justice.
Donuts	Donuts, Inc., the parent company of .WEB applicant Ruby Glen, LLC.
Donuts CEP	Cooperative Engagement Process invoked by Donuts on 2 August 2016 in regard to .WEB.
First Procedural Order	Panel’s first procedural order for Phase II, dated 5 March 2020.
gTLD	Generic top-level domain.
Guidebook	ICANN’s New gTLD Applicant Guidebook, Ex. C-3.
ICANN, or Respondent	Respondent Internet Corporation for Assigned Names and Numbers.
ICANN’s Response to the Amici’s Briefs	ICANN’s response dated 24 July 2020 to the <i>amici curiae</i> briefs.

ICDR	International Centre for Dispute Resolution.
ICDR Rules	International Arbitration Rules of the ICDR.
Interim Procedures	Interim Supplementary Procedures for Internet Corporation for Assigned Names and Numbers' Independent Review Process, Ex. C-59.
IOT	Independent Review Process Implementation Oversight Team.
IRP	Independent Review Process provided for under ICANN's Bylaws.
Joint Chronology	Chronology of relevant facts dated 23 October 2020, agreed to by the Parties and the <i>Amici</i> pursuant to the Panel's communication dated 16 October 2020.
NDC	<i>Amicus Curiae</i> Nu DotCo, LLC.
NDC's Brief	Nu DotCo, LLC's <i>amicus curiae</i> brief dated 26 June 2020.
New gTLD Program Rules	Collectively, ICANN's New gTLD Applicant Guidebook, Ex. C-3, and the Power Auctions LLC's Auction Rules for New gTLDs: Indirect Contentions Edition, Ex. C-4.
November 2016 Workshop	Workshop held by the Board on 3 November 2016 during which a briefing was presented by in-house counsel regarding the .WEB contention set.
Ombudsman	ICANN's Ombudsman.
Panel	The Panel appointed to resolve Claimant's IRP in the present case.
Phase I	First phase of this Independent Review Process which concluded with the Panel's Decision on Phase I dated 12 February 2020.
Procedural Order No. 2	Panel's second procedural order for Phase II dated 27 March 2020.
Procedural Order No. 3	Panel's third procedural order for Phase II dated 27 March 2020.
Procedural Order No. 4	Panel's fourth procedural order for Phase II dated 12 June 2020.
Procedural Order No. 5	Panel's fifth procedural order for Phase II dated 14 July 2020.
Procedural Order No. 6	Panel's sixth procedural order for Phase II dated 27 July 2020.

Procedural Timetable	Procedural timetable for Phase II attached to the First Procedural Order dated 5 March 2020.
Questionnaire	Questionnaire issued by ICANN on 16 September 2016.
Radix	Radix FZC.
Reconsideration Request 18-7	Reconsideration request submitted by Afilias challenging ICANN's response to its First Documentary Information Disclosure Policy Request.
Reconsideration Request 18-8	Reconsideration request submitted by Afilias challenging ICANN's response to its Second Documentary Information Disclosure Policy Request.
Request for Emergency Interim Relief	Afilias' Request for Emergency Panelist and Interim Measures of Protection, dated 27 November 2018.
Respondent, or ICANN	Respondent Internet Corporation for Assigned Names and Numbers.
Respondent's Answer	ICANN's Answer to the Amended Request for IRP dated 31 March 2019.
Respondent's PHB	ICANN's post-hearing brief dated 12 October 2020.
Respondent's Rejoinder	ICANN's Rejoinder Memorial in Response to Amended Request by Afilias Domains No. 3 Limited for Independent Review dated 1 June 2020.
Respondent's Response Submission on Costs	ICANN's response dated 23 October 2020 to the Claimant's submissions on costs.
Revised Procedural Timetable	Revised procedural timetable for Phase II attached to the Procedural Order No. 3 dated 13 March 2020.
Ruby Glen	Ruby Glen, LLC.
Ruby Glen Litigation	Ruby Glen, LLC's complaint against ICANN filed in the US District Court of the Central District of California and application seeking to halt the .WEB auction.
Rule 7 Claim	Afilias' claim that ICANN violated its Bylaws in adopting the <i>amicus curiae</i> provisions set out in Rule 7 of the Interim Procedures.

Second DIDP Request	Documentary Information Disclosure Policy request submitted by Afilias to ICANN on 23 April 2018.
Staff	ICANN's Staff.
Supplemental Submission	Afilias' supplemental submission dated 29 April 2020 adding an additional argument in favour of a broader document production by ICANN.
Verisign	<i>Amicus Curiae</i> Verisign, Inc.
Verisign's Brief	Verisign, Inc.'s <i>amicus curiae</i> brief dated 26 June 2020.
10 June Application	Afilias' application dated 10 June 2020 regarding the status of the evidence originating from the <i>Amici</i> which had been filed with the Respondent's Rejoinder.
29 April 2020 Application	Afilias' application seeking assistance from the Panel regarding ICANN's document production and privilege log.

I. INTRODUCTION

A. Overview

1. The Claimant is one of seven (7) entities that submitted an application to the Respondent for the right to operate the registry of the .WEB generic Top-Level Domain (**gTLD**), pursuant to the rules and procedures set out in the Respondent's New gTLD Applicant Guidebook (**Guidebook**) and the Auction Rules for New gTLDs (**Auction Rules**) (collectively, **New gTLD Program Rules**).
2. gTLDs are one category of top-level domains used in the domain name system (**DNS**) of the Internet, to the right of the final dot, such as ".COM" or ".ORG". Under the Guidebook and Auction Rules, in the event of multiple applicants for the same gTLD, the applicants are placed in a "contention set" for resolution privately or, if this first option fails, through an auction administered by the Respondent.
3. On 27 and 28 July 2016, the Respondent conducted an auction among the seven (7) applicants for the .WEB gTLD. Nu DotCo, LLC (**NDC**) won the auction while the Claimant was the second-highest bidder. Shortly after the .WEB auction, it was revealed that NDC and Verisign, Inc. (**Verisign**) had entered into an agreement (**Domain Acquisition Agreement** or **DAA**) under which Verisign undertook to provide funds for NDC's bid for the .WEB gTLD, while NDC undertook, if its application proved to be successful, to transfer and assign its registry operating rights in respect of .WEB to Verisign upon receipt from the Respondent of its actual or deemed consent to this assignment.¹
4. The Claimant initiated the present Independent Review Process (**IRP**) on 14 November 2018, seeking, among others, binding declarations that the Respondent must disqualify NDC's bid for .WEB and, in exchange for a bid price to be specified by the Panel, proceed with contracting the registry agreement for .WEB with the Claimant.
5. At the outset of these proceedings, on 30 August 2019, the Parties agreed that there should

¹ Domain Acquisition Agreement entered into by NDC and Verisign on 25 August 2015, Ex. C-218, as amended and supplemented by the "Confirmation of Understanding" executed by these same parties on 26 July 2016, Ex. H to Mr. Livesay's witness statement. See below, paras. 39, 84 and 101.

be a bifurcated Phase I in this IRP to address two questions. The first was the Claimant's claim that the Respondent violated its *Bylaws for Internet Corporation for Assigned Names and Numbers*, as amended on 18 June 2018 (**Bylaws**), in adopting the *amicus curiae* provisions set out in Rule 7 of the *Interim Procedures for Internet Corporation for Assigned Names and Numbers' Independent Review Process*, adopted by the Respondent's board of directors (**Board**) on 25 October 2018 (**Interim Procedures**), and that Verisign and NDC should be prohibited from participating in the IRP on that basis. This question has been referred to in these proceedings as the Claimant's **Rule 7 Claim**. The second question to be addressed in Phase I was the extent to which, in the event the Rule 7 Claim failed, NDC and Verisign should be permitted to participate in the IRP as *amici*.

6. In its Decision on Phase I dated 12 February 2020 (**Decision on Phase I**), which concluded the first phase of the IRP, this IRP Panel (**Panel**) unanimously decided to grant the requests respectively submitted by Verisign and NDC (collectively, the *Amici*) to participate as *amici curiae* in the present IRP, on the terms and subject to the conditions set out in that decision. On the basis of the Claimant's alternative request for relief in Phase I,² the Panel decided to join to the Claimant's other claims in Phase II those aspects of Afiliias' Rule 7 Claim over which the Panel determined that it had jurisdiction³ – to the extent the Claimant were to choose to maintain them.
7. On 4 March 2020, the Panel held a case management conference in relation to Phase II of the IRP. On that occasion, the Claimant informed the Panel that it intended to maintain its Rule 7 Claim in order to illustrate what it described as the “unseemly relationship between the regulator and the monopolist”⁴ (*i.e.*, in this case, respectively, the Respondent and Verisign). For reasons set out later in this Final Decision, the Panel has determined that the outstanding aspects of the Rule 7 Claim that were joined to the Claimant's other claims in Phase II have become moot by the participation of the *Amici* in this IRP in accordance with the Panel's Decision on Phase I. Accordingly, the Panel has concluded that no useful

² See Decision on Phase I, para. 183.

³ In its decision on Phase I, the Panel found that it has jurisdiction over any actions or failures to act alleged to violate the Articles or Bylaws: (a) committed by the Board; or (b) committed by Staff members of ICANN, but not over actions or failures to act committed by the IRP Implementation Oversight Team as such. See Decision on Phase I, para. 133.

⁴ Transcript of the preparatory conference of 4 March 2020, p. 11.

purpose would be served by the Rule 7 Claim being addressed beyond the findings and observations contained in the Panel's Decision of Phase I, which the Respondent's Board has no doubt reviewed and can act upon, as deemed appropriate. In this Final Decision, the Panel disposes of the Claimant's other substantive claims in this IRP, as well as its cost claims in connection with the IRP, including in relation to Phase I.

8. After careful consideration of the facts, the applicable law and the submissions made by the Parties and the *Amici*, the Panel finds that the Respondent has violated its *Amended and Restated Articles of Incorporation of Internet Corporation for Assigned Names and Numbers*, as approved by the Board on 9 August 2016, and filed on 3 October 2016 (**Articles**) and its Bylaws by (a) its staff (**Staff**) failing to pronounce on the question of whether the Domain Acquisition Agreement complied with the New gTLD Program Rules following the Claimant's complaints that it violated the Guidebook and Auction Rules, and, while these complaints remained unaddressed, by nevertheless moving to delegate .WEB to NDC in June 2018, upon the .WEB contention set being taken "off hold"; and (b) its Board, having deferred consideration of the Claimant's complaints about the propriety of the DAA while accountability mechanisms in connection with .WEB remained pending, nevertheless (i) failing to prevent the Staff, in June 2018, from moving to delegate .WEB to NDC, and (ii) failing itself to pronounce on these complaints while taking the position in this IRP, an accountability mechanism in which these complaints were squarely raised, that the Panel should not pronounce on them out of respect for, and in order to give priority to the Board's expertise and the discretion afforded to it in the management of the New gTLD Program. In the opinion of the Panel, the Respondent in so doing violated its commitment to make decisions by applying documented policies objectively and fairly. The Panel also finds that in preparing and issuing its questionnaire of 16 September 2016 (**Questionnaire**), and in failing to communicate to the Claimant the decision made by the Board on 3 November 2016, the Respondent has violated its commitment to operate in an open and transparent manner and consistent with procedures to ensure fairness.
9. The Panel is also of the view that it is for the Respondent, that has the requisite knowledge, expertise, and experience, to pronounce in the first instance on the propriety of the DAA under the New gTLD Program Rules, and on the question of whether NDC's application

should be rejected and its bids at the auction disqualified by reason of its alleged violations of the Guidebook and Auction Rules. The Panel therefore denies the Claimant's requests for (a) a binding declaration that the Respondent must disqualify NDC's bid for .WEB for violating the Guidebook and Auction Rules, and (b) an order directing the Respondent to proceed with contracting the Registry Agreement for .WEB with the Claimant, in exchange for a price to be specified by the Panel and paid by the Claimant.

B. The Parties

10. The Claimant in the IRP is Afilius Domains No. 3 Limited (**Afilius** or **Claimant**), a legal entity organised under the laws of the Republic of Ireland with its principal place of business in Dublin, Ireland. Afilius provides technical and management support to registry operators and operates several generic gTLD registries.
11. The Claimant's parent company, Afilius, Inc., was, until 29 December 2020, a United States corporation that was the world's second-largest Internet domain name registry. As noted below in paragraphs 244 to 249, in post-hearing submissions made in December 2020, the Panel was informed that pursuant to a Merger Agreement signed on 19 November 2020 between Afilius, Inc. and Donuts, Inc. (**Donuts**), these two (2) companies have merged as of 29 December 2020. The Claimant has explained, however, that this transaction does not include the transfer of the Claimant's .WEB application, as both the Claimant as an entity and its .WEB application have been carved out of the transaction.
12. The Claimant is represented in the IRP by Mr. Arif Hyder Ali, Mr. Alexandre de Gramont, Ms. Rose Marie Wong, Mr. David Attanasio, Mr. Michael A. Losco and Ms. Tamar Sarjveladze of Dechert LLP, and by Mr. Ethan Litwin of Constantine Cannon LLP.
13. The Respondent is the Internet Corporation for Assigned Names and Numbers (**ICANN** or **Respondent**), a not-for-profit corporation organised under the laws of the State of California, United States. ICANN oversees the technical coordination of the Internet's DNS on behalf of the Internet community. The essential function of the DNS is to convert

domain names that are easily remembered by humans – such as “icann.org” – into numeric IP addresses understood by computers.

14. ICANN’s core mission, as described in its Bylaws, is to ensure the stable and secure operation of the Internet’s unique identifier system. To that end, ICANN contracts with, among others, entities that operate gTLDs. The Bylaws provide that in performing its mission, ICANN will act in a manner that complies with and reflects ICANN’s commitments and respects ICANN’s core values, as described in the Bylaws.
15. ICANN is represented in the IRP by Mr. Jeffrey A. LeVee, Mr. Steven L. Smith, Mr. David L. Wallach, Mr. Eric P. Enson and Ms. Kelly M. Ozurovich, of Jones Day LLP.

C. The IRP Panel

16. On 26 November 2018, the Claimant nominated Professor Catherine Kessedjian as a panelist for the IRP. On 13 December 2018, the International Centre for Dispute Resolution (**ICDR**) appointed Prof. Kessedjian on the IRP Panel and her appointment was reaffirmed by the ICDR on 4 January 2019.
17. On 18 January 2019, the Respondent nominated Mr. Richard Chernick as a panelist for the IRP and he was appointed to that position by the ICDR on 19 February 2019.
18. On 17 July 2019, the Parties nominated Mr. Pierre Bienvenu, Ad. E., to serve as the IRP Panel Chair. Mr. Bienvenu accepted the nomination on 23 July 2019 and he was appointed by the ICDR on 9 August 2019.
19. In September 2019, with the consent of the Parties, Ms. Virginie Blanchette-Séguin was appointed as Administrative Secretary to the IRP Panel.

D. The Amici

20. Verisign is a publicly traded company organised under the laws of the State of Delaware. Verisign is a global provider of domain name registry services and Internet infrastructure that operates, among others, the registries for the .COM, .NET and .NAME gTLDs. Verisign is represented in this IRP by Mr. Ronald L. Johnston, Mr. James S. Blackburn,

Ms. Maria Chedid, Mr. Oscar Ramallo and Mr. John Muse-Fisher, of Arnold & Porter Kaye Scholer LLP.

21. NDC is a limited liability company organised under the laws of the State of Delaware. NDC was established as a special purpose vehicle to participate in ICANN's New gTLD Program. NDC was initially represented in this IRP by Mr. Charles Elder and Mr. Steven Marenberg, of Irell & Manella LLP, and from 1 March 2020 onward by Mr. Steven Marenberg, Mr. Josh B. Gordon and Ms. April Hua, of Paul Hastings LLP.

E. Place (Legal Seat) of the IRP

22. The Claimant has proposed that the seat of the IRP be London, England, without prejudice to the location of where hearings are held. In its letter dated 30 August 2019, the Respondent has confirmed its agreement with this proposal.

F. Language of the Proceedings

23. In accordance with Section 4.3(I) of the Bylaws, the language of the proceedings of this IRP is English.

G. Jurisdiction of the Panel

24. The Claimant's Request for IRP is submitted pursuant to Article 4, Section 4.3 of the Bylaws, the International Arbitration Rules of the ICDR (**ICDR Rules**), and the Interim Procedures. Section 4.3 of the Bylaws provides for an independent review process to hear and resolve, among others, claims that actions or failures to act by or within ICANN committed by the Board, individual Directors, Officers or Staff members constituted an action or inaction that violated the Articles or the Bylaws.
25. In its Decision on Phase I, the Panel concluded, in respect of Afiliias' Rule 7 Claim, that it has jurisdiction over any actions or failures to act alleged to violate the Articles or Bylaws:
 - (a) committed by the Board; or
 - (b) committed by Staff members;

but not over actions or failures to act allegedly committed by the IRP Implementation Oversight Team (**IOT**), on the ground that the latter does not fall within the enumeration “Board, individual Directors, Officers or Staff members” in the definition of **Covered Actions** at Section 4.3(b)(ii) of the Bylaws.

26. In relation to Phase II issues, the Parties and *Amici* have characterized a number of issues as “jurisdictional”, such as the scope of the dispute described in the Amended Request for IRP, the timeliness of the claims, the applicable standard of review, and the relief that the Panel is empowered to grant. Those issues are addressed in the relevant sections of this Final Decision. However, and subject to the foregoing, the jurisdiction of the Panel to hear the Claimant’s core claims against the Respondent in relation to .WEB is not contested.

H. Applicable Law

27. The rules applicable to the present IRP are, in the main, those set out in the Bylaws and the Interim Procedures.
28. Section 1.2(a) of the Bylaws provides that “[i]n performing its Mission, ICANN must operate in a manner consistent with these Bylaws for the benefit of the Internet community as a whole, carrying out its activities in conformity with relevant principles of international law and international conventions and applicable local law [...]”. The Panel notes that Article III of the Articles is to the same effect as Section 1.2(a) of the Bylaws.
29. At the hearing on Phase I, counsel for the Respondent, in response to a question from the Panel, submitted that in case of ambiguity the Interim Procedures, as well as the Articles and other “quasi-contractual” documents of ICANN, are to be interpreted in accordance with California law, since ICANN is a California not-for-profit corporation. The Claimant did not express disagreement with ICANN’s position in this respect.
30. As noted later in these reasons, the issues of privilege that arose in the document production phase of this IRP were resolved applying California law, as supplemented by US federal law.

I. Burden and Standard of Proof

31. It is a well-known and accepted principle in international arbitration that the party advancing a claim or defence carries the burden of proving its case on that claim or defence.
32. As regards the standard (or degree) of proof to which a party will be held in determining whether it has successfully carried its burden, it is generally accepted in practice in international arbitration that it is normally that of the balance of probabilities, that is, “more likely than not”. That said, it is also generally accepted that allegations of dishonesty or fraud will attract very close scrutiny of the evidence in order to ensure that the standard is met. To quote from a leading textbook, “[t]he more startling the proposition that a party seeks to prove, the more rigorous the arbitral tribunal will be in requiring that proposition to be fully established.”⁵
33. These principles were applied by the Panel in considering the issues in dispute in Phase II of this IRP.

J. Rules of Procedure

34. The ICDR is the IRP Provider responsible for administering IRP proceedings.⁶ The Interim Procedures, according to their preamble and the contextual note at footnote 1 thereof, are intended to supplement the ICDR Rules in effect at the time the relevant request for independent review is submitted. In the event of an inconsistency between the Interim Procedures and the ICDR Rules, the Interim Procedures govern.⁷

II. HISTORY OF THE PROCEEDINGS

A. Phase I

35. The history of these proceedings up to 12 February 2020, the date of the Panel’s Decision on Phase I, is set out at paragraphs 33 to 67 of the Panel’s Phase I decision, which are

⁵ See, generally, Nigel Blackaby, Constantine Partasides QC, Alan Redfern and Martin Hunter, *Redfern and Hunter on International Arbitration*, 6th ed., Oxford, Oxford University Press, 2015, para. 6.87.

⁶ See Bylaws, Ex. C-1, Section 4.3 (m).

⁷ See Interim Procedures, Ex. C-59, Rule 2.

incorporated by reference in this Final Decision.

36. In order to provide context for the present decision, the Panel recalls that on 18 June 2018, Afiliás invoked ICANN’s Cooperative Engagement Process (**CEP**) after learning that ICANN had removed the .WEB gTLD contention set’s “on-hold” status. A CEP is intended to help parties to a potential IRP resolve or narrow the issues that might need to be addressed in an IRP. The Parties participated in the CEP process until 13 November 2018.
37. On 14 November 2018, Afiliás filed its request for IRP with the ICDR. On the same day, ICANN informed Afiliás that it would only keep the .WEB gTLD contention set “on-hold” until 27 November 2018, so as to allow Afiliás time to file a request for emergency interim relief, barring which ICANN would take the .WEB gTLD contention set off of its “on hold” status. Afiliás filed a Request for Emergency Panelist and Interim Measures of Protection with the ICDR on 27 November 2018 (**Request for Emergency Interim Relief**), seeking to stay all ICANN actions that would further the delegation of the .WEB gTLD.
38. From November 2018 to March 2019, the Parties focused on the Claimant’s Request for Emergency Interim Relief and, pursuant to Requests to Participate as *Amicus* in the IRP filed by the *Amici* on 11 December 2018, on the possible participation of the *Amici* in the proceedings.
39. The Emergency Panelist presided over a focused document production process during which, on 18 December 2018, ICANN produced the Domain Acquisition Agreement entered into between Verisign and NDC in connection with .WEB. The Claimant then took the position that the documents produced to it by the Respondent warranted the amendment of its Request for IRP. Accordingly, on 29 January 2019, the Parties agreed to postpone the deadline for the submission of the Respondent’s Answer until after the Claimant filed its Amended Request for IRP. In the event, the Claimant filed its Amended Request for IRP with the ICDR on 21 March 2019 (**Amended Request for IRP**), and the Respondent submitted its Answer to the Amended Request for IRP on 31 May 2019 (**Respondent’s Answer**).
40. In January 2019, the Parties asked the Emergency Panelist to postpone further activity

pending resolution of the *Amici*'s requests to participate in the IRP. After the appointment of this Panel to determine the IRP, the Parties expressed their understanding that it would be for this Panel to resolve the Emergency Interim Relief Request. In the meantime, the Respondent agreed that the .WEB gTLD contention set would remain on hold until the conclusion of this IRP.⁸

41. As for the *Amici*'s requests to participate in the IRP, they were first the subject of proceedings before a Procedures Officer appointed by the ICDR on 21 December 2018. In its final Declaration, dated 28 February 2019, the Procedures Officer found that "the issues raised [...] are of such importance to the global Internet community and Claimants [sic] that they should not be decided by a "Procedures Officer", and therefore the issues raised are hereby referred to [...] the IRP Panel for determination".⁹ The *Amici*'s requests to participate in the IRP were referred to the Panel and, by agreement of the Parties, were resolved in Phase I of this IRP by the Panel's Decision on Phase I dated 12 February 2020.

B. Phase II

42. On 4 March 2020, the Panel presided over a case management conference to discuss the issues to be decided in Phase II and the Parties' respective proposed procedural timetables for the Phase II proceedings. The Parties differed as to the timing of document production and the briefing schedule for Phase II. The Claimant favoured document production taking place after the filing of Afilias' Reply, ICANN's Rejoinder and the *Amici*'s Briefs, such production to be followed by the simultaneous filing of Responses from the Parties. The Respondent, for its part, proposed a document production stage at the outset of Phase II, to be followed by a briefing schedule for the filing of the Parties' additional submissions and the *Amici*'s Briefs.
43. In its First Procedural Order for Phase II, dated of 5 March 2020 (**First Procedural Order**), the Panel decided that the document production phase in relation to Phase II would take place at the outset of Phase II, as proposed by the Respondent, so as to give the Parties

⁸ See ICANN's Response to Afilias' Costs Submission, dated 23 October 2020, at para. 23.

⁹ Declaration of the Procedures Officer dated 28 February 2019, p. 38.

the benefit of the documents produced during this process in their additional submissions in relation to Phase II. With respect to the other elements of the Procedural Timetable, the Panel adopted the Claimant’s proposed briefing sequence, which provided for the filing of the Claimant’s Reply, the Respondent’s Rejoinder, the *Amici*’s Briefs, and an opportunity for the Claimant and the Respondent subsequently to respond simultaneously to the *Amici*’s Briefs. The Panel attached to the First Procedural Order the following procedural timetable for Phase II, reflecting these decisions (**Procedural Timetable**):

No.	Action	Party	Date
1.	Simultaneous requests to produce (via Redfern Schedules)	Afilias and ICANN	6 March 2020
2.	Simultaneous responses/objections (via Redfern Schedules)	Afilias and ICANN	13 March 2020
3.	List of agreed issues to be decided in Phase II and, as the case may be, list(s) of additional issues to be decided in Phase II	Afilias and ICANN	13 March 2020
4.	Simultaneous replies to responses/objections (via Redfern Schedules)	Afilias and ICANN	20 March 2020
5.	Hyperlinked list of constituent elements (as of that date) of the Phase II record	Afilias and ICANN	20 March 2020
6.	Panel ruling on outstanding objections	N/A	27 March 2020
7.	Production of documents	Afilias and ICANN	17 April 2020
8.	Submissions on questions as to which the <i>Amici</i> will be permitted to submit briefings to the Panel, as well as page limits and other modalities	Afilias, ICANN, Verisign and NDC	24 April 2020
9.	Reply (along with all supporting exhibits, witness statements, expert reports and legal authorities)	Afilias	1 May 2020
10.	Rejoinder (along with all supporting exhibits, witness statements, expert reports and legal authorities)	Afilias	29 May 2020
11.	<i>Amici</i> ’s Briefs (along with all supporting exhibits, if any, and legal authorities)	Verisign and NDC	26 June 2020
12.	Simultaneous Responses to the <i>Amici</i> ’s Briefs	Afilias and ICANN	15 July 2020
13.	Parties to identify witnesses called for cross-examination at the hearing	Afilias and ICANN	24 July 2020
14.	Final status and pre-hearing conference	Afilias, ICANN, Verisign and NDC	29 July 2020
15.	Hearing	Afilias, ICANN, Verisign and NDC	3-7 August 2020

No.	Action	Party	Date
16.	Post-hearing submissions	Afilias, ICANN, Verisign and NDC	TBD

44. As reflected in the Procedural Timetable, in its First Procedural Order the Panel also asked the Parties to develop a joint list of issues to be decided in Phase II, and laid out a process for the determination, in consultation with the Parties and as contemplated in the Panel’s Decision on Phase I, of the questions as to which the *Amici* would be permitted to submit briefings to the Panel. The Panel also accepted the Parties’ proposal that the hearing, scheduled on 3-7 August 2020, be held in Chicago, IL.
45. In accordance with the Procedural Timetable, on or about 6 March 2020, the Parties exchanged document production requests in the form of Redfern Schedules. The Claimant addressed twenty-one (21) requests to produce documents to the Respondent, while the Respondent addressed two (2) requests to produce to the Claimant. Responses or objections to those requests were exchanged on or about 13 March 2020. The Claimant objected to both of the Respondent’s requests. The Respondent objected to many, but not all, of the Claimant’s requests, having agreed to search for some categories of documents requested by the Claimant.
46. Also on 6 March 2020, the Claimant sought clarification of the First Procedural Order as regards the question of whether the *Amici* would be permitted, in their briefs, to add new documents to the record as exhibits. The Claimant argued that any documents to be submitted by the *Amici* would inevitably be “cherry picked” and supportive of their submissions. The Claimant thus took the position that if the *Amici* were allowed to refer to documents that are not already in the record, the principles of fundamental fairness and due process required that it be granted an opportunity to request documents from the *Amici*. On 11 March 2020, the Respondent submitted in response that pursuant to the Decision on Phase I, the *Amici* are entitled to submit “briefings and supporting exhibits” and that the provisions of the Interim Procedures relating to the exchange of information do not apply to the *Amici*. On the same date, the *Amici* contended, for their part, that the First Procedural Order clearly states that they may submit exhibits, without specifying that such exhibits are limited to those already in the record. The *Amici* stressed that material evidence may

be in their possession and not in possession of the Parties. They further contended that the Panel had already ruled that they may not propound discovery nor be the recipient of information requests. In its reply dated 12 March 2020, the Claimant reiterated its fairness concerns and stated that the First Procedural Order did not address the question of whether the *Amici*'s exhibits were to be limited to those on record.

47. By email dated 13 March 2020, the Parties informed the Panel that they had attempted – for a second time and still without success – to agree on a joint list of issues to be decided in Phase II. While unable to agree on the joint issues list requested by the Panel, the Parties proposed an agreed procedure for the Panel ultimately to determine the questions on which the *Amici* would be invited to submit briefs. In the event, the Panel accepted the Parties' suggestion in Procedural Order No. 3, and issued a revised procedural timetable reflecting the changes proposed by the Parties (**Revised Procedural Timetable**).
48. In Procedural Order No. 2 dated 27 March 2020 (**Procedural Order No. 2**), the Panel ruled on the outstanding objections to the Parties' respective requests to produce, granting twelve (12) of the Claimant's fourteen (14) outstanding requests and one (1) of the two (2) requests presented by the Respondent. In the same order, the Panel directed each of the Parties to provide to the other a privilege log listing each document over which a privilege is asserted, on the ground that such logs might prove useful to the Parties and the Panel in addressing issues arising from refusals to produce based on privilege.
49. In Procedural Order No. 3, also dated 27 March 2020 (**Procedural Order No. 3**), the Panel ruled on the Claimant's clarification request in regard to the possibility for the *Amici*, as part of their briefs, to add to the evidentiary record of the IRP. It is useful to cite in full the Panel's ruling on that question:

In its Decision on Phase I, the Panel made clear that, under the Interim Procedures, the *Amici* are non-disputing parties whose participation in the IRP is through the submission of "written briefings", possibly supplemented by oral submissions at the merits hearing. The Panel also rejected the notion that, under the Interim Procedures, the *Amici* can enjoy the same participation rights as the disputing parties. It follows that it is for the Parties, who bear the burden of proving their case, to build the evidentiary record of the IRP, and it is based on that record that the *Amici* "may submit to the IRP Panel written briefing(s) on the DISPUTE or on such discrete questions as the IRP Panel may request briefing" (see Rule 7 of the Interim Procedures).

The Panel expects the Parties, in accordance with the Procedural Timetable, to file the entirety of the remainder of their case as part of the second round of submissions contemplated by the timetable, that is to say, with the Claimant's Reply and the Respondent's Rejoinder. As evoked in the Panel's Decision on Phase I (*see* par. 201), if there is evidence in the possession of the *Amici* that the Respondent considers relevant to, and that it wishes to adduce in support of its case, be it witness or documentary evidence, that evidence is required to be filed as part of the Respondent's Rejoinder, and not with the *Amici*'s Briefs.

The Panel did not preclude the possibility in its Phase I Decision (and the Procedural Timetable) that the *Amici* might wish to file documents in support of the submissions to be made in their Briefs. By referring to such documents as "exhibits", however, as other arbitral tribunals have in referring to materials to be filed with the submissions of *amicus* participants, the Panel did not mean to suggest that these "exhibits" (which the Panel would expect to be few in number, and to be directed to supporting the *Amici*'s submissions, not the Respondent's case) would become part of the record and acquire the same status as the documentary evidence filed by the Parties.

Should a Party be of the view that documents submitted in support of the *Amici*'s Briefs are incomplete or somehow misleading, it will be open to that Party to advance the argument in response to the *Amici*'s submissions and to seek whatever relief it considers appropriate from the Panel.¹⁰

50. As regards the Claimant's request to be granted an opportunity to request documents from the *Amici*, the Panel referred to its Decision on Phase I, in which it was noted that the provisions of the Interim Procedures relating to Exchange of Information (Rule 8) apply to *Parties*, not to persons, groups or entities that are granted permission to participate in an IRP with the status of an *amicus curiae*.¹¹
51. On 17 April 2020, the Respondent produced to the Claimant its document production pursuant to the Procedural Order No. 2. On 24 April 2020, the Respondent transmitted to the Claimant a privilege log identifying documents withheld from production based on the attorney-client privilege or the attorney work product doctrine.
52. On 29 April 2020, the Claimant filed an application seeking assistance from the Panel regarding what the Claimant described as the Respondent's "grossly deficient document production and insufficiently detailed Privilege Log" (**29 April 2020 Application**). By way of relief, the Claimant requested in this application that the Panel order the Respondent to "(i) supplement and remedy its production by producing those documents that are subject to the Tribunal's production order or ICANN's production agreement; (ii) produce those

¹⁰ Procedural Order No. 3, pp. 2-3.

¹¹ See Decision on Phase I, para. 195.

documents listed on ICANN's Privilege Log that are not privileged; (iii) produce those documents that contain privileged and non-privileged information with appropriate redactions covering only the privileged information; and (iii) (*sic*) for the remaining documents, remedy its Privilege Log so that the Panel and Afilias can properly assess the validity of the privilege that ICANN has invoked."¹² The Claimant also reserved "its right to request the Panel to conduct an in camera review of documents that ICANN has asserted are covered by privilege".¹³

53. As directed by the Panel, the Respondent responded to the 29 April 2020 Application on 6 May 2020, rejecting the Claimant's complaints and asserting that the Respondent had in all respects complied with the Procedural Order No. 2. The Respondent argued that it searched and produced all non-privileged documents responsive to the Claimant's requests to which the Respondent agreed or was directed by the Panel to respond, and that it properly withheld only those documents protected by attorney-client privilege or the work product doctrine. The Respondent added that it served a privilege log providing, in respect of each withheld document, all of the information necessary to establish privilege.
54. On 11 May 2020, the Panel, as suggested by the Claimant, held a telephonic hearing in connection with the 29 April 2020 Application. On that occasion, both Parties had the opportunity to amplify their written submissions orally and to present arguments in reply. Consistent with the Panel's Decision on Phase I, the *Amici* were permitted to attend this procedural hearing as observers, which they did. In the course of its counsel's reply submissions at the hearing, the Claimant articulated a new waiver argument, namely that by arguing that the Board reasonably decided, in November 2016, not to make any determination regarding NDC's conduct until after the conclusion of the IRP, as alleged in the Respondent's Rejoinder, the Respondent had in effect affirmatively put the reasonableness and good faith of that Board's decision at issue in the case.
55. In accordance with the Revised Procedural Timetable (as modified by the Panel's correspondence of 1 May 2020), on 4 May 2020, the Claimant filed its Reply Memorial in

¹² 29 April 2020 Application, p. 11.

¹³ *Ibid*, fn 29.

Support of Amended Request by Afilias Domains No. 3 Limited for Independent Review (**Claimant's Reply**) and, on 1 June 2020, the Respondent filed its Rejoinder Memorial in Response to Amended Request by Afilias Domains No. 3 Limited for Independent Review (**Respondent's Rejoinder**).

56. On 10 June 2020, while the Claimant's 29 April 2020 Application regarding document production remained under advisement, the Claimant filed a supplemental submission to add an additional argument in favour of a broader document production by the Respondent, which echoed the new argument put forward in the course of its counsel's reply at the hearing of 11 May 2020 (**Supplemental Submission**). In that supplemental submission, the Claimant argued that the Respondent had waived potentially applicable privilege with the filing of its Rejoinder Memorial where it allegedly put certain documents for which it claimed privilege "at issue" in this IRP.
57. By emails dated 11 June 2020 (corrected the following day), the Panel established a briefing schedule in relation to the Claimant's Supplemental Submission. In accordance with this schedule, the Respondent set out its position in relation to the Supplemental Submission in a response dated 17 June 2020 and a sur-reply dated 26 June 2020, inviting the Panel to find that the Respondent did not waive privilege and, therefore, that the relief sought by the Supplemental Submission should be denied. As for the Claimant, its position in relation to the Supplemental Submission was amplified in a reply dated 19 June 2020. The relief sought by the Claimant's Supplemental Submission as set out in the Claimant's 19 June 2020 reply is that the Panel order the Respondent to produce all documents that formed the basis of its Board's alleged determination, in November 2016, to defer any decision on the .WEB contention set, as well as all documents reflecting any determination by the Board to continue or terminate such deferral, including all such documents for which the Respondent claimed privilege, on the ground that the Respondent has waived any applicable privilege by putting such documents at issue.
58. The Claimant filed another application on 10 June 2020, this one regarding the status of the evidence originating from the *Amici* which had been filed with the Respondent's Rejoinder with the caveat that "ICANN did so without endorsing those statements or

agreeing with them in full”¹⁴ (**10 June Application**). The Claimant argued that ICANN was not permitted, pursuant to Procedural Order No. 3, to submit materials from the *Amici* unless it considered them relevant and wished to adduce them in support of its case. By way of relief, the Claimant requested that the Respondent be directed to resubmit the evidence filed with its Rejoinder that originated from the *Amici*, with a clear indication of the portions thereof with which the Respondent did not agree or which it did not endorse. Should the Respondent fail to do so, the Claimant invited the Panel to hold that all of the evidence submitted by the Respondent should be taken to have been submitted by and on behalf of the Respondent. On 15 June 2020, the Respondent responded to the 10 June Application, arguing that the submission of evidence on behalf of the *Amici* with the Respondent’s Rejoinder complied with Procedural Order No. 3. The Claimant replied on 17 June 2020, contending that the Panel could not allow Respondent to hide the basis for its actions and non-actions by letting the *Amici* defend it in the abstract and without affirming that it agrees with the *Amici*’s evidence.

59. In Procedural Order No. 4 dated 12 June 2020 (**Procedural Order No. 4**), the Panel denied the Claimant’s 29 April 2020 Application while reserving the question raised in the Supplemental Submission. The Panel decided that the Respondent had no obligation to ask the *Amici* to search for documents responsive to the Claimant’s requests to produce, and consequently rejected the Claimant’s claim that the Respondent ought to have produced responsive documents in the possession of the *Amici*. In that same order, a majority of the Panel concluded, applying California law as supplemented by US federal law, that the description used by the Respondent in its privilege log was sufficient to validly assert privilege and, therefore, that the Claimant had failed to justify its request that the Respondent be required to revise its privilege log. One member of the Panel, however, would have required disclosure of more detailed information from the Respondent in order to support the latter’s claims of privilege. Finally, the Panel rejected the remaining allegations of the Claimant regarding the alleged insufficiency of the Respondent’s production. Specifically, the Panel held that it would violate the attorney-client privilege and work product protection to call upon the Respondent, as requested by the Claimant, to

¹⁴ Respondent’s Rejoinder, fn 6.

redact privileged communications or work product documents so as to reveal “facts or information” contained in those protected documents.

60. On 26 June 2020, NDC and Verisign respectively filed the *Amicus Curiae* Brief of Nu DotCo, LLC (**NDC’s Brief**) and Verisign, Inc.’s Pre-Hearing Brief (Phase II) (**Verisign’s Brief**). In accordance with the Revised Procedural Timetable, the Claimant and the Respondent both responded to the *Amici*’s briefs on 24 July 2020, respectively in Afilias Domains No. 3 Limited’s Response to the *Amicus Curiae* Briefs (**Afilias’ Response to the Amici’s Briefs**) and ICANN’s Response to the Briefs of *Amicus Curiae* (**ICANN’s Response to the Amici’s Briefs**).
61. On 14 July 2020, the Panel issued its fifth procedural order (**Procedural Order No. 5**). In relation to the 10 June Application, the Panel found that the Respondent had allowed its Rejoinder to serve as a vehicle for the filing of what the Respondent itself described as the “*Amici*’s evidence”, the “*Amici*’s expert reports and witness statements”. In the Panel’s view, the Respondent had thus sought to do indirectly what the Panel had decided in Phase I could not be done directly under the Interim Procedures. By way of relief, the Panel directed the Respondent to clearly identify, in a communication to be addressed to the Claimant and the *Amici* and filed with the Panel, those aspects (if any) of the *Amici*’s facts and expert evidence which the Respondent formally refused to endorse, or with which it disagrees, and to provide an explanation for this non-endorsement or disagreement.¹⁵ The Respondent complied with the Panel’s direction by letters dated 17-18 July 2020.
62. The Panel considers it useful to cite the reasons supporting this ruling as they laid the foundations to the Panel’s approach to the issues in dispute in this IRP:

17. The Respondent has filed a Rejoinder seeking to draw a distinction between the Respondent’s evidence, filed without reservation in support of the Respondent’s primary case, and the “*Amici*’s evidence”, which the Respondent states it is filing “on behalf of the *Amici*” “to help ensure that the factual record in this IRP is complete”. However, the Respondent files this *Amici* evidence with the caveat that it is neither endorsing it, nor agreeing with it in full, as set out in the above quoted footnote 6 of the Rejoinder.

¹⁵ Procedural Order No. 5, para. 24.

18. In the Panel's view, the Respondent is thus seeking to do indirectly what the Panel decided in Phase I could not be done directly under the terms of the Interim Procedures. Instead of the *Amici* filing their own evidence with their Briefs, the Respondent has allowed the Rejoinder to serve as a vehicle for the filing of the "*Amici's* evidence", the "*Amici* expert reports and witness statements". This is indeed how the Respondent describes that evidence in its 15 June 2020 correspondence. The fact that the Rejoinder serves as a vehicle for the filing of what is, in effect, the *Amici's* evidence is consistent with the Respondent's proposal, in its submissions of 22 June 2020 relating to the modalities of the merits hearing (discussed below), that "the *Amici* be permitted to [...] introduced and conduct redirect examination of their own witnesses" (Respondent's letter of 22 June 2020, p. 2, para. 3 [emphasis added in PO5]).

19. The Respondent explains, in its 15 June response, that the purpose of the so-called "*Amici* evidence" is to address the Claimant's challenge of the *Amici's* conduct. The Respondent goes on to explain [emphasis added in PO5]:

Given that ICANN has not fully evaluated the competing contentions of Afilias and the *Amici*, for reasons ICANN explains at length in its Rejoinder, ICANN is not in a position to identify the portions of the *Amici* witness statements with which it "agrees or disagrees." But ICANN views it as essential that this evidence be of record, and that the Panel consider it, if the Panel decides to address the competing positions of Afilias and Amici regarding the latter's conduct.

20. The Panel understands the resulting procedural posture to be as follows. The Respondent has adduced evidence in support of its primary case that the ICANN Board, in the exercise of its fiduciary duties, made a decision that is both consistent with ICANN's Articles and Bylaws and within the realm of reasonable business judgment when, in November 2016, it decided not to address the issues surrounding .WEB while an Accountability Mechanism regarding .WEB was pending. That, according to the Respondent, should define the proper scope of the present IRP.

21. However, recognizing that the Claimant's case against the Respondent includes allegations concerning the *Amici's* conduct (specifically, NDC's alleged non-compliance with the Guidebook and Auction Rules), the Respondent files the "*Amici* evidence" on the ground that the record should include not only Afilias' allegations against Verisign and NDC, "but also Verisign's and NDC's responses." The difficulty is that this evidence is propounded not as the Respondent's defense to Afilias' claims against it, but rather (on the ground that the Respondent has not fully evaluated the competing contentions of Afilias and the *Amici*) as the *Amici's* response to Afilias' allegations that NDC violated the Guidebook and Auction Rules.

22. The Panel recalls that this IRP is an ICANN Accountability Mechanism, the parties to which are the Claimant and the Respondent. As such, it is not the proper forum for the resolution of potential disputes between Afilias and two non-parties that are participating in these proceedings as *amici curiae*. While it is open to the Respondent to choose how to respond to the Claimant's allegations concerning NDC's conduct, and to evaluate the consequences of its choice in this IRP, the Panel is of the view that the Respondent may not at the same time as it elects not to provide a direct response, adduce responsive evidence on that issue on behalf of the *Amici* and, in relation to that evidence, reserve its position as to which portions thereof the Respondent endorses or agrees with. In the opinion of the Panel, this leaves the Claimant uncertain as to the case it has to meet, which the Panel considers unfair, and it has the potential to disrupt the proceedings if the Respondent were later to take a position, for example in its post-hearing brief, which the Claimant would not have had the opportunity to address prior to, or at the merits hearing.

23. The Panel has taken due note of the Respondent's evidence and associated contentions concerning its Board's decision of November 2016. Nevertheless, the Guidebook and Auction Rules originate from ICANN. That being so, in this ICANN Accountability Mechanism in which the Respondent's conduct in relation to the application of the Guidebook and Auction Rules is being impugned, the Respondent should be able to say whether or not the position being defended by the *Amici* in relation to these ICANN instruments is one that ICANN is prepared to endorse and, if not, to state the reasons why.

63. In Procedural Order No. 5, the Panel also ruled on the Claimant's Supplemental Submission by rejecting the Claimant's contention that the Respondent's Rejoinder had itself put in issue in the IRP documents over which the Respondent had claimed privilege, and that the Respondent had thus waived attorney-client privilege. Having quoted the leading case on implied waiver of attorney-client privilege under California law,¹⁶ the Panel wrote:

37. In the Panel's opinion, the Supreme Court's reasoning directly applies, and defeats the Claimant's claim of implied waiver. While the Respondent has disclosed the fact that its Board received legal advice before deciding to defer acting upon Afilias' complaints, the Respondent did not disclose the content of counsel's advice. Nor is the Respondent asserting that the Board's decision was consistent with counsel's advice, or that the Board's decision was reasonable because it followed counsel's advice. Disclosure of the *fact* that the Board solicited and received legal advice does not entail waiver of privilege as to the *content* of that advice. If that were so, the Respondent's compliance with the Panel's directions concerning the contents of the privilege log to be filed in support of its claims of privilege would, in of itself, waive the privilege that the privilege log serves to protect.

[emphasis in the original]

64. On 26 July 2020, the *Amici* filed a request for "urgent clarification from the Panel regarding the status of the evidence from *Amici* that ICANN has not endorsed in response to Procedural Order No. 5". The *Amici* stressed that, while ICANN endorsed almost all of the statements of the *Amici*'s expert witnesses, ICANN declined to endorse almost all of the *Amici*'s fact witnesses. In its order dated 27 July 2020 (**Procedural Order No. 6**), the Panel ruled that, notwithstanding ICANN's decision not to endorse them, the witness statements of Messrs. Paul Livesay and Jose I. Rasco III remained part of the record of this IRP, and that the Panel would consider the evidence of these witnesses, as well as the rest of the evidence filed in the IRP.
65. On 29 July 2020, the Panel held a telephonic pre-hearing conference, which was attended

¹⁶ *Southern Cal. Gas Co. v. Public Utilities Com.*, 50 Cal. 3d 31 (1990).

by the Parties and *Amici*, to discuss various points of order in advance of the merits hearing.

66. The evidentiary hearing in relation to the merits of the IRP was held from 3 to 11 August 2020 inclusive. Because of the ongoing COVID-19 pandemic and the associated air travel restrictions, the hearing was conducted remotely using a videoconference platform selected by the Parties. Since the participants were located in multiple time zones, hearing days had to be shortened. To compensate, three (3) additional days to the five (5) days initially scheduled for the hearing were held in reserve. In the end, fewer witnesses than had been anticipated were heard and the hearing was completed in seven (7) days. A transcript of the hearing was prepared by Ms. Balinda Dunlap.
67. The Claimant had filed with its original Request for IRP witness statements from three (3) fact witnesses, Messrs. John L. Kane, Cedarampattu “Ram” Mohan and Jonathan M. Robinson, as well as one expert report by Mr. Jonathan Zittrain. Upon the filing of its Amended Request for IRP, on 21 March 2019, the Claimant filed one expert report, by Dr. George Sadowsky, and withdrew the witness statements of its three (3) fact witnesses “[i]n light of ICANN’s disclosure of the August 2015 Domain Acquisition Agreement between VeriSign and NDC”.¹⁷
68. For its part, the Respondents filed, on its own behalf, witness statements from five (5) fact witnesses, Ms. J. Beckwith Burr, Mr. Todd Strubbe, Ms. Christine A. Willett, Mr. Christopher Disspain and Ms. Samantha S. Eisner, and one (1) expert report by Dr. Dennis W. Carlton. In addition, the Respondent filed, on behalf of the *Amici*, witness statements from three (3) fact witnesses, Mr. Rasco, of NDC, and Messrs. David McAuley and Paul Livesay, of Verisign, and two (2) expert reports, one (1) by the Hon. John Kneuer, the other by Dr. Kevin M. Murphy. In its letter of 18 July 2020, the Respondent withdrew the witness statement of Mr. Strubbe, a Verisign employee whose evidence had been offered in support of the Respondent’s opposition to the Request for Emergency Interim Relief sought by the Claimant at the outset of the proceedings. The Respondent explained that Mr. Strubbe’s evidence related to the question of whether Verisign would be irreparably injured by a delay in the delegation of .WEB, an issue that had become moot

¹⁷ See Amended Request for IRP, fn 14, at p. ii.

by the time of the hearing.

69. The seven (7) fact witnesses whose witness statements remained in evidence, as well as the three (3) expert witnesses appointed by the Parties, were all initially called to appear at the hearing for questioning.¹⁸ In the course of the hearing, the Claimant informed the Panel of its decision not to cross-examine the Respondent's expert witness, which prompted the Respondent to decide not to cross-examine the Claimant's experts.
70. The evidentiary hearing was thus devoted to hearing the Parties' and *Amici*'s opening statements, and to the questioning of the remaining seven (7) fact witnesses called by the Respondent, on its behalf or on behalf of the *Amici*, namely Ms. Burr, Ms. Willett, Mr. Disspain, Ms. Eisner, Mr. McAuley, Mr. Rasco and Mr. Livesay.
71. At the end of the hearing, it was decided that the Parties and *Amici* would be permitted to file post-hearing briefs on 8 October 2020. The Panel indicated, referring back to a question that had been discussed at the pre-hearing conference, that it would inform the Parties and *Amici* of a date – to be held in reserve – on which the Panel would make itself available to hear oral closing submissions from the Parties and *Amici* should the Panel feel the need to do so after perusing the post-hearing submissions. The date was later set to 20 November 2020.
72. On 23 August 2020, the Panel forwarded to the Parties and *Amici* a list of questions that the Panel invited them to address in their respective post-hearing submissions.
73. Pursuant to a short extension of time granted by the Panel on 6 October 2020, on 12 October 2020, the Parties filed their post-hearing briefs (respectively, **Claimant's PHB** and **Respondent's PHB**), submissions on costs, and updated lists of Phase II issues, along with a factual chronology agreed to by both of them.
74. Also on 12 October 2020, the *Amici* filed a joint post-hearing brief (***Amici's PHB***). In their cover email, as well as in footnote 2 to their PHB, the *Amici* noted that the Parties had not consulted with them in the preparation of their respective issues lists, nor in the preparation

¹⁸ The Claimant did not request the presence of the *Amici*'s expert witnesses at the hearing.

of their joint chronology. The *Amici* therefore objected to the Parties' Phase II issues lists "to the extent that they omit or misrepresent the issues before this Panel", and they objected also to the Parties' joint chronology, which they asserted was incomplete.

75. On 16 October 2020, the Panel noted the *Amici*'s conditional objection to the Parties' respective issues lists. As regards the Parties' joint chronology, the *Amici* were given until 23 October 2020 to file, after consultations with the Parties, an amended version of the joint chronology with marked-up additions showing the items that they consider should be added to the joint chronology for it to be complete.
76. Also on 16 October 2020, the Claimant sought leave to respond to a number of "new non-record documents" cited in the *Amici*'s PHB. Having considered the Respondent's and *Amici*'s comments on this request, on 22 October 2020 the Panel granted the Claimant's request and a response to the impugned non-record documents was filed by the Claimant on 26 October 2020.
77. On 23 October 2020, the Parties filed their respective replies to the cost submissions of the other party (respectively, **Claimant's Reply Submission on Costs** and **Respondent's Response Submission on Costs**). On that date, the Claimant also provided the Panel with a joint chronology which had been agreed by the Parties and the *Amici* pursuant to the Panel's communication dated 16 October 2020 (**Joint Chronology**). The 23 October 2020 Joint Chronology is the chronology referred to in this Final Decision, and it is the one that the Panel has used in its deliberations
78. On 3 November 2020, having had the opportunity carefully to review the Parties' and *Amici*'s comprehensive post-hearing submissions, the Panel informed them of its decision not to avail itself of the possibility to hear additional oral closing submissions. The date reserved for that purpose was therefore released.
79. In a series of letters beginning with counsel for Verisign's letter of 9 December 2020, sent on behalf of both *Amici*, the Panel was informed of an impending, and later consummated merger of the Claimant's parent company, Afilias, Inc., and its competitor Donuts, Inc. This was described by Verisign as "new facts arising subsequent to the merits hearing, as

well as related newly discovered evidence, that contradict critical representations made by Afiliás Domains No. 3 Limited (“Afiliás”) in the pre-hearing pleadings and at the merits hearing [...]”. The *Amici* requested that the Panel consider these new developments in resolving the Claimant’s claims in this IRP. The submissions of the Parties and *Amici* concerning these post-hearing developments are summarized in the next section of this Final Decision.

80. On 7 April 2021, the Panel, being satisfied that the record of the IRP was complete and that the Parties and *Amici* had no further submissions to make in relation to the issues in dispute, formally declared the arbitral hearing closed in accordance with Article 27 of the ICDR Rules.
81. The Panel concludes this history of the proceedings by expressing its gratitude to Counsel for the Parties and *Amici* for their assistance in the resolution of this dispute and the exemplary professional courtesy each and everyone of them displayed throughout these proceedings.

III. FACTUAL BACKGROUND

82. The essential facts of this case have been conveniently laid out in the Joint Chronology dated 23 October 2020 agreed to by the Parties and *Amici*. In order to provide some background for the Panel’s analysis below, the most salient facts of this case are summarized in this section.
83. The deadline for the submission of applications for new gTLDs under the Respondent’s New gTLD Program was 30 May 2012. As mentioned in the overview, the Claimant is one of seven (7) entities that submitted an application to the Respondent for the right to operate the registry of the .WEB gTLD pursuant to the rules and procedures set out in the Respondent’s Guidebook and the Auction Rules for New gTLDs.
84. Because there were multiple applicants for .WEB, the applicants were placed in a “contention set” for resolution either privately or through an auction of last resort administered by the Respondent.
85. Towards the end of 2014, at a time when the .WEB contention set was still on hold, and

had thus not been resolved, Redacted - Third Party Designated Confidential Information

.¹⁹ Apart from filing applications for new gTLDs that were variants of the company's name, for example ".Verisign", or internationalized versions of Verisign's existing TLDs, Verisign had not otherwise sought to acquire rights to new gTLDs as part of ICANN's New gTLD Program. Redacted - Third Party Designated Confidential Information

.²⁰

86. Verisign identified .WEB as one business opportunity in the New gTLD Program. Redacted - Third Party Designated Confidential Information

. In May 2015, Mr. Livesay contacted Mr. Rasco, NDC's CFO and manager, and expressed interest in working with NDC to acquire the rights to .WEB.²¹

87. On 25 August 2015, Verisign and NDC executed the DAA under which Verisign undertook to provide, Redacted - Third Party Designated Confidential Information, funds for NDC's bid for the .WEB gTLD while NDC undertook, if it prevailed at the auction and entered into a registry agreement with ICANN, to transfer and assign its .WEB registry agreement to Verisign upon receipt of ICANN's actual or deemed consent to the assignment.

88. On 27 April 2016, ICANN scheduled the .WEB auction of last resort for 27 July 2016.

89. Early in June 2016, it became known among members of the .WEB contention set that NDC did not intend to participate in a private auction in order to privately resolve the contention set. It is common ground that the Respondent, as a rule, favours the private resolution of contention sets. On 7 June 2016, in answer to a request to postpone the

¹⁹ Merits hearing transcript, 11 August 2020, pp. 1125:17-1126:15 (Mr. Livesay).

²⁰ Mr. Livesay's witness statement, 1 June 2020, para. 4.

²¹ Merits hearing transcript, 7 August 2020, p. 806:12-18 (Mr. Rasco).

ICANN auction in order for members of the contention set to “try to work this out cooperatively”, Mr. Rasco stated in an email: “I went back to check with the powers that be and there was no change in the response and will not be seeking an extension.”²² The email in question was addressed to Mr. Jon Nevett, of Ruby Glen, LLC (**Ruby Glen**).

90. On 23 June 2016, Ruby Glen informed ICANN that it believed NDC “failed to properly update its application” to account for “changes to the Board of Directors and potential control of [NDC]”.²³ On 27 June 2016, ICANN asked NDC to “confirm that there have not been changes to [its] application or [to its] organization that need to be reported to ICANN.” On the same day, NDC confirmed that “there have been no changes to [its] organization that would need to be reported to ICANN.”²⁴
91. On 29 June 2016, Ms. Willett, then Vice-President of ICANN’s gTLD Operations, informed Ruby Glen that her team had investigated and that NDC had confirmed that there had been no changes to NDC’s ownership or control. As a result, she advised that “ICANN was continuing to proceed with the Auction as scheduled.”²⁵
92. On 30 June 2016, Ruby Glen formally raised its concern about a possible change in control of NDC with ICANN’s ombudsman (**Ombudsman**). On 12 July 2016, the Ombudsman informed Ms. Willett that he had “not seen any evidence which would satisfy [him] that there ha[d] been a material change to the application. So [his] tentative recommendation [was] that there was nothing which would justify a postponement of the auction based on unfairness to the other applicants.”²⁶ The following day, Ms. Willett informed the .WEB contention set accordingly.
93. On 17 July 2016, two other .WEB applicants, Donuts and Radix FZC (**Radix**), filed an emergency Reconsideration Request, alleging that ICANN had failed to perform a “full

²² Mr. Rasco’s email dated 7 June 2016, Ex. C-35.

²³ Ms. Willett’s witness statement, 31 May 2019, Ex. A.

²⁴ Exchanges between Messrs. Rasco and Jared Erwin, Ex. C-96.

²⁶ Ms. Willett’s witness statement, 31 May 2019, Ex. G.

and transparent investigation into the material representations made by NDC” and contesting ICANN’s decision to proceed with the ICANN auction.²⁷ Reconsideration is an ICANN accountability mechanism allowing any person or entity materially affected by an action or inaction of the Board or Staff to request reconsideration of that action or inaction.²⁸ Donuts’ and Radix’s Reconsideration Request was denied on 21 July 2016.²⁹

94. On 22 July 2016, Ruby Glen filed a complaint against ICANN in the US District Court of the Central District of California, and an application for a temporary restraining order seeking to halt the .WEB auction (**Ruby Glen Litigation**). On 26 July 2016, the application for a temporary restraining order was denied.³⁰
95. In the meantime, on 20 July 2016, the blackout period associated with the ICANN auction had begun. The blackout period extends from the deposit deadline, in this case 20 July 2016, until full payment has been received from the prevailing bidder (**Blackout Period**). During the Blackout Period, members of a contention set, including the .WEB contention set, “are prohibited from cooperating or collaborating with respect to, discussing with each other, or disclosing to each other in any manner the substance of their own, or each other’s, or any other competing applicants’ bids or bidding strategies, or discussing or negotiating settlement agreements or post-Auction ownership transfer arrangements, with respect to any Contention Strings in the Auction.”
96. On 22 July 2016, Mr. Kane, a representative of Afilias, wrote a text message to Mr. Rasco asking whether NDC would consider a private auction if ICANN were to delay the scheduled auction.³¹ Mr. Rasco did not respond to this query, as he testified he considered

it an attempt to engage in a prohibited discussion during the Blackout Period.³²

97. Redacted - Third Party Designated Confidential Information

.33

98. On 27 and 28 July 2016, ICANN conducted the auction of last resort among the seven (7) applicants for the .WEB gTLD. As already mentioned, NDC won the auction while the Claimant was the second-highest bidder.

99. On 28 July 2016, Verisign filed a form with the U.S. Security and Exchange Commission stating that “[s]ubsequent to June 30, 2016, the Company incurred a commitment to pay approximately \$130.0 million for the future assignment of contractual rights, which are subject to third party consent.”³⁴

100. On 31 July 2016, Mr. Rasco informed Ms. Willett that Redacted - Designated Confidential Information

.”³⁵ On 1 August 2016, Verisign issued a press release stating that it had “entered into an agreement with Nu Dot Co LLC wherein the Company provided funds for Nu Dot Co’s bid for the .web TLD.”³⁶

101. The following day, 2 August 2016, Donuts invoked the CEP with ICANN in regard to

³² Mr. Rasco’s witness statement, 10 December 2018, para. 17.

³³ Mr. Livesay’s witness statement, 1 June 2020, para. 27, and Ex. H attached thereto.

³⁴ Verisign’s Form 10-Q, Quarterly Report, Ex. C-45, p. 13.

³⁵ Ms. Willett’s email dated 31 July 2016, Ex. C-100, [PDF] pp. 1-2.

³⁶ Verisign statement regarding .WEB auction results, Ex. C-46.

.WEB (**Donuts CEP**).³⁷ The CEP is a non-binding process in which parties are encouraged to participate to attempt to resolve or narrow a dispute.³⁸ While the CEP is voluntary, the Bylaws create an incentive for parties to participate in this process by providing that failure of a Claimant to participate in good faith in a CEP exposes that party, in the event ICANN is the prevailing party in an IRP, to an award condemning it to pay all of ICANN's reasonable fees – including legal fees – and costs incurred by ICANN in the IRP.

102. On 8 August 2016, Ruby Glen filed an Amended Complaint against ICANN in the Ruby Glen Litigation. Also on 8 August 2016, Afiliis sent to Mr. Atallah a letter raising concerns about Verisign's involvement with NDC and in the ICANN auction, and, on the same day, submitted a complaint with the Ombudsman.
103. On 19 August 2016, ICANN informed the .WEB applicants that the .WEB contention set had been placed “on-hold” to reflect the pending accountability mechanism initiated by Donuts.
104. Redacted - Third Party Designated Confidential Information

105. On 9 September 2016, Afiliis sent ICANN a second letter regarding Afiliis' concerns about Verisign's involvement with NDC's application for .WEB, stating that “ICANN's Board and officers are obligated under the Articles, Bylaws and the Guidebook (as well as

³⁷ Cooperative Engagement and Independent Review Processes Status Update, 8 August 2016, Ex. C-108, [PDF] p. 1.

³⁸ Bylaws, Ex. C-1, Article 4, Section 4.3 (e).

⁴⁰ See Respondent's Rejoinder, para. 35 and Transcript of the 11 May 2020 Hearing, Ex. R-29, p. 20:9-15.

international law and California law) to disqualify NDC's bid immediately and proceed with contracting of a registry agreement with Afilias, the second highest bidder", and asking ICANN to respond by no later than 16 September 2016.⁴¹

106. On 16 September 2016, Ms. Willett sent Afilias, Ruby Glen, NDC and Verisign a detailed Questionnaire and invited them to provide information and comments on the allegations raised by Afilias and Ruby Glen.⁴² The Respondent avers that the purpose of the Questionnaire "was to assist ICANN in evaluating what action, if any, should be taken in response to the claims asserted by Afilias and Ruby Glen".⁴³ It is common ground that at the time, while ICANN, NDC and Verisign had knowledge of the provisions of the Domain Acquisition Agreement, of which each of them had a copy, Afilias and Ruby Glen did not. Responses to the Questionnaire were provided to ICANN on 7 October 2016 by Afilias⁴⁴ and Verisign⁴⁵, and on 10 October 2016 by NDC.⁴⁶
107. On 19 September 2016, the Ombudsman informed Afilias that he was declining to investigate Afilias' complaint regarding the .WEB auction because Ruby Glen had initiated both a CEP and litigation in respect of the same issue.⁴⁷
108. On 30 September 2016, ICANN acknowledged receipt of Afilias' letters of 8 August 2016 and 9 September 2016, noted that ICANN had placed the .WEB contention set on hold "to reflect a pending ICANN Accountability Mechanism initiated by another member in the contention set", and added that Afilias would "be notified of future changes to the contention set status or updates regarding the status of relevant Accountability Mechanisms." ICANN further stated that it would "continue to take Afilias' comments,

⁴⁷ Mr. Herb Waye's email to Mr. Hemphill dated 19 September 2016, Ex. C-101.

and other inputs that we have sought, into consideration as we consider this matter.”⁴⁸

109. On 3 November 2016, the Board of ICANN held a Board workshop during which a briefing was presented by in-house counsel regarding the .WEB contention set (**November 2016 Workshop**).⁴⁹ A memorandum prepared by ICANN’s outside counsel and containing legal advice in anticipation of litigation regarding the .WEB contention set had been sent to “non-conflicted” ICANN Board members on 2 November 2016, in advance of the workshop.⁵⁰ As will be seen in the following section of this Final Decision, the November 2016 Workshop is of particular importance in this case. Suffice it to say for present purposes that, at least according to ICANN, during this workshop the Board “specifically [chose...] not to address the issues surrounding .WEB while an Accountability Mechanism regarding .WEB was pending”.⁵¹ That decision of the ICANN Board was not communicated to Afilias at the time. Indeed, it was first made public and disclosed to Afilias 3 ½ years later, upon the filing of the Respondent’s Rejoinder in this IRP, filed on 1 June 2020.⁵²
110. On 28 November 2016, the US District Court of the Central District of California dismissed Ruby Glen’s claims against ICANN in the Ruby Glen Litigation on the basis that “the covenant not to sue [in Module 6 of the Guidebook] bars Plaintiff’s entire action.”⁵³
111. On 18 January 2017, the Department of Justice (**DOJ**) issued a civil investigative demand to Verisign, ICANN, and others regarding Verisign’s “proposed acquisition of [NDC’s] contractual rights to the .web generic top-level domain.”⁵⁴ The DOJ requested that ICANN take no action on .WEB during the pendency of the investigation. Between February

⁵⁴ DOJ Civil Investigative Demand to Thomas Indelicarto of Verisign dated 18 January 2017, Ex. AC-31.

and June 2017, ICANN made several document productions and provided information to DOJ, Redacted - Third Party Designated Confidential Information

.⁵⁵ On 9 January 2018, a year after the issuance of the DOJ's investigative demand, the DOJ closed its investigation of .WEB without taking any action.

112. On 30 January 2018, the Donuts CEP closed, and ICANN gave Ruby Glen (the entity through which Donuts, Inc. had submitted an application for .WEB) until 14 February 2018 to file an IRP. Ruby Glen did not file an IRP in respect of .WEB.
113. On 15 February 2018, Mr. Rasco requested via email that ICANN move forward with the execution of a .WEB registry agreement with NDC in light of the termination of the DOJ investigation and the absence of any pending accountability mechanisms.⁵⁶
114. On 23 February 2018, counsel for Afilias submitted a Documentary Information Disclosure Policy (**DIDP**) request to ICANN (**Afilias' First DIDP Request**) and asked for an update on ICANN's investigation of the .WEB contention set.⁵⁷ ICANN responded to Afilias' First DIDP Request on 24 March 2018.
115. On 28 February 2018, counsel for NDC sent a formal letter to ICANN requesting that it move forward with the execution of a registry agreement for .WEB with NDC.⁵⁸
116. On 16 April 2018, counsel for Afilias wrote to the ICANN Board requesting an update on the status of the .WEB contention set, an update on the status of ICANN's investigation, and prior notification of any action by the Board related to .WEB, adding that Afilias "intend[ed] to initiate a CEP and a subsequent IRP against ICANN, if ICANN proceeds toward delegation of .WEB to NDC."⁵⁹

⁵⁵ Respondent's Rejoinder, para. 49.

⁵⁶ Mr. Rasco's email to ICANN dated 15 February 2018, Ex. C-182.

⁵⁹ Dechert's letter to the Board dated 16 April 2018, Ex. C-113.

117. On 23 April 2018, counsel for Afilias wrote to the ICANN Board to object to the non-disclosure of the documents requested in the First DIDP Request by reason of their confidentiality, and to offer to limit their disclosure to outside counsel.⁶⁰ This request was treated as a new DIDP request (**Second DIDP Request**)⁶¹. On the same date, counsel for Afilias submitted a reconsideration request challenging ICANN's response to Afilias' First DIDP Request (**Reconsideration Request 18-7**).⁶²
118. On 28 April 2018, ICANN's outside counsel wrote to counsel for Afilias, confirming that the .WEB contention set was on-hold but declining to undertake to send Afilias prior notice of a change to its status on the ground that doing so "would constitute preferential treatment and would contradict Article 2, Section 2.3 of the ICANN Bylaws."⁶³ Afilias responded to that letter on 1 May 2018, reiterating the arguments it had previously made.⁶⁴
119. On 23 May 2018, ICANN responded to Afilias' Second DIDP Request, and on 5 June 2018, Afilias' Reconsideration Request 18-7 was denied.
120. On 6 June 2018, ICANN took the .WEB contention set off-hold and notified the .WEB applicants by emailing the contacts identified in the applications.⁶⁵ In the following days, the normal process leading to the execution of a registry agreement was put in motion within ICANN in relation to the .WEB registry.
121. On 12 June 2018, Ms. Willett and other Staff approved the draft Registry Agreement for .WEB and its transmittal to NDC. On 14 June 2018, ICANN sent the draft .WEB Registry Agreement to NDC, which NDC promptly signed and returned to ICANN. On the same day, Ms. Willett and other Staff approved executing the .WEB Registry Agreement on

⁶⁰ Dechert's letter to the Board dated 23 April 2018, Ex. C-79.

⁶⁵ Exchange of emails between ICANN Staff dated 6 June 2018, Ex. C-166; and Mr. Erwin's email to Ms. Willett and Mr. Christopher Bare dated 6 June 2018, Ex. C-167.

ICANN's behalf.⁶⁶

122. On 18 June 2018, prior to ICANN's execution of the .WEB Registry Agreement, Afilias invoked a CEP with ICANN regarding the .WEB gTLD.⁶⁷ Two days later, ICANN placed the .WEB contention set back on hold to reflect Afilias' invocation of a CEP. As a result, the extant .WEB Registry Agreement was voided.⁶⁸
123. On 22 June 2018, Afilias filed a second reconsideration request (**Reconsideration Request 18-8**), seeking reconsideration of ICANN's response to Afilias' 23 April 2018 DIDP Request. On 6 November 2018, the Board, on the recommendation of the Board Accountability Mechanisms Committee, denied that request.⁶⁹
124. A week later, on 13 November 2018, ICANN wrote to counsel for Afilias to confirm that the CEP for this matter was closed as of that date and to advise that ICANN would grant Afilias an extension of time to 27 November 2018 (fourteen (14) days following the close of the CEP) to file an IRP regarding the matters raised in the CEP, if Afilias chooses to do so. As already noted, Afilias filed its Request for IRP on the following day, 14 November 2018.

IV. SUMMARY OF SUBMISSIONS AND RELIEF SOUGHT

125. The submissions made in relation to Phase II are voluminous. The Panel summarizes these submissions below. Where appropriate, the Panel refers in the analysis section of this Final Decision to those parts of the submissions and evidence found by the Panel to be most pertinent to its analysis. In reaching its conclusions, however, the Panel has considered all of the Parties' submissions and evidence.
126. The submissions made and the relief initially sought in relation to the Claimant's Rule 7 Claim are set out in detail in the Panel's Decision on Phase I. The position adopted by the Claimant in relation to its Rule 7 Claim in Phase II is discussed below, in section V.E. of

⁶⁶ Exchange of emails between ICANN Staff dated 14 June 2018, Ex. C-170.

⁶⁷ Dechert's letter to ICANN dated 18 June 2018, Ex. C-52.

⁶⁸ Exchange of emails between ICANN Staff dated 14 June 2018, Ex. C-170.

⁶⁹ ICANN, Approved Board Resolutions, Special Meeting of the ICANN Board, 6 November 2018, Ex. C-7, pp. 1-10.

this Final Decision.

A. Claimant's Amended Request for IRP

127. In its Amended Request for IRP dated 21 March 2019, the Claimant claims that the Respondent has breached its Articles and Bylaws as a result of the Board's and Staff's failure to enforce the rules for, and underlying policies of, ICANN's New gTLD Program, including the rules, procedures, and policies set out in the Guidebook and Auction Rules.⁷⁰
128. The Claimant avers that NDC ought to have disclosed the Domain Acquisition Agreement to ICANN and modified its .WEB application to reflect that it had entered into the DAA with Verisign, or to account for the implications of the agreement's terms for its application. The Claimant submits that while it is evident that NDC violated the New gTLD Program Rules, the Respondent has failed to disqualify NDC from the .WEB contention set, or to disqualify NDC's bids in the .WEB auction.
129. The Claimant contends that the Respondent has breached its obligation, under its Bylaws, to make decisions by applying its documented policies "neutrally, objectively, and fairly," in addition to breaching its obligations under international law and California law to act in good faith. The Claimant also submits that the Respondent, by these breaches, has failed to respect one of the pillars of the New gTLD Program and one of ICANN's founding principles: to introduce and promote competition in the Internet namespace in order to break Verisign's monopoly.⁷¹
130. More specifically, the Claimant contends that NDC violated the Guidebook's prohibition against the resale, transfer, or assignment of its application, as NDC transferred to Verisign crucial application rights, including the right to reach a settlement or participate in a private auction. The Claimant also asserts that NDC's bids at the .WEB auction were invalid because they were made on Verisign's behalf, reflecting what the latter was willing to pay and implying no financial risk for NDC.

⁷⁰ Amended Request for IRP, para. 2.

⁷¹ *Ibid*, para. 5.

131. By way of relief, the Claimant requested the Panel to issue a binding declaration:
- (1) that ICANN has acted inconsistently with its Articles and Bylaws, breached the binding commitments contained in the AGB, and violated international law;
 - (2) that, in compliance with its Articles and Bylaws, ICANN must disqualify NDC's bid for .WEB for violating the AGB and Auction Rules;
 - (3) ordering ICANN to proceed with contracting the Registry Agreement for .WEB with Afilias in accordance with the New gTLD Program Rules;
 - (4) specifying the bid price to be paid by Afilias;
 - (5) that Rule 7 of the Interim Procedures is unenforceable and awarding Afilias all costs associated with the additional work needed to, among other things, address arguments and filings made by Verisign and/or NDC;
 - (6) declaring Afilias the prevailing party in this IRP and awarding it the costs of these proceedings; and
 - (7) granting such other relief as the Panel may consider appropriate in the circumstances.⁷²

B. Respondent's Response

132. In its Response dated 31 May 2019, the Respondent argues that it complied with its Articles, Bylaws, and policies in overseeing the .WEB contention set disputes and resulting accountability mechanisms.

⁷² Amended Request for IRP, para. 89.

133. The Respondent contends that it thoroughly investigated claims made prior to the .WEB auction about NDC’s alleged change of control, and notes that it was not alleged at the time that NDC had an agreement with Verisign regarding .WEB. Accordingly, what the Respondent investigated was an alleged change in ownership, management or control of NDC, which it found had not occurred.
134. With regard to alleged Guidebook violations resulting from the Domain Acquisition Agreement with Verisign, the Respondent notes that due to the pendency of the DOJ investigation and various accountability mechanisms – including this IRP – its Board has not yet had an opportunity to fully evaluate the Guidebook violations alleged by the Claimant, adding that those are hotly contested and would not in any event call for automatic disqualification of NDC.⁷³
135. The Respondent explains that, with the exception of approximately two weeks in June 2018, after Afiliias’ DIDP-related Reconsideration Requests were resolved and before Afiliias initiated its CEP, the .WEB contention set has been on hold from August 2016 through today. The Respondent observes that during the entire period from July 2016 through June 2018, the Claimant took no action that could have placed the .WEB issues before the Board, although it could have.⁷⁴
136. The Respondent adds that the Guidebook breaches alleged by the Claimant “are the subject of good faith dispute by NDC and VeriSign”. The Respondent also avers that while the Claimant’s IRP “is notionally directed at ICANN, it is focused exclusively on the conduct of NDC and VeriSign to which NDC and VeriSign have responses”.⁷⁵ The Respondent argues, speaking of its Board, that deferring consideration of the alleged violations of the Guidebook until this Panel renders its final decision is within the realm of reasonable business judgment.⁷⁶

⁷³ Respondent’s Response, para. 61.

⁷⁴ *Ibid*, para. 62. As noted above, the Claimant’s second Reconsideration Request was lodged on 22 June 2018, and therefore after the Respondent placed the .WEB contention set back on hold following the Claimant’s commencement of a CEP.

⁷⁵ Respondent’s Response, para. 63.

⁷⁶ *Ibid*, para. 66.

137. The Respondent underscores that the Guidebook does not require ICANN to deny an application where an applicant failed to inform ICANN that previously submitted information has become untrue or misleading. Rather, according to ICANN, the Guidebook gives it discretion to determine whether the changed circumstances are material and what consequences, if any, should follow. By disqualifying NDC, this Panel would, in ICANN's submission, usurp the Board's discretion and exceed the Panel's jurisdiction.
138. As for the Claimant's allegation that the Domain Acquisition Agreement between NDC and Verisign is anticompetitive, the Respondent notes that this is denied by Verisign and contradicted by the DOJ's decision not to take action following its investigation into the matter. The Respondent also denies Afilias' assertion that the sole purpose of the New gTLD Program was to create competition for Verisign. The Respondent also contends, relying on the evidence of its expert economist, Dr. Carlton, that there is no evidence that .WEB will be a unique competitive check on .COM, nor that the Claimant would promote .WEB more aggressively than Verisign.
139. As regards the applicable standard of review, the Respondent submits that an IRP panel is asked to evaluate whether an ICANN action or inaction was consistent with ICANN's Articles, Bylaws, and internal policies and procedures. However, with respect to IRPs challenging the ICANN Board's exercise of its fiduciary duties, the Respondent submits that an IRP Panel is not empowered to substitute its judgment for that of ICANN. Rather, its core task is to determine whether ICANN has exceeded the scope of its Mission or otherwise failed to comply with its foundational documents and procedures.⁷⁷
140. The Respondent contends that all of Afilias' claims are time-barred under both the Bylaws in force in 2016 and the current Interim Procedures. The Bylaws in force in 2016 provided that an IRP had to be filed within thirty (30) days of the posting of the Board minutes relating to the challenged ICANN decision or action. The Interim Procedures now provide that an IRP must be filed within 120 days after a claimant becomes aware "of the material effect of the action or inaction" giving rise to the dispute, provided that an IRP may not be filed more than twelve (12) months from the date of such action or inaction.

⁷⁷ Respondent's Response, para. 55.

The Respondent contends that Afiliás' claims regarding alleged deficiencies in ICANN's pre-auction investigation accrued on 12 September 2016, when it posted minutes regarding the Board's denial of Ruby Glen's Reconsideration Request challenging that investigation. The Respondent takes the position that the facts and claims supporting the Claimant's allegations of Guidebook and Auction Rules violations were set forth in Afiliás' letters dated August and September 2016, and were therefore known to the Claimant at that time.⁷⁸

141. As for the Claimant's requested relief, the Respondent contends that it goes far beyond what is permitted by the Bylaws and calls for the Panel to decide issues that are reserved to the discretion of the Board.

C. Claimant's Reply

142. In its Reply dated 4 May 2020 (revised on 6 May 2020), the Claimant rejects ICANN's self-description as a mere not-for-profit corporation, averring that the Respondent serves as the *de facto* international regulator and gatekeeper to the Internet's DNS space, with no government oversight.⁷⁹
143. Regarding the standard of review, the Claimant denies that this case involves the exercise of the Board's fiduciary duties. The Panel is required to conduct an objective, *de novo* examination of the Dispute. Moreover, quite apart from the Board's alleged determination to defer consideration of the Claimant's claims until this Panel has issued its decision, the Claimant notes that this IRP also impugns the flawed analysis of the New gTLD Program Rules by the Staff, ICANN's inadequate investigation of the *Amici*'s conduct, its failure to disqualify NDC's application and auction bids, and its decision to proceed with contracting with NDC in respect of .WEB.⁸⁰
144. The Claimant submits that the Respondent's defences are baseless and self-contradictory:

⁷⁸ *Ibid*, paras. 73-76.

⁷⁹ Claimant's Reply, paras. 1-3.

⁸⁰ *Ibid*, para. 8.

on the one hand it argues that it appropriately handled Afiliias' concerns while on the other it asserts that its Board has deferred consideration of these concerns until the Panel's final decision in this IRP.⁸¹ The Claimant reiterates that ICANN violated its Bylaws and Articles by not disqualifying NDC's application and bids for .WEB, and in proceeding to contract with NDC for the .WEB registry agreement.

145. The Claimant contends that the New gTLD Program Rules are mandatory. In its view, it is not within ICANN's discretion to overlook violations of those rules by some applicants, such as NDC, nor to allow non-applicants like Verisign to circumvent them by "enlisting a shell like NDC".⁸² According to the Claimant, the Respondent improperly ignored NDC's clear violation of the prohibition against the resale, transfer or assignment of rights and obligations in connection with its application.
146. In addition, the Claimant contends that the public portions of NDC's application, left unchanged after its agreement with Verisign, deceived the Internet community as to the identity of the true party-in-interest behind NDC's .WEB application.⁸³ All in all, the Domain Acquisition Agreement constituted, according to the Claimant, a change of circumstances that rendered the information in NDC's application misleading, yet the Respondent did nothing to redress that situation even after it was provided with a copy of the Domain Acquisition Agreement.⁸⁴
147. In reply to the Respondent's argument that the Guidebook does not impose, but merely allows ICANN to disqualify applications containing a material misstatement, misrepresentation, or omission, the Claimant counters that the Respondent must exercise any discretion it may have in this regard consistent with its Articles and Bylaws and in accordance with its obligation towards the Internet community to implement the New gTLD Program openly, transparently and fairly, treating all applicants equally. According to the Claimant, the Respondent's position, were it accepted, would wipe away years of

⁸¹ *Ibid*, para. 20.

⁸² *Ibid*, para. 27.

⁸³ Claimant's Reply, para. 40.

⁸⁴ *Ibid*, para. 69.

carefully deliberated policy development work by the ICANN community.⁸⁵

148. The Claimant also submits that NDC's bids in the auction were invalid for failure to comply with the Auction Rules.⁸⁶ In that respect, the Claimant stresses that while the Auction Rules provide that bids must be placed by or on behalf of a Qualified Applicant, in the present case the DAA makes it clear that NDC was making bids “Redacted - Third Party Designated Confidential Information”

⁸⁷ Afilias therefore claims that the New gTLD Program Rules required ICANN to declare NDC's bids invalid and award the .WEB gTLD to Afilias, as the next highest bidder.

149. The Claimant avers that ICANN's investigation of its stated concerns was superficial, self-serving, and designed to protect itself, without the transparency, openness, neutrality, objectivity, fairness and good faith required under the Bylaws. In that respect, the Claimant stresses that the Respondent received the Domain Acquisition Agreement on 23 August 2016, and ought to have disqualified NDC's application and bids upon review of its terms.

150. Instead, the Respondent issued its 16 September 2016 Questionnaire to Afilias, Verisign, NDC and Ruby Glen, making no mention of the fact that the Respondent had already sought and received input from Verisign, nor of the fact that at the time, ICANN, Verisign and NDC had knowledge of the contents of the Domain Acquisition Agreement, whereas Afilias had not. According to the Claimant, the Questionnaire was a “pure artifice”, designed to elicit answers that would help Verisign's cause if its arrangement with NDC was challenged at a later date and to protect ICANN from the type of criticism and concerns already raised by Afilias.⁸⁸

151. The Claimant notes that there is no indication that the Respondent did anything with the responses it received to the Questionnaire, or what steps were taken to achieve an “informed resolution” of the concerns raised by Afilias. What is known is merely that the

⁸⁵ *Ibid*, para. 85.

⁸⁶ *Ibid*, para. 88.

⁸⁷ *Ibid*, para. 95.

⁸⁸ Claimant's Reply, para. 114.

Board decided not to make a determination on the merits on Afilias' contentions against Verisign and NDC until all accountability mechanisms had been concluded, and that on 6 June 2018, the Respondent decided to remove the .WEB contention set from its on-hold status and to proceed with the delegation of .WEB to NDC. This, the Claimant asserts, suggests that the Respondent had in fact made a determination on the merits of Afilias' contentions.⁸⁹

152. According to the Claimant, ICANN must exercise its discretion insofar as the application of the New gTLD Program Rules is concerned consistently with what the Claimant describes as the Respondent's competition mandate, that is, the mandate to promote competition and to constrain the market power of .COM.⁹⁰ In the Claimant's view, the DOJ's investigation is irrelevant to deciding this IRP as the DOJ's official policy is that no inference should be drawn from a decision to close a merger investigation without taking further action.
153. In response to the Respondent's contention that its claims are time-barred, the Claimant argues that the lack of merit of this defence is underscored by the Respondent's assertion that the Claimant's claims are in one sense premature and in another sense overdue. The Claimant recalls that (1) between August 2016 and the end of 2016, ICANN represented that it would seek the informed resolution of Afilias' concerns, and keep Afilias informed of the outcome; (2) between January 2017 and January 2018, the DOJ was conducting its antitrust investigation, and had asked ICANN to take no action on .WEB; and (3) between January 2018 and June 2018, Afilias repeatedly asked ICANN for information about the status of .WEB, which ICANN failed to provide until the Claimant was notified that the .WEB contention set had been taken off-hold, whereupon Afilias invoked the Cooperative Engagement Process.⁹¹
154. The Claimant disputes that the complaints it made in its 2016 letters are the same as those relied upon in its Amended Request for IRP: the former were based on public information

⁸⁹ *Ibid*, para. 118.

⁹⁰ *Ibid*, paras. 125-128.

⁹¹ Claimant's Reply, paras. 137-139.

only, and requested an investigation; the latter were prompted by the realization that in spite of its requests that NDC's application and bids be disqualified, ICANN had now signaled that it was proceeding to contract with NDC.

155. The Claimant contends that the Respondent misstates the relief that an IRP Panel may order. According to the Claimant, the Panel has the power to issue "affirmative declaratory relief" requiring the Respondent to disqualify NDC's application and bids and to offer the Claimant the rights to .WEB.⁹²

D. Respondent's Rejoinder

156. In its Rejoinder Memorial dated 1 June 2020, the Respondent states that a feature that sets this IRP apart is that ICANN has not yet fully addressed the ultimate dispute underlying the Claimant's claims.⁹³ In that respect, the Respondent stresses that, since the inception of the New gTLD Program, it placed applications and contention sets "on hold" when related accountability mechanisms were initiated.⁹⁴ In its view, the Respondent followed its processes by specifically choosing, in November 2016, not to address the issues surrounding .WEB while an accountability mechanism regarding that gTLD was pending.⁹⁵ When it received the Domain Acquisition Agreement in August of 2016, ICANN did not disqualify NDC's application because the .WEB contention set was on hold at that time due to a pending accountability mechanism by the parent company of another .WEB applicant.⁹⁶ The Respondent argues that it was reasonable for the Board to make this choice because the results of the accountability mechanism, and the subsequent DOJ investigation, could have had an impact on any eventual analysis ICANN might be called upon to make.⁹⁷

157. The Respondent explains that, in the November 2016 Workshop, Board members and

⁹² *Ibid*, paras. 147-155.

⁹³ Respondent's Rejoinder, para. 1.

⁹⁴ *Ibid*, paras. 2 and 89.

⁹⁵ *Ibid*, paras. 3 and 89.

⁹⁶ *Ibid*, para. 4.

⁹⁷ *Ibid*, paras. 41 and 91.

ICANN's in-house counsel discussed the issue of .WEB and chose to not take any action at that time regarding .WEB because an accountability mechanism was pending regarding .WEB. The Respondent states that it did not seem prudent for the Board to interfere with or pre-empt the issues that were the subject of the accountability mechanism. The Respondent underscores that the Claimant does not explain how the Board's determination not to make a decision regarding .WEB during the pendency of an accountability mechanism or other legal proceedings on the same issue represents an inconsistent application of documented policies.⁹⁸

158. Responding to the Claimant's suggestion that ICANN was beholden to Verisign, the Respondent avers that it has an arms-length relationship with Verisign which is no different from ICANN's relationship with other registry operators, including Afilias.⁹⁹
159. Regarding the applicable standard of review, the Respondent argues that the Panel must apply a *de novo* standard in making findings of fact and reviewing the actions or inactions of individual directors, officers or Staff members, but has to review actions or inactions of the Board only to determine whether they were within the realm of reasonable business judgment. In other words, in the Respondent's view, it is not for the Panel to opine on whether the Board could have acted differently than it did.¹⁰⁰
160. The Respondent maintains that the Claimant's claims regarding actions or inactions of ICANN in August through October 2016 are time-barred under Rule 4 of the Interim Procedures.¹⁰¹ The Respondent stresses that the Claimant's IRP was filed more than two (2) years after it sent letters complaining about the auction and NDC's relationship with Verisign.¹⁰² According to the Respondent, the Claimant was aware, in 2016, of the actions and inactions that it seeks to challenge, along with the material effect of those

⁹⁸ Respondent's Rejoinder, paras. 40-41 and 92.

⁹⁹ *Ibid*, paras. 51-53.

¹⁰⁰ *Ibid*, paras. 54-62.

¹⁰¹ *Ibid*, paras. 9 and 63-64.

¹⁰² *Ibid*, para. 65.

actions, even if it did not have a copy of the Domain Acquisition Agreement.¹⁰³ In any event, the Respondent contends that the Claimant ignores the final clause of Rule 4, which states that a statement of dispute may not be filed more than twelve (12) months from the date of the challenged action or inaction.¹⁰⁴ Responding to the equitable estoppel argument advanced by the Claimant, the Respondent argues that there is nothing in its 2016 letters to suggest that it encouraged the Claimant to delay the filing of an IRP, and that the Claimant has not alleged that it relied on those letters in deciding not to file an IRP.¹⁰⁵ The Respondent also notes that the Claimant was represented by experienced counsel throughout the period at issue.¹⁰⁶

161. Responding to the Claimant's contentions pertaining to its post-auction investigation, the Respondent notes that the Claimant asserted no claim in that regard in its Amended Request for IRP, which focussed on pre-auction rumors.¹⁰⁷ In addition, the Respondent avers that its post-auction investigation was prompt, thorough, fair, and fully consistent with its Bylaws and Articles.¹⁰⁸
162. The Respondent also observes that the Guidebook and Auction Rules violations alleged by the Claimant do not require the automatic disqualification of NDC and instead that ICANN is vested with significant discretion to determine what the penalty or remedy should be, if any.¹⁰⁹
163. The Respondent contends that it has, as yet, taken no position on whether NDC violated the Guidebook.¹¹⁰ The Respondent adds that determining whether NDC violated the Guidebook "is not a simple analysis that is answered on the face of the Guidebook" which,

¹⁰³ *Ibid*, paras. 66-70.

¹⁰⁴ Respondent's Rejoinder, paras. 64-65.

¹⁰⁵ *Ibid*, paras. 72-75.

¹⁰⁶ *Ibid*, paras. 76-78.

¹⁰⁷ *Ibid*, paras. 104-105.

¹⁰⁸ *Ibid*, paras. 8 and 107-113.

¹⁰⁹ *Ibid*, paras. 80-88.

¹¹⁰ *Ibid*, para. 81.

according to the Respondent, includes no provision that squarely addresses an arrangement like the Domain Acquisition Agreement. The Respondent submits that a “true determination of whether there was a breach of the Guidebook requires an in-depth analysis and interpretation of the Guidebook provisions at issue, their drafting history to the extent it exists, how ICANN has handled similar situations, and the terms of the DAA”. The Respondent argues that “[t]his analysis must be done by those with the requisite knowledge, expertise, and experience, namely ICANN.”¹¹¹

164. The Respondent notes, referring to the evidence of the *Amici*, that there have been a number of arrangements that appear to be similar to the DAA in the secondary market for new gTLDs.¹¹² Because it has the ultimate responsibility for the New gTLD Program, the Board has reserved the right to individually consider any application to determine whether approval would be in the best interest of the Internet community.¹¹³
165. Turning to the Claimant’s arguments regarding competition, the Respondent denies that it has exercised its discretion to benefit Verisign, repeating that it has not “fully evaluated” the Domain Acquisition Agreement – and NDC’s related conduct – because the .WEB contention set has been on hold due to the invocation of ICANN’s accountability mechanisms and the DOJ investigation. Accordingly, the Claimant’s assertion that the Respondent has violated its so-called “competition promotion mandate” is not ripe for consideration.¹¹⁴
166. The Respondent adds that it is not required or equipped to make judgment about which applicant for a particular gTLD would more efficiently promote competition. Rather, ICANN complies with its core value regarding competition by coordinating and implementing policies that facilitate market-driven competition, and by deferring to the appropriate government regulator, such as the DOJ, the investigation of potential competition issues. The Respondent notes, pointing to the evidence of Drs. Carlton and

¹¹¹ *Ibid*, para. 82.

¹¹² Respondent’s Rejoinder, para. 83.

¹¹³ *Ibid*, para. 87.

¹¹⁴ *Ibid*, para. 95.

Murphy, that there is no evidence that Verisign's operation of .WEB would restrain competition.¹¹⁵

167. Finally, the Respondent argues that the Claimant seeks relief which is beyond the Panel's jurisdiction and not available in these proceedings. While the Panel is empowered to declare whether the Respondent complied with its Articles and Bylaws, it cannot disqualify NDC's application, or bid, and offer Claimant the rights to .WEB.¹¹⁶

E. The *Amici*'s Briefs

1. NDC's Brief

168. In its *amicus* brief dated 26 June 2020, NDC alleges that ICANN has approved many post-delegation assignments of registry agreements for new gTLDs pursuant to pre-delegation financing and other similar agreements.¹¹⁷ NDC notes that Afilias itself has participated extensively in the secondary market for new gTLDs.¹¹⁸
169. NDC argues that, having won the auction, it has the right and ICANN has the obligation under the Guidebook to execute the .WEB registry agreement, subject to compliance with the appropriate conditions. Although additional steps remain before the delegation of .WEB, NDC characterizes those as routine and administrative.¹¹⁹
170. Turning to the Panel's jurisdiction, NDC stresses that the Panel's remedial powers are significantly circumscribed. Section 4.3(o) of the Bylaws provides a closed list that only authorizes the Panel to take the actions enumerated therein. NDC contends that while the Panel is authorized to determine whether ICANN violated its Bylaws, it cannot decide the Claimant's claims on the merits or grant the affirmative relief sought by Afilias.¹²⁰

¹¹⁵ *Ibid.*, paras. 94-103.

¹¹⁶ *Ibid.*, paras. 114-124.

¹¹⁷ NDC's Brief, paras. 32-37.

¹¹⁸ *Ibid.*, paras. 38-39.

¹¹⁹ *Ibid.*, paras. 55-56.

¹²⁰ *Ibid.*, paras. 64-69.

171. NDC further argues that Section 4.3(o) does not permit the Panel to second-guess the Board's reasonable business judgment. If the Panel finds that there has been a violation of the Bylaws, the proper remedy is to issue a declaration to that effect. It would then be up to the Board to exercise its business judgment and decide what action to take in light of such declaration.¹²¹
172. According to NDC, the Panel's limited remedial authority is consistent with the terms of the Guidebook providing that ICANN retains the sole decision-making authority with respect to the Claimant's objections and NDC's .WEB application. NDC submits that only ICANN possesses the required expertise and resources to craft DNS policy and to weight the competing interests and policies that would factor into a decision on .WEB.¹²²
173. NDC argues that if ICANN were to find that NDC violated the Guidebook or other applicable rules, ICANN's discretion to make determinations regarding gTLD applications would offer it a wide range of possible reliefs, not limited to the relief that the Claimant has asked the Panel to grant.¹²³
174. Responding to the Claimant's argument that IRP decisions are intended to be final and enforceable, NDC contends that the binding nature of a dispute resolution procedure and the enforceability of a decision arising out of such procedure cannot expand the scope of the adjudicator's circumscribed remedial jurisdiction.¹²⁴ In that regard, the Cross-Community Working Group for Accountability (CCWG) did not, contrary to the Claimant's contention, recommend that IRP panels should be authorized to dictate a remedy in cases in which ICANN would be found to have violated its Articles or Bylaws. Rather, the CCWG stated that an IRP would result in a declaration that an action/failure to act complied or did not comply with ICANN's obligations.¹²⁵

¹²¹ *Ibid*, paras. 70-74.

¹²² NDC's Brief, paras. 75-79.

¹²³ *Ibid*, para. 80.

¹²⁴ *Ibid*, paras. 81-84.

¹²⁵ *Ibid*, paras. 85-89.

175. Finally, NDC denies making any material misrepresentations to ICANN, as there had been no change to its management, control or ownership since the filing of its .WEB application.¹²⁶ NDC also contends that it did not violate any ICANN rules by agreeing with Verisign to a post-auction transfer of .WEB. In arranging for such a post-auction transfer, NDC asserts that it acted consistently with what the industry understood was permissible.¹²⁷ In that respect, NDC argues that Afiliás' own participation in the secondary market – on both sides of transfers – belies its protestations in this case.¹²⁸ In addition, NDC submits that Afiliás itself violated the Guidebook by contacting NDC during the Blackout Period.¹²⁹
176. For these reasons, NDC requests that the Panel deny in its entirety the relief requested by the Claimant.¹³⁰

2. Verisign's Brief

177. In its *amicus* brief also dated 26 June 2020, Verisign declares that it joins in the sections of NDC's brief setting forth the background of this IRP and the scope of the Panel's authority, including as to the issues properly presented to the Panel for decision. In the submission of Verisign, the only question properly before the Panel is whether ICANN violated its Bylaws when it decided to defer a decision on the Claimant's objections, and the Panel should decline to determine the merits or lack thereof of these objections, or to award .WEB to the Claimant. According to Verisign, the Domain Acquisition Agreement complies with the Guidebook, is consistent with industry practices under the New gTLD Program, and there is no basis for refusing to delegate .WEB based on ICANN's mandate to promote competition.¹³¹
178. The Domain Acquisition Agreement, according to its terms, does not constitute a resale,

¹²⁶ *Ibid*, paras. 96-99.

¹²⁷ *Ibid*, paras. 100-107.

¹²⁸ *Ibid*, paras. 108-113.

¹²⁹ *Ibid*, paras. 114-119.

¹³⁰ *Ibid*, para. 120.

¹³¹ Verisign's Brief, pp. 1-2.

assignment, or transfer of rights or obligations with respect to NDC's .WEB application, nor does it require Verisign's consent for NDC to take any action necessary to comply with the Guidebook or with NDC's obligations under the application. Verisign argues that the only sale, assignment or transfer contemplated in the Domain Acquisition Agreement is the possible future and conditional assignment of the registry agreement for .WEB. Verisign contends that Section 10 of Module 6 of the Guidebook is intended to limit the acquisition of rights over the gTLD *by applicants*, providing that applicants would only acquire rights with respect to the subject gTLD upon execution of a post-delegation registry agreement with ICANN. Verisign contends that Section 10 does not prohibit future transfers of rights. Verisign further argues that restrictions on the assignment or transfer of a contract are to be narrowly construed consistent with the purpose of the contract.¹³² Verisign argues that the Domain Acquisition Agreement provides only for a possible future assignment of the registry agreement of .WEB upon ICANN's prior consent.¹³³

179. Verisign avers that the Domain Acquisition Agreement is consistent with industry practices under the Guidebook, including assignments of gTLDs approved by ICANN. According to Verisign, there exists a robust secondary marketplace with respect to the New gTLD Program in which Afilias itself has participated. Verisign argues that the Domain Acquisition Agreement contemplates nothing more than what has already often occurred under the Program.¹³⁴ Verisign further claims that it would be fundamentally unfair – and a violation of the equal treatment required under the Bylaws – if ICANN or the Panel were to adopt a new interpretation of the anti-assignment provision of the Guidebook.¹³⁵
180. In addition, Verisign argues that the drafting history of the Guidebook contradicts the Claimant's claims. According to Verisign, ICANN purposely declined to include proposed limits on post-delegation assignments of registry agreements, choosing instead to rely on ICANN's right, upon a post-delegation request for assignment of a registry agreement, to

¹³² *Ibid*, paras. 2-4, 6 and 11-20.

¹³³ *Ibid*, paras. 4 and 21-34.

¹³⁴ Verisign's Brief, paras. 5, 9-10 and 35-45.

¹³⁵ *Ibid*, para. 46.

approve such assignment.¹³⁶

181. Verisign contends that, in an attempt to contrive support for its contention that NDC sold the application to Verisign, the Claimant takes out of context select obligations of NDC under the Domain Acquisition Agreement to protect Verisign’s loan of funds to NDC for the auction.¹³⁷ Redacted - Third Party Designated Confidential Information

¹³⁸ In addition, Verisign underscores that there was no obligation for NDC to disclose Verisign’s support in the resolution of the contention set. As Verisign puts it, “confidentiality in such matters is common”.¹³⁹

182. Verisign argues that the Guidebook requires an amendment to the application only when previously submitted information becomes untrue or inaccurate, which was not the case here since the Domain Acquisition Agreement did not make Verisign the owner of NDC’s application.¹⁴⁰ Furthermore, Verisign asserts that the mission statement in a new gTLD application is irrelevant to its evaluation.¹⁴¹

183. Verisign also argues that there is no basis for refusing to delegate .WEB based on ICANN’s mandate to promote competition.¹⁴² According to Verisign, ICANN has no regulatory authority – including over matters of competition – and was not intended to supplant existing legal structures by establishing a new system of Internet governance.¹⁴³ In Verisign’s submission, ICANN has acted upon its commitment to enable competition by helping to create the conditions for a competitive DNS and by referring competition

¹³⁶ *Ibid*, paras. 49-51.

¹³⁷ *Ibid*, para. 52.

¹³⁸ *Ibid*, para. 57.

¹³⁹ *Ibid*, para. 62.

¹⁴⁰ *Ibid*, paras. 65-76.

¹⁴¹ *Ibid*, paras. 77-86.

¹⁴² *Ibid*, paras. 88-93.

¹⁴³ Verisign’s Brief, paras. 94-101.

issues to the relevant authorities.¹⁴⁴

184. Verisign claims that there is no threat or injury to competition resulting from its potential operation of the .WEB registry, and that the Claimant has submitted no economic evidence to support the contrary view.¹⁴⁵ Verisign further stresses that it does not have a dominant market position and that it is not a “monopoly”, as it has less than 50% of the relevant market.¹⁴⁶ In the view of the expert economists retained by Verisign and the Respondent, there is no evidence that .WEB will be a particularly significant competitive check on .COM.¹⁴⁷
185. Verisign concludes by reiterating that this Panel should only determine whether ICANN properly exercised its reasonable business judgment when it deferred making a decision on Afiliás’ claims regarding the .WEB auction. To the extent that the Panel considers the substance of the Claimant’s claims, Verisign submits that they are meritless and should be rejected.¹⁴⁸

F. Parties’ Responses to *Amici*’s Briefs

1. Afiliás’ Response to *Amici*’s Briefs

186. The Claimant begins its 24 July 2020 Response to the *Amici*’s Briefs by addressing what it describes as the omissions and misrepresentations of key facts in the *Amici*’s submissions.¹⁴⁹ The Claimant insists on the fact that Verisign failed to apply for .WEB by the set deadline¹⁵⁰ and provides no explanation for that failure. It observes that had Verisign applied for .WEB in 2012, its status as an applicant would have been known and the public

¹⁴⁴ *Ibid.*, paras. 102-107.

¹⁴⁵ *Ibid.*, paras. 108-112.

¹⁴⁶ *Ibid.*, paras. 112-119.

¹⁴⁷ *Ibid.*, paras. 125-134.

¹⁴⁸ *Ibid.*, para. 140.

¹⁴⁹ Claimant’s Response to *Amici*’s Briefs, paras. 5-66.

¹⁵⁰ While not material to the issues in dispute, there is some confusion in the Claimant’s submissions as to what the deadline was. In the Claimant’s Response, the deadline is said to be 13 June 2012 (para. 9); in the Claimant’s PHB, it is said to be 20 April 2012 (para. 10); while in the Joint Chronology, it is stated that it was 30 May 2012.

portions of its application would have been available for the public and governments to comment upon.¹⁵¹

187. Turning to the circumstances of the execution of the Domain Acquisition Agreement, the Claimant notes that as a small company with limited funding, NDC had no chance of obtaining .WEB for itself and was thus the perfect vehicle to allow Verisign to fly “under the radar” of the other .WEB applicants and to blindsides them with a high bid that none could have seen coming.¹⁵² The Claimant asks, if the *Amici* believed that their arrangement complied with the New gTLD Program Rules, why go through such lengths to conceal the Domain Acquisition Agreement not only to their competitors, but also to ICANN.¹⁵³ The Claimant notes in this regard Verisign’s inquiry to ICANN, shortly after the execution of the DAA, about ICANN’s practice when approached to approve the assignment of a new registry agreement. On that occasion, Verisign mentioned neither the DAA, nor .WEB.¹⁵⁴ The Claimant vehemently denies that the other transactions identified by the *Amici* as industry practice are analogous to the Domain Acquisition Agreement.¹⁵⁵
188. According to the Claimant, the *Amici*’s pre-auction conduct, including the execution of the Confirmation of Understandings of 26 July 2016, also exemplifies their concerted attempts to conceal the DAA and Verisign’s interest in .WEB. In regard to the post-auction period, the Claimant argues that the *Amici* misrepresent the Claimant’s letters of 8 August and 9 September 2016 as asserting the same claims as those made in this IRP, and adds that they have failed to explain how and why ICANN’s outside counsel came to contact Verisign’s outside counsel, by phone, to request information about the DAA.
189. With respect to the *Amici*’s reliance on ICANN’s purported “decision not to decide” of November 2016, the Claimant denies the existence of the “well-known practice” upon which the Board’s decision was allegedly based; states that this alleged practice is

¹⁵¹ Claimant’s Response to *Amici*’s Briefs, paras. 8-16.

¹⁵² *Ibid*, para. 20.

¹⁵³ *Ibid*, para. 22.

¹⁵⁴ *Ibid*, paras. 24-29.

¹⁵⁵ *Ibid*, para. 23.

inconsistent with ICANN’s conduct at the time; that not taking action on a contention set while an accountability mechanism is pending is not among ICANN’s documented policies;¹⁵⁶ that ICANN never informed Afiliás of such decision until well into this IRP;¹⁵⁷ and that such decision is not even documented.¹⁵⁸

190. The Claimant also notes that there is no indication that the Staff had undertaken any analysis of the compatibility of the DAA with the New gTLD Program Rules when the Staff moved toward contracting with NDC in June 2018, as soon as the Board rejected Afiliás’ request to reconsider the denial of its most recent document disclosure request.¹⁵⁹ Nor is it known what assessment of that question had been made by the Board. In this regard, the Claimant claims there is a contradiction between the Respondent’s statement in this IRP that it has not yet considered the Claimant’s complaints, and the Respondent’s submission to the Emergency Arbitrator that ICANN had evaluated these complaints.¹⁶⁰

191. According to the Claimant, the *Amici* misrepresent the nature of the Domain Acquisition Agreement. The Claimant notes that Redacted - Third Party Designated Confidential Information and were therefore not “executory” in nature.¹⁶¹ The Claimant also rejects any analogy between the Domain Acquisition Agreement and a financing agreement.¹⁶² In the Claimant’s submission, it is self-evident that the DAA was an attempt to circumvent the New gTLD Program Rules, and this should have been patently clear to the Staff and Board upon its review. The Domain Acquisition Agreement makes plain that NDC resold, assigned or transferred to Verisign several rights and obligations in its application for .WEB, including: Redacted - Third Party Designated Confidential Information

¹⁵⁶ *Ibid*, paras. 54-55.

¹⁵⁷ Claimant’s Response to *Amici*’s Briefs, para. 56.

¹⁵⁸ *Ibid*, paras. 49-58.

¹⁵⁹ *Ibid*, para. 62.

¹⁶⁰ *Ibid*, para. 65.

¹⁶¹ *Ibid*, paras. 67-71.

¹⁶² *Ibid*, paras. 72-73.

192. The Claimant avers that NDC violated the Guidebook by failing to promptly inform ICANN of the terms of the Domain Acquisition Agreement since those terms made the information previously submitted in NDC's .WEB application untrue, inaccurate, false or misleading. The Claimant stresses that the Guidebook does not exempt the section of the application that details the applicant's business plan from the obligation to notify changes to ICANN. In any event, NDC also failed to update its responses regarding the technical aspects of NDC's planned operation of the .WEB registry. The Claimant argues as well that NDC intentionally failed to disclose the Domain Acquisition Agreement prior to the auction, when Mr. Rasco was specifically asked whether there were any changed circumstances needing to be reported to ICANN.¹⁶⁴
193. The Claimant reiterates its arguments about NDC having violated the Guidebook by submitting invalid bids – made on behalf of a third party – at the .WEB auction. In the Claimant's submission, the *Amici's* examples of market practice are inapposite for a variety of reasons, and none of them reflects the level of control that the Domain Acquisition Agreement gave Verisign.¹⁶⁵
194. Responding to the *Amici's* arguments pertaining to the discretion enjoyed by ICANN in the administration of the New gTLD Program, the Claimant contends that such discretion is circumscribed by the Articles and Bylaws, as well as principles of international law, including the principle of good faith.¹⁶⁶ The Claimant underscores that the Bylaws require ICANN to operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness. The Claimant argues that due process and procedural fairness require, among other procedural protections, that decisions be based on evidence and on appropriate inquiry into the facts. According to the Claimant,

¹⁶³ *Ibid*, paras. 74-98.

¹⁶⁴ Claimant's Response to *Amici's* Briefs, paras. 99-114.

¹⁶⁵ *Ibid*, paras. 121-136.

¹⁶⁶ *Ibid*, paras. 140-144.

ICANN repeatedly failed to comply with those principles in regards to Afiliás' claims. The Claimant notes again that even in this IRP the Respondent has taken diametrically opposed positions as to whether or not it has evaluated Afiliás' concerns.¹⁶⁷

195. The Claimant also argues that ICANN is required by its Bylaws to afford impartial and non-discriminatory treatment, an obligation that is consistent with the principles of impartiality and non-discrimination under international law. The Claimant submits that, upon receipt of the Domain Acquisition Agreement, and without conducting any investigation on the matter, ICANN accepted the *Amici*'s positions on their agreement at face value, and incorporated them into a questionnaire that was designed to elicit answers to advance the *Amici*'s arguments, and that was based on information that ICANN and the *Amici* had in their possession – but which they knew was unavailable to Afiliás.¹⁶⁸
196. The Claimant avers that the Respondent also failed to act openly and transparently as required by the Articles, Bylaws and international law. The Claimant contends that, far from acting transparently, ICANN allowed NDC to enable Verisign to secretly participate in the .WEB auction in disregard of the New gTLD Program Rules, failed to investigate NDC's conduct and instead proceeded to delegate .WEB to NDC in an implicit acceptance of its conduct at the auction, all the while keeping Afiliás in the dark about the status of its investigation regarding the .WEB gTLD for nearly two years.¹⁶⁹ The Claimant further claims that the Respondent failed to respect its legitimate expectations despite its commitment to make decisions by applying documented policies consistently, neutrally, objectively and fairly. According to the Claimant, had the Respondent followed the New gTLD Program Rules, it would necessarily have disqualified NDC from the application and bidding process.¹⁷⁰
197. As regards the applicable standard of review, the Claimant denies that the Board's conduct in November 2016 constitutes a decision protected by the business judgment rule. The

¹⁶⁷ *Ibid*, paras. 145-147.

¹⁶⁸ Claimant's Response to *Amici*'s Briefs, paras. 148-149.

¹⁶⁹ *Ibid*, paras. 151-158.

¹⁷⁰ *Ibid*, paras. 159-161.

Claimant also stresses that neither the *Amici* nor the Respondent assert that the business judgment rule applies to the decision taken by ICANN in June 2018 to proceed with delegating .WEB to NDC. The Claimant takes the position that its claims regarding (1) the Respondent's failure to disqualify NDC, (2) its failure to offer Afilias the rights to .WEB and (3) the delegation process for .WEB after a superficial investigation of the Claimant's complaints, do not concern the Board's exercise of its fiduciary duties. The Claimant contends finally that, even assuming *arguendo* that the business judgment rule has any application, the secrecy regarding the Board's November 2016 conduct makes it impossible for this Panel to evaluate the reasonableness of that conduct.¹⁷¹

198. Responding to the *Amici*'s claims regarding its own conduct, the Claimant denies having violated the Blackout Period. It contends that the provisions relating to Blackout Period are designed to prevent bid rigging and do not prohibit any and all contact among the members of the contention set.¹⁷²
199. The Claimant states that the *Amici* misrepresent the scope and effect of ICANN's competition mandate. The Claimant argues that ICANN must act to promote competition pursuant to its Bylaws, and that it failed to do so when it permitted Verisign to acquire .WEB in a program designed to challenge .COM's dominance. The Claimant stresses that Dr. Carlton – the economist retained by the Respondent – expressed views on the competitive benefits of introducing new gTLDs in 2009 that differ from those expressed in his report prepared for the purpose of this IRP.¹⁷³ According to the Claimant, any decision furthering Verisign's acquisition of .WEB is inconsistent with ICANN's competition mandate. In the Claimant's view, .WEB cannot be considered as "just another gTLD", since it has been uniquely identified by members of the Internet community as the next best competitor for .COM. The Claimant contends that the high price paid by Verisign for .WEB was at least partly driven by the benefits it would derive from keeping that

¹⁷¹ *Ibid*, paras. 165-178.

¹⁷² *Ibid*, paras. 179-184.

¹⁷³ Claimant's Response to *Amici*'s Briefs, paras. 164 and 185-198.

competitive asset out of the hands of its competitors.¹⁷⁴ The Claimant reiterates its submission that the DOJ's decision to close its investigation is irrelevant to the Panel's analysis.¹⁷⁵

200. Turning to the Panel's remedial authority, the Claimant argues that the *Amici* are wrong in asserting that the Panel's authority is limited to issuing a declaration as to whether ICANN acted in conformity with its Articles and Bylaws when its Board deferred making any decision on .WEB in November 2016. The Claimant urges that meaningful and effective accountability requires review and redress of ICANN's conduct. In that regard, the Claimant invokes the international law principle that any breach of an engagement involves an obligation to make reparation.¹⁷⁶ Finally, the Claimant contends that the Panel must determine the scope of its authority based on the text, context, object and purposes of the IRP, and not only on Section 4.3(o) of the Bylaws, which is not exhaustive and should be read, *inter alia*, with reference to Section 4.3(a).¹⁷⁷

2. ICANN's Response to the *Amici*'s Briefs

201. In its brief Response dated 24 July 2020 to the *Amici*'s Briefs, the Respondent notes that the position advocated by the *Amici* in their respective briefs is generally consistent with its own position as regards the following three (3) issues: (1) the Panel's jurisdiction and remedial authority, (2) the nature and implications of the Bylaws' provisions in relation to competition, and (3) whether Verisign's potential operation of .WEB would be anticompetitive.¹⁷⁸
202. The Respondent reiterates that it does not take a position on what it describes as the Claimant's and NDC's "allegations against each other" regarding their respective pre-auction, and auction conduct, or whether NDC violated the Guidebook and Auction

¹⁷⁴ *Ibid*, paras. 199-209.

¹⁷⁵ *Ibid*, paras. 210-213.

¹⁷⁶ *Ibid*, paras. 218-220.

¹⁷⁷ *Ibid*, paras. 223-236.

¹⁷⁸ Respondent's Response to *Amici*'s Briefs, paras. 2-6.

Rules by the execution of the DAA, adding that it will consider those issues after this IRP concludes.¹⁷⁹

G. Post-Hearing Submissions

203. The Parties and *Amici* have filed comprehensive post-hearing submissions in which they have reiterated their respective positions on all issues in dispute. In the summary below, the Panel focuses on those aspects of the post-hearing submissions that comment on the hearing evidence, or put forward new points.

1. Claimant's Post-Hearing Brief

204. In its Post-Hearing Brief dated 12 October 2020, the Claimant argues that the two fundamental questions before the Panel are whether the Respondent was required to (i) determine that NDC is ineligible to enter into a registry agreement for .WEB for having violated the New gTLD Program Rules and, if so, (ii) offer the .WEB gTLD to the Claimant. The Claimant submits that the hearing evidence leaves no doubt that these questions must be answered in the affirmative.

205. The evidence revealed that the Respondent's failure to act upon the Claimant's complaints was a result of the unjustified position that these were motivated by "sour grapes" for having lost the auction. According to the Claimant, this attitude permeated every aspect of the Respondent's consideration of the Claimant's concerns, including its decision, in the course of 2018, to approve a gTLD registry contract for NDC.¹⁸⁰

206. The Claimant notes that Ms. Willett acknowledged that the decision of an applicant to participate in an Auction of Last Resort is one of the applicant's rights under a gTLD application. Redacted - Third Party Designated Confidential Information ^{.181}

207. The Claimant argues that the evidence of Mr. Livesay confirms the competitive significance of .WEB, in that Verisign's CEO was directly involved in the 2014 initiative

¹⁷⁹ *Ibid*, para. 7.

¹⁸⁰ Claimant's PHB, paras. 1-2.

¹⁸¹ Claimant's PHB, para. 16.

to seek to participate in the gTLD market. Mr. Livesay also confirmed, as did Mr. Rasco, that Redacted - Third Party Designated Confidential Information

According to the Claimant, the evidence of these witnesses demonstrates that they harboured serious doubts as to whether they were acting in compliance with the Program Rules; otherwise, why conceal the DAA's terms from ICANN's scrutiny, and keep Verisign's involvement in NDC's application hidden from the Internet community? In sum, the Claimant submits that the *Amici's* conduct evidence an attempt to "cheat the system".¹⁸²

208. In the pre-auction period, the Claimant focuses on Mr. Rasco's representation to the Ombudsman that there had been no changes to the NDC application, a statement that cannot be reconciled with the terms of the DAA, according to the Claimant. Also plainly incorrect, in the submission of the Claimant, is Mr. Rasco's assurance to Ms. Willett, as evidenced in the latter's email communication to the Ombudsman, that the decision not to resolve the contention set privately "was in fact his".
209. The Claimant notes that from the moment Verisign's involvement in NDC's application for .WEB was made public, the Respondent treated Verisign as though it was the *de facto* applicant for .WEB, for example, by directly contacting Verisign about questions concerning NDC's application and working with Verisign on the delegation process for .WEB. In regard to Verisign's detailed submission of 23 August 2016, which included a copy of the DAA, the Claimant notes that only the Claimant's outside counsel and Mr. Scott Hemphill have been able to review it and that the Internet community remains unaware of the Agreement's details. The Claimant finds surprising that Ms. Willett, in spite of her leadership position within ICANN in respect of the Program, would have never reviewed – indeed seen – the DAA, or Verisign's 23 August 2016 letter.¹⁸³
210. The Claimant also notes Ms. Willett's inability to address questions concerning the Questionnaire that was sent to some contention set members under cover of her letter

¹⁸² *Ibid*, paras. 21-23.

¹⁸³ *Ibid*, paras. 46-56.

dated 16 September 2016, including the fact that some questions were misleading for anyone, such as the Claimant, who had no knowledge of the terms of the DAA. The Claimant also notes that the Respondent presented no evidence explaining what it did with the responses to the Questionnaire, other than Mr. Disspain confirming that the responses were never considered by the Board.

211. Turning to the “load-bearing beam of ICANN’s defense in this case”, the November 2016 Board decision to defer consideration of Afilias’ complains, the Claimant submits that the evidence belies that any such decision was in fact made. Rather, according to the Claimant, both Ms. Burr and Mr. Disspain testified that ICANN simply adhered to its practice to put the process on hold once an accountability mechanism has been initiated, a practice that the Claimant says has not been proven in fact to exist. The Claimant quotes the evidence of Ms. Willett, who testified that work and communications within ICANN would continue while an accountability mechanism was pending, simply that the contention set would not move to the next phase; and points to the fact that the Staff were engaging with NDC and Verisign in December 2017 and January 2018 on the subject of the assignment of .WEB even though Ruby Glen had not yet resolved its CEP, or ICANN considered Afilias’ concerns. The Claimant also sees a contradiction between the Respondent’s claim that it has not yet taken a position on the merits of Afilias’ complaints, and the evidence of Ms. Willett that ICANN would not delegate a gTLD until a pending matter was resolved.¹⁸⁴
212. The Claimant reviews in its PHB the evidence concerning the genesis of Rule 7 of the Interim Procedures, as it reveals the degree to which, in its submission, the Respondent was willing to go to make things easier for itself and for Verisign to defend against future efforts by the Claimant to challenge ICANN’s conduct. The Claimant notes that Ms. Eisner and Mr. McAuley did speak over the phone on 15 October 2018, and that shortly thereafter, Ms. Eisner reversed her positions and expanded the categories of *amicus* participation to cover the circumstances in which the *Amici* found themselves at the time.¹⁸⁵

¹⁸⁴ Claimant’s PHB, paras. 61-76.

¹⁸⁵ *Ibid*, paras. 77-91.

213. Insofar as the DAA is concerned, the Claimant notes that the evidence confirms that NDC and Verisign performed exactly as the language of the DAA provides.¹⁸⁶
214. The Claimant argues that ICANN violated its Articles and Bylaws through its disparate treatment of Afilias and Verisign. For instance, the Claimant notes that ICANN: failed to provide timely answers to Afilias' letters while Verisign was able to reach ICANN easily to discuss .WEB, even though it was a non-applicant; informally invited Verisign's counsel to comment on Afilias' concerns; discussed the .WEB registry agreement with NDC, all the while stating that ICANN was precluded from acting on Afilias' complaints due to the pendency of an accountability mechanism; and also advocated for the *Amici* and against Afilias throughout this IRP. According to the Claimant, further evidence of disparate treatment can be found in the Staff's decision to make Rule 4 retroactive so as to catch the Claimant's CEP.¹⁸⁷
215. According to the Claimant, the Staff's decision to take the .WEB contention set off hold and to conclude a registry agreement with NDC also violated the Bylaws and ICANN's obligation to enforce its policies fairly. The Claimant argues that the Board delegated the authority to enforce the New gTLD Program Rules to Staff who authorized the .WEB registry agreement to be sent to NDC and would have countersigned it if the Claimant had not initiated a CEP. The Board did not act to stop the process even though it was aware that the execution of the .WEB registry agreement was imminent.¹⁸⁸
216. In addition, the Claimant contends that ICANN failed to enable and promote competition in the DNS contrary to its Bylaws. The Claimant submits that the only decision ICANN could have taken regarding .WEB to promote competition would have been to reject NDC's application and delegate .WEB to Afilias. In its view, ICANN cannot satisfy its competition mandate by relying on regulators or the DOJ's decision to close its .WEB investigation.¹⁸⁹

¹⁸⁶ *Ibid*, para. 103.

¹⁸⁷ Claimant's PHB, paras. 126-138.

¹⁸⁸ *Ibid*, paras. 139-143.

¹⁸⁹ *Ibid*, paras. 144-154.

217. In relation to its Rule 7 Claim, the Claimant maintains that the Staff improperly coordinated with Verisign the drafting of that rule. In response to a question raised by the Panel, the Claimant explained that its Rule 7 Claim remains relevant at the present stage of the IRP because the Respondent's breach of its Articles and Bylaws in regard to the development of Rule 7 justifies an award of costs in the Claimant's favour.¹⁹⁰
218. As regards the Respondent's argument based on the business judgment rule, the Claimant points to the evidence of Ms. Burr concerning the nature of Board workshops to advance the position that a workshop is not a forum where the Respondent's Board can take any action at all, still less one that is protected by the business judgment rule. The Claimant also asserts that the evidence of the Respondent's witnesses supports its position that no affirmative decision regarding .WEB had been taken during the November 2016 workshop. Finally, the Claimant reiterates that there is no evidence of an ICANN policy or practice to defer decisions while accountability mechanisms are pending.¹⁹¹
219. Turning to the limitations issue, the Claimant avers that the Respondent's position that the Claimant's claims are time-barred is inherently inconsistent with its assertion that ICANN has not yet addressed the fundamental issues underlying those claims. According to the Claimant, its claims are based on conduct of the Staff and Board that culminated in irreversible violations of Afilias' rights when the Staff proceeded with the delegation of .WEB to NDC on 6 June 2018. Consequently, the Claimant argues that its claims are not time-barred pursuant to Rule 4 of the Interim Procedures.
220. Responding to the Respondent's argument that the claims brought in the Amended Request for IRP are time-barred because Afilias raised the same issues in its letters of August and September 2016, the Claimant contends that in the face of ICANN's representations that it was considering the matter, it would have been unreasonable for Afilias to file contentious dispute resolution proceedings in 2016. The Claimant adds that those letters described how NDC had violated the New gTLD Program Rules – not how ICANN had violated its

¹⁹⁰ *Ibid*, para. 157.

¹⁹¹ Claimant's PHB, paras. 159-170.

Articles and Bylaws.¹⁹²

221. The Claimant further contends that, because of the circumstances in which Rule 4 of the Interim Procedures was adopted, it cannot be applied to its claims. The Claimant avers that four (4) days after the Claimant commenced its CEP – understanding that its claims had never been subject to any time limitation – ICANN launched a public comment process concerning the addition of timing requirements to the rules governing IRPs. In spite of the fact that the public comment period on proposed Rule 4 remained open, ICANN included Rule 4 in the draft Interim Procedures that were presented to the Board for approval, and adopted by the Board on 25 October 2018. The Respondent further provided that the Interim Procedures would apply as from 1 May 2018, and no carve out was made for pending CEPs or IRPs. According to the Claimant, the decision to make Rule 4 retroactive can only have been made in an attempt to preclude Afilias from arguing that its CEP had been filed prior to the adoption of the new rules. The Claimant avers that ICANN’s enactment and invocation of Rule 4 is an abuse of right and is contrary to the international law principle of good faith.¹⁹³
222. In response to the argument that Afilias should have submitted a reconsideration request to the Board, the Claimant argues that, prior to June 2018, there was no action or inaction by the Staff or Board to be reconsidered.¹⁹⁴
223. The Claimant contends that the Board waived its right to individually consider NDC’s application by failing to do so at a time where such review would have been meaningful. The Claimant underscores that the Board failed to do so in November 2016, and again in early June 2018 when it was informed that the Staff was going to conclude a registry agreement for .WEB with NDC. According to the Claimant, there is no evidence to suggest that the Board ever intended to consider whether NDC had violated the New gTLD Program Rules, and it is now for this Panel to decide the Claimant’s claims.¹⁹⁵

¹⁹² *Ibid*, paras. 177-183.

¹⁹³ Claimant’s PHB, paras. 184-192.

¹⁹⁴ *Ibid*, paras. 193-195.

¹⁹⁵ *Ibid*, paras. 196-202.

224. Moving to the issue of the Panel’s jurisdiction, the Claimant emphasizes that this is the first IRP under both ICANN’s revised Bylaws and the Interim Procedures. The Claimant stresses that the IRP is a “final, binding arbitration process” and that the Panel is “charged with hearing and resolving the Dispute”. According to the Claimant, this is particularly important in light of the litigation waiver that ICANN required all new gTLD applicants to accept and to avoid an accountability gap that would leave claimants without a means of redress against ICANN’s conduct. The Claimant submits that the Panel’s jurisdiction extends to granting the remedies that Afilias has requested. In the Claimant’s view, the inherent jurisdiction of an arbitral tribunal sets the baseline for the Panel’s jurisdiction and any deviation must be justified by the text of the Bylaws. In that respect, the Claimant also invokes the international arbitration principle that a tribunal has an obligation to exercise the full extent of its jurisdiction.¹⁹⁶
225. The Claimant notes that the CCWG intended to enhance ICANN’s accountability with an expansive IRP mechanism to ensure that ICANN remains accountable to the Internet community. In Afilias’ view, the CCWG’s report “provides binding interpretations for the provisions of ICANN’s Bylaws that set forth the jurisdiction and powers of an IRP panel – none of which are inconsistent with the CCWG Report.”¹⁹⁷
226. The Claimant alleges that in the Ruby Glen Litigation before the Ninth Circuit, ICANN represented that the litigation waiver would neither affect the rights of New gTLD Program applicants nor be exculpatory, with the implication that the IRP could do anything that the courts could. In Afilias’ view, ICANN’s position before the Ninth Circuit contradicts ICANN’s position in this IRP when it asserts that the Panel cannot order mandatory or non-interim affirmative relief.¹⁹⁸
227. In relation to the relief it is requesting from the Panel, the Claimant avers that the CCWG Report states that claimants have a right to “seek redress” against ICANN through an IRP. According to the Claimant, unless the Panel directs ICANN to remedy the alleged

¹⁹⁶ *Ibid*, paras. 203-210.

¹⁹⁷ Claimant’s PHB, paras. 211-220.

¹⁹⁸ *Ibid*, paras. 221-228.

violations, there is a serious risk that this dispute will go unresolved. For that reason, the Claimant requests that the Panel issue a decision that is legally binding on the Parties and that fully resolves the Dispute. By way of injunctive relief, the Claimant asks the Panel to: reject NDC's application for the .WEB gTLD; disqualify NDC's bids at the ICANN auction; deem NDC ineligible to execute a registry agreement for the .WEB gTLD; offer the registry rights to the .WEB gTLD to Afilias, as the next highest bidder in the ICANN auction; set the bid price to be paid by Afilias for the .WEB gTLD at USD 71.9 million; pay the Claimant's fees and costs.¹⁹⁹

2. Respondent's Post-Hearing Brief

228. In its Post-Hearing Brief dated 12 October 2020, the Respondent argues that the Claimant has effectively abandoned its competition claim, which was rooted in the notion that ICANN's founding purpose was to promote competition and that this competition mandate and ICANN's Core Values regarding competition required it to disqualify NDC and block Verisign's potential operation of .WEB. The Respondent contends that without this competition claim, the Claimant's case boils down to whether the Respondent was required to disqualify NDC for a series of alleged violations of the Guidebook and Auction Rules.²⁰⁰ As to those, the Respondent reiterates that it has not decided whether the DAA violates the Guidebook or Auction Rules, or the appropriate remedy for any violation that may be found. Relying on the evidence of Mr. Disspain, the Respondent contends that the propriety of the DAA is a matter for the ICANN Board.
229. According to the Respondent, the practice of placing contention sets on hold while accountability mechanisms are pending is well known. Accordingly, the Board's decision to defer making a decision on .WEB in November 2016 should have come as no surprise to the Claimant and is entitled to deference from this Panel. As for the transmission of a registry agreement for .WEB to NDC in June 2018, the Respondent claims that it did not reflect a decision that the DAA was compliant with the Guidebook and Auction Rules, but

¹⁹⁹ *Ibid.*, paras. 229-246. The Parties' submissions on costs are summarized below, in the section of this Final Decision dealing with the Claimant's cost claim.

²⁰⁰ Respondent's PHB, paras. 1-6.

was merely a ministerial act triggered by the removal of the set's on hold status.²⁰¹

230. The Respondent recalls that the Panel's jurisdiction is circumscribed by the Bylaws in relation to the types of disputes that may be addressed, the claims that can be raised, the remedies available, the time within which a Dispute may be brought, and the standard of review.²⁰² The Respondent contends that the Panel can only address alleged violations that are asserted in the Amended Request. In relation to those, the Panel's remedial authority is limited to issuing a declaration as to whether a Covered Action constituted an action or inaction that violated the Articles or Bylaws. According to the Respondent, the relief requested by the Claimant clearly exceeds the Panel's limited remedial authority, which does not include the authority to disqualify NDC's bid, proceed to contracting with Afilias, specify the price to be paid by Afilias, or invalidate Rule 7. The Respondent argues that the Panel is authorized to shift costs only on a finding that the losing party's claim or defence is frivolous or abusive. The Respondent submits that the CCWG's Supplemental Proposal dated 23 February 2016 does not expand the Panel's remedial authority. If there is any inconsistency, the Bylaws clearly control.²⁰³
231. The Respondent argues that there is no "gap" created by the litigation waiver and avers that it takes the same position in this IRP as it did in the Ruby Glen Litigation, where it sought to enforce the litigation waiver. The Respondent submits that the Claimant's position in this regard is based on the false premise that remedies available in IRPs must be co-extensive with remedies available in litigation.²⁰⁴
232. The Respondent also contends that the Panel is required to apply the prescribed standard of review. The first sentence of Section 4.3(i) of the Bylaws establishes a general *de novo* standard, and Subsection (iii) then creates a carve-out, providing that actions of the Board in the exercise of its fiduciary duty are entitled to deference provided that they are within the realm of "reasonable judgment". The Respondent argues that all actions by the Board

²⁰¹ Respondent's PHB, paras. 10-12.

²⁰² *Ibid*, para. 14.

²⁰³ *Ibid*, paras. 15-45.

²⁰⁴ *Ibid*, paras. 46-48.

on behalf of ICANN are subject to a fiduciary duty to act in good faith in the interests of ICANN.²⁰⁵

233. Turning to time limitation, the Respondent notes that the Panel has jurisdiction only over claims brought within the time limits established by Rule 4 of the Interim Procedures, and contends that the limitations and repose periods set out in Rule 4 are jurisdictional in nature.²⁰⁶ According to the Respondent, the Claimant's claim that ICANN had an unqualified obligation to disqualify NDC is barred by the repose period and the time limitation, which are dispositive.²⁰⁷ The Respondent contends that the Claimant's claim that the Staff violated the Articles and Bylaws in their investigation of pre-auction rumors or post-auction complaints is also time-barred and therefore outside the jurisdiction of the Panel.²⁰⁸ The Respondent denies that it is equitably estopped from relying on its time limitation defence, and avers that the repose and limitations periods apply retroactively because of the express terms of the Interim Procedures. According to the Respondent, if the Claimant wished to challenge Rule 4, it could have brought such a claim in this IRP, as it did with Rule 7.²⁰⁹
234. Regarding the merits of the Claimant's claims, the Respondent notes the Claimant's decision not to cross-examine Mr. Kneuer, Dr. Carlton, or Dr. Murphy, indicating the abandonment of its competition claim, and reiterates that ICANN does not have the mandate, authority, expertise or resources to act as a competition regulator of the DNS.²¹⁰ According to the Respondent, the unrebutted economic evidence establishes that .WEB will not be competitively unique such that Verisign's operation of .WEB would be anticompetitive.²¹¹

²⁰⁵ Respondent's PHB, paras. 49-57.

²⁰⁶ *Ibid*, paras. 58-61.

²⁰⁷ *Ibid*, paras. 62-69.

²⁰⁸ *Ibid*, paras. 70-72.

²⁰⁹ *Ibid*, paras. 73-85.

²¹⁰ *Ibid*, paras. 86-101.

²¹¹ *Ibid*, paras. 102-129.

235. The Respondent further contends that it was not required to disqualify NDC based on alleged violations of the Guidebook and Auction Rules. According to the Respondent, “it is not a foregone conclusion that NDC is or is not in breach”.²¹² The Respondent argues that the Guidebook and Auction Rules grant it significant discretion to determine whether a breach of their terms has occurred and the appropriate remedy, and that ICANN has not yet made that determination.²¹³ The Respondent maintains that it, and not the Panel, is in the best position to make a determination as to the propriety of the DAA, and its consistency with the Guidebook or Auction Rules.²¹⁴ According to the Respondent, its commitment to transparency and accountability is not relevant to the Claimant’s contention regarding NDC’s alleged violations.²¹⁵
236. The Respondent reiterates that the Board complied with ICANN’s obligations by deciding not to take any action regarding the .WEB contention set while accountability mechanisms were pending, and that the Panel should defer to this reasonable business judgment.²¹⁶ The Respondent adds that its obligations to act transparently did not require the Board to inform Afiliats of its 3 November 2016 decision. In that respect, the Respondent argues that the Claimant has not put forward a single piece of evidence suggesting that it would have acted differently had it known that the Board decided in November 2016 to take no action while the contention set remained on hold.²¹⁷
237. The Respondent takes the position that the Claimant has not properly challenged ICANN’s transmittal of a form registry agreement to NDC in June 2018 and, in any event, that in doing so it acted in accordance with Guidebook procedures and the Articles and Bylaws.²¹⁸
238. According to the Respondent, the Claimant’s claims that ICANN’s pre- and post- auction

²¹² Respondent’s PHB, para. 138.

²¹⁴ *Ibid.*, paras. 151-156.

²¹⁵ *Ibid.*, paras. 157-158.

²¹⁶ *Ibid.*, para. 159.

²¹⁷ *Ibid.*, paras. 182-189.

²¹⁸ *Ibid.*, paras. 190-197.

investigations violated the Articles and Bylaws have no merit and in any event are time-barred.²¹⁹

239. As regards the Rule 7 Claim, the Respondent submits that to the extent it is maintained, it must be rejected both as lacking merit and because there is no valid basis for an order shifting costs on the ground of Rule 7's alleged wrongful adoption.²²⁰

3. *Amici's Post-Hearing Brief*

240. In their joint Post-Hearing Brief dated 12 October 2020, the *Amici* submit that adverse inferences against the Claimant should be made with respect to every issue in the IRP based on "Afilias purposefully, voluntarily and knowingly withholding" evidence from the Panel. According to the *Amici*, the Claimant's executives whose witness statements were withdrawn had substantial direct personal knowledge and special industry expertise material to virtually every contested issue in the IRP.²²¹

241. The *Amici* argue that the Panel's jurisdiction is limited to declaring whether the Respondent violated its Bylaws, and does not extend to making findings of fact in relation to third-party claims or awarding relief contravening third party rights.²²² As a result, the *Amici* submit that the Panel lacks authority to find that the Domain Acquisition Agreement violates the Guidebook or that the *Amici* engaged in misconduct.²²³ According to the *Amici*, the Panel should limit its review to ICANN's decision making process and only make non-binding recommendations that relate to that process, as opposed to the decision ICANN should make.²²⁴

242. The *Amici* contend that a decision granting the Claimant's requested relief, or making findings on the Domain Acquisition Agreement or their conduct, would violate their due

²¹⁹ *Ibid*, paras. 198-217.

²²⁰ Respondent's PHB, paras. 218-231.

²²¹ *Ibid*, paras. 6 and 13-21.

²²² *Ibid*, paras. 22-49.

²²³ *Ibid*, paras. 62-67.

²²⁴ *Ibid*, paras. 68-81.

process rights because of their limited participation in the IRP.²²⁵

243. According to the *Amici*, the Domain Acquisition Agreement complies with the Guidebook. The *Amici* also allege that transactions comparable to the Domain Acquisition Agreement have regularly occurred as part of the gTLD Program, with ICANN's knowledge and approval and consistent with the Guidebook.²²⁶ They further urge that Section 10 of the Guidebook prohibits only the sale and transfer of an entire application, and does not prohibit agreements between an applicant and a third party to request ICANN to approve a future assignment of a registry agreement.²²⁷ The *Amici* aver that ICANN has approved many assignments of registry agreements under such circumstances.²²⁸
244. The *Amici* state that they did not seek to evade scrutiny by maintaining the Domain Acquisition Agreement confidential during the auction, and argue that the Guidebook did not require disclosure of that agreement prior to the auction. They note that the DAA was always intended to be, and will be subject to the same scrutiny as the numerous other post-delegation assignments of new gTLDs. In addition, the *Amici* deny that the confidentiality of the Domain Acquisition Agreement provided them with any undue advantage.²²⁹
245. The *Amici* argue that there is no evidence of anticompetitive intent or effect, and submit that Afilias has abandoned its competition claims. In addition, the *Amici* urge that ICANN is not an economic regulator, that competition is not a review criterion under the New gTLD Program, and that ICANN's competition mandate was fulfilled by the DOJ investigation.²³⁰
246. Finally, the *Amici* note that the Claimant never rebutted the evidence of its own violation of the Guidebook when a representative of the Claimant contacted NDC during

²²⁵ *Ibid*, paras. 82-86.

²²⁶ *Ibid*, paras. 8 and 87-123.

the Blackout Period.²³¹

H. Submissions Regarding the Donuts Transaction

247. As noted in the History of the Proceedings’ section of this Final Decision, the *Amici* have requested that the Panel take into consideration their submissions concerning the 29 December 2020 merger between Afilias, Inc. and Donuts, Inc. Those submissions, and that of the Parties, are summarized below.
248. In counsel’s letter of 9 December 2020, the *Amici* described the contemplated transaction, based on publicly disclosed information, as a sale to Donuts of Afilias, Inc.’s entire existing registry business, with only the .WEB application itself being retained within an Afilias, Inc. shell. This, the *Amici* averred, is information that the Claimant ought to have disclosed to the Panel as it is inconsistent with the Claimant’s claims and requested relief in this IRP. Moreover, the *Amici* contended that by withdrawing the witness statements of its party representatives in this IRP, the Claimant sought to prevent the Respondent and the *Amici* from eliciting this information.
249. In its response of 16 December 2020 to the *Amici*’s letter, the Claimant submitted that Afilias, Inc.’s arrangement with Donuts has no bearing on the issues in dispute in the IRP. The Claimant explained that the contemplated transaction concerned the registry business of Afilias, Inc., not its registrar business²³², and that the Claimant as an entity, as well as its .WEB application, had been carved out of the transaction. The Claimant added that after the transaction it will remain part of a group of companies that will control a significant registrar business. Accordingly, the Claimant averred that its new structure will not impact its ability to launch .WEB. Finally, the Claimant noted that it has informed the Respondent of a possible sale of its registry business back in September 2020.

²³¹ *Ibid*, paras. 206-214.

²³² Registry operators are parties to Registry Agreements with ICANN that set forth their rights, duties and obligations as operators. Companies known as “registrars” sell domain name registrations to entities and individuals within existing gTLDs. See Respondent’s Rejoinder, 31 May 2019, paras. 17 and 23. As explained in the preamble of the Guidebook, Ex. C-3, “[e]ach of the gTLDs has a designated ‘registry operator’ and, in most cases, a Registry Agreement between the operator (or sponsor) and ICANN. The registry operator is responsible for the technical operation of the TLD, including all of the names registered in the TLD. The gTLDs are served by 900 registrars, who interact with registrants to perform domain name registration and other related services.” (p. 2 of the PDF).

250. Also on 16 December 2020, the Respondent confirmed that it was aware that Afilias, Inc. and Donuts had entered into an agreement by which the latter would acquire the former's TLD registry business, excluding the Claimant's .WEB application. The Respondent submitted that these developments reinforced the importance for the Panel not to exceed its "limited jurisdiction to determine only whether a Covered Action by ICANN violated the Articles of Bylaws and to issue a declaration to that effect."
251. On 21 December 2020, with leave of the Panel, the *Amici* replied to the Parties' letters of 16 December 2020. According to the *Amici*, the Claimant's response only reinforced the "the inappropriateness and inadvisability of the Panel deciding allegations concerning the transactions at issue." That is because, according to the *Amici*, it is a fundamental principle and tenet of the Respondent's Bylaws and IRP procedures that matters involving multiple parties and interests such as the matters at issue in this case are to be addressed in the first instance by the Respondent. The *Amici* also reiterated their claim that the Claimant has not been transparent about its plans and that of Afilias, Inc. as they affected the Claimant's ability to execute on its proposed deployment of .WEB.
252. On 30 December 2020, the day after the closing of the Donuts transaction, Afilias responded to the *Amici*'s letter of 21 December 2020, stating that it "was yet another attempt to divert the Panel's attention from the relevant issue to be arbitrated in this IRP." The Claimant rejected the notion that the Donuts transaction, much like the other transactions the *Amici* had pointed to in their written submissions, bear any resemblance to the Domain Acquisition Agreement, and it listed what it considers are key differences between the two (2) situations.

V. ANALYSIS

A. Introduction

253. As the Panel observed in its Procedural Order No. 5, this IRP is an ICANN accountability mechanism, the Parties to which are the Claimant and the Respondent. As such, it is not the forum for the resolution of potential disputes between the Claimant and the *Amici*, two (2) non-parties that are participating in this IRP as *amici curiae*, or of divergence and

potential disputes between the *Amici* and the Respondent by reason of the latter's actions or inactions in addressing the question of whether the DAA complies with the New gTLD Program Rules.

254. The Claimant's core claims against the Respondent in this IRP arise from the Respondent's failure to reject NDC's application for .WEB, disqualify its bids at the auction, and deem NDC ineligible to enter into a registry agreement with the Respondent in relation to .WEB because of NDC's alleged breaches of the Guidebook and Auction Rules.²³³ The Respondent's impugned conduct engages its Staff's actions or inactions in relation to allegations of non-compliance with the Guidebook and Auction Rules on the part of NDC, communicated in correspondence to the Respondent in August and September 2016, and the Staff's decision to move to delegate .WEB to NDC in June 2018 by proceeding to execute a registry agreement in respect of .WEB with that company; as well as the Board's decision not to pronounce upon these allegations, first in November 2016, and again in June 2018 when, to the knowledge of the Board, the .WEB contention set was taken off hold and the Staff put in motion the process to delegate the .WEB gTLD to NDC.
255. As already noted, the Claimant's core claims serve to support the Claimant's requests that the Panel disqualify NDC's bid for .WEB and, in exchange for a bid price to be specified by the Panel and paid by the Claimant, order the Respondent to proceed with contracting the Registry Agreement for .WEB with the Claimant.
256. The Claimant's core claims have been articulated with increasing particulars as these proceedings progressed. This, in the opinion of the Panel, is understandable in light of the manner in which the Respondent's defences have themselves evolved, most particularly the defence based on the Board's 3 November 2016 decision to defer consideration of the issues raised in connection with .WEB. This reason alone justifies rejection of the Respondent's contention that the Claimant failed to sufficiently plead a violation of the Respondent's Articles and Bylaws in connection with ICANN's post-auction investigation of Afiliás' allegations that NDC violated the Guidebook and Auction Rules. In any event,

²³³ See Afiliás' PHB, para. 247. See also Claimant's Reply, para. 16, where the Claimant describes its "principal claim".

the Panel considers that the Claimant's core claims are comprised within the broad allegations of breach made in the Amended Request for IRP.²³⁴

257. The Respondent's main defences are, first, that the Claimant's claims regarding the Respondent's actions or inactions in 2016 are time-barred. While reserving its position about the propriety of the DAA under the New gTLD Program Rules, the Respondent also denies that it was obligated to disqualify NDC, whether it be by reason of its alleged competition mandate or as a necessary consequence of a violation of the Guidebook or Auction Rules. The Respondent also contends that it complied with its Articles and Bylaws when it decided not to take any action regarding the .WEB contention set while accountability mechanisms in relation to .WEB were pending, and that the Panel should defer to the Board's reasonable business judgment in coming to that decision. As noted, the Respondent rejects as unauthorized under the Bylaws, the Claimant's requests that the Respondent be ordered to proceed with contracting the Registry Agreement for .WEB with the Claimant, at a bid price to be specified by the Panel.
258. The Panel begins its analysis by considering the Respondent's time limitations defence. The Panel then addresses the standard by which the Respondent's actions or inactions should be reviewed. Thereafter, the Panel turns to examining the Respondent's conduct against the backdrop of the entire chronology of events, and considers whether it was open to the Respondent, both its Staff and its Board, not to pronounce upon the DAA's alleged non-compliance with the Guidebook and Auction Rules following the Claimant's complaints, an inaction that endures to this day. The Panel then considers, in turn, the Claimant's Rule 7 Claim, and the scope of the Panel's remedial authority in light of its findings that the Respondent, as set out in these reasons, violated its Articles and Bylaws. The Panel concludes its analysis by designating the prevailing party, as required by Section 4.3(r) of the Bylaws, and determining the Claimant's cost claim.

²³⁴ See, e.g., Amended Request for IRP, para. 2.

B. The Respondent's Time Limitations Defence

1. Applicable Time Limitations Rule

259. Three (3) successive limitations regimes have been referred to as potentially relevant to determining the timeliness of the Claimant's claims in this IRP.
260. Prior to 1 October 2016, at a time when only Board actions could be the subject of an IRP, the Bylaws required that a request for independent review be filed within thirty (30) days of the posting of the Board's minutes relating to the challenged Board decision.²³⁵
261. New ICANN Bylaws came into force as of 1 October 2016. However, these did not contain any provision setting a time limitation for the filing of an IRP. Since the supplementary rules for IRPs in force at the time did not contain a time limitation provision either, it is common ground that, during the period from 1 October 2016 to 25 October 2018, IRPs were subject neither to a limitation period nor to a repose period.
262. The Respondent's time limitations defence is based on Rule 4 of the Interim Procedures which, inclusive of the footnote that forms part of the Rule, reads as follows:

4. Time for Filing³

An INDEPENDENT REVIEW is commenced when CLAIMANT files a written statement of a DISPUTE. A CLAIMANT shall file a written statement of a DISPUTE with the ICDR no more than 120 days after a CLAIMANT becomes aware of the material effect of the action or inaction giving rise to the DISPUTE; provided, however, that a statement of a DISPUTE may not be filed more than twelve (12) months from the date of such action or inaction.

In order for an IRP to be deemed to have been timely filed, all fees must be paid to the ICDR within three business days (as measured by the ICDR) of the filing of the request with the ICDR.

³ The IOT recently sought additional public comment to consider the Time for Filing rule that will be recommended for inclusion in the final set of Supplementary Procedures. In the event that the final Time for Filing procedure allows additional time to file than this interim Supplementary Procedure allows, ICANN committed to the IOT that the final Supplementary Procedures will include transition language that provides potential claimants the benefit of that additional time, so as not to prejudice those potential claimants.

²³⁵ See Bylaws (as amended on 11 February 2016), Ex. C-23, Article IV, Section 3.3.

263. This Rule 4 came into being as part the new Interim Procedures adopted by the Board on 25 October 2018. As set out in some detail in the Panel’s Decision on Phase I, this was the culmination of a development process within ICANN’s IOT that began on 19 July 2016, with the circulation to IOT members of a first draft of proposed Updated Supplementary Procedures, and concluded on 22 October 2018, when draft Interim Supplementary Procedures were sent to the Board for adoption.²³⁶
264. While the Interim Procedures were adopted on 25 October 2018, the first paragraph of their preamble provides that “[t]hese procedures apply to all independent review process proceedings filed after 1 May 2018.” Rule 2 of the Interim Procedures confirms the retroactive application of the Interim Procedures in two (2) ways: first, by providing that they apply to IRPs submitted to the ICDR after the Interim Procedures “go onto effect”; and second, by providing that IRPs commenced prior to the Interim Procedures’ “adoption” (on 25 October 2018) shall be governed by the procedures “in effect at the time such IRPs were commenced”. For IRPs commenced after 1 May 2018, this would point to the Interim Procedures.
265. Ms. Eisner acknowledged in her evidence that Rule 4 was the subject of considerable debate within the IOT. She also confirmed that by October 2018, “ICANN org”²³⁷ was anxious to get a set of procedures in place. Indeed, Ms. Eisner had noted during the IOT meeting held of 11 October 2018 that “we at ICANN org are getting nervous about being on the precipice of having an IRP filed”.²³⁸ It is recalled that on 10 October 2018, the day prior to this meeting, the Claimant had, in the context of its pending CEP, provided the Respondent’s in-house counsel with a draft of the Claimant’s Request for an IRP in connection with .WEB.²³⁹
266. Underlying the footnote to Rule 4 is the fact that the Interim Procedures were conceived as a provisional instrument, designed to apply until the Respondent, in accordance with the

²³⁶ See Decision on Phase I, paras. 139-171.

²³⁷ “ICANN org” is an expression used to refer to ICANN’s Staff and organization, as opposed to ICANN’s Board or its supporting organizations and committees. See Merits hearing transcript, 4 August 2020, p. 391:6-15 (Ms. Burr).

²³⁸ Merits hearing transcript, 5 August 2020, pp. 495 and 498; see also pp. 479-480 (Ms. Eisner).

²³⁹ See Decision on Phase I, para. 151, and Merits hearing transcript, 5 August 2020, p. 494 (Ms. Eisner).

applicable governance processes, will come to develop and adopt final supplementary procedures for IRPs. Specifically in relation to the introduction of a “Time for Filing” provision in the Interim Procedures, Ms. Eisner explained that the IOT:

[...] agreed at some point and finalized language on a footnote that would confirm that if there was a future change in a deadline for time for filing, that ICANN would work to make sure no one was prejudiced by that. [...]

The footnote that was included in the Rule 4 was about the change between the -- we are putting the interim rules into effect. And then if in the future a discussion where people were suggesting that there should be basically no statute of limitations on the ability to challenge an act of ICANN, if that were to be the predominant view, and what the Board put into effect that there would be some sort of stopgap measure put in so that anyone who was not able to file under the interim rules and the timing set out there but could have filed if the other rules, the broader rules had been in effect, that we would put in a stopgap to make sure that no one was prejudiced by that differentiation because we had agreed on a different timing for the final set.²⁴⁰

267. In its Post-Hearing Brief dated 12 October 2020, the Respondent advised that as of that date, final Supplementary Procedures had not been completed or adopted.²⁴¹
268. Having identified and placed in context the rule on which the Respondent relies in support of its time limitations defence, the Panel turns to consider the merits of that defence.

2. Merits of the Respondent’s Time Limitations Defence

269. It is the Respondent’s contention that the Claimant’s claim that ICANN had an unqualified obligation to disqualify NDC upon receiving the DAA in August 2016 is barred by the repose period of Rule 4 because the Claimant challenges actions or inactions that occurred in 2016, more than two (2) years before the Claimant filed its IRP in November 2018. The Respondent adds that the limitations period of Rule 4 also bars the Claimant’s claims because the Claimant was aware of the material effect of the alleged actions or inactions of ICANN by August and September 2016, as evidenced by its letters of 8 August 2016 and 9 September 2016, demanding that ICANN disqualify NDC.
270. The Claimant’s position is that its claims against the Respondent for violating its Articles

²⁴⁰ Merits hearing transcript, 5 August 2020, pp. 496-498 (Ms. Eisner).

²⁴¹ Respondent’s PHB, fn 103, p. 38.

and Bylaws, as opposed to its claims that NDC had violated the New gTLD Program Rules, accrued no earlier than on 6 June 2018, when the Respondent proceeded with the delegation process for .WEB with NDC,²⁴² and that even if the time limitations and repose periods were applicable to its claims against the Respondent, which the Claimant contends they are not, they would have been tolled by its CEP that lasted from 18 June 2018 to 13 November 2018.

271. The Panel has carefully reviewed the Claimant's August and September 2016 correspondence relied upon by the Respondent, and cannot accept the latter's contention that the claims asserted by Afiliis in its 2016 letters to ICANN are the same as the claims asserted by the Claimant in this IRP. Whereas the Claimant's 2016 letters sought to demonstrate NDC's alleged violations of the New gTLD Program Rules, the Claimant's IRP, using these violations as a predicate, impugns the conduct of the Respondent itself in response to NDC's conduct. Stated otherwise, the Claimant's claims in this IRP concern not NDC's conduct, but rather the Respondent's actions or inactions in response to NDC's conduct.²⁴³
272. As amplified later in these reasons, when the Panel considers the Respondent's handling of the Claimant's complaints, the Panel does not accept, as urged by the Respondent, that the Claimant can be faulted for having waited for some form of determination by the Respondent before alleging in an IRP that the Respondent's actions or inaction violated its Articles and Bylaws. The Panel recalls that, in its responses to the Claimant's letters of 8 August 2016 and 9 September 2016, the Staff indicated, on 16 September 2016, that ICANN would pursue "informed resolution" of the questions raised by the Claimant and Ruby Glen,²⁴⁴ and, in ICANN's letter of 30 September 2016, that it would "continue to take Afiliis' comments, and other inputs that [it] ha[d] sought, into consideration as [it] consider[ed] this matter."²⁴⁵

²⁴² *Ibid*, para. 179.

²⁴³ Claimant's PHB, para. 182.

²⁴⁴ ICANN's letter to Mr. Kane dated 16 September 2016 and attached Questionnaire, Ex. C-50.

²⁴⁵ ICANN's letter to Mr. Hemphill dated 30 September 2016 and attached Questionnaire, Ex. C-61.

273. The first of these letters attached a detailed Questionnaire designed to assist ICANN in evaluating the concerns raised by Afiliás and Ruby Glen, and the second represented in no uncertain terms that the Respondent’s consideration of this matter was continuing. In such circumstances, there is force to the Claimant’s contention that commencing contentious dispute resolution proceedings at that time would have interfered with the “informed resolution” that ICANN had represented it would undertake, and would likely have attracted an objection of prematurity.
274. The Panel also recalls, a fact that is not in dispute, that the Respondent did not communicate to the Claimant any view or determination in respect of the many questions raised in the Questionnaire attached to the Respondent’s letter of 16 September 2016. As for the Board’s decision in November 2016 to defer consideration of the complaints raised in relation to NDC’s conduct, it is common ground that it was never communicated to the Claimant or otherwise made public, and that it was disclosed for the first time upon the filing of the Respondent’s Rejoinder in this case, on 1 June 2020.
275. From November 2016 to the beginning of the year 2018, as seen already, the .WEB contention set was on hold by reason of the pendency of an accountability mechanism and the DOJ investigation. The situation evolved with the DOJ’s decision to close its investigation on 9 January 2018, the closure of Donuts’ CEP on 30 January 2018, and the expiration on 14 February 2018 of the 14-day period given to Ruby Glen to file an IRP. Shortly thereafter, the Claimant, on 23 February 2018, formally requested an update on ICANN’s investigation of the .WEB contention set and requested documents by way of its First DIDP Request.²⁴⁶ The Claimant also requested that the Respondent take no action in regard to .WEB pending conclusion of this DIDP Request.
276. The Claimant was notified on 6 June 2018 that the Respondent had removed the .WEB contention set from its on-hold status.²⁴⁷ While the Claimant was still ignorant of any determination by the Respondent in respect of the concerns raised in August and

²⁴⁶ Dechert’s letter to the Board dated 23 February 2018, Ex. C-78.

²⁴⁷ ICANN Global Support’s email to Mr. Kane dated 7 June 2018, Ex. C-62, p. 1. Mr. Kane was in Australia at the time, which is why the date on the Afiliás’ copy is 7 June 2018, although ICANN sent it on 6 June 2018.

September 2016, which were the subject of the Respondent’s Questionnaire of 16 September 2016, a necessary implication of the Respondent’s decision was that these concerns did not stand – or no longer stood – in the way of the delegation of .WEB to NDC. In the Panel’s opinion, this is when the Claimant’s complaints about NDC’s conduct crystallized into a claim against the Respondent. To quote from Rule 4, but recalling that in June 2018 it had not yet been adopted, this is when the Claimant “[became] aware of the material effect of the action or inaction giving rise to the DISPUTE”.

277. The Claimant commenced its CEP on 18 June 2018, twelve days after the removal of the .WEB contention set from its on-hold status. As already explained, potential IRP claimants are “strongly encouraged” to engage in this non-binding process for the purpose of attempting to narrow the Dispute, and an additional incentive to do so resides in their exposure to a cost-shifting decision if they fail to partake in a CEP and ICANN prevails in the IRP.²⁴⁸
278. The rules applicable to a CEP are described in an ICANN document dated 11 April 2013 (**CEP Rules**).²⁴⁹ The CEP Rules provide that, if the parties have failed to agree a resolution of all issues in dispute upon conclusion of the CEP, the potential IRP claimant’s time to file a request for independent review shall be extended for each day of the CEP but in no event, absent agreement, for more than fourteen (14) days.
279. The Claimant’s CEP was terminated by the Respondent on 13 November 2018. Consistent with the CEP Rules, the Respondent informed the Claimant that “ICANN will grant Afiliis an extension of time to 27 November 2018 (14 days following the close of CEP) to file an IRP”, adding that “this extension will not alter any deadlines that may have expired before the initiation of the CEP”.²⁵⁰ The Claimant commenced its IRP the next day, on 14 November 2018.
280. The Respondent has not challenged the application of the CEP Rules to the Claimant’s

²⁴⁸ Bylaws, Ex. C-1, Article 4, Section 4.3(e)(i)-(ii).

²⁴⁹ Cooperative Engagement Process Rules, 11 April 2013, Ex. C-121.

²⁵⁰ Exchange of emails between ICANN and Dechert, Ex. C-54.

CEP and the time for the filing of its IRP. In response to the Claimant's argument that the retroactive time limitations period set out in Rule 4 was tolled from 18 June 2018 to 13 November 2018, while its CEP was pending, the Respondent argued that the tolling was irrelevant because the limitations period had already long expired based on its submission that the Claimant's claims had accrued in August/September 2016, a submission that this Panel has rejected.

281. In sum, the Panel finds that the Claimant's core claims against the Respondent, as summarized above in paragraph 251 of this Final Decision, only accrued on 6 June 2018. Since the Claimant's CEP had the effect of tolling the time available to the Claimant to file an IRP until 27 November 2018, fourteen (14) days after closure of the CEP, the Claimant's IRP was timely and the Respondent's time limitations defence insofar as the Claimant's core claims are concerned must be rejected.

282. The Claimant has accused the Respondent of having enacted Rule 4 and given it retroactive effect in order to retroactively time bar its claims in this IRP. In support of this contention, the Claimant advances the following factual allegations:

- The Respondent only launched the solicitation of public comments concerning the addition of timing requirements to the draft procedures governing IRPs on 22 June 2018, shortly after Afiliás filed its CEP;
- In spite of the fact that the public comment period on proposed Rule 4 remained open, Rule 4 was included in the proposed Interim Procedures presented to the Board for approval on 25 October 2018;
- Having received a draft of the Claimant's IRP in the context of its CEP on 10 October 2018, the Respondent decided to give retroactive effect to the Interim Procedures to 1 May 2018, six (6) weeks prior to the initiation of the Claimant's CEP, with no carve-out for pending CEPs (of which there were several) or IRPs

(of which there was none); and

- Having terminated the Claimant’s CEP on 13 November 2018, and received its IRP on 14 November 2018, the Respondent was able to rely on the retroactive application of the Interim Procedures to support its Rule 4 time limitations defence.

283. In light of the Panel’s finding as to the accrual date of the Claimant’s core claims, it is not necessary further to consider these allegations. However, the Panel does wish to record its view that, from a due process perspective, the retroactive application of a time limitations provision is inherently problematic. A retroactive law changes the legal consequences of acts committed or the legal status of facts and relationships prior to the enactment of the law.²⁵¹ The potential for unfairness is apparent and thus, in many legal systems, there are restrictions on, and presumptions against, giving legal rules a retroactive effect.

284. Between 1 October 2016 and 25 October 2018, there was no time limitation for the filing of an IRP in respect of the Respondent’s actions or failures to act. Yet an IRP timely filed under the Bylaws, say on 18 June 2018, would, if Rule 4 of the Interim Procedures were given effect to, retroactively be barred and the claims advanced therein defeated with no consideration of their merits because of the retroactive application of the Interim Procedures adopted on 25 October 2018. The fact that only a single case, the Claimant’s IRP, was in fact affected by the retroactive application of the Interim Procedures only heightens the due process concern. The Panel recalls that under Section 4.3(n)(i) of the Bylaws, the rules of procedure for the IRP to be developed by the IOT “should apply fairly to all parties”.

C. Standard of Review

285. The standard of review applicable to an IRP under the Bylaws is provided in Section 4.3(i) of the Bylaws and Rule 11 of the Interim Procedures, which are in substance identical.

²⁵¹ David P. Currie, *The Constitution in the Supreme Court: The First Hundred Years, 1789-1888*, p. 41. See also Black’s Law Online Dictionary, 2nd ed., s.v. “retroactive statute”: <https://thelawdictionary.org/retroactive-statute/> (consulted on 7 February 2021): “a law that imposes a new obligation on past things or a law that starts from a date in the past.”

Section 4.3(i) of the Bylaws reads in relevant parts as follows:

(i) Each IRP Panel shall conduct an objective, *de novo* examination of the Dispute.

(i) With respect to Covered Actions, the IRP Panel shall make findings of fact to determine whether the Covered Action constituted an action or inaction that violated the Articles of Incorporation or Bylaws.

(ii) All Disputes shall be decided in compliance with the Articles of Incorporation and Bylaws, as understood in the context of the norms of applicable law and prior relevant IRP decisions.

(iii) For Claims arising out of the Board's exercise of its fiduciary duties, the IRP Panel shall not replace the Board's reasonable judgment with its own so long as the Board's action or inaction is within the realm of reasonable business judgment.

286. It is common ground that, except for claims potentially falling under sub-paragraph (iii) of Section 4.3(i), the Panel must conduct an objective, *de novo* examination of claims that actions or failures to act on the part of the Respondent violate its Articles or Bylaws, and make appropriate findings of fact in light of the evidence. The Parties therefore agree that this is the standard applicable to the Panel's review of actions or failures to act on the part of the Respondent's Staff.

287. There is profound divergence between the Parties as to the import of sub-paragraph (iii) of Section 4.3(i), relating to Claims arising out of the Board's exercise of its fiduciary duties. The Respondent argues that the effect of this rule is to incorporate the "business judgment rule" into the independent review of ICANN's Board action, a doctrine which the Respondent avers is recognized in California²⁵² and, according to the California Supreme Court, which "exists in one form or another in every American jurisdiction".²⁵³ More specifically, the Parties diverge both as to the scope of the carve-out made in Section 4.3 (i)(iii), and the question of whether the Board actions and inactions that are impugned by the Claimant involve the Board's exercise of its fiduciary duties.

288. These questions are addressed when the Panel comes to consider the merits of the Claimant's claims. For present purposes, it is noted that the Parties agree that, to the extent

²⁵² Respondent's PHB, para. 50.

²⁵³ *Landen v. La Jolla Shores Clubdominium Homeowners Ass'n*, 21 Cal. 4th 249, 257 (1999) (quoting *Frances T. v. Vill. Green Owners Ass'n*, 42 Cal. 3d 490, 507 n.14 (1986), RLA-13).

the Panel finds that the business judgment rule as it may have been incorporated in Section 4.3(i)(iii) of the Bylaws has any application in the present case, it refers to a “judicial policy of deference to the business judgment of corporate directors in the exercise of their broad discretion in making corporate decisions.”²⁵⁴

D. Merits of the Claimant’s Core Claims

289. While the Panel has found that the Claimant’s core claims against the Respondent crystallized on 6 June 2018, the Panel’s view is that a proper analysis of the Claimant’s claims requires an examination of the Respondent’s conduct – that of its Board, individual Directors, Officers and Staff – against the backdrop of the entire chronology of events leading to the Respondent’s decision of 6 June 2018. Before embarking on this examination, however, the Panel considers it useful to recall the key standards against which the Respondent has determined that its conduct should be assessed.

1. Relevant Provisions of the Articles and Bylaws

290. Article 2, paragraph III of the Respondent’s Articles reads, in part, as follows:

The Corporation shall operate in a manner consistent with these Articles and its Bylaws for the benefit of the Internet community as a whole, carrying out its activities in conformity with relevant principles of international law and international conventions and applicable local law and through open and transparent processes that enable competition and open entry in Internet-related markets.[...]

291. Under its Bylaws, the Respondent has committed to “act in a manner that complies with and reflects ICANN’s Commitments and respects ICANN’s Core Values”.²⁵⁵

292. The Respondent’s Commitments that are relied upon by the Claimant or appear germane to its claims, are expressed as follows in the Bylaws:

In performing its Mission, ICANN must operate in a manner consistent with these Bylaws for the benefit of the Internet community as a whole, carrying out its activities in conformity with relevant principles of international law and international conventions and applicable local law, through open and transparent processes that enable competition and

²⁵⁴ *Lee v. Interinsurance Exch.*, 50 Cal. App. 4th 694, 711 (1996) (quoting *Barnes v. State Farm Mut. Auto Ins. Co.*, 16 Cal. App. 4th 365, 378 (1993)).

²⁵⁵ Bylaws, Ex. C-1, Section 1.2.

open entry in Internet-related markets. Specifically, ICANN commits to do the following (each, a "**Commitment**," and collectively, the "**Commitments**"):

[...]

(v) Make decisions by applying documented policies consistently, neutrally, objectively, and fairly, without singling out any particular party for discriminatory treatment (i.e., making an unjustified prejudicial distinction between or among different parties); and

(vi) Remain accountable to the Internet community through mechanisms defined in these Bylaws that enhance ICANN's effectiveness.²⁵⁶

293. As for ICANN's Core Values, which are to "guide the decisions and actions" of the Respondent, they include:

(iv) Introducing and promoting competition in the registration of domain names where practicable and beneficial to the public interest as identified through the bottom-up, multistakeholder policy development process;

(v) Operating with efficiency and excellence, in a fiscally responsible and accountable manner and, where practicable and not inconsistent with ICANN's other obligations under these Bylaws, at a speed that is responsive to the needs of the global Internet community;²⁵⁷

294. The Bylaws further provide that ICANN's Commitments and Core Values "are intended to apply in the broadest possible range of circumstances".²⁵⁸

295. Finally, under Article 3 of the Bylaws, entitled Transparency, the Respondent has committed that it and its constituent bodies:

[...] shall operate to the maximum extent possible in an open and transparent manner and consistent with procedures designed to ensure fairness, [...]²⁵⁹

296. Bearing the standards set out in those commitments and core values in mind, the Panel turns to consider the Respondent's conduct, beginning with the Claimant's complaints about the Respondent's pre-auction investigation.

2. Pre-Auction Investigation

297. The Claimant has criticized the Respondent's pre-auction investigation of the allegation

²⁵⁶ Bylaws, Ex. C-1, Section 1.2(a)(v)(vi).

²⁵⁷ *Ibid*, Section 1.2 (b) (v) and (vi).

²⁵⁸ *Ibid*, Section 1.2 (b) (c).

²⁵⁹ *Ibid*, Section 3.1.

by Ruby Glen that NDC had failed properly to update its application following an alleged change of ownership or control of NDC. This allegation was prompted by Mr. Rasco's email of 7 June 2016 to Mr. Nevett, where he stated that the "powers that be" had indicated there was no change in position and that NDC would not be seeking an extension of the auction date. The Claimant strenuously argues that Mr. Rasco's representations, first to an employee of ICANN's New gTLD Operations section, Mr. Jared Erwin,²⁶⁰ and then to the Ombudsman,²⁶¹ were both misleading (in the first case) and erroneous (in the second).

298. As regards the Respondent's pre-auction investigation – on which, in the opinion of the Panel, very little turns insofar as the Claimant's core claims are concerned – the Panel accepts the evidence of Ms. Willett that prior to the auction, the Respondent was unaware of Verisign's involvement in NDC's application. Having considered the witness and documentary evidence on this question, which is preponderant, the Panel finds that the allegation presented to the Respondent was one of change of control within NDC, that it was promptly investigated by Ms. Willett's team and the Respondent's Ombudsman, and that in light of the representations made by Mr. Rasco, it was reasonable for the Respondent to conclude, as Ruby Glen and the other applicants in the contention set were advised in Ms. Willett's letter of 13 July 2016, that the Respondent "found no basis to initiate the application change request process or postpone the auction."²⁶² The Panel therefore rejects the Claimant's contention that the Respondent violated its Bylaws by the manner in which it investigated and resolved the pre-auction allegations of change of control within NDC.

3. Post-auction Actions or Inactions

(i) Overview

299. The evidence leads the Panel to a different conclusion insofar as the post-auction actions and inactions of the Respondent are concerned. What the evidence establishes is that upon it being revealed that Verisign had entered into an agreement with NDC and provided funds

²⁶⁰ Exchanges between Messrs. Erwin and Rasco, Ms. Willett's witness statement, 31 May 2019, Ex. B.

²⁶¹ Exchanges between Messrs. LaHatte and Rasco, Mr. Rasco's witness statement, 30 May 2020, Ex. N, [PDF] p. 2.

²⁶² Ms. Willett's letter to members of the .WEB/.WEBS contention set dated 13 July 2016, Ex. C-44.

in support of NDC's successful bid for .WEB, questions were immediately raised by two (2) members of the .WEB contention set as to the propriety of NDC's conduct as a gTLD applicant in light of the New gTLD Program Rules. As explained later in these reasons, the Panel accepts that these questions, including the fundamental question of whether or not the DAA violates the Guidebook and the Auction Rules, are better left, in the first instance, to the consideration of the Respondent's Staff and Board. However, it needs to be emphasized that this deference is necessarily predicated on the assumption that the Respondent will take ownership of these issues when they are raised and, subject to the ultimate independent review of an IRP Panel, will take a position as to whether the conduct complained of complies with the Guidebook and Auction Rules. After all, these instruments originate from the Respondent, and it is the Respondent that is entrusted with responsibility for the implementation of the gTLD Program in accordance with the New gTLD Program Rules, not only for the benefit of direct participants in the Program but also for the benefit of the wider Internet community.

300. The evidence in the present case shows that the Respondent, to this day, while acknowledging that the questions raised as to the propriety of NDC's and Verisign's conduct are legitimate, serious, and deserving of its careful attention, has nevertheless failed to address them. Moreover, the Respondent has adopted contradictory positions, including in these proceedings, that at least in appearance undermine the impartiality of its processes.
301. In the paragraphs below, the Panel sets out its reasons for making those findings and reaching this conclusion.

(ii) The Claimant's 8 August and 9 September 2016 Letters

302. In the first of these two (2) letters, Mr. Hemphill, at the time, Afilias' Vice President and General Counsel, makes clear that while he has not been able to review a copy of the agreement(s) between NDC and Verisign, what has been made public about the arrangements between the two (2) companies raises sufficient concerns for Afilias to "request that ICANN promptly undertake an investigation" and "take appropriate action against NDC and its .WEB application for violations of the Guidebook, as we had

requested". Mr. Hemphill concludes his letter by urging the Respondent to stay any further action in relation to .WEB and, in particular, not to act upon any request for NDC or Verisign to enter into a registry agreement for .WEB with the Respondent.²⁶³

303. The Claimant's 9 September 2016 letter, noting that the Respondent had not responded to its earlier letter of 8 August, reiterated the request that the Respondent take no steps in relation to .WEB until ICANN, its Ombudsman, or its Board had reviewed NDC's conduct and determined whether or not to disqualify NDC's bid and reject its application. The letter then proceeds to explain, in detail, the reasons why, in the opinion of Afilias, the Respondent was obliged to disqualify NDC's application and proceed to contract for .WEB with Afilias. Specifically, Afilias articulated, by reference to the New gTLD Program Rules, the Articles and the Bylaws, why it considered that NDC had violated the Guidebook and Auction Rules and why ICANN was under a duty to contract with the next highest bidder in the auction. The Claimant concluded its letter by requesting a response by no later than 16 September 2016.²⁶⁴
304. The Claimant is not the only member of the contention set that raised questions, after the auction, about the propriety of Verisign's involvement in, and support for, the application of NDC. Contemporaneously with the Claimant's letters just reviewed, on 8 August 2016 Ruby Glen filed an Amended Complaint in the proceedings it had commenced in the US District Court prior to the auction. In its Amended Complaint, Ruby Glen questioned the legality of the auction for .WEB and sought an order enjoining the execution of a registry agreement pending resolution of its claims.
305. Before coming to the Questionnaire that the Respondent sent out on 16 September 2016, in part in response to Afilias' two (2) letters, the Panel recalls that in the meantime the Respondent had initiated a dialogue directly with Verisign, when outside counsel for the Respondent communicated by telephone with Verisign's outside counsel. The exact request that was made of Verisign's counsel remains unknown. However, it is undisputed that it was prompted by the Claimant's and Ruby Glen's complaints about the propriety of

²⁶³ Afilias' letter to Mr. Atallah dated 8 August 2016, Ex. C-49, pp. 1 and 3-4.

²⁶⁴ Afilias' letter to Mr. Atallah dated 9 September 2016, Ex. C-103.

NDC's arrangements with Verisign. Why the Respondent chose to request assistance at that point directly from Verisign, a non-applicant, rather than from NDC, is a question that was largely left unaddressed apart from outside counsel for the Respondent explaining, during the hearing held in connection with Afilias' Application of 29 April 2020, that counsel knew Verisign's lead counsel from prior cases, and therefore decided to contact him.²⁶⁵

306. On 23 August 2016, in response to this request, Verisign's and NDC's counsel, unbeknownst to the Claimant and likely to the other members of the contention set (except NDC), filed a submission with the Respondent on behalf of NDC and Verisign in the form of an eight (8) page letter and five (5) attachments, one of which was the DAA. The letter states that it is being submitted in response to the request by ICANN's counsel for information regarding the agreement between NDC and Verisign relating to .WEB. Redacted - Third Party Designated Confidential Information

²⁶⁶ The *Amici's* counsel's letter was marked as "Highly Confidential – Attorneys' Eyes Only", while the attached DAA, as already mentioned, was marked as "Confidential Business Information – Do Not Disclose". The letter of 23 August 2016 sent on behalf of the *Amici* was not posted on ICANN's website or disclosed to the Claimant because of its sender's request that it be kept confidential.²⁶⁷

(iii) The 16 September 2016 Questionnaire

307. Turning to the Respondent's Questionnaire of 16 September 2016, the evidence reveals that it resulted from a collaborative effort by and between Ms. Willett, who prepared a first

²⁶⁵ Transcript of the 11 May 2020 Hearing, Ex. R-29, p. 20:12-15 (Mr. Enson: "The lawyers ... -- ICANN and Verisign had been adverse to one another on a number of occasions. The lawyers know each other well and there is nothing extraordinary or sinister about me picking up the phone to call Mr. Johnston about an issue like this.") See also the response from counsel for the Claimant: Merits hearing transcript, 3 August 2020, p. 53:1-10 (Claimant's Opening).

²⁶⁶ Arnold & Porter's letter to Mr. Enson dated 23 August 2016, Ex. C-102.

²⁶⁷ See Merits hearing transcript, 6 August 2020, pp. 690-691 (Ms. Willett).

draft of the questions, and Respondent's counsel. At that time, Ms. Willett held the position of Vice-President, gTLD Operations, Global Division of ICANN, reporting directly to Mr. Atallah.²⁶⁸ The Questionnaire was sent out to Afilias, Ruby Glen, NDC, and Verisign, under cover of a letter of even date signed by Ms. Willett.²⁶⁹ Ms. Willett was asked why the Questionnaire was not sent to all members of the contention set, but the question was objected to on the ground of privilege.

308. The Panel has already noted that Ms. Willett's cover letter refers in introduction to questions having been raised in various fora about whether NDC should have participated in the 27-28 July 2016 auction, and whether NDC's application should have been rejected. The letter goes on to note:

To help facilitate informed resolution of these questions, ICANN would find it useful to have additional information.

Accordingly, ICANN invites Ruby Glen, NDC, Afilias, and Verisign, Inc. (Verisign) to provide information and comment on the topics listed in the attached. Please endeavor to respond to all of the topics/questions for which you have information to do so. To allow ICANN promptly to evaluate these matters, please provide response [...] no later than 7 October 2016.²⁷⁰

309. Ms. Willett was asked what she meant when she stated that the Respondent was seeking information to facilitate "informed resolution". It was put to her that this "sounds like an investigation at the end of which ICANN would resolve the questions that had been raised". In response, Ms. Willett denied that she was undertaking an investigation, and stated that the responses eventually received to the Questionnaire were simply passed on to counsel.²⁷¹
310. The Questionnaire is six (6) pages long and lists twenty (20) "topics" on which the entities to which it was addressed are invited to comment. The introductory paragraph echoes Ms. Willett's cover letter in stating that "all responses to these questions will be taken into

²⁶⁸ Merits hearing transcript, 5 August 2020, p. 545 (Ms. Willett). Ms. Willett left the employ of the Respondent in December 2019.

²⁶⁹ ICANN's letter to Mr. Kane dated 16 September 2016 and attached Questionnaire, Ex. C-50.

²⁷⁰ *Ibid.*, p. 1 [emphasis added].

²⁷¹ Merits hearing transcript, 6 August 2020, pp. 696-697 (Ms. Willett) : "[...] I was not undertaking an investigation. ICANN counsel handled and administered the CEP process. So the responses which I received to these letters I passed along to counsel."

consideration in ICANN’s evaluation of the issues raised [...]’.²⁷²

311. As already noted, while the Respondent, NDC and Verisign had knowledge of the terms of the DAA at that time, Afilias and Ruby Glen did not. It seems to the Panel evident that this asymmetry of information put Afilias and Ruby Glen at a significant disadvantage in addressing the topics listed in the Questionnaire in the context of “ICANN’s evaluation of the issues raised”. By way of example, the first topic asked for evidence regarding whether ownership or control of NDC changed after NDC applied for .WEB. The Respondent, NDC and Verisign were able to comment on the alleged change of ownership or control resulting from the contractual arrangements between the *Amici* by reference to the actual terms of the DAA. However, Afilias and Ruby Glen were not.
312. Other topics in the Questionnaire would attract very different answers depending on whether the responding party had knowledge of the terms of the DAA. By way of examples:

4. In his 8 August 2016, letter, Scott Hemphill stated: “A change in control can be effected by contract as well as by changes in equity ownership.” Do you think that an applicant’s making a contractual promise to conduct particular activities in which it is engaged in a particular manner constitutes a “change in control” of the applicant? Do you think that compliance with such a contractual promise constitutes such a change in control? Please give reasons.

5. Do you think that AGB Section 1.2.7 requires an applicant to disclose to ICANN all contractual commitments it makes to conduct its affairs in particular ways? If not, in what circumstances (if any) would disclosure be required? [...]

7. Do you think that changes to an applicant’s financial condition that do not negatively reflect on an applicant’s qualifications to operate the gTLD should be deemed material? If so, why? Do you think that an applicant’s obtaining a funding commitment from a third party to fund bidding at auction negatively affects that applicant’s qualifications to operate the gTLD? Please explain why, describing your view of the relevance of (a) the funding commitment the applicant received and (b) the consideration the applicant gave to obtain that commitment (e.g., a promise to repay; a promise to use a particular backend provider; an option to receive some ownership interest in the applicant in the future; some promise about how the gTLD will be operated).[...]

9. Do you think that requiring applicants to disclose funding commitments (whether through loans, contributions from affiliated companies, or otherwise) they obtain for auction bids would help or harm the auction process? Would a requirement that applicants disclose their funding arrangements create problems for applicants (for example, making funding commitments harder to obtain)? To what extent, if any, do you think scrutinizing such arrangements (beyond determining whether they negatively reflect on an applicant’s

²⁷² ICANN’s letter to Mr. Kane dated 16 September 2016 and attached Questionnaire, Ex. C-50, p. 2 [emphasis added].

qualifications) would be within ICANN's proper mission? Would required disclosure of applicants' funding sources pose any threat to robust competition?

313. Another noteworthy feature of the Questionnaire is that while it contains many references to Mr. Hemphill's letters, it does not refer to the letter of 23 August 2016 from counsel for the *Amici*, nor in terms to the DAA. This was because one and the other had been marked confidential when submitted to the Respondent. Ms. Willett was asked about ICANN's practice when presented with a request to keep correspondence confidential:

[...] our practice was that we respected those requests for confidentiality and we did not post those -- such correspondences, with one exception.

At some point if some other party asked for something to be published or it became desirable and relevant to something else, I recall, again, it's been years, so I don't recall a specific example, but as a general practice, I recall that ICANN might ask the sender if it would be possible to publish a letter, but we respected their requests for confidential correspondence.²⁷³

314. The Panel is of the view that the Respondent could have, and ought to have requested Verisign and NDC for authorization to disclose the DAA to the other addressees of its Questionnaire, be it on an "external counsel's eyes only" basis. There is no evidence that this possibility was explored. It seems to the Panel that in the context of an information gathering exercise such as that in which the Respondent chose to engage with its Questionnaire, it would have been, to quote Ms. Willett's evidence, both "desirable" and "relevant" to do so. The Panel also believes that ICANN's evaluation of the issues would have been better informed had Afilias and Ruby Glen been given an opportunity to know, and address directly, the arguments advanced on behalf of the *Amici* in response to the concerns they had raised. At the very least, the Respondent could have disclosed that the Questionnaire had been prepared with knowledge of the terms of the DAA, which would have given interested parties an opportunity to seek to obtain a copy of the agreement, either voluntarily by requesting it from the *Amici*, or through compulsion by available legal means.
315. The foregoing leads the Panel to find that the preparation and issuance of the Respondent's Questionnaire in the circumstances just reviewed violated the Respondent's commitment,

²⁷³ Merits hearing transcript, 6 August 2020, pp. 690-691 (Ms. Willett).

under the Bylaws, to operate in an open and transparent manner and consistent with procedures designed to ensure fairness.

316. As noted, Afilias, NDC and Verisign forwarded responses to the Questionnaire, but Ruby Glen did not. Ms. Willett testified that she passed on the responses she received to ICANN's legal team, without undertaking her own analysis. She was not sure what counsel did with them.²⁷⁴ As for any external follow-up, it is common ground that no feedback whatsoever was given to the Claimant of the Respondent's evaluation of these responses.

(iv) The Respondent's Letter of 30 September 2016

317. In the meantime, on 30 September 2016, Mr. Atallah, on behalf of the Respondent, acknowledged receipt of Afilias' 8 August and 9 September 2016 letters and, as found by the Panel when considering the Respondent's time limitations defence, represented in explicit terms that the Respondent's consideration of this matter was continuing. It bears noting that in 2016, Mr. Atallah was President of the Respondent's Global Domains Division, reporting to the CEO, and was the person responsible for overseeing the administration of the New gTLD Program.²⁷⁵

(v) Findings as to the Seriousness of the Issues Raised by the Claimant, and the Respondent's Representation that It Would Evaluate Them

318. In the Panel's opinion, the implication of the Respondent's decision to prepare and send out its 16 September 2016 Questionnaire, and of Mr. Atallah's letter of 30 September 2016 in response to the Claimant's letters of 8 August and 9 September 2016, was that the questions raised by the Claimant and Ruby Glen in connection with NDC's conduct and the latter's arrangements with Verisign were serious and deserving of the Respondent's consideration. This was admitted by the Respondent in its pleadings in this IRP, where the

²⁷⁴ Merits hearing transcript, 6 August 2020, pp. 719-720 (Ms. Willett).

²⁷⁵ Merits hearing transcript, 7 August 2020, pp. 917-918 (Mr. Disspain).

Respondent averred:

[...] ...determining that NDC violated the Guidebook is not a simple analysis that is answered on the face of the Guidebook. There is no Guidebook provision that squarely addresses an arrangement like the DAA. A true determination of whether there was a breach of the Guidebook requires an in-depth analysis and interpretation of the Guidebook provisions at issue, their drafting history to the extent it exists, how ICANN has handled similar situations, and the terms of the DAA. This analysis must be done by those with the requisite knowledge, expertise, and experience, namely ICANN.²⁷⁶

319. In making its finding as to the seriousness of the questions raised by the Claimant, the Panel is mindful of Ms. Willett’s evidence when asked, in cross-examination, whether she considered that the concerns that Afiliis had raised were serious. Her answer was that she “considered them to be sour grapes”, and she admitted that she may have shared that view with others within ICANN.²⁷⁷ However, Ms. Willett having testified that she never even read the DAA when these events were unfolding, nor had she read the 23 August 2016 letter sent to the Respondent on behalf of the *Amici*, the Panel must conclude that her stated view was more in the nature of a personal impression than a considered opinion. Moreover, in all appearance her impression was not shared by those who invested time in assisting her preparing the Questionnaire, or by Mr. Atallah who subsequently confirmed that ICANN was continuing to consider the questions raised by the Claimant. In any event, and as just seen, it is not the position formally adopted by the Respondent in this IRP.
320. The questions raised by the Claimant that are, in the opinion of the Panel, serious and deserving of the Respondent’s consideration, include the following, which the Panel merely cites as examples:
- Whether, in entering into the DAA, NDC violated the Guidebook and, more particularly, the section providing that an “Applicant may not resell, assign, or transfer any of applicant’s rights or obligations in connection with the application”.
 - Whether the execution of the DAA by NDC constituted a “change in circumstances

²⁷⁶ Respondent’s Rejoinder, para. 82.

²⁷⁷ Merits hearing transcript, 6 August 2020, p. 746 (Ms. Willett).

that [rendered] any information provided in the application false and misleading”.

- Whether by entering into the DAA after the deadline for the submission of applications for new gTLDs, and by agreeing with NDC provisions designed to keep the DAA strictly confidential, Verisign impermissibly circumvented the “roadmap” provided for applicants under the New gTLD Program Rules, and in particular the public notice, comment and evaluation process contemplated by these Rules.

321. The Panel expresses no view on the answers that should be given to those questions and the other questions arising from the execution of the DAA by NDC and Verisign, other than to reiterate, as acknowledged by the Respondent, that they are deserving of careful consideration.

322. The Panel has no hesitation in finding, based on the above, that that the Respondent represented by its conduct that the questions raised by the Claimant and “others in the contention set” were worthy of the Respondent’s consideration, and that the Respondent would consider, evaluate, and seek informed resolution of the issues arising therefrom. By reason of this conduct on the part of the Respondent, the Panel cannot accept the Respondent’s contention that there was nothing for the Respondent to consider, decide or pronounce upon in the absence of a formal accountability mechanism having been commenced by the Claimant. The fact of the matter is that the Respondent *represented* that it would consider the matter, and made that representation at a time when Ms. Willett confirmed the Claimant had no pending accountability mechanism.²⁷⁸ Moreover, since the Respondent is responsible for the implementation of the New gTLD Program in accordance with the New gTLD Program Rules, it would seem to the Panel that the Respondent itself had an interest in ensuring that these questions, once raised, were addressed and resolved. This would be required not only to preserve and promote the integrity of the New gTLD

²⁷⁸ Merits hearing transcript, 6 August 2020, p. 745 (Ms. Willett).

Program, but also to disseminate the Respondent’s position on those questions within the Internet community and allow market participants to act accordingly.

(vi) The November 2016 Board Workshop

323. The Panel comes to the November 2016 Workshop session at which “the Board chose not to take any action at that time regarding .WEB because an Accountability Mechanism was pending regarding .WEB.”²⁷⁹
324. The existence of this November 2016 Workshop was revealed for the first time in the Respondent’s Rejoinder, filed on 1 June 2020. For example, no mention of it is made in the chronology of events contained in the Respondent’s Response,²⁸⁰ where it was merely pleaded, with no reference to the workshop session, that the Board had not yet had an opportunity to fully address the issues being pursued by Afiliis in this IRP and that “[d]eferring such consideration until this Panel renders its final decision is well within the realm of reasonable business judgment.”²⁸¹
325. The Panel had the benefit of hearing the evidence of two (2) witnesses who were in attendance at the November 2016 Workshop: Mr. Disspain, a long-standing member of ICANN’s Board, and Ms. Burr, who attended the workshop as an observer shortly before being herself appointed to the Board. Both of these witnesses are intimately familiar with the Respondent and its processes, and both testified openly and credibly.
326. This is how Mr. Disspain described the November 2016 Workshop session in his witness statement:

10. In November 2016, the Board received a briefing from ICANN counsel on the status of, and issues being raised regarding, .WEB. The communications during that session, in which ICANN’s counsel, John Jeffrey (ICANN’s General Counsel) and Amy Stathos (ICANN’s Deputy General Counsel), were integrally involved, are privileged and, thus, I will not disclose details of those discussions so as to avoid waiving the privilege. I recall that, prior to this session, the Board received Board briefing materials directly from ICANN’s counsel that set forth relevant information about the disputes regarding .WEB, the parties’ legal and factual contentions and a set of options the Board could consider.

²⁷⁹ Respondent’s Rejoinder, paras. 40-41.

²⁸⁰ Respondent’s Response, paras. 40-54.

²⁸¹ Respondent’s Response, para. 66.

During the session, Board members discussed these topics and asked questions of, and received information and advice from, ICANN’s counsel.

11. At the November 2016 session, the Board chose not to take any action at that time regarding the claims arising from the .WEB auction, including the claim that, by virtue of the agreement between Verisign and NDC, NDC had committed violations of the Applicant Guidebook which merited the disqualification of its application for .WEB and the rejection of its winning bid. Given the Accountability Mechanisms that had already been initiated over .WEB, and given the prospect of further Accountability Mechanisms and legal proceedings, the Board decided to await the results of such proceedings before considering and determining what action, if any, to take at that time. [...]

327. In the course of his cross-examination, Mr. Disspain had the opportunity to add the following to the evidence set out in his witness statement:

- The workshop session of 3 November 2016 was separate and distinct from the actual Board meeting, which took place on 5 November 2016.²⁸²
- The session was attended by a significant number of Board members, in his estimation more than 50%.²⁸³ Also in attendance were ICANN’s CEO, its in-house lawyers, and likely Mr. Atallah.²⁸⁴
- The letters that Afilias had sent Mr. Atallah were known to those in attendance and “would have been part of the briefing”;²⁸⁵ the Questionnaire prepared by ICANN in response to these letters was also known.²⁸⁶ However, the DAA, the 23 August 2016 letter sent on behalf of the *Amici*, and the Questionnaire were not part of the briefing materials.²⁸⁷

²⁸² Merits hearing transcript, 7 August 2020, pp. 918-919 (Mr. Disspain).

²⁸³ *Ibid.*, p. 923 (Mr. Disspain).

²⁸⁴ Merits hearing transcript, 7 August 2020, p. 924 (Mr. Disspain).

²⁸⁵ Merits hearing transcript, 7 August 2020, p. 917 (Mr. Disspain).

²⁸⁶ Merits hearing transcript, 7 August 2020, p. 928 (Mr. Disspain).

²⁸⁷ Merits hearing transcript, 7 August 2020, pp. 930-931 (Mr. Disspain).

- There was a full and open discussion, that likely lasted more than fifteen (15) minutes.
- Rather than “proactively decide” or “agree” its course of action, the Board “made a choice” to follow its longstanding practice of not doing anything when there is a pending outstanding accountability mechanism.²⁸⁸
- The Board made this choice without the need for a vote, straw poll or show of hands.²⁸⁹

328. Ms. Burr explained that Board workshops are informal working sessions. A quorum is not required, attendance is not taken, nor are minutes prepared or resolutions passed.²⁹⁰

329. It is common ground that the choice, or decision, made by the Board at its November 2016 Workshop session was not communicated to Afilias or otherwise made public. In response to a question from the Panel, Mr. Disspain indicated that the question of whether the Board’s 3 November 2016 decision would or would not be communicated to the members of the .WEB contention set was not discussed at the workshop session.²⁹¹ Indeed, Mr. Disspain only became aware through his involvement in this IRP that the November 2016 Board decision to defer consideration of the issues raised in relation to .WEB was only communicated to the Claimant – and made public – when it was revealed in the Respondent’s Rejoinder.

330. Mr. Disspain was invited by the Panel to confirm that after the November 2016 Board workshop, he knew that the question of whether NDC’s bid was compliant with the New gTLD Program Rules had been raised by Afilias and was a “pending question, one on which the Board had not pronounced and had decided not to address.” [emphasis added]

²⁸⁸ Merits hearing transcript, 7 August 2020, pp. 938-939 (Mr. Disspain).

²⁸⁹ Merits hearing transcript, 7 August 2020, p. 935 (Mr. Disspain).

²⁹⁰ Merits hearing transcript, 4 August 2020, pp. 282-286 (Ms. Burr).

²⁹¹ Merits hearing transcript, 7 August 2020, p. 975 (Mr. Disspain).

Mr. Disspain provided this confirmation. The Panel can safely assume that what was true for Mr. Disspain was equally true for his fellow Board members who were in attendance at the workshop.

331. The Respondent urges that it was not a violation of the Respondent’s Bylaws for the Board, on 3 November 2016, to defer consideration of the complaints that had been raised in relation to NDC’s application and auction bids for .WEB. It is common ground that there were Accountability Mechanisms in relation to .WEB pending at the time, and it seems to the Panel reasonable for the Board to have decided to await the outcome of these proceedings before considering and determining what action, if any, it should take. The Panel notes that it reaches that conclusion without needing to rely on the provisions of Section 4.3(i)(iii) of the Bylaws, and determining whether or not that decision involved the Board’s exercise of its fiduciary duties.
332. The Panel does find, however, that it was a violation of the commitment to operate “in an open and transparent manner and consistent with procedures to ensure fairness”²⁹² for the Respondent to have failed to communicate the Board’s decision to the Claimant. As noted already, the Respondent had clearly represented in its letters of 16 and 30 September 2016 that it would evaluate the issues raised in connection with NDC’s application and auction bids for .WEB. Since the Board’s decision to defer consideration of these issues contradicted the Respondent’s representations, it was incumbent upon the Respondent to communicate that decision to the Claimant.

(vii) The Respondent’s Decision to Proceed with Delegation of .WEB to NDC in June 2018

333. Mr. Disspain confirmed that by early 2018, the situation as described in paragraph 327 above “remained unchanged.”²⁹³ That is, the question of whether NDC’s bid, post-DAA, was compliant with the New gTLD Program Rules had been raised and remained a pending question on which the Board had yet to pronounce. The extent to which the Respondent’s

²⁹² See Bylaws Ex. C-1, Art. 3.

²⁹³ Merits hearing transcript, 7 August 2020, pp. 976-977 (Mr. Disspain).

Staff had, by early 2018, progressed in their consideration of the questions that had been raised by the Claimant, if at all, is unknown. However, the evidence establishes that no determination of these questions was communicated to the Claimant, and that neither those questions nor any Staff position in relation thereto were brought back to the Board for its consideration. Ms. Willett explained in the course of her cross-examination that the on-hold status of an application or contention set does not mean “that all work ceases”, or that the Respondent is prevented from continuing to gather information.²⁹⁴ Hence, the fact that the contention set was on hold throughout the period from November 2016 to June 2018 would not justify the lack of progress in evaluating the issues that had been raised in connection with .WEB.

334. This brings the Panel to considering the Respondent’s decision to put the .WEB contention set “off hold” on 6 June 2018, the day after Afiliat’s Reconsideration Request 18-7 was denied.²⁹⁵ As seen, this immediately set back in motion the Respondent’s internal process leading to the execution of a registry agreement. On 12 June 2018, Ms. Willett and other ICANN staff approved a draft registry agreement for .WEB; the registry agreement was forwarded for execution to NDC on 14 June 2018; the agreement was promptly signed and returned to ICANN and, on the same day, ICANN’s Staff approved executing the .WEB Registry Agreement with NDC on behalf of ICANN.
335. In the opinion of the Panel, the Respondent’s decision to move to delegation without having pronounced on the questions raised in relation to .WEB was inconsistent with the representations made in Ms. Willett’s letter of 16 September 2016, the text in the introduction to the attached Questionnaire,²⁹⁶ and Mr. Atallah’s letter of 30 September 2016.²⁹⁷ The Panel also finds this conduct to be inconsistent with the Board’s decision of 3 November 2016 which, while it deferred consideration of the .WEB issues, nevertheless acknowledged that they were deserving of consideration, a position reiterated

²⁹⁴ Merits hearing transcript, 6 August 2020, pp. 697-698 (Ms. Willett).

²⁹⁵ See above, para. 117.

²⁹⁶ ICANN’s letter to Mr. Kane dated 16 September 2016 and attached Questionnaire, Ex. C-50.

²⁹⁷ ICANN’s letter to Mr. Hemphill dated 30 September 2016, Ex. C-61.

by the Respondent in this IRP.

336. Mr. Disspain testified about the Respondent's decision to put the contention set off hold in June 2018. While he had made the point in his witness statement that this was a decision made by ICANN's Staff,²⁹⁸ he confirmed at the hearing that the Board was aware, ahead of time, that the .WEB contention set would be put off hold. He added, however, that he and his fellow Board members fully expected the Claimant to make good on its promise to initiate an IRP, which would result in the contention set being put back on hold.²⁹⁹
337. Mr. Disspain was asked by the Panel what would the Board have done had the Claimant, contrary to his and his colleagues' expectation, *not* initiated an IRP. Might that not have resulted in a registry agreement for .WEB being signed by the Staff on behalf of the Respondent without the Board having the opportunity to address the questions it had chosen to defer in November 2016? Mr. Disspain, understandably, did not want to speculate as to what the Board would have done.³⁰⁰ However, when shown internal correspondence evidencing that signature of the registry agreement for .WEB on behalf of ICANN had in fact been approved by ICANN's Staff after receipt of the executed copy of the agreement by NDC, he did confirm that Board approval is not required for the execution of a registry agreement by ICANN.³⁰¹ Thus, clearly, a registry agreement with NDC for .WEB could have been executed by ICANN's Staff and come into force without the Board having pronounced on the propriety of the DAA under the Guidebook and Auction Rules.
338. In the course of her examination, Ms. Willett was asked the following hypothetical question:

[PANEL MEMBER]: [...] If [...] an applicant had failed to respect the guidebook, but there had been no accountability mechanism to complain about that noncompliance, would you, by reason of the absence of an accountability mechanism, have sent a draft Registry Agreement for execution?

²⁹⁸ Mr. Disspain's witness statement, 1 June 2020, para. 13.

²⁹⁹ Merits hearing transcript, 7 August 2020, pp. 978-980 (Mr. Disspain).

³⁰⁰ *Ibid.*, pp. 981-982 (Mr. Disspain).

³⁰¹ *Ibid.*, pp. 1002-1004 (Mr. Disspain).

THE WITNESS: No, I don't believe we would have. If we determined that an applicant had violated the terms of the guidebook, I don't believe that my team and I would have given our approvals to proceed with contracting.³⁰²

339. In the Panel's view, Ms. Willett's evidence in answer to this question reflects the kind of ownership of compliance issues with the New gTLD Program Rules that the Respondent did not display in its dealing with the concerns raised in connection with NDC's arrangements with Verisign.
340. The Panel observes that the Respondent's Staff's failure to take a position on the question of whether the DAA complies with the New gTLD Program Rules before moving to delegation stands in contrast with the resolution that was brought to the pre-auction allegation of change of control within NDC, which had also been raised, initially, in correspondence. Ms. Willett confirmed in her evidence that the Respondent's pre-auction investigation was prompted by Ruby Glen's email of 23 June 2016.³⁰³ Once the investigation was completed, Ms. Willett informed Ruby Glen of ICANN's decision³⁰⁴ and advised Ruby Glen that if dissatisfied with the decision, it could invoke ICANN's accountability mechanisms.³⁰⁵ No such decision was made by ICANN's Staff in relation to the issues raised by the Claimant that could have formed the basis for a formal accountability mechanism, in the context of which positions would have been adopted, battle lines would have been drawn, and an adversarial process such as an IRP would have resulted in a reasoned decision binding on the parties.
341. What the Panel has described as a failure on the part of the Respondent to take ownership of the issues arising from the concerns raised by the Claimant and Ruby Glen finds expression in the Respondent's submission in this IRP that the dispute arising out of NDC's arrangement with Verisign is in reality a dispute between the Claimant and the *Amici*. For example, the Respondent writes in its Response:

³⁰² Merits hearing transcript, 6 August 2020, pp. 749-750 (Ms. Eisner).

³⁰³ Merits hearing transcript, 6 August 2020, p. 617 (Ms. Willett).

³⁰⁴ See Ms. Willett's letter to members of the .WEB/.WEBS contention set dated 13 July 2016, Ex. C-44.

³⁰⁵ Merits hearing transcript, 6 August 2020, pp. 621-622 (Ms. Willett).

[...] the Guidebook breaches that Afilias alleges are the subject of good faith dispute by NDC and Verisign, both of which are seeking to participate in this IRP pursuant to their *amicus* applications. [...] While Afilias' Amended IRP Request is notionally directed at ICANN, it is focused exclusively on the conduct of NDC and Verisign, to which NDC and Verisign have responses. [...]³⁰⁶

342. Another example can be found in the Respondent's post-hearing brief where it is stated:

The testimony at the hearing established that there is a good-faith and fundamental dispute between *Amici* and *Afilias* about whether the DAA violated the Guidebook or Auction Rules, meaning that reasonable minds could differ on whether NDC is in breach of either and, if so, whether this qualification is the appropriate remedy. Accordingly, Afilias' additional argument that ICANN can only exercise its discretion reasonably by disqualifying NDC must be rejected.³⁰⁷

343. It may be fair to say, as averred in the Respondent's Response, that "ICANN has been caught in the middle of this dispute between powerful and well-funded businesses".³⁰⁸ However, in the Panel's view, it is not open to the Respondent to add, as it does in the same sentence of its Response, "[and ICANN] has not taken sides", as if the Respondent had no responsibility in bringing about a resolution of the dispute by itself taking a position as to the propriety of NDC's arrangements with Verisign.

344. In the opinion of the Panel, there is an inherent contradiction between proceeding with the delegation of .WEB to NDC, as the Respondent was prepared to do in June 2018, and recognizing that issues raised in connection with NDC's arrangements with Verisign are serious, deserving of the Respondent's consideration, and remain to be addressed by the Respondent and its Board, as was determined by the Board in November 2016. A necessary implication of the Respondent's decision to proceed with the delegation of .WEB to NDC in June 2018 was some implicit finding that NDC was not in breach of the New gTLD Program Rules and, by way of consequence, the implicit rejection of the Claimant's allegations of non-compliance with the Guidebook and Auction Rules. This is difficult to reconcile with the submission that "ICANN has taken no position on

³⁰⁶ See Respondent's Response, para. 63.

³⁰⁷ Respondent's PHB, para. 90 [emphasis added].

³⁰⁸ Respondent's Response, para. 4.

whether NDC violated the Guidebook”.³⁰⁹

345. The same can be said of the Respondent taking the position, shortly after Afiliias filed its IRP, that it would only keep the .WEB contention set on hold until 27 November 2018, so as to allow the Claimant to file a request for interim relief, barring which the Respondent would take the contention set off hold.³¹⁰ It seems to the Panel that the Respondent was once again adopting a position that could have resulted in .WEB being delegated to NDC without the Board having determined whether NDC’s arrangements with Verisign complied within the New gTLD Program Rules.
346. The Panel also finds it contradictory for the Respondent to assert in pleadings before this Panel that the Respondent has not yet considered the Claimant’s complaints, having represented to the Emergency Panelist earlier in these proceedings that ICANN “ha[d] evaluated these complaints” and that the “time ha[d] therefore come for the auction results to be finalized and for .WEB to be delegated so that it can be made available to consumers”.³¹¹
347. In sum, the Panel finds that it was inconsistent with the representations made to the Claimant by ICANN’s Staff, and the rationale of the Board’s decision, in November 2016, to defer consideration of the issues raised in relation to NDC’s application for .WEB, for the Respondent’s Staff, to the knowledge of the Respondent’s Board, to proceed to delegation without addressing the fundamental question of the propriety of the DAA under the New gTLD Program Rules. The Panel finds that in so doing, the Respondent has violated its commitment to make decisions by applying documented policies objectively and fairly.
348. As a direct result of the foregoing, the Panel has before it a party – the Claimant – attacking a decision – the Respondent’s failure to disqualify NDC’s application and auction bids – that the Respondent insists it has not yet taken. Moreover, the Panel finds itself in the

³⁰⁹ Respondent’s Rejoinder, para. 81.

³¹⁰ See Decision on Phase I, para. 40.

³¹¹ ICANN’s Opposition to Afiliias Domains No. 3 LTD.’s Request for Emergency Panelist and Interim Measures of Protection, para. 3.

unenviable position of being presented with allegations of non-compliance with the New gTLD Program Rules in circumstances where the Respondent, the entity with primary responsibility for this Program, has made no first instance determination of these allegations, whether through actions of its Staff or Board, and declines to take a position as to the propriety of the DAA under the Guidebook and Auction Rules in this IRP. The Panel addresses these peculiar circumstances further in the section of this Final Decision addressing the proper relief to be granted.

(viii) Other Related Claims

349. In addition to what the Panel has described as the Claimant's core claims, the Claimant has advanced a number of related claims, including that the Respondent violated its Articles and Bylaws through its disparate treatment of Afilias and Verisign, and by failing to enable and promote competition in the DNS.
350. As regards the allegation of disparate treatment, it rests for the most part on facts already considered by the Panel in analysing the Claimant's core claims, such as turning to Verisign rather than NDC to obtain information about NDC's arrangements with Verisign, allowing for asymmetry of information to exist between the recipients of the 16 September 2016 Questionnaire, delaying providing a response to Afilias' letters of 8 August and 9 September 2016, submitting Rule 4 for adoption in spite of it being the subject of an ongoing public comment process, and making that rule retroactive so as to encompass the Claimant's claims within its reach. Accordingly, the Panel does not consider it necessary, based on the allegation of disparate treatment, to add to its findings in relation to the Claimant's core claims.
351. Turning to the claim that the Respondent failed to enable and promote competition in the DNS, it was summarized in the Claimant's PHB as the contention that "to the extent ICANN has discretion regarding the enforcement of the New gTLD Program Rules, ICANN may not exercise its discretion in a manner that would be inconsistent with its competition mandate (or with its other Articles and Bylaws)."³¹² As seen, the Respondent

³¹² Claimant's PHB, para. 145.

has not as yet exercised whatever discretion it may have in enforcing the New gTLD Program Rules in relation to .WEB, and therefore this claim, as just summarized, appears to the Panel to be premature.

352. For reasons expressed elsewhere in this Final Decision, the Panel is of the opinion that it is for the Respondent to decide, in the first instance, whether NDC violated the Guidebook and Auction Rules and, assuming the Respondent determines that it did, what consequences should follow. Likewise, the Respondent is invested with the authority to approve an eventual transfer of a possible registry agreement for .WEB from NDC to Verisign, which it may or may not be called upon to exercise depending on whether NDC's application is rejected and its bids disqualified. That said, and even though it is not strictly necessary to decide the question, the Panel accepts the submission that ICANN does not have the power, authority, or expertise to act as a competition regulator by challenging or policing anticompetitive transactions or conduct. Compelling evidence to that effect was presented by Ms. Burr and Mr. Kneuer, supported by Mr. Disspain, and it is consistent with a public statement once endorsed by the Claimant, in which it was asserted:

While ICANN's mission includes the promotion of competition, this role is best fulfilled through the measured expansion of the name space and the facilitation of innovative approaches to the delivery of domain name registry services. *Neither ICANN nor the GNSO have the authority or expertise to act as anti-trust regulators.* Fortunately, many governments around the world do have this expertise and authority, and do not hesitate to exercise it in appropriate circumstances.³¹³

353. As noted in the History of the Proceedings section of this Final Decision,³¹⁴ the Parties came to the understanding that it would be for this Panel to determine the Claimant's Request for Emergency Interim Relief upon the Respondent agreeing that the .WEB gTLD contention set would remain on hold until the conclusion of this IRP. For the reasons set out in the section of this Final Decision analysing the Claimant's cost claim,³¹⁵ the Panel is of the view that the Claimant's Request for Emergency Interim Relief was well founded, and that it should be granted with effect until such time as the Respondent has considered

³¹³ Registry Operators' Submission Re: Objections to the Proposed Versign Settlement, Ex. R-21, p. 8 [emphasis added].

³¹⁴ See above, para. 40.

³¹⁵ See below, paras. 402-407.

the present Final Decision.

354. As regards the Donuts transaction of 29 December 2020, the Panel does not consider it relevant to the issues determined in this Final Decision. It will be for the Respondent to consider, in the first instance, whether this transaction is of relevance to the Claimant's request that following a possible disqualification of NDC's bid for .WEB, the Respondent must, in accordance with the New gTLD Program Rules, contract the Registry Agreement for .WEB with the Claimant.

E. The Rule 7 Claim

355. The Panel recalls that the Rule 7 Claim was first raised as a defence to the *Amici*'s requests, based on Rule 7 of the Interim Procedures, to participate in this IRP as *amici curiae*. In its Decision on Phase I, the Panel granted the *Amici*'s requests – subject to modalities set out in that decision – and, to the extent the Claimant wished to maintain its Rule 7 Claim, joined those aspects of the claim over which the Panel found it has jurisdiction to the claims to be decided in Phase II. The *Amici* have since participated in this IRP to the full extent permitted by the Decision on Phase I, as described in earlier sections of this Final Decision.
356. The Panel included in its list of questions to be addressed in post-hearing briefs a request to the Claimant to clarify what remained to be decided in connection with its Rule 7 Claim given the Decision on Phase I and the conduct of the IRP in accordance with that ruling. The Claimant's response is that the Rule 7 Claim remains relevant to justify an award of costs in its favour.
357. As explained in the sections of this Final Decision dealing, respectively, with the designation of the prevailing party and the Claimant's cost claim, there is, in the opinion of the Panel, no basis on which the Claimant could be awarded costs in relation to Phase I or in relation to the outstanding aspects of the Rule 7 Claim. This being so, it is the Panel's opinion that no useful purpose would be served by the Rule 7 Claim being addressed beyond the findings and observations contained in the Panel's Decision on Phase I, which the Respondent's Board has no doubt reviewed and can act upon, as appropriate. The Panel wishes to make clear that in making this Final Decision, the Panel expresses no view on

the merit of those outstanding aspects of the Rule 7 Claim over which the Panel found that it has jurisdiction, beyond that expressed in paragraph 408 of these reasons.

F. Determining the Proper Relief

358. The remedial authority of IRP Panels is set out in Section 4.3(o) of the Bylaws, which reads as follows:

(o) Subject to the requirements of this Section 4.3, each IRP Panel shall have the authority to:

(i) Summarily dismiss Disputes that are brought without standing, lack substance, or are frivolous or vexatious;

(ii) Request additional written submissions from the Claimant or from other parties;

(iii) Declare whether a Covered Action constituted an action or inaction that violated the Articles of Incorporation or Bylaws, declare whether ICANN failed to enforce ICANN's contractual rights with respect to the IANA Naming Function Contract or resolve PTI service complaints by direct customers of the IANA naming functions, as applicable;

(iv) Recommend that ICANN stay any action or decision, or take necessary interim action, until such time as the opinion of the IRP Panel is considered;

(v) Consolidate Disputes if the facts and circumstances are sufficiently similar, and take such other actions as are necessary for the efficient resolution of Disputes;

(vi) Determine the timing for each IRP proceeding; and

(vii) Determine the shifting of IRP costs and expenses consistent with Section 4.3(r).

[emphasis in the original]

359. Of relevance to situating the remedial authority of IRP Panels in their proper context are the provisions of Section 4.3(x), which it is useful to cite in full:

(x) The IRP is intended as a final, binding arbitration process.

(i) IRP Panel decisions are binding final decisions to the extent allowed by law unless timely and properly appealed to the en banc Standing Panel. En banc Standing Panel decisions are binding final decisions to the extent allowed by law.

(ii) IRP Panel decisions and decisions of an en banc Standing Panel upon an appeal are intended to be enforceable in any court with jurisdiction over ICANN without a *de novo* review of the decision of the IRP Panel or en banc Standing Panel, as applicable, with respect to factual findings or conclusions of law.

(iii) ICANN intends, agrees, and consents to be bound by all IRP Panel decisions of Disputes of Covered Actions as a final, binding arbitration.

(A) Where feasible, the Board shall consider its response to IRP Panel decisions at the Board's next meeting, and shall affirm or reject compliance with the decision on the public record based on an expressed rationale. The decision of the IRP Panel, or en banc Standing Panel, shall be final regardless of such Board action, to the fullest extent allowed by law.

(B) If an IRP Panel decision in a Community IRP is in favor of the EC, the Board shall comply within 30 days of such IRP Panel decision.

(C) If the Board rejects an IRP Panel decision without undertaking an appeal to the en banc Standing Panel or rejects an en banc Standing Panel decision upon appeal, the Claimant or the EC may seek enforcement in a court of competent jurisdiction. In the case of the EC, the EC Administration may convene as soon as possible following such rejection and consider whether to authorize commencement of such an action.

(iv) By submitting a Claim to the IRP Panel, a Claimant thereby agrees that the IRP decision is intended to be a final, binding arbitration decision with respect to such Claimant. Any Claimant that does not consent to the IRP being a final, binding arbitration may initiate a non-binding IRP if ICANN agrees; provided that such a non-binding IRP decision is not intended to be and shall not be enforceable.

[italics in the original]

360. The Panel also notes the provisions of Section 4.3(t) which, among others, require each IRP Panel decision to “specifically designate the prevailing party as to each part of a Claim”.
361. In the opinion of the Panel, the Claimant is entitled to a declaration that the Respondent violated its Articles and Bylaws to the extent found by the Panel in the previous sections of this Final Decision, and to being designated the prevailing party in respect of the liability portion of its core claims.
362. As foreshadowed earlier in these reasons, the Panel is firmly of the view that it is for the Respondent, that has the requisite knowledge, expertise, and experience, to pronounce in the first instance on the propriety of the DAA under the New gTLD Program Rules, and on the question of whether NDC’s application should be rejected and its bids at the auction disqualified by reason of its alleged violations of the Guidebook and Auction Rules.
363. The Panel also accepts the Respondent’s submission that it would be improper for the Panel to dictate what should be the consequence of NDC’s violation of the New gTLD Program

Rules, assuming a violation is found. The Panel is mindful of the Claimant’s contention that whatever discretion the Respondent may have is necessarily constrained by the Respondent’s obligation to enforce the New gTLD Program Rules objectively and fairly. Nevertheless, the Respondent does enjoy some discretion in addressing violations of the Guidebook and Auction Rules and it is best that the Respondent first exercises its discretion before it is subject to review by an IRP Panel.

364. In the opinion of the Panel, the foregoing conclusions are consistent with the authority of IRP Panels under Section 4.3 (o) (iii) of the Bylaws, which grants the Panel authority to “declare” whether a Covered Action constituted an action or inaction that violated the Articles or Bylaws.

G. Designating the Prevailing Party

365. Section 4.3(t) of the Bylaws requires the Panel to designate the prevailing party “as to each part of a Claim”.³¹⁶ This designation has relevance, among others, to the Panel’s exercise of its authority under Section 4.3(r) of the Bylaws to shift costs by providing for the “losing party” to pay the administrative costs and/or fees of the “prevailing party” in the event the Panel identifies the losing party’s Claim or defence as frivolous or abusive.³¹⁷
366. The Panel has already determined that the Claimant is entitled to be designated as the prevailing party in relation to the liability portion of its core claims. In the opinion of the Panel, the Claimant should also be designated the prevailing party in relation to its Request for Emergency Interim Relief, insofar as the Respondent eventually agreed to keep .WEB on hold until this IRP is concluded, consistent with the rationale of the Board’s decision of November 2016 to defer consideration of the issues raised in relation to .WEB and the status of NDC’s application, post-DAA, while accountability mechanisms remained

³¹⁶ The equivalent provision in the Interim Procedures, Ex. C-59, Rule 13 b., differs slightly in that it requires the IRP Panel Decision to “specifically designate the prevailing party as to each Claim”.

³¹⁷ See also Section 4.3(e)(ii) of the Bylaws, which requires an IRP Panel to award to ICANN all reasonable fees and costs incurred by ICANN in the IRP in the event it is the prevailing party in a case in which the Claimant failed to participate in good faith in a CEP.

pending.

367. With respect to Phase I of this IRP, the Claimant has argued that the prevailing party remained to be determined depending on the outcome of Phase II.³¹⁸ This is correct in regard to those aspects of the Claimant's Rule 7 Claim that were joined to the Claimant's other claims in Phase II, pursuant to the Panel's Decision on Phase I. However, the Respondent prevailed in Phase I on the question of whether the Panel had jurisdiction over actions or failures to act committed by the IOT and, importantly, on the principle of the *Amici*'s requests to participate in the IRP as *amici curiae*. These requests were both granted, albeit with narrower participation rights than those advocated by the Respondent.³¹⁹ In light of the foregoing, the Panel does not consider that the Claimant can be designated as the prevailing party in respect of Phase I of the IRP.
368. Turning to the requests for relief sought by the Claimant, the Respondent must be designated as the prevailing party in regard to all aspects of the Claimant's requests for relief other than (a) the request for a declaration that ICANN acted inconsistently with its Articles and Bylaws as described, among others, in paragraph 8 of this Final Decision and the *Dispositif*, and (b) the outstanding aspects of the Rule 7 Claim. With regard to the latter, which the Panel has determined have become moot by the participation of the *Amici* in this IRP in accordance with the Panel's Decision on Phase I, the Claimant cannot be designated as the prevailing party either, the matter not having been adjudicated upon. For the reasons set out in next section of this Final Decision, however, the fact that those aspects of the Rule 7 Claim have become moot and are therefore not decided in this Final Decision is without consequence on the Claimant's cost claim in relation to the Rule 7 Claim because, in the opinion of the Panel, it simply cannot be argued that the Respondent's defence to the Rule 7 Claim was frivolous and abusive.

³¹⁸ See *Afilias' Reply Costs Submission*, para. 9.

³¹⁹ See *Decision on Phase I*, paras. 96-97.

VI. COSTS

A. Submissions on Costs

369. In its decision on Phase I, the Panel deferred to Phase II the determination of costs in relation to Phase I of this IRP.³²⁰ The Parties' submissions on costs therefore relate to both phases of the IRP.

1. Claimant's Submissions on Costs

370. The Claimant submitted its cost submissions in a brief separate from, but filed simultaneously with its PHB, on 12 October 2020.³²¹ The Claimant argues that it should be declared the prevailing party on all of its claims in the IRP. Relying on Section 4.3(r) of the Bylaws, the Claimant requests that the Panel shift all of its fees and costs to the Respondent on the ground that the Respondent's defences in the IRP were "frivolous or abusive". In the alternative, the Claimant argues that the Respondent should at least bear all of its costs and fees related to the participation of the *Amici* in the IRP and the Emergency Interim Relief proceedings.

371. The Claimant states that there was no need for this IRP to be as procedurally and substantively complicated as it has been.³²² First, the Claimant avers that the Respondent used the CEP as cover to push through "interim procedures" that would provide the Respondent with a limitations defence. Second, the Claimant argues that the Respondent ought not to have forced the Claimant to seek emergency interim relief to protect against the .WEB contention set being taken off hold. Third, the Claimant blames the Respondent's belated disclosure of the DAA for the need for it to have filed an Amended Request for IRP. Fourth, the Claimant reproaches the Respondent for pressing for the *Amici*'s participation in the IRP, particularly Verisign, which was not even a member of the contention set. Finally, the Claimant contends that the Respondent ought

³²⁰ Decision on Phase I, para. 205(c).

³²¹ The Claimant's Submissions on Costs were corrected on 16 October 2020 apparently due to a technical problem with Afiliast's exhibit management software.

³²² Claimant's Submissions on Costs, paras. 1-2.

not to have hidden its central defence – the Board’s decision of November 2016 – until the filing of its Rejoinder.

372. In the Claimant’s submission, the Respondent’s central defence in this IRP – articulated for the first time on 1 June 2020 and based on an alleged Board decision taken during the November 2016 Workshop – frivolously and abusively sought to immunize the Respondent from any accountability and to render the present IRP an empty shell.³²³ The Claimant argues that it was abusive for the Respondent to center its defence around a decision that had never been made public or disclosed to Afiliis prior to the Respondent’s Rejoinder.³²⁴
373. The Claimant also contends that the Respondent’s defence frivolously and abusively sought to deprive the Claimant of an effective forum. In that regard, the Claimant avers that ICANN’s enactment of the Interim Procedures, weeks before the Claimant filed its IRP, was frivolous and abusive because it allowed the Respondent to advance a time-limitation defence that would otherwise not have been available to it previously and to enable the participation of the *Amici* in the IRP. In the Claimant’s view, the circumstances in which ICANN enacted the Interim Procedures made it clear that they were specifically targeted to undermine the Claimant’s position in the present IRP.³²⁵
374. The Claimant submits that ICANN’s refusal to put .WEB on hold after the filing of the IRP was also frivolous and abusive and needlessly forced the Claimant to pursue a “costly, distracting, and unwarranted Emergency Interim Relief phase”. The Claimant avers that the Respondent’s action was frivolous and abusive because the Respondent later abandoned its refusal to put .WEB on hold – but only after the Claimant had incurred extensive fees and costs on the Request for Emergency Interim Relief.³²⁶
375. The Claimant argues as well that the Respondent must bear its costs and fees associated with the *Amici*’s participation in the IRP. This is so because, in the submission of

³²³ Claimant’s Submissions on Costs, para. 16.

³²⁴ *Ibid*, paras. 12-17.

³²⁵ *Ibid*, paras. 19-25.

³²⁶ *Ibid*, paras. 26-27.

the Claimant, the Respondent abusively included Rule 7 in the Interim Supplementary Procedures in view of the present IRP and then used the *Amici* as surrogates for its defence.

2. Respondent's Submissions on Costs

376. The Respondent's submissions on costs are set out in its PHB dated 12 October 2020.

377. The Respondent takes the position that the Bylaws and Interim Procedures authorize the Panel to shift costs only in the event of a finding that, when viewed in its entirety, a party's case was frivolous or abusive. The Respondent stresses that while this is an uncommonly high standard for international arbitration, it is more permissive than the "American rule" under which legal fees cannot ordinarily be shifted to the non-prevailing party. The Respondent also recalls that, under the Bylaws, it is the Respondent that bears all the administrative costs of maintaining the IRP mechanism, including the fees and expenses of the panelists and the ICDR.³²⁷

378. ICANN states that it does not view the Claimant's case as a whole to be frivolous or abusive, even though, in the Respondent's submission, the Claimant has from time to time employed abusive tactics and taken positions that clearly have no merit. The Respondent therefore does not seek an award for costs.

379. The Respondent argues that the Claimant cannot plausibly contend that ICANN's defence triggers the Panel's authority to allocate legal expenses in favour of the Claimant. For these reasons, ICANN contends that the Parties should bear their own legal expenses.³²⁸

3. Claimant's Reply Submission on Costs

380. In its Reply Costs Submissions dated 23 October 2020, the Claimant argues that the Panel is empowered to shift costs if any part of the Respondent's defence lacked merit or was otherwise improper. In the Claimant's view, the standard for cost shifting must be informed, not by the California Code of Civil Procedure, which is relied upon by

³²⁷ Respondent's PHB, paras. 232-234.

³²⁸ *Ibid*, paras. 235-240.

the Respondent, but by international arbitration norms and ICANN’s obligation to conduct its activities “consistently, neutrally, objectively, and fairly” and “transparently.”³²⁹

381. The Claimant avers that the Respondent’s PHB underscores that its defence has been frivolous and abusive, both in general and in its particulars.³³⁰ The Claimant argues that the three (3) main planks of ICANN’s substantive defence were each frivolous and abusive: the belatedly disclosed Board decision of November 2016,³³¹ the allegedly limited remedial jurisdiction of the Panel,³³² and the time bar defence, based on Rule 4, which was made applicable to this IRP by distorting the Respondent’s rule-making process and violating the “fundamental rule” against retroactivity.³³³ The Claimant also asserts that the Respondent’s alleged reliance on the *Amici* as a defensive tactic allegedly to deflect attention from its own conduct has been frivolous and abusive, “both in conception and execution” in that it was facilitated by improper collaboration with Verisign in the process of adoption of Rule 7, and by using the *Amici* participation as an excuse to avoid answering the Claimant’s claims.³³⁴

382. In light of the foregoing, the Claimant requests that the Panel order the Respondent to pay the Claimant: USD 11,291,997.13 in compensation for the total fees and costs incurred by the Claimant in this IRP; or, in the alternative: USD 2,383,703.11 for the Claimant’s fees and costs incurred in relation to the *Amici* participation; and USD 823,811.88 for the fees and costs incurred in relation to the Emergency Interim Relief phase, along with pre- and post-award interest “at a reasonable rate from the date of this filing”.³³⁵

4. Respondent’s Response Submission on Costs

383. In its 23 October 2020 Response to Afiliias’ Costs Submission, the Respondent contends

³²⁹ Claimant’s Reply Submissions on Costs, paras. 3-4.

³³⁰ *Ibid*, para. 5.

³³¹ *Ibid*, para. 6.

³³² *Ibid*, para. 7.

³³³ *Ibid*, para. 8.

³³⁴ *Ibid*, para. 9.

³³⁵ *Ibid*, paras. 10-11.

that the Claimant's request for an order requiring ICANN to pay all its costs and legal fees should be denied because it is legally and factually baseless. In the Respondent's submission, the Claimant applies an incorrect standard for cost shifting, since Section 4.3(r) of the Bylaws allows the Panel to shift legal expenses and costs only when a party's IRP Claim or defence as a whole is found to be frivolous or abusive.³³⁶ The Respondent further argues that the Claimant's cost-shifting arguments are misplaced and baseless since its arguments in defence were not frivolous or abusive.³³⁷ Finally, the Respondent avers that the Claimant's legal fees and costs are unreasonable as to both their total amount and their allocation as between the subject matters in relation to which separate cost shifting requests are made.³³⁸

384. For those reasons, the Respondent requests that the Claimant's request for an order requiring the Respondent to reimburse its costs and legal fees should be denied in its entirety.³³⁹

B. Analysis Regarding Costs

1. Applicable Provisions

385. The Panel begins its analysis by citing the provisions of the Bylaws and Interim Procedures that are relevant to the Claimant's cost claim.

386. Section 4.3(r) of the Bylaws reads as follows:

(r) ICANN shall bear all the administrative costs of maintaining the IRP mechanism, including compensation of Standing Panel members. Except as otherwise provided in Section 4.3(e)(ii), each party to an IRP proceeding shall bear its own legal expenses, except that ICANN shall bear all costs associated with a Community IRP, including the costs of all legal counsel and technical experts. Nevertheless, except with respect to a Community IRP, the IRP Panel may shift and provide for the losing party to pay administrative costs and/or fees of the prevailing party in the event it identifies the losing party's Claim or defense as frivolous or abusive.

³³⁶ Respondent's Reply Submissions on Costs, paras. 4-8.

³³⁷ *Ibid*, paras. 9-24.

³³⁸ *Ibid*, paras. 25-28.

³³⁹ *Ibid*, para. 29.

387. Rule 15 of the Interim Procedures is to the same effect:

15. Costs

The IRP Panel shall fix costs in its IRP PANEL DECISION. Except as otherwise provided in Article 4, Section 4.3(e)(ii) of ICANN's Bylaws, each party to an IRP proceeding shall bear its own legal expenses, except that ICANN shall bear all costs associated with a Community IRP, as defined in Article 4, Section 4.3(d) of ICANN's Bylaws, including the costs of all legal counsel and technical experts.

Except with respect to a Community IRP, the IRP PANEL may shift and provide for the losing party to pay administrative costs and/or fees of the prevailing party in the event it identifies the losing party's Claim or defense as frivolous or abusive.

388. As discussed in the previous section of this Final Decision, it is pursuant to the provisions of Section 4.3(t) that the Panel is required to designate the prevailing party "as to each part of a Claim".³⁴⁰

2. Discussion

389. A threshold issue that falls to be determined is whether the Respondent is correct in arguing that costs and legal expenses can only be shifted, pursuant to Section 4.3(r) and Rule 15, if a Claim as a whole, or an IRP defence as a whole, is found by the Panel to be frivolous or abusive. In support of its position, the Respondent relies on the definition of Claim in Section 4.3(d) of the Bylaws, which reads as follows:

(d) An IRP shall commence with the Claimant's filing of a written statement of a Dispute (a "**Claim**") with the IRP Provider (described in Section 4.3(m) below). For the EC to commence an IRP ("**Community IRP**"), the EC shall first comply with the procedures set forth in Section 4.2 of Annex D.

390. Based on this definition, the Respondent submits that "costs and legal expenses may be shifted onto the Claimant only if the Request for IRP as a whole is frivolous or abusive".³⁴¹ By parity of reasoning, the Respondent argues that the same standard must apply to the Panel's authority to shift legal expenses onto ICANN which, so the argument goes, can only be done if ICANN's defence as a whole is found to be frivolous or abusive.

391. The Panel cannot accept the Respondent's proposed interpretation of the Bylaws

³⁴⁰ Rule 13 b. of the Interim Procedures, Ex. C-59, requires the Panel to designate the prevailing party "as to each Claim".

³⁴¹ ICANN's Response to Afiliias' Costs Submission, para. 5.

and Interim Procedures, which the Panel considers to be inconsistent with Section 4.3(t) of the Bylaws and Rule 13 b. of the Interim Procedures, and which would considerably restrict the scope of application of a carve-out that is already very narrow. The Panel's reasons in that respect are as follows.

392. The cost-shifting authority of IRP Panels is contingent upon two (2) findings. First, that the party claiming its costs be the prevailing party; and second, that the IRP Panel identify the losing party's Claim or defence as frivolous or abusive.
393. The Panel's obligation to designate the prevailing party is based on Section 4.3(t), which requires the Panel to make such a designation "as to each part of a Claim". It seems to the Panel that there would be no purpose in designating a prevailing party as to "each part of a Claim" if the Panel were required to consider "a Claim" as an indivisible whole for the purpose of the Panel's cost-shifting authority.
394. The Respondent's argument also fails if consideration is given to the slightly different wording used in Rule 13 b. of the Interim Procedures, which calls for the designation of the prevailing party "as to each Claim".
395. Finally, it would seem that the interpretation of the applicable provisions advocated by the Respondent would be unfair if it mandated that a single, isolated well-founded element of a Claim otherwise manifestly frivolous or abusive would suffice to save a Claimant from a potential cost-shifting order.
396. The better interpretation, one that harmonizes the provisions of Sections 4.3(r) and 4.3(t) of the Bylaws (that are clearly meant to operate in tandem) and reflects the practice of international arbitration, is the interpretation that allows IRP Panels to shift costs in relation to "parts" of the losing party's Claim or defence, which parts are the necessary reflection of the "parts" in respect of which the other party is designated as the prevailing party.
397. Applying the relevant provisions of the Bylaws and Interim Procedures, properly construed, to the facts of this IRP, the only parts of the Claimant's case as to which it has been designated as the prevailing party are the liability portion of its core claims and its Request for Emergency Interim Relief. This being so, those are the only parts of

the Claimant's case as to which the Panel needs to evaluate whether the Respondent's defence was frivolous or abusive.

398. While the Respondent has failed in its defence of the conduct of its Staff and Board in relation to the Claimant's core claims, the Panel cannot accept the Claimant's submission that ICANN's defence of its conduct in relation to these aspects of the case was frivolous or abusive.
399. To state the obvious, not every claim or defence that does not prevail in an IRP will result in an award of costs. The applicable cost shifting rule requires that the claim or defence be found to be frivolous or abusive. This standard binds the Parties as well as the Panel.
400. The Bylaws and Interim Procedures do not define the terms "frivolous" or "abusive". The Respondent has contended that they should be interpreted having regard to their well-established meaning under California law. The Panel agrees with the Claimant that there are good reasons not to seek guidance for the interpretation of those terms in a California statutory standard, which operates in an environment where the default rule is the so-called "American Rule" under which legal fees cannot ordinarily be shifted to the non-prevailing party.
401. In the opinion of the Panel, the terms "frivolous" and "abusive" as used in the Bylaws and Interim Procedures should be given their ordinary meanings. According to the Merriam-Webster Dictionary, "frivolous" means "of little weight or importance", "having no sound basis (as in fact or law)" or "lacking in seriousness".³⁴² According to Black's Law Dictionary, "[a]n answer or plea is called 'frivolous' when it is clearly insufficient on its face, and does not controvert the material points of the opposite pleading, and is presumably interposed for mere purposes of delay or to embarrass the plaintiff."³⁴³ For its part, the term "abusive" is defined by the Merriam-Webster Dictionary as "characterized by wrong or improper use or action"³⁴⁴, while the term "abuse" is defined in Black's Law

³⁴² Merriam-Webster *s.v.* "frivolous": <https://www.merriam-webster.com/dictionary/frivolous> (consulted on 23 March 2021).

³⁴³ Black's Law Online Dictionary, 2nd ed., *s.v.* "frivolous": <https://thelawdictionary.org/frivolous/> (consulted on 23 March 2021).

³⁴⁴ Merriam-Webster *s.v.* "abusive": <https://www.merriam-webster.com/dictionary/abusive> (consulted on 23 March 2021).

Dictionary as a “misuse of anything”.³⁴⁵

402. In the case of the Claimant’s core claims, the Respondent’s defences consisted in the main of the time limitations defence, and the rejection of the Claimant’s arguments based on the Respondent’s so-called competition mandate and on the asserted manifest incompatibility of the DAA with the provisions of the Guidebook and Auction Rules. The Respondent also raised as a defence the deference owed to its Board’s business judgment when it decided to take no action regarding the .WEB contention set while a related accountability mechanism was pending.
403. The time limitations defence was asserted by the Respondent in circumstances where the validity of Rule 4, unlike that of Rule 7, had not been directly challenged by the Claimant. While the Panel has expressed concern as a matter of principle with the retroactive application of a time limitations rule, the Respondent’s reliance on a rule, the validity of which had not been challenged and that on its face appeared to provide a defence, was not, in the opinion of the Panel, abusive or frivolous.
404. As regards the Respondent’s other defences, the Panel does not accept that it was frivolous or abusive for the Respondent to argue that it was reasonable for its Board to defer consideration of the issues raised with .WEB while accountability mechanisms were pending; that the propriety of the DAA under the New gTLD Program Rules was a debatable issue requiring careful consideration by the Respondent’s Board; or that the Respondent did not have the “competition mandate” contended for by the Claimant. These were all defensible positions and there is no evidence that they were advanced for an improper purpose or in bad faith. While the Respondent did fail in its contention that there was nothing for its Staff or Board to pronounce upon in the absence of a formal accountability mechanism challenging their action or inaction in relation to .WEB, the Respondent’s position in this respect cannot, in the opinion of the Panel, be said to have been frivolous or abusive. Accordingly, the Claimant’s claim for reimbursement of its costs in relation to the liability portion of its core claims must be dismissed.

³⁴⁵ Black’s Law Online Dictionary, 2nd ed., s.v. “abuse”: <https://thelawdictionary.org/abuse/> (consulted on 23 March 2021).

405. The Panel does consider that the Claimant’s cost claim in relation to its Request for Emergency Interim Relief is meritorious. The Claimant was forced to introduce this request as a result of the Respondent’s refusal to keep the .WEB contention set on hold in spite of the Claimant having commenced an IRP upon the termination of its CEP. When this decision was made, the .WEB contention set had already been on hold for more than two (2) years, precisely because accountability mechanisms were pending. The Board’s decision to defer consideration of the questions raised in relation to .WEB in November 2016 was likewise based on the fact that accountability mechanisms were pending. This is how the Claimant describes the sequence of events in its Request for Emergency Interim Relief:

13. On 13 November 2018, Afilias and ICANN participated in a final CEP meeting, following which ICANN terminated the CEP. On 14 November 2018, Afilias filed its Request for IRP. Hours later, ICANN responded by informing Afilias that it intended to take the .WEB contention set “off hold” on 27 November 2018 even though Afilias had commenced an ICANN accountability procedure that follows-on from a failed CEP.³⁰ ICANN provided Afilias with no explanation justifying its decision.

14. On 20 November 2018, Afilias wrote to ICANN about its decision to proceed with the delegation of .WEB despite Afilias’ commencement of the IRP.³¹ In its letter, Afilias questioned ICANN’s motives for removing the hold on .WEB, given that ICANN had voluntarily delayed the delegation of .WEB for several years and the lack of any apparent harm to ICANN if the .WEB contention set were to remain on hold for the duration of the IRP. Afilias requested an explanation justifying what appeared to be rash and arbitrary conduct by ICANN in proceeding with delegation of .WEB at this time, as well as the production of relevant documents. Afilias wrote to ICANN again on 24 November 2018 requesting a response to its 20 November 2018 letter.

15. ICANN did not respond to Afilias’ letter until after 9:00 pm EDT on 26 November 2018—quite literally the eve of the deadline that ICANN previously set for Afilias to submit this Interim Request to prevent ICANN from taking the .WEB contention set “off hold.”³² ICANN noted in its response that ICANN’s practice is to remove the hold on contention sets following CEP, notwithstanding the pendency of an IRP and despite the unanimous criticism of this practice in previous IRPs. ICANN also rejected Afilias’ request to produce documents related to its dealings with NDC and VeriSign about .WEB. Instead, ICANN inexplicably offered to keep the .WEB contention set “on hold” for another two weeks, until 11 December 2018, something that Afilias had not requested and that did not remotely address any of the concerns Afilias had raised.³³

16. It is because of ICANN’s unreasonable conduct and refusal to act in a transparent manner—as required by its Articles and Bylaws—that Afilias has been forced to file, at significant cost and expense, this Interim Request.

³⁰ Email from Independent Review (ICANN) to A. Ali and R. Wong (Counsel for Afilias) (14 Nov. 2018), [Ex. C-64], p. 1.

³¹ Letter from A. Ali (Counsel for Afilias) to Independent Review (ICANN) (20 Nov. 2018), [Ex. C-65].

³² Letter from J. LeVee (Jones Day) to A. Ali (Counsel for Afiliias) (26 Nov. 2018), [Ex. C-66].

³³ Letter from J. LeVee (Jones Day) to A. Ali (Counsel for Afiliias) (26 Nov. 2018), [Ex. C-66], p. 1.

406. Having forced the Claimant to initiate emergency interim relief proceedings, the Respondent eventually changed course and agreed to keep .WEB on hold until the conclusion of this IRP.
407. In the opinion of the Panel, the Respondent's requirement, as part of its defence strategy, that the Claimant introduce a Request for Emergency Interim Relief at the outset of the IRP, failing which the Respondent would lift the "on hold" status of the .WEB contention set, was "abusive" within the meaning of the cost shifting provisions of the Bylaws and Interim Procedures, all the more so in light of the Respondent's subsequent decision to agree to keep the .WEB contention set on hold until the conclusion of this IRP. In the opinion of the Panel, this conduct on the part of the Respondent was unjustified and obliged the Claimant to incur wasted costs that it would be unfair for the Claimant to have to bear.
408. The Claimant has claimed in relation to its Request for Emergency Interim Relief an amount of USD 823,811.88. This is said to represent 50% of the Claimant legal fees from 14 November 2018 to 10 December 2018; 33% of the Claimant's total fees from 11 December 2018 through 31 March 2019; and 50% of its fees from 1 April 2019 through 14 May 2019.
409. The Respondent has challenged the reasonableness of the fees claimed by the Claimant in relation to its Request for Emergency Interim Relief, pointing out that it entailed the preparation and presentation of the request, one supporting brief, and requests for production of documents which were resolved by 12 December 2018.³⁴⁶ As noted in the History of the Proceedings' section of this Final Decision, the Parties asked the Emergency Panelist to postpone further activity in January 2019.

³⁴⁶ See ICANN's Response to Afiliias' costs Submission, para. 28.

410. The Panel has difficulty accepting that such a significant amount of fees as that claimed by the Claimant in regard to the Request for Emergency Interim Relief can reasonably be attributed to the preparation of this request and the subsequent proceedings before the Emergency Panelist. Exercising its discretion in relation to the fixing of the legal expenses reasonably incurred that may be ordered to be reimbursed pursuant to a cost-shifting decision, the Panel reduces the Claimant's claim on account of the Request for Emergency Interim Relief to USD 450,000, inclusive of pre-award interest.
411. This leaves for consideration the Claimant's cost claim in relation to the outstanding aspects of the Rule 7 Claim which, pursuant to the Panel's Decision on Phase I, were joined to the Claimant's other claims in Phase II, a cost claim that the Panel takes to have been subsumed in the Claimant's global cost claim in relation to the *Amici* participation. In the opinion of the Panel, it suffices to read the Panel's Decision on Phase I to conclude that it cannot seriously be argued that the Respondent's defence to the Rule 7 Claim was frivolous and abusive. It follows from this assessment of the Respondent's defence that the fact that those aspects of the Rule 7 Claim have been found by the Panel to have become moot and are therefore not decided in this Final Decision is without consequence on the Claimant's cost claim in relation to the Rule 7 Claim. In other words, the Panel has sufficient familiarity with the Parties' respective positions on the merits of the outstanding aspects of the Rule 7 Claim to know, and hereby to determine, that regardless of the outcome, the Panel would not have accepted the submission that the Respondent's defence to this claim was frivolous and abusive.
412. The ICDR has informed the Panel that the administrative fees of the ICDR and the fees and expenses of the Panelists, the Emergency Panelist, and the Procedures Officer in this IRP total USD 1,198,493.88. The ICDR has further advised that the Claimant has advanced, as part of its share of these non-party costs of the IRP, an amount of USD 479,458.27. In accordance with the general rule set out in Section 4.3(r) of the Bylaws, the Claimant is entitled to be reimbursed by the Respondent the share of the non-party costs of the IRP that it has incurred, in the amount of USD 479,458.27.

VII. *DISPOSITIF*

413. For the reasons set out in this Final Decision, the Panel unanimously decides as follows:

1. **Declares** that the Respondent has violated its *Amended and Restated Articles of Incorporation of Internet Corporation for Assigned Names and Numbers*, as approved by the ICANN Board on 9 August 2016, and filed on 3 October 2016 (**Articles**), and its *Bylaws for Internet Corporation for Assigned Names and Numbers*, as amended on 18 June 2018 (**Bylaws**), by (a) its staff (**Staff**) failing to pronounce on the question of whether the Domain Acquisition Agreement entered into between Nu DotCo, LLC (**NDC**) and Verisign Inc. (**Verisign**) on 25 August 2015, as amended and supplemented by the “Confirmation of Understanding” executed by these same parties on 26 July 2016 (**DAA**), complied with the New gTLD Program Rules following the Claimant’s complaints that it violated the Guidebook and Auction Rules, and, while these complaints remained unaddressed, by nevertheless moving to delegate .WEB to NDC in June 2018, upon the .WEB contention set being taken “off hold”; and (b) its Board, having deferred consideration of the Claimant’s complaints about the propriety of the DAA while accountability mechanisms in connection with .WEB remained pending, nevertheless (i) failing to prevent the Staff, in June 2018, from moving to delegate .WEB to NDC, and (ii) failing itself to pronounce on these complaints while taking the position in this IRP, an accountability mechanism in which these complaints were squarely raised, that the Panel should not pronounce on them out of respect for, and in order to give priority to the Board’s expertise and the discretion afforded to it in the management of the New gTLD Program;
2. **Declares** that in so doing, the Respondent violated its commitment to make decisions by applying documented policies objectively and fairly;
3. **Declares** that in preparing and issuing its questionnaire of 16 September 2016 (**Questionnaire**), and in failing to communicate to the Claimant the decision made by the Board on 3 November 2016, the Respondent has violated its commitment to operate in an open and transparent manner and consistent with procedures to ensure

fairness;

4. **Grants** in part the Claimant's Request for Emergency Interim Relief dated 27 November 2018, and directs the Respondent to stay any and all action or decision that would further the delegation of the .WEB gTLD until such time as the Respondent has considered the present Final Decision;
5. **Recommends** that the Respondent stay any and all action or decision that would further the delegation of the .WEB gTLD until such time as the Respondent's Board has considered the opinion of the Panel in this Final Decision, and, in particular (a) considered and pronounced upon the question of whether the DAA complied with the New gTLD Program Rules following the Claimant's complaints that it violated the Guidebook and Auction Rules and, as the case may be, (b) determined whether by reason of any violation of the Guidebook and Auction Rules, NDC's application for .WEB should be rejected and its bids at the auction disqualified;
6. **Designates** the Claimant as the prevailing party in relation to the above declarations, decisions, findings, and recommendations, which relate to the liability portion of the Claimant's core claims and the Claimant's Request for Emergency Interim Relief dated 27 November 2018;
7. **Dismisses** the Claimant's other requests for relief in connection with its core claims and, in particular, the Claimant's request that that the Respondent be ordered by the Panel to disqualify NDC's bid for .WEB, proceed with contracting the Registry Agreement for .WEB with the Claimant in accordance with the New gTLD Program Rules, and specify the bid price to be paid by the Claimant, all of which are premature pending consideration by the Respondent of the questions set out above in sub-paragraph 410 (5);
8. **Designates** the Respondent as the prevailing party in respect of the matters set out in the immediately preceding paragraph;
9. **Determines** that the outstanding aspects of the Rule 7 Claim that were joined to the Claimant's other claims in Phase II have become moot by the participation of

the *Amici* in this IRP in accordance with the Panel's Decision on Phase I and, for that reason, decides that no useful purpose would be served by the Rule 7 Claim being addressed beyond the findings and observations contained in the Panel's Decision of Phase I;

10. **Fixes** the total costs of this IRP, consisting of the administrative fees of the ICDR, and the fees and expenses of the Panelists, the Emergency Panelist, and the Procedures Officer at USD 1,198,493.88, and in accordance with the general rule set out in Section 4.3(r) of the Bylaws, **declares** that the Respondent shall reimburse the Claimant the full amount of the share of these costs that the Claimant has advanced, in the amount of USD 479,458.27;
11. **Finds** that the Respondent's requirement, as part of its defence strategy, that the Claimant introduce a Request for Emergency Interim Relief at the outset of the IRP, failing which the Respondent would lift the "on hold" status of the .WEB contention set, was abusive within the meaning of the cost shifting provisions of the Bylaws and Interim Procedures in light of the Respondent's subsequent decision to agree to keep the .WEB contention set on hold until the conclusion of this IRP; and, as a consequence of this finding,
12. **Grants** the Claimant's request that the Panel shift liability for the Claimant's legal fees in connection with its Request for Emergency Interim Relief, **fixes** at USD 450,000, inclusive of pre-award interest, the amount of the legal fees to be reimbursed to the Claimant on account of the Emergency Interim Relief proceedings, and **orders** the Respondent to pay this amount to the Claimant within thirty (30) days of the date of notification of this Final Decision, after which 30 day-period this amount shall bear interest at the rate of 10% *per annum*;
13. **Dismisses** the Claimant's other requests for the shifting of its legal fees in connection with this IRP;
14. **Dismisses** all of the Parties' other claims and requests for relief.

414. This Final Decision may be executed in counterparts, each of which shall be deemed an original, and all of which shall constitute together one and the same instrument.

Auction Rules for New gTLDs: Indirect Contentions Edition

1. This document (“Auction Rules”) sets out the auction rules for resolving string contention among applicants for new gTLDs by the Internet Corporation for Assigned Names and Numbers (“ICANN”), for Contention Sets containing one or more Indirect Contention relationships.
2. Auctions for resolving string contention among applicants for new gTLDs will occur in a series of auction events. In each auction event (“Auction”), bidding will occur for one or more Contention Sets. If bidding occurs for at least two Contention Sets within an Auction, the bidding will occur simultaneously.
3. ICANN will be assisted in the implementation of these Auctions by its independent auction consultant, Power Auctions LLC (the “Auction Manager”).

Definitions and Interpretation

4. The definitions are set out in the Glossary at the end of the Auction Rules. The majority of the terms are explained in the body of the Auction Rules. Terms used but not otherwise defined herein shall have the meanings ascribed to them in the gTLD Applicant Guidebook (the “Applicant Guidebook”) or the “Bidder Agreement” (defined below). In the event of any inconsistency between the Bidder Agreement and the Applicant Guidebook or the Auction Rules, the Bidder Agreement shall prevail.
5. All prices in the Auction are expressed in whole numbers of United States dollars (\$US).
6. All references to time, unless otherwise stated, are to time defined under the UTC time standard.
7. Text boxes containing additional explanations and examples have been included in this document to assist applicants. The contents of these text boxes are not formally part of the Auction Rules.

 *Text boxes like these contain additional explanation and examples.*

Participation in the Auction

8. Prior to the scheduling of an Auction, an Intent to Auction notice will be provided to all members of an eligible Contention Set via the ICANN Customer Portal. To be eligible to receive an Intent to Auction notice from ICANN, requirements a-d below must be met:

All active applications in the Contention Set have:

- a) Passed evaluation
- b) Resolved any applicable GAC advice
- c) Resolved any objections

d) No pending ICANN Accountability Mechanisms

ICANN intends to initiate the Auction process once the composition of the contention set has stabilized. ICANN reserves the right not to send Intent to Auction notices and/or to postpone a scheduled Auction if a change request by one or more applicants in the Contention Set is pending, but believes that in most instances the Auction should be able to proceed without further delay.

9. [Reserved for future use.]
10. After an applicant receives the Intent to Auction notice from ICANN pursuant to the eligibility requirements described in clause 8, if each and every member of the Contention Set submits a postponement request through the ICANN Customer Portal, ICANN at its sole discretion may postpone the Auction for that Contention Set to a future date. Postponement requests must be submitted by all members of the Contention Set by the due date specified within the ICANN Customer Portal, generally twenty eight (28) days after receipt of Intent to Auction notice from ICANN. If a postponement request is not submitted by the due date specified within the ICANN Customer Portal or is not accommodated by ICANN, an applicant may request an advancement/postponement request via submission of the Auction Date Advancement/Postponement Request Form. The form must be submitted at least 45 days prior to the scheduled Auction Date and ICANN must receive a request from each member of the contention set. Without limiting the foregoing, ICANN reserves the right at its sole discretion to postpone the Auction for any Contention Set to a future date regardless of whether each and every member of the Contention Set has submitted a postponement request.
11. Eligible Contention Sets containing one or more Indirect Contention relationships, pursuant to clauses 8 -10, will generally be notified of ICANN's Intent to Auction the contention set priority order. ICANN in its sole discretion will determine the scheduling of each Auction.

It is anticipated that Auctions for Contention Sets containing one or more Indirect Contention relationships will be scheduled in separate Auction events from Contention Sets involving Direct Contention relationships only. Each Auction event will include only one or two Contention Sets with Indirect Contention relationships. The scheduling may not necessarily be based upon the priority order of these Contention Sets, but may be based on operational issues relating to the conduct of the Auctions, including the complexity of a given Contention Set.

12. Before an Auction, each Qualified Applicant may designate a party to bid on its behalf ("Designated Bidder"). Each Qualified Applicant or its Designated Bidder must execute a Bidder Agreement with the Auction Manager. The Bidder Agreement must be signed and returned to ICANN by the deadline specified in the Intent to Auction notice. A Qualified Applicant or its Designated Bidder, after executing a Bidder Agreement with Auction Manager, will henceforth be referred to as a "Bidder". Participation in an Auction is limited to Bidders. Failure to execute a Bidder Agreement by the deadline specified in the Intent to Auction notice and to submit a Deposit which is received into the Auction Bank Account by the Deposit Deadline may result in the inability to participate in the Auction

for the Contention Set, which will result in the rejection of the Qualified Applicant's application for the Contention String and the Contention String not being assigned or delegated to the relevant Qualified Applicant.

13. Before each Auction, each Bidder shall nominate up to two people ("Authorized Individuals") to bid on its behalf in the Auction.

✍ Training materials will be made available to Authorized Individuals in advance of each Auction. In addition, Authorized Individuals will be invited and encouraged to participate in a mock auction, which will be conducted on the Auction Site prior to the live Auction.

14. The first time in each Auction that an Authorized Individual accesses the Auction Site, he/she will be required to confirm acceptance of the Bidder Agreement and the Auction Rules.
15. All actions of Authorized Individuals on the Auction Site will be attributed to the Bidder that nominated the Authorized Individual to bid on its behalf.

Auction Process

16. Bidding will take place online at the Auction Site. Authorized Individuals will be given the web address of the Auction Site and will be provided with individual user names and passwords in order to access it. Authorized Individuals shall be obligated to keep this information confidential. The public will not have any access to the Auction Site.
17. Each Auction will take place in a number of Rounds, using an auction format known as an ascending clock auction. Each Round of an Auction will have a Starting Time and an Ending Time designated by the Auction Manager. There will be a Recess after each Round. Bids will be submitted between the Starting Time and Ending Time of the Round, subject to clause 39, and the results of the Round will be posted during the Recess after the Round.
18. These Auction Rules set out the rules for Contention Sets containing one or more Indirect Contention relationships. The changes introduced into the current document are not applicable to the substantial majority of Auctions, in which there are Direct Contention relationships only.

Auction Information and Scheduling

19. Prior to the Commencement Date of the Auction, ICANN or the Auction Manager will inform Bidders of relevant information relating to the Auction, including:
 - (a) The Contention Set or Sets that will be the subject of the Auction;
 - (b) confirmation of the Commencement Date; and
 - (c) the Starting Time, Ending Time and duration of Round 1.
20. The first Round of an Auction will start on the Commencement Date and last 30 minutes, the recess after the first Round will last 20 minutes, and all subsequent Rounds and recesses will last 20 minutes

each. The Auction Manager may open Round 1 for Early Bidding, a time period prior to the standard 30 minutes of bidding for Round 1 of a duration designated by the Auction Manager. A Bid submitted during Early Bidding has the same effect as a Bid submitted during the standard 30 minutes of Round 1. All Contention Sets within a single Auction event will follow the same Auction Schedule. The Auction Manager may lengthen the Round or Recess timescales on an ad hoc basis at its sole discretion. The Auction Manager may also shorten the Round or Recess timescales on an ad hoc basis, but only with the electronic written consent of all remaining participants in an Auction.

21. The Auction Site will contain a schedule showing the indicative times for each Round and each Recess (the "Auction Schedule"). The Auction Schedule will be updated as necessary during the course of the Auction. When applicable, the Early Bidding Starting Time will be announced by the Auction Manager.

✍ The Auction Manager intends to provide Early Bidding for most Auction events. Early bidding will provide an additional period of time prior to the standard bidding time allotted in Round 1 to accommodate Bidders in various time zones who may prefer to submit a Proxy Bid. The Auction Manager generally intends to open Early Bidding approximately 8 hours prior to the start of Round 1. The opening for early bidding may take place on the day prior to the official Commencement Date of the Auction. ICANN or the Auction Manager will communicate the opening of Round 1 to Bidders, pursuant to clause 19.

It should be noted, the Auction Manager does not intend to provide live customer support throughout the Early Bidding period. Live customer support will begin approximately 1 hour prior to the start of Round 1.

Auction Bank Account and Deposits

22. In advance of an Auction, each Bidder will receive wire instructions for an Auction Bank Account, which will be established for auction purposes by ICANN and Power Auctions LLC at a major US commercial bank. The funds in the Auction Bank Account will be held in escrow and segregated on a Bidder-by-Bidder basis.
23. All Deposits to the Auction Bank Account must be made by bank wire. All bank wires to the Auction Bank Account must be denominated in \$US. All bank wires to the Auction Bank Account must clearly identify the relevant Bidder and the relevant Contention Set. All Deposits to the Auction Bank Account and all payments of the net balance of the aggregate Winning Prices to the Auction Bank Account must be net of all taxes, tariffs and duties of any kind and all wire and service fees, all of which are the sole responsibility of the Bidder.
24. All bank wires to the Auction Bank Account must be made from a bank account owned by the Bidder. If the Qualified Applicant is an entity that does not own a bank account, it is required to designate a Designated Bidder that owns a bank account. All refunds from the Auction Bank Account will be made only to the same bank account from which the associated deposit was made, except for exceptional circumstances and at the sole discretion of the Auction Manager.

Bidding Limits

25. Each Bidder will be assigned a Bidding Limit applicable to a Contention Set within an Auction based on the amount of the Deposit, net of any bank fees, submitted by the Bidder for such Contention Set.
26. The Bidding Limit will be determined by the amount of the Deposit applicable to the Contention Set received from the Bidder. If the Deposit is less than \$2,000,000, the Bidding Limit will be set at ten (10) times the Deposit. If the Deposit is \$2,000,000 or greater, the Bidding Limit will be deemed to be "Unlimited".
27. If a Bidder is eligible to bid for more than one Application within an Auction, the Bidder will be assigned a separate Bidding Limit for each such Application, and the Bidding Limits will be non-transferable among Applications. If any wire to the Auction Bank Account is intended to provide Deposits for more than one Application, the Bidder must provide clear instructions in a specified form to the Auction Manager as to the allocation of Deposits among the Applications.
28. All wires and all instructions associated with Deposits, including instructions regarding the allocation of funds among Contention Sets from wires and funds rolled over from previous Auctions, must be received no later than 16:00 UTC on the day that is seven (7) calendar days prior to the Commencement Date of the relevant Auction (the "Deposit Deadline"), unless this deadline is waived, at the Auction Manager's sole discretion.

Participation in an Auction

29. To place Bids on an Application within an Auction, a Bidder must submit a Deposit and thereby establish a positive Bidding Limit pursuant to clauses 25 – 28. In the event that no Qualified Applicant in a given Contention Set submits a Deposit by the Deposit Deadline, ICANN reserves the right to reject all Applications subject to the Contention Set and not delegate any of the Contention Strings.
30. A Bidder who has submitted a Deposit for an Application in a Contention Set is required to participate in the Auction for the Contention Set unless the Bidder sends ICANN and the Auction Manager written notice that it has withdrawn from the Auction for the Contention Set. Such notification must be received by ICANN and the Auction Manager no later than the Deposit Deadline. In the absence of written notification or non-participation in the Auction, a default bid of one dollar (\$1), pursuant to clauses 31 and 42, will be entered automatically on the Bidder's behalf.

Bidding

31. For each Round and for each Open Contention Set, a Start-of-Round Price and an End-of-Round Price will be announced to Bidders for the Contention Set. The Start-of-Round Price for each Contention Set in Round 1 will be one dollar (\$1). The Start-of-Round and End-of-Round Prices will increase as the Auction progresses, pursuant to clauses 44(d), 45 and 48.
32. A Bid represents a price, which a Bidder is willing to pay to resolve string contention within a Contention Set in favor of its Application.
33. There are two types of Bids:

- (a) *Continue Bids*: A Continue Bid is a Bid for an Application at the End-of-Round Price for the relevant Contention Set (or a Proxy Bid at a specified greater price, see clauses 37 and 38 for further explanation of Proxy Bids); and
- (b) *Exit Bids*: An Exit Bid is a Bid for an Application at a specified price, which is less than the End-of-Round Price but at least the amount of the previous Bid for the Application (or \$1 in Round 1).

The Auction Site will include a link to make it very easy to submit a Continue Bid. Clicking on this link will generate a bid at the End-of-Round Price. Bids may also be typed at other allowable prices.

34. After each Round of the Auction, it is determined whether each Application that was eligible for bidding in the Round is Enduring, by sequentially applying conditions 34(a), 34(b) and 34(c) below. Only Enduring Applications may force the Auction to go to a next Round:

- (a) An Application that was eligible for bidding in the Round and received a Continue Bid is deemed to be Enduring;
- (b) An Application that was eligible for bidding in the Round is deemed not to be Enduring if an Exit Bid was received for this Application and if a higher Bid has been received for another Application that was Positioned the Same or Better than this Application; and
- (c) Under the assumption that conditions (a) and (b) are not satisfied: An Application that was eligible for bidding in the Round is deemed to be Enduring *if and only if* an Exit Bid was received for this Application, but this Application was part of a Feasible Set of Applications eligible for bidding in the Round whose Bids summed to at least the End-of-Round Price of the Round.

The purpose of the bidding restriction in clause 34 is to prevent "bid sniping": a Bidder is not permitted to wait until the very end of the Auction to bid. Instead, the Bidder is required to bid sufficiently much for its Application in each and every Round (or to place a Proxy Bid that has the same effect).

A Continue Bid guarantees that the Bidder's Application will not be eliminated from the Open Contention Set in the then current Round. By contrast, an Exit Bid may result in the Application being eliminated from the Auction or remaining in the Auction, in accordance with conditions (b) and (c), respectively.

35. After the processing of Round n ($n \geq 1$) pursuant to clause 34:

- (a) The Auction proceeds to Round $n + 1$ *if and only if* there remain two or more Enduring Applications that are in a Direct Contention relationship with one another—see clauses 44 and 46 below; and

- (b) Any Enduring Application that is no longer in a Direct Contention relationship with any other Enduring Application will be deemed to be a Winning Application, and will be removed from the list of Enduring Applications. Any Winning Application will no longer be treated as part of the Auction beginning in Round $n + 1$, if applicable; and
 - (c) Any Enduring Application that is in a Direct Contention relationship with another Enduring Application will be eligible for bidding in Round $n + 1$,
36. Bids may only be submitted during a Round (i.e. between the Starting Time and the Ending Time). During a Round, a Bidder may edit or cancel its Bids as often as desired, subject to the conditions set out in these Auction Rules. The valid Bids residing on the Auction Site at the Ending Time of the Round are binding on the respective Bidders and may not be amended or removed except pursuant to clause 39.
37. The End-of-Round Price for a Round is only the minimum price for a Continue Bid. Subject to limitations in clause 40, Continue Bids may be placed at prices higher than the End-of-Round Price. These are often referred to as Proxy Bids.
38. A Proxy Bid submitted by a Bidder in a prior Round, will be treated the same as a Bid that has been placed in the current Round, subject to clauses 34 and 35. It will be treated as an Exit Bid if its price is less than the relevant End-of-Round Price of the current Round, or otherwise as a Continue Bid.

The Proxy Bid capability makes it possible to submit a Bid in Round 1 and to take no further active part in the auction. In other words, it is not necessary to bid in real time in each Round. Proxy Bids submitted in a given Round will be processed by the auction software in each subsequent Round in exactly the same way as equivalent bids submitted during the Round. A Proxy Bid entered in one Round may also be amended during a subsequent Round, so long as the price was sufficiently large to keep the Bidder in the Auction until the subsequent Round.

39. In the event that an Authorized Individual loses access to the Internet or is otherwise unable to place a Bid, the Auction Manager, at its sole discretion, may permit the submission of Bids by alternative means, generally by fax. The Auction Manager will provide forms for any submissions by fax. All such submissions by alternative means must be validated by an Authorized Individual. Any Authorized Individual who submits Bids by alternative means shall be deemed to have confirmed acceptance of the Bidder Agreement and the Auction Rules as if he or she had accepted them on the Auction Site pursuant to clause 14.

Validity of Bids

40. In order to be valid, a Bid must satisfy each and all of the following conditions:
- (a) the Bid must have been submitted no earlier than the Starting Time of the relevant Round and no later than the Ending Time of the relevant Round, with the exception of Bids permitted by the Auction Manager pursuant to clause 39;
 - (b) the Bid must be placed by a Bidder for its Application in an Open Contention Set;

- (c) in Round 2 or later, the Bid must be placed by a Bidder for an Application that is deemed to be eligible for bidding pursuant to clause 35;
 - (d) the price of the Bid must be a whole number of \$US that is not less than the Bid of the previous Round (or \$1 in the first Round); and
 - (e) the price of the Bid must not exceed the Bidding Limit assigned to the Bidder for the Contention Set—this clause will not place any constraint if the Bidding Limit is “Unlimited”.
41. The Auction Site will enforce the conditions of clause 40 on Bid submissions.
42. If a Bidder who is eligible to bid for a Contention Set in a given Round does not submit a valid Bid during the Round and is unable to correct this omission pursuant to clause 39, then a Bid equal to the amount of the Bid of the previous Round (or \$1 in the first Round) will be entered automatically on the Bidder’s behalf.

Processing of Bids after a Round

43. During the Recess after each Round, the Auction Manager will process the Bids for each Open Contention Set and post the following results on the Auction Site to Bidders for the Contention Set:
- (a) the Number of Applications remaining eligible for bidding in the next Round , i.e., the Number of Enduring Applications, and the number of Enduring Applications that received Continue Bids in the Round (“Aggregate Demand”), but not the identities of the Enduring Applications or the Applications that received Continue Bids; and
 - (b) Start-of-Round Price and an End-of-Round Price for the next round of the Auction.
44. An Open Contention Set will remain Open in the next Round if there remain two or more Enduring Applications that are in a Direct Contention relationship with one another. In this event:
- (a) the number of Enduring Applications and the Aggregate Demand (but not the identities of the Enduring Applications or the Applications that received Continue Bids), will be posted to Bidders for the Contention Set;
 - (b) if any Application is eliminated after a Round, thereby causing another Application to be deemed a Winning Application pursuant to clause 35(b), or, if any Application is eliminated, thereby causing the Contention Set to divide into two or more disjoint subsets, this information (including the position of the eliminated Application in the Contention Set, as well as the Winning Application’s identity) will be communicated to Bidders for the Contention Set;
 - (c) the next Round’s Start-of-Round Price for the Contention Set, equal to the current Round’s End-of-Round Price, will be announced to Bidders for the Contention Set; and
 - (d) the next Round’s End-of-Round Price for the Contention Set, strictly greater than the current Round’s End-of-Round Price, will be announced to Bidders for the Contention Set.
45. The price increment used to obtain the End-of-Round Price in clause 44(d) will be set by the Auction Manager taking into account Aggregate Demand for the Contention Set and other information

relevant to the likely level of prices for the Contention Set, but the actual level of increment that is selected will be at the Auction Manager's sole discretion.

✍ Aggregate Demand is defined as the number of Continue Bids for Applications received in a Round, aggregated over all Applications that remained eligible for bidding in the Contention Set after a Round. It does not attempt to describe commercial demand for the gTLD.

46. An Open Contention Set will close after a Round if there do not remain two or more Enduring Applications that are in a Direct Contention relationship with one another. In this event:
- (a) The Auction Manager will select the Feasible Set of Applications for which the sum of the associated Bids is maximized.
 - (b) In the event that the maximization problem of clause (a) has a unique solution, the Applications in the selected Feasible Set will be deemed to be Winning Applications; and
 - (c) the Bidder(s) associated with Winning Applications will be deemed the Winner(s) of the Contention Set.
47. The Winning Prices will be determined by "second-price principles," specified as follows:
- (a) The sum of the Winning Prices associated with a set of Winning Applications shall not be less than the sum of the Bids for a non-winning set of Applications, evaluated in the Round in which the set of Winning Applications caused the non-winning set of Applications to be eliminated from the Auction.
 - (b) In applying clause (a), to the extent that the Bids of non-winning Applications need to be allocated among two or more Winning Applications, they shall be allocated proportionally. For example, suppose that Applications A and C together eliminate Application B in Round 3, and suppose that the Bids for these Applications in Round 3 are p_A , p_C and p_B , respectively. Then we require:
 - The Winning Price of Application A is not less than $\left(\frac{p_A}{p_A+p_C}\right)p_B$; and
 - The Winning Price of Application C is not less than $\left(\frac{p_C}{p_A+p_C}\right)p_B$.
 - (c) For the avoidance of doubt, the Bid amounts used in the calculation of clause (b) shall be the Bid amounts in the Round in which the Winning Applications caused the non-winning Applications to be eliminated.
 - (d) In particular, the Winning Price associated with a Winning Application shall not be less than any Bid, submitted in any Round of the Auction, for any other Application that is Positioned the Same or Better than the Winning Application.
 - (e) If applying these second-price principles generates two or more constraints on the Winning Price of a Winning Application, then each and every one of these constraints is required to

be satisfied. For example, if these rules determine that the Winning Price shall be not less than X and that the Winning Price shall not be less than Y, then the Winning Price shall not be less than the maximum of X and Y.

- (f) Similarly, in the event that a non-winning set of Applications can be eliminated by a set that includes either of two Enduring Applications, then the constraints generated on Winning Prices are required to hold in relation to each choice of these Enduring Applications, including the Enduring Application whose Bid is the minimum.
 - (g) In no event will the Winning Price for a Winning Application exceed the highest Bid submitted for the Winning Application. Additionally, in no event will the Winning Price for a Winning Application be less than \$1.
 - (h) The fact that the Contention Set has Closed, and the amounts of the Winning Prices, will be announced to all Bidders for the Contention Set when the Contention Set Closes.
 - (i) Greater detail on applying the second-price principles is provided in the paper, "Auction Design for Indirect Contentions."
 - (j) If ICANN or the Auction Manager feels there is any ambiguity in applying the second-price principles to a Contention Set, ICANN and the Auction Manager may issue an Addendum giving more detailed examples for the Contention Set. Such Addendum, if issued, will be provided to Bidders prior to the Deposit Deadline for the Contention Set and will be deemed to provide the definitive interpretation of the pricing rules for the Contention Set.
48. In the event that that the maximization problem of clause 46(a) has two or more solutions (i.e. there is a tie), the Contention Set will enter a single Tie-Breaking Round, which will be conducted as follows:
- (a) only those Bidders whose Exit Bids for the Contention Set were part of the tie are eligible to bid in the Tie-Breaking Round;
 - (b) the price of the Bid must be a whole number of \$US that is not less than the Bidder's previous Bid amount; and
 - (c) the price of the Bid must not exceed the Bidding Limit assigned to the Bidder for the Contention Set by more than \$50,000—this clause will not place any constraint if the Bidding Limit is "Unlimited".
49. If a Bidder who is eligible to bid in a Tie-Breaking Round does not submit a valid Bid during the Round and is unable to correct this omission pursuant to clause 39, then a Bid at the Bidder's previous Bid amount will be entered automatically on the Bidder's behalf.
50. The solution to the maximization problem of clause 46(a), as solved using the Bids from the Tie-Breaking Round including automatic bids entered pursuant to clause 49, shall determine the Winning Applications after the Tie-Breaking Round, if applicable. The Winning Prices shall be determined by applying clause 47 to the full set of Bids, including the Bids from the Tie-Breaking Round. In the event that there is a tie for Winner of the Tie-Breaking Round, the tie will be broken by means of a quasi-random number generator accessed by the Auction Site.

✍ The probability of ties can be reduced by utilizing the full richness of allowable prices, rather than bidding round numbers. For example, instead of placing a Bid at \$250,000, consider placing a Bid at \$250,017.

The use of quasi-random numbers to break ties is a well-established practice in spectrum auctions organized by various national telecommunications regulators around the world.

Conclusion of the Auction

51. The Auction concludes when every Contention Set in the Auction has Closed.
52. After a Contention Set has Closed, the Winning Bidder will be informed that it has won and will be informed of the Winning Price. All other Bidders for the Contention Set will be informed of the Winning Price only.
53. After the Auction has concluded, the Auction Manager will provide a complete, confidential report about the Auction to ICANN.
54. After receiving the Auction Manager's report, ICANN will make the following information publicly available on its website within seven (7) Calendar Days:
 - (a) the Start-of-Round and End-of-Round Prices of each Round, for each Contention Set;
 - (b) the number of Enduring Applications and the Aggregate Demand for each Round (except the final Round) for each Contention Set (but not the identities of the participants in each Round);
 - (c) the additional information, if any, implied by clause 44(b);
 - (d) the Winning Price for each Winning Application; and
 - (e) the identity of each Winning Application.

Payments, Defaults and Penalties

55. If a Bidder has one or more Winning Applications in the Auction, each Deposit will be applied to the respective Winning Application and any unused part of its aggregate Deposit for the Auction will be automatically applied toward payment of its aggregate Winning Prices. To the extent the aggregate Deposit exceeds the aggregate Winning Prices and any penalties, if applicable, the Bidder will be entitled to a refund.
56. The Winner of any Contention Set is required to pay the net balance of the aggregate Winning Prices by bank wire to the Auction Bank Account. Payment must be received within twenty (20) Business Days of the Close of the Auction for the Contention Set. In the event that a Bidder anticipates that it would require a longer payment period than twenty (20) Business Days due to verifiable government-imposed currency restrictions, the Bidder may advise Auction Manager well in advance of the Auction and Auction Manager will consider applying a longer payment period to all Bidders within the same Contention Set.

57. Any Winner from whom the net balance owed of the Winning Price(s) is not received within twenty (20) Business Days of the Close of the Auction for the Contention Set is subject to being declared in default. The Auction Manager, at its sole discretion, may delay the declaration of default for a brief period, but only if the Auction Manager determines in its sole discretion that receipt of full payment appears to be imminent.
58. Once declared in default, any Winner is subject to immediate forfeiture of its position in the Auction and assessment of default penalties.
59. After a Winner is declared in default, the remaining Applications (that have not been withdrawn from the New gTLD Program) which are not in a Direct Contention relationship with any of the non-defaulting Winning Applications will receive offers to have their Applications accepted, one at a time, in descending order of and subject to payment of its respective final Exit Bid. In this way, the next Bidder would be declared the winner subject to payment of its Exit Bid. In the event that there is a tie between two or more of the remaining Bidders that are next in descending order, the tie will be broken by means of a quasi-random number generator accessed by the Auction Site to determine the order in which the tied Bidders will receive offers to have their Applications accepted. Each Bidder that is offered the relevant gTLD will be given four (4) Business Days to respond as to whether it wants its Application to win. A Bidder who responds in the affirmative will have four (4) Business Days after its response to submit a 10% deposit and an additional sixteen (16) Business Days to submit the balance of its payment. The same default procedures and penalties are in place for any runner-up Bidder receiving such an offer. A Bidder who declines such an offer cannot rescind its decision to decline the offer, has no further obligations in this context and will not be considered in default.
60. The penalty for defaulting on the Winning Price will equal 10% of the Winning Price, but not to exceed two million dollars (\$2,000,000). Default penalties will be forfeited on an individual Contention String basis and charged against the Bidder's aggregate Deposit for the Auction. In the event a Bidder participates in multiple Contention Sets in an Auction and defaults on its net balance owed, the Bidder must provide by written notice the order of allocation of the aggregate Deposit net of penalties to those Contention Sets it has won.
61. A Bidder will be subject to a penalty of up to the full amount of the Deposit forfeiture of its Applications and/or termination of any or all of its registry agreements for a serious violation of the Auction Rules or Bidder Agreement. Without limiting the foregoing, violations of clause 68 (the anti-collusion clause) shall be considered to be serious violations of the Auction Rules.

Effect of Ineligibility of Winner To Sign a Registry Agreement or To Be Delegated the Contention String

62. If, at any time following the conclusion of an Auction, the Winner is determined by ICANN to be ineligible to sign a Registry Agreement for the Contention String that was the subject of the Auction, the remaining Bidders (with applications that have not been withdrawn from the New gTLD Program) will receive offers to have their Applications accepted, one at a time, in descending order of and subject to payment of its respective Exit Bid. In this way, the next Bidder would be declared the Winner subject to payment of its Exit Bid. Each Bidder that is offered the relevant gTLD will be given four (4) Business Days to respond as to whether it wants its Application to win. A Bidder who responds in the affirmative will have four (4) Business Days after its response to submit a 10% deposit and an additional sixteen (16) Business Days to submit the balance of its payment. The same procedures and

penalties are in place for any runner-up Bidder receiving such an offer. A Bidder who declines such an offer cannot rescind its decision to decline the offer, has no further obligations in this context and will not be considered in default.

Refunds and Rollovers

63. If a Bidder did not win any Contention Sets in an Auction, its Deposits will be eligible for a refund. All refunds are denominated in \$US.
64. If a Bidder wins at least one Contention Set in an Auction, and the Bidder's aggregate Deposit exceed its aggregate Winning Prices for an auction and any applicable Penalties, the Bidder will be entitled to a refund of the excess funds.
65. If a Winner is determined by ICANN following the conclusion of the Auction to be ineligible to sign a Registry Agreement, it will be eligible for a refund of the amount of any Deposit and Winning Price paid by the Winner for the Contention String. Nothing contained in this clause 65 limits any of ICANN's rights or remedies under the Applicant Guidebook in the event the Winner (a) fails to pay the full amount of the Winning Price within 20 business days of the end of an auction or (b) fails to fulfil its obligation to execute the required Registry Agreement within 90 days of the end of the auction for any reason other than a determination by ICANN that the Winner is ineligible to sign the Registry Agreement.
66. All refunds are net of any associated wire fees and will be initiated to the Bidder within seven (7) calendar days after the conclusion of the Auction unless the Bidder requests the funds be committed to Deposits for a future Auction, subject to clause 67.
67. Upon the Bidder's request and to the extent practical, the Auction Manager will work with the Bidder to roll over the Deposit to a future Auction. Such a request must be received no later than 16.00 UTC two (2) calendar days following the day on which the Auction concluded.

✍ Rollover: After the conclusion of an Auction a Bidder may request the excess funds from its Deposit to be applied toward a future Auction. This request is due to the Auction Manager by 16.00 UTC 2 calendar days after the conclusion of the Auction.

The allocation of the Rollover to various Contention Sets must be provided to the Auction Manager prior to the Deposit Deadline for the next applicable Auction.

General Terms and Conditions

68. For each Contention Set in an Auction, there will be a Blackout Period, extending from the Deposit Deadline for the Auction until full payment has been received in the Auction Bank Account from the Winner of the Contention Set, pursuant to clause 55, or another Bidder, pursuant to clauses 57-59, and that the following rules relate to the Blackout Period:
 - (a) During the Blackout Period, all applicants for Contention Strings within the Contention Set are prohibited from cooperating or collaborating with respect to, discussing with each other, or disclosing to each other in any manner the substance of their own, or each other's, or any other competing applicants' bids or bidding strategies, or discussing or negotiating

settlement agreements or post-Auction ownership transfer arrangements, with respect to any Contention Strings in the Auction. The provisions of this section shall not prohibit cooperation or collaboration among two or more Applications in the same Contention Set that were filed by the same applicant or were filed by applicants under the common control of the same entity, provided that the same Bidder has been designated for each Application.

- (b) The prohibition against these activities applies only with respect to Contention Strings that are within Blackout Periods; during the same time periods, applicants are permitted to engage in these activities with respect to other Contention Strings that are not within Blackout Periods and applicants are permitted to engage in discussions unrelated to Contention Strings.
 - (c) ICANN and the Auction Manager shall be permitted to disclose to other Bidders for the Contention Set that multiple Applications were filed by the same applicant or were under the common control of the same entity.
69. ICANN or the Auction Manager may terminate, suspend and resume, re-run a round, or change all or any part of an Auction, if ICANN or the Auction Manager determines in its sole discretion that such decision is justified by a technical or operational reason. ICANN or the Auction Manager will, without undue delay, give notice to each Bidder of any decision taken under this clause 69 and the respective reason(s).
70. ICANN shall be entitled, in its sole reasonable discretion, to amend these Auction Rules for any Auction at any time at least fifteen (15) days prior to that Auction. Any amendments to these Auction Rules will be published to the New gTLD microsite.
71. (a) The Bidder agrees to indemnify, defend and hold Auction Manager harmless from and against any and all claims, damages, losses, liabilities, costs or expenses, including reasonable attorneys' fees, whether direct or indirect, which may arise from or be related to the actual or alleged acts or omissions of the Bidder respecting (i) its participation in the Auction, (ii) its performance under the Bidder Agreement, or (iii) any other transaction in which the Bidder participates to which the Bidder Agreement relates.
- (b) Except to the extent set forth in Section 71(c) below, the Bidder expressly releases Auction Manager from any liability for (i) any and all claims, damages, losses, liabilities, costs or expenses, including reasonable attorneys' fees and costs, whether direct or indirect, which may arise from or be related to any Auction, the Bidder Agreement, or any other transaction to which the Bidder Agreement relates, including without limitation the conduct of the Auction, the quality or availability of the Auction Site or any tools or materials provided by the Auction Manager, any disturbance in the technical process, the receipt, storage and/or security of bids, or the award or failure to award a Contention String to any Bidder or other person, and (ii) any incidental or consequential damage, lost profits or lost opportunity which may arise from or be related to any Auction, the Bidder Agreement, or any other transaction to which the Bidder Agreement relates.
- (c) Auction Manager agrees to indemnify and hold harmless the Bidder from any and all third-party claims (including all damages, losses, liabilities, costs or expenses and claims thereof) which may arise from a claim that the Bidder's use of the Auction-Manager-provided Auction Site or participation in the Auction-Manager-provided Auction, as such use or participation is intended within the scope of

the Bidder Agreement, infringes, violates or misappropriates a valid third-party patent, copyright or other intellectual property right, provided that: (1) Auction Manager is notified promptly in writing of any such claim or action; (2) Bidder has neither reached any compromise or settlement of such claim or action nor made any admissions in respect of the same; (3) Auction Manager, at its option and expense, has sole control over the defense of any such claim or action and any related settlement negotiations; and (4) Bidder provides all requested reasonable assistance to defend the same (including, without limitation, by making available to Auction Manager all documents and information in Bidder's possession or control that are relevant to the infringement or misappropriation claims, and by making Bidder's personnel available to testify or consult with Auction Manager or its attorneys in connection with such defense). For the avoidance of doubt, this Section applies only in relation to claims of infringement, violation or misappropriation of intellectual property rights in auction technology or auction software arising directly from an Auction administered by the Auction Manager on behalf of ICANN, and, without limitation, this Section does not apply to any claims involving ownership rights, trademark rights or other rights to (or third-party agreements or rights involving) any gTLD.

(d) The Auction-Manager-Provided Auction Site and Auction-Manager-Provided Auction are provided "As Is" without warranty of any kind, either express or implied, including without limitation of any implied warranties of condition, uninterrupted use, merchantability, and fitness for a particular purpose.

72. If any dispute or disagreement arises in connection with these Auction Rules, including the interpretation or application of these Auction Rules, or the form, content, validity or time of receipt of any Bid, ICANN's decision shall be final and binding.

Schedule – Table of Definitions

Item	Applies to	Definition
Active	Round	A Round status denoting the Round is open for bidding.
Aggregate Demand	Contention Set, with respect to a Round	The number of Continue Bids for Applications received in a Round, aggregated over all Applications that remain eligible to be bid in the Contention Set in the next Round.
Application	Contention Set	An application for a specific gTLD string.
Auction	Bidders	The ICANN auction event for resolving string contention among Applications for one or more Contention Sets, governed by a Bidder Agreement and the Auction Rules as set out in this document.
Auction Bank Account	Auction	A bank account maintained by Power Auctions or ICANN to receive Deposits.
Auction Manager	Auction	Power Auctions LLC.
Auction Schedule	Auction	A schedule showing the indicative timing of each Round and each Recess in relation to an Auction.
Auction Site	Auction	The website at which Bids will be submitted
Authorized Individuals	Bidder	Up to two individuals nominated by a Bidder to bid on its behalf.
Blackout Period	Contention Set	A time period, extending from the Deposit Deadline until full payment has been received, during which applicants are prohibited from engaging in the activities described in clause 68.
Bid	Contention Set during a Round	A Bidder's binding willingness to secure its Application within the Contention Set at prices up to the specified price.
Bidder	Auction	A Qualified Applicant or its Designated Bidder identified as the Bidder in the ICANN Registration Form.
Bidder Agreement	Auction	The Agreement entered into between Bidders and the Auction Manager that provides terms and conditions for participation in the Auction.

Item	Applies to	Definition
Bidding Limit	Bidder, for a Contention Set	An upper limit on the price that a Bidder can specify for its Bid on an Application within a Contention Set, based on the Deposit submitted by the Bidder for that Contention Set.
Business Day		Monday to Friday, excluding days that banks are closed in New York City, New York
Closed	Contention Set	A status for a Contention Set indicating that the condition set out in clauses 46 has been met. Bidding on Applications in the Contention Set is no longer permitted.
Commencement Date	Auction	The date on which the standard 30 minutes of Round 1 of the Auction is scheduled to occur. If applicable, Early Bidding may start prior to the Commencement Date.
Contention Set	Auction	A group of Applications that are connected by a series of Direct Contention relationships.
Continue Bid	Application during a Round	A Bid for an Application within a Contention Set at the End-of-Round Price for that Contention Set or any higher price.
Deposit	Bidder, for a Contention Set	Money deposited into the Auction Bank Account by a Bidder for a nominated Contention Set.
Deposit Deadline	Bidder, for a Contention Set	16:00 UTC on the day that is seven calendar days prior to the Commencement Date of the relevant Auction.
Designated Bidder	Qualified Applicant	A party designated by a Qualified Applicant to bid on its behalf in an Auction
Direct Contention	Applications	The relationship between two Applications for strings that are identical or confusingly similar to one another and so both cannot be awarded.

Item	Applies to	Definition
Early Bidding	Auction	A time period prior to the standard 30 minutes of Round 1 that allows for Bidders to submit bids. Bids placed during Early Bidding will have the same effect as Bids submitted during the standard 30 minutes of Round 1. During this time period, the Auction Manager may not be available by phone or email, subject to the Auction Manager's standard business hours (i.e. 1 hour before an Auction, and Monday to Friday 8:30 AM to 5:00 PM US Eastern Time Zone). Offering Early Bidding for any particular Auction event is in the Auction Managers discretion, as is the duration of the Early Bidding period.
End-of-Round Price	Contention Set during a Round	The lowest price at which a Continue Bid for an Application within a Contention Set may be placed in a Round.
Ending Time	Round	The time at which any particular Round ends.
Enduring Application	Application	An Application for which a Continue Bid has been submitted or which satisfies the condition of clause 34(c), but which has not been deemed to be a Winning Application pursuant to clause 35(b).
Exit Bid	Application during a Round	A Bid for an Application at any price less than the End-of-Round Price but greater than or equal to the amount of the previous Bid for the Application (or \$1 in Round 1).
Feasible Set	Applications	A collection of Applications such that no two of the Applications are in a Direct Contention relationship with one another.
ICANN		Internet Corporation for Assigned Names and Numbers
Indirect Contention	Applications	The relationship between two Applications that are in the same Contention Set but are not in a Direct Contention relationship with one another.
Open	Contention Set during Round	A status indicating that any eligible Bidder for that Contention Set may place a Bid on its Application, if that Bid meets the requirements in clause 40. All Contention Sets are Open in Round 1.

Item	Applies to	Definition
Positioned Better	Applications	The position of a first Application relative to a second Application if the two Applications are in a Direct Contention relationship with one another, and if the set of all other Applications that are in a Direct Contention relationship with the first Application is a subset of the set of all other Applications that are in a Direct Contention relationship with the second Application.
Positioned the Same	Applications	The position of a first Application relative to a second Application if the two Applications are in a Direct Contention relationship with one another, and if the set of all other Applications that are in a Direct Contention relationship with the first Application is the same as the set of all other Applications that are in a Direct Contention relationship with the second Application.
Posted	Round	A Round status indicating that the Bids from the most recent Round have been processed and that the results have been made available to Bidders. When a Round is Posted, Bidders will be able to see the number of Enduring Applications and the Aggregate Demand for the Contention Sets that they have Applications within, whether any of these Contention Sets have Closed, the Applications that they have secured and the associated Winning Prices.
Proxy Bid	Application during a Round	A Bid for an Application within a Contention Set at a price higher than the End-of-Round Price for that Contention Set.
Qualified Applicant	Auction	An entity that has submitted an Application for a new gTLD, has received all necessary approvals from ICANN, and which is included within a Contention Set to be resolved by an Auction
Recess	Auction	The time interval between Rounds when Bids are processed, during which no bids may be submitted.
Round	Auction	The time interval during which Bids may be submitted.
Starting Time	Round	The time at which any particular Round starts.
Start-of-Round Price	Contention Set during a Round	In Round 1, \$1; in Round 2 or later, the End-of-Round Price of the previous Round.
Tie-Breaking Round	Contention Set	A single Round that is held in the case where there is a tie among the highest Exit Bids.

Item	Applies to	Definition
Tying Bid Price	Contention Set	The price of the highest Exit Bids that were tied.
Unlimited	Bidding Limit	The absence of any Bidding Limit for a Bidder for a Contention Set that has submitted a Deposit of \$2,000,000 or greater amount for that Contention Set.
Winner	Contention Set	A Bidder that secures its Application in the Contention Set.
Winning Application	Contention Set	An Application that prevails contention.
Winning Price	Contention Set	The price to be paid by a Winner to secure its Winning Application.

EXHIBIT C-4

New gTLD Auctions Bidder Agreement

Version 2014-04-03

This Qualified Applicant / Bidder Agreement (the "**Bidder Agreement**"), is made and entered into by the Qualified Applicant or Designated Bidder (collectively the "**Bidder**"), and Power Auctions, a limited liability company organized in the State of Delaware, United States of America, with offices in Washington DC (the "**Auction Manager**"), each of the Bidder and the Auction Manager referred to as a "**Party**" and, together, referred to as the "**Parties**". The terms and conditions set forth in this Bidder Agreement are to be read together with the Auction Rules. Terms used but not otherwise defined herein shall have the meanings ascribed to them in the gTLD Applicant Guidebook (the "**Applicant Guidebook**") or the "**Auction Rules**" (as defined below). In the event of any inconsistency between the Bidder Agreement and the Applicant Guidebook or the Auction Rules, the Bidder Agreement shall prevail.

RECITALS

WHEREAS, the Qualified Applicant has submitted an application (the "**gTLD Application**") for a new generic top-level domain ("**gTLD String**"), to the Internet Corporation for Assigned Names and Numbers ("**ICANN**") pursuant to the ICANN new gTLD program (the "**gTLD Program**");

WHEREAS, ICANN has identified and published a group of applications (the "**Contention Set**") containing identical or confusingly similar applied-for gTLD Strings (the "**Contention Strings**");

WHEREAS, the Qualified Applicant's gTLD Application is for a Contention String that has been included in a Contention Set;

WHEREAS, the Auction Manager will be administering an auction on behalf of ICANN to resolve string contention for the Contention Strings in the Contention Set (the "**Auction**") pursuant to section 4.3 of the ICANN gTLD Applicant Guidebook (the "**Applicant Guidebook**");

WHEREAS, the Auction Manager will provide an auction service on the internet ("**Auction Site**") which Bidders will use to participate in the Auction;

WHEREAS, ICANN has published an auction rules document ("**Auction Rules**") on its website which is binding upon Bidders in the Auction;

WHEREAS, the Qualified Applicant will place bids in the Auction on its own behalf or may designate an agent ("**Designated Bidder**") to enter bids in the Auction on the Qualified Applicant's behalf;

NOW, THEREFORE, in consideration of the premises and agreements of the parties contained in this Agreement, and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the Bidder and the Auction Manager agree as follows:

ARTICLE 1

STRING CONTENTION RESOLUTION BY AUCTION

Section 1.1 The Bidder. The Bidder represents that it is either: (a) a Qualified Applicant for one or more Contention Strings for which ICANN has provided to the Qualified Applicant a Notice of Intent to Auction; or (b) the Designated Bidder authorized by a Qualified Applicant for one or more Contention Strings for which ICANN has provided to the Qualified Applicant a Notice of Intent to Auction.

Section 1.2 Effective Date. This Bidder Agreement will become effective on the day that it has been executed by the Bidder and countersigned by the Auction Manager.

Section 1.3 Endorsement. The Parties agree that the Bidder may endorse this Bidder Agreement for additional gTLD Applications for Contention Strings for which it is the Qualified Applicant or the Designated Bidder, and that the Bidder may make such endorsement on the Auction Site by purely electronic means. If the Bidder endorses this Agreement for additional gTLD Applications, then this Agreement will apply with the same force and effect to the additional gTLD Applications as it does to the initial gTLD Application.

Section 1.4 The Auction. The Bidder shall participate in the Auction(s) for the relevant Contention Sets on the terms set forth herein and under the Auction Rules. The Auction(s) shall be conducted in accordance with the procedure set out in the Auction Rules. The Bidder acknowledges that it has reviewed the Auction Rules that will govern the participation of the Bidder in the Auction(s) and that the Auction(s) will be administered by the Auction Manager. By this Agreement, the Bidder agrees to be bound by the Auction Rules as published on ICANN's website.

Section 1.5 Consequences of Losing. The Bidder acknowledges and agrees that failure to submit a deposit by the specified deadline, failure to participate in the Auction or losing in the Auction will result in the rejection of the Qualified Applicant's application for the Contention String and the Contention String not being assigned or delegated to the relevant Qualified Applicant.

ARTICLE 2

BIDDER REPRESENTATIONS AND WARRANTIES

The Bidder represents and warrants to the Auction Manager as follows:

Section 2.1 Good Standing. The Bidder (i) is duly organized and validly existing under the laws of the jurisdiction of its organization or incorporation, (ii) is in good standing under such laws and (iii) has full power and authority to execute, deliver and perform its obligations, under this Bidder Agreement.

Section 2.2 Authorization. The Bidder Agreement has been duly and validly authorized, executed and delivered by the Bidder to the Auction Manager and constitutes the legal, valid and binding obligation of the Bidder, enforceable against the Bidder in accordance with its terms.

Section 2.3 Notifications and Instructions. Any notifications, including but not limited to the documents provided to the Auction Manager as represented by the Bidder Form or Bidder Designation Form included in this Bidder Agreement, signed by any authorized signatories of the Bidder, and delivered to the Auction Manager shall be deemed a representation and warranty by the Bidder to the Auction Manager as to the matters covered thereby.

Section 2.4 Account Information. The Bidder agrees not to disclose to any unauthorized party the Bidder's usernames, passwords, Auction Site URL or any other authentication credentials assigned to the Bidder ("**Account Information**") in connection with the gTLD Application or the Auction. The Bidder acknowledges that it shall be responsible for maintaining the confidentiality of such Account Information and for all utilizations of the Account Information.

Section 2.5 Auction Site. The Bidder agrees not to use the Auction Site for any purpose other than participation in Auctions that the Bidder is entitled to participate or to take any actions aimed at preventing the appropriate use of the Auction Site by any party.

Section 2.6 Anti-Collusion Rules. The Bidder and the Qualified Applicant each acknowledges for each Contention Set in an Auction, there will be a Blackout Period, extending from the Deposit Deadline for the Auction until full payment has been received in the Auction Bank Account from the Winner of the Contention Set, pursuant to Clause 55, or another Bidder, pursuant to clauses 57-59 of the Auction Rules. During the Blackout Period, all applicants for Contention Strings within the Contention Set are prohibited from cooperating or collaborating with respect to, discussing with each other, or disclosing to each other in any manner the substance of their own, or each other's, or any other competing applicants' bids or bidding strategies, or discussing or negotiating settlement agreements or post-Auction ownership transfer arrangements, with respect to any Contention Strings in the Auction. The prohibition against these activities applies only with respect to Contention Strings that are within Blackout Periods; during the same time periods, applicants are permitted to engage in these activities with respect to other Contention Strings that are not within Blackout Periods and applicants are permitted to engage in discussions unrelated to Contention Strings.

Section 2.7 Compliance. ICANN reserves the right to conduct due diligence on the Qualified Applicant and the Designated Bidder in an effort to ensure compliance with all applicable laws, regulations and rules governing the Auction and the transfer of funds in connection with the Auction. ICANN reserves the right to require the Qualified Applicant to substitute its Designated Bidder and/or the bank account from which Bidder wires funds to its designated Auction Bank Account if a compliance issue is identified with respect to an applicable law, regulation or rule governing the Auction or the transfer of funds in connection with the Auction.

Section 2.8 Assignment of Contention String. In the event the Bidder is designated a winner at the close of an Auction ("**Winner**") for one or more Contention Sets, its aggregate Deposits for such Auction will be automatically applied towards payment of its aggregate Winning Price(s). In the event the aggregate Deposits exceed the aggregate Winning Prices and penalties, if applicable, a refund will be initiated to the Bidder no later than 16:00 UTC on the day that is seven (7) calendar days after the conclusion of the Auction, subject to Section 2.9. If a net balance of the aggregate Winning Prices is due, the Winner is required to settle the amount owed by bank wire to its designated Auction Bank Account. Payment must be received no later than 16:00 UTC on the day that is twenty (20) "**Business Days**" (as defined in the Auction Rules) after the close of the Auction. In the event Bidder is a Winner and anticipates that it would require a longer payment period due to verifiable government-imposed currency restrictions, Bidder may advise Auction Manager well in advance of the Auction and Auction Manager will consider applying a longer payment period for all Winner(s) within the same Contention Set.

Section 2.9 Default. A Winner not in compliance with Section 2.8 is subject to being declared in default. Auction Manager at its sole discretion, may delay the declaration of default for a brief period, but only if Auction Manager determines in its sole discretion that receipt of full payment appears to be imminent. Once declared in default, the Winner is subject to immediate forfeiture of its position in the Auction and assessment of default penalties as set forth in clauses 58-60 in the Auction Rules. Default penalties will be forfeited and charged against the Bidder's aggregate Deposit(s) of the Auction. If a Winner defaults on multiple contention sets, ICANN reserve the right, in its sole discretion, to ban such Winner from future Auctions.

Section 2.10 Penalties. The Bidder acknowledges that it may be subject to a penalty of up to the full amount of the Deposit and forfeiture of its Applications or termination of its registry agreements for a serious violation of the Auction Rules or Bidder Agreement. Without limiting the foregoing, a violation of Section 2.6 of the Bidder Agreement shall be considered to be a serious violation of the Bidder Agreement.

Section 2.11 Reliance on Counsel. The Bidder acknowledges that it has been advised by its own counsel regarding the terms of the Bidder Agreement and Auction Rules and in participating in the Auction has not relied and is not relying on any representations, warranties or other statements whatsoever, whether written or oral, from or by the Auction Manager or ICANN, other than those expressly set out in this Bidder Agreement, the Auction Rules and the Applicant Guidebook.

ARTICLE 3

AUCTION BANK ACCOUNT

Section 3.1 Escrow Agreement. The Auction Manager represents that it and ICANN have entered into an agreement ("**Escrow Agreement**") whereby any funds provided by the Bidder to be used in connection with the Auction shall be held in escrow in a bank account ("**Auction Bank Account**") by an escrow agent (the "**Escrow Agent**"). The Auction Manager will provide the Bidder with Auction Bank Account details and wire instructions.

Section 3.2 Auction Bank Account. The Bidder will deposit funds by bank wire into the Auction Bank Account to be held in escrow pursuant to this Bidder Agreement and the Escrow Agreement. The Auction Bank Account is denominated in United States dollars (\$US) and all transactions to and from such account must be in \$US. Funds deposited into escrow by the Bidder may be applied by the Auction Manager in accordance with the Bidder Agreement and Auction Rules. Upon the occurrence of a withdrawal by a Qualified Applicant pursuant to Section 3.4 or termination of this Bidder Agreement pursuant to Section 5 or otherwise, the Auction Manager may direct the Escrow Agent to set-off and apply any amount deposited by the Bidder against any, to the extent amounts are owed, other payments due. The Auction Manager agrees promptly to notify the Bidder after any such set-off is made by the Auction Manager, provided that the failure to give such notice shall not affect the validity of the action.

Section 3.3 Deposits, Refunds, Rollovers. In all respects, including in relation to deposits, refunds and rollovers the Bidder agrees to comply with the provisions of the Bidder Agreement and Auction Rules. The deposit amount(s) made into the Auction Bank Account (the "**Deposit(s)**") including all instructions associated with Deposits and allocation of funds among Contention Sets from wires and funds rolled over from previous Auctions, must be received by the Auction Manager no later than 16:00 UTC on the day that is seven (7) calendar days prior to the commencement date of the Auction ("**Deposit Deadline**"). Failure by Bidder to deposit the Deposit(s) by the Deposit Deadline may, at the Auction Manager's sole discretion, result in the Bidder's ineligibility to participate in the Auction for the Contention Set, which will result in the rejection of the Qualified Applicant's application for the Contention String and the Contention String not being assigned or delegated to the relevant Qualified Applicant. If a Deposit(s) is received and the Bidder is determined to be ineligible for the Auction, a refund of the Deposit will be initiated to the bank account as specified by the Bidder no later than 16:00 UTC on the day that is seven (7) calendar days after the conclusion of the Auction. In the event the Bidder does not win in an Auction, or a Bidder's aggregate Deposits exceed its aggregate Winning Prices for an Auction, any excess amount will be refunded subject to Section 2.8 and 2.9. In the event a refund becomes due, a Bidder may request, by submitting rollover instructions to the Auction Manager by no later than 16:00 UTC two calendar days following the day on which the Auction concluded, that the Auction Manager, to the extent practical, assigns funds to a future Auction ("**Rollover**"). If this Bidder Agreement is terminated for any reason other than breach of contract by the Bidder, a refund of any remaining Deposit will be initiated to the Bidder no later than 16:00 UTC on the day that is seven (7) calendar days after the conclusion of the next scheduled Auction. All refunds are net of associated wire fees.

Section 3.4 Withdrawal Notices and Withdrawal Refunds. In all respects, including in relation to withdrawal refunds and the Qualified Applicant's notice of withdrawal, the Bidder agrees to comply with the provisions of the Bidder Agreement and Auction Rules. Applicants that are identified as being in contention are encouraged by ICANN to reach a settlement or agreement among themselves that resolves the contention prior to the date of the Auction, as set forth in section 4.1.3 of the Applicant Guidebook. Such settlement or agreement is allowed up until the Deposit Deadline of the Auction for such applicable Contention Set(s). In the event settlement is reached prior to the Deposit Deadline, the relevant Qualified Applicants shall send both ICANN and the Auction Manager

written notice and follow the process specified by ICANN to withdraw any application(s) for such Contention Strings that will not proceed as a result of the resolution. Such notification must be received by ICANN and the Auction Manager no later than the Deposit Deadline. The Auction Manager will remove such Contention Sets from the Auction upon receipt of instructions from ICANN applicable to such Contention Sets. A refund for the Deposit(s) corresponding to these Contention Sets will be initiated to the Bidder no later than 16:00 UTC on the day seven (7) calendar days after the conclusion of the Auction unless the Auction Manager receives rollover instructions from the Bidder by no later than 16:00 UTC two calendar days following the day on which the Auction concluded. After the Deposit Deadline each Bidder that submitted a Deposit is required to participate in the Auction.

ARTICLE 4

INDEMNIFICATION, WAIVERS OF LIABILITY AND RELEASE

Section 4.1 Auction Rules. The Auction Manager acknowledges its obligation to make a good-faith effort to administer the Auction in accordance with the Auction Rules.

Section 4.2 Indemnification and Waiver.

(a) The Bidder agrees to indemnify, defend and hold Auction Manager harmless from and against any and all claims, damages, losses, liabilities, costs or expenses, including reasonable attorneys' fees, whether direct or indirect, which may arise from or be related to the actual or alleged acts or omissions of the Bidder respecting (i) its participation in the Auction, (ii) its performance under this Bidder Agreement, or (iii) any other transaction in which the Bidder participates to which this Bidder Agreement relates.

(b) Except to the extent set forth in Section 4.2(c) below, the Bidder expressly releases Auction Manager from any liability for (i) any and all claims, damages, losses, liabilities, costs or expenses, including reasonable attorneys' fees and costs, whether direct or indirect, which may arise from or be related to any Auction, this Bidder Agreement, or any other transaction to which this Bidder Agreement relates, including without limitation the conduct of the Auction, the quality or availability of the Auction Site or any tools or materials provided by the Auction Manager, any disturbance in the technical process, the receipt, storage and/or security of bids, or the award or failure to award a Contention String to any Bidder or other person, and (ii) any incidental or consequential damage, lost profits or lost opportunity which may arise from or be related to any Auction, this Bidder Agreement, or any other transaction to which this Bidder Agreement relates.

(c) Auction Manager agrees to indemnify and hold harmless the Bidder from any and all third-party claims (including all damages, losses, liabilities, costs or expenses and claims thereof) which may arise from a claim that the Bidder's use of the Auction-Manager-provided Auction Site or participation in the Auction-Manager-provided Auction, as such use or participation is intended within the scope of

this Bidder Agreement, infringes, violates or misappropriates a valid third-party patent, copyright or other intellectual property right, provided that: (1) Auction Manager is notified promptly in writing of any such claim or action; (2) Bidder has neither reached any compromise or settlement of such claim or action nor made any admissions in respect of the same; (3) Auction Manager, at its option and expense, has sole control over the defense of any such claim or action and any related settlement negotiations; and (4) Bidder provides all requested reasonable assistance to defend the same (including, without limitation, by making available to Auction Manager all documents and information in Bidder's possession or control that are relevant to the infringement or misappropriation claims, and by making Bidder's personnel available to testify or consult with Auction Manager or its attorneys in connection with such defense). For the avoidance of doubt, this Section applies only in relation to claims of infringement, violation or misappropriation of intellectual property rights in auction technology or auction software arising directly from an Auction administered by the Auction Manager on behalf of ICANN, and, without limitation, this Section does not apply to any claims involving ownership rights, trademark rights or other rights to (or third-party agreements or rights involving) any gTLD.

(d) The Auction-Manager-Provided Auction Site and Auction-Manager-Provided Auction are provided "As Is" without warranty of any kind, either express or implied, including without limitation of any implied warranties of condition, uninterrupted use, merchantability, and fitness for a particular purpose.

Section 4.3 Force Majeure. No Party to this Bidder Agreement shall be responsible or liable for any failure or delay in the performance of its obligation under this Bidder Agreement arising out of or caused, directly or indirectly, by circumstances beyond their reasonable control, including, without limitation, acts of God; earthquakes; fire; flood; wars; acts of terrorism; civil or military disturbances; sabotage; epidemic; riots; accidents; labor disputes; acts of civil or military authority or governmental action; it being understood that each party to this Bidder Agreement shall use commercially reasonable efforts which are consistent with accepted practices to resume performance as soon as reasonably practicable under the circumstances; provided that Bidder's loss of access to the Internet during an Auction shall not be deemed a matter beyond Bidder's reasonable control in light of Bidder's ability to (a) designate two Authorized Individuals under the Auction Rules; and (b) employ alternative bidding mechanisms during the Auction via fax.

Section 4.4 Liability of ICANN. Qualified Applicant and Designated Bidder each understands, acknowledges and agrees that the Auction is a method of contention resolution contemplated by the gTLD Applicant Guidebook for Qualified Applicant's application and that, as between Qualified Applicant and ICANN, the provisions of Module 6: Top-Level Domain Application - Terms and Conditions of the Applicant Guidebook apply to the Auction. Without limiting the foregoing, Designated Bidder understands, acknowledges and agrees that it is participating in the Auction as an authorized agent of Qualified Applicant and its rights and remedies with respect to ICANN are limited to the same extent that Qualified Applicant's rights and remedies are limited by the provisions of Module 6: Top-Level Domain Application - Terms and Conditions of the Applicant Guidebook.

ARTICLE 5

TERMINATION

Section 5.1 Termination. This Bidder Agreement shall terminate 90 days after notice of termination is provided by either Party; provided, however, that the provisions of Section 4.2 (Indemnification), Section 6.1 (Confidentiality), Section 7.1 (Survival; Successors or Assigns), Section 7.3 (Notices), and Section 7.8 (Governing Law) shall survive termination of this Bidder Agreement.

ARTICLE 6

CONFIDENTIALITY

Section 6.1 Confidentiality. Except as otherwise stated in this Bidder Agreement, each Party agrees, to maintain the confidentiality of any confidential and proprietary information received by it from the other Party pursuant to this Bidder Agreement, including, without limitation, any Account Information or any material nonpublic information ("**Confidential Information**"); provided, however, that Confidential Information shall not include any information that: (a) is or becomes generally available to the public other than as a result of a disclosure by the receiving Party or its representatives; (b) is already in the receiving Party's possession, provided that such information is not subject to a contractual, legal or fiduciary obligation of confidentiality for the benefit of another; or (c) becomes available to the receiving Party on a non-confidential basis from a source not bound by a contractual, legal or fiduciary obligation to keep such information confidential for the benefit of another. The foregoing will not prohibit either Party from disclosing Confidential Information: to the extent it is required to do so by applicable law so long as the Party, prior to disclosure that is legally required, provides the Party with written notice of the Confidential Information to be disclosed and takes appropriate steps to preserve the confidentiality of such information to the extent reasonably practicable; to its affiliates, attorneys, accountants, consultants, and other professionals bound by similar confidentiality obligations. Bids in the Auction shall be deemed Confidential Information; however, the Auction Manager shall be permitted to disclose bids or bidding information to ICANN during the Auction only if reasonably necessary to inform ICANN of a potential pending dispute requiring resolution or input, and to disclose bids or bidding information publicly after the conclusion of the Auction to the extent permitted by and pursuant to the Auction Rules. Notwithstanding the above, the Auction Manager is expressly permitted to share with the Bidder such other information as may be provided or set forth in the Auction Rules.

ARTICLE 7

MISCELLANEOUS

Section 7.1 Survival; Successors and Assigns. All representations, warranties, covenants, indemnities and other provisions made by the parties shall be considered to have been relied upon by the parties, shall be true and correct as of the date hereof, and shall survive the execution, delivery, and performance of this Bidder Agreement. This Bidder Agreement, including the declarations, acknowledgments, guarantees and indemnities contained in this Bidder Agreement, shall inure to the benefit of, be binding upon and be enforceable by and against the parties and their respective successors and permitted assigns.

Section 7.2 Interpretation; Severability. The Bidder intends for this Bidder Agreement to comply with applicable state and federal laws. If any term or provision hereof is illegal or invalid for any reason whatsoever, such provisions will be replaced with a valid provision that as closely as possible resembles the purposes and intents of the invalid provision or, if not possible, will be severed from this Bidder Agreement, and such invalid or unenforceable provision will not affect the enforceability or validity of the remainder of this Bidder Agreement.

Section 7.3 Notices. All notices, requests, demands, and other communications required under this Bidder Agreement shall be in writing, in English, and shall be delivered by electronic transmission with written confirmation of receipt via RPost or a similar service that authenticates email delivery or via acknowledgement from the recipient, or via fax. If notice is given to a Bidder, it shall be delivered to the email address or fax number for such Bidder as provided by the Bidder to the Auction Manager. It shall be the responsibility of the Bidders to notify the Auction Manager of any changes in name, address or contact information.

Section 7.4 Entire Agreement. This Bidder Agreement, including the Bidder Form and Bidder Designation Form attached hereto and made a part hereof, sets forth the entire agreement and understanding of the parties related to the Auction.

Section 7.5 Amendment. This Bidder Agreement may be amended, modified, superseded, rescinded, or canceled only by a written instrument executed by the Auction Manager and Bidder.

Section 7.6 Auction Rules. ICANN shall be entitled, in its sole reasonable discretion, to amend the Auction Rules for any Auction at any time at least fifteen (15) days prior to that Auction. ICANN will inform the Bidder of such changes via electronic written notice and the changes will be effective immediately. Such amendments will be published to the ICANN website. If any dispute or disagreement arises in connection with the Auction Rules, including the interpretation or application of the Auction Rules, or the form, content, validity or time of receipt of any Bid, ICANN's decision shall be final and binding.

Section 7.7 Waivers. The failure of any party to this Bidder Agreement at any time or times to require performance of any provision under this Bidder Agreement shall in no manner affect the right at a later time to enforce the same performance. A waiver by any party to this Bidder Agreement of any such condition or breach of any term, covenant, representation, or warranty contained in this Bidder Agreement, in any one or more instances, will neither be construed as a further or continuing waiver of any such condition or breach nor a waiver of any other condition or breach of any other term, covenant, representation, or warranty contained in this Bidder Agreement.

Section 7.8 Governing Law. This Bidder Agreement shall be governed by and construed in accordance with the laws of the State of Delaware, United States of America, excluding any choice of law provisions.

Section 7.9 Jurisdiction. Subject to Section 8.2 on arbitration, the Bidder and the Auction Manager irrevocably and unconditionally submit to and accept the exclusive jurisdiction of the federal and state courts located in the State of Delaware for any action, suit, or proceeding arising out of or based upon this Bidder Agreement or any matter relating to it, and waive any objection that it may have to the laying of venue in any such court or that such court is an inconvenient forum or does not have personal jurisdiction over it.

Section 7.10 Third Party Beneficiary. ICANN is an intended third party beneficiary of this Bidder Agreement entitled to enforce this Bidder Agreement against the Bidder and the Auction Manager as if ICANN was a direct party to this Bidder Agreement.

Section 7.11 Execution in Counterparts. This Bidder Agreement may be executed in counterparts. All executed counterparts constitute one document.

ARTICLE 8

DISPUTE RESOLUTION

Section 8.1 Mediation. In the event of any dispute arising under or in connection with this Bidder Agreement, before either party may initiate arbitration pursuant to Section 8.2 below, the Auction Manager and the Bidder must attempt to resolve the dispute through mediation in accordance with the following terms and conditions:

- (a) - a party shall submit a dispute to mediation by written notice to the other party. The mediation shall be conducted by a single mediator selected by the parties. If the parties cannot agree on a mediator within fifteen (15) calendar days of delivery of written notice pursuant to this Section 8.1, the parties will promptly select a mutually acceptable mediation provider entity, which entity shall, as soon as practicable following such entity's selection, designate a mediator, who is a licensed attorney with general knowledge of contract law and, to the extent necessary to mediate the particular dispute, general knowledge of the gTLD Program. Any mediator must confirm in writing that he or she is not, and will not become during the term of

the mediation, an employee, partner, executive officer, director, or security holder of ICANN, the Auction Manager or the Bidder. If such confirmation is not provided by the appointed mediator, then a replacement mediator shall be appointed pursuant to this Section 8.1(a);

- (b) - the mediator shall conduct the mediation in accordance with the rules and procedures that he or she determines following consultation with the parties. The parties shall discuss the dispute in good faith and attempt, with the mediator's assistance, to reach an amicable resolution of the dispute. The mediation shall be treated as a settlement discussion and shall therefore be confidential and may not be used against either party in any later proceeding relating to the dispute, including any arbitration pursuant to Section 8.2. The mediator may not testify for either party in any later proceeding relating to the dispute;
- (c) - each party shall bear its own costs in the mediation. The parties shall share equally the fees and expenses of the mediator. Each party shall treat information received from the other party pursuant to the mediation that is appropriately marked as confidential (as required by Article 6) as Confidential Information of such other party in accordance with Article 6.
- (d) - if the parties have engaged in good faith participation in the mediation but have not resolved the dispute for any reason, either party or the mediator may terminate the mediation at any time and the dispute can then proceed to arbitration pursuant to Section 8.2 below. If the parties have not resolved the dispute for any reason by the date that is ninety (90) calendar days following the date of the notice delivered pursuant to Section 8.1(a), the mediation shall automatically terminate (unless extended by agreement of the parties) and the dispute can then proceed to arbitration pursuant to Section 8.2 below.

Section 8.2 Arbitration. Disputes arising under or in connection with this Bidder Agreement that are not resolved pursuant to Section 8.1, including requests for specific performance, will be resolved through binding arbitration conducted pursuant to the rules of the International Court of Arbitration of the International Chamber of Commerce. The arbitration will be conducted in the English language and will occur in the State of Delaware. Any arbitration will be in front of a single arbitrator, unless the parties agree in writing to a greater number of arbitrators in which event the arbitration will be in front of three arbitrators with each party selecting one arbitrator and the two selected arbitrators selecting the third arbitrator. In order to expedite the arbitration and limit its cost, the arbitrator(s) shall establish page limits for the parties' filings in conjunction with the arbitration, and should the arbitrator(s) determine that a hearing is necessary, the hearing shall be limited to one (1) calendar day, provided that the hearing may be extended for one (1) additional calendar day if agreed upon by the parties or ordered by the arbitrator(s) based on the arbitrator(s) independent determination or the reasonable request of one of the parties thereto. The prevailing party in the arbitration will have the right to recover its costs and reasonable attorneys' fees, which the arbitrator(s) shall include in the awards. Each party shall treat information received from the other party pursuant to the arbitration that is appropriately marked as confidential (as required by Article 6) as Confidential Information of such other party in accordance with Article 6. In any litigation involving the Auction Manager concerning this Bidder Agreement, jurisdiction and exclusive venue for such litigation will be in a court located in the State of Delaware; however, the parties will also have the right to enforce a judgment of such a court in any court of competent jurisdiction. The provisions for arbitration set forth herein shall be in lieu of any other procedure for the determination of controversies between the

Parties to this Agreement or any claim by such Party against any other such Party arising thereunder and the Parties agree not to invoke the intervention of the courts of Delaware or any other jurisdiction in relation to the appointment of the arbitrators, procedures adopted by or proceedings at the sitting of the arbitral tribunal in any dispute.

IN WITNESS WHEREOF, this Bidder Agreement has been duly executed by

Qualified Applicant

gTLD Applicant Guidebook

Version 2012-06-04

4 June 2012

Preamble

New gTLD Program Background

New gTLDs have been in the forefront of ICANN's agenda since its creation. The new gTLD program will open up the top level of the Internet's namespace to foster diversity, encourage competition, and enhance the utility of the DNS.

Currently the namespace consists of 22 gTLDs and over 250 ccTLDs operating on various models. Each of the gTLDs has a designated "registry operator" and, in most cases, a Registry Agreement between the operator (or sponsor) and ICANN. The registry operator is responsible for the technical operation of the TLD, including all of the names registered in that TLD. The gTLDs are served by over 900 registrars, who interact with registrants to perform domain name registration and other related services. The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market. When the program launches its first application round, ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

The program has its origins in carefully deliberated policy development work by the ICANN community. In October 2007, the Generic Names Supporting Organization (GNSO)—one of the groups that coordinate global Internet policy at ICANN—formally completed its policy development work on new gTLDs and approved a set of 19 policy recommendations. Representatives from a wide variety of stakeholder groups—governments, individuals, civil society, business and intellectual property constituencies, and the technology community—were engaged in discussions for more than 18 months on such questions as the demand, benefits and risks of new gTLDs, the selection criteria that should be applied, how gTLDs should be allocated, and the contractual conditions that should be required for new gTLD registries going forward. The culmination of this policy development process was a decision by the ICANN Board of Directors to adopt the community-developed policy in June 2008. A thorough brief to the policy process and outcomes can be found at <http://gnso.icann.org/issues/new-gtlds>.

ICANN's work next focused on implementation: creating an application and evaluation process for new gTLDs that is aligned with the policy recommendations and provides a clear roadmap for applicants to reach delegation, including Board approval. This implementation work is reflected in the drafts of the applicant guidebook that were released for public comment, and in the explanatory papers giving insight into rationale behind some of the conclusions reached on specific topics. Meaningful community input has led to revisions of the draft applicant guidebook. In parallel, ICANN has established the resources needed to successfully launch and operate the program. This process concluded with the decision by the ICANN Board of Directors in June 2011 to launch the New gTLD Program.

For current information, timelines and activities related to the New gTLD Program, please go to <http://www.icann.org/en/topics/new-gtld-program.htm>.

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 1

4 June 2012

Module 1

Introduction to the gTLD Application Process

This module gives applicants an overview of the process for applying for a new generic top-level domain, and includes instructions on how to complete and submit an application, the supporting documentation an applicant must submit with an application, the fees required, and when and how to submit them.

This module also describes the conditions associated with particular types of applications, and the stages of the application life cycle.

Prospective applicants are encouraged to read and become familiar with the contents of this entire module, as well as the others, before starting the application process to make sure they understand what is required of them and what they can expect at each stage of the application evaluation process.

For the complete set of the supporting documentation and more about the origins, history and details of the policy development background to the New gTLD Program, please see <http://gnso.icann.org/issues/new-gtlds/>.

This Applicant Guidebook is the implementation of Board-approved consensus policy concerning the introduction of new gTLDs, and has been revised extensively via public comment and consultation over a two-year period.

1.1 Application Life Cycle and Timelines

This section provides a description of the stages that an application passes through once it is submitted. Some stages will occur for all applications submitted; others will only occur in specific circumstances. Applicants should be aware of the stages and steps involved in processing applications received.

1.1.1 Application Submission Dates

The user registration and application submission periods open at **00:01 UTC 12 January 2012**.

The user registration period closes at **23:59 UTC 29 March 2012**. New users to TAS will not be accepted beyond this

time. Users already registered will be able to complete the application submission process.

Applicants should be aware that, due to required processing steps (i.e., online user registration, application submission, fee submission, and fee reconciliation) and security measures built into the online application system, it might take substantial time to perform all of the necessary steps to submit a complete application. Accordingly, applicants are encouraged to submit their completed applications and fees as soon as practicable after the Application Submission Period opens. Waiting until the end of this period to begin the process may not provide sufficient time to submit a complete application before the period closes. Accordingly, new user registrations will not be accepted after the date indicated above.

The application submission period closes at **23:59 UTC 12 April 2012**.

To receive consideration, all applications must be submitted electronically through the online application system by the close of the application submission period.

An application will not be considered, in the absence of exceptional circumstances, if:

- It is received after the close of the application submission period.
- The application form is incomplete (either the questions have not been fully answered or required supporting documents are missing). Applicants will not ordinarily be permitted to supplement their applications after submission.
- The evaluation fee has not been paid by the deadline. Refer to Section 1.5 for fee information.

ICANN has gone to significant lengths to ensure that the online application system will be available for the duration of the application submission period. In the event that the system is not available, ICANN will provide alternative instructions for submitting applications on its website.

1.1.2 Application Processing Stages

This subsection provides an overview of the stages involved in processing an application submitted to ICANN. Figure 1-1 provides a simplified depiction of the process. The shortest and most straightforward path is marked with bold lines, while certain stages that may or may not be

applicable in any given case are also shown. A brief description of each stage follows.

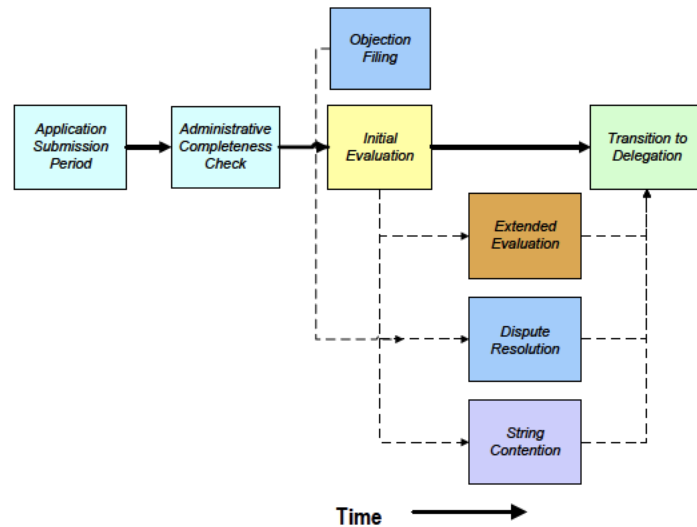

Figure 1-1 – Once submitted to ICANN, applications will pass through multiple stages of processing.

1.1.2.1 Application Submission Period

At the time the application submission period opens, those wishing to submit new gTLD applications can become registered users of the TLD Application System (TAS).

After completing the user registration, applicants will supply a deposit for each requested application slot (see section 1.4), after which they will receive access to the full application form. To complete the application, users will answer a series of questions to provide general information, demonstrate financial capability, and demonstrate technical and operational capability. The supporting documents listed in subsection 1.2.2 of this module must also be submitted through the online application system as instructed in the relevant questions.

Applicants must also submit their evaluation fees during this period. Refer to Section 1.5 of this module for additional information about fees and payments.

Each application slot is for one gTLD. An applicant may submit as many applications as desired; however, there is no means to apply for more than one gTLD in a single application.

Following the close of the application submission period, ICANN will provide applicants with periodic status updates on the progress of their applications.

1.1.2.2 Administrative Completeness Check

Immediately following the close of the application submission period, ICANN will begin checking all applications for completeness. This check ensures that:

- All mandatory questions are answered;
- Required supporting documents are provided in the proper format(s); and
- The evaluation fees have been received.

ICANN will post the public portions of all applications considered complete and ready for evaluation within two weeks of the close of the application submission period. Certain questions relate to internal processes or information: applicant responses to these questions will not be posted. Each question is labeled in the application form as to whether the information will be posted. See posting designations for the full set of questions in the attachment to Module 2.

The administrative completeness check is expected to be completed for all applications in a period of approximately 8 weeks, subject to extension depending on volume. In the event that all applications cannot be processed within this period, ICANN will post updated process information and an estimated timeline.

1.1.2.3 Comment Period

Public comment mechanisms are part of ICANN's policy development, implementation, and operational processes. As a private-public partnership, ICANN is dedicated to: preserving the operational security and stability of the Internet, promoting competition, achieving broad representation of global Internet communities, and developing policy appropriate to its mission through bottom-up, consensus-based processes. This necessarily involves the participation of many stakeholder groups in a public discussion.

ICANN will open a comment period (the Application Comment period) at the time applications are publicly posted on ICANN's website (refer to subsection 1.1.2.2). This period will allow time for the community to review and submit comments on posted application materials

(referred to as “application comments.”) The comment forum will require commenters to associate comments with specific applications and the relevant panel. Application comments received within a 60-day period from the posting of the application materials will be available to the evaluation panels performing the Initial Evaluation reviews. This period is subject to extension, should the volume of applications or other circumstances require. **To be considered by evaluators, comments must be received in the designated comment forum within the stated time period.**

Evaluators will perform due diligence on the application comments (i.e., determine their relevance to the evaluation, verify the accuracy of claims, analyze meaningfulness of references cited) and take the information provided in these comments into consideration. In cases where consideration of the comments has impacted the scoring of the application, the evaluators will seek clarification from the applicant. Statements concerning consideration of application comments that have impacted the evaluation decision will be reflected in the evaluators’ summary reports, which will be published at the end of Extended Evaluation.

Comments received after the 60-day period will be stored and available (along with comments received during the comment period) for other considerations, such as the dispute resolution process, as described below.

In the new gTLD application process, all applicants should be aware that that comment fora are a mechanism for the public to bring relevant information and issues to the attention of those charged with handling new gTLD applications. Anyone may submit a comment in a public comment forum.

Comments and the Formal Objection Process: A distinction should be made between application comments, which may be relevant to ICANN’s task of determining whether applications meet the established criteria, and formal objections that concern matters outside those evaluation criteria. The formal objection process was created to allow a full and fair consideration of objections based on certain limited grounds outside ICANN’s evaluation of applications on their merits (see subsection 3.2).

Public comments will not be considered as formal objections. Comments on matters associated with formal objections will not be considered by panels during Initial Evaluation. These comments will be available to and may

be subsequently considered by an expert panel during a dispute resolution proceeding (see subsection 1.1.2.9). However, in general, application comments have a very limited role in the dispute resolution process.

String Contention: Comments designated for the Community Priority Panel, as relevant to the criteria in Module 4, may be taken into account during a Community Priority Evaluation.

Government Notifications: Governments may provide a notification using the application comment forum to communicate concerns relating to national laws. However, a government's notification of concern will not in itself be deemed to be a formal objection. A notification by a government does not constitute grounds for rejection of a gTLD application. A government may elect to use this comment mechanism to provide such a notification, in addition to or as an alternative to the GAC Early Warning procedure described in subsection 1.1.2.4 below.

Governments may also communicate directly to applicants using the contact information posted in the application, e.g., to send a notification that an applied-for gTLD string might be contrary to a national law, and to try to address any concerns with the applicant.

General Comments: A general public comment forum will remain open through all stages of the evaluation process, to provide a means for the public to bring forward any other relevant information or issues.

1.1.2.4 GAC Early Warning

Concurrent with the 60-day comment period, ICANN's Governmental Advisory Committee (GAC) may issue a GAC Early Warning notice concerning an application. This provides the applicant with an indication that the application is seen as potentially sensitive or problematic by one or more governments.

The GAC Early Warning is a notice only. It is not a formal objection, nor does it directly lead to a process that can result in rejection of the application. However, a GAC Early Warning should be taken seriously as it raises the likelihood that the application could be the subject of GAC Advice on New gTLDs (see subsection 1.1.2.7) or of a formal objection (see subsection 1.1.2.6) at a later stage in the process.

A GAC Early Warning typically results from a notice to the GAC by one or more governments that an application might be problematic, e.g., potentially violate national law or raise sensitivities. A GAC Early Warning may be issued for any reason.¹ The GAC may then send that notice to the Board – constituting the GAC Early Warning. ICANN will notify applicants of GAC Early Warnings as soon as practicable after receipt from the GAC. The GAC Early Warning notice may include a nominated point of contact for further information.

GAC consensus is not required for a GAC Early Warning to be issued. Minimally, the GAC Early Warning must be provided in writing to the ICANN Board, and be clearly labeled as a GAC Early Warning. This may take the form of an email from the GAC Chair to the ICANN Board. For GAC Early Warnings to be most effective, they should include the reason for the warning and identify the objecting countries.

Upon receipt of a GAC Early Warning, the applicant may elect to withdraw the application for a partial refund (see subsection 1.5.1), or may elect to continue with the application (this may include meeting with representatives from the relevant government(s) to try to address the concern). To qualify for the refund described in subsection 1.5.1, the applicant must provide notification to ICANN of its election to withdraw the application within 21 calendar days of the date of GAC Early Warning delivery to the applicant.

To reduce the possibility of a GAC Early Warning, all applicants are encouraged to identify potential sensitivities in advance of application submission, and to work with the relevant parties (including governments) beforehand to mitigate concerns related to the application.

1.1.2.5 Initial Evaluation

Initial Evaluation will begin immediately after the administrative completeness check concludes. All complete applications will be reviewed during Initial Evaluation. At the beginning of this period, background screening on the applying entity and the individuals named in the application will be conducted. Applications

¹ While definitive guidance has not been issued, the GAC has indicated that strings that could raise sensitivities include those that "purport to represent or that embody a particular group of people or interests based on historical, cultural, or social components of identity, such as nationality, race or ethnicity, religion, belief, culture or particular social origin or group, political opinion, membership of a national minority, disability, age, and/or a language or linguistic group (non-exhaustive)" and "those strings that refer to particular sectors, such as those subject to national regulation (such as .bank, .pharmacy) or those that describe or are targeted to a population or industry that is vulnerable to online fraud or abuse."

must pass this step in conjunction with the Initial Evaluation reviews.

There are two main elements of the Initial Evaluation:

1. String reviews (concerning the applied-for gTLD string). String reviews include a determination that the applied-for gTLD string is not likely to cause security or stability problems in the DNS, including problems caused by similarity to existing TLDs or reserved names.
2. Applicant reviews (concerning the entity applying for the gTLD and its proposed registry services). Applicant reviews include a determination of whether the applicant has the requisite technical, operational, and financial capabilities to operate a registry.

By the conclusion of the Initial Evaluation period, ICANN will post notice of all Initial Evaluation results. Depending on the volume of applications received, such notices may be posted in batches over the course of the Initial Evaluation period.

The Initial Evaluation is expected to be completed for all applications in a period of approximately 5 months. If the volume of applications received significantly exceeds 500, applications will be processed in batches and the 5-month timeline will not be met. The first batch will be limited to 500 applications and subsequent batches will be limited to 400 to account for capacity limitations due to managing extended evaluation, string contention, and other processes associated with each previous batch.

If batching is required, a secondary time-stamp process will be employed to establish the batches. (Batching priority will not be given to an application based on the time at which the application was submitted to ICANN, nor will batching priority be established based on a random selection method.)

The secondary time-stamp process will require applicants to obtain a time-stamp through a designated process which will occur after the close of the application submission period. The secondary time stamp process will occur, if required, according to the details to be published on ICANN's website. (Upon the Board's approval of a final designation of the operational details of the "secondary timestamp" batching process, the final plan will be added as a process within the Applicant Guidebook.)

If batching is required, the String Similarity review will be completed on all applications prior to the establishment of evaluation priority batches. For applications identified as part of a contention set, the entire contention set will be kept together in the same batch.

If batches are established, ICANN will post updated process information and an estimated timeline.

Note that the processing constraints will limit delegation rates to a steady state even in the event of an extremely high volume of applications. The annual delegation rate will not exceed 1,000 per year in any case, no matter how many applications are received.²

1.1.2.6 *Objection Filing*

Formal objections to applications can be filed on any of four enumerated grounds, by parties with standing to object. The objection filing period will open after ICANN posts the list of complete applications as described in subsection 1.1.2.2, and will last for approximately 7 months.

Objectors must file such formal objections directly with dispute resolution service providers (DRSPs), not with ICANN. The objection filing period will close following the end of the Initial Evaluation period (refer to subsection 1.1.2.5), with a two-week window of time between the posting of the Initial Evaluation results and the close of the objection filing period. Objections that have been filed during the objection filing period will be addressed in the dispute resolution stage, which is outlined in subsection 1.1.2.9 and discussed in detail in Module 3.

All applicants should be aware that third parties have the opportunity to file objections to any application during the objection filing period. Applicants whose applications are the subject of a formal objection will have an opportunity to file a response according to the dispute resolution service provider's rules and procedures. An applicant wishing to file a formal objection to another application that has been submitted would do so within the objection filing period, following the objection filing procedures in Module 3.

Applicants are encouraged to identify possible regional, cultural, property interests, or other sensitivities regarding TLD strings and their uses before applying and, where

² See "Delegation Rate Scenarios for New gTLDs" at <http://icann.org/en/topics/new-gtlds/delegation-rate-scenarios-new-gtlds-06oct10-en.pdf> for additional discussion.

possible, consult with interested parties to mitigate any concerns in advance.

1.1.2.7 Receipt of GAC Advice on New gTLDs

The GAC may provide public policy advice directly to the ICANN Board on any application. The procedure for GAC Advice on New gTLDs described in Module 3 indicates that, to be considered by the Board during the evaluation process, the GAC Advice on New gTLDs must be submitted by the close of the objection filing period. A GAC Early Warning is not a prerequisite to use of the GAC Advice process.

If the Board receives GAC Advice on New gTLDs stating that it is the consensus of the GAC that a particular application should not proceed, this will create a strong presumption for the ICANN Board that the application should not be approved. If the Board does not act in accordance with this type of advice, it must provide rationale for doing so.

See Module 3 for additional detail on the procedures concerning GAC Advice on New gTLDs.

1.1.2.8 Extended Evaluation

Extended Evaluation is available only to certain applicants that do not pass Initial Evaluation.

Applicants failing certain elements of the Initial Evaluation can request an Extended Evaluation. If the applicant does not pass Initial Evaluation and does not expressly request an Extended Evaluation, the application will proceed no further. The Extended Evaluation period allows for an additional exchange of information between the applicant and evaluators to clarify information contained in the application. The reviews performed in Extended Evaluation do not introduce additional evaluation criteria.

An application may be required to enter an Extended Evaluation if one or more proposed registry services raise technical issues that might adversely affect the security or stability of the DNS. The Extended Evaluation period provides a time frame for these issues to be investigated. Applicants will be informed if such a review is required by the end of the Initial Evaluation period.

Evaluators and any applicable experts consulted will communicate the conclusions resulting from the additional review by the end of the Extended Evaluation period.

At the conclusion of the Extended Evaluation period, ICANN will post summary reports, by panel, from the Initial and Extended Evaluation periods.

If an application passes the Extended Evaluation, it can then proceed to the next relevant stage. If the application does not pass the Extended Evaluation, it will proceed no further.

The Extended Evaluation is expected to be completed for all applications in a period of approximately 5 months, though this timeframe could be increased based on volume. In this event, ICANN will post updated process information and an estimated timeline.

1.1.2.9 Dispute Resolution

Dispute resolution applies only to applicants whose applications are the subject of a formal objection.

Where formal objections are filed and filing fees paid during the objection filing period, independent dispute resolution service providers (DRSPs) will initiate and conclude proceedings based on the objections received. The formal objection procedure exists to provide a path for those who wish to object to an application that has been submitted to ICANN. Dispute resolution service providers serve as the fora to adjudicate the proceedings based on the subject matter and the needed expertise. Consolidation of objections filed will occur where appropriate, at the discretion of the DRSP.

As a result of a dispute resolution proceeding, either the applicant will prevail (in which case the application can proceed to the next relevant stage), or the objector will prevail (in which case either the application will proceed no further or the application will be bound to a contention resolution procedure). In the event of multiple objections, an applicant must prevail in all dispute resolution proceedings concerning the application to proceed to the next relevant stage. Applicants will be notified by the DRSP(s) of the results of dispute resolution proceedings.

Dispute resolution proceedings, where applicable, are expected to be completed for all applications within approximately a 5-month time frame. In the event that volume is such that this timeframe cannot be accommodated, ICANN will work with the dispute resolution service providers to create processing procedures and post updated timeline information.

1.1.2.10 String Contention

String contention applies only when there is more than one qualified application for the same or similar gTLD strings.

String contention refers to the scenario in which there is more than one qualified application for the identical gTLD string or for similar gTLD strings. In this Applicant Guidebook, “similar” means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.

Applicants are encouraged to resolve string contention cases among themselves prior to the string contention resolution stage. In the absence of resolution by the contending applicants, string contention cases are resolved either through a community priority evaluation (if a community-based applicant elects it) or through an auction.

In the event of contention between applied-for gTLD strings that represent geographic names, the parties may be required to follow a different process to resolve the contention. See subsection 2.2.1.4 of Module 2 for more information.

Groups of applied-for strings that are either identical or similar are called contention sets. All applicants should be aware that if an application is identified as being part of a contention set, string contention resolution procedures will not begin until all applications in the contention set have completed all aspects of evaluation, including dispute resolution, if applicable.

To illustrate, as shown in Figure 1-2, Applicants A, B, and C all apply for .EXAMPLE and are identified as a contention set. Applicants A and C pass Initial Evaluation, but Applicant B does not. Applicant B requests Extended Evaluation. A third party files an objection to Applicant C’s application, and Applicant C enters the dispute resolution process. Applicant A must wait to see whether Applicants B and C successfully complete the Extended Evaluation and dispute resolution phases, respectively, before it can proceed to the string contention resolution stage. In this example, Applicant B passes the Extended Evaluation, but Applicant C does not prevail in the dispute resolution proceeding. String contention resolution then proceeds between Applicants A and B.

Figure 1-2 – All applications in a contention set must complete all previous evaluation and dispute resolution stages before string contention resolution can begin.

Applicants prevailing in a string contention resolution procedure will proceed toward delegation of the applied-for gTLDs.

String contention resolution for a contention set is estimated to take from 2.5 to 6 months to complete. The time required will vary per case because some contention cases may be resolved in either a community priority evaluation or an auction, while others may require both processes.

1.1.2.11 Transition to Delegation

Applicants successfully completing all the relevant stages outlined in this subsection 1.1.2 are required to carry out a series of concluding steps before delegation of the applied-for gTLD into the root zone. These steps include execution of a registry agreement with ICANN and completion of a pre-delegation technical test to validate information provided in the application.

Following execution of a registry agreement, the prospective registry operator must complete technical set-up and show satisfactory performance on a set of technical tests before delegation of the gTLD into the root zone may be initiated. If the pre-delegation testing requirements are not satisfied so that the gTLD can be delegated into the root zone within the time frame specified in the registry agreement, ICANN may in its sole and absolute discretion elect to terminate the registry agreement.

Once all of these steps have been successfully completed, the applicant is eligible for delegation of its applied-for gTLD into the DNS root zone.

It is expected that the transition to delegation steps can be completed in approximately 2 months, though this could take more time depending on the applicant's level of preparedness for the pre-delegation testing and the volume of applications undergoing these steps concurrently.

1.1.3 Lifecycle Timelines

Based on the estimates for each stage described in this section, the lifecycle for a straightforward application could be approximately 9 months, as follows:

Figure 1-3 – A straightforward application could have an approximate 9-month lifecycle.

The lifecycle for a highly complex application could be much longer, such as 20 months in the example below:

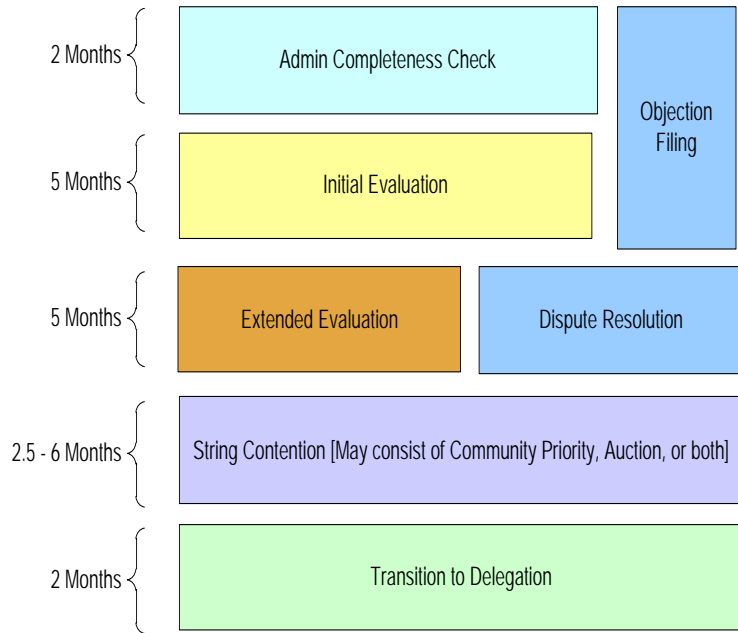

Figure 1-4 – A complex application could have an approximate 20-month lifecycle.

1.1.4 Posting Periods

The results of application reviews will be made available to the public at various stages in the process, as shown below.

Period	Posting Content
During Administrative Completeness Check	Public portions of all applications (posted within 2 weeks of the start of the Administrative Completeness Check).
End of Administrative Completeness Check	Results of Administrative Completeness Check.
GAC Early Warning Period	GAC Early Warnings received.
During Initial Evaluation	Status updates for applications withdrawn or ineligible for further review. Contention sets resulting from String Similarity review.

Period	Posting Content
End of Initial Evaluation	Application status updates with all Initial Evaluation results.
GAC Advice on New gTLDs	GAC Advice received.
End of Extended Evaluation	Application status updates with all Extended Evaluation results. Evaluation summary reports from the Initial and Extended Evaluation periods.
During Objection Filing/Dispute Resolution	Information on filed objections and status updates available via Dispute Resolution Service Provider websites. Notice of all objections posted by ICANN after close of objection filing period.
During Contention Resolution (Community Priority Evaluation)	Results of each Community Priority Evaluation posted as completed.
During Contention Resolution (Auction)	Results from each auction posted as completed.
Transition to Delegation	Registry Agreements posted when executed. Pre-delegation testing status updated.

1.1.5 Sample Application Scenarios

The following scenarios briefly show a variety of ways in which an application may proceed through the evaluation process. The table that follows exemplifies various processes and outcomes. This is not intended to be an exhaustive list of possibilities. There are other possible combinations of paths an application could follow.

Estimated time frames for each scenario are also included, based on current knowledge. Actual time frames may vary depending on several factors, including the total number

of applications received by ICANN during the application submission period. It should be emphasized that most applications are expected to pass through the process in the shortest period of time, i.e., they will not go through extended evaluation, dispute resolution, or string contention resolution processes. Although most of the scenarios below are for processes extending beyond nine months, it is expected that most applications will complete the process within the nine-month timeframe.

Scenario Number	Initial Evaluation	Extended Evaluation	Objection(s) Filed	String Contention	Approved for Delegation Steps	Estimated Elapsed Time
1	Pass	N/A	None	No	Yes	9 months
2	Fail	Pass	None	No	Yes	14 months
3	Pass	N/A	None	Yes	Yes	11.5 – 15 months
4	Pass	N/A	Applicant prevails	No	Yes	14 months
5	Pass	N/A	Objector prevails	N/A	No	12 months
6	Fail	Quit	N/A	N/A	No	7 months
7	Fail	Fail	N/A	N/A	No	12 months
8	Fail	Pass	Applicant prevails	Yes	Yes	16.5 – 20 months
9	Fail	Pass	Applicant prevails	Yes	No	14.5 – 18 months

Scenario 1 – Pass Initial Evaluation, No Objection, No Contention – In the most straightforward case, the application passes Initial Evaluation and there is no need for an Extended Evaluation. No objections are filed during the objection period, so there is no dispute to resolve. As there is no contention for the applied-for gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD. Most applications are expected to complete the process within this timeframe.

Scenario 2 – Extended Evaluation, No Objection, No Contention – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. As with Scenario 1, no objections are filed

during the objection period, so there is no dispute to resolve. As there is no contention for the gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

Scenario 3 – Pass Initial Evaluation, No Objection, Contention – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. No objections are filed during the objection period, so there is no dispute to resolve. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, the application prevails in the contention resolution, so the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

Scenario 4 – Pass Initial Evaluation, Win Objection, No Contention – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing (refer to Module 3, Objection Procedures). The objection is heard by a dispute resolution service provider panel that finds in favor of the applicant. The applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

Scenario 5 – Pass Initial Evaluation, Lose Objection – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection period, multiple objections are filed by one or more objectors with standing for one or more of the four enumerated objection grounds. Each objection is heard by a dispute resolution service provider panel. In this case, the panels find in favor of the applicant for most of the objections, but one finds in favor of the objector. As one of the objections has been upheld, the application does not proceed.

Scenario 6 – Fail Initial Evaluation, Applicant Withdraws – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant decides to withdraw the application rather than continuing with Extended Evaluation. The application does not proceed.

Scenario 7 – Fail Initial Evaluation, Fail Extended Evaluation -- In this case, the application fails one or more aspects of the Initial Evaluation. The applicant requests Extended Evaluation for the appropriate elements. However, the

application fails Extended Evaluation also. The application does not proceed.

Scenario 8 – Extended Evaluation, Win Objection, Pass Contention – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing. The objection is heard by a dispute resolution service provider panel that finds in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, the applicant prevails over other applications in the contention resolution procedure, the applicant can enter into a registry agreement, and the application can proceed toward delegation of the applied-for gTLD.

Scenario 9 – Extended Evaluation, Objection, Fail Contention – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing. The objection is heard by a dispute resolution service provider that finds in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, another applicant prevails in the contention resolution procedure, and the application does not proceed.

Transition to Delegation – After an application has successfully completed Initial Evaluation, and other stages as applicable, the applicant is required to complete a set of steps leading to delegation of the gTLD, including execution of a registry agreement with ICANN, and completion of pre-delegation testing. Refer to Module 5 for a description of the steps required in this stage.

1.1.6 Subsequent Application Rounds

ICANN's goal is to launch subsequent gTLD application rounds as quickly as possible. The exact timing will be based on experiences gained and changes required after this round is completed. The goal is for the next application round to begin within one year of the close of the application submission period for the initial round.

ICANN has committed to reviewing the effects of the New gTLD Program on the operations of the root zone system after the first application round, and will defer the delegations in a second application round until it is determined that the delegations resulting from the first round did not jeopardize root zone system security or stability.

It is the policy of ICANN that there be subsequent application rounds, and that a systemized manner of applying for gTLDs be developed in the long term.

1.2 Information for All Applicants

1.2.1 Eligibility

Established corporations, organizations, or institutions in good standing may apply for a new gTLD. Applications from individuals or sole proprietorships will not be considered. Applications from or on behalf of yet-to-be-formed legal entities, or applications presupposing the future formation of a legal entity (for example, a pending Joint Venture) will not be considered.

ICANN has designed the New gTLD Program with multiple stakeholder protection mechanisms. Background screening, features of the gTLD Registry Agreement, data and financial escrow mechanisms are all intended to provide registrant and user protections.

The application form requires applicants to provide information on the legal establishment of the applying entity, as well as the identification of directors, officers, partners, and major shareholders of that entity. The names and positions of individuals included in the application will be published as part of the application; other information collected about the individuals will not be published.

Background screening at both the entity level and the individual level will be conducted for all applications to confirm eligibility. This inquiry is conducted on the basis of the information provided in questions 1-11 of the application form. ICANN may take into account information received from any source if it is relevant to the criteria in this section. If requested by ICANN, all applicants will be required to obtain and deliver to ICANN and ICANN's background screening vendor any consents or agreements of the entities and/or individuals named in questions 1-11 of the application form necessary to conduct background screening activities.

ICANN will perform background screening in only two areas: (1) General business diligence and criminal history; and (2) History of cybersquatting behavior. The criteria used for criminal history are aligned with the “crimes of trust” standard sometimes used in the banking and finance industry.

In the absence of exceptional circumstances, applications from any entity with or including any individual with convictions or decisions of the types listed in (a) – (m) below will be automatically disqualified from the program.

- a. within the past ten years, has been convicted of any crime related to financial or corporate governance activities, or has been judged by a court to have committed fraud or breach of fiduciary duty, or has been the subject of a judicial determination that ICANN deems as the substantive equivalent of any of these;
- b. within the past ten years, has been disciplined by any government or industry regulatory body for conduct involving dishonesty or misuse of the funds of others;
- c. within the past ten years has been convicted of any willful tax-related fraud or willful evasion of tax liabilities;
- d. within the past ten years has been convicted of perjury, forswearing, failing to cooperate with a law enforcement investigation, or making false statements to a law enforcement agency or representative;
- e. has ever been convicted of any crime involving the use of computers, telephony systems, telecommunications or the Internet to facilitate the commission of crimes;
- f. has ever been convicted of any crime involving the use of a weapon, force, or the threat of force;
- g. has ever been convicted of any violent or sexual offense victimizing children, the

elderly, or individuals with disabilities;

- h. has ever been convicted of the illegal sale, manufacture, or distribution of pharmaceutical drugs, or been convicted or successfully extradited for any offense described in Article 3 of the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988³;
- i. has ever been convicted or successfully extradited for any offense described in the United Nations Convention against Transnational Organized Crime (all Protocols)^{4,5};
- j. has been convicted, within the respective timeframes, of aiding, abetting, facilitating, enabling, conspiring to commit, or failing to report any of the listed crimes above (i.e., within the past 10 years for crimes listed in (a) - (d) above, or ever for the crimes listed in (e) - (i) above);
- k. has entered a guilty plea as part of a plea agreement or has a court case in any jurisdiction with a disposition of Adjudicated Guilty or Adjudication Withheld (or regional equivalents), within the respective timeframes listed above for any of the listed crimes (i.e., within the past 10 years for crimes listed in (a) - (d) above, or ever for the crimes listed in (e) - (i) above);
- l. is the subject of a disqualification imposed by ICANN and in effect at the time the application is considered;
- m. has been involved in a pattern of adverse, final decisions indicating that the applicant

³ <http://www.unodc.org/unodc/en/treaties/illicit-traffic.html>

⁴ <http://www.unodc.org/unodc/en/treaties/CTOC/index.html>

⁵ It is recognized that not all countries have signed on to the UN conventions referenced above. These conventions are being used solely for identification of a list of crimes for which background screening will be performed. It is not necessarily required that an applicant would have been convicted pursuant to the UN convention but merely convicted of a crime listed under these conventions, to trigger these criteria.

or individual named in the application was engaged in cybersquatting as defined in the Uniform Domain Name Dispute Resolution Policy (UDRP), the Anti-Cybersquatting Consumer Protection Act (ACPA), or other equivalent legislation, or was engaged in reverse domain name hijacking under the UDRP or bad faith or reckless disregard under the ACPA or other equivalent legislation. Three or more such decisions with one occurring in the last four years will generally be considered to constitute a pattern.

- n. fails to provide ICANN with the identifying information necessary to confirm identity at the time of application or to resolve questions of identity during the background screening process;
- o. fails to provide a good faith effort to disclose all relevant information relating to items (a) – (m).

Background screening is in place to protect the public interest in the allocation of critical Internet resources, and ICANN reserves the right to deny an otherwise qualified application based on any information identified during the background screening process. For example, a final and legally binding decision obtained by a national law enforcement or consumer protection authority finding that the applicant was engaged in fraudulent and deceptive commercial practices as defined in the Organization for Economic Co-operation and Development (OECD) Guidelines for Protecting Consumers from Fraudulent and Deceptive Commercial Practices Across Borders⁶ may cause an application to be rejected. ICANN may also contact the applicant with additional questions based on information obtained in the background screening process.

All applicants are required to provide complete and detailed explanations regarding any of the above events as part of the application. Background screening information will not be made publicly available by ICANN.

Registrar Cross-Ownership -- ICANN-accredited registrars are eligible to apply for a gTLD. However, all gTLD registries

⁶ http://www.oecd.org/document/56/0,3746,en_2649_34267_2515000_1_1_1_1.00.html

are required to abide by a Code of Conduct addressing, *inter alia*, non-discriminatory access for all authorized registrars. ICANN reserves the right to refer any application to the appropriate competition authority relative to any cross-ownership issues.

Legal Compliance -- ICANN must comply with all U.S. laws, rules, and regulations. One such set of regulations is the economic and trade sanctions program administered by the Office of Foreign Assets Control (OFAC) of the U.S. Department of the Treasury. These sanctions have been imposed on certain countries, as well as individuals and entities that appear on OFAC's List of Specially Designated Nationals and Blocked Persons (the SDN List). ICANN is prohibited from providing most goods or services to residents of sanctioned countries or their governmental entities or to SDNs without an applicable U.S. government authorization or exemption. ICANN generally will not seek a license to provide goods or services to an individual or entity on the SDN List. In the past, when ICANN has been requested to provide services to individuals or entities that are not SDNs, but are residents of sanctioned countries, ICANN has sought and been granted licenses as required. In any given case, however, OFAC could decide not to issue a requested license.

1.2.2 Required Documents

All applicants should be prepared to submit the following documents, which are required to accompany each application:

1. **Proof of legal establishment** – Documentation of the applicant's establishment as a specific type of entity in accordance with the applicable laws of its jurisdiction.
2. **Financial statements** – Applicants must provide audited or independently certified financial statements for the most recently completed fiscal year for the applicant. In some cases, unaudited financial statements may be provided.

As indicated in the relevant questions, supporting documentation should be submitted in the original language. English translations are not required.

All documents must be valid at the time of submission. Refer to the Evaluation Criteria, attached to Module 2, for additional details on the requirements for these documents.

Some types of supporting documentation are required only in certain cases:

1. **Community endorsement** – If an applicant has designated its application as community-based (see section 1.2.3), it will be asked to submit a written endorsement of its application by one or more established institutions representing the community it has named. An applicant may submit written endorsements from multiple institutions. If applicable, this will be submitted in the section of the application concerning the community-based designation.

At least one such endorsement is required for a complete application. The form and content of the endorsement are at the discretion of the party providing the endorsement; however, the letter must identify the applied-for gTLD string and the applying entity, include an express statement of support for the application, and supply the contact information of the entity providing the endorsement.

Written endorsements from individuals need not be submitted with the application, but may be submitted in the application comment forum.

2. **Government support or non-objection** – If an applicant has applied for a gTLD string that is a geographic name (as defined in this Guidebook), the applicant is required to submit documentation of support for or non-objection to its application from the relevant governments or public authorities. Refer to subsection 2.2.1.4 for more information on the requirements for geographic names. If applicable, this will be submitted in the geographic names section of the application.
3. **Documentation of third-party funding commitments** – If an applicant lists funding from third parties in its application, it must provide evidence of commitment by the party committing the funds. If applicable, this will be submitted in the financial section of the application.

1.2.3 Community-Based Designation

All applicants are required to designate whether their application is **community-based**.

1.2.3.1 Definitions

For purposes of this Applicant Guidebook, a **community-based gTLD** is a gTLD that is operated for the benefit of a clearly delineated community. Designation or non-

designation of an application as community-based is entirely at the discretion of the applicant. Any applicant may designate its application as community-based; however, each applicant making this designation is asked to substantiate its status as representative of the community it names in the application by submission of written endorsements in support of the application. Additional information may be requested in the event of a community priority evaluation (refer to section 4.2 of Module 4). An applicant for a community-based gTLD is expected to:

1. Demonstrate an ongoing relationship with a clearly delineated community.
2. Have applied for a gTLD string strongly and specifically related to the community named in the application.
3. Have proposed dedicated registration and use policies for registrants in its proposed gTLD, including appropriate security verification procedures, commensurate with the community-based purpose it has named.
4. Have its application endorsed in writing by one or more established institutions representing the community it has named.

For purposes of differentiation, an application that has not been designated as community-based will be referred to hereinafter in this document as a **standard application**. A standard gTLD can be used for any purpose consistent with the requirements of the application and evaluation criteria, and with the registry agreement. A standard applicant may or may not have a formal relationship with an exclusive registrant or user population. It may or may not employ eligibility or use restrictions. Standard simply means here that the applicant has not designated the application as community-based.

1.2.3.2 Implications of Application Designation

Applicants should understand how their designation as community-based or standard will affect application processing at particular stages, and, if the application is successful, execution of the registry agreement and subsequent obligations as a gTLD registry operator, as described in the following paragraphs.

Objection / Dispute Resolution – All applicants should understand that a formal objection may be filed against any application on community grounds, even if the applicant has not designated itself as community-based or

declared the gTLD to be aimed at a particular community. Refer to Module 3, Objection Procedures.

String Contention – Resolution of string contention may include one or more components, depending on the composition of the contention set and the elections made by community-based applicants.

- A **settlement between the parties** can occur at any time after contention is identified. The parties will be encouraged to meet with an objective to settle the contention. Applicants in contention always have the opportunity to resolve the contention voluntarily, resulting in the withdrawal of one or more applications, before reaching the contention resolution stage.
- A **community priority evaluation** will take place only if a community-based applicant in a contention set elects this option. All community-based applicants in a contention set will be offered this option in the event that there is contention remaining after the applications have successfully completed all previous evaluation stages.
- An **auction** will result for cases of contention not resolved by community priority evaluation or agreement between the parties. Auction occurs as a contention resolution means of last resort. If a community priority evaluation occurs but does not produce a clear winner, an auction will take place to resolve the contention.

Refer to Module 4, String Contention Procedures, for detailed discussions of contention resolution procedures.

Contract Execution and Post-Delegation – A community-based applicant will be subject to certain post-delegation contractual obligations to operate the gTLD in a manner consistent with the restrictions associated with its community-based designation. Material changes to the contract, including changes to the community-based nature of the gTLD and any associated provisions, may only be made with ICANN's approval. The determination of whether to approve changes requested by the applicant will be at ICANN's discretion. Proposed criteria for approving such changes are the subject of policy discussions.

Community-based applications are intended to be a narrow category, for applications where there are

unambiguous associations among the applicant, the community served, and the applied-for gTLD string. Evaluation of an applicant's designation as community-based will occur only in the event of a contention situation that results in a community priority evaluation. However, any applicant designating its application as community-based will, if the application is approved, be bound by the registry agreement to implement the community-based restrictions it has specified in the application. This is true even if there are no contending applicants.

1.2.3.3 Changes to Application Designation

An applicant may not change its designation as standard or community-based once it has submitted a gTLD application for processing.

1.2.4 Notice concerning Technical Acceptance Issues with New gTLDs

All applicants should be aware that approval of an application and entry into a registry agreement with ICANN do not guarantee that a new gTLD will immediately function throughout the Internet. Past experience indicates that network operators may not immediately fully support new top-level domains, even when these domains have been delegated in the DNS root zone, since third-party software modification may be required and may not happen immediately.

Similarly, software applications sometimes attempt to validate domain names and may not recognize new or unknown top-level domains. ICANN has no authority or ability to require that software accept new top-level domains, although it does prominently publicize which top-level domains are valid and has developed a basic tool to assist application providers in the use of current root-zone data.

ICANN encourages applicants to familiarize themselves with these issues and account for them in their startup and launch plans. Successful applicants may find themselves expending considerable efforts working with providers to achieve acceptance of their new top-level domains.

Applicants should review <http://www.icann.org/en/topics/TLD-acceptance/> for background. IDN applicants should also review the material concerning experiences with IDN test strings in the root zone (see <http://idn.icann.org/>).

1.2.5 Notice concerning TLD Delegations

ICANN is only able to create TLDs as delegations in the DNS root zone, expressed using NS records with any corresponding DS records and glue records. There is no policy enabling ICANN to place TLDs as other DNS record types (such as A, MX, or DNAME records) in the root zone.

1.2.6 Terms and Conditions

All applicants must agree to a standard set of Terms and Conditions for the application process. The Terms and Conditions are available in Module 6 of this guidebook.

1.2.7 Notice of Changes to Information

If at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round.

Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application.

1.2.8 Voluntary Designation for High Security Zones

An ICANN stakeholder group has considered development of a possible special designation for "High Security Zone Top Level Domains" ("HSTLDs"). The group's Final Report can be found at <http://www.icann.org/en/topics/new-gtlds/hstld-final-report-11mar11-en.pdf>.

The Final Report may be used to inform further work. ICANN will support independent efforts toward developing voluntary high-security TLD designations, which may be available to gTLD applicants wishing to pursue such designations.

1.2.9 Security and Stability

Root Zone Stability: There has been significant study, analysis, and consultation in preparation for launch of the

New gTLD Program, indicating that the addition of gTLDs to the root zone will not negatively impact the security or stability of the DNS.

It is estimated that 200-300 TLDs will be delegated annually, and determined that in no case will more than 1000 new gTLDs be added to the root zone in a year. The delegation rate analysis, consultations with the technical community, and anticipated normal operational upgrade cycles all lead to the conclusion that the new gTLD delegations will have no significant impact on the stability of the root system. Modeling and reporting will continue during, and after, the first application round so that root-scaling discussions can continue and the delegation rates can be managed as the program goes forward.

All applicants should be aware that delegation of any new gTLDs is conditional on the continued absence of significant negative impact on the security or stability of the DNS and the root zone system (including the process for delegating TLDs in the root zone). In the event that there is a reported impact in this regard and processing of applications is delayed, the applicants will be notified in an orderly and timely manner.

1.2.10 Resources for Applicant Assistance

A variety of support resources are available to gTLD applicants. Financial assistance will be available to a limited number of eligible applicants. To request financial assistance, applicants must submit a separate financial assistance application in addition to the gTLD application form.

To be eligible for consideration, all financial assistance applications must be received by **23:59 UTC 12 April 2012**. Financial assistance applications will be evaluated and scored against pre-established criteria.

In addition, ICANN maintains a webpage as an informational resource for applicants seeking assistance, and organizations offering support.

See <http://newgtlds.icann.org/applicants/candidate-support> for details on these resources.

1.2.11 Updates to the Applicant Guidebook

As approved by the ICANN Board of Directors, this Guidebook forms the basis of the New gTLD Program. ICANN reserves the right to make reasonable updates and

changes to the Applicant Guidebook at any time, including as the possible result of new technical standards, reference documents, or policies that might be adopted during the course of the application process. Any such updates or revisions will be posted on ICANN's website.

1.3 Information for Internationalized Domain Name Applicants

Some applied-for gTLD strings are expected to be Internationalized Domain Names (IDNs). IDNs are domain names including characters used in the local representation of languages not written with the basic Latin alphabet (a - z), European-Arabic digits (0 - 9), and the hyphen (-). As described below, IDNs require the insertion of A-labels into the DNS root zone.

1.3.1 IDN-Specific Requirements

An applicant for an IDN string must provide information indicating compliance with the IDNA protocol and other technical requirements. The IDNA protocol and its documentation can be found at <http://icann.org/en/topics/idn/rfcs.htm>.

Applicants must provide applied-for gTLD strings in the form of both a **U-label** (the IDN TLD in local characters) and an **A-label**.

An A-label is the ASCII form of an IDN label. Every IDN A-label begins with the IDNA ACE prefix, "xn--", followed by a string that is a valid output of the Punycode algorithm, making a maximum of 63 total ASCII characters in length. The prefix and string together must conform to all requirements for a label that can be stored in the DNS including conformance to the LDH (host name) rule described in RFC 1034, RFC 1123, and elsewhere.

A U-label is the Unicode form of an IDN label, which a user expects to see displayed in applications.

For example, using the current IDN test string in Cyrillic script, the U-label is <испытание> and the A-label is <xn--80akhbyknj4f>. An A-label must be capable of being produced by conversion from a U-label and a U-label must be capable of being produced by conversion from an A-label.

Applicants for IDN gTLDs will also be required to provide the following at the time of the application:

1. Meaning or restatement of string in English. The applicant will provide a short description of what the string would mean or represent in English.
2. Language of label (ISO 639-1). The applicant will specify the language of the applied-for gTLD string, both according to the ISO codes for the representation of names of languages, and in English.
3. Script of label (ISO 15924). The applicant will specify the script of the applied-for gTLD string, both according to the ISO codes for the representation of names of scripts, and in English.
4. Unicode code points. The applicant will list all the code points contained in the U-label according to its Unicode form.
5. Applicants must further demonstrate that they have made reasonable efforts to ensure that the encoded IDN string does not cause any rendering or operational problems. For example, problems have been identified in strings with characters of mixed right-to-left and left-to-right directionality when numerals are adjacent to the path separator (i.e., the dot).⁷

If an applicant is applying for a string with known issues, it should document steps that will be taken to mitigate these issues in applications. While it is not possible to ensure that all rendering problems are avoided, it is important that as many as possible are identified early and that the potential registry operator is aware of these issues. Applicants can become familiar with these issues by understanding the IDNA protocol (see <http://www.icann.org/en/topics/idn/rfcs.htm>), and by active participation in the IDN wiki (see <http://idn.icann.org/>) where some rendering problems are demonstrated.

6. **[Optional]** - Representation of label in phonetic alphabet. The applicant may choose to provide its applied-for gTLD string notated according to the International Phonetic Alphabet (<http://www.langsci.ucl.ac.uk/ipa/>). Note that this information will not be evaluated or scored. The information, if provided, will be used as a guide to ICANN in responding to inquiries or speaking of the application in public presentations.

⁷ See examples at <http://stupid.domain.name/node/683>

1.3.2 IDN Tables

An IDN table provides the list of characters eligible for registration in domain names according to the registry's policy. It identifies any multiple characters that are considered equivalent for domain name registration purposes ("variant characters"). Variant characters occur where two or more characters can be used interchangeably.

Examples of IDN tables can be found in the Internet Assigned Numbers Authority (IANA) IDN Repository at <http://www.iana.org/procedures/idn-repository.html>.

In the case of an application for an IDN gTLD, IDN tables must be submitted for the language or script for the applied-for gTLD string (the "top level tables"). IDN tables must also be submitted for each language or script in which the applicant intends to offer IDN registrations at the second or lower levels.

Each applicant is responsible for developing its IDN Tables, including specification of any variant characters. Tables must comply with ICANN's IDN Guidelines⁸ and any updates thereto, including:

- Complying with IDN technical standards.
- Employing an inclusion-based approach (i.e., code points not explicitly permitted by the registry are prohibited).
- Defining variant characters.
- Excluding code points not permissible under the guidelines, e.g., line-drawing symbols, pictographic dingbats, structural punctuation marks.
- Developing tables and registration policies in collaboration with relevant stakeholders to address common issues.
- Depositing IDN tables with the IANA Repository for IDN Practices (once the TLD is delegated).

An applicant's IDN tables should help guard against user confusion in the deployment of IDN gTLDs. Applicants are strongly urged to consider specific linguistic and writing system issues that may cause problems when characters are used in domain names, as part of their work of defining variant characters.

⁸ See <http://www.icann.org/en/topics/idn/implementation-guidelines.htm>

To avoid user confusion due to differing practices across TLD registries, it is recommended that applicants cooperate with TLD operators that offer domain name registration with the same or visually similar characters.

As an example, languages or scripts are often shared across geographic boundaries. In some cases, this can cause confusion among the users of the corresponding language or script communities. Visual confusion can also exist in some instances between different scripts (for example, Greek, Cyrillic and Latin).

Applicants will be asked to describe the process used in developing the IDN tables submitted. ICANN may compare an applicant's IDN table with IDN tables for the same languages or scripts that already exist in the IANA repository or have been otherwise submitted to ICANN. If there are inconsistencies that have not been explained in the application, ICANN may ask the applicant to detail the rationale for differences. For applicants that wish to conduct and review such comparisons prior to submitting a table to ICANN, a table comparison tool will be available.

ICANN will accept the applicant's IDN tables based on the factors above.

Once the applied-for string has been delegated as a TLD in the root zone, the applicant is required to submit IDN tables for lodging in the IANA Repository of IDN Practices. For additional information, see existing tables at <http://iana.org/domains/idn-tables/>, and submission guidelines at <http://iana.org/procedures/idn-repository.html>.

1.3.3 IDN Variant TLDs

A variant TLD string results from the substitution of one or more characters in the applied-for gTLD string with variant characters based on the applicant's top level tables.

Each application contains one applied-for gTLD string. The applicant may also declare any variant strings for the TLD in its application. However, no variant gTLD strings will be delegated through the New gTLD Program until variant management solutions are developed and implemented.⁹ Declaring variant strings is informative only and will not imply any right or claim to the declared variant strings.

⁹ The ICANN Board directed that work be pursued on variant management in its resolution on 25 Sep 2010, <http://www.icann.org/en/minutes/resolutions-25sep10-en.htm#2.5>.

When a variant delegation process is established, applicants may be required to submit additional information such as implementation details for the variant TLD management mechanism, and may need to participate in a subsequent evaluation process, which could contain additional fees and review steps.

The following scenarios are possible during the gTLD evaluation process:

- a. Applicant declares variant strings to the applied-for gTLD string in its application. If the application is successful, the applied-for gTLD string will be delegated to the applicant. The declared variant strings are noted for future reference. These declared variant strings will not be delegated to the applicant along with the applied-for gTLD string, nor will the applicant have any right or claim to the declared variant strings.

Variant strings listed in successful gTLD applications will be tagged to the specific application and added to a "Declared Variants List" that will be available on ICANN's website. A list of pending (i.e., declared) variant strings from the IDN ccTLD Fast Track is available at <http://icann.org/en/topics/idn/fast-track/string-evaluation-completion-en.htm>.

ICANN may perform independent analysis on the declared variant strings, and will not necessarily include all strings listed by the applicant on the Declared Variants List.

- b. Multiple applicants apply for strings that are identified by ICANN as variants of one another. These applications will be placed in a contention set and will follow the contention resolution procedures in Module 4.
- c. Applicant submits an application for a gTLD string and does not indicate variants to the applied-for gTLD string. ICANN will not identify variant strings unless scenario (b) above occurs.

Each variant string declared in the application must also conform to the string requirements in section 2.2.1.3.2.

Variant strings declared in the application will be reviewed for consistency with the top-level tables submitted in the application. Should any declared variant strings not be

based on use of variant characters according to the submitted top-level tables, the applicant will be notified and the declared string will no longer be considered part of the application.

Declaration of variant strings in an application does not provide the applicant any right or reservation to a particular string. Variant strings on the Declared Variants List may be subject to subsequent additional review per a process and criteria to be defined.

It should be noted that while variants for second and lower-level registrations are defined freely by the local communities without any ICANN validation, there may be specific rules and validation criteria specified for variant strings to be allowed at the top level. It is expected that the variant information provided by applicants in the first application round will contribute to a better understanding of the issues and assist in determining appropriate review steps and fee levels going forward.

1.4 Submitting an Application

Applicants may complete the application form and submit supporting documents using ICANN's TLD Application System (TAS). To access the system, each applicant must first register as a TAS user.

As TAS users, applicants will be able to provide responses in open text boxes and submit required supporting documents as attachments. Restrictions on the size of attachments as well as the file formats are included in the instructions on the TAS site.

Except where expressly provided within the question, all application materials must be submitted in English.

ICANN will not accept application forms or supporting materials submitted through other means than TAS (that is, hard copy, fax, email), unless such submission is in accordance with specific instructions from ICANN to applicants.

1.4.1 Accessing the TLD Application System

The TAS site will be accessible from the New gTLD webpage (<http://www.icann.org/en/topics/new-gtld-program.htm>), and will be highlighted in communications regarding the opening of the application submission period. Users of TAS will be expected to agree to a standard set of terms of use

including user rights, obligations, and restrictions in relation to the use of the system.

1.4.1.1 User Registration

TAS user registration (creating a TAS user profile) requires submission of preliminary information, which will be used to validate the identity of the parties involved in the application. An overview of the information collected in the user registration process is below:

No.	Questions
1	Full legal name of Applicant
2	Principal business address
3	Phone number of Applicant
4	Fax number of Applicant
5	Website or URL, if applicable
6	Primary Contact: Name, Title, Address, Phone, Fax, Email
7	Secondary Contact: Name, Title, Address, Phone, Fax, Email
8	Proof of legal establishment
9	Trading, subsidiary, or joint venture information
10	Business ID, Tax ID, VAT registration number, or equivalent of Applicant
11	Applicant background: previous convictions, cybersquatting activities
12	Deposit payment confirmation and payer information

A subset of identifying information will be collected from the entity performing the user registration, in addition to the applicant information listed above. The registered user could be, for example, an agent, representative, or

employee who would be completing the application on behalf of the applicant.

The registration process will require the user to request the desired number of application slots. For example, a user intending to submit five gTLD applications would complete five application slot requests, and the system would assign the user a unique ID number for each of the five applications.

Users will also be required to submit a deposit of USD 5,000 per application slot. This deposit amount will be credited against the evaluation fee for each application. The deposit requirement is in place to help reduce the risk of frivolous access to the online application system.

After completing the registration, TAS users will receive access enabling them to enter the rest of the application information into the system. Application slots will be populated with the registration information provided by the applicant, which may not ordinarily be changed once slots have been assigned.

No new user registrations will be accepted after **23:59 UTC 29 March 2012**.

ICANN will take commercially reasonable steps to protect all applicant data submitted from unauthorized access, but cannot warrant against the malicious acts of third parties who may, through system corruption or other means, gain unauthorized access to such data.

1.4.1.2 Application Form

Having obtained the requested application slots, the applicant will complete the remaining application questions. An overview of the areas and questions contained in the form is shown here:

No.	Application and String Information
12	Payment confirmation for remaining evaluation fee amount
13	Applied-for gTLD string
14	IDN string information, if applicable
15	IDN tables, if applicable

16	Mitigation of IDN operational or rendering problems, if applicable
17	Representation of string in International Phonetic Alphabet (Optional)
18	Mission/purpose of the TLD
19	Is the application for a community-based TLD?
20	If community based, describe elements of community and proposed policies
21	Is the application for a geographic name? If geographic, documents of support required
22	Measures for protection of geographic names at second level
23	Registry Services: name and full description of all registry services to be provided
	Technical and Operational Questions (External)
24	Shared registration system (SRS) performance
25	EPP
26	Whois
27	Registration life cycle
28	Abuse prevention & mitigation
29	Rights protection mechanisms
30(a)	Security
	Technical and Operational Questions (Internal)
30(b)	Security
31	Technical overview of proposed registry
32	Architecture

33	Database capabilities
34	Geographic diversity
35	DNS service compliance
36	IPv6 reachability
37	Data backup policies and procedures
38	Escrow
39	Registry continuity
40	Registry transition
41	Failover testing
42	Monitoring and fault escalation processes
43	DNSSEC
44	IDNs (Optional)
	Financial Questions
45	Financial statements
46	Projections template: costs and funding
47	Costs: setup and operating
48	Funding and revenue
49	Contingency planning: barriers, funds, volumes
50	Continuity: continued operations instrument

1.4.2 Customer Service during the Application Process

Assistance will be available to applicants throughout the application process via the Applicant Service Center (ASC). The ASC will be staffed with customer service agents

to answer questions relating to the New gTLD Program, the application process, and TAS.

1.4.3 Backup Application Process

If the online application system is not available, ICANN will provide alternative instructions for submitting applications.

1.5 Fees and Payments

This section describes the fees to be paid by the applicant. Payment instructions are also included here.

1.5.1 gTLD Evaluation Fee

The gTLD evaluation fee is required from all applicants. This fee is in the amount of USD 185,000. The evaluation fee is payable in the form of a 5,000 deposit submitted at the time the user requests an application slot within TAS, and a payment of the remaining 180,000 submitted with the full application. ICANN will not begin its evaluation of an application unless it has received the full gTLD evaluation fee by **23:59 UTC 12 April 2012**.

The gTLD evaluation fee is set to recover costs associated with the new gTLD program. The fee is set to ensure that the program is fully funded and revenue neutral and is not subsidized by existing contributions from ICANN funding sources, including generic TLD registries and registrars, ccTLD contributions and RIR contributions.

The gTLD evaluation fee covers all required reviews in Initial Evaluation and, in most cases, any required reviews in Extended Evaluation. If an extended Registry Services review takes place, an additional fee will be incurred for this review (see section 1.5.2). There is no additional fee to the applicant for Extended Evaluation for geographic names, technical and operational, or financial reviews.

Refunds -- In certain cases, refunds of a portion of the evaluation fee may be available for applications that are withdrawn before the evaluation process is complete. An applicant may request a refund at any time until it has executed a registry agreement with ICANN. The amount of the refund will depend on the point in the process at which the withdrawal is requested, as follows:

Refund Available to Applicant	Percentage of Evaluation Fee	Amount of Refund
Within 21 calendar days of a GAC Early	80%	USD 148,000

Refund Available to Applicant	Percentage of Evaluation Fee	Amount of Refund
Warning		
After posting of applications until posting of Initial Evaluation results	70%	USD 130,000
After posting Initial Evaluation results	35%	USD 65,000
After the applicant has completed Dispute Resolution, Extended Evaluation, or String Contention Resolution(s)	20%	USD 37,000
After the applicant has entered into a registry agreement with ICANN		None

Thus, any applicant that has not been successful is eligible for at least a 20% refund of the evaluation fee if it withdraws its application.

An applicant that wishes to withdraw an application must initiate the process through TAS. Withdrawal of an application is final and irrevocable. Refunds will only be issued to the organization that submitted the original payment. All refunds are paid by wire transfer. Any bank transfer or transaction fees incurred by ICANN, or any unpaid evaluation fees, will be deducted from the amount paid. Any refund paid will be in full satisfaction of ICANN's obligations to the applicant. The applicant will have no entitlement to any additional amounts, including for interest or currency exchange rate changes.

Note on 2000 proof-of-concept round applicants -- Participants in ICANN's proof-of-concept application process in 2000 may be eligible for a credit toward the evaluation fee. The credit is in the amount of USD 86,000 and is subject to:

- submission of documentary proof by the applicant that it is the same entity, a successor in interest to the same entity, or an affiliate of the same entity that applied previously;
- a confirmation that the applicant was not awarded any TLD string pursuant to the 2000 proof-of-concept application round and that the applicant has no legal claims arising from the 2000 proof-of-concept process; and
- submission of an application, which may be modified from the application originally submitted in 2000, for the same TLD string that such entity applied for in the 2000 proof-of-concept application round.

Each participant in the 2000 proof-of-concept application process is eligible for at most one credit. A maximum of one credit may be claimed for any new gTLD application submitted according to the process in this guidebook. Eligibility for this credit is determined by ICANN.

1.5.2 Fees Required in Some Cases

Applicants may be required to pay additional fees in certain cases where specialized process steps are applicable. Those possible additional fees¹⁰ include:

- **Registry Services Review Fee** – If applicable, this fee is payable for additional costs incurred in referring an application to the Registry Services Technical Evaluation Panel (RSTEP) for an extended review. Applicants will be notified if such a fee is due. The fee for a three-member RSTEP review team is anticipated to be USD 50,000. In some cases, five-member panels might be required, or there might be increased scrutiny at a greater cost. The amount of the fee will cover the cost of the RSTEP review. In the event that reviews of proposed registry services can be consolidated across multiple applications or applicants, ICANN will apportion the fees in an equitable manner. In every case, the applicant will be advised of the cost before initiation of the review. Refer to subsection 2.2.3 of Module 2 on Registry Services review.

¹⁰ The estimated fee amounts provided in this section 1.5.2 will be updated upon engagement of panel service providers and establishment of fees.

- **Dispute Resolution Filing Fee** – This amount must accompany any filing of a formal objection and any response that an applicant files to an objection. This fee is payable directly to the applicable dispute resolution service provider in accordance with the provider’s payment instructions. ICANN estimates that filing fees could range from approximately USD 1,000 to USD 5,000 (or more) per party per proceeding. Refer to the appropriate provider for the relevant amount. Refer to Module 3 for dispute resolution procedures.
- **Advance Payment of Costs** – In the event of a formal objection, this amount is payable directly to the applicable dispute resolution service provider in accordance with that provider’s procedures and schedule of costs. Ordinarily, both parties in the dispute resolution proceeding will be required to submit an advance payment of costs in an estimated amount to cover the entire cost of the proceeding. This may be either an hourly fee based on the estimated number of hours the panelists will spend on the case (including review of submissions, facilitation of a hearing, if allowed, and preparation of a decision), or a fixed amount. In cases where disputes are consolidated and there are more than two parties involved, the advance payment will occur according to the dispute resolution service provider’s rules.

The prevailing party in a dispute resolution proceeding will have its advance payment refunded, while the non-prevailing party will not receive a refund and thus will bear the cost of the proceeding. In cases where disputes are consolidated and there are more than two parties involved, the refund of fees will occur according to the dispute resolution service provider’s rules.

ICANN estimates that adjudication fees for a proceeding involving a fixed amount could range from USD 2,000 to USD 8,000 (or more) per proceeding. ICANN further estimates that an hourly rate based proceeding with a one-member panel could range from USD 32,000 to USD 56,000 (or more) and with a three-member panel it could range from USD 70,000 to USD 122,000 (or more). These estimates may be lower if the panel does not call for written submissions beyond the objection and response, and does not allow a hearing. Please

refer to the appropriate provider for the relevant amounts or fee structures.

- **Community Priority Evaluation Fee** – In the event that the applicant participates in a community priority evaluation, this fee is payable as a deposit in an amount to cover the cost of the panel's review of that application (currently estimated at USD 10,000). The deposit is payable to the provider appointed to handle community priority evaluations. Applicants will be notified if such a fee is due. Refer to Section 4.2 of Module 4 for circumstances in which a community priority evaluation may take place. An applicant who scores at or above the threshold for the community priority evaluation will have its deposit refunded.

ICANN will notify the applicants of due dates for payment in respect of additional fees (if applicable). This list does not include fees (annual registry fees) that will be payable to ICANN following execution of a registry agreement.

1.5.3 Payment Methods

Payments to ICANN should be submitted by **wire transfer**. Instructions for making a payment by wire transfer will be available in TAS.¹¹

Payments to Dispute Resolution Service Providers should be submitted in accordance with the provider's instructions.

1.5.4 Requesting a Remittance Form

The TAS interface allows applicants to request issuance of a remittance form for any of the fees payable to ICANN. This service is for the convenience of applicants that require an invoice to process payments.

1.6 Questions about this Applicant Guidebook

For assistance and questions an applicant may have in the process of completing the application form, applicants should use the customer support resources available via the ASC. Applicants who are unsure of the information being sought in a question or the parameters for acceptable documentation are encouraged to communicate these questions through the appropriate

¹¹ Wire transfer is the preferred method of payment as it offers a globally accessible and dependable means for international transfer of funds. This enables ICANN to receive the fee and begin processing applications as quickly as possible.

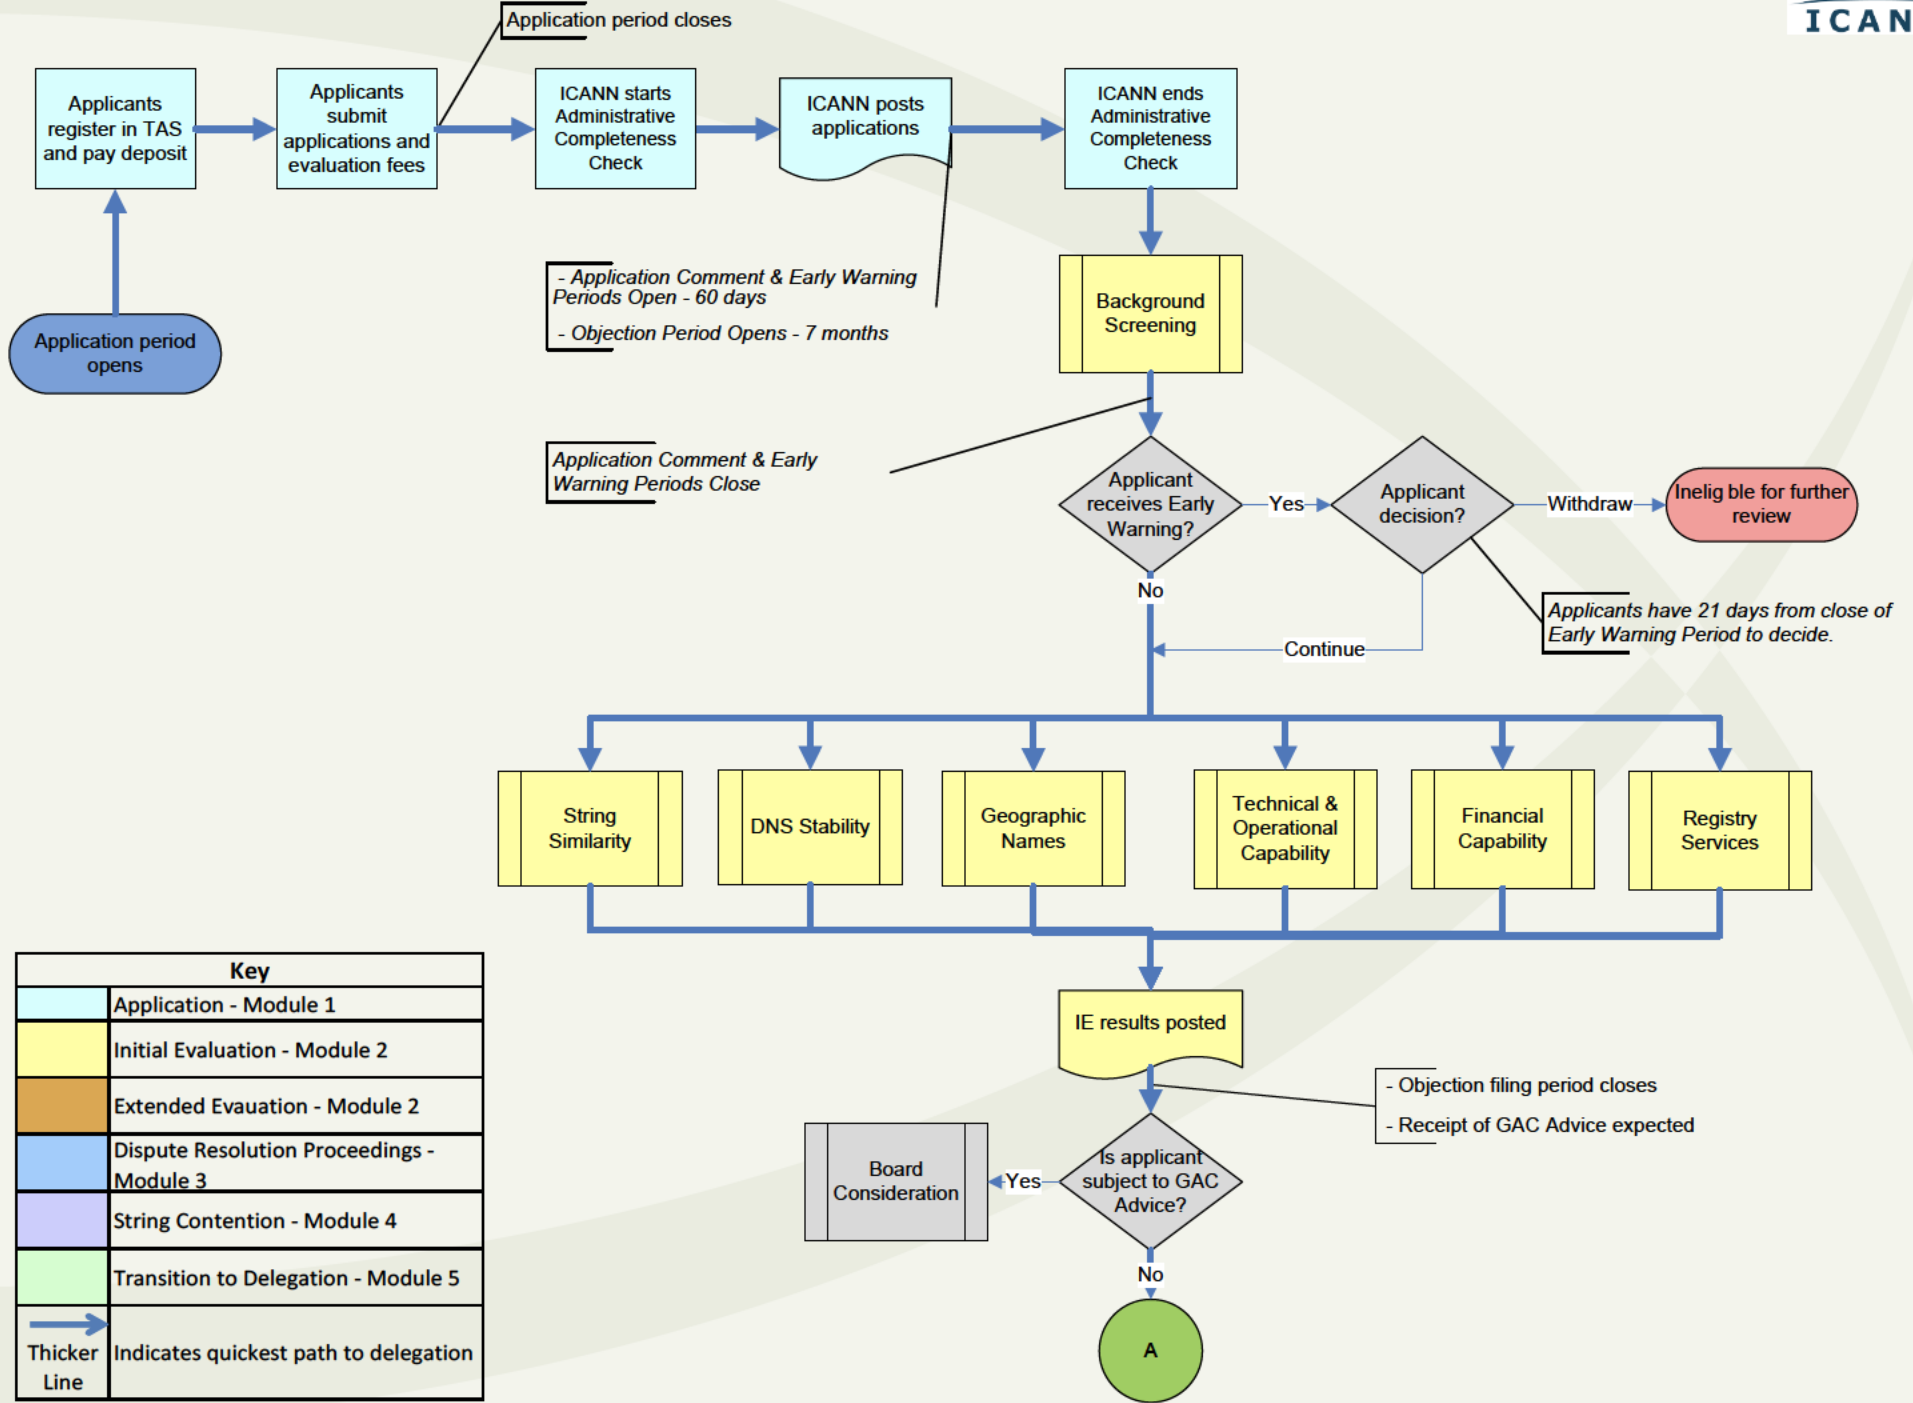

support channels before the application is submitted. This helps avoid the need for exchanges with evaluators to clarify information, which extends the timeframe associated with processing the application.

Currently, questions may be submitted via <newgtld@icann.org>. To provide all applicants equitable access to information, ICANN will make all questions and answers publicly available.

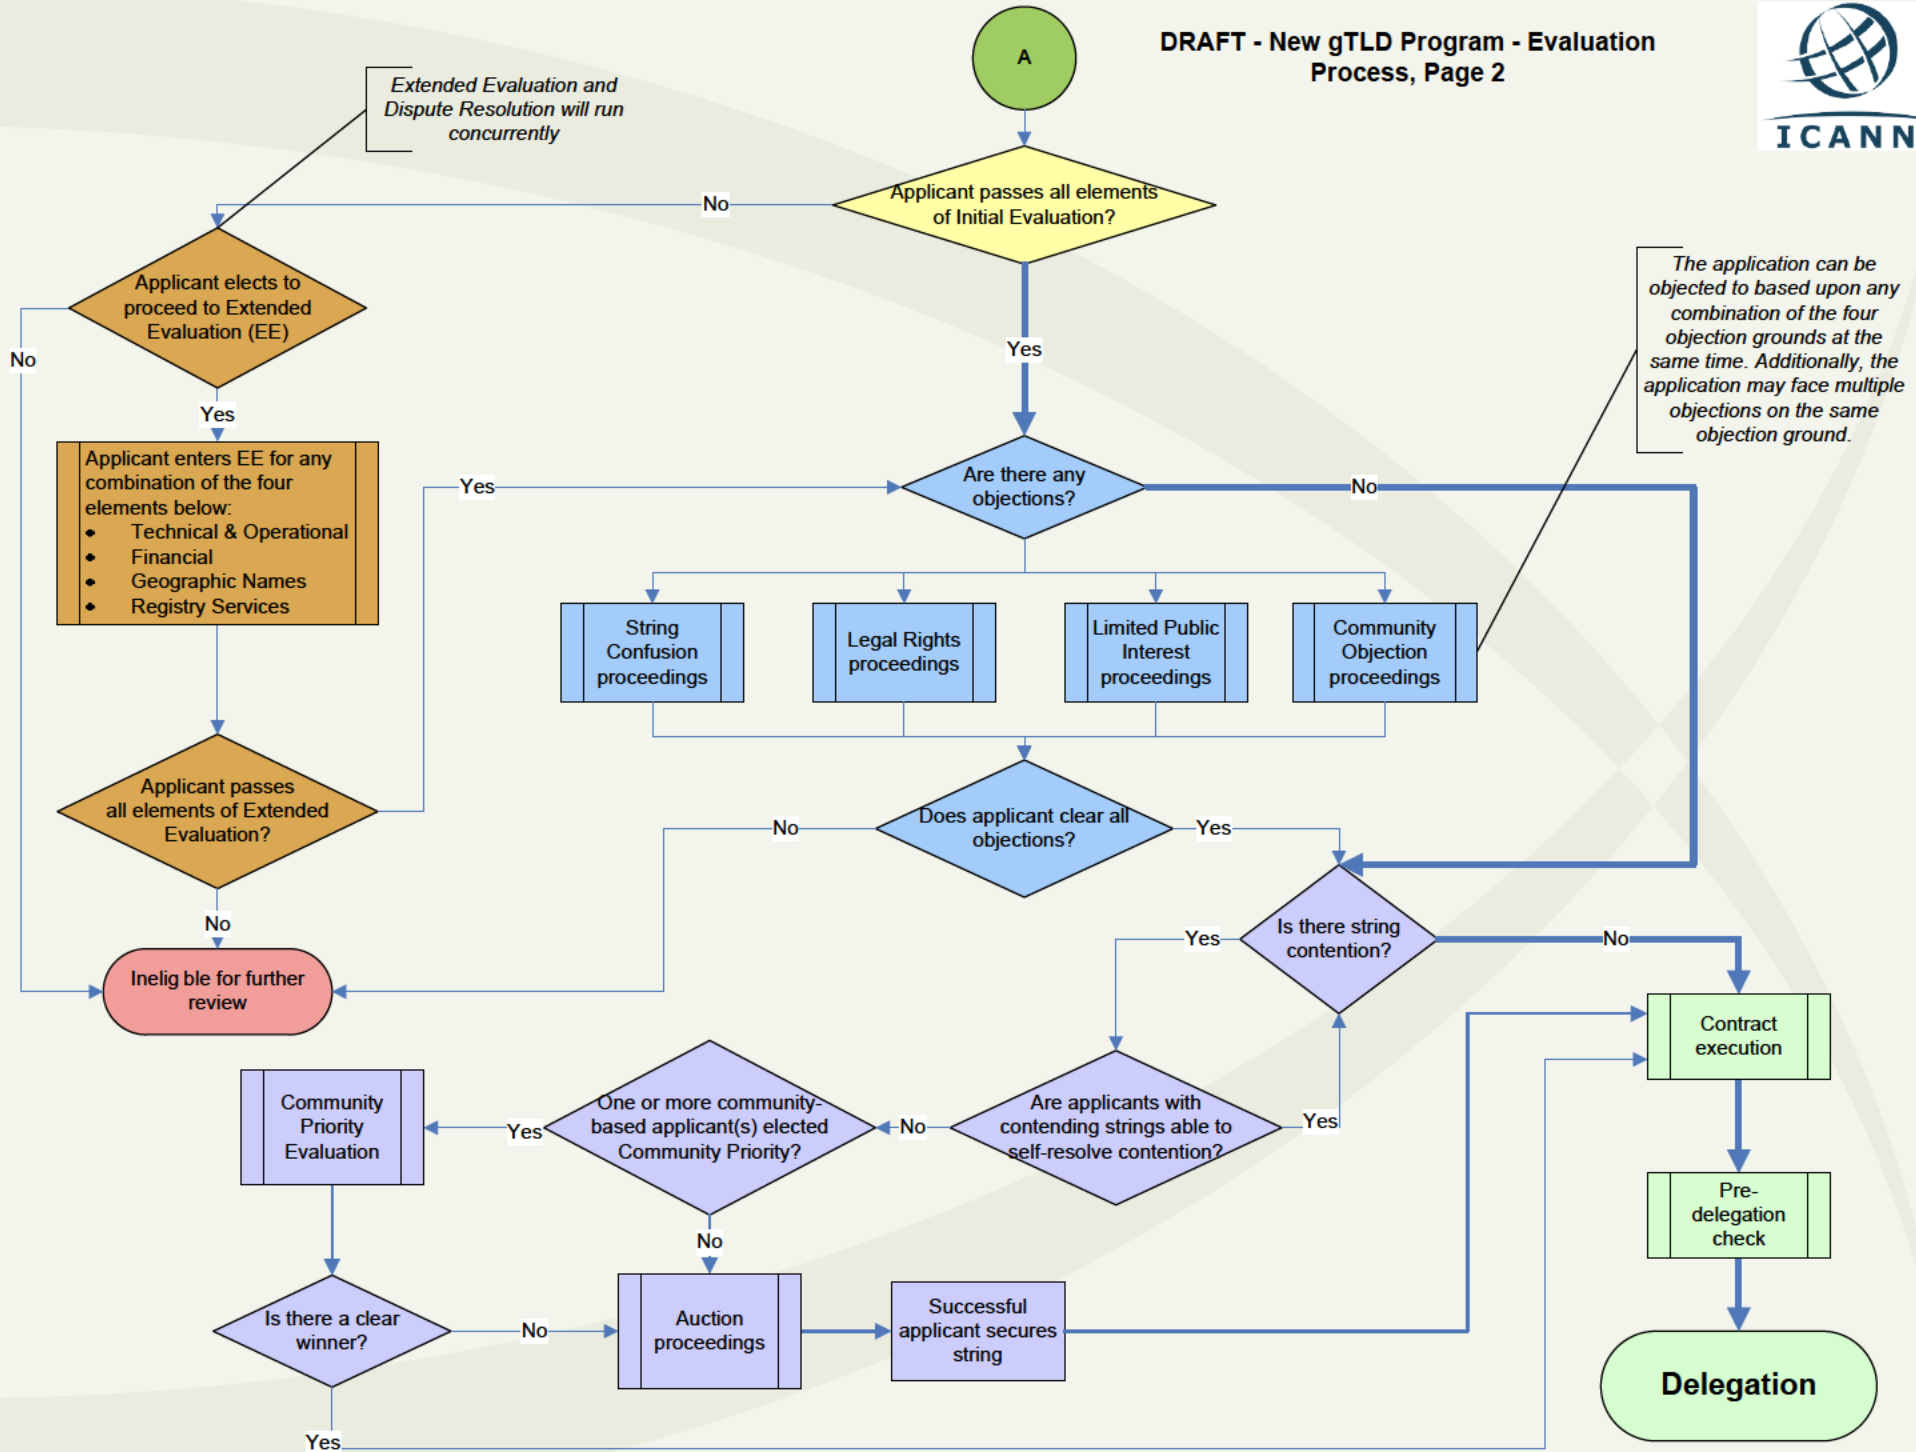

All requests to ICANN for information about the process or issues surrounding preparation of an application must be submitted to the ASC. ICANN will not grant requests from applicants for personal or telephone consultations regarding the preparation of an application. Applicants that contact ICANN for clarification about aspects of the application will be referred to the ASC.

Answers to inquiries will only provide clarification about the application forms and procedures. ICANN will not provide consulting, financial, or legal advice.

DRAFT - New gTLD Program - Evaluation Process

Key	
	Application - Module 1
	Initial Evaluation - Module 2
	Extended Evaluation - Module 2

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 2

4 June 2012

Module 2

Evaluation Procedures

This module describes the evaluation procedures and criteria used to determine whether applied-for gTLDs are approved for delegation. All applicants will undergo an Initial Evaluation and those that do not pass all elements may request Extended Evaluation.

The first, required evaluation is the **Initial Evaluation**, during which ICANN assesses an applied-for gTLD string, an applicant's qualifications, and its proposed registry services.

The following assessments are performed in the **Initial Evaluation**:

- String Reviews
 - String similarity
 - Reserved names
 - DNS stability
 - Geographic names
- Applicant Reviews
 - Demonstration of technical and operational capability
 - Demonstration of financial capability
 - Registry services reviews for DNS stability issues

An application must pass all these reviews to pass the Initial Evaluation. Failure to pass any one of these reviews will result in a failure to pass the Initial Evaluation.

Extended Evaluation may be applicable in cases in which an applicant does not pass the Initial Evaluation. See Section 2.3 below.

2.1 Background Screening

Background screening will be conducted in two areas:

- (a) General business diligence and criminal history; and
- (b) History of cybersquatting behavior.

The application must pass both background screening areas to be eligible to proceed. Background screening results are evaluated according to the criteria described in section 1.2.1. Due to the potential sensitive nature of the material, applicant background screening reports will not be published.

The following sections describe the process ICANN will use to perform background screening.

2.1.1 General business diligence and criminal history

Applying entities that are publicly traded corporations listed and in good standing on any of the world's largest 25 stock exchanges (as listed by the World Federation of Exchanges) will be deemed to have passed the general business diligence and criminal history screening. The largest 25 will be based on the domestic market capitalization reported at the end of the most recent calendar year prior to launching each round.¹

Before an entity is listed on an exchange, it must undergo significant due diligence including an investigation by the exchange, regulators, and investment banks. As a publicly listed corporation, an entity is subject to ongoing scrutiny from shareholders, analysts, regulators, and exchanges. All exchanges require monitoring and disclosure of material information about directors, officers, and other key personnel, including criminal behavior. In totality, these requirements meet or exceed the screening ICANN will perform.

For applicants not listed on one of these exchanges, ICANN will submit identifying information for the entity, officers, directors, and major shareholders to an international background screening service. The service provider(s) will use the criteria listed in section 1.2.1 and return results that match these criteria. Only publicly available information will be used in this inquiry.

ICANN is in discussions with INTERPOL to identify ways in which both organizations can collaborate in background screenings of individuals, entities and their identity documents consistent with both organizations' rules and regulations. Note that the applicant is expected to disclose potential problems in meeting the criteria in the application, and provide any clarification or explanation at the time of application submission. Results returned from

¹ See <http://www.world-exchanges.org/statistics/annual/2010/equity-markets/domestic-market-capitalization>

the background screening process will be matched with the disclosures provided by the applicant and those cases will be followed up to resolve issues of discrepancies or potential false positives.

If no hits are returned, the application will generally pass this portion of the background screening.

2.1.2 History of cybersquatting

ICANN will screen applicants against UDRP cases and legal databases as financially feasible for data that may indicate a pattern of cybersquatting behavior pursuant to the criteria listed in section 1.2.1.

The applicant is required to make specific declarations regarding these activities in the application. Results returned during the screening process will be matched with the disclosures provided by the applicant and those instances will be followed up to resolve issues of discrepancies or potential false positives.

If no hits are returned, the application will generally pass this portion of the background screening.

2.2 Initial Evaluation

The Initial Evaluation consists of two types of review. Each type is composed of several elements.

String review: The first review focuses on the applied-for gTLD string to test:

- Whether the applied-for gTLD string is so similar to other strings that it would create a probability of user confusion;
- Whether the applied-for gTLD string might adversely affect DNS security or stability; and
- Whether evidence of requisite government approval is provided in the case of certain geographic names.

Applicant review: The second review focuses on the applicant to test:

- Whether the applicant has the requisite technical, operational, and financial capability to operate a registry; and
- Whether the registry services offered by the applicant might adversely affect DNS security or stability.

2.2.1 String Reviews

In the Initial Evaluation, ICANN reviews every applied-for gTLD string. Those reviews are described in greater detail in the following subsections.

2.2.1.1 String Similarity Review

This review involves a preliminary comparison of each applied-for gTLD string against existing TLDs, Reserved Names (see subsection 2.2.1.2), and other applied-for strings. The objective of this review is to prevent user confusion and loss of confidence in the DNS resulting from delegation of many similar strings.

Note: In this Applicant Guidebook, “similar” means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.

The visual similarity check that occurs during Initial Evaluation is intended to augment the objection and dispute resolution process (see Module 3, Dispute Resolution Procedures) that addresses all types of similarity.

This similarity review will be conducted by an independent String Similarity Panel.

2.2.1.1.1 Reviews Performed

The String Similarity Panel’s task is to identify visual string similarities that would create a probability of user confusion.

The panel performs this task of assessing similarities that would lead to user confusion in four sets of circumstances, when comparing:

- Applied-for gTLD strings against existing TLDs and reserved names;
- Applied-for gTLD strings against other applied-for gTLD strings;
- Applied-for gTLD strings against strings requested as IDN ccTLDs; and
- Applied-for 2-character IDN gTLD strings against:
 - Every other single character.
 - Any other 2-character ASCII string (to protect possible future ccTLD delegations).

Similarity to Existing TLDs or Reserved Names – This review involves cross-checking between each applied-for string and the lists of existing TLD strings and Reserved Names to determine whether two strings are so similar to one another that they create a probability of user confusion.

In the simple case in which an applied-for gTLD string is identical to an existing TLD or reserved name, the online application system will not allow the application to be submitted.

Testing for identical strings also takes into consideration the code point variants listed in any relevant IDN table. For example, protocols treat equivalent labels as alternative forms of the same label, just as “foo” and “Foo” are treated as alternative forms of the same label (RFC 3490).

All TLDs currently in the root zone can be found at <http://iana.org/domains/root/db/>.

IDN tables that have been submitted to ICANN are available at <http://www.iana.org/domains/idn-tables/>.

Similarity to Other Applied-for gTLD Strings (String Contention Sets) – All applied-for gTLD strings will be reviewed against one another to identify any similar strings. In performing this review, the String Similarity Panel will create contention sets that may be used in later stages of evaluation.

A contention set contains at least two applied-for strings identical or similar to one another. Refer to Module 4, String Contention Procedures, for more information on contention sets and contention resolution.

ICANN will notify applicants who are part of a contention set as soon as the String Similarity review is completed. (This provides a longer period for contending applicants to reach their own resolution before reaching the contention resolution stage.) These contention sets will also be published on ICANN’s website.

Similarity to TLD strings requested as IDN ccTLDs -- Applied-for gTLD strings will also be reviewed for similarity to TLD strings requested in the IDN ccTLD Fast Track process (see <http://www.icann.org/en/topics/idn/fast-track/>). Should a conflict with a prospective fast-track IDN ccTLD be identified, ICANN will take the following approach to resolving the conflict.

If one of the applications has completed its respective process before the other is lodged, that TLD will be delegated. A gTLD application that has successfully completed all relevant evaluation stages, including dispute resolution and string contention, if applicable, and is eligible for entry into a registry agreement will be considered complete, and therefore would not be disqualified by a newly-filed IDN ccTLD request. Similarly, an IDN ccTLD request that has completed evaluation (i.e., is validated) will be considered complete and therefore would not be disqualified by a newly-filed gTLD application.

In the case where neither application has completed its respective process, where the gTLD application does not have the required approval from the relevant government or public authority, a validated request for an IDN ccTLD will prevail and the gTLD application will not be approved. The term “validated” is defined in the IDN ccTLD Fast Track Process Implementation, which can be found at <http://www.icann.org/en/topics/idn>.

In the case where a gTLD applicant has obtained the support or non-objection of the relevant government or public authority, but is eliminated due to contention with a string requested in the IDN ccTLD Fast Track process, a full refund of the evaluation fee is available to the applicant if the gTLD application was submitted prior to the publication of the ccTLD request.

Review of 2-character IDN strings — In addition to the above reviews, an applied-for gTLD string that is a 2-character IDN string is reviewed by the String Similarity Panel for visual similarity to:

- a) Any one-character label (in any script), and
- b) Any possible two-character ASCII combination.

An applied-for gTLD string that is found to be too similar to a) or b) above will not pass this review.

2.2.1.1.2 Review Methodology

The String Similarity Panel is informed in part by an algorithmic score for the visual similarity between each applied-for string and each of other existing and applied-for TLDs and reserved names. The score will provide one objective measure for consideration by the panel, as part of the process of identifying strings likely to result in user confusion. In general, applicants should expect that a higher visual similarity score suggests a higher probability

that the application will not pass the String Similarity review. However, it should be noted that the score is only indicative and that the final determination of similarity is entirely up to the Panel's judgment.

The algorithm, user guidelines, and additional background information are available to applicants for testing and informational purposes.² Applicants will have the ability to test their strings and obtain algorithmic results through the application system prior to submission of an application.

The algorithm supports the common characters in Arabic, Chinese, Cyrillic, Devanagari, Greek, Japanese, Korean, and Latin scripts. It can also compare strings in different scripts to each other.

The panel will also take into account variant characters, as defined in any relevant language table, in its determinations. For example, strings that are not visually similar but are determined to be variant TLD strings based on an IDN table would be placed in a contention set. Variant TLD strings that are listed as part of the application will also be subject to the string similarity analysis.³

The panel will examine all the algorithm data and perform its own review of similarities between strings and whether they rise to the level of string confusion. In cases of strings in scripts not yet supported by the algorithm, the panel's assessment process is entirely manual.

The panel will use a common standard to test for whether string confusion exists, as follows:

Standard for String Confusion – String confusion exists where a string so nearly resembles another visually that it is likely to deceive or cause confusion. For the likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

2.2.1.1.3 Outcomes of the String Similarity Review

An application that fails the String Similarity review due to similarity to an existing TLD will not pass the Initial Evaluation,

² See <http://icann.sword-group.com/algorithm/>

³ In the case where an applicant has listed Declared Variants in its application (see subsection 1.3.3), the panel will perform an analysis of the listed strings to confirm that the strings are variants according to the applicant's IDN table. This analysis may include comparison of applicant IDN tables with other existing tables for the same language or script, and forwarding any questions to the applicant.

and no further reviews will be available. Where an application does not pass the String Similarity review, the applicant will be notified as soon as the review is completed.

An application for a string that is found too similar to another applied-for gTLD string will be placed in a contention set.

An application that passes the String Similarity review is still subject to objection by an existing TLD operator or by another gTLD applicant in the current application round. That process requires that a string confusion objection be filed by an objector having the standing to make such an objection. Such category of objection is not limited to visual similarity. Rather, confusion based on any type of similarity (including visual, aural, or similarity of meaning) may be claimed by an objector. Refer to Module 3, Dispute Resolution Procedures, for more information about the objection process.

An applicant may file a formal objection against another gTLD application on string confusion grounds. Such an objection may, if successful, change the configuration of the preliminary contention sets in that the two applied-for gTLD strings will be considered in direct contention with one another (see Module 4, String Contention Procedures). The objection process will not result in removal of an application from a contention set.

2.2.1.2 *Reserved Names and Other Unavailable Strings*

Certain names are not available as gTLD strings, as detailed in this section.

2.2.1.2.1 *Reserved Names*

All applied-for gTLD strings are compared with the list of top-level Reserved Names to ensure that the applied-for gTLD string does not appear on that list.

Top-Level Reserved Names List

<i>AFRNIC</i>	<i>IANA-SERVERS</i>	<i>NRO</i>
<i>ALAC</i>	<i>ICANN</i>	<i>RFC-EDITOR</i>
<i>APNIC</i>	<i>IESG</i>	<i>RIPE</i>
<i>ARIN</i>	<i>IETF</i>	<i>ROOT-SERVERS</i>
<i>ASO</i>	<i>INTERNIC</i>	<i>RSSAC</i>
<i>CCNSO</i>	<i>INVALID</i>	<i>SSAC</i>
<i>EXAMPLE*</i>	<i>IRTF</i>	<i>TEST*</i>
<i>GAC</i>	<i>ISTF</i>	<i>TLD</i>

<i>GNSO</i>	<i>LACNIC</i>	<i>WHOIS</i>
<i>GTLD-SERVERS</i>	<i>LOCAL</i>	<i>WWW</i>
<i>IAB</i>	<i>LOCALHOST</i>	
<i>IANA</i>	<i>NIC</i>	
<p>*Note that in addition to the above strings, ICANN will reserve translations of the terms "test" and "example" in multiple languages. The remainder of the strings are reserved only in the form included above.</p>		

If an applicant enters a Reserved Name as its applied-for gTLD string, the application system will recognize the Reserved Name and will not allow the application to be submitted.

In addition, applied-for gTLD strings are reviewed during the String Similarity review to determine whether they are similar to a Reserved Name. An application for a gTLD string that is identified as too similar to a Reserved Name will not pass this review.

2.2.1.2.2 *Declared Variants*

Names appearing on the Declared Variants List (see section 1.3.3) will be posted on ICANN's website and will be treated essentially the same as Reserved Names, until such time as variant management solutions are developed and variant TLDs are delegated. That is, an application for a gTLD string that is identical or similar to a string on the Declared Variants List will not pass this review.

2.2.1.2.3 *Strings Ineligible for Delegation*

The following names are prohibited from delegation as gTLDs in the initial application round. Future application rounds may differ according to consideration of further policy advice.

These names are not being placed on the Top-Level Reserved Names List, and thus are not part of the string similarity review conducted for names on that list. Refer to subsection 2.2.1.1: where applied-for gTLD strings are reviewed for similarity to existing TLDs and reserved names, the strings listed in this section are not reserved names and accordingly are not incorporated into this review.

Applications for names appearing on the list included in this section will not be approved.

2.2.1.3 DNS Stability Review

This review determines whether an applied-for gTLD string might cause instability to the DNS. In all cases, this will involve a review for conformance with technical and other requirements for gTLD strings (labels). In some exceptional cases, an extended review may be necessary to investigate possible technical stability problems with the applied-for gTLD string.

Note: All applicants should recognize issues surrounding invalid TLD queries at the root level of the DNS.

Any new TLD registry operator may experience unanticipated queries, and some TLDs may experience a non-trivial load of unanticipated queries. For more information, see the Security and Stability Advisory Committee (SSAC)'s report on this topic at <http://www.icann.org/en/committees/security/sac045.pdf>. Some publicly available statistics are also available at <http://stats.l.root-servers.org/>.

ICANN will take steps to alert applicants of the issues raised in SAC045, and encourage the applicant to prepare to minimize the possibility of operational difficulties that would pose a stability or availability problem for its registrants and users. However, this notice is merely an advisory to applicants and is not part of the evaluation, unless the string raises significant security or stability issues as described in the following section.

2.2.1.3.1 DNS Stability: String Review Procedure

New gTLD labels must not adversely affect the security or stability of the DNS. During the Initial Evaluation period, ICANN will conduct a preliminary review on the set of applied-for gTLD strings to:

- ensure that applied-for gTLD strings comply with the requirements provided in section 2.2.1.3.2, and
- determine whether any strings raise significant security or stability issues that may require further review.

There is a very low probability that extended analysis will be necessary for a string that fully complies with the string requirements in subsection 2.2.1.3.2 of this module. However, the string review process provides an additional safeguard if unanticipated security or stability issues arise concerning an applied-for gTLD string.

In such a case, the DNS Stability Panel will perform an extended review of the applied-for gTLD string during the Initial Evaluation period. The panel will determine whether the string fails to comply with relevant standards or creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, and will report on its findings.

If the panel determines that the string complies with relevant standards and does not create the conditions

described above, the application will pass the DNS Stability review.

If the panel determines that the string does not comply with relevant technical standards, or that it creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, the application will not pass the Initial Evaluation, and no further reviews are available. In the case where a string is determined likely to cause security or stability problems in the DNS, the applicant will be notified as soon as the DNS Stability review is completed.

2.2.1.3.2 *String Requirements*

ICANN will review each applied-for gTLD string to ensure that it complies with the requirements outlined in the following paragraphs.

If an applied-for gTLD string is found to violate any of these rules, the application will not pass the DNS Stability review. No further reviews are available.

Part I -- Technical Requirements for all Labels (Strings) – The technical requirements for top-level domain labels follow.

- 1.1 The ASCII label (i.e., the label as transmitted on the wire) must be valid as specified in technical standards *Domain Names: Implementation and Specification* (RFC 1035), and *Clarifications to the DNS Specification* (RFC 2181) and any updates thereto. This includes the following:
 - 1.1.1 The label must have no more than 63 characters.
 - 1.1.2 Upper and lower case characters are treated as identical.
- 1.2 The ASCII label must be a valid host name, as specified in the technical standards *DOD Internet Host Table Specification* (RFC 952), *Requirements for Internet Hosts — Application and Support* (RFC 1123), and *Application Techniques for Checking and Transformation of Names* (RFC 3696), *Internationalized Domain Names in Applications (IDNA)*(RFCs 5890-5894), and any updates thereto. This includes the following:
 - 1.2.1 The ASCII label must consist entirely of letters (alphabetic characters a-z), or

- 1.2.2 The label must be a valid IDNA A-label (further restricted as described in Part II below).

Part II -- Requirements for Internationalized Domain Names

– These requirements apply only to prospective top-level domains that contain non-ASCII characters. Applicants for these internationalized top-level domain labels are expected to be familiar with the Internet Engineering Task Force (IETF) IDNA standards, Unicode standards, and the terminology associated with Internationalized Domain Names.

- 2.1 The label must be an A-label as defined in IDNA, converted from (and convertible to) a U-label that is consistent with the definition in IDNA, and further restricted by the following, non-exhaustive, list of limitations:
 - 2.1.1 Must be a valid A-label according to IDNA.
 - 2.1.2 The derived property value of all codepoints used in the U-label, as defined by IDNA, must be PVALID or CONTEXT (accompanied by unambiguous contextual rules).⁴
 - 2.1.3 The general category of all codepoints, as defined by IDNA, must be one of (Li, Lo, Lm, Mn, Mc).
 - 2.1.4 The U-label must be fully compliant with Normalization Form C, as described in *Unicode Standard Annex #15: Unicode Normalization Forms*. See also examples in <http://unicode.org/faq/normalization.html>.
 - 2.1.5 The U-label must consist entirely of characters with the same directional property, or fulfill the requirements of the Bidi rule per RFC 5893.
- 2.2 The label must meet the relevant criteria of the ICANN *Guidelines for the Implementation of Internationalised Domain Names*. See <http://www.icann.org/en/topics/idn/implementation>

⁴ It is expected that conversion tools for IDNA will be available before the Application Submission period begins, and that labels will be checked for validity under IDNA. In this case, labels valid under the previous version of the protocol (IDNA2003) but not under IDNA will not meet this element of the requirements. Labels that are valid under both versions of the protocol will meet this element of the requirements. Labels valid under IDNA but not under IDNA2003 may meet the requirements; however, applicants are strongly advised to note that the duration of the transition period between the two protocols cannot presently be estimated nor guaranteed in any specific timeframe. The development of support for IDNA in the broader software applications environment will occur gradually. During that time, TLD labels that are valid under IDNA, but not under IDNA2003, will have limited functionality.

[n-guidelines.htm](#). This includes the following, non-exhaustive, list of limitations:

- 2.2.1 All code points in a single label must be taken from the same script as determined by the Unicode Standard Annex #24: Unicode Script Property (See <http://www.unicode.org/reports/tr24/>).
- 2.2.2 Exceptions to 2.2.1 are permissible for languages with established orthographies and conventions that require the commingled use of multiple scripts. However, even with this exception, visually confusable characters from different scripts will not be allowed to co-exist in a single set of permissible code points unless a corresponding policy and character table are clearly defined.

Part III - Policy Requirements for Generic Top-Level

Domains – These requirements apply to all prospective top-level domain strings applied for as gTLDs.

- 3.1 Applied-for gTLD strings in ASCII must be composed of three or more visually distinct characters. Two-character ASCII strings are not permitted, to avoid conflicting with current and future country codes based on the ISO 3166-1 standard.
- 3.2 Applied-for gTLD strings in IDN scripts must be composed of two or more visually distinct characters in the script, as appropriate.⁵ Note, however, that a two-character IDN string will not be approved if:
 - 3.2.1 It is visually similar to any one-character label (in any script); or
 - 3.2.2 It is visually similar to any possible two-character ASCII combination.

See the String Similarity review in subsection 2.2.1.1 for additional information on this requirement.

⁵ Note that the Joint ccNSO-GNSO IDN Working Group (JIG) has made recommendations that this section be revised to allow for single-character IDN gTLD labels. See the JIG Final Report at <http://gns0.icann.org/drafts/jig-final-report-30mar11-en.pdf>. Implementation models for these recommendations are being developed for community discussion.

2.2.1.4 Geographic Names Review

Applications for gTLD strings must ensure that appropriate consideration is given to the interests of governments or public authorities in geographic names. The requirements and procedure ICANN will follow in the evaluation process are described in the following paragraphs. Applicants should review these requirements even if they do not believe their intended gTLD string is a geographic name. All applied-for gTLD strings will be reviewed according to the requirements in this section, regardless of whether the application indicates it is for a geographic name.

2.2.1.4.1 Treatment of Country or Territory Names⁶

Applications for strings that are country or territory names will not be approved, as they are not available under the New gTLD Program in this application round. A string shall be considered to be a country or territory name if:

- i. it is an alpha-3 code listed in the ISO 3166-1 standard.
- ii. it is a long-form name listed in the ISO 3166-1 standard, or a translation of the long-form name in any language.
- iii. it is a short-form name listed in the ISO 3166-1 standard, or a translation of the short-form name in any language.
- iv. it is the short- or long-form name association with a code that has been designated as “exceptionally reserved” by the ISO 3166 Maintenance Agency.
- v. it is a separable component of a country name designated on the “Separable Country Names List,” or is a translation of a name appearing on the list, in any language. See the Annex at the end of this module.
- vi. it is a permutation or transposition of any of the names included in items (i) through (v). Permutations include removal of spaces, insertion of punctuation, and addition or

⁶ Country and territory names are excluded from the process based on advice from the Governmental Advisory Committee in recent communiqués providing interpretation of Principle 2.2 of the GAC Principles regarding New gTLDs to indicate that strings which are a meaningful representation or abbreviation of a country or territory name should be handled through the forthcoming ccPDP, and other geographic strings could be allowed in the gTLD space if in agreement with the relevant government or public authority.

removal of grammatical articles like “the.” A transposition is considered a change in the sequence of the long or short-form name, for example, “RepublicCzech” or “IslandsCayman.”

- vii. it is a name by which a country is commonly known, as demonstrated by evidence that the country is recognized by that name by an intergovernmental or treaty organization.

2.2.1.4.2 *Geographic Names Requiring Government Support*

The following types of applied-for strings are considered geographic names and must be accompanied by documentation of support or non-objection from the relevant governments or public authorities:

1. An application for any string that is a representation, in any language, of the capital city name of any country or territory listed in the ISO 3166-1 standard.
2. An application for a city name, where the applicant declares that it intends to use the gTLD for purposes associated with the city name.

City names present challenges because city names may also be generic terms or brand names, and in many cases city names are not unique. Unlike other types of geographic names, there are no established lists that can be used as objective references in the evaluation process. Thus, city names are not universally protected. However, the process does provide a means for cities and applicants to work together where desired.

An application for a city name will be subject to the geographic names requirements (i.e., will require documentation of support or non-objection from the relevant governments or public authorities) if:

- (a) It is clear from applicant statements within the application that the applicant will use the TLD primarily for purposes associated with the city name; and

- (b) The applied-for string is a city name as listed on official city documents.⁷
3. An application for any string that is an exact match of a *sub-national place name*, such as a county, province, or state, listed in the ISO 3166-2 standard.
 4. An application for a string listed as a UNESCO region⁸ or appearing on the “Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings” list.⁹

In the case of an application for a string appearing on either of the lists above, documentation of support will be required from at least 60% of the respective national governments in the region, and there may be no more than one written statement of objection to the application from relevant governments in the region and/or public authorities associated with the continent or the region.

Where the 60% rule is applied, and there are common regions on both lists, the regional composition contained in the “Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings” takes precedence.

An applied-for gTLD string that falls into any of 1 through 4 listed above is considered to represent a geographic name. In the event of any doubt, it is in the applicant’s interest to consult with relevant governments and public authorities and enlist their support or non-objection prior to submission of the application, in order to preclude possible objections and pre-address any ambiguities concerning the string and applicable requirements.

Strings that include but do not match a geographic name (as defined in this section) will not be considered geographic names as defined by section 2.2.1.4.2, and therefore will not require documentation of government support in the evaluation process.

⁷ City governments with concerns about strings that are duplicates, nicknames or close renderings of a city name should not rely on the evaluation process as the primary means of protecting their interests in a string. Rather, a government may elect to file a formal objection to an application that is opposed by the relevant community, or may submit its own application for the string.

⁸ See <http://www.unesco.org/new/en/unesco/worldwide/>.

⁹ See <http://unstats.un.org/unsd/methods/m49/m49regin.htm>.

For each application, the Geographic Names Panel will determine which governments are relevant based on the inputs of the applicant, governments, and its own research and analysis. In the event that there is more than one relevant government or public authority for the applied-for gTLD string, the applicant must provide documentation of support or non-objection from all the relevant governments or public authorities. It is anticipated that this may apply to the case of a sub-national place name.

It is the applicant's responsibility to:

- identify whether its applied-for gTLD string falls into any of the above categories; and
- identify and consult with the relevant governments or public authorities; and
- identify which level of government support is required.

Note: the level of government and which administrative agency is responsible for the filing of letters of support or non-objection is a matter for each national administration to determine. Applicants should consult within the relevant jurisdiction to determine the appropriate level of support.

The requirement to include documentation of support for certain applications does not preclude or exempt applications from being the subject of objections on community grounds (refer to subsection 3.1.1 of Module 3), under which applications may be rejected based on objections showing substantial opposition from the targeted community.

2.2.1.4.3 Documentation Requirements

The documentation of support or non-objection should include a signed letter from the relevant government or public authority. Understanding that this will differ across the respective jurisdictions, the letter could be signed by the minister with the portfolio responsible for domain name administration, ICT, foreign affairs, or the Office of the Prime Minister or President of the relevant jurisdiction; or a senior representative of the agency or department responsible for domain name administration, ICT, foreign affairs, or the Office of the Prime Minister. To assist the applicant in determining who the relevant government or public authority may be for a potential geographic name, the applicant may wish to consult with the relevant

Governmental Advisory Committee (GAC) representative.¹⁰

The letter must clearly express the government's or public authority's support for or non-objection to the applicant's application and demonstrate the government's or public authority's understanding of the string being requested and its intended use.

The letter should also demonstrate the government's or public authority's understanding that the string is being sought through the gTLD application process and that the applicant is willing to accept the conditions under which the string will be available, i.e., entry into a registry agreement with ICANN requiring compliance with consensus policies and payment of fees. (See Module 5 for a discussion of the obligations of a gTLD registry operator.)

A sample letter of support is available as an attachment to this module.

Applicants and governments may conduct discussions concerning government support for an application at any time. Applicants are encouraged to begin such discussions at the earliest possible stage, and enable governments to follow the processes that may be necessary to consider, approve, and generate a letter of support or non-objection.

It is important to note that a government or public authority is under no obligation to provide documentation of support or non-objection in response to a request by an applicant.

It is also possible that a government may withdraw its support for an application at a later time, including after the new gTLD has been delegated, if the registry operator has deviated from the conditions of original support or non-objection. Applicants should be aware that ICANN has committed to governments that, in the event of a dispute between a government (or public authority) and a registry operator that submitted documentation of support from that government or public authority, **ICANN will comply with a legally binding order** from a court in the jurisdiction of the government or public authority that has given support to an application.

2.2.1.4.4 Review Procedure for Geographic Names

A Geographic Names Panel (GNP) will determine whether each applied-for gTLD string represents a geographic

¹⁰ See <https://gacweb.icann.org/display/gacweb/GAC+Members>

name, and verify the relevance and authenticity of the supporting documentation where necessary.

The GNP will review all applications received, not only those where the applicant has noted its applied-for gTLD string as a geographic name. For any application where the GNP determines that the applied-for gTLD string is a country or territory name (as defined in this module), the application will not pass the Geographic Names review and will be denied. No additional reviews will be available.

For any application where the GNP determines that the applied-for gTLD string is not a geographic name requiring government support (as described in this module), the application will pass the Geographic Names review with no additional steps required.

For any application where the GNP determines that the applied-for gTLD string is a geographic name requiring government support, the GNP will confirm that the applicant has provided the required documentation from the relevant governments or public authorities, and that the communication from the government or public authority is legitimate and contains the required content. ICANN may confirm the authenticity of the communication by consulting with the relevant diplomatic authorities or members of ICANN's Governmental Advisory Committee for the government or public authority concerned on the competent authority and appropriate point of contact within their administration for communications.

The GNP may communicate with the signing entity of the letter to confirm their intent and their understanding of the terms on which the support for an application is given.

In cases where an applicant has not provided the required documentation, the applicant will be contacted and notified of the requirement, and given a limited time frame to provide the documentation. If the applicant is able to provide the documentation before the close of the Initial Evaluation period, and the documentation is found to meet the requirements, the applicant will pass the Geographic Names review. If not, the applicant will have additional time to obtain the required documentation; however, if the applicant has not produced the required documentation by the required date (at least 90 calendar days from the date of notice), the application will be considered incomplete and will be ineligible for further review. The applicant may reapply in subsequent application rounds, if desired, subject to the fees and requirements of the specific application rounds.

If there is more than one application for a string representing a certain geographic name as described in this section, and the applications have requisite government approvals, the applications will be suspended pending resolution by the applicants. If the applicants have not reached a resolution by either the date of the end of the application round (as announced by ICANN), or the date on which ICANN opens a subsequent application round, whichever comes first, the applications will be rejected and applicable refunds will be available to applicants according to the conditions described in section 1.5.

However, in the event that a contention set is composed of multiple applications with documentation of support from the same government or public authority, the applications will proceed through the contention resolution procedures described in Module 4 when requested by the government or public authority providing the documentation.

If an application for a string representing a geographic name is in a contention set with applications for similar strings that have not been identified as geographical names, the string contention will be resolved using the string contention procedures described in Module 4.

2.2.2 Applicant Reviews

Concurrent with the applied-for gTLD string reviews described in subsection 2.2.1, ICANN will review the applicant's technical and operational capability, its financial capability, and its proposed registry services. Those reviews are described in greater detail in the following subsections.

2.2.2.1 Technical/Operational Review

In its application, the applicant will respond to a set of questions (see questions 24 – 44 in the Application Form) intended to gather information about the applicant's technical capabilities and its plans for operation of the proposed gTLD.

Applicants are not required to have deployed an actual gTLD registry to pass the Technical/Operational review. It will be necessary, however, for an applicant to demonstrate a clear understanding and accomplishment of some groundwork toward the key technical and operational aspects of a gTLD registry operation. Subsequently, each applicant that passes the technical evaluation and all other steps will be required to complete

a pre-delegation technical test prior to delegation of the new gTLD. Refer to Module 5, Transition to Delegation, for additional information.

2.2.2.2 Financial Review

In its application, the applicant will respond to a set of questions (see questions 45-50 in the Application Form) intended to gather information about the applicant's financial capabilities for operation of a gTLD registry and its financial planning in preparation for long-term stability of the new gTLD.

Because different registry types and purposes may justify different responses to individual questions, evaluators will pay particular attention to the consistency of an application across all criteria. For example, an applicant's scaling plans identifying system hardware to ensure its capacity to operate at a particular volume level should be consistent with its financial plans to secure the necessary equipment. That is, the evaluation criteria scale with the applicant plans to provide flexibility.

2.2.2.3 Evaluation Methodology

Dedicated technical and financial evaluation panels will conduct the technical/operational and financial reviews, according to the established criteria and scoring mechanism included as an attachment to this module. These reviews are conducted on the basis of the information each applicant makes available to ICANN in its response to the questions in the Application Form.

The evaluators may request clarification or additional information during the Initial Evaluation period. For each application, clarifying questions will be consolidated and sent to the applicant from each of the panels. The applicant will thus have an opportunity to clarify or supplement the application in those areas where a request is made by the evaluators. These communications will occur via TAS. Unless otherwise noted, such communications will include a 2-week deadline for the applicant to respond. Any supplemental information provided by the applicant will become part of the application.

It is the applicant's responsibility to ensure that the questions have been fully answered and the required documentation is attached. Evaluators are entitled, but not obliged, to request further information or evidence from an applicant, and are not obliged to take into account any information or evidence that is not made

available in the application and submitted by the due date, unless explicitly requested by the evaluators.

2.2.3 Registry Services Review

Concurrent with the other reviews that occur during the Initial Evaluation period, ICANN will review the applicant's proposed registry services for any possible adverse impact on security or stability. The applicant will be required to provide a list of proposed registry services in its application.

2.2.3.1 Definitions

Registry services are defined as:

1. operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry zone servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by the registry agreement;
2. other products or services that the registry operator is required to provide because of the establishment of a consensus policy; and
3. any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator.

Proposed registry services will be examined to determine if they might raise significant stability or security issues. Examples of services proposed by existing registries can be found at <http://www.icann.org/en/registries/rsep/>. In most cases, these proposed services successfully pass this inquiry.

Registry services currently provided by gTLD registries can be found in registry agreement appendices. See <http://www.icann.org/en/registries/agreements.htm>.

A full definition of registry services can be found at <http://www.icann.org/en/registries/rsep/rsep.html>.

For purposes of this review, security and stability are defined as follows:

Security – an effect on security by the proposed registry service means (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or

resources on the Internet by systems operating in accordance with all applicable standards.

Stability – an effect on stability means that the proposed registry service (1) does not comply with applicable relevant standards that are authoritative and published by a well-established, recognized, and authoritative standards body, such as relevant standards-track or best current practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant standards-track or best current practice RFCs and relying on registry operator’s delegation information or provisioning services.

2.2.3.2 Customary Services

The following registry services are customary services offered by a registry operator:

- Receipt of data from registrars concerning registration of domain names and name servers
- Dissemination of TLD zone files
- Dissemination of contact or other information concerning domain name registrations (e.g., port-43 WHOIS, Web-based Whois, RESTful Whois)
- DNS Security Extensions

The applicant must describe whether any of these registry services are intended to be offered in a manner unique to the TLD.

Any additional registry services that are unique to the proposed gTLD registry should be described in detail. Directions for describing the registry services are provided at http://www.icann.org/en/registries/rsep/rrs_sample.html.

2.2.3.3 TLD Zone Contents

ICANN receives a number of inquiries about use of various record types in a registry zone, as entities contemplate different business and technical models. Permissible zone contents for a TLD zone are:

- Apex SOA record.
- Apex NS records and in-bailiwick glue for the TLD’s DNS servers.

- NS records and in-bailiwick glue for DNS servers of registered names in the TLD.
- DS records for registered names in the TLD.
- Records associated with signing the TLD zone (i.e., RRSIG, DNSKEY, NSEC, and NSEC3).

An applicant wishing to place any other record types into its TLD zone should describe in detail its proposal in the registry services section of the application. This will be evaluated and could result in an extended evaluation to determine whether the service would create a risk of a meaningful adverse impact on security or stability of the DNS. Applicants should be aware that a service based on use of less-common DNS resource records in the TLD zone, even if approved in the registry services review, might not work as intended for all users due to lack of application support.

2.2.3.4 Methodology

Review of the applicant's proposed registry services will include a preliminary determination of whether any of the proposed registry services could raise significant security or stability issues and require additional consideration.

If the preliminary determination reveals that there may be significant security or stability issues (as defined in subsection 2.2.3.1) surrounding a proposed service, the application will be flagged for an extended review by the Registry Services Technical Evaluation Panel (RSTEP), see <http://www.icann.org/en/registries/rsep/rstep.html>. This review, if applicable, will occur during the Extended Evaluation period (refer to Section 2.3).

In the event that an application is flagged for extended review of one or more registry services, an additional fee to cover the cost of the extended review will be due from the applicant. Applicants will be advised of any additional fees due, which must be received before the additional review begins.

2.2.4 Applicant's Withdrawal of an Application

An applicant who does not pass the Initial Evaluation may withdraw its application at this stage and request a partial refund (refer to subsection 1.5 of Module 1).

2.3 *Extended Evaluation*

An applicant may request an Extended Evaluation if the application has failed to pass the Initial Evaluation elements concerning:

- Geographic names (refer to subsection 2.2.1.4). There is no additional fee for an extended evaluation in this instance.
- Demonstration of technical and operational capability (refer to subsection 2.2.2.1). There is no additional fee for an extended evaluation in this instance.
- Demonstration of financial capability (refer to subsection 2.2.2.2). There is no additional fee for an extended evaluation in this instance.
- Registry services (refer to subsection 2.2.3). Note that this investigation incurs an additional fee (the Registry Services Review Fee) if the applicant wishes to proceed. See Section 1.5 of Module 1 for fee and payment information.

An Extended Evaluation does not imply any change of the evaluation criteria. The same criteria used in the Initial Evaluation will be used to review the application in light of clarifications provided by the applicant.

From the time an applicant receives notice of failure to pass the Initial Evaluation, eligible applicants will have 15 calendar days to submit to ICANN the Notice of Request for Extended Evaluation. If the applicant does not explicitly request the Extended Evaluation (and pay an additional fee in the case of a Registry Services inquiry) the application will not proceed.

2.3.1 *Geographic Names Extended Evaluation*

In the case of an application that has been identified as a geographic name requiring government support, but where the applicant has not provided sufficient evidence of support or non-objection from all relevant governments or public authorities by the end of the Initial Evaluation period, the applicant has additional time in the Extended Evaluation period to obtain and submit this documentation.

If the applicant submits the documentation to the Geographic Names Panel by the required date, the GNP will perform its review of the documentation as detailed in

section 2.2.1.4. If the applicant has not provided the documentation by the required date (at least 90 calendar days from the date of the notice), the application will not pass the Extended Evaluation, and no further reviews are available.

2.3.2 Technical/Operational or Financial Extended Evaluation

The following applies to an Extended Evaluation of an applicant's technical and operational capability or financial capability, as described in subsection 2.2.2.

An applicant who has requested Extended Evaluation will again access the online application system (TAS) and clarify its answers to those questions or sections on which it received a non-passing score (or, in the case of an application where individual questions were passed but the total score was insufficient to pass Initial Evaluation, those questions or sections on which additional points are possible). The answers should be responsive to the evaluator report that indicates the reasons for failure, or provide any amplification that is not a material change to the application. Applicants may not use the Extended Evaluation period to substitute portions of new information for the information submitted in their original applications, i.e., to materially change the application.

An applicant participating in an Extended Evaluation on the Technical / Operational or Financial reviews will have the option to have its application reviewed by the same evaluation panelists who performed the review during the Initial Evaluation period, or to have a different set of panelists perform the review during Extended Evaluation.

The Extended Evaluation allows an additional exchange of information between the evaluators and the applicant to further clarify information contained in the application. This supplemental information will become part of the application record. Such communications will include a deadline for the applicant to respond.

ICANN will notify applicants at the end of the Extended Evaluation period as to whether they have passed. If an application passes Extended Evaluation, it continues to the next stage in the process. If an application does not pass Extended Evaluation, it will proceed no further. No further reviews are available.

2.3.3 Registry Services Extended Evaluation

This section applies to Extended Evaluation of registry services, as described in subsection 2.2.3.

If a proposed registry service has been referred to the Registry Services Technical Evaluation Panel (RSTEP) for an extended review, the RSTEP will form a review team of members with the appropriate qualifications.

The review team will generally consist of three members, depending on the complexity of the registry service proposed. In a 3-member panel, the review could be conducted within 30 to 45 calendar days. In cases where a 5-member panel is needed, this will be identified before the extended evaluation starts. In a 5-member panel, the review could be conducted in 45 calendar days or fewer.

The cost of an RSTEP review will be covered by the applicant through payment of the Registry Services Review Fee. Refer to payment procedures in section 1.5 of Module 1. The RSTEP review will not commence until payment has been received.

If the RSTEP finds that one or more of the applicant's proposed registry services may be introduced without risk of a meaningful adverse effect on security or stability, these services will be included in the applicant's registry agreement with ICANN. If the RSTEP finds that the proposed service would create a risk of a meaningful adverse effect on security or stability, the applicant may elect to proceed with its application without the proposed service, or withdraw its application for the gTLD. In this instance, an applicant has 15 calendar days to notify ICANN of its intent to proceed with the application. If an applicant does not explicitly provide such notice within this time frame, the application will proceed no further.

2.4 Parties Involved in Evaluation

A number of independent experts and groups play a part in performing the various reviews in the evaluation process. A brief description of the various panels, their evaluation roles, and the circumstances under which they work is included in this section.

2.4.1 Panels and Roles

The **String Similarity Panel** will assess whether a proposed gTLD string creates a probability of user confusion due to similarity with any reserved name, any existing TLD, any requested IDN ccTLD, or any new gTLD string applied for in the current application round. This occurs during the String Similarity review in Initial Evaluation. The panel may also review IDN tables submitted by applicants as part of its work.

The **DNS Stability Panel** will determine whether a proposed string might adversely affect the security or stability of the DNS. This occurs during the DNS Stability String review in Initial Evaluation.

The **Geographic Names Panel** will review each application to determine whether the applied-for gTLD represents a geographic name, as defined in this guidebook. In the event that the string is a geographic name requiring government support, the panel will ensure that the required documentation is provided with the application and verify that the documentation is from the relevant governments or public authorities and is authentic.

The **Technical Evaluation Panel** will review the technical components of each application against the criteria in the Applicant Guidebook, along with proposed registry operations, in order to determine whether the applicant is technically and operationally capable of operating a gTLD registry as proposed in the application. This occurs during the Technical/Operational reviews in Initial Evaluation, and may also occur in Extended Evaluation if elected by the applicant.

The **Financial Evaluation Panel** will review each application against the relevant business, financial and organizational criteria contained in the Applicant Guidebook, to determine whether the applicant is financially capable of maintaining a gTLD registry as proposed in the application. This occurs during the Financial review in Initial Evaluation, and may also occur in Extended Evaluation if elected by the applicant.

The **Registry Services Technical Evaluation Panel (RSTEP)** will review proposed registry services in the application to determine if they pose a risk of a meaningful adverse impact on security or stability. This occurs, if applicable, during the Extended Evaluation period.

Members of all panels are required to abide by the established Code of Conduct and Conflict of Interest guidelines included in this module.

2.4.2 Panel Selection Process

ICANN has selected qualified third-party providers to perform the various reviews, based on an extensive selection process.¹¹ In addition to the specific subject matter expertise required for each panel, specified qualifications are required, including:

- The provider must be able to convene – or have the capacity to convene - globally diverse panels and be able to evaluate applications from all regions of the world, including applications for IDN gTLDs.
- The provider should be familiar with the IETF IDNA standards, Unicode standards, relevant RFCs and the terminology associated with IDNs.
- The provider must be able to scale quickly to meet the demands of the evaluation of an unknown number of applications. At present it is not known how many applications will be received, how complex they will be, and whether they will be predominantly for ASCII or non-ASCII gTLDs.
- The provider must be able to evaluate the applications within the required timeframes of Initial and Extended Evaluation.

2.4.3 Code of Conduct Guidelines for Panelists

The purpose of the New gTLD Program (“Program”) Code of Conduct (“Code”) is to prevent real and apparent conflicts of interest and unethical behavior by any Evaluation Panelist (“Panelist”).

Panelists shall conduct themselves as thoughtful, competent, well prepared, and impartial professionals throughout the application process. Panelists are expected to comply with equity and high ethical standards while assuring the Internet community, its constituents, and the public of objectivity, integrity, confidentiality, and credibility. Unethical actions, or even the appearance of compromise, are not acceptable. Panelists are expected

¹¹ <http://newgtlds.icann.org/about/evaluation-panels-selection-process>

to be guided by the following principles in carrying out their respective responsibilities. This Code is intended to summarize the principles and nothing in this Code should be considered as limiting duties, obligations or legal requirements with which Panelists must comply.

Bias -- Panelists shall:

- not advance personal agendas or non-ICANN approved agendas in the evaluation of applications;
- examine facts as they exist and not be influenced by past reputation, media accounts, or unverified statements about the applications being evaluated;
- exclude themselves from participating in the evaluation of an application if, to their knowledge, there is some predisposing factor that could prejudice them with respect to such evaluation; and
- exclude themselves from evaluation activities if they are philosophically opposed to or are on record as having made generic criticism about a specific type of applicant or application.

Compensation/Gifts -- Panelists shall not request or accept any compensation whatsoever or any gifts of substance from the Applicant being reviewed or anyone affiliated with the Applicant. (Gifts of substance would include any gift greater than USD 25 in value).

If the giving of small tokens is important to the Applicant's culture, Panelists may accept these tokens; however, the total of such tokens must not exceed USD 25 in value. If in doubt, the Panelist should err on the side of caution by declining gifts of any kind.

Conflicts of Interest -- Panelists shall act in accordance with the "New gTLD Program Conflicts of Interest Guidelines" (see subsection 2.4.3.1).

Confidentiality -- Confidentiality is an integral part of the evaluation process. Panelists must have access to sensitive information in order to conduct evaluations. Panelists must maintain confidentiality of information entrusted to them by ICANN and the Applicant and any other confidential information provided to them from whatever source,

except when disclosure is legally mandated or has been authorized by ICANN. "Confidential information" includes all elements of the Program and information gathered as part of the process – which includes but is not limited to: documents, interviews, discussions, interpretations, and analyses – related to the review of any new gTLD application.

Affirmation -- All Panelists shall read this Code prior to commencing evaluation services and shall certify in writing that they have done so and understand the Code.

2.4.3.1 Conflict of Interest Guidelines for Panelists

It is recognized that third-party providers may have a large number of employees in several countries serving numerous clients. In fact, it is possible that a number of Panelists may be very well known within the registry / registrar community and have provided professional services to a number of potential applicants.

To safeguard against the potential for inappropriate influence and ensure applications are evaluated in an objective and independent manner, ICANN has established detailed Conflict of Interest guidelines and procedures that will be followed by the Evaluation Panelists. To help ensure that the guidelines are appropriately followed ICANN will:

- Require each Evaluation Panelist (provider and individual) to acknowledge and document understanding of the Conflict of Interest guidelines.
- Require each Evaluation Panelist to disclose all business relationships engaged in at any time during the past six months.
- Where possible, identify and secure primary and backup providers for evaluation panels.
- In conjunction with the Evaluation Panelists, develop and implement a process to identify conflicts and re-assign applications as appropriate to secondary or contingent third party providers to perform the reviews.

Compliance Period -- All Evaluation Panelists must comply with the Conflict of Interest guidelines beginning with the opening date of the Application Submission period and ending with the public announcement by ICANN of the

final outcomes of all the applications from the Applicant in question.

Guidelines -- The following guidelines are the minimum standards with which all Evaluation Panelists must comply. It is recognized that it is impossible to foresee and cover all circumstances in which a potential conflict of interest might arise. In these cases the Evaluation Panelist should evaluate whether the existing facts and circumstances would lead a reasonable person to conclude that there is an actual conflict of interest.

Evaluation Panelists and Immediate Family Members:

- Must not be under contract, have or be included in a current proposal to provide Professional Services for or on behalf of the Applicant during the Compliance Period.
- Must not currently hold or be committed to acquire any interest in a privately-held Applicant.
- Must not currently hold or be committed to acquire more than 1% of any publicly listed Applicant's outstanding equity securities or other ownership interests.
- Must not be involved or have an interest in a joint venture, partnership or other business arrangement with the Applicant.
- Must not have been named in a lawsuit with or against the Applicant.
- Must not be a:
 - Director, officer, or employee, or in any capacity equivalent to that of a member of management of the Applicant;
 - Promoter, underwriter, or voting trustee of the Applicant; or
 - Trustee for any pension or profit-sharing trust of the Applicant.

Definitions--

Evaluation Panelist: An Evaluation Panelist is any individual associated with the review of an application. This includes

any primary, secondary, and contingent third party Panelists engaged by ICANN to review new gTLD applications.

Immediate Family Member: Immediate Family Member is a spouse, spousal equivalent, or dependent (whether or not related) of an Evaluation Panelist.

Professional Services: include, but are not limited to legal services, financial audit, financial planning / investment, outsourced services, consulting services such as business / management / internal audit, tax, information technology, registry / registrar services.

2.4.3.2 Code of Conduct Violations

Evaluation panelist breaches of the Code of Conduct, whether intentional or not, shall be reviewed by ICANN, which may make recommendations for corrective action, if deemed necessary. Serious breaches of the Code may be cause for dismissal of the person, persons or provider committing the infraction.

In a case where ICANN determines that a Panelist has failed to comply with the Code of Conduct, the results of that Panelist's review for all assigned applications will be discarded and the affected applications will undergo a review by new panelists.

Complaints about violations of the Code of Conduct by a Panelist may be brought to the attention of ICANN via the public comment and applicant support mechanisms, throughout the evaluation period. Concerns of applicants regarding panels should be communicated via the defined support channels (see subsection 1.4.2). Concerns of the general public (i.e., non-applicants) can be raised via the public comment forum, as described in Module 1.

2.4.4 Communication Channels

Defined channels for technical support or exchanges of information with ICANN and with evaluation panels are available to applicants during the Initial Evaluation and Extended Evaluation periods. Contacting individual ICANN staff members, Board members, or individuals engaged by ICANN to perform an evaluation role in order to lobby for a particular outcome or to obtain confidential information about applications under review is not appropriate. In the interests of fairness and equivalent treatment for all applicants, any such individual contacts will be referred to the appropriate communication channels.

DRAFT - New gTLD Program – Initial Evaluation and Extended Evaluation

Application is confirmed as complete and ready for evaluation during Administrative Completeness Check

Background Screening
Third-party provider reviews applicant's background.

Initial Evaluation – String Review

Initial Evaluation – Applicant Review

String Similarity
String Similarity Panel reviews applied-for strings to ensure they are not too similar to existing TLDs or Reserved Names.

DNS Stability
All strings reviewed and in extraordinary cases, DNS Stability Panel may perform extended review for possible technical stability issues.

Geographic Names
Geographic Names Panel determines if applied-for string is geographic name requiring government support.

Technical and Operational Capability
Technical and Operational panel reviews applicant's answers to questions and supporting documentation.

Financial Capability
Financial panel reviews applicant's answers to questions and supporting documentation.

Registry Services
Preliminary review of applicant's registry services and referral to RSTEP for further review during Extended Evaluation where necessary

Panel compares all applied-for strings and creates contention sets.

Panel confirms supporting documentation where required.

ICANN will seek to publish contention sets prior to publication of full IE results.

Does applicant pass all elements of Initial Evaluation?

Applicant elects to pursue **Extended Evaluation**?

Extended Evaluation process

Applicant continues to subsequent steps.

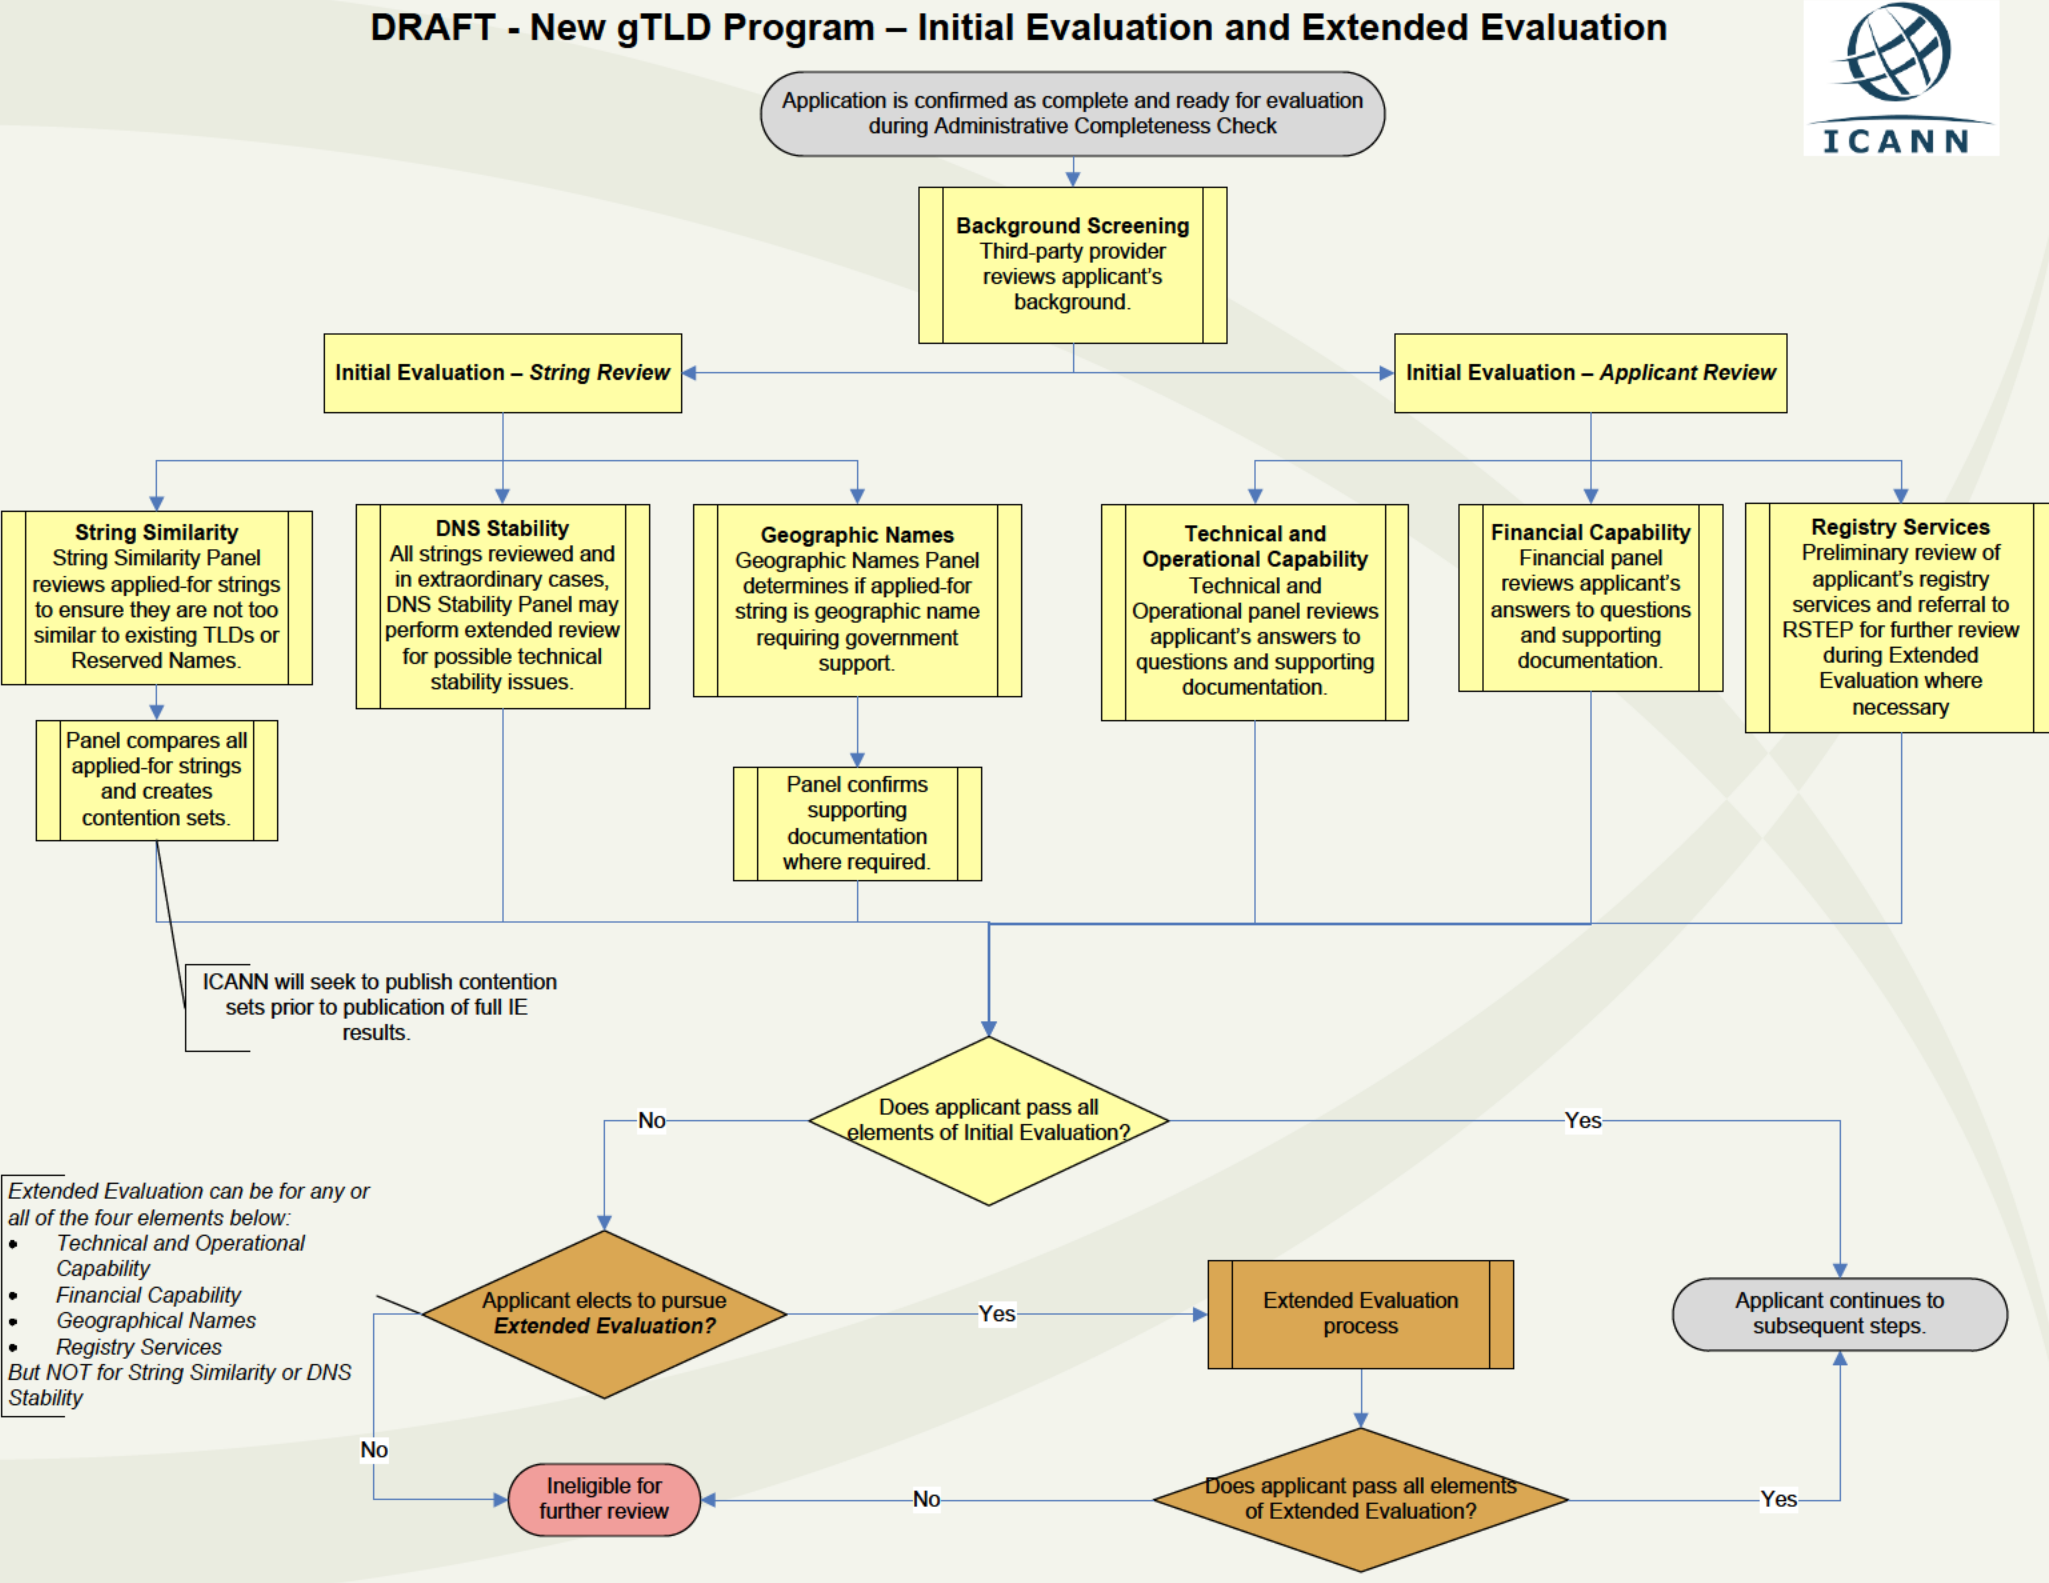

Ineligible for further review

Does applicant pass all elements of Extended Evaluation?

Extended Evaluation can be for any or all of the four elements below:

- Technical and Operational Capability
- Financial Capability
- Geographical Names
- Registry Services

But NOT for String Similarity or DNS Stability

Annex: Separable Country Names List

gTLD application restrictions on country or territory names are tied to listing in property fields of the ISO 3166-1 standard. Notionally, the ISO 3166-1 standard has an “English short name” field which is the common name for a country and can be used for such protections; however, in some cases this does not represent the common name. This registry seeks to add additional protected elements which are derived from definitions in the ISO 3166-1 standard. An explanation of the various classes is included below.

Separable Country Names List

Code	English Short Name	Cl.	Separable Name
ax	Åland Islands	B1	Åland

Maintenance

A Separable Country Names Registry will be maintained and published by ICANN Staff.

Each time the ISO 3166-1 standard is updated with a new entry, this registry will be reappraised to identify if the changes to the standard warrant changes to the entries in this registry. Appraisal will be based on the criteria listing in the "Eligibility" section of this document.

Codes reserved by the ISO 3166 Maintenance Agency do not have any implication on this registry, only entries derived from normally assigned codes appearing in ISO 3166-1 are eligible.

If an ISO code is struck off the ISO 3166-1 standard, any entries in this registry deriving from that code must be struck.

Eligibility

Each record in this registry is derived from the following possible properties:

- Class A:** The ISO 3166-1 English Short Name is comprised of multiple, separable parts whereby the country is comprised of distinct sub-entities. Each of these separable parts is eligible in its own right for consideration as a country name. For example, "Antigua and Barbuda" is comprised of "Antigua" and "Barbuda."
- Class B:** The ISO 3166-1 English Short Name (1) or the ISO 3166-1 English Full Name (2) contains additional language as to the type of country the entity is, which is often not used in common usage when referencing the country. For example, one such short name is "The Bolivarian Republic of Venezuela" for a country in common usage referred to as "Venezuela."
- ** Macedonia is a separable name in the context of this list; however, due to the ongoing dispute listed in UN documents between the Hellenic Republic (Greece) and the Former Yugoslav Republic of Macedonia over the name, no country will be afforded attribution or rights to the name "Macedonia" until the dispute over the name has been resolved. See <http://daccess-dds-ny.un.org/doc/UNDOC/GEN/N93/240/37/IMG/N9324037.pdf>.
- Class C:** The ISO 3166-1 Remarks column containing synonyms of the country name, or sub-national entities, as denoted by "often referred to as," "includes", "comprises", "variant" or "principal islands".

In the first two cases, the registry listing must be directly derivative from the English Short Name by excising words and articles. These registry listings do not include vernacular or other non-official terms used to denote the country.

Eligibility is calculated in class order. For example, if a term can be derived both from Class A and Class C, it is only listed as Class A.

Attachment to Module 2

Sample Letter of Government Support

[This letter should be provided on official letterhead]

ICANN
Suite 330, 4676 Admiralty Way
Marina del Rey, CA 90292

Attention: New gTLD Evaluation Process

Subject: Letter for support for [TLD requested]

This letter is to confirm that [government entity] fully supports the application for [TLD] submitted to ICANN by [applicant] in the New gTLD Program. As the [Minister/Secretary/position] I confirm that I have the authority of the [x government/public authority] to be writing to you on this matter. [Explanation of government entity, relevant department, division, office, or agency, and what its functions and responsibilities are]

The gTLD will be used to [explain your understanding of how the name will be used by the applicant. This could include policies developed regarding who can register a name, pricing regime and management structures.] [Government/public authority/department] has worked closely with the applicant in the development of this proposal.

The [x government/public authority] supports this application, and in doing so, understands that in the event that the application is successful, [applicant] will be required to enter into a Registry Agreement with ICANN. In doing so, they will be required to pay fees to ICANN and comply with consensus policies developed through the ICANN multi-stakeholder policy processes.

[Government / public authority] further understands that, in the event of a dispute between [government/public authority] and the applicant, ICANN will comply with a legally binding order from a court in the jurisdiction of [government/public authority].

[Optional] This application is being submitted as a community-based application, and as such it is understood that the Registry Agreement will reflect the community restrictions proposed in the application. In the event that we believe the registry is not complying with these restrictions, possible avenues of recourse include the Registry Restrictions Dispute Resolution Procedure.

[Optional] I can advise that in the event that this application is successful [government/public authority] will enter into a separate agreement with the applicant. This agreement will outline the conditions under which we support them in the operation of the TLD, and circumstances under which we would withdraw that support. ICANN will not be a party to this agreement, and enforcement of this agreement lies fully with [government/public authority].

[Government / public authority] understands that the Geographic Names Panel engaged by ICANN will, among other things, conduct due diligence on the authenticity of this documentation. I would request that if additional information is required during this process, that [name and contact details] be contacted in the first instance.

Thank you for the opportunity to support this application.

Yours sincerely

Signature from relevant government/public authority

Attachment to Module 2

Evaluation Questions and Criteria

Since ICANN was founded in 1998 as a not-for-profit, multi-stakeholder organization, one of its key mandates has been to promote competition in the domain name market. ICANN's mission specifically calls for the corporation to maintain and build on processes that will ensure competition and consumer interests – without compromising Internet security and stability. This includes the consideration and implementation of new gTLDs. It is ICANN's goal to make the criteria and evaluation as objective as possible.

While new gTLDs are viewed by ICANN as important to fostering choice, innovation and competition in domain registration services, the decision to launch these coming new gTLD application rounds followed a detailed and lengthy consultation process with all constituencies of the global Internet community.

Any public or private sector organization can apply to create and operate a new gTLD. However the process is not like simply registering or buying a second-level domain name. Instead, the application process is to evaluate and select candidates capable of running a registry, a business that manages top level domains such as, for example, .COM or .INFO. Any successful applicant will need to meet published operational and technical criteria in order to preserve Internet stability and interoperability.

I. Principles of the Technical and Financial New gTLD Evaluation Criteria

- Principles of conservatism. This is the first round of what is to be an ongoing process for the introduction of new TLDs, including Internationalized Domain Names. Therefore, the criteria in this round require applicants to provide a thorough and thoughtful analysis of the technical requirements to operate a registry and the proposed business model.
- The criteria and evaluation should be as objective as possible.
 - With that goal in mind, an important objective of the new TLD process is to diversify the namespace, with different registry business models and target audiences. In some cases, criteria that are objective, but that ignore the differences in business models and target audiences of new registries, will tend to make the process exclusionary. For example, the business model for a registry targeted to a small community need not possess the same robustness in funding and technical infrastructure as a registry intending to compete with large gTLDs. Therefore purely objective criteria such as a requirement for a certain amount of cash on hand will not provide for the flexibility to consider different business models. The process must provide for an objective evaluation framework, but allow for adaptation according to the differing models applicants will present. Within that framework, applicant responses will be evaluated against the criteria in light of the proposed model.
 - Therefore the criteria should be flexible: able to scale with the overall business approach, providing that the planned approach is consistent and coherent, and can withstand highs and lows.

- Criteria can be objective in areas of registrant protection, for example:
 - Providing for funds to continue operations in the event of a registry failure.
 - Adherence to data escrow, registry failover, and continuity planning requirements.
- The evaluation must strike the correct balance between establishing the business and technical competence of the applicant to operate a registry (to serve the interests of registrants), while not asking for the detailed sort of information or making the judgment that a venture capitalist would. ICANN is not seeking to certify business success but instead seeks to encourage innovation while providing certain safeguards for registrants.
- New registries must be added in a way that maintains DNS stability and security. Therefore, ICANN asks several questions so that the applicant can demonstrate an understanding of the technical requirements to operate a registry. ICANN will ask the applicant to demonstrate actual operational technical compliance prior to delegation. This is in line with current prerequisites for the delegation of a TLD.
- Registrant protection is emphasized in both the criteria and the scoring. Examples of this include asking the applicant to:
 - Plan for the occurrence of contingencies and registry failure by putting in place financial resources to fund the ongoing resolution of names while a replacement operator is found or extended notice can be given to registrants,
 - Demonstrate a capability to understand and plan for business contingencies to afford some protections through the marketplace,
 - Adhere to DNS stability and security requirements as described in the technical section, and
 - Provide access to the widest variety of services.

II. Aspects of the Questions Asked in the Application and Evaluation Criteria

The technical and financial questions are intended to inform and guide the applicant in aspects of registry start-up and operation. The established registry operator should find the questions straightforward while inexperienced applicants should find them a natural part of planning.

Evaluation and scoring (detailed below) will emphasize:

- How thorough are the answers? Are they well thought through and do they provide a sufficient basis for evaluation?
- Demonstration of the ability to operate and fund the registry on an ongoing basis:
 - Funding sources to support technical operations in a manner that ensures stability and security and supports planned expenses,
 - Resilience and sustainability in the face of ups and downs, anticipation of contingencies,
 - Funding to carry on operations in the event of failure.

- Demonstration that the technical plan will likely deliver on best practices for a registry and identification of aspects that might raise DNS stability and security issues.
- Ensures plan integration, consistency and compatibility (responses to questions are not evaluated individually but in comparison to others):
 - Funding adequately covers technical requirements,
 - Funding covers costs,
 - Risks are identified and addressed, in comparison to other aspects of the plan.

III. Scoring

Evaluation

- The questions, criteria, scoring and evaluation methodology are to be conducted in accordance with the principles described earlier in section I. With that in mind, globally diverse evaluation panelists will staff evaluation panels. The diversity of evaluators and access to experts in all regions of the world will ensure application evaluations take into account cultural, technical and business norms in the regions from which applications originate.
- Evaluation teams will consist of two independent panels. One will evaluate the applications against the financial criteria. The other will evaluate the applications against the technical & operational criteria. Given the requirement that technical and financial planning be well integrated, the panels will work together and coordinate information transfer where necessary. Other relevant experts (e.g., technical, audit, legal, insurance, finance) in pertinent regions will provide advice as required.
- Precautions will be taken to ensure that no member of the Evaluation Teams will have any interest or association that may be viewed as a real or potential conflict of interest with an applicant or application. All members must adhere to the Code of Conduct and Conflict of Interest guidelines that are found in Module 2.
- Communications between the evaluation teams and the applicants will be through an online interface. During the evaluation, evaluators may pose a set of clarifying questions to an applicant, to which the applicant may respond through the interface.

Confidentiality: ICANN will post applications after the close of the application submission period. The application form notes which parts of the application will be posted.

Scoring

- Responses will be evaluated against each criterion. A score will be assigned according to the scoring schedule linked to each question or set of questions. In several questions, 1 point is the maximum score that may be awarded. In several other questions, 2 points are awarded for a response that exceeds requirements, 1 point is awarded for a response that meets requirements and 0 points are awarded for a response that fails to meet requirements. Each question must receive at least a score of "1," making each a "pass/fail" question.
- In the Continuity question in the financial section(see Question #50), up to 3 points are awarded if an applicant provides, at the application stage, a financial instrument that will guarantee ongoing registry operations in the event of a business failure. This extra

point can serve to guarantee passing the financial criteria for applicants who score the minimum passing score for each of the individual criteria. The purpose of this weighting is to reward applicants who make early arrangements for the protection of registrants and to accept relatively riskier business plans where registrants are protected.

- There are 21 Technical & Operational questions. Each question has a criterion and scoring associated with it. The scoring for each is 0, 1, or 2 points as described above. One of the questions (IDN implementation) is optional. Other than the optional questions, all Technical & Operational criteria must be scored a 1 or more or the application will fail the evaluation.
- The total technical score must be equal to or greater than 22 for the application to pass. That means the applicant can pass by:
 - Receiving a 1 on all questions, including the optional question, and a 2 on at least one mandatory question; or
 - Receiving a 1 on all questions, excluding the optional question and a 2 on at least two mandatory questions.

This scoring methodology requires a minimum passing score for each question and a slightly higher average score than the per question minimum to pass.

- There are six Financial questions and six sets of criteria that are scored by rating the answers to one or more of the questions. For example, the question concerning registry operation costs requires consistency between the technical plans (described in the answers to the Technical & Operational questions) and the costs (described in the answers to the costs question).
- The scoring for each of the Financial criteria is 0, 1 or 2 points as described above with the exception of the Continuity question, for which up to 3 points are possible. All questions must receive at least a 1 or the application will fail the evaluation.
- The total financial score on the six criteria must be 8 or greater for the application to pass. That means the applicant can pass by:
 - Scoring a 3 on the continuity criteria, or
 - Scoring a 2 on any two financial criteria.
- Applications that do not pass Initial Evaluation can enter into an extended evaluation process as described in Module 2. The scoring is the same.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
Applicant Information	1	Full legal name of the Applicant (the established entity that would enter into a Registry Agreement with ICANN)	Y	Responses to Questions 1 - 12 are required for a complete application. Responses are not scored.			
	2	Address of the principal place of business of the Applicant. This address will be used for contractual purposes. No Post Office boxes are allowed.	Y				
	3	Phone number for the Applicant's principal place of business.	Y				
	4	Fax number for the Applicant's principal place of business.	Y				
	5	Website or URL, if applicable.	Y				
Primary Contact for this Application	6	Name	Y	The primary contact is the individual designated with the primary responsibility for management of the application, including responding to tasks in the TLD Application System (TAS) during the various application phases. Both contacts listed should also be prepared to receive inquiries from the public.

		Email address	Y				
Proof of Legal Establishment	8	(a) Legal form of the Applicant. (e.g., partnership, corporation, non-profit institution).	Y				
		(b) State the specific national or other jurisdiction that defines the type of entity identified in 8(a).	Y	In the event of questions regarding proof of establishment, the applicant may be asked for additional details, such as the specific national or other law applying to this type of entity			
		(c) Attach evidence of the applicant's establishment as the type of entity identified in Question 8(a) above, in accordance with the applicable laws identified in Question 8(b).	Y	Applications without valid proof of legal establishment will not be evaluated further. Supporting documentation for proof of legal establishment should be submitted in the original language.			
	9	(a) If the applying entity is publicly traded, provide the exchange and symbol.	Y				
		(b) If the applying entity is a subsidiary, provide the parent company.	Y				
		(c) If the applying entity is a joint venture, list all joint venture partners.	Y				
	10	Business ID, Tax ID, VAT registration number, or equivalent of the Applicant.	N				
Applicant Background	11	(a) Enter the full name, date and country of birth, contact information (permanent residence), and position of all directors (i.e., members of the applicant's Board of Directors, if applicable).	Partial	<p>Applicants should be aware that the names and positions of the individuals listed in response to this question will be published as part of the application. The contact information listed for individuals is for identification purposes only and will not be published as part of the application.</p> <p>Background checks may be conducted on individuals named in the applicant's response to question 11. Any material misstatement or misrepresentation (or omission of material information) may cause the application to be rejected.</p> <p>The applicant certifies that it has obtained permission for the posting of the names and positions of individuals included in this application.</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(b) Enter the full name, date and country of birth, contact information (permanent residence), and position of all officers and partners. Officers are high-level management officials of a corporation or business, for example, a CEO, vice president, secretary, chief financial officer. Partners would be listed in the context of a partnership or other such form of legal entity.	Partial				
		(c) Enter the full name and contact information of all shareholders holding at least 15% of shares, and percentage held by each. For a shareholder entity, enter the principal place of business. For a shareholder individual, enter the date and country of birth and contact information (permanent residence).	Partial				
		(d) For an applying entity that does not have directors, officers, partners, or shareholders, enter the full name, date and country of birth, contact information (permanent residence), and position of all individuals having overall legal or executive responsibility for the applying entity.	Partial				
		(e) Indicate whether the applicant or any of the individuals named above: <ul style="list-style-type: none"> i. within the past ten years, has been convicted of any crime related to financial or corporate governance activities, or has been judged by a court to have committed fraud or breach of fiduciary duty, or has been the subject of a judicial determination that is the substantive equivalent of any of these; ii. within the past ten years, has been disciplined by any government or industry regulatory body for conduct involving dishonesty or misuse of funds of others; iii. within the past ten years has been convicted of any willful tax-related fraud or willful evasion of tax liabilities; iv. within the past ten years has been convicted of perjury, forswearing, failing to cooperate with a law enforcement investigation, or making false statements to a law enforcement agency or representative; 	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>v. has ever been convicted of any crime involving the use of computers, telephony systems, telecommunications or the Internet to facilitate the commission of crimes;</p> <p>vi. has ever been convicted of any crime involving the use of a weapon, force, or the threat of force;</p> <p>vii. has ever been convicted of any violent or sexual offense victimizing children, the elderly, or individuals with disabilities;</p> <p>viii. has ever been convicted of the illegal sale, manufacture, or distribution of pharmaceutical drugs, or been convicted or successfully extradited for any offense described in Article 3 of the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988;</p> <p>ix. has ever been convicted or successfully extradited for any offense described in the United Nations Convention against Transnational Organized Crime (all Protocols);</p> <p>x. has been convicted, within the respective timeframes, of aiding, abetting, facilitating, enabling, conspiring to commit, or failing to report any of the listed crimes (i.e., within the past 10 years for crimes listed in (i) - (iv) above, or ever for the crimes listed in (v) - (ix) above);</p> <p>xi. has entered a guilty plea as part of a plea agreement or has a court case in any jurisdiction with a disposition of Adjudicated Guilty or Adjudication Withheld (or regional equivalents) within the respective timeframes listed above for any of the listed crimes (i.e., within the past 10 years for crimes listed in (i) - (iv) above, or ever for the crimes listed in (v) - (ix) above);</p> <p>xii. is the subject of a disqualification imposed by ICANN and in effect at the time of this application.</p> <p>If any of the above events have occurred, please provide details.</p>					

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(f) Indicate whether the applicant or any of the individuals named above have been involved in any decisions indicating that the applicant or individual named in the application was engaged in cybersquatting, as defined in the Uniform Domain Name Dispute Resolution Policy (UDRP), Anti-cybersquatting Consumer Protection Act (ACPA), or other equivalent legislation, or was engaged in reverse domain name hijacking under the UDRP or bad faith or reckless disregard under the ACPA or equivalent legislation.	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook for details.			
		(g) Disclose whether the applicant or any of the individuals named above has been involved in any administrative or other legal proceeding in which allegations of intellectual property infringement relating to registration or use of a domain name have been made. Provide an explanation related to each such instance.	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook for details.			
		(h) Provide an explanation for any additional background information that may be found concerning the applicant or any individual named in the application, which may affect eligibility, including any criminal convictions not identified above.	N				
Evaluation Fee	12	(a) Enter the confirmation information for payment of the evaluation fee (e.g., wire transfer confirmation number).	N	<p>The evaluation fee is paid in the form of a deposit at the time of user registration, and submission of the remaining amount at the time the full application is submitted. The information in question 12 is required for each payment.</p> <p>The full amount in USD must be received by ICANN. Applicant is responsible for all transaction fees and exchange rate fluctuation.</p> <p>Fedwire is the preferred wire mechanism; SWIFT is also acceptable. ACH is not recommended as these funds will take longer to clear and could affect timing of the application processing.</p>			
		(b) Payer name	N				
		(c) Payer address	N				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(d) Wiring bank	N				
		(e) Bank address	N				
		(f) Wire date	N				
Applied-for gTLD string	13	Provide the applied-for gTLD string. If applying for an IDN, provide the U-label.	Y	Responses to Questions 13-17 are not scored, but are used for database and validation purposes. The U-label is an IDNA-valid string of Unicode characters, including at least one non-ASCII character.			
	14	(a) If applying for an IDN, provide the A-label (beginning with "xn--").	Y				
		(b) If an IDN, provide the meaning, or restatement of the string in English, that is, a description of the literal meaning of the string in the opinion of the applicant.	Y				
		(c) If an IDN, provide the language of the label (both in English and as referenced by ISO-639-1).	Y				
		(d) If an IDN, provide the script of the label (both in English and as referenced by ISO 15924).	Y				
		(e) If an IDN, list all code points contained in the U-label according to Unicode form.	Y	For example, the string "HELLO" would be listed as U+0048 U+0065 U+006C U+006C U+0066.			
	15	(a) If an IDN, upload IDN tables for the proposed registry. An IDN table must include: <ol style="list-style-type: none"> 1. the applied-for gTLD string relevant to the tables, 2. the script or language designator (as defined in BCP 47), 3. table version number, 4. effective date (DD Month YYYY), and 5. contact name, email address, and phone number. <p>Submission of IDN tables in a standards-based format is encouraged.</p>	Y	In the case of an application for an IDN gTLD, IDN tables must be submitted for the language or script for the applied-for gTLD string. IDN tables must also be submitted for each language or script in which the applicant intends to offer IDN registrations at the second level (see question 44). IDN tables should be submitted in a machine-readable format. The model format described in Section 5 of RFC 4290 would be ideal. The format used by RFC 3743 is an acceptable alternative. Variant generation algorithms that are more complex (such as those with contextual			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				rules) and cannot be expressed using these table formats should be specified in a manner that could be re-implemented programmatically by ICANN. Ideally, for any complex table formats, a reference code implementation should be provided in conjunction with a description of the generation rules.			
		(b) Describe the process used for development of the IDN tables submitted, including consultations and sources used.	Y				
		(c) List any variants to the applied-for gTLD string according to the relevant IDN tables.	Y	Variant TLD strings will not be delegated as a result of this application. Variant strings will be checked for consistency and, if the application is approved, will be entered on a Declared IDN Variants List to allow for future allocation once a variant management mechanism is established for the top level. Inclusion of variant TLD strings in this application is for information only and confers no right or claim to these strings upon the applicant.			
	16	Describe the applicant's efforts to ensure that there are no known operational or rendering problems concerning the applied-for gTLD string. If such issues are known, describe steps that will be taken to mitigate these issues in software and other applications.	Y				
	17	OPTIONAL. Provide a representation of the label according to the International Phonetic Alphabet (http://www.langsci.ucl.ac.uk/ipa/).	Y	If provided, this information will be used as a guide to ICANN in communications regarding the application.			
Mission/Purpose	18	(a) Describe the mission/purpose of your proposed gTLD.	Y	The information gathered in response to Question 18 is intended to inform the post-launch review of the New gTLD Program, from the perspective of assessing the relative costs and benefits achieved in the expanded gTLD space. For the application to be considered complete, answers to this section must be fulsome and sufficiently quantitative and detailed to inform future study on plans vs. results.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				<p>The New gTLD Program will be reviewed, as specified in section 9.3 of the Affirmation of Commitments. This will include consideration of the extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of (a) the application and evaluation process, and (b) safeguards put in place to mitigate issues involved in the introduction or expansion.</p> <p>The information gathered in this section will be one source of input to help inform this review. This information is not used as part of the evaluation or scoring of the application, except to the extent that the information may overlap with questions or evaluation areas that are scored.</p> <p>An applicant wishing to designate this application as community-based should ensure that these responses are consistent with its responses for question 20 below.</p>			
		(b) How do you expect that your proposed gTLD will benefit registrants, Internet users, and others?	Y	<p>Answers should address the following points:</p> <ul style="list-style-type: none"> i. What is the goal of your proposed gTLD in terms of areas of specialty, service levels, or reputation? ii. What do you anticipate your proposed gTLD will add to the current space, in terms of competition, differentiation, or innovation? iii. What goals does your proposed gTLD have in terms of user experience? iv. Provide a complete description of the applicant's intended registration policies in support of the goals listed above. v. Will your proposed gTLD impose any measures for 			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				<p>protecting the privacy or confidential information of registrants or users? If so, please describe any such measures.</p> <p>Describe whether and in what ways outreach and communications will help to achieve your projected benefits.</p>			
	18	(c) What operating rules will you adopt to eliminate or minimize social costs (e.g., time or financial resource costs, as well as various types of consumer vulnerabilities)? What other steps will you take to minimize negative consequences/costs imposed upon consumers?	Y	<p>Answers should address the following points:</p> <ul style="list-style-type: none"> i. How will multiple applications for a particular domain name be resolved, for example, by auction or on a first-come/first-serve basis? ii. Explain any cost benefits for registrants you intend to implement (e.g., advantageous pricing, introductory discounts, bulk registration discounts). iii. Note that the Registry Agreement requires that registrars be offered the option to obtain initial domain name registrations for periods of one to ten years at the discretion of the registrar, but no greater than ten years. Additionally, the Registry Agreement requires advance written notice of price increases. Do you intend to make contractual commitments to registrants regarding the magnitude of price escalation? If so, please describe your plans. 			
Community-based Designation	19	Is the application for a community-based TLD?	Y	There is a presumption that the application is a standard application (as defined in the Applicant Guidebook) if this question is left unanswered.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				The applicant's designation as standard or community-based cannot be changed once the application is submitted.			
	20	(a) Provide the name and full description of the community that the applicant is committing to serve. In the event that this application is included in a community priority evaluation, it will be scored based on the community identified in response to this question. The name of the community does not have to be formally adopted for the application to be designated as community-based.	Y	<p>Descriptions should include:</p> <ul style="list-style-type: none"> • How the community is delineated from Internet users generally. Such descriptions may include, but are not limited to, the following: membership, registration, or licensing processes, operation in a particular industry, use of a language. • How the community is structured and organized. For a community consisting of an alliance of groups, details about the constituent parts are required. • When the community was established, including the date(s) of formal organization, if any, as well as a description of community activities to date. • The current estimated size of the community, both as to membership and geographic extent. 		<p>Responses to Question 20 will be regarded as firm commitments to the specified community and reflected in the Registry Agreement, provided the application is successful.</p> <p>Responses are not scored in the Initial Evaluation. Responses may be scored in a community priority evaluation, if applicable. Criteria and scoring methodology for the community priority evaluation are described in Module 4 of the Applicant Guidebook.</p>	
		(b) Explain the applicant's relationship to the community identified in 20(a).	Y	<p>Explanations should clearly state:</p> <ul style="list-style-type: none"> • Relations to any community organizations. • Relations to the community and its constituent parts/groups. • Accountability mechanisms of the applicant to the community. 			
		(c) Provide a description of the community-based purpose of the applied-for gTLD.	Y	<p>Descriptions should include:</p> <ul style="list-style-type: none"> • Intended registrants in the TLD. • Intended end-users of the TLD. • Related activities the applicant has carried out or intends to carry out in service of this purpose. • Explanation of how the purpose is of a lasting nature. 			
		(d) Explain the relationship between the applied-for gTLD string and the community identified in 20(a).	Y	<p>Explanations should clearly state:</p> <ul style="list-style-type: none"> • relationship to the established name, if any, of the community. 			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				<ul style="list-style-type: none"> relationship to the identification of community members. any connotations the string may have beyond the community. 			
		(e) Provide a complete description of the applicant's intended registration policies in support of the community-based purpose of the applied-for gTLD. Policies and enforcement mechanisms are expected to constitute a coherent set.	Y	<p>Descriptions should include proposed policies, if any, on the following:</p> <ul style="list-style-type: none"> Eligibility: who is eligible to register a second-level name in the gTLD, and how will eligibility be determined. Name selection: what types of second-level names may be registered in the gTLD. Content/Use: what restrictions, if any, the registry operator will impose on how a registrant may use its registered name. Enforcement: what investigation practices and mechanisms exist to enforce the policies above, what resources are allocated for enforcement, and what appeal mechanisms are available to registrants. 			
		(f) Attach any written endorsements for the application from established institutions representative of the community identified in 20(a). An applicant may submit written endorsements by multiple institutions, if relevant to the community.	Y	<p>At least one such endorsement is required for a complete application. The form and content of the endorsement are at the discretion of the party providing the endorsement; however, the letter must identify the applied-for gTLD string and the applying entity, include an express statement support for the application, and the supply the contact information of the entity providing the endorsement.</p> <p>Endorsements from institutions not mentioned in the response to 20(b) should be accompanied by a clear description of each such institution's relationship to the community.</p> <p>Endorsements presented as supporting documentation for this question should be submitted in the original language.</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
Geographic Names	21	(a) Is the application for a geographic name?	Y	<p>An applied-for gTLD string is considered a geographic name requiring government support if it is: (a) the capital city name of a country or territory listed in the ISO 3166-1 standard; (b) a city name, where it is clear from statements in the application that the applicant intends to use the gTLD for purposes associated with the city name; (c) a sub-national place name listed in the ISO 3166-2 standard; or (d) a name listed as a UNESCO region or appearing on the "Composition of macro geographic (continental) or regions, geographic sub-regions, and selected economic and other groupings" list. See Module 2 for complete definitions and criteria.</p> <p>An application for a country or territory name, as defined in the Applicant Guidebook, will not be approved.</p>			
		(b) If a geographic name, attach documentation of support or non-objection from all relevant governments or public authorities.	N	<p>See the documentation requirements in Module 2 of the Applicant Guidebook.</p> <p>Documentation presented in response to this question should be submitted in the original language.</p>			
Protection of Geographic Names	22	Describe proposed measures for protection of geographic names at the second and other levels in the applied-for gTLD. This should include any applicable rules and procedures for reservation and/or release of such names.	Y	<p>Applicants should consider and describe how they will incorporate Governmental Advisory Committee (GAC) advice in their management of second-level domain name registrations. See "Principles regarding New gTLDs" at https://gacweb.icann.org/display/GACADV/New+gTLDs.</p> <p>For reference, applicants may draw on existing methodology developed for the reservation and release of country names in the .INFO top-level domain. See the Dot Info Circular at https://gacweb.icann.org/display/GACADV/New+gTLDs.</p> <p>Proposed measures will be posted for public comment as part of the application. However, note that procedures for release of geographic names at the second level</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				must be separately approved according to Specification 5 of the Registry Agreement. That is, approval of a gTLD application does not constitute approval for release of any geographic names under the Registry Agreement. Such approval must be granted separately by ICANN.			
Registry Services	23	<p>Provide name and full description of all the Registry Services to be provided. Descriptions should include both technical and business components of each proposed service, and address any potential security or stability concerns.</p> <p>The following registry services are customary services offered by a registry operator:</p> <ul style="list-style-type: none"> A. Receipt of data from registrars concerning registration of domain names and name servers. B. Dissemination of TLD zone files. C. Dissemination of contact or other information concerning domain name registrations (e.g., port-43 WHOIS, Web-based Whois, RESTful Whois service). D. Internationalized Domain Names, where offered. E. DNS Security Extensions (DNSSEC). <p>The applicant must describe whether any of these registry services are intended to be offered in a manner unique to the TLD.</p> <p>Additional proposed registry services that are unique to the registry must also be described.</p>	Y	<p>Registry Services are defined as the following: (1) operations of the Registry critical to the following tasks: (i) the receipt of data from registrars concerning registrations of domain names and name servers; (ii) provision to registrars of status information relating to the zone servers for the TLD; (iii) dissemination of TLD zone files; (iv) operation of the Registry zone servers; and (v) dissemination of contact and other information concerning domain name server registrations in the TLD as required by the Registry Agreement; and (2) other products or services that the Registry Operator is required to provide because of the establishment of a Consensus Policy; (3) any other products or services that only a Registry Operator is capable of providing, by reason of its designation as the Registry Operator. A full definition of Registry Services can be found at http://www.icann.org/en/registries/rsep/rsep.html.</p> <p>Security: For purposes of this Applicant Guidebook, an effect on security by the proposed Registry Service means (1) the unauthorized disclosure, alteration, insertion or destruction of Registry Data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with applicable standards.</p> <p>Stability: For purposes of this Applicant Guidebook, an effect on stability shall mean that the proposed Registry Service (1) is not compliant with applicable relevant standards that are authoritative and published by a well-established, recognized and</p>		<p>Responses are not scored. A preliminary assessment will be made to determine if there are potential security or stability issues with any of the applicant's proposed Registry Services. If any such issues are identified, the application will be referred for an extended review. See the description of the Registry Services review process in Module 2 of the Applicant Guidebook. Any information contained in the application may be considered as part of the Registry Services review. If its application is approved, applicant may engage in only those registry services defined in the application, unless a new request is submitted to ICANN in accordance with the Registry Agreement.</p>	

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				authoritative standards body, such as relevant Standards-Track or Best Current Practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects the throughput, response time, consistency or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant Standards-Track or Best Current Practice RFCs and relying on Registry Operator's delegation information or provisioning.			
Demonstration of Technical & Operational Capability (External)	24	<p>Shared Registration System (SRS) Performance: describe</p> <ul style="list-style-type: none"> the plan for operation of a robust and reliable SRS. SRS is a critical registry function for enabling multiple registrars to provide domain name registration services in the TLD. SRS must include the EPP interface to the registry, as well as any other interfaces intended to be provided, if they are critical to the functioning of the registry. Please refer to the requirements in Specification 6 (section 1.2) and Specification 10 (SLA Matrix) attached to the Registry Agreement; and resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). <p>A complete answer should include, but is not limited to:</p> <ul style="list-style-type: none"> A high-level SRS system description; Representative network diagram(s); Number of servers; Description of interconnectivity with other registry systems; Frequency of synchronization between servers; and Synchronization scheme (e.g., hot standby, cold standby). 	Y	<p>The questions in this section (24-44) are intended to give applicants an opportunity to demonstrate their technical and operational capabilities to run a registry. In the event that an applicant chooses to outsource one or more parts of its registry operations, the applicant should still provide the full details of the technical arrangements.</p> <p>Note that the resource plans provided in this section assist in validating the technical and operational plans as well as informing the cost estimates in the Financial section below.</p> <p>Questions 24-30(a) are designed to provide a description of the applicant's intended technical and operational approach for those registry functions that are outward-facing, i.e., interactions with registrars, registrants, and various DNS users. Responses to these questions will be published to allow review by affected parties.</p>	0-1	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> a plan for operating a robust and reliable SRS, one of the five critical registry functions; scalability and performance consistent with the overall business approach, and planned size of the registry; a technical plan that is adequately resourced in the planned costs detailed in the financial section; and evidence of compliance with Specification 6 (section 1.2) to the Registry Agreement. 	<p>1 - meets requirements: Response includes</p> <ol style="list-style-type: none"> An adequate description of SRS that substantially demonstrates the applicant's capabilities and knowledge required to meet this element; Details of a well-developed plan to operate a robust and reliable SRS; SRS plans are sufficient to result in compliance with Specification 6 and Specification 10 to the Registry Agreement; SRS is consistent with the technical, operational and financial approach described in the application; and Demonstrates that adequate technical resources are already on hand, or committed or readily available to carry out this function. <p>0 - fails requirements: Does not meet all the requirements to score 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		A complete answer is expected to be no more than 5 pages. (As a guide, one page contains approximately 4000 characters).					
	25	<p>Extensible Provisioning Protocol (EPP): provide a detailed description of the interface with registrars, including how the applicant will comply with EPP in RFCs 3735 (if applicable), and 5730-5734.</p> <p>If intending to provide proprietary EPP extensions, provide documentation consistent with RFC 3735, including the EPP templates and schemas that will be used.</p> <p>Describe resourcing plans (number and description of personnel roles allocated to this area).</p> <p>A complete answer is expected to be no more than 5 pages. If there are proprietary EPP extensions, a complete answer is also expected to be no more than 5 pages per EPP extension.</p>	Y		0-1	<p>Complete answer demonstrates:</p> <p>(1) complete knowledge and understanding of this aspect of registry technical requirements;</p> <p>(2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry; and</p> <p>(3) a technical plan that is adequately resourced in the planned costs detailed in the financial section;</p> <p>(4) ability to comply with relevant RFCs;</p> <p>(5) if applicable, a well-documented implementation of any proprietary EPP extensions; and</p> <p>(6) if applicable, how proprietary EPP extensions are consistent with the registration lifecycle as described in Question 27.</p>	<p>1 - meets requirements: Response includes</p> <p>(1) Adequate description of EPP that substantially demonstrates the applicant's capability and knowledge required to meet this element;</p> <p>(2) Sufficient evidence that any proprietary EPP extensions are compliant with RFCs and provide all necessary functionalities for the provision of registry services;</p> <p>(3) EPP interface is consistent with the technical, operational, and financial approach as described in the application; and</p> <p>(4) Demonstrates that technical resources are already on hand, or committed or readily available.</p> <p>0 - fails requirements: Does not meet all the requirements to score 1.</p>
	26	<p>Whois: describe</p> <ul style="list-style-type: none"> • how the applicant will comply with Whois specifications for data objects, bulk access, and lookups as defined in Specifications 4 and 10 to the Registry Agreement; • how the Applicant's Whois service will comply with RFC 3912; and • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). <p>A complete answer should include, but is not limited to:</p>	Y	The Registry Agreement (Specification 4) requires provision of Whois lookup services for all names registered in the TLD. This is a minimum requirement. Provision for Searchable Whois as defined in the scoring column is a requirement for achieving a score of 2 points.	0-2	<p>Complete answer demonstrates:</p> <p>(1) complete knowledge and understanding of this aspect of registry technical requirements, (one of the five critical registry functions);</p> <p>(2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry;</p> <p>(3) a technical plan that is adequately resourced in the</p>	<p>2 – exceeds requirements: Response meets all the attributes for a score of 1 and includes:</p> <p>(1) A Searchable Whois service: Whois service includes web-based search capabilities by domain name, registrant name, postal address, contact names, registrar IDs, and Internet Protocol addresses without arbitrary limit. Note that the complete security policy for the registry is required to be submitted in accordance with 30(b).</p>	Y	<p>Criterion 5 calls for security levels to be appropriate for the use and level of trust associated with the TLD string, such as, for example, financial services oriented TLDs. "Financial services" are activities performed by financial institutions, including: 1) the acceptance of deposits and other repayable funds; 2) lending; 3) payment and remittance services; 4) insurance or reinsurance services; 5) brokerage services; 6) investment services and activities; 7) financial leasing; 8) issuance of guarantees and commitments; 9) provision of financial advice; 10) portfolio management and advice; or 11) acting as a financial clearinghouse. Financial services is used as an example only; other strings with exceptional potential to cause harm to consumers would also be expected to deploy appropriate levels of security.</p>	0-2	<p>Complete answer demonstrates:</p> <p>(1) detailed description of processes and solutions deployed to manage logical security across infrastructure and systems, monitoring and detecting threats and security vulnerabilities and taking appropriate steps to resolve them;</p> <p>(2) security capabilities are consistent with the overall business approach and planned size of the registry;</p> <p>(3) a technical plan adequately resourced in the planned costs detailed in the financial section;</p> <p>(4) security measures are consistent with any commitments made to registrants regarding security levels; and</p> <p>(5) security measures are appropriate for the applied-for gTLD string (For example, applications for strings with unique trust implications, such as financial services-oriented strings, would be expected to provide a commensurate level of security).</p>	<p>2 - exceeds requirements: Response meets all attributes for a score of 1 and includes:</p> <p>(1) Evidence of highly developed and detailed security capabilities, with various baseline security levels, independent benchmarking of security metrics, robust periodic security monitoring, and continuous enforcement; and</p> <p>(2) an independent assessment report is provided demonstrating effective security controls are either in place or have been designed, and are commensurate with the applied-for gTLD string. (This could be ISO 27001 certification or other well-established and recognized industry certifications for the registry operation. If new independent standards for demonstration of effective security controls are established, such as the High Security Top Level Domain (HSTLD) designation, this could also be included. An illustrative example of an independent standard is the proposed set of requirements described in http://www.icann.org/en/correspondence/aba-bits-to-beckstrom-crocker-20dec11-en.pdf.)</p> <p>1 - meets requirements: Response includes:</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
							(1) Adequate description of security policies and procedures that substantially demonstrates the applicant's capability and knowledge required to meet this element; (2) A description of adequate security capabilities, including enforcement of logical access control, threat analysis, incident response and auditing. Ad-hoc oversight and governance and leading practices being followed; (3) Security capabilities consistent with the technical, operational, and financial approach as described in the application, and any commitments made to registrants; (4) Demonstrates that an adequate level of resources are on hand, committed or readily available to carry out this function; and (5) Proposed security measures are commensurate with the nature of the applied-for gTLD string. 0 - fails requirements: Does not meet all the requirements to score 1.
Demonstration of Technical & Operational Capability (Internal)	30	(b) Security Policy: provide the complete security policy and procedures for the proposed registry, including but not limited to: <ul style="list-style-type: none"> • system (data, server, application / services) and network access control, ensuring systems are maintained in a secure fashion, including details of how they are monitored, logged and backed up; • resources to secure integrity of updates between registry systems and nameservers, and between nameservers, if any; • independent assessment reports demonstrating security capabilities (submitted as attachments), if any; • provisioning and other measures that mitigate risks posed by denial of service attacks; • computer and network incident response 	N	Questions 30(b) – 44 are designed to provide a description of the applicant's intended technical and operational approach for those registry functions that are internal to the infrastructure and operations of the registry. To allow the applicant to provide full details and safeguard proprietary information, responses to these questions will not be published.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
	39	<p>Registry Continuity: describe how the applicant will comply with registry continuity obligations as described in Specification 6 (section 3) to the registry agreement. This includes conducting registry operations using diverse, redundant servers to ensure continued operation of critical functions in the case of technical failure.</p> <p>Describe resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</p> <p>The response should include, but is not limited to, the following elements of the business continuity plan:</p> <ul style="list-style-type: none"> • Identification of risks and threats to compliance with registry continuity obligations; • Identification and definitions of vital business functions (which may include registry services beyond the five critical registry functions) versus other registry functions and supporting operations and technology; • Definitions of Recovery Point Objectives and Recovery Time Objective; and • Descriptions of testing plans to promote compliance with relevant obligations. <p>To be eligible for a score of 2, answers must also include:</p> <ul style="list-style-type: none"> • A highly detailed plan that provides for leading practice levels of availability; and • Evidence of concrete steps such as a contract with a backup provider (in addition to any currently designated service operator) or a maintained hot site. <p>A complete answer is expected to be no more than 15 pages.</p>	N	<p>For reference, applicants should review the ICANN gTLD Registry Continuity Plan at http://www.icann.org/en/registries/continuity/gtld-registry-continuity-plan-25apr09-en.pdf.</p> <p>A Recovery Point Objective (RPO) refers to the point in time to which data should be recovered following a business disruption or disaster. The RPO allows an organization to define a window of time before a disruption or disaster during which data may be lost and is independent of the time it takes to get a system back on-line. If the RPO of a company is two hours, then when a system is brought back on-line after a disruption/disaster, all data must be restored to a point within two hours before the disaster.</p> <p>A Recovery Time Objective (RTO) is the duration of time within which a process must be restored after a business disruption or disaster to avoid what the entity may deem as unacceptable consequences. For example, pursuant to the draft Registry Agreement DNS service must not be down for longer than 4 hours. At 4 hours ICANN may invoke the use of an Emergency Back End Registry Operator to take over this function. The entity may deem this to be an unacceptable consequence therefore they may set their RTO to be something less than 4 hours and would build continuity plans accordingly.</p> <p>Vital business functions are functions that are critical to the success of the operation. For example, if a registry operator provides an additional service beyond the five critical registry functions, that it deems as central to its TLD, or supports an operation that is central to the TLD, this might be identified as a vital business function.</p>	0-2	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> (1) detailed description showing plans for compliance with registry continuity obligations; (2) a technical plan scope/scale that is consistent with the overall business approach and planned size of the registry; (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; and (4) evidence of compliance with Specification 6 to the Registry Agreement. 	<p>2 - exceeds requirements: Response meets all attributes for a score of 1 and includes:</p> <ol style="list-style-type: none"> (1) Highly developed and detailed processes for maintaining registry continuity; and (2) Evidence of concrete steps, such as a contract with a backup service provider or a maintained hot site. <p>1 - meets requirements: Response includes:</p> <ol style="list-style-type: none"> (1) Adequate description of a Registry Continuity plan that substantially demonstrates capability and knowledge required to meet this element; (2) Continuity plans are sufficient to result in compliance with requirements (Specification 6); (3) Continuity plans are consistent with the technical, operational, and financial approach as described in the application; and (4) Demonstrates an adequate level of resources that are on hand, committed readily available to carry out this function. <p>0 - fails requirements: Does not meet all the requirements to score a 1.</p>
	40	<p>Registry Transition: provide a Service Migration plan (as described in the Registry Transition Processes) that could be followed in the event</p>	N		0-1	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> (1) complete knowledge and 	<p>1 - meets requirements: Response includes</p> <ol style="list-style-type: none"> (1) Adequate description of a registry

		<p>(c) Describe your contingency planning where activity volumes so significantly exceed the high projections that material deviation from the implementation model are required. In particular, how will on-going technical requirements be met?</p> <p>A complete answer is expected to be no more than 10 pages.</p>	N				
	50	<p>(a) Provide a cost estimate for funding critical registry functions on an annual basis, and a rationale for these cost estimates commensurate with the technical, operational, and financial approach described in the application.</p> <p>The critical functions of a registry which must be supported even if an applicant's business and/or funding fails are:</p> <p>(1) DNS resolution for registered domain names</p> <p>Applicants should consider ranges of volume of daily DNS queries (e.g., 0-100M, 100M-1B, 1B+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics.</p> <p>(2) Operation of the Shared Registration System</p> <p>Applicants should consider ranges of volume of daily EPP transactions (e.g., 0-200K, 200K-2M, 2M+), the incremental costs associated with</p>	N	<p>Registrant protection is critical and thus new gTLD applicants are requested to provide evidence indicating that the critical functions will continue to be performed even if the registry fails. Registrant needs are best protected by a clear demonstration that the basic registry functions are sustained for an extended period even in the face of registry failure. Therefore, this section is weighted heavily as a clear, objective measure to protect and serve registrants.</p> <p>The applicant has two tasks associated with adequately making this demonstration of continuity for critical registry functions. First, costs for maintaining critical registrant protection functions are to be estimated (Part a). In evaluating the application, the evaluators will adjudge whether the estimate is reasonable given the systems architecture and overall business approach described elsewhere in the application.</p> <p>The Continuing Operations Instrument (COI) is invoked by ICANN if necessary to pay for an Emergency Back End Registry Operator (EBERO) to maintain the five critical registry functions for a period of three to five years. Thus, the cost estimates are tied to the cost for a third party to provide the functions, not</p>	0-3	<p>Figures provided are based on an accurate estimate of costs. Documented evidence or detailed plan for ability to fund on-going critical registry functions for registrants for a period of three years in the event of registry failure, default or until a successor operator can be designated. Evidence of financial wherewithal to fund this requirement prior to delegation. This requirement must be met prior to or concurrent with the execution of the Registry Agreement.</p>	<p>3 - exceeds requirements: Response meets all the attributes for a score of 1 and:</p> <p>(1) Financial instrument is secured and in place to provide for on-going operations for at least three years in the event of failure.</p> <p>1 - meets requirements:</p> <p>(1) Costs are commensurate with technical, operational, and financial approach as described in the application; and</p> <p>(2) Funding is identified and instrument is described to provide for on-going operations of at least three years in the event of failure.</p> <p>0 - fails requirements: Does not meet all the requirements to score a 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>increasing levels of such queries, and the ability to meet SLA performance metrics.</p> <p>(3) Provision of Whois service</p> <p>Applicants should consider ranges of volume of daily Whois queries (e.g., 0-100K, 100k-1M, 1M+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics for both web-based and port-43 services.</p> <p>(4) Registry data escrow deposits</p> <p>Applicants should consider administration, retention, and transfer fees as well as daily deposit (e.g., full or incremental) handling. Costs may vary depending on the size of the files in escrow (i.e., the size of the registry database).</p> <p>(5) Maintenance of a properly signed zone in accordance with DNSSEC requirements.</p> <p>Applicants should consider ranges of volume of daily DNS queries (e.g., 0-100M, 100M-1B, 1B+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics.</p> <p>List the estimated annual cost for each of these functions (specify currency used).</p> <p>A complete answer is expected to be no more than 10 pages.</p>		<p>to the applicant's actual in-house or subcontracting costs for provision of these functions.</p> <p>Refer to guidelines at http://www.icann.org/en/announcements/announcement-3-23dec11-en.htm regarding estimation of costs. However, the applicant must provide its own estimates and explanation in response to this question.</p>			
		<p>(b) Applicants must provide evidence as to how the funds required for performing these critical registry functions will be available and guaranteed to fund registry operations (for the protection of registrants in the new gTLD) for a</p>	N	<p>Second (Part b), methods of securing the funds required to perform those functions for at least three years are to be described by the applicant in accordance with the criteria below. Two types of instruments will fulfill</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>minimum of three years following the termination of the Registry Agreement. ICANN has identified two methods to fulfill this requirement:</p> <p><u>(i) Irrevocable standby letter of credit (LOC)</u> issued by a reputable financial institution.</p> <ul style="list-style-type: none"> • The amount of the LOC must be equal to or greater than the amount required to fund the registry operations specified above for at least three years. In the event of a draw upon the letter of credit, the actual payout would be tied to the cost of running those functions. • The LOC must name ICANN or its designee as the beneficiary. Any funds paid out would be provided to the designee who is operating the required registry functions. • The LOC must have a term of at least five years from the delegation of the TLD. The LOC may be structured with an annual expiration date if it contains an evergreen provision providing for annual extensions, without amendment, for an indefinite number of periods until the issuing bank informs the beneficiary of its final expiration or until the beneficiary releases the LOC as evidenced in writing. If the expiration date occurs prior to the fifth anniversary of the delegation of the TLD, applicant will be required to obtain a replacement instrument. • The LOC must be issued by a reputable financial institution insured at the highest level in its jurisdiction. Documentation should indicate by whom the issuing institution is insured (i.e., as opposed to by whom the institution is rated). • The LOC will provide that ICANN or its designee shall be unconditionally entitled to a release of funds (full or partial) thereunder upon delivery of written notice by ICANN or its designee. • Applicant should attach an original copy of the executed letter of credit or a draft of the letter of credit containing the full terms and conditions. If not yet executed, the Applicant will be required to provide ICANN with an original copy of the executed LOC prior to or concurrent with the execution of the Registry Agreement. • The LOC must contain at least the following required elements: <ul style="list-style-type: none"> ○ Issuing bank and date of issue. ○ Beneficiary: ICANN / 4676 Admiralty 		<p>this requirement. The applicant must identify which of the two methods is being described. The instrument is required to be in place at the time of the execution of the Registry Agreement.</p> <p>Financial Institution Ratings: The instrument must be issued or held by a financial institution with a rating beginning with "A" (or the equivalent) by any of the following rating agencies: A.M. Best, Dominion Bond Rating Service, Egan-Jones, Fitch Ratings, Kroll Bond Rating Agency, Moody's, Morningstar, Standard & Poor's, and Japan Credit Rating Agency.</p> <p>If an applicant cannot access a financial institution with a rating beginning with "A," but a branch or subsidiary of such an institution exists in the jurisdiction of the applying entity, then the instrument may be issued by the branch or subsidiary or by a local financial institution with an equivalent or higher rating to the branch or subsidiary.</p> <p>If an applicant cannot access any such financial institutions, the instrument may be issued by the highest-rated financial institution in the national jurisdiction of the applying entity, if accepted by ICANN.</p> <p>Execution by ICANN: For any financial instruments that contemplate ICANN being a party, upon the written request of the applicant, ICANN may (but is not obligated to) execute such agreement prior to submission of the applicant's application if the agreement is on terms acceptable to ICANN. ICANN encourages applicants to deliver a written copy of any such agreement (only if it requires ICANN's signature) to ICANN as soon as possible to facilitate ICANN's review. If the financial instrument requires ICANN's signature, then the applicant will receive 3 points for question 50 (for the instrument being "secured and in place") only if ICANN executes the agreement prior to submission of the application. ICANN will determine, in</p>

		<p>of five years from the delegation of the TLD.</p> <ul style="list-style-type: none"> The funds in the deposit escrow account are not considered to be an asset of ICANN. Any interest earnings less bank fees are to accrue to the deposit, and will be paid back to the applicant upon liquidation of the account to the extent not used to pay the costs and expenses of maintaining the escrow. The deposit plus accrued interest, less any bank fees in respect of the escrow, is to be returned to the applicant if the funds are not used to fund registry functions due to a triggering event or after five years, whichever is greater. The Applicant will be required to provide ICANN an explanation as to the amount of the deposit, the institution that will hold the deposit, and the escrow agreement for the account at the time of submitting an application. Applicant should attach evidence of deposited funds in the escrow account, or evidence of provisional arrangement for deposit of funds. Evidence of deposited funds and terms of escrow agreement must be provided to ICANN prior to or concurrent with the execution of the Registry Agreement. 					

Instructions: TLD Applicant – Financial Projections

The application process requires the applicant to submit two cash basis Financial Projections.

The first projection (Template 1) should show the Financial Projections associated with the Most Likely scenario expected. This projection should include the forecasted registration volume, registration fee, and all costs and capital expenditures expected during the start-up period and during the first three years of operations. Template 1 relates to Question 46 (Projections Template) in the application.

We also ask that applicants show as a separate projection (Template 2) the Financial Projections associated with a realistic Worst Case scenario. Template 2 relates to Question 49 (Contingency Planning) in the application.

For each Projection prepared, please include Comments and Notes on the bottom of the projection (in the area provided) to provide those reviewing these projections with information regarding:

1. Assumptions used, significant variances in Operating Cash Flows and Capital Expenditures from year-to-year;
2. How you plan to fund operations;
3. Contingency planning

As you complete Template 1 and Template 2, please reference data points and/or formulas used in your calculations (where appropriate).

Section I – Projected Cash inflows and outflows

Projected Cash Inflows

Lines A and B. Provide the number of forecasted registrations and the registration fee for years 1, 2, and 3. Leave the *Start-up* column blank. The start-up period is for cash costs and capital expenditures only; there should be no cash projections input to this column.

Line C. Multiply lines A and B to arrive at the *Registration Cash Inflow* for line C.

Line D. Provide projected cash inflows from any other revenue source for years 1, 2, and 3. For any figures provided on line D, please disclose the source in the *Comments/Notes* box of Section I. Note, do not include funding in Line D as that is covered in Section VI.

Line E. Add lines C and D to arrive at the total cash inflow.

Projected Operating Cash Outflows

Start up costs - For all line items (F thru L) Please describe the total period of time this start-up cost is expected to cover in the *Comments/Notes* box.

Line F. Provide the projected labor costs for marketing, customer support, and technical support for start-up, year 1, year 2, and year 3. Note, other labor costs should be put in line *L (Other Costs)* and specify the type of labor and associated projected costs in the *Comments/Notes* box of this section.

Line G. *Marketing Costs* represent the amount spent on advertising, promotions, and other marketing activities. This amount should not include labor costs included in Marketing Labor (line *F*).

Lines H through K. Provide projected costs for facilities, G&A, interests and taxes, and Outsourcing for start-up as well as for years 1, 2, and 3. Be sure to list the type of activities that are being outsourced. You may combine certain activities from the same provider as long as an appropriate description of the services being combined is listed in the *Comments/Notes* box.

Line L. Provide any other projected operating costs for start-up, year 1, year 2, year 3. Be sure to specify the type of cost in the *Comments/Notes* box.

Line M. Add lines *F* through *L* to arrive at the total costs for line *M*.

Line N. Subtract line *E* from line *M* to arrive at the projected net operation number for line *N*.

Section IIa – Breakout of Fixed and Variable Operating Cash Outflows

Line A. Provide the projected variable operating cash outflows including labor and other costs that are not fixed in nature. Variable operating cash outflows are expenditures that fluctuate in relationship with increases or decreases in production or level of operations.

Line B. Provide the projected fixed operating cash outflows. Fixed operating cash outflows are expenditures that do not generally fluctuate in relationship with increases or decreases in production or level of operations. Such costs are generally necessary to be incurred in order to operate the base line operations of the organization or are expected to be incurred based on contractual commitments.

Line C – Add lines *A* and *B* to arrive at total Fixed and Variable Operating Cash Outflows for line *C*. This must equal Total Operating Cash Outflows from Section I, Line *M*.

Section IIb – Breakout of Critical Registry Function Operating Cash Outflows

Lines A – E. Provide the projected cash outflows for the five critical registry functions. If these functions are outsourced, the component of the outsourcing fee representing these functions must be separately identified and provided. These costs are based on the applicant's cost to manage these functions and should be calculated separately from the Continued Operations Instrument (COI) for Question 50.

Line F. If there are other critical registry functions based on the applicant's registry business model then the projected cash outflow for this function must be provided with a description added to the *Comment/Notes* box. This projected cash outflow may also be included in the 3-year reserve.

Line G. Add lines *A* through *F* to arrive at the Total Critical Registry Function Cash Outflows.

Section III – Projected Capital Expenditures

Lines A through C. Provide projected hardware, software, and furniture & equipment capital expenditures for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line D. Provide any projected capital expenditures as a result of outsourcing. This should be included for start-up and years 1, 2, and 3. Specify the type of expenditure and describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box of Section III.

Line E – Please describe “other” capital expenditures in the *Comments/Notes* box.

Line F. Add lines A through E to arrive at the Total Capital Expenditures.

Section IV – Projected Assets & Liabilities

Lines A through C. Provide projected cash, account receivables, and other current assets for start-up as well as for years 1, 2, and 3. For *Other Current Assets*, specify the type of asset and describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line D. Add lines A, B, C to arrive at the Total Current Assets.

Lines E through G. Provide projected accounts payable, short-term debt, and other current liabilities for start-up as well as for years 1, 2, and 3. For *Other Current Liabilities*, specify the type of liability and describe the total period of time the start-up up cost is expected to cover in the *Comments/Notes* box.

Line H. Ad lines E through G to arrive at the total current liabilities.

Lines I through K. Provide the projected fixed assets (PP&E), the 3-year reserve, and long-term assets for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line L. Ad lines I through K to arrive at the total long-term assets.

Line M. Provide the projected long-term debt for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box

Section V – Projected Cash Flow

Cash flow is driven by *Projected Net Operations* (Section I), *Projected Capital Expenditures* (Section III), and *Projected Assets & Liabilities* (Section IV).

Line A. Provide the projected net operating cash flows for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line B. Provide the projected capital expenditures for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box of Section V.

Lines C through F. Provide the projected change in non-cash current assets, total current liabilities, debt adjustments, and other adjustments for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line G. Add lines A through F to arrive at the projected net cash flow for line H.

Section VI – Sources of Funds

Lines A & B. Provide projected funds from debt and equity at start-up. Describe the sources of debt and equity funding as well as the total period of time the start-up is expected to cover in the *Comments/Notes* box. Please also provide evidence the funding (e.g., letter of commitment).

Line C. Add lines A and B to arrive at the total sources of funds for line C.

General Comments – Regarding Assumptions Used, Significant Variances Between Years, etc.

Provide explanations for any significant variances between years (or expected in years beyond the timeframe of the template) in any category of costing or funding.

General Comments – Regarding how the Applicant Plans to Fund Operations

Provide general comments explaining how you will fund operations. Funding should be explained in detail in response to question 48.

General Comments – Regarding Contingencies

Provide general comments to describe your contingency planning. Contingency planning should be explained in detail in response to question 49.

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 3

4 June 2012

Module 3

Objection Procedures

This module describes two types of mechanisms that may affect an application:

- I. The procedure by which ICANN's Governmental Advisory Committee may provide GAC Advice on New gTLDs to the ICANN Board of Directors concerning a specific application. This module describes the purpose of this procedure, and how GAC Advice on New gTLDs is considered by the ICANN Board once received.
- II. The dispute resolution procedure triggered by a formal objection to an application by a third party. This module describes the purpose of the objection and dispute resolution mechanisms, the grounds for lodging a formal objection to a gTLD application, the general procedures for filing or responding to an objection, and the manner in which dispute resolution proceedings are conducted.

This module also discusses the guiding principles, or standards, that each dispute resolution panel will apply in reaching its expert determination.

All applicants should be aware of the possibility that a formal objection may be filed against any application, and of the procedures and options available in the event of such an objection.

3.1 GAC Advice on New gTLDs

ICANN's Governmental Advisory Committee was formed to consider and provide advice on the activities of ICANN as they relate to concerns of governments, particularly matters where there may be an interaction between ICANN's policies and various laws and international agreements or where they may affect public policy issues.

The process for GAC Advice on New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities.

GAC members can raise concerns about any application to the GAC. The GAC as a whole will consider concerns

raised by GAC members, and agree on GAC advice to forward to the ICANN Board of Directors.

The GAC can provide advice on any application. For the Board to be able to consider the GAC advice during the evaluation process, the GAC advice would have to be submitted by the close of the Objection Filing Period (see Module 1).

GAC Advice may take one of the following forms:

- I. The GAC advises ICANN that it is the consensus of the GAC that a particular application should not proceed. This will create a strong presumption for the ICANN Board that the application should not be approved.
- II. The GAC advises ICANN that there are concerns about a particular application "dot-example." The ICANN Board is expected to enter into dialogue with the GAC to understand the scope of concerns. The ICANN Board is also expected to provide a rationale for its decision.
- III. The GAC advises ICANN that an application should not proceed unless remediated. This will raise a strong presumption for the Board that the application should not proceed unless there is a remediation method available in the Guidebook (such as securing the approval of one or more governments), that is implemented by the applicant.

Where GAC Advice on New gTLDs is received by the Board concerning an application, ICANN will publish the Advice and endeavor to notify the relevant applicant(s) promptly. The applicant will have a period of 21 calendar days from the publication date in which to submit a response to the ICANN Board.

ICANN will consider the GAC Advice on New gTLDs as soon as practicable. The Board may consult with independent experts, such as those designated to hear objections in the New gTLD Dispute Resolution Procedure, in cases where the issues raised in the GAC advice are pertinent to one of the subject matter areas of the objection procedures. The receipt of GAC advice will not toll the processing of any application (i.e., an application will not be suspended but will continue through the stages of the application process).

3.2 *Public Objection and Dispute Resolution Process*

The independent dispute resolution process is designed to protect certain interests and rights. The process provides a path for formal objections during evaluation of the applications. It allows a party with standing to have its objection considered before a panel of qualified experts.

A formal objection can be filed only on four enumerated grounds, as described in this module. A formal objection initiates a dispute resolution proceeding. In filing an application for a gTLD, the applicant agrees to accept the applicability of this gTLD dispute resolution process. Similarly, an objector accepts the applicability of this gTLD dispute resolution process by filing its objection.

As described in section 3.1 above, ICANN's Governmental Advisory Committee has a designated process for providing advice to the ICANN Board of Directors on matters affecting public policy issues, and these objection procedures would not be applicable in such a case. The GAC may provide advice on any topic and is not limited to the grounds for objection enumerated in the public objection and dispute resolution process.

3.2.1 *Grounds for Objection*

A formal objection may be filed on any one of the following four grounds:

String Confusion Objection – The applied-for gTLD string is confusingly similar to an existing TLD or to another applied-for gTLD string in the same round of applications.

Legal Rights Objection – The applied-for gTLD string infringes the existing legal rights of the objector.

Limited Public Interest Objection – The applied-for gTLD string is contrary to generally accepted legal norms of morality and public order that are recognized under principles of international law.

Community Objection – There is substantial opposition to the gTLD application from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted.

The rationales for these objection grounds are discussed in the final report of the ICANN policy development process for new gTLDs. For more information on this process, see

<http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm>.

3.2.2 *Standing to Object*

Objectors must satisfy standing requirements to have their objections considered. As part of the dispute proceedings, all objections will be reviewed by a panel of experts designated by the applicable Dispute Resolution Service Provider (DRSP) to determine whether the objector has standing to object. Standing requirements for the four objection grounds are:

Objection ground	Who may object
String confusion	Existing TLD operator or gTLD applicant in current round. In the case where an IDN ccTLD Fast Track request has been submitted before the public posting of gTLD applications received, and the Fast Track requestor wishes to file a string confusion objection to a gTLD application, the Fast Track requestor will be granted standing.
Legal rights	Rightsholders
Limited public interest	No limitations on who may file – however, subject to a “quick look” designed for early conclusion of frivolous and/or abusive objections
Community	Established institution associated with a clearly delineated community

3.2.2.1 *String Confusion Objection*

Two types of entities have standing to object:

- An existing TLD operator may file a string confusion objection to assert string confusion between an applied-for gTLD and the TLD that it currently operates.
- Any gTLD applicant in this application round may file a string confusion objection to assert string confusion between an applied-for gTLD and the gTLD for which it has applied, where string confusion between the two applicants has not already been found in the Initial Evaluation. That is, an applicant does not have standing to object to another application with which it is already in a contention set as a result of the Initial Evaluation.

In the case where an existing TLD operator successfully asserts string confusion with an applicant, the application will be rejected.

In the case where a gTLD applicant successfully asserts string confusion with another applicant, the only possible

outcome is for both applicants to be placed in a contention set and to be referred to a contention resolution procedure (refer to Module 4, String Contention Procedures). If an objection by one gTLD applicant to another gTLD application is unsuccessful, the applicants may both move forward in the process without being considered in direct contention with one another.

3.2.2.2 Legal Rights Objection

A rightsholder has standing to file a legal rights objection. The source and documentation of the existing legal rights the objector is claiming (which may include either registered or unregistered trademarks) are infringed by the applied-for gTLD must be included in the filing.

An intergovernmental organization (IGO) is eligible to file a legal rights objection if it meets the criteria for registration of a .INT domain name¹:

- a) An international treaty between or among national governments must have established the organization; and
- b) The organization that is established must be widely considered to have independent international legal personality and must be the subject of and governed by international law.

The specialized agencies of the UN and the organizations having observer status at the UN General Assembly are also recognized as meeting the criteria.

3.2.2.3 Limited Public Interest Objection

Anyone may file a Limited Public Interest Objection. Due to the inclusive standing base, however, objectors are subject to a "quick look" procedure designed to identify and eliminate frivolous and/or abusive objections. An objection found to be manifestly unfounded and/or an abuse of the right to object may be dismissed at any time.

A Limited Public Interest objection would be manifestly unfounded if it did not fall within one of the categories that have been defined as the grounds for such an objection (see subsection 3.5.3).

A Limited Public Interest objection that is manifestly unfounded may also be an abuse of the right to object. An objection may be framed to fall within one of the

¹ See also <http://www.iana.org/domains/int/policy/>.

accepted categories for Limited Public Interest objections, but other facts may clearly show that the objection is abusive. For example, multiple objections filed by the same or related parties against a single applicant may constitute harassment of the applicant, rather than a legitimate defense of legal norms that are recognized under general principles of international law. An objection that attacks the applicant, rather than the applied-for string, could be an abuse of the right to object.²

The quick look is the Panel's first task, after its appointment by the DRSP and is a review on the merits of the objection. The dismissal of an objection that is manifestly unfounded and/or an abuse of the right to object would be an Expert Determination, rendered in accordance with Article 21 of the New gTLD Dispute Resolution Procedure.

In the case where the quick look review does lead to the dismissal of the objection, the proceedings that normally follow the initial submissions (including payment of the full advance on costs) will not take place, and it is currently contemplated that the filing fee paid by the applicant would be refunded, pursuant to Procedure Article 14(e).

3.2.2.4 Community Objection

Established institutions associated with clearly delineated communities are eligible to file a community objection. The community named by the objector must be a community strongly associated with the applied-for gTLD string in the application that is the subject of the objection. To qualify for standing for a community objection, the objector must prove both of the following:

² The jurisprudence of the European Court of Human Rights offers specific examples of how the term "manifestly ill-founded" has been interpreted in disputes relating to human rights. Article 35(3) of the European Convention on Human Rights provides: "The Court shall declare inadmissible any individual application submitted under Article 34 which it considers incompatible with the provisions of the Convention or the protocols thereto, manifestly ill-founded, or an abuse of the right of application." The ECHR renders reasoned decisions on admissibility, pursuant to Article 35 of the Convention. (Its decisions are published on the Court's website <http://www.echr.coe.int>.) In some cases, the Court briefly states the facts and the law and then announces its decision, without discussion or analysis. E.g., Decision as to the Admissibility of Application No. 34328/96 by Egbert Peree against the Netherlands (1998). In other cases, the Court reviews the facts and the relevant legal rules in detail, providing an analysis to support its conclusion on the admissibility of an application. Examples of such decisions regarding applications alleging violations of Article 10 of the Convention (freedom of expression) include: *Décision sur la recevabilité de la requête no 65831/01 présentée par Roger Garaudy contre la France* (2003); *Décision sur la recevabilité de la requête no 65297/01 présentée par Eduardo Fernando Alves Costa contre le Portugal* (2004).

The jurisprudence of the European Court of Human Rights also provides examples of the abuse of the right of application being sanctioned, in accordance with ECHR Article 35(3). See, for example, *Décision partielle sur la recevabilité de la requête no 61164/00 présentée par Gérard Duringer et autres contre la France et de la requête no 18589/02 contre la France* (2003).

It is an established institution – Factors that may be considered in making this determination include, but are not limited to:

- Level of global recognition of the institution;
- Length of time the institution has been in existence; and
- Public historical evidence of its existence, such as the presence of a formal charter or national or international registration, or validation by a government, inter-governmental organization, or treaty. The institution must not have been established solely in conjunction with the gTLD application process.

It has an ongoing relationship with a clearly delineated community – Factors that may be considered in making this determination include, but are not limited to:

- The presence of mechanisms for participation in activities, membership, and leadership;
- Institutional purpose related to the benefit of the associated community;
- Performance of regular activities that benefit the associated community; and
- The level of formal boundaries around the community.

The panel will perform a balancing of the factors listed above, as well as other relevant information, in making its determination. It is not expected that an objector must demonstrate satisfaction of each and every factor considered in order to satisfy the standing requirements.

3.2.3 Dispute Resolution Service Providers

To trigger a dispute resolution proceeding, an objection must be filed by the posted deadline date, directly with the appropriate DRSP for each objection ground.

- The International Centre for Dispute Resolution has agreed to administer disputes brought pursuant to string confusion objections.
- The Arbitration and Mediation Center of the World Intellectual Property Organization has agreed to administer disputes brought pursuant to legal rights objections.

- The International Center of Expertise of the International Chamber of Commerce has agreed to administer disputes brought pursuant to Limited Public Interest and Community Objections.

ICANN selected DRSPs on the basis of their relevant experience and expertise, as well as their willingness and ability to administer dispute proceedings in the new gTLD Program. The selection process began with a public call for expressions of interest³ followed by dialogue with those candidates who responded. The call for expressions of interest specified several criteria for providers, including established services, subject matter expertise, global capacity, and operational capabilities. An important aspect of the selection process was the ability to recruit panelists who will engender the respect of the parties to the dispute.

3.2.4 Options in the Event of Objection

Applicants whose applications are the subject of an objection have the following options:

The applicant can work to reach a settlement with the objector, resulting in withdrawal of the objection or the application;

The applicant can file a response to the objection and enter the dispute resolution process (refer to Section 3.2); or

The applicant can withdraw, in which case the objector will prevail by default and the application will not proceed further.

If for any reason the applicant does not file a response to an objection, the objector will prevail by default.

3.2.5 Independent Objector

A formal objection to a gTLD application may also be filed by the Independent Objector (IO). The IO does not act on behalf of any particular persons or entities, but acts solely in the best interests of the public who use the global Internet.

In light of this public interest goal, the Independent Objector is limited to filing objections on the grounds of Limited Public Interest and Community.

³ See <http://www.icann.org/en/announcements/announcement-21dec07.htm>.

Neither ICANN staff nor the ICANN Board of Directors has authority to direct or require the IO to file or not file any particular objection. If the IO determines that an objection should be filed, he or she will initiate and prosecute the objection in the public interest.

Mandate and Scope - The IO may file objections against “highly objectionable” gTLD applications to which no objection has been filed. The IO is limited to filing two types of objections: (1) Limited Public Interest objections and (2) Community objections. The IO is granted standing to file objections on these enumerated grounds, notwithstanding the regular standing requirements for such objections (see subsection 3.1.2).

The IO may file a Limited Public Interest objection against an application even if a Community objection has been filed, and vice versa.

The IO may file an objection against an application, notwithstanding the fact that a String Confusion objection or a Legal Rights objection was filed.

Absent extraordinary circumstances, the IO is not permitted to file an objection to an application where an objection has already been filed on the same ground.

The IO may consider public comment when making an independent assessment whether an objection is warranted. The IO will have access to application comments received during the comment period.

In light of the public interest goal noted above, the IO shall not object to an application unless at least one comment in opposition to the application is made in the public sphere.

Selection – The IO will be selected by ICANN, through an open and transparent process, and retained as an independent consultant. The Independent Objector will be an individual with considerable experience and respect in the Internet community, unaffiliated with any gTLD applicant.

Although recommendations for IO candidates from the community are welcomed, the IO must be and remain independent and unaffiliated with any of the gTLD applicants. The various rules of ethics for judges and international arbitrators provide models for the IO to declare and maintain his/her independence.

The IO's (renewable) tenure is limited to the time necessary to carry out his/her duties in connection with a single round of gTLD applications.

Budget and Funding – The IO's budget would comprise two principal elements: (a) salaries and operating expenses, and (b) dispute resolution procedure costs – both of which should be funded from the proceeds of new gTLD applications.

As an objector in dispute resolution proceedings, the IO is required to pay filing and administrative fees, as well as advance payment of costs, just as all other objectors are required to do. Those payments will be refunded by the DRSP in cases where the IO is the prevailing party.

In addition, the IO will incur various expenses in presenting objections before DRSP panels that will not be refunded, regardless of the outcome. These expenses include the fees and expenses of outside counsel (if retained) and the costs of legal research or factual investigations.

3.3 *Filing Procedures*

The information included in this section provides a summary of procedures for filing:

- Objections; and
- Responses to objections.

For a comprehensive statement of filing requirements applicable generally, refer to the New gTLD Dispute Resolution Procedure ("Procedure") included as an attachment to this module. In the event of any discrepancy between the information presented in this module and the Procedure, the Procedure shall prevail.

Note that the rules and procedures of each DRSP specific to each objection ground must also be followed. See <http://newgtlds.icann.org/en/program-status/objection-dispute-resolution>.

3.3.1 *Objection Filing Procedures*

The procedures outlined in this subsection must be followed by any party wishing to file a formal objection to an application that has been posted by ICANN. Should an applicant wish to file a formal objection to another gTLD application, it would follow these same procedures.

- All objections must be filed electronically with the appropriate DRSP by the posted deadline date.

Objections will not be accepted by the DRSPs after this date.

- All objections must be filed in English.
- Each objection must be filed separately. An objector wishing to object to several applications must file a separate objection and pay the accompanying filing fees for each application that is the subject of an objection. If an objector wishes to object to an application on more than one ground, the objector must file separate objections and pay the accompanying filing fees for each objection ground.

Each objection filed by an objector must include:

- The name and contact information of the objector.
- A statement of the objector's basis for standing; that is, why the objector believes it meets the standing requirements to object.
- A description of the basis for the objection, including:
 - A statement giving the specific ground upon which the objection is being filed.
 - A detailed explanation of the validity of the objection and why it should be upheld.
- Copies of any documents that the objector considers to be a basis for the objection.

Objections are limited to 5000 words or 20 pages, whichever is less, excluding attachments.

An objector must provide copies of all submissions to the DRSP associated with the objection proceedings to the applicant.

The DRSP will publish, and regularly update a list on its website identifying all objections as they are filed. ICANN will post on its website a notice of all objections filed once the objection filing period has closed.

3.3.2 Objection Filing Fees

At the time an objection is filed, the objector is required to pay a filing fee in the amount set and published by the relevant DRSP. If the filing fee is not paid, the DRSP will

dismiss the objection without prejudice. See Section 1.5 of Module 1 regarding fees.

Funding from ICANN for objection filing fees, as well as for advance payment of costs (see subsection 3.4.7 below) is available to the At-Large Advisory Committee (ALAC). Funding for ALAC objection filing and dispute resolution fees is contingent on publication by ALAC of its approved process for considering and making objections. At a minimum, the process for objecting to a gTLD application will require: bottom-up development of potential objections, discussion and approval of objections at the Regional At-Large Organization (RALO) level, and a process for consideration and approval of the objection by the At-Large Advisory Committee.

Funding from ICANN for objection filing fees, as well as for advance payment of costs, is available to individual national governments in the amount of USD 50,000 with the guarantee that a minimum of one objection per government will be fully funded by ICANN where requested. ICANN will develop a procedure for application and disbursement of funds.

Funding available from ICANN is to cover costs payable to the dispute resolution service provider and made directly to the dispute resolution service provider; it does not cover other costs such as fees for legal advice.

3.3.3 Response Filing Procedures

Upon notification that ICANN has published the list of all objections filed (refer to subsection 3.3.1), the DRSPs will notify the parties that responses must be filed within 30 calendar days of receipt of that notice. DRSPs will not accept late responses. Any applicant that fails to respond to an objection within the 30-day response period will be in default, which will result in the objector prevailing.

- All responses must be filed in English.
- Each response must be filed separately. That is, an applicant responding to several objections must file a separate response and pay the accompanying filing fee to respond to each objection.
- Responses must be filed electronically.

Each response filed by an applicant must include:

- The name and contact information of the applicant.

- A point-by-point response to the claims made by the objector.
- Any copies of documents that it considers to be a basis for the response.

Responses are limited to 5000 words or 20 pages, whichever is less, excluding attachments.

Each applicant must provide copies of all submissions to the DRSP associated with the objection proceedings to the objector.

3.3.4 Response Filing Fees

At the time an applicant files its response, it is required to pay a filing fee in the amount set and published by the relevant DRSP, which will be the same as the filing fee paid by the objector. If the filing fee is not paid, the response will be disregarded, which will result in the objector prevailing.

3.4 Objection Processing Overview

The information below provides an overview of the process by which DRSPs administer dispute proceedings that have been initiated. For comprehensive information, please refer to the New gTLD Dispute Resolution Procedure (included as an attachment to this module).

3.4.1 Administrative Review

Each DRSP will conduct an administrative review of each objection for compliance with all procedural rules within 14 calendar days of receiving the objection. Depending on the number of objections received, the DRSP may ask ICANN for a short extension of this deadline.

If the DRSP finds that the objection complies with procedural rules, the objection will be deemed filed, and the proceedings will continue. If the DRSP finds that the objection does not comply with procedural rules, the DRSP will dismiss the objection and close the proceedings without prejudice to the objector's right to submit a new objection that complies with procedural rules. The DRSP's review or rejection of the objection will not interrupt the time limit for filing an objection.

3.4.2 Consolidation of Objections

Once the DRSP receives and processes all objections, at its discretion the DRSP may elect to consolidate certain objections. The DRSP shall endeavor to decide upon

consolidation prior to issuing its notice to applicants that the response should be filed and, where appropriate, shall inform the parties of the consolidation in that notice.

An example of a circumstance in which consolidation might occur is multiple objections to the same application based on the same ground.

In assessing whether to consolidate objections, the DRSP will weigh the efficiencies in time, money, effort, and consistency that may be gained by consolidation against the prejudice or inconvenience consolidation may cause. The DRSPs will endeavor to have all objections resolved on a similar timeline. It is intended that no sequencing of objections will be established.

New gTLD applicants and objectors also will be permitted to propose consolidation of objections, but it will be at the DRSP's discretion whether to agree to the proposal.

ICANN continues to strongly encourage all of the DRSPs to consolidate matters whenever practicable.

3.4.3 *Mediation*

The parties to a dispute resolution proceeding are encouraged—but not required—to participate in mediation aimed at settling the dispute. Each DRSP has experts who can be retained as mediators to facilitate this process, should the parties elect to do so, and the DRSPs will communicate with the parties concerning this option and any associated fees.

If a mediator is appointed, that person may not serve on the panel constituted to issue an expert determination in the related dispute.

There are no automatic extensions of time associated with the conduct of negotiations or mediation. The parties may submit joint requests for extensions of time to the DRSP according to its procedures, and the DRSP or the panel, if appointed, will decide whether to grant the requests, although extensions will be discouraged. Absent exceptional circumstances, the parties must limit their requests for extension to 30 calendar days.

The parties are free to negotiate without mediation at any time, or to engage a mutually acceptable mediator of their own accord.

3.4.4 Selection of Expert Panels

A panel will consist of appropriately qualified experts appointed to each proceeding by the designated DRSP. Experts must be independent of the parties to a dispute resolution proceeding. Each DRSP will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing an expert for lack of independence.

There will be one expert in proceedings involving a string confusion objection.

There will be one expert, or, if all parties agree, three experts with relevant experience in intellectual property rights disputes in proceedings involving an existing legal rights objection.

There will be three experts recognized as eminent jurists of international reputation, with expertise in relevant fields as appropriate, in proceedings involving a Limited Public Interest objection.

There will be one expert in proceedings involving a community objection.

Neither the experts, the DRSP, ICANN, nor their respective employees, directors, or consultants will be liable to any party in any action for damages or injunctive relief for any act or omission in connection with any proceeding under the dispute resolution procedures.

3.4.5 Adjudication

The panel may decide whether the parties shall submit any written statements in addition to the filed objection and response, and may specify time limits for such submissions.

In order to achieve the goal of resolving disputes rapidly and at reasonable cost, procedures for the production of documents shall be limited. In exceptional cases, the panel may require a party to produce additional evidence.

Disputes will usually be resolved without an in-person hearing. The panel may decide to hold such a hearing only in extraordinary circumstances.

3.4.6 Expert Determination

The DRSPs' final expert determinations will be in writing and will include:

- A summary of the dispute and findings;

- An identification of the prevailing party; and
- The reasoning upon which the expert determination is based.

Unless the panel decides otherwise, each DRSP will publish all decisions rendered by its panels in full on its website.

The findings of the panel will be considered an expert determination and advice that ICANN will accept within the dispute resolution process.

3.4.7 Dispute Resolution Costs

Before acceptance of objections, each DRSP will publish a schedule of costs or statement of how costs will be calculated for the proceedings that it administers under this procedure. These costs cover the fees and expenses of the members of the panel and the DRSP's administrative costs.

ICANN expects that string confusion and legal rights objection proceedings will involve a fixed amount charged by the panelists while Limited Public Interest and community objection proceedings will involve hourly rates charged by the panelists.

Within ten (10) calendar days of constituting the panel, the DRSP will estimate the total costs and request advance payment in full of its costs from both the objector and the applicant. Each party must make its advance payment within ten (10) calendar days of receiving the DRSP's request for payment and submit to the DRSP evidence of such payment. The respective filing fees paid by the parties will be credited against the amounts due for this advance payment of costs.

The DRSP may revise its estimate of the total costs and request additional advance payments from the parties during the resolution proceedings.

Additional fees may be required in specific circumstances; for example, if the DRSP receives supplemental submissions or elects to hold a hearing.

If an objector fails to pay these costs in advance, the DRSP will dismiss its objection and no fees paid by the objector will be refunded.

If an applicant fails to pay these costs in advance, the DSRP will sustain the objection and no fees paid by the applicant will be refunded.

After the hearing has taken place and the panel renders its expert determination, the DRSP will refund the advance payment of costs to the prevailing party.

3.5 Dispute Resolution Principles (Standards)

Each panel will use appropriate general principles (standards) to evaluate the merits of each objection. The principles for adjudication on each type of objection are specified in the paragraphs that follow. The panel may also refer to other relevant rules of international law in connection with the standards.

The objector bears the burden of proof in each case.

The principles outlined below are subject to evolution based on ongoing consultation with DRSPs, legal experts, and the public.

3.5.1 String Confusion Objection

A DRSP panel hearing a string confusion objection will consider whether the applied-for gTLD string is likely to result in string confusion. String confusion exists where a string so nearly resembles another that it is likely to deceive or cause confusion. For a likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

3.5.2 Legal Rights Objection

In interpreting and giving meaning to GNSO Recommendation 3 (“Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law”), a DRSP panel of experts presiding over a legal rights objection will determine whether the potential use of the applied-for gTLD by the applicant takes unfair advantage of the distinctive character or the reputation of the objector’s registered or unregistered trademark or service mark (“mark”) or IGO name or acronym (as identified in the treaty establishing the organization), or unjustifiably impairs the distinctive character or the reputation of the objector’s mark or IGO name or acronym, or otherwise creates an impermissible likelihood of confusion between the applied-for gTLD and the objector’s mark or IGO name or acronym.

In the case where the objection is based on trademark rights, the panel will consider the following non-exclusive factors:

1. Whether the applied-for gTLD is identical or similar, including in appearance, phonetic sound, or meaning, to the objector's existing mark.
2. Whether the objector's acquisition and use of rights in the mark has been bona fide.
3. Whether and to what extent there is recognition in the relevant sector of the public of the sign corresponding to the gTLD, as the mark of the objector, of the applicant or of a third party.
4. Applicant's intent in applying for the gTLD, including whether the applicant, at the time of application for the gTLD, had knowledge of the objector's mark, or could not have reasonably been unaware of that mark, and including whether the applicant has engaged in a pattern of conduct whereby it applied for or operates TLDs or registrations in TLDs which are identical or confusingly similar to the marks of others.
5. Whether and to what extent the applicant has used, or has made demonstrable preparations to use, the sign corresponding to the gTLD in connection with a bona fide offering of goods or services or a bona fide provision of information in a way that does not interfere with the legitimate exercise by the objector of its mark rights.
6. Whether the applicant has marks or other intellectual property rights in the sign corresponding to the gTLD, and, if so, whether any acquisition of such a right in the sign, and use of the sign, has been bona fide, and whether the purported or likely use of the gTLD by the applicant is consistent with such acquisition or use.
7. Whether and to what extent the applicant has been commonly known by the sign corresponding to the gTLD, and if so, whether any purported or likely use of the gTLD by the applicant is consistent therewith and bona fide.
8. Whether the applicant's intended use of the gTLD would create a likelihood of confusion with the objector's mark as to the source, sponsorship, affiliation, or endorsement of the gTLD.

In the case where a legal rights objection has been filed by an IGO, the panel will consider the following non-exclusive factors:

1. Whether the applied-for gTLD is identical or similar, including in appearance, phonetic sound or meaning, to the name or acronym of the objecting IGO;
2. Historical coexistence of the IGO and the applicant's use of a similar name or acronym. Factors considered may include:
 - a. Level of global recognition of both entities;
 - b. Length of time the entities have been in existence;
 - c. Public historical evidence of their existence, which may include whether the objecting IGO has communicated its name or abbreviation under Article 6^{ter} of the Paris Convention for the Protection of Industrial Property.
3. Whether and to what extent the applicant has used, or has made demonstrable preparations to use, the sign corresponding to the TLD in connection with a bona fide offering of goods or services or a bona fide provision of information in a way that does not interfere with the legitimate exercise of the objecting IGO's name or acronym;
4. Whether and to what extent the applicant has been commonly known by the sign corresponding to the applied-for gTLD, and if so, whether any purported or likely use of the gTLD by the applicant is consistent therewith and bona fide; and
5. Whether the applicant's intended use of the applied-for gTLD would create a likelihood of confusion with the objecting IGO's name or acronym as to the source, sponsorship, affiliation, or endorsement of the TLD.

3.5.3 Limited Public Interest Objection

An expert panel hearing a Limited Public Interest objection will consider whether the applied-for gTLD string is contrary to general principles of international law for morality and public order.

Examples of instruments containing such general principles include:

- The Universal Declaration of Human Rights (UDHR)

- The International Covenant on Civil and Political Rights (ICCPR)
- The Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW)
- The International Convention on the Elimination of All Forms of Racial Discrimination
- Declaration on the Elimination of Violence against Women
- The International Covenant on Economic, Social, and Cultural Rights
- The Convention against Torture and Other Cruel, Inhuman, or Degrading Treatment or Punishment
- The International Convention on the Protection of the Rights of all Migrant Workers and Members of their Families
- Slavery Convention
- Convention on the Prevention and Punishment of the Crime of Genocide
- Convention on the Rights of the Child

Note that these are included to serve as examples, rather than an exhaustive list. It should be noted that these instruments vary in their ratification status. Additionally, states may limit the scope of certain provisions through reservations and declarations indicating how they will interpret and apply certain provisions. National laws not based on principles of international law are not a valid ground for a Limited Public Interest objection.

Under these principles, everyone has the right to freedom of expression, but the exercise of this right carries with it special duties and responsibilities. Accordingly, certain limited restrictions may apply.

The grounds upon which an applied-for gTLD string may be considered contrary to generally accepted legal norms relating to morality and public order that are recognized under principles of international law are:

- Incitement to or promotion of violent lawless action;
- Incitement to or promotion of discrimination based upon race, color, gender, ethnicity, religion or national origin, or other similar types of

discrimination that violate generally accepted legal norms recognized under principles of international law;

- Incitement to or promotion of child pornography or other sexual abuse of children; or
- A determination that an applied-for gTLD string would be contrary to specific principles of international law as reflected in relevant international instruments of law.

The panel will conduct its analysis on the basis of the applied-for gTLD string itself. The panel may, if needed, use as additional context the intended purpose of the TLD as stated in the application.

3.5.4 Community Objection

The four tests described here will enable a DRSP panel to determine whether there is substantial opposition from a significant portion of the community to which the string may be targeted. For an objection to be successful, the objector must prove that:

- The community invoked by the objector is a clearly delineated community; and
- Community opposition to the application is substantial; and
- There is a strong association between the community invoked and the applied-for gTLD string; and
- The application creates a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted. Each of these tests is described in further detail below.

Community – The objector must prove that the community expressing opposition can be regarded as a clearly delineated community. A panel could balance a number of factors to determine this, including but not limited to:

- The level of public recognition of the group as a community at a local and/or global level;
- The level of formal boundaries around the community and what persons or entities are considered to form the community;

- The length of time the community has been in existence;
- The global distribution of the community (this may not apply if the community is territorial); and
- The number of people or entities that make up the community.

If opposition by a number of people/entities is found, but the group represented by the objector is not determined to be a clearly delineated community, the objection will fail.

Substantial Opposition – The objector must prove substantial opposition within the community it has identified itself as representing. A panel could balance a number of factors to determine whether there is substantial opposition, including but not limited to:

- Number of expressions of opposition relative to the composition of the community;
- The representative nature of entities expressing opposition;
- Level of recognized stature or weight among sources of opposition;
- Distribution or diversity among sources of expressions of opposition, including:
 - Regional
 - Subsectors of community
 - Leadership of community
 - Membership of community
- Historical defense of the community in other contexts; and
- Costs incurred by objector in expressing opposition, including other channels the objector may have used to convey opposition.

If some opposition within the community is determined, but it does not meet the standard of substantial opposition, the objection will fail.

Targeting – The objector must prove a strong association between the applied-for gTLD string and the community represented by the objector. Factors that could be

balanced by a panel to determine this include but are not limited to:

- Statements contained in application;
- Other public statements by the applicant;
- Associations by the public.

If opposition by a community is determined, but there is no strong association between the community and the applied-for gTLD string, the objection will fail.

Detriment – The objector must prove that the application creates a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted. An allegation of detriment that consists only of the applicant being delegated the string instead of the objector will not be sufficient for a finding of material detriment.

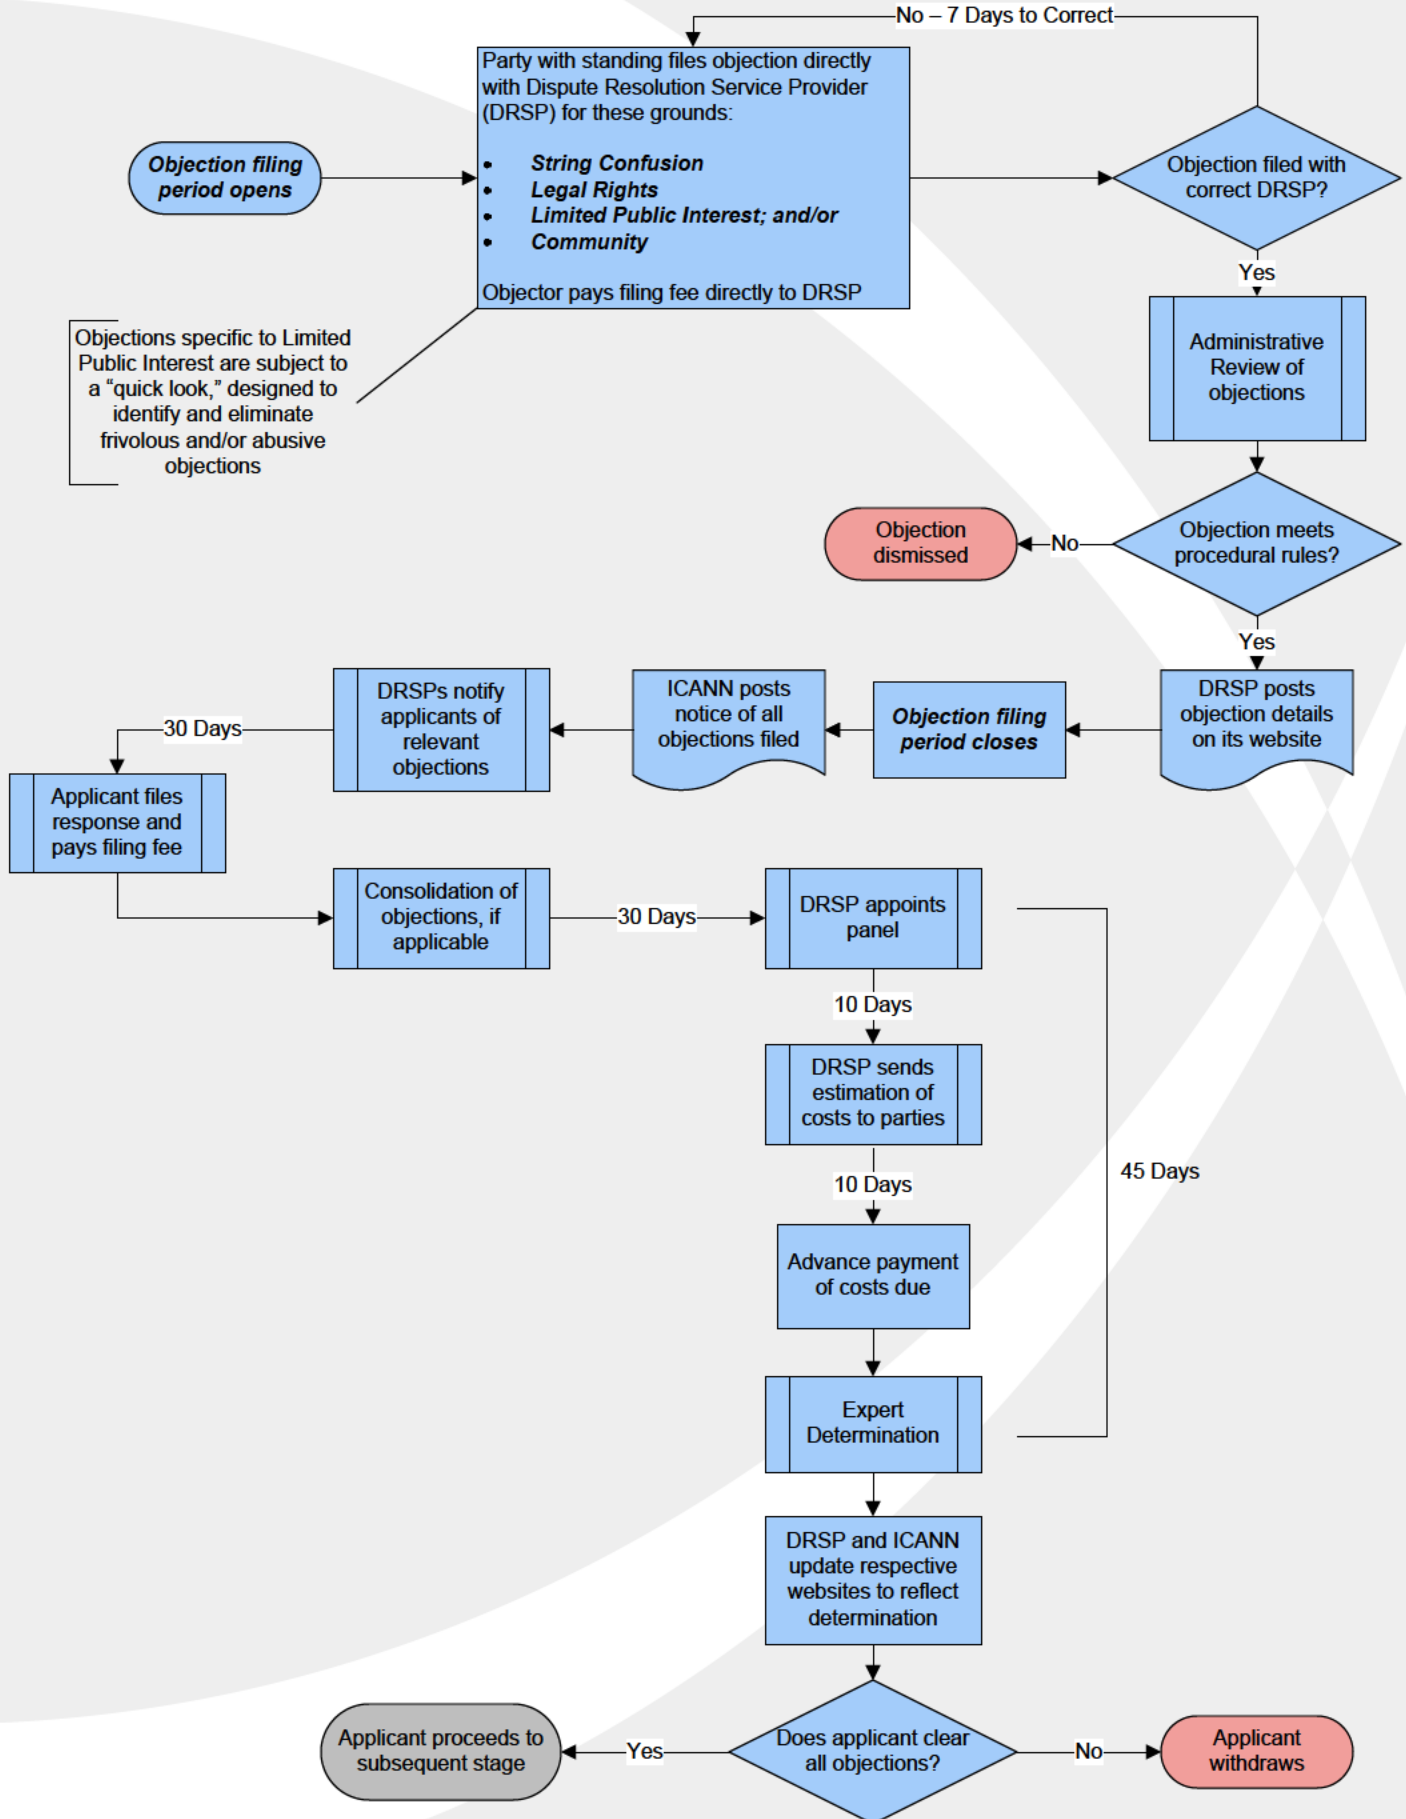

Factors that could be used by a panel in making this determination include but are not limited to:

- Nature and extent of damage to the reputation of the community represented by the objector that would result from the applicant's operation of the applied-for gTLD string;
- Evidence that the applicant is not acting or does not intend to act in accordance with the interests of the community or of users more widely, including evidence that the applicant has not proposed or does not intend to institute effective security protection for user interests;
- Interference with the core activities of the community that would result from the applicant's operation of the applied-for gTLD string;
- Dependence of the community represented by the objector on the DNS for its core activities;
- Nature and extent of concrete or economic damage to the community represented by the objector that would result from the applicant's operation of the applied-for gTLD string; and
- Level of certainty that alleged detrimental outcomes would occur.

If opposition by a community is determined, but there is no likelihood of material detriment to the targeted community resulting from the applicant's operation of the applied-for gTLD, the objection will fail.

The objector must meet all four tests in the standard for the objection to prevail.

DRAFT - New gTLD Program – Objection and Dispute Resolution

Attachment to Module 3

New gTLD Dispute Resolution Procedure

These Procedures were designed with an eye toward timely and efficient dispute resolution. As part of the New gTLD Program, these Procedures apply to all proceedings administered by each of the dispute resolution service providers (DRSP). Each of the DRSPs has a specific set of rules that will also apply to such proceedings.

NEW gTLD DISPUTE RESOLUTION PROCEDURE

Article 1. ICANN's New gTLD Program

- (a) The Internet Corporation for Assigned Names and Numbers ("ICANN") has implemented a program for the introduction of new generic Top-Level Domain Names ("gTLDs") in the internet. There will be a succession of rounds, during which applicants may apply for new gTLDs, in accordance with terms and conditions set by ICANN.
- (b) The new gTLD program includes a dispute resolution procedure, pursuant to which disputes between a person or entity who applies for a new gTLD and a person or entity who objects to that gTLD are resolved in accordance with this New gTLD Dispute Resolution Procedure (the "Procedure").
- (c) Dispute resolution proceedings shall be administered by a Dispute Resolution Service Provider ("DRSP") in accordance with this Procedure and the applicable DRSP Rules that are identified in Article 4(b).
- (d) By applying for a new gTLD, an applicant accepts the applicability of this Procedure and the applicable DRSP's Rules that are identified in Article 4(b); by filing an objection to a new gTLD, an objector accepts the applicability of this Procedure and the applicable DRSP's Rules that are identified in Article 4(b). The parties cannot derogate from this Procedure without the express approval of ICANN and from the applicable DRSP Rules without the express approval of the relevant DRSP.

Article 2. Definitions

- (a) The "Applicant" or "Respondent" is an entity that has applied to ICANN for a new gTLD and that will be the party responding to the Objection.
- (b) The "Objector" is one or more persons or entities who have filed an objection against a new gTLD for which an application has been submitted.
- (c) The "Panel" is the panel of Experts, comprising one or three "Experts," that has been constituted by a DRSP in accordance with this Procedure and the applicable DRSP Rules that are identified in Article 4(b).
- (d) The "Expert Determination" is the decision upon the merits of the Objection that is rendered by a Panel in a proceeding conducted under this Procedure and the applicable DRSP Rules that are identified in Article 4(b).
- (e) The grounds upon which an objection to a new gTLD may be filed are set out in full in Module 3 of the Applicant Guidebook. Such grounds are identified in this Procedure, and are based upon the Final Report on the Introduction of New Generic Top-Level Domains, dated 7 August 2007, issued by the ICANN Generic Names Supporting Organization (GNSO), as follows:
 - (i) "String Confusion Objection" refers to the objection that the string comprising the potential gTLD is confusingly similar to an existing top-level domain or another string applied for in the same round of applications.
 - (ii) "Existing Legal Rights Objection" refers to the objection that the string comprising the potential new gTLD infringes the existing legal rights of others

that are recognized or enforceable under generally accepted and internationally recognized principles of law.

- (iii) "Limited Public Interest Objection" refers to the objection that the string comprising the potential new gTLD is contrary to generally accepted legal norms relating to morality and public order that are recognized under principles of international law.
- (iv) "Community Objection" refers to the objection that there is substantial opposition to the application from a significant portion of the community to which the string may be explicitly or implicitly targeted.
- (f) "DRSP Rules" are the rules of procedure of a particular DRSP that have been identified as being applicable to objection proceedings under this Procedure.

Article 3. Dispute Resolution Service Providers

The various categories of disputes shall be administered by the following DRSPs:

- (a) String Confusion Objections shall be administered by the International Centre for Dispute Resolution.
- (b) Existing Legal Rights Objections shall be administered by the Arbitration and Mediation Center of the World Intellectual Property Organization.
- (c) Limited Public Interest Objections shall be administered by the International Centre for Expertise of the International Chamber of Commerce.
- (d) Community Objections shall be administered by the International Centre for Expertise of the International Chamber of Commerce.

Article 4. Applicable Rules

- (a) All proceedings before the Panel shall be governed by this Procedure and by the DRSP Rules that apply to a particular category of objection. The outcome of the proceedings shall be deemed an Expert Determination, and the members of the Panel shall act as experts.
- (b) The applicable DRSP Rules are the following:
 - (i) For a String Confusion Objection, the applicable DRSP Rules are the ICDR Supplementary Procedures for ICANN's New gTLD Program.
 - (ii) For an Existing Legal Rights Objection, the applicable DRSP Rules are the WIPO Rules for New gTLD Dispute Resolution.
 - (iii) For a Limited Public Interest Objection, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce (ICC), as supplemented by the ICC as needed.
 - (iv) For a Community Objection, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce (ICC), as supplemented by the ICC as needed.
- (c) In the event of any discrepancy between this Procedure and the applicable DRSP Rules, this Procedure shall prevail.

- (d) The place of the proceedings, if relevant, shall be the location of the DRSP that is administering the proceedings.
- (e) In all cases, the Panel shall ensure that the parties are treated with equality, and that each party is given a reasonable opportunity to present its position.

Article 5. Language

- (a) The language of all submissions and proceedings under this Procedure shall be English.
- (b) Parties may submit supporting evidence in its original language, provided and subject to the authority of the Panel to determine otherwise, that such evidence is accompanied by a certified or otherwise official English translation of all relevant text.

Article 6. Communications and Time Limits

- (a) All communications by the Parties with the DRSPs and Panels must be submitted electronically. A Party that wishes to make a submission that is not available in electronic form (e.g., evidentiary models) shall request leave from the Panel to do so, and the Panel, in its sole discretion, shall determine whether to accept the non-electronic submission.
- (b) The DRSP, Panel, Applicant, and Objector shall provide copies to one another of all correspondence (apart from confidential correspondence between the Panel and the DRSP and among the Panel) regarding the proceedings.
- (c) For the purpose of determining the date of commencement of a time limit, a notice or other communication shall be deemed to have been received on the day that it is transmitted in accordance with paragraphs (a) and (b) of this Article.
- (d) For the purpose of determining compliance with a time limit, a notice or other communication shall be deemed to have been sent, made or transmitted if it is dispatched in accordance with paragraphs (a) and (b) of this Article prior to or on the day of the expiration of the time limit.
- (e) For the purpose of calculating a period of time under this Procedure, such period shall begin to run on the day following the day when a notice or other communication is received.
- (f) Unless otherwise stated, all time periods provided in the Procedure are calculated on the basis of calendar days

Article 7. Filing of the Objection

- (a) A person wishing to object to a new gTLD for which an application has been submitted may file an objection ("Objection"). Any Objection to a proposed new gTLD must be filed before the published closing date for the Objection Filing period.
- (b) The Objection must be filed with the appropriate DRSP, using a model form made available by that DRSP, with copies to ICANN and the Applicant.
- (c) The electronic addresses for filing Objections (the specific addresses shall be made available once they are created by providers):
 - (i) A String Confusion Objection must be filed at: [●].

- (ii) An Existing Legal Rights Objection must be filed at: [●].
 - (iii) A Limited Public Interest Objection must be filed at: [●].
 - (iv) A Community Objection must be filed at: [●].
- (d) All Objections must be filed separately:
- (i) An Objector who wishes to object to an application on more than one ground must file separate objections with the appropriate DRSP(s).
 - (ii) An Objector who wishes to object to more than one gTLD must file separate objections to each gTLD with the appropriate DRSP(s).
- (e) If an Objection is filed with the wrong DRSP, that DRSP shall promptly notify the Objector of the error and that DRSP shall not process the incorrectly filed Objection. The Objector may then cure the error by filing its Objection with the correct DRSP within seven (7) days of receipt of the error notice, failing which the Objection shall be disregarded. If the Objection is filed with the correct DRSP within seven (7) days of receipt of the error notice but after the lapse of the time for submitting an Objection stipulation by Article 7(a) of this Procedure, it shall be deemed to be within this time limit.

Article 8. Content of the Objection

- (a) The Objection shall contain, *inter alia*, the following information:
- (i) The names and contact information (address, telephone number, email address, etc.) of the Objector;
 - (ii) A statement of the Objector's basis for standing; and
 - (iii) A description of the basis for the Objection, including:
 - (aa) A statement of the ground upon which the Objection is being filed, as stated in Article 2(e) of this Procedure;
 - (bb) An explanation of the validity of the Objection and why the objection should be upheld.
- (b) The substantive portion of the Objection shall be limited to 5,000 words or 20 pages, whichever is less, excluding attachments. The Objector shall also describe and provide copies of any supporting or official documents upon which the Objection is based.
- (c) At the same time as the Objection is filed, the Objector shall pay a filing fee in the amount set in accordance with the applicable DRSP Rules and include evidence of such payment in the Objection. In the event that the filing fee is not paid within ten (10) days of the receipt of the Objection by the DRSP, the Objection shall be dismissed without prejudice.

Article 9. Administrative Review of the Objection

- (a) The DRSP shall conduct an administrative review of the Objection for the purpose of verifying compliance with Articles 5-8 of this Procedure and the applicable DRSP Rules, and inform the Objector, the Applicant and ICANN of the result of its review within

fourteen (14) days of its receipt of the Objection. The DRSP may extend this time limit for reasons explained in the notification of such extension.

- (b) If the DRSP finds that the Objection complies with Articles 5-8 of this Procedure and the applicable DRSP Rules, the DRSP shall confirm that the Objection shall be registered for processing.
- (c) If the DRSP finds that the Objection does not comply with Articles 5-8 of this Procedure and the applicable DRSP Rules, the DRSP shall have the discretion to request that any administrative deficiencies in the Objection be corrected within five (5) days. If the deficiencies in the Objection are cured within the specified period but after the lapse of the time limit for submitting an Objection stipulated by Article 7(a) of this Procedure, the Objection shall be deemed to be within this time limit.
- (d) If the DRSP finds that the Objection does not comply with Articles 5-8 of this Procedure and the applicable DRSP Rules, and the deficiencies in the Objection are not corrected within the period specified in Article 9(c), the DRSP shall dismiss the Objection and close the proceedings, without prejudice to the Objector's submission of a new Objection that complies with this Procedure, provided that the Objection is filed within the deadline for filing such Objections. The DRSP's review of the Objection shall not interrupt the running of the time limit for submitting an Objection stipulated by Article 7(a) of this Procedure.
- (e) Immediately upon registering an Objection for processing, pursuant to Article 9(b), the DRSP shall post the following information about the Objection on its website: (i) the proposed string to which the Objection is directed; (ii) the names of the Objector and the Applicant; (iii) the grounds for the Objection; and (iv) the dates of the DRSP's receipt of the Objection.

Article 10. ICANN's Dispute Announcement

- (a) Within thirty (30) days of the deadline for filing Objections in relation to gTLD applications in a given round, ICANN shall publish a document on its website identifying all of the admissible Objections that have been filed (the "Dispute Announcement"). ICANN shall also directly inform each DRSP of the posting of the Dispute Announcement.
- (b) ICANN shall monitor the progress of all proceedings under this Procedure and shall take steps, where appropriate, to coordinate with any DRSP in relation to individual applications for which objections are pending before more than one DRSP.

Article 11. Response to the Objection

- (a) Upon receipt of the Dispute Announcement, each DRSP shall promptly send a notice to: (i) each Applicant for a new gTLD to which one or more admissible Objections have been filed with that DRSP; and (ii) the respective Objector(s).
- (b) The Applicant shall file a response to each Objection (the "Response"). The Response shall be filed within thirty (30) days of the transmission of the notice by the DRSP pursuant to Article 11(a).
- (c) The Response must be filed with the appropriate DRSP, using a model form made available by that DRSP, with copies to ICANN and the Objector.

- (d) The Response shall contain, inter alia, the following information:
 - (i) The names and contact information (address, telephone number, email address, etc.) of the Applicant; and
 - (ii) A point-by-point response to the statements made in the Objection.
- (e) The substantive portion of the Response shall be limited to 5,000 words or 20 pages, whichever is less, excluding attachments. The Applicant shall also describe and provide copies of any supporting or official documents upon which the Response is based.
- (f) At the same time as the Response is filed, the Applicant shall pay a filing fee in the amount set and published by the relevant DRSP (which shall be the same as the filing fee paid by the Objector) and include evidence of such payment in the Response. In the event that the filing fee is not paid within ten (10) days of the receipt of the Response by the DRSP, the Applicant shall be deemed to be in default, any Response disregarded and the Objection shall be deemed successful.
- (g) If the DRSP finds that the Response does not comply with Articles 11(c) and (d)(1) of this Procedure and the applicable DRSP Rules, the DRSP shall have the discretion to request that any administrative deficiencies in the Response be corrected within five (5) days. If the administrative deficiencies in the Response are cured within the specified period but after the lapse of the time limit for submitting a Response pursuant to this Procedure, the Response shall be deemed to be within this time limit.
- (g) If the Applicant fails to file a Response to the Objection within the 30-day time limit, the Applicant shall be deemed to be in default and the Objection shall be deemed successful. No fees paid by the Applicant will be refunded in case of default.

Article 12. Consolidation of Objections

- (a) The DRSP is encouraged, whenever possible and practicable, and as may be further stipulated in the applicable DRSP Rules, to consolidate Objections, for example, when more than one Objector has filed an Objection to the same gTLD on the same grounds. The DRSP shall endeavor to decide upon consolidation prior to issuing its notice pursuant to Article 11(a) and, where appropriate, shall inform the parties of the consolidation in that notice.
- (b) If the DRSP itself has not decided to consolidate two or more Objections, any Applicant or Objector may propose the consolidation of Objections within seven (7) days of the notice given by the DRSP pursuant to Article 11(a). If, following such a proposal, the DRSP decides to consolidate certain Objections, which decision must be made within 14 days of the notice given by the DRSP pursuant to Article 11(a), the deadline for the Applicant's Response in the consolidated proceeding shall be thirty (30) days from the Applicant's receipt of the DRSP's notice of consolidation.
- (c) In deciding whether to consolidate Objections, the DRSP shall weigh the benefits (in terms of time, cost, consistency of decisions, etc.) that may result from the consolidation against the possible prejudice or inconvenience that the consolidation may cause. The DRSP's determination on consolidation shall be final and not subject to appeal.
- (d) Objections based upon different grounds, as summarized in Article 2(e), shall not be consolidated.

Article 13. The Panel

- (a) The DRSP shall select and appoint the Panel of Expert(s) within thirty (30) days after receiving the Response.
- (b) Number and specific qualifications of Expert(s):
 - (i) There shall be one Expert in proceedings involving a String Confusion Objection.
 - (ii) There shall be one Expert or, if all of the Parties so agree, three Experts with relevant experience in intellectual property rights disputes in proceedings involving an Existing Legal Rights Objection.
 - (iii) There shall be three Experts recognized as eminent jurists of international reputation, one of whom shall be designated as the Chair. The Chair shall be of a nationality different from the nationalities of the Applicant and of the Objector, in proceedings involving a Limited Public Interest Objection.
 - (iv) There shall be one Expert in proceedings involving a Community Objection.
- (c) All Experts acting under this Procedure shall be impartial and independent of the parties. The applicable DRSP Rules stipulate the manner by which each Expert shall confirm and maintain their impartiality and independence.
- (d) The applicable DRSP Rules stipulate the procedures for challenging an Expert and replacing an Expert.
- (e) Unless required by a court of law or authorized in writing by the parties, an Expert shall not act in any capacity whatsoever, in any pending or future proceedings, whether judicial, arbitral or otherwise, relating to the matter referred to expert determination under this Procedure.

Article 14. Costs

- (a) Each DRSP shall determine the costs for the proceedings that it administers under this Procedure in accordance with the applicable DRSP Rules. Such costs shall cover the fees and expenses of the members of the Panel, as well as the administrative fees of the DRSP (the "Costs").
- (b) Within ten (10) days of constituting the Panel, the DRSP shall estimate the total Costs and request the Objector and the Applicant/Respondent each to pay in advance the full amount of the Costs to the DRSP. Each party shall make its advance payment of Costs within ten (10) days of receiving the DRSP's request for payment and submit to the DRSP evidence of such payment. The respective filing fees paid by the Parties shall be credited against the amounts due for this advance payment of Costs.
- (c) The DRSP may revise its estimate of the total Costs and request additional advance payments from the parties during the proceedings.
- (d) Failure to make an advance payment of Costs:
 - (i) If the Objector fails to make the advance payment of Costs, its Objection shall be dismissed and no fees that it has paid shall be refunded.

- (ii) If the Applicant fails to make the advance payment of Costs, the Objection will be deemed to have been sustained and no fees that the Applicant has paid shall be refunded.
- (e) Upon the termination of the proceedings, after the Panel has rendered its Expert Determination, the DRSP shall refund to the prevailing party, as determined by the Panel, its advance payment(s) of Costs.

Article 15. Representation and Assistance

- (a) The parties may be represented or assisted by persons of their choice.
- (b) Each party or party representative shall communicate the name, contact information and function of such persons to the DRSP and the other party (or parties in case of consolidation).

Article 16. Negotiation and Mediation

- (a) The parties are encouraged, but not required, to participate in negotiations and/or mediation at any time throughout the dispute resolution process aimed at settling their dispute amicably.
- (b) Each DRSP shall be able to propose, if requested by the parties, a person who could assist the parties as mediator.
- (c) A person who acts as mediator for the parties shall not serve as an Expert in a dispute between the parties under this Procedure or any other proceeding under this Procedure involving the same gTLD.
- (d) The conduct of negotiations or mediation shall not, *ipso facto*, be the basis for a suspension of the dispute resolution proceedings or the extension of any deadline under this Procedure. Upon the joint request of the parties, the DRSP or (after it has been constituted) the Panel may grant the extension of a deadline or the suspension of the proceedings. Absent exceptional circumstances, such extension or suspension shall not exceed thirty (30) days and shall not delay the administration of any other Objection.
- (e) If, during negotiations and/or mediation, the parties agree on a settlement of the matter referred to the DRSP under this Procedure, the parties shall inform the DRSP, which shall terminate the proceedings, subject to the parties' payment obligation under this Procedure having been satisfied, and inform ICANN and the parties accordingly.

Article 17. Additional Written Submissions

- (a) The Panel may decide whether the parties shall submit any written statements in addition to the Objection and the Response, and it shall fix time limits for such submissions.
- (b) The time limits fixed by the Panel for additional written submissions shall not exceed thirty (30) days, unless the Panel, having consulted the DRSP, determines that exceptional circumstances justify a longer time limit.

Article 18. Evidence

In order to achieve the goal of resolving disputes over new gTLDs rapidly and at reasonable cost, procedures for the production of documents shall be limited. In exceptional cases, the Panel may require a party to provide additional evidence.

Article 19. Hearings

- (a) Disputes under this Procedure and the applicable DRSP Rules will usually be resolved without a hearing.
- (b) The Panel may decide, on its own initiative or at the request of a party, to hold a hearing only in extraordinary circumstances.
- (c) In the event that the Panel decides to hold a hearing:
 - (i) The Panel shall decide how and where the hearing shall be conducted.
 - (ii) In order to expedite the proceedings and minimize costs, the hearing shall be conducted by videoconference if possible.
 - (iii) The hearing shall be limited to one day, unless the Panel decides, in exceptional circumstances, that more than one day is required for the hearing.
 - (iv) The Panel shall decide whether the hearing will be open to the public or conducted in private.

Article 20. Standards

- (a) For each category of Objection identified in Article 2(e), the Panel shall apply the standards that have been defined by ICANN.
- (b) In addition, the Panel may refer to and base its findings upon the statements and documents submitted and any rules or principles that it determines to be applicable.
- (c) The Objector bears the burden of proving that its Objection should be sustained in accordance with the applicable standards.

Article 21. The Expert Determination

- (a) The DRSP and the Panel shall make reasonable efforts to ensure that the Expert Determination is rendered within forty-five (45) days of the constitution of the Panel. In specific circumstances such as consolidated cases and in consultation with the DRSP, if significant additional documentation is requested by the Panel, a brief extension may be allowed.
- (b) The Panel shall submit its Expert Determination in draft form to the DRSP's scrutiny as to form before it is signed, unless such scrutiny is specifically excluded by the applicable DRSP Rules. The modifications proposed by the DRSP to the Panel, if any, shall address only the form of the Expert Determination. The signed Expert Determination shall be communicated to the DRSP, which in turn will communicate that Expert Determination to the Parties and ICANN.
- (c) When the Panel comprises three Experts, the Expert Determination shall be made by a majority of the Experts.

- (d) The Expert Determination shall be in writing, shall identify the prevailing party and shall state the reasons upon which it is based. The remedies available to an Applicant or an Objector pursuant to any proceeding before a Panel shall be limited to the success or dismissal of an Objection and to the refund by the DRSP to the prevailing party, as determined by the Panel in its Expert Determination, of its advance payment(s) of Costs pursuant to Article 14(e) of this Procedure and any relevant provisions of the applicable DRSP Rules.
- (e) The Expert Determination shall state the date when it is made, and it shall be signed by the Expert(s). If any Expert fails to sign the Expert Determination, it shall be accompanied by a statement of the reason for the absence of such signature.
- (f) In addition to providing electronic copies of its Expert Determination, the Panel shall provide a signed hard copy of the Expert Determination to the DRSP, unless the DRSP Rules provide for otherwise.
- (g) Unless the Panel decides otherwise, the Expert Determination shall be published in full on the DRSP's website.

Article 22. Exclusion of Liability

In addition to any exclusion of liability stipulated by the applicable DRSP Rules, neither the Expert(s), nor the DRSP and its employees, nor ICANN and its Board members, employees and consultants shall be liable to any person for any act or omission in connection with any proceeding conducted under this Procedure.

Article 23. Modification of the Procedure

- (a) ICANN may from time to time, in accordance with its Bylaws, modify this Procedure.
- (b) The version of this Procedure that is applicable to a dispute resolution proceeding is the version that was in effect on the day when the relevant application for a new gTLD is submitted.

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 4

4 June 2012

Module 4

String Contention Procedures

This module describes situations in which contention over applied-for gTLD strings occurs, and the methods available to applicants for resolving such contention cases.

4.1 String Contention

String contention occurs when either:

1. Two or more applicants for an identical gTLD string successfully complete all previous stages of the evaluation and dispute resolution processes; or
2. Two or more applicants for similar gTLD strings successfully complete all previous stages of the evaluation and dispute resolution processes, and the similarity of the strings is identified as creating a probability of user confusion if more than one of the strings is delegated.

ICANN will not approve applications for proposed gTLD strings that are identical or that would result in user confusion, called contending strings. If either situation above occurs, such applications will proceed to contention resolution through either community priority evaluation, in certain cases, or through an auction. Both processes are described in this module. A group of applications for contending strings is referred to as a contention set.

(In this Applicant Guidebook, “similar” means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.)

4.1.1 Identification of Contention Sets

Contention sets are groups of applications containing identical or similar applied-for gTLD strings. Contention sets are identified during Initial Evaluation, following review of all applied-for gTLD strings. ICANN will publish preliminary contention sets once the String Similarity review is completed, and will update the contention sets as necessary during the evaluation and dispute resolution stages.

Applications for identical gTLD strings will be automatically assigned to a contention set. For example, if Applicant A and Applicant B both apply for .TLDSTRING, they will be identified as being in a contention set. Such testing for identical strings also takes into consideration the code point variants listed in any relevant IDN table. That is, two or more applicants whose applied-for strings or designated variants are variant strings according to an IDN table submitted to ICANN would be considered in direct contention with one another. For example, if one applicant applies for string A and another applies for string B, and strings A and B are variant TLD strings as defined in Module 1, then the two applications are in direct contention.

The String Similarity Panel will also review the entire pool of applied-for strings to determine whether the strings proposed in any two or more applications are so similar that they would create a probability of user confusion if allowed to coexist in the DNS. The panel will make such a determination for each pair of applied-for gTLD strings. The outcome of the String Similarity review described in Module 2 is the identification of contention sets among applications that have direct or indirect contention relationships with one another.

Two strings are in **direct contention** if they are identical or similar to one another. More than two applicants might be represented in a direct contention situation: if four different applicants applied for the same gTLD string, they would all be in direct contention with one another.

Two strings are in **indirect contention** if they are both in direct contention with a third string, but not with one another. The example that follows explains direct and indirect contention in greater detail.

In Figure 4-1, Strings A and B are an example of direct contention. Strings C and G are an example of indirect contention. C and G both contend with B, but not with one another. The figure as a whole is one contention set. A contention set consists of all applications that are linked by string contention to one another, directly or indirectly.

Figure 4-1 – This diagram represents one contention set, featuring both directly and indirectly contending strings.

While preliminary contention sets are determined during Initial Evaluation, the final configuration of the contention sets can only be established once the evaluation and dispute resolution process stages have concluded. This is because any application excluded through those processes might modify a contention set identified earlier.

A contention set may be augmented, split into two sets, or eliminated altogether as a result of an Extended Evaluation or dispute resolution proceeding. The composition of a contention set may also be modified as some applications may be voluntarily withdrawn throughout the process.

Refer to Figure 4-2: In contention set 1, applications D and G are eliminated. Application A is the only remaining application, so there is no contention left to resolve.

In contention set 2, all applications successfully complete Extended Evaluation and Dispute Resolution, so the original contention set remains to be resolved.

In contention set 3, application F is eliminated. Since application F was in direct contention with E and J, but E and J are not in contention with one other, the original contention set splits into two sets: one containing E and K in direct contention, and one containing I and J.

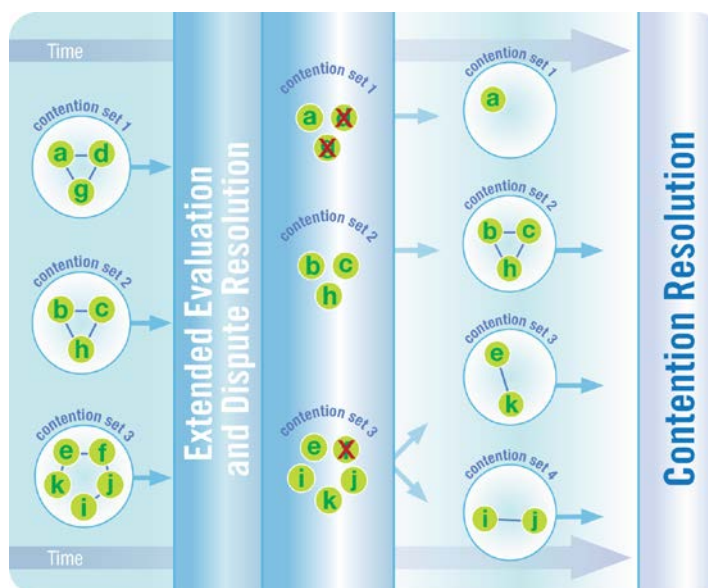

Figure 4-2 – Resolution of string contention cannot begin until all applicants within a contention set have completed all applicable previous stages.

The remaining contention cases must then be resolved through community priority evaluation or by other means, depending on the circumstances. In the string contention resolution stage, ICANN addresses each contention set to achieve an unambiguous resolution.

As described elsewhere in this guidebook, cases of contention might be resolved by community priority evaluation or an agreement among the parties. Absent that, the last-resort contention resolution mechanism will be an auction.

4.1.2 Impact of String Confusion Dispute Resolution Proceedings on Contention Sets

If an applicant files a string confusion objection against another application (refer to Module 3), and the panel finds that user confusion is probable (that is, finds in favor of the objector), the two applications will be placed in direct contention with each other. Thus, the outcome of a dispute resolution proceeding based on a string confusion objection would be a new contention set structure for the relevant applications, augmenting the original contention set.

If an applicant files a string confusion objection against another application, and the panel finds that string

confusion does not exist (that is, finds in favor of the responding applicant), the two applications will not be considered in direct contention with one another.

A dispute resolution outcome in the case of a string confusion objection filed by another applicant will not result in removal of an application from a previously established contention set.

4.1.3 Self-Resolution of String Contention

Applicants that are identified as being in contention are encouraged to reach a settlement or agreement among themselves that resolves the contention. This may occur at any stage of the process, once ICANN publicly posts the applications received and the preliminary contention sets on its website.

Applicants may resolve string contention in a manner whereby one or more applicants withdraw their applications. An applicant may not resolve string contention by selecting a new string or by replacing itself with a joint venture. It is understood that applicants may seek to establish joint ventures in their efforts to resolve string contention. However, material changes in applications (for example, combinations of applicants to resolve contention) will require re-evaluation. This might require additional fees or evaluation in a subsequent application round. Applicants are encouraged to resolve contention by combining in a way that does not materially affect the remaining application. Accordingly, new joint ventures must take place in a manner that does not materially change the application, to avoid being subject to re-evaluation.

4.1.4 Possible Contention Resolution Outcomes

An application that has successfully completed all previous stages and is no longer part of a contention set due to changes in the composition of the contention set (as described in subsection 4.1.1) or self-resolution by applicants in the contention set (as described in subsection 4.1.3) may proceed to the next stage.

An application that prevails in a contention resolution procedure, either community priority evaluation or auction, may proceed to the next stage.

In some cases, an applicant who is not the outright winner of a string contention resolution process can still proceed. This situation is explained in the following paragraphs.

If the strings within a given contention set are all identical, the applications are in direct contention with each other and there can only be one winner that proceeds to the next step.

However, where there are both direct and indirect contention situations within a set, more than one string may survive the resolution.

For example, consider a case where string A is in contention with B, and B is in contention with C, but C is not in contention with A. If A wins the contention resolution procedure, B is eliminated but C can proceed since C is not in direct contention with the winner and both strings can coexist in the DNS without risk for confusion.

4.2 Community Priority Evaluation

Community priority evaluation will only occur if a community-based applicant selects this option. Community priority evaluation can begin once all applications in the contention set have completed all previous stages of the process.

The community priority evaluation is an independent analysis. Scores received in the applicant reviews are not carried forward to the community priority evaluation. Each application participating in the community priority evaluation begins with a score of zero.

4.2.1 Eligibility for Community Priority Evaluation

As described in subsection 1.2.3 of Module 1, all applicants are required to identify whether their application type is:

- Community-based; or
- Standard.

Applicants designating their applications as community-based are also asked to respond to a set of questions in the application form to provide relevant information if a community priority evaluation occurs.

Only community-based applicants are eligible to participate in a community priority evaluation.

At the start of the contention resolution stage, all community-based applicants within remaining contention sets will be notified of the opportunity to opt for a community priority evaluation via submission of a deposit by a specified date. Only those applications for which a deposit has been received by the deadline will be scored in the community priority evaluation. Following the evaluation, the deposit will be refunded to applicants that score 14 or higher.

Before the community priority evaluation begins, the applicants who have elected to participate may be asked to provide additional information relevant to the community priority evaluation.

4.2.2 Community Priority Evaluation Procedure

Community priority evaluations for each eligible contention set will be performed by a community priority panel appointed by ICANN to review these applications. The panel's role is to determine whether any of the community-based applications fulfills the community priority criteria. Standard applicants within the contention set, if any, will not participate in the community priority evaluation.

If a single community-based application is found to meet the community priority criteria (see subsection 4.2.3 below), that applicant will be declared to prevail in the community priority evaluation and may proceed. If more than one community-based application is found to meet the criteria, the remaining contention between them will be resolved as follows:

- In the case where the applications are in indirect contention with one another (see subsection 4.1.1), they will both be allowed to proceed to the next stage. In this case, applications that are in direct contention with any of these community-based applications will be eliminated.
- In the case where the applications are in direct contention with one another, these applicants will proceed to an auction. If all parties agree and present a joint request, ICANN may postpone the auction for a three-month period while the parties attempt to reach a settlement before proceeding to auction. This is a one-time option; ICANN will grant no more than one such request for each set of contending applications.

If none of the community-based applications are found to meet the criteria, then all of the parties in the contention set (both standard and community-based applicants) will proceed to an auction.

Results of each community priority evaluation will be posted when completed.

Applicants who are eliminated as a result of a community priority evaluation are eligible for a partial refund of the gTLD evaluation fee (see Module 1).

4.2.3 Community Priority Evaluation Criteria

The Community Priority Panel will review and score the one or more community-based applications having elected the community priority evaluation against four criteria as listed below.

The scoring process is conceived to identify qualified community-based applications, while preventing both “false positives” (awarding undue priority to an application that refers to a “community” construed merely to get a sought-after generic word as a gTLD string) and “false negatives” (not awarding priority to a qualified community application). This calls for a holistic approach, taking multiple criteria into account, as reflected in the process. The scoring will be performed by a panel and be based on information provided in the application plus other relevant information available (such as public information regarding the community represented). The panel may also perform independent research, if deemed necessary to reach informed scoring decisions.

It should be noted that a qualified community application eliminates all directly contending standard applications, regardless of how well qualified the latter may be. This is a fundamental reason for very stringent requirements for qualification of a community-based application, as embodied in the criteria below. Accordingly, a finding by the panel that an application does not meet the scoring threshold to prevail in a community priority evaluation is not necessarily an indication the community itself is in some way inadequate or invalid.

The sequence of the criteria reflects the order in which they will be assessed by the panel. The utmost care has been taken to avoid any “double-counting” - any negative aspect found in assessing an application for one criterion

should only be counted there and should not affect the assessment for other criteria.

An application must score at least 14 points to prevail in a community priority evaluation. The outcome will be determined according to the procedure described in subsection 4.2.2.

Criterion #1: Community Establishment (0-4 points)

A maximum of 4 points is possible on the Community Establishment criterion:

As measured by:

A. Delineation (2)

2	1	0
Clearly delineated, organized, and pre-existing community.	Clearly delineated and pre-existing community, but not fulfilling the requirements for a score of 2.	Insufficient delineation and pre-existence for a score of 1.

B. Extension (2)

2	1	0
Community of considerable size and longevity.	Community of either considerable size or longevity, but not fulfilling the requirements for a score of 2.	Community of neither considerable size nor longevity.

This section relates to the community as explicitly identified and defined according to statements in the application. (The implicit reach of the applied-for string is not

considered here, but taken into account when scoring Criterion #2, "Nexus between Proposed String and Community.")

Criterion 1 Definitions

- "Community" - Usage of the expression "community" has evolved considerably from its Latin origin – "communitas" meaning "fellowship" – while still implying more of cohesion than a mere commonality of interest. Notably, as "community" is used throughout the application, there should be:
(a) an awareness and recognition of a community among its members; (b) some understanding of the community's existence prior to September 2007 (when the new gTLD policy recommendations were completed); and (c) extended tenure or longevity—non-transience—into the future.
- "Delineation" relates to the membership of a community, where a clear and straight-forward membership definition scores high, while an unclear, dispersed or unbound definition scores low.
- "Pre-existing" means that a community has been active as such since before the new gTLD policy recommendations were completed in September 2007.
- "Organized" implies that there is at least one entity mainly dedicated to the community, with documented evidence of community activities.
- "Extension" relates to the dimensions of the community, regarding its number of members, geographical reach, and foreseeable activity lifetime, as further explained in the following.
- "Size" relates both to the number of members and the geographical reach of the community, and will be scored depending on the context rather than on absolute numbers - a geographic location community may count millions of members in a limited location, a language community may have a million members with some spread over the globe, a community of service providers may have "only" some hundred members although well spread over the globe, just to mention some examples - all these can be regarded as of "considerable size."

- "Longevity" means that the pursuits of a community are of a lasting, non-transient nature.

Criterion 1 Guidelines

With respect to "Delineation" and "Extension," it should be noted that a community can consist of legal entities (for example, an association of suppliers of a particular service), of individuals (for example, a language community) or of a logical alliance of communities (for example, an international federation of national communities of a similar nature). All are viable as such, provided the requisite awareness and recognition of the community is at hand among the members. Otherwise the application would be seen as not relating to a real community and score 0 on both "Delineation" and "Extension."

With respect to "Delineation," if an application satisfactorily demonstrates all three relevant parameters (delineation, pre-existing and organized), then it scores a 2.

With respect to "Extension," if an application satisfactorily demonstrates both community size and longevity, it scores a 2.

Criterion #2: Nexus between Proposed String and Community (0-4 points)

A maximum of 4 points is possible on the Nexus criterion:

As measured by:

A. Nexus (3)

3	2	0
The string matches the name of the community or is a well-known short-form or abbreviation of the community	String identifies the community, but does not qualify for a score of 3.	String nexus does not fulfill the requirements for a score of 2.

3	2	0
---	---	---

name.

B. Uniqueness (1)

1	0
---	---

String has no other significant meaning beyond identifying the community described in the application.

String does not fulfill the requirement for a score of 1.

This section evaluates the relevance of the string to the specific community that it claims to represent.

Criterion 2 Definitions

- "Name" of the community means the established name by which the community is commonly known by others. It may be, but does not need to be, the name of an organization dedicated to the community.
- "Identify" means that the applied for string closely describes the community or the community members, without over-reaching substantially beyond the community.

Criterion 2 Guidelines

With respect to "Nexus," for a score of 3, the essential aspect is that the applied-for string is commonly known by others as the identification / name of the community.

With respect to "Nexus," for a score of 2, the applied-for string should closely describe the community or the community members, without over-reaching substantially beyond the community. As an example, a string could qualify for a score of 2 if it is a noun that the typical community member would naturally be called in the context. If the string appears excessively broad (such as, for example, a globally well-known but local tennis club applying for ".TENNIS") then it would not qualify for a 2.

With respect to "Uniqueness," "significant meaning" relates to the public in general, with consideration of the community language context added.

"Uniqueness" will be scored both with regard to the community context and from a general point of view. For example, a string for a particular geographic location community may seem unique from a general perspective, but would not score a 1 for uniqueness if it carries another significant meaning in the common language used in the relevant community location. The phrasing "...beyond identifying the community" in the score of 1 for "uniqueness" implies a requirement that the string does identify the community, i.e. scores 2 or 3 for "Nexus," in order to be eligible for a score of 1 for "Uniqueness."

It should be noted that "Uniqueness" is only about the *meaning* of the string - since the evaluation takes place to resolve contention there will obviously be other applications, community-based and/or standard, with identical or confusingly similar strings in the contention set to resolve, so the string will clearly not be "unique" in the sense of "alone."

Criterion #3: Registration Policies (0-4 points)

A maximum of 4 points is possible on the Registration Policies criterion:

As measured by:

A. Eligibility (1)

1	0
Eligibility restricted to community members.	Largely unrestricted approach to eligibility.

B. Name selection (1)

1	0
Policies include name selection rules consistent with the articulated community-based purpose of the applied-for gTLD.	Policies do not fulfill the requirements for a score of 1.

C. Content and use (1)

1	0
Policies include rules for content and use consistent with the articulated community-based purpose of the applied-for gTLD.	Policies do not fulfill the requirements for a score of 1.

D. Enforcement (1)

1	0
Policies include specific enforcement measures (e.g. investigation practices, penalties, takedown procedures) constituting a coherent set with appropriate appeal mechanisms.	Policies do not fulfill the requirements for a score of 1.

This section evaluates the applicant's registration policies as indicated in the application. Registration policies are the conditions that the future registry will set for prospective registrants, i.e. those desiring to register second-level domain names under the registry.

Criterion 3 Definitions

- "Eligibility" means the qualifications that entities or individuals must have in order to be allowed as registrants by the registry.
- "Name selection" means the conditions that must be fulfilled for any second-level domain name to be deemed acceptable by the registry.
- "Content and use" means the restrictions stipulated by the registry as to the content provided in and the use of any second-level domain name in the registry.
- "Enforcement" means the tools and provisions set out by the registry to prevent and remedy any breaches of the conditions by registrants.

Criterion 3 Guidelines

With respect to "Eligibility," the limitation to community "members" can invoke a formal membership but can also be satisfied in other ways, depending on the structure and orientation of the community at hand. For example, for a geographic location community TLD, a limitation to members of the community can be achieved by requiring that the registrant's physical address is within the boundaries of the location.

With respect to "Name selection," "Content and use," and "Enforcement," scoring of applications against these sub-criteria will be done from a holistic perspective, with due regard for the particularities of the community explicitly addressed. For example, an application proposing a TLD for a language community may feature strict rules imposing this language for name selection as well as for content and use, scoring 1 on both B and C above. It could nevertheless include forbearance in the enforcement measures for tutorial sites assisting those wishing to learn the language and still score 1 on D. More restrictions do not automatically result in a higher score. The restrictions and corresponding enforcement mechanisms proposed by the applicant should show an alignment with the community-based purpose of the TLD and demonstrate continuing accountability to the community named in the application.

Criterion #4: Community Endorsement (0-4 points)

4	3	2	1	0	
Community Endorsement					
High		←————→			Low

As measured by:

A. Support (2)

2	1	0
Applicant is, or has documented support from, the recognized community institution(s)/ member organization(s) or has otherwise documented authority to represent the community.	Documented support from at least one group with relevance, but insufficient support for a score of 2.	Insufficient proof of support for a score of 1.

B. Opposition (2)

2	1	0
No opposition of relevance.	Relevant opposition from one group of non-negligible size.	Relevant opposition from two or more groups of non-negligible size.

This section evaluates community support and/or opposition to the application. Support and opposition will be scored in relation to the communities explicitly addressed as stated in the application, with due regard for the communities implicitly addressed by the string.

Criterion 4 Definitions

- "Recognized" means the institution(s)/organization(s) that, through membership or otherwise, are clearly recognized by

the community members as representative of the community.

- "Relevance" and "relevant" refer to the communities explicitly and implicitly addressed. This means that opposition from communities not identified in the application but with an association to the applied-for string would be considered relevant.

Criterion 4 Guidelines

With respect to "Support," it follows that documented support from, for example, the only national association relevant to a particular community on a national level would score a 2 if the string is clearly oriented to that national level, but only a 1 if the string implicitly addresses similar communities in other nations.

Also with respect to "Support," the plurals in brackets for a score of 2, relate to cases of multiple institutions/organizations. In such cases there must be documented support from institutions/organizations representing a majority of the overall community addressed in order to score 2.

The applicant will score a 1 for "Support" if it does not have support from the majority of the recognized community institutions/member organizations, or does not provide full documentation that it has authority to represent the community with its application. A 0 will be scored on "Support" if the applicant fails to provide documentation showing support from recognized community institutions/community member organizations, or does not provide documentation showing that it has the authority to represent the community. It should be noted, however, that documented support from groups or communities that may be seen as implicitly addressed but have completely different orientations compared to the applicant community will not be required for a score of 2 regarding support.

To be taken into account as relevant support, such documentation must contain a description of the process and rationale used in arriving at the expression of support. Consideration of support is not based merely on the number of comments or expressions of support received.

When scoring "Opposition," previous objections to the application as well as public comments during the same application round will be taken into account and assessed

in this context. There will be no presumption that such objections or comments would prevent a score of 2 or lead to any particular score for “Opposition.” To be taken into account as relevant opposition, such objections or comments must be of a reasoned nature. Sources of opposition that are clearly spurious, unsubstantiated, made for a purpose incompatible with competition objectives, or filed for the purpose of obstruction will not be considered relevant.

4.3 Auction: Mechanism of Last Resort

It is expected that most cases of contention will be resolved by the community priority evaluation, or through voluntary agreement among the involved applicants. Auction is a tie-breaker method for resolving string contention among the applications within a contention set, if the contention has not been resolved by other means.

An auction will not take place to resolve contention in the case where the contending applications are for geographic names (as defined in Module 2). In this case, the applications will be suspended pending resolution by the applicants.

An auction will take place, where contention has not already been resolved, in the case where an application for a geographic name is in a contention set with applications for similar strings that have not been identified as geographic names.

In practice, ICANN expects that most contention cases will be resolved through other means before reaching the auction stage. However, there is a possibility that significant funding will accrue to ICANN as a result of one or more auctions.¹

¹ The purpose of an auction is to resolve contention in a clear, objective manner. It is planned that costs of the new gTLD program will offset by fees, so any funds coming from a last resort contention resolution mechanism such as auctions would result (after paying for the auction process) in additional funding. Any proceeds from auctions will be reserved and earmarked until the uses of funds are determined. Funds must be used in a manner that supports directly ICANN's Mission and Core Values and also allows ICANN to maintain its not for profit status.

Possible uses of auction funds include formation of a foundation with a clear mission and a transparent way to allocate funds to projects that are of interest to the greater Internet community, such as grants to support new gTLD applications or registry operators from communities in subsequent gTLD rounds, the creation of an ICANN-administered/community-based fund for specific projects for the benefit of the Internet community, the creation of a registry continuity fund for the protection of registrants (ensuring that funds would be in place to support the operation of a gTLD registry until a successor could be found), or establishment of a security fund to expand use of secure protocols, conduct research, and support standards development organizations in accordance with ICANN's security and stability mission.

4.3.1 Auction Procedures

An auction of two or more applications within a contention set is conducted as follows. The auctioneer successively increases the prices associated with applications within the contention set, and the respective applicants indicate their willingness to pay these prices. As the prices rise, applicants will successively choose to exit from the auction. When a sufficient number of applications have been eliminated so that no direct contentions remain (i.e., the remaining applications are no longer in contention with one another and all the relevant strings can be delegated as TLDs), the auction will be deemed to conclude. At the auction's conclusion, the applicants with remaining applications will pay the resulting prices and proceed toward delegation. This procedure is referred to as an "ascending-clock auction."

This section provides applicants an informal introduction to the practicalities of participation in an ascending-clock auction. It is intended only as a general introduction and is only preliminary. The detailed set of Auction Rules will be available prior to the commencement of any auction proceedings. If any conflict arises between this module and the auction rules, the auction rules will prevail.

For simplicity, this section will describe the situation where a contention set consists of two or more applications for identical strings.

All auctions will be conducted over the Internet, with participants placing their bids remotely using a web-based software system designed especially for auction. The auction software system will be compatible with current versions of most prevalent browsers, and will not require the local installation of any additional software.

Auction participants ("bidders") will receive instructions for access to the online auction site. Access to the site will be password-protected and bids will be encrypted through SSL. If a bidder temporarily loses connection to the Internet, that bidder may be permitted to submit its bids in a given auction round by fax, according to procedures described

The amount of funding resulting from auctions, if any, will not be known until all relevant applications have completed this step. Thus, a detailed mechanism for allocation of these funds is not being created at present. However, a process can be pre-established to enable community consultation in the event that such funds are collected. This process will include, at a minimum, publication of data on any funds collected, and public comment on any proposed models.

in the auction rules. The auctions will generally be conducted to conclude quickly, ideally in a single day.

The auction will be carried out in a series of auction rounds, as illustrated in Figure 4-3. The sequence of events is as follows:

1. For each auction round, the auctioneer will announce in advance: (1) the start-of-round price, (2) the end-of-round price, and (3) the starting and ending times of the auction round. In the first auction round, the start-of-round price for all bidders in the auction will be USD 0. In later auction rounds, the start-of-round price will be its end-of-round price from the previous auction round.

Figure 4-3 – Sequence of events during an ascending-clock auction.

2. During each auction round, bidders will be required to submit a bid or bids representing their willingness to pay within the range of intermediate prices between the start-of-round and end-of-round prices. In this way a bidder indicates its willingness to stay in the auction at all prices through and including the end-of-auction round price, or its wish to exit the auction at a price less than the end-of-auction round price, called the exit bid.
3. Exit is irrevocable. If a bidder exited the auction in a previous auction round, the bidder is not permitted to re-enter in the current auction round.

4. Bidders may submit their bid or bids at any time during the auction round.
5. Only bids that comply with all aspects of the auction rules will be considered valid. If more than one valid bid is submitted by a given bidder within the time limit of the auction round, the auctioneer will treat the last valid submitted bid as the actual bid.
6. At the end of each auction round, bids become the bidders' legally-binding offers to secure the relevant gTLD strings at prices up to the respective bid amounts, subject to closure of the auction in accordance with the auction rules. In later auction rounds, bids may be used to exit from the auction at subsequent higher prices.
7. After each auction round, the auctioneer will disclose the aggregate number of bidders remaining in the auction at the end-of-round prices for the auction round, and will announce the prices and times for the next auction round.
 - Each bid should consist of a single price associated with the application, and such price must be greater than or equal to the start-of-round price.
 - If the bid amount is strictly less than the end-of-round price, then the bid is treated as an exit bid at the specified amount, and it signifies the bidder's binding commitment to pay up to the bid amount if its application is approved.
 - If the bid amount is greater than or equal to the end-of-round price, then the bid signifies that the bidder wishes to remain in the auction at all prices in the current auction round, and it signifies the bidder's binding commitment to pay up to the end-of-round price if its application is approved. Following such bid, the application cannot be eliminated within the current auction round.
 - To the extent that the bid amount exceeds the end-of-round price, then the bid is also treated as a proxy bid to be carried forward to the next auction round. The bidder will be permitted to change the proxy bid amount in the next auction round, and the amount of the proxy bid will not constrain the bidder's ability to submit any valid bid amount in the next auction round.

- No bidder is permitted to submit a bid for any application for which an exit bid was received in a prior auction round. That is, once an application has exited the auction, it may not return.
 - If no valid bid is submitted within a given auction round for an application that remains in the auction, then the bid amount is taken to be the amount of the proxy bid, if any, carried forward from the previous auction round or, if none, the bid is taken to be an exit bid at the start-of-round price for the current auction round.
8. This process continues, with the auctioneer increasing the price range for each given TLD string in each auction round, until there is one remaining bidder at the end-of-round price. After an auction round in which this condition is satisfied, the auction concludes and the auctioneer determines the clearing price. The last remaining application is deemed the successful application, and the associated bidder is obligated to pay the clearing price.

Figure 4-4 illustrates how an auction for five contending applications might progress.

Figure 4-4 – Example of an auction for five mutually-contending applications.

- Before the first auction round, the auctioneer announces the end-of-round price P_1 .
- During Auction round 1, a bid is submitted for each application. In Figure 4-4, all five bidders submit bids of at least P_1 . Since the aggregate demand exceeds one, the auction proceeds to Auction round 2. The auctioneer discloses that five contending applications remained at P_1 and announces the end-of-round price P_2 .
- During Auction round 2, a bid is submitted for each application. In Figure 4-4, all five bidders submit bids of at least P_2 . The auctioneer discloses that five contending applications remained at P_2 and announces the end-of-round price P_3 .
- During Auction round 3, one of the bidders submits an exit bid at slightly below P_3 , while the other four bidders submit bids of at least P_3 . The auctioneer discloses that four contending applications remained at P_3 and announces the end-of-round price P_4 .
- During Auction round 4, one of the bidders submits an exit bid midway between P_3 and P_4 , while the other three remaining bidders submit bids of at least P_4 . The auctioneer discloses that three contending applications remained at P_4 and announces the end-of-auction round price P_5 .
- During Auction round 5, one of the bidders submits an exit bid at slightly above P_4 , and one of the bidders submits an exit bid at P_c midway between P_4 and P_5 . The final bidder submits a bid greater than P_c . Since the aggregate demand at P_5 does not exceed one, the auction concludes in Auction round 5. The application associated with the highest bid in Auction round 5 is deemed the successful application. The clearing price is P_c , as this is the lowest price at which aggregate demand can be met.

To the extent possible, auctions to resolve multiple string contention situations will be conducted simultaneously.

4.3.1.1 Currency

For bids to be comparable, all bids in the auction will be submitted in any integer (whole) number of US dollars.

4.3.1.2 Fees

A bidding deposit will be required of applicants participating in the auction, in an amount to be determined. The bidding deposit must be transmitted by wire transfer to a specified bank account specified by ICANN or its auction provider at a major international bank, to be received in advance of the auction date. The amount of the deposit will determine a bidding limit for each bidder: the bidding deposit will equal 10% of the bidding limit; and the bidder will not be permitted to submit any bid in excess of its bidding limit.

In order to avoid the need for bidders to pre-commit to a particular bidding limit, bidders may be given the option of making a specified deposit that will provide them with unlimited bidding authority for a given application. The amount of the deposit required for unlimited bidding authority will depend on the particular contention set and will be based on an assessment of the possible final prices within the auction.

All deposits from non-defaulting losing bidders will be returned following the close of the auction.

4.3.2 Winning Bid Payments

Any applicant that participates in an auction will be required to sign a bidder agreement that acknowledges its rights and responsibilities in the auction, including that its bids are legally binding commitments to pay the amount bid if it wins (i.e., if its application is approved), and to enter into the prescribed registry agreement with ICANN— together with a specified penalty for defaulting on payment of its winning bid or failing to enter into the required registry agreement.

The winning bidder in any auction will be required to pay the full amount of the final price within 20 business days of the end of the auction. Payment is to be made by wire transfer to the same international bank account as the bidding deposit, and the applicant's bidding deposit will be credited toward the final price.

In the event that a bidder anticipates that it would require a longer payment period than 20 business days due to verifiable government-imposed currency restrictions, the bidder may advise ICANN well in advance of the auction and ICANN will consider applying a longer payment period to all bidders within the same contention set.

Any winning bidder for whom the full amount of the final price is not received within 20 business days of the end of an auction is subject to being declared in default. At their sole discretion, ICANN and its auction provider may delay the declaration of default for a brief period, but only if they are convinced that receipt of full payment is imminent.

Any winning bidder for whom the full amount of the final price is received within 20 business days of the end of an auction retains the obligation to execute the required registry agreement within 90 days of the end of auction. Such winning bidder who does not execute the agreement within 90 days of the end of the auction is subject to being declared in default. At their sole discretion, ICANN and its auction provider may delay the declaration of default for a brief period, but only if they are convinced that execution of the registry agreement is imminent.

4.3.3 Post-Default Procedures

Once declared in default, any winning bidder is subject to immediate forfeiture of its position in the auction and assessment of default penalties. After a winning bidder is declared in default, the remaining bidders will receive an offer to have their applications accepted, one at a time, in descending order of their exit bids. In this way, the next bidder would be declared the winner subject to payment of its last bid price. The same default procedures and penalties are in place for any runner-up bidder receiving such an offer.

Each bidder that is offered the relevant gTLD will be given a specified period—typically, four business days—to respond as to whether it wants the gTLD. A bidder who responds in the affirmative will have 20 business days to submit its full payment. A bidder who declines such an offer cannot revert on that statement, has no further obligations in this context and will not be considered in default.

The penalty for defaulting on a winning bid will equal 10% of the defaulting bid.² Default penalties will be charged against any defaulting applicant's bidding deposit before the associated bidding deposit is returned.

² If bidders were given the option of making a specified deposit that provided them with unlimited bidding authority for a given application and if the winning bidder utilized this option, then the penalty for defaulting on a winning bid will be the lesser of the following: (1) 10% of the defaulting bid, or (2) the specified deposit amount that provided the bidder with unlimited bidding authority.

4.4 Contention Resolution and Contract Execution

An applicant that has been declared the winner of a contention resolution process will proceed by entering into the contract execution step. (Refer to section 5.1 of Module 5.)

If a winner of the contention resolution procedure has not executed a contract within 90 calendar days of the decision, ICANN has the right to deny that application and extend an offer to the runner-up applicant, if any, to proceed with its application. For example, in an auction, another applicant who would be considered the runner-up applicant might proceed toward delegation. This offer is at ICANN's option only. The runner-up applicant in a contention resolution process has no automatic right to an applied-for gTLD string if the first place winner does not execute a contract within a specified time. If the winning applicant can demonstrate that it is working diligently and in good faith toward successful completion of the steps necessary for entry into the registry agreement, ICANN may extend the 90-day period at its discretion. Runner-up applicants have no claim of priority over the winning application, even after what might be an extended period of negotiation.

String Contention

Transition to
Delegation

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 5

4 June 2012

Module 5

Transition to Delegation

This module describes the final steps required of an applicant for completion of the process, including execution of a registry agreement with ICANN and preparing for delegation of the new gTLD into the root zone.

5.1 Registry Agreement

All applicants that have successfully completed the evaluation process—including, if necessary, the dispute resolution and string contention processes—are required to enter into a registry agreement with ICANN before proceeding to delegation.

After the close of each stage in the process, ICANN will send a notification to those successful applicants that are eligible for execution of a registry agreement at that time.

To proceed, applicants will be asked to provide specified information for purposes of executing the registry agreement:

1. Documentation of the applicant's continued operations instrument (see Specification 8 to the agreement).
2. Confirmation of contact information and signatory to the agreement.
3. Notice of any material changes requested to the terms of the agreement.
4. The applicant must report: (i) any ownership interest it holds in any registrar or reseller of registered names, (ii) if known, any ownership interest that a registrar or reseller of registered names holds in the applicant, and (iii) if the applicant controls, is controlled by, or is under common control with any registrar or reseller of registered names. ICANN retains the right to refer an application to a competition authority prior to entry into the registry agreement if it is determined that the registry-registrar cross-ownership

arrangements might raise competition issues. For this purpose "control" (including the terms "controlled by" and "under common control with") means the possession, directly or indirectly, of the power to direct or cause the direction of the management or policies of a person or entity, whether through the ownership of securities, as trustee or executor, by serving as a member of a board of directors or equivalent governing body, by contract, by credit arrangement or otherwise.

To ensure that an applicant continues to be a going concern in good legal standing, ICANN reserves the right to ask the applicant to submit additional updated documentation and information before entering into the registry agreement.

ICANN will begin processing registry agreements one month after the date of the notification to successful applicants. Requests will be handled in the order the complete information is received.

Generally, the process will include formal approval of the agreement without requiring additional Board review, so long as: the application passed all evaluation criteria; there are no material changes in circumstances; and there are no material changes to the base agreement. There may be other cases where the Board requests review of an application.

Eligible applicants are expected to have executed the registry agreement within nine (9) months of the notification date. Failure to do so may result in loss of eligibility, at ICANN's discretion. An applicant may request an extension of this time period for up to an additional nine (9) months if it can demonstrate, to ICANN's reasonable satisfaction, that it is working diligently and in good faith toward successfully completing the steps necessary for entry into the registry agreement.

The registry agreement can be reviewed in the attachment to this module. Certain provisions in the agreement are labeled as applicable to governmental and intergovernmental entities only. Private entities, even if supported by a government or IGO, would not ordinarily be eligible for these special provisions.

All successful applicants are expected to enter into the agreement substantially as written. Applicants may request and negotiate terms by exception; however, this extends

the time involved in executing the agreement. In the event that material changes to the agreement are requested, these must first be approved by the ICANN Board of Directors before execution of the agreement.

ICANN's Board of Directors has ultimate responsibility for the New gTLD Program. The Board reserves the right to individually consider an application for a new gTLD to determine whether approval would be in the best interest of the Internet community. Under exceptional circumstances, the Board may individually consider a gTLD application. For example, the Board might individually consider an application as a result of GAC Advice on New gTLDs or of the use of an ICANN accountability mechanism.

5.2 Pre-Delegation Testing

Each applicant will be required to complete pre-delegation technical testing as a prerequisite to delegation into the root zone. This pre-delegation test must be completed within the time period specified in the registry agreement.

The purpose of the pre-delegation technical test is to verify that the applicant has met its commitment to establish registry operations in accordance with the technical and operational criteria described in Module 2.

The test is also intended to indicate that the applicant can operate the gTLD in a stable and secure manner. All applicants will be tested on a pass/fail basis according to the requirements that follow.

The test elements cover both the DNS server operational infrastructure and registry system operations. In many cases the applicant will perform the test elements as instructed and provide documentation of the results to ICANN to demonstrate satisfactory performance. At ICANN's discretion, aspects of the applicant's self-certification documentation can be audited either on-site at the services delivery point of the registry or elsewhere as determined by ICANN.

5.2.1 Testing Procedures

The applicant may initiate the pre-delegation test by submitting to ICANN the Pre-Delegation form and accompanying documents containing all of the following information:

- All name server names and IPv4/IPv6 addresses to be used in serving the new TLD data;
- If using anycast, the list of names and IPv4/IPv6 unicast addresses allowing the identification of each individual server in the anycast sets;
- If IDN is supported, the complete IDN tables used in the registry system;
- A test zone for the new TLD must be signed at test time and the valid key-set to be used at the time of testing must be provided to ICANN in the documentation, as well as the TLD DNSSEC Policy Statement (DPS);
- The executed agreement between the selected escrow agent and the applicant; and
- Self-certification documentation as described below for each test item.

ICANN will review the material submitted and in some cases perform tests in addition to those conducted by the applicant. After testing, ICANN will assemble a report with the outcome of the tests and provide that report to the applicant.

Any clarification request, additional information request, or other request generated in the process will be highlighted and listed in the report sent to the applicant.

ICANN may request the applicant to complete load tests considering an aggregated load where a single entity is performing registry services for multiple TLDs.

Once an applicant has met all of the pre-delegation testing requirements, it is eligible to request delegation of its applied-for gTLD.

If an applicant does not complete the pre-delegation steps within the time period specified in the registry agreement, ICANN reserves the right to terminate the registry agreement.

5.2.2 Test Elements: DNS Infrastructure

The first set of test elements concerns the DNS infrastructure of the new gTLD. In all tests of the DNS infrastructure, all requirements are independent of whether IPv4 or IPv6 is used. All tests shall be done both over IPv4 and IPv6, with reports providing results according to both protocols.

UDP Support -- The DNS infrastructure to which these tests apply comprises the complete set of servers and network infrastructure to be used by the chosen providers to deliver DNS service for the new gTLD to the Internet. The documentation provided by the applicant must include the results from a system performance test indicating available network and server capacity and an estimate of expected capacity during normal operation to ensure stable service as well as to adequately address Distributed Denial of Service (DDoS) attacks.

Self-certification documentation shall include data on load capacity, latency and network reachability.

Load capacity shall be reported using a table, and a corresponding graph, showing percentage of queries responded against an increasing number of queries per second generated from local (to the servers) traffic generators. The table shall include at least 20 data points and loads of UDP-based queries that will cause up to 10% query loss against a randomly selected subset of servers within the applicant's DNS infrastructure. Responses must either contain zone data or be NXDOMAIN or NODATA responses to be considered valid.

Query latency shall be reported in milliseconds as measured by DNS probes located just outside the border routers of the physical network hosting the name servers, from a network topology point of view.

Reachability will be documented by providing information on the transit and peering arrangements for the DNS server locations, listing the AS numbers of the transit providers or peers at each point of presence and available bandwidth at those points of presence.

TCP support -- TCP transport service for DNS queries and responses must be enabled and provisioned for expected load. ICANN will review the capacity self-certification documentation provided by the applicant and will perform TCP reachability and transaction capability tests across a

randomly selected subset of the name servers within the applicant's DNS infrastructure. In case of use of anycast, each individual server in each anycast set will be tested.

Self-certification documentation shall include data on load capacity, latency and external network reachability.

Load capacity shall be reported using a table, and a corresponding graph, showing percentage of queries that generated a valid (zone data, NODATA, or NXDOMAIN) response against an increasing number of queries per second generated from local (to the name servers) traffic generators. The table shall include at least 20 data points and loads that will cause up to 10% query loss (either due to connection timeout or connection reset) against a randomly selected subset of servers within the applicant's DNS infrastructure.

Query latency will be reported in milliseconds as measured by DNS probes located just outside the border routers of the physical network hosting the name servers, from a network topology point of view.

Reachability will be documented by providing records of TCP-based DNS queries from nodes external to the network hosting the servers. These locations may be the same as those used for measuring latency above.

DNSSEC support -- Applicant must demonstrate support for EDNS(0) in its server infrastructure, the ability to return correct DNSSEC-related resource records such as DNSKEY, RRSIG, and NSEC/NSEC3 for the signed zone, and the ability to accept and publish DS resource records from second-level domain administrators. In particular, the applicant must demonstrate its ability to support the full life cycle of KSK and ZSK keys. ICANN will review the self-certification materials as well as test the reachability, response sizes, and DNS transaction capacity for DNS queries using the EDNS(0) protocol extension with the "DNSSEC OK" bit set for a randomly selected subset of all name servers within the applicant's DNS infrastructure. In case of use of anycast, each individual server in each anycast set will be tested.

Load capacity, query latency, and reachability shall be documented as for UDP and TCP above.

5.2.3 Test Elements: Registry Systems

As documented in the registry agreement, registries must provide support for EPP within their Shared Registration System, and provide Whois service both via port 43 and a web interface, in addition to support for the DNS. This section details the requirements for testing these registry systems.

System performance -- The registry system must scale to meet the performance requirements described in Specification 10 of the registry agreement and ICANN will require self-certification of compliance. ICANN will review the self-certification documentation provided by the applicant to verify adherence to these minimum requirements.

Whois support -- Applicant must provision Whois services for the anticipated load. ICANN will verify that Whois data is accessible over IPv4 and IPv6 via both TCP port 43 and via a web interface and review self-certification documentation regarding Whois transaction capacity. Response format according to Specification 4 of the registry agreement and access to Whois (both port 43 and via web) will be tested by ICANN remotely from various points on the Internet over both IPv4 and IPv6.

Self-certification documents shall describe the maximum number of queries per second successfully handled by both the port 43 servers as well as the web interface, together with an applicant-provided load expectation.

Additionally, a description of deployed control functions to detect and mitigate data mining of the Whois database shall be documented.

EPP Support -- As part of a shared registration service, applicant must provision EPP services for the anticipated load. ICANN will verify conformance to appropriate RFCs (including EPP extensions for DNSSEC). ICANN will also review self-certification documentation regarding EPP transaction capacity.

Documentation shall provide a maximum Transaction per Second rate for the EPP interface with 10 data points corresponding to registry database sizes from 0 (empty) to the expected size after one year of operation, as determined by applicant.

Documentation shall also describe measures taken to handle load during initial registry operations, such as a land-rush period.

IPv6 support -- The ability of the registry to support registrars adding, changing, and removing IPv6 DNS records supplied by registrants will be tested by ICANN. If the registry supports EPP access via IPv6, this will be tested by ICANN remotely from various points on the Internet.

DNSSEC support -- ICANN will review the ability of the registry to support registrars adding, changing, and removing DNSSEC-related resource records as well as the registry's overall key management procedures. In particular, the applicant must demonstrate its ability to support the full life cycle of key changes for child domains. Inter-operation of the applicant's secure communication channels with the IANA for trust anchor material exchange will be verified.

The practice and policy document (also known as the DNSSEC Policy Statement or DPS), describing key material storage, access and usage for its own keys is also reviewed as part of this step.

IDN support -- ICANN will verify the complete IDN table(s) used in the registry system. The table(s) must comply with the guidelines in <http://iana.org/procedures/idn-repository.html>.

Requirements related to IDN for Whois are being developed. After these requirements are developed, prospective registries will be expected to comply with published IDN-related Whois requirements as part of pre-delegation testing.

Escrow deposit -- The applicant-provided samples of data deposit that include both a full and an incremental deposit showing correct type and formatting of content will be reviewed. Special attention will be given to the agreement with the escrow provider to ensure that escrowed data can be released within 24 hours should it be necessary. ICANN may, at its option, ask an independent third party to demonstrate the reconstitutability of the registry from escrowed data. ICANN may elect to test the data release process with the escrow agent.

5.3 Delegation Process

Upon notice of successful completion of the ICANN pre-delegation testing, applicants may initiate the process for delegation of the new gTLD into the root zone database.

This will include provision of additional information and completion of additional technical steps required for delegation. Information about the delegation process is available at <http://iana.org/domains/root/>.

5.4 Ongoing Operations

An applicant that is successfully delegated a gTLD will become a “Registry Operator.” In being delegated the role of operating part of the Internet’s domain name system, the applicant will be assuming a number of significant responsibilities. ICANN will hold all new gTLD operators accountable for the performance of their obligations under the registry agreement, and it is important that all applicants understand these responsibilities.

5.4.1 What is Expected of a Registry Operator

The registry agreement defines the obligations of gTLD registry operators. A breach of the registry operator’s obligations may result in ICANN compliance actions up to and including termination of the registry agreement. Prospective applicants are encouraged to review the following brief description of some of these responsibilities.

Note that this is a non-exhaustive list provided to potential applicants as an introduction to the responsibilities of a registry operator. For the complete and authoritative text, please refer to the registry agreement.

A registry operator is obligated to:

Operate the TLD in a stable and secure manner. The registry operator is responsible for the entire technical operation of the TLD. As noted in RFC 1591¹:

“The designated manager must do a satisfactory job of operating the DNS service for the domain. That is, the actual management of the assigning of domain names, delegating subdomains and operating nameservers must be done with technical competence. This includes keeping

¹ See <http://www.rfc-editor.org/rfc/rfc1591.txt>

the central IR² (in the case of top-level domains) or other higher-level domain manager advised of the status of the domain, responding to requests in a timely manner, and operating the database with accuracy, robustness, and resilience.”

The registry operator is required to comply with relevant technical standards in the form of RFCs and other guidelines. Additionally, the registry operator must meet performance specifications in areas such as system downtime and system response times (see Specifications 6 and 10 of the registry agreement).

Comply with consensus policies and temporary policies.

gTLD registry operators are required to comply with consensus policies. Consensus policies may relate to a range of topics such as issues affecting interoperability of the DNS, registry functional and performance specifications, database security and stability, or resolution of disputes over registration of domain names.

To be adopted as a consensus policy, a policy must be developed by the Generic Names Supporting Organization (GNSO)³ following the process in Annex A of the ICANN Bylaws.⁴ The policy development process involves deliberation and collaboration by the various stakeholder groups participating in the process, with multiple opportunities for input and comment by the public, and can take significant time.

Examples of existing consensus policies are the Inter-Registrar Transfer Policy (governing transfers of domain names between registrars), and the Registry Services Evaluation Policy (establishing a review of proposed new registry services for security and stability or competition concerns), although there are several more, as found at <http://www.icann.org/en/general/consensus-policies.htm>.

gTLD registry operators are obligated to comply with both existing consensus policies and those that are developed in the future. Once a consensus policy has been formally adopted, ICANN will provide gTLD registry operators with notice of the requirement to implement the new policy and the effective date.

² IR is a historical reference to “Internet Registry,” a function now performed by ICANN.

³ <http://gns0.icann.org>

⁴ <http://www.icann.org/en/general/bylaws.htm#AnnexA>

In addition, the ICANN Board may, when required by circumstances, establish a temporary policy necessary to maintain the stability or security of registry services or the DNS. In such a case, all gTLD registry operators will be required to comply with the temporary policy for the designated period of time.

For more information, see Specification 1 of the registry agreement.

Implement start-up rights protection measures. The registry operator must implement, at a minimum, a Sunrise period and a Trademark Claims service during the start-up phases for registration in the TLD, as provided in the registry agreement. These mechanisms will be supported by the established Trademark Clearinghouse as indicated by ICANN.

The Sunrise period allows eligible rightsholders an early opportunity to register names in the TLD.

The Trademark Claims service provides notice to potential registrants of existing trademark rights, as well as notice to rightsholders of relevant names registered. Registry operators may continue offering the Trademark Claims service after the relevant start-up phases have concluded.

For more information, see Specification 7 of the registry agreement and the Trademark Clearinghouse model accompanying this module.

Implement post-launch rights protection measures. The registry operator is required to implement decisions made under the Uniform Rapid Suspension (URS) procedure, including suspension of specific domain names within the registry. The registry operator is also required to comply with and implement decisions made according to the Trademark Post-Delegation Dispute Resolution Policy (PDDRP).

The required measures are described fully in the URS and PDDRP procedures accompanying this module. Registry operators may introduce additional rights protection measures relevant to the particular gTLD.

Implement measures for protection of country and territory names in the new gTLD. All new gTLD registry operators are required to provide certain minimum protections for country and territory names, including an initial reservation requirement and establishment of applicable rules and

procedures for release of these names. The rules for release can be developed or agreed to by governments, the GAC, and/or approved by ICANN after a community discussion. Registry operators are encouraged to implement measures for protection of geographical names in addition to those required by the agreement, according to the needs and interests of each gTLD's particular circumstances. (See Specification 5 of the registry agreement).

Pay recurring fees to ICANN. In addition to supporting expenditures made to accomplish the objectives set out in ICANN's mission statement, these funds enable the support required for new gTLDs, including: contractual compliance, registry liaison, increased registrar accreditations, and other registry support activities. The fees include both a fixed component (USD 25,000 annually) and, where the TLD exceeds a transaction volume, a variable fee based on transaction volume. See Article 6 of the registry agreement.

Regularly deposit data into escrow. This serves an important role in registrant protection and continuity for certain instances where the registry or one aspect of the registry operations experiences a system failure or loss of data. (See Specification 2 of the registry agreement.)

Deliver monthly reports in a timely manner. A registry operator must submit a report to ICANN on a monthly basis. The report includes registrar transactions for the month and is used by ICANN for calculation of registrar fees. (See Specification 3 of the registry agreement.)

Provide Whois service. A registry operator must provide a publicly available Whois service for registered domain names in the TLD. (See Specification 4 of the registry agreement.)

Maintain partnerships with ICANN-accredited registrars. A registry operator creates a Registry-Registrar Agreement (RRA) to define requirements for its registrars. This must include certain terms that are specified in the Registry Agreement, and may include additional terms specific to the TLD. A registry operator must provide non-discriminatory access to its registry services to all ICANN-accredited registrars with whom it has entered into an RRA, and who are in compliance with the requirements. This includes providing advance notice of pricing changes to all

registrars, in compliance with the time frames specified in the agreement. (See Article 2 of the registry agreement.)

Maintain an abuse point of contact. A registry operator must maintain and publish on its website a single point of contact responsible for addressing matters requiring expedited attention and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. A registry operator must also take reasonable steps to investigate and respond to any reports from law enforcement, governmental and quasi-governmental agencies of illegal conduct in connection with the use of the TLD. (See Article 2 and Specification 6 of the registry agreement.)

Cooperate with contractual compliance audits. To maintain a level playing field and a consistent operating environment, ICANN staff performs periodic audits to assess contractual compliance and address any resulting problems. A registry operator must provide documents and information requested by ICANN that are necessary to perform such audits. (See Article 2 of the registry agreement.)

Maintain a Continued Operations Instrument. A registry operator must, at the time of the agreement, have in place a continued operations instrument sufficient to fund basic registry operations for a period of three (3) years. This requirement remains in place for five (5) years after delegation of the TLD, after which time the registry operator is no longer required to maintain the continued operations instrument. (See Specification 8 to the registry agreement.)

Maintain community-based policies and procedures. If the registry operator designated its application as community-based at the time of the application, the registry operator has requirements in its registry agreement to maintain the community-based policies and procedures it specified in its application. The registry operator is bound by the Registry Restrictions Dispute Resolution Procedure with respect to disputes regarding execution of its community-based policies and procedures. (See Article 2 to the registry agreement.)

Have continuity and transition plans in place. This includes performing failover testing on a regular basis. In the event that a transition to a new registry operator becomes necessary, the registry operator is expected to cooperate

by consulting with ICANN on the appropriate successor, providing the data required to enable a smooth transition, and complying with the applicable registry transition procedures. (See Articles 2 and 4 of the registry agreement.)

Make TLD zone files available via a standardized process.

This includes provision of access to the registry's zone file to credentialed users, according to established access, file, and format standards. The registry operator will enter into a standardized form of agreement with zone file users and will accept credential information for users via a clearinghouse. (See Specification 4 of the registry agreement.)

Implement DNSSEC. The registry operator is required to sign the TLD zone files implementing Domain Name System Security Extensions (DNSSEC) in accordance with the relevant technical standards. The registry must accept public key material from registrars for domain names registered in the TLD, and publish a DNSSEC Policy Statement describing key material storage, access, and usage for the registry's keys. (See Specification 6 of the registry agreement.)

5.4.2 What is Expected of ICANN

ICANN will continue to provide support for gTLD registry operators as they launch and maintain registry operations. ICANN's gTLD registry liaison function provides a point of contact for gTLD registry operators for assistance on a continuing basis.

ICANN's contractual compliance function will perform audits on a regular basis to ensure that gTLD registry operators remain in compliance with agreement obligations, as well as investigate any complaints from the community regarding the registry operator's adherence to its contractual obligations. See <http://www.icann.org/en/compliance/> for more information on current contractual compliance activities.

ICANN's Bylaws require ICANN to act in an open and transparent manner, and to provide equitable treatment among registry operators. ICANN is responsible for maintaining the security and stability of the global Internet, and looks forward to a constructive and cooperative relationship with future gTLD registry operators in furtherance of this goal.

Draft – New gTLD Program - Transition to Delegation

(Timeframes are estimates only)

Applicant Doc Prep 1 Month

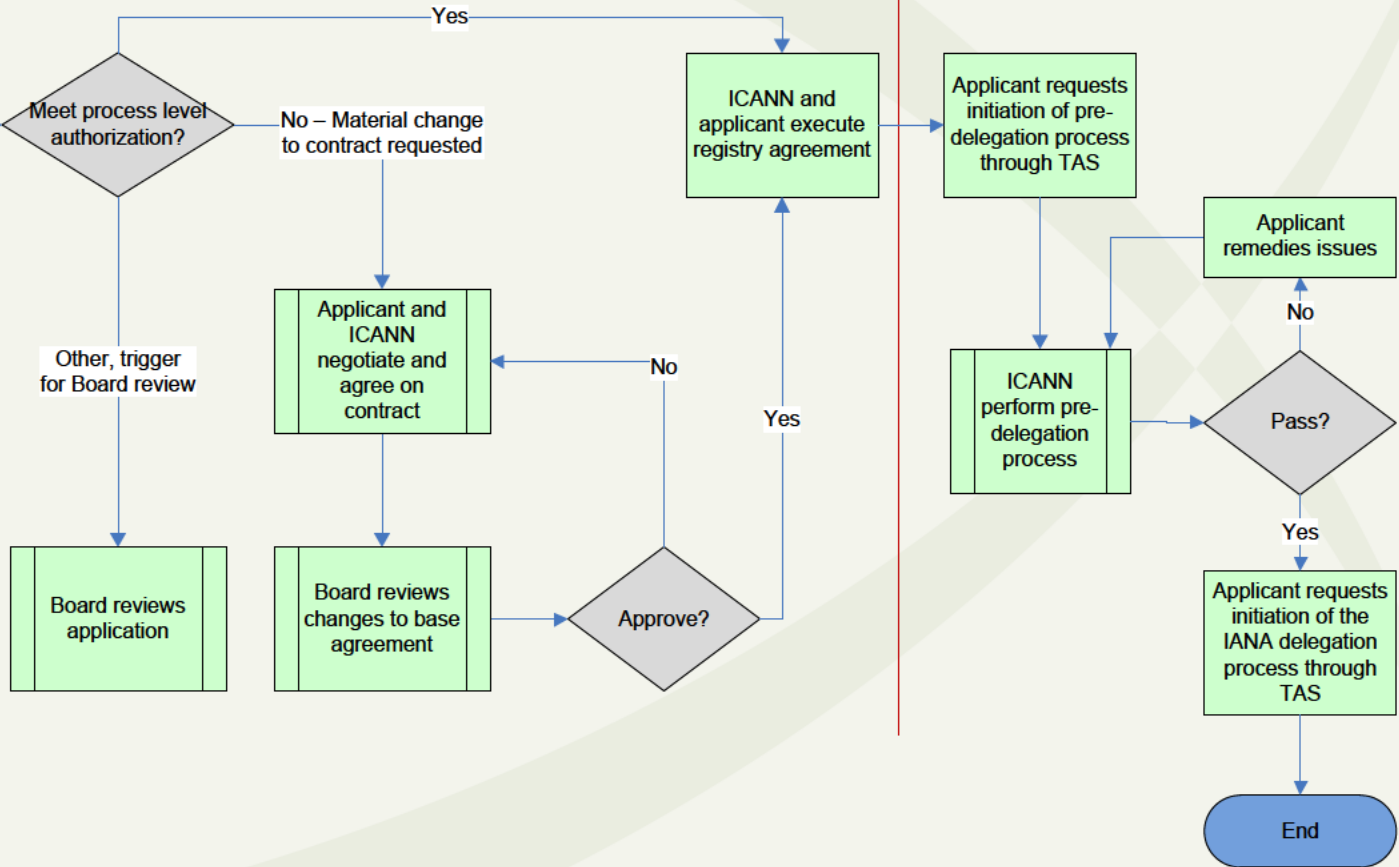

Contracting – 1 day to 9 months

Pre-Delegation Testing – 1 to 12 months

ICANN provides notice of eligibility to applicant

Applicant prepares documentation for contracting

- Includes:
- Material changes in circumstances
 - Continued Operations instrument
 - Designated contracting parties

New gTLD Agreement

This document contains the registry agreement associated with the Applicant Guidebook for New gTLDs.

Successful gTLD applicants would enter into this form of registry agreement with ICANN prior to delegation of the new gTLD. (Note: ICANN reserves the right to make reasonable updates and changes to this proposed agreement during the course of the application process, including as the possible result of new policies that might be adopted during the course of the application process).

REGISTRY AGREEMENT

This REGISTRY AGREEMENT (this “Agreement”) is entered into as of _____ (the “Effective Date”) between Internet Corporation for Assigned Names and Numbers, a California nonprofit public benefit corporation (“ICANN”), and _____, a _____ (“Registry Operator”).

ARTICLE 1.

DELEGATION AND OPERATION OF TOP-LEVEL DOMAIN; REPRESENTATIONS AND WARRANTIES

1.1 Domain and Designation. The Top-Level Domain to which this Agreement applies is _____ (the “TLD”). Upon the Effective Date and until the end of the Term (as defined in Section 4.1), ICANN designates Registry Operator as the registry operator for the TLD, subject to the requirements and necessary approvals for delegation of the TLD and entry into the root-zone.

1.2 Technical Feasibility of String. While ICANN has encouraged and will continue to encourage universal acceptance of all top-level domain strings across the Internet, certain top-level domain strings may encounter difficulty in acceptance by ISPs and webhosters and/or validation by web applications. Registry Operator shall be responsible for ensuring to its satisfaction the technical feasibility of the TLD string prior to entering into this Agreement.

1.3 Representations and Warranties.

(a) Registry Operator represents and warrants to ICANN as follows:

(i) all material information provided and statements made in the registry TLD application, and statements made in writing during the negotiation of this Agreement, were true and correct in all material respects at the time made, and such information or statements continue to be true and correct in all material respects as of the Effective Date except as otherwise previously disclosed in writing by Registry Operator to ICANN;

(ii) Registry Operator is duly organized, validly existing and in good standing under the laws of the jurisdiction set forth in the preamble hereto, and Registry Operator has all requisite power and authority and obtained all necessary approvals to enter into and duly execute and deliver this Agreement; and

(iii) Registry Operator has delivered to ICANN a duly executed instrument that secures the funds required to perform registry functions for the TLD in the event of the termination or expiration of this Agreement (the “Continued Operations Instrument”), and such instrument is a binding obligation of the parties thereto, enforceable against the parties thereto in accordance with its terms.

(b) ICANN represents and warrants to Registry Operator that ICANN is a nonprofit public benefit corporation duly organized, validly existing and in good standing under the laws of the State of California, United States of America. ICANN has all requisite power and authority and obtained all necessary corporate approvals to enter into and duly execute and deliver this Agreement.

ARTICLE 2.

COVENANTS OF REGISTRY OPERATOR

Registry Operator covenants and agrees with ICANN as follows:

2.1 Approved Services; Additional Services. Registry Operator shall be entitled to provide the Registry Services described in clauses (a) and (b) of the first paragraph of Section 2.1 in the specification at [*see specification 6*] (“Specification 6”) and such other Registry Services set forth on Exhibit A (collectively, the “Approved Services”). If Registry Operator desires to provide any Registry Service that is not an Approved Service or is a modification to an Approved Service (each, an “Additional Service”), Registry Operator shall submit a request for approval of such Additional Service pursuant to the Registry Services Evaluation Policy at <http://www.icann.org/en/registries/rsep/rsep.html>, as such policy may be amended from time to time in accordance with the bylaws of ICANN (as amended from time to time, the “ICANN Bylaws”) applicable to Consensus Policies (the “RSEP”). Registry Operator may offer Additional Services only with the written approval of ICANN, and, upon any such approval, such Additional Services shall be deemed Registry Services under this Agreement. In its reasonable discretion, ICANN may require an amendment to this Agreement reflecting the provision of any Additional Service which is approved pursuant to the RSEP, which amendment shall be in a form reasonably acceptable to the parties.

2.2 Compliance with Consensus Policies and Temporary Policies. Registry Operator shall comply with and implement all Consensus Policies and Temporary Policies found at <http://www.icann.org/general/consensus-policies.htm>, as of the Effective Date and as may in the future be developed and adopted in accordance with the ICANN Bylaws, provided such future Consensus Policies and Temporary Policies are adopted in accordance with the procedure and relate to those topics and subject to those limitations set forth at [*see specification 1*]* (“Specification 1”).

2.3 Data Escrow. Registry Operator shall comply with the registry data escrow procedures posted at [*see specification 2*]*.

2.4 Monthly Reporting. Within twenty (20) calendar days following the end of each calendar month, Registry Operator shall deliver to ICANN reports in the format posted in the specification at [*see specification 3*]*.

2.5 Publication of Registration Data. Registry Operator shall provide public access to registration data in accordance with the specification posted at [*see specification 4*]* (“Specification 4”).

2.6 Reserved Names. Except to the extent that ICANN otherwise expressly authorizes in writing, Registry Operator shall comply with the restrictions on registration of character strings set forth at [*see specification 5*]* (“Specification 5”). Registry Operator may establish policies concerning the reservation or blocking of additional character strings within the TLD at its discretion. If Registry Operator is the registrant for any domain names in the Registry TLD (other than the Second-Level Reservations for Registry Operations from Specification 5), such registrations must be through an ICANN accredited registrar. Any such registrations will be considered Transactions (as defined in Section 6.1) for purposes of calculating the Registry-Level Transaction Fee to be paid to ICANN by Registry Operator pursuant to Section 6.1.

2.7 Registry Interoperability and Continuity. Registry Operator shall comply with the Registry Interoperability and Continuity Specifications as set forth in Specification 6.

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

2.8 Protection of Legal Rights of Third Parties. Registry Operator must specify, and comply with, a process and procedures for launch of the TLD and initial registration-related and ongoing protection of the legal rights of third parties as set forth in the specification at [*see specification 7*]* (“Specification 7”). Registry Operator may, at its election, implement additional protections of the legal rights of third parties. Any changes or modifications to the process and procedures required by Specification 7 following the Effective Date must be approved in advance by ICANN in writing. Registry Operator must comply with all remedies imposed by ICANN pursuant to Section 2 of Specification 7, subject to Registry Operator’s right to challenge such remedies as set forth in the applicable procedure described therein. Registry Operator shall take reasonable steps to investigate and respond to any reports from law enforcement and governmental and quasi-governmental agencies of illegal conduct in connection with the use of the TLD. In responding to such reports, Registry Operator will not be required to take any action in contravention of applicable law.

2.9 Registrars.

(a) Registry Operator must use only ICANN accredited registrars in registering domain names. Registry Operator must provide non-discriminatory access to Registry Services to all ICANN accredited registrars that enter into and are in compliance with the registry-registrar agreement for the TLD; provided, that Registry Operator may establish non-discriminatory criteria for qualification to register names in the TLD that are reasonably related to the proper functioning of the TLD. Registry Operator must use a uniform non-discriminatory agreement with all registrars authorized to register names in the TLD. Such agreement may be revised by Registry Operator from time to time; provided, however, that any such revisions must be approved in advance by ICANN.

(b) If Registry Operator (i) becomes an Affiliate or reseller of an ICANN accredited registrar, or (ii) subcontracts the provision of any Registry Services to an ICANN accredited registrar, registrar reseller or any of their respective Affiliates, then, in either such case of (i) or (ii) above, Registry Operator will give ICANN prompt notice of the contract, transaction or other arrangement that resulted in such affiliation, reseller relationship or subcontract, as applicable, including, if requested by ICANN, copies of any contract relating thereto; provided, that ICANN will not disclose such contracts to any third party other than relevant competition authorities. ICANN reserves the right, but not the obligation, to refer any such contract, transaction or other arrangement to relevant competition authorities in the event that ICANN determines that such contract, transaction or other arrangement might raise competition issues.

(c) For the purposes of this Agreement: (i) “Affiliate” means a person or entity that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, the person or entity specified, and (ii) “control” (including the terms “controlled by” and “under common control with”) means the possession, directly or indirectly, of the power to direct or cause the direction of the management or policies of a person or entity, whether through the ownership of securities, as trustee or executor, by serving as an employee or a member of a board of directors or equivalent governing body, by contract, by credit arrangement or otherwise.

2.10 Pricing for Registry Services.

(a) With respect to initial domain name registrations, Registry Operator shall provide ICANN and each ICANN accredited registrar that has executed the registry-registrar agreement for the TLD advance written notice of any price increase (including as a result of the elimination of any refunds, rebates, discounts, product tying or other programs which had the effect of reducing the price charged to registrars, unless such refunds, rebates, discounts, product tying or other programs are of a limited

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

duration that is clearly and conspicuously disclosed to the registrar when offered) of no less than thirty (30) calendar days. Registry Operator shall offer registrars the option to obtain initial domain name registrations for periods of one to ten years at the discretion of the registrar, but no greater than ten years.

(b) With respect to renewal of domain name registrations, Registry Operator shall provide ICANN and each ICANN accredited registrar that has executed the registry-registrar agreement for the TLD advance written notice of any price increase (including as a result of the elimination of any refunds, rebates, discounts, product tying, Qualified Marketing Programs or other programs which had the effect of reducing the price charged to registrars) of no less than one hundred eighty (180) calendar days. Notwithstanding the foregoing sentence, with respect to renewal of domain name registrations: (i) Registry Operator need only provide thirty (30) calendar days notice of any price increase if the resulting price is less than or equal to (A) for the period beginning on the Effective Date and ending twelve (12) months following the Effective Date, the initial price charged for registrations in the TLD, or (B) for subsequent periods, a price for which Registry Operator provided a notice pursuant to the first sentence of this Section 2.10(b) within the twelve (12) month period preceding the effective date of the proposed price increase; and (ii) Registry Operator need not provide notice of any price increase for the imposition of the Variable Registry-Level Fee set forth in Section 6.3. Registry Operator shall offer registrars the option to obtain domain name registration renewals at the current price (i.e. the price in place prior to any noticed increase) for periods of one to ten years at the discretion of the registrar, but no greater than ten years.

(c) In addition, Registry Operator must have uniform pricing for renewals of domain name registrations (“Renewal Pricing”). For the purposes of determining Renewal Pricing, the price for each domain registration renewal must be identical to the price of all other domain name registration renewals in place at the time of such renewal, and such price must take into account universal application of any refunds, rebates, discounts, product tying or other programs in place at the time of renewal. The foregoing requirements of this Section 2.10(c) shall not apply for (i) purposes of determining Renewal Pricing if the registrar has provided Registry Operator with documentation that demonstrates that the applicable registrant expressly agreed in its registration agreement with registrar to higher Renewal Pricing at the time of the initial registration of the domain name following clear and conspicuous disclosure of such Renewal Pricing to such registrant, and (ii) discounted Renewal Pricing pursuant to a Qualified Marketing Program (as defined below). The parties acknowledge that the purpose of this Section 2.10(c) is to prohibit abusive and/or discriminatory Renewal Pricing practices imposed by Registry Operator without the written consent of the applicable registrant at the time of the initial registration of the domain and this Section 2.10(c) will be interpreted broadly to prohibit such practices. For purposes of this Section 2.10(c), a “Qualified Marketing Program” is a marketing program pursuant to which Registry Operator offers discounted Renewal Pricing, provided that each of the following criteria is satisfied: (i) the program and related discounts are offered for a period of time not to exceed one hundred eighty (180) calendar days (with consecutive substantially similar programs aggregated for purposes of determining the number of calendar days of the program), (ii) all ICANN accredited registrars are provided the same opportunity to qualify for such discounted Renewal Pricing; and (iii) the intent or effect of the program is not to exclude any particular class(es) of registrations (e.g., registrations held by large corporations) or increase the renewal price of any particular class(es) of registrations. Nothing in this Section 2.10(c) shall limit Registry Operator’s obligations pursuant to Section 2.10(b).

(d) Registry Operator shall provide public query-based DNS lookup service for the TLD (that is, operate the Registry TLD zone servers) at its sole expense.

2.11 Contractual and Operational Compliance Audits.

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(a) ICANN may from time to time (not to exceed twice per calendar year) conduct, or engage a third party to conduct, contractual compliance audits to assess compliance by Registry Operator with its representations and warranties contained in Article 1 of this Agreement and its covenants contained in Article 2 of this Agreement. Such audits shall be tailored to achieve the purpose of assessing compliance, and ICANN will (a) give reasonable advance notice of any such audit, which notice shall specify in reasonable detail the categories of documents, data and other information requested by ICANN, and (b) use commercially reasonable efforts to conduct such audit in such a manner as to not unreasonably disrupt the operations of Registry Operator. As part of such audit and upon request by ICANN, Registry Operator shall timely provide all responsive documents, data and any other information necessary to demonstrate Registry Operator's compliance with this Agreement. Upon no less than five (5) business days notice (unless otherwise agreed to by Registry Operator), ICANN may, as part of any contractual compliance audit, conduct site visits during regular business hours to assess compliance by Registry Operator with its representations and warranties contained in Article 1 of this Agreement and its covenants contained in Article 2 of this Agreement.

(b) Any audit conducted pursuant to Section 2.11(a) will be at ICANN's expense, unless (i) Registry Operator (A) controls, is controlled by, is under common control or is otherwise Affiliated with, any ICANN accredited registrar or registrar reseller or any of their respective Affiliates, or (B) has subcontracted the provision of Registry Services to an ICANN accredited registrar or registrar reseller or any of their respective Affiliates, and, in either case of (A) or (B) above, the audit relates to Registry Operator's compliance with Section 2.14, in which case Registry Operator shall reimburse ICANN for all reasonable costs and expenses associated with the portion of the audit related to Registry Operator's compliance with Section 2.14, or (ii) the audit is related to a discrepancy in the fees paid by Registry Operator hereunder in excess of 5% to ICANN's detriment, in which case Registry Operator shall reimburse ICANN for all reasonable costs and expenses associated with the entirety of such audit. In either such case of (i) or (ii) above, such reimbursement will be paid together with the next Registry-Level Fee payment due following the date of transmittal of the cost statement for such audit.

(c) Notwithstanding Section 2.11(a), if Registry Operator is found not to be in compliance with its representations and warranties contained in Article 1 of this Agreement or its covenants contained in Article 2 of this Agreement in two consecutive audits conducted pursuant to this Section 2.11, ICANN may increase the number of such audits to one per calendar quarter.

(d) Registry Operator will give ICANN immediate notice of the commencement of any of the proceedings referenced in Section 4.3(d) or the occurrence of any of the matters specified in Section 4.3(f).

2.12 Continued Operations Instrument. Registry Operator shall comply with the terms and conditions relating to the Continued Operations Instrument set forth in the specification at [*see specification 8*].

2.13 Emergency Transition. Registry Operator agrees that in the event that any of the registry functions set forth in Section 6 of Specification 10 fails for a period longer than the emergency threshold for such function set forth in Section 6 of Specification 10, ICANN may designate an emergency interim registry operator of the registry for the TLD (an "Emergency Operator") in accordance with ICANN's registry transition process (available at _____) (as the same may be amended from time to time, the "Registry Transition Process") until such time as Registry Operator has demonstrated to ICANN's reasonable satisfaction that it can resume operation of the registry for the TLD without the reoccurrence of such failure. Following such demonstration, Registry Operator may transition back into operation of the registry for the TLD pursuant to the procedures set out in the Registry Transition Process,

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

provided that Registry Operator pays all reasonable costs incurred (i) by ICANN as a result of the designation of the Emergency Operator and (ii) by the Emergency Operator in connection with the operation of the registry for the TLD, which costs shall be documented in reasonable detail in records that shall be made available to Registry Operator. In the event ICANN designates an Emergency Operator pursuant to this Section 2.13 and the Registry Transition Process, Registry Operator shall provide ICANN or any such Emergency Operator with all data (including the data escrowed in accordance with Section 2.3) regarding operations of the registry for the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such Emergency Operator. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event that an Emergency Operator is designated pursuant to this Section 2.13. In addition, in the event of such failure, ICANN shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable.

2.14 Registry Code of Conduct. In connection with the operation of the registry for the TLD, Registry Operator shall comply with the Registry Code of Conduct as set forth in the specification at [*see specification 9*].

2.15 Cooperation with Economic Studies. If ICANN initiates or commissions an economic study on the impact or functioning of new generic top-level domains on the Internet, the DNS or related matters, Registry Operator shall reasonably cooperate with such study, including by delivering to ICANN or its designee conducting such study all data reasonably necessary for the purposes of such study requested by ICANN or its designee, provided, that Registry Operator may withhold any internal analyses or evaluations prepared by Registry Operator with respect to such data. Any data delivered to ICANN or its designee pursuant to this Section 2.15 shall be fully aggregated and anonymized by ICANN or its designee prior to any disclosure of such data to any third party.

2.16 Registry Performance Specifications. Registry Performance Specifications for operation of the TLD will be as set forth in the specification at [*see specification 10*]*. Registry Operator shall comply with such Performance Specifications and, for a period of at least one year, shall keep technical and operational records sufficient to evidence compliance with such specifications for each calendar year during the Term.

2.17 Personal Data. Registry Operator shall (i) notify each ICANN-accredited registrar that is a party to the registry-registrar agreement for the TLD of the purposes for which data about any identified or identifiable natural person (“Personal Data”) submitted to Registry Operator by such registrar is collected and used under this Agreement or otherwise and the intended recipients (or categories of recipients) of such Personal Data, and (ii) require such registrar to obtain the consent of each registrant in the TLD for such collection and use of Personal Data. Registry Operator shall take reasonable steps to protect Personal Data collected from such registrar from loss, misuse, unauthorized disclosure, alteration or destruction. Registry Operator shall not use or authorize the use of Personal Data in a way that is incompatible with the notice provided to registrars.

2.18 [Note: For Community-Based TLDs Only] Obligations of Registry Operator to TLD Community. Registry Operator shall establish registration policies in conformity with the application submitted with respect to the TLD for: (i) naming conventions within the TLD, (ii) requirements for registration by members of the TLD community, and (iii) use of registered domain names in conformity with the stated purpose of the community-based TLD. Registry Operator shall operate the TLD in a manner that allows the TLD community to discuss and participate in the development and modification of policies and practices for the TLD. Registry Operator shall establish procedures for the enforcement of registration policies for the TLD, and resolution of disputes concerning compliance with TLD registration

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

policies, and shall enforce such registration policies. Registry Operator agrees to implement and be bound by the Registry Restrictions Dispute Resolution Procedure as set forth at [*insert applicable URL*] with respect to disputes arising pursuant to this Section 2.18.]

ARTICLE 3.

COVENANTS OF ICANN

ICANN covenants and agrees with Registry Operator as follows:

3.1 Open and Transparent. Consistent with ICANN’s expressed mission and core values, ICANN shall operate in an open and transparent manner.

3.2 Equitable Treatment. ICANN shall not apply standards, policies, procedures or practices arbitrarily, unjustifiably, or inequitably and shall not single out Registry Operator for disparate treatment unless justified by substantial and reasonable cause.

3.3 TLD Nameservers. ICANN will use commercially reasonable efforts to ensure that any changes to the TLD nameserver designations submitted to ICANN by Registry Operator (in a format and with required technical elements specified by ICANN at <http://www.iana.org/domains/root/> will be implemented by ICANN within seven (7) calendar days or as promptly as feasible following technical verifications.

3.4 Root-zone Information Publication. ICANN’s publication of root-zone contact information for the TLD will include Registry Operator and its administrative and technical contacts. Any request to modify the contact information for the Registry Operator must be made in the format specified from time to time by ICANN at <http://www.iana.org/domains/root/>.

3.5 Authoritative Root Database. To the extent that ICANN is authorized to set policy with regard to an authoritative root server system, ICANN shall use commercially reasonable efforts to (a) ensure that the authoritative root will point to the top-level domain nameservers designated by Registry Operator for the TLD, (b) maintain a stable, secure, and authoritative publicly available database of relevant information about the TLD, in accordance with ICANN publicly available policies and procedures, and (c) coordinate the Authoritative Root Server System so that it is operated and maintained in a stable and secure manner; provided, that ICANN shall not be in breach of this Agreement and ICANN shall have no liability in the event that any third party (including any governmental entity or internet service provider) blocks or restricts access to the TLD in any jurisdiction.

ARTICLE 4.

TERM AND TERMINATION

4.1 Term. The term of this Agreement will be ten years from the Effective Date (as such term may be extended pursuant to Section 4.2, the “Term”).

4.2 Renewal.

(a) This Agreement will be renewed for successive periods of ten years upon the expiration of the initial Term set forth in Section 4.1 and each successive Term, unless:

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(i) Following notice by ICANN to Registry Operator of a fundamental and material breach of Registry Operator's covenants set forth in Article 2 or breach of its payment obligations under Article 6 of this Agreement, which notice shall include with specificity the details of the alleged breach, and such breach has not been cured within thirty (30) calendar days of such notice, (A) an arbitrator or court has finally determined that Registry Operator has been in fundamental and material breach of such covenant(s) or in breach of its payment obligations, and (B) Registry Operator has failed to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court; or

(ii) During the then current Term, Registry Operator shall have been found by an arbitrator (pursuant to Section 5.2 of this Agreement) on at least three (3) separate occasions to have been in fundamental and material breach (whether or not cured) of Registry Operator's covenants set forth in Article 2 or breach of its payment obligations under Article 6 of this Agreement.

(b) Upon the occurrence of the events set forth in Section 4.2(a) (i) or (ii), the Agreement shall terminate at the expiration of the then current Term.

4.3 Termination by ICANN.

(a) ICANN may, upon notice to Registry Operator, terminate this Agreement if: (i) Registry Operator fails to cure (A) any fundamental and material breach of Registry Operator's representations and warranties set forth in Article 1 or covenants set forth in Article 2, or (B) any breach of Registry Operator's payment obligations set forth in Article 6 of this Agreement, each within thirty (30) calendar days after ICANN gives Registry Operator notice of such breach, which notice will include with specificity the details of the alleged breach, (ii) an arbitrator or court has finally determined that Registry Operator is in fundamental and material breach of such covenant(s) or in breach of its payment obligations, and (iii) Registry Operator fails to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

(b) ICANN may, upon notice to Registry Operator, terminate this Agreement if Registry Operator fails to complete all testing and procedures (identified by ICANN in writing to Registry Operator prior to the date hereof) for delegation of the TLD into the root zone within twelve (12) months of the Effective Date. Registry Operator may request an extension for up to additional twelve (12) months for delegation if it can demonstrate, to ICANN's reasonable satisfaction, that Registry Operator is working diligently and in good faith toward successfully completing the steps necessary for delegation of the TLD. Any fees paid by Registry Operator to ICANN prior to such termination date shall be retained by ICANN in full.

(c) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator fails to cure a material breach of Registry Operator's obligations set forth in Section 2.12 of this Agreement within thirty (30) calendar days of delivery of notice of such breach by ICANN, or if the Continued Operations Instrument is not in effect for greater than sixty (60) consecutive calendar days at any time following the Effective Date, (ii) an arbitrator or court has finally determined that Registry Operator is in material breach of such covenant, and (iii) Registry Operator fails to cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(d) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator makes an assignment for the benefit of creditors or similar act, (ii) attachment, garnishment or similar proceedings are commenced against Registry Operator, which proceedings are a material threat to Registry Operator's ability to operate the registry for the TLD, and are not dismissed within sixty (60) days of their commencement, (iii) a trustee, receiver, liquidator or equivalent is appointed in place of Registry Operator or maintains control over any of Registry Operator's property, (iv) execution is levied upon any property of Registry Operator, (v) proceedings are instituted by or against Registry Operator under any bankruptcy, insolvency, reorganization or other laws relating to the relief of debtors and such proceedings are not dismissed within thirty (30) days of their commencement, or (vi) Registry Operator files for protection under the United States Bankruptcy Code, 11 U.S.C. Section 101 et seq., or a foreign equivalent or liquidates, dissolves or otherwise discontinues its operations or the operation of the TLD.

(e) ICANN may, upon thirty (30) calendar days' notice to Registry Operator, terminate this Agreement pursuant to Section 2 of Specification 7, subject to Registry Operator's right to challenge such termination as set forth in the applicable procedure described therein.

(f) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator knowingly employs any officer that is convicted of a misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such officer is not terminated within thirty (30) calendar days of Registry Operator's knowledge of the foregoing, or (ii) any member of Registry Operator's board of directors or similar governing body is convicted of a misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such member is not removed from Registry Operator's board of directors or similar governing body within thirty (30) calendar days of Registry Operator's knowledge of the foregoing.

(g) *[Applicable to intergovernmental organizations or governmental entities only.]*
ICANN may terminate this Agreement pursuant to Section 7.14.

4.4 Termination by Registry Operator.

(a) Registry Operator may terminate this Agreement upon notice to ICANN if, (i) ICANN fails to cure any fundamental and material breach of ICANN's covenants set forth in Article 3, within thirty (30) calendar days after Registry Operator gives ICANN notice of such breach, which notice will include with specificity the details of the alleged breach, (ii) an arbitrator or court has finally determined that ICANN is in fundamental and material breach of such covenants, and (iii) ICANN fails to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

(b) Registry Operator may terminate this Agreement for any reason upon one hundred eighty (180) calendar day advance notice to ICANN.

4.5 Transition of Registry upon Termination of Agreement. Upon expiration of the Term pursuant to Section 4.1 or Section 4.2 or any termination of this Agreement pursuant to Section 4.3 or Section 4.4, Registry Operator shall provide ICANN or any successor registry operator that may be designated by ICANN for the TLD in accordance with this Section 4.5 with all data (including the data

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

escrowed in accordance with Section 2.3) regarding operations of the registry for the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such successor registry operator. After consultation with Registry Operator, ICANN shall determine whether or not to transition operation of the TLD to a successor registry operator in its sole discretion and in conformance with the Registry Transition Process; provided, however, that if Registry Operator demonstrates to ICANN's reasonable satisfaction that (i) all domain name registrations in the TLD are registered to, and maintained by, Registry Operator for its own exclusive use, (ii) Registry Operator does not sell, distribute or transfer control or use of any registrations in the TLD to any third party that is not an Affiliate of Registry Operator, and (iii) transitioning operation of the TLD is not necessary to protect the public interest, then ICANN may not transition operation of the TLD to a successor registry operator upon the expiration or termination of this Agreement without the consent of Registry Operator (which shall not be unreasonably withheld, conditioned or delayed). For the avoidance of doubt, the foregoing sentence shall not prohibit ICANN from delegating the TLD pursuant to a future application process for the delegation of top-level domains, subject to any processes and objection procedures instituted by ICANN in connection with such application process intended to protect the rights of third parties. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event of a transition of the TLD pursuant to this Section 4.5. In addition, ICANN or its designee shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable, regardless of the reason for termination or expiration of this Agreement.

[Alternative Section 4.5 Transition of Registry upon Termination of Agreement text for intergovernmental organizations or governmental entities or other special circumstances:

“Transition of Registry upon Termination of Agreement. Upon expiration of the Term pursuant to Section 4.1 or Section 4.2 or any termination of this Agreement pursuant to Section 4.3 or Section 4.4, in connection with ICANN's designation of a successor registry operator for the TLD, Registry Operator and ICANN agree to consult each other and work cooperatively to facilitate and implement the transition of the TLD in accordance with this Section 4.5. After consultation with Registry Operator, ICANN shall determine whether or not to transition operation of the TLD to a successor registry operator in its sole discretion and in conformance with the Registry Transition Process. In the event ICANN determines to transition operation of the TLD to a successor registry operator, upon Registry Operator's consent (which shall not be unreasonably withheld, conditioned or delayed), Registry Operator shall provide ICANN or such successor registry operator for the TLD with any data regarding operations of the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such successor registry operator in addition to data escrowed in accordance with Section 2.3 hereof. In the event that Registry Operator does not consent to provide such data, any registry data related to the TLD shall be returned to Registry Operator, unless otherwise agreed upon by the parties. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event of a transition of the TLD pursuant to this Section 4.5. In addition, ICANN or its designee shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable, regardless of the reason for termination or expiration of this Agreement.”]

4.6 Effect of Termination. Upon any expiration of the Term or termination of this Agreement, the obligations and rights of the parties hereto shall cease, provided that such expiration or termination of this Agreement shall not relieve the parties of any obligation or breach of this Agreement accruing prior to such expiration or termination, including, without limitation, all accrued payment obligations arising under Article 6. In addition, Article 5, Article 7, Section 2.12, Section 4.5, and this

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

Section 4.6 shall survive the expiration or termination of this Agreement. For the avoidance of doubt, the rights of Registry Operator to operate the registry for the TLD shall immediately cease upon any expiration of the Term or termination of this Agreement.

ARTICLE 5.

DISPUTE RESOLUTION

5.1 Cooperative Engagement. Before either party may initiate arbitration pursuant to Section 5.2 below, ICANN and Registry Operator, following initiation of communications by either party, must attempt to resolve the dispute by engaging in good faith discussion over a period of at least fifteen (15) calendar days.

5.2 Arbitration. Disputes arising under or in connection with this Agreement, including requests for specific performance, will be resolved through binding arbitration conducted pursuant to the rules of the International Court of Arbitration of the International Chamber of Commerce. The arbitration will be conducted in the English language and will occur in Los Angeles County, California. Any arbitration will be in front of a single arbitrator, unless (i) ICANN is seeking punitive or exemplary damages, or operational sanctions, or (ii) the parties agree in writing to a greater number of arbitrators. In either case of clauses (i) or (ii) in the preceding sentence, the arbitration will be in front of three arbitrators with each party selecting one arbitrator and the two selected arbitrators selecting the third arbitrator. In order to expedite the arbitration and limit its cost, the arbitrator(s) shall establish page limits for the parties' filings in conjunction with the arbitration, and should the arbitrator(s) determine that a hearing is necessary, the hearing shall be limited to one (1) calendar day, provided that in any arbitration in which ICANN is seeking punitive or exemplary damages, or operational sanctions, the hearing may be extended for one (1) additional calendar day if agreed upon by the parties or ordered by the arbitrator(s) based on the arbitrator(s) independent determination or the reasonable request of one of the parties thereto. The prevailing party in the arbitration will have the right to recover its costs and reasonable attorneys' fees, which the arbitrator(s) shall include in the awards. In the event the arbitrators determine that Registry Operator has been repeatedly and willfully in fundamental and material breach of its obligations set forth in Article 2, Article 6 or Section 5.4 of this Agreement, ICANN may request the arbitrators award punitive or exemplary damages, or operational sanctions (including without limitation an order temporarily restricting Registry Operator's right to sell new registrations). In any litigation involving ICANN concerning this Agreement, jurisdiction and exclusive venue for such litigation will be in a court located in Los Angeles County, California; however, the parties will also have the right to enforce a judgment of such a court in any court of competent jurisdiction.

[Alternative **Section 5.2 Arbitration** text for intergovernmental organizations or governmental entities or other special circumstances:

“Arbitration. Disputes arising under or in connection with this Agreement, including requests for specific performance, will be resolved through binding arbitration conducted pursuant to the rules of the International Court of Arbitration of the International Chamber of Commerce. The arbitration will be conducted in the English language and will occur in Geneva, Switzerland, unless another location is mutually agreed upon by Registry Operator and ICANN. Any arbitration will be in front of a single arbitrator, unless (i) ICANN is seeking punitive or exemplary damages, or operational sanctions, or (ii) the parties agree in writing to a greater number of arbitrators. In either case of clauses (i) or (ii) in the preceding sentence, the arbitration will be in front of three arbitrators with each party selecting one arbitrator and the two selected arbitrators selecting the third arbitrator. In order to expedite the arbitration and limit its cost, the arbitrator(s) shall establish page limits for the parties' filings in conjunction with the

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

arbitration, and should the arbitrator(s) determine that a hearing is necessary, the hearing shall be limited to one (1) calendar day, provided that in any arbitration in which ICANN is seeking punitive or exemplary damages, or operational sanctions, the hearing may be extended for one (1) additional calendar day if agreed upon by the parties or ordered by the arbitrator(s) based on the arbitrator(s) independent determination or the reasonable request of one of the parties thereto. The prevailing party in the arbitration will have the right to recover its costs and reasonable attorneys' fees, which the arbitrator(s) shall include in the awards. In the event the arbitrators determine that Registry Operator has been repeatedly and willfully in fundamental and material breach of its obligations set forth in Article 2, Article 6 or Section 5.4 of this Agreement, ICANN may request the arbitrators award punitive or exemplary damages, or operational sanctions (including without limitation an order temporarily restricting Registry Operator's right to sell new registrations). In any litigation involving ICANN concerning this Agreement, jurisdiction and exclusive venue for such litigation will be in a court located in Geneva, Switzerland, unless an another location is mutually agreed upon by Registry Operator and ICANN; however, the parties will also have the right to enforce a judgment of such a court in any court of competent jurisdiction."}]

5.3 Limitation of Liability. ICANN's aggregate monetary liability for violations of this Agreement will not exceed an amount equal to the Registry-Level Fees paid by Registry Operator to ICANN within the preceding twelve-month period pursuant to this Agreement (excluding the Variable Registry-Level Fee set forth in Section 6.3, if any). Registry Operator's aggregate monetary liability to ICANN for breaches of this Agreement will be limited to an amount equal to the fees paid to ICANN during the preceding twelve-month period (excluding the Variable Registry-Level Fee set forth in Section 6.3, if any), and punitive and exemplary damages, if any, awarded in accordance with Section 5.2. In no event shall either party be liable for special, punitive, exemplary or consequential damages arising out of or in connection with this Agreement or the performance or nonperformance of obligations undertaken in this Agreement, except as provided in Section 5.2. Except as otherwise provided in this Agreement, neither party makes any warranty, express or implied, with respect to the services rendered by itself, its servants or agents, or the results obtained from their work, including, without limitation, any implied warranty of merchantability, non-infringement or fitness for a particular purpose.

5.4 Specific Performance. Registry Operator and ICANN agree that irreparable damage could occur if any of the provisions of this Agreement was not performed in accordance with its specific terms. Accordingly, the parties agree that they each shall be entitled to seek from the arbitrator specific performance of the terms of this Agreement (in addition to any other remedy to which each party is entitled).

ARTICLE 6.

FEES

6.1 Registry-Level Fees. Registry Operator shall pay ICANN a Registry-Level Fee equal to (i) the Registry Fixed Fee of US\$6,250 per calendar quarter and (ii) the Registry-Level Transaction Fee. The Registry-Level Transaction Fee will be equal to the number of annual increments of an initial or renewal domain name registration (at one or more levels, and including renewals associated with transfers from one ICANN-accredited registrar to another, each a "Transaction"), during the applicable calendar quarter multiplied by US\$0.25; provided, however that the Registry-Level Transaction Fee shall not apply until and unless more than 50,000 Transactions have occurred in the TLD during any calendar quarter or any four calendar quarter period (the "Transaction Threshold") and shall apply to each Transaction that occurred during each quarter in which the Transaction Threshold has been met, but shall not apply to each quarter in which the Transaction Threshold has not been met. Registry Operator shall pay the Registry-

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

Level Fees on a quarterly basis by the 20th day following the end of each calendar quarter (i.e., on April 20, July 20, October 20 and January 20 for the calendar quarters ending March 31, June 30, September 30 and December 31) of the year to an account designated by ICANN.

6.2 Cost Recovery for RSTEP. Requests by Registry Operator for the approval of Additional Services pursuant to Section 2.1 may be referred by ICANN to the Registry Services Technical Evaluation Panel ("RSTEP") pursuant to that process at <http://www.icann.org/en/registries/rsep/>. In the event that such requests are referred to RSTEP, Registry Operator shall remit to ICANN the invoiced cost of the RSTEP review within ten (10) business days of receipt of a copy of the RSTEP invoice from ICANN, unless ICANN determines, in its sole and absolute discretion, to pay all or any portion of the invoiced cost of such RSTEP review.

6.3 Variable Registry-Level Fee.

(a) If the ICANN accredited registrars (as a group) do not approve pursuant to the terms of their registrar accreditation agreements with ICANN the variable accreditation fees established by the ICANN Board of Directors for any ICANN fiscal year, upon delivery of notice from ICANN, Registry Operator shall pay to ICANN a Variable Registry-Level Fee, which shall be paid on a fiscal quarter basis, and shall accrue as of the beginning of the first fiscal quarter of such ICANN fiscal year. The fee will be calculated and invoiced by ICANN on a quarterly basis, and shall be paid by Registry Operator within sixty (60) calendar days with respect to the first quarter of such ICANN fiscal year and within twenty (20) calendar days with respect to each remaining quarter of such ICANN fiscal year, of receipt of the invoiced amount by ICANN. The Registry Operator may invoice and collect the Variable Registry-Level Fees from the registrars who are party to a registry-registrar agreement with Registry Operator (which agreement may specifically provide for the reimbursement of Variable Registry-Level Fees paid by Registry Operator pursuant to this Section 6.3); provided, that the fees shall be invoiced to all ICANN accredited registrars if invoiced to any. The Variable Registry-Level Fee, if collectible by ICANN, shall be an obligation of Registry Operator and shall be due and payable as provided in this Section 6.3 irrespective of Registry Operator's ability to seek and obtain reimbursement of such fee from registrars. In the event ICANN later collects variable accreditation fees for which Registry Operator has paid ICANN a Variable Registry-Level Fee, ICANN shall reimburse the Registry Operator an appropriate amount of the Variable Registry-Level Fee, as reasonably determined by ICANN. If the ICANN accredited registrars (as a group) do approve pursuant to the terms of their registrar accreditation agreements with ICANN the variable accreditation fees established by the ICANN Board of Directors for a fiscal year, ICANN shall not be entitled to a Variable-Level Fee hereunder for such fiscal year, irrespective of whether the ICANN accredited registrars comply with their payment obligations to ICANN during such fiscal year.

(b) The amount of the Variable Registry-Level Fee will be specified for each registrar, and may include both a per-registrar component and a transactional component. The per-registrar component of the Variable Registry-Level Fee shall be specified by ICANN in accordance with the budget adopted by the ICANN Board of Directors for each ICANN fiscal year. The transactional component of the Variable Registry-Level Fee shall be specified by ICANN in accordance with the budget adopted by the ICANN Board of Directors for each ICANN fiscal year but shall not exceed US\$0.25 per domain name registration (including renewals associated with transfers from one ICANN-accredited registrar to another) per year.

6.4 Adjustments to Fees. Notwithstanding any of the fee limitations set forth in this Article 6, commencing upon the expiration of the first year of this Agreement, and upon the expiration of each year thereafter during the Term, the then current fees set forth in Section 6.1 and Section 6.3 may be

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

adjusted, at ICANN's discretion, by a percentage equal to the percentage change, if any, in (i) the Consumer Price Index for All Urban Consumers, U.S. City Average (1982-1984 = 100) published by the United States Department of Labor, Bureau of Labor Statistics, or any successor index (the "CPI") for the month which is one (1) month prior to the commencement of the applicable year, over (ii) the CPI published for the month which is one (1) month prior to the commencement of the immediately prior year. In the event of any such increase, ICANN shall provide notice to Registry Operator specifying the amount of such adjustment. Any fee adjustment under this Section 6.4 shall be effective as of the first day of the year in which the above calculation is made.

6.5 Additional Fee on Late Payments. For any payments thirty (30) calendar days or more overdue under this Agreement, Registry Operator shall pay an additional fee on late payments at the rate of 1.5% per month or, if less, the maximum rate permitted by applicable law.

ARTICLE 7.

MISCELLANEOUS

7.1 Indemnification of ICANN.

(a) Registry Operator shall indemnify and defend ICANN and its directors, officers, employees, and agents (collectively, "Indemnitees") from and against any and all third-party claims, damages, liabilities, costs, and expenses, including reasonable legal fees and expenses, arising out of or relating to intellectual property ownership rights with respect to the TLD, the delegation of the TLD to Registry Operator, Registry Operator's operation of the registry for the TLD or Registry Operator's provision of Registry Services, provided that Registry Operator shall not be obligated to indemnify or defend any Indemnitee to the extent the claim, damage, liability, cost or expense arose: (i) due to the actions or omissions of ICANN, its subcontractors, panelists or evaluators specifically related to and occurring during the registry TLD application process (other than actions or omissions requested by or for the benefit of Registry Operator), or (ii) due to a breach by ICANN of any obligation contained in this Agreement or any willful misconduct by ICANN. This Section shall not be deemed to require Registry Operator to reimburse or otherwise indemnify ICANN for costs associated with the negotiation or execution of this Agreement, or with monitoring or management of the parties' respective obligations hereunder. Further, this Section shall not apply to any request for attorney's fees in connection with any litigation or arbitration between or among the parties, which shall be governed by Article 5 or otherwise awarded by a court or arbitrator.

[Alternative **Section 7.1(a)** text for intergovernmental organizations or governmental entities:

"Registry Operator shall use its best efforts to cooperate with ICANN in order to ensure that ICANN does not incur any costs associated with claims, damages, liabilities, costs and expenses, including reasonable legal fees and expenses, arising out of or relating to intellectual property ownership rights with respect to the TLD, the delegation of the TLD to Registry Operator, Registry Operator's operation of the registry for the TLD or Registry Operator's provision of Registry Services, provided that Registry Operator shall not be obligated to provide such cooperation to the extent the claim, damage, liability, cost or expense arose due to a breach by ICANN of any of its obligations contained in this Agreement or any willful misconduct by ICANN. This Section shall not be deemed to require Registry Operator to reimburse or otherwise indemnify ICANN for costs associated with the negotiation or execution of this Agreement, or with monitoring or management of the parties' respective obligations hereunder. Further, this Section shall not apply to any request for attorney's fees in connection with any

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

litigation or arbitration between or among the parties, which shall be governed by Article 5 or otherwise awarded by a court or arbitrator.”]

(b) For any claims by ICANN for indemnification whereby multiple registry operators (including Registry Operator) have engaged in the same actions or omissions that gave rise to the claim, Registry Operator’s aggregate liability to indemnify ICANN with respect to such claim shall be limited to a percentage of ICANN’s total claim, calculated by dividing the number of total domain names under registration with Registry Operator within the TLD (which names under registration shall be calculated consistently with Article 6 hereof for any applicable quarter) by the total number of domain names under registration within all top level domains for which the registry operators thereof are engaging in the same acts or omissions giving rise to such claim. For the purposes of reducing Registry Operator’s liability under Section 7.1(a) pursuant to this Section 7.1(b), Registry Operator shall have the burden of identifying the other registry operators that are engaged in the same actions or omissions that gave rise to the claim, and demonstrating, to ICANN’s reasonable satisfaction, such other registry operators’ culpability for such actions or omissions. For the avoidance of doubt, in the event that a registry operator is engaged in the same acts or omissions giving rise to the claims, but such registry operator(s) do not have the same or similar indemnification obligations to ICANN as set forth in Section 7.1(a) above, the number of domains under management by such registry operator(s) shall nonetheless be included in the calculation in the preceding sentence. [*Note: This Section 7.1(b) is inapplicable to intergovernmental organizations or governmental entities.*]

7.2 Indemnification Procedures. If any third-party claim is commenced that is indemnified under Section 7.1 above, ICANN shall provide notice thereof to Registry Operator as promptly as practicable. Registry Operator shall be entitled, if it so elects, in a notice promptly delivered to ICANN, to immediately take control of the defense and investigation of such claim and to employ and engage attorneys reasonably acceptable to ICANN to handle and defend the same, at Registry Operator’s sole cost and expense, provided that in all events ICANN will be entitled to control at its sole cost and expense the litigation of issues concerning the validity or interpretation of ICANN’s policies, Bylaws or conduct. ICANN shall cooperate, at Registry Operator’s cost and expense, in all reasonable respects with Registry Operator and its attorneys in the investigation, trial, and defense of such claim and any appeal arising therefrom, and may, at its own cost and expense, participate, through its attorneys or otherwise, in such investigation, trial and defense of such claim and any appeal arising therefrom. No settlement of a claim that involves a remedy affecting ICANN other than the payment of money in an amount that is fully indemnified by Registry Operator will be entered into without the consent of ICANN. If Registry Operator does not assume full control over the defense of a claim subject to such defense in accordance with this Section 7.2, ICANN will have the right to defend the claim in such manner as it may deem appropriate, at the cost and expense of Registry Operator and Registry Operator shall cooperate in such defense. [*Note: This Section 7.2 is inapplicable to intergovernmental organizations or governmental entities.*]

7.3 Defined Terms. For purposes of this Agreement, unless such definitions are amended pursuant to a Consensus Policy at a future date, in which case the following definitions shall be deemed amended and restated in their entirety as set forth in such Consensus Policy, Security and Stability shall be defined as follows:

(a) For the purposes of this Agreement, an effect on “Security” shall mean (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards.

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(b) For purposes of this Agreement, an effect on “Stability” shall refer to (1) lack of compliance with applicable relevant standards that are authoritative and published by a well-established and recognized Internet standards body, such as the relevant Standards-Track or Best Current Practice Requests for Comments (“RFCs”) sponsored by the Internet Engineering Task Force; or (2) the creation of a condition that adversely affects the throughput, response time, consistency or coherence of responses to Internet servers or end systems operating in accordance with applicable relevant standards that are authoritative and published by a well-established and recognized Internet standards body, such as the relevant Standards-Track or Best Current Practice RFCs, and relying on Registry Operator's delegated information or provisioning of services.

7.4 No Offset. All payments due under this Agreement will be made in a timely manner throughout the Term and notwithstanding the pendency of any dispute (monetary or otherwise) between Registry Operator and ICANN.

7.5 Change in Control; Assignment and Subcontracting. Neither party may assign this Agreement without the prior written approval of the other party, which approval will not be unreasonably withheld. Notwithstanding the foregoing, ICANN may assign this Agreement in conjunction with a reorganization or re-incorporation of ICANN to another nonprofit corporation or similar entity organized in the same legal jurisdiction in which ICANN is currently organized for the same or substantially the same purposes. For purposes of this Section 7.5, a direct or indirect change of control of Registry Operator or any material subcontracting arrangement with respect to the operation of the registry for the TLD shall be deemed an assignment. ICANN shall be deemed to have reasonably withheld its consent to any such a direct or indirect change of control or subcontracting arrangement in the event that ICANN reasonably determines that the person or entity acquiring control of Registry Operator or entering into such subcontracting arrangement (or the ultimate parent entity of such acquiring or subcontracting entity) does not meet the ICANN-adopted registry operator criteria or qualifications then in effect. In addition, without limiting the foregoing, Registry Operator must provide no less than thirty (30) calendar days advance notice to ICANN of any material subcontracting arrangements, and any agreement to subcontract portions of the operations of the TLD must mandate compliance with all covenants, obligations and agreements by Registry Operator hereunder, and Registry Operator shall continue to be bound by such covenants, obligations and agreements. Without limiting the foregoing, Registry Operator must also provide no less than thirty (30) calendar days advance notice to ICANN prior to the consummation of any transaction anticipated to result in a direct or indirect change of control of Registry Operator. Such change of control notification shall include a statement that affirms that the ultimate parent entity of the party acquiring such control meets the ICANN-adopted specification or policy on registry operator criteria then in effect, and affirms that Registry Operator is in compliance with its obligations under this Agreement. Within thirty (30) calendar days of such notification, ICANN may request additional information from Registry Operator establishing compliance with this Agreement, in which case Registry Operator must supply the requested information within fifteen (15) calendar days. If ICANN fails to expressly provide or withhold its consent to any direct or indirect change of control of Registry Operator or any material subcontracting arrangement within thirty (30) (or, if ICANN has requested additional information from Registry Operator as set forth above, sixty (60)) calendar days of the receipt of written notice of such transaction from Registry Operator, ICANN shall be deemed to have consented to such transaction. In connection with any such transaction, Registry Operator shall comply with the Registry Transition Process.

7.6 Amendments and Waivers.

(a) If ICANN determines that an amendment to this Agreement (including to the Specifications referred to herein) and all other registry agreements between ICANN and the Applicable

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

Registry Operators (the “Applicable Registry Agreements”) is desirable (each, a “Special Amendment”), ICANN may submit a Special Amendment for approval by the Applicable Registry Operators pursuant to the process set forth in this Section 7.6, provided that a Special Amendment is not a Restricted Amendment (as defined below). Prior to submitting a Special Amendment for such approval, ICANN shall first consult in good faith with the Working Group (as defined below) regarding the form and substance of a Special Amendment. The duration of such consultation shall be reasonably determined by ICANN based on the substance of the Special Amendment. Following such consultation, ICANN may propose the adoption of a Special Amendment by publicly posting such amendment on its website for no less than thirty (30) calendar days (the “Posting Period”) and providing notice of such amendment by ICANN to the Applicable Registry Operators in accordance with Section 7.8. ICANN will consider the public comments submitted on a Special Amendment during the Posting Period (including comments submitted by the Applicable Registry Operators).

(b) If, within two (2) calendar years of the expiration of the Posting Period (the “Approval Period”), (i) the ICANN Board of Directors approves a Special Amendment (which may be in a form different than submitted for public comment) and (ii) such Special Amendment receives Registry Operator Approval (as defined below), such Special Amendment shall be deemed approved (an “Approved Amendment”) by the Applicable Registry Operators (the last date on which such approvals are obtained is herein referred to as the “Amendment Approval Date”) and shall be effective and deemed an amendment to this Agreement upon sixty (60) calendar days notice from ICANN to Registry Operator (the “Amendment Effective Date”). In the event that a Special Amendment is not approved by the ICANN Board of Directors or does not receive Registry Operator Approval within the Approval Period, the Special Amendment will have no effect. The procedure used by ICANN to obtain Registry Operator Approval shall be designed to document the written approval of the Applicable Registry Operators, which may be in electronic form.

(c) During the thirty (30) calendar day period following the Amendment Approval Date, Registry Operator (so long as it did not vote in favor of the Approved Amendment) may apply in writing to ICANN for an exemption from the Approved Amendment (each such request submitted by Registry Operator hereunder, an “Exemption Request”). Each Exemption Request will set forth the basis for such request and provide detailed support for an exemption from the Approved Amendment. An Exemption Request may also include a detailed description and support for any alternatives to, or a variation of, the Approved Amendment proposed by such Registry Operator. An Exemption Request may only be granted upon a clear and convincing showing by Registry Operator that compliance with the Approved Amendment conflicts with applicable laws or would have a material adverse effect on the long-term financial condition or results of operations of Registry Operator. No Exemption Request will be granted if ICANN determines, in its reasonable discretion, that granting such Exemption Request would be materially harmful to registrants or result in the denial of a direct benefit to registrants. Within ninety (90) calendar days of ICANN’s receipt of an Exemption Request, ICANN shall either approve (which approval may be conditioned or consist of alternatives to or a variation of the Approved Amendment) or deny the Exemption Request in writing, during which time the Approved Amendment will not amend this Agreement; provided, that any such conditions, alternatives or variations shall be effective and, to the extent applicable, will amend this Agreement as of the Amendment Effective Date. If the Exemption Request is approved by ICANN, the Approved Amendment will not amend this Agreement. If such Exemption Request is denied by ICANN, the Approved Amendment will amend this Agreement as of the Amendment Effective Date (or, if such date has passed, such Approved Amendment shall be deemed effective immediately on the date of such denial), provided that Registry Operator may, within thirty (30) calendar days following receipt of ICANN’s determination, appeal ICANN’s decision to deny the Exemption Request pursuant to the dispute resolution procedures set forth in Article 5. The Approved

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

Amendment will be deemed not to have amended this Agreement during the pendency of the dispute resolution process. For avoidance of doubt, only Exemption Requests submitted by Registry Operator that are approved by ICANN pursuant to this Section 7.6(c) or through an arbitration decision pursuant to Article 5 shall exempt Registry Operator from any Approved Amendment, and no exemption request granted to any other Applicable Registry Operator (whether by ICANN or through arbitration) shall have any effect under this Agreement or exempt Registry Operator from any Approved Amendment.

(d) Except as set forth in this Section 7.6, no amendment, supplement or modification of this Agreement or any provision hereof shall be binding unless executed in writing by both parties, and nothing in this Section 7.6 shall restrict ICANN and Registry Operator from entering into bilateral amendments and modifications to this Agreement negotiated solely between the two parties. No waiver of any provision of this Agreement shall be binding unless evidenced by a writing signed by the party waiving compliance with such provision. No waiver of any of the provisions of this Agreement or failure to enforce any of the provisions hereof shall be deemed or shall constitute a waiver of any other provision hereof, nor shall any such waiver constitute a continuing waiver unless otherwise expressly provided. For the avoidance of doubt, nothing in this Section 7.6 shall be deemed to limit Registry Operator's obligation to comply with Section 2.2.

(e) For purposes of this Section 7.6, the following terms shall have the following meanings:

(i) "Applicable Registry Operators" means, collectively, the registry operators of the top-level domains party to a registry agreement that contains a provision similar to this Section 7.6, including Registry Operator.

(ii) "Registry Operator Approval" means the receipt of each of the following: (A) the affirmative approval of the Applicable Registry Operators whose payments to ICANN accounted for two-thirds of the total amount of fees (converted to U.S. dollars, if applicable) paid to ICANN by all the Applicable Registry Operators during the immediately previous calendar year pursuant to the Applicable Registry Agreements, and (B) the affirmative approval of a majority of the Applicable Registry Operators at the time such approval is obtained. For avoidance of doubt, with respect to clause (B), each Applicable Registry Operator shall have one vote for each top-level domain operated by such Registry Operator pursuant to an Applicable Registry Agreement.

(iii) "Restricted Amendment" means the following: (i) an amendment of Specification 1, (ii) except to the extent addressed in Section 2.10 hereof, an amendment that specifies the price charged by Registry Operator to registrars for domain name registrations, (iii) an amendment to the definition of Registry Services as set forth in the first paragraph of Section 2.1 of Specification 6, or (iv) an amendment to the length of the Term.

(iv) "Working Group" means representatives of the Applicable Registry Operators and other members of the community that ICANN appoints, from time to time, to serve as a working group to consult on amendments to the Applicable Registry Agreements (excluding bilateral amendments pursuant to Section 7.6(d)).

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

7.7 No Third-Party Beneficiaries. This Agreement will not be construed to create any obligation by either ICANN or Registry Operator to any non-party to this Agreement, including any registrar or registered name holder.

7.8 General Notices. Except for notices pursuant to Section 7.6, all notices to be given under or in relation to this Agreement will be given either (i) in writing at the address of the appropriate party as set forth below or (ii) via facsimile or electronic mail as provided below, unless that party has given a notice of change of postal or email address, or facsimile number, as provided in this agreement. All notices under Section 7.6 shall be given by both posting of the applicable information on ICANN's web site and transmission of such information to Registry Operator by electronic mail. Any change in the contact information for notice below will be given by the party within thirty (30) calendar days of such change. Notices, designations, determinations, and specifications made under this Agreement will be in the English language. Other than notices under Section 7.6, any notice required by this Agreement will be deemed to have been properly given (i) if in paper form, when delivered in person or via courier service with confirmation of receipt or (ii) if via facsimile or by electronic mail, upon confirmation of receipt by the recipient's facsimile machine or email server, provided that such notice via facsimile or electronic mail shall be followed by a copy sent by regular postal mail service within two (2) business days. Any notice required by Section 7.6 will be deemed to have been given when electronically posted on ICANN's website and upon confirmation of receipt by the email server. In the event other means of notice become practically achievable, such as notice via a secure website, the parties will work together to implement such notice means under this Agreement.

7.9 Entire Agreement. This Agreement (including those specifications and documents incorporated by reference to URL locations which form a part of it) constitutes the entire agreement of the parties hereto pertaining to the operation of the TLD and supersedes all prior agreements, understandings, negotiations and discussions, whether oral or written, between the parties on that subject.

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

7.10 English Language Controls. Notwithstanding any translated version of this Agreement and/or specifications that may be provided to Registry Operator, the English language version of this Agreement and all referenced specifications are the official versions that bind the parties hereto. In the event of any conflict or discrepancy between any translated version of this Agreement and the English language version, the English language version controls. Notices, designations, determinations, and specifications made under this Agreement shall be in the English language.

7.11 Ownership Rights. Nothing contained in this Agreement shall be construed as establishing or granting to Registry Operator any property ownership rights or interests in the TLD or the letters, words, symbols or other characters making up the TLD string.

7.12 Severability. This Agreement shall be deemed severable; the invalidity or unenforceability of any term or provision of this Agreement shall not affect the validity or enforceability of the balance of this Agreement or of any other term hereof, which shall remain in full force and effect. If any of the provisions hereof are determined to be invalid or unenforceable, the parties shall negotiate in good faith to modify this Agreement so as to effect the original intent of the parties as closely as possible.

7.13 Court Orders. ICANN will respect any order from a court of competent jurisdiction, including any orders from any jurisdiction where the consent or non-objection of the government was a requirement for the delegation of the TLD. Notwithstanding any other provision of this Agreement, ICANN's implementation of any such order will not be a breach of this Agreement.

[Note: The following section is applicable to intergovernmental organizations or governmental entities only.]

7.14 Special Provision Relating to Intergovernmental Organizations or Governmental Entities.

(a) ICANN acknowledges that Registry Operator is an entity subject to public international law, including international treaties applicable to Registry Operator (such public international law and treaties, collectively hereinafter the “Applicable Laws”). Nothing in this Agreement and its related specifications shall be construed or interpreted to require Registry Operator to violate Applicable Laws or prevent compliance therewith. The Parties agree that Registry Operator’s compliance with Applicable Laws shall not constitute a breach of this Agreement.

(b) In the event Registry Operator reasonably determines that any provision of this Agreement and its related specifications, or any decisions or policies of ICANN referred to in this Agreement, including but not limited to Temporary Policies and Consensus Policies (such provisions, specifications and policies, collectively hereinafter, “ICANN Requirements”), may conflict with or violate Applicable Law (hereinafter, a “Potential Conflict”), Registry Operator shall provide detailed notice (a “Notice”) of such Potential Conflict to ICANN as early as possible and, in the case of a Potential Conflict with a proposed Consensus Policy, no later than the end of any public comment period on such proposed Consensus Policy. In the event Registry Operator determines that there is Potential Conflict between a proposed Applicable Law and any ICANN Requirement, Registry Operator shall provide detailed Notice of such Potential Conflict to ICANN as early as possible and, in the case of a Potential Conflict with a proposed Consensus Policy, no later than the end of any public comment period on such proposed Consensus Policy.

(c) As soon as practicable following such review, the parties shall attempt to resolve the Potential Conflict by cooperative engagement pursuant to the procedures set forth in Section 5.1. In

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

addition, Registry Operator shall use its best efforts to eliminate or minimize any impact arising from such Potential Conflict between Applicable Laws and any ICANN Requirement. If, following such cooperative engagement, Registry Operator determines that the Potential Conflict constitutes an actual conflict between any ICANN Requirement, on the one hand, and Applicable Laws, on the other hand, then ICANN shall waive compliance with such ICANN Requirement (provided that the parties shall negotiate in good faith on a continuous basis thereafter to mitigate or eliminate the effects of such non-compliance on ICANN), unless ICANN reasonably and objectively determines that the failure of Registry Operator to comply with such ICANN Requirement would constitute a threat to the Security and Stability of Registry Services, the Internet or the DNS (hereinafter, an “ICANN Determination”). Following receipt of notice by Registry Operator of such ICANN Determination, Registry Operator shall be afforded a period of ninety (90) calendar days to resolve such conflict with an Applicable Law. If the conflict with an Applicable Law is not resolved to ICANN’s complete satisfaction during such period, Registry Operator shall have the option to submit, within ten (10) calendar days thereafter, the matter to binding arbitration as defined in subsection (d) below. If during such period, Registry Operator does not submit the matter to arbitration pursuant to subsection (d) below, ICANN may, upon notice to Registry Operator, terminate this Agreement with immediate effect.

(d) If Registry Operator disagrees with an ICANN Determination, Registry Operator may submit the matter to binding arbitration pursuant to the provisions of Section 5.2, except that the sole issue presented to the arbitrator for determination will be whether or not ICANN reasonably and objectively reached the ICANN Determination. For the purposes of such arbitration, ICANN shall present evidence to the arbitrator supporting the ICANN Determination. If the arbitrator determines that ICANN did not reasonably and objectively reach the ICANN Determination, then ICANN shall waive Registry Operator’s compliance with the subject ICANN Requirement. If the arbitrators or pre-arbitral referee, as applicable, determine that ICANN did reasonably and objectively reach the ICANN Determination, then, upon notice to Registry Operator, ICANN may terminate this Agreement with immediate effect.

(e) Registry Operator hereby represents and warrants that, to the best of its knowledge as of the date of execution of this Agreement, no existing ICANN Requirement conflicts with or violates any Applicable Law.

(f) Notwithstanding any other provision of this Section 7.14, following an ICANN Determination and prior to a finding by an arbitrator pursuant to Section 7.14(d) above, ICANN may, subject to prior consultations with Registry Operator, take such reasonable technical measures as it deems necessary to ensure the Security and Stability of Registry Services, the Internet and the DNS. These reasonable technical measures shall be taken by ICANN on an interim basis, until the earlier of the date of conclusion of the arbitration procedure referred to in Section 7.14(d) above or the date of complete resolution of the conflict with an Applicable Law. In case Registry Operator disagrees with such technical measures taken by ICANN, Registry Operator may submit the matter to binding arbitration pursuant to the provisions of Section 5.2 above, during which process ICANN may continue to take such technical measures. In the event that ICANN takes such measures, Registry Operator shall pay all costs incurred by ICANN as a result of taking such measures. In addition, in the event that ICANN takes such measures, ICANN shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable.

EXHIBIT A

Approved Services

SPECIFICATION 1

CONSENSUS POLICIES AND TEMPORARY POLICIES SPECIFICATION

1. Consensus Policies.

- 1.1. “*Consensus Policies*” are those policies established (1) pursuant to the procedure set forth in ICANN's Bylaws and due process, and (2) covering those topics listed in Section 1.2 of this document. The Consensus Policy development process and procedure set forth in ICANN's Bylaws may be revised from time to time in accordance with the process set forth therein.
- 1.2. Consensus Policies and the procedures by which they are developed shall be designed to produce, to the extent possible, a consensus of Internet stakeholders, including the operators of gTLDs. Consensus Policies shall relate to one or more of the following:
 - 1.2.1. issues for which uniform or coordinated resolution is reasonably necessary to facilitate interoperability, security and/or stability of the Internet or Domain Name System (“DNS”);
 - 1.2.2. functional and performance specifications for the provision of Registry Services;
 - 1.2.3. Security and Stability of the registry database for the TLD;
 - 1.2.4. registry policies reasonably necessary to implement Consensus Policies relating to registry operations or registrars;
 - 1.2.5. resolution of disputes regarding the registration of domain names (as opposed to the use of such domain names); or
 - 1.2.6. restrictions on cross-ownership of registry operators and registrars or registrar resellers and regulations and restrictions with respect to registry operations and the use of registry and registrar data in the event that a registry operator and a registrar or registrar reseller are affiliated.
- 1.3. Such categories of issues referred to in Section 1.2 shall include, without limitation:
 - 1.3.1. principles for allocation of registered names in the TLD (e.g., first-come/first-served, timely renewal, holding period after expiration);
 - 1.3.2. prohibitions on warehousing of or speculation in domain names by registries or registrars;
 - 1.3.3. reservation of registered names in the TLD that may not be registered initially or that may not be renewed due to reasons reasonably related to (i) avoidance of confusion among or misleading of users, (ii) intellectual property, or (iii) the technical management of the DNS or the Internet (e.g., establishment of reservations of names from registration); and
 - 1.3.4. maintenance of and access to accurate and up-to-date information concerning domain name registrations; and procedures to avoid disruptions of domain name registrations due to suspension or termination of operations by a registry operator or a registrar, including procedures for allocation of responsibility for serving registered domain names in a TLD affected by such a suspension or termination.
- 1.4. In addition to the other limitations on Consensus Policies, they shall not:

- 1.4.1. prescribe or limit the price of Registry Services;
 - 1.4.2. modify the terms or conditions for the renewal or termination of the Registry Agreement;
 - 1.4.3. modify the limitations on Temporary Policies (defined below) or Consensus Policies;
 - 1.4.4. modify the provisions in the registry agreement regarding fees paid by Registry Operator to ICANN; or
 - 1.4.5. modify ICANN's obligations to ensure equitable treatment of registry operators and act in an open and transparent manner.
2. **Temporary Policies.** Registry Operator shall comply with and implement all specifications or policies established by the Board on a temporary basis, if adopted by the Board by a vote of at least two-thirds of its members, so long as the Board reasonably determines that such modifications or amendments are justified and that immediate temporary establishment of a specification or policy on the subject is necessary to maintain the stability or security of Registry Services or the DNS ("*Temporary Policies*").
- 2.1. Such proposed specification or policy shall be as narrowly tailored as feasible to achieve those objectives. In establishing any Temporary Policy, the Board shall state the period of time for which the Temporary Policy is adopted and shall immediately implement the Consensus Policy development process set forth in ICANN's Bylaws.
 - 2.1.1. ICANN shall also issue an advisory statement containing a detailed explanation of its reasons for adopting the Temporary Policy and why the Board believes such Temporary Policy should receive the consensus support of Internet stakeholders.
 - 2.1.2. If the period of time for which the Temporary Policy is adopted exceeds 90 days, the Board shall reaffirm its temporary adoption every 90 days for a total period not to exceed one year, in order to maintain such Temporary Policy in effect until such time as it becomes a Consensus Policy. If the one year period expires or, if during such one year period, the Temporary Policy does not become a Consensus Policy and is not reaffirmed by the Board, Registry Operator shall no longer be required to comply with or implement such Temporary Policy.
3. **Notice and Conflicts.** Registry Operator shall be afforded a reasonable period of time following notice of the establishment of a Consensus Policy or Temporary Policy in which to comply with such policy or specification, taking into account any urgency involved. In the event of a conflict between Registry Services and Consensus Policies or any Temporary Policy, the Consensus Policies or Temporary Policy shall control, but only with respect to subject matter in conflict.

SPECIFICATION 2

DATA ESCROW REQUIREMENTS

Registry Operator will engage an independent entity to act as data escrow agent (“*Escrow Agent*”) for the provision of data escrow services related to the Registry Agreement. The following Technical Specifications set forth in Part A, and Legal Requirements set forth in Part B, will be included in any data escrow agreement between Registry Operator and the Escrow Agent, under which ICANN must be named a third-party beneficiary. In addition to the following requirements, the data escrow agreement may contain other provisions that are not contradictory or intended to subvert the required terms provided below.

PART A – TECHNICAL SPECIFICATIONS

1. **Deposits.** There will be two types of Deposits: Full and Differential. For both types, the universe of Registry objects to be considered for data escrow are those objects necessary in order to offer all of the approved Registry Services.
 - 1.1 “**Full Deposit**” will consist of data that reflects the state of the registry as of 00:00:00 UTC on each Sunday.
 - 1.2 “**Differential Deposit**” means data that reflects all transactions that were not reflected in the last previous Full or Differential Deposit, as the case may be. Each Differential Deposit will contain all database transactions since the previous Deposit was completed as of 00:00:00 UTC of each day, but Sunday. Differential Deposits must include complete Escrow Records as specified below that were not included or changed since the most recent full or Differential Deposit (i.e., newly added or modified domain names).

2. **Schedule for Deposits.** Registry Operator will submit a set of escrow files on a daily basis as follows:
 - 2.1 Each Sunday, a Full Deposit must be submitted to the Escrow Agent by 23:59 UTC.
 - 2.2 The other six days of the week, the corresponding Differential Deposit must be submitted to Escrow Agent by 23:59 UTC.

3. **Escrow Format Specification.**
 - 3.1 **Deposit’s Format.** Registry objects, such as domains, contacts, name servers, registrars, etc. will be compiled into a file constructed as described in draft-arias-noguchi-registry-data-escrow, see [1]. The aforementioned document describes some elements as optional; Registry Operator will include those elements in the Deposits if they are available. Registry Operator will use the draft version available at the time of signing the Agreement, if not already an RFC. Once the specification is published as an RFC, Registry Operator will implement that specification, no later than 180 days after. UTF-8 character encoding will be used.

 - 3.2 **Extensions.** If a Registry Operator offers additional Registry Services that require submission of additional data, not included above, additional “extension schemas” shall be defined in a case by case base to represent that data. These “extension schemas” will be specified as described in [1]. Data related to the “extensions schemas” will be included in the deposit file described in section 3.1. ICANN and the respective Registry shall work together to agree on such new objects’ data escrow specifications.

4. **Processing of Deposit files.** The use of compression is recommended in order to reduce electronic data transfer times, and storage capacity requirements. Data encryption will be used to ensure the privacy of registry escrow data. Files processed for compression and encryption will be in the binary OpenPGP format as per OpenPGP Message Format - RFC 4880, see [2]. Acceptable algorithms for Public-key cryptography, Symmetric-key cryptography, Hash and Compression are those enumerated in RFC 4880, not marked as deprecated in OpenPGP IANA Registry, see [3], that are also royalty-free. The process to follow for a data file in original text format is:
- (1) The file should be compressed. The suggested algorithm for compression is ZIP as per RFC 4880.
 - (2) The compressed data will be encrypted using the escrow agent's public key. The suggested algorithms for Public-key encryption are Elgamal and RSA as per RFC 4880. The suggested algorithms for Symmetric-key encryption are TripleDES, AES128 and CAST5 as per RFC 4880.
 - (3) The file may be split as necessary if, once compressed and encrypted is larger than the file size limit agreed with the escrow agent. Every part of a split file, or the whole file if split is not used, will be called a processed file in this section.
 - (4) A digital signature file will be generated for every processed file using the Registry's private key. The digital signature file will be in binary OpenPGP format as per RFC 4880 [2], and will not be compressed or encrypted. The suggested algorithms for Digital signatures are DSA and RSA as per RFC 4880. The suggested algorithm for Hashes in Digital signatures is SHA256.
 - (5) The processed files and digital signature files will then be transferred to the Escrow Agent through secure electronic mechanisms, such as, SFTP, SCP, HTTPS file upload, etc. as agreed between the Escrow Agent and the Registry Operator. Non-electronic delivery through a physical medium such as CD-ROMs, DVD-ROMs, or USB storage devices may be used if authorized by ICANN.
 - (6) The Escrow Agent will then validate every (processed) transferred data file using the procedure described in section 8.
5. **File Naming Conventions.** Files will be named according to the following convention: {gTLD}_{YYYY-MM-DD}_{type}_S{#}_R{rev}.{ext} where:
- 5.1 {gTLD} is replaced with the gTLD name; in case of an IDN-TLD, the ASCII-compatible form (A-Label) must be used;
 - 5.2 {YYYY-MM-DD} is replaced by the date corresponding to the time used as a timeline watermark for the transactions; i.e. for the Full Deposit corresponding to 2009-08-02T00:00Z, the string to be used would be "2009-08-02";
 - 5.3 {type} is replaced by:
 - (1) "full", if the data represents a Full Deposit;
 - (2) "diff", if the data represents a Differential Deposit;
 - (3) "thin", if the data represents a Bulk Registration Data Access file, as specified in section 3 of Specification 4;
 - 5.4 {#} is replaced by the position of the file in a series of files, beginning with "1"; in case of a lone file, this must be replaced by "1".
 - 5.5 {rev} is replaced by the number of revision (or resend) of the file beginning with "0";
 - 5.6 {ext} is replaced by "sig" if it is a digital signature file of the quasi-homonymous file. Otherwise it is replaced by "ryde".

6. **Distribution of Public Keys.** Each of Registry Operator and Escrow Agent will distribute its public key to the other party (Registry Operator or Escrow Agent, as the case may be) via email to an email address to be specified. Each party will confirm receipt of the other party's public key with a reply email, and the distributing party will subsequently reconfirm the authenticity of the key transmitted via offline methods, like in person meeting, telephone, etc. In this way, public key transmission is authenticated to a user able to send and receive mail via a mail server operated by the distributing party. Escrow Agent, Registry and ICANN will exchange keys by the same procedure.
7. **Notification of Deposits.** Along with the delivery of each Deposit, Registry Operator will deliver to Escrow Agent and to ICANN a written statement (which may be by authenticated e-mail) that includes a copy of the report generated upon creation of the Deposit and states that the Deposit has been inspected by Registry Operator and is complete and accurate. Registry Operator will include the Deposit's "id" and "resend" attributes in its statement. The attributes are explained in [1].
8. **Verification Procedure.**
 - (1) The signature file of each processed file is validated.
 - (2) If processed files are pieces of a bigger file, the latter is put together.
 - (3) Each file obtained in the previous step is then decrypted and uncompressed.
 - (4) Each data file contained in the previous step is then validated against the format defined in [1].
 - (5) If [1] includes a verification process, that will be applied at this step.
If any discrepancy is found in any of the steps, the Deposit will be considered incomplete.
9. **References.**

PART B – LEGAL REQUIREMENTS

1. **Escrow Agent.** Prior to entering into an escrow agreement, the Registry Operator must provide notice to ICANN as to the identity of the Escrow Agent, and provide ICANN with contact information and a copy of the relevant escrow agreement, and all amendment thereto. In addition, prior to entering into an escrow agreement, Registry Operator must obtain the consent of ICANN to (a) use the specified Escrow Agent, and (b) enter into the form of escrow agreement provided. ICANN must be expressly designated a third-party beneficiary of the escrow agreement. ICANN reserves the right to withhold its consent to any Escrow Agent, escrow agreement, or any amendment thereto, all in its sole discretion.
2. **Fees.** Registry Operator must pay, or have paid on its behalf, fees to the Escrow Agent directly. If Registry Operator fails to pay any fee by the due date(s), the Escrow Agent will give ICANN written notice of such non-payment and ICANN may pay the past-due fee(s) within ten business days after receipt of the written notice from Escrow Agent. Upon payment of the past-due fees by ICANN, ICANN shall have a claim for such amount against Registry Operator, which Registry Operator shall be required to submit to ICANN together with the next fee payment due under the Registry Agreement.
3. **Ownership.** Ownership of the Deposits during the effective term of the Registry Agreement shall remain with Registry Operator at all times. Thereafter, Registry Operator shall assign any such ownership rights (including intellectual property rights, as the case may be) in such Deposits to ICANN. In the event that during the term of the Registry Agreement any Deposit is released from escrow to ICANN, any intellectual property rights held by Registry Operator in the Deposits will automatically be licensed on a non-exclusive, perpetual, irrevocable, royalty-free, paid-up basis to ICANN or to a party designated in writing by ICANN.
4. **Integrity and Confidentiality.** Escrow Agent will be required to (i) hold and maintain the Deposits in a secure, locked, and environmentally safe facility, which is accessible only to authorized representatives of Escrow Agent, (ii) protect the integrity and confidentiality of the Deposits using commercially reasonable measures and (iii) keep and safeguard each Deposit for one year. ICANN and Registry Operator will be provided the right to inspect Escrow Agent's applicable records upon reasonable prior notice and during normal business hours. Registry Operator and ICANN will be provided with the right to designate a third-party auditor to audit Escrow Agent's compliance with the technical specifications and maintenance requirements of this Specification 2 from time to time.

If Escrow Agent receives a subpoena or any other order from a court or other judicial tribunal pertaining to the disclosure or release of the Deposits, Escrow Agent will promptly notify the Registry Operator and ICANN unless prohibited by law. After notifying the Registry Operator and ICANN, Escrow Agent shall allow sufficient time for Registry Operator or ICANN to challenge any such order, which shall be the responsibility of Registry Operator or ICANN; provided, however, that Escrow Agent does not waive its rights to present its position with respect to any such order. Escrow Agent will cooperate with the Registry Operator or ICANN to support efforts to quash or limit any subpoena, at such party's expense. Any party requesting additional assistance shall pay Escrow Agent's standard charges or as quoted upon submission of a detailed request.

5. **Copies.** Escrow Agent may be permitted to duplicate any Deposit, in order to comply with the terms and provisions of the escrow agreement.
6. **Release of Deposits.** Escrow Agent will make available for electronic download (unless otherwise requested) to ICANN or its designee, within twenty-four hours, at the Registry Operator's expense, all Deposits in Escrow Agent's possession in the event that the Escrow Agent receives a request from Registry Operator to effect such delivery to ICANN, or receives one of the following written notices by ICANN stating that:
- 6.1 the Registry Agreement has expired without renewal, or been terminated; or
 - 6.2 ICANN failed, with respect to (a) any Full Deposit or (b) five Differential Deposits within any calendar month, to receive, within five calendar days after the Deposit's scheduled delivery date, notification of receipt from Escrow Agent; (x) ICANN gave notice to Escrow Agent and Registry Operator of that failure; and (y) ICANN has not, within seven calendar days after such notice, received notice from Escrow Agent that the Deposit has been received; or
 - 6.3 ICANN has received notification from Escrow Agent of failed verification of a Full Deposit or of failed verification of five Differential Deposits within any calendar month and (a) ICANN gave notice to Registry Operator of that receipt; and (b) ICANN has not, within seven calendar days after such notice, received notice from Escrow Agent of verification of a remediated version of such Full Deposit or Differential Deposit; or
 - 6.4 Registry Operator has: (i) ceased to conduct its business in the ordinary course; or (ii) filed for bankruptcy, become insolvent or anything analogous to any of the foregoing under the laws of any jurisdiction anywhere in the world; or
 - 6.5 Registry Operator has experienced a failure of critical registry functions and ICANN has asserted its rights pursuant to Section 2.13 of the Registry Agreement; or
 - 6.6 a competent court, arbitral, legislative, or government agency mandates the release of the Deposits to ICANN.

Unless Escrow Agent has previously released the Registry Operator's Deposits to ICANN or its designee, Escrow Agent will deliver all Deposits to ICANN upon termination of the Registry Agreement or the Escrow Agreement.

7. **Verification of Deposits.**
- 7.1 Within twenty-four hours after receiving each Deposit or corrected Deposit, Escrow Agent must verify the format and completeness of each Deposit and deliver to ICANN a copy of the verification report generated for each Deposit. Reports will be delivered electronically, as specified from time to time by ICANN.
 - 7.2 If Escrow Agent discovers that any Deposit fails the verification procedures, Escrow Agent must notify, either by email, fax or phone, Registry Operator and ICANN of such nonconformity within twenty-four hours after receiving the non-conformant Deposit. Upon notification of such verification failure, Registry Operator must begin developing modifications, updates, corrections, and other fixes of the Deposit necessary for the Deposit to pass the verification procedures and deliver such fixes to Escrow Agent as promptly as possible.
8. **Amendments.** Escrow Agent and Registry Operator shall amend the terms of the Escrow Agreement to conform to this Specification 2 within ten (10) calendar days of any amendment or modification to this Specification 2. In the event of a conflict between this Specification 2 and the Escrow Agreement, this Specification 2 shall control.
9. **Indemnity.** Registry Operator shall indemnify and hold harmless Escrow Agent and each of its directors, officers, agents, employees, members, and stockholders ("Escrow Agent Indemnitees")

absolutely and forever from and against any and all claims, actions, damages, suits, liabilities, obligations, costs, fees, charges, and any other expenses whatsoever, including reasonable attorneys' fees and costs, that may be asserted by a third party against any Escrow Agent Indemnitees in connection with the Escrow Agreement or the performance of Escrow Agent or any Escrow Agent Indemnitees thereunder (with the exception of any claims based on the misrepresentation, negligence, or misconduct of Escrow Agent, its directors, officers, agents, employees, contractors, members, and stockholders). Escrow Agent shall indemnify and hold harmless Registry Operator and ICANN, and each of their respective directors, officers, agents, employees, members, and stockholders ("Indemnitees") absolutely and forever from and against any and all claims, actions, damages, suits, liabilities, obligations, costs, fees, charges, and any other expenses whatsoever, including reasonable attorneys' fees and costs, that may be asserted by a third party against any Indemnitee in connection with the misrepresentation, negligence or misconduct of Escrow Agent, its directors, officers, agents, employees and contractors.

SPECIFICATION 3

FORMAT AND CONTENT FOR REGISTRY OPERATOR MONTHLY REPORTING

Registry Operator shall provide one set of monthly reports per gTLD to _____ with the following content. ICANN may request in the future that the reports be delivered by other means and using other formats. ICANN will use reasonable commercial efforts to preserve the confidentiality of the information reported until three months after the end of the month to which the reports relate.

1. Per-Registrar Transactions Report. This report shall be compiled in a comma separated-value formatted file as specified in RFC 4180. The file shall be named “gTLD-transactions-yyyymm.csv”, where “gTLD” is the gTLD name; in case of an IDN-TLD, the A-label shall be used; “yyyymm” is the year and month being reported. The file shall contain the following fields per registrar:

Field #	Field Name	Description
01	registrar-name	registrar's full corporate name as registered with IANA
02	iana-id	http://www.iana.org/assignments/registrar-ids
03	total-domains	total domains under sponsorship
04	total-nameservers	total name servers registered for TLD
05	net-adds-1-yr	number of domains successfully registered with an initial term of one year (and not deleted within the add grace period)
06	net-adds-2-yr	number of domains successfully registered with an initial term of two years (and not deleted within the add grace period)
07	net-adds-3-yr	number of domains successfully registered with an initial term of three years (and not deleted within the add grace period)
08	net-adds-4-yr	number of domains successfully registered with an initial term of four years (and not deleted within the add grace period)
09	net-adds-5-yr	number of domains successfully registered with an initial term of five years (and not deleted within the add grace period)
10	net-adds-6-yr	number of domains successfully registered with an initial term of six years (and not deleted within the add grace period)
11	net-adds-7-yr	number of domains successfully registered with an initial term of seven years (and not deleted within the add grace period)

12	net-adds-8-yr	number of domains successfully registered with an initial term of eight years (and not deleted within the add grace period)
13	net-adds-9-yr	number of domains successfully registered with an initial term of nine years (and not deleted within the add grace period)
14	net-adds-10-yr	number of domains successfully registered with an initial term of ten years (and not deleted within the add grace period)
15	net-renews-1-yr	number of domains successfully renewed either automatically or by command with a new renewal period of one year (and not deleted within the renew grace period)
16	net-renews-2-yr	number of domains successfully renewed either automatically or by command with a new renewal period of two years (and not deleted within the renew grace period)
17	net-renews-3-yr	number of domains successfully renewed either automatically or by command with a new renewal period of three years (and not deleted within the renew grace period)
18	net-renews-4-yr	number of domains successfully renewed either automatically or by command with a new renewal period of four years (and not deleted within the renew grace period)
19	net-renews-5-yr	number of domains successfully renewed either automatically or by command with a new renewal period of five years (and not deleted within the renew grace period)
20	net-renews-6-yr	number of domains successfully renewed either automatically or by command with a new renewal period of six years (and not deleted within the renew grace period)
21	net-renews-7-yr	number of domains successfully renewed either automatically or by command with a new renewal period of seven years (and not deleted within the renew grace period)
22	net-renews-8-yr	number of domains successfully renewed either automatically or by command with a new renewal period of eight years (and not deleted within the renew grace period)
23	net-renews-9-yr	number of domains successfully renewed either

		automatically or by command with a new renewal period of nine years (and not deleted within the renew grace period)
24	net-renews-10-yr	number of domains successfully renewed either automatically or by command with a new renewal period of ten years (and not deleted within the renew grace period)
25	transfer-gaining-successful	transfers initiated by this registrar that were ack'd by the other registrar – either by command or automatically
26	transfer-gaining-nacked	transfers initiated by this registrar that were n'acked by the other registrar
27	transfer-losing-successful	transfers initiated by another registrar that this registrar ack'd – either by command or automatically
28	transfer-losing-nacked	transfers initiated by another registrar that this registrar n'acked
29	transfer-disputed-won	number of transfer disputes in which this registrar prevailed
30	transfer-disputed-lost	number of transfer disputes this registrar lost
31	transfer-disputed-nodecision	number of transfer disputes involving this registrar with a split or no decision
32	deleted-domains-grace	domains deleted within the add grace period
33	deleted-domains-nograce	domains deleted outside the add grace period
34	restored-domains	domain names restored from redemption period
35	restored-noreport	total number of restored names for which the registrar failed to submit a restore report
36	agp-exemption-requests	total number of AGP (add grace period) exemption requests
37	agp-exemptions-granted	total number of AGP (add grace period) exemption requests granted
38	agp-exempted-domains	total number of names affected by granted AGP (add grace period) exemption requests
39	attempted-adds	number of attempted (successful and failed) domain name create commands

The first line shall include the field names exactly as described in the table above as a “header line” as described in section 2 of RFC 4180. The last line of each report shall include totals for each column across all registrars; the first field of this line shall read “Totals” while the second field shall be left empty in that line. No other lines besides the ones described above shall be included. Line breaks shall be <U+000D, U+000A> as described in RFC 4180.

2. Registry Functions Activity Report. This report shall be compiled in a comma separated-value formatted file as specified in RFC 4180. The file shall be named “gTLD-activity-yyyymm.csv”, where “gTLD” is the gTLD name; in case of an IDN-TLD, the A-label shall be used; “yyyymm” is the year and month being reported. The file shall contain the following fields:

Field #	Field Name	Description
01	operational-registrars	number of operational registrars at the end of the reporting period
02	ramp-up-registrars	number of registrars that have received a password for access to OT&E at the end of the reporting period
03	pre-ramp-up-registrars	number of registrars that have requested access, but have not yet entered the ramp-up period at the end of the reporting period
04	zfa-passwords	number of active zone file access passwords at the end of the reporting period
05	whois-43-queries	number of WHOIS (port-43) queries responded during the reporting period
06	web-whois-queries	number of Web-based Whois queries responded during the reporting period, not including searchable Whois
07	searchable-whois-queries	number of searchable Whois queries responded during the reporting period, if offered
08	dns-udp-queries-received	number of DNS queries received over UDP transport during the reporting period
09	dns-udp-queries-responded	number of DNS queries received over UDP transport that were responded during the reporting period
10	dns-tcp-queries-received	number of DNS queries received over TCP transport during the reporting period
11	dns-tcp-queries-responded	number of DNS queries received over TCP transport that were responded during the reporting period
12	srs-dom-check	number of SRS (EPP and any other interface) domain name “check” requests responded during the reporting period
13	srs-dom-create	number of SRS (EPP and any other interface) domain name “create” requests responded during the reporting period
14	srs-dom-delete	number of SRS (EPP and any other interface) domain name “delete” requests responded during the reporting period
15	srs-dom-info	number of SRS (EPP and any other interface) domain name “info” requests responded during the reporting period
16	srs-dom-renew	number of SRS (EPP and any other interface) domain name

		“renew” requests responded during the reporting period
17	srs-dom-rgp-restore-report	number of SRS (EPP and any other interface) domain name RGP “restore” requests responded during the reporting period
18	srs-dom-rgp-restore-request	number of SRS (EPP and any other interface) domain name RGP “restore” requests delivering a restore report responded during the reporting period
19	srs-dom-transfer-approve	number of SRS (EPP and any other interface) domain name “transfer” requests to approve transfers responded during the reporting period
20	srs-dom-transfer-cancel	number of SRS (EPP and any other interface) domain name “transfer” requests to cancel transfers responded during the reporting period
21	srs-dom-transfer-query	number of SRS (EPP and any other interface) domain name “transfer” requests to query about a transfer responded during the reporting period
22	srs-dom-transfer-reject	number of SRS (EPP and any other interface) domain name “transfer” requests to reject transfers responded during the reporting period
23	srs-dom-transfer-request	number of SRS (EPP and any other interface) domain name “transfer” requests to request transfers responded during the reporting period
24	srs-dom-update	number of SRS (EPP and any other interface) domain name “update” requests (not including RGP restore requests) responded during the reporting period
25	srs-host-check	number of SRS (EPP and any other interface) host “check” requests responded during the reporting period
26	srs-host-create	number of SRS (EPP and any other interface) host “create” requests responded during the reporting period
27	srs-host-delete	number of SRS (EPP and any other interface) host “delete” requests responded during the reporting period
28	srs-host-info	number of SRS (EPP and any other interface) host “info” requests responded during the reporting period
29	srs-host-update	number of SRS (EPP and any other interface) host “update” requests responded during the reporting period
30	srs-cont-check	number of SRS (EPP and any other interface) contact “check” requests responded during the reporting period
31	srs-cont-create	number of SRS (EPP and any other interface) contact “create” requests responded during the reporting period

32	srs-cont-delete	number of SRS (EPP and any other interface) contact “delete” requests responded during the reporting period
33	srs-cont-info	number of SRS (EPP and any other interface) contact “info” requests responded during the reporting period
34	srs-cont-transfer-approve	number of SRS (EPP and any other interface) contact “transfer” requests to approve transfers responded during the reporting period
35	srs-cont-transfer-cancel	number of SRS (EPP and any other interface) contact “transfer” requests to cancel transfers responded during the reporting period
36	srs-cont-transfer-query	number of SRS (EPP and any other interface) contact “transfer” requests to query about a transfer responded during the reporting period
37	srs-cont-transfer-reject	number of SRS (EPP and any other interface) contact “transfer” requests to reject transfers responded during the reporting period
38	srs-cont-transfer-request	number of SRS (EPP and any other interface) contact “transfer” requests to request transfers responded during the reporting period
39	srs-cont-update	number of SRS (EPP and any other interface) contact “update” requests responded during the reporting period

The first line shall include the field names exactly as described in the table above as a “header line” as described in section 2 of RFC 4180. No other lines besides the ones described above shall be included. Line breaks shall be <U+000D, U+000A> as described in RFC 4180.

SPECIFICATION 4

SPECIFICATION FOR REGISTRATION DATA PUBLICATION SERVICES

1. **Registration Data Directory Services.** Until ICANN requires a different protocol, Registry Operator will operate a WHOIS service available via port 43 in accordance with RFC 3912, and a web-based Directory Service at <whois.nic.TLD> providing free public query-based access to at least the following elements in the following format. ICANN reserves the right to specify alternative formats and protocols, and upon such specification, the Registry Operator will implement such alternative specification as soon as reasonably practicable.

1.1. The format of responses shall follow a semi-free text format outline below, followed by a blank line and a legal disclaimer specifying the rights of Registry Operator, and of the user querying the database.

1.2. Each data object shall be represented as a set of key/value pairs, with lines beginning with keys, followed by a colon and a space as delimiters, followed by the value.

1.3. For fields where more than one value exists, multiple key/value pairs with the same key shall be allowed (for example to list multiple name servers). The first key/value pair after a blank line should be considered the start of a new record, and should be considered as identifying that record, and is used to group data, such as hostnames and IP addresses, or a domain name and registrant information, together.

1.4. Domain Name Data:

1.4.1. **Query format:** whois EXAMPLE.TLD

1.4.2. **Response format:**

```

1.6. Nameserver Data:

1.6.1. **Query format:** whois "NS1.EXAMPLE.TLD" or whois "nameserver (IP Address)"

1.6.2. **Response format:**

Server Name: NS1.EXAMPLE.TLD
 IP Address: 192.0.2.123
 IP Address: 2001:0DB8::1
 Registrar: Example Registrar, Inc.
 WHOIS Server: whois.example-registrar.tld
 Referral URL: http://www.example-registrar.tld
 >>> Last update of WHOIS database: 2009-05-29T20:15:00Z <<<

1.7. The format of the following data fields: domain status, individual and organizational names, address, street, city, state/province, postal code, country, telephone and fax numbers, email addresses, date and times should conform to the mappings specified in EPP RFCs 5730-5734 so that the display of this information (or values return in WHOIS responses) can be uniformly processed and understood.

1.8. **Searchability.** Offering searchability capabilities on the Directory Services is optional but if offered by the Registry Operator it shall comply with the specification described in this section.

1.8.1. Registry Operator will offer searchability on the web-based Directory Service.

1.8.2. Registry Operator will offer partial match capabilities, at least, on the following fields: domain name, contacts and registrant's name, and contact and registrant's postal address, including all the sub-fields described in EPP (e.g., street, city, state or province, etc.).

1.8.3. Registry Operator will offer exact-match capabilities, at least, on the following fields: registrar id, name server name, and name server's IP address (only applies to IP addresses stored by the registry, i.e., glue records).

1.8.4. Registry Operator will offer Boolean search capabilities supporting, at least, the following logical operators to join a set of search criteria: AND, OR, NOT.

1.8.5. Search results will include domain names matching the search criteria.

1.8.6. Registry Operator will: 1) implement appropriate measures to avoid abuse of this feature (e.g., permitting access only to legitimate authorized users); and 2) ensure the feature is in compliance with any applicable privacy laws or policies.

2. Zone File Access

2.1. Third-Party Access

2.1.1. **Zone File Access Agreement.** Registry Operator will enter into an agreement with any Internet user that will allow such user to access an Internet host server or servers designated by Registry Operator and download zone file data. The agreement will be standardized, facilitated and administered by a Centralized Zone Data Access Provider (the “CZDA Provider”). Registry Operator will provide access to zone file data per Section 2.1.3 and do so using the file format described in Section 2.1.4. Notwithstanding the foregoing, (a) the CZDA Provider may reject the request for access of any user that does not satisfy the credentialing requirements in Section 2.1.2 below; (b) Registry Operator may reject the request for access of any user that does not provide correct or legitimate credentials under Section 2.1.2 or where Registry Operator reasonably believes will violate the terms of Section 2.1.5. below; and, (c) Registry Operator may revoke access of any user if Registry Operator has evidence to support that the user has violated the terms of Section 2.1.5.

2.1.2. **Credentialing Requirements.** Registry Operator, through the facilitation of the CZDA Provider, will request each user to provide it with information sufficient to correctly identify and locate the user. Such user information will include, without limitation, company name, contact name, address, telephone number, facsimile number, email address, and the Internet host machine name and IP address.

2.1.3. **Grant of Access.** Each Registry Operator will provide the Zone File FTP (or other Registry supported) service for an ICANN-specified and managed URL (specifically, <TLD>.zda.icann.org where <TLD> is the TLD for which the registry is responsible) for the user to access the Registry’s zone data archives. Registry Operator will grant the user a non-exclusive, non-transferable, limited right to access Registry Operator’s Zone File FTP server, and to transfer a copy of the top-level domain zone files, and any associated cryptographic checksum files no more than once per 24 hour period using FTP, or other data transport and access protocols that may be prescribed by ICANN. For every zone file access server, the zone files are in the top-level directory called <zone>.zone.gz, with <zone>.zone.gz.md5 and <zone>.zone.gz.sig to verify downloads. If the Registry Operator also provides historical data, it will use the naming pattern <zone>-yyyymmdd.zone.gz, etc.

2.1.4. **File Format Standard.** Registry Operator will provide zone files using a sub-format of the standard Master File format as originally defined in RFC 1035, Section 5, including all the records present in the actual zone used in the public DNS. Sub-format is as follows:

1. Each record must include all fields in one line as: <domain-name> <TTL> <class> <type> <RDATA>.
2. Class and Type must use the standard mnemonics and must be in lower case.

3. TTL must be present as a decimal integer.
4. Use of /X and /DDD inside domain names is allowed.
5. All domain names must be in lower case.
6. Must use exactly one tab as separator of fields inside a record.
7. All domain names must be fully qualified.
8. No \$ORIGIN directives.
9. No use of "@" to denote current origin.
10. No use of "blank domain names" at the beginning of a record to continue the use of the domain name in the previous record.
11. No \$INCLUDE directives.
12. No \$TTL directives.
13. No use of parentheses, e.g., to continue the list of fields in a record across a line boundary.
14. No use of comments.
15. No blank lines.
16. The SOA record should be present at the top and (duplicated at) the end of the zone file.
17. With the exception of the SOA record, all the records in a file must be in alphabetical order.
18. One zone per file. If a TLD divides its DNS data into multiple zones, each goes into a separate file named as above, with all the files combined using tar into a file called <tld>.zone.tar.

2.1.5. Use of Data by User. Registry Operator will permit user to use the zone file for lawful purposes; provided that, (a) user takes all reasonable steps to protect against unauthorized access to and use and disclosure of the data, and (b) under no circumstances will Registry Operator be required or permitted to allow user to use the data to, (i) allow, enable, or otherwise support the transmission by e-mail, telephone, or facsimile of mass unsolicited, commercial advertising or solicitations to entities other than user's own existing customers, or (ii) enable high volume, automated, electronic processes that send queries or data to the systems of Registry Operator or any ICANN-accredited registrar.

2.1.6. Term of Use. Registry Operator, through CZDA Provider, will provide each user with access to the zone file for a period of not less than three (3) months. Registry Operator will allow users to renew their Grant of Access.

2.1.7. No Fee for Access. Registry Operator will provide, and CZDA Provider will facilitate, access to the zone file to user at no cost.

2.2 Co-operation

2.2.1. Assistance. Registry Operator will co-operate and provide reasonable assistance to ICANN and the CZDA Provider to facilitate and maintain the efficient access of zone file data by permitted users as contemplated under this Schedule.

2.3 ICANN Access. Registry Operator shall provide bulk access to the zone files for the TLD to ICANN or its designee on a continuous basis in the manner ICANN may reasonably specify from time to time.

2.4 Emergency Operator Access. Registry Operator shall provide bulk access to the zone files for the TLD to the Emergency Operators designated by ICANN on a continuous basis in the manner ICANN may reasonably specify from time to time.

3. Bulk Registration Data Access to ICANN

3.1. Periodic Access to Thin Registration Data. In order to verify and ensure the operational stability of Registry Services as well as to facilitate compliance checks on accredited registrars, Registry Operator will provide ICANN on a weekly basis (the day to be designated by ICANN) with up-to-date Registration Data as specified below. Data will include data committed as of 00:00:00 UTC on the day previous to the one designated for retrieval by ICANN.

3.1.1. Contents. Registry Operator will provide, at least, the following data for all registered domain names: domain name, domain name repository object id (roid), registrar id (IANA ID), statuses, last updated date, creation date, expiration date, and name server names. For sponsoring registrars, at least, it will provide: registrar name, registrar repository object id (roid), hostname of registrar Whois server, and URL of registrar.

3.1.2. Format. The data will be provided in the format specified in Specification 2 for Data Escrow (including encryption, signing, etc.) but including only the fields mentioned in the previous section, i.e., the file will only contain Domain and Registrar objects with the fields mentioned above. Registry Operator has the option to provide a full deposit file instead as specified in Specification 2.

3.1.3. Access. Registry Operator will have the file(s) ready for download as of 00:00:00 UTC on the day designated for retrieval by ICANN. The file(s) will be made available for download by SFTP, though ICANN may request other means in the future.

3.2. Exceptional Access to Thick Registration Data. In case of a registrar failure, de-accreditation, court order, etc. that prompts the temporary or definitive transfer of its domain names to another registrar, at the request of ICANN, Registry Operator will provide ICANN with up-to-date data for the domain names of the losing registrar. The data will be provided in the format specified in Specification 2 for Data Escrow. The file will only contain data related to the domain names of the losing registrar. Registry Operator will provide the data within 2 business days. Unless otherwise agreed by Registry Operator and ICANN, the file will be made available for download by ICANN in the same manner as the data specified in Section 3.1. of this Specification.

SPECIFICATION 5

SCHEDULE OF RESERVED NAMES AT THE SECOND LEVEL IN GTLD REGISTRIES

Except to the extent that ICANN otherwise expressly authorizes in writing, Registry Operator shall reserve (i.e., Registry Operator shall not register, delegate, use or otherwise make available such labels to any third party, but may register such labels in its own name in order to withhold them from delegation or use) names formed with the following labels from initial (i.e. other than renewal) registration within the TLD:

1. **Example. The label “EXAMPLE”** shall be reserved at the second level and at all other levels within the TLD at which Registry Operator makes registrations.
2. **Two-character labels.** All two-character labels shall be initially reserved. The reservation of a two-character label string may be released to the extent that Registry Operator reaches agreement with the government and country-code manager. The Registry Operator may also propose release of these reservations based on its implementation of measures to avoid confusion with the corresponding country codes.
3. **Tagged Domain Names.** Labels may only include hyphens in the third and fourth position if they represent valid internationalized domain names in their ASCII encoding (for example "xn--ndk061n").
4. **Second-Level Reservations for Registry Operations.** The following names are reserved for use in connection with the operation of the registry for the TLD. Registry Operator may use them, but upon conclusion of Registry Operator's designation as operator of the registry for the TLD they shall be transferred as specified by ICANN: NIC, WWW, IRIS and WHOIS.
5. **Country and Territory Names.** The country and territory names contained in the following internationally recognized lists shall be initially reserved at the second level and at all other levels within the TLD at which the Registry Operator provides for registrations:
 - 5.1. the short form (in English) of all country and territory names contained on the ISO 3166-1 list, as updated from time to time, including the European Union, which is exceptionally reserved on the ISO 3166-1 list, and its scope extended in August 1999 to any application needing to represent the name European Union
<http://www.iso.org/iso/support/country_codes/iso_3166_code_lists/iso-3166-1_decoding_table.htm#EU>;
 - 5.2. the United Nations Group of Experts on Geographical Names, Technical Reference Manual for the Standardization of Geographical Names, Part III Names of Countries of the World; and
 - 5.3. the list of United Nations member states in 6 official United Nations languages prepared by the Working Group on Country Names of the United Nations Conference on the Standardization of Geographical Names;

provided, that the reservation of specific country and territory names may be released to the extent that Registry Operator reaches agreement with the applicable government(s), provided, further, that

Registry Operator may also propose release of these reservations, subject to review by ICANN's Governmental Advisory Committee and approval by ICANN.

SPECIFICATION 6

REGISTRY INTEROPERABILITY AND CONTINUITY SPECIFICATIONS

1. Standards Compliance

1.1. **DNS.** Registry Operator shall comply with relevant existing RFCs and those published in the future by the Internet Engineering Task Force (IETF) including all successor standards, modifications or additions thereto relating to the DNS and name server operations including without limitation RFCs 1034, 1035, 1982, 2181, 2182, 2671, 3226, 3596, 3597, 4343, and 5966.

1.2. **EPP.** Registry Operator shall comply with relevant existing RFCs and those published in the future by the Internet Engineering Task Force (IETF) including all successor standards, modifications or additions thereto relating to the provisioning and management of domain names using the Extensible Provisioning Protocol (EPP) in conformance with RFCs 5910, 5730, 5731, 5732, 5733 and 5734. If Registry Operator implements Registry Grace Period (RGP), it will comply with RFC 3915 and its successors. If Registry Operator requires the use of functionality outside the base EPP RFCs, Registry Operator must document EPP extensions in Internet-Draft format following the guidelines described in RFC 3735. Registry Operator will provide and update the relevant documentation of all the EPP Objects and Extensions supported to ICANN prior to deployment.

1.3. **DNSSEC.** Registry Operator shall sign its TLD zone files implementing Domain Name System Security Extensions (“DNSSEC”). During the Term, Registry Operator shall comply with RFCs 4033, 4034, 4035, 4509 and their successors, and follow the best practices described in RFC 4641 and its successors. If Registry Operator implements Hashed Authenticated Denial of Existence for DNS Security Extensions, it shall comply with RFC 5155 and its successors. Registry Operator shall accept public-key material from child domain names in a secure manner according to industry best practices. Registry shall also publish in its website the DNSSEC Practice Statements (DPS) describing critical security controls and procedures for key material storage, access and usage for its own keys and secure acceptance of registrants’ public-key material. Registry Operator shall publish its DPS following the format described in “DPS-framework” (currently in draft format, see <http://tools.ietf.org/html/draft-ietf-dnsop-dnssec-dps-framework>) within 180 days after the “DPS-framework” becomes an RFC.

1.4. **IDN.** If the Registry Operator offers Internationalized Domain Names (“IDNs”), it shall comply with RFCs 5890, 5891, 5892, 5893 and their successors. Registry Operator shall comply with the ICANN IDN Guidelines at <http://www.icann.org/en/topics/idn/implementation-guidelines.htm>, as they may be amended, modified, or superseded from time to time. Registry Operator shall publish and keep updated its IDN Tables and IDN Registration Rules in the IANA Repository of IDN Practices as specified in the ICANN IDN Guidelines.

1.5. **IPv6.** Registry Operator shall be able to accept IPv6 addresses as glue records in its Registry System and publish them in the DNS. Registry Operator shall offer public IPv6 transport for, at least, two of the Registry’s name servers listed in the root zone with the corresponding IPv6 addresses registered with IANA. Registry Operator should follow “DNS IPv6 Transport Operational Guidelines” as described in BCP 91 and the recommendations and considerations described in RFC 4472. Registry Operator shall offer public IPv6 transport for its Registration Data Publication Services as defined in Specification 4 of this Agreement; e.g. Whois (RFC 3912), Web based Whois. Registry Operator shall offer public IPv6 transport for its Shared Registration System (SRS) to any Registrar, no later than six months after receiving the first request in writing from a gTLD accredited Registrar willing to operate with the SRS over IPv6.

2. Registry Services

2.1. **Registry Services.** “Registry Services” are, for purposes of the Registry Agreement, defined as the following: (a) those services that are operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry DNS servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by this Agreement; (b) other products or services that the Registry Operator is required to provide because of the establishment of a Consensus Policy as defined in Specification 1; (c) any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator; and (d) material changes to any Registry Service within the scope of (a), (b) or (c) above.

2.2. **Wildcard Prohibition.** For domain names which are either not registered, or the registrant has not supplied valid records such as NS records for listing in the DNS zone file, or their status does not allow them to be published in the DNS, the use of DNS wildcard Resource Records as described in RFCs 1034 and 4592 or any other method or technology for synthesizing DNS Resources Records or using redirection within the DNS by the Registry is prohibited. When queried for such domain names the authoritative name servers must return a “Name Error” response (also known as NXDOMAIN), RCODE 3 as described in RFC 1035 and related RFCs. This provision applies for all DNS zone files at all levels in the DNS tree for which the Registry Operator (or an affiliate engaged in providing Registration Services) maintains data, arranges for such maintenance, or derives revenue from such maintenance.

3. Registry Continuity

3.1. **High Availability.** Registry Operator will conduct its operations using network and geographically diverse, redundant servers (including network-level redundancy, end-node level redundancy and the implementation of a load balancing scheme where applicable) to ensure continued operation in the case of technical failure (widespread or local), or an extraordinary occurrence or circumstance beyond the control of the Registry Operator.

3.2. **Extraordinary Event.** Registry Operator will use commercially reasonable efforts to restore the critical functions of the registry within 24 hours after the termination of an extraordinary event beyond the control of the Registry Operator and restore full system functionality within a maximum of 48 hours following such event, depending on the type of critical function involved. Outages due to such an event will not be considered a lack of service availability.

3.3. **Business Continuity.** Registry Operator shall maintain a business continuity plan, which will provide for the maintenance of Registry Services in the event of an extraordinary event beyond the control of the Registry Operator or business failure of Registry Operator, and may include the designation of a Registry Services continuity provider. If such plan includes the designation of a Registry Services continuity provider, Registry Operator shall provide the name and contact information for such Registry Services continuity provider to ICANN. In the case of an extraordinary event beyond the control of the Registry Operator where the Registry Operator cannot be contacted, Registry Operator consents that ICANN may contact the designated Registry Services continuity provider, if one exists. Registry Operator shall conduct Registry Services Continuity testing at least once per year.

4. Abuse Mitigation

4.1. **Abuse Contact.** Registry Operator shall provide to ICANN and publish on its website its accurate contact details including a valid email and mailing address as well as a primary contact for handling inquiries related to malicious conduct in the TLD, and will provide ICANN with prompt notice of any changes to such contact details.

4.2. **Malicious Use of Orphan Glue Records.** Registry Operators shall take action to remove orphan glue records (as defined at <http://www.icann.org/en/committees/security/sac048.pdf>) when provided with evidence in written form that such records are present in connection with malicious conduct.

5. Supported Initial and Renewal Registration Periods

5.1. **Initial Registration Periods.** Initial registrations of registered names may be made in the registry in one (1) year increments for up to a maximum of ten (10) years. For the avoidance of doubt, initial registrations of registered names may not exceed ten (10) years.

5.2. **Renewal Periods.** Renewal of registered names may be made in one (1) year increments for up to a maximum of ten (10) years. For the avoidance of doubt, renewal of registered names may not extend their registration period beyond ten (10) years from the time of the renewal.

SPECIFICATION 7

MINIMUM REQUIREMENTS FOR RIGHTS PROTECTION MECHANISMS

1. **Rights Protection Mechanisms.** Registry Operator shall implement and adhere to any rights protection mechanisms (“RPMs”) that may be mandated from time to time by ICANN. In addition to such RPMs, Registry Operator may develop and implement additional RPMs that discourage or prevent registration of domain names that violate or abuse another party’s legal rights. Registry Operator will include all ICANN mandated and independently developed RPMs in the registry-registrar agreement entered into by ICANN-accredited registrars authorized to register names in the TLD. Registry Operator shall implement in accordance with requirements established by ICANN each of the mandatory RPMs set forth in the Trademark Clearinghouse (posted at [url to be inserted when final Trademark Clearinghouse is adopted]), which may be revised by ICANN from time to time. Registry Operator shall not mandate that any owner of applicable intellectual property rights use any other trademark information aggregation, notification, or validation service in addition to or instead of the ICANN-designated Trademark Clearinghouse.

2. **Dispute Resolution Mechanisms.** Registry Operator will comply with the following dispute resolution mechanisms as they may be revised from time to time:

- a. the Trademark Post-Delegation Dispute Resolution Procedure (PDDRP) and the Registration Restriction Dispute Resolution Procedure (RRDRP) adopted by ICANN (posted at [urls to be inserted when final procedure is adopted]). Registry Operator agrees to implement and adhere to any remedies ICANN imposes (which may include any reasonable remedy, including for the avoidance of doubt, the termination of the Registry Agreement pursuant to Section 4.3(e) of the Registry Agreement) following a determination by any PDDRP or RRDRP panel and to be bound by any such determination; and
- b. the Uniform Rapid Suspension system (“URS”) adopted by ICANN (posted at [url to be inserted]), including the implementation of determinations issued by URS examiners.

SPECIFICATION 8

CONTINUED OPERATIONS INSTRUMENT

1. The Continued Operations Instrument shall (a) provide for sufficient financial resources to ensure the continued operation of the critical registry functions related to the TLD set forth in Section [__] of the Applicant Guidebook posted at [url to be inserted upon finalization of Applicant Guidebook] (which is hereby incorporated by reference into this Specification 8) for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period of one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6th) anniversary of the Effective Date, and (b) be in the form of either (i) an irrevocable standby letter of credit, or (ii) an irrevocable cash escrow deposit, each meeting the requirements set forth in Section [__] of the Applicant Guidebook posted at [url to be inserted upon finalization of Applicant Guidebook] (which is hereby incorporated by reference into this Specification 8). Registry Operator shall use its best efforts to take all actions necessary or advisable to maintain in effect the Continued Operations Instrument for a period of six (6) years from the Effective Date, and to maintain ICANN as a third party beneficiary thereof. Registry Operator shall provide to ICANN copies of all final documents relating to the Continued Operations Instrument and shall keep ICANN reasonably informed of material developments relating to the Continued Operations Instrument. Registry Operator shall not agree to, or permit, any amendment of, or waiver under, the Continued Operations Instrument or other documentation relating thereto without the prior written consent of ICANN (such consent not to be unreasonably withheld). The Continued Operations Instrument shall expressly state that ICANN may access the financial resources of the Continued Operations Instrument pursuant to Section 2.13 or Section 4.5 [*insert for government entity*: or Section 7.14] of the Registry Agreement.

2. If, notwithstanding the use of best efforts by Registry Operator to satisfy its obligations under the preceding paragraph, the Continued Operations Instrument expires or is terminated by another party thereto, in whole or in part, for any reason, prior to the sixth anniversary of the Effective Date, Registry Operator shall promptly (i) notify ICANN of such expiration or termination and the reasons therefor and (ii) arrange for an alternative instrument that provides for sufficient financial resources to ensure the continued operation of the Registry Services related to the TLD for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period of one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6) anniversary of the Effective Date (an “Alternative Instrument”). Any such Alternative Instrument shall be on terms no less favorable to ICANN than the Continued Operations Instrument and shall otherwise be in form and substance reasonably acceptable to ICANN.

3. Notwithstanding anything to the contrary contained in this Specification 8, at any time, Registry Operator may replace the Continued Operations Instrument with an alternative

instrument that (i) provides for sufficient financial resources to ensure the continued operation of the Registry Services related to the TLD for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6) anniversary of the Effective Date, and (ii) contains terms no less favorable to ICANN than the Continued Operations Instrument and is otherwise in form and substance reasonably acceptable to ICANN. In the event Registry Operation replaces the Continued Operations Instrument either pursuant to paragraph 2 or this paragraph 3, the terms of this Specification 8 shall no longer apply with respect to the original Continuing Operations Instrument, but shall thereafter apply with respect to such replacement instrument(s).

SPECIFICATION 9

Registry Operator Code of Conduct

1. In connection with the operation of the registry for the TLD, Registry Operator will not, and will not allow any parent, subsidiary, Affiliate, subcontractor or other related entity, to the extent such party is engaged in the provision of Registry Services with respect to the TLD (each, a “Registry Related Party”), to:
 - a. directly or indirectly show any preference or provide any special consideration to any registrar with respect to operational access to registry systems and related registry services, unless comparable opportunities to qualify for such preferences or considerations are made available to all registrars on substantially similar terms and subject to substantially similar conditions;
 - b. register domain names in its own right, except for names registered through an ICANN accredited registrar that are reasonably necessary for the management, operations and purpose of the TLD, provided, that Registry Operator may reserve names from registration pursuant to Section 2.6 of the Registry Agreement;
 - c. register names in the TLD or sub-domains of the TLD based upon proprietary access to information about searches or resolution requests by consumers for domain names not yet registered (commonly known as, "front-running");
 - d. allow any Affiliated registrar to disclose user data to Registry Operator or any Registry Related Party, except as necessary for the management and operations of the TLD, unless all unrelated third parties (including other registry operators) are given equivalent access to such user data on substantially similar terms and subject to substantially similar conditions; or
 - e. disclose confidential registry data or confidential information about its Registry Services or operations to any employee of any DNS services provider, except as necessary for the management and operations of the TLD, unless all unrelated third parties (including other registry operators) are given equivalent access to such confidential registry data or confidential information on substantially similar terms and subject to substantially similar conditions.
2. If Registry Operator or a Registry Related Party also operates as a provider of registrar or registrar-reseller services, Registry Operator will, or will cause such Registry Related Party to, ensure that such services are offered through a legal entity separate from Registry Operator, and maintain separate books of accounts with respect to its registrar or registrar-reseller operations.
3. Registry Operator will conduct internal reviews at least once per calendar year to

- ensure compliance with this Code of Conduct. Within twenty (20) calendar days following the end of each calendar year, Registry Operator will provide the results of the internal review, along with a certification executed by an executive officer of Registry Operator certifying as to Registry Operator's compliance with this Code of Conduct, via email to an address to be provided by ICANN. (ICANN may specify in the future the form and contents of such reports or that the reports be delivered by other reasonable means.) Registry Operator agrees that ICANN may publicly post such results and certification.
4. Nothing set forth herein shall: (i) limit ICANN from conducting investigations of claims of Registry Operator's non-compliance with this Code of Conduct; or (ii) provide grounds for Registry Operator to refuse to cooperate with ICANN investigations of claims of Registry Operator's non-compliance with this Code of Conduct.
 5. Nothing set forth herein shall limit the ability of Registry Operator or any Registry Related Party, to enter into arms-length transactions in the ordinary course of business with a registrar or reseller with respect to products and services unrelated in all respects to the TLD.
 6. Registry Operator may request an exemption to this Code of Conduct, and such exemption may be granted by ICANN in ICANN's reasonable discretion, if Registry Operator demonstrates to ICANN's reasonable satisfaction that (i) all domain name registrations in the TLD are registered to, and maintained by, Registry Operator for its own exclusive use, (ii) Registry Operator does not sell, distribute or transfer control or use of any registrations in the TLD to any third party that is not an Affiliate of Registry Operator, and (iii) application of this Code of Conduct to the TLD is not necessary to protect the public interest.

SPECIFICATION 10

REGISTRY PERFORMANCE SPECIFICATIONS

1. Definitions

- 1.1. **DNS.** Refers to the Domain Name System as specified in RFCs 1034, 1035, and related RFCs.
- 1.2. **DNSSEC proper resolution.** There is a valid DNSSEC chain of trust from the root trust anchor to a particular domain name, e.g., a TLD, a domain name registered under a TLD, etc.
- 1.3. **EPP.** Refers to the Extensible Provisioning Protocol as specified in RFC 5730 and related RFCs.
- 1.4. **IP address.** Refers to IPv4 or IPv6 addresses without making any distinction between the two. When there is need to make a distinction, IPv4 or IPv6 is used.
- 1.5. **Probes.** Network hosts used to perform (DNS, EPP, etc.) tests (see below) that are located at various global locations.
- 1.6. **RDDS.** Registration Data Directory Services refers to the collective of WHOIS and Web-based WHOIS services as defined in Specification 4 of this Agreement.
- 1.7. **RTT.** Round-Trip Time or **RTT** refers to the time measured from the sending of the first bit of the first packet of the sequence of packets needed to make a request until the reception of the last bit of the last packet of the sequence needed to receive the response. If the client does not receive the whole sequence of packets needed to consider the response as received, the request will be considered unanswered.
- 1.8. **SLR.** Service Level Requirement is the level of service expected for a certain parameter being measured in a Service Level Agreement (SLA).

2. Service Level Agreement Matrix

	Parameter	SLR (monthly basis)
DNS	DNS service availability	0 min downtime = 100% availability
	DNS name server availability	≤ 432 min of downtime (≈ 99%)
	TCP DNS resolution RTT	≤ 1500 ms, for at least 95% of the queries
	UDP DNS resolution RTT	≤ 500 ms, for at least 95% of the queries
	DNS update time	≤ 60 min, for at least 95% of the probes
RDDS	RDDS availability	≤ 864 min of downtime (≈ 98%)
	RDDS query RTT	≤ 2000 ms, for at least 95% of the queries
	RDDS update time	≤ 60 min, for at least 95% of the probes
EPP	EPP service availability	≤ 864 min of downtime (≈ 98%)
	EPP session-command RTT	≤ 4000 ms, for at least 90% of the commands
	EPP query-command RTT	≤ 2000 ms, for at least 90% of the commands
	EPP transform-command RTT	≤ 4000 ms, for at least 90% of the commands

Registry Operator is encouraged to do maintenance for the different services at the times and dates of statistically lower traffic for each service. However, note that there is no provision for planned outages or similar; any downtime, be it for maintenance or due to system failures, will be noted simply as downtime and counted for SLA purposes.

3. DNS

- 3.1. **DNS service availability.** Refers to the ability of the group of listed-as-authoritative name servers of a particular domain name (e.g., a TLD), to answer DNS queries from DNS probes. For the service to be considered available at a particular moment, at least, two of the delegated name servers registered in the DNS must have successful results from “**DNS tests**” to each of their public-DNS registered “**IP addresses**” to which the name server resolves. If 51% or more of the DNS testing probes see the service as unavailable during a given time, the DNS service will be considered unavailable.
- 3.2. **DNS name server availability.** Refers to the ability of a public-DNS registered “**IP address**” of a particular name server listed as authoritative for a domain name, to answer DNS queries from an Internet user. All the public DNS-registered “**IP address**” of all name servers of the domain name being monitored shall be tested individually. If 51% or more of the DNS testing probes get undefined/unanswered results from “**DNS tests**” to a name server “**IP address**” during a given time, the name server “**IP address**” will be considered unavailable.
- 3.3. **UDP DNS resolution RTT.** Refers to the **RTT** of the sequence of two packets, the UDP DNS query and the corresponding UDP DNS response. If the **RTT** is 5 times greater than the time specified in the relevant **SLR**, the **RTT** will be considered undefined.
- 3.4. **TCP DNS resolution RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the DNS response for only one DNS query. If the **RTT** is 5 times greater than the time specified in the relevant **SLR**, the **RTT** will be considered undefined.
- 3.5. **DNS resolution RTT.** Refers to either “**UDP DNS resolution RTT**” or “**TCP DNS resolution RTT**”.
- 3.6. **DNS update time.** Refers to the time measured from the reception of an EPP confirmation to a transform command on a domain name, until the name servers of the parent domain name answer “**DNS queries**” with data consistent with the change made. This only applies for changes to DNS information.
- 3.7. **DNS test.** Means one non-recursive DNS query sent to a particular “**IP address**” (via UDP or TCP). If DNSSEC is offered in the queried DNS zone, for a query to be considered answered, the signatures must be positively verified against a corresponding DS record published in the parent zone or, if the parent is not signed, against a statically configured Trust Anchor. The answer to the query must contain the corresponding information from the Registry System, otherwise the query will be considered unanswered. A query with a “**DNS resolution RTT**” 5 times higher than the corresponding **SLR**, will be considered unanswered. The possible results to a DNS test are: a number in milliseconds corresponding to the “**DNS resolution RTT**” or, undefined/unanswered.
- 3.8. **Measuring DNS parameters.** Every minute, every DNS probe will make an UDP or TCP “**DNS test**” to each of the public-DNS registered “**IP addresses**” of the name servers of the domain

name being monitored. If a “**DNS test**” result is undefined/unanswered, the tested IP will be considered unavailable from that probe until it is time to make a new test.

3.9. **Collating the results from DNS probes.** The minimum number of active testing probes to consider a measurement valid is 20 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

3.10. **Distribution of UDP and TCP queries.** DNS probes will send UDP or TCP “**DNS test**” approximating the distribution of these queries.

3.11. **Placement of DNS probes.** Probes for measuring DNS parameters shall be placed as near as possible to the DNS resolvers on the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

4. **RDDS**

4.1. **RDDS availability.** Refers to the ability of all the RDDS services for the TLD, to respond to queries from an Internet user with appropriate data from the relevant Registry System. If 51% or more of the RDDS testing probes see any of the RDDS services as unavailable during a given time, the RDDS will be considered unavailable.

4.2. **WHOIS query RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the WHOIS response. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

4.3. **Web-based-WHOIS query RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the HTTP response for only one HTTP request. If Registry Operator implements a multiple-step process to get to the information, only the last step shall be measured. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

4.4. **RDDS query RTT.** Refers to the collective of “**WHOIS query RTT**” and “**Web-based-WHOIS query RTT**”.

4.5. **RDDS update time.** Refers to the time measured from the reception of an EPP confirmation to a transform command on a domain name, host or contact, up until the servers of the RDDS services reflect the changes made.

4.6. **RDDS test.** Means one query sent to a particular “**IP address**” of one of the servers of one of the RDDS services. Queries shall be about existing objects in the Registry System and the responses must contain the corresponding information otherwise the query will be considered unanswered. Queries with an **RTT** 5 times higher than the corresponding SLR will be considered as unanswered. The possible results to an RDDS test are: a number in milliseconds corresponding to the **RTT** or undefined/unanswered.

4.7. **Measuring RDDS parameters.** Every 5 minutes, RDDS probes will select one IP address from all the public-DNS registered “**IP addresses**” of the servers for each RDDS service of the TLD being monitored and make an “**RDDS test**” to each one. If an “**RDDS test**” result is

undefined/unanswered, the corresponding RDDS service will be considered as unavailable from that probe until it is time to make a new test.

4.8. **Collating the results from RDDS probes.** The minimum number of active testing probes to consider a measurement valid is 10 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

4.9. **Placement of RDDS probes.** Probes for measuring RDDS parameters shall be placed inside the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

5. **EPP**

5.1. **EPP service availability.** Refers to the ability of the TLD EPP servers as a group, to respond to commands from the Registry accredited Registrars, who already have credentials to the servers. The response shall include appropriate data from the Registry System. An EPP command with “**EPP command RTT**” 5 times higher than the corresponding SLR will be considered as unanswered. If 51% or more of the EPP testing probes see the EPP service as unavailable during a given time, the EPP service will be considered unavailable.

5.2. **EPP session-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a session command plus the reception of the EPP response for only one EPP session command. For the login command it will include packets needed for starting the TCP session. For the logout command it will include packets needed for closing the TCP session. EPP session commands are those described in section 2.9.1 of EPP RFC 5730. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.

5.3. **EPP query-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a query command plus the reception of the EPP response for only one EPP query command. It does not include packets needed for the start or close of either the EPP or the TCP session. EPP query commands are those described in section 2.9.2 of EPP RFC 5730. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

5.4. **EPP transform-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a transform command plus the reception of the EPP response for only one EPP transform command. It does not include packets needed for the start or close of either the EPP or the TCP session. EPP transform commands are those described in section 2.9.3 of EPP RFC 5730. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.

5.5. **EPP command RTT.** Refers to “**EPP session-command RTT**”, “**EPP query-command RTT**” or “**EPP transform-command RTT**”.

5.6. **EPP test.** Means one EPP command sent to a particular “**IP address**” for one of the EPP servers. Query and transform commands, with the exception of “create”, shall be about existing objects in the Registry System. The response shall include appropriate data from the Registry System. The possible results to an EPP test are: a number in milliseconds corresponding to the “**EPP command RTT**” or undefined/unanswered.

5.7. **Measuring EPP parameters.** Every 5 minutes, EPP probes will select one “IP address“ of the EPP servers of the TLD being monitored and make an “EPP test”; every time they should alternate between the 3 different types of commands and between the commands inside each category. If an “EPP test” result is undefined/unanswered, the EPP service will be considered as unavailable from that probe until it is time to make a new test.

5.8. **Collating the results from EPP probes.** The minimum number of active testing probes to consider a measurement valid is 5 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

5.9. **Placement of EPP probes.** Probes for measuring EPP parameters shall be placed inside or close to Registrars points of access to the Internet across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

6. **Emergency Thresholds**

The following matrix presents the Emergency Thresholds that, if reached by any of the services mentioned above for a TLD, would cause the Emergency Transition of the Critical Functions as specified in Section 2.13. of this Agreement.

Critical Function	Emergency Threshold
DNS service (all servers)	4-hour downtime / week
DNSSEC proper resolution	4-hour downtime / week
EPP	24-hour downtime / week
RDDS (WHOIS/Web-based WHOIS)	24-hour downtime / week
Data Escrow	Breach of the Registry Agreement caused by missing escrow deposits as described in Specification 2, Part B, Section 6.

7. **Emergency Escalation**

Escalation is strictly for purposes of notifying and investigating possible or potential issues in relation to monitored services. The initiation of any escalation and the subsequent cooperative investigations do not in themselves imply that a monitored service has failed its performance requirements.

Escalations shall be carried out between ICANN and Registry Operators, Registrars and Registry Operator, and Registrars and ICANN. Registry Operators and ICANN must provide said emergency operations departments. Current contacts must be maintained between ICANN and Registry Operators and published to Registrars, where relevant to their role in escalations, prior to any processing of an Emergency Escalation by all related parties, and kept current at all times.

7.1. **Emergency Escalation initiated by ICANN**

Upon reaching 10% of the Emergency thresholds as described in Section 6, ICANN’s emergency operations will initiate an Emergency Escalation with the relevant Registry Operator. An Emergency Escalation consists of the following minimum elements: electronic (i.e., email or SMS) and/or voice contact notification to the Registry Operator’s emergency operations department with detailed information concerning the issue being escalated, including evidence of monitoring failures, cooperative trouble-shooting of the monitoring failure between ICANN staff and the Registry Operator, and the

commitment to begin the process of rectifying issues with either the monitoring service or the service being monitoring.

7.2. Emergency Escalation initiated by Registrars

Registry Operator will maintain an emergency operations departments prepared to handle emergency requests from registrars. In the event that a registrar is unable to conduct EPP transactions with the Registry because of a fault with the Registry Service and is unable to either contact (through ICANN mandated methods of communication) the Registry Operator, or the Registry Operator is unable or unwilling to address the fault, the registrar may initiate an Emergency Escalation to the emergency operations department of ICANN. ICANN then may initiate an Emergency Escalation with the Registry Operator as explained above.

7.3. Notifications of Outages and Maintenance

In the event that a Registry Operator plans maintenance, they will provide related notice to the ICANN emergency operations department, at least, 24 hours ahead of that maintenance. ICANN's emergency operations department will note planned maintenance times, and suspend Emergency Escalation services for the monitored services during the expected maintenance outage period.

If Registry Operator declares an outage, as per their contractual obligations with ICANN, on services under SLA and performance requirements, it will notify the ICANN emergency operations department. During that declared outage, ICANN's emergency operations department will note and suspend Emergency Escalation services for the monitored services involved.

8. Covenants of Performance Measurement

- 8.1. **No interference.** Registry Operator shall not interfere with measurement **Probes**, including any form of preferential treatment of the requests for the monitored services. Registry Operator shall respond to the measurement tests described in this Specification as it would do with any other request from Internet users (for DNS and RDDS) or registrars (for EPP).
- 8.2. **ICANN testing registrar.** Registry Operator agrees that ICANN will have a testing registrar used for purposes of measuring the **SLRs** described above. Registry Operator agrees to not provide any differentiated treatment for the testing registrar other than no billing of the transactions. ICANN shall not use the registrar for registering domain names (or other registry objects) for itself or others, except for the purposes of verifying contractual compliance with the conditions described in this Agreement.

TRADEMARK CLEARINGHOUSE
4 JUNE 2012

1. PURPOSE OF CLEARINGHOUSE

- 1.1 The Trademark Clearinghouse is a central repository for information to be authenticated, stored, and disseminated, pertaining to the rights of trademark holders. ICANN will enter into an arms-length contract with service provider or providers, awarding the right to serve as a Trademark Clearinghouse Service Provider, i.e., to accept, authenticate, validate and facilitate the transmission of information related to certain trademarks.
- 1.2 The Clearinghouse will be required to separate its two primary functions: (i) authentication and validation of the trademarks in the Clearinghouse; and (ii) serving as a database to provide information to the new gTLD registries to support pre-launch Sunrise or Trademark Claims Services. Whether the same provider could serve both functions or whether two providers will be determined in the tender process.
- 1.3 The Registry shall only need to connect with one centralized database to obtain the information it needs to conduct its Sunrise or Trademark Claims Services regardless of the details of the Trademark Clearinghouse Service Provider's contract(s) with ICANN.
- 1.4 Trademark Clearinghouse Service Provider may provide ancillary services, as long as those services and any data used for those services are kept separate from the Clearinghouse database.
- 1.5 The Clearinghouse database will be a repository of authenticated information and disseminator of the information to a limited number of recipients. Its functions will be performed in accordance with a limited charter, and will not have any discretionary powers other than what will be set out in the charter with respect to authentication and validation. The Clearinghouse administrator(s) cannot create policy. Before material changes are made to the Clearinghouse functions, they will be reviewed through the ICANN public participation model.
- 1.6 Inclusion in the Clearinghouse is not proof of any right, nor does it create any legal rights. Failure to submit trademarks into the Clearinghouse should not be perceived to be lack of vigilance by trademark holders or a waiver of any rights, nor can any negative influence be drawn from such failure.

2. SERVICE PROVIDERS

- 2.1 The selection of Trademark Clearinghouse Service Provider(s) will be subject to predetermined criteria, but the foremost considerations will be the ability to store, authenticate, validate and disseminate the data at the highest level of technical stability

and security without interference with the integrity or timeliness of the registration process or registry operations.

2.2 Functions – Authentication/Validation; Database Administration. Public commentary has suggested that the best way to protect the integrity of the data and to avoid concerns that arise through sole-source providers would be to separate the functions of database administration and data authentication/validation.

2.2.1 One entity will authenticate registrations ensuring the word marks qualify as registered or are court-validated word marks or word marks that are protected by statute or treaty. This entity would also be asked to ensure that proof of use of marks is provided, which can be demonstrated by furnishing a signed declaration and one specimen of current use.

2.2.2 The second entity will maintain the database and provide Sunrise and Trademark Claims Services (described below).

2.3 Discretion will be used, balancing effectiveness, security and other important factors, to determine whether ICANN will contract with one or two entities - one to authenticate and validate, and the other to, administer in order to preserve integrity of the data.

2.4 Contractual Relationship.

2.4.1 The Clearinghouse shall be separate and independent from ICANN. It will operate based on market needs and collect fees from those who use its services. ICANN may coordinate or specify interfaces used by registries and registrars, and provide some oversight or quality assurance function to ensure rights protection goals are appropriately met.

2.4.2 The Trademark Clearinghouse Service Provider(s) (authenticator/validator and administrator) will be selected through an open and transparent process to ensure low costs and reliable, consistent service for all those utilizing the Clearinghouse services.

2.4.3 The Service Provider(s) providing the authentication of the trademarks submitted into the Clearinghouse shall adhere to rigorous standards and requirements that would be specified in an ICANN contractual agreement.

2.4.4 The contract shall include service level requirements, customer service availability (with the goal of seven days per week, 24 hours per day, 365 days per year), data escrow requirements, and equal access requirements for all persons and entities required to access the Trademark Clearinghouse database.

- 2.4.5 To the extent practicable, the contract should also include indemnification by Service Provider for errors such as false positives for participants such as Registries, ICANN, Registrants and Registrars.
- 2.5. Service Provider Requirements. The Clearinghouse Service Provider(s) should utilize regional marks authentication service providers (whether directly or through sub-contractors) to take advantage of local experts who understand the nuances of the trademark in question. Examples of specific performance criteria details in the contract award criteria and service-level-agreements are:
 - 2.5.1 provide 24 hour accessibility seven days a week (database administrator);
 - 2.5.2 employ systems that are technically reliable and secure (database administrator);
 - 2.5.3 use globally accessible and scalable systems so that multiple marks from multiple sources in multiple languages can be accommodated and sufficiently cataloged (database administrator and validator);
 - 2.5.4 accept submissions from all over the world - the entry point for trademark holders to submit their data into the Clearinghouse database could be regional entities or one entity;
 - 2.5.5 allow for multiple languages, with exact implementation details to be determined;
 - 2.5.6 provide access to the Registrants to verify and research Trademark Claims Notices;
 - 2.5.7 have the relevant experience in database administration, validation or authentication, as well as accessibility to and knowledge of the various relevant trademark laws (database administrator and authenticator); and
 - 2.5.8 ensure through performance requirements, including those involving interface with registries and registrars, that neither domain name registration timeliness, nor registry or registrar operations will be hindered (database administrator).

3. CRITERIA FOR TRADEMARK INCLUSION IN CLEARINGHOUSE

- 3.1 The trademark holder will submit to one entity – a single entity for entry will facilitate access to the entire Clearinghouse database. If regional entry points are used, ICANN will publish an information page describing how to locate regional submission points. Regardless of the entry point into the Clearinghouse, the authentication procedures established will be uniform.
- 3.2 The standards for inclusion in the Clearinghouse are:
 - 3.2.1 Nationally or regionally registered word marks from all jurisdictions.
 - 3.2.2 Any word mark that has been validated through a court of law or other judicial proceeding.

- 3.2.3 Any word mark protected by a statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion.
 - 3.2.4 Other marks that constitute intellectual property.
 - 3.2.5 Protections afforded to trademark registrations do not extend to applications for registrations, marks within any opposition period or registered marks that were the subject of successful invalidation, cancellation or rectification proceedings.
- 3.3 The type of data supporting entry of a registered word mark into the Clearinghouse must include a copy of the registration or the relevant ownership information, including the requisite registration number(s), the jurisdictions where the registrations have issued, and the name of the owner of record.
- 3.4 Data supporting entry of a judicially validated word mark into the Clearinghouse must include the court documents, properly entered by the court, evidencing the validation of a given word mark.
- 3.5 Data supporting entry into the Clearinghouse of word marks protected by a statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion, must include a copy of the relevant portion of the statute or treaty and evidence of its effective date.
- 3.6 Data supporting entry into the Clearinghouse of marks that constitute intellectual property of types other than those set forth in sections 3.2.1-3.2.3 above shall be determined by the registry operator and the Clearinghouse based on the services any given registry operator chooses to provide.
- 3.7 Registrations that include top level extensions such as “icann.org” or “.icann” as the word mark will not be permitted in the Clearinghouse regardless of whether that mark has been registered or it has been otherwise validated or protected (e.g., if a mark existed for icann.org or .icann, neither will not be permitted in the Clearinghouse).
- 3.8 All mark holders seeking to have their marks included in the Clearinghouse will be required to submit a declaration, affidavit, or other sworn statement that the information provided is true and current and has not been supplied for an improper purpose. The mark holder will also be required to attest that it will keep the information supplied to the Clearinghouse current so that if, during the time the mark is included in the Clearinghouse, a registration gets cancelled or is transferred to another entity, or in the case of a court- or Clearinghouse-validated mark the holder abandons use of the mark, the mark holder has an affirmative obligation to notify the Clearinghouse. There will be penalties for failing to keep information current. Moreover, it is anticipated that there will be a process whereby registrations can be

removed from the Clearinghouse if it is discovered that the marks are procured by fraud or if the data is inaccurate.

- 3.9 As an additional safeguard, the data will have to be renewed periodically by any mark holder wishing to remain in the Clearinghouse. Electronic submission should facilitate this process and minimize the cost associated with it. The reason for periodic authentication is to streamline the efficiencies of the Clearinghouse and the information the registry operators will need to process and limit the marks at issue to the ones that are in use.

4. USE OF CLEARINGHOUSE DATA

- 4.1 All mark holders seeking to have their marks included in the Clearinghouse will have to consent to the use of their information by the Clearinghouse. However, such consent would extend only to use in connection with the stated purpose of the Trademark Clearinghouse Database for Sunrise or Trademark Claims services. The reason for such a provision would be to presently prevent the Clearinghouse from using the data in other ways without permission. There shall be no bar on the Trademark Clearinghouse Service Provider or other third party service providers providing ancillary services on a non-exclusive basis.
- 4.2 In order not to create a competitive advantage, the data in the Trademark Clearinghouse should be licensed to competitors interested in providing ancillary services on equal and non-discriminatory terms and on commercially reasonable terms if the mark holders agree. Accordingly, two licensing options will be offered to the mark holder: (a) a license to use its data for all required features of the Trademark Clearinghouse, with no permitted use of such data for ancillary services either by the Trademark Clearinghouse Service Provider or any other entity; or (b) license to use its data for the mandatory features of the Trademark Clearinghouse and for any ancillary uses reasonably related to the protection of marks in new gTLDs, which would include a license to allow the Clearinghouse to license the use and data in the Trademark Clearinghouse to competitors that also provide those ancillary services. The specific implementation details will be determined, and all terms and conditions related to the provision of such services shall be included in the Trademark Clearinghouse Service Provider's contract with ICANN and subject to ICANN review.
- 4.3 Access by a prospective registrant to verify and research Trademark Claims Notices shall not be considered an ancillary service, and shall be provided at no cost to the Registrant. Misuse of the data by the service providers would be grounds for immediate termination.

5. DATA AUTHENTICATION AND VALIDATION GUIDELINES

- 5.1 One core function for inclusion in the Clearinghouse would be to authenticate that the data meets certain minimum criteria. As such, the following minimum criteria are suggested:
- 5.1.1 An acceptable list of data authentication sources, i.e. the web sites of patent and trademark offices throughout the world, third party providers who can obtain information from various trademark offices;
 - 5.1.2 Name, address and contact information of the applicant is accurate, current and matches that of the registered owner of the trademarks listed;
 - 5.1.3 Electronic contact information is provided and accurate;
 - 5.1.4 The registration numbers and countries match the information in the respective trademark office database for that registration number.
- 5.2 For validation of marks by the Clearinghouse that were not protected via a court, statute or treaty, the mark holder shall be required to provide evidence of use of the mark in connection with the bona fide offering for sale of goods or services prior to application for inclusion in the Clearinghouse. Acceptable evidence of use will be a signed declaration and a single specimen of current use, which might consist of labels, tags, containers, advertising, brochures, screen shots, or something else that evidences current use.

6. MANDATORY RIGHTS PROTECTION MECHANISMS

All new gTLD registries will be required to use the Trademark Clearinghouse to support its pre-launch or initial launch period rights protection mechanisms (RPMs). These RPMs, at a minimum, must consist of a Trademark Claims service and a Sunrise process.

- 6.1 Trademark Claims service
- 6.1.1 New gTLD Registry Operators must provide Trademark Claims services during an initial launch period for marks in the Trademark Clearinghouse. This launch period must occur for at least the first 60 days that registration is open for general registration.
 - 6.1.2 A Trademark Claims service is intended to provide clear notice to the prospective registrant of the scope of the mark holder's rights in order to minimize the chilling effect on registrants (Trademark Claims Notice). A form that describes the required elements is attached. The specific statement by

prospective registrant warrants that: (i) the prospective registrant has received notification that the mark(s) is included in the Clearinghouse; (ii) the prospective registrant has received and understood the notice; and (iii) to the best of the prospective registrant's knowledge, the registration and use of the requested domain name will not infringe on the rights that are the subject of the notice.

- 6.1.3 The Trademark Claims Notice should provide the prospective registrant access to the Trademark Clearinghouse Database information referenced in the Trademark Claims Notice to enhance understanding of the Trademark rights being claimed by the trademark holder. These links (or other sources) shall be provided in real time without cost to the prospective registrant. Preferably, the Trademark Claims Notice should be provided in the language used for the rest of the interaction with the registrar or registry, but it is anticipated that at the very least in the most appropriate UN-sponsored language (as specified by the prospective registrant or registrar/registry).
- 6.1.4 If the domain name is registered in the Clearinghouse, the registrar (again through an interface with the Clearinghouse) will promptly notify the mark holders(s) of the registration after it is effectuated.
- 6.1.5 The Trademark Clearinghouse Database will be structured to report to registries when registrants are attempting to register a domain name that is considered an "Identical Match" with the mark in the Clearinghouse. "Identical Match" means that the domain name consists of the complete and identical textual elements of the mark. In this regard: (a) spaces contained within a mark that are either replaced by hyphens (and vice versa) or omitted; (b) only certain special characters contained within a trademark are spelled out with appropriate words describing it (@ and &); (c) punctuation or special characters contained within a mark that are unable to be used in a second-level domain name may either be (i) omitted or (ii) replaced by spaces, hyphens or underscores and still be considered identical matches; and (d) no plural and no "marks contained" would qualify for inclusion.

6.2 Sunrise service

- 6.2.1 Sunrise registration services must be offered for a minimum of 30 days during the pre-launch phase and notice must be provided to all trademark holders in the Clearinghouse if someone is seeking a sunrise registration. This notice will be provided to holders of marks in the Clearinghouse that are an Identical Match to the name to be registered during Sunrise.
- 6.2.2 Sunrise Registration Process. For a Sunrise service, sunrise eligibility requirements (SERs) will be met as a minimum requirement, verified by Clearinghouse data, and

incorporate a Sunrise Dispute Resolution Policy (SDRP).

- 6.2.3 The proposed SERs include: (i) ownership of a mark (that satisfies the criteria in section 7.2 below), (ii) optional registry elected requirements re: international class of goods or services covered by registration; (iii) representation that all provided information is true and correct; and (iv) provision of data sufficient to document rights in the trademark.
- 6.2.4 The proposed SDRP must allow challenges based on at least the following four grounds: (i) at time the challenged domain name was registered, the registrant did not hold a trademark registration of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; (ii) the domain name is not identical to the mark on which the registrant based its Sunrise registration; (iii) the trademark registration on which the registrant based its Sunrise registration is not of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; or (iv) the trademark registration on which the domain name registrant based its Sunrise registration did not issue on or before the effective date of the Registry Agreement and was not applied for on or before ICANN announced the applications received.
- 6.2.5 The Clearinghouse will maintain the SERs, validate and authenticate marks, as applicable, and hear challenges.

7. PROTECTION FOR MARKS IN CLEARINGHOUSE

The scope of registered marks that must be honored by registries in providing Trademarks Claims services is broader than those that must be honored by registries in Sunrise services.

- 7.1 For Trademark Claims services - Registries must recognize and honor all word marks that have been or are: (i) nationally or regionally registered; (ii) court-validated; or (iii) specifically protected by a statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion. No demonstration of use is required.
- 7.2 For Sunrise services - Registries must recognize and honor all word marks: (i) nationally or regionally registered and for which proof of use – which can be a declaration and a single specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse; or (ii) that have been court-validated; or (iii) that are specifically protected by a statute or treaty currently in effect and that was in effect on or before 26 June 2008.

8. COSTS OF CLEARINGHOUSE

Costs should be completely borne by the parties utilizing the services. Trademark holders will pay to register the Clearinghouse, and registries will pay for Trademark Claims and Sunrise services. Registrars and others who avail themselves of Clearinghouse services will pay the Clearinghouse directly.

TRADEMARK NOTICE

[In English and the language of the registration agreement]

You have received this Trademark Notice because you have applied for a domain name which matches at least one trademark record submitted to the Trademark Clearinghouse.

You may or may not be entitled to register the domain name depending on your intended use and whether it is the same or significantly overlaps with the trademarks listed below.

Your rights to register this domain name may or may not be protected as noncommercial use or "fair use" by the laws of your country. [in bold italics or all caps]

Please read the trademark information below carefully, including the trademarks, jurisdictions, and goods and service for which the trademarks are registered. Please be aware that not all jurisdictions review trademark applications closely, so some of the trademark information below may exist in a national or regional registry which does not conduct a thorough or substantive review of trademark rights prior to registration.

If you have questions, you may want to consult an attorney or legal expert on trademarks and intellectual property for guidance.

If you continue with this registration, you represent that, you have received and you understand this notice and to the best of your knowledge, your registration and use of the requested domain name will not infringe on the trademark rights listed below.

The following [number] Trademarks are listed in the Trademark Clearinghouse:

1. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant: Trademark Registrant Contact:

[with links to the TM registrations as listed in the TM Clearinghouse]

2. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant:

Trademark Registrant Contact:

***** [with links to the TM registrations as listed in the TM Clearinghouse]

X. 1. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant: Trademark Registrant Contact:

**UNIFORM RAPID SUSPENSION SYSTEM (“URS”)
4 JUNE 2012**

DRAFT PROCEDURE

1. Complaint

1.1 Filing the Complaint

- a) Proceedings are initiated by electronically filing with a URS Provider a Complaint outlining the trademark rights and the actions complained of entitling the trademark holder to relief.
- b) Each Complaint must be accompanied by the appropriate fee, which is under consideration. The fees will be non-refundable.
- c) One Complaint is acceptable for multiple related companies against one Registrant, but only if the companies complaining are related. Multiple Registrants can be named in one Complaint only if it can be shown that they are in some way related. There will not be a minimum number of domain names imposed as a prerequisite to filing.

1.2 Contents of the Complaint

The form of the Complaint will be simple and as formulaic as possible. There will be a Form Complaint. The Form Complaint shall include space for the following:

- 1.2.1 Name, email address and other contact information for the Complaining Party (Parties).
- 1.2.2 Name, email address and contact information for any person authorized to act on behalf of Complaining Parties.
- 1.2.3 Name of Registrant (i.e. relevant information available from Whois) and Whois listed available contact information for the relevant domain name(s).
- 1.2.4 The specific domain name(s) that are the subject of the Complaint. For each domain name, the Complainant shall include a copy of the currently available Whois information and a description and copy, if available, of the offending portion of the website content associated with each domain name that is the subject of the Complaint.
- 1.2.5 The specific trademark/service marks upon which the Complaint is based and pursuant to which the Complaining Parties are asserting their rights to them, for which goods and in connection with what services.
- 1.2.6 A statement of the grounds upon which the Complaint is based setting forth facts showing that the Complaining Party is entitled to relief, namely:

1.2.6.1. that the registered domain name is identical or confusingly similar to a word mark: (i) for which the Complainant holds a valid national or regional registration and that is in current use; or (ii) that has been validated through court proceedings; or (iii) that is specifically protected by a statute or treaty in effect at the time the URS complaint is filed.

- a. Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use in commerce - was submitted to, and validated by, the Trademark Clearinghouse)
- b. Proof of use may also be submitted directly with the URS Complaint.

and

1.2.6.2. that the Registrant has no legitimate right or interest to the domain name; and

1.2.6.3. that the domain was registered and is being used in bad faith.

A non-exclusive list of circumstances that demonstrate bad faith registration and use by the Registrant include:

- a. Registrant has registered or acquired the domain name primarily for the purpose of selling, renting or otherwise transferring the domain name registration to the complainant who is the owner of the trademark or service mark or to a competitor of that complainant, for valuable consideration in excess of documented out-of pocket costs directly related to the domain name; or
- b. Registrant has registered the domain name in order to prevent the trademark holder or service mark from reflecting the mark in a corresponding domain name, provided that Registrant has engaged in a pattern of such conduct; or
- c. Registrant registered the domain name primarily for the purpose of disrupting the business of a competitor; or
- d. By using the domain name Registrant has intentionally attempted to attract for commercial gain, Internet users to Registrant's web site or other on-line location, by creating a likelihood of confusion with the complainant's mark as to the source, sponsorship, affiliation, or endorsement of Registrant's web site or location or of a product or service on that web site or location.

1.2.7 A box in which the Complainant may submit up to 500 words of explanatory free form text.

1.2.8. An attestation that the Complaint is not being filed for any improper basis and that there is a sufficient good faith basis for filing the Complaint.

2. Fees

2.1 URS Provider will charge fees to the Complainant. Fees are thought to be in the range of USD 300 per proceeding, but will ultimately be set by the Provider.

2.2 Complaints listing fifteen (15) or more disputed domain names registered by the same registrant will be subject to a Response Fee which will be refundable to the prevailing party. Under no circumstances shall the Response Fee exceed the fee charged to the Complainant.

3. Administrative Review

3.1 Complaints will be subjected to an initial administrative review by the URS Provider for compliance with the filing requirements. This is a review to determine that the Complaint contains all of the necessary information, and is not a determination as to whether a *prima facie* case has been established.

3.2 The Administrative Review shall be conducted within two (2) business days of submission of the Complaint to the URS Provider.

3.3 Given the rapid nature of this Procedure, and the intended low level of required fees, there will be no opportunity to correct inadequacies in the filing requirements.

3.4 If a Complaint is deemed non-compliant with filing requirements, the Complaint will be dismissed without prejudice to the Complainant filing a new complaint. The initial filing fee shall not be refunded in these circumstances.

4. Notice and Locking of Domain

4.1 Upon completion of the Administrative Review, the URS Provider must immediately notify the registry operator (via email) ("Notice of Complaint") after the Complaint has been deemed compliant with the filing requirements. Within 24 hours of receipt of the Notice of Complaint from the URS Provider, the registry operator shall "lock" the domain, meaning the registry shall restrict all changes to the registration data, including transfer and deletion of the domain names, but the name will continue to resolve. The registry operator will notify the URS Provider immediately upon locking the domain name ("Notice of Lock").

4.2 Within 24 hours after receiving Notice of Lock from the registry operator, the URS Provider shall notify the Registrant of the Complaint, sending a hard copy of the Notice of Complaint to the addresses listed in the Whois contact information, and providing an electronic copy of the Complaint, advising of the locked status, as well as the potential

effects if the Registrant fails to respond and defend against the Complaint. Notices must be clear and understandable to Registrants located globally. The Notice of Complaint shall be in English and translated by the Provider into the predominant language used in the registrant's country or territory.

- 4.3 All Notices to the Registrant shall be sent through email, fax (where available) and postal mail. The Complaint and accompanying exhibits, if any, shall be served electronically.
- 4.4 The URS Provider shall also electronically notify the registrar of record for the domain name at issue via the addresses the registrar has on file with ICANN.

5. The Response

- 5.1 A Registrant will have 14 calendar days from the date the URS Provider sent its Notice of Complaint to the Registrant to electronically file a Response with the URS Provider. Upon receipt, the Provider will electronically send a copy of the Response, and accompanying exhibits, if any, to the Complainant.
- 5.2 No filing fee will be charged if the Registrant files its Response prior to being declared in default or not more than thirty (30) days following a Determination. For Responses filed more than thirty (30) days after a Determination, the Registrant should pay a reasonable non-refundable fee for re-examination, plus a Response Fee as set forth in section 2.2 above if the Complaint lists twenty-six (26) or more disputed domain names against the same registrant. The Response Fee will be refundable to the prevailing party.
- 5.3 Upon request by the Registrant, a limited extension of time to respond may be granted by the URS Provider if there is a good faith basis for doing so. In no event shall the extension be for more than seven (7) calendar days.
- 5.4 The Response shall be no longer than 2,500 words, excluding attachments, and the content of the Response should include the following:
 - 5.4.1 Confirmation of Registrant data.
 - 5.4.2 Specific admission or denial of each of the grounds upon which the Complaint is based.
 - 5.4.3 Any defense which contradicts the Complainant's claims.
 - 5.4.4 A statement that the contents are true and accurate.
- 5.5 In keeping with the intended expedited nature of the URS and the remedy afforded to a successful Complainant, affirmative claims for relief by the Registrant will not be permitted except for an allegation that the Complainant has filed an abusive Complaint.
- 5.6 Once the Response is filed, and the URS Provider determines that the Response is compliant with the filing requirements of a Response (which shall be on the same day),

the Complaint, Response and supporting materials will immediately be sent to a qualified Examiner, selected by the URS Provider, for review and Determination. All materials submitted are considered by the Examiner.

- 5.7 The Response can contain any facts refuting the claim of bad faith registration by setting out any of the following circumstances:
- 5.7.1 Before any notice to Registrant of the dispute, Registrant's use of, or demonstrable preparations to use, the domain name or a name corresponding to the domain name in connection with a bona fide offering of goods or services; or
 - 5.7.2 Registrant (as an individual, business or other organization) has been commonly known by the domain name, even if Registrant has acquired no trademark or service mark rights; or
 - 5.7.3 Registrant is making a legitimate or fair use of the domain name, without intent for commercial gain to misleadingly divert consumers or to tarnish the trademark or service mark at issue.

Such claims, if found by the Examiner to be proved based on its evaluation of all evidence, shall result in a finding in favor of the Registrant.

- 5.8 The Registrant may also assert Defenses to the Complaint to demonstrate that the Registrant's use of the domain name is not in bad faith by showing, for example, one of the following:
- 5.8.1 The domain name is generic or descriptive and the Registrant is making fair use of it.
 - 5.8.2 The domain name sites are operated solely in tribute to or in criticism of a person or business that is found by the Examiner to be fair use.
 - 5.8.3 Registrant's holding of the domain name is consistent with an express term of a written agreement entered into by the disputing Parties and that is still in effect.
 - 5.8.4 The domain name is not part of a wider pattern or series of abusive registrations because the Domain Name is of a significantly different type or character to other domain names registered by the Registrant.
- 5.9 Other factors for the Examiner to consider:
- 5.9.1 Trading in domain names for profit, and holding a large portfolio of domain names, are of themselves not indicia of bad faith under the URS. Such conduct, however, may be abusive in a given case depending on the circumstances of the dispute. The Examiner must review each case on its merits.
 - 5.9.2 Sale of traffic (i.e. connecting domain names to parking pages and earning click-per-view revenue) does not in and of itself constitute bad faith under the URS.

Such conduct, however, may be abusive in a given case depending on the circumstances of the dispute. The Examiner will take into account:

5.9.2.1. the nature of the domain name;

5.9.2.2. the nature of the advertising links on any parking page associated with the domain name; and

5.9.2.3. that the use of the domain name is ultimately the Registrant's responsibility.

6. Default

- 6.1 If at the expiration of the 14-day answer period (or extended period if granted), the Registrant does not submit an answer, the Complaint proceeds to Default.
- 6.2 In either case, the Provider shall provide Notice of Default via email to the Complainant and Registrant, and via mail and fax to Registrant. During the Default period, the Registrant will be prohibited from changing content found on the site to argue that it is now a legitimate use and will also be prohibited from changing the Whois information.
- 6.3 All Default cases proceed to Examination for review on the merits of the claim.
- 6.4 If after Examination in Default cases, the Examiner rules in favor of Complainant, Registrant shall have the right to seek relief from Default via de novo review by filing a Response at any time up to six months after the date of the Notice of Default. The Registrant will also be entitled to request an extension of an additional six months if the extension is requested before the expiration of the initial six-month period.
- 6.5 If a Response is filed after: (i) the Respondent was in Default (so long as the Response is filed in accordance with 6.4 above); and (ii) proper notice is provided in accordance with the notice requirements set forth above, the domain name shall again resolve to the original IP address as soon as practical, but shall remain locked as if the Response had been filed in a timely manner before Default. The filing of a Response after Default is not an appeal; the case is considered as if responded to in a timely manner.
- 6.5 If after Examination in Default case, the Examiner rules in favor of Registrant, the Provider shall notify the Registry Operator to unlock the name and return full control of the domain name registration to the Registrant.

7. Examiners

- 7.1 One Examiner selected by the Provider will preside over a URS proceeding.
- 7.2 Examiners should have demonstrable relevant legal background, such as in trademark law, and shall be trained and certified in URS proceedings. Specifically, Examiners shall be provided with instructions on the URS elements and defenses and how to conduct the examination of a URS proceeding.

- 7.3 Examiners used by any given URS Provider shall be rotated to the extent feasible to avoid “forum or examiner shopping.” URS Providers are strongly encouraged to work equally with all certified Examiners, with reasonable exceptions (such as language needs, non-performance, or malfeasance) to be determined on a case by case analysis.

8. Examination Standards and Burden of Proof

- 8.1 The standards that the qualified Examiner shall apply when rendering its Determination are whether:
- 8.1.2 The registered domain name is identical or confusingly similar to a word mark: (i) for which the Complainant holds a valid national or regional registration and that is in current use; or (ii) that has been validated through court proceedings; or (iii) that is specifically protected by a statute or treaty currently in effect and that was in effect at the time the URS Complaint is filed; and
- 8.1.2.1 Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse.
- 8.1.2.2 Proof of use may also be submitted directly with the URS Complaint.
- 8.1.2 The Registrant has no legitimate right or interest to the domain name; and
- 8.1.3 The domain was registered and is being used in a bad faith.
- 8.2 The burden of proof shall be clear and convincing evidence.
- 8.3 For a URS matter to conclude in favor of the Complainant, the Examiner shall render a Determination that there is no genuine issue of material fact. Such Determination may include that: (i) the Complainant has rights to the name; and (ii) the Registrant has no rights or legitimate interest in the name. This means that the Complainant must present adequate evidence to substantiate its trademark rights in the domain name (e.g., evidence of a trademark registration and evidence that the domain name was registered and is being used in bad faith in violation of the URS).
- 8.4 If the Examiner finds that the Complainant has not met its burden, or that genuine issues of material fact remain in regards to any of the elements, the Examiner will reject the Complaint under the relief available under the URS. That is, the Complaint shall be dismissed if the Examiner finds that evidence was presented or is available to the Examiner to indicate that the use of the domain name in question is a non-infringing use or fair use of the trademark.
- 8.5 Where there is any genuine contestable issue as to whether a domain name registration and use of a trademark are in bad faith, the Complaint will be denied, the URS proceeding will be terminated without prejudice, e.g., a UDRP, court proceeding or

another URS may be filed. The URS is not intended for use in any proceedings with open questions of fact, but only clear cases of trademark abuse.

- 8.6 To restate in another way, if the Examiner finds that all three standards are satisfied by clear and convincing evidence and that there is no genuine contestable issue, then the Examiner shall issue a Determination in favor of the Complainant. If the Examiner finds that any of the standards have not been satisfied, then the Examiner shall deny the relief requested, thereby terminating the URS proceeding without prejudice to the Complainant to proceed with an action in court of competent jurisdiction or under the UDRP.

9. Determination

- 9.1 There will be no discovery or hearing; the evidence will be the materials submitted with the Complaint and the Response, and those materials will serve as the entire record used by the Examiner to make a Determination.
- 9.2 If the Complainant satisfies the burden of proof, the Examiner will issue a Determination in favor of the Complainant. The Determination will be published on the URS Provider's website. However, there should be no other preclusive effect of the Determination other than the URS proceeding to which it is rendered.
- 9.3 If the Complainant does not satisfy the burden of proof, the URS proceeding is terminated and full control of the domain name registration shall be returned to the Registrant.
- 9.4 Determinations resulting from URS proceedings will be published by the service provider in a format specified by ICANN.
- 9.5 Determinations shall also be emailed by the URS Provider to the Registrant, the Complainant, the Registrar, and the Registry Operator, and shall specify the remedy and required actions of the registry operator to comply with the Determination.
- 9.6 To conduct URS proceedings on an expedited basis, examination should begin immediately upon the earlier of the expiration of a fourteen (14) day Response period (or extended period if granted), or upon the submission of the Response. A Determination shall be rendered on an expedited basis, with the stated goal that it be rendered within three (3) business days from when Examination began. Absent extraordinary circumstances, however, Determinations must be issued no later than five (5) days after the Response is filed. Implementation details will be developed to accommodate the needs of service providers once they are selected. (The tender offer for potential service providers will indicate that timeliness will be a factor in the award decision.)

10. Remedy

- 10.1 If the Determination is in favor of the Complainant, the decision shall be immediately transmitted to the registry operator.

- 10.2 Immediately upon receipt of the Determination, the registry operator shall suspend the domain name, which shall remain suspended for the balance of the registration period and would not resolve to the original web site. The nameservers shall be redirected to an informational web page provided by the URS Provider about the URS. The URS Provider shall not be allowed to offer any other services on such page, nor shall it directly or indirectly use the web page for advertising purposes (either for itself or any other third party). The Whois for the domain name shall continue to display all of the information of the original Registrant except for the redirection of the nameservers. In addition, the Whois shall reflect that the domain name will not be able to be transferred, deleted or modified for the life of the registration.
- 10.3 There shall be an option for a successful Complainant to extend the registration period for one additional year at commercial rates.
- 10.4 No other remedies should be available in the event of a Determination in favor of the Complainant.

11. Abusive Complaints

- 11.1 The URS shall incorporate penalties for abuse of the process by trademark holders.
- 11.2 In the event a party is deemed to have filed two (2) abusive Complaints, or one (1) “deliberate material falsehood,” that party shall be barred from utilizing the URS for one-year following the date of issuance of a Determination finding a complainant to have: (i) filed its second abusive complaint; or (ii) filed a deliberate material falsehood.
- 11.3 A Complaint may be deemed abusive if the Examiner determines:
 - 11.3.1 it was presented solely for improper purpose such as to harass, cause unnecessary delay, or needlessly increase the cost of doing business; and
 - 11.3.2 (i) the claims or other assertions were not warranted by any existing law or the URS standards; or (ii) the factual contentions lacked any evidentiary support
- 11.4 An Examiner may find that Complaint contained a deliberate material falsehood if it contained an assertion of fact, which at the time it was made, was made with the knowledge that it was false and which, if true, would have an impact on the outcome on the URS proceeding.
- 11.5 Two findings of “deliberate material falsehood” shall permanently bar the party from utilizing the URS.
- 11.6 URS Providers shall be required to develop a process for identifying and tracking barred parties, and parties whom Examiners have determined submitted abusive complaints or deliberate material falsehoods.

- 11.7 The dismissal of a complaint for administrative reasons or a ruling on the merits, in itself, shall not be evidence of filing an abusive complaint.
- 11.8 A finding that filing of a complaint was abusive or contained a deliberate materially falsehood can be appealed solely on the grounds that an Examiner abused his/her discretion, or acted in an arbitrary or capricious manner.

12. Appeal

- 12.1 Either party shall have a right to seek a de novo appeal of the Determination based on the existing record within the URS proceeding for a reasonable fee to cover the costs of the appeal. An appellant must identify the specific grounds on which the party is appealing, including why the appellant claims the Examiner's Determination was incorrect.
- 12.2 The fees for an appeal shall be borne by the appellant. A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint. The Appeal Panel, to be selected by the Provider, may request, in its sole discretion, further statements or documents from either of the Parties.
- 12.3 Filing an appeal shall not change the domain name's resolution. For example, if the domain name no longer resolves to the original nameservers because of a Determination in favor of the Complainant, the domain name shall continue to point to the informational page provided by the URS Provider. If the domain name resolves to the original nameservers because of a Determination in favor of the registrant, it shall continue to resolve during the appeal process.
- 12.4 An appeal must be filed within 14 days after a Determination is issued and any Response must be filed 14 days after an appeal is filed.
- 12.5 If a respondent has sought relief from Default by filing a Response within six months (or the extended period if applicable) of issuance of initial Determination, an appeal must be filed within 14 days from date the second Determination is issued and any Response must be filed 14 days after the appeal is filed.
- 12.6 Notice of appeal and findings by the appeal panel shall be sent by the URS Provider via e-mail to the Registrant, the Complainant, the Registrar, and the Registry Operator.
- 12.7 The Providers' rules and procedures for appeals, other than those stated above, shall apply.

13. Other Available Remedies

The URS Determination shall not preclude any other remedies available to the appellant, such as UDRP (if appellant is the Complainant), or other remedies as may be available in a court of competition jurisdiction. A URS Determination for or against a party shall not prejudice the

party in UDRP or any other proceedings.

14. Review of URS

A review of the URS procedure will be initiated one year after the first Examiner Determination is issued. Upon completion of the review, a report shall be published regarding the usage of the procedure, including statistical information, and posted for public comment on the usefulness and effectiveness of the procedure.

TRADEMARK POST-DELEGATION DISPUTE RESOLUTION PROCEDURE (TRADEMARK PDDRP)
4 JUNE 2012

1. Parties to the Dispute

The parties to the dispute will be the trademark holder and the gTLD registry operator. ICANN shall not be a party.

2. Applicable Rules

2.1 This procedure is intended to cover Trademark post-delegation dispute resolution proceedings generally. To the extent more than one Trademark PDDRP provider ("Provider") is selected to implement the Trademark PDDRP, each Provider may have additional rules that must be followed when filing a Complaint. The following are general procedures to be followed by all Providers.

2.2 In the Registry Agreement, the registry operator agrees to participate in all post-delegation procedures and be bound by the resulting Determinations.

3. Language

3.1 The language of all submissions and proceedings under the procedure will be English.

3.2 Parties may submit supporting evidence in their original language, provided and subject to the authority of the Expert Panel to determine otherwise, that such evidence is accompanied by an English translation of all relevant text.

4. Communications and Time Limits

4.1 All communications with the Provider must be submitted electronically.

4.2 For the purpose of determining the date of commencement of a time limit, a notice or other communication will be deemed to have been received on the day that it is transmitted to the appropriate contact person designated by the parties.

4.3 For the purpose of determining compliance with a time limit, a notice or other communication will be deemed to have been sent, made or transmitted on the day that it is dispatched.

4.4 For the purpose of calculating a period of time under this procedure, such period will begin to run on the day following the date of receipt of a notice or other communication.

4.5 All references to day limits shall be considered as calendar days unless otherwise specified.

5. Standing

- 5.1 The mandatory administrative proceeding will commence when a third-party complainant (“Complainant”) has filed a Complaint with a Provider asserting that the Complainant is a trademark holder (which may include either registered or unregistered marks as defined below) claiming that one or more of its marks have been infringed, and thereby the Complainant has been harmed, by the registry operator’s manner of operation or use of the gTLD.
- 5.2 Before proceeding to the merits of a dispute, and before the Respondent is required to submit a substantive Response, or pay any fees, the Provider shall appoint a special one-person Panel to perform an initial “threshold” review (“Threshold Review Panel”).

6. Standards

For purposes of these standards, “registry operator” shall include entities directly or indirectly controlling, controlled by or under common control with a registry operator, whether by ownership or control of voting securities, by contract or otherwise where ‘control’ means the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of an entity, whether by ownership or control of voting securities, by contract or otherwise.

6.1 Top Level:

A complainant must assert and prove, by clear and convincing evidence, that the registry operator’s affirmative conduct in its operation or use of its gTLD string that is identical or confusingly similar to the complainant’s mark, causes or materially contributes to the gTLD doing one of the following:

(a) taking unfair advantage of the distinctive character or the reputation of the complainant’s mark; or

(b) impairing the distinctive character or the reputation of the complainant’s mark; or

(c) creating a likelihood of confusion with the complainant’s mark.

An example of infringement at the top-level is where a TLD string is identical to a trademark and then the registry operator holds itself out as the beneficiary of the mark.

6.2 Second Level

Complainants are required to prove, by clear and convincing evidence that, through the registry operator’s affirmative conduct:

(a) there is a substantial pattern or practice of specific bad faith intent by the registry operator to profit from the sale of trademark infringing domain names; and

(b) the registry operator's bad faith intent to profit from the systematic registration of domain names within the gTLD that are identical or confusingly similar to the complainant's mark, which:

(i) takes unfair advantage of the distinctive character or the reputation of the complainant's mark; or

(ii) impairs the distinctive character or the reputation of the complainant's mark, or

(iii) creates a likelihood of confusion with the complainant's mark.

In other words, it is not sufficient to show that the registry operator is on notice of possible trademark infringement through registrations in the gTLD. The registry operator is not liable under the PDDRP solely because: (i) infringing names are in its registry; or (ii) the registry operator knows that infringing names are in its registry; or (iii) the registry operator did not monitor the registrations within its registry.

A registry operator is not liable under the PDDRP for any domain name registration that: (i) is registered by a person or entity that is unaffiliated with the registry operator; (ii) is registered without the direct or indirect encouragement, inducement, initiation or direction of any person or entity affiliated with the registry operator; and (iii) provides no direct or indirect benefit to the registry operator other than the typical registration fee (which may include other fees collected incidental to the registration process for value added services such as enhanced registration security).

An example of infringement at the second level is where a registry operator has a pattern or practice of actively and systematically encouraging registrants to register second level domain names and to take unfair advantage of the trademark to the extent and degree that bad faith is apparent. Another example of infringement at the second level is where a registry operator has a pattern or practice of acting as the registrant or beneficial user of infringing registrations, to monetize and profit in bad faith.

7. Complaint

7.1 Filing:

The Complaint will be filed electronically. Once the Administrative Review has been completed and the Provider deems the Complaint to be in compliance, the Provider will electronically serve the Complaint and serve a paper notice on the registry operator that is the subject of the Complaint ("Notice of Complaint") consistent with the contact information listed in the Registry Agreement.

7.2 Content:

7.2.1 The name and contact information, including address, phone, and email address, of the Complainant, and, to the best of Complainant's knowledge, the name and address of the current owner of the registration.

- 7.2.2 The name and contact information, including address, phone, and email address of any person authorized to act on behalf of Complainant.
- 7.2.3 A statement of the nature of the dispute, and any relevant evidence, which shall include:
- (a) The particular legal rights claim being asserted, the marks that form the basis for the dispute and a short and plain statement of the basis upon which the Complaint is being filed.
 - (b) A detailed explanation of how the Complainant's claim meets the requirements for filing a claim pursuant to that particular ground or standard.
 - (c) A detailed explanation of the validity of the Complaint and why the Complainant is entitled to relief.
 - (d) A statement that the Complainant has at least 30 days prior to filing the Complaint notified the registry operator in writing of: (i) its specific concerns and specific conduct it believes is resulting in infringement of Complainant's trademarks and (ii) its willingness to meet to resolve the issue.
 - (e) An explanation of how the mark is used by the Complainant (including the type of goods/services, period and territory of use – including all on-line usage) or otherwise protected by statute, treaty or has been validated by a court or the Clearinghouse.
 - (f) Copies of any documents that the Complainant considers to evidence its basis for relief, including evidence of current use of the Trademark at issue in the Complaint and domain name registrations.
 - (g) A statement that the proceedings are not being brought for any improper purpose.
 - (h) A statement describing how the registration at issue has harmed the trademark owner.
- 7.3 Complaints will be limited 5,000 words and 20 pages, excluding attachments, unless the Provider determines that additional material is necessary.
- 7.4 At the same time the Complaint is filed, the Complainant will pay a non-refundable filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within 10 days of the receipt of the Complaint by the Provider, the Complaint will be dismissed without prejudice.

8. Administrative Review of the Complaint

- 8.1 All Complaints will be reviewed by the Provider within five (5) business days of submission to the Provider to determine whether the Complaint contains all necessary information and complies with the procedural rules.
- 8.2 If the Provider finds that the Complaint complies with procedural rules, the Complaint will be deemed filed, and the proceedings will continue to the Threshold Review. If the Provider finds that the Complaint does not comply with procedural rules, it will electronically notify the Complainant of such non-compliance and provide the Complainant five (5) business days to submit an amended Complaint. If the Provider does not receive an amended Complaint within the five (5) business days provided, it will dismiss the Complaint and close the proceedings without prejudice to the Complainant's submission of a new Complaint that complies with procedural rules. Filing fees will not be refunded.
- 8.3 If deemed compliant, the Provider will electronically serve the Complaint on the registry operator and serve the Notice of Complaint consistent with the contact information listed in the Registry Agreement.

9. Threshold Review

- 9.1 Provider shall establish a Threshold Review Panel, consisting of one panelist selected by the Provider, for each proceeding within five (5) business days after completion of Administrative Review and the Complaint has been deemed compliant with procedural rules.
- 9.2 The Threshold Review Panel shall be tasked with determining whether the Complainant satisfies the following criteria:
 - 9.2.1 The Complainant is a holder of a word mark that: (i) is nationally or regionally registered and that is in current use; or (ii) has been validated through court proceedings; or (iii) that is specifically protected by a statute or treaty at the time the PDDRP complaint is filed;
 - 9.2.1.1 Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse
 - 9.2.1.2 Proof of use may also be submitted directly with the Complaint.
 - 9.2.2 The Complainant has asserted that it has been materially harmed as a result of trademark infringement;
 - 9.2.3 The Complainant has asserted facts with sufficient specificity that, if everything the Complainant asserted is true, states a claim under the Top Level Standards herein
OR

The Complainant has asserted facts with sufficient specificity that, if everything the Complainant asserted is true, states a claim under the Second Level Standards herein;

9.2.4 The Complainant has asserted that: (i) at least 30 days prior to filing the Complaint the Complainant notified the registry operator in writing of its specific concerns and specific conduct it believes is resulting in infringement of Complainant's trademarks, and its willingness to meet to resolve the issue; (ii) whether the registry operator responded to the Complainant's notice of specific concerns; and (iii) if the registry operator did respond, that the Complainant attempted to engage in good faith discussions to resolve the issue prior to initiating the PDDRP.

9.3 Within ten (10) business days of date Provider served Notice of Complaint, the registry operator shall have the opportunity, but is not required, to submit papers to support its position as to the Complainant's standing at the Threshold Review stage. If the registry operator chooses to file such papers, it must pay a filing fee.

9.4 If the registry operator submits papers, the Complainant shall have ten (10) business days to submit an opposition.

9.5 The Threshold Review Panel shall have ten (10) business days from due date of Complainant's opposition or the due date of the registry operator's papers if none were filed, to issue Threshold Determination.

9.6 Provider shall electronically serve the Threshold Determination on all parties.

9.7 If the Complainant has not satisfied the Threshold Review criteria, the Provider will dismiss the proceedings on the grounds that the Complainant lacks standing and declare that the registry operator is the prevailing party.

9.8 If the Threshold Review Panel determines that the Complainant has standing and satisfied the criteria then the Provider will commence the proceedings on the merits.

10. Response to the Complaint

10.1 The registry operator must file a Response to each Complaint within forty-five (45) days after the date of the Threshold Review Panel Declaration.

10.2 The Response will comply with the rules for filing of a Complaint and will contain the name and contact information for the registry operator, as well as a point-by-point response to the statements made in the Complaint.

10.3 The Response must be filed with the Provider and the Provider must serve it upon the Complainant in electronic form with a hard-copy notice that it has been served.

- 10.4 Service of the Response will be deemed effective, and the time will start to run for a Reply, upon confirmation that the electronic Response and hard-copy notice of the Response was sent by the Provider to the addresses provided by the Complainant.
- 10.5 If the registry operator believes the Complaint is without merit, it will affirmatively plead in its Response the specific grounds for the claim.

11. Reply

- 11.1 The Complainant is permitted ten (10) days from Service of the Response to submit a Reply addressing the statements made in the Response showing why the Complaint is not “without merit.” A Reply may not introduce new facts or evidence into the record, but shall only be used to address statements made in the Response. Any new facts or evidence introduced in a Response shall be disregarded by the Expert Panel.
- 11.2 Once the Complaint, Response and Reply (as necessary) are filed and served, a Panel will be appointed and provided with all submissions.

12. Default

- 12.1 If the registry operator fails to respond to the Complaint, it will be deemed to be in default.
- 12.2 Limited rights to set aside the finding of default will be established by the Provider, but in no event will they be permitted absent a showing of good cause to set aside the finding of default.
- 12.3 The Provider shall provide notice of Default via email to the Complainant and registry operator.
- 12.4 All Default cases shall proceed to Expert Determination on the merits.

13. Expert Panel

- 13.1 The Provider shall establish an Expert Panel within 21 days after receiving the Reply, or if no Reply is filed, within 21 days after the Reply was due to be filed.
- 13.2 The Provider shall appoint a one-person Expert Panel, unless any party requests a three- member Expert Panel. No Threshold Panel member shall serve as an Expert Panel member in the same Trademark PDDRP proceeding.
- 13.3 In the case where either party requests a three-member Expert Panel, each party (or each side of the dispute if a matter has been consolidated) shall select an Expert and the two selected Experts shall select the third Expert Panel member. Such selection shall be made pursuant to the Providers rules or procedures. Trademark PDDRP panelists within a Provider shall be rotated to the extent feasible.

- 13.4 Expert Panel member must be independent of the parties to the post-delegation challenge. Each Provider will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing a panelist for lack of independence.

14. Costs

- 14.1 The Provider will estimate the costs for the proceedings that it administers under this procedure in accordance with the applicable Provider rules. Such costs will be estimated to cover the administrative fees of the Provider, the Threshold Review Panel and the Expert Panel, and are intended to be reasonable.
- 14.2 The Complainant shall be required to pay the filing fee as set forth above in the “Complaint” section, and shall be required to submit the full amount of the Provider estimated administrative fees, the Threshold Review Panel fees and the Expert Panel fees at the outset of the proceedings. Fifty percent of that full amount shall be in cash (or cash equivalent) to cover the Complainant’s share of the proceedings and the other 50% shall be in either cash (or cash equivalent), or in bond, to cover the registry operator’s share if the registry operator prevails.
- 14.3 If the Panel declares the Complainant to be the prevailing party, the registry operator is required to reimburse Complainant for all Panel and Provider fees incurred. Failure to do shall be deemed a violation of the Trademark PDDRP and a breach of the Registry Agreement, subject to remedies available under the Agreement up to and including termination.

15. Discovery

- 15.1 Whether and to what extent discovery is allowed is at the discretion of the Panel, whether made on the Panel’s own accord, or upon request from the Parties.
- 15.2 If permitted, discovery will be limited to that for which each Party has a substantial need.
- 15.3 In extraordinary circumstances, the Provider may appoint experts to be paid for by the Parties, request live or written witness testimony, or request limited exchange of documents.
- 15.4 At the close of discovery, if permitted by the Expert Panel, the Parties will make a final evidentiary submission, the timing and sequence to be determined by the Provider in consultation with the Expert Panel.

16. Hearings

- 16.1 Disputes under this Procedure will be resolved without a hearing unless either party requests a hearing or the Expert Panel determines on its own initiative that one is necessary.

- 16.2 If a hearing is held, videoconferences or teleconferences should be used if at all possible. If not possible, then the Expert Panel will select a place for hearing if the Parties cannot agree.
- 16.3 Hearings should last no more than one day, except in the most extraordinary circumstances.
- 16.4 All dispute resolution proceedings will be conducted in English.

17. Burden of Proof

The Complainant bears the burden of proving the allegations in the Complaint; the burden must be by clear and convincing evidence.

18. Remedies

- 18.1 Since registrants are not a party to the action, a recommended remedy cannot take the form of deleting, transferring or suspending registrations (except to the extent registrants have been shown to be officers, directors, agents, employees, or entities under common control with a registry operator).
- 18.2 Recommended remedies will not include monetary damages or sanctions to be paid to any party other than fees awarded pursuant to section 14.
- 18.3 The Expert Panel may recommend a variety of graduated enforcement tools against the registry operator if it the Expert Panel determines that the registry operator is liable under this Trademark PDDRP, including:
 - 18.3.1 Remedial measures for the registry to employ to ensure against allowing future infringing registrations, which may be in addition to what is required under the registry agreement, except that the remedial measures shall not:
 - (a) Require the Registry Operator to monitor registrations not related to the names at issue in the PDDRP proceeding; or
 - (b) Direct actions by the registry operator that are contrary to those required under the Registry Agreement;
 - 18.3.2 Suspension of accepting new domain name registrations in the gTLD until such time as the violation(s) identified in the Determination is(are) cured or a set period of time;

OR,

- 18.3.3 In extraordinary circumstances where the registry operator acted with malice, providing for the termination of a Registry Agreement.

- 18.4 In making its recommendation of the appropriate remedy, the Expert Panel will consider the ongoing harm to the Complainant, as well as the harm the remedies will create for other, unrelated, good faith domain name registrants operating within the gTLD.
- 18.5 The Expert Panel may also determine whether the Complaint was filed “without merit,” and, if so, award the appropriate sanctions on a graduated scale, including:
 - 18.5.1 Temporary bans from filing Complaints;
 - 18.5.2 Imposition of costs of registry operator, including reasonable attorney fees; and
 - 18.5.3 Permanent bans from filing Complaints after being banned temporarily.
- 18.6 Imposition of remedies shall be at the discretion of ICANN, but absent extraordinary circumstances, those remedies will be in line with the remedies recommended by the Expert Panel.

19. The Expert Panel Determination

- 19.1 The Provider and the Expert Panel will make reasonable efforts to ensure that the Expert Determination is issued within 45 days of the appointment of the Expert Panel and absent good cause, in no event later than 60 days after the appointment of the Expert Panel.
- 19.2 The Expert Panel will render a written Determination. The Expert Determination will state whether or not the Complaint is factually founded and provide the reasons for that Determination. The Expert Determination should be publicly available and searchable on the Provider’s web site.
- 19.3 The Expert Determination may further include a recommendation of specific remedies. Costs and fees to the Provider, to the extent not already paid, will be paid within thirty (30) days of the Expert Panel’s Determination.
- 19.4 The Expert Determination shall state which party is the prevailing party.
- 19.5 While the Expert Determination that a registry operator is liable under the standards of the Trademark PDDRP shall be taken into consideration, ICANN will have the authority to impose the remedies, if any, that ICANN deems appropriate given the circumstances of each matter.

20. Appeal of Expert Determination

- 20.1 Either party shall have a right to seek a de novo appeal of the Expert Determination of liability or recommended remedy based on the existing record within the Trademark PDDRP proceeding for a reasonable fee to cover the costs of the appeal.
- 20.2 An appeal must be filed with the Provider and served on all parties within 20 days after an Expert Determination is issued and a response to the appeal must be filed within 20

days after the appeal. Manner and calculation of service deadlines shall in consistent with those set forth in Section 4 above, "Communication and Time Limits."

- 20.3 A three-member Appeal Panel is to be selected by the Provider, but no member of the Appeal Panel shall also have been an Expert Panel member.
- 20.4 The fees for an appeal in the first instance shall be borne by the appellant.
- 20.5 A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint.
- 20.6 The Appeal Panel may request at its sole discretion, further statements or evidence from any party regardless of whether the evidence pre-dates the filing of the Complaint if the Appeal Panel determines such evidence is relevant.
- 20.7 The prevailing party shall be entitled to an award of costs of appeal.
- 20.8 The Providers rules and procedures for appeals, other than those stated above, shall apply.

21. Challenge of a Remedy

- 21.1 ICANN shall not implement a remedy for violation of the Trademark PDDRP for at least 20 days after the issuance of an Expert Determination, providing time for an appeal to be filed.
- 21.2 If an appeal is filed, ICANN shall stay its implementation of a remedy pending resolution of the appeal.
- 21.3 If ICANN decides to implement a remedy for violation of the Trademark PDDRP, ICANN will wait ten (10) business days (as observed in the location of its principal office) after notifying the registry operator of its decision. ICANN will then implement the decision unless it has received from the registry operator during that ten (10) business-day period official documentation that the registry operator has either: (a) commenced a lawsuit against the Complainant in a court of competent jurisdiction challenging the Expert Determination of liability against the registry operator, or (b) challenged the intended remedy by initiating dispute resolution under the provisions of its Registry Agreement. If ICANN receives such documentation within the ten (10) business day period, it will not seek to implement the remedy in furtherance of the Trademark PDDRP until it receives: (i) evidence of a resolution between the Complainant and the registry operator; (ii) evidence that registry operator's lawsuit against Complainant has been dismissed or withdrawn; or (iii) a copy of an order from the dispute resolution provider selected pursuant to the Registry Agreement dismissing the dispute against ICANN whether by reason of agreement of the parties or upon determination of the merits.

- 21.4 The registry operator may challenge ICANN's imposition of a remedy imposed in furtherance of an Expert Determination that the registry operator is liable under the PDDRP, to the extent a challenge is warranted, by initiating dispute resolution under the provisions of its Registry Agreement. Any arbitration shall be determined in accordance with the parties' respective rights and duties under the Registry Agreement. Neither the Expert Determination nor the decision of ICANN to implement a remedy is intended to prejudice the registry operator in any way in the determination of the arbitration dispute. Any remedy involving a termination of the Registry Agreement must be according to the terms and conditions of the termination provision of the Registry Agreement.
- 21.5 Nothing herein shall be deemed to prohibit ICANN from imposing remedies at any time and of any nature it is otherwise entitled to impose for a registry operator's non-compliance with its Registry Agreement.

22. Availability of Court or Other Administrative Proceedings

- 22.1 The Trademark PDDRP is not intended as an exclusive procedure and does not preclude individuals from seeking remedies in courts of law, including, as applicable, review of an Expert Determination as to liability.
- 22.2 In those cases where a Party submits documented proof to the Provider that a Court action involving the same Parties, facts and circumstances as the Trademark PDDRP was instituted prior to the filing date of the Complaint in the Trademark PDDRP, the Provider shall suspend or terminate the Trademark PDDRP.

REGISTRY RESTRICTIONS DISPUTE RESOLUTION PROCEDURE (RRDRP)¹
4 JUNE 2012

1. Parties to the Dispute

The parties to the dispute will be the harmed established institution and the gTLD registry operator. ICANN shall not be a party.

2. Applicable Rules

2.1 This procedure is intended to cover these dispute resolution proceedings generally. To the extent more than one RRDRP provider (“Provider”) is selected to implement the RRDRP, each Provider may have additional rules and procedures that must be followed when filing a Complaint. The following are the general procedure to be followed by all Providers.

2.2 In any new community-based gTLD registry agreement, the registry operator shall be required to agree to participate in the RRDRP and be bound by the resulting Determinations.

3. Language

3.1 The language of all submissions and proceedings under the procedure will be English.

3.2 Parties may submit supporting evidence in their original language, provided and subject to the authority of the RRDRP Expert Panel to determine otherwise, that such evidence is accompanied by an English translation of all relevant text.

4. Communications and Time Limits

4.1 All communications with the Provider must be filed electronically.

4.2 For the purpose of determining the date of commencement of a time limit, a notice or other communication will be deemed to have been received on the day that it is transmitted to the appropriate contact person designated by the parties.

4.3 For the purpose of determining compliance with a time limit, a notice or other communication will be deemed to have been sent, made or transmitted on the day that it is dispatched.

¹ Initial complaints that a Registry has failed to comply with registration restrictions shall be processed through a Registry Restriction Problem Report System (RRPRS) using an online form similar to the Whois Data Problem Report System (WDPRS) at InterNIC.net. A nominal processing fee could serve to decrease frivolous complaints. The registry operator shall receive a copy of the complaint and will be required to take reasonable steps to investigate (and remedy if warranted) the reported non-compliance. The Complainant will have the option to escalate the complaint in accordance with this RRDRP, if the alleged non-compliance continues. Failure by the Registry to address the complaint to complainant’s satisfaction does not itself give the complainant standing to file an RRDRP complaint.

- 4.4 For the purpose of calculating a period of time under this procedure, such period will begin to run on the day following the date of receipt of a notice or other communication.
- 4.5 All references to day limits shall be considered as calendar days unless otherwise specified.

5. Standing

- 5.1 The mandatory administrative proceeding will commence when a third-party complainant (“Complainant”) has filed a Complaint with a Provider asserting that the Complainant is a harmed established institution as a result of the community-based gTLD registry operator not complying with the registration restrictions set out in the Registry Agreement.
- 5.2 Established institutions associated with defined communities are eligible to file a community objection. The “defined community” must be a community related to the gTLD string in the application that is the subject of the dispute. To qualify for standing for a community claim, the Complainant must prove both: it is an established institution, and has an ongoing relationship with a defined community that consists of a restricted population that the gTLD supports.
- 5.3 Complainants must have filed a claim through the Registry Restriction Problem Report System (RRPRS) to have standing to file an RRDRP.
- 5.4 The Panel will determine standing and the Expert Determination will include a statement of the Complainant’s standing.

6. Standards

- 6.1 For a claim to be successful, the claims must prove that:
 - 6.1.1 The community invoked by the objector is a defined community;
 - 6.1.2 There is a strong association between the community invoked and the gTLD label or string;
 - 6.1.3 The TLD operator violated the terms of the community-based restrictions in its agreement;
 - 6.1.4 There is a measureable harm to the Complainant and the community named by the objector.

7. Complaint

- 7.1 Filing:

The Complaint will be filed electronically. Once the Administrative Review has been completed and the Provider deems the Complaint to be in compliance, the Provider will electronically serve the Complaint and serve a hard copy and fax notice on the registry operator consistent with the contact information listed in the Registry Agreement.

7.2 Content:

- 7.2.1 The name and contact information, including address, phone, and email address, of the Complainant, the registry operator and, to the best of Complainant's knowledge, the name and address of the current owner of the registration.
- 7.2.2 The name and contact information, including address, phone, and email address of any person authorized to act on behalf of Complainant.
- 7.2.3 A statement of the nature of the dispute, which must include:
 - 7.2.3.1 The particular registration restrictions in the Registry Agreement with which the registry operator is failing to comply; and
 - 7.2.3.2 A detailed explanation of how the registry operator's failure to comply with the identified registration restrictions has caused harm to the complainant.
- 7.2.4 A statement that the proceedings are not being brought for any improper purpose.
- 7.2.5 A statement that the Complainant has filed a claim through the RRPRS and that the RRPRS process has concluded.
- 7.2.6 A statement that Complainant has not filed a Trademark Post-Delegation Dispute Resolution Procedure (PDDRP) complaint relating to the same or similar facts or circumstances.

7.3 Complaints will be limited to 5,000 words and 20 pages, excluding attachments, unless the Provider determines that additional material is necessary.

7.4 Any supporting documents should be filed with the Complaint.

7.5 At the same time the Complaint is filed, the Complainant will pay a filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within 10 days of the receipt of the Complaint by the Provider, the Complaint will be dismissed without prejudice to the Complainant to file another complaint.

8. Administrative Review of the Complaint

8.1 All Complaints will be reviewed within five (5) business days of submission by panelists designated by the applicable Provider to determine whether the Complainant has complied with the procedural rules.

- 8.2 If the Provider finds that the Complaint complies with procedural rules, the Complaint will be deemed filed, and the proceedings will continue. If the Provider finds that the Complaint does not comply with procedural rules, it will electronically notify the Complainant of such non-compliance and provide the Complainant five (5) business days to submit an amended Complaint. If the Provider does not receive an amended Complaint within the five (5) business days provided, it will dismiss the Complaint and close the proceedings without prejudice to the Complainant's submission of a new Complaint that complies with procedural rules. Filing fees will not be refunded if the Complaint is deemed not in compliance.
- 8.3 If deemed compliant, the Provider will electronically serve the Complaint on the registry operator and serve a paper notice on the registry operator that is the subject of the Complaint consistent with the contact information listed in the Registry Agreement.

9. Response to the Complaint

- 9.1 The registry operator must file a response to each Complaint within thirty (30) days of service the Complaint.
- 9.2 The Response will comply with the rules for filing of a Complaint and will contain the names and contact information for the registry operator, as well as a point by point response to the statements made in the Complaint.
- 9.3 The Response must be electronically filed with the Provider and the Provider must serve it upon the Complainant in electronic form with a hard-copy notice that it has been served.
- 9.4 Service of the Response will be deemed effective, and the time will start to run for a Reply, upon electronic transmission of the Response.
- 9.5 If the registry operator believes the Complaint is without merit, it will affirmatively plead in its Response the specific grounds for the claim.
- 9.6 At the same time the Response is filed, the registry operator will pay a filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within ten (10) days of the receipt of the Response by the Provider, the Response will be deemed improper and not considered in the proceedings, but the matter will proceed to Determination.

10 Reply

- 10.1 The Complainant is permitted ten (10) days from Service of the Response to submit a Reply addressing the statements made in the Response showing why the Complaint is not "without merit." A Reply may not introduce new facts or evidence into the record, but shall only be used to address statements made in the Response. Any new facts or evidence introduced in a Response shall be disregarded by the Expert Panel.
- 10.2 Once the Complaint, Response and Reply (as necessary) are filed and served, a Panel will be appointed and provided with all submissions.

11. Default

- 11.1 If the registry operator fails to respond to the Complaint, it will be deemed to be in default.
- 11.2 Limited rights to set aside the finding of default will be established by the Provider, but in no event will it be permitted absent a showing of good cause to set aside the finding of Default.
- 11.3 The Provider shall provide Notice of Default via email to the Complainant and registry operator.
- 11.4 All Default cases shall proceed to Expert Determination on the merits.

12. Expert Panel

- 12.1 The Provider shall select and appoint a single-member Expert Panel within (21) days after receiving the Reply, or if no Reply is filed, within 21 days after the Reply was due to be filed.
- 12.2 The Provider will appoint a one-person Expert Panel unless any party requests a three-member Expert Panel.
- 12.3 In the case where either party requests a three-member Expert Panel, each party (or each side of the dispute if a matter has been consolidated) shall select an Expert and the two selected Experts shall select the third Expert Panel member. Such selection shall be made pursuant to the Provider's rules or procedures. RRDRP panelists within a Provider shall be rotated to the extent feasible.
- 12.4 Expert Panel members must be independent of the parties to the post-delegation challenge. Each Provider will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing an Expert for lack of independence.

13. Costs

- 13.1 The Provider will estimate the costs for the proceedings that it administers under this procedure in accordance with the applicable Provider Rules. Such costs will cover the administrative fees, including the Filing and Response Fee, of the Provider, and the Expert Panel fees, and are intended to be reasonable.
- 13.2 The Complainant shall be required to pay the Filing fee as set forth above in the "Complaint" section, and shall be required to submit the full amount of the other Provider-estimated administrative fees, including the Response Fee, and the Expert Panel fees at the outset of the proceedings. Fifty percent of that full amount shall be in cash (or cash equivalent) to cover the Complainant's share of the proceedings and the other 50% shall be in either cash (or cash equivalent), or in bond, to cover the registry operator's share if the registry operator prevails.

- 13.3 If the Panel declares the Complainant to be the prevailing party, the registry operator is required to reimburse Complainant for all Panel and Provider fees incurred, including the Filing Fee. Failure to do so shall be deemed a violation of the RRDRP and a breach of the Registry Agreement, subject to remedies available under the Agreement up to and including termination.
- 13.4 If the Panel declares the registry operator to be the prevailing party, the Provider shall reimburse the registry operator for its Response Fee.

14. Discovery/Evidence

- 14.1 In order to achieve the goal of resolving disputes rapidly and at a reasonable cost, discovery will generally not be permitted. In exceptional cases, the Expert Panel may require a party to provide additional evidence.
- 14.2 If permitted, discovery will be limited to that for which each Party has a substantial need.
- 14.3 Without a specific request from the Parties, but only in extraordinary circumstances, the Expert Panel may request that the Provider appoint experts to be paid for by the Parties, request live or written witness testimony, or request limited exchange of documents.

15. Hearings

- 15.1 Disputes under this RRDRP will usually be resolved without a hearing.
- 15.2 The Expert Panel may decide on its own initiative, or at the request of a party, to hold a hearing. However, the presumption is that the Expert Panel will render Determinations based on written submissions and without a hearing.
- 15.3 If a request for a hearing is granted, videoconferences or teleconferences should be used if at all possible. If not possible, then the Expert Panel will select a place for hearing if the parties cannot agree.
- 15.4 Hearings should last no more than one day, except in the most exceptional circumstances.
- 15.5 If the Expert Panel grants one party's request for a hearing, notwithstanding the other party's opposition, the Expert Panel is encouraged to apportion the hearing costs to the requesting party as the Expert Panel deems appropriate.
- 15.6 All dispute resolution proceedings will be conducted in English.

16. Burden of Proof

The Complainant bears the burden of proving its claim; the burden should be by a preponderance of the evidence.

17. Recommended Remedies

- 17.1 Since registrants of domain names registered in violation of the agreement restriction are not a party to the action, a recommended remedy cannot take the form of deleting, transferring or suspending registrations that were made in violation of the agreement restrictions (except to the extent registrants have been shown to be officers, directors, agents, employees, or entities under common control with a registry operator).
- 17.2 Recommended remedies will not include monetary damages or sanctions to be paid to any party other than fees awarded pursuant to section 13.
- 17.3 The Expert Panel may recommend a variety of graduated enforcement tools against the registry operator if the Expert Panel determines that the registry operator allowed registrations outside the scope of its promised limitations, including:
- 17.3.1 Remedial measures, which may be in addition to requirements under the registry agreement, for the registry to employ to ensure against allowing future registrations that do not comply with community-based limitations; except that the remedial measures shall not:
- (a) Require the registry operator to monitor registrations not related to the names at issue in the RRDRP proceeding, or
 - (b) direct actions by the registry operator that are contrary to those required under the registry agreement
- 17.3.2 Suspension of accepting new domain name registrations in the gTLD until such time as the violation(s) identified in the Determination is(are) cured or a set period of time;
- OR,
- 17.3.3 In extraordinary circumstances where the registry operator acted with malice providing for the termination of a registry agreement.
- 17.3 In making its recommendation of the appropriate remedy, the Expert Panel will consider the ongoing harm to the Complainant, as well as the harm the remedies will create for other, unrelated, good faith domain name registrants operating within the gTLD.

18. The Expert Determination

- 18.1 The Provider and the Expert Panel will make reasonable efforts to ensure that the Expert Determination is rendered within 45 days of the appointment of the Expert Panel and absent good cause, in no event later than 60 days after the appointment of the Expert Panel.
- 18.2 The Expert Panel will render a written Determination. The Expert Determination will state whether or not the Complaint is factually founded and provide the reasons for its

Determination. The Expert Determination should be publicly available and searchable on the Provider's web site.

- 18.3 The Expert Determination may further include a recommendation of specific remedies. Costs and fees to the Provider, to the extent not already paid, will be paid within thirty (30) days of the Expert Determination.
- 18.4 The Expert Determination shall state which party is the prevailing party.
- 18.5 While the Expert Determination that a community-based restricted gTLD registry operator was not meeting its obligations to police the registration and use of domains within the applicable restrictions shall be considered, ICANN shall have the authority to impose the remedies ICANN deems appropriate, given the circumstances of each matter.

19. Appeal of Expert Determination

- 19.1 Either party shall have a right to seek a de novo appeal of the Expert Determination based on the existing record within the RDRP proceeding for a reasonable fee to cover the costs of the appeal.
- 19.2 An appeal must be filed with the Provider and served on all parties within 20 days after an Expert Determination is issued and a response to the appeal must be filed within 20 days after the appeal. Manner and calculation of service deadlines shall in consistent with those set forth in Section 4 above, "Communication and Time Limits."
- 19.3 A three-member Appeal Panel is to be selected by the Provider, but no member of the Appeal Panel shall also have been an Expert Panel member.
- 19.4 The fees for an appeal in the first instance shall be borne by the appellant.
- 19.5 A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint.
- 19.6 The Appeal Panel may request at its sole discretion, further statements or evidence from any party regardless of whether the evidence pre-dates the filing of the Complaint if the Appeal Panel determines such evidence is relevant.
- 19.7 The prevailing party shall be entitled to an award of costs of appeal.
- 19.8 The Providers rules and procedures for appeals, other than those stated above, shall apply.

20. Breach

- 20.1 If the Expert determines that the registry operator is in breach, ICANN will then proceed to notify the registry operator that it is in breach. The registry operator will be given the opportunity to cure the breach as called for in the Registry Agreement.

- 20.2 If registry operator fails to cure the breach then both parties are entitled to utilize the options available to them under the registry agreement, and ICANN may consider the recommended remedies set forth in the Expert Determination when taking action.
- 20.3 Nothing herein shall be deemed to prohibit ICANN from imposing remedies at any time and of any nature it is otherwise entitled to impose for a registry operator's non-compliance with its Registry Agreement.

21. Availability of Court or Other Administrative Proceedings

- 21.1 The RRDRP is not intended as an exclusive procedure and does not preclude individuals from seeking remedies in courts of law, including, as applicable, review of an Expert Determination as to liability.
- 21.2 The parties are encouraged, but not required to participate in informal negotiations and/or mediation at any time throughout the dispute resolution process but the conduct of any such settlement negotiation is not, standing alone, a reason to suspend any deadline under the proceedings.

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 6

4 June 2012

Module 6

Top-Level Domain Application - Terms and Conditions

By submitting this application through ICANN's online interface for a generic Top Level Domain (gTLD) (this application), applicant (including all parent companies, subsidiaries, affiliates, agents, contractors, employees and any and all others acting on its behalf) agrees to the following terms and conditions (these terms and conditions) without modification. Applicant understands and agrees that these terms and conditions are binding on applicant and are a material part of this application.

1. Applicant warrants that the statements and representations contained in the application (including any documents submitted and oral statements made and confirmed in writing in connection with the application) are true and accurate and complete in all material respects, and that ICANN may rely on those statements and representations fully in evaluating this application. Applicant acknowledges that any material misstatement or misrepresentation (or omission of material information) may cause ICANN and the evaluators to reject the application without a refund of any fees paid by Applicant. Applicant agrees to notify ICANN in writing of any change in circumstances that would render any information provided in the application false or misleading.
2. Applicant warrants that it has the requisite organizational power and authority to make this application on behalf of applicant, and is able to make all agreements, representations, waivers, and understandings stated in these terms and conditions and to enter into the form of registry agreement as posted with these terms and conditions.
3. Applicant acknowledges and agrees that ICANN has the right to determine not to proceed with any and all applications for new gTLDs, and that there is no assurance that any additional gTLDs will be created. The decision to review, consider and approve an application to establish one or more

gTLDs and to delegate new gTLDs after such approval is entirely at ICANN's discretion. ICANN reserves the right to reject any application that ICANN is prohibited from considering under applicable law or policy, in which case any fees submitted in connection with such application will be returned to the applicant.

4. Applicant agrees to pay all fees that are associated with this application. These fees include the evaluation fee (which is to be paid in conjunction with the submission of this application), and any fees associated with the progress of the application to the extended evaluation stages of the review and consideration process with respect to the application, including any and all fees as may be required in conjunction with the dispute resolution process as set forth in the application. Applicant acknowledges that the initial fee due upon submission of the application is only to obtain consideration of an application. ICANN makes no assurances that an application will be approved or will result in the delegation of a gTLD proposed in an application. Applicant acknowledges that if it fails to pay fees within the designated time period at any stage of the application review and consideration process, applicant will forfeit any fees paid up to that point and the application will be cancelled. Except as expressly provided in this Application Guidebook, ICANN is not obligated to reimburse an applicant for or to return any fees paid to ICANN in connection with the application process.
5. Applicant shall indemnify, defend, and hold harmless ICANN (including its affiliates, subsidiaries, directors, officers, employees, consultants, evaluators, and agents, collectively the ICANN Affiliated Parties) from and against any and all third-party claims, damages, liabilities, costs, and expenses, including legal fees and expenses, arising out of or relating to: (a) ICANN's or an ICANN Affiliated Party's consideration of the application, and any approval rejection or withdrawal of the application; and/or (b) ICANN's or an ICANN Affiliated Party's reliance on information provided by applicant in the application.

6. Applicant hereby releases ICANN and the ICANN Affiliated Parties from any and all claims by applicant that arise out of, are based upon, or are in any way related to, any action, or failure to act, by ICANN or any ICANN Affiliated Party in connection with ICANN's or an ICANN Affiliated Party's review of this application, investigation or verification, any characterization or description of applicant or the information in this application, any withdrawal of this application or the decision by ICANN to recommend, or not to recommend, the approval of applicant's gTLD application. APPLICANT AGREES NOT TO CHALLENGE, IN COURT OR IN ANY OTHER JUDICIAL FORA, ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION, AND IRREVOCABLY WAIVES ANY RIGHT TO SUE OR PROCEED IN COURT OR ANY OTHER JUDICIAL FORA ON THE BASIS OF ANY OTHER LEGAL CLAIM AGAINST ICANN AND ICANN AFFILIATED PARTIES WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES AND ACCEPTS THAT APPLICANT'S NONENTITLEMENT TO PURSUE ANY RIGHTS, REMEDIES, OR LEGAL CLAIMS AGAINST ICANN OR THE ICANN AFFILIATED PARTIES IN COURT OR ANY OTHER JUDICIAL FORA WITH RESPECT TO THE APPLICATION SHALL MEAN THAT APPLICANT WILL FOREGO ANY RECOVERY OF ANY APPLICATION FEES, MONIES INVESTED IN BUSINESS INFRASTRUCTURE OR OTHER STARTUP COSTS AND ANY AND ALL PROFITS THAT APPLICANT MAY EXPECT TO REALIZE FROM THE OPERATION OF A REGISTRY FOR THE TLD; PROVIDED, THAT APPLICANT MAY UTILIZE ANY ACCOUNTABILITY MECHANISM SET FORTH IN ICANN'S BYLAWS FOR PURPOSES OF CHALLENGING ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES THAT ANY ICANN AFFILIATED PARTY IS AN EXPRESS THIRD PARTY BENEFICIARY OF THIS SECTION 6 AND MAY ENFORCE EACH PROVISION OF THIS SECTION 6 AGAINST APPLICANT.
7. Applicant hereby authorizes ICANN to publish on ICANN's website, and to disclose or publicize in any other manner, any materials submitted to, or obtained or generated by, ICANN and the ICANN Affiliated Parties in connection with the application, including evaluations, analyses and any other

materials prepared in connection with the evaluation of the application; provided, however, that information will not be disclosed or published to the extent that this Applicant Guidebook expressly states that such information will be kept confidential, except as required by law or judicial process. Except for information afforded confidential treatment, applicant understands and acknowledges that ICANN does not and will not keep the remaining portion of the application or materials submitted with the application confidential.

8. Applicant certifies that it has obtained permission for the posting of any personally identifying information included in this application or materials submitted with this application. Applicant acknowledges that the information that ICANN posts may remain in the public domain in perpetuity, at ICANN's discretion. Applicant acknowledges that ICANN will handle personal information collected in accordance with its gTLD Program privacy statement <http://newgtlds.icann.org/en/applicants/agb/program-privacy>, which is incorporated herein by this reference. If requested by ICANN, Applicant will be required to obtain and deliver to ICANN and ICANN's background screening vendor any consents or agreements of the entities and/or individuals named in questions 1-11 of the application form necessary to conduct these background screening activities. In addition, Applicant acknowledges that to allow ICANN to conduct thorough background screening investigations:
 - a. Applicant may be required to provide documented consent for release of records to ICANN by organizations or government agencies;
 - b. Applicant may be required to obtain specific government records directly and supply those records to ICANN for review;
 - c. Additional identifying information may be required to resolve questions of identity of individuals within the applicant organization;

- d. Applicant may be requested to supply certain information in the original language as well as in English.
9. Applicant gives ICANN permission to use applicant's name in ICANN's public announcements (including informational web pages) relating to Applicant's application and any action taken by ICANN related thereto.
10. Applicant understands and agrees that it will acquire rights in connection with a gTLD only in the event that it enters into a registry agreement with ICANN, and that applicant's rights in connection with such gTLD will be limited to those expressly stated in the registry agreement. In the event ICANN agrees to recommend the approval of the application for applicant's proposed gTLD, applicant agrees to enter into the registry agreement with ICANN in the form published in connection with the application materials. (Note: ICANN reserves the right to make reasonable updates and changes to this proposed draft agreement during the course of the application process, including as the possible result of new policies that might be adopted during the course of the application process). Applicant may not resell, assign, or transfer any of applicant's rights or obligations in connection with the application.
11. Applicant authorizes ICANN to:
 - a. Contact any person, group, or entity to request, obtain, and discuss any documentation or other information that, in ICANN's sole judgment, may be pertinent to the application;
 - b. Consult with persons of ICANN's choosing regarding the information in the application or otherwise coming into ICANN's possession, provided, however, that ICANN will use reasonable efforts to ensure that such persons maintain the confidentiality of information in the application that this Applicant Guidebook expressly states will be kept confidential.

12. For the convenience of applicants around the world, the application materials published by ICANN in the English language have been translated into certain other languages frequently used around the world. Applicant recognizes that the English language version of the application materials (of which these terms and conditions is a part) is the version that binds the parties, that such translations are non-official interpretations and may not be relied upon as accurate in all respects, and that in the event of any conflict between the translated versions of the application materials and the English language version, the English language version controls.
13. Applicant understands that ICANN has a long-standing relationship with Jones Day, an international law firm, and that ICANN intends to continue to be represented by Jones Day throughout the application process and the resulting delegation of TLDs. ICANN does not know whether any particular applicant is or is not a client of Jones Day. To the extent that Applicant is a Jones Day client, by submitting this application, Applicant agrees to execute a waiver permitting Jones Day to represent ICANN adverse to Applicant in the matter. Applicant further agrees that by submitting its Application, Applicant is agreeing to execute waivers or take similar reasonable actions to permit other law and consulting firms retained by ICANN in connection with the review and evaluation of its application to represent ICANN adverse to Applicant in the matter.
14. ICANN reserves the right to make reasonable updates and changes to this applicant guidebook and to the application process, including the process for withdrawal of applications, at any time by posting notice of such updates and changes to the ICANN website, including as the possible result of new policies that might be adopted or advice to ICANN from ICANN advisory committees during the course of the application process. Applicant acknowledges that ICANN may make such updates and changes and agrees that its application will be subject to any such updates and changes. In the event that Applicant has completed and submitted its application prior to

such updates or changes and Applicant can demonstrate to ICANN that compliance with such updates or changes would present a material hardship to Applicant, then ICANN will work with Applicant in good faith to attempt to make reasonable accommodations in order to mitigate any negative consequences for Applicant to the extent possible consistent with ICANN's mission to ensure the stable and secure operation of the Internet's unique identifier systems.

EXHIBIT C-6

MEMORANDUM OF UNDERSTANDING BETWEEN
THE U.S. DEPARTMENT OF COMMERCE
AND
INTERNET CORPORATION FOR ASSIGNED NAMES AND NUMBERS

I. PARTIES

This document constitutes an agreement between the U.S. Department of Commerce (DOC or USG) and the Internet Corporation for Assigned Names and Numbers (ICANN), a not-for-profit corporation.

II. PURPOSE

A. Background

On July 1, 1997, as part of the Administration's Framework for Global Electronic Commerce, the President directed the Secretary of Commerce to privatize the management of the domain name system (DNS) in a manner that increases competition and facilitates international participation in its management.

On June 5, 1998, the DOC published its Statement of Policy, *Management of Internet Names and Addresses*, 63 Fed. Reg. 31741(1998) (Statement of Policy). The Statement of Policy addressed the privatization of the technical management of the DNS in a manner that allows for the development of robust competition in the management of Internet names and addresses. In the Statement of Policy, the DOC stated its intent to enter an agreement with a not-for-profit entity to establish a process to transition current U.S. Government management of the DNS to such an entity based on the principles of stability, competition, bottom-up coordination, and representation.

B. Purpose

Before making a transition to private sector DNS management, the DOC requires assurances that the private sector has the capability and resources to assume the important responsibilities related to the technical management of the DNS. To secure these assurances, the Parties will collaborate on this DNS Project (DNS Project). In the DNS Project, the Parties will jointly design, develop, and test the mechanisms, methods, and procedures that should be in place and the steps necessary to transition management responsibility for DNS functions now performed by, or on behalf of, the U.S. Government to a private-sector not-for-profit entity. Once testing is successfully completed, it is contemplated that management of the DNS will be transitioned to the mechanisms, methods, and procedures designed and developed in the DNS Project.

In the DNS Project, the parties will jointly design, develop, and test the mechanisms, methods, and procedures to carry out the following DNS management functions:

- a. Establishment of policy for and direction of the allocation of IP number blocks;
- b. Oversight of the operation of the authoritative root server system;
- c. Oversight of the policy for determining the circumstances under which new top level domains would be added to the root system;
- d. Coordination of the assignment of other Internet technical parameters as needed to maintain universal connectivity on the Internet; and
- e. Other activities necessary to coordinate the specified DNS management functions, as agreed by the Parties.

The Parties will jointly design, develop, and test the mechanisms, methods, and procedures that will achieve the transition without disrupting the functional operation of the Internet. The Parties will also prepare a joint DNS Project Report that documents the conclusions of the design, development, and testing.

DOC has determined that this project can be done most effectively with the participation of ICANN. ICANN has a stated purpose to perform the described coordinating functions for Internet names and addresses and is the organization that best demonstrated that it can accommodate the broad and diverse interest groups that make up the Internet community.

C. The Principles

The Parties will abide by the following principles:

1. Stability

This Agreement promotes the stability of the Internet and allows the Parties to plan for a deliberate move from the existing structure to a private-sector structure without disruption to the functioning of the DNS. The Agreement calls for the design, development, and testing of a new management system that will not harm current functional operations.

2. Competition

This Agreement promotes the management of the DNS in a manner that will permit market mechanisms to support competition and consumer choice in the technical management of the DNS. This competition will lower costs, promote innovation, and enhance user choice and satisfaction.

3. Private, Bottom-Up Coordination

This Agreement is intended to result in the design, development, and testing of a private coordinating process that is flexible and able to move rapidly enough to meet the changing needs of the Internet and of Internet users. This Agreement is intended to foster the development of a private sector management system that, as far as possible, reflects a system of bottom-up management.

4. Representation.

This Agreement promotes the technical management of the DNS in a manner that reflects the global and functional diversity of Internet users and their needs. This Agreement is intended to promote the design, development, and testing of mechanisms to solicit public input, both domestic and international, into a private-sector decision making process. These mechanisms will promote the flexibility needed to adapt to changes in the composition of the Internet user community and their needs.

III. AUTHORITIES

A. DOC has authority to participate in the DNS Project with ICANN under the following authorities:

- (1) 15 U.S.C. § 1525, the DOC's Joint Project Authority, which provides that the DOC may enter into joint projects with nonprofit, research, or public organizations on matters of mutual interest, the cost of which is equitably apportioned;
- (2) 15 U.S.C. § 1512, the DOC's authority to foster, promote, and develop foreign and domestic commerce;
- (3) 47 U.S.C. § 902, which specifically authorizes the National Telecommunications and Information Administration (NTIA) to coordinate the telecommunications activities of the Executive Branch and assist in the formulation of policies and standards for those activities including, but not limited to, considerations of interoperability, privacy, security, spectrum use, and emergency readiness;
- (4) Presidential Memorandum on Electronic Commerce, 33 Weekly Comp. Presidential Documents 1006 (July 1, 1997), which directs the Secretary of Commerce to transition DNS management to the private sector; and
- (5) Statement of Policy, *Management of Internet Names and Addresses*, (63 Fed. Reg. 31741(1998) (Attachment A), which describes the manner in which the Department of Commerce will transition DNS management to the private sector.

B. ICANN has the authority to participate in the DNS Project, as evidenced in its Articles of Incorporation (Attachment B) and Bylaws (Attachment C). Specifically, ICANN has stated that its business purpose is to:

- (i) coordinate the assignment of Internet technical parameters as needed to maintain universal connectivity on the Internet;
- (ii) perform and oversee functions related to the coordination of the Internet Protocol (IP) address space;
- (iii) perform and oversee functions related to the coordination of the Internet domain name system, including the development of policies for determining the circumstances under which new top-level domains are added to the DNS root system;
- (iv) oversee operation of the authoritative Internet DNS root server system; and
- (v) engage in any other related lawful activity in furtherance of Items (i) through (iv).

IV. MUTUAL INTEREST OF THE PARTIES

Both DOC and ICANN have a mutual interest in a transition that ensures that future technical management of the DNS adheres to the principles of stability, competition, coordination, and representation as published in the Statement of Policy. ICANN has declared its commitment to these principles in its Bylaws. This Agreement is essential for the DOC to ensure continuity and stability in the performance of technical management of the DNS now performed by, or on behalf of, the U.S. Government. Together, the Parties will collaborate on the DNS Project to achieve the transition without disruption.

V. RESPONSIBILITIES OF THE PARTIES

A. General.

1. The Parties agree to jointly participate in the DNS Project for the design, development, and testing of the mechanisms, methods and procedures that should be in place for the private sector to manage the functions delineated in the Statement of Policy in a transparent, non-arbitrary, and reasonable manner.
2. The Parties agree that the mechanisms, methods, and procedures developed under the DNS Project will ensure that private-sector technical management of the DNS shall not apply standards, policies, procedures or practices inequitably or single out any particular party for disparate treatment unless justified by substantial and reasonable cause and will ensure sufficient appeal procedures for adversely affected members of the Internet community.
3. Before the termination of this Agreement, the Parties will collaborate on a DNS Project Report that will document ICANN's test of the policies and procedures designed and developed pursuant to this Agreement.
4. The Parties agree to execute the following responsibilities in accordance with the Principles and Purpose of this Agreement as set forth in section II.

B. DOC. The DOC agrees to perform the following activities and provide the following resources in support of the DNS Project:

1. Provide expertise and advice on existing DNS management functions.
2. Provide expertise and advice on methods and administrative procedures for conducting open, public proceedings concerning policies and procedures that address the technical management of the DNS.
3. Identify with ICANN the necessary software, databases, know-how, other equipment, and intellectual property necessary to design, develop, and test methods and procedures of the DNS Project.
4. Participate, as necessary, in the design, development, and testing of the methods and procedures of the DNS Project to ensure continuity including coordination between ICANN and Network Solutions, Inc.
5. Collaborate on a study on the design, development, and testing of a process for making the management of the root server system more robust and secure. This aspect of the DNS Project will address:
 - a. Operational requirements of root name servers, including host hardware capacities, operating system and name server software versions, network connectivity, and physical environment.
 - b. Examination of the security aspects of the root name server system and review of the number, location, and distribution of root name servers considering the total system performance, robustness, and reliability.
 - c. Development of operational procedures for the root server system, including formalization of contractual relationships under which root servers throughout the world are operated.
6. Consult with the international community on aspects of the DNS Project.
7. Provide general oversight of activities conducted pursuant to this Agreement.
8. Maintain oversight of the technical management of DNS functions currently performed either directly, or subject to agreements with the U.S. Government, until such time as further agreement(s) are arranged as necessary, for the private sector to undertake management of specific DNS technical management functions.

C. ICANN. ICANN agrees to perform the following activities and provide the following resources in support of the DNS Project and further agrees to undertake the following activities pursuant to its procedures as set forth in Attachment B (Articles of Incorporation) and Attachment C (By-Laws), as they may be revised from time to time in conformity with the DNS Project:

1. Provide expertise and advice on private sector functions related to technical management of the DNS such as the policy and direction of the allocation of IP number blocks and coordination of the assignment of other Internet technical parameters as needed to maintain universal connectivity on the Internet.
2. Collaborate on the design, development and testing of procedures by which members of the Internet community adversely affected by decisions that are in conflict with the bylaws of the organization can seek external review of such decisions by a neutral third party.
3. Collaborate on the design, development, and testing of a plan for introduction of competition in domain name registration services, including:
 - a. Development of procedures to designate third parties to participate in tests conducted pursuant to this Agreement.

- b. Development of an accreditation procedure for registrars and procedures that subject registrars to consistent requirements designed to promote a stable and robustly competitive DNS, as set forth in the Statement of Policy.
 - c. Identification of the software, databases, know-how, intellectual property, and other equipment necessary to implement the plan for competition;
4. Collaborate on written technical procedures for operation of the primary root server including procedures that permit modifications, additions or deletions to the root zone file.
5. Collaborate on a study and process for making the management of the root server system more robust and secure. This aspect of the Project will address:
 - a. Operational requirements of root name servers, including host hardware capacities, operating system and name server software versions, network connectivity, and physical environment.
 - b. Examination of the security aspects of the root name server system and review of the number, location, and distribution of root name servers considering the total system performance; robustness, and reliability.
 - c. Development of operational procedures for the root system, including formalization of contractual relationships under which root servers throughout the world are operated.
6. Collaborate on the design, development and testing of a process for affected parties to participate in the formulation of policies and procedures that address the technical management of the Internet. This process will include methods for soliciting, evaluating and responding to comments in the adoption of policies and procedures.
7. Collaborate on the development of additional policies and procedures designed to provide information to the public.
8. Collaborate on the design, development, and testing of appropriate membership mechanisms that foster accountability to and representation of the global and functional diversity of the Internet and its users, within the structure of private- sector DNS management organization.
9. Collaborate on the design, development and testing of a plan for creating a process that will consider the possible expansion of the number of gTLDs. The designed process should consider and take into account the following:
 - a. The potential impact of new gTLDs on the Internet root server system and Internet stability.
 - b. The creation and implementation of minimum criteria for new and existing gTLD registries.
 - c. Potential consumer benefits/costs associated with establishing a competitive environment for gTLD registries.
 - d. Recommendations regarding trademark/domain name policies set forth in the Statement of Policy; recommendations made by the World Intellectual Property Organization (WIPO) concerning: (i) the development of a uniform approach to resolving trademark/domain name disputes involving cyberpiracy; (ii) a process for protecting famous trademarks in the generic top level domains; (iii) the effects of adding new gTLDs and related dispute resolution procedures on trademark and intellectual property holders; and recommendations made by other independent organizations concerning trademark/domain name issues.
10. Collaborate on other activities as appropriate to fulfill the purpose of this Agreement, as agreed by the Parties.

D. Prohibitions.

1. ICANN shall not act as a domain name Registry or Registrar or IP Address Registry in competition with entities affected by the plan developed under this Agreement. Nothing, however, in this Agreement is intended to prevent ICANN or the USG from taking reasonable steps that are necessary to protect the operational stability of the Internet in the event of the financial failure of a Registry or Registrar or other emergency.
2. Neither Party, either in the DNS Project or in any act related to the DNS Project, shall act unjustifiably or arbitrarily to injure particular persons or entities or particular categories of persons or entities.
3. Both Parties shall act in a non-arbitrary and reasonable manner with respect to design, development, and testing of the DNS Project and any other activity related to the DNS Project.

VI. EQUITABLE APPORTIONMENT OF COSTS

The costs of this activity are equitably apportioned, and each party shall bear the costs of its own activities under this Agreement. This Agreement contemplates no transfer of funds between the Parties. Each Party's estimated costs for the first six months of this Agreement are attached hereto. The Parties shall review these estimated costs in light of actual expenditures at the completion of the first six month period and will ensure costs will be equitably apportioned.

VII. PERIOD OF AGREEMENT AND MODIFICATION/TERMINATION

This Agreement will become effective when signed by all parties. The Agreement will terminate on September 30, 2000, but may be amended at any time by mutual agreement of the parties. Either party may terminate this Agreement by providing one hundred twenty (120) days written notice to the other party. In the event this Agreement is terminated, each party shall be solely responsible for the payment of any expenses it has incurred. This Agreement is subject to the availability of funds.

Associate Administrator, NTIA
U.S. Department of Commerce
Washington, D.C. 20230

PARTIES ESTIMATED SIX MONTH COSTS

A. ICANN

Costs to be borne by ICANN over the first six months of this Agreement include: development of Accreditation Guidelines for Registries; review of Technical Specifications for Shared Registries; formation and operation of Government, Root Server, Membership and Independent Review Advisor Committees; advice on formation of and review of applications for recognition by Supporting Organizations; promulgation of conflicts of interest policies; review and adoption of At-Large membership and elections processes and independent review procedures, etc; quarterly regular Board meetings and associated costs (including open forums, travel, staff support and communications infrastructure); travel, administrative support and infrastructure for additional open forums to be determined; internal executive, technical and administrative costs; legal and other professional services; and related other costs. The estimated six month budget (subject to change and refinement over time) is \$750,000 - 1 million.

B. DOC

Costs to be borne by DOC over the first six months of this Agreement include: maintenance of DNS technical management functions currently performed by, or subject to agreements with, the U.S. Government, expertise and advice on existing DNS management functions; expertise and advice on administrative procedures; examination and review of the security aspects of the Root Server System (including travel and technical expertise); consultations with the international community on aspects of the DNS Project (including travel and communications costs); general oversight of activities conducted pursuant to the Agreement; staff support equal to half-time dedication of 4-5 full time employees, travel, administrative support, communications and related other costs. The estimate six month budget (subject to change and refinement over time) is \$250,000 - \$350,000.

EXHIBIT C-7

New gTLD Program Explanatory Memorandum Resolving String Contention A Complete Lifecycle Including String Contention Resolution

Date of Publication:

18 February 2009

Background - New gTLD Program

Since ICANN was founded ten years ago as a not-for-profit, multi-stakeholder organization dedicated to coordinating the Internet's addressing system, one of its foundational principles, recognized by the United States and other governments, has been to promote competition in the domain-name marketplace while ensuring Internet security and stability. The expansion will allow for more innovation, choice and change to the Internet's addressing system, now constrained by only 21 generic top-level domain names. In a world with 1.5 billion Internet users—and growing—diversity, choice and competition are key to the continued success and reach of the global network.

The decision to launch these coming new gTLD application rounds followed a detailed and lengthy consultation process with all constituencies of the global Internet community. Representatives from a wide variety of stakeholders—governments, individuals, civil society, business and intellectual property constituencies, and the technology community—were engaged in discussions for more than 18 months. In October 2007, the Generic Names Supporting Organization (GNSO)—one of the groups that coordinate global Internet policy at ICANN—completed its policy development work on new gTLDs and approved a set of recommendations. Contributing to this policy work were ICANN's Governmental Advisory Committee (GAC), At-Large Advisory Committee (ALAC), Country Code Names Supporting Organization (ccNSO) and Security and Stability Advisory Committee (SSAC). The culmination of this policy development process was a decision by the ICANN Board of Directors to adopt the community-developed policy in June 2008 at the ICANN meeting in Paris. A thorough brief to the policy process and outcomes can be found at <http://gns0.icann.org/issues/new-gtlds/>.

This paper is part of a series of papers that will serve as explanatory memoranda published by ICANN to assist the Internet community to better understand the Request for Proposal (RFP), also known as *applicant guidebook*. A public comment period for the RFP will allow for detailed review and input to be made by the Internet community. Those comments will then be used to revise the documents in preparation of a final RFP. ICANN will release the final RFP in the first half of 2009. For current information, timelines and activities related to the New gTLD Program, please go to <http://www.icann.org/en/topics/new-gtld-program.htm>.

Please note that this is a discussion draft only. Potential applicants should not rely on any of the proposed details of the new gTLD program as the program remains subject to further consultation and revision.

Summary of Key Points in this Paper

- This paper provides a summary of the string contention process.
- A detailed explanation is provided of how confusingly similar applied-for gTLDs are identified and how they are grouped together into contention sets.
- A detailed explanation is provided of how string contention is resolved when there is one or more community based applicants in a contention set.
- As a last resort, contention that is not resolved through negotiation among parties or by comparative evaluation must be resolved by other means.

Chapter 1: Introduction

For the introduction of new gTLDs, the Generic Names Supporting Organization (GNSO) has recommended that:

Strings must not be confusingly similar to an existing top-level domain or a Reserved Name. (Recommendation 2, http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm#_ftn26)

The string contention lifecycle was developed to address this concern. There are two main components of string contention. The first involves identifying gTLD strings that are likely to deceive or cause user confusion in relation to existing TLDs or Reserved Names. In addition, proposed gTLDs in a given round must not be likely to deceive or cause user confusion in relation to each other. The identification of applied-for gTLDs that are confusingly similar gives way to the second component of string contention, which is the resolution of the string contention.

This paper will provide detailed descriptions of the distinct aspects of the string contention lifecycle. This paper is divided into five sections:

1. **String Contention Overview** – Provides a summary of the string contention process.
2. **Process Flow** – Provides a graphical representation of the string contention process.
3. **Contention Set Handling** – Provides a detailed explanation of how confusingly similar applied-for gTLDs are identified and how they are grouped together into contention sets.
4. **Comparative Evaluation** – Provides a detailed explanation of how string contention is resolved when there is one or more community based applicants in a contention set.
5. **Auction** – As a last resort, contention that is not resolved through negotiation

among parties or by comparative evaluation must be resolved by other means. The GNSO policy recommendations call for an “efficient” means of resolution. While it is not yet settled, one of those means might be an auction. ICANN commissioned an experienced provider to develop an auction methodology that is described below.

Chapter 2: String Contention Overview

Introduction

This chapter summarizes how string contention between applications in the upcoming New gTLD round will be identified, handled and resolved using foreseen contention resolution methods. More in-depth information is available in three separate papers introduced in the text.

1. String confusion and string contention

In the application process step for the round, each applicant will enter its proposed gTLD string. It is possible that strings proposed by different applicants will be identical or confusingly similar. In such situations, choices must be made between applications in order to prevent that gTLDs causing user confusion are allowed to coexist in the Domain Name System.

Applications with identical strings will be directly identified by an algorithm in the software system supporting the application process. The algorithm will score similarities between strings for each pair of applications, as a partial guidance for determination of the likelihood of string confusion.

String confusion is deemed to occur if a string so nearly resembles another visually that it is likely to deceive or cause confusion. For a likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable consumer. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

Two applications are in direct string contention if their proposed strings are identical or so similar that string confusion would occur if both were to be delegated as TLDs. More than two applications might be involved in a direct contention situation: if four applications feature identical strings, they will all be in direct contention with one another.

Two applications are in indirect string contention if they are both in direct string contention with a third application, but not with one another.

2. Determination of string contention and establishment of contention sets

In the Initial Evaluation process step, a Panel will examine all applied-for strings for string similarity. This Panel determines whether the strings proposed in two applications are so similar that they are in direct string contention. Such a determination, based on human judgment assisted by criteria and algorithm outcomes, is performed for each pair of applications. When all applications have been checked in this way, the outcome is a matrix of direct string contentions between pairs of applications. Applications without any string contention can proceed without further action, but contention must be resolved for all others.

Contention sets are established among applications that are directly or indirectly linked by string contention. A contention set consists of at least two applications, but may involve more applications and have complex link structures. A number of such contention sets may be found in an application round. The final contention sets can only be established once the Extended Evaluation and Objection process steps have been concluded for the applications involved, since some applications may be excluded in

those steps, thereby modifying an earlier identified contention set. A contention set could, for example, be split it into two sets or be eliminated altogether as a consequence.

In the Objections process step, any applicant may also file a string confusion objection to assert string confusion between its string and the string of another application. If the objection is upheld by the panel adjudicating the objection, the applications are deemed to be in direct string contention and the relevant contention sets are modified accordingly.

In Chapter 4, *Contention Set Handling*, the establishment and further handling of contention sets is explained in more detail.

3. Contention resolution methods

Once the final contention sets are established they must be resolved. The first option to do that is through **voluntary agreements** between the applicants concerned. Applicants in contention are encouraged to reach a settlement or agreement that results in resolution of the contention. This may occur at any stage of the process, once ICANN has posted the applications received. Applicants may not resolve string contention by selecting a new string, or replacing the formal applicant by a joint venture. It is understood that joint ventures may result from self-resolution of string contention by applicants. Material changes in applications (that result from say, combinations to resolve contention) will require re-evaluation. This might require additional fees or evaluation in a subsequent round.

If not achieved by voluntary means, string contention will be resolved through comparative evaluation or auction, depending on the case at hand. Each contention set will be addressed in its entirety in order to achieve a clear resolution of the string contention.

3.1 Comparative evaluation

Comparative evaluation will only be used if at least one of the applications involved is *community-based and has expressed preference for comparative evaluation*. Moreover, only an application fulfilling those criteria is eligible to be determined a clear winner of a comparative evaluation. The comparative evaluation is an independent analysis and the scores received in the technical and business operational reviews are not brought into this evaluation.

Applicants designating their applications as community-based will be asked to respond to a set of questions during the application phase to provide relevant information for a comparative evaluation case. Before the comparative evaluation begins, all applicants in the contention set may be asked to provide additional information of relevance. A community-based applicant who elects comparative evaluation may be asked to furnish additional information at this stage to substantiate its status.

A panel will review and score the community-based applications that have elected comparative evaluation against the following criteria:

- Nexus between Proposed String and Community
- Dedicated Registration Policies

- Community Establishment
- Community Endorsement

If one application is found to be a clear winner, which means that it is the only one to pass the scoring threshold for winning, the application proceeds to the next step and its direct contenders are eliminated. For complex contention sets, there may even be more than one clear winner which can proceed to the next step, provided that they are not in direct string contention. There may also be “lucky losers” among the remaining contenders, for which the outcome has happened to resolve their string contentions. Potential remaining contenders with unresolved string contentions between them will be brought into a residual contention set to be resolved by auction.

If none of the applications is found to be a clear winner, the full contention set will be resolved through auction.

In case a comparative evaluation results in more than one winner in direct contention, an auction between the winners will be undertaken to resolve which one will be granted a gTLD.

In Chapter 5, *Comparative Evaluation*, the procedure for comparative evaluation and its potential outcomes are explained in further detail.

3.2 Auction

ICANN examined a number of potential mechanisms for resolving string contention in the event that the contention cannot be resolved by the means made available that are described elsewhere in this paper: comparative evaluation and agreement among the contending parties. Several mechanisms were considered for this “last resort” contention resolution tool including: selection by chance, comparative evaluation, selection by best terms and auctions. As described later in this document and more fully in other explanatory memoranda, auctions appear to be the best means of resolving contention among competing applications as a mechanism of last resort. Resolution of string contention through auction will occur for certain cases of contention sets not resolved or eligible for comparative evaluation. Auctions will only be used only in cases where:

- There is string contention and those who are in contention successfully complete all evaluations,
- Contending applicants elect not to use comparative evaluation, did not have comparative evaluation available, or in certain cases where comparative evaluation occurred and did not provide a clear winner, and
- Contending applicants have not resolved the contention among themselves.

The purpose of an auction is to resolve contention in a clear, objective manner. Proceeds from auctions will be reserved and earmarked until the uses of the proceeds are determined. It is planned that costs of the new gTLD program will offset by fees, so any funds coming from a last resort contention resolution mechanism such as auctions would result (after paying for the auction process) in additional revenue stream. Therefore, consideration of a last resort contention mechanism should include the uses of funds. Funds must be earmarked separately and used in a manner that supports directly ICANN’s Mission and Core Values and also maintains its not for profit status.

Possible uses include: reduction in application fees or grants to support new gTLD applications or registry operators from communities in subsequent gTLD rounds, the creation of an ICANN-administered/community-based fund for specific projects for the benefit of the Internet community, creating a registry continuity fund for the protection of registrants (ensuring that funds would be in place to support the operation of a gTLD registry until a successor could be found), or a security fund to expand use of secure protocols, conduct research and support standards development organizations in accordance with ICANN's security and stability mission.

Further detail on the potential uses of funds will be provided with the proposed budget for the new gTLD process and updated Applicant Guidebook materials.

The foreseen procedure is an ascending-clock auction with successive rounds for increasing price brackets. This implies that applications will exit successively as the bidding level in a round exceeds their respective exit bids.

All auctions will be conducted over the Internet, with bidders placing their bids remotely using a web-based software system. The auction will be carried out in a series of auction rounds with defined starting and ending prices for each round. Exit is irrevocable, meaning that an application that has exited in a previous auction round is not permitted to re-enter a subsequent round. At the end of each round, the contention situations are reviewed and the auction stops when there is no further contention to resolve. This may imply that more than one application may remain as winners. The winners pay the closing bid and proceed to the next step. Special rules apply, should a winning application default in its obligation to pay the closing bid.

As in comparative evaluations, potential "lucky loser" situations may occur in auctions. In such cases, any residual contention situations are possible to resolve based on the exit bids for the applications concerned.

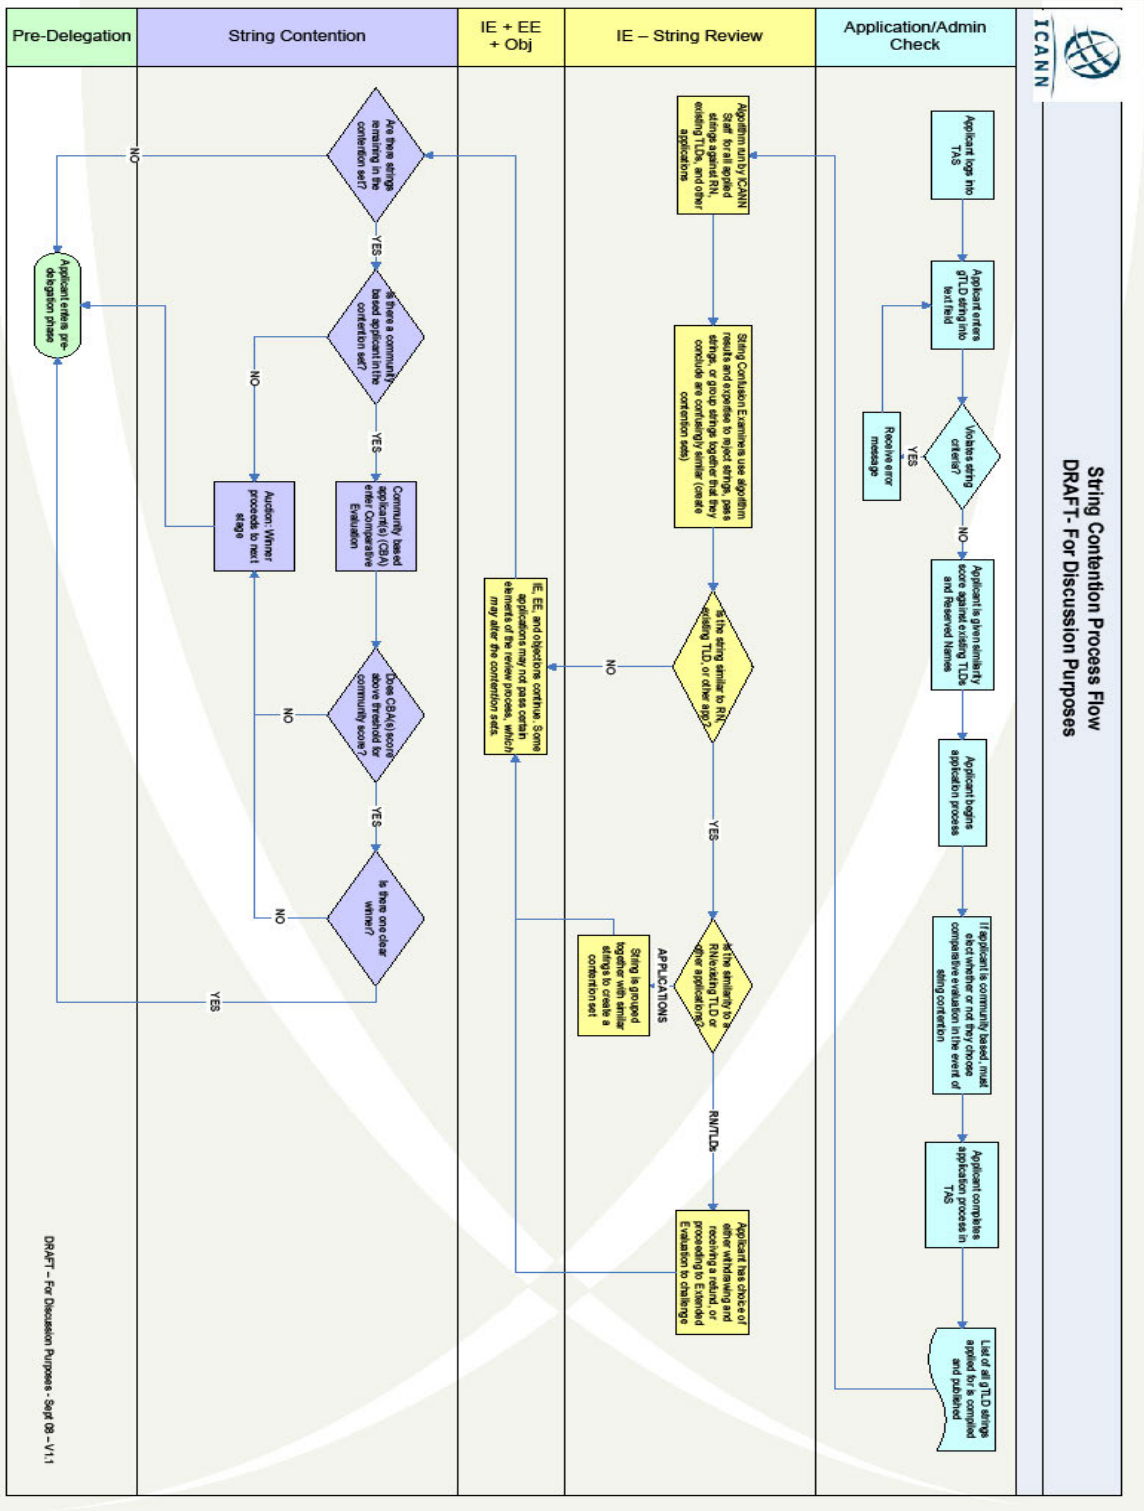

The paper *Auction Design for Resolving Contention for New gTLDs* describes the auction model and its potential outcomes in further detail.

4. Resolution outcomes

Regarding the outcomes for both contention resolution methods, a basic principle is that any application with no string contention situation left to resolve is allowed to proceed, even if it is not an outright winner.

If the strings within a contention set are all identical, the applications are in direct contention with each other and there can only be one winner that proceeds to the next step. However, in a contention set there may be both direct and indirect contention situations and the indirect contention situations may be linked in complex ways. For such contention sets, there may be more than one application that passes contention resolution, as outright winners and/or as "lucky losers". A simple such example is that string A is in contention with B, which in turn is in contention with C, although C is not in contention with A. If A wins the contention, B is eliminated but C survives since C is not in direct contention with the winner and both strings can coexist as gTLDs. The overall outcome of contention resolution will thus depend on the actual topology of the contention set at hand as well as on which application(s) win(s) the contention.

Chapter 3: Process Flow

Draft—for discussion only—please refer to disclaimer on the title page of this document.

Chapter 4: Contention Set Handling

Summary

Contention sets are groups of applications that feature identical or confusingly similar strings. A String Similarity Panel determines whether the strings proposed in two applications are so similar that they would result in detrimental user confusion if allowed to coexist in the Domain Name System. Such a determination, based on human judgment assisted by criteria and algorithm outcomes, is performed for each pair of applications. When all applications have been checked in this way, the outcome is a number of direct contention relationships between pairs of applications. Applications without any such contention relationships do not need further steps from this perspective, but cases of contention must be resolved for all others. The next step is that contention sets are established among applications that are directly or indirectly linked by contention relationships. A contention set consists of at least two applications, but may involve more applications and have complex link structures. The number of contention sets found in an application round will thus depend on the contention relationships and how the applications are linked by them.

The final contention sets can only be established once the extended evaluation and objection process steps have been concluded for the applications involved, since some applications may be excluded in those steps. The remaining contention sets must then be resolved; through comparative evaluation and/or auction. In this processing, each contention set is addressed in its entirety in order to achieve a non-ambiguous resolution of the contentions.

This paper describes the establishment and handling of contention sets in hypothetical situations, provides two examples of contention sets as well as how these contention sets would be resolved. The paper elaborates on resolution through comparative evaluation as well as auction for both examples given. A main conclusion drawn is that the overall outcome of the contention resolution will depend on the actual topology of the contention set at hand as well as on which application wins the contention. Resolution of a contention set may result in multiple “winners” and also “lucky losers” that all may proceed to delegation.

1. Establishment of contention sets

Contention sets are sets of applications featuring identical or confusingly similar strings, as established by the String Similarity Panel, based on algorithm outcomes, criteria and human judgment. Let’s assume that there are 10 applications in total, “a” - “k” and that the algorithm has scored the pair-wise similarity between their proposed TLD strings as shown in Table 1 below (assuming an algorithm threshold at 60%, meaning that scores below 60% come out as zeroes). Scores in the example are illustrative only and not indicative of any string confusion threshold to be applied by ICANN.

Table 1. Hypothetical similarity scores

Application	a	B	c	d	e	f	g	i	j	k
A		73%	0	93%	0	98%	0	70%	0	0
B	73%		88%	0	85%	0	93%	0	0	0
C	0	88%		99%	75%	72%	0	0	0	0
d	93%	0	99%		93%	0	88%	0	0	0
e	0	85%	75%	93%		85%	0	62%	0	0
f	98%	0	72%	0	85%		80%	0	0	0
g	0	93%	0	88%	0	80%		0	0	0
i	70%	0	0	0	62%	0	0		87%	0
j	0	0	0	0	0	0	0	87%		80%
k	0	0	0	0	0	0	0	0	80%	

Note that the similarity scores are commutative, thus if “a” is 97% similar to “b”, then “b” is 97% similar to “a” and the table shows mirror symmetry around the diagonal.

Guided by the scores above, the String Similarity Panel inspects all string pairs with scores above a certain percentage threshold (TBD), applies criteria and decides whether each string pair is confusingly similar. The outcome is shown in Table 2 below, where “1” in a cell of the table indicates that the corresponding strings are in contention (identical or confusingly similar) while a “0” indicates no contention situation for that particular string pair. In reality, the contention cases are expected to be fewer and simpler than illustrated here - this hypothetical case is exaggerated on purpose to illustrate complexities.

String confusion exists where a string so nearly resembles another visually that it is likely to deceive or cause confusion. For a likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable consumer. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

Note 1

Table 2. String contentions

Application	a	b	c	d	e	F	g	i	j	k
a		1	0	1	0	1	0	0	0	0
b	1		1	0	1	0	1	0	0	0
c	0	1		1	0	1	0	0	0	0
d	1	0	1		1	0	1	0	0	0
e	0	1	0	1		1	0	0	0	0
f	1	0	1	0	1		1	0	0	0
g	0	1	0	1	0	1		0	0	0
i	0	0	0	0	0	0	0		1	0
j	0	0	0	0	0	0	0	1		1
k	0	0	0	0	0	0	0	0	1	

In this case, for example, the applications c and d are in string contention (denoted by a "1"), while those of c and e are not ("0"). The output from the String Similarity Panel is presented in such a format, covering all pairs of proposed strings, to facilitate the establishment of contention sets. Note that the Panel has found "a" to be in contention with "b", in spite of a lower score (73 %) than for "c" versus "e" (75 %), although the latter are deemed to be not in contention. Again, this is for illustration purposes only and not to be taken as indicative of any importance of these imaginary percentage values.

None of the applications has only zeroes in its row (and its column). Such a situation would indicate that there is no contention situation to resolve and that the application could proceed directly to the next step. In the present hypothetical case, all applications have at least one "1" in their rows and must be brought into contention sets. A contention set consists of all applications that are linked by string contention to one another, directly or indirectly.

Contention sets can be established manually with relative ease in a table like the one above, by applying "highlighter pen recursion" (in practice, the contention sets will be established using a software program). In this case there are two contention sets; a simple set with the three applications i, j and k, and a more complex set consisting of a, b, c, d, e, f and g. The set i-k is easy to identify in the table; i and k are both in contention with j, but not with each other. The complex contention set a-g needs a closer look, though. To identify that one, proceed like this:

1. Mark the first column where a "1" appears, in yellow below
2. For each "1" in that column, mark the corresponding row in blue-green
3. For each "1" in each of these rows, mark the corresponding column, unless marked already, in red
4. For each "1" in each of these columns, mark the corresponding row unless marked already (etc, alternating between rows and columns in this way until no further steps required). In this case, they are all marked already, meaning that the contention set is exhausted and consists of the applications that have either a column or a row marked. (Note that the "1"s in the columns b, d, f and rows a, c, e, g just replicate what has already been found!)

Table 3. Finding contention set a-g

Application	a	b	c	d	e	f	g	i	j	k
a		1	0	1	0	1	0	0	0	0
b	1		1	0	1	0	1	0	0	0
c	0	1		1	0	1	0	0	0	0
d	1	0	1		1	0	1	0	0	0
e	0	1	0	1		1	0	0	0	0
f	1	0	1	0	1		1	0	0	0
g	0	1	0	1	0	1		0	0	0
i	0	0	0	0	0	0	0		1	0
j	0	0	0	0	0	0	0	1		1
k	0	0	0	0	0	0	0	0	1	

This set can be brought into a table of its own to get a more focused view, see below:

Table 4. Contention set a-g

Application	a	b	c	D	e	f	g
a		1	0	1	0	1	0
b	1		1	0	1	0	1
c	0	1		1	0	1	0
d	1	0	1		1	0	1
e	0	1	0	1		1	0
f	1	0	1	0	1		1
g	0	1	0	1	0	1	

In order to get a visual image of the contention situations, the sets can be illustrated graphically as follows, with the applications as nodes and connector lines showing the contention situations:

The "simple" contention set i - k

The "complex" contention set a - g

The latter is a "meshed" contention set where each application happens to be in contention with three or four others, although none is in contention with every other application.

2. Handling the “simple” contention set i-k

2.1 Comparative evaluation

Comparative evaluation only occurs if at least one of the contending applications is community-based and has expressed preference for comparative evaluation. Moreover, only an application fulfilling those criteria is eligible to be elected a clear winner of a comparative evaluation. In a case when the applications in the contention set all fulfill these criteria, there are three principally different outcomes:

- Where application j is a clear winner (in green), both i and k are eliminated (red), as illustrated below:

- Where application i is a clear winner, j is eliminated, so k would also survive (grey) since there is no contention situation left following the elimination of j :

A variant of this type of outcome would occur if k is a clear winner, j is eliminated and i survives.

- Where none of the community-based applications in the contention set is found to be a clear winner, the full contention set continues to an auction process to resolve the contention.

2.2 Auction

For resolution of the contention set through auction, it should first be noted that the anticipated procedure is an ascending-clock auction, which implies that applications exit successively as the bidding level in a round exceeds their respective exit bids. In contention resolution through auction, the first two outcomes mentioned above are the only possibilities; either j wins, eliminating both the others, or one of the other applications (i or k) wins, eliminating j and saving the other (k or i, respectively) since there is no contention situation left when j is out. More in detail, the auction process with ascending-clock rounds will have the effect of first eliminating one contender when the auction reaches the first exit bid. If that resolves all contention situation (as is the case if the bid level exceeds the exit bid of j), the auction stops, both remaining contenders i and k pay the same “closing bid” (bid level at the time contention is eliminated) and proceed to the next step. Conversely, if contention remains (as is the case if i exits first) the auction continues until the bid level exceeds the exit bid of one of the remaining contenders. If that one is k, j remains as the sole winner, pays the closing bid and proceeds to the next

step. If j is the one exiting first of the two, k is the winner, pays the closing bid and proceeds to the next step. Moreover, i survives due to lack of contention with k, pays his exit bid and proceeds to the next step.

Thus, regardless of whether comparative evaluation or auction is applied to resolve the contention, the overall outcome will depend not only on which application wins but also on the topology of the contention set to be resolved, provided any application with no contention situation left to resolve is allowed to survive, even if it is not the outright winner.

3. Handling of the “complex” contention set a - g

For the “complex” contention set, let’s first consider some potential cases for comparative evaluation.

3.1 One community application

Let’s assume that “b” is a community-based application and that the applicant has opted for comparative evaluation. All the others are “open” applications (or community-based applications not opting for comparative evaluation). The comparative evaluation should focus on b (blue) and those in contention with b, notably a, c, e and g (orange).

Different outcomes of the comparative evaluation will play out as follows:

- If b wins (green) the comparative evaluation, a, c, e and g are rejected (red), as illustrated below:

With b accepted and a, c, e and g disappearing, all the previous contention relationships have been resolved. It follows that d and f would survive and proceed to the next step, without any further steps in this regard.

- The alternative is that "b" is not a clear winner. The consequence of that situation is that the contention set in its entirety will be resolved through an auction.

3.2 Two community applications

Assume that the contention set contains two community applications and both have requested comparative evaluation. There are two cases to analyze depending on whether these applications are in direct contention or not.

3.2.1 Direct contention

Assuming that "a" and "b" are the community applications (blue), all the others will be in contention (orange) with either or both, as follows:

It is then reasonable to handle the situation by including all in the comparative evaluation at the same time. Regardless of whether "a" or "b" is found to be a clear winner, all the others would seem to lose at first sight. However, among those there will be some that are not in contention with the winner and could coexist with it. Say that "a" wins, then "b", "f" and "d" would be eliminated (red), while "g", "e" and "c" would survive (grey) since they have no remaining contention situations.

It is also possible that both a and b score above the threshold value for winning the comparative evaluation. In such a case, the contention will be resolved thru an auction between a and b, with subsequent review of the full contention set resulting in a final outcome like the one illustrated above.

If neither a nor b score above the required threshold for winning, the full contention set will proceed to auction for resolution.

3.2.2 No direct contention

With b and d as the community applications, there is no contention between the two, but all the others except "f" have contention with either or both, as illustrated below:

Since b and d could coexist if they both would survive resolution of the contentions, there is a rationale for regarding this situation as two direct contention sets to resolve with two comparative evaluations, one for "d" and those in direct contention with "d", and one for "b" and its direct contenders. Say that the "d" set is evaluated first and that d wins, then a, c, e and g are rejected, all contentions are resolved and "b" survives as well as "f" with no need for further steps, as follows:

If "d" doesn't win, the set is left unchanged and comparative evaluation for "b" is undertaken. If "b" wins that one, "a", "c", "e" and "g" are eliminated while both "d" and "f" survive, without remaining contention, as follows:

If “b” is not deemed a clear winner either, the whole contention set will be resolved through an auction process.

Note that whether the “b” contention or “d” contention is addressed first will not affect the outcome.

3.3 Auction

In an auction for the “complex” contention set, the whole set is participating and one or more winners emerge. As mentioned earlier, an ascending-clock auction implies that applications exit successively as the bidding level in a round exceeds their respective exit bids. For each bidding round when one or more applications have exited, the remaining contention situations are reviewed and the auction process stops as soon as all contention situations have been resolved. Suppose that the auction has reached a point where a, c, e and g have exited (red) and the situation is as follows:

There are no more contention situations left for b, d and f. They all pay the same closing bid (equal to the bidding level at the time when the contentions are finally resolved) and proceed to the next step.

With a complex contention set, the effect of applications exiting in a successive manner may also result in survival of some applications that have exited early, depending on which application(s) win(s) and the topology of the contention set. Assume that f exits first, and then a, c, e and g. By then, all contentions are resolved; b and d are winners,

pay the closing bid and proceed to the next step. However, the final outcome will be the same as for the graph above; a, c, e and g are eliminated since they are in direct contention with either or both of the winners, but f has no direct contention with any of the winners and will survive, so f pays its exit bid and proceeds to the next step.

Regardless of which the winners are, there will be applications among those exiting early that have no contention situation with the winners and would survive—and there may also be remaining contentions to resolve among such “lucky losers”. Such residual contentions could be resolved by comparing the exit bids among the “lucky losers”, appointing a winner among them (and if necessary by repeating that process until all contentions are effectively resolved).

If, for example, e wins overall, the situation is as follows:

So, b, d and f are eliminated, and thereby the contention situations for a, c and g are eliminated as well, meaning that they survive, regardless of when and in which sequence they exited the auction.

As for the “simple” contention set, although even more obvious for this “complex” case, the overall outcome will depend on both who wins and on the topology of the contention set, provided those ending up without contention are allowed to survive, in spite of not being the overall winners.

4. Conclusion

Resolution of complex contention sets, either through comparative evaluation or auction, may result in multiple winners that have no direct contention relationships between them. They can thus all proceed to delegation.

A comparative evaluation where (at least) one clear winner is found may also result in certain other applications surviving as well, as “lucky losers”, since each of them individually could coexist in the DNS with the winner(s). Such surviving applications may have residual contention cases between them that need to be resolved through auction. Conversely, if no clear winner is found, the full contention set will have to be resolved through auction. The same kind of potential “lucky loser” situations may occur in

auctions, where any residual contention situations are possible to resolve based on the exit bids for the applications concerned.

Provided that it is deemed acceptable to allow those applications to survive which have no contention situations left to resolve, which seems reasonable, the overall outcome of the contention resolution will depend not only on which application wins, but also on the actual topology of the contention set at hand.

A special case occurs if a comparative evaluation results in multiple winners in direct contention. Such cases will be resolved thru auction among the winners.

Chapter 5: Comparative Evaluation/New gTLDs

5.1 Background

Comparative evaluation is foreseen to play an important role as selection method in a particular case for new gTLD applications, notably to resolve string contention (defined below) in a case when at least one application is community-based and has explicitly opted for comparative evaluation as the method to resolve string contention. The basis for this approach is found in Implementation Guideline F in the GNSO's New gTLD Final Report:

"If there is contention for strings, applicants may:

i) resolve contention between them within a pre-established timeframe

ii) if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and;

iii) the ICANN Board may be used to make a final decision, using advice from staff and expert panels."

String contention occurs when the strings of two or more applications are identical or found to be so similar that delegation of both will create a threat of user confusion. Applications in string contention are aggregated into contention sets during Initial Evaluation. As a first option, it is foreseen that applicants with applications in string contention may negotiate among themselves to resolve the contention voluntarily, through withdrawal of one or more applications without material changes of any application. If contention remains after all other stages have been completed, the first method available to resolve contention (in cases where there are one or more community-based applicants) will be comparative evaluation. This paper provides considerations and describes the approach for processing comparative evaluations in the given context.

5.2 Considerations

As stated above, the GNSO Final Report advises that some preference be given to community-based applications in string contention cases. The chosen comparative evaluation approach features criteria to validate the relevance of the community-based designation as a prerequisite for such a preference to be given.

The applicant will designate the application as open or community-based at the time of application. If it makes a designation as community-based, the applicant will be asked to respond to a set of questions to demonstrate that the application is intended for and supported by the relevant community. The applicant will also be asked whether a comparative evaluation is the preferred method to resolve any string contention the application may encounter. Comparative evaluation will take place if one or more community-based applications in a contention set features such a preference. The comparative evaluation process will include all the applications in the relevant contention set. Applicants might be asked to furnish additional information before the comparative evaluation to substantiate community representation.

If successful in a comparative evaluation, an applicant with a community-based application will be constrained in the operation of the TLD to serve that community, according to provisions incorporated into the registry agreement between ICANN and the registry operator.

The comparative evaluation process requires a clear objective outcome and is designed to avoid the effects of subjective aspects by focusing on situations where the benefits of one of the applicants clearly outweigh the other contenders. Therefore, a comparative evaluation that does not produce a clear winner will be declared inconclusive. The string contention will then be settled thru an auction. It should be noted that a comparative evaluation for a contention set with complex topology may result in more than one winner that all can proceed to delegation, provided they are not in direct contention. In case there are multiple winners in direct contention, an auction between the winners will be held to finally resolve the contention.

5.3 Procedure

- 1 In the application phase, each applicant that declares its gTLD application as community-based also expresses any preference for comparative evaluation, should string contention arise. Applicants become aware of identical or confusingly similar strings once the entire group of applications received is posted.
- 2 Formal objections may be filed once the applications are posted.

Note 2

Prior to any comparative evaluation taking place, communities also have the opportunity to formally object to applications that might inappropriately apply for a TLD string that constitutes the name of the respective community. Given that a community-based applicant may use that opportunity to oppose a potential string contender rather than await resolution by comparative evaluation, the standards of the objection procedure and comparative evaluation are logically consistent so that, where appropriate, they will provide consistent outcomes for each given case.

3. During the Initial Evaluation period, the analysis of the String Similarity Panel results in contention sets. These contention sets are published at the conclusion of Initial Evaluation.
4. Some applications may not pass Initial or Extended Evaluation and would be eliminated during these stages. Some applications may not prevail in a dispute resolution proceeding and would be eliminated during this stage. Some contention sets may be resolved through voluntary agreement among applicants.
5. At the start of the Contention Resolution stage, contention sets are re-configured among the applications that have passed all previous stages. For all contention sets where there is a community-based application with preference for comparative evaluation, the comparative evaluation starts.
6. For each direct contention subset within the contention set, a panel appointed by the comparative evaluation provider will review and score the one or more community-based applications with preference for comparative evaluation against the following criteria:
 - a. **Nexus between proposed string and community**

4 = String is strongly associated with the community or community institution and has no other significant associations.

3 = String is clearly associated with the community but also has other associations.

2 = String is relevant to the community but also has other well-known associations.

1 = The string, although relevant to the community, primarily has wider associations.

0 = The nexus between string and community does not fulfill the requirement for scoring 1.

In detail, the nexus between string and community will be given:

- a score from 3, for strong association with the community, to 0, for insufficient association with the community.
- a score of 1 for absence of other associations to the string, i.e., that the string is unique to this community, and a score of 0 if the string is known to also be a label for other communities.

b. Dedicated registration policies

4 = Registration eligibility is strictly limited to members of the pre-established community identified in the application. Registration policies also include name selection and other requirements consistent with the articulated scope and community-based nature of the TLD. Proposed policies include specific enforcement measures including investigation practices, penalties, takedown procedures and appeal mechanisms.

3 = Registration eligibility is predominantly available to members of the pre-established community identified in the application, and also permits people or groups formally associated with the community to register. Policies include most elements for a high score but one element is missing.

2 = Registration eligibility is predominantly available to members of the pre-established community identified in the application, and also permits people or groups informally associated with the community to register. Policies include some elements for the high score but more than one element is missing.

1 = Registration eligibility is encouraged or facilitated for members of the pre-established community identified in the application, and also permits others to register. Policies include only one of the elements for high score.

0 = The registration policies do not fulfill the requirements for scoring 1

In detail, the registration policies will be given:

- a score from 2 for eligibility restricted to community members, to 0 for a largely unrestricted approach to eligibility.
- a score of 1 for clear rules concerning name selection and other requirements for registered names of relevance to the community addressed, and a score of 0 for absence of rules concerning name selection and other requirements for registered names, or rules that are insufficient or lack relevance.

- a score of 1 for satisfactory enforcement measures and a score of 0 for absence of enforcement measures or measures that are insufficient.

c. Community establishment

4 = Clearly identified, organized and pre-established community of considerable size and longevity.

3= The community addressed fulfills all but one of the requirements for a high score.

2 =The community addressed fulfills more than one of the requirements for a high score, but fails on two or more requirements..

1 = The community addressed fulfills only one of the requirements for a high score.

0 = The community addressed does not fulfill any of the requirements for a high score.

In detail, the community establishment will be given:

- a score from 2, for a clearly identified, organized and pre-established community, to 0 for a community lacking clear identification, organization and establishment history
- a score from 2 for a community of considerable size and longevity, to 0 for a community of very limited size and longevity

d. Community endorsement

4 = Application from, or endorsement by, a recognized community institution, or application endorsed by member organizations.

3 = Endorsement by most groups with apparent relevance, but unclear if the whole community is supportive.

2 = Endorsement by groups with apparent relevance, but also some opposition from groups with apparent relevance.

1 = Assorted endorsement by groups of unknown relevance, but also clear opposition from groups with apparent relevance.

0 = Limited endorsement by groups of unknown relevance. Strong opposition from groups with apparent relevance.

In detail, the community endorsement will be given:

- a score from 2 for clear and documented support, to 0 for no or limited endorsement of uncertain relevance
- a score from 2 for no opposition of relevance, to 0 for strong and relevant opposition

If no application scores 14 or more, there will not be a clear winner. If only one application scores 14 or more, it will be declared the winner.

If more than one application scores 14 or more and they are not in direct contention they will be declared winners and can all proceed toward delegation. If they are in direct contention, an auction among these applications will be held to resolve the contention, unless they address the

same community and one application clearly has the support of the majority of that community, in which case this application is declared the sole winner.

7. Following the comparative evaluation described above, ICANN will review the results and reconfigure the contention set as needed. For remaining direct contention subsets involving any community-based application that has elected comparative evaluation, the same procedure described in Step 6 occurs. If none such are left in the contention set, remaining applications in contention will proceed to a subsequent contention resolution process. Applications with no contention remaining will then be able to proceed toward delegation.

Chapter 6: Auction

Auction Design for Resolving Contention for New gTLDs

10 September 2008 (Updated 25 January 2009)

Executive Summary

Auctions are the contention resolution mechanism of last resort. Auctions will only be used only in cases where:

- There is string contention and those who are in contention successfully complete all evaluations,
- Contending applicants elect not to use comparative evaluation, did not have comparative evaluation available, or comparative evaluation did not provide a clear winner, and
- Contending applicants have not resolved the contention among themselves.

The purpose of an auction is to resolve contention in a clear, objective manner. Proceeds from auctions will be reserved until the uses of the proceeds are determined through a community consultation. The proceeds will not go into ICANN's general expense budget but will be separately earmarked.

This paper describes a proposed auction design for resolving contention among competing applicants for new generic TLD strings. The following features are present in this design:

- Simultaneous ascending-clock auctions with discrete rounds and irrevocable exit;
- Contending (identical or confusingly-similar) strings give rise to a "graph" structure;
- An applicant needs to continue to bid until all applications with which it contends have exited;
- Information is provided as to the number of competing applications remaining after each round, but not their identities; and
- Bids need to be legally-binding commitments and, to that end, bidding deposits are required.

6.1 Background

ICANN is preparing implementation plans for the new gTLD process. Staff is working from the GNSO New gTLD recommendations and input from Internet community to guide the implementation. This document has been prepared by Power Auctions LLC, auction design consultant retained by ICANN, in close consultation with ICANN staff.

The current document has the sole purpose of recommending an auction design for resolving contention among competing applicants for new generic TLD strings, and it does not provide any recommendation of auction design for any other purpose.

Draft—for discussion only—please refer to disclaimer on the title page of this document.

Note 3

A separate but related document, “Economic Case for Auctions in New gTLDs” (8 August 2008, see <http://www.icann.org/en/topics/economic-case-auctions-08aug08-en.pdf>) describes the rationale for using auctions as a tie-breaking mechanism for resolving contention among competing applicants for new generic TLD strings. The current document describes specific aspects of the auction model that is proposed.

This document does not describe any potential use of funds resulting from an auction process. A separate document, including a proposed budget for the new gTLD process, will describe potential uses of funds.

6.2 Triggering of the auction process

Two applications that survive ICANN’s evaluation process will be said to *in contention* with each other if the generic TLD strings that they propose are identical or “confusingly similar” to one another. A surviving application for a new gTLD will be subject to auction only in the event that it is in contention with another surviving application.

A successful community-based application is in contention with one or more other applications, the community-based application may request that it and the contending application(s) be subject to a comparative evaluation process instead of an auction. However, in the event that the evaluator for ICANN determines that there is unlikely to be an adequate basis for selecting one of these applications over the other(s), then these applications will also be entered into the auction process.

6.3 Consideration of the available auction models

Power Auctions LLC, as auction consultant for ICANN, began its analysis by reviewing the available auction models. The basic alternatives considered were:

For a longer review of the available auction models, see: “Auctions (Theory),” New Palgrave Dictionary of Economics, Second Edition (2008) (Lawrence M. Ausubel), downloadable at <http://www.powerauction.com/docs/auction-theory-new-palgrave.pdf>.

Note 4

- First-price auction: Bidders submit sealed bids, in advance of a deadline; the highest bidder wins the item and pays the amount of its bid.
- Second-price auction: Bidders submit sealed bids, in advance of a deadline; the highest bidder wins the item and pays the amount bid by the second-highest bidder.
- Ascending-bid auction: Bidders dynamically submit bids at successively higher bids; the final bidder wins the item and pays the price at which it became the final bidder.
- Dutch auction: The auctioneer starts at a high price and announces successively lower prices, until some bidder expresses its willingness to purchase the item by bidding; the first bidder to bid wins the item, and pays the current price at the time of its bid.

Generally, the second-price auction and ascending-bid auction are regarded as

enabling the simplest bidding strategies for bidders and as leading to the efficient auction outcome. In particular, if bidders have pure private values for a single item being auctioned, the optimal bidding strategy in either is simply to “bid what the item is worth to you.” Since achieving an efficient allocation of new gTLD applications, rather than maximizing revenues, is a principal objective of ICANN, second-price or ascending-bid auctions are the natural choices for auctions of new gTLDs.

By contrast, the formulation of a bidding strategy in a first-price auction is relatively complex. The bidder, in addition to assessing what the item is worth to it, must assess the competitive situation and then “shade” its bid accordingly. In addition, bidders tend particularly to dislike bidding in first-price auctions in which, for reasons of transparency, the amounts of the losing bids are revealed after the auction. A bidder in a first-price auction will feel particularly foolish if, for example, it submits a winning bid of \$250,000 whereas the second-highest submitted bid was \$50,000. It will be evident to all parties that a bid of \$50,001 was sufficient to win and that the bidder “overbid” by \$200,000. Each of these difficulties can be avoided by using a second-price or ascending-bid auction instead.

It is well understood that the Dutch auction is strategically equivalent to the first-price auction. Its only advantage is that the losing bids are never submitted and so their amounts never become known, avoiding the last problem described in the previous paragraph. However, as in the first-price auction, the formulation of bidding strategy is relatively complex and the auction is less likely to produce the efficient allocation, again favoring a choice of a second-price or ascending-bid auction.

See “Counterspeculation, Auctions and Competitive Sealed Tenders,” *Journal of Finance* 16, pp. 8-37, (1961) (William Vickrey).

Note 5

For resolving contention among competing applicants for new gTLD strings, the ascending-bid auction offers three decisive advantages over the second-price auction. First, ascending-bid auctions offer the greatest transparency and, by contrast, sealed-bid auctions are comparatively opaque. Second, in explaining why ascending-bid auctions are quite prevalent while second-price auctions are comparatively rare, it has been observed that bidders will be reluctant to reveal their private values truthfully in an auction if either there may be cheating by the auctioneer or there will be subsequent auctions or negotiations in which the information revealed can be used against them. By contrast, an ascending-bid auction avoids these problems, as it does not require the high-value bidder to reveal its value—the bidding stops as soon as the second-highest bidder exits. Third, the ascending-bid auction format scales particularly well to a simultaneous auction of multiple items, which is discussed further in the next section.

See “Why Are Vickrey Auctions Rare?” *Journal of Political Economy*, 98(1), pp. 94–109 (1990) (Michael H. Rothkopf, Thomas J. Teisberg, and Edward P. Kahn).

Note 6

6.4 Ascending-clock auction structure, generally

We recommend that the ascending-clock auction be the basic component of the

auction design. The ascending-clock auction is a particular version of the ascending-bid auction recommended in Section 3. In an ascending-clock auction, the auctioneer starts at a low price and announces successively higher prices. At every price (or range of prices), each bidder is asked to indicate its willingness to purchase the item. The price continues to rise so long as two or more bidders indicate interest. The auction concludes at the first price such that fewer than two bidders indicate interest, and the item is awarded at this final price.

Note 7

For background information on ascending-clock auctions in theory and practice, see the Auctions (Theory) entry of the New Palgrave Dictionary of Economics, referenced in footnote 2, and “Auctioning Many Divisible Goods,” *Journal of the European Economic Association*, Vol. 2: No. 2-3, pp. 480-493 (April-May 2004) (Lawrence M. Ausubel and Peter Cramton), downloadable at <http://www.powerauction.com/docs/auctioning-many-divisible-goods.pdf>

Thus, an ascending-clock auction is similar to the standard Sotheby’s or eBay auction, except that the pace of the auction is not driven by prices that bidders propose. Rather, the auctioneer announces prices (or ranges of prices) that increase over time, and bidders’ responses are limited to indicating whether they are “in” or “out” at the announced prices. This design is increasingly being used in auctions of high-valued items, and it has several strengths.

First, it is well suited to an Internet auction with discrete bidding rounds, where no advantage is given to submitting bids at the latest possible moment (“bid-sniping”) or at the earliest possible moment. This provides bidders with adequate time to make reasonably considered decisions in bidding for high-valued items and it avoids favoring bidders in any particular time zone.

Second, the auction can then employ the following “activity rule”: a bidder needs to have been “in” at early prices in the auction in order to continue to stay “in” at later prices. (In other words, exit from the auction is irrevocable.) Bidders are informed of the number of contending applications that have remained “in” after each round, but not their identities; with the specified activity rule, this demand information has real significance, as a competitor who has exited the auction cannot later re-enter.

Third, the auctioneer has the ability to pace the speed at which prices increase. This facet has greatest importance if related items are auctioned simultaneously, as their prices can then be paced to increase together in relation to the level of demand.

Note 8

The reason why information is provided about the number of contending applications that have remained “in”, but not the identities of the remaining applications, is that it strikes an appropriate balance, providing bidders with the numbers information that will be most useful to them during the auction, but without providing the information about remaining bidders’ identities that would most facilitate collusion.

Indeed, it is proposed that, as much as possible, the auctions for various contending applications occur simultaneously. This has the advantage of providing bidders with information about the level of demand for other new gTLDs—and hence the value of a new gTLD—while the auction is still in progress. One of the benefits of the auction process is that it will generate information concerning the value of new gTLDs; some of this information will effectively become available to participants during the auction and it will be useful to them in making their subsequent decisions in the auction. Moreover, as will be discussed below, it is essential that a given application be auctioned simultaneously

with all other contending applications—as well as simultaneously with all applications that are in contention with any contending application, etc.

Note 9

For example, if there are four contending applications for .market and three contending applications for .store, we suggest that, to the extent reasonably feasible, the auctions for .market and for .store occur simultaneously and that information concerning the progress of each of these auctions be provided to participants in the other auctions. The benefit of the simultaneity is that it would enable participants in each of these auctions to gain additional information about the value of new gTLDs *in general*, which should assist the participants in deciding how high they should bid.

6.5 Additional aspects of the recommended ascending-clock auction structure

6.5.1 Intra-round bidding

In the simplest description of an ascending-clock auction structure, the auctioneer announces a single price associated with each round and bidders indicate whether they are “in” or “out” at that price. For example, the price for Round 1 might be \$50,000 and the price for Round 2 might be \$100,000. Since price ascends in discrete steps, this introduces a reasonable likelihood of ties. For example, Bidders A and B might both indicate that they are “in” at \$50,000, but “out” at \$100,000.

The performance of this auction model can be drastically improved using a technique known as **intra-round bidding**. The technique adds very little to the complexity of the auction, while increasing the ability of applicants to express their valuations in the auction and reducing the probability of ties. Each round of the auction has a “Start-of-Round Price” and an “End-of-Round Price”, and bidders indicate whether they are “in” or “out” at all prices within that range. For example, in Round 1, the Start-of-Round Price might be \$0 and the End-of-Round Price might be \$50,000; while in Round 2, the Start-of-Round Price might be \$50,000 and the End-of-Round Price might be \$100,000. Assuming that a bidder stayed “in” for Round 1, it has the following alternatives available in Round 2:

- It may stay “in” through the End-of-Round Price for the current round (i.e. \$100,000); or
- It may submit an “exit bid” (a number strictly between \$50,000 and \$100,000).

As an example, Bidder A might submit an exit bid of \$83,000, while Bidder B might submit an exit bid of \$92,500. If these are the only two bidders, then \$83,000 is the first price at which fewer than two bidders remain. Thus, the auction ends and Bidder B wins the item, at a final price of \$83,000.

If instead, both Bidders indicate that they are “in” through \$100,000, then the auction progresses to Round 3. The Start-of-Round Price for Round 3 equals the End-of-Round Price for Round 2, while the Auctioneer announces an End-of-Round Price of perhaps \$150,000 for Round 3.

Ties remain possible, but now become extremely unlikely. In order to avoid any possibility of a tie, bidders will be randomly assigned “priority numbers” before the auction. In the unlikely event that all of the remaining bidders submit identical exit bids, the winner will be deemed to be the exiting bidder with the highest priority number. Of course, any

bidder can avoid having the priority numbers determine whether it wins by judicious choice of its exit bid, for example by submitting an exit bid of an odd amount such as \$83,017 instead of using a round number such as \$83,000.

As in the basic description of the ascending-clock auction, the Auctioneer announces after each round the number of bidders who remained "in" at the End-of-Round Price, but not their identities. Exit is irrevocable; a bidder who submits an exit bid in Round 2 can no longer participate if the auction progresses to Round 3.

6.5.2 Bidding units (currency)

In order for bids to be comparable, given currency fluctuations, it is necessary for all bids in the auction to be submitted in a single currency. Given that the application fee will be stated in US dollars, the currency for all bids in the auction will also be US dollars. Bids may be submitted in any integer (whole) number of US dollars.

6.5.3 Post-default procedure

If full payment of the final price is not received from the winning bidder within 10 business days after the conclusion of the auction, or if the winning bidder fails to enter into the prescribed registry agreement with ICANN, the winning bidder will be subject to being declared in default. Once declared in default, the winning bidder will be subject to immediate forfeiture of its position in the auction and assessment of the default penalties. After a winning bidder is declared in default, the relevant gTLD would be offered to other bidders, one at a time, in descending order of their exit bids.

6.6 Practicalities of participation in an ascending-clock auction

This section will provide an informal introduction, from the applicant's perspective, to the practicalities of participation in an ascending-clock auction. Please note that it is intended only as a general introduction and it is only preliminary.

The auction will be conducted over the Internet, with bidders placing their bids remotely using a web-based software system designed for the auction. Auction participants will receive instructions for access to the online auction site. The auction software system will be compatible with current prevalent Internet browsers, and will not require the local installation of any additional software. Access to the site will be password-protected and bids will be encrypted via SSL. The auction will generally be conducted in such a way as to conclude quickly, ideally in a single day.

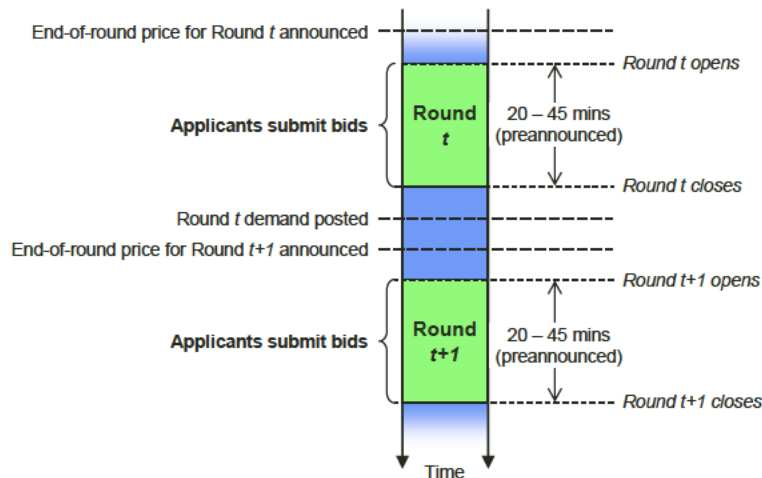

The auction will be carried out in a series of auction rounds. The sequence of events will be as follows:

- For each round, the auctioneer will announce in advance: (i) the Start-of-Round Price; (ii) the End-of-Round Price; and (iii) the starting and ending times of the round. In the first round, the Start-of-Round Price for all applications in the auction will be \$0 US; in subsequent rounds, the Start-of-Round Price will be its End-of-Round Price from the previous round.
- The End-of-Round Price will be set in relation to the number of contending applications and the configuration of the "graph" (see following sections) of contentions.
- During each round, applicants will be required to submit bid(s) concerning their

willingness to pay within the range of intermediate prices between the Start-of-Round and End-of-Round Prices. In this manner, an applicant may indicate its willingness to “stay in” the auction at all prices through and including the End-of-Round Price, or its wish to exit the auction at a price less than the End-of-Round Price (“exit bid”).

- Exit is irrevocable. If an application exited the auction in a previous round, the application is not permitted to re-enter in the current round.
- Applicants may submit their bid(s) at any time during the round.
- After each round, the auctioneer will disclose the aggregate number of contending applications that remained in the auction at the End-of-Round Prices for the round, and will announce the prices and times for the next round.

The sequence of events during the auction is illustrated as follows:

In each round, a bid is required to be submitted for each application remaining in the auction. The bid indicates the applicant’s demand for the application at all prices between the Start-of-Round and End-of-Round Prices, as follows:

- Each bid consists of a single price associated with the application, such price required to be greater than or equal to the Start-of-Round Price.
- If the bid amount is strictly less than the End-of-Round Price, then the bid is treated as an exit bid at the specified amount, and it signifies the applicant’s binding commitment to pay up to the bid amount if its application is approved.
- If the bid amount is greater than or equal to the End-of-Round Price, then the bid signifies that the applicant wishes to remain in the auction at all prices in the current round, and it signifies the applicant’s binding commitment to pay up to the End-of-Round Price if its application is approved. Following such bid, there is no possibility of the application being eliminated within the current round.
- To the extent that the bid amount exceeds the End-of-Round Price, then the bid is also treated as a proxy bid that will be carried forward to the next round. The

applicant will be permitted to change the proxy bid amount in the next round; and the amount of the proxy bid will not constrain the applicant's ability to submit any valid bid amount in the next round.

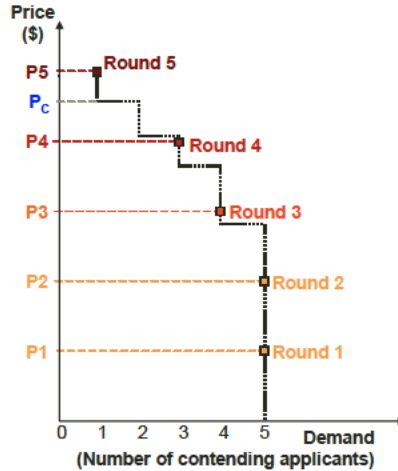

- The bid amount for an application is not permitted to exceed the financial limit established for the application, such limit based on the financial deposit received from the respective applicant in accordance with the Auction Rules.
- A bid is not permitted to be submitted for any application for which an exit bid was received in a prior round.
- If no valid bid is submitted within a given round for an application that remains in the auction, then the bid amount is taken to be the amount of the proxy bid (if any) carried forward from the previous round or, if none, the bid is taken to be an exit bid at the Start-of-Round Price for the current round.

This process continues, with the auctioneer increasing the price range associated with each given TLD string in each round, until there is at most one contending application at the end-of-round prices. After a round in which this condition is satisfied, the auction will conclude, and the auctioneer will determine the clearing price(s). The last remaining application(s) will be deemed the successful application(s), and the associated applicant(s) will be obligated to pay the clearing price(s).

In the case of n mutually-contending applications, the successful application and the clearing price are determined by the following process.

At the end of each round, the auction software aggregates the bids of individual applicants to determine the level of demand for a TLD string. If the number of remaining bidders exceeds one, applicants are notified of the aggregate demand at the End-of-Round Prices, and applicants are notified of the prices and timing details for the next round. If the aggregate demand is not greater than one, the auction software identifies the lowest price at which such an outcome occurs (i.e. the exit bid of the penultimate applicant). This price is deemed the clearing price, and the remaining application is deemed the successful application. In the unlikely event that all of the remaining applications exit at the clearing price, then the application exiting at the clearing price which has the highest priority number is deemed to be the successful application.

The diagram and description, below, illustrate how an auction for five (5) mutually-contending applications might progress:

- Before the first round, the Auctioneer announces the End-of-Round Price P1.
- During Round 1, a bid is submitted for each application. In the diagram shown, all five applicants submit bids of at least P1. Since the aggregate demand exceeds one, the auction proceeds to Round 2. The auctioneer discloses that five contending applications remained at P1 and announces the End-of-Round Price P2.
- During Round 2, a bid is submitted for each application. In the diagram shown, all five applicants submit bids of at least P2. The auctioneer discloses that five contending applications remained at P2 and announces the End-of-Round Price P3.
- During Round 3, one of the applicants submits an exit bid at slightly below P3, while the other four applicants submit bids of at least P3. The auctioneer discloses that four contending applications remained at P3 and announces the End-of-Round Price P4.
- During Round 4, one of the applicants submits an exit bid midway between P3 and P4, while the other three remaining applicants submit bids of at least P4. The auctioneer discloses that three contending applications remained at P4 and announces the End-of-Round Price P5.
- During Round 5, one of the applicants submits an exit bid at slightly above P4, and one of the applicants submits an exit bid at Pc (midway between P4 and P5). The final applicant submits a bid greater than Pc. Since the aggregate demand at P5 does not exceed one, the auction concludes in Round 5. The application associated with the highest bid in Round 5 is deemed the successful application. The clearing price is Pc, as this is the lowest price at which aggregate demand can be met.

The successful bidder will be offered the base registry agreement and a certain period of time to come to terms. If terms cannot be agreed, the agreement will be offered to the second place bidder.

1. ICANN Board Rationale for the Approval of the Launch of the New gTLD Program

1. ICANN Board Rationale for the Approval of the Launch of the New gTLD Program

I. WHY NEW gTLDs ARE BEING INTRODUCED

New gTLDs are being introduced because the community has asked for them. The launch of the new generic top-level domain (gTLD) program will allow for more innovation, choice and change to the Internet’s addressing system, now constrained by only 22 gTLDs. In a world with over 2 billion Internet users – and growing – diversity, choice and competition are key to the continued success and reach of the global network. New gTLDs will bring new protections to consumers (as well as brand holders and others) that do not exist today in the Domain Name System (DNS). Within this safer environment, community and cultural groups are already anticipating how they can bring their groups together in new and innovative ways. Companies and consumers that do not use the Latin alphabet will be brought online in their own scripts and languages. Industries and companies will have the opportunity to explore new ways to reach customers. The years of community work in planning have produced a robust implementation plan, and it is time to see that plan through to fruition.

II. FOLLOWING ICANN’S MISSION AND COMMUNITY DEVELOPED PROCESSES

A. Introduction of new TLDs is a core part of ICANN’s Mission

When ICANN was formed in 1998 as a not for profit, multi-stakeholder organization dedicated to coordinating the Internet’s addressing system, a purpose was to promote competition in the DNS marketplace, including by developing a process for the introduction of new generic top-level domains while ensuring internet security and stability. The introduction of new top-level domains into the DNS has thus been a fundamental part of ICANN’s mission from its inception, and was specified in ICANN’s Memorandum of Understanding and Joint Project Agreement with the U.S. Department of Commerce.¹

ICANN initially created significant competition at the registrar level, which has resulted in enormous benefits for consumers. ICANN’s community and Board has now turned its attention to fostering competition in the registry market. ICANN began this process with the “proof of concept” round for the addition of a limited number of new generic Top Level Domains (“gTLDs”) in 2000, and then permitted a limited number of additional “sponsored” TLDs in 2004-2005. These additions to the root demonstrated that TLDs could be added without adversely affecting the security and stability of the domain name system. Follow on economic studies indicated that, while benefits accruing from innovation are difficult to predict, that the introduction of new gTLDs will bring benefits in the form of increased competition, choice and new services to Internet users. The

¹ ICANN’s Bylaws articulate that the promotion of competition in the registration of domain names is one of ICANN’s core missions. See ICANN Bylaws, Article 1, Section 2.6.

studies also stated that taking steps to mitigate the possibility of rights infringement and other forms of malicious conduct would result in maximum net social benefits.

B. The Community Created a Policy Relating to the Introduction of new gTLDs

After an intensive policy development process, in August 2007, the Generic Names Supporting Organization issued a lengthy report in which it recommended that ICANN expand the number of gTLDs. See <http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-part-a-08aug07.htm>. Contributing to this policy work were ICANN's Governmental Advisory Committee ("GAC"), At-Large Advisory Committee ("ALAC"), County Code Names Supporting Organization ("ccNSO") and Security and Stability Advisory Committee ("SSAC"). The policy development process culminated with Board approval in June 2008. See http://www.icann.org/en/minutes/resolutions-26jun08.htm#_Toc76113171.

III. COMMUNITY INVOLEMENT WAS KEY IN IMPLEMENTATION PLANNING

Since the June 2008 decision, the community has been hard at work creating, commenting on, and refining the implementation of this policy.

Seven versions of the Applicant Guidebook have been published. Fifty-eight explanatory memoranda have been produced. There have been nearly 50 new gTLD-related public comment sessions, over these documents as well as a variety of excerpts and working group reports. Over 2,400 comments were received through those public comment fora, which have been summarized and analyzed, and considered in revisions to the new gTLD program. Over 1,350 pages of summary and analysis have been produced. The community has also participated in numerous workshops and sessions and open microphone public forums at ICANN meetings, providing additional suggestions for the improvement of the new gTLD program. ICANN has listened to all of these community comments in refining the program that is being approved today.

Nearly every ICANN Supporting Organization and Advisory Committee was represented in targeted community-based working groups or expert teams formed to address implementation issues. The GNSO and its component stakeholder groups and constituencies participated in all aspects of the implementation work arising out of its policy recommendations. The ccNSO was particularly active on issues relating to internationalized domain names (IDNs) and the treatment of geographical names in the new gTLD program.

ICANN's technical Advisory Committees provided direct input into the implementation work. For example, RSSAC and SSAC provided expert analysis that there is no expected significant impact of new gTLDs on the stability and scalability of the root server system.

ALAC members served on nearly every working group and team, and actively participated in all public comment fora, giving the world's Internet users a voice in implementation discussions.

IV. CONSULTATION WITH THE GAC LEAD TO IMPROVEMENTS

Under the ICANN Bylaws, the GAC has an assurance that the Board will take GAC advice into account. The Board, through an extensive and productive consultation process with the GAC, has considered the GAC's advice on the new gTLD program and resolved nearly all of the areas where there were likely differences between the GAC advice and the Board's positions.

The ICANN Board and the GAC held a landmark face-to-face consultation on 28 February – 1 March 2011 and subsequently exchanged written comments on various aspects of the new gTLD Program. On 15 April 2011, ICANN published a revised Applicant Guidebook, taking into account many compromises with the GAC as well as additional community comment. On 20 May 2011, the GAC and the ICANN Board convened another meeting by telephone, and continued working through the remaining differences between the Board and GAC positions. See <http://www.icann.org/en/announcements/announcement-22may11-en.htm>. On 26 May 2011, the GAC provided its comments on the 15 April 2011 Applicant Guidebook, and the GAC comments were taken into consideration in the production of the 30 May 2011 Applicant Guidebook.

On 19 June 2011, the ICANN Board and GAC engaged in a further consultation over the remaining areas where the Board's approval of the launch of the new gTLD program may not be consistent with GAC advice. At the beginning of the GAC consultation process, there were 12 issues under review by the GAC and the Board, with 80 separate sub-issues. The GAC and the Board have identified mutually acceptable solutions for nearly all of these sub-issues. Despite this great progress and the good faith participation of the GAC and the Board in the consultation process, a few areas remain where the GAC and the Board were not able to reach full agreement. The reasons why these items of GAC advice were not followed are set forth in responses to the GAC such as Board responses to item of GAC Advice.

V. MAJOR IMPLEMENTATION ISSUES HAVE BEEN THOROUGHLY CONSIDERED

The launch of the new gTLDs has involved the careful consideration of many complex issues. Four overarching issues, along with several other major substantive topics have been addressed through the new gTLD implementation work. Detailed rationale papers discussing the approval of the launch of the program as it relates to nine of those topics are included here. These nine topics are:

- Evaluation Process
- Fees
- Geographic Names
- Mitigating Malicious Conduct
- Objection Process
- Root Zone Scaling
- String Similarity and String Contention
- Trademark Protection.

Detailed rationales have already been produced and approved by the Board in support of its decisions relating to two other topics, Cross Ownership, at <http://www.icann.org/en/minutes/rationale-cross-ownership-21mar11-en.pdf> and Economic Studies, at <http://www.icann.org/en/minutes/rationale-economic-studies-21mar11-en.pdf>, each approved on 25 January 2011.

VI. CONCLUSION

The launch of the new gTLD program is in fulfillment of a core part of ICANN's Bylaws: the introduction of competition and consumer choice in the DNS. After the ICANN community created a policy recommendation on the expansion of the number of gTLDs, the community and ICANN have worked tirelessly to form an implementation plan. The program approved for launch today is robust and will provide new protections and opportunities within the DNS.

The launch of the new gTLD program does not signal the end of ICANN's or the community's work. Rather, the launch represents the beginning of new opportunities to better shape the further introduction of new gTLDs, based upon experience. After the launch of the first round of new gTLDs, a second application window will only be opened after ICANN completes a series of assessments and refinements – again with the input of the community. The Board looks forward to the continual community input on the further evolution of this program.

The Board relied on all members of the ICANN community for the years of competent and thorough work leading up to the launch of the new gTLD program. Within the implementation phase alone, the community has devoted tens of thousands of hours to this process, and has created a program that reflects the best thought of the community. This decision represents ICANN's continued adherence to its mandate to introduce competition in the DNS, and also represents the culmination of an ICANN community policy recommendation of how this can be achieved.

2. ICANN Board Rationale on the Evaluation Process Associated with the gTLD Program

2. ICANN Board Rationale on the Evaluation Process Associated with the gTLD Program

I. Introduction

Through the development of the new gTLD program, one of the areas that required significant focus is a process that allows for the evaluation of applications for new gTLDs. The Board determined that the evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination.

Following the policy advice of the GNSO, the key goal for the evaluation process was to establish criteria that are as objective and measurable as possible. ICANN worked through the challenge of creating criteria that are measurable, meaningful (i.e., indicative of the applicant's capability and not easily manipulated), and also flexible enough to facilitate a diverse applicant pool. In the end, ICANN has implemented a global, robust, consistent and efficient process that will allow any public or private sector organization to apply to create and operate a new gTLD.

II. Brief History of ICANN's Analysis of the Evaluation Process Associated with the gTLD Program

This section sets forth a brief history of the significant actions on the subject of the evaluation process associated with the gTLD program.

- In December 2005, the GNSO commenced a policy development process to determine whether (and the circumstances under which) new gTLDs would be added. A broad consensus was achieved that new gTLDs should be added to the root in order to stimulate competition further and for numerous other reasons.

- In August of 2007, the GNSO issued its final report regarding the introduction of new gTLDs.
<http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm>
- At the 2 November 2007 ICANN Board Meeting, the Board considered the GNSO's policy recommendation and passed a resolution requesting that ICANN staff continue working on the implementation analysis for the introduction of the new gTLD program and report back to the Board with a report on implementation issues.
<http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm>; http://www.icann.org/minutes/resolutions-02nov06.htm#_Toc89933880
- Starting with the November 2007 Board meeting, the Board began to consider issues related to the selection procedure for new gTLDs, including the need for the process to respect the principles of fairness, transparency and non-discrimination.
- On 20 November 2007, the Board discussed the need for a detailed and robust evaluation process, to allow applicants to understand what is expected of them in the process and to provide a roadmap. The process should include discussion of technical criteria, business and financial criteria, and other specifications. ICANN proceeded to work on the first draft of the anticipated request for proposals.
<http://www.icann.org/en/minutes/minutes-18dec07.htm>
- On 23 October 2008, ICANN posted the Draft Applicant Guidebook, including an outline of the evaluation procedures (incorporating both reviews of the applied-for gTLD string and of the applicant), as well as the intended application questions and scoring criteria. These were continually revised, updated, and posted for comment through successive drafts of the Guidebook.
<http://www.icann.org/en/topics/new-gtlds/comments-en.htm>

- Between June and September 2009, KPMG conducted a benchmarking study on ICANN’s behalf, with the objective of identifying benchmarks based on registry financial and operational data. The KPMG report on Benchmarking of Registry Operations (“KPMG Benchmarking Report”) was designed to be used as a reference point during the review of new gTLD applications.
- In February 2010, ICANN published an overview of the KPMG Benchmarking Report. This overview stated that ICANN commissioned the study to gather industry data on registry operations as part of the ongoing implementation of the evaluation criteria and procedures for the new gTLD program.
<http://icann.org/en/topics/new-gtlds/benchmarking-report-15feb10-en.pdf> [Rationale-all -final-20110609.doc](#)
- On 30 May 2011, ICANN posted the Applicant Guidebook for consideration by the Board. This lays out in full the proposed approach to the evaluation of gTLD applications.

III. Analysis and Consideration of the Evaluation Process

A. Policy Development Guidance

The GNSO’s advice included the following:

- The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination.
- All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.
- Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.

- Applicants must be able to demonstrate their financial and organisational operational capability.
- There must be a clear and pre-published application process using objective and measurable criteria.

B. Implementation of Policy Principles

Publication of the Applicant Guidebook has included a process flowchart which maps out the different phases an application must go through, or may encounter, during the evaluation process. There are six major components to the process: (1) Application Submission/Background Screening; (2) Initial Evaluation; (3) Extended Evaluation; (4) Dispute Resolution; (5) String Contention and (6) Transition to Delegation. All applications must pass the Initial Evaluation to be eligible for approval.

The criteria and evaluation processes used in Initial Evaluation are designed to be as objective as possible. With that goal in mind, an important objective of the new TLD process is to diversify the namespace, with different registry business models and target audiences. In some cases, criteria that are objective, but that ignore the differences in business models and target audiences of new registries, will tend to make the process exclusionary. The Board determined that the process must provide for an objective evaluation framework, but also allow for adaptation according to the differing models applicants will present.

The Board set out to create an evaluation process that strikes a correct balance between establishing the business and technical competence of the applicant to operate a registry, while not asking for the detailed sort of information that a venture capitalist may request. ICANN is not seeking to certify business success but instead seeks to encourage innovation while providing certain safeguards for registrants.

Furthermore, new registries must be added in a way that maintains DNS stability and security. Therefore, ICANN has created an evaluation process that

asks several questions so that the applicant can demonstrate an understanding of the technical requirements to operate a registry.

After a gTLD application passes the financial and technical evaluations, the applicant will then be required to successfully complete a series of pre-delegation tests. These pre-delegation tests must be completed successfully within a specified period as a prerequisite for delegation into the root zone.

C. Public Comment

Comments from the community on successive drafts of the evaluation procedures, application questions, and scoring criteria were also considered by the Board. In particular, changes were made to provide greater clarity on the information being sought, and to more clearly distinguish between the minimum requirements and additional scoring levels.

There was feedback from some that the evaluation questions were more complicated or cumbersome than necessary, while others proposed that ICANN should set a higher bar and perform more stringent evaluation, particularly in certain areas such as security. ICANN has sought to consider and incorporate these comments in establishing a balanced approach that results in a rigorous evaluation process in line with ICANN's mission for what is to be the initial gTLD evaluation round. See <http://www.icann.org/en/topics/new-gtlds/comments-analysis-en.htm>.

IV. The Board's Analysis of the Evaluation Process Associated with the gTLD Program

A. Who the Board Consulted Regarding the Evaluation Process

- Legal Counsel
- The GNSO stakeholder groups

- ICANN’s Governmental Advisory Committee
- The At-Large Advisory Committee
- Various consultants were engaged throughout the process to assist in developing a methodology that would meet the above goals. These included InterIsle, Deloitte, KPMG, Gilbert and Tobin, and others.
- All other Stakeholders and Community members through public comment forums and other methods of participation.

B. What Significant Non-Privileged Materials the Board Reviewed

- Public Comments;
<http://icann.org/en/topics/new-gtlds/comments-analysis-en.htm>
- Benchmarking of Registry Operations;
<http://icann.org/en/topics/new-gtlds/benchmarking-report-15feb10-en.pdf>

C. What Factors the Board Found to Be Significant

The Board considered a number of factors in its analysis of the evaluation process for the new gTLD program. The Board found the following factors to be significant:

- the principle that the Board should base its decision on solid factual investigation and expert consultation and study;
- the addition of new gTLDs to the root in order to stimulate competition at the registry level;
- the responsibility of ensuring that new gTLDs do not jeopardize the security or stability of the DNS;

- an established set of criteria that are as objective and measurable as possible;
- the selection of independent evaluation panels with sufficient expertise, resources and geographic diversity to review applications for the new gTLD program; and
- an evaluation and selection procedure for new gTLD registries that respects the principles of fairness, transparency and non-discrimination.

V. The Board's Reasons for Concluding the Evaluation Process was Appropriate for the gTLD Program

- The evaluation process allows for any public or private sector organization to apply to create and operate a new gTLD. However, the process is not like simply registering or buying a second-level domain. ICANN has developed an application process designed to evaluate and select candidates capable of running a registry. Any successful applicant will need to meet the published operational and technical criteria in order to ensure a preservation of internet stability and interoperability.
- ICANN's main goal for the evaluation process was to establish criteria that are as objective and measurable as possible while providing flexibility to address a wide range of business models. Following the policy advice, evaluating the public comments, and addressing concerns raised in discussions with the community, the Board decided on the proposed structure and procedures of the evaluation process to meet the goals established for the program.

3. ICANN Board Rationale on Fees Associated With the gTLD Program

3. ICANN Board Rationale on Fees Associated With the gTLD Program

I. Introduction

The launch of the new gTLD program is anticipated to result in improvements to consumer choice and competition in the DNS. However, there are important cost implications, both to ICANN as a corporate entity and to gTLD applicants who participate in the program. It is ICANN's policy, developed through its bottom-up, multi-stakeholder process, that the application fees associated with new gTLD applications should be designed to ensure that adequate resources exist to cover the total cost of administering the new gTLD process. <http://www.icann.org/en/topics/new-gtlds/cost-considerations-23oct08-en.pdf>.

On 2 October 2009, the Board defined the directive approving the community's policy recommendations for the implementation of the new gTLD policy. That policy included that the implementation program should be fully self-funding. The Board has taken great care to estimate the costs with an eye toward ICANN's previous experience in TLD rounds, the best professional advice, and a detailed and thorough review of expected program costs. The new gTLD program requires a robust evaluation process to achieve its goals. This process has identifiable costs. The new gTLD implementation should be revenue neutral and existing ICANN activities regarding technical coordination of names, numbers and other identifiers should not cross-subsidize the new program. See <http://icann.org/en/topics/new-gtlds/cost-considerations-04oct09-en.pdf>

II. Brief History of ICANN's Analysis of Fees Associated with the gTLD Program

This section sets forth a brief history of the significant Board consideration on the subject of fees associated with the gTLD program.

- In December 2005 – September 2007, the GNSO conducted a rigorous policy development process to determine whether (and the

circumstances under which) new gTLDs would be added. A broad consensus was achieved that new gTLDs should be added to the root in order to stimulate competition further and for numerous other reasons and that evaluation fees should remain cost neutral to ICANN. The GNSO's Implementation Guideline B stated: "Application fees will be designed to ensure that adequate resources exist to cover the total cost to administer the new gTLD process."

- At the 2 November 2007 ICANN Board Meeting, the Board considered the GNSO's policy recommendation and passed a resolution requesting that ICANN staff continue working on the implementation analysis for the introduction of the new gTLD program and report back to the Board with a report on implementation issues.
<http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm>; http://www.icann.org/minutes/resolutions-02nov06.htm#_Toc89933880
- On 2 November 2007, the Board reviewed the ICANN Board or Committee Submission No. 2007-54 entitled Policy Development Process for the Delegation of New gTLDs. The submission discussed application fees and stated, "[a]pplication fees will be designed to ensure that adequate resources exist to cover the total cost to administer the new gTLD process. Application fees may differ for applicants."
<http://www.icann.org/en/minutes/minutes-18dec07.htm>.
- On 23 October 2008, ICANN published the initial draft version of the gTLD Applicant Guidebook, including an evaluation fee of USD 185,000 and an annual registry fee of USD 75,000.
<http://www.icann.org/en/topics/new-gtlds/comments-en.htm>
- At the 12 February 2009 Board Meeting, the ICANN Board discussed the new version of the Applicant Guidebook ("AGB"). The Board determined that the application fee should remain at the proposed fee of USD 185,000 but the annual minimum registry fee should be

reduced to USD 25,000, with a transaction fee at 25 cents per transaction. Analysis was conducted and budgets were provided to support the USD 185,000 fee. The decrease in of the registry fee to USD 25,000 was based on a level of effort to support registries.

<http://www.icann.org/en/minutes/minutes-12feb09.htm>

- On 6 March 2009, the Board reviewed ICANN Board Submission No. 2009-03-06-05 entitled Update on new gTLDs. The submission analyzed recent public comments and detailed how ICANN incorporated those comments and changes into the fee structure. It also pointed out that the annual registry fee was reduced to a baseline of USD 25,000 plus a per transaction fee of 25 cents once the registry has registered 50,000 names. Also, the submission highlighted a refund structure for the USD 185,000 evaluation fee, with a minimum 20% refund to all unsuccessful applicants, and higher percentages to applicants who withdraw earlier in the process.
- On 25 June, ICANN Published the New gTLD Program Explanatory Memorandum – New gTLD Budget which broke down the cost components of the USD 185,000 application fee.
<http://www.icann.org/en/topics/new-gtlds/new-gtld-budget-28may10-en.pdf>
- On 30 May 2011, ICANN posted a new version of the Applicant Guidebook, taking into account public comment and additional comments from the GAC.
<http://icann.org/en/topics/new-gtlds/comments-7-en.htm>

III. Major Principles Considered by the Board

A. Important Financial Considerations

The ICANN Board identified several financial considerations it deemed to be important in evaluating and deciding on a fee structure for the new gTLD program. On 23 October 2008, ICANN published an explanatory memorandum

describing its cost considerations and identified three themes which shaped the fee structure: (1) care and conservatism; (2) up-front payment/incremental consideration; and (3) fee levels and accessibility. See <http://www.icann.org/en/topics/new-gtlds/cost-considerations-23oct08-en.pdf>.

1. Care and Conservatism

ICANN coordinates unique identifiers for the Internet, and particularly important for this context, directly contracts with generic top level domain registries, and cooperates with country code registries around the world in the interest of security, resiliency and stability of the DNS. There are more than 170,000,000 second-level domain registrations that provide for a richness of communication, education and commerce, and this web is reaching ever more people around the world. ICANN's system of contracts, enforcement and fees that supports this system, particularly for the 105,000,000 registrations in gTLDs, must not be put at risk. Therefore, the new gTLD must be fully self funding.

The principle of care and conservatism means that each element of the application process must stand up to scrutiny indicating that it will yield a result consistent with the community-developed policy. A robust evaluation process, including detailed reviews of the applied-for TLD string, the applying entity, the technical and financial plans, and the proposed registry services, is in place so that the security and stability of the DNS are not jeopardized. While the Board thoughtfully considered process and cost throughout the process design, cost-minimization is not the overriding objective. Rather, process fidelity is given priority.

2. Up-Front Payment/Incremental Consideration

ICANN will collect the entire application fee at the time an application is submitted. This avoids a situation where the applicant gets part way through the application process, then may not have the resources to continue. It also assures that all costs are covered. However, if the applicant elects to withdraw its application during the process, ICANN will refund a prorated amount of the fees to the applicant.

A uniform evaluation fee for all applicants provides cost certainty with respect to ICANN fees for all applicants. Further, it ensures there is no direct cost penalty to the applicant for going through a more complex application (except, when necessary, fees paid directly to a provider). A single fee, with graduated refunds, and with provider payments (e.g. dispute resolution providers) made directly to the provider where these costs are incurred seems to offer the right balance of certainty and fairness to all applicants.

3. Fee Levels and Accessibility

Members of the GNSO community recognized that new gTLD registry applicants would likely come forward with a variety of business plans and models appropriate to their own specific communities, and there was a commitment that the evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency, and non-discrimination.

Some community members expressed concern that financial requirements and fees might discourage applications from developing nations, or indigenous and minority peoples, who may have different sets of financial opportunities or capabilities relative to more highly developed regions of the world. The Board addressed these concerns with their “Application Support” program (which is discussed more in depth below).

B. Important Assumptions

In the explanatory memorandum on cost considerations published on 23 October 2008, ICANN identified the three assumptions on which it would rely in determining the fee structure for the program: (1) estimating methodology; (2) expected quantity of applications; and (3) the new gTLD program will be ongoing.

1. Estimating Methodology

Estimators for the various costs associated with the application evaluation strove to use a maximum-likelihood basis to estimate the costs. A detailed

approach was taken to get the best possible estimates. The evaluation process was divided into 6 phases, 24 major steps and 75 separate tasks. Twenty-seven separate possible outcomes were identified in the application process, probabilities were identified for reaching each of these states, and cost estimates were applied for each state. Estimates at this detailed level are likely to yield more accurate estimates than overview summary estimates.

Further, whenever possible, sensitivity analysis was applied to cost estimates. This means asking questions such as “How much would the total processing cost be if all applications went through the most complex path? Or “How much would the total processing cost be if all applications went through the simplest path?” Sensitivity analysis also helps to explore and understand the range of outcomes, and key decision points in the cost estimation mode.

2. Expected Quantity of Applications

While ICANN has asked constituents and experts, there is no sure way to estimate with certainty the number of new TLD applications that will be received. ICANN has based its estimates on an assumption of 500 applications in the first round. This volume assumption is based on several sources, including a report from a consulting economist, public estimates on the web, oral comments at public meetings and off-the-record comments by industry participants. While the volume assumption of 500 applications is consistent with many data points, there is no feasible way to make a certain prediction.

If there are substantially fewer than 500 applications, the financial risk is that ICANN would not recoup historical program development costs or fixed costs in the first round, and that higher fixed costs would drive the per unit application costs to be higher than forecast. Still, the total risk of a much smaller-than-anticipated round would be relatively low, since the number of applications would be low.

If there are substantially more than 500 applications, the risk is that application processing costs would again be higher than anticipated, as ICANN would need to bring in more outside resources to process applications in a timely

fashion, driving the variable processing costs higher. In this case, ICANN would be able to pay for these higher expected costs with greater-than-expected recovery of fixed cost components (historical program development and other fixed costs), thus at least ameliorating this element of risk.

3. The New gTLD Program Will Be Ongoing

ICANN’s goal is to launch subsequent gTLD application rounds as quickly as possible. The exact timing will be based on experiences gained and changes required after this round is completed. The goal is for the next application round to begin within one year of the close of the application submission period for the initial round.

It is reasonable to expect that various fees may be lower in subsequent application rounds, as ICANN processes are honed, and uncertainty is reduced.

C. Cost Elements Determined by the Board

1. Application Fee

The Board determined the application fee to be in the amount of USD 185,000. The application fee has been segregated into three main components: (a) Development Costs, (b) Risk Costs, and (c) Application Processing (see www.icann.org/en/topics/new-gtlds/cost-considerations-04oct09-en.pdf). The breakdown of each component is as follows (rounded):

Development Costs:	USD 27,000
Risk Costs:	USD 60,000
<u>Application Processing:</u>	<u>USD 98,000</u>
Application Fee:	USD 185,000

The application fee was also extrapolated and further analyzed under several assumptions including receiving 500 applications (see

www.icann.org/en/topics/new-gtlds/explanatory-memo-new-gtld-program-budget-22oct10-en.pdf).

a. Development Costs

These costs have two components:

i) Development costs which are the activities necessary to progress the implementation of the gTLD policy recommendations. This includes resolving open concerns, developing and completing the AGB, managing communication with the Internet community, designing and developing the processes and systems necessary to process applications in accordance with the final Guidebook, and undertaking the activities that have been deemed high risk or would require additional time to complete.

The costs associated with the Development Phase have been funded through normal ICANN budgetary process and the associated costs have been highlighted in ICANN's annual Operating Plan and Budget Documents

ii) Deployment costs which are the incremental steps necessary to complete the implementation of the application evaluation processes and system. Such costs require timing certainty and include the global communication campaign, on-boarding of evaluation panels, hiring of additional staff, payment of certain software licenses, and so on.

b. Risk Costs

These represent harder to predict costs and cover a number of risks that could occur during the program. Examples of such costs include variations between estimates and actual costs incurred or receiving a significantly low or high number of applications. ICANN engaged outside experts to assist with developing a risk framework and determining a quantifiable figure for the program.

c. Application Processing

Application Processing represents those costs necessary to accept and process new gTLD applications, conduct contract execution activities, and conduct pre-delegation checks of approved applicants prior to delegation into the root zone. Application processing costs consist of a variable and fixed costs.

Variable costs are those that vary depending on the number of applications that require a given task to be completed. Whereas fixed costs are necessary to manage the program and are not associated with an individual application.

The application fee is payable in the form of a USD 5,000 deposit submitted at the time the user requests application slots within the TLD Application System (“TAS”), and a payment of USD 180,000 submitted with the full application. See <http://icann.org/en/topics/new-gtlds/intro-clean-12nov10-en.pdf>.

2. Annual Registry Fee

ICANN’s Board has determined to place the Annual Registry Fee at a baseline of USD 25,000 plus a variable fee based on transaction volume where the TLD exceeds a defined transaction volume.

3. Refunds

In certain cases, refunds of a portion of the evaluation fee may be available for applications that are withdrawn before the evaluation process is complete. An applicant may request a refund at any time until it has executed a registry agreement with ICANN. The amount of the refund will depend on the point in the process at which the withdrawal is requested. Any applicant that has not been successful is eligible for, at a minimum, a 20% refund of the evaluation fee if it withdraws its application.

According to the AGB, the breakdown of possible refund scenarios is as follows:

Refund Available to Applicant	Percentage of Evaluation Fee	Amount of Refund
Within 21 calendar days of a GAC Early Warning	80%	USD 148,000
After posting of applications until posting of Initial Evaluations results	70%	USD 130,000
After posting Initial Evaluation Results	35%	USD 65,000
After the applicant has completed Dispute Resolution, Extended Evaluation, or String Contention Resolution(s)	20%	USD 37,000
After the applicant has registered into a registry agreement with ICANN		None

4. Application Support (JAS WG Charter)

As mentioned above, some community members expressed concerned that the financial requirements and fees might discourage applications from developing nations, or indigenous or minority peoples, who may have different financial opportunities. The Board addressed these concerns with their “Application Support” program, and recognized the importance of an inclusion in the new gTLD program by resolving that stakeholders work to “develop a sustainable approach to providing support to applicants requiring assistance in applying for and operating new gTLDs.” See <http://www.icann.org/en/minutes/resolutions-12mar10-en.htm#20>.

In direct response to this Board resolution, the GNSO Council proposed a Joint SO/AC Working Group (“JAS WG”), composed by members of ICANN’s Supporting Organizations (“SOs”) and Advisory Committees (“ACs”), to look into applicant support for new gTLDs. See <https://st.icann.org/so-ac-new-gtld-wg/index.cgi>.

IV. The Board’s Analysis of Fees

A. Why the Board Addressed Fees

- ICANN’s mission statement and one of its founding principles is to promote user choice and competition. ICANN has created significant competition at the registrar level that has resulted in enormous benefits for consumers. To date, ICANN has not created meaningful competition at the registry level. Based upon the report and recommendation from the GNSO to introduce new gTLDs, the Board decided to proceed with the new gTLD program.
- While the primary implications of the new gTLD program relate to possible improvements in choice and competition as a result of new domain names, there are also important cost implications, both to the ICANN corporate entity and to gTLD applicants. The Board initially determined that the application fees associated with new gTLD applications should be designed to ensure that adequate resources exist to cover the total cost to administer the new gTLD process.
- Both the Board and members of the community have commented on the application fee structure for the new gTLD program. From those comments the Board has determined that the new gTLD implementation should be fully self-funding and revenue neutral, and that existing ICANN activities regarding technical coordination of names, numbers, and other identifiers should not cross-subsidize the new program.

B. Who the Board Consulted Regarding Fees

- Legal Counsel
- The GNSO
- ICANN’s Supporting Organizations

- The ALAC
- The GAC
- Other ICANN Advisory Committees
- All other Stakeholders and Community members through public comment forums and other methods of participation.

C. Public Comments Considered by the Board

Over 1200 pages of feedback, from more than 300 entities, have been received since the first Draft AGB was published. The Board has analyzed and considered these comments in the context of the GNSO policy recommendations.. The Board received many comments on the fee structure, both the annual registry fee and application evaluation fee. Regarding the annual registry fee, the Board received comments stating that the annual minimum and percentage fee for registries was perceived by some to be too high.

Furthermore, the Board incorporated many suggestions from public comments pursuant to its JAS WG Application Support Program. <http://forum.icann.org/lists/soac-newgtldapsup-wg>.

D. What Factors the Board Found to Be Significant

The Board considered numerous factors in its analysis of fees. The Board found the following factors to be significant:

- The principle that the Board should base its decision on solid factual investigation and expert consultation and study;
- The addition of new gTLDs to the root in order to stimulate competition at the registry level;

- That the new gTLD implementation should be fully self funding and revenue neutral; and
- That existing ICANN activities regarding technical coordination of names, numbers, and other identifiers should not cross-subsidize the new program.
- That any revenue received in excess of costs be used in a manner consistent with community input.
- Evaluation fees will be re-evaluated after the first round and adjusted.

V. The Board's Reasons for Deciding the Proposed Fee Structure is Appropriate

While the primary implications of this new policy relate to possible improvements in choice and competition as a result of new domain names, there are also important cost implications, both to ICANN as a corporate entity and to gTLD applicants with regard to the implementation of the policy through the acceptance and processing of applications as set out in the policy adopted by the community and accepted by the Board.

After evaluating public comments, addressing initial concerns and carefully evaluating the twenty-seven separate possible outcomes that were identified in the application process, the Board decided on the proposed fee structure to ensure that the new gTLD implementation would be fully self-funding and revenue neutral.

4. ICANN Board Rationale on Geographic Names Associated with the gTLD Program

4. ICANN Board Rationale on Geographic Names Associated with the gTLD Program

I. Introduction

Through the development of the new gTLD program, one of the areas of interest to governments and other parties was the treatment of country/territory names and other geographic names. This area has been the subject of stakeholder input and discussion throughout the implementation process.

This memorandum focuses on the Board's consideration of the provisions for geographic names in the new gTLD program. The memorandum summarizes the Board's consideration of the issue, and the Board's rationale for implementing the new gTLD program containing the adopted measures on geographic names.

II. Brief History of ICANN's Consideration of Geographic Names Associated with The New gTLD Program

This section sets forth a brief history of significant actions on the subject of geographic names associated with the new gTLD program.

- In December 2005, the GNSO commenced a rigorous policy development process to determine whether (and the circumstances under which) new gTLDs would be added. A broad consensus was achieved that new gTLDs should be added to the root in order to further stimulate competition and for other reasons.
- On 28 March 2007, the GAC adopted principles to govern the introduction of new gTLDs (the "GAC Principles"). Sections 2.2 and 2.7 of the GAC Principles address geographic names issues at the top and second level.
 - 2.2 ICANN should avoid country, territory, or place names, and country, territory, or regional language or people descriptions, unless in agreement with the relevant governments or public authorities.
 - 2.7 Applicant registries for new gTLDs should pledge to: a) adopt, before the new gTLD is introduced, appropriate procedures for blocking, at no cost and upon demand of

governments, public authorities or IGOs, names with national or geographic significance at the second level of any new gTLD, and b) ensure procedures to allow governments, public authorities or IGOs to challenge abuses of names with national or geographic significance at the second level of any new gTLD.

http://gac.icann.org/system/files/gTLD_principles_0.pdf

- On 23 May 2007, the GNSO Reserved Names Working Group issued its final report. Recommendation 20 of the report stated that: (1) there should be no geographical reserved names; and (2) governments should protect their interests in certain names by raising objections on community grounds.
<http://gnso.icann.org/issues/new-gtlds/final-report-rn-wg-23may07.htm>
- On 8 August 2007, the GNSO issued its final report regarding the introduction of new gTLDs. Recommendation 20 of the report intended to provide protections for geographical names, stating that an application for a new gTLD should be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be targeted.
<http://GNSO.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm>
- On 26 June 2008, the Board approved the GNSO's Recommendations for the introduction of new gTLDs and directed staff to develop an implementation plan.
<http://www.icann.org/en/minutes/resolutions-26jun08.htm>
- On 24 October 2008, ICANN published Version 1 of the new gTLD Applicant Guidebook ("Version 1"), which incorporated various concepts set forth in the GAC Principles. Version 1 required applications involving geographic names to be accompanied by documents of support or non-objection from the relevant government authority. Geographic names included country and territory names, sub-national names on the ISO 3166-2 list, city names (if the applicant was intending to leverage the city name), and names of continents and regions included on a UN-maintained

list. <http://www.icann.org/en/topics/new-gtlds/draft-rfp-24oct08-en.pdf>

- The 24 October 2008 posting also included an explanatory memorandum on the topic of geographical names, describing the various considerations used in arriving at the proposed approach. <http://www.icann.org/en/topics/new-gtlds/geographic-names-22oct08-en.pdf>
- On 28 December 2008, the ccNSO commented on Version 1. The ccNSO stated that (1) the restriction of protections for country/territory names to the 6 official United Nations languages needed to be amended to translation in any language; and (2) All country names and territory names should be ccTLDs – not gTLDs and should not be allowed until the IDN ccPDP process concluded. <http://forum.icann.org/lists/gtld-evaluation/msg00015.html>
- On 12 February 2009, the Board met to discuss: (1) proposed changes to Version 1; and (2) the implementation of policy recommendations given by the GAC and GNSO. <http://www.icann.org/en/minutes/minutes-12feb09.htm>
- On 18 February 2009, ICANN published an analysis of public comments received <http://www.icann.org/en/topics/new-gtlds/agv1-analysis-public-comments-18feb09-en.pdf>
- Also on 18 February 2009, ICANN published Version 2 of the new gTLD Applicant Guidebook (“Version 2”), which clarified the definition of geographic names set forth in Version 1. In addition, Version 2 expanded protection for country and territory names involving meaningful representations in any language, and augmented requirements for documentation of support or non-objection from relevant governments and public authorities. <http://www.icann.org/en/topics/new-gtlds/draft-rfp-clean-18feb09-en.pdf>; <http://www.icann.org/en/topics/new-gtlds/comments-2-en.htm>
- On 6 March 2009, the Board resolved that it was generally in agreement with Version 2 as it related to geographic names, but directed staff to revise the relevant portions of Version 2 to provide greater specificity on the scope of protection at the top level for the

names of countries and territories listed in the ISO 3166-1 standard. The Board also directed ICANN staff to send a letter to the GAC by 17 March 2009 identifying implementation issues that have been identified in association with the GAC's advice, in order to continue communications with the GAC to find a mutually acceptable solution.

<http://www.icann.org/en/minutes/resolutions-06mar09.htm>

- On 17 March 2009, Paul Twomey delivered a letter to Janis Karklins that: (1) outlined the Board's 6 March 2009 resolution; (2) stated that ICANN's treatment of geographic names provided a workable compromise between the GAC Principles and GNSO policy recommendations; and (3) sought advice to resolve implementation issues regarding the protection of geographic names at the second level. <http://www.icann.org/correspondence/twomey-to-karklins-17mar09-en.pdf>
- On 9 April 2009, the ccNSO commented on Version 2. The ccNSO reiterated that all country and territory names are ccTLDs – not gTLDs. <http://forum.icann.org/lists/2gtld-guide/pdfc3uGsuV7CG.pdf>
- On 24 April 2009, Janis Karklins delivered a letter to Paul Twomey stating that: (1) countries should not have to use objection process and should instead wait for the IDN ccTLD PDP to delegate country names; (2) the names contained on three lists be reserved at the second level at no cost for the government; and (3) ICANN should notify registries and request the suspension of any name if the government notifies ICANN that there was a misuse of a second level domain name. <http://www.icann.org/correspondence/karklins-to-twomey-24apr09.pdf>
- On 29 May 2009, Janis Karklins delivered a letter to Paul Twomey. The letter that stated that: (1) the proposed changes to Version 2 in relation to geographic names at the second level were acceptable to the GNSO; and (2) the GNSO and the GAC were not in agreement with regard to other issues relating to Geographic names at the top level. <http://www.icann.org/correspondence/karklins-to-twomey-29may09-en.pdf>

- On 31 May, 2009, ICANN published an analysis of the public comments received concerning draft version 2 of the Applicant Guidebook.
<http://www.icann.org/en/topics/new-gtlds/agv2-analysis-public-comments-31may09-en.pdf>
- On 26 June 2009, the Board discussed proposed changes to the geographic names section of the Applicant Guidebook. These proposed changes were intended to provide greater specificity on the scope of protection at the top level for the names of countries and territories and greater specificity in the support requirements for continent or region names. The changes also provided additional guidance to applicants for determining the relevant government or public authority for the purpose of obtaining the required documentation.
<http://www.icann.org/en/minutes/resolutions-26jun09.htm>
- On 18 August 2009, Janis Karklins delivered a letter to Peter Dengate Thrush that stated that (1) strings that were a meaningful representation or abbreviation of a country name or territory name should not be allowed in the gTLD space; and (2) government or public authority should be able to initiate the redelegation process in limited circumstances.
<http://www.icann.org/correspondence/karklins-to-dengate-thrush-18aug09-en.pdf>
- On 22 September 2009, Peter Dengate-Thrush delivered a letter to Janis Karklins, responding to GAC comments on draft version 2 of the Applicant Guidebook and describing the rationale for the proposed treatment of country names, as well as the Board's general intention to provide clear rules for applicants where possible with reference to lists.
<http://www.icann.org/correspondence/dengate-thrush-to-karklins-22sep09-en.pdf>
- On 04 October 2009, ICANN published Version 3 of the new gTLD Applicant Guidebook ("Version 3").
<http://www.icann.org/en/topics/new-gtlds/draft-rfp-clean-04oct09-en.pdf>
- On 21 November 2009, ccNSO delivered a letter to the Board, raising concerns about the treatment of country and territory

names. ccNSO also submitted these comments via public comments. <http://www.icann.org/correspondence/dispain-to-dengate-thrush-21nov09-en.pdf>

- On 15 February 2010, ICANN published an analysis of the public comments received. <http://www.icann.org/en/topics/new-gtlds/summary-analysis-agv3-15feb10-en.pdf>
- On 12 March 2010, the Board resolved that ICANN should consider whether the Registry Restrictions Dispute Resolution Procedure or a similar post-delegation dispute resolution procedure could be implemented for use by government supported TLD operators where the government withdraws its support of the TLD. <http://www.icann.org/en/minutes/resolutions-12mar10-en.htm>
- On 31 May 2010, ICANN published Version 4 of the new gTLD Applicant Guidebook (“Version 4”). Version 4 excluded country and territory names from the first gTLD application round, continuing with the existing definition of country and territory names in Version 3. <http://www.icann.org/en/topics/new-gtlds/comments-4-en.htm>
- On 23 September 2010, Heather Dryden delivered a letter to Peter Dengate Thrush that stated that that Version 4 still did not take fully into consideration GAC’s concerns regarding the definition of country/territory names. <http://www.icann.org/en/correspondence/dryden-to-dengate-thrush-23sep10-en.pdf>
- On 25 September 2010, the Board met in Trondheim, Norway and decided: (1) not to include translations of the ISO 3166-1 sub-national place names in the Applicant Guidebook, and (2) to augment the definition of Continent or UN Regions in the Applicant Guidebook to include UNESCO’s regional classification list. At the same meeting, the Board resolved that ICANN staff should determine if the directions indicated by the Board regarding geographical names and other issues are consistent with GAC comments, and recommend any appropriate further action in light of GAC’s comments. <http://icann.org/en/minutes/resolutions-25sep10-en.htm>

- On 28 October, 2010, the Board discussed the scope, timing and logistics of a consultation needed with GAC regarding remaining geographic names issues in the new gTLD program. The Board agreed that staff should provide a paper on geographic names to GAC. <http://www.icann.org/en/minutes/prelim-report-28oct10-en.htm>
- On 12 November 2010, ICANN posted the proposed final version of the Applicant Guidebook (the “Proposed Final Guidebook”). <http://www.icann.org/en/topics/new-gtlds/draft-rfp-clean-12nov10-en.pdf>
- On 23 February 2011, the GAC released its Indicative Scorecard on New gTLD Outstanding Issues. This scorecard included advice from the GAC on the topics of Post-Delegation Disputes and Use of Geographic Names. http://gac.icann.org/system/files/20110223_Scorecard_GAC_outstanding_issues_20110223.pdf
- On 28 February – 1 March 2011, the Board met with GAC representatives at a meeting in Brussels to discuss the issues raised by the GAC.
- On 4 March 2011, the Board published its notes on the GAC Indicative Scorecard. The Board provided an indication of whether each component of the GAC’s advice was consistent (fully or partially) or inconsistent with the Board’s position on each of the issues. <http://gac.icann.org/system/files/2011-03-04-ICANN-Board-Notes-Actionable-GAC-Scorecard.pdf>
- On 12 April 2011, the GAC published comments on the Board’s response to the GAC Scorecard. http://gac.icann.org/system/files/20110412_GAC_comments_on_the_Board_response_to_the_GAC_scorecard_0.pdf
- On 15 April 2011, ICANN posted a discussion draft of the Applicant Guidebook (the “Discussion Draft Guidebook”). This version expanded the definition of country names to include “a name by which a country is commonly known, as demonstrated by evidence that the country is recognized by that name by an intergovernmental or treaty organization” as well as providing clarification to applicants that in the event of a dispute between a

government (or public authority) and a registry operator that submitted documentation of support from that government or public authority, ICANN will comply with a legally binding order from a court in the jurisdiction of the government or public authority that has given support to an application.

<http://www.icann.org/en/topics/new-gtlds/draft-rfp-redline-15apr11-en.pdf>

- On 26 May 2011, the GAC provided comments on the 15 April 2011 Discussion Draft.
<http://gac.icann.org/system/files/GAC%20Comments%20on%20the%20new%20gTLDs%20-%2026%20May%202011.pdf>
- On 30 May 2011, ICANN posted another version of the Applicant Guidebook, taking into account public comment and the additional comment from the GAC. This version includes some clarifications but no significant changes from the 15 April 2011 Discussion Draft.
<http://icann.org/en/topics/new-gtlds/comments-7-en.htm>

III. The Board’s Analysis of Geographic Names Associated with the gTLD Program

A. Brief Introduction to Geographic Names

This section sets forth an overview of the treatment of geographic names in the Applicant Guidebook.

- Section 2.2.1.4 provides the following guidance for applications involving geographic names.
 - Applications for gTLD strings must ensure that appropriate consideration is given to the interests of governments or public authorities in geographic names.
 - Certain types of applied-for strings are considered geographical names and must be accompanied by documentation of support or non-objection from the relevant governments or public authorities. These include:

- An application for any string that is a representation, in any language, of the capital city name of any country or territory listed in the ISO 3166-1 standard;
 - An application for a city name, where the applicant declares that it intends to use the gTLD for purposes associated with the city name;
 - An application for any string that is an exact match of a sub-national place name, such as a county, province, or state, listed in the ISO 3166-2 standard; and
 - An application for a string which represents a continent or UN region appearing on the “Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings” list.
- Applications for strings that are country or territory names will not be approved, as they are not available under the new gTLD program in this application round.
 - The requirement to include documentation of support for certain applications does not preclude or exempt applications from being the subject of objections on community grounds, under which applications may be rejected based on objections showing substantial opposition from the targeted community.
- Section 2.3.1 of the Draft Discussion Guidebook provides additional guidance:
 - If an application has been identified as a geographic name requiring government support, but the applicant has not provided sufficient evidence of support or non-objection from all relevant governments or public authorities by the end of the initial evaluation period, the applicant will have additional time to obtain and submit this information in the extended evaluation period.

B. Why the Board Addressed Geographic Names

- The treatment of geographic names in the new gTLD space was an area of significant concern to many stakeholders.
- The Board received extensive advice from the GAC regarding the protection of geographic names.
- The GNSO, in its policy development work, balanced a number of stakeholder considerations in the formation of advice on the treatment of geographic names.
- The Board recognized that government stakeholders have important interests in protecting certain geographic names.
- The Board wished to create an appropriate balance between the interests of governments in protecting certain geographic names, and the multiple uses possible for various types of names in the namespace.

C. Who the Board Consulted

- Legal Counsel
- The GNSO
- The GAC
- The ALAC
- The ccNSO
- The SSAC
- All other Stakeholders and Community members through public comment forum and other methods of participation.

D. What Significant Non-Privileged Materials the Board Reviewed

- **Communications from GAC**

- On 28 March 2007, GAC adopted the GAC Principles
http://gac.icann.org/system/files/gTLD_principles_0.pdf
- On 31 October 2007, GAC issued a communiqué
<http://gac.icann.org/communiqués/gac-2007-communique-30>
- On 26 June 2008, GAC expressed concern to Board and GNSO that the GNSO proposals do not include provisions reflecting GAC Principles regarding new gTLDs
<http://www.icann.org/en/minutes/resolutions-26jun08.htm>
- On 8 September 2008, Paul Twomey participated in a conference call with the GAC to discuss treatment of GAC Principles
- On 2 October 2008, Paul Twomey delivered a letter to Janis Karklins
<http://www.icann.org/en/correspondence/twomey-to-karklins-02oct08.pdf>
- On 8 November 2008: GAC issued a communiqué
<http://gac.icann.org/communiqués/gac-2008-communique-33>
- On 4 March 2009, GAC issued a communiqué
<http://gac.icann.org/communiqués/gac-2009-communique-34>
- On 17 March 2009, Paul Twomey delivered a letter to Janis Karklins
<http://www.icann.org/correspondence/twomey-to-karklins-17mar09-en.pdf>
- On 24 April 2009, Janis Karklins delivered a letter to Paul Twomey
<http://www.icann.org/correspondence/karklins-to-twomey-24apr09.pdf>

- On 29 May 2009, Janis Karklins delivered a letter to Paul Twomey
<http://www.icann.org/correspondence/karklins-to-twomey-29may09-en.pdf>
 - On 24 June 2009, GAC issued a communiqué
<http://gac.icann.org/communiques/gac-2010-communique-38>
 - On 18 August 2009, Janis Karklins delivered a letter to Peter Dengate
<http://www.icann.org/correspondence/karklins-to-dengate-thrush-18aug09-en.pdf>
 - On 22 September 2009, Peter Dengate-Thrush delivered a letter to Janis Karklins
<http://www.icann.org/correspondence/dengate-thrush-to-karklins-22sep09-en.pdf>
 - On 10 March 2010, Janis Karklins delivered a letter to Peter Dengate-Thrush
<http://www.icann.org/correspondence/karklins-to-dengate-thrush-10mar10-en.pdf>
 - On 23 September 2010, Heather Dryden delivered a letter to Peter Dengate-Thrush
<http://www.icann.org/en/correspondence/dryden-to-dengate-thrush-23sep10-en.pdf>
- On 23 February 2011, the GAC delivered its Indicative Scorecard on New gTLD Outstanding Issues
http://gac.icann.org/system/files/20110223_Scorecard_GAC_outstanding_issues_20110223.pdf

- **GNSO Policy Recommendations**

- On 23 May 2007, GNSO Reserved Names Working Group issued its final report

<http://gns0.icann.org/issues/new-gtlds/final-report-rn-wg-23may07.htm>

- On 8 August 2007, GNSO issued its final report regarding the introduction of new gTLDs
<http://GNSO.icann.org/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm>

- **ccNSO Comments**

- On 28 December 2008, ccNSO commented on Version 1
<http://forum.icann.org/lists/gtld-evaluation/msg00015.html>
- On 9 April 2009, ccNSO commented on Version 2
<http://forum.icann.org/lists/2gtld-guide/pdfc3uGsuV7CG.pdf>
- On 6 July 2009, ccNSO commented on an excerpt from Version 3
<http://forum.icann.org/lists/e-gtld-evaluation/msg00006.html>
- On 21 November 2009, ccNSO commented on Version 3 again <http://www.icann.org/correspondence/disspain-to-dengate-thrush-21nov09-en.pdf>

- **Public Comments**

- Comments from the community
<http://www.icann.org/en/topics/new-gtlds/comments-analysis-en.htm>

E. What Concerns the Community Raised

- There is a need for clarification of the geographic names process in the Application Guidebook.
- The new gTLDs should respect the sensitivity regarding terms with national, cultural, geographic and religious significance.

- The enumerated grounds for objection might not provide sufficient grounds to safeguard the interest of national, local and municipal governments in the preservation of geographic names that apply to them.
- Delegation and registration of country and territory names is a matter of national sovereignty.
- There is concern over the fees involved in the dispute resolution process, particularly for governments.
- There is concern over perceived inconsistencies with the GNSO policy recommendations.

F. What Factors the Board Found to Be Significant

- The balance of retaining certainty for applicants and demonstrating flexibility in finding solutions;
- The goals of providing greater clarity for applicants and appropriate safeguards for governments and the broad community;
- The goal of providing greater protections for country and territory names, and greater specificity in the support requirements for the other geographic names;
- The goal of respecting the relevant government or public authority's sovereign rights and interests;
- The risk of causing confusion for potential applicants and others in the user community; and
- The risk of possible misuse of a country or territory name or the misappropriation of a community label.

G. The Board's Reasons For the Proposed Approach to Geographic Names

- ICANN's Core Values include introducing and promoting competition in the registration of domain names where practicable and beneficial in the public interest.

- The Board has accepted GAC advice to require government approval in the case of applications for certain geographic names.
- The Board intended to create a predictable, repeatable process for the evaluation of gTLD applications. Thus, to the extent possible, geographic names are defined with respect to pre-existing lists.
- The Board recognized that the community objection process recommended by the GNSO to address misappropriation of a community label would be an additional avenue available to governments to pursue a case where a name was not protected by reference to a list. The Board discussed this topic extensively with the GAC. As a result of the consultation on this and other topics, the Applicant Guidebook was revised to incorporate an Early Warning process which governments could use to flag concerns about a gTLD application at an early stage of the process. These procedures could also help address any concerns from governments about geographic names not already protected in the process.
- The Board also confirmed that the GAC has the ability to provide GAC Advice on New gTLDs concerning any application. Thus, governments would not be required to file objections and participate in the dispute resolution process, but rather, may raise their concerns via the GAC. This process could be used, for example, for governments to object to an application for a string considered by a government to be a geographic name.
- The formal objection and dispute resolution process does remain available to governments as an additional form of protection. Limited funding support from ICANN for objection filing fees and dispute resolution costs is available to governments.
- The Board adopted GAC recommendations for protections of geographic names in second-level registrations.

5. ICANN Board Rationale on the Risk of Increased Malicious Conduct Associated with the New gTLD Program

5. ICANN Board Rationale on the Risk of Increased Malicious Conduct Associated with the New gTLD Program

I. Introduction

Through the development of the new gTLD program and the numerous opportunities for public comment and receipt of community input on the new gTLD program, one of the issues that emerged as a commonly-raised concern was the potential for an increased risk of instances of malicious conduct associated with the introduction of New gTLDs. ICANN committed to (and remains committed to) addressing this issue. The Affirmation of Commitments of the United States Department of Commerce and ICANN includes the following provision:

ICANN will ensure that as it contemplates expanding the top-level domain space, the various issues that are involved (including competition, consumer protection, security, stability and resiliency, malicious abuse issues, sovereignty concerns, and rights protection) will be adequately addressed prior to implementation.

<http://www.icann.org/en/documents/affirmation-of-commitments-30sep09-en.htm>. These issues were not newly identified in the Affirmation of Commitments. From the outset, ICANN has sought to address these issues as it has prepared to implement the new gTLD program, and has mechanisms and processes designed to address this concern.

This memorandum focuses on the Board's consideration of the risk of a potential increase in malicious conduct associated with the introduction of new gTLDs. The memorandum summarizes: the Board's consideration of the issue, measures approved to mitigate instances of malicious conduct, and the Board's rationale for implementing the new gTLD program while adopting and implementing measures to mitigate that risk.

II. History of the Board's Consideration of Malicious Conduct

This section contains a brief history of significant actions taken by the ICANN Board to mitigate the potential for malicious conduct associated with the new gTLD program.

- On 26 June 2008, the Board adopted the Generic Names Supporting Organization's ("GNSO") policy recommendations for the introduction of new gTLDs, and directed ICANN staff to continue to develop a detailed implementation plan.
See Board Resolution at http://www.icann.org/en/minutes/resolutions-26jun08.htm#_Toc76113171; see Board Meeting Transcript at https://par.icann.org/files/paris/ParisBoardMeeting_26June08.txt
- On 16 May 2009, the Board participated in a workshop on issues related to the new gTLD program, including the security and stability of the Internet generally and the potential risk of malicious conduct in particular. [Rationale-all -final-20110609.doc](#)
- On 20 June 2009, the Board participated in another workshop on issues related to the new gTLD program, including the risk of malicious conduct on the Internet.
- On 26 June 2009, the Board resolved that new gTLDs be prohibited from using Domain Name System ("DNS") redirection and synthesized DNS responses; directed ICANN staff to amend the draft Applicant Guidebook accordingly; and further directed ICANN staff to educate the community about the harms associated with DNS redirection and synthesized DNS responses and how to stop them.
See Board Resolution at <https://icann.org/en/minutes/resolutions-26jun09.htm>; see Board Meeting Transcript at <http://syd.icann.org/files/meetings/sydney2009/transcript-board-meeting-26jun09-en.txt>
- During its study of malicious conduct, ICANN staff solicited and received comments from multiple outside sources, including the Anti Phishing Working Group (APWG), Registry Internet Safety Group (RISG), the Security and Stability Advisory Committee (SSAC), Computer Emergency Response Teams (CERTs) and members of the banking/financial and Internet security communities. These parties described several potential malicious conduct issues and encouraged ICANN to consider ways these might be addressed or mitigated in new gTLD registry agreements.
- On 1 October 2009, ICANN announced the launch of the Expedited Registry Security Request ("ERSR") process. ICANN intends that

gTLD registries will use the ERSR process for security incidents that require immediate action by the registry in order to avoid adverse effects upon DNS stability or security. The ERSR, a web-based submission procedure, reflects the result of a collaborative effort between ICANN and existing gTLD registries to develop a process for quick action in cases where gTLD registries: (1) inform ICANN of a present or imminent security threat to their TLD and/or the DNS; and (2) request a contractual waiver for actions they may take or already have taken to mitigate or eliminate the threat.

<http://www.icann.org/en/announcements/announcement-01oct09-en.htm>

- On 3 October 2009, ICANN published an Explanatory Memorandum on Mitigating Malicious Conduct, part of a series of documents published by ICANN to assist the global Internet community in understanding the development of the new gTLD program and the requirements and processes presented in the Applicant Guidebook. <https://icann.org/en/topics/new-gtlds/mitigating-malicious-conduct-04oct09-en.pdf>
- On 24 November 2009, ICANN announced that it was soliciting members for two new temporary expert advisory groups to study issues related to the risk of malicious conduct: (1) the establishment of a high security TLD designation; and (2) centralized zone access. <https://icann.org/en/announcements/announcement-03dec09-en.htm>
- On 3 December 2009, ICANN announced that it had formed the High Security Zone Advisory Group and the Centralized Zone File Access Advisory Group. <http://www.icann.org/en/announcements/announcement-03dec09-en.htm>
- On 22 February 2010, ICANN published papers by the High Security Zone Advisory Committee and the Central File Access Advisory Committee and solicited public comments. As the result of the latter paper, a uniform method of accessing registry data is now incorporated into the Guidebook. <http://www.icann.org/en/announcements/announcement-22feb10-en.htm>

- On 28 May 2010, ICANN published an Updated Explanatory Memorandum of Mitigating Malicious Conduct. The paper described specific malicious conduct mitigation measures that were recommended by recognized experts in this area that were subsequently incorporated into the Applicant Guidebook.
<http://www.icann.org/en/topics/new-gtlds/mitigating-malicious-conduct-memo-update-28may10-en.pdf>
- On 16 June 2010, ICANN solicited comments on the High Security Zone Advisory Committee's Policy Development Snapshot #2.
<http://www.icann.org/en/topics/new-gtlds/hstld-program-snapshot-2-16jun10-en.pdf>
- On 22 September 2010, ICANN published a Request for Information on the proposed High Security Zone program and requested that all submissions be made by 23 November 2010.
- On 23 September 2010, the GAC outlined to the Board its concerns and recommendations for the new gTLD program and its comments on version 4 of the Draft Applicant Guidebook.
<http://www.icann.org/en/correspondence/dryden-to-dengate-thrush-23sep10-en.pdf>
- On 24-25 September 2010, the Board participated in another workshop on issues related to the new gTLD program, including discussions on background screening, orphan glue records, and the High-Security Top-Level Domain (HSTLD) concept.
<http://www.icann.org/en/minutes/resolutions-25sep10-en.htm#2.8>
- On 12 November 2010, ICANN published a second Updated Explanatory Memorandum of Mitigating Malicious Conduct.
<https://icann.org/en/topics/new-gtlds/explanatory-memo-mitigating-malicious-conduct-12nov10-en.pdf>. This memo noted ICANN's adoption of the Zone File Access Advisory Group's [Strategy Proposal](#) for a recommendation to create a mechanism to support the centralization of access to zone-file records. This centralized approach is intended to streamline the access and approval process and standardize the format methodology for zone file consumers (e.g. anti-abuse and trademark protection organizations, researchers, academia, etc.). The Centralized Zone Data Access Provider pilot program was deployed for testing in June 2011 and a

production version program is anticipated to be deployed before any new gTLDs are delegated in the root. [Rationale-all -final-20110609.doc](#)

- On 9 December 2010, the GAC provided ICANN with a list of issues it considered to be “outstanding” and requiring further consideration, including consumer protection/the risk of malicious conduct.
http://gac.icann.org/system/files/Cartagena_Communique.pdf
- On 10 December 2010, the Board resolved that ICANN had addressed the issue of the risk of increased malicious conduct in new gTLDs by adopting and implementing various measures, including centralized zone file access. The Board further stated that these solutions reflected the negotiated position of the ICANN community, but that ICANN would continue to take into account public comment and the advice of the GAC.
See Board Resolution at <https://icann.org/en/minutes/resolutions-10dec10-en.htm>; see Board Meeting Minutes at <https://icann.org/en/minutes/minutes-10dec10-en.htm>
- On 21 February 2011, ICANN published a briefing paper on issues the GAC had identified as “outstanding” in September 2010, including certain issues related to the risk of increased malicious conduct.
<http://www.icann.org/en/announcements/announcement-6-21feb11-en.htm>
- On 28 February 2011 and 1 March 2011, the GAC and the Board conferred about remaining outstanding issues related to the new gTLD program, including certain issues related to the risk of increased malicious conduct.
<http://www.icann.org/en/announcements/announcement-23feb11-en.htm>
- On 4 March 2011, the Board published its comments on the GAC Scorecard.
<http://www.icann.org/en/topics/new-gtlds/board-notes-gac-scorecard-04mar11-en.pdf>
- On 15 April 2011, ICANN posted a discussion draft of the Applicant Guidebook (the “Discussion Draft Guidebook”).

<http://www.icann.org/en/topics/new-gtlds/draft-rfp-redline-15apr11-en.pdf>

- On 26 May 2011, the GAC provided comments on the 15 April 2011 Discussion Draft.
<http://gac.icann.org/system/files/GAC%20Comments%20on%20the%20new%20gTLDs%20-%2026%20May%202011.pdf>
- The GAC-Board discussions resulted in additional forms of background checks and requirements for new registries to cooperate with law enforcement.
- On 30 May 2011, ICANN posted another version of the Applicant Guidebook, taking into account public comment and the additional comment from the GAC.
<http://icann.org/en/topics/new-gtlds/comments-7-en.htm>

III. The Board's Analysis of the Risk of Increased Malicious Conduct Associated with the New gTLD Program

A. Why the Board is Addressing This Issue Now

- ICANN's mission statement and one of its founding principles is to promote competition. The expansion of TLDs will allow for more innovation and choice in the Internet's addressing system. The ICANN Board seeks to implement the new gTLD program together with measures designed to mitigate the risk of increased malicious conduct on the Internet.
- ICANN committed to the U.S. Department of Commerce that it would address the risk of malicious conduct in new gTLDs prior to implementing the program.
- The ICANN Board is committed to making decisions based on solid factual investigation and expert analysis.

B. Who the Board Consulted

- The GNSO
- The GAC
- The At-Large Community and ALAC

- The ICANN Implementation Recommendation Team (“IRT”)
- The Anti-Phishing Working Group
<http://www.antiphishing.org/>
- The Registry Internet Safety Group
<http://registrysafety.org/website/>
- The ICANN Security and Stability Advisory Committee
<http://www.icann.org/en/committees/security/>

<http://www.icann.org/en/announcements/announcement-6-21feb11-en.htm>

- Comments from the Community

D. What Concerns the Community Raised

- There was concern expressed that the new gTLD program will lead to an expansion of crime on the Internet, including look-alike domains, drop catching, domain tasting, domain hijacking, malware distribution, identity theft and miscellaneous deceptive practices.
- Wrongdoers may apply to operate registries.
- Wrongdoers may exploit technical weaknesses in the Internet, including automated registration services.
- End user confusion about new gTLDs may lead to increased fraud. For example, end users may be confused about TLDs whose mere names raise expectations of security.
- Certain new gTLDs may not comply with some national laws.
- There is a need for an enhanced control framework for TLDs with intrinsic potential for abuse, including those involving e-service transactions requiring a high confidence infrastructure (such as electronic financial services or electronic voting) and those involving critical assets (such as energy infrastructures or medical services).
- There is a need for better and more efficient identification of domain name resellers.
- There is a need to ensure the integrity and utility of registry information.
- The new gTLD program should safeguard the privacy of personal and confidential information.
- New gTLDs may adversely affect trademark owners.
- ICANN and others should better enforce provisions in agreements with registries and registrars.
- ICANN should impose new requirements on TLD operators.

- There is a need for systemic processes to combat abuse on the Internet.

E. What Steps the Board Resolved to Take to Mitigate Malicious Conduct

The Board believes the following measures will greatly help to mitigate the risk of increasing malicious conduct arising from new gTLDs. ICANN has incorporated the majority of these measures in the current version of the Applicant Guidebook and/or the registry agreement, and its efforts to implement the remaining measures are ongoing.

<http://www.icann.org/en/topics/new-gtlds/dag-en.htm>

- Required vetting of registry operators: The application process includes standardized, thorough background and reference checks for companies and individuals (key officers) to mitigate the risk that known felons, members of criminal organizations or those with histories of bad business operations (including cybersquatting) will become involved in registry operations or gain ownership or proxy control of registries.
- Required demonstrations of plans for Domain Name System Security Extensions (“DNSSEC”) deployment: DNSSEC is designed to protect the Internet from most attacks, including DNS cache poisoning. It is a set of extensions to the DNS which provide: (1) origin authentication of DNS data; (2) data integrity; and (3) authenticated denial of existence.
- Prohibition on wildcarding: The prohibition on wildcarding bans DNS redirection and synthesized DNS responses to reduce the risk of DNS redirection to a malicious site.
- Required removal of orphan glue records: Removal of orphan glue records destroys potential name server “safe havens” that abusers can use to support criminal domain registrations. Registry operators will be required to remove orphan glue records when presented with evidence in written form that such records are present in connection with malicious conduct.
- Mandatory thick WHOIS records: Registry Operators must maintain and provide public access to registration data using a thick WHOIS data model. Thick WHOIS will help mitigate malicious conduct and

trademark abuse by ensuring greater accessibility and improved stability of records.

- Centralization of zone file access: Central coordination of zone file data will allow the anti-abuse community to efficiently obtain updates on new domains as they are created within each zone, and to reduce the time necessary to take corrective action within TLDs experiencing malicious activity. The program is designed to reduce differences in and complexities of contractual agreements, standardize approaches and improve security and access methods.
- Mandatory documentation of registry level abuse contacts and procedures: Registry operators will provide a single abuse point of contact for all domains within the TLD who is responsible for addressing and providing timely responses to abuse complaints received from recognized parties, such as registries, registrars, law enforcement organizations and recognized members of the anti-abuse community. Registries also must provide a description of their policies to combat abuse.
- Required participation in the Expedited Registry Security Request (“ERSR”) process: ICANN developed the ERSR process in consultation with registries, registrars and security experts, based on lessons learned in responding to the Conficker worm, to provide a process for registries to inform ICANN of a present or imminent “security situation” involving a gTLD and to request a contractual waiver for actions the registry might take or has taken to mitigate or eliminate the security concerns. “Security situation” means: (1) malicious activity involving the DNS of a scale and severity that threatens the systematic security, stability and resiliency of the DNS; (2) potential or actual unauthorized disclosure, alteration, insertion or destruction of registry data, or the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards; or (3) potential or actual undesired consequences that may cause or threaten to cause a temporary or long-term failure of one or more of the critical functions of a gTLD registry as defined in ICANN’s gTLD Registry Continuity Plan.
- Framework for High Security Zones Verification: The concept of a voluntary verification program is a mechanism for TLDs that desire

to distinguish themselves as secure and trusted, by meeting additional requirements for establishing the accuracy of controls for the registry, registrar and registrant processing, as well as periodic independent audits. A draft framework was created by the HSTLD working group.. The working group’s Final Report may be used to inform further work. ICANN will support independent efforts toward developing voluntary high-security TLD designations, which may be available to gTLD applicants wishing to pursue such designations.

F. What Factors the Board Found to Be Significant

The Board considered numerous factors in its analysis of the potential for malicious conduct associated with the new gTLD program. The Board found the following factors to be significant:

- the principle that the Board should base Policy on solid factual investigation and expert analysis;
- whether new gTLDs would promote consumer welfare;
- certain measures intended to mitigate the risk of malicious conduct may raise implementation costs for new gTLD registries;
- the creation of new TLDs may provide an opportunity for ICANN to improve the quality of domain name registration and domain resolution services in a manner that limits opportunities for malicious conduct;
- most abuse takes place in larger registries because that is where abusive behavior “pays back,”; a more diverse gTLD landscape makes attacks less lucrative and effective;
- the risk of increasing exposure to litigation; and
- the lack of reported problems concerning increased criminal activity associated with ICANN’s previous introductions of new TLDs.

IV. The Board’s Reasons for Proceeding with the New gTLD Program While Implementing Measures to Mitigate the Risk of Malicious Conduct

- Modest additions to the root have demonstrated that additional TLDs can be added without adversely affecting the security and stability of the domain name system.
- ICANN’s “default” position should be for creating more competition as opposed to having rules that restrict the ability of Internet stakeholders to innovate. New gTLDs offer new and innovative opportunities to Internet stakeholders.
- Most abuse takes place in larger registries. A more diverse gTLD landscape makes attacks less lucrative and effective.
- New gTLD users might rely on search functions rather than typing a URL in an environment with many TLDs, lessening the effectiveness of forms of cyber-squatting.
- Brand owners might more easily create consumer awareness around their brands as a top-level name, reducing the effectiveness of phishing and other abuses.
- ICANN has worked with the community to address concerns relating to potential malicious conduct in the new gTLD space. New and ongoing work on these issues in the policy development arena may provide additional safeguards recommended as a result of the bottom-up process, and ICANN will continue to support these efforts.
- Data protection is best accomplished by data protection tools, including audits, contractual penalties such as contract termination, punitive damages, and costs of enforcement, as well as strong enforcement of rules.
- The measures adopted by ICANN, including centralized zone file access, and other mechanisms, address the principal concerns raised by stakeholders about the potential for proliferation of malicious conduct in the new gTLD space. A combination of verified security measures and the implementation of DNSSEC will

allow users to find and use more trusted DNS environments within the TLD market.

- Revised applicant procedures and agreements reflecting the measures to mitigate the risk of malicious conduct will permit ICANN to address certain risks of abuse contractually and also will permit ICANN to refer abuses to appropriate authorities. ICANN can amend contracts and the applicant guidebook to address harms that may arise as a direct or indirect result of the new gTLD program.

6. ICANN Board Rationale on Objection Process Associated with the New gTLD Program

6. ICANN Board Rationale on Objection Process Associated with the New gTLD Program

I. Introduction

Recommendation 12 of the Generic Names Supporting Organization (GNSO) Final Report on the Introduction of New gTLDs (<http://gnsso.icann.org/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm>), and approved by the Board in June 2008 (http://www.icann.org/en/minutes/resolutions-26jun08.htm#_Toc76113171) states that, “[D]ispute resolution and challenge processes must be established prior to the start of the process.” Further, Implementation Guideline H, also set forth by the GNSO, states “External dispute providers will give decisions on objections.”

Based on the GNSO Policy and implementation planning, it was determined that four of the GNSO recommendations should serve as a basis for an objection process managed by external providers. Those include the following:

- (i) Recommendation 2 “Strings must not be confusingly similar to an existing top-level domain or a Reserved Name” (String Confusion Objection);
- (ii) Recommendation 3 “Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law” (Legal Rights Objection);
- (iii) Recommendation 6 “Strings must not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law” (Limited Public Interest Objection); and
- (iv) Recommendation 20 “An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted” (Community Objection).

Thus, a process allowing third parties to object to applications for new gTLDs on each the four grounds stated above was developed.²

Subsequent to the development and refinement of the original Objection Procedures based on the GNSO recommendations and set out in Module 3 of the Applicant Guidebook (see <http://www.icann.org/en/topics/new-gtlds/objection-procedures-clean-30may11-en.pdf>) a separate process has been established for the GAC. That process is also set out in Module 3 of the Applicant Guidebook. In short, there is now a formal process for the GAC to provide advice in relation to the approval of an application.

II. History of the Development of the Objection Processes and Procedures Associated with the New gTLD Program

This section sets forth a history of significant actions taken on the subject of the objection process associated with the new gTLD program.

- In December 2005, the GNSO commenced a rigorous policy development process to determine whether (and the circumstances under which) new gTLDs would be added. A broad consensus was achieved that new gTLDs should be added to the root in order to further stimulate competition and for numerous other reasons.
- In August 2007, the GNSO issued its final report regarding the introduction of new gTLDs. Recommendation 12 of the report (“Recommendation 12”) states that “[d]ispute resolution and challenge processes . . . must be established prior to the start of the process” and Implementation Guideline H states that “External dispute providers will give decisions on objections.” <http://gns0.icann.org/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm>
- In December 2007, ICANN posted a call for expressions of Interest from potential Dispute Resolution Service Providers (DSRP) for the new gTLD Program. <http://www.icann.org/en/announcements/announcement-21dec07.htm>

² The International Centre for Dispute Resolution (ICDR) has agreed to administer disputes brought pursuant to String Confusion Objections. The Arbitration and Mediation Center of the World Intellectual Property Organization (WIPO) has agreed to administer disputes brought pursuant to Legal Rights Objections. The International Center of Expertise of the International Chamber of Commerce (ICC) has agreed to administer disputes brought pursuant to Limited Public Interest and Community Objections.

- Throughout 2008, external dispute resolution service providers were evaluated and selected. As noted above in footnote 1, the ICDR will administer disputes brought pursuant to String Confusion Objections, WIPO will administer disputes brought pursuant to Legal Rights Objections and the ICC will administer disputes brought pursuant to Limited Public Interest and Community Objections.
- Also throughout 2008, ICANN conducted public consultations, as well as thorough and global research to help define the standing requirements and standards to be used by dispute resolution panels to resolve the disputes on the various Objection grounds.
- In October 2008, ICANN published draft version 1 of the Applicant Guidebook, including Module 3, which laid out the Dispute Resolution Procedures. At that same time, ICANN posted a paper for community discussion entitled “Morality and Public Order Objection Considerations in New gTLDs,” which summarized the implementation work that had been accomplished in response to Recommendation 6 (now called Limited Public Interest Objection).
<http://www.icann.org/en/topics/new-gtlds/morality-public-order-draft-29oct08-en.pdf>
- In February 2009, the Board discussed who would have standing to object to an applied-for string on the basis of morality and public order. There was a sense that an objection-based dispute resolution process was the appropriate method for addressing possible disputes. There was also a sense that any injured party would have standing to object. Limiting standing to governments or other official bodies might not address the potential harm.
<http://www.icann.org/en/minutes/minutes-12feb09.htm>
- Also in February 2009, with the second draft version of the Applicant Guidebook, ICANN posted the separate “New gTLD Dispute Resolution Procedure”. <http://www.icann.org/en/topics/new-gtlds/draft-dispute-resolution-procedure-18feb09-en.pdf>
- Also in February 2009, ICANN posted a paper for community discussion entitled “Description of Independent Objector for the New gTLD Dispute Resolution Process,” which explored the potential benefits of

allowing an “Independent Objector” to object within the dispute resolution process.

<http://www.icann.org/en/topics/new-gtlds/independent-objector-18feb09-en.pdf>

- In May 2009, along with revised excerpts of the Applicant Guidebook, ICANN posted a paper for community discussion entitled “Standards for Morality and Public Order Research,” which summarized the research relating to the development of standards for morality and public order (now Limited Public Interest) objections.
<http://www.icann.org/en/topics/new-gtlds/morality-public-order-30may09-en.pdf>
- In May 2010, ICANN posted a paper entitled “‘Quick Look’ Procedure for Morality and Public Order Objections,” which summarized a procedure requested by community members by which morality and public order objections could be dismissed if they are determined to be “manifestly unfounded and/or an abuse of the right to object.”
<http://www.icann.org/en/topics/new-gtlds/morality-public-order-quick-look-28may10-en.pdf>
- In August 2010, Heather Dryden, Chair of the GAC, delivered a letter to Peter Dengate Thrush, Chairman of the Board, requesting that the proposed procedure for morality and public order objections be replaced with an alternative mechanism.
<http://www.icann.org/en/correspondence/gac-to-dengate-thrush-04aug10-en.pdf>
- Also in August 2010, the Board considered Submission No. 2010-08-05-15, which discussed the feedback received by the GAC with regard to the proposed procedure for morality and public order objections.
<http://www.icann.org/en/minutes/board-briefing-materials-2-05aug10-en.pdf>
- In September 2010, the cross-stakeholder group known as the New gTLD Recommendation 6 Cross-Community Working Group (“Rec6 CWG”) published a report on the Implementation of the Recommendation (the “Rec6 CWG report”). The report provided guidance to the Board with regard to procedures for addressing culturally objectionable and/or sensitive strings, while protecting internationally recognized freedom of expression rights. This report

was posted for public comment. [See link at http://www.icann.org/en/announcements/announcement-2-22sep10-en.htm](http://www.icann.org/en/announcements/announcement-2-22sep10-en.htm)

- Also in September 2010, the Board met in Trondheim, Norway and stated that they would “accept the [Rec6 CWG] recommendations that are not inconsistent with the existing process, as this can be achieved before the opening of the first gTLD application round, and [would] work to resolve any inconsistencies.” At the same meeting, the Board agreed that it had “ultimate responsibility for the new gTLD program ... however, [that it wished] to rely on the determination of experts on these issues.”
<http://www.icann.org/en/minutes/resolutions-25sep10-en.htm>
- In October 2010, the Board again discussed the Rec6 CWG report, indicating that several of the working group recommendations could be included in the Guidebook for public discussion and that the working group recommendations should be discussed publicly at ICANN’s upcoming meeting in Cartagena.
<http://www.icann.org/en/minutes/resolutions-28oct10-en.htm>
- In November 2010, ICANN posted the proposed final version of the Applicant Guidebook (the “Proposed Final Guidebook”), which adopted several of the recommendations set forth in the Rec6 CWG report.
<http://www.icann.org/en/topics/new-gtlds/draft-rfp-clean-12nov10-en.pdf>
- Also in November 2010, ICANN posted an explanatory memorandum entitled “Limited Public Interest Objection,” which described the recommendations set forth in the Rec6 CWG report, ICANN’s responses to those recommendations and ICANN’s rationale for its responses.
<http://www.icann.org/en/topics/new-gtlds/explanatory-memorality-public-order-12nov10-en.pdf>
- In December 2010 in Cartagena, Columbia, the Board had two separate sessions with the Rec6 CWG to help achieve further understanding of the working group’s positions.
- On 23 February the GAC issued the “GAC indicative scorecard on new gTLD issues listed in the GAC Cartagena Communique” (“Scorecard”)

identifying the Objection Process as one of twelve areas for discussion.
<http://www.icann.org/en/topics/new-gtlds/gac-scorecard-23feb11-en.pdf>

- On 28 February and 1 March 2011, the Board and the GAC had a two-day consultation in Brussels, Belgium to discuss the issues raised in the Scorecard, including the suggestion that the GAC should not be subject to the Objection Procedures for Limited Public Interest Objections. Instead, a process was discussed by which the GAC could provide public policy advice on individual gTLD applications directly to the Board
- On 12 April 2011, the GAC issued “GAC comments on the ICANN’s Board’s response to the GAC Scorecard” that also addressed the Objection Procedures. <http://www.icann.org/en/topics/new-gtlds/gac-comments-board-response-gac-scorecard-12apr11-en.pdf>
- On April 15 2011, ICANN posted the April 2011 Discussion Draft of the Applicant Guidebook, containing a new “GAC Advice” section detailing the procedure by which the GAC could provide advice to the Board concerning gTLD applications. <http://www.icann.org/en/topics/new-gtlds/draft-dispute-resolution-procedures-redline-15apr11-en.pdf>
- Also on 15 April 2011, ICANN posted an Explanatory Memorandum entitled ‘GAC and Government Objections; Handling of Sensitive Strings; Early Warning’ to describe details of the new procedures. <http://www.icann.org/en/topics/new-gtlds/gac-objections-sensitive-strings-15apr11-en.pdf>
- [Also on 15 April 2011, ICANN posted](http://www.icann.org/en/topics/new-gtlds/board-notes-gac-scorecard-clean-15apr11-en.pdf) “Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response” discussing its response to the GAC’s concerns on the Objection Process. <http://www.icann.org/en/topics/new-gtlds/board-notes-gac-scorecard-clean-15apr11-en.pdf>
- [On 20 May the Board and GAC had further consultations that included discussion on the Objection Process.](http://www.icann.org/en/topics/new-gtlds/transcript-board-gac-20may11-en.pdf) <http://www.icann.org/en/topics/new-gtlds/transcript-board-gac-20may11-en.pdf>

- [On 30 May, ICANN posted the current version of the Applicant Guidebook with additional refinements to the Objection Process as it relates to the GAC. http://www.icann.org/en/topics/new-gtlds/comments-7-en.htm](http://www.icann.org/en/topics/new-gtlds/comments-7-en.htm)
- [On 19 June 2011, the Board and the GAC had additional consultations.](#)

III. The Board’s Analysis of the Objection Process Associated with the New gTLD Program

A. Brief Introduction to the Objection Process

1. Brief Overview of the Objection Process for all except the GAC.

- The new gTLD process is an objection-based process, in which parties with standing may file with an identified independent dispute resolution provider a formal objection to an application on certain enumerated grounds (see footnote 1 for list of providers). The grounds for filing a formal objection to an application are:
 - the gTLD string is confusingly similar to an existing TLD or another applied-for gTLD string in the same round of applications (“String Confusion Objection”)
 - the gTLD string infringes the existing legal rights of the objector (“Legal Rights Objection”)
 - the gTLD string is contrary to generally accepted legal norms of morality and public order that are recognized under international principles of law (“Limited Public Interest Objection”)
 - there is substantial opposition to the application from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted (“Community Objection”).

<http://www.icann.org/en/topics/new-gtlds/draft-rfp-redline-15apr11-en.pdf>

- If the objectors have standing, their objections will be considered by a panel of qualified experts, that will issue a Determination.

- Specific standards under which each of the four types of objections will be evaluated are set forth in detail in Module 3 of the current Applicant Guidebook.
- There will be objection fees (fixed for String Confusion and Community Objections and hourly for Limited Public Interest and Community Objections) that will be refundable to the prevailing party.

2. Brief Overview of the GAC Advice Process.

- The process for GAC Advice on New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities.
- For the Board to be able to consider the GAC advice during the evaluation process, the GAC advice would have to be submitted by the close of the Objection Filing Period
- Where GAC Advice on New gTLDs is received by the Board concerning an application, ICANN will publish the Advice and endeavor to notify the relevant applicant(s) promptly. The applicant will have a period of 21 calendar days from the publication date in which to submit a response to the ICANN Board.
- ICANN will consider the GAC Advice on New gTLDs as soon as practicable. The Board may consult with independent experts, such as those designated to hear objections in the New gTLD Dispute Resolution Procedure, in cases where the issues raised in the GAC advice are pertinent to one of the subject matter areas of the objection procedures.
- The receipt of GAC advice will not toll the processing of any application (i.e., an application will not be suspended but will continue through the stages of the application process).

B. Why the Board Addressed the Objection Process as it has

- The GNSO Policy Recommendations called for the creation of a dispute resolution or objection process in the new gTLD program.

- The GNSO also provided implementation guidelines suggesting that external dispute resolution providers should be utilized.
- A fully established objection process, with uniform standing requirements and standards available to the dispute resolution service providers, ensures that a reasonably objective process is in place. It further ensures that experts in dispute resolution make any determinations on the disputes after considering all of the evidence.
- A fully established dispute resolution process provides parties with a cost-effective alternative to initiating action in court, if there is a valid objection.
- The GAC advised the Board that it was not amendable to utilizing the standard Objection Process established for the new gTLD program. Accordingly, the Board worked closely with the GAC to develop a mutually acceptable “objection” mechanism, in the form of GAC Advice.

C. Who the Board Consulted

- Legal Counsel
- International arbitration experts
- Judges from various international tribunals such as the International Court of Justice
- Attorneys who practice in front of international tribunals such as the International Court of Justice
- The GNSO
- The GAC
- The ALAC
- The ccNSO
- The SSAC
- All other Stakeholders and Community Members

D. Significant Non-Privileged Materials the Board Reviewed

- GAC Principles Regarding New gTLDs.
http://gac.icann.org/system/files/gTLD_principles_0.pdf
- GNSO “Final Report – Introduction of new generic top-level domains.” <http://gns0.icann.org/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm>
- Report on Implementation of GNSO New GTLD Recommendation #6. See link to Report from <http://www.icann.org/en/announcements/announcement-2-22sep10-en.htm>
- All materials related to the Board/GAC consultation. See <http://www.icann.org/en/topics/new-gtlds/related-en.htm>
- All relevant GAC letters and Communiqués. See <http://www.icann.org/en/correspondence/> and <http://gac.icann.org/communiqués>.
- Applicant Guidebook, related explanatory memoranda, other related documents and related comment summaries and analyses:
 - Each version of the Applicant Guidebook, including all ICANN created explanatory memoranda and the specific proposals for trademark protections, along with numerous pages of public comment summaries and analysis related to the Objection Procedures. See (i) <http://www.icann.org/en/topics/new-gtlds/comments-en.htm>; (ii) <http://www.icann.org/en/topics/new-gtlds/comments-2-en.htm#expmem>; (iii) <http://www.icann.org/en/topics/new-gtlds/comments-en.htm>; (iv) <http://www.icann.org/en/topics/new-gtlds/comments-3-en.htm>; (v) <http://www.icann.org/en/topics/new-gtlds/gns0-consultations-reports-en.htm>; (vi) <http://www.icann.org/en/announcements/announcement-4-15feb10-en.htm>; (vii) <http://www.icann.org/en/topics/new-gtlds/summaries-4-en.htm>; (viii) <http://www.icann.org/en/topics/new-gtlds/comments-5-en.htm>; (ix)

<http://www.icann.org/en/topics/new-gtlds/comments-analysis-en.htm>; (x) <http://www.icann.org/en/topics/new-gtlds/dag-en.htm>; (xi) <http://www.icann.org/en/topics/new-gtlds/comments-6-en.htm>; and (xii) <http://www.icann.org/en/topics/new-gtlds/comments-7-en.htm>

E. Significant Concerns the Community Raised

- What will be done if there is an application for a highly objectionable name, but there are no objectors within the process?
- There is a need for clarification on what type of string would be considered to be “contrary to generally accepted legal norms relating to morality and public order . . . recognized under international principles of law.”
- Are the standards set out for each objection appropriate?
- How will fees be determined?
- Will ICANN fund certain stakeholders’ objections?
- Should it be a dispute process rather than a mere objection process?
- Are the independent dispute resolution providers the rights ones to handle the specific objections?
- Neither Governments nor the GAC should be required to utilize the Objection Procedures.

F. Factors the Board Found to Be Significant

- The Dispute Resolution Process is designed to protect certain interests and rights, those interests identified by the GNSO in their policy recommendations that were approved by the ICANN Board.
- The Dispute Resolution Process will be more cost effective and efficient than judicial proceedings. Fees will be paid directly to the dispute resolution providers.

- The Dispute Resolution Process should be independent as possible so that the applicants, the community and ICANN have the benefit of neutral expert opinion.
- It is critical to address risk to the established processes and to ICANN by providing a path for considering controversial applications that might otherwise result in litigation or attacks to the process or to the ICANN model.
- Governments have a particular interest in having an unencumbered process to provide advice to the Board without having to utilize the formal independent objection process.

G. The Board’s Reasons for Supporting the Two-pronged Objection Process Established for the New gTLD Program

- The Dispute Resolution Process complies with the policy guidance provided by the GNSO.
- The Dispute Resolution Process provides a clear, predictable path for objections and objectors.
- The Dispute Resolution Process provides clear standards that will lead to predictable, consistent results.
- The Dispute Resolution Process provides for an independent analysis of a dispute.
- The Dispute Resolution Process provides a bright line between public comment and a formal objection process so parties understand the manner in which a challenge to a particular application should be brought (a lesson learned from previous rounds).
- The Dispute Resolution Process appropriately limits the role for the Board.
- The Dispute Resolution Process limits involvement to those who truly have a valid objection.
- The Dispute Resolution Process provides for a more efficient and cost effective approach to dispute resolution than judicial proceedings.

- The Dispute Resolution Process, which provide for an “Independent Objector” to object is an important step to achieving the goal of independence and ensuring the objectionable strings are challenged.
- The GAC Advice process provides an avenue for the GAC to provide public policy advice to the Board on individual applications in a relatively timely fashion and consistent manner.
- The GAC Advice process was developed after close consultations with the GAC and provides a prescribed manner and time frame in which the Board will be able to consider GAC advice with respect to a particular string or applicant.

7. ICANN Board Rationale on Root Zone Scaling in the New gTLD Program

7. ICANN Board Rationale on Root Zone Scaling in the New gTLD Program

I. Introduction

When ICANN was formed in 1998 as a not for profit, multi-stakeholder organization dedicated to coordinating the Internet's addressing system, its primary purpose was to promote competition in the domain name system ("DNS") marketplace while ensuring internet security and stability. ICANN's Bylaws and other foundational documents articulate that the promotion of competition in the registration of domain names is one of ICANN's core missions. See ICANN Bylaws, Article 1, Section 2.6.

One part of this mission is fostering competition by allowing additional Top Level Domains ("TLDs") to be created. ICANN began this process with the "proof of concept" round for a limited number of new gTLDs in 2000, and then permitted a limited number of additional "sponsored" TLDs in 2004-2005. These additions to the root demonstrated that TLDs could be added without adversely affecting the security and stability of the domain name system.

After an extensive policy development process, in August 2007, the GNSO issued a lengthy report in which it recommended that ICANN permit a significant expansion in the number of new gTLDs. The report recognized that the introduction of new gTLDs would require the expansion of the top-level DNS zone in the DNS hierarchy known as the DNS root zone ("root zone"). This expansion of the root zone, along with ICANN's recent and concurrent implementation of other changes to the root of the DNS, caused some members of the community to ask ICANN to review how the expansion of the root zone could impact root zone stability. <http://gns0.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm>.

Between 2004 and 2010, the root of the DNS underwent significant changes, both in content as well as support infrastructure. These changes included the addition of Internationalized Domain Names ("IDNs") to the root, the deployment of IPv6 and implementation of Domain Name System Security

Extensions (“DNSSEC”). The broad scope of these changes was unprecedented. Now with new gTLDs on the horizon, further substantive changes in the root of the DNS are expected.

In response to comments from members of the community, ICANN commissioned a number of studies to address the capacity and scaling of the root server system with the goal of ensuring the stable and secure addition of new gTLDs. The studies improved ICANN’s understanding of the scalability of the root zone as it pertains to new gTLDs, and they reinforced confidence in the technical capability and stability of the root zone at the projected expansion rates. The studies also helped to inform and improve ICANN’s approach to monitoring the scalability and stability of the root zone.

II. Brief History of ICANN’s Consideration of Root Zone Scaling Associated with the New gTLD Program

This section sets forth a brief history of significant Board actions on the subject of root zone scaling associated with the new gTLD program.

- In December 2005, the GNSO commenced a rigorous policy development process to determine whether (and the circumstances under which) new gTLDs would be added. A broad consensus was achieved that new gTLDs should be added to the root in order to further stimulate competition and for numerous other reasons.
- At the 2 November 2007 ICANN Board Meeting, the Board considered the GNSO’s policy recommendation and passed a resolution requesting that ICANN staff continue working on the implementation analysis for the introduction of the new gTLD program and report back to the Board with a report on implementation issues.
<http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm>; http://www.icann.org/minutes/resolutions-02nov06.htm#_Toc89933880

- On 6 February 2008, ICANN published a paper entitled DNS Stability: The Effect of New Generic Top Level Domains on the Internet Domain Name System which addressed TLD Strings, technical stability and the capacity of the root zone.

<http://www.icann.org/en/topics/dns-stability-draft-paper-06feb08.pdf>
- On 6 February 2008, in response to ICANN’s publication of the paper entitled DNS Stability: The Effect of New Generic Top Level Domains in the Internet Domain System, the Board requested public comments and community feedback regarding technical issues relevant to the addition of new gTLDs. The Board also requested guidance on how best to facilitate transparency in implementing the recommendations of the paper.

<http://www.icann.org/en/announcements/announcement-06feb08.htm>
- In February 2009, the Board resolved that the Security and Stability Advisory Committee (“SSAC”) and the DNS Root Server System Advisory Committee (“RSSAC”) should jointly conduct a study analyzing the aggregate impact of the proposed implementation of various changes to the root zone and any potential effects on the security and stability within the DNS root server system. These changes include the still-recent addition of IPv6 access to the root servers, the planned addition of IDNs at the root level, signing the root zone with DNSSEC, and the provisioning of new country code IDN TLDs and new gTLDs.
- On 7 September 2009, the Root Zone Scaling Team (“RSST”) released its study entitled Scaling the Root.

<http://www.icann.org/en/committees/dns-root/root-scaling-study-report-31aug09-en.pdf>
- On 17 September 2009, the DNS Operations Analysis and Research Center (“DNS-OARC”) released the “L” Root Study entitled Root Zone Augmentation and Impact Analysis.

<http://www.icann.org/en/topics/ssr/root-zone-augmentation-analysis-17sep09-en.pdf>

- On 29 September 2009, the Netherlands Organization for Applied Scientific Research (“TNO”) released a report directed by the RSST to develop a quantitative model of the DNS Root Server System to analyze the impact of the addition of new gTLDs, IDN TLDs, IPv6 and DNSSEC. That study is entitled Root Scaling Study: Description of the DNS Root Scaling Model. <http://www.icann.org/en/committees/dns-root/root-scaling-model-description-29sep09-en.pdf>
- On 14 October 2009, the Chair of the Internet Architecture Board (“IAB”), Olaf Kolkman, sent a letter to ICANN’s Board in response to the publication of the RSST Study. He stated that the report’s recommendations were accurate and that security, stability and resiliency are the most important properties of the system and they need to continue to be monitored and safeguarded by ICANN. <http://www.icann.org/en/correspondence/kolkman-to-ceo-board-14oct09-en.pdf>
- On 3 March 2010, ICANN released its Draft Delegation Rate Scenarios for New gTLDs, laying out the plan for limiting delegation rates and outlining expected demand for new gTLDs based on: (1) current participation in the new gTLD process; (2) brand and famous mark holders; and (3) regional, national and other geographic regions that are not currently participating. <http://www.icann.org/en/announcements/announcement-03mar10-en.htm>
- On 25 September 2010, the Board adopted a resolution approving a model and a rationale for the maximum rate of applications. It set the number at 1,000 applications per year. The Board noted that the initial survey of the root server operator’s ability to support growth was successful and directed ICANN staff to revisit that estimate on a regular basis. The Board directed ICANN to consult with root zone operators

to define, monitor and publish data on root zone stability.

<http://www.icann.org/en/minutes/resolutions-25sep10-en.htm#2.3>

- On 6 October 2010, ICANN released its Delegation Rate Scenarios for New gTLDs, laying out in final form the plan for limiting delegation rates for new gTLDs.
- On 5 November 2010, the ICANN Board received a letter from the Chair of ICANN's Board Risk Committee, Bruce Tonkin, stating that the Risk Committee is seeking advice from RSSAC on the capability of the root server system to support the planned introduction of new gTLDs in 2011/2012.
<http://www.icann.org/en/correspondence/tonkin-to-murai-05nov10-en.pdf>
- On 25 November 2010, the ICANN Board received a letter from the Chair of RSSAC, Jun Murai, stating that the recent successful implementation of DNSSEC in the root zone was a good example of how to proceed with new capabilities. He further stated that in the case of the proposed gradual expansion of no more than 1,000 new gTLD entries per year for the next several years, the RSSAC expected the system to remain stable and robust.
<http://www.icann.org/en/correspondence/murai-to-board-25nov10-en.pdf>
- On 10 December 2010, the Board indicated that the overarching issue of root zone scaling had been addressed through expert consultation and study. The studies indicate that rate-limited addition of TLDs can be implemented without any expected impact on the stability of the root zone system. The Board also agreed to implement communications and monitoring systems to oversee the new gTLD program.
<http://www.icann.org/en/minutes/minutes-10dec10-en.htm>

III. Major Root Zone Scaling Studies Commissioned by the Board

On 3 February 2009, the ICANN Board unanimously directed the RSSAC and SSAC to jointly study “the impact to security and stability within the DNS root server system of [the IPv6, IDN TLDs, DNSSEC and new gTLDs] proposed implementations.” The Board resolution stated that the joint studies should: (1) address the implications of the initial implementation of these changes occurring during a compressed time period; (2) address the capacity and scaling of the root server system to address a wide range of technical challenges and operational demands that might emerge as part of the implementation of proposed changes; and (3) ensure that the process for establishing the study terms, design and implementation will address technical and operational concerns regarding expanding the DNS root zone. <http://www.icann.org/en/minutes/minutes-03feb09.htm>.

In response to the Board’s 3 February 2009 Resolution, ICANN commissioned two studies. The “L” Root Study focused on the impact of the scaling of the root on one server. The RSST Study modeled the processes in the root management system and analyzed the results of scaling the system.

The studies made important observations about possible limits to the root system, including limits to the pace of scaling and limitations other than purely technical, e.g. in processing TLD applications through ICANN, NTIA and VeriSign. Neither study found meaningful technical limitations in system scaling. The RSST Study recommended ongoing system modeling and monitoring, and encouraged improved communication with ICANN staff on gTLD forecasts and plans. To follow up on the RSST Study, the TNO put together a modeling contribution in conjunction with the RSST Study to transform the information and findings in the RSST Study into a quantitative model and simulation software.

A. The “L” Root Study

The DNS-OARC released the “L” Root Study on 17 September 2009. The DNS-OARC conducted the study pursuant to a contract with ICANN. The study focused specifically on the impact of adding IPv6, DNSSEC and new TLDs to a laboratory simulation of the “L” Root Server. See

<http://www.icann.org/en/topics/ssr/root-zone-augmentation-analysis-17sep09-en.pdf>.

The DNS-OARC performed a number of simulations and measurements with BIND and NSD server software and varying zone sizes to better understand how the new gTLD program changes may affect the performance of, and resource requirements for, the root DNS server infrastructure. The analysis looked at five key areas that would have an impact on operations: (1) zone size; (2) name server reload and restart times; (3) DNS response latency; (4) inter-nameserver bandwidth utilization; and (5) potential increases in Transmission Control Protocol usage.

The “L” Root Study concluded that at least that one root server could easily handle both the deployment of the new technologies as well as the new gTLD program.

B. The RSST Study

The RSST released their study on 7 September 2009. It undertook to determine if, how, and to what extent “scaling the root” will affect the management and operation of the root system. The RSST Study considered the “L” Root Study as part of its input and outsourced the development of a simulation of root management processes and conducted interviews with root server operators, IANA staff, VeriSign, NTIA and others. The RSST Study reviewed the impact on the root servers, and on the provisioning systems that lead up to the root zone being propagated to the root servers. See <http://www.icann.org/en/topics/ssr/root-zone-augmentation-analysis-17sep09-en.pdf>.

The study provided qualitative and quantitative models of the root system that show how the root zone’s different parts are related and how the root zone responds to changes in the parameters that define its environment. The RSST Study’s conclusions assume that the estimate of less than 1,000 new gTLDs being added to the root zone per year is accurate. The study also assumes that other parameters relating to the management of the DNS root will not be substantively

altered. With these assumptions in mind, the RSST Study concluded that normal operational upgrade cycles and resource allocations will be sufficient to ensure that scaling the root, both in terms of new technologies as well as new content, will have no significant impact on the stability of the root system.

The principal results of the study are qualitative and quantitative models. These models enable the static simulation of popular “what-if” scenarios—*e.g.*, “what would happen if the size of the root zone increased by three orders of magnitude (assuming that everything in the system remained as it is today)?”—but also a far more useful dynamic analysis of the way in which the system responds and adapts to changes in the DNS environment over time. The analysis allows the community to anticipate the consequences of scaling the root, identify and recognize “early warning signs” of system stress, and plan ahead for any mitigating steps that may be necessary to keep the system running smoothly if and when signs of stress appear. The RSST Study also recommended that the Board call on ICANN’s staff to take on a monitoring role in collaboration with other system partners as an element of the new gTLD program rollout.

C. The TNO Report

To follow up on the RSST Study, the TNO put together a modeling contribution in conjunction with the RSST Study to transform the information and findings in the RSST Study into a quantitative model and simulation software. The TNO Report was able to simulate several cases for the purpose of model validation and to illustrate typical use of the simulation model. More specifically, this study was directed by the RSST to apply quantitative modeling expertise to develop a quantitative model of the DNS Root Server System to analyze ways it responds to the addition of new gTLDs, IDN TLDs, IPv6 and DNSSEC. The TNO suggested that the model be fine-tuned as the new gTLD program is implemented, and that the model be used as a tool by ICANN in order to give ICANN more accurate boundaries for the scalability of the root. See <http://www.icann.org/en/committees/dns-root/root-scaling-model-description-29sep09-en.pdf>.

IV. The Board’s Analysis of Root Zone Scaling

A. Why the Board Commissioned Studies on Root Zone Scaling

- ICANN’s mission statement and one of its founding principles is to promote user choice and competition. ICANN has created significant competition at the registrar level that has resulted in enormous benefits for consumers. To date, ICANN has not created meaningful competition at the registry level. Based upon the report and recommendation from the GNSO to introduce new gTLDs, the Board decided to proceed with the new gTLD program.
- Both the Board and members of the community have commented that the introduction of new gTLDs would require the expansion of the root zone and could impact root zone stability. To address these comments, on 3 February 2009, the Board adopted a resolution approving the SSAC/RSSAC Stability Studies which led to the commissioning of the “L” Root Study and RSST Study.

B. Who the Board Consult Regarding Root Zone Scaling

- Legal Counsel
- The GNSO
- The GAC
- DNS-OARC
- The SSAC
- The RSSAC
- The TNO

- All other Stakeholders and Community members through public comment forum and other methods of participation.

C. What Significant Non-Privileged Materials the Board Reviewed

In evaluating the issue of root zone scaling, the ICANN Board reviewed various materials to determine the stability of the root zone: (1) Deployment Experience; (2) Studies and Models; and (3) Public Comments.

1. Deployment Experience

In order to determine the stability of the root zone with the implementation of the new gTLD program, the Board closely evaluated the impact of the significant changes that had already been implemented or were in the process of being implemented into the root zone. Since February 2008, there have been significant additions to the root zone with the adoption and implementation of IDNs, IPv6 and DNSSEC. In fact, during the period between July 2004 when the first IPv6 addresses were added to the root zone for TLD name servers, until July 2010 when the root was DNSSEC-signed and Delegation Signer Records were inserted, the root DNS service continued with no reported or publicly visible degradation of service. The Board evaluated the impact of each individual addition to the root zone to date, and determined that the addition of IPv6 to the root system, IDN TLDs and the deployment of DNSSEC had no significant harmful effects that were observed by or reported to ICANN’s Board. Below is a timeline of the various additions to the root zone since July 2004:

Date	Technology	Event
July 2004	IPv6	First IPv6 addresses added to the root zone for top-level domains (KR and JP).
November 2005	DNSSEC	First top-level domain (.SE) signed.
June 2007	DNSSEC	IANA DNSSEC-signed root test bed made available.

August 2007	IDNs	Test IDN top-level domains added to the root.
February 2008	IPv6, gTLDs	First IPv6 addresses added for root servers (A, F, J, K, L and M). A limit of a maximum of less than 1,000 new gTLDs per year is derived from estimates of gTLD processing times.
January 2010	DNSSEC	Deliberately Unvalidatable Root Zone (DURZ) published on first root server ("L").
May 2010	IDNs, DNSSEC	First production IDNs added to the root (for Egypt, Saudi Arabia and United Arab Emirates). DURZ deployed on all 13 root servers.
June 2010	DNSSEC	First DS records are published in the root zone (for .UK and .BR).
July 2010	DNSSEC	Root is DNSSEC-signed and the root trust anchor is published.

<http://icann.org/en/topics/new-gtlds/summary-of-impact-root-zone-scaling-06oct10-en.pdf>

The deployment of new technologies continues without any significant impact to root zone stability. Deployment of IPv6 in the root, which began in 2004, caused no significant harmful effects. Insertion of IDNs into the root in 2007 similarly was a non-event from the perspective of stability of the DNS, and deployment of DNSSEC in the root starting in January 2010 resulted in no observable or reported negative consequences. The empirical data drawn from the deployment of these new technologies can be used to validate the observations. Furthermore, the Board looked at this data, and the continued stability of the root zone throughout the implementation of these programs, as a demonstration that the introduction of the new gTLD program at the proposed max rate of 1,000 applications per year would similarly not impact the stability of the root zone.

2. Studies and Models

As previously mentioned, the ICANN Board commissioned two studies in order to analyze any impact the new gTLD program might have on the root zone. Both of these studies took a different approach to evaluate the possible impact the new gTLD program might have on root zone stability. Along with the TNO Report, the studies concluded that if the proposed new gTLD program is implemented pursuant to the adopted model of a maximum of 1,000 applications per year, the program will have no significant impact on the stability of the root system.

3. Public Comments and the Board's Response

Throughout the Board's analysis of the new gTLD program, in particular with respect to its possible impact to root zone stability, the Board considered public comments made by individuals both in public comment forums and in direct response to the release of the two root zone stability studies. The universe of comments pertaining to root zone scaling is still available. See <http://forum.icann.org/lists/scaling/index.html>.

The ICANN Board's responses to those comments made in response to the RSST Study were published for the public. See <http://icann.org/en/committees/dns-root/summary-analysis-root-scaling-study-tor-04oct09-en.pdf>.

D. What Factors the Board Found to Be Significant

The Board considered numerous factors in its analysis of root zone scaling. The Board found the following factors to be significant:

- the principle that the Board should base its decision on solid factual investigation and expert consultation and study;
- the addition of new gTLDs to the root in order to stimulate competition at the registry level;
- the stable and secure addition of addition of new gTLDs to the DNS;

- the continued security, stability and resiliency of the root zone; and
- the continued monitoring of the root zone system.

V. The Board’s Reasons for Concluding the Introduction of New gTLDs Will Not Harm the Root Zone

The overarching issue of root zone scaling has been addressed through conversations with the public, expert consultation and expert analysis of the impact of the new gTLD program. These studies, consultations and interactions with the community facilitated the Board’s study of the possible impacts the introduction of new gTLDs may have on root zone stability. The Board concluded that the additional gTLDs may be delegated without any significant impact on the stability of the root zone system.

The Board will continue to closely monitor the stability of the root zone and will call on its staff to take on a monitoring regime along with other system partners as an element of the new gTLD program roll-out. Furthermore, the Board will ensure that ICANN staff and system partners establish effective communication channels with root zone operators and RSSAC to ensure a timely response to any changes in the root zone environment.

8. ICANN Board Rationale on String Similarity and String Contention Associated with the gTLD Program

8. ICANN Board Rationale on String Similarity and String Contention Associated with the gTLD Program

I. Introduction

Through the development of the new gTLD program, the Board has given consideration to issues of potential user confusion resulting from the delegation of many similar TLD strings, as well as to creating procedures for resolving contention cases (i.e., where there is more than one qualified applicant for a TLD).

The foundational policy guidance for the program contains the principle that strings likely to cause user confusion should be avoided. Additionally, policy guidance recommended that there should be a preference for community applications in contention situations.

This memorandum focuses on the Board's review of these issues in implementing these principles in the new gTLD program. The memorandum summarizes the Board's consideration of these issues, and the Board's rationale for implementing the new gTLD program with the provisions on string contention and string similarity.

II. Brief History of ICANN's Analysis of String Similarity and String Contention Associated With the gTLD Program

This section sets forth a brief history of significant actions on the subject of string contention associated with the new gTLD program.

- In December 2005, the GNSO commenced a rigorous policy development process to determine whether (and the circumstances under which) new gTLDs would be added. A broad consensus was achieved that new gTLDs should be added to the root in order to further stimulate competition and for other reasons.
- In February 2007, Bruce Tonkin sent an email to the GNSO Council, describing the type of contention resolution methods under discussion for the gTLD process, including self-resolution, among the parties, third-party mediation, a bidding process, auctions, and testing for community affiliations.

<http://forum.icann.org/lists/gtld-council/msg00358.html>;
<http://forum.icann.org/lists/gtld-council/msg00359.html>

- In March 2007, the Governmental Advisory Committee issued its GAC Principles regarding New gTLDs. This included: 2.4: In the interests of consumer confidence and security, new gTLDs should not be confusingly similar to existing TLDs. To avoid confusion with country-code Top Level Domains, no two letter gTLDs should be introduced.
http://gac.icann.org/system/files/gTLD_principles_0.pdf
- In August 2007, the GNSO issued its final report regarding the introduction of new gTLDs, including Recommendation 2, which stated that “strings must not be confusingly similar to an existing top-level domain or a Reserved Name.”
<http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm>
- The GNSO’s Final Report also included Implementation Guideline F, which stated: If there is contention for strings, applicants may: i) resolve contention between them within a pre-established timeframe; ii) if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and; iii) the ICANN Board may be used to make a final decision, using advice from staff and expert panels.
- In March 2008, ICANN reported on preliminary work with SWORD to develop a potential algorithm that could help to automate the process for assessing similarity among proposed and existing TLD strings. <http://www.icann.org/en/minutes/prelim-report-27mar08.htm>
- On 26 June 2008, the Board adopted the Generic Names Supporting Organization’s (“GNSO”) policy recommendations for the introduction of new gTLDs, and directed ICANN staff to continue to develop a detailed implementation plan.
See Board Resolution at
<http://www.icann.org/en/minutes/resolutions->

[26jun08.htm# Toc76113171](#); see Board Meeting Transcript at https://par.icann.org/files/paris/ParisBoardMeeting_26June08.txt

- In August 2008, ICANN considered the use of auctions as a tie-breaking mechanism within the new gTLD process. <https://www.icann.org/en/topics/new-gtlds/program-updates-2008.htm>
- Also in August 2008, ICANN posted a paper for community discussion, entitled “The Economic Case for Auctions,” which explores the potential benefits of auctions as a tie-breaking mechanism. <https://www.icann.org/en/topics/economic-case-auctions-08aug08-en.pdf>
- Also in August 2008, ICANN considered the use of a string similarity algorithm to help automate the process for assessing similarity among the proposed and existing TLD strings. SWORD completed a beta algorithm and reviewed several test cases with ICANN staff to refine the parameters and discuss how the algorithm could be successfully integrated as a tool to help implement the GNSO's recommendation that new gTLD strings should not result in user confusion. <https://www.icann.org/en/topics/new-gtlds/program-updates-2008.htm>; <http://www.icann.org/en/announcements/announcement-08aug08-en.htm>
- In October 2008, the Board passed a resolution, authorizing the CEO, COO and/or General Counsel of ICANN to enter into an agreement for algorithm related services with SWORD. <https://www.icann.org/en/minutes/prelim-report-01oct08.htm>
- On 24 October 2008, ICANN published Version 1 of the new gTLD Applicant Guidebook (“Version 1”), as well as an explanatory memorandum, “Resolving String Contention,” <http://www.icann.org/en/topics/new-gtlds/string-contention-22oct08-en.pdf>, describing the reasons for the contention procedures found in the draft Guidebook. The Guidebook included a preliminary establishment of contention sets based on similarity between strings, opportunities for applicants to self-resolve such contention, a comparative evaluation process, and an objective

mechanism as a last resort.

<http://www.icann.org/en/topics/new-gtlds/draft-rfp-24oct08-en.pdf>

- These procedures have been continually revised, updated, and posted for comment through successive drafts of the Guidebook. In February 2009, auctions were identified as an objective mechanism of last resort for resolving string contention, included in an updated memorandum, <http://www.icann.org/en/topics/new-gtlds/string-contention-18feb09-en.pdf>, and beginning in draft version 2 of the Guidebook. <http://www.icann.org/en/topics/new-gtlds/draft-string-contention-clean-18feb09-en.pdf>
- Comments on successive drafts of the Guidebook expressed a desire for greater clarity around the standards to be used for comparative evaluation, including requests for examples of applications that would and would not meet the threshold. In response to these comments, ICANN developed detailed explanatory notes for each of the scoring criteria to give additional guidance to applicants. These were included beginning in draft version 3 of the Guidebook. <http://www.icann.org/en/topics/new-gtlds/draft-string-contention-clean-04oct09-en.pdf>
- In May 2010, ICANN issued draft version 4 of the Guidebook. The comparative evaluation was renamed the Community Priority Evaluation, to more accurately convey the purpose and nature of the evaluation (i.e., not comparing applicants to one another but comparing each against a common set of criteria). Version 4 also included definitions for terms used in the explanatory notes as well as clarifications and expanded guidance in several areas. <http://www.icann.org/en/topics/new-gtlds/comments-4-en.htm>
- In June 2010, the GNSO Council and the Registries Stakeholder Group requested that exceptions be granted from findings of confusing similarity. The reason for granting an exception would be that a string pair that was found to be confusingly similar constituted a case of "non-detrimental confusion." <http://gns0.icann.org/mailling-lists/archives/council/msg09379.html>; <http://forum.icann.org/lists/string-similarity->

[amendment/msg00002.html](#);
<http://www.icann.org/en/minutes/board-briefing-materials-1-25sep10-en.pdf>

- In September 2010, the Board discussed the subject of string similarity and resolved to encourage policy development as needed to consider any exceptions from findings of confusing similarity.
<http://www.icann.org/en/minutes/resolutions-25sep10-en.htm#2.4>
- On 30 May 2011, ICANN posted the Applicant Guidebook for consideration by the Board.
<http://www.icann.org/en/topics/new-gtlds/comments-7-en.htm>

III. The Board's Analysis of String Similarity and String Contention

A. Brief Introduction to String Similarity and String Contention

1. String Similarity

This section sets forth an overview of the string similarity determination:

- What is the Concern over String Similarity?
 - The Board determined that delegating highly similar TLDs in the new gTLD program created the threat of detrimental user confusion.
- How Is It Determined that String Similarity Exists?
 - The preliminary similarity review will be conducted by a panel of String Similarity Examiners, who will use the following standard to test for whether string confusion exists:

String confusion exists where a string so nearly resembles another visually that it is likely to deceive or cause confusion. For the likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

- The examination will be informed by human judgment assisted by criteria and an algorithmic score for the visual similarity between each applied-for string and each of other existing and applied-for TLDs. <http://icann.sword-group.com/algorithm/>
- What Happens Once the Determination is Made that String Similarity Exists?
 - In the simple case in which an applied-for TLD string is identical to an existing TLD, the application system will not allow the application to be submitted.
 - An application that fails the string confusion review and is found too similar to an existing TLD string will not pass the Initial Evaluation stage of the evaluation process, and no further reviews will be available.
 - An application that passes the string similarity review in the Initial Evaluation is still subject to challenge regarding string similarity in the current application round. That process requires that a specific string similarity objection be filed by an objector having the standing to make such an objection. Such category of objection is not limited to visual similarity. Rather, confusion based on any type of similarity may be claimed by an objector, visual, phonetic, and semantic similarity.
 - An application that passes the string similarity review and is not subject to a string confusion objection would proceed to the next relevant stage of the process.

2. String Contention

This section sets forth an overview of the string contention process:

- What is String Contention?
 - String contention is said to occur when the strings of two or more applications are identical or found to be so similar that delegation of both will create a threat of user confusion.
- What Components Are Involved in the String Contention Process?

- Identifying gTLD strings that are likely to deceive or cause user confusion in relation to either existing TLDs or reserved names or applied-for gTLDs; and
- Resolving the string contention.
- How is a Contention Set Identified?
 - In the initial evaluation of an applied for gTLD, a string similarity panel, using the procedures described above, will determine whether two or more applications for gTLDs are in direct string contention. The applications that are determined to be in direct string contention will be marked for later resolution of the contention and proceed to the subsequent process steps. Applications that are not part of a contention set can proceed to the next stage of the evaluation process without further action.
 - Applications are in direct string contention if their proposed strings are identical or so similar that string confusion would occur if both were to be delegated as TLDs. The determination is based on human judgment assisted by an algorithmic test performed on applications.
 - Two applications are in indirect string contention if they are both in direct string contention with a third application, but not with each other.
 - During the objection process, an applicant may file a string confusion objection to assert string confusion. If the objection is upheld by the panel adjudicating the objection, the applications will be deemed to be in a direct string contention and the relevant contention sets will be modified accordingly.
 - The final contention sets are established once the extended evaluation and objection process have been concluded, because some applications may be excluded in those steps.
- How is a Contention Set Resolved?

- Voluntary settlements or agreements can occur between applications that result in the withdrawal of one or more applications. These can occur at any stage of the process, once ICANN has posted the applications received. However, material changes to an application may require a re-evaluation.
- Community priority evaluation can be used only if at least one of the applications involved is community-based and has expressed a preference for community priority evaluation. A panel will receive and score the community-based applications against the established criteria for: (1) community establishment; (2) nexus between the proposed string and community; (3) dedicated registration policies; and (4) community endorsement. If one application is a “clear winner” (i.e., meets the community priority criteria), the application proceeds to the next step and its direct contenders are eliminated. If there is no “clear winner,” the contention set will be resolved through negotiation between the parties or auction. It may occur that more than one application meets the community priority criteria, in which case time will be allowed for resolving the remaining contention by either applicant withdrawing, otherwise an auction between those applicants will resolve the contention.
- A community application that prevails in a community priority evaluation eliminates all directly contending standard applications, regardless of how well qualified the latter may be. This is a fundamental reason for very stringent requirements for qualification of a community-based application, as embodied in the criteria. Arriving at the best outcome in a contention situation requires careful balancing of several variables, and this is the reason that a number of factors are included in the analysis.
- Auction is available as a last resort mechanism for resolving string contention when (1) contending applicants successfully complete all evaluations; (2) contending applicants elect not to use community priority evaluation, were not eligible for community priority evaluation, or

community priority evaluation did not provide a “clear winner”; and (3) contending applications have not resolved the contention among themselves.

B. Why The Board Addressed String Similarity and String Contention

- The new gTLD program will increase the number of domain names available, implying a risk that “confusingly” similar strings will appear.
- It is in the interests of consumer confidence and security to protect against the threat of user confusion and to avoid increasing opportunities for bad faith entities who wish to defraud users.
- Measures should be in place to protect internet users from the potential harm in delegating confusingly similar strings in the new gTLD program.
- The Board wants to create greater certainty in the domain name marketplace by crafting a fair and practical approach on how to identify and how best to resolve contention sets.
- The Board adopted the GNSO policy recommendations, including the implementation guideline implying that a community-based TLD application could be given a priority in cases of contention.

C. Who the Board Consulted

- Legal Counsel
- The GNSO
- The GAC
- The ALAC
- The ccNSO
- The SSAC
- All other Stakeholders and Community members through public comment forum and other methods of participation.

D. What Significant Non-Privileged Materials the Board Reviewed

- **GNSO Policy Recommendations**
 - Recommendation 2: Strings must not be confusingly similar to an existing top-level domain or a Reserved Name
<http://GNSO.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm>
 - Implementation Guideline F: If there is contention for strings, applicants may:
 - i) resolve contention between them within a pre-established timeframe
 - ii) if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and
 - iii) the ICANN Board may be used to make a final decision, using advice from staff and expert panels.
- **GAC Principles**
 - Recommendation 2.4: In the interests of consumer confidence and security, new gTLDs should not be confusingly similar to existing TLDs. To avoid confusion with country-code Top Level Domains, no two letter gTLDs should be introduced
http://gac.icann.org/system/files/gTLD_principles_0.pdf
- **Comments from the Community**
 - <http://www.icann.org/en/topics/new-gtlds/comments-analysis-en.htm>

E. What Concerns the Community Raised

- There is a need for clarification on the definition of “confusing similarity.”
- There are questions about the definitions for “standard” vs. “community-based” TLD types.
- There is a need for objective procedures and criteria for the community priority evaluation.

- A special form of resolution should be considered for a contention set involving two community-based applicants of equal strength, so that such a contention set is not required to go to auction.
- There is concern over using the auction process (and the receipt of auction proceeds) as a means to resolve contention for TLDs.
- There is concern that the string similarity algorithm only accounts for visual similarity, and does not accurately gauge the human reaction of confusion.
- Proceeds from auctions may be used for the benefit of the DNS and be spent through creation of a foundation that includes oversight by the community.

F. What Factors the Board Found to Be Significant

- There should be a consistent and predictable model for the resolution of contention among applicants for gTLD strings;
- The process should be kept as straightforward as possible to avoid unnecessary risks;
- There is potential harm in confusingly similar TLD strings that extends not only to the interests of existing TLD operators, but also to Internet users; and
- The protections set forth in the current string similarity process will safeguard both user and operator interests;

IV. The Board’s Reasons for Supporting the String Contention Process Contemplated in the new gTLD Program

- The Algorithm is a tool to aid the string similarity analysis.
 - The algorithm will be a consistent and predicable tool to inform the string confusion element of the new gTLD program. The algorithm will provide guidance to applicants and evaluators;
 - The role of the algorithm is primarily indicative; it is intended to provide informational data to the panel of examiners and expedite their review.

- The algorithm, user guidelines, and additional background information are available to applicants for testing and informational purposes
- Human judgment will be the determining factor in the final decisions regarding confusing similarity for all proposed strings.
- Contending applicants should be given the opportunity to settle contention among themselves – this will result in innovative and economic solutions.
- The community priority evaluation stage of the string contention process features sufficient criteria to: (a) validate the designation given to community-based applications; and (b) assess a preference for community-based applications in a contention set. Both the GNSO Final Report and GAC Principles encourage the special consideration of applications that are supported by communities. <http://GNSO.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm>; http://gac.icann.org/system/files/gTLD_principles_0.pdf
- The GAC Principle that two-letter TLDs should not be delegated to avoid confusion with ccTLDs was adopted.
- There are advantages to an auction as a resolution mechanism of last resort.
 - It is an objective test; other means are subjective and might give unfair results, are unpredictable, and might be subject to abuses.
 - It assures the round will finish in a timely way.
 - It is thought that few auctions will actually occur. A negotiated settlement will be a lower-cost solution for the parties than an auction. The availability of auctions will encourage parties to settle. Even if there are proceeds from auctions, these will be expended in a process that includes independent oversight.
 - Ascending clock auctions typically employ an “activity rule,” where a bidder needs to have been “in” at early prices in the auction in order to continue to stay “in” at later prices. This is useful because in an ascending clock auction, bidders are

informed of the number of contending applications that have remained “in” after each round, but not their identities. With the specified activity rule, this demand information has real significance, as a competitor who has exited the auction cannot later re-enter.

- The auctioneer in ascending clock auctions has the ability to pace the speed at which prices increase. This facet has greatest importance if related items are auctioned simultaneously, as their prices can then be paced to increase together in relation to the level of demand. This has the advantage of providing bidders with information about the level of demand for other new gTLDs—and hence the value of a new gTLD—while the auction is still in progress.

9. ICANN Board Rationale On Trademark Protection in the New gTLD Program

9. ICANN Board Rationale On Trademark Protection in the New gTLD Program

I. Introduction

One of ICANN’s core values is “[i]ntroducing and promoting competition in the registration of domain names where practicable and beneficial in the public interest.” <http://www.icann.org/en/general/bylaws.htm>. In furtherance of this core value, ICANN is committed to ensuring that the concerns of all community members, including trademark holders, are considered and addressed to the extent practicable before launching the new generic top level domain (“gTLD”) program.

ICANN has long recognized the importance of ensuring that the introduction of new gTLDs is conducted consistently with the protection of the rights of trademark holders, communities and other rights holders from abusive registration and infringement. In each previous expansion to the domain name system (“DNS”), the protection of legal rights of third parties was a feature of the application and evaluation process. For the new gTLD Program, ICANN has sought input from numerous stakeholders, including trademark holders, trademark lawyers, businesses, other constituencies and governments, to devise a multi-layered approach to protecting the rights of third parties. The approach includes a pre-delegation dispute resolution process for protecting existing legal rights at the top level. Also included in this approach are numerous rights protection mechanisms at the second level such as: (i) the establishment of a trademark clearinghouse to support both sunrise and trademark claims processes, a trademark post-delegation dispute resolution procedure (PDDRP), the Uniform Rapid Suspension System (URS) and the requirement for registries to maintain a thick Whois database. Of course, also available to all is the existing, long-standing and tested Uniform Domain Name Dispute Resolution Policy (UDRP).

II. History of the Board's Consideration of Trademark Protection

This section contains a brief history of significant actions taken to address trademark protection in the new gTLD program.

- On 1 February 2007, the Generic Names Supporting Organization (“GNSO”) Council approved a request to form a Working Group on

Protecting the Rights of Others.

<http://gns0.icann.org/meetings/minutes-gns0-01feb07.html>

- On 15 March 2007, the GNSO Council ratified a Statement of Work for the newly-formed GNSO Working Group on Protecting the Rights of Others. <http://gns0.icann.org/meetings/minutes-gns0-15mar07.html>
- On 26 June 2007, the GNSO Working Group on Protecting the Rights of Others published its Final Report. gns0.icann.org/drafts/pro-wg-final-report-26jun07.pdf
- On 8 August 2008, the GNSO issues its “Final Report – Introduction of New Generic Top-Level Domains,” including a recommendation that “Strings must not infringe the existing legal rights of others”. <http://gns0.icann.org/issues/new-gtlds/pdp-dec05-fr-parta-08aug07.htm>
- On 21 December 2007, ICANN requested “expressions of interest from potential dispute resolution service providers for the new gTLD program.” <http://www.icann.org/en/topics/drsp-call-for-expressions-of-interest.pdf>
- On 26 June 2008, the Board adopted the GNSO’s Policy recommendations for the introduction of new gTLDs. See Board Resolution at http://www.icann.org/en/minutes/resolutions-26jun08.htm#_Toc76113171; see Board Meeting Transcript at https://par.icann.org/files/paris/ParisBoardMeeting_26June08.txt
- On 22 October 2008, ICANN published an Explanatory Memorandum on Protection of Rights of Others in New gTLDs and solicited comments. <http://www.icann.org/en/topics/new-gtlds/protection-rights-22oct08-en.pdf>
- After receiving significant community input, on 6 March 2009, the Board recognized trademark protection in the new gTLD program as an issue requiring additional input and analysis, the resolution of which would benefit the new gTLD program. The Board requested that the GNSO’s Intellectual Property Constituency convene an Implementation Recommendation Team (“IRT”) to solicit input,

analyze the issue, and prepare draft and final reports.

<http://www.icann.org/en/minutes/resolutions-06mar09.htm#07>

- On 24 April 2009, the IRT published its Preliminary Report for public comment.
<http://www.icann.org/en/topics/new-gtlds/irt-draft-report-trademark-protection-24apr09-en.pdf>; see public comments at <http://forum.icann.org/lists/irt-draft-report/>
- On 16 May 2009, the Board participated in a workshop on issues related to the new gTLD program, including trademark protections in particular.
- On 29 May 2009, the IRT published its Final Report and an “Open Letter from the IRT Introducing our Work.” ICANN and the IRT recognized that a significant intersection exists in between strategies to facilitate trademark protection and strategies to mitigate the risk of increased malicious conduct on the Internet.
<http://www.icann.org/en/topics/new-gtlds/irt-final-report-trademark-protection-29may09-en.pdf>
- On 20 June 2009, the Board participated in another workshop on issues related to the new gTLD program, including trademark protection.
- On 21 June 2009, the IRT presented its Final Report to the ICANN Board at the ICANN Sydney Open Meeting and provided briefings to the GNSO, interested constituencies and others.
<http://syd.icann.org/full-sched>
- On 26 June 2009, the Board acknowledged and thanked the IRT for its “intensive engagement” and its “detailed and articulate proposals.”
<http://www.icann.org/en/minutes/resolutions-26jun09.htm>
- Also on 26 June 2009, the Board acknowledged that ICANN staff had posted material on the new Draft Applicant Guidebook for public comment; thanked the community; and requested that all further comments be submitted by the close of the comment period on 20 July 2009. The Board also requested that the ICANN staff prepare a comprehensive set of implementation documents before the Board’s meeting on 30 October 2009. See Board

Resolution at <https://icann.org/en/minutes/resolutions-26jun09.htm>; see Board Meeting Transcript at <http://syd.icann.org/files/meetings/sydney2009/transcript-board-meeting-26jun09-en.txt>

- On 12 September 2009, the Board continued its discussion about trademark protection in new gTLDs at a Board Retreat.
- On 12 October 2009, the Board sent a letter to the GNSO, requesting that it review trademark protection policy for the new gTLD program as described in the Draft Applicant Guidebook and accompanying memoranda, including the proposals for a Trademark Clearinghouse and a Uniform Rapid Suspension System. <http://www.gnso.icann.org/correspondence/beckstrom-to-gnso-council-12oct09-en.pdf>
- On 28 October 2009, the GNSO adopted a resolution creating the Special Trademarks Issues review team (“STI”), which included representatives from each stakeholder group, the At-Large community, nominating committee appointees, and the Governmental Advisory Committee (“GAC”). <http://gnso.icann.org/resolutions/#200910>
- On 30 October 2009, the Board issued a resolution encouraging additional comments on the Draft Applicant Guidebook and new gTLD program. See Board Resolution at <https://icann.org/en/minutes/resolutions-30oct09-en.htm>; see Board Meeting Transcript at <https://icann.org/en/minutes/index-2009.htm>
- On 11 December 2009, the STI published its Report. See link to Report in <http://gnso.icann.org/resolutions/#200912>
- On 18 December 2009, the GNSO unanimously approved the recommendations contained in the STI’s report. <http://gnso.icann.org/resolutions/#200912>
- On 15 February 2010, ICANN published for public comment proposals for trademark protection in the new gTLD program, including the Trademark Clearinghouse, a Uniform Rapid Suspension System, and a post-delegation dispute resolution procedure.

<http://www.icann.org/en/announcements/announcement-4-15feb10-en.htm>

- On 10 March 2010, the GAC outlined to the Board some concerns and recommendations for the new gTLD program and its comments on version 3 of the Draft Applicant Guidebook.
<http://www.icann.org/en/correspondence/karklins-to-dengate-thrush-10mar10-en.pdf>
- On 12 March 2010, the Board acknowledged the community recommendations for trademark protections in the new gTLD program, including the development of a Trademark Clearinghouse and a Uniform Rapid Suspension System; resolved that the proposals for both be incorporated into version 4 of the Draft Applicant Guidebook; and directed ICANN staff to review any additional comments and develop final versions of the proposals for inclusion in the Draft Applicant Guidebook.
<http://www.icann.org/en/minutes/resolutions-12mar10-en.htm>
- Also on 12 March 2010, the Board approved the concept of a post-delegation dispute resolution procedure; and directed ICANN staff to review any additional comments and synthesize them, as appropriate, into a final draft procedure, and include the procedure in version 4 of the Draft Applicant Guidebook.
<http://www.icann.org/en/minutes/resolutions-12mar10-en.htm>
- On 28 May 2010, in response to further comments from the community, ICANN published for public comment revised proposals for the Trademark Clearinghouse, Uniform Rapid Suspension System, and a post-delegation dispute resolution procedure.
<http://www.icann.org/en/topics/new-gtlds/comments-4-en.htm>
- On 5 August 2010, the Board responded to the GAC's comments on version 3 of the Draft Applicant Guidebook and described the steps it took to protect trademarks in version 4 of the Draft Applicant Guidebook.
<http://www.icann.org/en/correspondence/dengate-thrush-to-dryden-05aug10-en.pdf>
- On 23 September 2010, the GAC outlined to the Board its concerns and recommendations for the new gTLD program and its comments on version 4 of the Draft Applicant Guidebook.

<http://www.icann.org/en/correspondence/dryden-to-dengate-thrush-23sep10-en.pdf>

- On 24-25 September 2010, the Board participated in another workshop on issues related to the new gTLD program, including trademark protections and passed some resolutions specifically addressing trademark protections.
<http://www.icann.org/en/minutes/resolutions-25sep10-en.htm#2.6>
- On 12 November 2010, ICANN posted for public comment version 5 of the Draft Applicant Guidebook, incorporating a number of protections for the rights of others, and a series of papers explaining certain aspects of the current proposals for the Trademark Clearinghouse, the Uniform Rapid Suspension System and related comments and analysis.
<http://www.icann.org/en/topics/new-gtlds/draft-rfp-clean-12nov10-en.pdf>
- On 10 December 2010, the Board resolved that ICANN had addressed the issue of trademark protection in new gTLDs by adopting and implementing various measures, including the establishment of a Trademark Clearinghouse, the Uniform Rapid Suspension System and the Post-Delegation Dispute Resolution Procedure. The Board further stated that these solutions reflected the negotiated position of the ICANN community, but that ICANN would continue to take into account public comment and the advice of the GAC.
See Board Resolution at <https://icann.org/en/minutes/resolutions-10dec10-en.htm>; see Board Meeting Minutes at <https://icann.org/en/minutes/minutes-10dec10-en.htm>
- On 21 February 2011, ICANN published numerous briefing papers on the trademark issues the GAC had identified as “outstanding” in September 2010.
<http://www.icann.org/en/announcements/announcement-6-21feb11-en.htm>
- On 23 February 2011, the GAC issued its “Indicative Scorecard” which included 30 specific recommendations relating to trademark protections on which it intended to consult with the.

<http://www.icann.org/en/topics/new-gtlds/gac-scorecard-23feb11-en.pdf>

- On 28 February 2011 and 1 March 2011, the GAC and the Board participated in a special two-day consultation to address the remaining outstanding issues related to the new gTLD program, including certain issues related to trademark protection.
<http://www.icann.org/en/announcements/announcement-23feb11-en.htm>
- On 4 March 2011, the Board published its comments on the GAC Scorecard.
<http://www.icann.org/en/topics/new-gtlds/board-notes-gac-scorecard-04mar11-en.pdf>
- On 15 April 2011, ICANN published an Explanatory Memorandum on Trademark Protection in the new gTLD program.
<http://www.icann.org/en/topics/new-gtlds/trademark-protection-claims-use-15apr11-en.pdf>
- Also on 15 April 2011, ICANN posted for comment version 6 of the Draft Applicant Guidebook, incorporating additional protections for the rights of others.
<http://www.icann.org/en/topics/new-gtlds/comments-6-en.htm>
- Also on 15 April 2011, ICANN issued “Revised ICANN Notes on: the GAC New gTLDs Scorecard, and GAC Comments to Board Response”
<http://www.icann.org/en/topics/new-gtlds/board-notes-gac-scorecard-clean-15apr11-en.pdf>
- On 19 April 2011, the GAC issued “Remaining points of difference between the ICANN Board and the Governmental Advisory Committee on New gTLD Rights Protection Mechanisms”
http://gac.icann.org/system/files/20110419-GAC_comments_on_NewgTLD_Rights_Protection.pdf
- On 26 May 2011, the GAC issued “GAC comments on the Applicant Guidebook (April 15th, 2011 version)”
<http://www.icann.org/en/topics/new-gtlds/gac-comments-new-gtlds-26may11-en.pdf>

- On 30 May 2011, ICANN posted the current version of the Applicant Guidebook.
<http://www.icann.org/en/topics/new-gtlds/comments-7-en.htm>

III. The Board’s Analysis of Trademark Protection in the New gTLD Program

A. Why the Board is Addressing This Issue Now

- ICANN’s mission statement and one of its founding principles is to promote competition. The expansion of gTLDs will allow for more innovation and choice in the Internet’s addressing system. The ICANN Board seeks to implement the new gTLD program together with measures designed to protect the rights of others on the Internet.
<http://www.icann.org/en/documents/affirmation-of-commitments-30sep09-en.htm>
- The Board endorsed GNSO policy recommendation states that gTLD strings should not infringe the rights of others. The Board took that recommendation as an emphasis on the need to protect intellectual property rights.
- ICANN committed to the Internet community and governments, including the U.S. Department of Commerce that it would address trademark protection in new gTLDs prior to implementing the program.
- The ICANN Board is committed to making decisions based on solid factual investigation and expert analysis.

B. Who the Board Consulted

- The GNSO
<http://gns0.icann.org/>
- The GAC
<http://gac.icann.org/>

C. What Significant Non-Privileged Materials the Board Reviewed

- In addition to all public comments received on all versions of the Applicant Guidebook, as well as all relevant GAC Communiqués (see <http://gac.icann.org/communiques>), the ICANN Board reviewed the following reports from Stakeholders:
 - 1 June 2007 GNSO Working Group on Protecting the Rights of Others’ Final Report <http://www.gnso.icann.org/drafts/GNSO-PRO-WG-final-01Jun07.pdf>
 - 8 August 2007 GNSO Final Report – Introduction of New Generic Top Level Domains. <http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-part-a-08aug07.htm>
 - 24 April 2009 IRT Draft Report and Public Comment Summary <http://forum.icann.org/lists/irt-draft-report/pdfuyqR57X82f.pdf>
 - 24 April 2009 IRT Preliminary Report, and public comment thereon <http://www.icann.org/en/topics/new-gtlds/irt-draft-report-trademark-protection-24apr09-en.pdf>; see public comments at <http://forum.icann.org/lists/irt-draft-report/>
 - 29 May 2009 IRT Final Report <http://www.icann.org/en/topics/new-gtlds/irt-final-report-trademark-protection-29may09-en.pdf>
 - 29 May 2009 Implementation Recommendation Team Final Draft Report to ICANN Board

<http://www.icann.org/en/topics/new-gtlds/irt-final-report-trademark-protection-29may09-en.pdf>

- 4 October 2009 ICANN Comment and Analysis on IRT Report: Post-Delegation Dispute Mechanism and Other Topics
<http://www.icann.org/en/topics/new-gtlds/summary-analysis-irt-final-report-04oct09-en.pdf>
- 11 December 2009, STI Report
See link to Report in
<http://gnso.icann.org/resolutions/#200912>
- 12 December 2009 letter from the members of the former IRT to ICANN unanimously supporting the work of the STI process and recommendations concerning a trademark clearinghouse and a mandatory Uniform Rapid Suspension system
<http://www.icann.org/en/correspondence/irt-group-to-dengate-thrush-15dec09-en.pdf>
- 23 February 2011 GAC “Indicative Scorecard”
<http://www.icann.org/en/topics/new-gtlds/gac-scorecard-23feb11-en.pdf>
- 19 April 2011 GAC issued “Remaining points of difference between the ICANN Board and the Governmental Advisory Committee on New gTLD Rights Protection Mechanisms”
http://gac.icann.org/system/files/20110419-GAC_comments_on_NewgTLD_Rights_Protection.pdf
- 26 May 2011, the GAC issued “GAC comments on the Applicant Guidebook (April 15th, 2011 version)”
<http://www.icann.org/en/topics/new-gtlds/gac-comments-new-gtlds-26may11-en.pdf>
- ICANN prepared materials
 - Each version of the Applicant Guidebook, including all ICANN created explanatory memoranda and the specific proposals for trademark protections, along with hundreds of pages of public comment summaries and analysis related to trademark protections.
(i) <http://www.icann.org/en/topics/new-gtlds/comments->

[en.htm](http://www.icann.org/en/topics/new-gtlds/comments-2-en.htm#expmem); (ii) <http://www.icann.org/en/topics/new-gtlds/comments-2-en.htm#expmem>; (iii) <http://www.icann.org/en/topics/new-gtlds/comments-e-en.htm>; (iv) <http://www.icann.org/en/topics/new-gtlds/comments-3-en.htm>; (v) <http://www.icann.org/en/topics/new-gtlds/gnso-consultations-reports-en.htm>; (vi) <http://www.icann.org/en/announcements/announcement-4-15feb10-en.htm>; (vii) <http://www.icann.org/en/topics/new-gtlds/summaries-4-en.htm>; (viii) <http://www.icann.org/en/topics/new-gtlds/comments-5-en.htm>; (ix) <http://www.icann.org/en/topics/new-gtlds/comments-analysis-en.htm>; (x) <http://www.icann.org/en/topics/new-gtlds/dag-en.htm>; (xi) <http://www.icann.org/en/topics/new-gtlds/comments-6-en.htm>; and (xii) <http://www.icann.org/en/topics/new-gtlds/comments-7-en.htm>

D. What Concerns the Community Raised

- There is a need for adequate protection of intellectual property rights in new and existing gTLDs.
- If the introduction of new gTLDs leads to increased malicious conduct on the Internet, then trademark owners may pay a disproportionate percentage of costs associated with enforcing standards of behavior.
- Defensive domain name registrations in new gTLDs generate substantial costs for trademark owners.
- Registry behavior may cause or materially contribute to trademark abuse, whether through a TLD or through domain name registrations in the TLD.
- Legal rights that a party seeks to protect through Rights Protection Mechanisms should be capable of being authenticated, at least if the authenticity of such rights is challenged.

- Administrative dispute resolution procedures provide trademark owners with relatively swift and inexpensive alternatives to arbitration and litigation.
- Recurring sanctions may not be a sufficient remedy for wrongful conduct; suspension and termination may be necessary remedies.
- Policies developed to prevent and remedy trademark abuses in the DNS are expected to build upon the framework of existing intellectual property laws to minimize burdens on trademark owners and contribute to the orderly functioning of the DNS.
- The introduction of new gTLDs may lead to consumer confusion if one trademark owner registers its mark in one gTLD while another registers an identical or similar mark in another gTLD. To the extent that Internet users are unable (or become unaccustomed) to associate one mark with a specific business origin, the distinctive character of the mark will be diluted.

E. What Steps ICANN Has Taken or Is Taking to Protect the Rights of Others in New gTLDs

The Board believes the following measures will significantly help to protect the rights of others on the Internet. ICANN has incorporated the majority of these measures into the current version of the Applicant Guidebook and the registry agreement, and its efforts to implement the remaining measures are ongoing:

- Pre-delegation objection procedures.
- Mandatory publication by new gTLDs of policy statements on rights protection mechanisms, including measures that discourage registration of domain names that infringe intellectual property rights, reservation of specific names to prevent inappropriate name registrations, minimization of abusive registrations, compliance with applicable trademark and anti-cyber squatting legislation, protections for famous name and trademark owners and other measures.
- Mandatory maintenance of thick Whois records to ensure greater accessibility and improved stability of records.

- The establishment of a Trademark Clearinghouse as a central repository for rights information, creating efficiencies for trademark holders, registries, and registrars
- The requirement for all new registries to offer both a Trademarks Claims service and a Sunrise period.
- Post-delegation dispute resolution procedures that allow rights holders to address infringing activity by a registry operator that may be taking place after delegation.
- Implementation of the Uniform Rapid Suspension System that provides a streamline, lower-cost mechanism to suspend infringing names
- The continued application of the Uniform Domain Name Dispute Resolution Policy on all new gTLDs.

F. What Factors the Board Found to Be Significant

The Board considered numerous factors in its analysis of trademark protection in the new gTLD program. The Board found the following factors to be significant:

- The GNSO’s Working Group on Protecting the Rights of Others was not able to reach consensus on “best practices” for Rights Protection Mechanisms;
- While economic studies revealed that there will be both benefits and cost to trademark holders associated with new gTLDs, no determination could be made that the costs outweigh the benefits.
- New gTLDs would promote consumer welfare.
- The availability and efficacy of dispute resolution mechanisms and appropriately-designed modifications of ICANN procedures for protecting intellectual property.
- The need for dispute resolution mechanisms to be comprehensive enough to expand with the addition of new gTLDs.

- The need to balance the protection of trademark rights with the practical interests of compliant registry operators to minimize operational burdens and the legitimate expectations of good faith domain name registrants.
- The risk of increasing exposure of participants to litigation.
- The lack of reported problems with ICANN’s previous introductions of new TLDs.

IV. The Board’s Reasons for Proceeding to Launch the New gTLD Program While Implementing Measures to Protect Trademarks and Other Rights

- ICANN’s “default” position should be for creating more competition as opposed to having rules that restrict the ability of Internet stakeholders to innovate.
- New gTLDs offer new and innovative opportunities to Internet stakeholders.
- Brand owners might more easily create consumer awareness around their brands as a top-level name, reducing the effectiveness of phishing and other abuses.
- Revised applicant procedures and agreements reflecting the measures to mitigate the risk of malicious conduct will permit ICANN to address certain risks of abuse contractually and also will permit ICANN to refer abuses to appropriate authorities. ICANN can amend contracts and the applicant guidebook to address harms that may arise as a direct or indirect result of the new gTLD program.
- ICANN has addressed the principal concerns raised by stakeholders about the potential for proliferation of malicious conduct in the new gTLD space by implementing measures to mitigate that risk, including centralized zone file access, a high security TLD designation and other mechanisms. A combination of verified security measures and the implementation of DNSSEC will allow users to find and use more trusted DNS environments within the TLD market.
- ICANN has addressed the principal concerns raised by stakeholders about the protection of trademarks in the new gTLD space by

implementing other measures to enhance protections for trademarks and other rights, including pre-delegation dispute resolution procedures, a trademark clearinghouse, and post-delegation dispute resolution procedures.

- To the extent that there are costs to trademark owners or others, ICANN has worked with the community to address those concerns, and ICANN pledges to continue that effort.

EXHIBIT C-9

Economic Case for Auctions in New gTLDs

8 August 2008

Executive Summary

There are two lines of argument for auctions as the tie-breaking mechanism for resolving contention among competing applicants for new generic TLD strings. First, auctions accomplish the goal of allocative efficiency: putting scarce resources into the hands of those who value them the most. In particular:

- Applicants whose true intentions or abilities are to serve many users would be able to justify higher bids than applicants who will serve few users;
- Applicants capable of providing high-quality service at low cost would be able to justify higher bids than low-quality, high-cost applicants; and
- Applicants who intend to develop the gTLD immediately would be able to justify higher bids than applicants whose purpose is to hold the gTLD, unused, for speculative purposes.

Second, while auctions are not perfectly aligned with ICANN's objectives, alternative allocation mechanisms such as comparative evaluations and lotteries inherently have much more severe limitations and defects, as evidenced by the historical record and by the abandonment of these alternatives in other communications areas.

ICANN intends to use auctions in the new gTLD process as a tie-breaking mechanism, not the primary allocation mechanism, for the resolution of string contention among competing new gTLD applicants for identical or similar strings. Auction would be the final means of settling any contention cases that have not been resolved at any of the previous stages in the process.

1. Background

ICANN is preparing implementation plans for the new gTLD process. Staff is working from the GNSO New gTLD recommendations and input from Internet community to guide the implementation. This memo has been prepared with the assistance of Power Auctions LLC, which has been retained for assistance in auction design.

In 2004, the Organization for Economic Cooperation and Development (OECD) released a paper on "Generic Top Level Domain Names: Market Development and Allocation Issues" (see <http://www.oecd.org/dataoecd/56/34/32996948.pdf>). The OECD paper described allocation methods for gTLD strings, including auction and comparative evaluation. The OECD paper concluded: "On balance the economic arguments favour the use of auctions in some form, where scarcity exists, in relation to the goals set by ICANN for allocation procedures. They are particularly strong in relation to allocation decisions concerning to existing resources and where a 'tie-breaker' is needed during a comparative selection procedure for a new resource. In all cases, the best elements of comparative selection procedures could still be incorporated, at a prequalification stage for registries, using straightforward, transparent, and objective procedures that preserve the stability of the Internet" (pp. 51-52).

The paper acknowledged that comparative evaluation may have the advantage of providing equity for new gTLD applicants, and permits the inclusion of broader objectives in the new gTLD selection process. However, it also noted that comparative evaluation lacks transparency and relies on subjective judgment in the determination of a winner for a proposed gTLD string.

By contrast, auctions provide objectivity and transparency: “Auctions rely on relatively simple and transparent rules that apply to all participants. As such they are fair and transparent. Given that bids are observable and verifiable by a court or any third party, the final allocation is less likely to be legally contested relative to a comparative selection procedure” (see page 42).

The OECD paper highlighted both that auctions are effective for determining the market value and that auctions are advantageous even if revenue maximization is not a primary objective. “Economic theory and experience suggest that auctions are one of the best available mechanisms for realising the true market value of a resource, as the price is decided by those with the best knowledge of the market. In the context of the TLD market the benefits auctions can bring, in this respect, largely depend on the objectives that are set by ICANN.” It continued: “As a notfor-profit organisation, revenue maximisation may not, in fact, be an objective ICANN sets for itself. The value of any new gTLD may, for example, be impacted by the number of other gTLDs that ICANN chooses to make available. ICANN may decide that the increasing the number of new gTLDs can provide greater competition, choice and innovation and give higher priority to meeting those objectives than to revenue maximisation. This does not, however, negate the benefit an auction can yield in terms of determining the value of a resource or in being a tool for efficient allocation” (p. 44).

An additional resource available to ICANN is “An Economic Analysis of Domain Name Policy,” Hastings Communication and Entertainment Law Journal (2003) (by Karl M. Manheim and Lawrence B. Solum) (see <http://law.bepress.com/sandiegolwps/le/art1>). This paper argues that the root is an economically scarce resource, that ICANN should allow a market to develop in top-level domains, and that the market should serve the public interest. It should be noted that TLDs are not necessarily a scarce resource.

Manheim and Solum compare management of the Internet’s system of unique identifiers to telecommunications spectrum and licensing of spectrum in the United States by the Federal Communications Commission (FCC). “Compared to spectrum auctions, we believe gTLD auctions will be relatively simple, both in concept and operation. Nonetheless, we think actual auction design should be worked out by ICANN to assure compatibility with technical standards and to maximize economic efficiency” (pp. 416-417).

Manheim and Solum conclude: “When auctions were first proposed to the FCC, they were dismissed out of hand as “too academic” and ridiculed as “of the realm in which it is merely the fashion of economists to amuse themselves.” The same attitude can be found in many of the objections to gTLD auctions espoused by defenders of the status quo. Just as, over time, auctions have become accepted as means for allocating economically scarce spectrum and telephony resources, we believe they will become seen as the best means for expanding the TLD name space. Indeed, the case for auctioning new gTLDs is compelling” (p. 449).

2. Auctions accomplish the goal of allocative efficiency

Auctions are well suited to accomplishing the goal of *allocative efficiency*: putting scarce resources into the hands of those who value them the most. As such, the results of auctions tend to create greater social value than alternative allocation mechanisms. For example, suppose that one applicant for a gTLD has the true intention and capability of serving many users, while a second applicant has in mind a narrow application that would serve only a few limited interests. The first applicant would generally be able to justify a higher bid for the gTLD than the second applicant; consequently, the first applicant would be likely to win the gTLD in an auction. By contrast, in a comparative evaluation, the second applicant might be able to win the

gTLD if it were more persuasive (or hired the more effective consultant or lobbyist); and in a lottery, the two applicants are by definition equally likely to win. Similarly, an auction process would tend to favor a high-quality, low-cost applicant over a low-quality, high-cost applicant. And an applicant who intends to develop the gTLD immediately would be able to justify a higher bid than an applicant whose purpose is to hold the gTLD, unused, for speculative purposes.

Largely for similar reasons, governments began 15 years ago to allocate telecommunications licenses by auction. In 1993, the US Congress authorized the Federal Communications Commission (FCC) to allocate mobile telephone licenses by auction; and in 1997, it extended this authorization to use auctions for resolving competing applications for radio and TV licenses. Moreover, auctions for allocating radio spectrum have been a truly global phenomenon. They have been used in New Zealand since 1990 and in Australia since 1993; and they have been adopted subsequently in the UK, Germany, Austria, Netherlands, Switzerland, India, Hong Kong, Singapore, Nigeria, Canada, Mexico, Brazil, and Trinidad and Tobago (to provide only a partial list).

The key benefits of a well-designed auction mechanism include the following:

- Transparent and objective means for determining a winner
- Efficient allocation – puts gTLD strings in the hands of those who value them the most and will put them to use (Note - ICANN intends to use auctions as a tiebreaking mechanism, not as the primary allocation mechanism.)
- Efficient process – fully dynamic auction, concludes in one day to one week
- Revenue maximization (with possible options for ensuring that “deepest pockets” do not always win auction) *Note that revenue maximization is not one of ICANN’s goals with the new gTLD process.

Of course, no allocation mechanism will perfectly address needs for transparency, objectivity and scalability, and auctions have received severe criticism in some contexts. For example, the European Telecommunications Network Operators’ Association (ETNO) all but blamed the European UMTS/3G spectrum auctions of 2000 and the subsequent collapse of the telecommunications sector: “The auction process appears to be particularly inappropriate when considering innovative technologies and new markets ... the whole sector has been seriously destabilised and the launch of new services delayed.”¹ ETNO argues that beauty contests are preferable to auctions.²

The timing of the European spectrum auctions coincided with the NASDAQ stock market peak. Given that telecom firms operating outside of Europe or outside the wireless sector suffered similar drops in stock prices as European wireless operators and given the similarly-timed bursting of the “dot-com” bubble, it is more reasonable to view the high European spectrum auction prices as a symptom of the bubble rather than as a cause of its collapse. Oxford University Professor Paul Klemperer has noted: “In retrospect, of course, the licenses look expensive. But in retrospect, shares or houses sometimes look expensive. Like any other

¹ See ETNO Reflection Document Commenting on Auctions and Beauty Contests, Dec. 2004; available at <http://www.etno.eu/Portals/34/ETNO Documents/Information Society i2010/RD203 - FM Auctions and Beauty Contests.pdf> (p. 3).

² As described in the reflection document’s introduction, ETNO represents the voice of Europe’s largest telecom operators. Thus, ETNO has a vested interest in obtaining lower license fees for its member operators and insulating them from new entry. Note that the document also asserts: “The progress in technologies leads to significant evolutions of services and transformation of traditional markets. As a consequence, maintaining a distinction between incumbent operators and new entrants becomes more and more artificial.” (p. 2).

market, an auction simply matches willing buyers and willing sellers — it cannot protect them against their own mistakes.”³

While the spectrum auction experience offers some useful insights, there are major differences between spectrum licenses and gTLDs. Spectrum licenses are unique and are limited to a fixed supply — and specific spectrum licenses are needed to provide specific wireless services. Telecom firms in Europe in 2000 may have perceived that they needed to win specific licenses in order to remain in business. By contrast, gTLDs are unique only in their identifying string and the number of gTLDs can be expanded over time — and any of a large number of alternative gTLD strings can be used for a given purpose. If a bidder fails to win its first-choice gTLD, it can submit a new proposal and apply for an alternative string. In this respect, an auction for gTLDs is more likely to be comparable to an auction for houses⁴ than to an auction for spectrum. There are characteristics of a house that make it unique and more desirable than another home, but if an applicant is unsuccessful in a house auction, there is likely to be another suitable house available. Similarly, an applicant who finds .movie to be too expensive in a gTLD auction can instead apply for .film or .cinema. Participants in gTLD auctions will not generally find themselves in “must-win” situations; their second or third choices will be reasonable substitutes.

It is worth emphasizing that, similar to ICANN, most spectrum agencies have not placed revenue maximization at the top of their list of objectives. Rather, the efficient use of the spectrum, and the putting of spectrum into use in a timely fashion, has generally been uppermost. It has also been widely perceived that scarce spectrum is a valuable public resource that governments should not merely give away to self-interested individuals. Transferring TLD rights to third parties for little or no compensation would be equally as objectionable as spectrum giveaways.

At the same time, allocating these resources for free does not reduce the price to end-consumers.

It is a classic fallacy in economics (the “sunk cost fallacy”) that profit-maximizing firms will set their prices in relation to the level of past fixed costs. Rather, they will take account of the scarcity of the resources that they use, regardless of whether they pay for them or receive them for free. There may be a concern that auctions resolving contention among gTLD applications will result in passing on of costs to consumers. The available evidence after spectrum auctions has been that consumer prices do not depend on the price paid for the spectrum. A similar point has been seen recently in Europe, where utilities received grandfathered carbon emission allowances for free but nevertheless set higher consumer prices that reflected the opportunity cost of the allowances, not the (zero) price they paid.

Finally, various devices can be considered for favoring disadvantaged bidders in an auction. For example, a 25% bidding credit could be offered to community-based bidders whose community is located primarily in least-developed countries: a \$300,000 bid from such a bidder would be viewed as equivalent to a \$400,000 bid from a wealthy country. (Obviously, in such event, measures would need to be taken so that bidders in wealthy countries could not establish shell corporations for the primary purpose of “gaming” such bidding credits.) Such devices might make auctions more attractive to the Internet community.

³ Klemperer, P., “The Wrong Culprit for Telecom Trouble,” *Financial Times*, 26 Nov. 2002, p. 21.

⁴ Auctions for houses are commonplace and work well in various parts of the world, for example, in Sydney, Australia.

3. Alternative allocation mechanisms are deficient

Manheim and Solum (2003, p. 367) consider four possible allocation mechanisms:

- Rule of first occupancy⁵
- Lotteries
- Comparative evaluations
- Auctions

Meanwhile, the OECD paper does not even consider a rule of first occupancy and summarily dismisses lotteries: “These are little used by OECD governments where allocative choice is required” (p. 39). Both papers come down decisively in favor of auctions. While part of the reason to use auctions is the set of attractive properties outlined in the previous section, another reason to use auctions is that the alternatives are grossly deficient.

A rule of first occupancy does not seem worthy of any further attention, so we limit consideration to the two other alternatives: lotteries and comparative evaluations.

Lotteries

In the telecommunications area, the best known use of lotteries was in connection with the allocation of US mobile telephone licenses, beginning in 1981. The experience was summarized by Manheim and Solum (2003, pp. 396-397): “Applications came in by the hundreds of thousands. Winners would often ‘flip’ or resell their licenses to larger entities at substantial profit without ever delivering service to a single customer. Some licenses won at lottery were resold in short order for tens of millions of dollars. The windfalls continued, as per the Coase Theorem.⁶ But the transaction costs were high, including the cost of delay in getting licenses to firms that could actually use them. One estimation of social cost for the ten-year delay in licensing of cellular providers [by lottery] was 2 percent of Gross National Product (GNP). By 1985, the FCC indicated its desire to eliminate the lottery system.”

In addition, awarding rights to gTLDs by lottery or “coin flip” might be contrary to the laws in certain jurisdictions. We take no opinion on the legal argument, as conducting a lottery would otherwise appear antithetical to economic principles and to ICANN’s objectives.

Comparative evaluations

Before lotteries, radio spectrum licenses in the US were allocated by comparative evaluation. The process is summarized in Paul Milgrom’s book, “Putting Auction Theory to Work,” Cambridge University Press (2004, p. 3): “Spectrum rights (licenses) in the United States and many other countries had long been assigned in comparative hearings, in which regulators compared proposals to decide which applicant would put the spectrum to its best use. The process was hardly objective: it involved lawyers and lobbyists arguing that their plans and

⁵ A rule of “first occupancy” allocates an item to the first individual to gain possession of or make use of the item.

⁶ The Coase Theorem was introduced by University of Chicago Law & Economics Professor Ronald Coase, see <http://www.law.uchicago.edu/socrates/coase.html>. Coase won the 1991 Nobel Prize for his work. The theorem is summarized as “In a world where there are no transaction costs, an efficient outcome will occur regardless of the initial allocation of property rights.”

clients were most deserving of a valuable but free government license. With its formal procedures and appeals, a comparative hearing could take years to complete.” Milgrom adds in a footnote: “The process was once characterized by an FCC Commissioner as the ‘FCC’s equivalent of the Medieval trial by ordeal’ (as quoted by Kwerel and Felker (1985)).”

The International Olympic Committee uses a comparative evaluation process for determining the site of the Olympic Games. In one of the more notorious episodes, it was alleged that in connection with the selection of Salt Lake City for the 2002 Winter Games, IOC members accepted more than \$1 million in cash, gifts, trips and scholarships. As a result of this bribery scandal, 10 members of the IOC were expelled, another 10 members were sanctioned, and several criminal prosecutions ensued. While the IOC is unlikely to replace its comparative evaluation process with an explicit auction, the episode highlights that comparative evaluations without clear criteria for deciding an allocation are invitations to corruption. By contrast, since auctions are transparent and objective, it is much more difficult to influence the outcome in favor of a particular bidder.

The disadvantages of comparative evaluations can be summarized as follows:

- It is difficult to establish meaningful transparent and objective criteria that allow the evaluator to distinguish among and select one of multiple competing applications;
- As a consequence, the comparative evaluations take a long period of time and require the investment of exhaustive resources by both applicants and the evaluator;
- Also as a consequence, the comparative evaluation process is vulnerable to corruption;
- The awards, once made, are unlikely to withstand judicial review;
- If other than the highest-value applicant wins the comparative evaluation, the winner is likely to ‘flip’ the rights for speculative profits;
- Depending on how the comparative evaluation is structured, the process may favor well-connected applicants, and thus may not be any more protective of disadvantaged applicants than auctions; and
- In the language of the economics and political science literatures, the comparative evaluation process may thus be an ‘all-pay auction’ which dissipates revenues (through expenditures on consultants and lobbyists) instead of collecting revenues that can be channeled to the good of the internet community.

At the same time, as emphasized by the OECD paper and noted in Section 1 above, most of the advantages of comparative evaluations can be obtained through a pre-qualification process before the auction. The pre-qualification procedures could apply straightforward, transparent and objective standards that would deal with concerns that a stand-alone auction might otherwise engender among the Internet community. However, the pre-qualification process would often fail to eliminate multiple competing applications for new generic TLD strings, which would then be resolved by auction. Pre-qualification and evaluation will still be used as a primary allocation method, but auctions would serve as the tie-breaker for resolving contention among identical or similar string applications

Respondent,

and

NU DOTCO, LLC. and VERISIGN, INC.

Amicus Curiae

ICDR CASE NO: 01-18-0004-2702

WITNESS STATEMENT OF PAUL LIVESAY IN SUPPORT OF

ICANN'S REJOINDER AND *AMICI'S* BRIEFS

Confidential – Attorneys' Eyes Only

Not to be Publicly Disclosed in IRP

I, Paul Livesay, declare as follows:

1. I am a former Vice-President and Associate General Counsel of VeriSign, Inc. (“Verisign” or the “Company”). I have personal knowledge of the matters set forth herein, except where I indicate otherwise, and am competent to testify as to those matters.

2. From 2014 through 2018, I served as a Vice-President and Associate General Counsel for Verisign. In that capacity, I was in charge of intellectual property matters, had responsibility for certain strategic business transactions for the Company, and provided general advice and counseling to the Company’s management on business and legal matters. My position at the company had both business and legal components. My statement is only a statement of facts and not legal reasoning or opinions. Previously, I had been with Verisign in 2009-2010 as Vice-President, Strategy and Management, for Verisign’s digital certificate business.

3. I have been an intellectual property and technology transactions attorney for over twenty-five years. Prior to joining Verisign in 2014, among other roles, I practiced law at the firm of Wilson, Sonsini, Goodrich & Rosati, was General Counsel of RSA Data Security, Inc., was General Counsel at the design firm IDEO LLC, and was Vice-President, Technology, for Symantec Corporation. I am a member of the Bar of the State of California.

The Secondary Market for new gTLDs and Discussions with .WEB Applicants

4. In 2014, I was put in charge of identifying potential business opportunities for Verisign in ICANN’s New gTLD Program. Up until that point, Verisign had participated in the New gTLD Program by filing applications for new TLDs that were variants of its company name (*i.e.*, “.Verisign”) or internationalized versions of Verisign’s existing TLDs, but Verisign had not sought to acquire the rights to a new gTLD not already associated with Verisign.

Redacted - Third Party Designated Confidential Information

. The period for filing new applications as part of the New gTLD Program had ended. Redacted - Third Party Designated Confidential Information

Redacted - Third Party Designated Confidential Information

5. Redacted - Third Party Designated Confidential Information

I studied very closely the New gTLD Applicant Guidebook (the “Guidebook”) published by ICANN, the Auction Rules, and other information regarding the New gTLD Program available on ICANN’s website, www.icann.org, to familiarize myself with the rules applicable to the Program. Redacted - Third Party Designated Confidential Information

6. The Guidebook and Auction Rules do not prohibit applicants from entering into business transactions with other entities with respect to an applied-for TLD. Based on the Guidebook, it is apparent that ICANN’s concern with respect to such transactions is whether a transaction would require re-evaluation of the applicant, which could result in a delay in the resolution of a contention set. For example, Section 4.1.3 of the Guidebook acknowledges that applicants may seek to resolve string contentions (*i.e.*, which of various competing applicants for a TLD would be awarded the TLD) by establishing joint ventures among themselves, which could change the ownership of the applicant or the identity of the applicant itself.¹ The Guidebook cautions that material changes such as these could require re-evaluation, and encourages applicants to combine in ways that do not require re-evaluation: “Applicants are encouraged to resolve contention by combining in a way that does not materially affect the

¹ Afilias C-3 (*gTLD Applicant Guidebook*, Module 4, § 4.1.3, available at <https://newgtlds.icann.org/en/applicants/agb>).

remaining application. Accordingly, new joint ventures must take place in a manner that does not materially change the application, to avoid being subject to re-evaluation.”²

7. Similarly, Clause 68 of the Auction Rules recognizes that applicants may enter into “settlement agreements or post-Auction ownership transfer arrangements, with respect to any Contention Strings in the Auction”; although once within an active auction timeline, these activities are prohibited during a “Blackout Period” extending from the deposit deadline for an auction through full payment of the winning auction bid, but permitted both for the period prior to and after the Blackout Period.³

8. Redacted - Third Party Designated Confidential Information

). Donuts was a major participant in the new gTLD Program, filing hundreds of applications for new gTLDs. Under the arrangement between Donuts and Demand Media, which was entered into while the new gTLD applications were pending, the gTLDs would be transferred to Demand Media after rights to the subject new gTLDs were awarded to Donuts in exchange for Demand Media’s assistance in funding Donuts’ acquisition of the gTLDs. Donuts also was one of the several applicants for the .WEB gTLD. Attached hereto as Exhibit A is a true and correct copy of a press release dated June 11, 2012 from Demand Media describing its arrangement with Donuts (<https://ir.leafgroup.com/investor-overview/investor->

² *Id.*

³ Afilias C-4 (*Auction Rules for New gTLDs, Indirect Contentions Edition, Version 2015-02-24*, Clause 68(a) & (b), available at <https://newgtlds.icann.org/en/applicants/auctions>).

press-releases/press-release-details/2012/Demand-Media-to-Participate-in-Historic-Expansion-of-Generic-Top-Level-Web-Domain-Name-Extensions/default.aspx).

9. Through my research, I also became aware that it was not uncommon for entities interested in acquiring a new gTLD to form a special purpose entity to be the applicant for a new gTLD. For example, I understand that Donuts formed a separate special purpose entity for each gTLD for which it applied. For .WEB, Donuts formed Ruby Glen, LLC and used that entity to apply for the gTLD. By contrast, Google used the same entity, Charleston Road Registry Inc., to apply for all of the new gTLDs it sought to acquire.

10. One effect of the use of special purpose entities was to facilitate secondary market transfers of new gTLDs through the transfer of the special purpose entity independent of other assets of a party supporting the applicant. Another effect of the use of such entities can be to maintain as confidential the party for whose benefit the application was being pursued. In this regard, the new gTLD application form required the disclosure of the name of the applicant and the identity of any person or entity that owned more than 15% of the applicant.⁴ In some instances, this resulted in the disclosure of the real party in interest. For example, Google is identified as the owner of Charleston Road Registry Inc. In other instances, the requirement for a disclosure of the real party in interest was avoided by forming another entity to be the parent of the applicant, so the real parties in interest were not disclosed as the parent entity in the application. Donuts formed “Covered TLD LLC,” for example, and made that entity the disclosed parent entity on many of its applications.

11. Redacted - Third Party Designated Confidential Information

ICANN’s website identified each new gTLD for which an application had been filed and listed the identity of applicants along with a copy of non-confidential parts of their respective applications. Redacted - Third Party Designated Confidential Information

12. Redacted - Third Party Designated Confidential Information

13. Redacted - Third Party Designated Confidential Information

14. Redacted - Third Party Designated Confidential Information

The Domain Acquisition Agreement between Verisign and NDC

15. Redacted - Third Party Designated Confidential Information

16. Redacted - Third Party Designated Confidential Information

. Private

auctions are conducted on terms privately negotiated among the competing bidders for the TLD, and private auction agreements commonly include terms for the losing applicants to split the proceeds of the auction among themselves. In private auctions, which may have been the most common form of resolving contention sets, there are no Guidebook requirements, and commonly no other requirements, with respect to how a participant conducts its bid, disclosure of financing terms, disclosure of interested parties, or post award intentions of the participants. Indeed, some applicants seem to have made a lucrative business out of losing private auctions. In a public auction, by contrast, the terms are not privately negotiated among the participants/competitors, and the proceeds of the auction are placed in a fund to be set up by ICANN for investment benefitting the Internet community as a whole rather than benefitting the losing bidders in a private auction.

17. Redacted - Third Party Designated Confidential Information

18. On August 15, 2015, NDC and Verisign entered into the Domain Acquisition Agreement (“DAA”). A copy of the DAA is attached hereto as Exhibit D. The DAA is a conditional agreement pursuant to which Verisign agreed to provide the funds for NDC to participate in an auction for the .WEB gTLD. In the event NDC prevailed at the auction and

entered into a registry agreement for .WEB with ICANN -- upon application to ICANN and with ICANN's consent -- NDC would assign the .WEB registry agreement to Verisign.

19. Redacted - Third Party Designated Confidential Information

20. The DAA is compliant with all terms of the Guidebook and consistent with transactions by others with respect to the new gTLD Program. Verisign did not acquire any interest in or control over NDC. The application for .WEB was not transferred to Verisign. The DAA's registry agreement assignment provision was conditional and contingent, applied only to an executed registry agreement following an award of .WEB to NDC, and was subject to ICANN's prior consent. The structure of the agreement also was consistent with industry practices in the secondary market for new gTLD applications of which I became aware in my research of the New gTLD Program, as explained above and as further documented below.

21. Redacted - Third Party Designated Confidential Information

22. The express terms of the DAA establish that it does not transfer NDC's application for .WEB and that any transfer to Verisign would be in the future and contingent on

ICANN's normal processes for such transfers, including application to ICANN for consent to an assignment of the registry agreement and ICANN's consent. For example, the DAA provides:

Redacted - Third Party Designated Confidential Information

Thus, a transfer or assignment would only take place after a registry agreement was signed between ICANN and NDC, ICANN's subsequent consent to an assignment of the registry agreement to Verisign, and the subsequent execution and delivery of the Transfer Agreement.

23. The lack of any transfer of rights in NDC's Application or assignment of a registry agreement is further confirmed by the terms of the DAA that permitted a termination of Redacted - Third Party Designated Confidential Information

24. Redacted - Third Party Designated Confidential Information

25. The Guidebook does not require an applicant to reveal the existence of, sources or amounts of any funding for a public or private auction for a new gTLD or other resolution of a contention set. ICANN's new gTLD application requires applicants to provide certain financial information to ICANN regarding its ability to *operate* a new gTLD.⁵ There is no requirement that an applicant disclose any information regarding funding for participation in an auction. It is further my understanding that financial information submitted as part of a gTLD application also is designated confidential by ICANN and not disclosed to other applicants or the public. Accordingly, under the terms of the new gTLD Program, even if the sources or terms of their funding for participation in the auction were subject to disclosure to ICANN, which they were not, other members of the contention set would never have access to that information.

26. As another example of the confidential nature of financial arrangements, it was disclosed after the fact that Automattic Inc. ("Automattic") financed the successful bid in a private auction for the .BLOG gTLD by applicant Primer Nivel S.A. ("Primer Nivel"). The auction took place in February 2015. In May 2016, before the .WEB auction, it was reported that Primer Nivel's bid had been financed by Automattic, the owner of the blogging platform wordpress.com. According to press reports, Automattic paid Primer Nivel \$19 million in exchange for Primer Nivel's agreement to assign the .BLOG gTLD to Automattic if it was successful in the private auction. One of the press reports that I reviewed regarding this

⁵ Afilias C-3 (*gTLD Applicant Guidebook*, §§ 1.2.1.2, 1.2.2 & 2.2.2.2, available at <https://newgtlds.icann.org/en/applicants/agb>).

transaction is attached hereto as Exhibit E (Kevin Murphy, WordPress Reveals IT Bought .blog For \$19 Million, Domain Incite (May 13, 2016), <http://domainincite.com/20440-wordpress-reveals-it-bought-blog-for-19-million>). This funding transaction appears to have been kept confidential and not revealed to ICANN or other bidders, which included an Afilias entity (Afilias Domains No. 1 Limited), prior to the .BLOG auction. Specifically, a press report states that WordPress financed Primer Nivel’s winning auction bid but “wanted to stay stealth while in the bidding process and afterward in order not to draw too much attention.” See Ex. F (Alan Dunn, Knock Knock WordPress Acquires Blog for 19 million, NameCorp (May 15, 2016), <https://namecorp.com/knock-knock-wordpress-acquires-blog-for-19-million/>). On April 29, 2016, ICANN consented to the assignment of .BLOG from Primer Nivel to Knock Knock WHOIS There, LLC, a subsidiary of Automattic. See Ex. G (<https://www.icann.org/resources/agreement/blog-2015-05-14-en>). To the best of my knowledge, Afilias did not object to the .BLOG auction after Automattic’s role in financing Primer Nivel’s bid was revealed. This transaction further supported my understanding then that pre-auction financing agreements, such as the DAA, were consistent with the Guidebook.

The Assurances of Performance

27. Redacted - Third Party Designated Confidential Information

28. Redacted - Third Party Designated Confidential Information

[Redacted content]

Afilias Claims in the IRP

29. It is my understanding that Afilias argues in this IRP that the DAA constitutes an impermissible transfer by NDC of rights in its new gTLD application. Such an argument is inconsistent with the express terms of the DAA and Confirmation of Understandings described above. Further, such an interpretation of the Guidebook would be contrary to industry practices with respect to the New gTLD Program that I learned in researching the Guidebook and secondary market.

30. Redacted - Third Party Designated Confidential Information

31. Redacted - Third Party Designated Confidential Information

A public auction is specifically provided for in the Guidebook, is fair and conducted under ICANN's oversight, and I am not aware of any requirement under the Guidebook that an applicant agree to a private auction. To the contrary, the Guidebook provides a private auction may only be conducted if *all* members of the Contention Set agree to have a private auction.⁶

⁶ Afilias C-3 (*gTLD Applicant Guidebook*, §§ 4.13 & 4.3, available at <https://newgtlds.icann.org/en/applicants/agb>).

32. Redacted - Third Party Designated Confidential Information

33. Redacted - Third Party Designated Confidential Information

34. Redacted - Third Party Designated Confidential Information

35. I understand that Afilias has stated that its bidding in the .WEB auction was constrained by the terms of its financing arrangement, which limited its bidding to no more than \$135 million.⁷ The limits on Afilias' funding demonstrates that Afilias' own conduct as a bidder during the .WEB auction was limited by its own financing arrangements, appearing to confirm again the industry practice of financing arrangements with parties not part of the .WEB contention set.

The Auction

36. In accordance with the DAA, Verisign provided funds for NDC to use in bidding for the .WEB gTLD in the public auction. NDC submitted a final bid that ICANN deemed to be and announced as the winning bid. Shortly after the auction, NDC paid ICANN \$135 million as the winning bid for the .WEB gTLD. Those funds were provided to NDC by Verisign.

37. [Redacted - Third Party Designated Confidential Information]

38. Finally, I understand that Afilias makes a claim that there was some form of collusion between Verisign and ICANN during or following the auction proceedings. This is untrue. I was responsible for this transaction. I did not have any communications with ICANN before or following the auction process. [Redacted - Third Party Designated Confidential Information]

⁷ See Witness Statement of Ram Mohan, 1 November 2018, ¶ 35, fn. 38 (<https://www.icann.org/en/system/files/files/irp-afili-as-witness-statement-mohan-redacted-26nov18-en.pdf>).

. As a major participant in the DNS, Verisign has regular dealings with ICANN on a range of matters. Also, with respect to the questionnaire ICANN sent out to Verisign, NDC and contention set members who objected to ICANN regarding the public auction for .WEB, I am unaware of any advance notice by ICANN to NDC or Verisign of the questionnaire.

I swear under penalty of perjury under the laws of the United States of America that the foregoing is true and correct. Executed this 1st day of June 2020 at San Carlos, California.

CALIFORNIA, AUGUST 11, 2020

---o0o---

ARBITRATOR BIENVENU: Mr. Livesay, good morning. Good morning, sir. I don't know where you're joining us from, but I made the presumption that "good morning" would work.

THE WITNESS: Yes, it's morning. I am here in California.

ARBITRATOR BIENVENU: Excellent. Sir, could I ask you to speak closer to your mic or to increase the volume of your mic?

THE WITNESS: Is that better? Can you hear me now better?

ARBITRATOR BIENVENU: It is better, but we could do with a bit more volume.

THE WITNESS: Let me put the mic here in front of my face. How about that?

ARBITRATOR BIENVENU: Mr. Livesay, my name is Pierre Bienvenu. I chair the Panel. My colleagues are Catherine Kessedjian, who is joining us from Paris, and Mr. Richard Chernick, who is joining from Los Angeles.

You have, sir, filed in connection with this Independent Review Process a witness statement dated 1st June 2020, correct?

1 THE WITNESS: Correct.

2 ARBITRATOR BIENVENU: And your statement
3 ends with your swearing that the statements in your
4 witness statement are true and correct?

5 THE WITNESS: Correct.

6 ARBITRATOR BIENVENU: I would ask you,
7 sir, in relation to the evidence that you will give
8 to the Panel today, likewise, solemnly to affirm
9 that it will be the truth, the whole truth and
10 nothing but the truth?

11 THE WITNESS: I do.

12 ARBITRATOR BIENVENU: Thank you.

13 Mr. Johnston.

14 MR. JOHNSTON: Good morning, Mr. Livesay.
15 Have you recently had an opportunity to review your
16 witness statement?

17 THE WITNESS: I have over the last few
18 days.

19 MR. JOHNSTON: And are there any
20 corrections you wish to make to it?

21 THE WITNESS: I think the only
22 clarification is there might be where I said not
23 four --

24 (Discussion off the record.)

25 ARBITRATOR BIENVENU: Maybe, Mr. Livesay,

1 maybe you could put your mic on something else so
2 it would be higher up. If you rest it on a book or
3 binder or whatever, it will be closer to you.

4 (Discussion off the record.)

5 ARBITRATOR BIENVENU: I believe
6 Mr. Johnston was asking if you had any corrections
7 that you wish to make to your witness statement,
8 and you were cut off in the course of your answer.

9 THE WITNESS: Right. I was simply stating
10 there's a point where I said I may have talked to
11 four or five of the potential set members, and I
12 can confirm I have only talked to four, not four or
13 five. It is a clarification. I don't think it is
14 inconsistent with the original statement.

15 MR. JOHNSTON: Mr. Chairman, we offer
16 Mr. Livesay for cross-examination.

17 ARBITRATOR BIENVENU: Thank you very much,
18 Mr. Johnston.

19 Mr. Litwin, you ready to proceed with your
20 cross-examination?

21 MR. LITWIN: I am, Mr. Chairman. Thank
22 you very much.

23 //

24 //

25 //

1 CROSS-EXAMINATION

2 BY MR. LITWIN

3 Q. Good morning, Mr. Livesay. My name is
4 Ethan Litwin. I am from the law firm of
5 Constantine Cannon. I understand that you have
6 likely received a package from us, as has
7 Mr. Johnston, and I would ask that you both open
8 them now.

9 A. All right.

10 Q. Mr. Livesay, as you will see, in fact, if
11 you just turn to your witness statement, which is
12 behind Tab 1, you'll see that we've marked each
13 page of the documents in that binder with a unique
14 page number. When I direct your attention to these
15 documents, I will refer to that unique page number,
16 okay?

17 A. The lower right-hand corner?

18 Q. Correct.

19 A. Okay.

20 Q. Now, there are a few documents that are
21 not in the binder. Those will be on the screen.
22 So I assume that you have been able to see on your
23 screen the documents that Chuck has been pulling up
24 this morning?

25 A. Yes.

1 Q. Okay. You're a little faint again, but I
2 think I can make it out.

3 A. I think it is just because when I look
4 away.

5 (Discussion off the record.)

6 Q. BY MR. LITWIN: All right. We are in
7 business.

8 Mr. Livesay, can you please tell me, in
9 addition to your witness statement, what other
10 documents you reviewed to prepare for your
11 testimony here today?

12 A. I reviewed some of the filings, I believe
13 Afiliast's filing from May, and then I also read
14 through some of the filings afterward, including
15 Afiliast's response and some of the other papers, but
16 largely just the filings over the last couple of
17 months.

18 Q. Did you look at any of the exhibits that
19 were referenced in those filings?

20 A. Exhibits -- I just read the filings mostly
21 directly.

22 Q. Okay. Mr. Livesay, you were employed at
23 VeriSign as a vice president and associate general
24 counsel between 2014 and 2018; is that correct?

25 A. Correct.

1 Q. And you had previously worked at VeriSign
2 in 2009-2010 as the vice president, strategy and
3 management for VeriSign's digital certificate
4 business; is that correct?

5 A. Correct.

6 Q. And in 2010, you left VeriSign to join
7 Symantec when it acquired VeriSign's certificate
8 business; is that right?

9 A. Correct. I was sold off in that
10 transaction, correct.

11 Q. Do you recall the month in 2014 when you
12 returned to VeriSign?

13 A. I think I started early June, like the
14 first week of June 2014.

15 Q. And what about the month in 2018 that you
16 left?

17 A. I believe my last day was early May of
18 2018.

19 Q. And what was the reason for your departure
20 in 2018?

21 A. I live in the Silicon Valley and VeriSign
22 is in Reston, Virginia. I was commuting every
23 other week for almost -- well, a long time. I got
24 separated from my wife in 2017 and ultimately just
25 had to return home.

1 And at that same time my mother was going
2 through a severe decline, had to take over as her
3 medical attorney-in-fact, and she went into
4 hospice. So I had that kind of stuff.

5 Q. Understood, Mr. Livesay.

6 A. I also wanted to take care of some stuff.

7 Q. Did you sign any sort of termination
8 agreement when you left VeriSign?

9 A. I'm sure I was exited as part of a
10 reduction in force. I am sure there was some forms
11 that I signed or whatnot.

12 Q. Did you sign anything related to providing
13 VeriSign with assistance in matters relating to
14 disputes concerning .WEB?

15 A. I don't recall anything like that as a
16 part of my departure, no.

17 Q. Since you left VeriSign, where have you
18 been employed?

19 A. Since leaving VeriSign, I am basically
20 working as an independent attorney contractor, as
21 you say, because I was dealing with a lot of other
22 family stuff at the time.

23 Q. Have you done any work for VeriSign since
24 leaving in 2018?

25 A. No, not until they contacted me in early

1 May regarding this matter.

2 Q. In early May of?

3 A. This year.

4 Q. Of this year?

5 A. Yeah.

6 Q. Are you providing your testimony in this
7 case pursuant to any contractual agreement with
8 VeriSign?

9 A. No.

10 Q. Have you been compensated in any way for
11 the assistance you have provided to VeriSign in
12 connection with these disputes concerning .WEB?

13 A. Nope.

14 Q. Do you have any financial interest in the
15 outcome of the .WEB dispute?

16 A. Nope.

17 Q. Okay. In 2014 you were asked to identify
18 potential business opportunities for VeriSign in
19 ICANN's new gTLD Program; is that right?

20 A. Yeah, towards the end of '14, yeah, I
21 began -- I started middle of '14 I was doing some
22 stuff having to do with strategy and the patent
23 group stuff. Later in the fall I kind of got into
24 this program, yeah.

25 Q. Who gave you this assignment?

1 A. My boss at the time, Tom Indelicarto, and
2 Jim Bidzos, the CEO.

3 Q. Mr. Bidzos personally instructed you to
4 identify opportunities in the new gTLD Program?

5 A. I worked for two people at the company, my
6 immediate boss and his boss. I do what they ask me
7 to do.

8 Q. Well, my question is: Do you recall
9 receiving this assignment from somebody?

10 A. You know, we had small discussions. I
11 don't recall a specific -- I am not really sure
12 what you're asking, because, like I said, I had
13 discussions with these two executives, and I was
14 asked to pursue and find opportunities in this
15 area.

16 Q. Okay. That's fair enough.

17 Just for the court reporter, could you
18 spell Indelicarto and Bidzos for her?

19 A. This is going to be good. Indelicarto,
20 I-n-d-e-l-i-c-a-r-t-o, Indelicarto, I think.

21 Q. I think that's right.

22 A. Bidzos, B-i-d-z-o-s.

23 Q. Thank you. Did you report back to
24 Mr. Indelicarto or Mr. Bidzos as you proceeded to
25 work on this assignment?

1 A. Sure, absolutely.

2 Q. How often?

3 A. Probably weekly or biweekly as we
4 progressed trying to investigate this area.
5 Obviously -- go ahead. Sorry.

6 Q. In what form did you report back, was it
7 in writing, email, memo, small meetings?

8 A. Most commonly small meetings talking about
9 the development and progress of matters.

10 Q. Did you collaborate on this project with
11 anyone else at VeriSign?

12 A. Not sure what you mean by "collaborate,"
13 depending on where in the project we were. Early
14 on it was a very small group. As we got into
15 later, working on the agreement became more
16 involved. There were other attorneys involved in
17 the drafting and that kind of stuff.

18 Q. So let's break this into the -- what I'll
19 call the investigative stage and the contracting
20 stage; is that fair, Mr. Livesay?

21 A. Within reason, yes, that's probably fair.

22 Q. Okay. So during the investigative stage,
23 how big was the group you were working with?

24 A. It was pretty small. A little project
25 group. I don't know entirely who else might have

1 been aware of the project outside of the few
2 executives I mentioned. I am not telling anyone
3 outside my -- those folks at that time.

4 Q. So outside of Mr. Bidzos and
5 Mr. Indelicarto, is there anyone else who was
6 working with you to identify opportunities in the
7 new gTLD Program?

8 A. Well, certainly there was some people on
9 the business side who were evaluating and making
10 the decisions whether it makes sense for us to get
11 into the gTLD market.

12 Q. Who were they -- I'm sorry.

13 A. I am not sure of everyone. I know I
14 worked with a gentleman by the name of John Cochran
15 at the time who was in the corporate strategy
16 group. I think he rolled up through finance.

17 To be fair, though, there's a distinction,
18 I think, between the business folks looking at
19 whether it makes sense for us to go into this
20 business and whether or not they were necessarily
21 involved in the project of pursuing opportunities.

22 What I mean by that is there was a
23 decision to potentially look at this opportunity,
24 but the folks developing that intel maybe weren't
25 necessarily aware of what I was doing in trying to

1 pursue an actual agreement with a contention
2 member.

3 Q. Okay. And what was Mr. Indelicarto's
4 title?

5 A. He's general counsel.

6 Q. And Mr. Bidzos?

7 A. He's the chairman, CEO and whatever stuff
8 you could put on there.

9 Q. Now, when you moved to the contracting
10 time of this project, you mentioned that other
11 lawyers were involved. Who were they?

12 A. Specifically a guy by the name of Kevin
13 Ristau, R-a-s-t-a-u, I think it is, and Rob Wilson.

14 Q. And the Panel is familiar with a document
15 called the Domain Acquisition Agreement, which is
16 the agreement you signed with NDC. Did Mr. Ristau
17 and Mr. Wilson draft that document?

18 A. They were definitely involved in the
19 drafting of that document for sure.

20 Q. Were you involved in the drafting of that
21 document?

22 A. Sure.

23 Q. I'm sorry, didn't hear that?

24 A. Yes.

25 Q. Did you work with Mr. David McAuley on

1 this project at all?

2 A. I don't recall that name, no, not on that
3 project.

4 Q. Do you know Mr. McAuley?

5 A. The name sounds familiar. Maybe he's a
6 VeriSign person, but it's been a while. I don't
7 recall.

8 Q. That's the same exact answer he gave about
9 you. He knew your name, but wasn't familiar.

10 Now, you got this project in 2014, and
11 that was after the new gTLD application window had
12 closed, correct?

13 A. I believe the application window closed in
14 '12, so yeah.

15 Q. Following the closure of the application
16 window, VeriSign had raised concerns with ICANN
17 about the risk of name collision; is that right?

18 A. I am not sure. I don't know. I think
19 that's handled within another group within
20 VeriSign.

21 Q. So are you aware that name collision
22 concerns the risk that delegation of new gTLDs
23 could interfere with the attempts to reach a
24 private domain and instead would result in
25 resolving to a public domain as well?

1 A. I thought you asked whether I was aware
2 somebody had communicated about it. I thought
3 that's what you asked. I am aware of the concept
4 of name collision.

5 Q. Okay. And just to be clear that we
6 understand what name "collision" is, so if there
7 were a registry for, let's say, .HOME or .CORP, for
8 example, a lot of people use those for their
9 private Internets, right?

10 A. I don't know. That's not my expertise.

11 Q. Would it be fair to say through its
12 lobbying efforts on name collision, VeriSign
13 managed to at least preliminarily take close to 10
14 million domain names off the market in 2013?

15 A. I have no idea what you mean by VeriSign's
16 lobbying, and I was not with the company in 2013.

17 Q. In January of 2014, ICANN announced that
18 it had received over 1,900 applications for new
19 gTLDs.

20 Do you recall that?

21 A. I wasn't with the company at that time.
22 You said January '14; is that right?

23 Q. Yes.

24 A. No. I joined in June of '14.

25 Q. Did you follow the progress of the new

1 gTLD Program during your time at Symantec?

2 A. No. Prior to joining VeriSign in 2014, I
3 had never been a part of the DNS world. Prior to
4 that, my history in security infrastructure had
5 been on the encryption side and then on the
6 certificate side. So me coming to VeriSign related
7 to the naming business was a new industry to me.

8 Q. Okay. When you joined VeriSign in June of
9 2014, were you aware that ICANN had announced that
10 it had received over 1,900 applications for new
11 gTLDs?

12 A. I am aware that they received a lot of
13 applications. That number sounds correct.

14 Q. And did you become aware in June of 2014,
15 when you began work on this assignment -- scratch
16 that.

17 When you returned to VeriSign, did you
18 become aware that ICANN had announced that it was
19 possible that the DNS would end up expanding by
20 over 1,300 gTLDs; is that right?

21 A. Certainly as I looked into the gTLD
22 program, I became aware of the large increase in
23 number of TLDs that would become available
24 potentially.

25 Q. And over the course of 2013 and 2014, are

1 you aware that quite a few articles had been
2 published from the financial press raising concerns
3 about the slowdown in the growth of the .COM
4 registry?

5 A. I wasn't with the company in 2013.

6 Q. Well, in your discussions with Mr. Bidzos,
7 the CEO, and Mr. Indelicarto, the general counsel,
8 did they disclose to you that there had been
9 concerns raised about the slowdown in the growth of
10 the .COM registry?

11 MR. JOHNSTON: Excuse me, Mr. Chairman,
12 I'd like to ask the witness to be conscious of the
13 fact that that question specifically refers to
14 conversations with Mr. Indelicarto, who is the
15 general counsel of the company, and ask the
16 witness, in the event of answering the question, it
17 might divulge any attorney-client communications
18 with Mr. Indelicarto, that he alert us so that
19 doesn't happen. Thank you.

20 MR. LITWIN: If I might respond briefly,
21 Mr. Chairman, I think we've established that the
22 meetings between Mr. Livesay, Mr. Indelicarto and
23 Mr. Bidzos concerned the business side of VeriSign.
24 I am asking a business question. I am not asking
25 for the witness to divulge any legal advice.

1 ARBITRATOR BIENVENU: I understand your
2 point, and Mr. Johnston did not object to the
3 question. He simply cautioned the witness not to
4 disclose what could be privileged communications in
5 the course of his answer.

6 Unless Mr. Johnston advises otherwise, I
7 did not hear him object to the question.

8 MR. JOHNSTON: That's correct.

9 MR. LITWIN: Okay. Thank you,
10 Mr. Chairman.

11 Q. Mr. Livesay, I will echo Mr. Johnston's
12 comment that at no time during my examination I
13 would ask you to reveal the substance of a
14 privileged communication. And please tell me if my
15 question, in your mind, elicits one.

16 My question is: Over the course of your
17 discussions with Mr. Indelicarto and Mr. Bidzos
18 concerning the -- finding opportunities for
19 VeriSign in the new gTLD Program, did they reveal
20 to you that during 2013 and 2014 there had been
21 articles published in the financial press raising
22 concerns about the slowdown in the growth of the
23 .COM registry?

24 A. I don't recall having any specific
25 discussions with Bidzos about that. I do know that

1 there has been obvious legal history and work
2 around that topic, but I am not a competition
3 attorney. I am not involved in the running of
4 .COM. That was a separate business unit, and I was
5 really invoked to try to find ways that the company
6 could simply have more opportunities at other
7 domains to sell more domain.

8 The history of .COM was a separate running
9 enterprise, not my forte.

10 Q. Now, in 2015, VeriSign sought to acquire
11 the rights to the .WEB registry by concluding the
12 DAA; is that correct?

13 A. I'm sorry, say that again?

14 Q. In 2015, VeriSign sought to acquire the
15 rights to the .WEB registry by concluding the DAA
16 with NDC; is that correct?

17 A. I don't know about the DAA, period. There
18 are several steps in that agreement. The goal was
19 hopefully finance or help NDC finance, win the
20 auction, and if they became the registry, that they
21 would seek to have it assigned to us.

22 So there were definitely some steps
23 involved. I don't know if I would say -- use your
24 description about finally signing.

25 Q. Well, let me rephrase it, Mr. Livesay.

1 Is it fair to say that the ultimate
2 objective that VeriSign sought to achieve by
3 entering into the DAA with NDC was the acquisition
4 of the rights to the .WEB registry?

5 A. The goal was for us to become the operator
6 of .WEB.

7 Q. And VeriSign has not signed any other
8 deals to acquire other gTLDs; is that right?

9 A. Not that I am aware of. Not in the time
10 that I was there.

11 Q. Were you aware, as you worked on this
12 project during the end of 2014 and 2015, that the
13 .COM Registry Agreement was due in the fall of
14 2016?

15 A. I don't recall being aware of that at the
16 time, no.

17 Q. Is it fair to say that the .COM Registry
18 Agreement is the single most important contract
19 that VeriSign has?

20 A. I don't think I'd be a good judge of that.

21 Q. Well, .COM is responsible for over a
22 billion dollars in revenue for VeriSign; isn't that
23 right?

24 A. That's true. But you asked if that's the
25 most important agreement. I don't know. I don't

1 run that business. I am not part of that business.

2 I don't know.

3 Q. Would it be fair to say -- strike that.

4 In connection with your assignment in 2014
5 to identify potential business opportunities in the
6 new gTLD Program, you state in your witness
7 statement that you studied very closely the new
8 gTLD application guidebook; is that correct?

9 A. I did, yep.

10 Q. And the auction rules?

11 A. When we got around to the auction, yep.

12 Q. And the other rules -- let me step back.

13 So when you say when you got around to the
14 auction, does that mean that you studied those
15 rules in the run-up to the auction in 2016?

16 A. At some point I would have been reading
17 the auction rules and become aware of them. I
18 don't recall exactly when, but yep.

19 Q. Well, was that before or after you
20 executed the DAA -- or VeriSign executed the DAA in
21 August of 2015?

22 A. I don't recall reviewing auction or
23 bidding agreements prior to signing the DAA, but I
24 don't know. I don't recall it.

25 Q. And did you study the other body of rules

1 that comprise the relevant rules that govern the
2 new gTLD Program?

3 A. Like what?

4 Q. Well, you mentioned -- let's look at your
5 witness statement. If you can turn to Tab 1 in
6 your binder, and I would direct your attention to
7 Paragraph 5, you write, "I studied very closely the
8 new gTLD Application Guidebook published by ICANN,
9 the Auction Rules, and other information regarding
10 the new gTLD Program on ICANN's website to
11 familiarize myself with the rules applicable to the
12 Program."

13 So I guess my question is, Mr. Livesay:
14 Other than the guidebook and the auction rules,
15 what other rules did you review?

16 A. You know, I think generally I am referring
17 to -- the ICANN website has a lot of information on
18 it. Anything I could read, I did. That's where I
19 found information about, say, applicants, what they
20 had done, where they are located. I think that end
21 there is saying I used the ICANN website as the
22 primary source of information for how the program
23 is run and the applicants and the contention sets.

24 Q. Redacted - Third-Party Designated Confidential Information
25

1 Redacted - Third-Party Designated Confidential Information

2
3
4 A. Redacted - Third-Party Designated Confidential Information

5 Q. I would now like to refer to you Tab 4 in
6 your binder.

7 A. You know, I am just looking at this side
8 of the paper. That's why I'm looking down.

9 Q. Okay. That's fair. I am going to be
10 largely doing the same thing over here.

11 Chuck will put things up on the screen in
12 case it is unclear.

13 So these are some significant excerpts
14 from the new gTLD guidebook, and I will just
15 represent to you that we've included the entire
16 module where we have accepted the module, but we do
17 have the entire version available electronically.

18 I would like to direct your attention to
19 Page 95. And on Page 95 you will see Rule 4.1.3,
20 which you discuss in your witness statement.

21 This section is entitled "Self-Resolution
22 of String Contention."

23 Do you see that, sir?

24 A. Yep.

25 Q. Now, it provides that, "Applicants that

1 are identified as being in contention are
2 encouraged to reach settlement or agreement among
3 themselves that resolves the contention."

4 It goes on to say, "Applicants may resolve
5 string contention in a manner whereby one or more
6 applicants withdraw their applications."

7 It goes on to say, "It is understood that
8 applicants may seek to establish joint ventures in
9 their efforts to resolve string contention," and
10 then concludes, it says, "Accordingly," and I would
11 interpret that as "however," given how we have gone
12 through this, that, "new joint ventures must take
13 place in a manner that does not materially change
14 the application, to avoid being subject to
15 reevaluation."

16 Do you see that, sir?

17 A. Yep.

18 Q. So it's fair to say that ICANN encourages
19 applicants to resolve contention sets among
20 themselves before an ICANN auction; is that fair?

21 A. That's fair.

22 Q. And one of the ways in which ICANN
23 envisioned that this may happen was by establishing
24 joint ventures among themselves; is that right?

25 A. It says it right there, correct.

1 Q. But ICANN cautions applicants that in
2 creating joint ventures, they shouldn't do so in a
3 manner that would require reevaluation under the
4 rules, right?

5 A. That's what it says.

6 Q. Okay. If you could please turn back to
7 Page 32 of Tab 4, you will see Rule 1.2.7 there.

8 Do you see that, sir?

9 A. What page number are we on?

10 Q. Page 32 of Tab 4.

11 A. All right. Yep.

12 Q. And what Section 1.2.7 provides, it says,
13 "Notice of Changes to Information. If at any time
14 during the evaluation process information
15 previously submitted by an applicant becomes untrue
16 or inaccurate, the applicant must promptly notify
17 ICANN via submission of the appropriate forms."

18 And then at the bottom, it says that,
19 "ICANN reserves the right" -- I guess it is in the
20 middle, rather -- "reserves the right to require a
21 re-evaluation of the application in the event of a
22 material change"; is that right?

23 A. That's what it says.

24 Q. Now, you can turn back to Page 95 if you
25 want, where Rule 4.1.3 is, but is it fair to say

1 that the lesson you drew from reviewing Rule 4.1.3
2 is that when applicants were seeking to resolve
3 contention among themselves, ICANN's primary
4 concern was that they did so in a way that would
5 not require reevaluation and thus not cause delay
6 in the resolution of the contention set; is that
7 fair?

8 A. It seems to be that they knew or were
9 expecting that people would resolve contention sets
10 through various agreements and simply wanted to
11 ensure that -- to try and do it in a way that did
12 not trigger reevaluation. I agree with that
13 statement.

14 That seemed to be what they were
15 encouraging and were also aware and wanted to be
16 clear, don't do anything that actually changes the
17 organizational function. I think they say -- I
18 don't recall where, but having an entity acquire an
19 applicant might require reevaluation. So they gave
20 some examples, I believe, about things you could or
21 shouldn't do. It seemed to be that's what they
22 were looking for in the guidebook.

23 Q. Now, of course, you were aware at the time
24 that VeriSign was not an applicant for .WEB; is
25 that right?

1 A. That's correct.

2 Q. Now, Section 1.2.7 requires applicants to
3 notify changes in their application via submission
4 of the appropriate forms, correct?

5 A. No. It says a material change to the
6 applicant or that becomes untrue or inaccurate. I
7 don't believe anything in the application of NU DOT
8 CO changed.

9 Q. Let's just keep it general for now,
10 Mr. Livesay. I will agree with you that where --
11 and I believe this is what you're saying, but if
12 you would confirm that Section 1.2.7 provides that
13 where a -- where information in the application
14 that had been previously submitted by the applicant
15 becomes untrue or inaccurate, that applicant must
16 promptly notify ICANN via submission of the
17 appropriate forms?

18 A. Correct. If something's untrue or
19 inaccurate, the applicant needs to do that.

20 Q. Now, those forms were analyzed pursuant to
21 ICANN's change request criteria, correct?

22 A. I don't know what form you're talking
23 about.

24 Q. You did not familiarize yourself with the
25 ICANN application portal?

1 A. We weren't making any changes to an
2 application requiring submission of a form. It
3 sounds like you jumped over something in this last
4 question, that's all.

5 Q. So Section 1.2.7 says if an application
6 previously submitted has information in it that
7 becomes untrue or inaccurate, the applicant must
8 promptly notify ICANN, correct?

9 A. Yeah. And you had asked me whether or not
10 I looked at the form, and I said no, because we
11 didn't do anything that changed the applicant that
12 made it untrue or inaccurate.

13 Q. Okay. Right now I am just trying to
14 inquire, Mr. Livesay, into your review of the ICANN
15 rules and procedures governing the new gTLD
16 Program. We'll come back to the particular
17 transaction in a minute.

18 Chuck, can you put up Exhibit C-56,
19 please.

20 ARBITRATOR BIENVENU: Is that in the
21 binder, Mr. Litwin?

22 MR. LITWIN: It is not. I apologize,
23 Mr. Chairman. There's a handful of documents that
24 are not in the binder.

25 Chuck, if you could just blow up -- yeah,

1 that part. That would be great.

2 Q. This is a document from ICANN's website
3 called the "New gTLD Application Change Request
4 Process and Criteria."

5 Have you seen this document before?

6 A. Doesn't look familiar to me, nope.

7 Q. So when you say that you carefully studied
8 the rules and procedures governing the new gTLD
9 Program, you did not review the change request
10 process?

11 A. I didn't say that. I am saying it doesn't
12 look familiar. Right now I can't see the document
13 on the screen because you have this thing blown up
14 in front of it.

15 MR. LITWIN: Chuck, can you please take
16 that off. Is there any way to blow up the whole
17 document, or at least the first page of it?

18 THE WITNESS: Your question was did I
19 review this when I reviewed the guidelines?

20 Q. BY MR. LITWIN: Correct.

21 A. When I went through the guidelines, I
22 looked for things that seemed relevant, and when I
23 got to something like this, which said "Change
24 Request Process," I look at what the requirement
25 is, doesn't apply, so I move on.

1 Q. Okay. So is it fair to say you did not
2 discuss the change request criteria with NDC?

3 A. Nope.

4 Q. Is it also fair to say in your work on the
5 DAA you did not consult with ICANN regarding the
6 applicability of the change request criteria?

7 A. Say that again?

8 Q. And is it fair to say that in connection
9 with your work on the DAA, you did not consult with
10 ICANN regarding the applicability of the change
11 request criteria?

12 A. Correct. I didn't contact ICANN in this
13 regard, no.

14 Q. And it is true, Mr. Livesay, that NDC, in
15 fact, never filed a change request with ICANN; is
16 that right?

17 A. As far as I am aware.

18 Q. Okay. Now, directing your attention to
19 the first page and to the section called change
20 request overview, you can see that the document
21 quotes that part of 1.2.7 that we just reviewed,
22 that when, "any time during the evaluation process
23 information previously submitted by the applicant
24 becomes untrue or inaccurate, the applicant must
25 promptly notify ICANN via submission of the

1 appropriate forms."

2 Do you see that, sir?

3 A. I see that, yep.

4 Q. And ICANN notes that the Application
5 Change Request process was, in fact, created "in
6 order to allow applicants to notify ICANN of
7 changes to application materials."

8 Do you see that at the bottom of that?

9 A. Yep.

10 Q. Now, if we can look at the next section,
11 it identifies seven criteria, and it is on the
12 bottom of this first page and the top of the next
13 page. I will just wait a second for Chuck to blow
14 that up for you.

15 And the seven criterion are, one,
16 explanation; two, evidence that the original
17 submission was in error; three, other parties
18 affected; four, precedents; five, fairness to
19 applicants; six, materiality; and seven, timing,
20 correct?

21 A. That's what it says.

22 Q. Now, ICANN states right below this -- and
23 Chuck, if you could blow that up -- that, "These
24 criteria were carefully developed to enable
25 applicants to make necessary changes to their

1 applications while ensuring a fair and equitable
2 process for all applications."

3 Do you see that, sir?

4 A. I see where that's written, yeah.

5 ARBITRATOR BIENVENU: "For all
6 applicants," not "for all applications."

7 MR. LITWIN: "For all applicants." Sorry.
8 I misspoke, Mr. Chairman.

9 Q. Let's move down to the next section, which
10 goes through these criterion in more detail.

11 So the first -- maybe just -- yeah, pull
12 up that whole box so we don't have to keep doing
13 it. That's great.

14 So the first criterion is explanation.
15 This is, as ICANN says here, simply an opportunity
16 to allow the applicant to provide an explanation
17 for the change.

18 A. If you weren't making a change, this
19 wouldn't apply, correct?

20 Q. Excuse me?

21 A. Since we didn't make a change, this
22 wouldn't apply, we didn't need to provide an
23 explanation if the change hadn't been made,
24 correct?

25 Q. What I am doing, sir, is just going

1 through the document so that we understand what
2 ICANN provided as their criterion. We'll come back
3 and look at the NDC application.

4 A. Right. When you read this, if you step
5 into these seven criteria on the presumption that a
6 change has been made and an application for a
7 change has been made, I agree these are all
8 written, but we didn't request a change because an
9 applicant -- and NDC's application wasn't altered.

10 Q. I understand that. I understand that that
11 is what you have testified to here today,
12 Mr. Livesay.

13 What I am trying just to establish is that
14 in the event that a change request had been
15 submitted, these are the criterion that ICANN would
16 have looked at, correct?

17 A. That seems to be the case. It is right
18 there in black and white.

19 ARBITRATOR BIENVENU: Mr. Litwin, this is
20 Pierre Bienvenu. Could I ask your colleague Chuck
21 to blow the introductory paragraph to the text that
22 we are looking at now. Thank you. This puts the
23 subparagraphs in context. Please continue with
24 your questions.

25 MR. LITWIN: Thank you, Mr. Chairman.

1 Q. So in the event -- and I'll phrase it like
2 that so it is clear, Mr. Livesay. In the event
3 that a change request was submitted to ICANN or --
4 I'll use the subjunctive -- were to be submitted to
5 ICANN, ICANN would first look at the explanation.

6 But is it fair to say that because this is
7 simply an opportunity to allow the applicant to
8 provide an explanation for the change, the
9 criterion is always satisfied and does not bear as
10 much weight as the others; is that fair,
11 Mr. Livesay?

12 A. I have no way of understanding of how
13 ICANN would weigh these in your hypothetical. You
14 are presenting a hypothetical to which you want a
15 hypothetical answer. I don't know.

16 Q. So what this says, and I will quote, it
17 says, "As such, this criterion is always met and
18 does not bear as much weight as the other
19 criteria."

20 Is that what it says, sir?

21 A. That's what it says.

22 Q. So turning next to evidence that the
23 original submission was an error. You know, I
24 think we can agree that even if NDC had submitted a
25 change request, which you testified they did not,

1 to your knowledge, this would not apply, in any
2 event, correct?

3 A. I don't know. I don't know. You are
4 creating a hypothetical which you want me to create
5 an answer to. I don't know. They did not submit a
6 change request because no change was made, and now
7 you're asking me to apply these rules that ICANN
8 would in your hypothetical.

9 Q. Well, fair enough, Mr. Livesay. In the
10 event that a change request is submitted --

11 A. This is a hypothetical question?

12 Q. Yes. In the event that a change request
13 were submitted to ICANN and it does not concern an
14 error in the original submission, but rather a
15 changed circumstance, this criterion would not
16 apply; is that correct?

17 A. I am not really familiar with how ICANN
18 applies these rules. You're reading the words the
19 same as I am right now.

20 Q. Let's skip down to "Precedents" and look
21 at that one. Here ICANN notes that if a change
22 request would create a new precedent, that change
23 request would be unlikely to be approved; is that
24 fair?

25 A. I am reading the same words you are.

1 Q. Well, is it fair, Mr. Livesay, based on
2 your reading of the same words that I am, that if a
3 change request were to create a new precedent, that
4 change would be unlikely to be approved?

5 A. That's what the words say. How ICANN
6 interprets it, I don't know.

7 Q. Now, going back to the "Other third
8 parties affected" criterion, this criterion
9 evaluates whether a change request materially
10 impacts other third parties, particularly other
11 applicants; is that correct?

12 A. That's what it says.

13 Q. And, in fact, it says that in cases where
14 a change to application material has the potential
15 to materially impact the status of another
16 applicant's application, this criterion is heavily
17 weighted; is that correct, sir?

18 A. You read the line.

19 Q. Now, closely related to the "Other third
20 parties affected" criterion is the "Fairness to
21 applicants" criterion. Here ICANN notes that it
22 will evaluate change requests to determine whether
23 granting the request, quote, "would put the
24 applicant in a position of advantage or
25 disadvantage compared to the other applicants,"

1 correct?

2 A. That is what it says.

3 Q. And ICANN further states that, quote, "if
4 a change request is found to materially impact
5 other third parties, it will likely be found to
6 cause issues of unfairness," right?

7 A. That's what it says.

8 Q. In other words, if granting the change
9 would be unfair to other applicants, this criterion
10 would weigh against granting the change, correct?

11 A. I don't know if your rewording is accurate
12 or the way ICANN would read it. I go with the
13 words that are on the page.

14 Q. The next criterion is "Materiality," which
15 notes that ICANN will consider whether a change
16 request will impact competing applications,
17 correct?

18 A. That's what it says.

19 Q. So if a change request would impact other
20 members of a contention set, that would satisfy the
21 materiality criterion, correct?

22 A. I mean, I am just reading the words here.
23 I am not really sure what you're trying to read
24 differently.

25 Q. I am not trying to read anything

1 differently, Mr. Livesay. I am just asking that
2 this "Materiality" criterion provides that if a
3 change request would impact other members of a
4 contention set -- and you can see the word
5 "contention set" in Line 2?

6 A. Yep.

7 Q. Do you see that?

8 A. Yeah.

9 Q. I'm sorry, are you saying "yes" or "yep"?

10 A. Yes, I see where you have highlighted.

11 Q. Then the "Materiality" criterion would be
12 satisfied; isn't that correct?

13 A. I don't see the word "satisfied" in there.

14 Q. Well, you understand that these criterion
15 are used by ICANN to determine whether or not to
16 approve a change request; is that right?

17 A. That's why I defer to how ICANN interprets
18 something. You are providing interpretations of
19 your reading, and I would have to defer to ICANN's
20 interpretation. You are providing hypotheticals
21 for a situation I don't believe we are in.

22 Q. I am just reading the rules.

23 A. You are reading them and then asking me to
24 affirm your ultimate reading where you change a few
25 words. You can read them, and I will affirm the

1 words on the page are what they are, but I have no
2 reason to take an interpretation because this isn't
3 a world -- a situation we were in. I will defer to
4 ICANN. How can I put my mind in what ICANN would
5 use in the seven criterion?

6 Q. Is it fair to say, Mr. Livesay, as you
7 conducted your review of the rules in the
8 guidebook, for example, you just looked at the
9 plain language of the rule and just applied that in
10 terms of your thinking about how to structure a
11 transaction?

12 A. Certainly not. I am not really sure where
13 you get that interpretation.

14 Q. Well, what I am asking --

15 MR. JOHNSTON: I would ask Mr. Litwin to
16 allow the witness to finish his answer before
17 interrupting with another question.

18 MR. LITWIN: I apologize. I thought he
19 was done.

20 Q. Please continue, Mr. Livesay.

21 A. I don't remember what the question was.
22 Where were we?

23 Q. Let me go back, because I think it was a
24 poorly-phrased question, and allow me to rephrase
25 it for you.

1 In reviewing these change request
2 criterion, you say -- well, you agree that that's
3 what it says, but, you know, if you're trying to
4 interpret it, it is really ICANN's job to interpret
5 it; is that right?

6 A. You presented on the screen right now the
7 seven criteria after a change request was submitted
8 and what ICANN would use to evaluate. This isn't
9 the standard for how you get into a change request.
10 This is once it is already there.

11 You asked previously did I look at the
12 rule and just decide there not to go through a
13 change request. No, there's a lot of factors.
14 There's a lot of rules.

15 I looked at other transactions going on in
16 the market. I saw disclosures of different
17 companies having funded other activities of other
18 applicants. I see elsewhere in the guidebook where
19 it encourages parties to resolve without changing
20 their application so as to not delay or have the
21 string -- I guess "delay" is the right word, or put
22 on hold. So there's a lot of factors that went
23 into this.

24 But at the end of the day, the path we
25 took is we are not looking to become the applicant.

1 We are looking to become the registry of this
2 domain and to try to help fund NDC to win the
3 auction. And if they ended up winning and we
4 successfully signed a Registry Agreement, they
5 would then apply to have it assigned to us, and we
6 would be evaluated at that time.

7 So I don't think there's anything -- we
8 were following -- we had a lot of different things,
9 both through what we see in the marketplace and
10 what the guidebook suggests, and we think we did it
11 correctly.

12 Q. So, Mr. Livesay, I am not trying to imply
13 here that NDC submitted a change request. I think
14 we have established that NDC did not submit a
15 change request.

16 What I am trying to do is to progress
17 through a set of ICANN rules that inform how ICANN
18 would consider a change request and asking you what
19 your view of the rule is outside of what may or may
20 not have happened regarding NDC.

21 A. And I have told you before, it is hard to
22 give you hypothetical answers to hypothetical
23 questions. So you just read one rule, and did it
24 go this way, no, it is not that.

25 Like I said, the way we approached this is

1 we are reading the rules. We are looking at
2 activities in the marketplace. We are looking at
3 what other strings and how other contention sets
4 get resolved. We look at other information in the
5 guidebook itself that suggests, recommends parties
6 reorganize themselves in a way that doesn't require
7 reevaluation, and we think we did that correctly.

8 Q. Mr. Livesay, is it fair to say that this
9 document that we are looking at now, Exhibit C-56,
10 concerns how ICANN evaluates change requests?

11 A. That is exactly what it says.

12 Q. And is it also fair that this document
13 informs whether or not a change request should be
14 filed?

15 A. That doesn't tell me that, no.

16 Q. So the description that ICANN provides
17 here about how it goes about evaluating and the
18 things it considers in evaluating a change request
19 has no bearing whatsoever to the decision on
20 whether or not to file a change request?

21 A. As I look at the document, there's a
22 criteria for filing the change request, which we
23 did not think applied, and these standards here, as
24 I read them, are once you're in that realm, this is
25 how those change requests would be addressed. It

1 would seem unusual to think that the change request
2 criteria are how you get into the change request
3 criteria, seems circular the way you have described
4 it.

5 Q. So the rule -- if we can turn back to the
6 first page of this document, C-56, ICANN quotes the
7 rule from the applicant guidebook?

8 A. That's right.

9 Q. That says if any information previously
10 submitted by an applicant becomes untrue or
11 inaccurate, that applicant is obligated to promptly
12 notify ICANN, correct?

13 A. That's what it says.

14 Q. And turning through this document, it does
15 suggest that, well, in determining whether or not
16 Rule 1.2.7 applies, whether those changes would be
17 unfair to applicants, whether those changes would
18 create new precedents, whether those --

19 A. You are jumping again. Those changes, if
20 there are no changes, you can't bootstrap yourself
21 into the criteria. There were no material changes
22 that made the application untrue and inaccurate.

23 Q. Okay. We'll come back to that. We'll
24 come --

25 MR. JOHNSTON: Stop interrupting.

1 THE WITNESS: I am confused at what you're
2 asking at this point, I guess.

3 MR. JOHNSTON: Your Honor, Mr. Chair, I
4 object to this line of questioning. We have been
5 spending a lot of time on this document, and
6 virtually every question posed lacked foundation
7 and most just asked the witness to read the
8 document.

9 If Mr. Litwin wants to make these
10 arguments in closing argument, that's appropriate.
11 But to spend all this time with the witness asking
12 questions that lack foundation is not appropriate.

13 ARBITRATOR BIENVENU: Your objection is
14 noted, Mr. Johnston.

15 As to the question of foundation,
16 Mr. Livesay, may I ask you just to clarify your
17 evidence as regards the knowledge that you had when
18 you familiarized yourself with the guidebook of the
19 requirement to notify ICANN of changes in an
20 application.

21 I am looking at Page 32 of the rough
22 transcript, and Mr. Litwin, having displayed the
23 document we have been talking about, said, "This is
24 a document from ICANN's website called the 'New
25 gTLD Application Change Request Process and

1 Criteria.' Have you seen this document before?"

2 Your answer was, "It doesn't look familiar
3 to me, nope.

4 "Question: So when you say that you
5 carefully studied the rules and procedures
6 governing the new gTLD Program, you did not review
7 the change request process?

8 "Answer: I didn't say that. I am saying
9 it doesn't look familiar. Right now I can't see
10 the document on the screen because you have got --
11 you have this thing blown up in front of it."

12 And then we went on.

13 Let me ask you this, Mr. Livesay: Was it
14 a concern to you, as you were considering on behalf
15 of VeriSign the potential of striking a deal with
16 NDC, that the agreement not trigger a notice of
17 change to information under Section 1.2.7 of the
18 guidebook?

19 I'm sorry, please --

20 (Discussion off the record.)

21 THE WITNESS: I said that's correct, we
22 were looking for --

23 (Discussion off the record.)

24 ARBITRATOR BIENVENU: Shall I repeat my
25 question?

1 (Discussion off the record.)

2 THE WITNESS: Please repeat the question.

3 (Discussion off the record.)

4 ARBITRATOR BIENVENU: Okay. So I am going
5 to read it, Mr. Livesay, so I don't interpret it.

6 "Was it a concern to you, as you were
7 considering on behalf of VeriSign the potential of
8 striking a deal with NDC, that the agreement not
9 trigger a notice of change to information under
10 Section 1.2.7 of the guidebook?"

11 THE WITNESS: That is correct. It was a
12 concern --

13 (Discussion off the record.)

14 THE WITNESS: So yes, it was a concern
15 that we not trigger or do anything to change the
16 application that would trigger a reevaluation
17 because we knew that that -- couple of things.
18 One, the guidebook suggests, one, to try and
19 resolve things without triggering reevaluation.

20 Two, if it did trigger reevaluation, that
21 might actually delay the string in getting
22 resolution. So yeah, it was a concern of ours to
23 not trigger that.

24 ARBITRATOR BIENVENU: Excellent.

25 Now, given that this was a concern, as you

1 sit here today, do you recall looking at the form
2 on which you were questioned in the past 15 minutes
3 entitled "New gTLD Application Change Request
4 Process and Criteria," do you recall looking at
5 that?

6 THE WITNESS: I recall only the portion --
7 the reference to 1.2.7. I don't recall
8 specifically the other, but this was a long time
9 ago, five or more years, and the guidebook is a
10 long document.

11 ARBITRATOR BIENVENU: Very well. Very
12 well. I am sorry for the interruption, Mr. Litwin.
13 Please proceed.

14 MR. LITWIN: Thank you, Mr. Chairman.

15 Q. I just have two more questions on this
16 document, Mr. Livesay. If you look at the next
17 page, Page 3 of this document, is it your
18 understanding that where change requests were
19 submitted to ICANN, they were posted on ICANN's
20 website?

21 A. Are you asking if I'm aware whether they
22 were?

23 Q. Yes.

24 A. I don't recall one way or the other. I
25 decline whether I knew that or not.

1 MR. LITWIN: Mr. Chairman, perhaps this is
2 a good time to take our first break today. I am at
3 a good breaking point in my outline.

4 ARBITRATOR BIENVENU: Very well.
5 Mr. Livesay, we are going to break for 15 minutes.
6 I am required by our sequestration order to ask
7 that you not discuss your evidence during the
8 break.

9 THE WITNESS: That's good.

10 ARBITRATOR BIENVENU: Thank you very much,
11 sir. So we will resume in 15 minutes, and you'll
12 be brought virtually to a separate room.

13 THE WITNESS: Okay. Thank you.

14 ARBITRATOR BIENVENU: Thank you.

15 (Whereupon a recess was taken.)

16 ARBITRATOR BIENVENU: Thank you very much.

17 Mr. Johnston, you are there?

18 MR. JOHNSTON: Yes, I am.

19 ARBITRATOR BIENVENU: Mr. Litwin, and is
20 Mr. Livesay back with us?

21 MR. ENGLISH: No, he's in the waiting
22 room.

23 ARBITRATOR BIENVENU: Okay. So you may
24 bring him back.

25 You ready to proceed, Mr. Litwin?

1 MR. LITWIN: I am, Mr. Chairman.

2 MR. ENGLISH: Okay. Mr. Livesay has
3 joined the meeting, and if he could unmute himself.

4 THE WITNESS: You can hear me all right
5 with the new microphone?

6 ARBITRATOR BIENVENU: We can hear you.

7 MR. LITWIN: Much better.

8 ARBITRATOR BIENVENU: Thank you very much.
9 So, Mr. Livesay, under the same solemn affirmation,
10 Mr. Litwin, please proceed.

11 Q. BY MR. LITWIN: Mr. Livesay, I just wanted
12 to ask you one last question about -- and just to
13 clarify your earlier testimony, about the change
14 request criterion document that we have been
15 reviewing, Exhibit C-56, I think what you said,
16 that it did not matter what you or VeriSign think
17 about the rules set forth in here, I think your
18 testimony was it's what ICANN thinks that matters;
19 is that a fair statement?

20 A. You read the provisions and then you
21 rephrased them and asked me if your rephrasing was
22 fair. I simply said I defer to ICANN how they
23 would interpret the plain language of these
24 provisions.

25 Q. Okay. Thank you.

1 So moving on, I would refer you back to
2 your witness statement and Paragraph 5. As you
3 recall from before the break, we left off with the
4 provision in the change request criterion document
5 that says that change requests would be posted to
6 ICANN's website.

7 And in response to the Chairman's
8 question, you said that you had studied the rules
9 to ensure that there were no changes that needed to
10 be reported to ICANN.

11 Redacted - Third-Party Designated Confidential Information
12
13
14
15
16
17

18 A. Redacted - Third-Party Designated Confidential Information

19 Q. Okay. Now, let's turn back to Section
20 4.1.3 of the AGB. So that's Tab 4 at Page 95.

21 Are you there, sir?

22 A. Is that in what you sent me or is this
23 another document that's not in the binder you sent?

24 Q. No, it is there. It is Tab 4, Page 95.

25 A. Oh, 95, okay. Got it here.

1 Q. This rule is titled "Self-Resolution of
2 String Contention" and only concerns transactions
3 among contention set members themselves; is that
4 correct?

5 A. It appears to be the case, yeah.

6 Q. Okay. Please turn to Page 124 of this
7 document behind Tab 4, and I direct your attention
8 to what is the last line of Paragraph 10 of Module
9 6, the terms and conditions.

10 A. Yep.

11 Q. What it says here is that, "Applicant may
12 not resell, assign, or transfer any of applicant's
13 rights or obligations in connection with the
14 application."

15 Now, this provision is not limited to
16 transactions among contention set members, correct?

17 A. I am not sure -- say that again.

18 Q. So where this provision says, "Applicant
19 may not resell, assign, or transfer any of
20 applicant's rights or obligations in connection
21 with the application," my question to you, sir, is
22 that this provision is not limited to transactions
23 among contention set members?

24 A. As I read the sentence, it applies to
25 applicant. So I am not really sure what you're

1 saying about other contention sets. As I read
2 this, it is a restriction on an applicant.

3 Q. It is a restriction on an applicant that
4 provides that the, "Applicant may not resell,
5 assign, or transfer any of applicant's rights or
6 obligations in connection with the application" to
7 any third party, correct?

8 A. I guess. It doesn't say that limitation.
9 The limitation is on the applicant.

10 Q. I --

11 A. You're asking me to read something in
12 there that's not there. I mean, maybe you are -- I
13 am not really sure what you're asking me to read
14 into that. It says, "Applicant may not resell,
15 assign, or transfer any of the applicant's rights
16 or obligations." That seems very straightforward.

17 Q. Any -- sorry, Mr. Chairman.

18 ARBITRATOR BIENVENU: First of all, can
19 we, just in fairness to the witness, go to Page 120
20 of that document, just to situate that provision.
21 So this is part of the terms and conditions of
22 Module 6.

23 You are familiar with that document?

24 THE WITNESS: I recall reviewing it at
25 great length back in the day. I did not review it

1 again in advance of this testimony.

2 ARBITRATOR BIENVENU: Right. Now,
3 focusing back on the text on which Mr. Litwin drew
4 your attention --

5 THE WITNESS: Yep.

6 ARBITRATOR BIENVENU: -- do you understand
7 that provision as targeting transactions within a
8 contention set or as targeting transactions
9 generally, whether they involve contention set
10 members or not? I think that's the question that
11 is being asked of you.

12 THE WITNESS: I see. I don't read that
13 sentence that's highlighted as limited to just
14 within a contention set. It seems to apply to an
15 applicant both inside and outside a contention set.
16 The applicant cannot resell, assign or transfer in
17 and outside of a contention set. That's the way I
18 read it. Is that the clarification you were asking
19 for?

20 ARBITRATOR BIENVENU: I was just trying to
21 rephrase the question that was asked of you.

22 THE WITNESS: Got it.

23 ARBITRATOR BIENVENU: Back to you,
24 Mr. Litwin.

25 MR. LITWIN: Thank you, Mr. Chairman.

1 Q. In addition to your review of the
2 guidebook and other rules governing the new gTLD
3 Program, Redacted - Third-Party Designated Confidential Information
4
5

6
7 A. Redacted - Third-Party Designated Confidential Information

8 Q. Redacted - Third-Party Designated Confidential Information
9

10

11

12

13 A. In the sense -- how do you mean,
14 special-purpose vehicles -- go ahead. I am
15 listening.

16 Q. Perhaps I should just orient you to your
17 witness statement, sir. It is behind Tab 1. If
18 you look at Page 5, Paragraph 9.

19 A. Oh, correct, right, in terms of special.
20 Like in this example I found that sometimes an
21 entity would have a shell company for each
22 individual company, sometimes held by a parent, or
23 sometimes all the applications were held by one
24 entity, such as the way Google did it with
25 Charleston Road Registry. Redacted - Third-Party Designated
Confidential Information

1 Q. And we can look down at Paragraph 10,
2 where you continue your discussion about the
3 special purpose entities. You write, "For example,
4 Google is identified as the owner of Charleston
5 Road Registry, Inc.," correct?

6 A. Correct.

7 Q. And when you say "is identified," you mean
8 identified in the application, correct?

9 A. Correct. I have not looked at it, but if
10 I recall correctly, you can look at the
11 applications and it will show for each string who
12 the applicant is.

13 In this case it would show up as
14 Charleston Road Registry. If you then click on it,
15 it will show you the public portion of the
16 application, which would then show who the actual
17 party is, or the contact, I should say.

18 For instance, if I recall, if I looked up
19 this, it would have said -- on the applicant it
20 would have said Charleston Road Registry, but it
21 would have a contact name, and that contact name I
22 think was a Google address, for example, email,
23 that is.

24 Q. Yes. In fact, in Section 11 Google is
25 identified in each of Charleston Road Registry's

1 applications as the owner of Charleston Road
2 Registry.

3 Do you recall that?

4 A. I believe so, yeah. Let me see where
5 you're highlighting. Yep.

6 Q. Now, you also go on to write that, "In
7 other instances, the requirement for a disclosure
8 of the real party in interest was avoided by
9 forming another entity to be the parent of the
10 application, so the real parties in interest were
11 not disclosed as part of the parent entity in the
12 application." And you give an example. You say
13 "Donuts formed 'Covered TLD, LLC,' for example, and
14 made that entity the disclosed parent on many of
15 its applications."

16 A. Correct.

17 Q. You see that, sir?

18 A. Yep.

19 Q. And in Paragraph 9 you refer to Ruby Glen
20 LLC as a Donuts applicant entity, correct?

21 A. Correct.

22 Q. So what you're saying is that the
23 application would have been made on behalf of Ruby
24 Glen, and when you look at the ownership
25 information, it would say, "Covered TLD LLC,"

1 another shell, in your words, correct?

2 A. I believe that's correct.

3 Q. Now, are you aware that the primary
4 contact listed at Section 6 of Ruby Glen's
5 applications was identified as an executive vice
6 president of Donuts?

7 A. I believe I may recall it might have been
8 a Donuts address, perhaps, the email, perhaps, I
9 think you're talking about.

10 Q. Well, they give his title as the executive
11 vice president of Donuts, and as you say, there was
12 a Donuts email address associated with that contact
13 person. Does that sound familiar?

14 A. I don't recall seeing his title on the
15 application, but likely seeing the email.

16 Q. Do you also recall that at Section 11(b),
17 Ruby Glen identified Donuts' CEO and the chairman
18 of Donuts' Board of Directors as the two people who
19 had legal and executive responsibility for Ruby
20 Glen?

21 A. I'm sure at some point I looked at who the
22 individuals listed in the application were. I
23 don't recall specifically their names now.

24 Q. So it wasn't exactly a secret that Ruby
25 Glen was a Donuts special purpose entity, correct?

1 A. I don't think it was a secret, no.

2 Q. In the course of your research you learned
3 about an arrangement between Donuts and Demand
4 Media, correct?

5 A. Correct.

6 Q. If you could take a look at Page 18 of Tab
7 1. This is Exhibit A to your witness statement, a
8 press release by Demand Media. I am just going to
9 read what it says in the fourth paragraph.

10 It says, "As part of this initiative,
11 Demand Media has applied for 26 names on a
12 stand-alone basis. In addition, Demand Media has
13 entered into a strategic arrangement with Donuts,
14 an Internet domain registry founded by industry
15 veterans, through which it" -- meaning Demand
16 Media -- "may acquire rights in certain gTLDs after
17 they have been awarded to Donuts by ICANN. These
18 rights are shared equally with Donuts and are
19 associated with 107 gTLDs for which Donuts is the
20 applicant."

21 Do you see that?

22 A. I am reading along with you, yes.

23 Q. And this is one of the examples that
24 informed your research in advance of negotiating
25 the DAA, correct?

1 A. It was an example, yes.

2 Q. Now, if you look at the date of the press
3 release, you'll see it's from June 11th, 2012.

4 Do you see that?

5 A. Yep.

6 Q. So that was -- the press release was
7 issued shortly after the application window had
8 closed in April of 2012, as you testified earlier,
9 correct?

10 A. The dates look correct.

11 Q. And, therefore, this press release was
12 issued during the period for public comment and
13 evaluation by ICANN, correct?

14 A. That would be the case, yeah.

15 Q. Are you aware that Demand Media was
16 disclosed as Donuts's, quote, "partner in these 107
17 applications"?

18 A. I am not aware that they were listed as a
19 co-owner or partner, no.

20 Q. Are you aware that the public portions of
21 these applications are available on ICANN's
22 website?

23 A. The public portion of the applications
24 would naturally be available on ICANN's website.

25 Q. Did you review these 107 applications by

1 Donuts that you refer to at Paragraph 8 of your
2 witness statement?

3 A. I do not recall looking at all those
4 applications, no.

5 Q. So, for example, if I represented to you
6 that Demand Media is listed as Donuts's partner in
7 its applications for .CITY, .ASSOCIATES, .CAMERA,
8 .CHURCH, .CLOTHING, .COACH, .ECO, .ENERGY, .HELP,
9 .INVESTMENTS, .SALON, .SINGLES, .VENTURE and
10 .VOYAGE, among others, would you have any knowledge
11 as to whether or not Demand Media is, in fact,
12 listed as Donuts' partner in those applications?

13 MR. JOHNSTON: I'll object on grounds of
14 lack of foundation. Perhaps counsel could put just
15 one of those in front of the witness.

16 MR. LITWIN: Well, I am asking him for his
17 knowledge about this. I don't believe these are in
18 the record. I'd be happy to show him one if you
19 would consent to that.

20 MR. JOHNSTON: I would consent to showing
21 him the limited part you're representing to him is
22 in the application.

23 MR. LITWIN: Very good.

24 For my team that's on the phone, can you
25 send to Chuck the .CITY application, please.

1 Chuck, let me know when you get it.

2 I have just been told .CITY is on the
3 record, and they are pulling it up right now.

4 Chuck, when you get that, if you can just
5 put it up on the screen for everyone to see,
6 please.

7 MR. JOHNSTON: I'm sorry to have provoked
8 this delay. I had a specific reason, which I won't
9 explain with the witness on camera, but I had a
10 specific reason for wanting the witness to see the
11 application as opposed to rely on the
12 representation as made.

13 Again, I am sorry for the delay.

14 ARBITRATOR BIENVENU: That's fine. Let's
15 see if we can get the document up quickly,
16 otherwise we can put this in abeyance and come back
17 to it.

18 MR. LITWIN: There we go. Actually, while
19 we go through this, if you can just stop right
20 there, Chuck, don't move any further. If you can
21 blow up the full legal name at one, please?

22 MR. VAUGHAN: I don't have the ability to
23 blow anything up on this.

24 MR. LITWIN: Got it.

25 Q. Can you see that, Mr. Livesay?

1 A. I see it says, "Snow Sky, LLC."

2 MR. LITWIN: If we can go down to 6,
3 please, Chuck.

4 Q. You'll see the gentleman there is
5 identified as the executive vice president of
6 Donuts?

7 A. Yep, yep.

8 Q. And under 6(f), that's the Donuts email
9 address that you recall.

10 Do you see that, sir?

11 A. Yep, yep.

12 Q. Now, if you can go down to Paragraph 23.
13 Boy, this is incredibly small on my computer. What
14 it says in the second paragraph there is, "The
15 following response describes our registry services
16 as implemented by Donuts and our partners. Such
17 partners include Demand Media Europe Limited for
18 back-end registry services."

19 Do you see that, sir?

20 A. I see that.

21 Q. So Demand Media was disclosed in the .CITY
22 application submitted by Donuts to ICANN. So there
23 was no secret that Donuts and Demand Media had a
24 partnership, correct?

25 A. Well, I think the word "partnership" goes

1 to what you mean by partnership. In the press
2 release it doesn't describe the nature of that
3 partnership. In this it seems to limit Demand
4 Media, at least in the application, to being a BERS
5 provider, not necessarily a co-owner of the
6 application. Maybe you need to describe what
7 "partner" means in the relationship of the press
8 release.

9 When I read this, it looks like Demand
10 Media is simply, at the stage that this is made,
11 not represented as a co-owner, but a back-end
12 registry provider, which is a different matter, at
13 least as I read it.

14 Q. So let me see if I can break this down a
15 little bit.

16 In Paragraph 23 of the .CITY application,
17 Demand Media is identified as a partner for Donuts
18 to provide back-end registry services, correct?

19 A. Correct.

20 Q. So there was no secret that Demand Media
21 had at least some role here as a back-end registry
22 service provider associated with the .CITY
23 application, correct?

24 A. It appears in the .CITY application they
25 are the BERS, back-end provider. That doesn't

1 represent them as a co-owner or having an interest
2 in possibly obtaining the domain after its
3 delegation. It doesn't suggest they have any of
4 that kind of right in it.

5 Q. In the application --

6 A. In the public portion that you are having
7 me read, I am only saying that it lists them only
8 as a BERS provider, not a co-owner.

9 Q. Sir --

10 A. Which is what you mean to imply.

11 Q. Sir, I am not implying anything, and I
12 would appreciate it if you would let me finish my
13 question --

14 A. Go ahead.

15 Q. -- as well as I will let you finish your
16 answer.

17 My question is simply that Demand Media is
18 identified as a partner for Donuts at Paragraph 23
19 of the .CITY application for the purpose of
20 providing back-end registry services, correct?

21 A. They are identified as the back-end
22 registry service provider for this application.

23 Q. So there was no secret that Demand Media
24 was involved with Donuts in at least some capacity
25 in its application itself, correct?

1 A. As a back-end registry provider. I don't
2 see that as an owner.

3 Q. Now, we also looked at the press release
4 that was issued on June 11th, 2012, where Demand
5 Media publicly disclosed that its relationship with
6 Donuts was broader; is that correct?

7 A. I don't know what you mean by "broader."
8 If you mean -- as I read the article, it seems to
9 state that they had an arrangement whereby Donuts
10 would obtain certain TLDs and in some situations
11 postdelegation request assignment and transfer for
12 Demand Media, up to 107 of them. It looks like you
13 pointed me to one in which Demand Media is listed
14 as the BERS provider, okay.

15 Q. Okay. All I am saying, Mr. Livesay, is
16 that Demand Media was identified as having some
17 role in all of the 107 applications of which I am
18 showing you one?

19 A. And I am only able to confirm the one.
20 The one you're showing me shows them as a BERS
21 provider, nothing more.

22 Q. I will represent to you, sir, that the
23 same language is in each of those 107 different
24 applications.

25 A. Based on the --

1 MR. JOHNSTON: Excuse me, Mr. Livesay.

2 Objection; lack of foundation.

3 ARBITRATOR BIENVENU: Before I address the
4 objection, it is very important for us, in order to
5 have a clean record, that only one person speak at
6 a time. I understand it is difficult, especially
7 when we are proceeding by remote video, but let the
8 question be asked and then proceed with your
9 answer. And Mr. Litwin will not cut you off. He
10 will let you finish your answer.

11 Now, what is the nature of your objection,
12 Mr. Johnston? Lack of foundation as to what?

13 MR. JOHNSTON: Well, counsel was
14 representing what was present in 107 applications
15 the witness said he wasn't familiar with. The
16 question was only, "Take my representation; is that
17 true," as I heard the question. I think that's
18 pretty obviously a question that has no foundation
19 in the witness' knowledge.

20 ARBITRATOR BIENVENU: Mr. Litwin?

21 MR. LITWIN: I can rephrase.

22 Q. Is it fair to say, Mr. Livesay, that
23 Demand Media was disclosed as a partner of Donuts
24 for the purposes of back-end registry services in
25 its application submitted to ICANN?

1 A. The one you have shown me, it looks like
2 their limited nature as a partner is that of being
3 a BERS provider.

4 Q. Is it also fair that Demand Media issued a
5 public press release during the comment period and
6 the time at which ICANN was evaluating the
7 application to disclose its broader role regarding
8 those applications?

9 A. From the time and the dates of things,
10 that appears to be the case, yeah.

1 agreement would have provided --

2 A. It is not an agreement, and so it is
3 hypothetical. Would have provided. This is a
4 first draft of something --

5 ARBITRATOR BIENVENU: Mr. Livesay.

6 THE WITNESS: Yes, sir.

7 ARBITRATOR BIENVENU: I'm sorry, I have
8 to -- I instruct you again to not cut off
9 Mr. Litwin in the middle of a question because we
10 are not going to get a clean record.

11 THE WITNESS: I am trying to -- sometimes
12 I think he's finished with a statement or a
13 question, and I am making a presumption -- I will
14 try to stop and hold back.

15 ARBITRATOR BIENVENU: Don't take this as a
16 reproach, Mr. Livesay, but just as a direction so
17 that in everybody's interest, we have a clean
18 record.

19 THE WITNESS: Understood.

20 ARBITRATOR BIENVENU: Very well.

21 So -- well, do you want to finish what you
22 were saying, Mr. Livesay, and then Mr. Litwin.

23 THE WITNESS: We can go back -- I am fine
24 with him asking or reasking questions. That's
25 fine.

Q. Mr. Livesay, when we were talking about the change request criteria, you noted that you had received draft agreements and these were, in your view, precedents for the DAA.

Do you recall that testimony, sir?

A. Right. These were some examples of that, yeah.

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

1 MR. LITWIN: Excuse me for one minute. I
2 just need to look at the transcript for a second.

3 Q. You testified a moment ago, and I am
4 referring to Page 81, line -- Lines 17, 18, 19, 20
5 and 21, you say, "To be honest, I don't recall
6 reviewing this document at depth really at the
7 time, because it presented a situation, in my view,
8 and the way they presented it, is we would buy the
9 entity."

10 So I'm a little confused because I think
11 you just said that you did review the document at
12 the time. So which is it?

13 A. First of all, like I said, I did review it
14 at the time. But at a basic level I saw that it
15 was trying to set up an acquisition of the entity.
16 I am sure my recollection back then is better now,
17 but I did not rereview or reexamine the documents
18 in preparation for this, is my point. I can assure
19 you I had a much better understanding of all this
20 five years ago than I do right now.

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

1 Redacted - Third-Party Designated Confidential Information

2 ARBITRATOR BIENVENU: Mr. Livesay, I'm
3 sorry to interrupt.

4 THE WITNESS: He asked me a question, and
5 I am trying to answer it and then he jumps in and
6 tries to tell me to correct it. If he doesn't like
7 my answer, he can not like my answer. That's fine.

8 ARBITRATOR BIENVENU: Mr. Litwin, you are
9 not there to argue with the witness.

10 MR. LITWIN: Understood, your Honor.

11 ARBITRATOR BIENVENU: I would ask both of
12 you to sit back for a moment.

13 And, Mr. Livesay, let the questions come
14 and answer them in the best of your ability.

15 And please, I am addressing this to both
16 of you, don't cut each other off. It just creates
17 an unworkable record.

18 Mr. Litwin, please pose your question.

19 Q. BY MR. LITWIN: Mr. Livesay, I am going to
20 try and lay some foundation for what I'm asking you
21 here. Redacted - Third-Party Designated Confidential Information

22
23
24 A. Redacted - Third-Party Designated Confidential Information

25

1 Q. Redacted - Third-Party Designated Confidential Information

2

3

4 A. Redacted - Third-Party Designated Confidential Information

5 You see, this is my difficulty, Mr. Head of the
6 Tribunal, is he's quoting it and adding different
7 language as he's reading it, and I am left trying
8 to figure out is he asking for me to affirm his
9 interpretation of it or my reading of it when I
10 have not read these details.

11 Redacted - Third-Party Designated Confidential Information

12

13

14

15 And if Mr. Litwin wants to read it and ask
16 if I can confirm what it says, I can do that. If
17 he's going to read it and add different words in,
18 how am I supposed to respond?

19 ARBITRATOR BIENVENU: So I may suggest,
20 Mr. Livesay, that you take a minute to look at the
21 language on which you are questioned and perhaps
22 refer back to terms that are defined in that
23 language. And once you have familiarized yourself
24 with that language, then Mr. Litwin can ask his
25 question. All he can ask for is your understanding

1 of that document as you sit here today and read the
2 language. Fair enough?

3 THE WITNESS: Well, I don't know. Is the
4 Tribunal willing to give me an hour to look at a
5 document that I haven't looked at in five years?

6 ARBITRATOR BIENVENU: You think you need
7 an hour?

8 THE WITNESS: I assure you that when we
9 went through this in 2015, it was a lot more than a
10 few hours to look at these documents and settle
11 this out. I am perfectly fine reviewing these
12 documents that never iterated, we didn't sign, but
13 if he's going to ask me to interpret documents that
14 have defined terms, I tend to read documents
15 thoroughly.

16 ARBITRATOR BIENVENU: Mr. Livesay, you
17 chose to append this document to your witness
18 statement.

19 THE WITNESS: I did. And I appended it as
20 an example of something I received. If he's going
21 to ask me to read it and interpret it as an
22 attorney, I should do that.

23 ARBITRATOR BIENVENU: You appended it in
24 order to make a point, and you are being questioned
25 about your evidence.

1 THE WITNESS: Fair enough.

2 ARBITRATOR BIENVENU: I think it is a fair
3 line of inquiry for Mr. Litwin in order to
4 understand your evidence.

5 THE WITNESS: Fair enough.

6 ARBITRATOR BIENVENU: Now, I fully
7 understand your concern that you don't want to be
8 trapped into giving a legal interpretation to a
9 document you have not recently reviewed. We
10 appreciate that, and we are sensitive to that.

11 Now you're being questioned on one
12 subparagraph of the agreement. I take your point
13 that they are defined terms, but please take the
14 time to read that one paragraph. If you want to
15 refer to the defined terms, do that, and then we'll
16 see the question and we'll step in if we find the
17 answer -- the question puts you in an unfair
18 position, but I don't think that it does. If you
19 take the time to review that paragraph, review the
20 defined terms, you should be able to answer his
21 question.

22 THE WITNESS: Fair enough.

23 I think it is back to you, Mr. Litwin, to
24 pick up wherever I interrupted.

25 MR. LITWIN: Thank you.

1 Q. Mr. Livesay, I just wanted to ask a couple
2 of questions. You executed your witness statement
3 on June 1st of this year, correct?

4 A. Correct.

5 Q. And did you review the attachments to your
6 witness statement when you signed it or before
7 you -- in the preparation of your witness
8 statement?

9 A. I reviewed that it was the document that I
10 received. I did not go through and reread the
11 document.

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

1 Q. Are you aware that Dot Tech the entity
2 did, in fact, prevail at the ICANN auction for
3 .TECH the gTLD?

4 A. I believe I may have heard that, yeah.

5 Q. Are you also aware that Dot Tech the
6 entity submitted a revised application after the
7 auction identifying Radix as the new owner of the
8 applicant Dot Tech the entity?

9 A. I don't have any specific memory of that,
10 but sounds accurate, I guess.

11 Q. And are you aware that as a result of
12 submitting that revised application, ICANN
13 commenced a reevaluation of that application?

14 A. I was not aware of that, that I can
15 recall.

16 Q. Are you aware that Dot Tech the entity, in
17 fact, submitted a further revised application in
18 response to a change request that it had submitted
19 to ICANN?

20 A. Nope, not aware of that.

21 Q. You also refer in your witness statement
22 to a transaction between Automattic and Primer
23 Nivel regarding .BLOG; is that correct?

24 A. I think I refer to maybe a press release
25 or something about that, yeah.

1 Q. Now, you state that in May 2016 it was
2 reported that Primer Nivel's bid for .BLOG had
3 been, quote, "financed by Automattic," correct?

4 A. I think I'm citing a news source about
5 that, yeah.

6 Q. So the answer to my question is yes?

7 A. Correct.

8 Q. And those reports postdate your August
9 2015 Domain Acquisition Agreement with NDC,
10 correct?

11 A. I'd have to relook at the dates. Do we
12 have that as an attachment?

13 Q. Yes. It is an attachment to your witness
14 statement, sir.

15 A. Let me make sure I am remembering the
16 correct press releases here.

17 Q. They begin, sir, at Exhibit E, which is on
18 Page 95 of Tab 1, and continue on to Page 111.

19 A. Yeah. So your question is what?

20 Q. Let me ask my question again.

21 A. Yeah.

22 Q. These reports regarding .BLOG postdate the
23 August 2015 DAA, correct?

24 A. Yes. That appears to be the case,
25 correct.

1 Q. So it's fair to say that you did not
2 discover information concerning the
3 Automattic-Primer Nivel transaction as part of your
4 research prior to the execution of the DAA,
5 correct?

6 A. That would seem to be the case, yeah.

7 Q. Therefore, it's also fair to say that you
8 were not relying on the Automattic-Primer Nivel
9 transaction as a precedent for the DAA, correct?

10 A. Certainly not in advance of the DAA, but
11 it certainly seemed to give some credibility
12 heading up to the auction.

13 Q. Now, .BLOG was auctioned in February of
14 2015, correct?

15 A. I believe that sounds right.

16 Q. And in March of 2014, Primer Nivel had
17 submitted a change request to ICANN regarding
18 Paragraph 11 of its application, correct?

19 A. I am not aware that that's the case.

20 Q. I direct your attention to Page 96 of
21 Exhibit E, and at the bottom, last paragraph, it
22 says, "ICANN processed the change request to the
23 Question 11 answer in March of 2014."

24 Do you see that?

25 A. I do.

1 Q. And, in fact, Question 11 asks about
2 ownership information, correct?

3 A. I believe that's correct.

4 Q. And, in fact, in Section 11 is where Ruby
5 Glen disclosed that Donuts' CEO and chairman had
6 legal or executive authority over it, right?

7 A. I'm sorry, what's the reference to Donuts?
8 What?

9 Q. Sorry. I'll move on. I was trying to
10 refer to something earlier in the testimony, but it
11 is not important.

12 At the .BLOG auction, the winning bidder
13 was a company called Knock Knock Whois There LLC,
14 correct?

15 A. Sounds correct.

16 Q. And that entity was controlled by
17 Automattic, correct?

18 A. I believe that's the case.

19 Q. And you don't know any of the details
20 about how Automattic and the Primer Nivel deal was
21 structured, do you?

22 A. No, I don't have any window into that.

23 Q. Now, finally, sir, I'll represent to you
24 in his opening statement Mr. Johnston, counsel for
25 VeriSign, referred to several transactions that

1 were entered into by Afilias, these concerned
2 .MEET, .PROMO, .ARCHI, .SKI and .BIO. And for each
3 of these gTLDs, isn't it true that Afilias entered
4 into an agreement to acquire these Registry
5 Agreements after those Registry Agreements had been
6 fully executed?

7 A. I don't -- you had a list there. I don't
8 recall any of those specifically. Was that a list
9 of TLDs that had changed hands when?

10 Q. Correct. So this is .MEET, .PROMO,
11 .ARCHI, .SKI and .BIO.

12 Sitting here today, do you have any
13 information to suggest that any of those deals were
14 struck prior to the Registry Agreement being fully
15 executed between the registry operator and ICANN.

16 A. I don't have any special information on
17 that, no.

18 MR. LITWIN: Okay. Mr. Chairman, I think
19 it is a good opportunity to take a second break.

20 ARBITRATOR BIENVENU: Very well.

21 Can you give us -- without holding you to
22 it, but can you give us a sense of how much longer
23 you plan to go?

24 MR. LITWIN: It's a little difficult to
25 say, Mr. Chairman. I would have thought I would

1 have gone through the first part a bit faster than
2 I did. I estimate I have about an hour and a half
3 left, maybe a little bit more. Depends how quickly
4 we can move through these subjects.

5 ARBITRATOR BIENVENU: Very well. So let's
6 take a second break now.

7 So, Mr. Livesay, with the same
8 instructions, you'll be brought to another room.
9 Thank you for your cooperation, and we resume in 15
10 minutes.

11 THE WITNESS: All right. Thank you.

12 (Whereupon a recess was taken.)

13 ARBITRATOR BIENVENU: Thank you,
14 Mr. Livesay. So under the same solemn affirmation,
15 we continue with your cross-examination.

16 THE WITNESS: True, correct.

17 MR. LITWIN: Thank you, Mr. Chairman.

18 Q. Mr. Livesay, I would like to direct your
19 attention to Paragraph 18 of your witness statement
20 that appears on Pages 7 and 8, and there you write,
21 "The DAA is a conditional agreement pursuant to
22 which VeriSign agreed to provide the funds to NDC
23 to participate in the auction for the .WEB gTLD.

24 "In the event NDC prevailed at the auction
25 and entered into a Registry Agreement with .WEB

1 with ICANN -- upon application to ICANN and with
2 ICANN's consent -- NDC would assign the .WEB
3 Registry Agreement to VeriSign."

4 Sitting here today, do you still agree
5 with that statement?

6 A. Yes.

7 Q. And looking at Paragraph 20, further down
8 the page, you write, "The DAA is compliant with all
9 terms of the Guidebook and consistent with
10 transactions by others with respect to the new gTLD
11 Program."

12 You close that paragraph by saying, "The
13 structure of the agreement was also consistent with
14 industry practices in the secondary market for new
15 gTLD applications of which I became aware in my
16 research of the new gTLD Program, as explained
17 above and further documented below."

18 Sitting here today, do you agree with
19 those statements?

20 A. I do, yes.

21 Q. Redacted - Third-Party Designated Confidential Information

22

23

24

25 A. Redacted - Third-Party Designated Confidential Information

1 financing an opportunity.

2 Q. Did VeriSign provide financing to NDC?

3 A. We provided the funds so they could
4 participate in an auction. How you define
5 "finance," I am not sure. We did not finance their
6 entity. We financed their bid in the auction,
7 which I think are two different things.

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

1 Redacted - Third-Party Designated Confidential Information

2
3
4 Q. Redacted - Third-Party Designated Confidential Information

5 A. Redacted - Third-Party Designated Confidential Information

6
7
8
9
10
11 Q. Well, let's talk about -- let's step back
12 and talk generally, Mr. Livesay.

13 In a financing arrangement, generally the
14 entity that provides the financing defines the
15 principal amount of that financing.

16 A. So let me correct again. I did not say
17 this is a financing. I said elements analogous to
18 financing in the following sentence, we are
19 providing a lot of funds for a third party we are
20 arm's length with who I don't know very well. I
21 like Jose, seems like a trustworthy guy, but when I
22 say it is analogous to a financing, I mean from the
23 standpoint, whether it is a home financing or a
24 business financing or a small loan, an unsecured
25 financing, you might look for ways to secure your

1 interest in that money so it is not misused, used
2 for things it was not intended to, making sure it
3 is returned if something goes awry.

4 So when I say "analogous to a financing,"
5 I mean from the standpoint of putting protections
6 into the one providing the funds. I did not mean
7 to suggest it was a financing with a fixed
8 principal or interest rate or this or that.

9 That's why I am trying to make sure you
10 don't step over the word "analogous" and start
11 going into financing, because it is not that. It
12 is analogous to that from the sense of providing
13 protections for the funds we were providing.

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. And are you aware, sir, that in a financing agreement, when a financier secures a security interest, that is limited to the amount of investment that they have made, the amount of funding they have provided; isn't that true?

A. I wouldn't know because this isn't a financing agreement in the common sense. Even in the highlighted part, it says it serves like a security interest. I am not saying it is a security interest in the terms that you would have, like, mortgage interest, for instance. We don't have any -- we are trying to, like I said, analogize, when you put a lot of money on the table, how do you ensure that those moneys are used the way you and this other third party agreed.

Like I said, as much as I like Jose, they were a new party to us. They were working in the

1 secondary market of TLDs. They had been in private
2 auction along with all of these folks in this
3 cohort.

4 To me, as I am looking at this, it looks a
5 bit swampy, and I am thinking, how would we go
6 about preserving our interests so we don't get
7 hosed one way or another. And so we started
8 looking at ways to do that.

9 Redacted - Third-Party Designated Confidential Information

10

11

12

Q. Redacted - Third-Party Designated Confidential Information

13

14

A. Redacted - Third-Party Designated Confidential Information

15

16

17

18

19

20

Q. Redacted - Third-Party Designated Confidential Information

21

22

23

24

25

In fact, you talked about a mortgage. So
maybe we could use that as a paradigm to compare

1 how this worked here.

2 In a mortgage, the borrower wants to buy
3 some real estate, and the bank loans, let's say,
4 \$500,000 to the borrower to enable them to do that.
5 And in exchange, they take a security interest in
6 the property; is that your understanding of how a
7 mortgage works?

8 A. Yeah, that's why I think comparing this to
9 a mortgage is totally inappropriate. Because the
10 thing about mortgages is, you're right, the lender
11 actually has an interest that's filed in states
12 with the Secretary of State or whoever, regarding
13 the particular property.

14 Redacted - Third-Party Designated Confidential Information

15

16

17

18

19

20

21

22 Q. Right.

23 A. I don't think a mortgage is a fair
24 comparison because of that.

25 Q. I agree with you, Mr. Livesay. In fact,

1 when a bank has to foreclose, it recoups its
2 security interest up to the amount, in my example,
3 of the \$500,000 principal. Anything that the
4 auction of the property achieves above that goes to
5 the borrower, because the borrower is the owner.

Q. I'm sorry, you're using the term
"nth-order possibility"?

A. Yeah.

Q. What does that mean?

A. Another word for saying seems like a very

1 remote possibility, right? You look at a tree of
2 potential outcomes. We simply ran through a lot of
3 them, some seemed a lot more remote than others, so
4 we tried to develop an outcome for it. Some of
5 them, we just said, "This seems like the way," and
6 we shook hands and signed the deal.

A. Redacted - Third-Party Designated Confidential Information

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. Now, the .WEB auction was comprised of several rounds over two days; is that right?

A. Yes.

1 Q. Redacted - Third-Party Designated Confidential Information

2

3 A. Redacted - Third-Party Designated Confidential Information

4 Q. Redacted - Third-Party Designated Confidential Information

5

6 A. Redacted - Third-Party Designated Confidential Information

7 Q. Now, each round of this auction had a
8 start-of-round price and an end-of-round price; is
9 that correct?

10 A. That sounds correct, yeah.

11 Q. So as Mr. Rasco explained it on Friday, if
12 bidders did not want to continue bidding, they put
13 in a bid at the start-of-round price, correct, and
14 that would be treated as an exit-round bid?

15 A. I believe so.

16 Redacted - Third-Party Designated Confidential Information

17

18

19

20

21

22

23

24

25 Q. So if a bidder wanted to continue to the

1 next round, they submitted the end-of-round price,
2 which was the top price in that range, to ensure
3 that they continued to the next round; is that
4 right?

5 A. That's my recollection, correct.

6 Q. And, of course, they could bid anything
7 between the start- and the end-of-round price,
8 right?

9 A. That's my understanding, or recollection,
10 yeah.

11 Q. So let's see how that worked in practice.

12 I will represent to you that during the
13 sixteenth round of the .WEB auction the
14 start-of-round price was \$57.5 million and the
15 end-of-round price was 71.9 million, okay?

16 A. Okay.

17 Q. Now, if that is correct --

18 Actually, Chuck, why don't you put up
19 Exhibit R-10, please. If you could just highlight
20 the sixteenth round.

21 A. This is not in the binder?

22 Q. It is not.

23 A. I will just look at the screen, then.

24 Q. If you just highlight the row information
25 and then the sixteenth row, please. So there you

1 see, sir, Round 16, the start-of-round price was
2 57.5 million and the end-of-round price was 71.9
3 million, right?

4 A. That's correct.

5 Q. Now, NDC entered a bid of -- I'm sorry,
6 did someone say something? I'm sorry.

7 NDC entered a bid of 71.9 million,
8 correct?

9 A. I would assume so if we went to the next
10 round.

11 Q. Well, you testified that the final bid you
12 submitted was 142 million?

13 A. I know. I know. I am just saying you're
14 providing me this. I am assuming this is the
15 accurate document, right? Naturally, to get to the
16 next round, I have to assume we bid at the
17 end-of-round price. I don't have any specific
18 recollection of the start-of-round price and the
19 end-of-round price. I am taking you at your word
20 that these are the actual amounts.

21 Q. From the ICANN website I represent to you
22 it is a fair and accurate information of the
23 information related to the .WEB auction.

24 A. From that standpoint, I would say we must
25 have entered the end-of-round price if we got to

1 the next round.

2 Q. Redacted - Third-Party Designated Confidential Information

3

4 A. Redacted - Third-Party Designated Confidential Information

5 Q. Now, I would like you to assume a
6 situation where Mr. Rasco believed that .WEB was
7 not worth more than \$65 million.

8 Redacted - Third-Party Designated Confidential Information

9

10

11

12 A. I don't know. I have no way to assume
13 what Mr. Rasco is thinking or why he would think
14 like that. So you're creating a hypothetical, but
15 go ahead.

16 Q. I am asking you to assume that that
17 factual situation took place.

18 A. However improbable, but okay.

19 Q. Redacted - Third-Party Designated Confidential Information

20

21

22

23

24

25 A. Redacted - Third-Party Designated Confidential Information

1 Q. And Mr. Rasco, I think you said it is
2 highly implausible, or words to that effect,
3 because, in fact, as we established earlier,

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

1 Q. I am just wondering, is that a typo,
2 should it be October 20th, 2016?

3 A. No, I don't think it is a typo. I don't
4 recall -- there was a reason for that date. I
5 believe it was on -- I don't remember. I don't
6 remember, but there was a reason for that date. I
7 don't recall what it is now.

8 Q. Okay. If you turn to Page 78, you will
9 see that the DAA was executed on October -- excuse
10 me, on August 25th, 2015, but NDC did not disclose
11 the existence or terms of the DAA to ICANN in 2015,
12 did it?

13 A. 2015, I don't believe that they did, but I
14 believe -- pretty sure we provided a copy, but I
15 don't know about NU DOT CO.

16 Q. You provided -- sorry.

17 A. I said I don't recall whether NU DOT CO
18 provided them a copy in 2015.

19 Q. Did VeriSign provide ICANN with a copy of
20 the DAA in 2015?

21 A. I believe -- I am pretty sure that they
22 provided them a copy not too long after the
23 auction, but it's been a while. Whether it was '15
24 or '16, I thought it was '15, but that's my
25 recollection. That could be off.

1 Q. Maybe I can help you with the dates. The
2 ICANN auction for .WEB took place in July of 2016.
3 So did VeriSign disclose --

4 A. Okay. Fair enough. It would have been
5 after the auction. So that's correct.

6 Q. Okay.

7 A. My years are flipping in my head right
8 now. Sorry about that.

Q. So your view was that -- strike that.

I am going to move on.

I'd like to direct your attention to your
witness statement where you write that,

Redacted - Third-Party Designated Confidential Information

1 Redacted - Third-Party Designated Confidential Information

2 ARBITRATOR BIENVENU: Which paragraph?

3 Q. BY MR. LITWIN: Do you agree with that
4 statement?

5 ARBITRATOR BIENVENU: Which paragraph?

6 MR. LITWIN: If you just give me a second,
7 Mr. Chairman.

8 MR. VAUGHAN: It is on Page 8.

9 MR. LITWIN: Yes, Page 8 at Paragraph 21.

10 ARBITRATOR BIENVENU: Thank you.

11 THE WITNESS: I am reading that.

12 Q. BY MR. LITWIN: Now, this is a
13 representation that NDC made to VeriSign in the
14 context of a contract, correct?

15 A. Correct.

16 Q. It is fair to say that just because a
17 party represents something is true in an agreement,
18 that does not, in fact, prove that it is true,
19 right?

20 A. That's the nature of contracts, right.

21 Q. It is, indeed. That's why we have
22 misrepresentation suits, right.

Q. In fact, that's what VeriSign requested
NDC to do in July of 2016, correct?

A. Correct.

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. Now, this confirmation was signed two days

1 prior to the .WEB auction; is that right?

2 A. I think the auction started on the 27th,
3 so maybe one day before.

4 Q. I'm sorry, one day before.

5 A. Two days before conclusion. So you win
6 that one. I'm with you on that one.

7 Q. There you go. Okay.

8 Now, following execution of this
9 confirmation of understanding, NDC did not disclose
10 the DAA to ICANN prior to the .WEB auction,
11 correct?

12 A. Correct.

13 Q. In fact, NDC never disclosed the DAA to
14 ICANN, right? It was only after Afilias had
15 complained to ICANN, after ICANN's external counsel
16 had called VeriSign's external counsel, did
17 VeriSign cause its external counsel to produce the
18 DAA, correct?

19 A. That's how I understand it was delivered
20 to them, yes.

21 Q. And when the DAA was finally disclosed,
22 VeriSign designated it as confidential, which
23 precluded ICANN from even informing Afilias or
24 anyone else that it received the agreement between
25 VeriSign and NDC, correct?

1 MR. JOHNSTON: Excuse me. I'd like to
2 just caution the witness not to disclose
3 communications with counsel or information he only
4 possesses because of a communication with counsel.

5 MR. LITWIN: I will accept a yes-or-no
6 answer to my question.

7 THE WITNESS: Could you restate it real
8 quick?

9 Q. BY MR. LITWIN: Sure. And when the DAA
10 was finally disclosed, VeriSign designated it as
11 confidential, which precluded ICANN from even
12 informing Afilias or anyone else that it had
13 received the agreement between VeriSign and NDC,
14 correct?

15 A. I can only confirm having been informed
16 that a copy was sent to them from our outside
17 counsel. Anything beyond that, I wasn't involved.

18 Q. Redacted - Third-Party Designated Confidential Information

19

20

21 A. Redacted - Third-Party Designated Confidential Information

22

23

24

25 Q. Okay. Let me step back. Is it fair to

1 say -- is it fair to say that in agreements, there
2 are certain things that are confidential and
3 certain things that are not?

4 A. I guess it would vary on the agreement.
5 Some make all the terms confidential, some make
6 some terms confidential. I think it would vary on
7 the agreement.

8 Q. So is your testimony here that VeriSign
9 considered the entirety of the DAA to be
10 confidential?

A. Redacted - Third-Party Designated Confidential Information

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. Well, I can refer you, sir, to Tab 10 of
your binder.

A. There it is.

1 Q. Does that help refresh your recollection
2 that the DAA was produced on August 23rd?

3 A. It is not refreshing my recollection
4 because I don't think I have ever actually seen
5 this document. I only know that it was sent. I
6 don't know the context. This is the first time I
7 recall seeing this particular letter.

8 Q. And the DAA was only produced after
9 Afilias had complained to ICANN; isn't that right,
10 as you've said earlier?

11 A. I mean, sadly, Afilias had already been
12 complaining since before the auction. So
13 everything happens after Afilias starts
14 complaining, right.

15 Q. Mr. Livesay, what evidence do you have
16 that Afilias made any complaints before the .WEB
17 auction?

18 A. I am not following your question about --
19 you asked about whether I knew when this -- when
20 the letter and the DAA went from our counsel to
21 ICANN's counsel, and then you said -- then you
22 asked, "Was this after or before Afilias" something
23 or other.

24 So I am trying to make sense of your
25 question.

1 Q. My question was --

2 A. Yep.

3 Q. -- that the DAA was finally produced to
4 ICANN only after Afilias had complained following
5 the conclusion of the .WEB auction?

6 A. That I can't be sure because I don't know
7 when Afilias first complained. I am not certain if
8 you mean when they made their first complaint to
9 ICANN or -- I don't know.

10 MR. LITWIN: Mr. Chairman, I'd like to
11 take a few minutes to confer with my colleagues,
12 please.

13 ARBITRATOR BIENVENU: Very well.

14 (Whereupon a recess was taken.)

15 MR. LITWIN: Thank you, Mr. Chairman.

16 ARBITRATOR KESSEDJIAN: Just a minute.
17 Mr. Chernick is not back.

18 MR. LITWIN: Oh, I see him now. May I
19 proceed, Mr. Chairman?

20 ARBITRATOR KESSEDJIAN: Indeed, he's back.

21 ARBITRATOR BIENVENU: Yes, go ahead.

22 Q. BY MR. LITWIN: Mr. Livesay, right before
23 we went to break -- and I am going to read the
24 question and answer back to you -- I asked, "And
25 the DAA was only produced after Afilias had

1 complained to ICANN; isn't that right?"

2 You responded, "I mean, sadly Afilias had
3 been complaining since before the auction."

4 Do you know how -- what the -- when
5 Afilias first complained to ICANN?

6 A. I don't. In fact, even when I say "before
7 the auction," I may be confusing it with some of
8 the activities of Donuts, who I believe filed some
9 case in trying to prevent the auction. I might
10 have been misspeaking about who was complaining.

11 The question about when did Afilias
12 complain, I don't know specifically when they made
13 any first formal complaint to ICANN. I don't know
14 what date that would be.

15 Q. Okay. But it's fair to say that you were
16 aware that complaints were made to ICANN regarding
17 the .WEB auction prior to the .WEB auction taking
18 place, correct?

19 A. There was definitely stuff circulating in
20 the swamp about that, yeah.

21 MR. LITWIN: Okay. Mr. Chairman, I have
22 no further questions. Thank you.

23 ARBITRATOR BIENVENU: Thank you very much,
24 Mr. Litwin.

25 Do my colleagues have questions for

1 Mr. Livesay?

2 ARBITRATOR KESSEDJIAN: I may have some.
3 Do you have any questions, Mr. Chairman?

4 ARBITRATOR BIENVENU: I have a few
5 questions, yes.

6 ARBITRATOR KESSEDJIAN: Perhaps you can go
7 ahead, and then I can ask if there are some
8 unanswered of my questions.

9 ARBITRATOR BIENVENU: Very well.
10 Mr. Chernick?

11 ARBITRATOR CHERNICK: I do not. Thank
12 you.

13 ARBITRATOR BIENVENU: Thank you.

14 Mr. Livesay, were you and the executives
15 you were working with on this initiative surprised
16 by the amount that NDC had to bid to win the
17 auction for .WEB?

18 THE WITNESS: I don't know if "surprised"
19 is the right word. I think we had been watching a
20 lot of TLDs go for higher prices right before then,
21 and I may get the numbers wrong, but I think .APP
22 went for 25, if I recall, something like that. We
23 were just watching this and looking and saying,
24 well, .WEB may have more potential than .APP.
25 Maybe .WEB's broader, maybe it goes for more than

1 that. 135, yeah, maybe higher than I thought, but,
2 yeah, not crazily surprised, I guess.

3 ARBITRATOR BIENVENU: When you say "higher
4 prices," you mean increasingly high prices?

5 Nothing was higher than what was bid for .WEB, as
6 we understand.

7 THE WITNESS: Yeah, I am not aware of
8 anything higher than .WEB. I am simply saying we
9 had seen some TLDs going for tens of million
10 dollars, at least in that area.

11 ARBITRATOR BIENVENU:

ARBITRATOR BIENVENU: I think you mentioned at the beginning of your evidence, but I could be wrong, but I think you mentioned that among the documents that you reviewed for the preparation of your testimony today were the filings that the parties made in the IRP; is that correct?

THE WITNESS: Some of them. I don't believe all of them. I read Afilias' document

1 from -- I think it was May, in which I then -- that
2 was kind of some of the background of creating my
3 written testimony. And then I read the filings
4 that came in after that.

5 MR. BIENVENU: Oh, you did. So I was
6 going to ask you a question about --

7 THE WITNESS: Let me clarify. When I say
8 "read," I just breezed through to kind of
9 understand what was going on. I wasn't trying to
10 take up any of the legal arguments. I just want to
11 give you a heads-up on that.

12 ARBITRATOR BIENVENU: I would just invite
13 you to comment on a paragraph from the rejoinder
14 memorial of ICANN. This is not something you would
15 have reviewed before signing your witness statement
16 because it was filed on the same day as your
17 witness statement. It was filed on June 1st. But
18 perhaps you have read it since.

19 THE WITNESS: Do you have it there to
20 show?

21 ARBITRATOR BIENVENU: Yes. Perhaps
22 somebody could display on the screen the first
23 page. It is called "ICANN's Rejoinder Memorial."

24 Mr. Litwin, is Chuck available?

25 MR. LITWIN: Do you have a copy of the

1 rejoinder? My team is sending it to him right now.
2 I would send my copy, but it has quite a bit of
3 handwritten notes on it.

4 MR. VAUGHAN: All I need is an exhibit
5 number.

6 MR. LITWIN: It is not an exhibit. It is
7 a pleading. So someone is going to have to send it
8 to you.

9 MR. JOHNSTON: Or, Mr. Chairman, if it is
10 short enough and integrated itself, you might read
11 it to the witness. He might be able to answer the
12 question without actually seeing it. If he needs
13 to see it, he can ask.

14 ARBITRATOR BIENVENU: I'd like to invite
15 him to comment on three sentences in the middle of
16 a paragraph, and I think it would be more fair if a
17 witness could see the whole paragraph. So I would
18 prefer -- I don't want to read the whole paragraph.
19 Let's see if we can display it.

20 MR. LITWIN: It will be only one more
21 minute, Mr. Chairman.

22 (Discussion off the record.)

23 ARBITRATOR BIENVENU: The cover doesn't
24 look like my cover. Is this the one dated June
25 1st?

1 MR. LITWIN: I believe it is.

2 ARBITRATOR BIENVENU: Okay. Very well.

3 So this is the document, Mr. Livesay. Do
4 you remember seeing this document?

5 THE WITNESS: Not necessarily by the
6 pleading cover. I definitely read one of
7 ICANN's -- I don't know if it was this one because
8 I read one that must have been filed later than
9 this because it had my name in it. I don't know if
10 I read this ICANN paper.

11 ARBITRATOR BIENVENU: Anyway, the
12 paragraph on which I would like to invite you to
13 comment is Paragraph 82, if Chuck would display
14 that.

15 Mr. Livesay, you are welcome to read the
16 whole paragraph. My questions will concern the
17 third, fourth and fifth sentence in that paragraph.

18 THE WITNESS: All right. Paragraph 82,
19 just give me a second to read it.

20 Okay. I have read it. What's the
21 questions?

22 ARBITRATOR BIENVENU: So I'd like you to
23 comment on the statement, the fourth line,
24 "Determining that NDC violated the Guidebook is not
25 a simple analysis that is answered on the face of

1 the Guidebook. There is no Guidebook provision
2 that squarely addresses an arrangement like the
3 DAA."

4 So I stop there for a minute. Do you
5 agree with these statements?

6 THE WITNESS: As to the first highlighted
7 one, whether it is easy or difficult to determine
8 if it's been violated, I mean, that's ICANN's
9 perspective. I think they may be using some
10 information I'm not aware of.

11 Because, again, I don't believe that what
12 we did changed the ownership or would have required
13 any type of request for reevaluation. So I don't
14 know that I necessarily agree that it is not a
15 simple analysis.

16 And then the second statement, I think
17 that's probably true. There is no guidebook that
18 squarely addresses this anymore than there's one
19 that squarely addresses the way Google constructed
20 its document or the way that -- I forget -- the Dot
21 Tech, that's not expressly addressed either, I
22 don't think.

23 ARBITRATOR BIENVENU: And what about the
24 next sentence, "A true determination of whether
25 there was a breach of the Guidebook requires an

1 in-depth analysis and interpretation of the
2 Guidebook provisions at issue, their drafting
3 history to the extent it exists, how ICANN has
4 handled similar situations, and the terms of the
5 DAA."

6 THE WITNESS: I think it is certainly fair
7 to say that some analysis needs to be had between
8 the guidebook and the DAA. How in-depth that is, I
9 think, is a matter of opinion, I suppose.

10 ARBITRATOR BIENVENU: In your experience,
11 Mr. Livesay, and those you were working with at
12 VeriSign, but, you know, exclude conversations with
13 counsel, is there a mechanism for an applicant or
14 someone interesting in conceiving deals in what you
15 describe as the secondary market, to ask on a
16 confidential basis sort of advisory opinion from
17 ICANN as to the compliant nature of a possible
18 transaction with the applicable program rules?

19 THE WITNESS: I think maybe you are
20 getting at the question of -- maybe that was so
21 long that I didn't understand your question
22 exactly.

23 MR. BIENVENU: Let me rephrase it. It was
24 a long question.

25 Is there a mechanism for someone who, like

1 VeriSign when it was looking at the DAA, to ask
2 ICANN -- suppose you had a doubt as to whether the
3 DAA was permissible or not. Was there a mechanism
4 to ask on a confidential basis for an advisory
5 opinion on --

6 THE WITNESS: Okay. I was confused by
7 your use of the term "mechanism." It made it sound
8 like there was some fixed process within the
9 company that I am not aware of.

10 There was, however, a communication made
11 after the auction. Actually, I don't know
12 specifically a date, but I believe there was a
13 generic question asked by someone from our naming
14 group to someone at ICANN about what would happen
15 if -- you know, in a request for assignment and
16 what's looked at and what types of
17 disqualifications might affect that. I believe a
18 call like that was made, because the intent from
19 our standpoint was to -- at the request for
20 assignment, after NU DOT CO had executed the
21 Registry Agreement, we wanted to feel comfortable
22 that -- I don't want to use the word "perfunctory,"
23 but given our history in running TLDs, VeriSign,
24 that is, both financially and technically, we were
25 interested in making sure, is there any other

1 reason why an assignment would not be approved to
2 us as a potential assignee. Sorry.

3 ARBITRATOR BIENVENU: I think I know what
4 you're referring to in terms of asking what is the
5 practice of ICANN when it is to approve an
6 assignment.

7 But I meant to situate my question at
8 another point in time, an earlier point in time,
9 when you and your colleagues were engaged or
10 approaching the point where you would engage with
11 potential counterparties to strike a deal like the
12 one you made in the DAA.

13 Did you consider asking ICANN whether the
14 time of the transaction, the way you proposed to
15 structure it, complied with the guidebook?

16 THE WITNESS: I don't recall having a
17 discussion specifically. I think you're asking why
18 did we -- we could have just asked ICANN ahead of
19 the auction, or maybe that's what you're asking. I
20 am not really sure.

21 ARBITRATOR BIENVENU: I am asking whether
22 when you were contemplating entering into the
23 DAA --

24 THE WITNESS: Right.

25 ARBITRATOR BIENVENU: -- whether you

1 discussed seeking an advisory opinion from ICANN as
2 to the -- as to the compliant nature of the
3 agreement you were looking at with the program
4 rules?

5 THE WITNESS:

21 ARBITRATOR BIENVENU: Very well. Thank
22 you, Mr. Livesay.

23 Mr. Johnston, any redirect, and do you
24 want to take --

25 ARBITRATOR KESSEDJIAN: Mr. Chairman --

1 ARBITRATOR BIENVENU: Oh, sorry. Excuse
2 me.

3 ARBITRATOR KESSEDJIAN: Everybody's tired,
4 but I think I can still survive. It is 9:38 p.m.
5 for me. So it is starting to be dinnertime in the
6 Spanish way.

7 Mr. Livesay, I still have a few questions
8 for you. This is Catherine Kessedjian. I am
9 speaking from Paris, and I'd like to come back to
10 one question that was asked by the Chair.

11 THE WITNESS: Yeah.

12 ARBITRATOR KESSEDJIAN: About the
13 relationship, the business and, I would say,
14 financial and whatever you want to call it,
15 relationship between the .WEB and the .COM and the
16 other gTLDs that we have there.

17 Am I correct to think that you were a vice
18 president of VeriSign for strategy and management
19 in 2009 and 2010?

20 THE WITNESS: Correct.

21 ARBITRATOR KESSEDJIAN: Thank you. So you
22 must have a sense of the business?

23 THE WITNESS: No, not the naming business.
24 At that time, the company was predominantly two
25 businesses. The certificate business, digital

1 certificates. In fact, at that time the digital
2 certificate business was about 50 percent larger
3 than the DNS business. I believe it was about
4 60/40, I want to say, out of a billion, roughly.

5 I come from the history of the certificate
6 business. When I was hired in, I worked directly
7 for the chairman, Jim Bidzos, at the time, to help
8 look at the splitting of the two businesses, but I
9 come from that half of the world.

10 ARBITRATOR KESSEDJIAN: Okay. Very good.
11 So it was only later in 2014 that you had to become
12 aware, if you will, of the business of the gTLDs?

13 THE WITNESS: A lot of rapid learning,
14 yes.

15 ARBITRATOR KESSEDJIAN: Yes. I am
16 absolutely confident that you are capable of that.

17 Now, we read in several reports and
18 particularly a report by J.P. Morgan that it was
19 the understanding of the business that, in fact,
20 .WEB was going to be a competitor for almost every
21 single gTLD because of the nature of the word
22 "WEB."

23 Now, what is your reaction to those
24 reports? Could you tell us a bit more about that?

25 THE WITNESS: I don't know that I am

1 familiar with the report you're referring to. I
2 read a lot of things back then. I definitely
3 recall hearing both, you know, that .WEB looked
4 like a great potential true generic. That
5 certainly played into reasons why VeriSign might be
6 interested in it, which is selling domains and
7 broadening the availability of domains is what
8 VeriSign does, and this looked like a good
9 opportunity for that.

10 ARBITRATOR KESSEDJIAN: Okay. Thank you
11 very much.

12 Now, I want to understand another point
13 that was not asked within the cross or by the
14 Chair. We heard since the beginning of the
15 hearing -- so last week we have been at this
16 hearing -- that, in fact, ICANN has always favored
17 what they call a private auction. In fact, ICANN
18 favors that the contention set people, entities
19 that are in the contention set, basically do it by
20 themselves. ICANN would much prefer not to have
21 the public auction.

22 Redacted - Third-Party Designated Confidential Information
23
24
25

2
3
4 Could you explain to us why is it that
5 VeriSign was so adamant to actually have a public
6 auction and not making it private?

7 THE WITNESS: Sure, sure. One of the
8 things that, as I got more into looking at how the
9 contention sets were resolved, in any string that
10 has more than one, how do you resolve it? I
11 definitely read and familiarized myself, and it was
12 definitely made clear that ICANN prefers a private
13 resolution.

14 But as I talked to people in different
15 contention sets, both in .WEB and some others that
16 we looked at, what became curious to me was I
17 appreciated why ICANN would want the contention set
18 to resolve itself, because at that point in theory
19 all the potential antagonists have agreed, great
20 solution.

21 The thing that looked unusual to me is
22 that whether it is a private auction or other
23 private resolution, in the private auction case,
24 the winner is paying or -- another way to look at
25 it is buying off the losers. That has a weird

1 collusive look to it for someone like VeriSign.

2 So to have a situation where we are going
3 to somehow bid and pay off all the losers seemed
4 troubling, and that's one.

5 And then in the other private resolution,
6 in fact, where it is not necessarily auction, but
7 just contention set members are, I don't know,
8 resolving through agreement and having postauction
9 transfers, it just -- the lack of transparency in
10 the conduct between the contention set members
11 seemed unusual, and the fact that it was paying off
12 people to lose was troubling.

13 I think this even came back to prove
14 itself in reality.

15 Redacted - Third-Party Designated Confidential Information

16

17

18 Some of those things seem to have come
19 back in play the following year leading up to the
20 auction. For example, I was surprised to see that
21 the other contention members were still trying to
22 contact NDC during the blackout period. That kind
23 of behavior is kind of the weird behavior we didn't
24 want to be a part of in a private resolution. I
25 realize the blackout period doesn't authorize that,

1 but it was happening anyway.

2 I also recall that Afilias made not one,
3 but two offers to somehow promise NU DOT CO an
4 amount. At one point I believe it was 16.8 and
5 then they came back and raised the number to 17.02
6 or something like that. I'm like, wow, this is
7 kind of weird stuff we were wondering about. How
8 is one contention set member able to simply offer
9 money to someone else? It just seemed weird to me.

10 Redacted - Third-Party Designated Confidential Information

11

12

13

14 ARBITRATOR KESSEDJIAN: You are not
15 mentioning one point, which may be important, which
16 is the fact that VeriSign being secretly involved,
17 there was less of a possibility to control the
18 auction and the price.

19 THE WITNESS: I don't know if that's the
20 case. In a private auction, one could see --
21 that's the thing, the way privates are resolved was
22 kind of a bit of a black box.

23 ARBITRATOR KESSEDJIAN: Okay.

24 THE WITNESS: That was kind of -- the
25 unknowns just seemed -- let's go with something

1 that's straight and open.

2 ARBITRATOR KESSEDJIAN: Okay. Thank you.
3 Now, you said that at some stage in your testimony
4 tonight -- tonight for me -- that VeriSign didn't
5 want -- or VeriSign had the confidentiality clauses
6 in the DAA because without them, it would be
7 concerned that it would -- and I use your terms, at
8 least the ones that I have noted. I don't have the
9 real live feed. I didn't sign up for that --
10 upsetting the path. That's your words, at least
11 from what I have taken as notes.

12 Now, do you refer to that as a concern
13 that VeriSign, that if it were discovered by
14 anybody that VeriSign was behind one of the
15 contention set applicants, it would really be a
16 problem? Could you explore more what you meant by
17 upsetting the path?

18 THE WITNESS: I guess the only way I can
19 say it is all the alleged claims we are hearing now
20 from Afilias, however wrong I think they are, we
21 would have heard. But that wasn't really the main
22 drive. The main drive was we figured we'd be
23 reviewed and have to take that when it came out.

24 The point was there looked like a path,
25 that there's a specific point where it would be

1 evaluated, whether we were an appropriate assignee
2 or not of the RA. So I think we just looked at a
3 particular path that looked like it would work, and
4 it still required disclosure, eventually, and
5 that's the path we are on.

6 ARBITRATOR KESSEDJIAN: Thank you,
7 Mr. Livesay.

8 No more questions, Mr. Chairman.

9 ARBITRATOR BIENVENU: Thank you. And
10 apologies for forgetting to ask you for your
11 questions.

12 Mr. Chernick, any questions?

13 ARBITRATOR CHERNICK: No thank you.

14 ARBITRATOR BIENVENU: Mr. Johnston, do you
15 want to take a few minutes before you start your
16 redirect or do you want to start right away?

17 MR. JOHNSTON: I think two minutes would
18 be helpful, but I think it will only take two
19 minutes.

20 ARBITRATOR BIENVENU: Very well. Let us
21 know when you're ready.

22 MR. JOHNSTON: Can we have a room, JD?

23 MR. ENGLISH: Sure. Give me one second.

24 (Whereupon a recess was taken.)

25 ARBITRATOR BIENVENU: Mr. Johnston, are we

1 ready to go?

2 MR. JOHNSTON: Yes, and no. We have no
3 questions, and we just thank Mr. Livesay for his
4 testimony.

5 ARBITRATOR BIENVENU: Very well.
6 Mr. Livesay, I would like to say the very same
7 thing on behalf of the members of the Panel. Thank
8 you very much for your evidence and thank you for
9 your time today.

10 THE WITNESS: Thank you all for clocking
11 in from all different parts of the world. I have
12 it easy here in California time. My apologies to
13 France. It is past my dinnertime there. Okay.
14 Great.

15 ARBITRATOR BIENVENU: Thank you, sir.
16 JD, we'll remove the witness from the
17 room.

18 MR. ENGLISH: The witness is gone from the
19 room and the meeting.

20 ARBITRATOR BIENVENU: Very good. I think
21 this concludes the evidentiary portion of this
22 hearing. Perhaps I can begin by reverting to the
23 question foreshadowed in my opening remarks this
24 morning and ask whether the parties are satisfied
25 in the manner in which this hearing is being

1 conducted and whether there is any concern in this
2 regard that either party would wish to raise.

3 I'll begin with directing the question to
4 Mr. Ali on behalf of the claimant.

5 MR. ALI: Thank you, Mr. Chairman.

6 As I indicated last week and, I must say,
7 somewhat emotionally, for which I apologize to the
8 Panel, we on our side did not believe, do not feel
9 that the prehearing phase was handled very well by
10 the Panel, putting unnecessary, undue pressure on
11 counsel in a matter that is evidently extremely
12 complicated and one which we had a very significant
13 record to deal with and a number of witnesses.

14 With that having been said, I think I
15 speak on behalf of the client and our entire team
16 to say that the hearing has been handled extremely
17 well, of course with great help from our
18 technologists and the support, but so far as the
19 hearing itself is concerned, from Afiliias' side, we
20 have no concerns. Thank you for managing such a
21 good hearing and for very incisive and very
22 well-formed questions.

23 ARBITRATOR BIENVENU: Thank you, Mr. Ali.

24 Mr. LeVee, can I ask the same question to
25 the respondent?

1 MR. LeVEE: ICANN has no objections to how
2 any of these past several weeks have been handled.
3 Certainly the parties have had -- I said certainly
4 the parties have had vigorous exchanges and the
5 last several weeks have been extraordinarily busy
6 for everyone.

7 I think the Panel handled it extremely
8 well, given that we had set specific deadlines and
9 that we had last week scheduled in Chicago and the
10 Panel made it work and then added these days. And
11 ICANN is extraordinarily appreciative of the
12 Panel's efforts, its dedication, its questions and,
13 candidly, its patience. Because I think patience
14 was required over the course of the last seven days
15 of this hearing.

16 And may I say, it may well be that virtual
17 proceedings like this are here to stay for some
18 unknown and perhaps long periods of time.

19 I think these seven days showed that it
20 can work and that we can put together people in
21 multiple locations, including time zones that are
22 nine hours from mine. And I think, candidly, I did
23 not expect it would work as well as it did. And
24 yes, we had a little bit of technology issues come
25 across, but people will get better at that as time

1 goes by. Even in a thunderstorm, Paris didn't lose
2 its Wi-Fi connection tonight.

3 So we are very pleased, and we would like
4 to thank not only the members of the Panel, but
5 opposing counsel, obviously, our client, folks from
6 the VeriSign side.

7 We thank you. This has been seven very
8 challenging but ultimately days that made sense.
9 And we thank you, and we don't want to do it again
10 any time soon, but we think it worked.

11 So thank you, Mr. Chairman, for allowing
12 me to say that.

13 ARBITRATOR BIENVENU: Thank you,
14 Mr. LeVee.

15 May I then ask of the Amici, beginning
16 with Mr. Marenberg on behalf of NDC?

17 MR. MARENBERG: Thank you, Mr. Chairman.
18 Can you all hear me clearly?

19 ARBITRATOR BIENVENU: Very clearly.

20 MR. MARENBERG: Thank you.

21 First I would like to thank the Panel for
22 your hard work and your diligence, your patience
23 and, frankly, your graciousness in handling the
24 seven days of testimony that we've had.

25 And I also express agreement with

1 Mr. LeVee that I think that the virtual nature of
2 this proceeding has been relatively seamless.

3 And I think if I were a hotel or an
4 airline, I would worry because I think we are
5 demonstrating here that these trials -- or at least
6 trials that do not involve juries, can be
7 undertaken and undertaken well with the technology
8 available now.

9 On those grounds, I have nothing but
10 praise for the Panel and praise for TRIALanywhere
11 and the proceedings and the technology.

12 I do have some concerns that I want to
13 raise on behalf of Amici, and I want to preface it
14 by saying that I have no intention of relitigating
15 Procedural Order 1 here that limited the role of
16 Amici in this instance. That's not what I am
17 saying now.

18 I do want to express concerns, concerns
19 that are particularly acute to me in light of the
20 testimony of -- I think it was Mr. Disspain, where
21 he suggested that ICANN would give, I think -- I
22 don't know whether he used "deference" or whether
23 he would take into consideration and give serious
24 consideration to whatever recommendations this
25 Panel made.

1 Here's why I have concerns about that.
2 This has not been a true adversarial proceeding
3 from NDC's -- I'll let VeriSign speak for itself,
4 but certainly from NDC's point of view.

5 We do not have the ability to put on any
6 witnesses of our own. We have not had the ability
7 to demand that Afiliias stop playing games with this
8 Panel and not withdraw the witnesses that it
9 withdrew so that we couldn't cross-examine those
10 witnesses and explain to the Panel that what they
11 are accusing NDC of doing and VeriSign of doing is
12 functionally and substantively no different from
13 what they do every day.

14 If we had their witnesses here, we could
15 have -- well, I could still not have cross-examined
16 them, but perhaps someone could have. But the fact
17 that I couldn't cross-examine them and my client's
18 rights are at issue or potentially at issue is a
19 problem with the proceeding, not a problem with the
20 Panel, but it is a problem that suggests that the
21 Panel needs to be very careful, I'll just say it
22 that way, with the, quote, "recommendation that it
23 is making," because it is doing so on the basis of
24 a somewhat one-sided presentation.

25 By the way, and I think Mr. Ali will

1 object to this, but I believe that the Panel should
2 be taking and making adverse inferences from the
3 fact that Afiliias withdrew all its witnesses. That
4 is, as I understand it, a traditional prerogative
5 of the Panel when witnesses are under control of a
6 party and they are withdrawn for no reason at all.

7 Now, I am going to guess that Mr. Ali is
8 going to object to my suggesting that because,
9 after all, I am only an Amici and not a party, and
10 I have no right to make that suggestion.

11 But if that's true, that goes to, again,
12 the limitations of this proceeding as reflected
13 from the perspective of my client, NDC, whose
14 rights are at issue here.

15 There was another instance, and, again, I
16 take no umbrage of it, and I think that the Chair
17 was quite patient with me when I interrupted the
18 proceedings at a time where I thought a witness who
19 was commenting on the actions of my client was
20 interrupted by counsel and not able to give a full
21 explanation of the answer.

22 Now, I think the Panel quite rightly said,
23 "Under the rules, you're an Amici, you have no
24 right to do that under the rules we set up. And,
25 Mr. Marenberg, please be quiet." I think I was

1 after that.

2 But it goes again to the limitations of
3 the proceedings from the perspective of NDC.
4 Again, I suspect VeriSign feels similarly to this.

5 This is, in a sense, an unbalanced
6 proceeding. I think the evidence -- and I am not
7 going to say a lot about this. The evidence has
8 come out quite favorably to the positions that were
9 taken, but it has come out despite the fact that
10 this is an uneven proceeding and unbalanced
11 proceeding.

12 Therefore, those are the comments I want
13 to make. It is no criticism of the Panel at all.
14 It is the nature of the process that we are engaged
15 in.

16 ARBITRATOR BIENVENU: Thank you,
17 Mr. Marenberg.

18 We'll hear from the parties in a minute as
19 to what was -- what is going to be proposed in
20 terms of posthearing submissions, but you will have
21 an opportunity in the course of posthearing
22 submissions of making representations of the sort
23 that you have made now, about what should or should
24 not be our recommendations.

25 As you know, the question I'm posing has a

1 narrower objective. But anyway, your concerns and
2 comments are reflected in the record.

3 Mr. Johnston.

4 MR. JOHNSTON: Yes. I would agree with
5 what Mr. Marenberg says. I am going to make my
6 comments very pointed and brief.

7 I thought the Panel has been thoughtful,
8 prepared, courteous. I don't know most of the
9 Panel members. I haven't had experience with most
10 of you before, so I can tell you that I was
11 surprised and impressed.

12 I have been an arbitrator before, and I
13 don't think I have ever been more prepared or
14 courteous than the Panel has demonstrated during
15 this hearing.

16 My concern has nothing to do with the
17 Panel. My concern is the combination of the
18 system, IRP system, and the way, in my view -- and
19 I am not going to repeat my opening statement --
20 the way it's been misused here to try and bring
21 claims asking for resolution of issues and relief
22 directly against parties who cannot be parties by
23 virtue of the rules, an ambiguity that lasted
24 throughout this hearing as to what the jurisdiction
25 would be that the Panel would rule on.

1 So we have on the one hand a system that
2 did not allow Amici to appear as parties,
3 including, for the reasons Mr. Marenberg pointed
4 out, while at the same time we had a claimant
5 asking for relief directly against unrepresented
6 parties, and then from day one objecting to
7 participation by Amici, trying to keep us out of
8 the proceeding in virtually every way. Ultimately
9 there was some relenting on that, but as
10 Mr. Marenberg summarized, it has created a
11 one-sided proceeding.

12 So my concern is basically were the Panel
13 to go beyond what we believe the Panel's
14 jurisdiction is and either in their findings
15 regarding such matters as to whether the DAA is
16 consistent with the guidebook or awards relief,
17 such as undoing an auction and setting a price for
18 Afilias to walk off with .WEB, which is what
19 Afilias has asked the Panel to do.

20 I don't know that there's a way that the
21 Panel can remedy the system, but one step that
22 would remedy, I guess, our concerns is if the Panel
23 adopted our notion of its jurisdiction and stayed
24 within it.

25 Because once it goes beyond that

1 definition of jurisdiction, it directly impacts our
2 interests without an equal or fair representation.

3 But in terms of what the Panel's done as
4 opposed to the way the rules are attempted to be
5 used here, I only have compliments to offer.

6 ARBITRATOR BIENVENU: Thank you very much,
7 Mr. Johnston.

8 Can I ask, then, for the parties' thoughts
9 about posthearing submissions? I assume you have
10 had time over the past 24 hours to discuss that.

11 Mr. Ali, do you want to?

12 MR. ALI: Yes, we have, Mr. Chairman. I
13 think we agreed on a date for the filing -- the
14 first round filing of the posthearing submissions,
15 which is October 8th; is that correct, Jeff?

16 MR. LeVEE: Yes. I don't know that the
17 Amici have confirmed their agreement to that date,
18 but ICANN and Afilias have agreed that we will
19 submit our posthearing brief on 8 October of 2020.

20 If I might add, just so there's no
21 ambiguity, I would propose that we do so at 8:00
22 p.m. Pacific so that everyone knows exactly what
23 time they should be submitting their briefs.

24 MR. ALI: That's fine. Of course, this is
25 subject to your comments earlier, Mr. Chairman,

1 about the Panel having -- needing time to define
2 the questions and consider the evidence that you
3 have received over the course of the past seven
4 days.

5 ARBITRATOR BIENVENU: Did you discuss with
6 your colleagues, Mr. Ali, the question of the
7 length of the posthearing submissions?

8 MR. ALI: We did, and as you can imagine,
9 we had lengthy emails about the length, and we
10 couldn't reach agreement.

11 Our basic question is that --

12 ARBITRATOR BIENVENU: I am glad everyone's
13 sense of humor remains intact.

14 MR. ALI: Hopefully the posthearing briefs
15 will be shorter than the length of the emails.

16 In any event, our position is that we
17 should have the same number of pages as ICANN and
18 Amici put together, so that if each of the ICANN
19 and Amici have 50 pages each, we get 150 pages
20 simply because we need to respond to all of the
21 various arguments.

22 As we have seen, you have got a very
23 developed and large evidentiary record now based on
24 this hearing, and as we have seen previously,
25 particularly with the Amici, they cross-refer to

1 each other. So certainly it would be extremely
2 imbalanced if we were to be given the same number
3 of pages as each of ICANN and the Amici
4 individually.

5 So that's the starting -- that's the
6 discussion that we had, and ultimately I think we
7 would have to leave it with the Panel.

8 I would just make one other point, is that
9 the evidence that's been elicited here has been
10 through our cross-examination. So we would need to
11 have the opportunity to put all of that evidence in
12 context.

13 The other point is that insofar as
14 simultaneous submissions are concerned, it doesn't
15 really matter what the page limits are because at
16 this point, we don't have any further proceedings.
17 What we are trying to do is to put the evidence in
18 context and to help you, the panelists, by bringing
19 all of the various points, to crystallize them, to
20 put them in the context for you.

21 At the end of the day, it doesn't -- it is
22 not to our client's benefit to deluge you with
23 paper, but rather to present the case as clearly as
24 we can now that we have a full evidentiary record.

25 So that's where we are coming from, sir.

1 MR. LeVEE: May I?

2 ARBITRATOR BIENVENU: Yes. I thought he
3 was paving the way for the number, and you would
4 give us the number.

5 MR. LeVEE: Well, we did have a number of
6 discussions. Mr. Ali started, as he just
7 indicated, off the discussion by indicating that he
8 did not --

9 MR. ALI: Jeff, may I just interrupt you
10 for a second? Vice President Biden has just
11 nominated Kamala Harris for vice president.
12 Historic moment. Not to interrupt this historic
13 moment that we ourselves are engaged in here.

14 MR. LeVEE: So Mr. Ali did initially
15 suggest that the page limit -- that there not be a
16 page limit. ICANN strongly opposes that. I think
17 there should be limitations.

18 And then the issue was, well, should
19 Afilias have some additional pages because they are
20 responding to more briefs, but we only are going to
21 file one brief. So Afilias -- we have simultaneous
22 briefs, so Afilias isn't going to be responding to
23 briefs. They are going to be submitting their
24 briefs just as ICANN is submitting its brief, just
25 as the Amici are submitting theirs.

1 So under the equality of treatment
2 principle, ICANN very much would like to have the
3 same number of pages as Afilias. I understand, but
4 the Amici can confirm separately, that they have
5 agreed that whatever the page limit ICANN and
6 Afilias are given, that they would have that number
7 of pages combined. So by way of example, if ICANN
8 and Afilias each had 75 pages, then the Amici
9 combined would submit 75 pages.

10 I will tell you that ICANN proposed that
11 we submit a brief of 50 pages because we think 50
12 would be sufficient, and we're not looking to have
13 the Panel have another set of briefs that are
14 literally hundreds of pages long.

15 I think it is ultimately up to the Panel
16 to determine the length, but I do think that this
17 is a situation where ICANN and Afilias should have
18 the same number of pages. If we don't use the
19 number that we are given, that's our prerogative,
20 and if the Amici are willing to -- still willing to
21 have collectively the number of pages that ICANN
22 and Afilias have, I think that that would be
23 extraordinarily fair. It would be consistent with
24 the ICDR arbitration rules.

25 So that would be our proposal. I'll be

1 candid, Mr. Ali said he wanted 150 pages. We have
2 no interest in giving the Panel 450 pages or 350
3 pages, whatever that would work out with the Amici.
4 We think it is too much. There has been a lot of
5 ink provided to the Panel already, positions that
6 have been taken, and now the parties need to
7 comment on the what the evidence was.

8 And while it is true that Afilias did most
9 of the cross-examining, some of that was because
10 they withdrew witnesses. So the parties are where
11 we are, and I think ICANN's proposal is
12 extraordinarily reasonable and consistent with the
13 rules.

14 MR. ALI: Chairman, may I make a
15 suggestion here?

16 ARBITRATOR BIENVENU: Sure.

17 MR. ALI: Insofar as the responses to the
18 Amici is concerned, the Panel, of course, will be
19 aware of the page limits. There the parties have
20 agreed that the Amici shall each be permitted to
21 file separate briefs of 50 pages in length and that
22 the parties shall each be permitted to file briefs
23 100 pages in length.

24 As Mr. LeVee says, if we choose not to use
25 100 pages, that's, of course, our respective

1 prerogatives. That would be, I think, a good way
2 of resolving this matter, given the fact that
3 that's what we agreed, and that's what the Panel
4 accepted previously. So 50 pages for VeriSign, 50
5 pages for NDC, and 100 pages each for ICANN and
6 Afiliias would be my suggestion.

7 ARBITRATOR BIENVENU: Very well. You will
8 leave it with us.

9 MR. JOHNSTON: Can Amici be heard on this,
10 please?

11 ARBITRATOR BIENVENU: Yes, of course.

12 MR. JOHNSTON: At least I -- I am not sure
13 about Mr. Marenberg, but two months to prepare
14 postclosing briefs in a seven-day trial is
15 extraordinary in our view, and -- my view, it's a
16 lot of time.

17 As one of my colleagues said, memories
18 fade, and we just had this trial and hundreds of
19 pages of briefing immediately before the trial. It
20 seems to me that this could be pushed along more
21 quickly, which might be easier on everybody because
22 they will have this fresh in mind and not have to
23 reinvent the wheel in starting to think about their
24 posthearing briefs.

25 I am very cognizant that the Panel would

1 like time to pose some questions, and I think
2 that's a superb idea because it will hopefully
3 guide the briefs in the right direction as opposed
4 to, again, going over the whole history as though
5 this trial never took place.

6 So we started off proposing two weeks and
7 then went up to a month. But in terms of our
8 position, two months is a bit long.

9 So we would ask that it be a little bit
10 shorter and that the briefs not, again, be in the
11 hundreds of pages of length. There are -- you
12 know, it sometimes gets lost there that there are
13 people with other rights and interests in moving
14 this forward than just Afilias and ICANN.

15 These are people who went in and paid
16 their money at the auction and would like to see
17 this resolved and back to the Board to follow the
18 proper processes, at least as we see those
19 processes.

20 So we have some concern about the length
21 of time that's been set, and we have concerns about
22 the size of the briefs that Afilias wants because,
23 again, we have just had this trial. We are not
24 going to retry everything, hopefully, again based
25 on briefs, although I have no doubt that the

1 Afilias briefs will be excellent. We have seen
2 quite a few of them already.

3 ARBITRATOR CHERNICK: Mr. Chairman, is it
4 contemplated that upon the submission of the
5 posthearing briefs, the matter will be submitted
6 for decision to the Panel without necessity of
7 further argument?

8 ARBITRATOR BIENVENU: Well, that was the
9 next point I was going to raise. You recall that
10 in the charts -- the chart, singular, entitled
11 "Topics for Prehearing Conference" that was
12 delivered to the Panel after the prehearing
13 conference of 29 July, there was a box for closing
14 argument. There was disagreement -- sorry.

15 I think everybody agreed that it would be
16 at the discretion of the Panel, and the way we put
17 it was that we would decide after receiving
18 posthearing briefs, but that in the event that we
19 considered that closing argument would be helpful,
20 we would agree today or in the ensuing days on a
21 date for that purpose. It would be penciled into
22 everybody's agenda, and if ever we need to use it,
23 the date will be reserved.

24 So that was the last topic I was going to
25 cover.

1 I think normally we should not need
2 closing argument in addition to a prehearing --
3 sorry, posthearing briefs, but, you know, the
4 question having been raised by the parties, I am
5 happy to leave it aside as a possibility. But we
6 should fix the date right away so that everybody is
7 available if that is to happen.

8 I don't foresee it as needed at the
9 present time, but --

10 MR. ALI: Has the Panel discussed
11 potential dates so that we can consider?

12 ARBITRATOR BIENVENU: We have not. We
13 have not. That's a good suggestion, Mr. Ali.
14 Maybe we should send you a list of dates and the
15 parties can let us know what works for everybody.

16 MR. ALI: If I may just comment on what
17 Mr. Johnston said regarding the timing of the
18 posthearing briefs. Number one, state the obvious,
19 the parties agreed on a date.

20 Number two, harkening back to the comment
21 I made regarding the prehearing stage of this
22 arbitration, there is -- there are commercial
23 interests, of course, at play, but there are also
24 human frailties and human abilities. And my team
25 members are all taking a much-deserved break.

1 And then we have commitments as well that
2 in the way -- I had initially started out with
3 Mr. LeVee asking for October 15th or 16th, and we
4 compromised. I think I said October 9th, and ICANN
5 wanted October 8 because of other commitments that
6 ICANN has. So I think that that is fairly
7 reasonable, and I think a customary length of time
8 in international arbitration.

9 Certainly we are not intending to
10 regurgitate everything, but you do have an ample
11 evidentiary record from this hearing, and we do
12 feel that the Amici submission allowances of page
13 numbers is very reasonable and fits with what has
14 already been agreed by the parties.

15 MR. LeVEE: If I can just clarify one
16 thing? ICANN had originally proposed late
17 September. Mr. Ali had come back and said that
18 they had commitments, so we did go back and forth.
19 On that basis, we landed on October 8. So that is
20 what Afilias and ICANN agreed to following
21 negotiation. It is the case that Amici did express
22 concern.

23 ARBITRATOR BIENVENU: Very well. Leave it
24 with us.

25 I will mention, insofar as the list of

1 questions from the Panel is concerned, these will
2 be targeted questions on issues about which we
3 would like further assistance from the parties.

4 For the rest, we leave it to counsel to
5 structure their posthearing brief in the way that
6 they consider most useful to bring it all together,
7 knowing that we have the evidence of witnesses.

8 ARBITRATOR KESSEDJIAN: Please remember
9 our request for a common list of exhibits and a
10 common chronology, factual chronology.

11 (Discussion off the record.)

12 ARBITRATOR KESSEDJIAN: Please remember
13 our request of -- and then the two things.

14 (Discussion off the record.)

15 ARBITRATOR KESSEDJIAN: The first one is a
16 common list of exhibits chronologically ordered,
17 and then a factual common chronology so that we can
18 actually have common paths to what happened.
19 Factual, all the essential facts in this case.

20 By the way, if you do that, and we really
21 require that you do it, it will be easier for your
22 posthearing briefs because you would not have to
23 spend too much time on the facts.

24 MR. ALI: If I may, Professor Kessedjian,
25 we will do our best. My experience, it is not easy

1 to agree on certain facts.

2 ARBITRATOR KESSEDJIAN: I am not saying it
3 is easy.

4 MR. ALI: But I would -- I think we will
5 exercise our best efforts to provide the facts that
6 we can agree on.

7 I was just going to ask if the Panel has a
8 date in mind by which you would like that, or is
9 this to be submitted simultaneously with the
10 posthearing briefing?

11 ARBITRATOR KESSEDJIAN: We didn't discuss
12 that, but from my part, I would be happy to have it
13 with the posthearing brief.

14 ARBITRATOR BIENVENU: Yes, that would be
15 good.

16 All right. Anything else from the parties
17 or the Amici?

18 MR. ALI: If I may just take a quick --
19 just peek over my computer screen to my other
20 colleagues to see if they have anything.

21 Ethan, if there's anything, just text me.

22 Just one second, Mr. Chairman.

23 A very good question has been raised by
24 one of my colleagues, which is insofar as the
25 facts, the common list of facts are concerned, is

1 that also to be agreed with the Amici?

2 ARBITRATOR BIENVENU: Well, I think it
3 would be useful to submit it to the Amici for
4 comments once a first agreed chronology has been
5 generated between the parties, yes.

6 MR. ALI: Okay. We will try and work that
7 out, and hopefully we don't have to revert to the
8 Panel, but we'll do our best to achieve the
9 objective and fully understood what you're looking
10 for.

11 That having been said, from my side,
12 again, I would like to thank my colleagues on all
13 the other screens insofar as Amici and ICANN are
14 concerned. Of course, the Panel, for all of your
15 incredible work. I've certainly been extremely
16 impressed, as has already been expressed, with the
17 precision of your questions. It is not an easy
18 matter to grapple with.

19 I have to particularly let Mr. Chernick
20 know that since I was a little boy, I have always
21 loved Charlie Chaplin but have been petrified by
22 clowns. So spending seven days looking at the
23 clown has, I think, perhaps cured me of my phobia.

24 ARBITRATOR CHERNICK: So something has
25 been gained by this proceeding.

1 MR. ALI: Yes, absolutely.

2 And, of course, to TRIALanywhere. To
3 Balinda, to all of those who have not appeared on
4 the screens who have helped to make this production
5 happen, my deep gratitude.

6 I hope people do get some time to rest and
7 recover before we get into the -- into the rigors
8 of the fall. My thanks to all.

9 ARBITRATOR BIENVENU: Mr. LeVee, nothing
10 else on your part?

11 MR. LeVEE: I am not going to repeat what
12 I said before. I thank everyone. I hope in an
13 unusual summer that everyone has the opportunity to
14 have a nice vacation or holiday someplace. I wish
15 everyone well and thank you all.

16 ARBITRATOR BIENVENU: Thanks.

17 Mr. Johnston, Mr. Marenberg, no other
18 matter to --

19 MR. MARENBERG: In the area where I do a
20 lot of work, which is entertainment, they'd be
21 cuing the music at the Oscars by now.

22 ARBITRATOR BIENVENU: We have gone through
23 our agenda, so it remains to me to bring this
24 hearing to a close.

25 But before I do so, I would like to

1 express the Panel's gratitude to each and every
2 member of the teams of lawyers and support staff
3 that contributed to the representation of the
4 parties and the Amici in this IRP.

5 I would say, if I may say so, the parties
6 and Amici are extremely well-represented in this
7 case, and it truly is a pleasure for my colleagues
8 and I to work with professionals of such high
9 caliber.

10 We also appreciate the exemplary courtesy
11 and cooperation displayed among counsel throughout
12 the hearing. It makes it very easy for the Panel
13 when that happens.

14 We also wish to thank JD and his team for
15 their excellent services throughout the hearing.
16 Everything went very smoothly.

17 And last but not least, thank you to our
18 court reporter and those who support her for their
19 services in connection with this hearing.

20 So I know that on this note, my colleagues
21 join me in wishing everyone well. Stay safe, in
22 good health, and if I may end on a positive note,
23 we will get through this pandemic, and we will meet
24 in person again once we get to the end of this
25 tunnel.

REPORTER'S CERTIFICATE

---o0o---

STATE OF CALIFORNIA)
) ss.
COUNTY OF SAN FRANCISCO)

I, BALINDA DUNLAP, certify that I was the official court reporter and that I reported in shorthand writing the foregoing proceedings; that I thereafter caused my shorthand writing to be reduced to typewriting, and the pages included, constitute a full, true, and correct record of said proceedings:

IN WITNESS WHEREOF, I have subscribed this certificate at San Francisco, California, on this 20th day of August, 2020.

BALINDA DUNLAP, CSR NO. 10710, RPR, CRR, RMR

Counsel to *Amicus Curiae*
Nu Dotco, LLC

I, Jose Ignacio Rasco III, declare as follows:

1. My full name is Jose Ignacio Rasco III, and I reside in Miami, Florida. I am currently the Chief Financial Officer and a Manager of Nu Dotco, LLC (“NDC”), a company founded to submit applications and acquire rights for new generic top level domains (“gTLD”) as part of the Internet Corporation for Assigned Names and Number’s (“ICANN”) New gTLD Program.

I. Biography

2. In 2001, I graduated from the University of Pennsylvania’s Wharton School with a Bachelor of Science Degree in Economics with concentrations in Accounting and Real Estate. In 2003, I earned a Master’s Degree in Taxation from Florida International University.

3. In 2005, I saw an opportunity to enter the domain name industry after I began working with Juan Diego Calle, an entrepreneur working within the internet space. In 2007, the Colombian government announced the release of the .CO geographic top level domain (“TLD”) for public auction. In 2009, I, Mr. Calle, Nicolai Bezsonoff, and a few others co-founded .CO Internet S.A.S. (“dotCO”) to acquire, develop, and operate the .CO TLD. I served as dotCO’s Chief Financial Officer, while Mr. Calle and Mr. Bezsonoff served as dotCO’s Chief Executive Officer and Chief Operating Officer, respectively. We operated dotCO as a joint venture with Neustar, Inc. (“Neustar”), an American technology company that served as our technical partner. In 2009, dotCO successfully bid for the .CO TLD, which we then operated with considerable success. Under our leadership, for example, we increased registrations and revenue to the point where .CO operated on par with top-echelon domains. Following that success, we sold dotCO to Neustar in 2014.

4. In 2012, while still at dotCO, Mr. Calle, Mr. Bezsonoff, and I began to strategize the future of our domain industry business. During this time, we closely followed ICANN’s

announcement of its New gTLD Program, under which ICANN promised to introduce numerous new gTLDs to the domain name system. As a complement to our existing dotCO business, we decided to participate in the New gTLD Program by applying to be operators of certain new gTLDs. We focused on those potential gTLDs that could occupy a corporate space similar to .CO and had the greatest potential for commercial success.

II. NDC's Management and Ownership

5. The business organization we used to pursue our interest in participating in ICANN's New gTLD Program was NDC, a name ("Nu Dotco") that is a takeoff on our then-existing business "dotCO." On March 19, 2012, Mr. Calle, Mr. Bezsonoff, and I founded NDC, a company organized under the laws of Delaware with its principal place of business in Florida. Maintaining the same positions and roles we served at dotCO, I served as NDC's Chief Financial Officer, Mr. Calle served as NDC's Chief Executive Officer, and Mr. Bezsonoff served as NDC's Chief Operating Officer.

6. At its formation, NDC was owned by two entities as follows: Domain Marketing Holdings, LLC ("DMH") owned 85% of NDC; Nuco LP, LLC ("Nuco") owned the other 15%. That ownership structure remained the same until December 2017, at which time Nuco distributed its 15% ownership interest in NDC to Nuco's members. As a result of that distribution, as of December 2017, DMH continued to hold 85% of NDC and the three other entities that had comprised Nuco collectively held the remaining 15% (with each necessarily owning less than 15%).

7. Accordingly, other than DMH and Nuco, no other entity or person has ever owned at least 15% of NDC. Similarly, there have been no changes or amendments to NDC's management since 2012. Mr. Calle, Mr. Bezsonoff, and I remain the sole officers of NDC and continue to perform the duties associated with those positions.

8. Formed for the specific purpose of submitting applications to ICANN to acquire gTLDs, NDC ultimately applied for thirteen (13) gTLDs through ICANN's New gTLD Program, including .WEB.¹

III. NDC's Application for .WEB

9. On June 13, 2012, NDC submitted an application to ICANN to acquire the right to operate the .WEB gTLD (the "Application"). Exhibit A attached hereto is a true and correct copy of the Application, together with the exhibits to that Application.² NDC timely paid the required \$185,000 application fee.

10. NDC's Application satisfied all of ICANN's requirements. For example:

- **Corporate Information**

11. Mr. Bezsonoff and I completed NDC's .WEB Application. In that regard, as specified by Sections 1 and 8 of the ICANN gTLD application form, we identified NDC as the applicant and as a Delaware limited liability company. Ex. A.1, §8(b). As specified by Sections 6 and 7 of the form, we listed me as NDC's "Primary Contact" and listed Mr. Bezsonoff as NDC's "Secondary Contact." *Id.* at §§6-7. And as specified by Sections 11(a) & (b), we listed three people as NDC's directors and officers: me as CFO, Mr. Calle as CEO, and Mr. Bezsonoff as COO. *Id.* at §§11(a), (b). This information was accurate at the time NDC's Application was prepared and submitted and this information remains accurate today.

12. To comply with the requirements of Section 11(c) of the gTLD application form, we identified "all shareholders holding at least 15% of shares" in NDC. As was accurate at the time, we listed Domain Marketing Holdings, LLC and Nuco LP, LLC as entities that held at least

¹ NDC applied for the following 13 gTLDs: .INC, .LLC, .GROUP, .LTD, .DESIGN, .MOVIE, .BOOK, .WEB, .CORP, .GMBH, .APP, .LAW, and .TECH.

² Exhibit A.1 contains publicly available portions of the Application. Exhibit A.2 contains non-public, confidential portions of the Application. Exhibits Aa-Ap contain exhibits submitted with the Application.

a 15% ownership interest in the LLC. *Id.* at §11(c). As stated above, these two entities are the only entities or persons that have ever held at least 15% of NDC.

- **Mission/Purpose of Proposed .gTLD**

13. Consistent with other gTLD applications NDC had submitted, in Section 18(a) of the Application we stated that the “mission/purpose” of .WEB was “to provide the internet community at-large with an alternative ‘home domain’ for their online presence. We envision that through strategic marketing campaigns designed to brand the domain, it will become a premium online namespace for a variety of businesses and websites. This general domain will provide new registrants with better, more relevant alternatives to the limited options remaining for current commercial TLD names.” *Id.* at §18(a).

14. Sections 18(b) and 18(c) of the ICANN gTLD application ask applicants, respectively, to describe how the “proposed gTLD will benefit registrants, Internet users, and others” and to describe “operating rules ... to eliminate or minimize social costs.” *Id.* at §§18(b), (c). In answering these questions, NDC provided its general vision of new gTLDs in the marketplace and its general strategy at the time as to how .WEB might be successfully and productively introduced and used to benefit consumers. *Id.* Although NDC used its experience with .CO as an *example* of how .WEB might accomplish these goals, we understood, and we stated in our answers, that specific plans would depend on market conditions and thus were not fully described in the Application. Nonetheless, we repeatedly stated NDC’s intent to follow ICANN’s policies, rules, and recommendations in connection with .WEB.

15. With slight modifications to reflect the specific gTLD at issue, NDC’s statements in Section 18 of its .WEB Application were largely identical to corresponding statements in all of NDC’s other ICANN gTLD applications. We understood Section 18 to request general

descriptions of marketing and other business intent, not binding commitments of future actions. In fact, as described in more detail below, I understand that ICANN does not use Section 18 to evaluate gTLD applications and does not take any interest in any distinctions that might arise between statements made in Section 18 of a gTLD application and how a domain is ultimately operated. To the best of my knowledge, other applicants—including Claimant Afilias Domains No. 3 Ltd. (“Afilias”)—similarly responded to Section 18 (and other sections) of the ICANN gTLD application form with near-identical statements in each of their applications, irrespective of how they operated domains they ultimately acquired or whether they subsequently transferred the domains to another entity. And, also to the best of my knowledge, ICANN has never policed any distinctions between Section 18 statements and such subsequent actions.

16. Nonetheless, I understand that Afilias has alleged that NDC’s answers to the application form’s “mission/purpose” inquiries in Section 18 were made false or misleading, thereby requiring an update to NDC’s Application, by NDC’s entry into the Domain Acquisition Agreement (“DAA”) with Verisign over three years later. *See* Part VI, *infra*. That is incorrect. First, NDC’s subjective views as to the “mission/purpose” of gTLDs, including .WEB, and how .WEB might benefit consumers and others have not changed, irrespective of who operates .WEB. Second, NDC’s Section 18 responses expressly stated that NDC’s marketing and other business plans were not final and were subject to market conditions. In all of my experience with ICANN applications, I have never updated, nor known any applicant to update, an application to reflect new and different marketing and business plans for a gTLD.

17. Third, given that NDC’s marketing and business plans were subject to change, as a baseline position NDC stated that it planned to follow ICANN’s policies, rules, and recommendations in connection with .WEB. Nothing in the DAA required an update to that

statement, including because I understood that Verisign, a longstanding registry owner and operator with whom ICANN was very familiar, would also follow those policies, rules, and recommendations. As a baseline, therefore, I did not believe anything about our Section 18 responses had materially changed on account of the DAA and I did not believe any amendment to NDC's Application was required or warranted. Among other things, in

Redacted - Third Party Designated Confidential Information

18. Moreover, as stated above, it has always been my understanding that the Section 18 "mission/purpose" inquiry is intended to provide ICANN with certain New gTLD Program statistics and is not part of the evaluation criteria. Rather, when evaluating whether an applicant is qualified to participate in a new gTLD contention set, ICANN has always been most concerned with whether that applicant has the financial ability and technical infrastructure to successfully operate the gTLD registry. For example, the ICANN Guidebook states that responses to Section 18 are "not used as part of the evaluation or scoring of the application, except to the extent that the information may overlap with questions or evaluation areas that are scored."³

19. Instead, the Guidebook explains that Section 18 responses are used in connection with *ex-post* reviews of the gTLD program in general and not in connection with any specific application:

The information gathered in response to Question 18 is intended to inform the post-launch review of the New gTLD Program, from the perspective of assessing the relative costs and benefits achieved in the expanded gTLD space. For the application to be considered complete, answers to this section must be fulsome and

³ Afiliis C-3 (*gTLD Applicant Guidebook*, Attachment to Module 2, A-11, A-12, available at <https://newgtlds.icann.org/en/applicants/agb>).

sufficiently quantitative and detailed to inform future study on plans vs. results. The New gTLD Program will be reviewed, as specified in section 9.3 of the Affirmation of Commitments. This will include consideration of the extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of (a) the application and evaluation process, and (b) safeguards put in place to mitigate issues involved in the introduction or expansion. *Id.*

20. As a result, while helpful for ICANN to assess the New gTLD Program in general, Section 18 responses are not a material part of evaluating a particular application and, moreover, are not subject to subsequent enforcement by ICANN in the event those responses differ from how or by whom a domain is ultimately operated. Accordingly, for this additional reason, I again did not believe that NDC was obligated to update any such response in its .WEB Application.

- **Technical Capabilities**

21. In Sections 23-44, NDC provided a robust description of its technical ability to operate the .WEB gTLD. For example, NDC explained that it had partnered with Neustar, an experienced domain registry company with proven and scalable infrastructure. Ex. A.2, §§23-27. NDC further provided detailed information regarding the specific services Neustar would provide, including the necessary security, abuse prevention, and rights protection services. *E.g., id.* at §§28-44.

- **Financial Information**

22. Redacted - Third Party Designated Confidential Information

This financial information is considered confidential by ICANN, and is not disclosed by ICANN in its public posting of new gTLD applications. Therefore, only ICANN would have had access to this information about NDC's financial ability to operate the .WEB gTLD. Other members of the Contention Set, including those who might bid at auction for .WEB, would not have had access to such financial information.

23. Notably, the ICANN application form did not call for, and therefore NDC did not provide, any information regarding NDC's financial capability to acquire the .WEB gTLD in an auction or sources of financing for that auction. In more than a dozen ICANN applications I have overseen for NDC, ICANN has never requested and NDC has never provided such information.

24. As NDC's primary contact for the Application, I received confirmation from ICANN that our .WEB Application had been accepted—meaning that the Application had satisfied all applicable ICANN criteria and evaluations—in June 2013.

25. Pursuant to the ICANN Guidebook, if more than one applicant applies for a gTLD, then the approved applicants are grouped together into a "Contention Set," with the competing applications resolved either through (i) a private auction or other negotiated settlement conducted by agreement of the applicants or, if all members of the Contention Set do not agree to a private auction, (ii) a public auction conducted under the auspices of ICANN.

26. In addition to NDC, there were six other approved applicants for the .WEB gTLD: Web.com Group, Inc., Charleston Road Registry Inc. (Google), Schlund Technologies GmbH, Dot Web Inc. (Radix), Ruby Glen LLC ("Donuts"), and Afilias. In February 2014, ICANN officially formed a Contention Set for .WEB comprising these seven applicants, including NDC.

27. It was not until April 2016, however, that ICANN sent notice to the Contention Set that ICANN would issue the .WEB gTLD and, therefore, that ICANN had scheduled a public

auction for .WEB to take place on July 27, 2016. Until ICANN sent that formal notice, there was no guarantee that ICANN would hold an auction for .WEB. Rather, as had occurred with other domain strings (such as .CORP), ICANN had the right to decline to issue the .WEB gTLD and thus not to hold an auction.

28. As a result, between June 2013, when ICANN approved NDC's application, and April 2016, when ICANN scheduled the public auction, there was no clarity as to how NDC's application for .WEB might ultimately be resolved.

IV. Changes to the gTLD Marketplace and the Emergence of New Participants

29. Following NDC's successful acquisition and operation of the .CO domain in 2010 and ICANN's introduction of the New gTLD Program in or around 2012, NDC decided to focus its gTLD acquisition strategy on similar company-type domains. For example, because "CO" is short for "Company," NDC applied for domain strings such as .INC, .LLC, .CORP, .LTD, and others in this corporate short identifier space. NDC also applied for domain strings related to high traffic Internet searches, including .MOVIE, .BOOK, and, of course, .WEB. In total, NDC submitted 13 ICANN applications for these and similar domains.

30. Between 2012 and 2015 several other companies emerged as repeat participants in the ICANN New gTLD Program. Prominent among these was Donuts. On information and belief, Donuts raised funds through private equity transactions to finance ICANN applications and auction bids. With that money, it is my understanding that Donuts applied for and bid on at least 300 gTLD domain strings, far more than NDC or, I believe, most other companies.

31. Donuts also emerged as a driving force behind the private auctions permitted by ICANN. As briefly described above, ICANN does not specify how applicants might privately resolve the Contention Set, and applicants may mutually agree to resolve the Contention Set through a private auction or other means. In fact, ICANN encourages applicants to resolve

Contention Sets on their own terms—viewing a public auction as a last resort—and historically has neither participated in nor policed those private resolutions.

32. To the contrary, once ICANN has determined that a gTLD application satisfies the requirements of the Guidebook and placed the various applicants into a Contention Set, to the best of my knowledge, ICANN has effectively fulfilled any gatekeeping function that it might undertake: ICANN has determined that the applicant is qualified and capable of operating the gTLD if that applicant emerges from the Contention Set and secures the rights to operate the domain. Beyond that, to the best of my knowledge, ICANN takes no position *on which* applicant in a Contention Set subsequently becomes eligible to sign a registry agreement with ICANN for the domain in question *or how* they do so. In fact, the Auction Rules expressly state that applicants within a Contention Set may discuss and negotiate, among other things, “settlement agreements or post-Auction ownership transfer arrangements” for the domain in question so long as the Contention Set is not within a designated Blackout Period shortly before a public auction.⁴

33. Accordingly, over the years, applicants have considered and employed numerous means to resolve Contention Sets. For example, when NDC first considered participating in the New gTLD Program, we researched the program rules and considered various means of resolving Contention Sets, including trading domains with other applicants who might have a greater interest in a particular domain string than NDC, cross-selling percentage interests in different domains, and buying various applicants out of their applications before any auction was held. Although NDC has never used these means in practice, I have never considered, and am not aware of anyone who does consider, such means of resolving Contention Sets to be prohibited by the ICANN rules.

⁴ Afiliac C-4 (*Auction Rules for New gTLDs: Indirect Contentions Edition*, 68(a)-(b), available at <https://newgtlds.icann.org/en/applicants/auctions>).

34. Following the disclosure by ICANN of the various entities that had submitted gTLD applications, NDC and those entities engaged in numerous discussions regarding how we might resolve Contention Sets without proceeding to a public ICANN auction. Most of the ideas discussed were variations on private auctions, and private auctions have since become the most prominent means to resolve Contention Sets. Although the terms of those auctions may vary depending on the agreement reached by members of the Contention Set, a common form of private auction—which Donuts was heavily involved in creating—is resolved in favor of the highest-bidding applicant. Unlike a public auction under the auspices of ICANN, however, the money offered by the *highest* bidder is often divided equally among the *losing* bidders, not paid to ICANN. As a result, each member of the Contention Set stands to benefit from a private auction as long as the “losers’ share” exceeds expenses, including the ICANN \$185,000 application fee.

35. As another example, in July 2016, Oliver Mauss, the CEO of 1&1 Internet, which owns the Schlund entity that had applied for .WEB and was in the .WEB Contention Set, emailed Mr. Calle with a proposal for an “alternative private auction.” Exhibit C attached hereto is a true and correct copy of that email, which Mr. Calle forwarded to me on July 5, 2016. In his email, Mr. Mauss described the “basic principles” of his proposal: “It divides the participants into groups of strong and weak;” “the weak players are meant to lose and are compensated for this with a pre-defined sum;” “the strong players bid for the asset;” and “the highest bid wins, but the winner pays a lower price than the 2nd highest bid.” *Id.* According to Mr. Mauss, this proposal had several advantages over a typical private auction (which he called an “Applicant Auction”) and an ICANN public auction. *Id.* For example, “the winning party pays less for the asset in comparison to both” an ICANN public auction or an “Applicant Auction;” “the losing strong players receive a higher return than in the Applicant Auction;” and “the losing weak players receive a lower return than in

the Applicant Auction.” *Id.* Essentially, Mr. Mauss concluded, the “benefit for the strong bidders comes from a lower share of proceeds for the weak bidders than in the Applicant Auction.” *Id.* We did not agree to participate in Mr. Mauss’s proposal, but it was yet another example of means through which participants in the New gTLD Program attempted to resolve Contention Sets without proceeding to a public ICANN auction.

36. Following ICANN’s publication of the Guidebook in 2012, Donuts made significant efforts to coordinate private auctions between gTLD applicants. For example, Donuts hired a mathematician to develop models for operating such auctions, developed tutorials, and hosted meetings and mock auctions so participants could experience and evaluate how private auctions might work. I participated in at least one such meeting, which was held during an ICANN conference (but was not on the official conference schedule) and which I understood had been arranged by Donuts. At that meeting, a mathematician and a private auction company provided information to gTLD applicants about how a private auction might work.

37. Other companies, including Afilias, similarly prioritized private auctions, ultimately treating gTLD applications as a form of arbitrage in which each application was an asset to be leveraged for profit without ever intending to actually operate any, or most, of the gTLDs. Based on my active participation in the domain industry for over 12 years and numerous conversations with other participants, it is my understanding that such practices were commonly known in the industry. I believe that ICANN was aware of these practices and, to my knowledge, did not object to them. I believed that these practices were acceptable to ICANN, which sought only to ensure that the ultimate operator was qualified and technically and financially capable of operating each respective gTLD.

38. By 2015, Donuts had become a well-financed, major force in the New gTLD Program. In addition, large companies such as Amazon and Google also began to participate in the Program, including by participating in private and public auctions.

39. As private auctions proliferated and the value of gTLD domain strings increased, including as a result of the influx of money from participants such as Donuts, Amazon, and Google, the market expectations for the .WEB domain and other new gTLDs increased.

40. Given these changes in the marketplace, ^{Redacted - Third Party Designated Confidential Information}

V. The Domain Acquisition Agreement and Confirmation of Understandings

A. The Domain Acquisition Agreement

41. In or around May 2015, I received a phone call from Verisign expressing interest in working with NDC to acquire the rights to .WEB. As noted above, by that date ICANN had formed the Contention Set for .WEB (meaning no new applicants could join) and

Redacted - Third Party Designated Confidential Information

In addition, as also noted above, by that date ICANN had yet to schedule a public auction for .WEB, and thus the domain was still on hold, so there was no clarity as to a resolution by either a public *or* a private auction. Consequently, because

Redacted - Third Party Designated Confidential Information

42. As stated above, based on my experience and discussions with others in the industry, it was common industry knowledge by 2015-2016 that gTLD applicants used various means to resolve Contention Sets and monetize their applications. In addition to private auctions, it was common knowledge that interested parties had monetized successful gTLD applications by assigning interests in domain strings after securing the rights from ICANN. And it was commonly understood that ICANN approved of these assignments. In fact, when NDC first developed its strategy in connection with the New gTLD Program, we considered the possibilities presented by these secondary market opportunities to acquire others' rights in domains, and we came to understand that other gTLD applicants had utilized such opportunities and entered into registry agreements with ICANN based on those opportunities.

43. For example, in or around 2013-2014 I knew that Donuts and Rightside Media had entered into an arrangement whereby certain gTLD applications were potentially financed by the other party in exchange for an interest in the domains in question if and when the domains were acquired. To the best of my knowledge, more than twenty (20) domains have been assigned under this arrangement without any update to ICANN applications disclosing the underlying arrangement. Later on, I knew that the .BLOG gTLD had been acquired by WordPress, or an affiliated entity, after another entity, Primer Nevel S.A, prevailed at auction and executed a registry agreement with ICANN.

44. In addition, I have reason to believe that Radix Registry ("Radix") acquired the rights to the .TECH gTLD through an agreement with Dot Tech, LLC. Dot Tech, LLC was in the .TECH Contention Set with NDC. At no time in the auction process for .TECH did NDC think or know that Radix was participating in any way in the auction and Dot Tech LLC did not update its ICANN application prior to the auction to reveal any agreement with Radix. Dot Tech, LLC won

the .TECH auction on or around September 17, 2014. Thereafter, on October 23, 2014, Dot Tech, LLC updated its application to, among other things, add Radix personnel (including Brijesh Joshi, a Radix Director) as officers and as the new Primary and Secondary Contacts and to reflect that a Radix entity was the only party holding 15% or more of the shares of Dot Tech, LLC. Attached hereto as Exhibits D and E, respectively, are Dot Tech, LLC's original June 2012 application and the revised application dated October 23, 2014. On November 7, 2014, less than two months after Dot Tech, LLC won the auction, **Radix** issued a press release stating that “**Radix** made the winning bid of \$6.7 million for rights to .TECH, competing with Google, Donuts, and other industry players.” (Emphasis added.) Indeed, based on the unsigned .TECH Registry Agreement available on ICANN's website, that agreement was set to be signed for Dot Tech LLC by Brijesh Joshi, the Radix Director whose name appeared on the Dot Tech LLC application for the first time after the auction was held, not anyone from Dot Tech LLC who had participated in the .TECH Contention Set. Attached hereto as Exhibits F and G, respectively, are true and correct copies of Radix's press release and the publicly available, unsigned, .TECH Registry Agreement.

45. It was in this context—our knowledge of these transactions, and our interest in maximizing NDC's return from our .WEB Application—that we began to consider any type of contact with Verisign about .WEB. In the spring and summer of 2015 NDC engaged in discussions with Verisign about the .WEB domain. Those discussions culminated in the August 25, 2015 “Domain Acquisition Agreement” between NDC and Verisign. Ex. B.

53. **Redacted - Third Party Designated Confidential Information**

Not only in the past did any transfer depend on ICANN determining to delegate a .WEB TLD (as noted above), and not only must ICANN consent to an assignment of a .WEB registry agreement to Verisign, but the DAA further provides that **Redacted - Third Party Designated Confidential Information**

B. The Confirmation Of Understandings

54. In July 2016, Verisign requested that NDC confirm the parties' understanding regarding NDC's .WEB Application in light of allegations by Donuts that NDC had transferred control of NDC to a third party or assigned the .WEB Application to a third party. *See* Part VII.C,

infra. Because those allegations were unequivocally false, and because

Redacted - Third Party Designated Confidential Information, NDC readily agreed to Verisign's request, and the parties subsequently executed a letter agreement dated July 26, 2016 (the "Confirmation of Understandings"). Exhibit H attached hereto is a true and correct copy of the Confirmation of Understandings. Redacted - Third Party Designated Confidential Information

55. I understand that Afilius has alleged that the Confirmation of Understandings contained "false 'talking points'" provided to me by Verisign that I "duly signed" because I was "instructed" to do so by Verisign. Reply Memorial ¶79. That is false. I did not view the Confirmation of Understandings as "talking points," let alone as something to be used in coordinating any response to ICANN, but instead as an accurate statement of NDC's rights and obligations that protected NDC. As a result, I signed the Confirmation of Understandings of my own accord, for NDC and not for Verisign, because it was a true and accurate description of certain facts and understandings between NDC and Verisign, each of which is consistent with NDC's intent in executing the DAA. In addition, Redacted - Third Party Designated Confidential Information

56. For example, in the Confirmation of Understandings, Redacted - Third Party Designated Confidential Information

Redacted - Third Party Designated Confidential Information

57. Fully agreeing that the Confirmation of Understandings set forth NDC's rights as the applicant for .WEB and its rights and obligations under the DAA, each of which I understood to be consistent with and in compliance with ICANN rules and procedures, I signed the Confirmation of Understandings as of July 26, 2016. Importantly, the Confirmation of Understandings in no way contradicted what I told ICANN in June and July 2016—that NDC had not experienced any changes in its organizational management or control. *See* Part VII.C, *infra*.

As explained in detail below, my statements to ICANN were truthful, and I never deceived or misled ICANN or anyone else regarding NDC's .WEB Application.

VI. Neither the DAA Nor the Confirmation of Understandings Warranted an Update to NDC's .WEB Application

58. As discussed in Part III, *supra*, I did not believe that the DAA warranted or required any update to NDC's .WEB Application. The same is therefore true of the Confirmation of Understandings. For example, I address in Part III, *supra*, why I disagree with Afilias' assertions that the DAA rendered NDC's "mission/purpose" responses false or misleading. Simply put, nothing in the DAA changed NDC's view of the "mission/purpose" of .WEB or changed how NDC might operate .WEB or NDC's technical or financial capability to operate .WEB. Because nothing in those responses became false or misleading, I did not believe any update to the Application was necessary.

59. Indeed, Afilias assumes that, as of August 2015, there was no scenario in which NDC itself might operate .WEB. That is incorrect, including because Redacted - Third Party Designated Confidential Information and, as of August 2015, ICANN had yet to even conclude whether or how the .WEB Contention Set would be resolved. There was no guarantee, therefore, that the DAA would be in effect when the Contention Set was resolved.

Redacted - Third Party Designated Confidential Information

These facts informed my belief that NDC was under no obligation to update its .WEB application upon execution of the DAA.

60. I understand that Afilias has emphasized two provisions of the DAA in support of its argument that the DAA required an update to NDC's .WEB Application. First, Afilias repeatedly quotes the following: Redacted - Third Party Designated Confidential Information

61. Redacted - Third Party Designated Confidential Information

In fact, in the context of private auctions, there is no disclosure of interested parties or planned transfers of acquired domains, and I am not aware of any applicant, including Afiliias, questioning or challenging the results of a private auction on any basis, let alone on the basis that the winner of the auction subsequently transferred its rights in the domain to another, previously unknown party. Redacted - Third Party Designated Confidential Information

62. Second, Afilias also relies on language

Redacted - Third Party Designated Confidential Information

VII. Pre-Auction Communications with the .WEB Contention Set and ICANN

A. NDC Did Not Agree to a Private Auction for .WEB

63. As noted above, in April 2016, eight months after NDC and Verisign executed the DAA, ICANN informed the .WEB Contention Set that it had scheduled a public auction for July 27, 2016. Thereafter, members of that Contention Set began to discuss the private and public auction options for .WEB.

64. For example, between April and June 2016, I and Mr. Calle (the CEO of NDC) had various phone, email, and text conversations with other members of the Contention Set regarding both .WEB and other outstanding TLDs for which we had pending applications. In the course of those conversations, other members of the Contention Set, including Donuts and Afilias, attempted to persuade NDC to participate in a private auction for .WEB.

65. Because there is no obligation under the ICANN Guidebook or otherwise to participate in a private auction, NDC declined to do so in connection with .WEB. Not only did

Mr. Calle and I repeatedly decline requests from Donuts, Afiliias, and others, but we also never signed any agreement committing NDC to a private auction for .WEB. To be plain, NDC was not required to participate in a private auction for .WEB and never agreed to do so.

66. Nor would NDC Redacted - Third Party Designated Confidential Information

B. Other Contention Set Members Sought to Pressure NDC to Agree to a Private Auction

67. At the time, I understood that other members of the .WEB Contention Set were unhappy that NDC would not agree to a private auction. Recall that a private auction requires the consent of all members of the Contention Set. And recall that, in a private auction, the winner secures the rights to the gTLD at issue and the winning bid is shared among the losing parties. In contrast, in a public auction, the winning bid is retained by ICANN (for investment in the Internet infrastructure) and the losing bidders recover nothing.⁵ Accordingly, other members of the Contention Set stood to lose the opportunity to “earn” significant amounts of money as the losers in a private auction were .WEB to proceed to a public auction.

⁵ Applicants can recover portions of their application fee depending on if and when they exit the auction process, but recover nothing if they complete the auction but do not prevail.

68. One such party was Donuts. On June 6, 2016, I received an email from Jon Nevett, a co-founder of Donuts, regarding .WEB. Exhibit I attached hereto is a true and correct copy of an email string containing Mr. Nevett's June 6 email and our subsequent communications. In his June 6 email, Mr. Nevett said that he was unsure if I, Mr. Calle, and Mr. Bezsonoff were "still the Board members of your applicant" and asked us to agree to a two-month delay of the public auction for .WEB while the Contention Set tried "to work this out cooperatively." *Id.* Based on prior communications with Mr. Nevett, I understood him to be asking to discuss further NDC's participation in a private auction. On June 7, I replied to Mr. Nevett's email and informed him that NDC would not agree to a private auction (maintaining its intention to proceed to a public auction administered by ICANN) and would not agree to a postponement of the public auction. *Id.* In particular, I told Mr. Nevett that, based on his request, "I went back to check with all the powers that be and there was no change in the response and [NDC] will not be seeking an extension." *Id.*

69. In addition, in response to Mr. Nevett's inquiry about whom at NDC he should contact regarding .WEB, I stated that "Nicolai [Bezsonoff] is at [Neustar] full time and no longer involved with our TLD applications. I'm still running our program and Juan [Calle] sits on the board with me and several others." *Id.* Mr. Nevett responded with "Thanks Jose," and asked a follow-up question about unrelated domains. He did not ask for any other information or for any clarification about what I had written. *Id.*

70. I am aware that my reply to Mr. Nevett is being mischaracterized and used as the basis to withhold the award of .WEB to NDC following our successful auction bid in July 2016. My email to Mr. Nevett was an informal email between colleagues who, though also competitors, had a cordial, and even friendly relationship. In that context, I sought to politely respond to Mr.

Nevett's inquiry and deflect further questions. I never intended to suggest any of the changes to the ownership or control of NDC that have been alleged. Nor did I have any obligation or intention to provide detailed, formal information about our company or its management to Donuts.

71. To the contrary, as I have previously attested, I intended the following by the statements in my June 7 email:

Redacted - Third Party Designated Confidential Information

72. Again, I did not intend my June 7 email to a competitor to convey formal information about NDC's corporate organization, let alone to communicate some change to NDC's management that warranted an update to our .WEB Application, as there had been no such change since NDC submitted its .WEB Application. Rather, the language I used was intended to politely dissuade Mr. Nevett from continuing to pursue the issue of a private auction but, at the same time, not to create any ill will between us. I viewed the email as a polite "stiff-arm" response to a competitor to whom neither I nor NDC had any duty to provide either information or explanations for our decisions.

73. On the same day that Jon Nevett of Donuts emailed me, June 7, 2016, Steve Heflin of Afilius contacted Mr. Calle by text message to similarly ask if NDC would reconsider its decision to forego a private auction for .WEB. Exhibit J attached hereto is a true and correct copy of those text messages, which Mr. Calle forwarded to me on June 7, 2016. In those messages, Afilius offered to "guarantee [NDC] score[s] at least 16 mil if you go into the private auction and

lose.” Mr. Calle declined Afiliast’s offer. *Id.* Afiliast then offered to increase the guaranteed payment to “\$17.02” million. Mr. Calle again declined. *Id.*

74. John Kane of Afiliast also texted me to make the same request. I again declined. Exhibit K attached hereto is a true and correct copy of my text messages with Mr. Kane.

C. ICANN Investigated and Dismissed Complaints by the Other Contention Set Members

75. Unable to persuade NDC to participate in a private auction for .WEB, and, in my opinion, motivated entirely by a desire to delay the upcoming *public* auction so as to preserve the possibility that they might profit from the losers’ share in a *private* auction, on June 23, 2016, Donuts and Ruby Glen (which is owned and operated by Donuts) complained to ICANN that NDC had changed its ownership and/or management structure but had not reported the change to ICANN as allegedly required. Donuts and Ruby Glen requested that ICANN investigate those allegations and requested that the public auction for .WEB be delayed during that investigation. Exhibit L attached hereto is a true and correct copy of Donuts’ and Ruby Glen’s June 23, 2016 complaint to ICANN (the “Donuts Complaint”).

76. Signed by Jon Nevett of Donuts—with whom I had emailed between June 6-8, 2016—the Donuts Complaint was entirely premised on the misconception that my statements to Mr. Nevett on June 7 revealed a change in “ownership or control” of NDC that NDC had not communicated to ICANN through an update to NDC’s .WEB Application. *See id.*

77. On June 27, 2016, I received an email message from a member of ICANN’s New gTLD Operations department stating that ICANN “would like to confirm that there have not been changes to [NDC’s] application or the [NDC] organization that need to be reported to ICANN. This may include any information that is no longer true and accurate in the application, including changes that occur as part of regular business operations (e.g., changes to officers and directors

[and/or] application contacts).” Exhibit M attached hereto is a true and correct copy of ICANN’s June 27, 2016 email and subsequent communications on that day between me and ICANN. ICANN’s email requested that, if “there have been any such changes,” NDC submit the changes to ICANN via ICANN’s customer portal. *Id.*

78. I responded to ICANN’s email on the same day, confirming that “there have been no changes to the [NDC] organization that would need to be reported to ICANN.” *Id.* ICANN responded that same day, informing me that no further action was required at the time. *Id.* I believed—and still believe—that my answer to ICANN’s inquiry was accurate and fully responsive. It most certainly was not an “outright lie” as Afilias accuses it to be. *Cf.* Reply Memorial, ¶73. To the contrary, as shown on Exhibit M, ICANN’s June 27 emails to me did not reference any complaint received by ICANN from any other party or any specific information that ICANN or any other party believed might be incorrect. Rather, given the type of potential changes highlighted in ICANN’s email—“changes that occur as part of regular business operations (*e.g., changes to officers and directors [and/or] application contacts*)” (my emphasis)—I understood ICANN to be making a routine inquiry of the Contention Set members given that many years had passed since the .WEB applications had been submitted and that the public auction date had been set and was rapidly approaching. That is, in the context of this very specific inquiry, I understood ICANN to be asking whether the identifying information set forth in NDC’s application, (*e.g., management, ownership, and contacts*) had changed, not whether *any aspect of NDC’s business had changed*. As such, it never occurred to me that ICANN’s routine inquiry might require disclosure of NDC’s financing arrangement with Verisign in general or the DAA in particular, especially given the well-known industry practice of transferring domains, with ICANN’s consent, after the auction process concluded.

79. The next I heard from anyone at ICANN about any potential concerns regarding NDC's .WEB Application was July 6-7, 2016, when I received emails from ICANN ombudsman Chris LaHatte informing me that "one or more" of the other applicants for .WEB had complained that NDC's .WEB Application had not been properly updated due to changes in NDC's board. Exhibit N attached hereto is a true and correct copy of Mr. LaHatte's emails to me and my response.

80. In particular, Mr. LaHatte referenced an email "which suggests that one of [NDC's] directors is no longer taking an active part in the application, and that there are other directors now involved." *Id.* And he informed me that the "complainant also suggested that NDC's shareholders have changed since the original application." *Id.* In the communications with ICANN that followed, I endeavored to be as thorough and responsive as possible, and I provided accurate and what I thought were clear answers to the questions I was asked. For example:

81. I responded to Mr. LaHatte on July 8, 2016, telling him that there had "been no changes to the [NDC] application. Neither the governance, management nor the ownership in [NDC] has changed." *Id.* I further explained that, in an LLC like NDC, "there are no directors, it is a manager managed company, as designated by the Members of the LLC within the Operating Agreement of the Limited Liability Company." *Id.* And in the case of NDC, I explained that there "has never been an amendment to that operating agreement. There are no new 'directors,' nor have any left the company." *Id.* Finally, I explained that, "while the managers are ultimately responsible for the LCC, as a manager, I take my duties very seriously and for major decisions, I confer with the Members (i.e. shareholders), which again for clarification, have never changed." *Id.*

82. My July 8 email was accurate at the time and remains accurate today. Mr. LaHatte asked if other NDC directors were involved with the .WEB application and if any shareholders had changed. I truthfully answered that neither was true. Moreover, in stating that I confer with other Members regarding “major decisions,” I only meant to clarify our general practice at NDC and not to represent anything specifically about .WEB. *Cf.* Reply Memorial, ¶81.

83. Also on July 8, 2016, I received an email from Christine Willet, whom I understand to be a Vice President, gTLD Operations, Global Domains Division, at ICANN. Ms. Willett asked me to call her regarding NDC’s .WEB Application and I did so the same day.

84. During that July 8, 2016 telephone conversation with Ms. Willett, I reiterated what I had explained to Mr. LaHatte, which was that neither the ownership nor the control of NDC had changed Redacted - Third Party Designated Confidential Information

85. During that same telephone conversation, I also explained that Redacted - Third Party Designated Confidential Information

86. Realizing that Donuts had misconstrued my June 7 response to Mr. Nevett and that my email was now the basis for the complaint to ICANN, I further explained to Ms. Willett that Redacted - Third Party Designated Confidential Information

87. I understand that Afilias now contends that my statements to the other applicants were intentionally misleading. However, I was under no obligation to be completely forthcoming about our internal operations or plans with parties who were competing for the same gTLD. Nor did I expect the same candor from the other applicants. My statements to Donuts were an attempt at politely deflecting a competitor. Nothing in ICANN's rules prohibits doing so. To be clear, nothing I said to Donuts or to ICANN was a "blatant falsehood" or any attempt to "affirmatively conceal" anything from anyone. *Cf.* Reply Memorial, ¶78. Afilias' assertions to the contrary are simply not true.

88. In fact, on July 11, 2016, I wrote to Ms. Willett to make sure the statements I made in our conversation on July 8 were clear. Exhibit O attached hereto is a true and correct copy of my July 11, 2016 email to Ms. Willett. In addition to reiterating what I had told her about the lack of any changes to the ownership or control of NDC, I also reiterated that I shared her understanding that other applicants had raised the complaint "in order to get more time to convince us to resolve the contention set via a private auction, even though we have made it very clear to them (and all other applicants) that we will not participate in a private auction and that we are committed to participating in ICANN's auction as scheduled." *Id.* In addition, I noted that under ICANN's rules every member of the Contention Set was required to join in a request for the postponement of a public auction, but as of July 11, 2016, the deadline to make such a unanimous request for .WEB had passed. *Id.*

89. On July 13, 2016, Ms. Willet informed the Contention Set that, among other things, ICANN had investigated the complaints of “potential changes of control” of NDC and, “to date we have found no basis to initiate the application change request process or postpone the auction.” Exhibit P attached hereto is a true and correct copy of Ms. Willett’s letter dated July 13, 2016.

90. Although my June 7, 2016 email to Mr. Nevett was taken entirely out of context, my responses to ICANN’s inquiries were unequivocal and accurate. In particular, as described above, I repeatedly told Ms. Willett and Mr. LaHatte in July 2016 that there had been no change to NDC’s management, control, or ownership since the filing of NDC’s .WEB Application, including because the LLC Operating Agreement had not been amended. *See, e.g.*, ¶¶ 81, 84, *supra*. Those statements were unequivocally true.

91. Moreover, the only changes to NDC’s ownership structure (pursuant to which Nuco distributed its shares in NDC to its shareholders) that have ever been made did not occur until December 2017, more than five years *after* NDC submitted its .WEB Application in 2012 and more than one year *after* both my communications with ICANN and the .WEB Auction in 2016. And in any event, that change to NDC’s ownership structure did not result in any new person or entity having more than a 15% interest in NDC, the threshold required to be disclosed in the ICANN application form. *See*, ¶12, *supra*. As such, even today, nearly eight years after NDC submitted its .WEB Application, the information therein remains accurate.

D. Afilias Attempted to Arrange a Private Auction for .WEB During the ICANN Blackout Period

92. As noted above, ICANN informed the parties in April 2016 that a public auction for .WEB had been scheduled for July 27, 2016.

93. Under the ICANN Auction Rules and Bidder Agreement, upon the commencement of a “Blackout Period,” “all applicants for Contention Strings within the Contention Set are

prohibited from cooperating or collaborating with respect to, discussing with each other, or disclosing to each other in any manner the substance of their own, or each other's, or any other competing applicants' bids or bidding strategies, or discussing or negotiating settlement agreements or post-Auction ownership transfer arrangements with respect to any Contention Strings in the auction.”⁶ Violations of the Blackout Period can result in disqualification from the Contention Set.

94. The Blackout Period for .WEB commenced on July 20, 2016, when the deposit deadline for the .WEB auction expired. In particular, on July 20, 2016, I received an email from Larry Ausubel of Power Auctions LLC (the administrator appointed by ICANN to conduct the .WEB auction) advising me—as every other member of the Contention Set was also advised—that “the Deposit Deadline for .WEB/.WEBS has passed and we are now in the Blackout Period.” Exhibit Q attached hereto is a true and correct copy of the July 20, 2016 email from Mr. Ausubel.

95. On July 22, 2016, two days after Mr. Ausubel notified the Contention Set that the Blackout Period had begun, I received a text message from John Kane of Afilias asking: “If ICANN delays the auction next week would you again consider a private auction? Y-N.” Exhibit R attached hereto is a true and correct copy of that July 22, 2016 text message.

96. I did not respond to Afilias' text message, as it was sent within the Blackout Period in violation of the Auction Rules and Bidder Agreement. Specifically, I understood that message to be an attempt to discuss resolution of the .WEB Contention Set by settlement during the Blackout Period and thus viewed it as a direct inquiry regarding NDC's strategy for the upcoming auction, in violation of the Blackout Period.

⁶ Afilias C-4 (*Auction Rules for New gTLDs: Indirect Contentions Edition*, 68(a), available at <https://newgtlds.icann.org/en/applicants/auctions>).

97. I also understood Afilius' text message to refer back to a proposal made by Afilius to Mr. Calle in June 2016 under which Afilius attempted to induce NDC to agree to a private auction for .WEB by guaranteeing NDC over \$17 million if NDC lost that auction. Because we were in the Blackout Period and the public auction was scheduled for five days later, July 27, I ignored Afilius' improper contact.

VIII. The .WEB Public Auction

98. The public auction for .WEB took place on July 27, 2016, continuing into the morning of July 28, 2016. I participated in that auction from Verisign's offices in Reston, Virginia.

Redacted - Third Party Designated Confidential Information

99. Redacted - Third Party Designated Confidential Information

100. Similarly, I believed that it was reasonable for

Redacted - Third Party Designated Confidential Information

Given the significant interest in the .WEB domain, there were numerous rounds of bidding across the two auction days. In an ICANN auction, a price is set in each round and applicants must enter a bid amount that is equal to or greater than the set price to continue to the next round. Although applicants know *how many* parties are participating in each round, they do not know *which* parties remain at any time or the limits of each party's financing or interest in the gTLD.

101. The .WEB auction concluded on July 28

Redacted - Third Party Designated Confidential Information

Apart from that statement, I have never possessed any information regarding the terms of Afiliás' financing, which I believe remains confidential.

102. Financing arrangements secured by the .WEB Contention Set were not disclosed by NDC or other bidders, as any such arrangements are commonly confidential. Nor is there any ICANN or other requirement that the Contention Set disclose available financing to ICANN or other members of the Contention Set. To the contrary, doing so would provide an unfair advantage to bidders that, upon such disclosure, would know the limits of their competitors' funds and thus know what amount of money would secure the winning bid. Such disclosure would thus be counterintuitive to a competitive auction, and I am not aware of any auction, ICANN or otherwise, that proceeds in such a manner. As a result, I did not know (and could not have known) that Afiliás

Redacted - Third Party Designated Confidential Information Nor would it have been appropriate for others to know the amount NDC could or might bid.

103. Having secured the winning bid, NDC

Redacted - Third Party Designated Confidential Information I understand that ICANN has retained the entire notwithstanding that it has not yet agreed to execute a Registry Agreement with NDC for the .WEB gTLD.

IX. Post-Auction Communications with ICANN Regarding .WEB

104. On September 16, 2016, I received an email from Ms. Willett at ICANN stating that Ruby Glen and Afiliast had continued to complain that NDC should not have participated in the .WEB public auction and that NDC's Application should be rejected. That letter was a surprise to me, as prior to receiving it I had not heard from or communicated with Ms. Willett or anyone else at ICANN about .WEB since confirming our payment for .WEB in August 2016.

105. In her letter, Ms. Willett requested that NDC provide responses to 20 questions posed by ICANN so that ICANN could evaluate those complaints. Ms. Willett's email also invited Ruby Glen, Afiliast, and Verisign to respond to the same questions, and I understand that each of those entities received the same request from ICANN. Exhibit S attached hereto is a true and correct copy of Ms. Willett's September 16, 2016 email.

106. NDC provided responses to ICANN's 20 questions on October 10, 2016. Exhibit T attached hereto is a true and correct copy of the October 10, 2016 email I sent to ICANN attaching those responses and the responses themselves.

107. Since submitting those responses in October 2016, NDC has periodically made inquiries to ICANN through the ICANN customer service portal regarding the status of .WEB. ICANN has never responded beyond a statement that the resolution of .WEB is on hold due to the pendency of accountability mechanisms or similar processes.

108. I understand Afilius has suggested that NDC somehow colluded with Verisign and ICANN regarding ICANN's investigation of Afilius' complaints. That is false. NDC does not have any ability to direct or control ICANN's investigation and has not remotely attempted to do so. NDC was not consulted by ICANN about its investigation and has no more insight into ICANN's investigation than any other party.

109. What is true, however, is that it is now June 2020, nearly four years after the public auction for .WEB. NDC has been seriously injured by the delays caused by the various—and in my opinion entirely unfounded—complaints and objections by Donuts and the pursuit of this proceeding by Afilius. Among other things, Redacted - Third Party Designated Confidential Information

110. Redacted - Third Party Designated Confidential Information by members of the .WEB Contention Set, including Afilius, following their unsuccessful attempts to either (i) coerce NDC to participate in a private auction for .WEB—thus ensuring a profit even if they lost that auction—or, (ii) when those efforts failed, to obtain the rights to .WEB themselves. Having accomplished neither, it is my belief that Afilius' continued complaints are no more than a transparent attempt to profit at NDC's and Verisign's expense. I respectfully submit that, as set forth in this statement, there is no factual basis for those complaints.

I swear under penalty of perjury under the laws of the United States that the foregoing is true and correct to the best of my knowledge and belief.

Executed on this 30th day of May, 2020 at Miami, Florida.

Jose Ignacio Rasco III

SUPPLEMENTARY EXAMINATION BY MR. LITWIN	1002

1 CALIFORNIA, CALIFORNIA, AUGUST 7, 2020

2 ---o0o---

3 ARBITRATOR BIENVENU: Good day, everyone.
4 It is an early morning on the West Coast. We have
5 a big day ahead of us.

6 I'll ask if there are preliminary matters
7 that the parties or Amici would like to raise.

8 MR. ALI: Just very briefly, Mr. Chairman.
9 Mr. LeVee had asked me earlier today to provide an
10 estimate regarding the cross-examination times for
11 Mr. Rasco and Mr. Disspain.

12 All I can say is that we worked pretty
13 much late into the night and all night to cut back
14 our examinations of both as much as we could to
15 allow the Panel time to ask questions and for
16 Mr. LeVee and Mr. Marenberg to conduct their
17 respective redirects of the witnesses.

18 I can't say much more than that because I
19 think we have done what we can. We hope that the
20 witnesses will be efficient in their responses and
21 that the redirects will be efficient as well to
22 allow you sufficient time to question the
23 witnesses.

24 I did make a commitment to Mr. LeVee, and
25 we will do everything that we can to abide by the

1 commitment that we made to do our part to get both
2 witnesses done today.

3 ARBITRATOR BIENVENU: Excellent. Thank
4 you, Mr. Ali, for that.

5 Mr. LeVee, will you be introducing -- no,
6 Mr. Marenberg will be introducing the witness this
7 morning, correct?

8 MR. MARENBERG: Correct.

9 MR. LeVEE: Yes.

10 ARBITRATOR BIENVENU: Good morning,
11 Mr. Marenberg.

12 MR. MARENBERG: Good morning.

13 ARBITRATOR BIENVENU: Do you have any
14 preliminary matters that you would like to raise,
15 or can we bring the witness in the hearing room?

16 MR. MARENBERG: Nope, I think we can bring
17 the witness in. The only thing I would say is --
18 and probably Mr. LeVee would echo this -- we have
19 gotten a commitment to finish both witnesses today.
20 That is obviously dependent on the length of the
21 cross-examination, and I think we should monitor it
22 as we are going forward carefully because we can
23 easily get off time.

24 ARBITRATOR BIENVENU: Yes, I think we are
25 all conscious of these constraints.

1 Mr. English, if you could bring the
2 witness in.

3 Morning, Mr. De Gramont.

4 MR. De GRAMONT: Morning.

5 MR. ENGLISH: The witness is now in the
6 meeting.

7 ARBITRATOR BIENVENU: Good morning,
8 Mr. Rasco. Can you hear me?

9 THE WITNESS: I can. Good morning.

10 ARBITRATOR BIENVENU: My name is Pierre
11 Bienvenu. I serve as Chair of the Panel. My
12 colleagues are Professor Catherine Kessedjian, who
13 is joining us from Paris, and Mr. Richard Chernick,
14 who is in Los Angeles.

15 Can you see all three of us on your
16 screen?

17 THE WITNESS: Yes. Good morning. I
18 believe I can, yes.

19 ARBITRATOR BIENVENU: Excellent. So,
20 Mr. Rasco, welcome and thank you for participating
21 in this hearing.

22 You have signed a witness statement in
23 relation to this case dated 30 May 2020?

24 THE WITNESS: That's correct.

25 ARBITRATOR BIENVENU: And at the end of

1 your witness statement, you swear that the content
2 of this statement is correct to the best of your
3 knowledge and belief, correct?

4 THE WITNESS: That's correct.

5 ARBITRATOR BIENVENU: May I ask you, sir,
6 in relation to the evidence that you will give to
7 the Panel today, likewise solemnly to affirm that
8 it will be the truth, the whole truth and nothing
9 but the truth?

10 THE WITNESS: I do.

11 ARBITRATOR BIENVENU: Thank you, sir.

12 Mr. Marenberg, any introductory questions?

13 MR. MARENBERG: Mr. Rasco, is there
14 anything that you would like to change or augment
15 to your witness declaration before
16 cross-examination starts?

17 THE WITNESS: Sure. Thanks, Steve.

18 Just in reviewing my witness statement, I
19 just wanted to point out a clarification. I
20 believe it is Paragraph 107 where I mentioned that
21 I communicated with ICANN primarily -- I
22 communicated with ICANN through the portal, and I
23 didn't mean that to be an exhaustive list. I also
24 did initiate communications with ICANN, I believe,
25 by email, and I think I attempted by phone call.

1 So I just wanted to clarify that. By no means was
2 I trying to exclude the fact that there was other
3 means of communications, but primarily ICANN
4 communications have been through the portal.

5 MR. MARENBERG: Mr. Rasco, what period of
6 time do the communications referenced by Paragraph
7 107 infer?

8 THE WITNESS: After the auction.

9 MR. MARENBERG: I have nothing further,
10 Mr. Chairman.

11 ARBITRATOR BIENVENU: Thank you,
12 Mr. Marenberg.

13 Mr. De Gramont, you will be conducting the
14 cross on behalf of the claimant?

15 MR. De GRAMONT: I will, Mr. Chairman.

16 ARBITRATOR BIENVENU: Morning to you.

17 MR. De GRAMONT: Morning to you. Thank
18 you, Mr. Chairman.

19 CROSS-EXAMINATION

20 BY MR. De GRAMONT

21 Q. Good morning, Mr. Rasco. My name is Alex
22 de Gramont. I represent Afiliias. Thank you very
23 much for being with us this morning.

24 You should have a package that has a
25 binder of documents, and I would ask you to open it

1 now.

2 A. Okay.

3 MR. MARENBERG: May I open mine as well?

4 MR. De GRAMONT: I don't know about that,
5 Mr. Marenberg. Yes, please go ahead.

6 Q. Mr. Rasco, you have a binder in front of
7 you. We have included your witness statement
8 behind Tab 1, and then behind that are various
9 documents that we're going to discuss with you.

10 The good news is we are going to skip a
11 lot of them in an effort to speed up the
12 examination, but we will be asking you about some
13 of them. You will see that we have put brackets at
14 the bottom of the page that has page numbers, and
15 that's because sometimes the PDF and the hardcopies
16 had different page numbers. Just so everyone can
17 follow, we will be looking at the bracketed page
18 numbers, okay?

19 A. Thank you.

20 Q. Okay. So, Mr. Rasco, you are still one of
21 the managers and the chief financial officer of NU
22 DOT CO, or NDC; is that correct?

23 A. That's correct.

24 Q. Are you currently employed in any other
25 capacity?

1 A. Yes, I am.

2 Q. And can you tell me in what other capacity
3 or capacities?

4 A. Sure, yeah, I have multiple -- multiple
5 jobs. I am the CEO and founder of the .HEALTH
6 top-level domain. I also operate a coworking space
7 here in Miami, so -- and also a real-estate-related
8 business.

9 Q. Okay. Thank you. You testify in your
10 witness statement that you and Juan Diego Calle and
11 Nicolai Bezsonoff founded NDC in 2012; is that
12 correct?

13 A. That's correct.

14 Q. And in Paragraph 6 of your witness
15 statement, you explain that at its founding, NDC
16 had two shareholders, the first was Domain
17 Marketing Holdings, LLC, or DMH, which owned 85
18 percent of NDC; is that correct?

19 A. That's right.

20 Q. And then Nuco LP, which owned the other 15
21 percent; is that right?

22 A. That's correct.

23 Q. And who owned DMH?

24 A. Redacted - Third-Party Designated Confidential Information

25

16
17
18
19
20
21
22
23
24
25

Q. Can you tell us who owns STRAAT Investments?

A. Redacted - Third-Party Designated Confidential Information

Q. And then who owned Nuco?

A. Redacted - Third-Party Designated Confidential Information

Q. And do you know if that information was provided to ICANN?

A. I don't believe so. I believe the application only asked you who owned more than 15 percent.

Q. Now, you and Mr. Calle and Mr. Bezsonoff had previously launched the .CO ccTLD; is that correct?

A. That's correct, along with Lori Anne Wardi and Eduardo Santoyo.

Q. And the term "ccTLD" is an abbreviation for "country code TLD," correct?

1 A. That's correct.

2 Q. For ccTLDs each country decides how to
3 choose the registry for its own country TLD; is
4 that right?

5 A. That's right. They generally set up the
6 guidelines for running it.

7 Q. So Colombia had a public auction, and your
8 company .CO won the auction; is that correct?

9 A. It wasn't an auction; it was an RFP.

10 Q. And that took place under the procurement
11 laws of the Republic of Colombia, I assume?

12 A. That's correct.

13 Q. So it is a different process than the one
14 that ICANN used for issuing gTLDs in the new gTLD
15 Program, correct?

16 A. Yeah, that's right, that's right.

17 Q. Okay. So NDC was formed in 2012 for the
18 purpose of applying for new gTLD strings in the new
19 gTLD Program; is that right?

20 A. That's right.

21 Q. And NDC ultimately applied for 13 gTLD
22 strings, including .WEB, correct?

23 A. Thirteen, yes.

24 Q. And the one -- and the one gTLD that NDC
25 acquired was .HEALTH; is that right?

1 A. No, that's not correct. .HEALTH was
2 applied for by a different entity, so NDC has
3 nothing to do with .HEALTH.

4 Q. With respect to the 13 gTLD strings, I
5 assume that NDC paid the 185,000 application fee
6 for each application, right?

7 A. That's right.

8 Q. When you applied for .WEB and the other
9 strings in 2012, were you hoping to obtain the
10 Registry Agreement and operate the registries for
11 all of those gTLDs?

12 A. Redacted - Third-Party Designated Confidential Information
13
14
15

16 Q. And did you envision in 2012 that there
17 would be private auctions and other settlement of
18 contention sets to, quote, "monetize," unquote, the
19 applications?

20 A. Well, we speculated, but there was no way
21 to be sure at that time.

22 Q. Okay. And you and Mr. Bezsonoff completed
23 NDC's .WEB application; is that correct?

24 A. Primarily. We might have had help from
25 other folks in several sections. It was a very

1 long application times 13 times. It was a pretty
2 long process.

3 Q. Did you hire consultants or proposal
4 writers to assist you?

5 A. No. We hired a young man by the name of
6 David McCombie who kind of helped us kind of
7 theorize about different outcomes and try to come
8 up with valuations for the different strings.

9 Q. And what kind of consultant was
10 Mr. McCombie?

11 A. David is a -- I guess like a management
12 consultant, McKinsey kind of background, or Bain,
13 one of those.

14 Q. Okay. Thank you.

15 You understood that the public portions of
16 the application would be publicly posted for public
17 comment, correct?

18 A. Yes. I can't recall which exact portions,
19 but yes, I remember that there was -- there were
20 definitely many aspects of the application that
21 were to remain public.

22 Q. Okay. And that was so the public could
23 see who was applying for each particular gTLD; is
24 that your understanding?

25 A. I believe so, yes.

1 Q. Okay. Skipping ahead to 2015, you state
2 in your witness statement that by 2015 market
3 conditions had changed and

4 Redacted - Third-Party Designated Confidential Information
5

6 Do you recall that testimony?

7 A. I recall that section in my testimony,
8 yes.

9 Q. And you recall that given changing
10 market -- given what you described as changing
11 market conditions, you thought that

12 Redacted - Third-Party Designated Confidential Information
13

14 A. My experience to that point is that in the
15 auctions that we participated in, just our
16 competitors were willing to bid a lot more than we
17 were.

18 Q. Okay. And you reached the same conclusion
19 with respect to .WEB; is that right?

20 A. That's correct.

21 Q. And you state that the, quote, "market
22 expectations for .WEB were high."

23 Do you recall that testimony?

24 A. Yes, I do.

25 Q. And that means that you believe that .WEB

1 was going to command a high price whether at an
2 ICANN auction or a private resolution of the
3 contention set; is that correct?

4 A. Yeah. Mostly in -- going back all the way
5 to 2011, when all of us potential applicants would
6 talk about the gTLD Program, .WEB was frequently
7 mentioned as one of the more attractive strings.

8 Q. Okay. And you knew who all the members of
9 the .WEB contention set were?

10 A. Not all of them personally, but yes, in
11 general I knew the organizations.

12 Q. And based on that knowledge, NDC was able
13 to consider how best to develop a strategy that
14 would allow for a return on your investment in
15 preparing the .WEB application; is that accurate?

16 A. Well, I don't necessarily think that
17 knowing who all the applicants were really affected
18 us. I think the market conditions are the things
19 that kind of drove our decision-making.

20 Q. Well, you mentioned in your witness
21 statement that there were some big players in the
22 .WEB contention set, Google, et cetera, so that
23 must have helped you assess the likely price at
24 which the contention set was going to be resolved,
25 whether privately or through an ICANN auction; is

1 that fair?

2 A. Well, it definitely influenced. However,
3 you know, Google had -- we had participated in
4 auctions with Google, and Google didn't value
5 everything very highly. They didn't bid up a lot
6 of things. So it really depended on the individual
7 string.

8 Q. On the individual string and on the
9 individual companies in the particular contention
10 set?

11 A. That's right.

12 Q. Okay. And you state in your witness
13 statement that in around May 2015 you, quote,
14 "received a phone call from VeriSign expressing
15 interest in working with NDC to acquire the rights
16 to .WEB," unquote. It is at Paragraph 41 of your
17 witness statement if you want to take a look.

18 A. I remember that.

19 Q. You remember that.

20 So who at VeriSign called you?

21 A. I believe the first contact that I had was
22 with Pat Kane. I don't know his exact title, but
23 he's generally the face of their registry program
24 and someone who I was friendly with and familiar
25 with.

1 Q. Okay. Do you recall what Mr. Kane said to
2 you?

3 A. He was trying -- he wanted me to have --
4 he didn't explain too much, but he wanted me to
5 have a conversation with a colleague of his at
6 VeriSign.

7 Q. And who was that colleague?

8 A. That was Paul Livesay.

9 Q. And we have been arguing about whether it
10 is pronounced Livesay or Livesay. Is it Livesay?

11 A. I think it is. I haven't spoken to Paul
12 in many years, but I think that's what it is.

13 Q. How long after your call with Mr. Kane did
14 you make -- did it take for you to make contact
15 with Mr. Livesay?

16 A. I can't recall exactly, sir, but I don't
17 believe it was the same day. It might have been
18 the next day or it could have been a few days. I
19 really don't recall.

20 Q. It was soon thereafter, soon after the
21 call with Mr. Kane?

22 A. That's probably accurate, yeah.

23 Q. And do you recall what Mr. Livesay said?

24 A. I think just speaking generally, you know,
25 I think the message was, Redacted - Third-Party Designated
Confidential Information

Q. Did he mention that VeriSign had failed to timely make applications for the gTLDs itself?

A. I am not sure that he told me that. I knew that they had applied and participated in the program to a certain extent, but obviously he was asking me about strings that they didn't apply for.

Q. So after that phone call, did you enter into negotiations with VeriSign that led to the Domain Acquisition Agreement, or the DAA?

A. Yeah, I can't recall the exact timeline, but yes, after that phone call we started talking. We started discussing what they would be interested in doing and went through various different thoughts as to how to work out some kind of a deal, which consummated in the DAA, I think in August of that year.

Q. Was he interested in any other gTLDs, or was the focus only on .WEB?

A. Well, when we first started talking, we were talking about our applications in general, our

1 gTLDs in general, and we were negotiating primarily
2 the three -- so at that moment we had four
3 applications remaining, I believe it was .WEB,
4 obviously, .INC, .LLC and .CORP, all four of those
5 applications -- yeah, all four of those
6 applications were on hold.

7 So mine and my partners' attitude was, all
8 right, if we are going to end up doing a deal,
9 let's try to do a deal for all our applications and
10 all these strings and then we're done with this
11 program. So we first started talking about all of
12 them.

13 Q. Did you reach an agreement on any of those
14 TLDs other than .WEB?

15 A. We didn't end up signing anything, no.

16 Q. And do you know why that is? How did it
17 come to be that only .WEB was the subject of your
18 agreement with VeriSign?

19 A. So we were actually negotiating on the
20 three primaries, which I would call .WEB, .INC and
21 .LLC. .CORP, there was some significant
22 questioning as to whether .CORP would ever see the
23 light of day, and that ended up being true.

24 So we actually were negotiating on those
25 three. The negotiations became difficult and

1 complicated, and at some point in those
2 negotiations, rather than breaking down completely,
3 I think we said, "Look, let's do this one at a
4 time."

5 Q. And did you have to enter into a
6 nondisclosure agreement in connection with the
7 negotiations, do you recall?

8 A. I don't recall. I wouldn't be surprised
9 if I did.

10 Q. Okay.

11 A. But I don't recall.

12 Q. And who conducted the negotiations for
13 NDC?

14 A. I was the primary point of contact with
15 VeriSign. And when it came down to actually
16 structuring the agreement, my attorney, Brian
17 Leventhal.

18 Q. And who conducted the negotiations for
19 VeriSign?

20 A. Mr. Livesay.

21 Q. Anyone else at VeriSign?

22 A. I met with several lawyers a few times,
23 again, I think more in the course of structuring
24 the agreement, but in terms of hard-nose
25 negotiations, it was myself and Mr. Livesay.

1 Q. Do you recall the names of the VeriSign
2 lawyers with whom you met?

3 A. I don't. I think one was Kevin, Kevin R.,
4 if I recall his initials.

5 Q. Did VeriSign send you the first draft of
6 the DAA?

7 A. I can't recall.

8 Q. Do you recall how many drafts were
9 exchanged over time?

10 A. No, not exactly, no.

11 Q. And were you, meaning you, Mr. Rasco,
12 focused on the substantive terms of the DAA or were
13 you focused primarily on the payment terms or both?

14 A. Well, you know, as in any negotiation, you
15 have stages. So first we tried to figure out what
16 we were all dealing with and then you try to come
17 to terms on the financial portion and then how you
18 execute it.

19 So I was involved in all of it, but
20 really, obviously, when it comes down to the legal
21 matters, I defer those, the legalities to Brian
22 Leventhal.

23 Q. Had Mr. Leventhal helped you on other
24 application issues?

25 A. Brian's been our corporate attorney for

1 many years, so he's well aware of all of our
2 businesses.

3 Q. Did you and Mr. Livesay meet in person to
4 negotiate or were the negotiations by phone?

5 A. Both.

6 Q. Do you recall how many times you met in
7 person?

8 A. We met one time in my office in Miami, and
9 we met one time definitely in VeriSign's office in
10 Virginia.

11 Q. And the DAA was executed on August 25th,
12 2016; is that correct?

13 A. That sounds correct.

14 Q. Was it executed in person?

15 A. I believe so, yes. I think Paul -- I
16 think Mr. Livesay was in my office.

17 Q. Let's take a look at the DAA, which is at
18 Tab 2 of your agreement. It is Exhibit C-69. And
19 you'll see that throughout NDC is referred to as
20 "the Company" and VeriSign is referred to as
21 "Verisign"; is that correct?

22 A. I see that, yes.

23 Q. Redacted - Third-Party Designated Confidential Information
24
25

1 Do you see that?

2 A. Yes.

3 Q. And that's NDC, correct?

4 A. Yes.

5 Q. And if you turn to

6 Redacted - Third-Party Designated Confidential Information

7

8

9

10 Do you see that?

11 A. I see that, yes.

12 Q. So you understood that after signing this
13 agreement, entering into this agreement,

14 Redacted - Third-Party Designated Confidential Information

15

16

17 A. Well, I don't necessarily agree with that.
18 I think, Redacted - Third-Party Designated Confidential Information

19

20

21

22 Q. In spite of what this says.

23 Okay. Let's look at some of the other
24 provisions. Let's take a look at

25 Redacted - Third-Party Designated Confidential Information

1
2
3
4
5
6
7
8

21
22
23
24
25

Redacted - Third-Party Designated Confidential Information

A. I believe that's correct.

Q. In fact, it is more detailed than that.

Let me just read some of the language.

Redacted - Third-Party Designated Confidential Information

So if I understand that correctly, you had

1 Redacted - Third-Party Designated Confidential Information

2
3
4
5 A. Yes.

6 Q. And you had to

7 Redacted - Third-Party Designated Confidential Information

8
9
10
11
12 Do you recall those requirements?

13 A. Yes, I do. I recall their

14 Redacted - Third-Party Designated Confidential Information so I felt that
15 these provisions were appropriate.

16 Q. I am not asking whether they are
17 appropriate. I am just asking if -- if my
18 understanding of them is consistent with yours,
19 which is that

20 Redacted - Third-Party Designated Confidential Information

21
22 A. Correct.

23 Q. Redacted - Third-Party Designated Confidential Information

24
25 A. You know, I believe I did. There may be

1 an occasion or two where I didn't think about some
2 of these. For the most part, I don't think I was
3 trying to conceal anything from VeriSign.

4 Q. And if you turn to
5 Redacted - Third-Party Designated Confidential Information
6
7
8
9
10
11

12 A. That's correct.

13 Q. But it also provides that
14 Redacted - Third-Party Designated Confidential Information

15 A. That's correct.

16 Q. So Redacted - Third-Party Designated Confidential Information
17

18 A. Redacted - Third-Party Designated Confidential Information

19 Q. Is that your understanding?

20 A. I believe that's about accurate, I think,
21 yes.

22 Q. Okay. Let's take a look at
23 Redacted - Third-Party Designated Confidential Information

Q. Okay Redacted - Third-Party Designated Confidential Information

A. Correct. Redacted - Third-Party Designated Confidential
I f ti

Q. And you think that if the DAA had been disclosed, it would have affected the outcome of the auction?

A. I can't pretend to know what might have happened.

Q. So if Redacted - Third-Party Designated Confidential Information

A. I don't think that the DAA
Redacted - Third-Party Designated Confidential Information

A. That's correct.

Q. Now, you have testified in your witness

1 statement that you thought this arrangement with
2 VeriSign was acceptable under the guidebook,
3 correct?

4 A. I did.

5 Q. Did you wonder why
6 Redacted - Third-Party Designated Confidential Information

7
8 A. No, not really. As I just mentioned, I
9 think Redacted - Third-Party Designated Confidential Information

10

11

12

13

14 Q. And you thought that it was prudent not to
15 let anyone know that NDC -- strike that.

Redacted - Third-Party Designated Confidential Information

A. I don't -- I don't see how you come to
that. Redacted - Third-Party Designated Confidential Information

Q. You basically

Redacted - Third-Party Designated Confidential Information

A. No, I disagree.

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

At that point, when we signed
the DAA, there was not even any clarity as to
whether or not the .WEB TLD would ever be
delegated. It was on hold and had been on hold for
years. So I don't...

Q. Redacted - Third-Party Designated Confidential Information

A. If that's the way you want to phrase it.

1 Q. The answer is yes, that's what you
2 thought?

3 A. Well, the DAA, Redacted - Third-Party Designated
4 Confidential Information

5 Q. Did you ever ask Mr. Livesay why
6 Redacted - Third-Party Designated Confidential Information

7
8
9 A. I don't believe I did. As I mentioned, I
10 have been fortunate to do a few deals with public
11 companies, so I didn't think anything was strange
12 in terms of confidentiality. I don't even know how
13 many people within VeriSign knew about our
14 arrangement.

15 Q. And did you ever discuss with Mr. Calle or
16 Mr. Bezsonoff why

17 Redacted - Third-Party Designated Confidential Information

18
19 A. Did I speak about that particularly with
20 Mr. Calle or Mr. Bezsonoff, I don't believe that I
21 did.

22 Q. Let's turn to Exhibit A

Redacted - Third-Party Designated Confidential Information

A. Yes, that's correct.

Q. Did you arrive two business days prior to the start of the auction?

A. I believe it was one business day. I don't think it ended up being two, but I can't be certain. I think it was just one business day.

Q. Redacted - Third-Party Designated Confidential Information

Do you see that?

A. I do, yes.

Q. Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

1 Q. So how did this work, you and
2 Mr. Leventhal were sitting in a conference room at
3 VeriSign's offices; is that right?

4 A. That's correct.

5 Q. And who from VeriSign was there with you?

6 A. Mr. Livesay was there, and people would
7 come in and out. I am not sure who was there.
8 There might have been an IT support person that was
9 around. I am not sure exactly who else, but
10 obviously my relationship and my primary contact
11 was always Mr. Livesay.

12 Q. And do you recall how many bids you put in
13 during the bidding process?

14 A. No. The bid last -- the auction lasted
15 two days, so there were several rounds. I don't
16 recall exactly how many rounds. It is public, so
17 that information is available.

18 Q. And did Mr. Livesay tell you each bid to
19 make?

20 A. Well, the way the auction works is that I
21 believe you have a continue price. So the auction
22 provider generally provides a threshold for
23 continuing the auction. You have to bid something
24 above that amount in order to continue or that
25 amount to continue, and I believe that's how it

1 worked. Redacted - Third-Party Designated Confidential Information

12
13
14 A. Well, as our funding source, we were kind
15 of limited as to what we were going to bid, just as
16 I'm sure my competitors who were financed by
17 outside sources were limited as to how much they
18 were going to bid.
19 Q. And you think that your competitors had
20 their financing sources sitting with them, telling
21 them whether they could bid on each specific round?
22 A. I can't pretend to know how they handled
23 it.
24 Q. Did VeriSign provide any
25 financial-modeling people for the bidding process?

1 A. I never participated in anything like
2 that.

3 Q. Okay. So you are not aware whether they
4 had financial-modeling people to figure out how
5 much to bid or not?

6 A. I don't know.

7 Q. Okay.

Q. Redacted - Third-Party Designated Confidential Information

1 Redacted - Third-Party Designated Confidential Information

2 A. You know, I don't know what I would have
3 done in that circumstance.

4 Q. Redacted - Third-Party Designated Confidential Information

5

6

7

8 A. Redacted - Third-Party Designated Confidential Information

9

10 MR. De GRAMONT: Mr. Chairman, I am going
11 to suggest that we take our break earlier today.
12 It might enable me to cut down on some of the
13 questions. Would that be acceptable to the Panel?

14 ARBITRATOR BIENVENU: It would certainly
15 be acceptable to us, and I don't expect
16 Mr. Marenberg would have any difficulty with that.

17 MR. MARENBERG: No objection,
18 Mr. Chairman.

19 ARBITRATOR BIENVENU: Excellent. So let's
20 break for 15 minutes.

21 And, Mr. Rasco, sorry, we have to -- you
22 still there, Mr. Rasco?

23 THE WITNESS: I am still here.

24 ARBITRATOR BIENVENU: Yes. I am going to
25 instruct you during our break, and that holds true

1 until the end of your evidence, not to discuss your
2 evidence with anyone during the break.

3 THE WITNESS: Understood.

4 ARBITRATOR BIENVENU: Thank you, sir.

5 THE WITNESS: Thank you.

6 (Whereupon a recess was taken.)

7 ARBITRATOR BIENVENU: Mr. Rasco, good
8 morning again.

9 THE WITNESS: Good morning.

10 ARBITRATOR BIENVENU: We will continue
11 with your cross-examination.

12 Mr. De Gramont, please proceed.

13 MR. De GRAMONT: Thank you, Mr. Chairman.

14 Q. Welcome back, Mr. Rasco.

15 A. Thank you.

16 Q. Now, there are various scenarios set forth
17 in the rest of Exhibit A as to what happens
18 depending on the outcome of the contention set. I
19 am going to focus primarily on the scenario which
20 actually happened, which was NDC winning the ICANN
21 auction.

22 So I'd like to direct you to

A. Right, correct.

Q. Redacted - Third-Party Designated Confidential Information

A. Not technically, no.

Q. Do you have a rough estimate?

A. Redacted - Third-Party Designated Confidential Information

Q. Pretty good return on investment, right?

A. It was a fantastic deal.

Q. Okay. Congratulations for that.

A. It is not done yet, unfortunately.

Q. Okay. You write in your witness statement that in April 2016 ICANN sent notice to the contention set that ICANN had scheduled the ICANN auction for .WEB on 27 July 2016; is that correct?

A. That's correct.

Q. Do you recall this?

A. Yes, I do.

Q. And certain members of the contention set commenced discussions about a private resolution of

1 the contention set, right?

2 A. I believe so, yes. It was a general
3 practice, in my experience, in general, when a
4 string became available at the auction, then you'd
5 start talking.

6 Q. Do you recall when you advised the other
7 members of the contention set that NDC was not
8 willing to participate in a private auction?

9 A. I don't know -- I don't know if I actively
10 or affirmatively told them at some point other than
11 probably some of the correspondence that we are
12 going to speak of here today.

13 Q. Do you know if anyone else at NDC,
14 Mr. Calle or anyone else, advised the other members
15 of the contention set that it was not going to
16 participate in a public auction?

17 A. Other than some of the exhibits that were
18 kind of in front of us here today, I don't believe
19 so.

20 Q. Okay. Let's take a look at what's behind
21 Tab 6. It's Exhibit C-33. And if we look at the
22 last page, Page 4, we see that on October 12th,
23 2015, Mr. Jon Nevett of Donuts sent an email to you
24 and other members of the contention set advising
25 that the Vistaprint decision had been issued and

1 asking if everyone was available to discuss next
2 steps.

3 Do you see that?

4 A. I see that, yep.

5 Q. Okay. And do you remember receiving that
6 email?

7 A. I see that I am a recipient here. I don't
8 remember this email specifically, but it looks like
9 I most likely received it.

10 Q. And then if you look up a couple emails on
11 October 18, 2015, you replied all, quote, "All, I
12 won't be joining you in Dublin, but I'll support
13 however I can. Just let me know. Have a great
14 meeting. Jose."

15 Do you recall writing that email?

16 A. Yeah, this recalls my memory, yeah, sure.

17 Q. And this is a couple months after you've
18 entered the DAA, correct?

19 A. Correct. That would have been August, so
20 yes.

21 Q. And under the DAA Redacted - Third-Party Designated
Confidential Information

22

23

24 A. I guess we read that, yeah, sure.

25 Q. And do you recall if you forwarded this to

1 VeriSign?

2 A. I don't recall doing so.

3 Q. Yeah, okay. Let's turn to Page 2, and
4 this is skipping forward to May of 2016, and if you
5 look at the second email from the bottom, May 5th,
6 2016, at 11:44 p.m., Mr. Sandeep Ramchandani of
7 Radix wrote, "The GDD is just around the corner.
8 If most of us are going to be there, would be a
9 good opportunity to catch-up face to face,"
10 unquote.

11 What was GDD?

12 A. GDD is an industry meeting put on by
13 ICANN. GDD stands for the Global Domains Division.
14 Outside of the regular ICANN meetings there's
15 usually -- or there had been for a few years a GDD
16 meeting, which was really for the registry
17 operators primarily and the registrars.

18 So a lot less policy, you know, high-level
19 ICANN policy and more registry/registrar-related
20 policy and business.

21 Q. And if you go up a couple of emails to the
22 middle of the page, you'll see that on May 6, 2016,
23 Jon Nevett writes, quote, "I'm free for a call at
24 that time, but it shouldn't be that hard to
25 schedule the auction and decide what to do about

1 .WEBS."

2 And then right above that, on May 9th, you
3 write, Jose Ignacio Rasco writes, "Sandeep, I am
4 available for a call tomorrow if needed. Regards,
5 Jose," end quote.

6 Do you recall if that call took place?

7 A. I don't believe it did. I don't remember
8 being a part of a call like that.

9 Q. Do you recall if you forwarded this on to
10 VeriSign, Redacted - Third-Party Designated Confidential Information

11 A. I don't recall, no.

12 Q. If you turn to Page 1, at the bottom
13 you'll see a May 11, 2016, email from John Kane at
14 Afiliias, and he writes, quote, "Good news! I have
15 spoken directly with most members of the contention
16 set and/or saw confirmation in email that everyone
17 is willing to participate in a .WEB only auction.
18 If for any reason anyone's position has changed,
19 please let the group or the auction house know
20 ASAP. If we are going to keep it on track, I
21 suggest to do an auction the week of June 13th,"
22 unquote.

23 Do you recall receiving this email?

24 A. I don't particularly recall, but, yeah, it
25 is likely that I saw this as part of the contention

1 set.

2 Q. Do you recall if you or anyone else at NDC
3 had indicated that NDC would be willing to
4 participate in a private auction?

5 A. No. I remember speaking to the auction
6 providers and them giving the updates, but other
7 than that, I don't believe I ever committed
8 affirmatively or negatively.

9 Q. Okay. Redacted - Third-Party Designated Confidential Information

10

11

12

13 A. No, no. My assumption all along was that
14 my default position was we are going to an ICANN
15 auction. If anything changed, I assumed we'd
16 discuss it.

17 Q. And then why were you talking to the
18 private auction providers if you knew that you were
19 going to an ICANN auction?

20 A. Just to stay informed.

21 Q. Just to stay informed?

22 A. Just to stay informed, yeah.

23 Q. And I assume you were passing that
24 information on to VeriSign?

25 A. I was probably updating VeriSign on what

1 was happening with the contention set, most likely,
2 yes.

3 Q. If you knew that you were not going to a
4 private auction, why didn't you just tell the other
5 members of the contention set of that fact?

6 A. Honestly, I didn't feel obligated to do
7 so. ICANN had set the public auction, and outside
8 of that, that's what was going to be next.

9 Q. Well, if all the members were talking
10 about privately resolving the contention set, you
11 felt no obligation to tell them that they shouldn't
12 be wasting their time because you were going to
13 insist on an ICANN auction?

14 A. No. I mean, at some point I do
15 communicate clearly that I am not changing my mind.

16 Q. Well, when you say changing your mind,
17 have you ever advised the members of the contention
18 set that NDC was likely going to seek an ICANN
19 auction as opposed to a private auction?

20 A. I don't recall, but honestly, the history
21 of NDC, we had participated in both. So one could
22 assume, you know, that we would participate in a
23 private auction.

24 Q. If you look up to the next email in
25 Exhibit C-33, you'll see there's a Jon Nevett email

1 dated July 7. He says, quote, "Hi guys. Just so
2 you are not surprised, we are seeking a
3 postponement of the .WEB ICANN auction. I don't
4 want to get into the details yet, but I don't want
5 you guys to be surprised if a postponement was
6 announced."

7 You are not copied on this email. I
8 assume by this point you had informed the other
9 members of the contention set that you were not
10 going to participate in the private auction?

11 A. No, I hadn't. I definitely had an
12 exchange with Jon Nevett in June where I told him
13 that we were not going to participate in the
14 private auction.

15 Q. Okay. Let's take a look at that. It is
16 behind Tab 8 of your email -- I'm sorry. It's
17 behind Tab 8 of your binder. It is Exhibit C-35.

18 A. Got it.

19 Q. And Mr. Nevett writes on June 6, "Hi guys.
20 Jose and I corresponded last week, but I wanted to
21 take another run at the three of you. Not sure if
22 you three are still the Board members of your
23 applicant, but I wanted to reach out to discuss a
24 couple of ideas," unquote.

25 And he asks for a two-month delay of the

1 ICANN auction and whether you would be agreeable to
2 that.

3 Do you recall receiving that email, that's
4 what you just referred to?

5 A. I do, yes.

6 Q. Okay. And do you recall whether you
7 forwarded it to anybody at VeriSign?

8 A. I don't believe I did, no.

9 Q. Okay. And then on June 7th you respond,
10 quote, "Thanks for the message. Sorry for the
11 delay. The three of us" -- and there you're
12 referring to yourself, Mr. Calle and Mr. Bezsonoff?

13 A. That's correct, yes.

14 Q. "The three of us are still technically the
15 managers of the LLC, but the decision goes beyond
16 just us. Nicolai is at NSR full time and no longer
17 involved with our TLD applications. I'm still
18 running our program and Juan sits on the Board with
19 me and several others. Based on your request, I
20 went back to check with all the powers that be and
21 there was no change in the response and will not be
22 seeking an extension."

23 So I have a few questions about this.

24 A. Sure.

25 Q. When you stated that "the decision goes

1 beyond just us," that was accurate, right? The
2 decision was really in the hands of VeriSign?

3 A. No, not at all. Really what I was
4 referring to there is that, you know, as an LLC, as
5 a company, you know, yes, while Juan, Nicolai and I
6 are the managers in general for major decisions, we
7 speak about it with the shareholders. So that's
8 what I was referring to.

9 Q. You were referring to the shareholders,
10 even though you had signed an agreement with
11 VeriSign Redacted - Third-Party Designated Confidential Information

12

13

14 A. Well, no, as I previously stated,
15 Redacted - Third-Party Designated Confidential Information

16

17 Subject to anything changing, that was
18 going to be our position.

19 Q. So your reasoning is -- sorry, I didn't
20 mean to cut you off, sir.

21 A. No, that's okay.

22 Q. So your thinking is that since you made
23 the decision to enter into an agreement which

24 Redacted - Third-Party Designated Confidential Information

25

1 Redacted - Third-Party Designated Confidential Information

2
3 A. Well, I kind of disagree with your
4 premise. I don't believe there's any rights to
5 participate in a private auction. ICANN says you
6 can try to resolve these contention sets however
7 you want, and if you can't, you come to an ICANN
8 auction of last resort. So that's really what we
9 were doing.

10 Redacted - Third-Party Designated Confidential Information

11
12
13
14 Q. Well, the question, sir, isn't whether
15 there's an obligation to participate in a private
16 auction, but all applicants have the choice as to
17 whether to participate in a private or ICANN
18 auction, Redacted - Third-Party Designated Confidential Information

19
20 A. Well, I believe you said that

21 Redacted - Third-Party Designated Confidential Information

22 There's no right to participate in a
23 private auction, so I don't think I was obliged to
24 explain to any of my competitors how I was going to
25 resolve our contention set.

1 Q. Well, there's no obligation to participate
2 in a private auction, but every applicant had a
3 right to do so, correct?

4 A. Well, no, ICANN says if there's a
5 contention set, figure it out. If you can't figure
6 it out, then you come to an auction. I didn't want
7 to figure it out. I already knew what I was doing.

8 Q. Right. Redacted - Third-Party Designated Confidential Information
9

10 A. No, I disagree.

11 Q. All right. Then you say, "Nicolai is at
12 NSR full time and no longer involved with our TLD
13 applications."

14 What is "NSR"?

15 A. "NSR" is Neustar.

16 Q. And you say, "I'm still running our
17 program and Juan sits on the Board with me and
18 several others."

19 Who were the other Board members to whom
20 you were referring?

21 A. Well, I was referring there to our other
22 shareholders, the Board members. As you probably
23 are aware, LLCs don't have a Board of Directors.
24 They have managers and members. So there I was
25 just referring to our members.

1 Q. Sir, there were three members in the LLC,
2 correct?

3 A. No, there's three managers.

4 Q. Three managers. Oh, and when you say the
5 members, you're talking about the owners of the
6 other shares?

7 A. Shareholders.

8 Q. I see. Why didn't you simply say other
9 shareholders?

10 A. I mean, I was just writing an email. I
11 wasn't intending this to be some kind of official
12 document describing the inner workings of NU DOT
13 CO. I was really just trying to redirect and put
14 off Mr. Nevett, who I had a friendly relationship,
15 and, I mean, how many different ways could I tell
16 him we are not going to a private auction?

17 So I guess it was my fault for trying to
18 be a little polite in trying to just redirect him.

19 Q. But you certainly couldn't tell him the
20 truth, Redacted - Third-Party Designated Confidential Information

21

22

23 A. Well, I wasn't going to tip my funding
24 sources for an ultimate auction. That would affect
25 the outcome of the auction.

1 Q. So you knew who all the other applicants
2 were, but they didn't know that VeriSign was behind
3 your application?

4 A. Well, VeriSign was not behind my
5 application. NU DOT CO is and always was in
6 control of our application. There was never --
7 VeriSign never controlled our application and never
8 controlled NU DOT CO.

9 Q. Well, I think the Panel will have to
10 determine that based on the terms of the DAA, sir.

11 Let me point you to the last sentence of
12 your June 7th email. It says, quote, "It pains me
13 personally to stroke a check to ICANN like this,
14 but that's what we're going to have to do just like
15 others did on .APP and .SHOP."

16 Now, it couldn't have been that painful to
17 stroke a check to ICANN since VeriSign was paying
18 for it, right?

19 A. Well, no matter what, yes, it was painful.

20 Q. How so?

21 A. Figuratively speaking it was just sending
22 ICANN \$135 million wasn't -- actually, at this time
23 I didn't know how much it was going to be, but I
24 was just speaking figuratively.

25 Q. But it was VeriSign's money, but it pained

1 you to take VeriSign's money and pay it to ICANN as
2 opposed to --

3 A. It was my application. Again, I was
4 trying to be polite and just get this guy off my
5 back, quite frankly.

6 Q. In any event, you're aware now that
7 Mr. Nevett contacted ICANN about a potential change
8 in control in NDC, right?

9 A. I later learned of that, yes.

10 Q. And you can see why based on your email he
11 thought there might have been a change in the
12 ownership or control; isn't that fair?

13 A. I mean, I can't pretend to understand what
14 he was thinking, but I see how he took my email out
15 of context and tried to create a barrier, a delay
16 to moving forward with the ICANN auction.

17 Q. When you say "out of context," you mean
18 that he thought you were being truthful?

19 A. I mean, yes, I probably told him a little
20 white lie in order to get him off my back, and yes.
21 Again, I was not trying to tell him how exactly
22 things operated internally at NU DOT CO. But most
23 clear to me is that NU DOT CO hadn't had any
24 changes to our organization, to our application or
25 anything else.

1 Q. Now, on June 27th you received an email
2 from Jared Erwin.

3 Do you recall that?

4 A. Yes.

5 Q. It is behind Tab 10 of your binder. It is
6 Exhibit M to your witness statement. And the
7 bottom email is from Mr. Erwin. He writes, quote,
8 "We would like to confirm that there have not been
9 changes to your application or the NU DOT CO LLC
10 organization that need to be reported to ICANN.
11 This may include any information that is no longer
12 true and accurate in the application, including
13 changes that occur as part of regular business
14 operations (e.g., changes to officers and
15 directors, application contacts)," unquote.

16 You appear to have responded very quickly
17 to that email, although I can't tell whether
18 there's a time change in this because you were in a
19 different time zone.

20 Do you recall responding very quickly?

21 A. I honestly don't. Just for your context,
22 this is not an email. This is a message system
23 within the customer service portal. So yeah, just
24 based on the time stamps, yeah, it looks like I got
25 to him pretty quickly, but I can't tell if I opened

1 that message at 12:45 or at 12:05.

2 Q. And you say, quote, "I can confirm that
3 there have been no changes to the NU DOT CO LLC
4 organization that would need to be reported to
5 ICANN."

6 Do you recall that?

7 A. Yes, I do.

8 Q. But you didn't answer the part of his
9 question asking you to confirm that there had not
10 been changes to the application.

11 Do you see that?

12 A. Yeah. As I testified, I honestly thought
13 this was a routine inquiry one month out from the
14 auction, considering the fact that it had been four
15 years since we submitted our application. I just
16 read it and fired off an answer.

17 I mean, I don't think anything was
18 inaccurate or misleading here. Nothing did change
19 in our application and nothing did change in NU DOT
20 CO.

21 Yeah, I see that I direct the answer, the
22 part of the organization, but I never intended to
23 withhold anything. There was no changes that I
24 felt I needed to report.

25 So I really just, again, as a routine

1 inquiry, I was like, okay, I guess they are getting
2 ready for the auction.

3 Q. And you state that other members of the
4 contention set were putting pressure on you to do a
5 private auction and you had your conversation with
6 Mr. Nevett re: the additional Board members, et
7 cetera, but it never entered into your mind that
8 this communication from ICANN had anything to do
9 with that?

10 A. No, at this point, no. I hadn't heard
11 back from Jon. I don't believe I heard back from
12 Jon after our exchange, and I don't recall having
13 heard from anyone, so no, it didn't spark anything
14 at that point.

15 Q. Notwithstanding the terms of the DAA that
16 we just reviewed, your view was that nothing about
17 your application had changed whatsoever; is that
18 your testimony, sir?

19 A. Nothing in the application changed that
20 would require any kind of disclosure to ICANN.

21 Q. Redacted - Third-Party Designated Confidential Information

22

23

24 A. Redacted - Third-Party Designated Confidential Information

25

1 Redacted - Third-Party Designated Confidential Information

2
3 Q. Redacted - Third-Party Designated Confidential Information

4
5
6
7
8 Do you recall that?

9 A. Correct. Redacted - Third-Party Designated Confidential Information

10
11 Q. Okay. You had several exchanges of emails
12 with the ombudsman on July 6, 7 and 8.

13 Do you recall that?

14 A. I do. I recall one email that I responded
15 to him, but yes.

16 Q. Okay. And then on July 8th, Ms. Willett
17 emailed you and asked you to call her.

18 Do you recall that?

19 A. I do, yes.

20 Q. And, in fact, you did call her, correct?

21 A. I did.

22 Q. Okay. And if you take a look behind Tab
23 13, we see the message that she sent to you on July
24 8th. It is Tab 13, "Rasco Witness Statement
25 Exhibit O." At the bottom of the page she asks you

1 to call her, and then there's an email on the top
2 that says -- well, in which you responded to her
3 after that conversation.

4 Do you recall when she sent you this email
5 or text or message?

6 A. Well, it says July 8th that she sent it to
7 me, and then the one you have in the box right now
8 is my follow-up response to her.

9 Q. I can't see a date here. You don't recall
10 when you sent that to her?

11 A. Just in reviewing for this, I don't know
12 if it was the next day or two days after. I am not
13 sure exactly.

14 Q. Okay. At the second-to-last paragraph you
15 write, quote, "I share your understanding that the
16 complaint was raised in order to get more time to
17 convince us to resolve the contention set via a
18 private auction, even though we have made it very
19 clear to them (and all other applicants) that we
20 will not participate in a private auction and that
21 we are committed to participating in ICANN's
22 auction as scheduled," unquote.

23 So did Ms. Willett tell you that she
24 thought the complaint was raised simply to get more
25 time to convince NDC in the private auction?

1 A. I don't recall if she raised that
2 possibility. I know we discussed it, and she
3 seemed to sympathize with that position.

4 Q. You mentioned that NDC had participated in
5 other ICANN auctions?

6 A. At least two that I can recall, yes.

7 Q. And do you recall in those auctions when
8 you received inquiries like that, you received from
9 Mr. Erwin about your management and control?

10 A. I don't recall, but they would have been
11 much earlier in the program.

12 Q. Okay.

13 A. There was a lot of preauction
14 correspondence getting ready for auctions, so I
15 honestly don't recall if a similar message to
16 Mr. Erwin ever came in.

17 Q. Would you take a look at what's behind Tab
18 14, which is Exhibit D to Ms. Willett's witness
19 statement. I don't know if you have seen this
20 before. Looking at Page 3, it is an email dated
21 Saturday, July 9, 2016, from Ms. Willett to Chris
22 LaHatte, who I understand was the ICANN ombudsman
23 at the time.

24 Have you ever seen this before?

25 A. I think I have.

1 Q. Let me rephrase it. Have you ever seen
2 this email outside the context of preparing for
3 your testimony?

4 A. No, I have not.

5 Q. I am going to refer you to Paragraph 5 and
6 it says, quote, "He" -- and she's referring to
7 Mr. Rasco. "He was contacted by a competitor who
8 took some of his words out of context and is using
9 them as evidence regarding the alleged change in
10 ownership. In communicating with that competitor,
11 he used language to give the impression that the
12 decision to not resolve contention privately was
13 not entirely his. However, this decision was, in
14 fact, his," end of quote.

15 Did you tell Ms. Willett that the decision
16 to skip the private auction and participate in the
17 ICANN auction was, in fact, your decision?

18 A. I told her that we as NDC had decided
19 already that we were going to the ICANN auction. I
20 don't know if I told her this was Jose Rasco's
21 decision, but collectively I told her, "Listen, we
22 had already decided that we weren't going to
23 consider a private auction."

24 Q. And, again, the decision was actually your
25 decision to enter the DAA; is that your testimony?

1 A. That's correct.

2 Q. Okay. Would you turn to Tab 15 of your
3 binder?

4 A. Yes.

5 Q. Actually, let me take a -- let's go back
6 to Willett Exhibit D for a moment. I want to ask
7 you a few follow-up questions about your saying
8 that the decision to enter the DAA was, in fact,
9 NDC's.

10 Again, you had entered the DAA a year
11 earlier in Redacted - Third-Party Designated Confidential Information

12

13

14 MR. MARENBERG: Objection; misstates the
15 document and misstates his prior testimony.

16 Q. BY MR. De GRAMONT: Sir, do you disagree
17 that Redacted - Third-Party Designated Confidential Information

18

19

20 A. Sorry, is that for me or for my attorney?

21 Q. It is for you, sir.

22 A. Sorry. Can you repeat it?

23 Q. Yes. We looked at the DAA,

Redacted - Third Party Designated Confidential Information

Do you recall that provision in the DAA?

A. I recall that there's a provision that
says Redacted - Third-Party Designated Confidential Information

Q. Let me just read to you again
Redacted - Third-Party Designated Confidential Information

A. Redacted - Third-Party Designated Confidential Information

Q. In your witness statement you testified

1 that your communications with ICANN were as, quote,
2 "thorough and responsive as possible," unquote.

3 Do you recall that?

4 A. I mean, you'd have to point it out to me,
5 but if you're saying it is in my witness statement,
6 then I'll take that.

7 Q. It is at Paragraph 80.

8 In Paragraph 90 you testified that your
9 statements to ICANN were, quote, "unequivocally
10 true," unquote.

11 Do you recall that?

12 A. I don't, but if that's in my witness
13 statement, then I believe so.

14 Q. So when you --

15 MR. MARENBERG: Excuse me. Can you ask
16 Mr. De Gramont to put up these statements? Because
17 he's actually taking snippets of these statements
18 out of context, I believe.

19 ARBITRATOR BIENVENU: So the sentence is
20 now projected on the screen.

21 Q. MR. De GRAMONT: If you like, Mr. Rasco,
22 you can look at the hardcopy of the witness
23 statement, which is behind Tab 1 of your binder,
24 whichever you prefer.

25 Let me first read Paragraph 80.

1 MR. MARENBERG: If you could put up
2 Paragraph 80, that would be helpful, please.

3 Q. BY MR. De GRAMONT: Paragraph 80 says, In
4 particular, Mr. LaHatte referenced an email, quote,
5 "which suggests that one of [NDC's] directors is no
6 longer taking an active part in the application,
7 and that there are other directors now involved,"
8 unquote. And he informed me that the, quote,
9 "complainant also suggested that NDC's shareholders
10 have changed since the original application," close
11 quote. "In the communications with ICANN that
12 followed, I endeavored to be as thorough and
13 responsive as possible, and I provided what I
14 thought were clear answers to the questions I was
15 asked," unquote.

16 So did your testimony that you were
17 providing thorough and responsive answers extend to
18 your communication to Ms. Willett that the decision
19 as to whether to enter a private or ICANN auction
20 was NDC's decision?

21 A. I don't know. Can you rephrase that?
22 Because I am confused by what -- you're talking
23 about Ms. Willett and Mr. LaHatte in here, and I am
24 a little bit confused.

25 Q. It was a long question, and I apologize.

1 at ICANN?

2 A. I absolutely did not.

3 Q. Did you ever tell Ms. Willett or anyone
4 else at ICANN that VeriSign was funding your
5 application?

6 A. I did not.

7 Q. Prior to the auction?

8 A. Prior to the auction, I didn't mention
9 that anyone else was involved in the auction.

10 Q. Your testimony to the Panel is that when
11 you told Ms. Willett the decision to skip the
12 private auction was, in fact, NDC's, that that
13 testimony was, quote, "unequivocally true,"
14 unquote?

15 A. Yes, that's correct.

16 Q. Okay. So the auction went forward on 27
17 July 2016, correct?

18 A. That's right.

19 Q. Let's turn to what's behind Tab 15 of your
20 binder. It is Exhibit C-97. It is a letter dated
21 July 26, 2016, from Mr. Livesay to you.

22 Do you recall at this time, were you
23 already at VeriSign's headquarters in Virginia?
24 This was the day before the auction.

25 A. Was I -- was I there when?

1 Q. On July 26, when you received this letter?

2 A. Well, I'm not sure that -- I am not sure
3 when I exactly received the letter, but I know it
4 was signed on July 26.

5 Q. And do you recall if you signed it in
6 VeriSign's offices?

7 A. I believe I did, yes, in person.

8 Q. And the first paragraph says, quote,
9 Redacted - Third-Party Designated Confidential Information

10

11

12

13

Did you understand Redacted - Third-Party Designated Confidential Information

14

Mr. Livesay was referring to?

15

16

A. I assume they were talking about the noise
that Donuts was making.

17

18

Q. And how did -- how did Mr. Livesay become
aware of the noise that Donuts was making?

19

20

21

22

23

A. Well, I can't recall precisely at this
point, but I believe Donuts tried to enjoin the
auction and get a postponement of the auction by
filing something, I don't know, in District Court
or something along those lines.

24

25

Q. Had you informed Mr. Livesay or anyone
else at VeriSign about the communications that you

1 had had with ICANN following Mr. Nevett's email
2 with you?

3 A. I can't recall precisely, but in most
4 likely circumstances, yes, I did.

5 Q. Okay. If you look at Page 2,
6 Redacted - Third-Party Designated Confidential Information

7

8

9

10

11

12

13

14

15

16

17 Do you see that?

18 A. I do.

19 Q. And do you recall that there had been
20 discussions over the last several months prior to
21 this letter in which

22 Redacted - Third-Party Designated Confidential Information

23

24 A. I honestly don't recall discussions. As I
25 mentioned before, I think the -- my assumption and

1 baseline position was that

2 Redacted - Third-Party Designated Confidential Information

3

4 Q. Before we move on, just a few more
5 questions about your phone conversation with
6 Ms. Willett.

7 Did she ask about VeriSign during -- did
8 she mention VeriSign during that call?

9 A. I don't think so, no.

10 Q. Did anyone from ICANN ever mention
11 VeriSign in its preauction conversations with you?

12 A. Not that I can recall, no.

13 Q. Did she ask you any questions about the
14 email that you had sent to Mr. Nevett?

15 A. Did she ask me -- I think the basis for
16 the communication was that email and the ombudsman
17 inquiry. So I don't know -- I think that's what
18 the basis of the conversation was.

19 Q. Did she or anyone else from ICANN ask you
20 what you meant when you were referring to other
21 Board members, do you recall?

22 A. I think that was part of the communication
23 with Mr. LaHatte. I believe my phone conversation
24 with Christine, with Ms. Willett, was confirming
25 everything that I had told Mr. LaHatte.

1 Q. And so were you specifically asked about
2 what you meant when you were referring to all the
3 powers that be?

4 A. I don't know if Christine asked me about
5 that, honestly.

6 I took it as a we want to make absolutely
7 sure that there hasn't been any change in control
8 that you need to report or anything else that would
9 cause a change in your application. So that's the
10 context for which I was answering her completely.
11 As I mentioned before, the DAA was not something
12 that affected the application.

13 Q. Did either the ombudsman or Ms. Willett
14 walk you through your email to Mr. Nevett, do you
15 recall?

16 A. I don't think they did, no.

17 Q. Okay. So the auction proceeds on 27 July,
18 Redacted - Third-Party Designated Confidential Information
19 and were declared the winning bidder; is that
20 correct?

21 A. NU DOT CO won the auction, that's correct,
22 yes.

23 Q. And do you recall that on July 31st, 2016,
24 you wrote Ms. Willett

25 Redacted - Third-Party Designated Confidential Information

1 A. I do recall that, yes, I do.

2 Q. And how did you know that

3 Redacted - Third-Party Designated Confidential Information

4 A. I can't be certain, but I believe VeriSign
5 told me.

6 Q. Let's take a look at Exhibit C-100. It is
7 behind Tab 18. And at the bottom you wrote to
8 Ms. Willett on July 31st, 2016,

9 Redacted - Third-Party Designated Confidential Information

10

11

12

13

14 You don't remember

15 Redacted - Third-Party Designated Confidential Information

16

17 A. Like I said, my primary contact for most
18 issues was Mr. Livesay.

19 Q. Do you specifically remember Mr. Livesay
20 telling you that?

21 A. No, I don't.

22 Q. Do you recall someone from VeriSign
23 telling that you someone from VeriSign would or --
24 would soon be or already had contacted Akram
25 Atallah?

1 A. I can't remember, but if I had to assume
2 it was someone, it might have been Mr. Livesay.

3 Q. Did the person from VeriSign tell you who
4 from VeriSign would be calling Mr. Atallah?

5 A. Not that I know of, no.

6 Q. Okay. Do you know who called Mr. Atallah
7 from VeriSign?

8 A. I don't know that anyone actually did call
9 Mr. Atallah.

10 Q. So if we go up higher in this document,
11 there's an exchange of emails with Ms. Willett on
12 August 4th. You wrote

13 Redacted - Third-Party Designated Confidential Information

14

15 Tell me how this worked.

16 Redacted - Third-Party Designated Confidential Information

17

18 How did that work?

19 A. Logistically you want me to go through it?

20 Q. Very briefly.

21 A. So I believe

22 Redacted - Third-Party Designated Confidential Information

23

24

25

1 Q. And then on Friday, August 5th,
2 Ms. Willett confirmed receipt of the proceeds and
3 said you should expect to receive an invitation to
4 contracting later that day.

5 Do you recall receiving the CIR later that
6 day?

7 A. I can't recall if we received it that day.
8 I know I did receive it at some point. I just
9 don't know when it was.

10 Q. Do you recall if it was in August 2016?

11 A. I can't, no.

12 Q. Okay. Do you recall if it was in 2016 at
13 all?

14 A. I don't recall honestly, no.

15 Q. Okay. Let's take a look at your witness
16 statement again. This is Paragraph 104. Tell me
17 when you're there. It is on Page 38, almost at the
18 end of your witness statement.

19 So you're there?

20 A. Yes, yes.

21 Q. Paragraph 104 says, quote, "On September
22 16, 2016, I received an email from Ms. Willett at
23 ICANN stating that Ruby Glen and Afiliias had
24 continued to complain that NDC should not have
25 participated in the .WEB public auction and that

1 NDC's application should be rejected. This letter
2 was a surprise to me, as prior to receiving it I
3 had not heard from or communicated with Ms. Willett
4 or anyone else at ICANN about .WEB since confirming
5 our payment for .WEB in August 2016," unquote.

6 Do you see that?

7 A. Yes, I do.

8 Q. Now, were you aware that on August 23rd,
9 2016, VeriSign's outside counsel had written a
10 letter to ICANN's outside counsel forwarding the
11 DAA and various other information?

12 A. I had to have been aware.

13 Q. Let's take a look at the letter. It is
14 Tab 20 of your binder, Exhibit C-102.

15 When you say you had to be aware, do you
16 specifically remember being aware or are you
17 assuming -- I'm sorry.

18 A. I recall the existence of the letter, but
19 as it was kind of a fairly legal matter, I wasn't
20 overly involved. Probably Brian Leventhal would
21 have been running point on something like this.

22 Q. You don't recall if you read it at the
23 time?

24 A. No, it is probable that I read it, but I
25 can't recall being overly involved in this.

1 Q. Do you have any understanding of what
2 prompted this letter to be sent from Arnold &
3 Porter to Jones Day?

4 MR. MARENBERG: Objection; calls for
5 privileged communication. If we can just limit it
6 to outside privileged communications, I would have
7 no problem with this question, Mr. Chairman.

8 MR. De GRAMONT: I'll rephrase.

9 ARBITRATOR BIENVENU: Would you like to
10 rephrase your question?

11 MR. De GRAMONT: I will, Mr. Chairman.

12 Q. Outside of communications with your
13 lawyer, do you have any understanding of what
14 prompted Arnold & Porter to send this letter to
15 Jones Day?

16 A. Outside of communications with Brian, I
17 can't recall.

18 Q. Do you recall wondering at the time why
19 Jones Day, the outside counsel, was reaching out to
20 VeriSign's outside counsel about this matter?

21 MR. MARENBERG: Objection.

22 THE WITNESS: I don't.

23 Q. BY MR. De GRAMONT: Let me restate it.

24 Did it seem strange to you that Jones Day
25 had reached out to VeriSign's outside counsel

1 rather than simply having ICANN contact NDC?

2 A. Did I think it was strange that ICANN's
3 outside counsel -- I didn't -- I didn't think about
4 this, honestly.

5 Q. If you take a look at -- do you recall
6 that NDC prepared responses to the questionnaire
7 from Ms. Willett?

8 A. What we referred to as the 20 questions?

9 Q. Yes. Those are the -- I actually didn't
10 count them, but that's how many questions
11 Ms. Willett sent to you?

12 A. I believe so. I was aware of that
13 document, yes.

14 Q. And you recall that NDC provided
15 responses, right?

16 A. We did, yes.

17 Q. And did you read them?

18 A. I definitely read them, at least some sort
19 of draft of them, yes.

20 Q. And did you read VeriSign's responses?

21 A. I can't recall. Again, this was a similar
22 situation where obviously it was increasingly legal
23 and legalese in nature, so I had Brian running this
24 process.

25 Q. And are you aware that many of the answers

1 are verbatim identical in the two responses?

2 A. Identical to what?

3 Q. To each other.

4 A. Sorry, can you rephrase?

5 Q. So for example --

6 A. I just don't know what you're comparing.

7 Q. So if you take a look at NDC's answers and
8 VeriSign's answers to the questionnaire --

9 A. Oh, I understand.

10 Q. -- many of those answers are verbatim
11 identical.

12 Do you remember that?

13 A. I don't recall, but obviously we were a
14 part of the same deal. So it doesn't sound strange
15 to me that, you know, our interpretation of our
16 deal is similar.

17 Q. And in some instances,
18 Redacted - Third-Party Designated Confidential Information

19 Do you recall that?

20 A. I don't particularly recall that.

21 Q. Okay. You're aware that the Antitrust
22 Division of the Department of Justice commenced an
23 investigation in late 2016 or early 2017 about the
24 transaction, right?

25 A. I'll never forget that.

1 Q. And the investigation lasted until January
2 2018?

3 A. That sounds about right.

4 Q. And was it your understanding that
5 everything regarding .WEB was on hold pending that
6 investigation?

7 A. I don't know that there was a firm policy
8 announcement by ICANN, but that was my general
9 understanding, that while the DOJ was looking at
10 this, nothing was going to happen on the ICANN
11 side.

12 Q. If you look at Paragraph 107 of your
13 witness statement, I think this is the paragraph
14 that Mr. Marenberg referred to you earlier on?

15 A. Yes. That's the one that I opened up the
16 proceedings with in adding to.

17 Q. I just wanted to make sure I understand
18 the clarification.

19 It says, quote, "Since submitting those
20 responses in October 2016, NDC has periodically
21 made inquiries to ICANN through the ICANN customer
22 service portal regarding the status of .WEB. ICANN
23 has never responded beyond a statement that the
24 resolution of .WEB is on hold due to the pendency
25 of the accountability mechanisms or similar

1 processes."

2 Could you just tell me the clarification
3 again so I make sure I understand that?

4 A. Yeah, here in the second line I said
5 "inquiries through the ICANN customer service
6 portal" -- it probably could have said "customer
7 services portal, email or phone call" -- regarding
8 the status of .WEB.

9 Q. So you do recall having communications
10 with ICANN after receiving the 2016 twenty
11 questions?

12 A. Yes, definitely.

13 Q. Do you recall that you reached out to
14 ICANN in December 2017?

15 A. I do.

16 Q. Let's take a look at that email. I think
17 we are both referring to the same thing. It is
18 behind Tab 31, Exhibit C-182, and down at the
19 bottom there's an email dated December 12th, 2017,
20 from Peg Rettino referring to a meeting that was
21 being scheduled in December of 2017.

22 Can you tell me what the meeting schedule
23 was?

24 A. If I recall correctly, I believe the
25 context of this message was around this time, just

1 prior to the holidays, I think we had received
2 maybe unofficial word from the DOJ that that
3 process was coming to an end sooner rather than
4 later.

5 So I believe I reached out to ICANN to
6 inquire as to what was next. What was going on
7 with -- at the time, besides the DOJ, there was an
8 ongoing accountability mechanism, which was the CEP
9 between Donuts and ICANN, CEP being Cooperative
10 Engagement Process.

11 So, you know, from my viewpoint, I was
12 trying to get ahead of the fact that, hey, if the
13 DOJ was going to end, I wanted to know what's going
14 on with the Donuts CEP, is that -- can that end?
15 Can we get to a signing?

16 I wanted my Registry Agreement to sign,
17 quite frankly. It had been already quite some time
18 since we had won the auction.

19 Q. And did you have a conversation with
20 people at ICANN in December 2017?

21 A. I believe we did, yes.

22 Q. Do you remember who you spoke to?

23 A. If I recall correctly, it probably would
24 have been John Jeffrey, general counsel, and Akram
25 Atallah, I believe at the time president of the

1 GDD.

2 Q. And was anyone else on the line from NDC?

3 A. I believe Mr. Marenberg was on the line
4 with me.

5 Q. And had Mr. Marenberg replaced your
6 earlier lawyer, whose name I am drawing a blank on?

7 A. Brian Leventhal. So we added
8 Mr. Marenberg to the team once we -- once we saw
9 that there was any potential litigation surrounding
10 this and for his experience handling the DOJ
11 inquiry.

12 Q. And was Mr. Marenberg recommended by
13 VeriSign?

14 A. Mr. Marenberg, I believe Brian and I had a
15 conversation about hiring an attorney and --

16 MR. MARENBERG: Objection.

17 Let me caution the witness. You should
18 not disclose your communications with
19 Mr. Leventhal.

20 I'll object to the question to the extent
21 that it calls for disclosure of those
22 communications on the grounds that it invades
23 privilege.

24 ARBITRATOR BIENVENU: Your response to the
25 objection, Mr. De Gramont?

1 MR. De GRAMONT: Let me rephrase the
2 question because I don't want to elicit any
3 client-counsel communications.

4 Q. This is just a yes-or-no question. Do you
5 know -- strike that.

6 Did VeriSign, to your knowledge, recommend
7 Mr. Marenberg for this assignment to NDC?

8 A. No. I recall VeriSign -- I recall
9 VeriSign proffering a few suggestions on law firms
10 to potentially hire, or speak to, at least.

11 Q. And do you recall if Mr. Marenberg was on
12 that list?

13 A. I can't recall. Honestly, these go to my
14 communications with Mr. Leventhal.

15 Q. I am sure Mr. Marenberg is on everyone's
16 list, but you don't recall if he was on the list
17 provided by VeriSign?

18 A. If he isn't, he should be.

19 Q. But you don't recall?

20 A. I can't recall, no.

21 Q. But you do recall that VeriSign provided
22 you with a list of possible lawyers for this
23 representation?

24 A. I believe they made some suggestions.

25 Q. Okay. So Mr. Marenberg was on the phone

1 with you. Anybody else from NDC?

2 A. No, I don't think on this call, no.

3 Q. Was anyone from VeriSign on the call?

4 A. No.

5 Q. Had VeriSign asked you to reach out to
6 ICANN?

7 A. No.

8 Q. And do you recall if anyone other than
9 John Jeffrey and Akram Atallah were on the line?

10 A. I don't believe that anyone else was on --
11 at least no one was disclosed to me if they were.

12 Q. And do you recall what you said to
13 Mr. Jeffrey and Mr. Atallah?

14 A. I think in summary, what I just previously
15 mentioned, which was, "Listen, I am sure you are
16 hearing just like we are that the DOJ investigation
17 is going to end without further action. You know,
18 I know that the Donuts CEP has been going on for a
19 very long time and can we expect that to come to an
20 end any time soon?"

21 Q. And what did they tell you?

22 A. There wasn't much of a concrete answer.
23 You know, all along I think for some time the
24 general message that we were getting was that that
25 Donuts CEP was going to end, but it never did.

1 Obviously it did eventually, but there was no real
2 concrete answer given other than when it ends and
3 if there are no accountability mechanisms, we'll
4 follow our process.

5 Q. Did they say that when it ends and when
6 there are no accountability mechanisms pending,
7 they would proceed to contract for .WEB with NDC?

8 A. I can't say that they said that verbatim,
9 but I think it was along the lines that they would
10 follow their process. As far as I knew it, the
11 process was that if there were no accountability
12 mechanisms, there was nothing standing in the way
13 from a Registry Agreement.

14 Q. A Registry Agreement with NDC?

15 A. With NDC, correct.

16 Q. Okay. Let me ask you this: Did you
17 follow up with anyone at VeriSign about the
18 conversation you had with Mr. Jeffrey and Mr. Akram
19 and Mr. Marenberg?

20 A. I probably gave them a summary of the
21 conversation, yes, although I can't be certain. In
22 most likely circumstances, I updated them on the
23 conversation.

24 Q. Are you aware that someone from VeriSign
25 reached out to ICANN staff in January 2018 to ask

1 about the process of having NDC assign the Registry
2 Agreement to VeriSign?

3 A. I recall in preparation for this, I recall
4 perhaps seeing that there was a contact about that.

5 Q. Let's just take a quick look at it. It is
6 Tab 32, Exhibit C-115.

7 I have two questions. First of all is
8 whether outside of preparing for the testimony, do
9 you recall seeing this exchange of emails at the
10 time?

11 A. I can't recall, no.

12 Q. Were you aware that these communications
13 were taking place at the time?

14 A. I honestly can't recall. I recognize
15 Jessica Hooper's name as someone who was assigned
16 by VeriSign at some point to help with the
17 assignment process. I think she was becoming
18 familiar with the assignment process.

19 Q. Do you recall speaking to her or anyone
20 else about that?

21 A. You know, I believe I did have a phone
22 call with someone. I think Jessica -- Ms. Hooper
23 was probably one of those people. It is just kind
24 of a preparatory call where we kind of talked about
25 what their understanding of the assignment process

1 was as the way they read it through ICANN's website
2 and the guidebook.

3 Q. Do you recall when that conversation took
4 place?

5 A. I really can't, no.

6 Q. Do you recall if they --

7 A. It was obviously premature.

8 Q. Do you recall if they told you that they
9 had already been in contact with ICANN?

10 A. No. I don't recall that.

11 Q. Okay. Let's take a look at what's behind
12 Tab 31 of your binder, which is Exhibit C-182, and
13 this is an email -- oh, we were looking at that.

14 So this is the email on top of that email
15 chain. It is an email from you to John Jeffrey and
16 Akram Atallah, dated February 15, 2018.

17 Do you recall whether between the phone
18 call in December 2017 and this February 15th, 2018,
19 email, there had been any other communications
20 between you and ICANN?

21 A. I can't be certain, but I don't believe
22 there were.

23 Q. Okay. And so you write to Mr. Jeffrey and
24 Mr. Atallah, quote, "I hope this message finds you
25 well. In line with our previous conversation, I am

1 contacting you regarding NuDotco signing the
2 Registry Agreement for .WEB. Now that the DOJ CID
3 has concluded and that there are no pending
4 accountability mechanisms associated with our
5 successful bid at the auction for this string in
6 2016, the next step in the process is for us to
7 execute the Registry Agreement. Please let me know
8 if you'll have sufficient time to get that to me
9 this week. Thanks so much for all your help
10 throughout this process, and I look forward to
11 wrapping this up."

12 Did you write this email yourself?

13 A. It definitely looks like my language, yes.

14 Q. Did anyone from ICANN respond to this
15 email?

16 A. I don't believe they did.

17 Q. So what was the next communication you had
18 with ICANN after this?

19 A. Again, I can't be certain, but I guess at
20 some point there was a notification that -- well, I
21 can't be certain if there was a notification that
22 there was no longer any accountability mechanisms
23 or whether or not that was for the entire
24 contention set, or in -- I believe it is in June we
25 received the Registry Agreement to sign.

1 Q. And when you received the Registry
2 Agreement, you signed it and returned it to ICANN?

3 A. As fast as I possibly could.

4 MR. De GRAMONT: Mr. Chairman, I think I
5 am getting close to the end of my examination.
6 Could I just have a two-minute break? I may have
7 about 15 minutes more or so, but I just want to
8 confer with my colleagues.

9 ARBITRATOR BIENVENU: Absolutely. I think
10 we will keep the witness in the hearing room, but
11 you are free to consult your colleagues.

12 MR. De GRAMONT: Thank you, Mr. Chairman.

13 (Whereupon a recess was taken.)

14 MR. De GRAMONT: Mr. Chairman, I'm sorry
15 that it took a little longer break than we thought,
16 but the time was well spent.

17 I have no further questions, Mr. Rasco.
18 Thank you very much for your time today.

19 THE WITNESS: Thank you very much.

20 ARBITRATOR BIENVENU: Mr. Marenberg has a
21 few questions for Mr. Rasco, and as we did for the
22 previous witness, I will begin. If my colleagues
23 have additional questions, they will go after me.

24 Mr. Rasco, could I ask you to take a look
25 at Paragraph 58 of your witness statement?

THE WITNESS: Yes, Mr. Chairman.

ARBITRATOR BIENVENU: There you say in the first sentence that

Redacted - Third-Party Designated Confidential Information

Do you see that?

THE WITNESS: I do, that's correct.

ARBITRATOR BIENVENU: The question of whether Redacted - Third-Party Designated Confidential Information

THE WITNESS: I don't recall it being a part of the negotiations, Mr. Chairman.

ARBITRATOR BIENVENU: You don't recall the determination being made on the part of NDC or as part of its negotiations with VeriSign as to whether or not -- let me finish, if I may.

THE WITNESS: Yeah, sorry.

ARBITRATOR BIENVENU: Do you recall a determination being made -- and, of course, please do not disclose any discussion you may have had with counsel. But do you recall the determination being made in the course of your negotiations with VeriSign Redacted - Third-Party Designated Confidential Information

Redacted - Third-Party Designated Confidential Information

THE WITNESS: I am having a little trouble to try to figure out how to answer the question.

The way that I understood
Redacted - Third-Party Designated Confidential Information

ARBITRATOR BIENVENU: Was the question of whether the guidebook -- or I'll say the program rules in order to include both the guidebook and the auction rules. Was the question of whether the program rules required disclosure of the DAA to ICANN discussed with ICANN?

THE WITNESS: Discussed with ICANN, no, I don't believe so. In what context? I am not sure.

1 ARBITRATOR BIENVENU: I am asking if you
2 had a discussion with ICANN about whether that kind
3 of an agreement needed to be disclosed to them?

4 THE WITNESS: No, sir. No, we did not.

5 MR. MARENBERG: Mr. Chairman, you meant to
6 be inquiring about discussions he had with ICANN
7 and not VeriSign?

8 ARBITRATOR BIENVENU: Yes, I meant to ask
9 ICANN. Prior I asked the clarifying, but now I was
10 talking about ICANN.

11 Mr. Rasco, as you sit here today, I
12 believe you are aware that in November 2016 the
13 ICANN Board turned its mind to the question of
14 whether NDC's bid was compliant with the program
15 rules and decided not to pronounce itself on that
16 question. Are you aware of that?

17 THE WITNESS: In the context of this
18 hearing, I became aware of that.

19 ARBITRATOR BIENVENU: Exactly.

20 Now, when did you -- withdrawn.

21 Were you informed of that decision in the
22 days, weeks or months following that decision?

23 THE WITNESS: I don't believe I ever was,
24 no.

25 ARBITRATOR BIENVENU: So it is in the

1 context of this IRP that you became aware of that?

2 THE WITNESS: I believe that's correct.

3 ARBITRATOR BIENVENU: So if we look at the
4 letter under Tab 33, which is a letter sent by
5 Mr. Marenberg to ICANN, you recognize this letter?
6 It is the very last tab of the witness binder.

7 THE WITNESS: Yes, I see that, yes.

8 ARBITRATOR BIENVENU: You recognize that
9 letter?

10 THE WITNESS: I do. I haven't seen it in
11 some time, but I vaguely recognize it, yes.

12 ARBITRATOR BIENVENU: If we look at the
13 last paragraph of that letter, so basically this is
14 a letter complaining to ICANN that a lot of time
15 has passed since the auction, and we have reached a
16 point when a Registry Agreement should be delivered
17 for execution to NDC. In substance, I believe
18 that's what the letter says.

19 In the last paragraph we read this, "ICANN
20 has gone to great lengths over a very long period
21 of time to protect what it thought might be any
22 interests of other parties, including," et cetera,
23 and then we have the sentence, "That process is
24 complete."

25 When that letter was sent out, and I

1 assume it was with your approval, you were not
2 aware that the ICANN Board had deferred
3 consideration of whether NDC's bid was compliant
4 with the program rules, were you?

5 THE WITNESS: I was not aware. In my
6 experience, most new TLD applications didn't go
7 before the ICANN Board to go to signing. But I was
8 not aware that the Board had made a decision not to
9 decide.

10 ARBITRATOR BIENVENU: Thank you,
11 Mr. Rasco.

12 Do my co-panelists have questions for
13 Mr. Rasco?

14 ARBITRATOR CHERNICK: I do not.

15 ARBITRATOR KESSEDJIAN: Sorry, took me
16 some time to unmute. No. I decided not to ask the
17 questions that I initially had because the topics
18 had been covered, even though I am still fairly
19 confused about some of the answers, but I think in
20 terms of time, I think I will refrain.

21 ARBITRATOR BIENVENU: Thank you very much.
22 Mr. Marenberg, any redirect for Mr. Rasco?

23 MR. MARENBERG: Yes. May I just have two
24 minutes to cut some questions and make it very
25 brief?

1 ARBITRATOR BIENVENU: Of course. Wave
2 your hand when you're ready.

3 MR. MARENBERG: I am just going to go off
4 and then come back.

5 (Whereupon a recess was taken.)

6 MR. MARENBERG: I am ready whenever you
7 are, Mr. Chairman.

8 ARBITRATOR BIENVENU: We are ready for
9 your questions, Mr. Marenberg. Please proceed with
10 your redirect.

11 REDIRECT EXAMINATION

12 BY MR. MARENBERG

13 Q. Can we put up Rasco Exhibit O, please?
14 Would you go to the text of the email?

15 ARBITRATOR BIENVENU: Do you know which
16 tab of the exhibit book?

17 MR. De GRAMONT: It is Tab 13.

18 ARBITRATOR BIENVENU: 13, thank you,
19 Mr. De Gramont.

20 Q. BY MR. MARENBERG: I believe, Mr. Rasco,
21 you were shown this exhibit by Mr. De Gramont, and
22 he asked you a couple questions about it.

23 I just want to confirm, Ms. Willett from
24 ICANN reached out to you and asked you to call her;
25 is that correct?

1 A. That's correct.

2 Q. And you did that same day?

3 A. I believe it was the same day, yes.

4 Q. Now, if we could put up paragraph --
5 excuse me, Exhibit C-75 and turn to Page 4, which
6 is Ms. Willett's summary of the conversation that
7 she had with Mr. Rasco. Go to Page 4, please.

8 Mr. De Gramont, what was -- that's it.
9 Right there.

10 And you were shown this exhibit earlier in
11 your testimony here today.

12 Do you recall that?

13 ARBITRATOR BIENVENU: This is Tab 14 of
14 the witness exhibit?

15 THE WITNESS: Yes, I recall.

16 Q. BY MR. MARENBERG: Now, Mr. De Gramont
17 highlighted various sections of this document with
18 you, and he has with other people.

19 I want to highlight another section.
20 Would you highlight Paragraph 1. It reads, "When
21 ICANN previously contacted him about potential
22 changes, he assumed that the confirmation was part
23 of the standard auction process, and his response
24 was relatively brief."

25 Mr. Rasco, is it your understanding that

1 what Ms. Willett is referring to there is your
2 initial email exchange or exchange on the portal
3 with --

4 A. Mr. Erwin.

5 Q. -- Mr. Erwin; is that correct?

6 A. That's correct.

7 Q. All right. And Ms. Willett is recounting
8 what you said to her about that exchange in 2016,
9 correct?

10 A. That sounds correct, yes.

11 Q. Now, a fair amount of ink has been spilled
12 insinuating that you have changed your view of what
13 you said to Mr. Erwin over time now that we are in
14 an IRP proceeding.

15 But at the time you had this conversation
16 with Ms. Willett in 2016, was there an IRP
17 proceeding involving Afiliast?

18 A. No, there was not.

19 Q. And so when you told Ms. Willett and gave
20 the explanation of your response to Mr. Erwin as
21 that it was simply part of the standard auction
22 process and that you quickly responded to
23 Mr. Erwin, that was not in the context of any
24 declaration or witness statement prepared in
25 connection with any IRP or litigation?

1 A. No, not at all.

2 Q. All right. Before there was ever any of
3 this contention, you had told Mr. Erwin essentially
4 what you said in your witness statement -- you had
5 told Ms. Willett essentially what you said in the
6 witness statement, which was, "I fired off a quick
7 response to Mr. Erwin as part of the standard
8 auction process"?

9 MR. De GRAMONT: Mr. Chairman, I am not
10 objecting to leading questions because I want this
11 to go fast, but at some point Mr. Marenberg cannot
12 testify for the witness. So I will object to that
13 last question as leading.

14 MR. MARENBERG: I'll withdraw it.

15 ARBITRATOR BIENVENU: I think, Mr. De
16 Gramont, we all understand what's happening here,
17 but your point is well-taken by your colleague, I'm
18 sure.

19 MR. De GRAMONT: Thank you.

20 Q. BY MR. MARENBERG: Now, if we could put up
21 Exhibit C-100, which is Tab 18 in the binder?

22 ARBITRATOR BIENVENU: Just so that it is
23 clear, when I said we all understand what's
24 happening now, I meant to say that counsel is
25 simply trying to go through points to be covered in

1 the most efficient way. That's what I meant.

2 MR. MARENBERG: Right. Thank you,
3 Mr. Chairman.

4 Q. So this is your exchange with Ms. Willett
5 on the 31st of July of 2016, and you write to her,
6 Redacted - Third-Party Designated Confidential Information

7
8
9 To your knowledge, was this the first time
10 you said anything to ICANN about VeriSign's
11 involvement in the .WEB TLD?

12 A. I believe this was the first time I
13 mentioned VeriSign, that's correct.

14 Q. Now, did you discuss
15 Redacted - Third-Party Designated Confidential Information

16
17 A. I don't recall exactly, Mr. Marenberg, but
18 I know that the plan all along was, subsequent to
19 the auction, to notify ICANN immediately of
20 Redacted - Third-Party Designated Confidential Information

21
22
23 Q. Did you have an understanding yourself as
24 to whether Redacted - Third-Party Designated Confidential Information

25

1 Redacted - Third-Party Designated Confidential Information

2 A. I knew that no matter what, they were
3 going to be aware of the agreement. I can't be
4 sure as to whether or not they were going to ask
5 for a copy of it, but I knew that we were going to
6 have to let them know about our agreement and about

7 Redacted - Third-Party Designated Confidential Information

8 Q. Is it fair to say that

9 Redacted - Third-Party Designated Confidential Information

10
11 A. Well, yeah, correct.

12 Redacted - Third-Party Designated Confidential Information

13
14
15
16 Q. Is it accurate to say, in essence, from
17 the beginning of the negotiations with VeriSign
18 over this deal,

19 Redacted - Third-Party Designated Confidential Information

20
21 MR. De GRAMONT: Mr. Chairman, I want this
22 to go quickly, but Mr. Marenberg is really
23 testifying for the witness. So object to that
24 question as leading.

25 ARBITRATOR BIENVENU: Mr. Marenberg, do

1 you want to reformulate your question?

2 MR. MARENBERG: I'll withdraw it, your
3 Honor.

4 Q. Now, let me just go back to the Exhibit
5 C-100.

6 At the time that you mentioned to
7 Ms. Willett on July 31st that ^{Redacted - Third-Party Designated Confidential Information}

8 what was the nature of the blogosphere as
9 it concerned the .WEB TLD?

10 A. So if I recall correctly, even prior to
11 the auction I believe the filings from Donuts or
12 Ruby Glen were made public in their attempts to try
13 to stop the auction. So at that point I guess the
14 scuttlebutt or the gossip going around was, wow,
15 there must be someone behind this. And there were
16 kind of -- I don't know if you would say
17 suppositions or there were assumptions that, wow,
18 it must -- what if one of the big players is here?
19 What if, could it possibly be VeriSign?

20 And then subsequent to the auction or
21 around the time of the auction when the actual
22 dollar amount came out, I have a feeling, if I
23 recall correctly, there was, you know, definitely
24 bloggers, whether it was Kevin Murphy of Domain
25 Incite or Kieren McCarthy, I forget where he was

1 writing at the time, but probably writing about the
2 potential participation of VeriSign.

3 Q. Can we put up Exhibit C-43, please?

4 MR. De GRAMONT: Mr. Chairman, I have a
5 feeling counsel is about to go beyond the scope of
6 cross-examination, and if so, I will object to
7 that.

8 MR. MARENBERG: I don't believe so.

9 ARBITRATOR BIENVENU: Would you like to
10 respond to that objection, Mr. Marenberg?

11 MR. MARENBERG: I think I am just putting
12 up the clarifications that Mr. De Gramont asked him
13 and putting it in that context.

14 MR. De GRAMONT: I didn't go through that
15 with this witness, but why don't we hear the
16 question and then I'll deal with the objection.

17 Q. BY MR. MARENBERG: Is this an example of
18 the types of communications that were circulating
19 in the blogosphere in the aftermath of the .WEB
20 auction?

21 A. That's correct, this is an example of
22 those assumptions that VeriSign was potentially
23 involved.

24 Q. Okay. Now, let's go back to Exhibit
25 C-100, please.

1
2
3
4
5
6
7
8
9
10
11
12

23
24
25

ARBITRATOR BIENVENU: Tab 18?

MR. MARENBERG: Tab 18.

Q. Now I want to focus your attention on the next email after the one you sent on July 31st and after Ms. Willett's response.

That's your email of August 4th. For what purpose were you writing Ms. Willett on August 4th?

A. I was confirming that they received the payment and inquiring about the CIR, which is the invitation to contracting.

Q. Okay. At this point in time, did you have an understanding when you were communicating with Ms. Willett as to whether she understood that VeriSign was involved in some way in the .WEB TLD?

A. I don't know what she thought, but I had already -- Redacted - Third-Party Designated Confidential Information, so I am assuming she already knew about it.

Q. Okay. And let's go to the top email on the page, which is Ms. Willett's response. Same document, top email, please, C-100. Thank you.

And Ms. Willett responds to you,
Redacted - Third-Party Designated Confidential Information

1 Redacted - Third-Party Designated Confidential Information

2
3
4
5
6 What did you understand she was telling
7 you there?

8 A. From my point of view,

9 Redacted - Third-Party Designated Confidential Information

10
11
12
13 Q. This was after VeriSign's involvement had
14 been disclosed, correct?

15 A. That's correct. It didn't -- in other
16 words, it didn't look like there was much of a
17 surprise here.

18 MR. MARENBERG: I have no further
19 questions.

20 ARBITRATOR BIENVENU: Thank you very much,
21 Mr. Marenberg.

22 Mr. Rasco, I would like, on behalf of the
23 other members of the Panel and indeed on behalf of
24 all the participants in this process, to thank you
25 for your evidence and for your time.

1 THE WITNESS: Thank you very much,
2 Mr. Chairman. It was fun.

3 ARBITRATOR BIENVENU: Mr. Rasco, I must
4 instruct you not to discuss your evidence and your
5 testimony with any other persons who are scheduled
6 to appear before the Panel.

7 THE WITNESS: Yes, sir.

8 ARBITRATOR BIENVENU: Thank you very much,
9 indeed.

10 THE WITNESS: Thank you.

11 ARBITRATOR BIENVENU: We are on to our
12 next witness. Mr. LeVee, will you be leading or
13 introducing the witness?

14 ARBITRATOR KESSEDJIAN: Can we can have a
15 short break, probably five or eight minutes, no
16 more?

17 ARBITRATOR BIENVENU: An unscheduled
18 break?

19 ARBITRATOR KESSEDJIAN: An unscheduled
20 break, yes.

21 ARBITRATOR BIENVENU: I see agreement by
22 our friend Mr. Chernick, so let's have an
23 unscheduled break of five minutes.

24 In the meantime, Mr. LeVee, you can
25 perhaps ensure that the witness -- can you tell us

1 if the witness is ready?

2 MR. LeVEE: The witness should be in his
3 own holding room. I believe that's been confirmed.
4 I apologize. I had expected the Panel to take a
5 short break.

6 ARBITRATOR KESSEDJIAN: I am reading your
7 mind, Mr. LeVee.

8 MR. LeVEE: My apologies, but I am sitting
9 here getting my computer activated.

10 ARBITRATOR KESSEDJIAN: Let's meet in five
11 minutes.

12 MR. LeVEE: Five minutes is good with me.

13 (Whereupon a recess was taken.)

14 ARBITRATOR BIENVENU: Welcome, again,
15 Mr. Litwin.

16 MR. LITWIN: Thank you, Mr. Chairman.

17 ARBITRATOR BIENVENU: Mr. Disspain,
18 welcome. My name is Pierre Bienvenu. I chair the
19 Panel in this IRP. My colleagues are Professor
20 Catherine Kessedjian, whom I assume you see on your
21 screen, and Mr. Richard Chernick.

22 THE WITNESS: Yes, I can see them. Thank
23 you.

24 ARBITRATOR BIENVENU: Very well. So first
25 of all, on behalf of the Panel, welcome to you.

1 Sir, you have signed a witness statement
2 in relation to this case dated 1st June 2020.

3 THE WITNESS: Yes, I have.

4 ARBITRATOR BIENVENU: And at the end of
5 your statement, you swear that the content of your
6 statement is true and correct?

7 THE WITNESS: Yes, I do.

8 ARBITRATOR BIENVENU: May I ask you, sir,
9 likewise solemnly to affirm that the evidence that
10 you will give to the Panel today will be the truth,
11 the whole truth and nothing but the truth?

12 THE WITNESS: Yes, I do so affirm, sir.

13 ARBITRATOR BIENVENU: Thank you very much.
14 Mr. LeVee.

15 MR. LeVEE: Thank you, Mr. Chairman.

16 Good evening, Mr. Disspain. How are you?

17 THE WITNESS: I'm fine, Mr. LeVee. Thank
18 you. How are you?

19 MR. LeVEE: I am fine. Thank you.

20 I have just two questions. One, are you
21 in the United Kingdom? Is that where you are
22 testifying from?

23 THE WITNESS: Yes, I am.

24 MR. LeVEE: Okay. And second, the Chair
25 showed you your witness statement. Do you have any

1 corrections to your witness statement that you'd
2 like to correct?

3 THE WITNESS: No, I don't.

4 MR. LeVEE: Then, Mr. Chair, I have no
5 additional questions and submit Mr. Disspain to
6 cross-examination.

7 ARBITRATOR BIENVENU: Thank you,
8 Mr. LeVee.

9 The cross-examination will be conducted by
10 Mr. Litwin.

11 Mr. Litwin, your witness.

12 MR. LITWIN: Thank you, Mr. Chairman.

13 CROSS-EXAMINATION

14 BY MR. LITWIN

15 Q. Mr. Disspain, can you hear me okay?

16 A. Yes, I can. Thank you very much.

17 Q. Excellent. Good evening, sir. I
18 understand you have received a bundle containing
19 our exhibits?

20 A. I do have it, yeah.

21 Q. If you could open that on camera, and
22 Mr. LeVee may do the same.

23 A. I will do my best to open it on camera
24 without cutting myself.

25 Q. Don't cut yourself. We see it is

1 unopened.

2 A. I will put it down so I can open it
3 properly. Okay. There we go. Okay. There we
4 are.

5 Q. I regret to say we killed quite a number
6 of trees with it, and I am not sure we are actually
7 going to review much of it.

8 A. It would appear so, but I can use it for
9 scrap paper later.

10 Q. Very good. I am happy to hear to that.

11 But if I do refer to a document in that
12 binder, you will see that we have marked each page
13 at the bottom right-hand corner with a unique page
14 number that is new, and I will be referring to that
15 page number, not to the original document number.

16 A. You said the bottom right-hand corner?

17 Q. Yeah, should be the bottom right-hand
18 corner.

19 A. So that's ICANN-WEB_ something?

20 Q. Yes.

21 A. The binder wants to spring itself open, so
22 just give me a second so I don't lose any
23 documents. I will do my best. It is kind of
24 damaged.

25 Q. No worries. As I said, I don't expect to

1 look at much of anything in there.

2 A. Just so you know, it is actually broken.
3 Don't worry. My apologies.

4 Q. I apologize.

5 A. No, it is not your fault. I just didn't
6 want to be an inconvenience to you.

7 Q. Mr. Disspain, you are a member of ICANN's
8 Board of Directors, correct?

9 A. Yes, that's correct.

10 Q. When did you first join the Board?

11 A. October 2011.

12 Q. And you have been a member of the Board
13 since that time, correct?

14 A. That is correct.

15 Q. I would like to take you back to the
16 events of November 2016. You stated in your
17 witness statement that ICANN lawyers periodically
18 provided updates to the Board regarding the status
19 of .WEB; is that correct?

20 A. That's correct.

21 Q. And these updates address various legal
22 matters, such as the Ruby Glen litigation against
23 ICANN regarding .WEB, correct?

24 A. Yes, that's correct.

25 Q. And the associated CEP that Donuts, Ruby

1 Glen's parent entity, had initiated concerning
2 .WEB; is that correct?

3 A. Yes, that's correct as well.

4 Q. And the complaints that Afilias had made
5 to ICANN's ombudsman regarding .WEB?

6 A. Well, I think we knew that a complaint had
7 been made, but we didn't have any of the details.
8 That would not have been appropriate. Complaints
9 to the ombudsman, obviously they'd complained to
10 the ombudsman, so we didn't have any of the details
11 of that.

12 Q. What about the letters that Afilias had
13 written to Mr. Akram Atallah that had raised
14 concerns regarding how the .WEB contention set had
15 been resolved, were those discussed during those
16 updates?

17 A. I think we certainly knew about them
18 because they were -- as Akram said, they were
19 public. They would have been part of the briefing,
20 if you will, to discuss the issue.

21 Q. And at the time in 2016, Mr. Atallah was
22 the president of ICANN's Global Domains Division,
23 correct?

24 A. I believe so, yeah.

25 Q. Generally speaking, he was responsible for

1 overseeing the administration of the new gTLD
2 Program, right?

3 A. Reporting to the CEO, but yes.

4 Q. Now, you attended the public ICANN
5 meetings that were held in Hyderabad, India in
6 November 2016, correct?

7 A. I did, indeed.

8 Q. And during those meetings, did you attend
9 a Board workshop session on November 3rd, 2016,
10 where ICANN legal briefed the Board about .WEB?

11 A. The answer to that is yes, although I
12 couldn't be certain about the actual dates, but
13 yes, at Hyderabad in November we had a briefing
14 session on the issue.

15 Q. I will represent to you that in ICANN's
16 privilege log, there is an entry for a transcript
17 of a Board workshop session that took place on
18 November 3rd. If I am representing that correctly,
19 would that help you recall that that is the subject
20 of the discussion?

21 A. If that's what it says, then I accept
22 that's what it was, yes.

23 Q. I will also represent, as far as I can
24 tell from ICANN's website, the first meeting of the
25 ICANN Board was on November 5th. Is it your

1 recollection that this workshop was held before
2 that regular meeting?

3 A. So you say "meeting," you mean formal
4 meeting of the Board?

5 Q. Yes.

6 A. If you do, the answer is yes.

7 Q. Okay. Was there a discussion during that
8 November 3rd workshop that the conversation you
9 were having was privileged?

10 A. Yes.

11 Q. And that meeting took place in India,
12 correct?

13 A. It took place in Hyderabad, yes.

14 Q. And ICANN carries out its activities in
15 conformity with the principles of international
16 law, correct?

17 A. I can't -- I don't understand -- I can't
18 answer that question. I don't know what you mean.
19 ICANN carries out its activities pursuant to
20 California law, I think.

21 Q. So already I have misrepresented to you,
22 sir, we are going to take a look at your witness
23 binder.

24 A. Not a problem.

25 Q. But it is at the beginning?

1 A. Given the state of it --

2 Q. If you can turn to Tab 4, sir.

3 A. Yes, I have got Tab 4.

4 Q. And if you can, if you just give me a
5 minute here, if you turn to Page 5, these are
6 ICANN's bylaws.

7 A. Hang on, is this your page number?

8 Q. Yes. Exhibit C-1, Page 5.

9 A. I am on Page 5, yep, yep, yep.

10 Q. If you look at Section 1.2(a).

11 A. Yes, I have got that.

12 Q. It says, "In performing its Mission, ICANN
13 must operate in a manner consistent with these
14 Bylaws for the benefit of the Internet community as
15 a whole, carrying out its activities in conformity
16 with relevant principles of international law and
17 international conventions and applicable local
18 law."

19 Do you see that?

20 A. I am fine with that, and yes, that's
21 absolutely what the bylaws say.

22 Q. So when there was a -- when you write in
23 your witness statement, sir, that the Board's
24 communications with counsel during the November 3rd
25 workshop session were privileged, which set of laws

1 regarding the legal privilege are you referring to?

2 A. I'm referring to advice received by our
3 lawyers. I am not an international lawyer, and you
4 are asking me to provide you with a legal opinion,
5 which I can't do.

6 Q. So you don't -- sitting here today, you do
7 not have an understanding of which laws concerning
8 legal privilege were governing that meeting in
9 India?

10 A. I have an understanding.

11 MR. LeVEE: Mr. Chairman, could I
12 interrupt briefly? There has already been
13 litigation or activity regarding Afiliias's claims
14 relating to this meeting, and the Panel concluded
15 what it did. I am not going to say what the Panel
16 concluded in front of the witness.

17 But this clearly is an improper line of
18 questioning with respect to a legal issue. The
19 witness has already said he doesn't know the legal
20 issue, but he also did say he understood California
21 law applied.

22 ARBITRATOR BIENVENU: Let us see where
23 we're headed with Mr. Litwin's questions, and I
24 invite you to reformulate your objection as the
25 case may be.

1 MR. LeVEE: I will do that.

2 Q. BY MR. LITWIN: Mr. Disspain, do you need
3 me to restate?

4 A. Yes, I do. I have no idea what you were
5 asking me. So you have to start again, I'm afraid.

6 Q. So my only question was whether, sitting
7 here today, you have any understanding as to which
8 privilege rules applied to the meeting you were
9 having in Hyderabad, India?

10 A. My understanding is we were instructed
11 that that meeting was privileged, not specifically
12 by what law, but that it was privileged.

13 Q. Now, Mr. Disspain, I am going to ask you a
14 series of questions regarding the November 3rd
15 workshop session.

16 I will not ask you to reveal the substance
17 of any privileged communication made during that
18 workshop, and certainly by my questions I am not
19 intending to elicit any answers that would reveal
20 any such privileged communications.

21 I would therefore request that, just to be
22 safe, you keep your responses brief, but naturally
23 you should be guided by the instructions of your
24 counsel in this regard. But I just wanted to make
25 that clear up front.

1 A. I appreciated it, and I understand. Thank
2 you very much.

3 Q. To the best of your recollection, how many
4 directors attended the November 3rd workshop
5 session where issues related to .WEB were
6 discussed?

7 A. I wouldn't start to put a number on it.
8 My recollection is there were a significant number
9 of Board members present, but I couldn't tell you
10 how many.

11 Q. Could you give me an approximation of what
12 percentage of the Board was present?

13 A. It would be very much a guess, but in my
14 mind I would suggest it was certainly more than 50
15 percent. It could have been up to -- it could have
16 been everyone, but certainly more than 50 percent,
17 in my mind.

18 Q. Did anyone from ICANN staff attend the
19 November 3rd workshop?

20 A. Yes, lots of people from -- are you
21 talking about this specific session or just
22 general?

23 Q. Yes, yes.

24 A. This specific session?

25 Q. This specific session, where -- the

1 November 3rd workshop I am going to refer to when
2 the issue -- the legal issues regarding .WEB were
3 discussed.

4 A. Yes, certainly the lawyers did. John
5 Jeffrey was there. I think Amy Stathos was there,
6 the CEO was there. Again, I don't have a clear
7 recollection. I would be surprised to discover
8 that Akram Atallah wasn't there. I am not telling
9 you stuff from actual memory. I am telling you it
10 would surprise me if he hadn't been, but yes, there
11 was certainly staff present.

12 Q. So just to be clear, Mr. Disspain, I am
13 not asking you to speculate. I am asking you, to
14 the best of your recollection, was Mr. Atallah in
15 attendance?

16 A. I believe he was.

17 Q. What about Ms. Willett?

18 A. I don't remember.

19 Q. Other than Mr. Atallah, were there any
20 other members of ICANN staff present at the
21 November 3rd workshop session, also other than
22 legal staff, that you recall?

23 A. Not that I can recall.

24 Q. So just to clarify again, what we are
25 talking about in the November 3rd workshop session,

1 is it fair to say, and this is really a yes-or-no
2 question, that multiple topics were discussed
3 during the entirety of that November 3rd workshop
4 unrelated to .WEB?

5 A. Now you have confused me because you said
6 before, you said when you refer to the November 3rd
7 workshop, you are specifically referring to a
8 discussion about this.

9 Q. Correct. What I am trying to just get at,
10 sir, I just want to understand, this was one of the
11 topics that were discussed at the workshop? And
12 then we'll go on.

13 A. During the day, during our sessions, a
14 number of topics were discussed, yes, that is
15 correct.

16 Q. Okay. So from now on when I refer to the
17 November 3rd workshop session, I am just going to
18 refer to the discussion regarding .WEB.

19 To the best of your recollection, how long
20 was the discussion concerning .WEB?

21 A. I couldn't -- I genuinely couldn't say. I
22 don't know. I would be speculating.

23 Q. Okay.

24 A. I would be saying -- I'd be thinking it
25 through and saying, well, I know what was

1 discussed, how long would that take, et cetera, and
2 that's what you don't want me to do, so I don't
3 know.

4 Q. Would you say it was more than 15 minutes?

5 A. I'm going to resort to a reply I gave you
6 earlier in another context. I would be surprised
7 if it wasn't more than 15 minutes, but I remember
8 there being a full and open discussion about the
9 topic. How long it actually took, I couldn't say.

10 Q. Okay. Had there been another sort of full
11 and open discussion of legal issues regarding .WEB
12 in any of the other updates that had been provided
13 to the Board?

14 A. You mean at Hyderabad?

15 Q. No, at any other time that you recall.

16 A. I don't recall there being any
17 face-to-face discussion. I do recall that we were
18 kept up to speed with what was happening to some
19 extent, but I don't recall that -- so we received
20 updates in respect to what was going on with .WEB,
21 but I don't recall a Board discussion.

22 Q. Now, the discussion regarding .WEB that
23 took place on November 3rd, did that -- ICANN was
24 involved in active federal court litigation with
25 Ruby Glen at the time. So the briefing, I assume,

1 would have included a discussion of Ruby Glen's
2 case; is that right?

3 A. Well, it included an update on Ruby Glen's
4 case, yes.

5 Q. And Donuts' CEP that we mentioned earlier?

6 A. Again, it would have been -- we would have
7 been briefed that that had happened, that was
8 happening, yes.

9 Q. What about what ICANN was doing in
10 response to the letters that Mr. Atallah had
11 received from Afilias?

12 MR. LeVEE: That question I will object to
13 because it is so vague.

14 Ethan, can you make it a little bit more
15 clear? We are trying to make sure -- you are
16 trying to make sure he doesn't waive the privilege.
17 I am trying to make sure he doesn't waive the
18 privilege. That question --

19 THE WITNESS: I'll be guided by both of
20 you as to whether I am waiving the privilege or
21 not, so I am comfortable.

22 Q. BY MR. LITWIN: I think you should listen
23 to ICANN's lawyer.

24 A. I think you are probably right.

25 Q. That's not my role here today, but I do

1 want to make sure that I am sensitive to this.

2 So I will rephrase the question. So did
3 the Board also receive an update about ICANN's
4 response to Afiliast's letters to Mr. Atallah?

5 A. My recollection is that we knew that ICANN
6 had sent out a questionnaire, if that's what you're
7 asking me.

8 Q. Yes. That is what I'm asking you. Thank
9 you.

10 Did the Board discuss on November 3rd
11 Ms. Willett's pre-auction investigation of NDC? I
12 am asking just for a yes-or-no question, not about
13 the substance.

14 A. I don't know what you're referring to, so
15 I am afraid I can't -- I don't know what
16 Ms. Willett's pre-auction investigation is, so I
17 can't answer that.

18 Q. What about the ombudsman's
19 pre-investigation auction -- excuse me. Let me
20 rephrase.

21 What about the ombudsman pre-auction
22 investigation of NDC, was that discussed?

23 A. We wouldn't discuss what the ombudsman had
24 done, because that's a matter for the ombudsman and
25 that remains with him and no one else.

1 Q. I can represent that other contention set
2 members had complained about the .WEB auction at
3 one point or another. Did the Board discuss any
4 complaints that were brought by any contention set
5 member other than Afilias or Ruby Glen during the
6 November 3rd workshop?

7 A. Not that I can recall.

8 Q. You note in your witness statement that
9 Board members asked questions of ICANN's legal
10 counsel during the November 3rd discussion of .WEB.

11 To the best of your recollection, sir,
12 could you please identify everyone who asked a
13 question of ICANN's legal counsel during the
14 November 3rd discussion of .WEB?

15 A. Well, no, for a couple of reasons, but
16 mainly because I can remember the events and the
17 discussion, but you're asking me to identify
18 particular individuals who had asked particular
19 questions, and I can't do that.

20 I know there was a discussion. I know
21 that Board members were present. I know that -- I
22 believe, as I have already said, that 50 percent of
23 the Board was present, but I would not be able to
24 tell you who spoke, and I wouldn't be able to tell
25 you what questions they asked.

1 Q. Well, I am certainly not asking you to
2 reveal what questions were asked, sir.

3 Let me ask you this: Did you ask any
4 questions during that November 3rd discussion of
5 .WEB?

6 A. I believe that I probably did.

7 Q. Sitting here today, do you have a
8 recollection one way or another?

9 A. Well, you see, here's the challenge. I
10 know me, so I know that it's highly likely I would
11 have asked questions.

12 But if you're asking me can I actually
13 remember, I know you are not going to ask me what
14 they were, but logically for me to remember, I
15 would need to remember the questions, the answer is
16 no. To revert to a previous answer, I would be
17 surprised if I did not.

18 Q. Understood. We sound very much alike,
19 Mr. Disspain.

20 You note in your witness statement that
21 you received briefing materials in advance of the
22 November 3rd meeting, correct?

23 A. Correct.

24 Q. And did those briefing materials include a
25 copy of the August 25th, 2015, VeriSign-NDC Domain

1 Acquisition Agreement?

2 A. Not to my recollection.

3 Q. Did the briefing materials contain a copy
4 of the August 23rd, 2016, letter from Mr. Ronald
5 Johnston of Arnold & Porter on behalf of VeriSign
6 to Mr. Eric Enson of Jones Day on behalf of ICANN?

7 A. Again, not to my recollection.

8 Q. You mentioned a few minutes earlier that
9 ICANN had sent questionnaires out in response to
10 Afilias's complaints. Were the responses to those
11 questionnaires that were received from Afilias
12 included in your briefing materials?

13 A. Not to my recollection.

14 Q. What about the answers that were received
15 to the questionnaire from VeriSign or NDC, do you
16 recall?

17 A. I don't recall any responses or the
18 questionnaire.

19 Q. Did you ever discuss any issues regarding
20 .WEB with Mr. Atallah?

21 A. Are you asking me personally or are you
22 asking me --

23 Q. Yes, personally.

24 A. Not that I can recall, no.

25 Q. Since the Board was also discussing the

1 Ruby Glen .WEB litigation, did the briefing
2 materials also contain -- or did the briefing
3 materials contain a copy of Ruby Glen's pleadings
4 from that case?

5 A. Again, not that I can recall. I don't
6 remember seeing those.

7 Q. Did the briefing materials contain a copy
8 of any of the legal briefs at that had been filed
9 as of November 3rd, 2016, in that case?

10 A. Again --

11 MR. LeVEE: Let me just interrupt. I am
12 letting this go on, but I am confident that
13 whatever materials were provided to the Board would
14 themselves be -- the fact of a lawyer giving a
15 document to the Board would itself be privileged.

16 I don't think it is appropriate -- and I
17 don't want to waive the privilege, but I don't
18 think it is appropriate for questions to be asked
19 about what specific materials were provided to the
20 Board. They were selected by counsel. That's
21 already been established.

22 MR. LITWIN: Mr. Chairman, may I respond
23 to that, please?

24 ARBITRATOR BIENVENU: I was going to
25 invite you to do so.

1 MR. LITWIN: Thank you, Mr. Chairman.

2 Without belaboring the point, it is
3 well-established that the identity of a document
4 that is provided by a lawyer to a client is not
5 privileged, but the contents of that document and
6 any discussion about that document to the extent
7 the document is privileged.

8 So I believe I am entitled to know what
9 documents were provided to the Board. To the
10 extent that they are nonprivileged documents, I
11 would ask questions about them. To the extent it
12 is a privileged document, I obviously would not ask
13 questions about them.

14 MR. LeVEE: May I respond?

15 ARBITRATOR BIENVENU: Just a minute,
16 Mr. LeVee. I have a question.

17 What you say is well-established,
18 Mr. Litwin, is this a matter of New York law,
19 California law, U.S. federal law or all?

20 MR. LITWIN: I believe it is all of the
21 above, and I will represent that I checked with my
22 ethics counsel before embarking on these questions
23 here today. I would be happy to provide a written
24 opinion to the Panel if it so desires.

25 ARBITRATOR BIENVENU: Mr. LeVee, you want

1 to respond?

2 MR. LeVEE: Thank you, Mr. Chairman.

3 The Panel has already ruled that
4 California law applies, so I am going to stick with
5 California law.

6 Under California law, the fact that a
7 document exists, that's not privileged. The fact
8 that a lawyer gives the document to the client,
9 that is privileged because the lawyer is making a
10 determination of what materials to provide to the
11 client, and that is privileged.

12 So I agree with Mr. Litwin to the extent
13 that a document itself, the very existence of the
14 fact that a letter was sent, that's not a
15 privileged fact. I haven't argued that it was, but
16 the transmission by the lawyer to the client is
17 privileged. There are many cases in California
18 that agree with that concept.

19 MR. LITWIN: Mr. Chairman, if I might, I
20 am really at the end of these questions, so I think
21 we are having a debate over an academic point. But
22 if the Panel would like to hear further on this, I
23 would be happy to submit something in writing so we
24 do not take up any more of Mr. Disspain's time.

25 ARBITRATOR BIENVENU: So would you like,

1 then, to withdraw your question and move on to the
2 next topic?

3 MR. LITWIN: Yes, Mr. Chairman.

4 ARBITRATOR BIENVENU: Thank you.

5 Q. BY MR. LITWIN: Mr. Disspain, you stated
6 in your witness statement that on November 3rd the
7 Board, quote, "Chose not to take any action at that
8 time," close quote, concerning .WEB.

9 Did the Board take a vote on November 3rd?

10 A. No.

11 Q. Was a straw poll taken?

12 A. Not that I can recall.

13 Q. Was there a show of hands?

14 A. Not that I can recall.

15 Q. Was there a call of ayes and nays?

16 A. No, again, not that I can recall. It was
17 a decision to -- a choice, if you will, to do what
18 we would usually do, normally do with a
19 longstanding practice of not interfering when there
20 was an outstanding accountability mechanism.

21 Q. I will represent to you, Mr. Disspain,
22 that ICANN has stated at oral argument in this IRP
23 that the Board, quote, "decided to defer" --

24 A. But it wasn't a vote or a straw poll.

25 ARBITRATOR BIENVENU: Mr. Litwin, I think

1 you hadn't completed your question.

2 MR. LITWIN: To clear up the record, why
3 don't I ask my question again.

4 Q. So as I was saying, Mr. Disspain, at oral
5 argument ICANN's counsel represented that during
6 the November 3rd meeting, the Board, and I quote,
7 "decided to defer," end quote, "consideration of
8 Afiliast's complaints regarding the resolution of
9 the .WEB contention set."

10 Would you agree with that statement that
11 the Board took a, quote, "decision to defer"?

12 A. We decided that it was -- there were
13 outstanding accountability mechanisms.

14 ARBITRATOR BIENVENU: I'm sorry to
15 interrupt you. There was a break in the
16 communication, so we did not hear the beginning of
17 your question. Could I ask you to start again at
18 the very beginning of your answer?

19 THE WITNESS: The beginning of my answer.
20 I will do my best.

21 The Board discussed the briefing and it
22 decided that -- we had agreed that we would
23 continue the longstanding practice of not doing
24 anything where there is an outstanding
25 accountability mechanism.

1 I don't recall if there was a specific
2 agreement to not to deal with Afiliias' issues. It
3 was more -- my recollection, it was more it is not
4 appropriate for us to be doing anything in respect
5 to this because there are accountability --

6 (Discussion off the record.)

7 THE WITNESS: -- and our variable
8 practices.

9 MR. LeVEE: Mr. Disspain -- go ahead,
10 Mr. Chairman.

11 THE WITNESS: Would it be helpful if I
12 disconnect and reconnect? Would that be helpful?

13 ARBITRATOR KESSEDJIAN: Yes.

14 THE WITNESS: Shall I just do that?

15 ARBITRATOR KESSEDJIAN: Mr. Disspain,
16 Catherine Kessedjian, make sure you are close to
17 your Wi-Fi connection.

18 THE WITNESS: Close to my Wi-Fi
19 connection. Thank you. I will disconnect and
20 reconnect now.

21 ARBITRATOR BIENVENU: Yeah, okay.

22 (Whereupon a recess was taken.)

23 ARBITRATOR BIENVENU: You are back with
24 us. So let's -- do you have a live feed of the
25 transcript? Mr. Litwin, do you know where we left

1 off?

2 THE WITNESS: I do. I think --

3 ARBITRATOR BIENVENU: I think you should
4 repeat your question.

5 And, Mr. Disspain, you are going to have
6 to repeat your answer, I'm afraid.

7 THE WITNESS: Not a problem.

8 Q. BY MR. LITWIN: Just to summarize,
9 Mr. Disspain, because I think you generally do
10 recall what my question was, was -- would you agree
11 with ICANN's counsel's statement that the Board
12 took a, quote, "decision to defer," end quote,
13 during the November 3rd workshop session?

14 A. So what I said to you in response to that
15 question is I think the Board made a choice to
16 follow its longstanding practice of not doing
17 anything when there is an outstanding
18 accountability mechanism.

19 I cannot say that the Board proactively
20 decided, proactively agreed, proactively chose to
21 as to put to do -- as to do it as you put it, which
22 is to not pursue Afilias' complaints.

23 We just decided that it was our standard
24 practice not to do anything because there were
25 outstanding accountability mechanisms.

1 Q. So when you say that the Board did not
2 proactively decide, is it fair to say you received
3 a brief from legal counsel, questions were asked of
4 legal counsel, responses to those questions were
5 given, and then you moved on to the next item on
6 the agenda?

7 A. Yeah, it wasn't before us for a
8 decision -- for a formal decision unless we had
9 chosen to move to a formal decision.

10 What we chose to do was to follow our
11 longstanding practice.

12 MR. LITWIN: Excuse me for one second,
13 please.

14 (Whereupon a recess was taken.)

15 Q. BY MR. LITWIN: So, Mr. Disspain, I think
16 you testified earlier that certain members of staff
17 were present during the November 3rd workshop where
18 the .WEB issues were discussed, correct?

19 A. Correct, yes, that's correct.

20 Q. And that included Mr. Atallah?

21 A. That's my recollection.

22 Q. So Mr. Atallah, at the least, would have
23 heard the conversation and heard the questions that
24 were asked of legal counsel and the responses that
25 were given, correct?

1 A. Yes. If my recollection is correct and he
2 was in the room, then yes, he would have heard.

3 Q. The ICANN bylaws require that ICANN must
4 make, quote, "any action taken by the Board
5 publicly available within seven business days of
6 the conclusion of each meeting."

7 Are you aware of that, sir?

8 A. Yes, I am aware of what you just said,
9 yes.

10 Q. And that if the Board determines not to
11 disclose any action, that the Board must disclose
12 the reasons for that disclosure; is that also
13 correct?

14 A. That sounds right.

15 Q. Are you aware that Afilias sent a DIDP --
16 again, that's D-I-D-P for the court reporter -- a
17 DIDP request to ICANN in early 2018 demanding that
18 ICANN disclose the status of its .WEB investigation
19 and the .WEB contention set; are you aware of that?

20 A. I am aware there was a DIDP question from
21 Afilias, and I think that's the one you're
22 referring to, yes.

23 Q. Are you aware, in response to ICANN's
24 response to that DIDP request, Afilias filed a
25 reconsideration request?

1 A. Yep.

2 Q. Are you aware that ICANN, in its response
3 to the DIDP request, did not disclose anything
4 about the November 3rd workshop?

5 A. Yes, I think I would have been aware of
6 that at the time. At the time the reconsideration
7 request came in, I would have been aware of that,
8 yes.

9 Q. Are you aware that the Board denied
10 Afiliias' --

11 A. Yes.

12 Q. -- reconsideration request?

13 A. Yes.

14 Q. You state in your -- yes?

15 ARBITRATOR BIENVENU: Excuse me. The
16 Chair here. I am sorry to break your flow.

17 Could you, for my benefit, recall what
18 precisely was being sought by the DIDP and what was
19 the decision and then what precisely was being
20 sought by the reconsideration request?

21 MR. LITWIN: Mr. Chairman, I do not have
22 those documents in front of me, but I believe we
23 will have time that my team can compile those so we
24 can put those on the screen when I complete my
25 questions. Would that be acceptable, Mr. Chairman?

1 ARBITRATOR BIENVENU: Yeah, I don't need
2 to see the documents. I just need to have an
3 understanding exactly of what was being sought at
4 each step and what decision was at each step.

5 But if it takes too long to summarize it,
6 let's defer it.

7 MR. LITWIN: I just don't want to
8 misrepresent anything, Mr. Chairman. I would
9 prefer to take that later on in the examination, if
10 I might.

11 ARBITRATOR BIENVENU: That's fine. Please
12 proceed.

13 Q. BY MR. LITWIN: Mr. Disspain, you state in
14 your witness statement that it did not seem prudent
15 for the Board to interfere or preempt issues that
16 were the subject of accountability mechanisms
17 concerning .WEB; is that right?

18 A. Yes, that's correct.

19 Q. Now, as of November 3rd, 2016, Donuts had
20 filed a CEP concerning .WEB; is that correct?

21 A. Yes.

22 Q. And the claims at issue in the CEP had
23 also been brought in court as part of Ruby Glen's
24 litigation against ICANN; is that correct?

25 A. If you say so. I can't confirm that

1 personally.

2 Q. Is it your understanding that the claims
3 that were at issue, at least in the CEP, concerned
4 the conduct of ICANN's preauction investigation of
5 NDC?

6 A. I haven't looked at that for some time.
7 That sounds right, but I can't remember exactly. I
8 just know that there was an outstanding CEP and
9 that, therefore, waiting for that or any others
10 would be a prudent way to deal with the matter.

11 Q. Now, other than the Donuts CEP, as of
12 November 3rd, 2016, there were no other
13 accountability mechanisms pending concerning .WEB,
14 correct?

15 A. Not that I can recall, no, I don't believe
16 so.

17 Q. You state in your witness statement that
18 the Board also considered that there might be
19 future accountability mechanisms brought concerning
20 .WEB, correct?

21 A. That's correct.

22 Q. So there could be more CEPs, right?

23 A. There could be more CEPs. There could be
24 reconsideration requests. There could be DIDP
25 requests. There could be other considerations,

1 yes.

2 Q. Is a DIDP request an accountability
3 mechanism?

4 A. Probably not. Fair enough. It would be a
5 reconsideration request or a CEP.

6 Q. Or an IRP?

7 A. Or an IRP as an accountability mechanism,
8 that's correct.

9 Q. Now, if an IRP was brought, the bylaws
10 strongly encouraged and were designed to strongly
11 encourage complainants to bring a CEP before an
12 IRP, right?

13 A. Correct.

14 Q. Now, the purpose of a CEP is to narrow
15 claims in advance of filing an IRP; is that right?

16 A. Yeah, but I think it is also -- yes, but
17 in the main, it is also about getting the parties
18 together to discuss things and see if we can avoid
19 an IRP, if possible. But yes, you're right. The
20 purpose is to do exactly what you just said.

21 Q. I guess if everybody agrees you have
22 narrowed the claims completely and everybody can go
23 home happy, right?

24 A. Correct.

25 Q. So if ICANN determines if it agreed with

1 the claimant on any issue, that would help narrow
2 the claims in dispute in advance of filing an IRP,
3 right?

4 A. If they agreed. If the claimant and ICANN
5 agreed on something, absolutely it would.

6 Q. And if the ICANN --

7 A. By the way, if the claimant agreed with
8 ICANN or ICANN agreed with the claimant,
9 absolutely.

10 Q. Point taken. And if the ICANN Board
11 determined that it agreed with the claimant on any
12 issue, that would also help to narrow the claims in
13 dispute in advance of filing an IRP, right?

14 A. It would except for the fact that the
15 Board hasn't involved itself and didn't involve
16 itself in CEPs. The Board -- CEP is an
17 accountability mechanism. The accountability
18 mechanism takes place -- that particular
19 accountability mechanism takes place between ICANN
20 and the claimant, and so the Board wouldn't get
21 involved at all in that respect.

22 Q. Wouldn't it be consistent with the CEP for
23 the ICANN Board, if it had the opportunity to do
24 so, to consider the merits of a claim presented to
25 ICANN during CEP?

1 A. It never has. As far as I am aware, it
2 never has.

3 Q. You state in your witness statement that
4 you recall that once there were no pending
5 accountability mechanisms in June of 2018, that
6 ICANN staff changed the status of the .WEB
7 contention set from "on hold" to "resolved" and
8 NDC's status from "on hold" to "in contracting"; is
9 that right?

10 A. Yes.

11 Q. And Afilias' status had changed at the
12 same time from "on hold" to "will not proceed"; is
13 that also correct?

14 A. If you say so. I think that's a natural
15 corollary from the move that you previously laid
16 out, so yes.

17 Q. So just -- it would be ICANN's general
18 practice that if one member of a contention set's
19 status had changed to "in contracting," the other
20 members of the contention set would move to "will
21 not proceed," correct?

22 A. That sounds right.

23 Q. Are you aware that those changes were made
24 the very day after Afilias' reconsideration request
25 was denied?

1 A. No. I mean, I am aware they were made. I
2 wasn't -- I was aware -- not -- in contrast of the
3 fact it was the very day after.

4 Q. The ICANN Board did not meet to consider
5 the merits of Afilias' complaints during the
6 resolution -- regarding the resolution of the .WEB
7 contention set in June of 2018 after those
8 accountability mechanisms had expired, did it?

9 A. I don't think so. Again, you need to run
10 that past me one more time. Are you asking me that
11 we didn't meet to discuss what, Afilias'
12 complaints?

13 Q. Yes. So on November 3rd you stated that
14 the Board had --

15 A. Yes.

16 Q. -- chosen not to discuss any of the issues
17 regarding .WEB until all accountability mechanisms
18 had expired?

19 You write in your witness statement that
20 they had expired in June of 2018 --

21 A. Correct.

22 Q. -- and now my question is: Did the Board
23 meet in June of 2018, after those accountability
24 mechanisms had expired, to discuss those issues
25 regarding the .WEB?

1 A. That's a slightly different question. Yes
2 is the answer, the Boards did meet. Certainly the
3 Board Accountability Mechanisms Committee met. It
4 may have been that there were -- my recollection
5 would be that there were other Board members
6 present.

7 But originally you asked me specifically
8 to discuss Afilias' complaints, I think, and
9 that's -- I wouldn't say that. What I would say is
10 that we met -- we were briefed that after the
11 contract came off hold that that is what had
12 occurred, and, in fact, the Board Accountability
13 Mechanisms Committee was briefed prior to it coming
14 off hold, that the next step -- the next step in
15 the process would be that it would come off hold.

16 And it was also briefed that Afilias had
17 written letters, maybe a letter, I can't remember,
18 one or more than one, to say that if that happened,
19 if it came off hold, Afilias was going to launch an
20 accountability mechanism. I can't remember if it
21 says an IRP or not, but launch an accountability
22 mechanism. The BAMC was aware of that.

23 Q. Did the BAMC discuss the substance of
24 Afilias' complaints about how the resolution of the
25 .WEB set had occurred?

1 A. No.

2 Q. Did the Board during June of 2018 discuss
3 the merits of Afiliias' complaints regarding the
4 resolution of the .WEB contention set?

5 A. No.

6 Q. So, Mr. Disspain, as it turns out, this
7 was not the only period where there was no
8 accountability mechanism pending concerning .WEB.
9 I will represent to you that the Donuts CEP that we
10 discussed earlier terminated on January 30th of
11 2018 and that Donuts was given until February 14 of
12 2018 to file an IRP.

13 Are you aware of that?

14 A. That sounds right.

15 Q. And are you also aware that Donuts did
16 not, in fact, file an IRP by February 14?

17 A. Yes, I am aware of that.

18 Q. And Afiliias filed its first
19 reconsideration request on April 23rd, 2018.

20 Are you aware of that?

21 A. I am, indeed.

22 Q. So during the period when there was no
23 accountability mechanisms pending, the ICANN Board
24 held workshop sessions on March 9th and 11th.

25 Did the Board take up the merits of

1 Afilias' .WEB complaints during those workshops?

2 A. No.

3 Q. And on March 15th the Board held a regular
4 meeting, and by "regular meeting," I mean the
5 formal meeting that's called the regular meeting
6 that's set forth in ICANN's bylaws.

7 Did the Board consider the merits of
8 Afilias' .WEB complaints during the March 15
9 meeting?

10 A. No. The Board has, to my recollection,
11 not considered the merits of Afilias' complaint.

12 MR. LITWIN: Mr. Chairman, at this time I
13 would request that we would take our recess. I
14 realize it is a bit early, but I am coming towards
15 the end, and I would like to confer with my team
16 and also respond to your question about the
17 reconsideration requests.

18 ARBITRATOR BIENVENU: Surely. We will
19 take our 15-minute recess.

20 Mr. Disspain, you are not to discuss your
21 evidence with anyone during the break.

22 THE WITNESS: I shall not do so,
23 Mr. Chairman. Thank you very much. I will,
24 however, be leaving the camera. I believe the
25 expression is to take a comfort break.

1 ARBITRATOR BIENVENU: That's fine. Thank
2 you, Mr. Disspain.

3 MR. LITWIN: Thank you, Mr. Disspain.

4 THE WITNESS: Thank you.

5 (Whereupon a recess was taken.)

6 ARBITRATOR BIENVENU: Mr. Litwin, do you
7 wish to continue your cross-examination?

8 MR. LITWIN: I do, Mr. Chairman. Thank
9 you.

10 Chuck, if you could bring up Exhibit C-78,
11 please.

12 MR. VAUGHAN: Is this in the binder?

13 MR. LITWIN: This is not in the binder.

14 This is in response to the question the Chairman
15 asked of me earlier. I just wanted to have this up
16 to walk Mr. Disspain through it.

17 Q. Mr. Disspain, I will represent to you that
18 this is a letter that my colleague, Arif Ali, sent
19 to the Board of ICANN regarding a request for
20 update on ICANN's investigation of the .WEB
21 contention set and containing also a request for
22 documents pursuant to the DIDP.

23 So, Chuck, could we look at the top of
24 Page 2, please.

25 MR. LeVEE: Can I ask, Ethan, that you

1 just thumb through the whole thing so we can see
2 how long it is?

3 MR. LITWIN: Of course. It is a five-page
4 letter.

5 Chuck, if you could just scroll briefly
6 through all five pages, please.

7 Now, if you could go back to Page 2. If
8 you could just blow up the first -- the bullet and
9 the heading, rather, in the first two paragraphs --
10 three paragraphs. I'm sorry. That will be
11 easiest, yes.

12 Q. You will see, Mr. Disspain, this is
13 entitled "Request for Update on ICANN's
14 Investigation of .WEB Contention Set."

15 Do you see that, sir?

16 A. I do.

17 Q. Mr. Ali writes, "Therefore, pursuant to
18 ICANN's transparency obligations, we respectfully
19 request that ICANN provide an update on the status
20 of ICANN's investigation of the .WEB contention
21 set, including: (1) the steps (if any) taken by
22 ICANN to disqualify NDC's bid on the basis that NDC
23 violated the rules applicable to its application;
24 and (2) the steps (if any) taken by ICANN to assess
25 competition issues arising out of delegation of

1 .WEB to VeriSign."

2 Do you see that, sir?

3 A. I do.

4 Q. And turn to the next page. And if you
5 could just highlight the Point Heading II, Chuck.

6 This says, "Request for Documents Pursuant
7 to the DIDP," and you understand, Mr. Disspain,
8 that refers to the document information -- now I
9 can't remember. What is DIDP? Document
10 Information Disclosure Policy?

11 A. Yes.

12 Q. Yes. If we could turn to the next page,
13 Page 4 of the February 23rd, 2018, letter, Mr. Ali
14 requests the disclosure of, No. 6, "All documents
15 concerning any investigation or discussion related
16 to the .WEB contention set."

17 Do you see that, sir?

18 A. I do.

19 Q. So this DIDP request was sent on February
20 23rd of 2018.

21 Are you aware that ICANN responded to it
22 on March 24th?

23 A. I am aware that ICANN responded to it. I
24 have no idea what the date was.

25 Q. Are you aware that ICANN did not disclose

1 documents pursuant to this request?

2 A. Yes, I am.

3 Q. Are you aware that ICANN did not provide a
4 status update as requested pursuant to Point
5 Heading I?

6 A. Not specifically. I am aware that there
7 was a reconsideration request in respect to the
8 DIDP request, so matters that were part of that
9 reconsideration request, I would have been aware of
10 it at the time we were considering the
11 reconsideration request.

12 Q. I am just going to take you through the
13 timeline, Mr. Disspain.

14 On April 23rd, are you aware that Afiliias
15 filed a reconsideration request regarding the
16 denial of the DIDP request that had been sent in
17 February of 2018?

18 A. Again, I am aware they filed a
19 reconsideration request. I take your word for it
20 that it was on that date.

21 Q. And are you aware that also on April 23rd
22 Afiliias filed a second DIDP request requesting, in
23 sum and substance, the same information as in
24 February 23rd?

25 A. I do recall there was a -- I do recall

1 that there was a second DIDP request, yes.

2 Q. Now, on May 23rd, are you aware that ICANN
3 responded to this second DIDP request?

4 A. If you're asking me about the date, no.
5 If you're asking am I aware they responded, yes.

6 Q. And are you aware that they received the
7 same answer, which is essentially nothing?

8 A. Yes, I believe that that's correct.

9 Q. And then on June 5th, are you aware that
10 Afiliias' reconsideration request that had been
11 filed on April 23rd was considered within the BAMC?

12 A. So I am. Again, if you say it was on June
13 the 5th, I will accept that. I am aware of that.
14 I have a memory of that discussion, yes.

15 Q. And I believe it was your testimony from
16 earlier today that the BAMC recommended that
17 Afiliias' reconsideration request be denied; is that
18 a fair statement?

19 A. It is a little difficult to remember with
20 it, because there were two, but yes, I believe that
21 that's correct, we did, indeed.

22 Q. And are you aware that the -- that
23 Afiliias' reconsideration request was never
24 presented to the full Board?

25 A. I believe that under the bylaws at that

1 time, that's correct, yes.

2 MR. LITWIN: Mr. Chairman, does that
3 clarify your questions about the timeline and what
4 was requested under Afilias' DIDP request and
5 reconsideration requests?

6 ARBITRATOR BIENVENU: Yes, it does. Thank
7 you very much. All of these correspondence are in
8 the file, are in the record?

9 MR. LITWIN: They are, Mr. Chairman.

10 ARBITRATOR BIENVENU: Thank you very much.

11 Q. BY MR. LITWIN: Mr. Disspain, you
12 testified earlier today that ICANN and the ICANN
13 Board has a policy of not considering the merits of
14 complaints that are subject to outstanding
15 accountability mechanisms; is that correct?

16 A. No. I said that we had a longstanding
17 practice. And I'm sorry to be picky, but the term
18 "policy" in the context of ICANN has a different
19 meaning.

20 Q. And what is the difference between
21 practice and policy, in your mind, as a Board
22 member?

23 A. Well, policy is -- a policy in the ICANN
24 context is the policy that is set by the supporting
25 organizations for dealing with -- in the case of a

1 gTLD, the GNSO in the case of country codes and
2 ccNSO.

3 I didn't say "policy." I said "practice."
4 I don't use the word "policy" because that has a
5 different meaning to me.

6 Q. So the Board has certain practices that it
7 observes in its functioning; is that fair to say?

8 A. Yes. If you're implying that there's a
9 list of them somewhere, no. But there are things
10 that we have generally done over time, and our
11 practice has -- was in respect to new gTLDs, very
12 specifically, to avoid stepping in where there are
13 outstanding accountability mechanisms running.

14 Q. Is that practice documented anywhere?

15 A. Not -- I couldn't say, don't know.

16 Q. Is it in the bylaws, for example?

17 A. Not as far as I'm aware.

18 Q. Is there a document on ICANN's website
19 that reveals that practice?

20 A. Not as far as I'm aware, but it may be
21 that there are documents on the website that reveal
22 discussions that will reveal rationale. There may
23 be mentions in rationales and resolutions that say,
24 "In accordance with ICANN's longstanding practice."
25 They may appear in "whereas" clauses to

1 resolutions, you know, "whereas there was an
2 accountability mechanism outstanding." I don't
3 know. I can't say.

4 Q. So is it fair to say if I were to -- let
5 me just ask you, sir, just to bottom this out --

6 A. Sure.

7 Q. -- can you direct me to any resolution or
8 rationale that discloses this practice?

9 A. No. But I can direct you to numerous
10 occasions where -- there have been a number of
11 occasions where the Board has not done anything
12 because there have been accountability mechanisms
13 running. It's just our practice.

14 Q. Were those examples -- well, strike that.
15 Can you give me another example of when
16 the Board has not intervened because of an
17 outstanding accountability mechanism.

18 A. Not off the top of my head, and I wouldn't
19 do that without going away and doing some research,
20 but I can assure you they exist.

21 Q. So it's fair to say, sitting here today,
22 you could not direct me to any minutes or
23 transcripts of a Board meeting where that practice
24 was disclosed?

25 A. It would be fair to say that I cannot

1 direct you there today, but I can confirm that it
2 is a longstanding practice.

3 Q. Now, the practice, as you say, was
4 exercised during the November 3rd workshop session.
5 There was no transcript posted from that workshop,
6 correct?

7 A. No, there wasn't, and the discussion was
8 privileged, in any event.

9 Q. So is it fair to say that where this
10 practice had arisen previously was likely to be in
11 the context of a privileged discussion with
12 counsel?

13 A. It's possible. It's equally possible that
14 it could have been disclosed, as I said, as part of
15 a formal resolution as a parse action in a
16 "whereas" clause. I don't know.

17 So I don't think you can draw that
18 conclusion. I think you can say that it's --
19 either way is possible. I can only comment on this
20 particular occasion and tell you that it was
21 privileged.

22 Q. Okay. ICANN has collected hundreds of
23 millions of dollars in fees and auction proceeds as
24 a consequence of its administration of the new gTLD
25 Program; is that correct?

1 A. Yes, that's correct.

2 Q. In fact, just looking at auction proceeds,
3 ICANN has collected net revenues of approximately
4 \$240 million; is that correct?

5 A. That's about right.

6 Q. So if my math is correct, the .WEB auction
7 brought in somewhere north of 50 percent of that
8 \$240 million; is that fair to say?

9 A. If your math is correct, then yes, that is
10 correct.

11 Q. Now, ICANN represented to the community
12 that it would hold the auction proceeds in a fully
13 segregated bank and investment account earmarked
14 for use in a community-developed plan, correct?

15 A. You are going to have to tell me where we
16 represented that, because I don't recall that term.
17 I am not saying that -- I am not saying that -- I'm
18 saying that I don't remember us saying we would put
19 it in an entirely separate bank account, et cetera,
20 et cetera, et cetera. I don't remember any of
21 that.

22 Q. Okay. Are you aware that there is a CCWG,
23 a Cross Community Working Group, that was formed to
24 discuss the final plan for use of the funds; is
25 that correct?

1 A. I am aware of that, yes.

2 Q. Are you aware that they have yet to
3 develop a final plan for the use of those funds?

4 A. They have developed a number of proposals,
5 but the plan is as of yet still forming. We
6 anticipate we will be sending a report through to
7 the Board relatively soon.

8 Q. Since VeriSign paid the \$135 million
9 winning bid to ICANN, that money has earned
10 interest; is that fair to say?

11 A. Yes, I believe so. I wouldn't have any of
12 the details.

13 Q. Is it fair to say that ICANN has, in fact,
14 earned over \$10 million in interest on the auction
15 funds that it is holding in its bank in investment
16 accounts?

17 A. I have no idea. I could find out, but I
18 don't know.

19 Q. In the event that ICANN is required to
20 refund part or all of the \$135 million to VeriSign,
21 would it need to pay interest on that?

22 A. I don't know.

23 Q. If it is required to pay interest, would
24 it be a fair estimate to say that it is a
25 proportion relative to the overall value of the

1 \$135 million, as opposed to the full corpus that's
2 in that account?

3 A. I don't understand the question.

4 MR. LeVEE: Okay.

5 MR. LITWIN: I will rephrase. That was a
6 terrible question.

7 Q. Mr. Disspain, assuming my math is correct
8 and the \$135 million winning bid that was paid on
9 .WEB represents more than 50 percent of the corpus
10 of that investment account where the auction
11 proceeds are held --

12 A. Yes.

13 Q. -- is it fair to say that if ICANN is
14 required to refund that winning bid payment to
15 VeriSign and it had to pay interest on that, that a
16 reasonable estimate would be somewhere over 50
17 percent of the interest earned to date on that
18 account?

19 A. Well, there are so many ifs in that
20 question it is not helping me to answer it. I
21 don't know.

22 If you're saying -- I mean, if you're
23 asking me if you took the full amount of the money
24 and you got paid 1 percent interest on it and if
25 ICANN was refunding that money to VeriSign and it

1 was required to refund the portion of the interest,
2 then obviously it seems to me logical to say that
3 the 1 percent on that money would be paid. But I
4 don't know for sure, and I have no idea what the
5 actual arrangements are off the top of my head.

6 Q. Is it true that ICANN has already moved
7 \$36 million out of this account that holds the
8 auction proceeds and moved it into ICANN's reserve
9 fund?

10 A. It is correct that ICANN has repaid the
11 reserve fund with the amount of money calculated to
12 have been the cost of the gTLD Program, but that
13 is -- if you say that's 36 million, again, I'll
14 take your word for it. Off the top of my head, I
15 can't remember the exact amount. But yes, that is
16 correct, the amount, the costs of the new gTLD
17 Program have been refunded.

18 Q. And a reserve fund is used to pay
19 operating expenses when a company runs a deficit;
20 is that right?

21 A. Well, we could get into an extraordinarily
22 long discussion about what reserve funds are for
23 and whether it is a reserve fund and/or a
24 contingency fund, whether it should be the amount
25 of money to pay to wind down an organization in the

1 event that it's being wound up, et cetera, et
2 cetera. So I would prefer not to provide a
3 cast-iron definition of what a reserve fund is for.
4 It is entirely dependent on the organization
5 itself.

6 And ICANN has dipped into the reserve fund
7 on occasions and has a policy -- the Board has an
8 agreement, rather, to try to increase the amount of
9 the reserve fund to a reasonable amount. I can't
10 remember the exact number off the top of my head.

11 Q. When you say that ICANN has dipped into
12 the reserve fund, that is from time to time to pay
13 operating expenses, correct?

14 A. It pays some of the New gTLD expenses out
15 of its reserve funds, so yes. If you want to
16 characterize that as operating expenses, yes,
17 that's correct.

18 MR. LITWIN: Chuck, can you pull up Module
19 4 of the AGB, please, the applicant guidebook, and
20 I would refer your direction to Page 4-19.

21 ARBITRATOR BIENVENU: Is that in the
22 witness binder, Mr. Litwin?

23 MR. LITWIN: I am going to check, but I
24 don't believe it is.

25 ARBITRATOR BIENVENU: Okay. That's fine.

1 We will look at it on the screen.

2 MR. LITWIN: Oh, it is. It is Tab 6.

3 THE WITNESS: My strong advice is to tell
4 me to look at it on the screen instead of the
5 binder.

6 MR. LITWIN: Yeah, I think we have --
7 Chuck, I need Module 4, not Module 6. I think it
8 is Exhibit 314, if that helps. Okay. This is not
9 what I asked for.

10 Mr. Chairman, I am just going to go off
11 the record, but I think I am done with the witness.
12 May I have two minutes?

13 MR. ALI: Wait a second. You are not done
14 with the witness, Ethan. Why don't you and I just
15 have a chat first.

16 MR. LITWIN: Yeah, that's fine. That's
17 what I was going to say.

18 ARBITRATOR BIENVENU: Okay. So let's
19 pause for a few minutes to give counsel for the
20 claimant an opportunity to consult.

21 THE WITNESS: Mr. Chairman, are you okay
22 if I disappear briefly?

23 ARBITRATOR BIENVENU: I think you will be
24 made to disappear, but you may disappear.

25 THE WITNESS: Thank you so much. I

1 appreciate it.

2 (Whereupon a recess was taken.)

3 ARBITRATOR BIENVENU: All right. We are
4 ready to resume.

5 Mr. Disspain, I believe Mr. Litwin has
6 more questions for you.

7 Q. BY MR. LITWIN: Mr. Disspain, thank you
8 very much. I have just a couple of questions for
9 you.

10 Earlier, a few minutes ago, I represented
11 to you that ICANN had represented to the community
12 that it would hold the auction proceeds in a fully
13 segregated bank account, investment account
14 earmarked for community use.

15 I'd like to direct your attention to
16 Module 4 of the guidebook. This is Exhibit C-3.

17 Do you see that, sir, on your screen?

18 Mr. Disspain, I'll ask you again, do you
19 see Module 4 of the guidebook up on your screen
20 there?

21 A. Yes, I do.

22 Q. If we could turn to Page 4-19 of the
23 guidebook, which I understand is on Page 203 of the
24 PDF, and on that page, if you can bring up that
25 footnote on the bottom, please, you will see in

1 that second paragraph that the guidebook says that,
2 "Any proceeds from auctions will be reserved and
3 earmarked until the uses of funds are determined."

4 And then it says -- I am trying to find
5 where it says this -- that, "Possible uses of
6 auction funds include formation of a foundation
7 with a clear mission and transparent way to
8 allocate funds to projects that are of interest to
9 the greater Internet community."

10 Do you see that?

11 A. I do. That's what the working group is
12 currently working on, yes.

13 Q. And if you can -- if I could now call up
14 Exhibit 314, which are the Board resolutions.

15 MR. LeVEE: Is that in the binder?

16 MR. LITWIN: It is not.

17 Q. So these are -- if we could turn to Page
18 45, please.

19 MR. LeVEE: Ethan, if you would give me a
20 second with the exhibits. You are faster than I am
21 at putting them up, and I have to get copies.

22 MR. LITWIN: I understand that. Please
23 let me know when you're ready, Jeff.

24 MR. LeVEE: Thank you. Is it C-314?

25 MR. LITWIN: It is -- I believe it is. My

1 team has told me it is 314.

2 MR. LeVEE: Okay. I have got it. Thank
3 you. For the record, it is C-314, I believe.

4 Q. BY MR. LITWIN: Can we blow up Page 45,
5 please?

6 A. What is it I am actually looking at?

7 Q. These are the Board resolutions from
8 October 25th, 2018.

9 Chuck, can you just blow up that page?
10 I'm sorry, I apologize.

11 Arif, if you have anything on this, let me
12 know, but I'm sorry, I don't see the quote.

13 MR. ALI: Just one second, please.

14 ARBITRATOR KESSEDJIAN: I don't see the
15 Chair of the Tribunal anymore.

16 ARBITRATOR BIENVENU: I have lost my
17 connection, but I can still see the proceedings
18 using our administrative secretary's screen. I am
19 in the process of reconnecting.

20 ARBITRATOR KESSEDJIAN: Okay. You'll have
21 the time to find out what you want to show us.

22 (Discussion off the record.)

23 MR. LITWIN: Mr. Chairman, I would just
24 ask that, given that I cannot find what my team is
25 trying to refer to me, that perhaps Mr. Ali could

1 ask whatever question he is asking me to ask the
2 witness, just to be more efficient, given the time
3 limits.

4 ARBITRATOR BIENVENU: Mr. LeVee, any
5 objection to that?

6 MR. LeVEE: If it is one or two questions,
7 I have no objection to that.

8 ARBITRATOR BIENVENU: Mr. Ali, good
9 afternoon to you, and please proceed.

10 MR. De GRAMONT: Mr. Chairman, this is
11 Mr. De Gramont. Mr. Ali is just trying to find the
12 relevant page. This is one of the challenges of
13 having everybody spread out in different places,
14 and the associate who knows the documents best is
15 at home in Pennsylvania.

16 So if you'll just bear with us for another
17 minute, we'll be right back. Thank you.

18 ARBITRATOR BIENVENU: Thank you.

19 (Whereupon a recess was taken.)

20 MR. LeVEE: I wonder if the Panel has
21 questions. They could begin, conscious of the
22 time.

23 ARBITRATOR BIENVENU: Does that foreshadow
24 the length of your redirect, Mr. LeVee?

25 MR. LeVEE: It is only because I do not

1 know how long the members of the Panel will ask
2 questions.

3 ARBITRATOR BIENVENU: I was joking.

4 I think I prefer to wait until the
5 cross-examination is completed.

6 (Whereupon a recess was taken.)

7 ARBITRATOR BIENVENU: Please proceed,
8 Mr. Ali.

9 MR. ALI: Thank you, Mr. Chairman.

10 CROSS-EXAMINATION

11 BY MR. ALI

12 Q. Mr. Disspain, good afternoon. This is
13 Arif Ali here. It's been a long time since we have
14 seen each other.

15 A. It has, indeed.

16 Q. At the bottom of Page 66, you see that
17 language that says "Resolved"?

18 A. Yeah.

19 Q. "The Board directs the president and CEO,
20 or his designee(s)"?

21 A. Yep.

22 Q. Then we go to the top of the next page,
23 "to take all actions necessary to increase the
24 Reserve Fund through annual excesses from the
25 operating fund of ICANN organization by a total

1 amount of 32 million over a period of seven to
2 eight years starting with fiscal year 2019."

3 So my question is: If that money -- those
4 are moneys that are coming from the auction fund;
5 is that correct?

6 A. No. That's a resolution to direct the
7 president and CEO to take all actions necessary to
8 increase the reserve fund through annual excesses
9 from the operating fund by 32 million over a period
10 of seven to eight years. If they were to take
11 funds from the auction proceeds fund, then it would
12 be able to come out in one go and it would say
13 "auction proceeds funds" rather than "operating
14 fund."

15 Q. All right. Then let's continue down
16 below.

17 A. Yep. That's the resolution that deals
18 with the repayment of the costs of the -- of the
19 new gTLD Program, I believe.

20 Q. So what you're telling us is that no money
21 has been taken from the proceeds of the auctions to
22 fund the reserve fund?

23 A. That is correct. I am telling you that
24 one payment has been made -- well, a payment, I
25 don't know if it was one, but the new gTLD Program

1 was costed to be a cost of 36 million, and the
2 Board resolved that the auction proceeds should --
3 the 36 million should be taken from the auction
4 proceeds.

5 And I believe from memory that that means
6 that the Cross Community Working Group is working
7 on the principle that the funds for .WEB being cast
8 aside to a different category, that there is
9 roughly speaking, ignoring those, roughly speaking,
10 some 80-something to \$3 million left of the
11 proceeds, apart from the .WEB proceeds, and that is
12 the number they are working on, because no one has
13 any idea what will happen to the .WEB proceeds at
14 this stage.

15 And there is a separate resolution above
16 that which has to do with ongoing replenishment of
17 the reserve fund over a period of seven to eight
18 years, which is the Board's decision based on the
19 fact that the Board believes that that should be
20 set at a particular level, and I cannot remember
21 off the top of my head what that level is.

22 Q. None of those moneys from the reserve fund
23 would come from the auction proceeds; that's your
24 testimony?

25 A. Didn't say that. I said that the \$36

1 million from the auction proceeds that you referred
2 to here is repayment to the -- for the new GTLD
3 process -- sorry, new gTLD Program costs.

4 The previous resolution refers very
5 specifically to \$32 million being funded into the
6 reserve fund from annual excesses from the
7 operating fund of ICANN over seven to eight years,
8 which is not the same as the auction proceeds.

9 MR. ALI: Thank you, Mr. Disspain. I have
10 no further questions.

11 ARBITRATOR BIENVENU: Thank you, Mr. Ali.

12 Mr. Litwin, does that complete the
13 cross-examination of Mr. Disspain by the claimant?

14 MR. LITWIN: It does, Mr. Chairman.

15 Mr. Disspain, thank you very much, and I
16 do apologize about the kerfuffle at the end here.

17 THE WITNESS: There is nothing to
18 apologize for except possibly your binder.

19 ARBITRATOR BIENVENU: So do my colleagues
20 have questions for Mr. Disspain, or shall I begin
21 and you have supplementary questions and you go
22 after? What's your preference?

23 ARBITRATOR CHERNICK: Go ahead, Pierre.

24 ARBITRATOR KESSEDJIAN: Yeah, I think
25 that's good if you go ahead.

1 ARBITRATOR BIENVENU: Mr. Disspain, just a
2 couple of questions.

3 Turning your mind back to the November
4 2016 workshop session concerning .WEB, and
5 repeating the caution not to disclose any
