6 privileged communication or any privileged advice,
7 do you know whether, as part of the briefing that
8 was provided to the Board at that session, the
9 staff of ICANN or, you know, what I think you
10 referred to as ICANN org had taken a position and
11 that position was conveyed to the Board as to
12 whether the NDC bid complied with the program? Was
13 there an ICANN staff position on this question?

14 THE WITNESS: I think I understand your
15 question, Mr. Chairman.

16 MR. LeVEE: Mr. Chairman, I am really
17 uncomfortable making this objection, but I do think
18 you are asking about the contents of a privileged
19 communication.

20 ARBITRATOR BIENVENU: Because you -- well,
21 I do not want to do so.

22 Basically it is a question I asked
23 Ms. Willett, I believe, what I tried to explore
24 with Ms. Willett, but if you're saying that
25 whatever position ICANN staff would have taken

1 would reflect the advice of counsel, I am prepared
2 to move forward.

3 MR. LeVEE: I am saying that.

4 ARBITRATOR BIENVENU: Okay. Very well.

5 Mr. Disspain -- and forgive me, Mr. LeVee,
6 I really didn't want to elicit privileged
7 communications or advice.

8 MR. LeVEE: Fair enough.

9 ARBITRATOR BIENVENU: Mr. Disspain, did
10 the Board discuss at the November 2016 working
11 session that its decision not to take any action
12 regarding the claims arising from the .WEB auction
13 should not be made public, including should not be
14 communicated to those who were within the
15 contention set? Was that part of the discussion?

16 THE WITNESS: No, I don't believe it was.

17 ARBITRATOR BIENVENU: And you as a Board
18 member, do you know that the decision taken by the
19 Board at that workshop session was only
20 communicated to the claimant as is alleged by the
21 claimant in the course of these proceedings?

22 THE WITNESS: Forgive me, Mr. Chairman. I
23 am not sure I actually understand your question.

24 ARBITRATOR BIENVENU: Let me reformulate
25 it.

1 Are you aware, as you sit here today, that
2 the decision taken by the Board during that
3 workshop was only communicated to Afiliias in the
4 course of the proceedings in this IRP, so just very
5 recently?

6 THE WITNESS: No. I am now aware of that.
7 I wasn't aware of that at the time. I am aware of
8 it because it's been mentioned.

9 ARBITRATOR BIENVENU: At the November 2016
10 session, Mr. Disspain, you were made aware that
11 Afiliias -- and you might have been aware of that
12 from prior correspondence -- was taking the
13 position that NDC's bid, supported as it was by
14 VeriSign through an agreement with NDC, that
15 Afiliias was taking the position that that bid did
16 not comply with the guidebook and the auction
17 rules, correct?

18 THE WITNESS: Yes, I am aware that Afiliias
19 had said that in correspondence.

20 ARBITRATOR BIENVENU: So after the
21 November 2016 working session, you knew as a Board
22 member that the question of whether the bid was
23 compliant or not was a pending question, one on
24 which the Board had not pronounced and had decided
25 not to address in November 2016; is that correct?

1 THE WITNESS: Yes. I was -- I knew that
2 we had not -- that it had not been addressed.
3 Well, no -- yes, you're right. I knew that.

4 ARBITRATOR BIENVENU: Right. And by early
5 2018, the situation as I have just described it,
6 remained unchanged; is that correct?

7 THE WITNESS: Yes.

8 ARBITRATOR BIENVENU: Can you look now at
9 Paragraphs 12 and 13 of your witness statement?

10 THE WITNESS: Yes.

11 ARBITRATOR BIENVENU: And there you refer
12 to the events of the first half of the year 2018?

13 THE WITNESS: Correct.

14 ARBITRATOR BIENVENU: So first you
15 referred to the DOJ announcement in January 2018
16 that it had closed its investigation?

17 THE WITNESS: Correct.

18 ARBITRATOR BIENVENU: Then to the
19 withdrawal by Donuts of its CEP?

20 THE WITNESS: Correct.

21 ARBITRATOR BIENVENU: And then the denial
22 by the Board of Afiliias' reconsideration request
23 regarding its document requests, correct?

24 THE WITNESS: Correct.

25 ARBITRATOR BIENVENU: And then you come to

1 ICANN's decision in June 2018 to change the status
2 of the .WEB contention set and send a draft
3 Registry Agreement for .WEB to NDC?

4 THE WITNESS: Correct.

5 ARBITRATOR BIENVENU: And in Paragraph 13,
6 you mention that this was a decision of ICANN
7 staff.

8 Do you see that?

9 THE WITNESS: I do.

10 ARBITRATOR BIENVENU: Does that mean that
11 the Board was not consulted about this decision?

12 THE WITNESS: Well, it depends on what you
13 mean by the word "consulted." But let me tell you
14 what actually happened. Perhaps that would be
15 helpful.

16 Again, I can't give you dates, but I can
17 tell you that prior to the -- I think I have
18 already said this to Mr. Litwin. Prior to the
19 lifting of the hold on the contention set, the
20 matter was discussed in the Board Accountability
21 Mechanisms Committee, I believe as part of its
22 general litigation update, but I am not certain.

23 In that discussion we were told that the
24 next step in the process was for -- should all of
25 the accountability mechanisms be dealt with, was

1 for it to come off hold, but that Afiliias had made
2 it abundantly clear that in the event that it did
3 come off hold, that they would file an IRP.

4 And we were also clear as a Board
5 committee that Afiliias would be aware that it had
6 come off hold because all of the contention set
7 members would be informed that it had come off
8 hold. So that occurred.

9 And then secondly, a couple days -- again,
10 I don't know exactly, I can't remember exactly
11 when -- after it had actually come off hold, there
12 was another discussion at which we were told that
13 it had come off hold and that an IRP claim from
14 Afiliias was expected -- I am going to paraphrase
15 here -- at any minute, so to speak, because that is
16 what they said they would do.

17 I hope that's helpful and clear.

18 ARBITRATOR BIENVENU: Yes, it is. In
19 fact, it kind of anticipates what was my next
20 question. When you say in the penultimate sentence
21 of Paragraph 13, "Given the letters we had received
22 from Afiliias threatening to take legal action in
23 such circumstances, I fully expected, as did
24 others, that Afiliias would immediately initiate
25 another Accountability Mechanism" --

1 THE WITNESS: Yes.

2 ARBITRATOR BIENVENU: -- so that suggests
3 that you as a Board member actually turned your
4 mind to this issue. And in light of that
5 expectation -- well, I shouldn't say that, but you
6 turned your mind to this, and you anticipated that
7 an IRP would be coming?

8 THE WITNESS: We as a group meeting --
9 again, I'm sorry. I cannot remember. I am fairly
10 sure it was the Board Accountability Mechanisms
11 Committee meeting, but I imagine there would have
12 been other Board members present as well. We were
13 very clear that our understanding was that Afilias
14 had said categorically that they would launch an
15 IRP in the event that the contention set was taken
16 off hold.

17 ARBITRATOR BIENVENU: By ICANN sending a
18 draft Registry Agreement to NDC for execution,
19 would you consider, Mr. Disspain, that ICANN was,
20 in effect, expressing disagreement with those who
21 claimed that NDC's bid was noncompliant and that
22 the auction rules had been breached by NDC because
23 of its agreement with VeriSign?

24 THE WITNESS: No, I don't think so. I
25 think that ICANN was taking the next step in its

1 process. You know, there are two -- without
2 wishing to place any weight on either side in this
3 matter, there are two sides. There are the Afilias
4 side, who are bringing this IRP; and then there are
5 others on the other side who believe that they are
6 entitled to the TLD. So both sides need to be
7 treated fairly by ICANN. The best way for ICANN to
8 do that is to follow its process.

9 To be clear, having been told in no
10 uncertain terms by Afilias that they were intending
11 to lodge an IRP, that is what we expected to
12 happen, and that is exactly what did happen. I
13 don't think you can read into the step, the process
14 step, a motive, if you will, that says we,
15 therefore, believe that this is the right thing to
16 do.

17 ARBITRATOR BIENVENU: Let us assume,
18 Mr. Disspain, that contrary to your and your
19 colleagues's expectations, Afilias had not
20 commenced an IRP, what would have happened then?
21 Would ICANN have executed the Registry Agreement
22 that NDC had promptly signed and returned to ICANN?

23 THE WITNESS: Well, Mr. Chairman, I can't
24 say what would have happened. I can say that the
25 Board would have known that Afilias had not filed

1 an IRP. I can say that the Board -- when I say
2 "the Board," I am mainly talking about the
3 Accountability Mechanisms Committee, but for the
4 purposes of this discussion, it amounts to the same
5 thing, and that the Board would have known that the
6 contract -- or the BAMC had known that the contract
7 had been returned, and I can't say what the Board
8 would have done in those circumstances. But I can
9 say that the Board would have been aware.

10 ARBITRATOR BIENVENU: Are you aware,
11 Mr. Disspain, that in November 2018, after Afilias
12 filed its IRP, ICANN took the position in the
13 context of the IRP that it would only keep the dot
14 contention set on hold until 27 November 2018, so
15 as to give an opportunity to Afilias to file a
16 request for emergency relief, barring which --
17 barring which ICANN would take the contention set
18 off of its on-hold status?

19 THE WITNESS: Yes, I am.

20 ARBITRATOR BIENVENU: You were aware of
21 that?

22 THE WITNESS: And I am aware that this is
23 the practice in respect to IRPs, that the process
24 itself -- it differs slightly from the way that
25 reconsideration requests are dealt with, in that

1 there is a mechanism by which the claimant can
2 bring a -- I think you used the expression
3 "emergency relief claim" to stay the moving
4 forwards. So yes, I am aware of that and that that
5 is the practice.

6 But I am not ICANN's lawyer, and what
7 lawyers instructed, advised us to do, I can't
8 comment.

9 ARBITRATOR BIENVENU: And what I'm
10 interested in asking you, Mr. Disspain, is whether
11 in so doing, ICANN was again taking a position that
12 might have resulted in .WEB being awarded to NDC,
13 delegated to NDC without the Board having the
14 opportunity to determine the question that it chose
15 not to pronounce upon in November 2016, namely
16 whether the bid was compliant?

17 THE WITNESS: So the answer to that
18 question is, again, I need to say I don't know what
19 the Board would have done, but to take the leap to
20 say does ICANN's position in the legal proceedings
21 imply that the delegation would have taken place is
22 a leap -- is not a leap I would take because I
23 don't know what the Board would have done.

24 And it is not -- it is impossible to
25 suggest that the Board would have stepped in, but I

1 don't know. I can't say whether they would or
2 wouldn't. That is purely a hypothetical.

3 ARBITRATOR BIENVENU: Now, I assume that
4 you are aware that in this IRP, as we speak today,
5 ICANN takes no position as to whether NDC's bid
6 violated the guidebook or not, you're aware of
7 that?

8 THE WITNESS: Yes.

9 ARBITRATOR BIENVENU: So the matter, then,
10 comes before -- the matter comes before the IRP
11 Panel, and the Panel doesn't have the benefit of
12 ICANN's view on the -- on whether the bid is
13 compliant or not even though the guidebook emanates
14 from ICANN.

15 You don't think it would have been useful
16 to the Panel to have the view of ICANN as to the
17 reach or the interpretation of the guidebook in
18 relation to an agreement like the DAA?

19 THE WITNESS: Well, I think two things,
20 Mr. Chairman. I think that the Board -- the Board
21 has rigorously stuck to its practice and its
22 processes.

23 And secondly, that the scope of the Panel,
24 as I understand it, doesn't stretch to a
25 discussion -- or, rather, a decision in respect to

1 the actual DAA itself.

2 Now, I am not holding myself out as an
3 expert in this respect. I am merely reading the
4 bylaws. That's my understanding. So I can only
5 say what I understand.

6 ARBITRATOR BIENVENU: I think you have
7 very accurately described the position of ICANN
8 before the Panel, but the claimant is taking a
9 different position.

10 THE WITNESS: I understand that.

11 ARBITRATOR KESSEDJIAN: Mr. Chairman, can
12 I ask a follow-up question on this one without
13 interrupting you, or do you want to finish your
14 questions?

15 ARBITRATOR BIENVENU: No, if it is a
16 follow-up question.

17 ARBITRATOR KESSEDJIAN: Mr. Disspain, this
18 is Catherine Kessedjian. I am speaking from Paris,
19 so we are actually closer.

20 THE WITNESS: Is it as hot there as it is
21 here?

22 ARBITRATOR KESSEDJIAN: It's very warm.

23 I have a follow-up question on this very
24 question of how you understand the scope of the
25 jurisdiction of the IRP. It is one of the issues

1 we have.

2 You just said that you don't think -- you
3 were careful, and if I rephrase in a way that is
4 not correct, please interrupt me.

5 But you said that you don't think that the
6 IRP jurisdiction will stretch to whether or not the
7 DAA was validly entered into considering the
8 guidebook rules; is that correct?

9 THE WITNESS: Yes. That is, in essence,
10 what I said, yes.

11 ARBITRATOR KESSEDJIAN: Okay. So if you
12 consider this is not our jurisdiction, whose
13 jurisdiction is that? Where does an applicant go
14 to have this question resolved?

15 THE WITNESS: Well, Professor, that is an
16 extraordinarily good question, and I believe that
17 at the end of the day, the answer may well be that
18 it is a matter for the Board. But that's just my
19 opinion, and I am not here to debate the legal
20 issues.

21 The IRP itself is -- the bylaws are very
22 clear about what an IRP does and what an IRP does
23 not do.

24 Let me suggest something to you as a sort
25 of answer to your question.

1 The Board -- I was asked earlier on what
2 would have happened if the Board had not -- if the
3 IRP had not happened, and I said I don't know
4 because I don't know what the Board would have
5 done.

6 What I do know is what the Board will do
7 with respect to this IRP. If the IRP finds in
8 favor of ICANN, the Board is going to consider the
9 decision of that IRP, and what the Board will do is
10 to take very seriously -- it will operate within
11 its fiduciary responsibility and its responsibility
12 to the community, within its responsibility to
13 ICANN's mission and bylaws and public interest, and
14 it will take very seriously anything that the Panel
15 says by way of recommendation outside of its
16 decision on the finer points of what the Panel's
17 scope extends to in respect to the bylaws.

18 Now, I can't say what the Board will do,
19 and I can't say that the Board will necessarily do
20 anything. But what I can say is that this Panel
21 operates under the terms of the bylaws, and I think
22 my understanding of an interpretation of bylaws is
23 the correct one.

24 I don't know if that's helpful.

25 ARBITRATOR KESSEDJIAN: I am just

1 surprised by the beginning of your answer, or
2 beginning of your explanation, for which I am very
3 grateful.

4 Sorry, I don't have the feed of the court
5 reporter.

6 THE WITNESS: Not a problem.

7 ARBITRATOR KESSEDJIAN: Did you say that
8 the Board would take seriously only if the IRP was
9 in favor of ICANN?

10 THE WITNESS: No, no, no. I was not
11 suggesting that at all, no. What the Panel decides
12 is what the Panel decides. I was simply suggesting
13 that if the Panel -- I was simply saying that the
14 Panel -- it is open to the Panel to make its
15 decision.

16 And if the Panel, on making its decisions,
17 makes a series of recommendations, those
18 recommendations are something that we treat very
19 seriously by the Board.

20 ARBITRATOR KESSEDJIAN: Thank you very
21 much.

22 THE WITNESS: That's all I was trying to
23 say. I hope that's clearer.

24 ARBITRATOR KESSEDJIAN: Yes, indeed.

25 THE WITNESS: I apologize if we missed

1 each other.

2 ARBITRATOR KESSEDJIAN: No, no, that's
3 great. Thank you.

4 ARBITRATOR BIENVENU: My last question,
5 Mr. Disspain, is the following: I am speaking
6 under the control of Mr. LeVee, but I understand --
7 not because we are treading near privilege, but
8 because I am about to summarize the position of
9 ICANN.

10 THE WITNESS: Okay. Thank you.

11 ARBITRATOR BIENVENU: I think I am correct
12 in describing ICANN's position in this IRP as being
13 that the proper scope of the IRP requires the Panel
14 to limit itself in deciding whether in making the
15 decision that it did in November 2016, the Board
16 acted reasonably.

17 My question to you is: Let us imagine
18 that we accept that position and that we refuse the
19 claimant's invitation to pronounce on the question
20 of whether the NDC's bid was compliant with the
21 program rules, then what will happen then and when
22 will the Board have an opportunity to resolve that
23 question and to pronounce upon it?

24 THE WITNESS: Thank you. I am going to,
25 in some respects, repeat what I just said to

1 Professor Kessedjian, but in the context of your
2 question. So when will the Board have an
3 opportunity?

4 My recollection is that the Board, there
5 is a set time frame in which the Board must address
6 any decision made by the Panel. I can't remember
7 what it is off the top of my head, but there is a
8 set time frame. So that is the answer, whatever
9 the set time frame is, that's the answer to that
10 question.

11 In respect to what the Board will do, I
12 don't know what the Board will do. Let me say it
13 again. I believe that the Board would take very
14 seriously any recommendations made by this Panel
15 outside of its decision within scope. This Panel
16 would have heard everything, and this Panel will
17 be -- what it says in respect to its decision is
18 its decision.

19 If it wants to make a series of
20 recommendations outside of its decision, I am
21 saying, when the Board looks at the decision of
22 this Panel, I would expect the Board to take those
23 recommendations very seriously.

24 ARBITRATOR BIENVENU: My question was
25 slightly different --

1 THE WITNESS: I apologize.

2 ARBITRATOR BIENVENU: -- than Professor
3 Kessedjian's question.

4 My question was: If we accept ICANN's
5 submission that in making the decision that it did,
6 the Board acted reasonably, and accept the further
7 submission by the respondent that we should go no
8 further, then the question that was not addressed
9 in November 2016 and that remains as yet
10 unaddressed, when will that question be resolved?

11 THE WITNESS: I don't know. All I can
12 tell you is that pursuant to the decision of this
13 Panel, the Board will meet and the Board will
14 consider what this Panel has to say. But I can't
15 give you -- I apologize. I can't give you a
16 clearer answer than that.

17 ARBITRATOR BIENVENU: No, that's fair
18 enough. Thank you. Thank you, Mr. Disspain.

19 Any questions from my colleagues?

20 ARBITRATOR CHERNICK: No, thank you.

21 ARBITRATOR KESSEDJIAN: No other
22 questions.

23 ARBITRATOR BIENVENU: Mr. LeVee, any
24 redirect?

25 MR. LeVEE: I do have some redirect. I am

1 mindful that it is seven minutes before we are
2 supposed to conclude, and if it's possible to go
3 over just a couple, I'll do my best to be
4 efficient.

5 ARBITRATOR BIENVENU: Thank you,
6 Mr. LeVee.

7 REDIRECT EXAMINATION

8 BY MR. LeVEE

9 Q. Mr. Disspain, thank you for staying with
10 us.

11 Let me return you briefly to the November
12 2016 meeting.

13 Do you recall anyone at the meeting
14 voicing opposition to the decision that was taken?

15 A. Do you mean voicing opposition to deciding
16 that we would not do anything pending the
17 accountability mechanisms running their course?

18 Q. Yes.

19 A. No, I do not.

20 Q. You were asked about whether the bylaws
21 required the publication of a decision from a
22 workshop like this.

23 A. Yes.

24 Q. I am not going -- I don't have the time to
25 take you through all the bylaws.

1 Do you have an understanding of whether
2 the bylaws require publication of actions taken at
3 Board workshops?

4 A. I don't believe that the bylaws do.

5 Q. Okay. Now, you were shown an application
6 under the DIDP policy, but you were not shown the
7 response. So I am going to ask Ms. Ozurovich to
8 bring up the response, and I think the exhibit
9 number is VeriSign-24.

10 Do you see that on your screen?

11 A. Yes, I do.

12 Q. And this is dated 24 March 2018.

13 Do you see that?

14 A. I do. Very large font now.

15 Q. The very first paragraph, can you read it
16 without Ms. Ozurovich blowing it up?

17 A. Yeah, I can read that perfectly well.
18 Thank you.

19 Q. Okay. In the first paragraph it
20 references a letter dated 23 February 2018, which
21 was Exhibit C-78 that you were shown earlier?

22 A. Yep, I remember that.

23 Q. And it included a request for an update
24 and then also a request under the DIDP policy.

25 Do you see that?

1 A. Yes, I do.

2 Q. And there was a statement by counsel that
3 ICANN provided no documents in response.

4 I wanted just briefly to show you that --
5 have you seen this before?

6 A. No, not that I can recall.

7 Q. Okay. Do you know --

8 A. Who is it from?

9 Q. Well, it is from ICANN.

10 A. Okay. Fine.

11 Q. Do you know whether as part of the DIDP
12 response ICANN refers people who submit DIDP
13 applications to documents that are in -- that are
14 publicly available?

15 A. I do know that ICANN does that, if the
16 document is published, then they will say go here.

17 Q. Okay. So ICANN doesn't actually send
18 copies of the documents; ICANN identifies where in
19 the public domain those documents exist?

20 A. Absolutely.

21 Q. So just by way of example, if you look --
22 I am going to go to Page 6. We are going to look
23 at the -- that's 4. If you look at the bottom, do
24 you see where it says, "Item 4, all applications
25 and all documents," et cetera, et cetera?

1 A. Yep.

2 Q. You see that ICANN provided links to a
3 number of materials?

4 A. Yep.

5 Q. I am going to ask you to turn to Page 16,
6 Ms. Ozurovich, just so you can see that initially
7 the response is 16 pages. I am not going to take
8 the time to go through all the responses.

9 Do you see that?

10 A. Yep.

11 Q. And then if you turn, Ms. Ozurovich, just
12 sort of scan through the next page, next several
13 pages, through Page 28, are additional links that
14 ICANN provided to Afilias and its counsel where
15 materials can be found?

16 A. Correct.

17 Q. And is that what you understand to be
18 ICANN's policy in terms of responding to the DIDP
19 request?

20 A. When you say is that what I understand,
21 you mean where the documents are public to provide
22 links? Yes.

23 Q. Yes.

24 A. Yes.

25 Q. Do you understand whether ICANN discloses

1 information that is privileged in response to a
2 DIDP request?

3 A. No, it doesn't.

4 Q. Okay. You were asked about the extent to
5 which ICANN's practice of keeping contention sets
6 on hold as a result of accountability mechanisms --
7 and I am not going to -- I am trying to avoid
8 saying what you said, but you reference the
9 possibility that ICANN has published material on
10 this topic.

11 Do you remember your testimony on that?

12 A. Yes, I did. I said it is possible. I
13 have no idea whether it's happened or not, but it
14 is possible.

15 Q. Let me ask everyone to take a look at
16 Exhibit R-33. Do you recall that ICANN published
17 updates on application status and contention sets
18 from time to time?

19 A. I certainly do, yeah.

20 Q. This particular one is dated August 1,
21 2016. Do you know if ICANN published them
22 regularly?

23 A. Yes. But how regularly, I don't know.

24 Q. Okay. And you can see -- I am not going
25 to read it all. I am going to go to the second

1 page in a second, but you can see that in the
2 middle there's a bold that says "Application Status
3 and Contention Set Status."

4 Do you see that?

5 A. Yes, yes.

6 Q. Toward the bottom it says "Explanation of
7 Application Status."

8 Do you see that?

9 A. Yes, I do.

10 Q. Now, I am going to just read at the
11 bottom. It says, "Alternatively" -- the very last
12 line, "Alternatively, the page may reflect one of
13 the following statuses for an application."

14 Do you see that?

15 A. Yep, yes.

16 Q. Okay. Now we'll turn the page. I am
17 going to have Ms. Ozurovich blow up just that top
18 section, just like that.

19 A. Brilliant.

20 Q. So one of the statuses is that the
21 application has been withdrawn, correct?

22 A. Yes, yep.

23 Q. Another is that it is not approved?

24 A. Yep.

25 Q. Another is that it will not proceed?

1 A. Yep.

2 Q. And then it says, "On-Hold"?

3 A. Yes.

4 Q. "May be applied if there are pending
5 activities (e.g., ICANN accountability mechanisms,
6 ICANN public comment periods)," so forth and so on?

7 A. Yep.

8 Q. Is that some recognition of the practice
9 that ICANN posted on its website that
10 accountability mechanisms result in an on-hold
11 status?

12 A. Yes.

13 Q. Okay.

14 ARBITRATOR BIENVENU: What's the exhibit
15 number of this document that you just introduced?
16 Because the transcript says 433.

17 MR. LeVEE: "R," as in "Robert," 33.

18 ARBITRATOR BIENVENU: R-33, thank you.

19 MR. LeVEE: Of course.

20 Q. Do you know whether in June 2018 -- I
21 think I misspoke.

22 You may be on mute, Mr. Disspain.

23 A. Sorry. I had to close the window due to
24 bats flying around.

25 Q. Sounds like a good excuse.

1 A. Trust me, you don't want one in the house.

2 Q. I am positive.

3 Do you know whether prior to June of 2018,
4 when Afiliias initiated what was actually a CEP at
5 that time, do you know whether Afiliias had
6 initiated an accountability mechanism relating to
7 the .WEB auction?

8 A. Not as far as I can recall.

9 Q. Okay. So the status at that time was that
10 Afiliias had sent letters?

11 A. Yeah, they sent heaps of letters saying
12 this was wrong, this should happen, that should
13 happen, et cetera. The questionnaire had gone out
14 and so on.

15 But they had not of themselves actually
16 filed any form of -- ignoring the DIDP, which is
17 separate, they had not filed any accountability
18 mechanism in this .WEB matter, no.

19 Q. Okay. In your witness statement, which is
20 the first tab of the binder, if you'd like to look
21 at it.

22 A. Yeah.

23 Q. You say -- I am not going to read it, but
24 you comment -- you address how ICANN deals with
25 letters, right?

1 A. Yeah, yep.

2 Q. And the practice of ICANN was that absent
3 the accountability mechanisms, such as a
4 reconsideration request, CEP and so forth, that was
5 the way to know that a contention set would be
6 placed on hold; is that correct?

7 A. Well, kind of. In essence, the way I
8 would put it is you can write whatever letters you
9 like. The way that you move forward with an issue
10 of this nature is through using ICANN's
11 accountability mechanisms. That's what they are
12 there for.

13 MR. LeVEE: Mr. Chairman, may I take one
14 minute to consult with my colleagues, including
15 Mr. Smith, who, of course, is in San Francisco?

16 ARBITRATOR BIENVENU: Of course.

17 MR. LITWIN: Before we break, I would beg
18 the Panel's indulgence to allow me one brief
19 recross on a document that was inspired by your
20 question, Mr. Chairman, that I think would clarify
21 one of Mr. Disspain's responses. It would be no
22 more than two minutes.

23 ARBITRATOR BIENVENU: That's fine. We
24 will hear the question, but first I will allow
25 Mr. LeVee to consult his colleagues.

1 MR. LeVEE: Just for the record,
2 Mr. Chairman, I do object to redirect -- sorry,
3 recross. It is not part of the rules. It is not
4 something we have done, and I just want the
5 objection noted for the record.

6 (Whereupon a recess was taken.)

7 ARBITRATOR BIENVENU: Mr. LeVee.

8 MR. LeVEE: I have no additional
9 questions. I do repeat that I am concerned about
10 recross, and if there is recross, I would ask that
11 I be given at least the opportunity to respond to
12 it.

13 ARBITRATOR BIENVENU: Yes, yes, well, I
14 agree with you that there is no recross, but I
15 didn't understand Mr. Litwin to ask for recross,
16 and if he did, I would disallow it.

17 However, we are an international
18 arbitration, and it is customary to allow counsel
19 to ask, you know, supplementary questions if they
20 arise out of redirect.

21 So I am sure that Mr. Litwin will be
22 disciplined, as he should be at this stage in the
23 process, and ask a question that only is
24 supplemental to your redirect, and he will do so
25 under our watchful eye.

1 MR. LeVEE: Thank you, Mr. Chairman.

2 MR. LITWIN: Mr. Chairman, just as a point
3 of clarification, my question arises not out of
4 Mr. LeVee's redirect, but in response to an answer
5 Mr. Disspain gave to one of your questions.

6 ARBITRATOR BIENVENU: That's fine. Please
7 proceed, but understand this is a supplementary
8 question, not a continuation of your cross.

9 MR. LITWIN: I understand, Mr. Chairman.

10 SUPPLEMENTARY EXAMINATION

11 BY MR. LITWIN

12 Q. Mr. Disspain, do you recall the Chairman
13 asking you about whether or not the Registry
14 Agreement would have been signed by ICANN in June
15 of 2018?

16 A. Can I interrupt you for one second? I
17 lost you at the beginning of your question. I just
18 heard you for the last ten seconds.

19 Can you go back and start again for me,
20 please?

21 Q. Mr. Disspain, do you recall that the
22 Chairman asked you whether or not ICANN would have
23 executed the Registry Agreement in June of 2018,
24 and you said that one way or another, you could not
25 speculate as to what would have happened?

1 Do you recall that?

2 A. Yes.

3 MR. LITWIN: I would ask Chuck to bring up
4 Exhibit 170, please.

5 MR. LeVEE: Mr. Chairman, I can tell
6 already, this is recross.

7 ARBITRATOR BIENVENU: I'll allow the
8 question, Mr. LeVee.

9 Q. BY MR. LITWIN: Mr. Disspain, I am showing
10 you an email that was sent from Mr. Grant Nakata
11 from ICANN internally, and he writes, "I want to
12 provide an update on the WEB Registry Agreement."

13 This email was sent on June 20th, 2018,
14 two days after Afilias filed its CEP.

15 He says, "Prior to the execution of the
16 WEB Registry Agreement, we received notice that a
17 Cooperative Engagement Process (CEP) was initiated
18 on .WEB. The .WEB/WEBS contention set has been
19 placed On Hold. We will void the current Registry
20 Agreement (via DocuSign). If or when we are able
21 to proceed, we will reinitiate this approval
22 process."

23 If you look down in this document at the
24 bottom of Page 1 and onto Page 2, you will see that
25 the Registry Agreement had been approved by

1 Ms. Christine Willett and the other members of her
2 team.

3 Do you see that, sir?

4 A. It would appear so, yes.

5 Q. So does that refresh your recollection
6 that had Afilias not filed its CEP, that ICANN was
7 ready to sign the Registry Agreement?

8 A. No, it doesn't, because this doesn't
9 refresh my recollection. I don't have a
10 recollection. I simply said what I said. I am not
11 aware of these emails. They are internal emails,
12 so I can't comment on them.

13 Q. That's because the Board does not have to
14 approve a Registry Agreement. It simply required
15 the signature of Mr. Atallah; is that correct?

16 A. The Board does not have to approve an
17 agreement, that is correct. However, as I already
18 said, the BAMC in its discussion with ICANN org
19 prior to -- sorry, post the lifting of hold would
20 have been aware if Afilias had not filed a --
21 what's the word I'm looking for? Accountability
22 mechanism, that's the word. Thank you.
23 Accountability mechanism.

24 But I am talking about what the Board was
25 doing. I can't tell you what ICANN org was doing.

1 That's a matter for ICANN org.

2 MR. LITWIN: Okay. Thank you,
3 Mr. Chairman.

4 ARBITRATOR BIENVENU: Thank you,
5 Mr. Litwin.

6 Mr. LeVee?

7 MR. LeVEE: I do not have follow-up.
8 Thank you.

9 ARBITRATOR BIENVENU: Mr. Disspain, it
10 remains for me and the members of the Panel and,
11 indeed, all the participants in this process, to
12 thank you very much for your time and for your
13 evidence. We appreciate it very much.

14 THE WITNESS: Thank you very much, indeed.

15 MR. LITWIN: Thank you, Mr. Disspain.

16 THE WITNESS: Thank you, Mr. Chairman.
17 Thank you all.

18 ARBITRATOR BIENVENU: Mr. Disspain, one
19 last point. Per the sequestration order, it
20 requires that I instruct you not to discuss the
21 case with other persons who may appear as witnesses
22 before us.

23 THE WITNESS: Not a problem. Thank you.

24 ARBITRATOR BIENVENU: Thank you. Thank
25 you for your time.

1 THE WITNESS: Thank you very much.

2 Good-bye.

3 ARBITRATOR BIENVENU: Well, it's been a
4 long day. Is there anything that absolutely needs
5 to be raised now, as opposed to when we resume next
6 Monday? Looking at the claimant.

7 MR. ALI: I apologize. Nothing from
8 claimant's side, Mr. Chairman, other than thank you
9 for a good week.

10 ARBITRATOR BIENVENU: On the respondent's
11 side, Mr. LeVee?

12 MR. LeVEE: Nothing beyond wishing
13 everyone a very nice weekend. We will see you on
14 Monday.

15 ARBITRATOR BIENVENU: Those are wishes I
16 send back from everyone on the Panel.

17 I wish to thank everyone for what I know
18 was an extremely demanding week. We are certainly
19 impressed, but mostly very grateful for the
20 extraordinary work of counsel throughout the week,
21 and in particular for going through our demanding
22 agenda today.

23 So thank you all. Have a good weekend.
24 We resume on Monday at the normal hour. And the
25 next witness is?

MR. ALI: Mr. McAuley.

ARBITRATOR CHERNICK: Is the normal hour
8:00 a.m. Pacific?

ARBITRATOR BIENVENU: That's correct.

ARBITRATOR CHERNICK: Okay. That's fine.

ARBITRATOR BIENVENU: Thank you all. And
I wish you all a restful weekend.

ARBITRATOR KESSEDJIAN: Have a good
weekend.

MR. LITWIN: Thank you.

MR. LeVEE: Have a good weekend.

(Whereupon the proceedings were
concluded at 1:18 p.m.)

REPORTER'S CERTIFICATE

---o0o---

STATE OF CALIFORNIA)
) ss.
COUNTY OF SAN FRANCISCO)

I, BALINDA DUNLAP, certify that I was the official court reporter and that I reported in shorthand writing the foregoing proceedings; that I thereafter caused my shorthand writing to be reduced to typewriting, and the pages included, constitute a full, true, and correct record of said proceedings:

IN WITNESS WHEREOF, I have subscribed this certificate at San Francisco, California, on this 18th day of August, 2020.

BALINDA DUNLAP, CSR NO. 10710, RPR, CRR, RMR

ARTICLE 1 MISSION, COMMITMENTS AND CORE VALUES

Section 1.1. MISSION

(a) The mission of the Internet Corporation for Assigned Names and Numbers ("**ICANN (Internet Corporation for Assigned Names and Numbers)**") is to ensure the stable and secure operation of the Internet's unique identifier systems as described in this Section 1.1(a) (the "**Mission**"). Specifically, ICANN (Internet Corporation for Assigned Names and Numbers):

(i) Coordinates the allocation and assignment of names in the root zone of the Domain Name (Domain Name) System ("**DNS (Domain Name System)**") and coordinates the development and implementation of policies concerning the registration of second-level

domain names in generic top-level domains ("**gTLDs**"). In this role, ICANN (Internet Corporation for Assigned Names and Numbers)'s scope is to coordinate the development and implementation of policies:

- For which uniform or coordinated resolution is reasonably necessary to facilitate the openness, interoperability, resilience, security and/or stability of the DNS (Domain Name System) including, with respect to gTLD (generic Top Level Domain) registrars and registries, policies in the areas described in Annex G-1 and Annex G-2; and
- That are developed through a bottom-up consensus-based multistakeholder process and designed to ensure the stable and secure operation of the Internet's unique names systems.

The issues, policies, procedures, and principles addressed in Annex G-1 and Annex G-2 with respect to gTLD (generic Top Level Domain) registrars and registries shall be deemed to be within ICANN (Internet Corporation for Assigned Names and Numbers)'s Mission.

(ii) Facilitates the coordination of the operation and evolution of the DNS (Domain Name System) root name server system.

(iii) Coordinates the allocation and assignment at the top-most level of Internet Protocol (Protocol) numbers and Autonomous System numbers. In service of its Mission, ICANN (Internet Corporation for Assigned Names and Numbers) (A) provides registration services and open access for global number registries as requested by the Internet Engineering Task Force ("IETF (Internet Engineering Task Force)") and the

Regional Internet Registries ("**RIRs**") and (B) facilitates the development of global number registry policies by the affected community and other related tasks as agreed with the RIRs.

(iv) Collaborates with other bodies as appropriate to provide registries needed for the functioning of the Internet as specified by Internet protocol standards development organizations. In service of its Mission, ICANN (Internet Corporation for Assigned Names and Numbers)'s scope is to provide registration services and open access for registries in the public domain requested by Internet protocol development organizations.

(b) ICANN (Internet Corporation for Assigned Names and Numbers) shall not act outside its Mission.

(c) ICANN (Internet Corporation for Assigned Names and Numbers) shall not regulate (i.e., impose rules and restrictions on) services that use the Internet's unique identifiers or the content that such services carry or provide, outside the express scope of Section 1.1(a). For the avoidance of doubt, ICANN (Internet Corporation for Assigned Names and Numbers) does not hold any governmentally authorized regulatory authority.

(d) For the avoidance of doubt and notwithstanding the foregoing:

(i) the foregoing prohibitions are not intended to limit ICANN (Internet Corporation for Assigned Names and Numbers)'s authority or ability to adopt or implement policies or procedures that take into account the use of domain names as natural-language identifiers;

(ii) Notwithstanding any provision of the Bylaws to the contrary, the terms and conditions of the documents

listed in subsections (A) through (C) below, and ICANN (Internet Corporation for Assigned Names and Numbers)'s performance of its obligations or duties thereunder, may not be challenged by any party in any proceeding against, or process involving, ICANN (Internet Corporation for Assigned Names and Numbers) (including a request for reconsideration or an independent review process pursuant to Article 4) on the basis that such terms and conditions conflict with, or are in violation of, ICANN (Internet Corporation for Assigned Names and Numbers)'s Mission or otherwise exceed the scope of ICANN (Internet Corporation for Assigned Names and Numbers)'s authority or powers pursuant to these Bylaws ("**Bylaws**") or ICANN (Internet Corporation for Assigned Names and Numbers)'s Articles of Incorporation ("**Articles of Incorporation**"):

(A)

(1) all registry agreements and registrar accreditation agreements between ICANN (Internet Corporation for Assigned Names and Numbers) and registry operators or registrars in force on 1 October 2016 ^[1], including, in each case, any terms or conditions therein that are not contained in the underlying form of registry agreement and registrar accreditation agreement;

(2) any registry agreement or registrar accreditation agreement not encompassed by (1) above to the extent its terms do not vary materially from the form of registry agreement or registrar accreditation agreement that existed on 1 October 2016;

(B) any renewals of agreements described in subsection (A) pursuant to their terms and conditions for renewal; and

(C) ICANN (Internet Corporation for Assigned Names and Numbers)'s Five-Year Strategic Plan and Five-Year Operating Plan (Five-Year Operating Plan) existing on 10 March 2016.

(iii) Section 1.1(d)(ii) does not limit the ability of a party to any agreement described therein to challenge any provision of such agreement on any other basis, including the other party's interpretation of the provision, in any proceeding or process involving ICANN (Internet Corporation for Assigned Names and Numbers).

(iv) ICANN (Internet Corporation for Assigned Names and Numbers) shall have the ability to negotiate, enter into and enforce agreements, including public interest commitments, with any party in service of its Mission.

Section 1.2. COMMITMENTS AND CORE VALUES

In performing its Mission, ICANN (Internet Corporation for Assigned Names and Numbers) will act in a manner that complies with and reflects ICANN (Internet Corporation for Assigned Names and Numbers)'s Commitments and respects ICANN (Internet Corporation for Assigned Names and Numbers)'s Core Values, each as described below.

(a) COMMITMENTS

In performing its Mission, ICANN (Internet Corporation for Assigned Names and Numbers) must operate in a manner consistent with these Bylaws for the benefit of the Internet community as a whole, carrying out its activities in conformity

with relevant principles of international law and international conventions and applicable local law, through open and transparent processes that enable competition and open entry in Internet-related markets. Specifically, ICANN (Internet Corporation for Assigned Names and Numbers) commits to do the following (each, a "**Commitment**," and collectively, the "**Commitments**"):

- (i) Preserve and enhance the administration of the DNS (Domain Name System) and the operational stability, reliability, security, global interoperability, resilience, and openness of the DNS (Domain Name System) and the Internet;
- (ii) Maintain the capacity and ability to coordinate the DNS (Domain Name System) at the overall level and work for the maintenance of a single, interoperable Internet;
- (iii) Respect the creativity, innovation, and flow of information made possible by the Internet by limiting ICANN (Internet Corporation for Assigned Names and Numbers)'s activities to matters that are within ICANN (Internet Corporation for Assigned Names and Numbers)'s Mission and require or significantly benefit from global coordination;
- (iv) Employ open, transparent and bottom-up, multistakeholder policy development processes that are led by the private sector (including business stakeholders, civil society, the technical community, academia, and end users), while duly taking into account the public policy advice of governments and public authorities. These processes shall (A) seek input from the public, for whose benefit ICANN (Internet Corporation for Assigned Names and Numbers) in all events shall act, (B) promote well-informed decisions based on expert advice, and (C)

ensure that those entities most affected can assist in the policy development process;

(v) Make decisions by applying documented policies consistently, neutrally, objectively, and fairly, without singling out any particular party for discriminatory treatment (i.e., making an unjustified prejudicial distinction between or among different parties); and

(vi) Remain accountable to the Internet community through mechanisms defined in these Bylaws that enhance ICANN (Internet Corporation for Assigned Names and Numbers)'s effectiveness.

(b) **CORE VALUES**

In performing its Mission, the following "**Core Values**" should also guide the decisions and actions of ICANN (Internet Corporation for Assigned Names and Numbers):

(i) To the extent feasible and appropriate, delegating coordination functions to or recognizing the policy role of, other responsible entities that reflect the interests of affected parties and the roles of bodies internal to ICANN (Internet Corporation for Assigned Names and Numbers) and relevant external expert bodies;

(ii) Seeking and supporting broad, informed participation reflecting the functional, geographic, and cultural diversity of the Internet at all levels of policy development and decision-making to ensure that the bottom-up, multistakeholder policy development process is used to ascertain the global public interest and that those processes are accountable and transparent;

(iii) Where feasible and appropriate, depending on market mechanisms to promote and sustain a

competitive environment in the DNS (Domain Name System) market;

(iv) Introducing and promoting competition in the registration of domain names where practicable and beneficial to the public interest as identified through the bottom-up, multistakeholder policy development process;

(v) Operating with efficiency and excellence, in a fiscally responsible and accountable manner and, where practicable and not inconsistent with ICANN (Internet Corporation for Assigned Names and Numbers)'s other obligations under these Bylaws, at a speed that is responsive to the needs of the global Internet community;

(vi) While remaining rooted in the private sector (including business stakeholders, civil society, the technical community, academia, and end users), recognizing that governments and public authorities are responsible for public policy and duly taking into account the public policy advice of governments and public authorities;

(vii) Striving to achieve a reasonable balance between the interests of different stakeholders, while also avoiding capture; and

(viii) Subject to the limitations set forth in Section 27.2, within the scope of its Mission and other Core Values, respecting internationally recognized human rights as required by applicable law. This Core Value does not create, and shall not be interpreted to create, any obligation on ICANN (Internet Corporation for Assigned Names and Numbers) outside its Mission, or beyond obligations found in applicable law. This Core Value does not obligate ICANN (Internet Corporation for Assigned Names and Numbers) to enforce its human

rights obligations, or the human rights obligations of other parties, against other parties.

(c) The Commitments and Core Values are intended to apply in the broadest possible range of circumstances. The Commitments reflect ICANN (Internet Corporation for Assigned Names and Numbers)'s fundamental compact with the global Internet community and are intended to apply consistently and comprehensively to ICANN (Internet Corporation for Assigned Names and Numbers)'s activities. The specific way in which Core Values are applied, individually and collectively, to any given situation may depend on many factors that cannot be fully anticipated or enumerated. Situations may arise in which perfect fidelity to all Core Values simultaneously is not possible. Accordingly, in any situation where one Core Value must be balanced with another, potentially competing Core Value, the result of the balancing must serve a policy developed through the bottom-up multistakeholder process or otherwise best serve ICANN (Internet Corporation for Assigned Names and Numbers)'s Mission.

ARTICLE 2 POWERS

Section 2.1. GENERAL POWERS

Except as otherwise provided in the Articles of Incorporation or these Bylaws, the powers of ICANN (Internet Corporation for Assigned Names and Numbers) shall be exercised by, and its property controlled and its business and affairs conducted by or under the direction of, the Board (as defined in Section 7.1). With respect to any matters that would fall within the provisions of Section 3.6(a)-(c), the Board may act only by a majority vote of all Directors. In all other matters, except as otherwise provided in these Bylaws or by law, the Board may act by majority vote of the Directors present at any annual, regular, or special meeting of the Board. Any references in these Bylaws to a vote of the Board shall mean

the vote of only those Directors present at the meeting where a quorum is present unless otherwise specifically provided in these Bylaws by reference to "of all Directors."

Section 2.2. RESTRICTIONS

ICANN (Internet Corporation for Assigned Names and Numbers) shall not act as a Domain Name (Domain Name) System Registry or Registrar or Internet Protocol (Protocol) Address Registry in competition with entities affected by the policies of ICANN (Internet Corporation for Assigned Names and Numbers). Nothing in this Section 2.2 is intended to prevent ICANN (Internet Corporation for Assigned Names and Numbers) from taking whatever steps are necessary to protect the operational stability of the Internet in the event of financial failure of a Registry or Registrar or other emergency.

Section 2.3. NON-DISCRIMINATORY TREATMENT

ICANN (Internet Corporation for Assigned Names and Numbers) shall not apply its standards, policies, procedures, or practices inequitably or single out any particular party for disparate treatment unless justified by substantial and reasonable cause, such as the promotion of effective competition.

ARTICLE 3 TRANSPARENCY

Section 3.1. OPEN AND TRANSPARENT

ICANN (Internet Corporation for Assigned Names and Numbers) and its constituent bodies shall operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness, including implementing procedures to (a) provide advance notice to facilitate stakeholder engagement in policy

development decision-making and cross-community deliberations, (b) maintain responsive consultation procedures that provide detailed explanations of the basis for decisions (including how comments have influenced the development of policy considerations), and (c) encourage fact-based policy development work. ICANN (Internet Corporation for Assigned Names and Numbers) shall also implement procedures for the documentation and public disclosure of the rationale for decisions made by the Board and ICANN (Internet Corporation for Assigned Names and Numbers)'s constituent bodies (including the detailed explanations discussed above).

Section 3.2. WEBSITE

ICANN (Internet Corporation for Assigned Names and Numbers) shall maintain a publicly-accessible Internet World Wide Web site (the "**Website**"), which may include, among other things, (a) a calendar of scheduled meetings of the Board, the EC (Empowered Community) (as defined in Section 6.1(a)), Supporting Organizations (Supporting Organizations) (as defined in Section 11.1), and Advisory Committees (Advisory Committees) (as defined in Section 12.1); (b) a docket of all pending policy development matters, including their schedule and current status; (c) specific meeting notices and agendas as described below; (d) information on the ICANN (Internet Corporation for Assigned Names and Numbers) Budget (as defined in Section 22.4(a)(i)), the IANA (Internet Assigned Numbers Authority) Budget (as defined in Section 22.4(b)(i)), annual audit, financial contributors and the amount of their contributions, and related matters; (e) information about the availability of accountability mechanisms, including reconsideration, independent review, and Ombudsman activities, as well as information about the outcome of specific requests and complaints invoking these mechanisms; (f) announcements about ICANN (Internet Corporation for Assigned Names and Numbers) activities of interest to significant segments of the

ICANN (Internet Corporation for Assigned Names and Numbers) community; (g) comments received from the community on policies being developed and other matters; (h) information about ICANN (Internet Corporation for Assigned Names and Numbers)'s physical meetings and public forums; and (i) other information of interest to the ICANN (Internet Corporation for Assigned Names and Numbers) community.

Section 3.3. MANAGER OF PUBLIC PARTICIPATION

There shall be a staff position designated as Manager of Public Participation, or such other title as shall be determined by the President, that shall be responsible, under the direction of the President, for coordinating the various aspects of public participation in ICANN (Internet Corporation for Assigned Names and Numbers), including the Website and various other means of communicating with and receiving input from the general community of Internet users.

Section 3.4. MEETING NOTICES AND AGENDAS

At least seven days in advance of each Board meeting (or if not practicable, as far in advance as is practicable), a notice of such meeting and, to the extent known, an agenda for the meeting shall be posted.

Section 3.5. MINUTES AND PRELIMINARY REPORTS

- a. All minutes of meetings of the Board, the Advisory Committees (Advisory Committees) and Supporting Organizations (Supporting Organizations) (and any councils thereof) shall be approved promptly by the originating body and provided to the ICANN (Internet Corporation for Assigned Names and Numbers)

Secretary ("**Secretary**") for posting on the Website. All proceedings of the EC (Empowered Community) Administration (as defined in Section 6.3) and the EC (Empowered Community) shall be provided to the Secretary for posting on the Website.

- b. No later than 11:59 p.m. on the second business day after the conclusion of each meeting (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office), any resolutions passed by the Board at that meeting shall be made publicly available on the Website; provided, however, that any actions relating to personnel or employment matters, legal matters (to the extent the Board determines it is necessary or appropriate to protect the interests of ICANN (Internet Corporation for Assigned Names and Numbers)), matters that ICANN (Internet Corporation for Assigned Names and Numbers) is prohibited by law or contract from disclosing publicly, and other matters that the Board determines, by a three-quarters (3/4) vote of Directors present at the meeting and voting, are not appropriate for public distribution, shall not be included in the resolutions made publicly available. The Secretary shall send notice to the Board and the Chairs of the Supporting Organizations (Supporting Organizations) (as set forth in Article 9 through Article 11) and Advisory Committees (Advisory Committees) (as set forth in Article 12) informing them that the resolutions have been posted.
- c. No later than 11:59 p.m. on the seventh business days after the conclusion of each meeting (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office), any actions taken by the Board shall be made publicly available in a preliminary report on the Website, subject to the limitations on disclosure set forth in Section 3.5(b).

above. For any matters that the Board determines not to disclose, the Board shall describe in general terms in the relevant preliminary report the reason for such nondisclosure.

- d. No later than the day after the date on which they are formally approved by the Board (or, if such day is not a business day, as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office, then the next immediately following business day), the minutes of the Board shall be made publicly available on the Website; provided, however, that any minutes of the Board relating to personnel or employment matters, legal matters (to the extent the Board determines it is necessary or appropriate to protect the interests of ICANN (Internet Corporation for Assigned Names and Numbers)), matters that ICANN (Internet Corporation for Assigned Names and Numbers) is prohibited by law or contract from disclosing publicly, and other matters that the Board determines, by a three-quarters (3/4) vote of Directors present at the meeting and voting, are not appropriate for public distribution, shall not be included in the minutes made publicly available. For any matters that the Board determines not to disclose, the Board shall describe in general terms in the relevant minutes the reason for such nondisclosure.

Section 3.6. NOTICE AND COMMENT ON POLICY ACTIONS

(a) With respect to any policies that are being considered by the Board for adoption that substantially affect the operation of the Internet or third parties, including the imposition of any fees or charges, ICANN (Internet Corporation for Assigned Names and Numbers) shall:

(i) provide public notice on the Website explaining what policies are being considered for adoption and why, at least twenty-one days (and if practical, earlier) prior to any action by the Board;

(ii) provide a reasonable opportunity for parties to comment on the adoption of the proposed policies, to see the comments of others, and to reply to those comments (such comment period to be aligned with ICANN (Internet Corporation for Assigned Names and Numbers)'s public comment practices), prior to any action by the Board; and

(iii) in those cases where the policy action affects public policy concerns, to request the opinion of the Governmental Advisory Committee (Advisory Committee) ("**GAC (Governmental Advisory Committee)**" or "**Governmental Advisory Committee (Advisory Committee)**") and take duly into account any advice timely presented by the Governmental Advisory Committee (Advisory Committee) on its own initiative or at the Board's request.

(b) Where both practically feasible and consistent with the relevant policy development process, an in-person public forum shall also be held for discussion of any proposed policies as described in Section 3.6(a)(ii), prior to any final Board action.

(c) After taking action on any policy subject to this Section 3.6, the Board shall publish in the meeting minutes the rationale for any resolution adopted by the Board (including the possible material effects, if any, of its decision on the global public interest, including a discussion of the material impacts to the security, stability and resiliency of the DNS (Domain Name System), financial impacts or other issues that were considered by the Board in approving such

resolutions), the vote of each Director voting on the resolution, and the separate statement of any Director desiring publication of such a statement.

(d) Where a Board resolution is consistent with GAC (Governmental Advisory Committee) Consensus (Consensus) Advice (as defined in Section 12.2(a)(x)), the Board shall make a determination whether the GAC (Governmental Advisory Committee) Consensus (Consensus) Advice was a material factor in the Board's adoption of such resolution, in which case the Board shall so indicate in such resolution approving the decision (a "**GAC (Governmental Advisory Committee) Consensus (Consensus) Board Resolution**") and shall cite the applicable GAC (Governmental Advisory Committee) Consensus (Consensus) Advice. To the extent practical, the Board shall ensure that GAC (Governmental Advisory Committee) Consensus (Consensus) Board Resolutions only relate to the matters that were the subject of the applicable GAC (Governmental Advisory Committee) Consensus (Consensus) Advice and not matters unrelated to the applicable GAC (Governmental Advisory Committee) Consensus (Consensus) Advice. For the avoidance of doubt: (i) a GAC (Governmental Advisory Committee) Consensus (Consensus) Board Resolution shall not have the effect of making any other Board resolutions in the same set or series so designated, unless other resolutions are specifically identified as such by the Board; and (ii) a Board resolution approving an action consistent with GAC (Governmental Advisory Committee) Consensus (Consensus) Advice received during a standard engagement process in which input from all Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees) has been requested shall not be considered a GAC (Governmental Advisory Committee) Consensus (Consensus) Board Resolution based solely on that input, unless the GAC (Governmental Advisory Committee)

Consensus (Consensus) Advice was a material factor in the Board's adoption of such resolution.

(e) GAC (Governmental Advisory Committee) Carve-out

(i) Where a Board resolution is consistent with GAC (Governmental Advisory Committee) Consensus (Consensus) Advice and the Board has determined that the GAC (Governmental Advisory Committee) Consensus (Consensus) Advice was a material factor in the Board's adoption of such resolution as described in the relevant GAC (Governmental Advisory Committee) Consensus (Consensus) Board Resolution, the Governmental Advisory Committee (Advisory Committee) shall not participate as a decision-maker in the EC (Empowered Community)'s exercise of its right to challenge the Board's implementation of such GAC (Governmental Advisory Committee) Consensus (Consensus) Advice. In such cases, the Governmental Advisory Committee (Advisory Committee) may participate in the EC (Empowered Community) in an advisory capacity only with respect to the applicable processes described in Annex D, but its views will not count as support or an objection for purposes of the thresholds needed to convene a community forum or exercise any right of the EC (Empowered Community) ("**GAC (Governmental Advisory Committee) Carve-out**"). In the case of a Board Recall Process (as defined in Section 3.3 of Annex D), the GAC (Governmental Advisory Committee) Carve-out shall only apply if an IRP Panel has found that, in implementing GAC (Governmental Advisory Committee) Consensus (Consensus) Advice, the Board acted inconsistently with the Articles of Incorporation or these Bylaws.

(ii) When the GAC (Governmental Advisory Committee) Carve-out applies (A) any petition notice

provided in accordance with Annex D or Approval Action Board Notice (as defined in Section 1.2 of Annex D) shall include a statement that cites the specific GAC (Governmental Advisory Committee) Consensus (Consensus) Board Resolution and the line item or provision that implements such specific GAC (Governmental Advisory Committee) Consensus (Consensus) Board Resolution ("GAC (Governmental Advisory Committee) Consensus (Consensus) Statement"), (B) the Governmental Advisory Committee (Advisory Committee) shall not be eligible to support or object to any petition pursuant to Annex D or Approval Action (as defined in Section 1.1 of Annex D), and (C) any EC (Empowered Community) Decision (as defined in Section 4.1(a) of Annex D) that requires the support of four or more Decisional Participants (as defined in Section 6.1(a)) pursuant to Annex D shall instead require the support of three or more Decisional Participants with no more than one Decisional Participant objecting.

(iii) For the avoidance of doubt, the GAC (Governmental Advisory Committee) Carve-out shall not apply to the exercise of the EC (Empowered Community)'s rights where a material factor in the Board's decision was advice of the Governmental Advisory Committee (Advisory Committee) that was not GAC (Governmental Advisory Committee) Consensus (Consensus) Advice.

Section 3.7. TRANSLATION OF DOCUMENTS

As appropriate and to the extent provided in the ICANN (Internet Corporation for Assigned Names and Numbers) Budget, ICANN (Internet Corporation for Assigned Names and Numbers) shall facilitate the translation of final published documents into various appropriate languages.

ARTICLE 4 ACCOUNTABILITY AND REVIEW

Section 4.1. PURPOSE

In carrying out its Mission, ICANN (Internet Corporation for Assigned Names and Numbers) shall be accountable to the community for operating in accordance with the Articles of Incorporation and these Bylaws, including the Mission set forth in Article 1 of these Bylaws. This Article 4 creates reconsideration and independent review processes for certain actions as set forth in these Bylaws and procedures for periodic review of ICANN (Internet Corporation for Assigned Names and Numbers)'s structure and operations, which are intended to reinforce the various accountability mechanisms otherwise set forth in these Bylaws, including the transparency provisions of Article 3 and the Board and other selection mechanisms set forth throughout these Bylaws.

Section 4.2. RECONSIDERATION

(a) ICANN (Internet Corporation for Assigned Names and Numbers) shall have in place a process by which any person or entity materially affected by an action or inaction of the ICANN (Internet Corporation for Assigned Names and Numbers) Board or Staff may request ("**Requestor**") the review or reconsideration of that action or inaction by the Board. For purposes of these Bylaws, "**Staff**" includes employees and individual long-term paid contractors serving in locations where ICANN (Internet Corporation for Assigned Names and Numbers) does not have the mechanisms to employ such contractors directly.

(b) The EC (Empowered Community) may file a Reconsideration Request (as defined in Section 4.2(c)) if approved pursuant to Section 4.3 of Annex D ("**Community Reconsideration Request**") and if the matter relates to the exercise of the powers and rights of the EC (Empowered

Community) of these Bylaws. The EC (Empowered Community) Administration shall act as the Requestor for such a Community Reconsideration Request and shall act on behalf of the EC (Empowered Community) for such Community Reconsideration Request as directed by the Decisional Participants, as further described in Section 4.3 of Annex D.

(c) A Requestor may submit a request for reconsideration or review of an ICANN (Internet Corporation for Assigned Names and Numbers) action or inaction ("**Reconsideration Request**") to the extent that the Requestor has been adversely affected by:

(i) One or more Board or Staff actions or inactions that contradict ICANN (Internet Corporation for Assigned Names and Numbers)'s Mission, Commitments, Core Values and/or established ICANN (Internet Corporation for Assigned Names and Numbers) policy(ies);

(ii) One or more actions or inactions of the Board or Staff that have been taken or refused to be taken without consideration of material information, except where the Requestor could have submitted, but did not submit, the information for the Board's or Staff's consideration at the time of action or refusal to act; or

(iii) One or more actions or inactions of the Board or Staff that are taken as a result of the Board's or staff's reliance on false or inaccurate relevant information.

(d) Notwithstanding any other provision in this Section 4.2, the scope of reconsideration shall exclude the following:

(i) Disputes relating to country code top-level domain ("**ccTLD (Country Code Top Level Domain)**") delegations and re-delegations;

(ii) Disputes relating to Internet numbering resources;
and

(iii) Disputes relating to protocol parameters.

(e) The Board has designated the Board Accountability Mechanisms Committee to review and consider Reconsideration Requests. The Board Accountability Mechanisms Committee shall have the authority to:

(i) Evaluate Reconsideration Requests;

(ii) Summarily dismiss insufficient or frivolous Reconsideration Requests;

(iii) Evaluate Reconsideration Requests for urgent consideration;

(iv) Conduct whatever factual investigation is deemed appropriate;

(v) Request additional written submissions from the affected party, or from other parties; and

(vi) Make a recommendation to the Board on the merits of the Reconsideration Request, if it has not been summarily dismissed.

(f) ICANN (Internet Corporation for Assigned Names and Numbers) shall absorb the normal administrative costs of the Reconsideration Request process. Except with respect to a Community Reconsideration Request, ICANN (Internet Corporation for Assigned Names and Numbers) reserves the right to recover from a party requesting review or reconsideration any costs that are deemed to be extraordinary in nature. When such extraordinary costs can be foreseen, that fact and the reasons why such costs are necessary and appropriate to evaluating the Reconsideration

Request shall be communicated to the Requestor, who shall then have the option of withdrawing the request or agreeing to bear such costs.

(g) All Reconsideration Requests must be submitted by the Requestor to an email address designated by the Board Accountability Mechanisms Committee:

(i) For Reconsideration Requests that are not Community Reconsideration Requests, such Reconsideration Requests must be submitted:

(A) for requests challenging Board actions, within 30 days after the date on which information about the challenged Board action is first published in a resolution, unless the posting of the resolution is not accompanied by a rationale. In that instance, the request must be submitted within 30 days from the initial posting of the rationale;

(B) for requests challenging Staff actions, within 30 days after the date on which the Requestor became aware of, or reasonably should have become aware of, the challenged Staff action; or

(C) for requests challenging either Board or Staff inaction, within 30 days after the date on which the Requestor reasonably concluded, or reasonably should have concluded, that action would not be taken in a timely manner.

(ii) For Community Reconsideration Requests, such Community Reconsideration Requests must be submitted in accordance with the timeframe set forth in Section 4.3 of Annex D.

(h) To properly initiate a Reconsideration Request, all Requestors must review, complete and follow the

Reconsideration Request form posted on the Website at <https://www.icann.org/resources/pages/accountability/reconsideration-en>. Requestors must also acknowledge and agree to the terms and conditions set forth in the form when filing.

(i) Requestors shall not provide more than 25 pages (double-spaced, 12-point font) of argument in support of a Reconsideration Request, not including exhibits. Requestors may submit all documentary evidence necessary to demonstrate why the action or inaction should be reconsidered, without limitation.

(j) Reconsideration Requests from different Requestors may be considered in the same proceeding so long as: (i) the requests involve the same general action or inaction; and (ii) the Requestors are similarly affected by such action or inaction. In addition, consolidated filings may be appropriate if the alleged causal connection and the resulting harm is substantially the same for all of the Requestors. Every Requestor must be able to demonstrate that it has been materially harmed and adversely impacted by the action or inaction giving rise to the request.

(k) The Board Accountability Mechanisms Committee shall review each Reconsideration Request upon its receipt to determine if it is sufficiently stated. The Board Accountability Mechanisms Committee may summarily dismiss a Reconsideration Request if: (i) the Requestor fails to meet the requirements for bringing a Reconsideration Request; or (ii) it is frivolous. The Board Accountability Mechanisms Committee's summary dismissal of a Reconsideration Request shall be documented and promptly posted on the Website.

(l) For all Reconsideration Requests that are not summarily dismissed, except Reconsideration Requests described in [Section 4.2\(l\)\(iii\)](#) and Community Reconsideration Requests, the Reconsideration Request shall be sent to the

Ombudsman, who shall promptly proceed to review and consider the Reconsideration Request.

(i) The Ombudsman shall be entitled to seek any outside expert assistance as the Ombudsman deems reasonably necessary to perform this task to the extent it is within the budget allocated to this task.

(ii) The Ombudsman shall submit to the Board Accountability Mechanisms Committee his or her substantive evaluation of the Reconsideration Request within 15 days of the Ombudsman's receipt of the Reconsideration Request. The Board Accountability Mechanisms Committee shall thereafter promptly proceed to review and consideration.

(iii) For those Reconsideration Requests involving matters for which the Ombudsman has, in advance of the filing of the Reconsideration Request, taken a position while performing his or her role as the Ombudsman pursuant to Article 5 of these Bylaws, or involving the Ombudsman's conduct in some way, the Ombudsman shall recuse himself or herself and the Board Accountability Mechanisms Committee shall review the Reconsideration Request without involvement by the Ombudsman.

(m) The Board Accountability Mechanisms Committee may ask ICANN (Internet Corporation for Assigned Names and Numbers) Staff for its views on a Reconsideration Request, which comments shall be made publicly available on the Website.

(n) The Board Accountability Mechanisms Committee may request additional information or clarifications from the Requestor, and may elect to conduct a meeting with the Requestor by telephone, email or, if acceptable to the Requestor, in person. A Requestor may also ask for an

opportunity to be heard. The Board Accountability Mechanisms Committee's decision on any such request is final. To the extent any information gathered in such a meeting is relevant to any recommendation by the Board Accountability Mechanisms Committee, it shall so state in its recommendation.

(o) The Board Accountability Mechanisms Committee may also request information relevant to the Reconsideration Request from third parties. To the extent any information gathered is relevant to any recommendation by the Board Accountability Mechanisms Committee, it shall so state in its recommendation. Any information collected by ICANN (Internet Corporation for Assigned Names and Numbers) from third parties shall be provided to the Requestor.

(p) The Board Accountability Mechanisms Committee shall act on a Reconsideration Request on the basis of the public written record, including information submitted by the Requestor, by the ICANN (Internet Corporation for Assigned Names and Numbers) Staff, and by any third party.

(q) The Board Accountability Mechanisms Committee shall make a final recommendation to the Board with respect to a Reconsideration Request within 30 days following its receipt of the Ombudsman's evaluation (or 30 days following receipt of the Reconsideration Request involving those matters for which the Ombudsman recuses himself or herself or the receipt of the Community Reconsideration Request, if applicable), unless impractical, in which case it shall report to the Board the circumstances that prevented it from making a final recommendation and its best estimate of the time required to produce such a final recommendation. In any event, the Board Accountability Mechanisms Committee shall endeavor to produce its final recommendation to the Board within 90 days of receipt of the Reconsideration Request. The final recommendation of the Board Accountability Mechanisms Committee shall be documented and promptly

(i.e., as soon as practicable) posted on the Website and shall address each of the arguments raised in the Reconsideration Request. The Requestor may file a 10-page (double-spaced, 12-point font) document, not including exhibits, in rebuttal to the Board Accountability Mechanisms Committee's recommendation within 15 days of receipt of the recommendation, which shall also be promptly (i.e., as soon as practicable) posted to the Website and provided to the Board for its evaluation; provided, that such rebuttal shall: (i) be limited to rebutting or contradicting the issues raised in the Board Accountability Mechanisms Committee's final recommendation; and (ii) not offer new evidence to support an argument made in the Requestor's original Reconsideration Request that the Requestor could have provided when the Requestor initially submitted the Reconsideration Request.

(r) The Board shall not be bound to follow the recommendations of the Board Accountability Mechanisms Committee. The final decision of the Board and its rationale shall be made public as part of the preliminary report and minutes of the Board meeting at which action is taken. The Board shall issue its decision on the recommendation of the Board Accountability Mechanisms Committee within 45 days of receipt of the Board Accountability Mechanisms Committee's recommendation or as soon thereafter as feasible. Any circumstances that delay the Board from acting within this timeframe must be identified and posted on the Website. In any event, the Board's final decision shall be made within 135 days of initial receipt of the Reconsideration Request by the Board Accountability Mechanisms Committee. The Board's decision on the recommendation shall be posted on the Website in accordance with the Board's posting obligations as set forth in Article 3 of these Bylaws. If the Requestor so requests, the Board shall post both a recording and a transcript of the substantive Board discussion from the meeting at which the Board considered the Board Accountability Mechanisms Committee's

recommendation. All briefing materials supplied to the Board shall be provided to the Requestor. The Board may redact such briefing materials and the recording and transcript on the basis that such information (i) relates to confidential personnel matters, (ii) is covered by attorney-client privilege, work product doctrine or other recognized legal privilege, (iii) is subject to a legal obligation that ICANN (Internet Corporation for Assigned Names and Numbers) maintain its confidentiality, (iv) would disclose trade secrets, or (v) would present a material risk of negative impact to the security, stability or resiliency of the Internet. In the case of any redaction, ICANN (Internet Corporation for Assigned Names and Numbers) will provide the Requestor a written rationale for such redaction. If a Requestor believes that a redaction was improper, the Requestor may use an appropriate accountability mechanism to challenge the scope of ICANN (Internet Corporation for Assigned Names and Numbers)'s redaction.

(s) If the Requestor believes that the Board action or inaction for which a Reconsideration Request is submitted is so urgent that the timing requirements of the process set forth in this Section 4.2 are too long, the Requestor may apply to the Board Accountability Mechanisms Committee for urgent consideration. Any request for urgent consideration must be made within two business days (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) of the posting of the resolution at issue. A request for urgent consideration must include a discussion of why the matter is urgent for reconsideration and must demonstrate a likelihood of success with the Reconsideration Request.

(t) The Board Accountability Mechanisms Committee shall respond to the request for urgent consideration within two business days after receipt of such request. If the Board Accountability Mechanisms Committee agrees to consider the matter with urgency, it will cause notice to be provided to

the Requestor, who will have two business days after notification to complete the Reconsideration Request. The Board Accountability Mechanisms Committee shall issue a recommendation on the urgent Reconsideration Request within seven days of the completion of the filing of the Reconsideration Request, or as soon thereafter as feasible. If the Board Accountability Mechanisms Committee does not agree to consider the matter with urgency, the Requestor may still file a Reconsideration Request within the regular time frame set forth within these Bylaws.

(u) The Board Accountability Mechanisms Committee shall submit a report to the Board on an annual basis containing at least the following information for the preceding calendar year:

(i) the number and general nature of Reconsideration Requests received, including an identification if the Reconsideration Requests were acted upon, summarily dismissed, or remain pending;

(ii) for any Reconsideration Requests that remained pending at the end of the calendar year, the average length of time for which such Reconsideration Requests have been pending, and a description of the reasons for any Reconsideration Request pending for more than ninety (90) days;

(iii) an explanation of any other mechanisms available to ensure that ICANN (Internet Corporation for Assigned Names and Numbers) is accountable to persons materially affected by its decisions; and

(iv) whether or not, in the Board Accountability Mechanisms Committee's view, the criteria for which reconsideration may be requested should be revised, or another process should be adopted or modified, to ensure that all persons materially affected by ICANN

(Internet Corporation for Assigned Names and Numbers) decisions have meaningful access to a review process that ensures fairness while limiting frivolous claims.

Section 4.3. INDEPENDENT REVIEW PROCESS FOR COVERED ACTIONS

(a) In addition to the reconsideration process described in Section 4.2, ICANN (Internet Corporation for Assigned Names and Numbers) shall have a separate process for independent third-party review of Disputes (defined in Section 4.3(b)(iii)) alleged by a Claimant (as defined in Section 4.3(b)(i)) to be within the scope of the Independent Review Process ("**IRP**"). The IRP is intended to hear and resolve Disputes for the following purposes ("**Purposes of the IRP**"):

(i) Ensure that ICANN (Internet Corporation for Assigned Names and Numbers) does not exceed the scope of its Mission and otherwise complies with its Articles of Incorporation and Bylaws.

(ii) Empower the global Internet community and Claimants to enforce compliance with the Articles of Incorporation and Bylaws through meaningful, affordable and accessible expert review of Covered Actions (as defined in Section 4.3(b)(i)).

(iii) Ensure that ICANN (Internet Corporation for Assigned Names and Numbers) is accountable to the global Internet community and Claimants.

(iv) Address claims that ICANN (Internet Corporation for Assigned Names and Numbers) has failed to enforce its rights under the IANA (Internet Assigned Numbers Authority) Naming Function Contract (as defined in Section 16.3(a)).

(v) Provide a mechanism by which direct customers of the IANA (Internet Assigned Numbers Authority) naming functions may seek resolution of PTI (as defined in Section 16.1) service complaints that are not resolved through mediation.

(vi) Reduce Disputes by creating precedent to guide and inform the Board, Officers (as defined in Section 15.1), Staff members, Supporting Organizations (Supporting Organizations), Advisory Committees (Advisory Committees), and the global Internet community in connection with policy development and implementation.

(vii) Secure the accessible, transparent, efficient, consistent, coherent, and just resolution of Disputes.

(viii) Lead to binding, final resolutions consistent with international arbitration norms that are enforceable in any court with proper jurisdiction.

(ix) Provide a mechanism for the resolution of Disputes, as an alternative to legal action in the civil courts of the United States or other jurisdictions.

This Section 4.3 shall be construed, implemented, and administered in a manner consistent with these Purposes of the IRP.

(b) The scope of the IRP is defined with reference to the following terms:

(i) A "**Claimant**" is any legal or natural person, group, or entity including, but not limited to the EC (Empowered Community), a Supporting Organization (Supporting Organization), or an Advisory Committee (Advisory Committee) that has been materially affected by a Dispute. To be materially affected by a Dispute,

the Claimant must suffer an injury or harm that is directly and causally connected to the alleged violation.

(A)The EC (Empowered Community) is deemed to be materially affected by all Covered Actions. ICANN (Internet Corporation for Assigned Names and Numbers) shall not assert any defenses of standing or capacity against the EC (Empowered Community) in any forum.

(B)ICANN (Internet Corporation for Assigned Names and Numbers) shall not object to the standing of the EC (Empowered Community), a Supporting Organization (Supporting Organization), or an Advisory Committee (Advisory Committee) to participate in an IRP, to compel an IRP, or to enforce an IRP decision on the basis that it is not a legal person with capacity to sue. No special pleading of a Claimant's capacity or of the legal existence of a person that is a Claimant shall be required in the IRP proceedings. No Claimant shall be allowed to proceed if the IRP Panel (as defined in Section 4.3(g)) concludes based on evidence submitted to it that the Claimant does not fairly or adequately represent the interests of those on whose behalf the Claimant purports to act.

(ii) "**Covered Actions**" are defined as any actions or failures to act by or within ICANN (Internet Corporation for Assigned Names and Numbers) committed by the Board, individual Directors, Officers, or Staff members that give rise to a Dispute.

(iii) "**Disputes**" are defined as:

(A)Claims that Covered Actions constituted an action or inaction that violated the Articles of Incorporation or Bylaws, including but not limited to any action or inaction that:

- (1) exceeded the scope of the Mission;
- (2) resulted from action taken in response to advice or input from any Advisory Committee (Advisory Committee) or Supporting Organization (Supporting Organization) that are claimed to be inconsistent with the Articles of Incorporation or Bylaws;
- (3) resulted from decisions of process-specific expert panels that are claimed to be inconsistent with the Articles of Incorporation or Bylaws;
- (4) resulted from a response to a DIDP (as defined in Section 22.7(d)) request that is claimed to be inconsistent with the Articles of Incorporation or Bylaws; or
- (5) arose from claims involving rights of the EC (Empowered Community) as set forth in the Articles of Incorporation or Bylaws.

(B) Claims that ICANN (Internet Corporation for Assigned Names and Numbers), the Board, individual Directors, Officers or Staff members have not enforced ICANN (Internet Corporation for Assigned Names and Numbers)'s contractual rights with respect to the IANA (Internet Assigned Numbers Authority) Naming Function Contract, and

(C) Claims regarding PTI service complaints by direct customers of the IANA (Internet Assigned Numbers Authority) naming functions that are not resolved through mediation.

(c) Notwithstanding any other provision in this Section 4.3, the IRP's scope shall exclude all of the following:

- (i) EC (Empowered Community) challenges to the result(s) of a PDP (Policy Development Process), unless the Supporting Organization (Supporting Organization)(s) that approved the PDP (Policy

Development Process) supports the EC (Empowered Community) bringing such a challenge;

(ii) Claims relating to ccTLD (Country Code Top Level Domain) delegations and re-delegations;

(iii) Claims relating to Internet numbering resources, and

(iv) Claims relating to protocol parameters.

(d) An IRP shall commence with the Claimant's filing of a written statement of a Dispute (a "**Claim**") with the IRP Provider (described in Section 4.3(m) below). For the EC (Empowered Community) to commence an IRP ("**Community IRP**"), the EC (Empowered Community) shall first comply with the procedures set forth in Section 4.2 of Annex D.

(e) Cooperative Engagement Process

(i) Except for Claims brought by the EC (Empowered Community) in accordance with this Section 4.3 and Section 4.2 of Annex D, prior to the filing of a Claim, the parties are strongly encouraged to participate in a non-binding Cooperative Engagement Process ("**CEP**") for the purpose of attempting to resolve and/or narrow the Dispute. CEPs shall be conducted pursuant to the CEP Rules to be developed with community involvement, adopted by the Board, and as amended from time to time.

(ii) The CEP is voluntary. However, except for Claims brought by the EC (Empowered Community) in accordance with this Section 4.3 and Section 4.2 of Annex D, if the Claimant does not participate in good faith in the CEP and ICANN (Internet Corporation for Assigned Names and Numbers) is the prevailing party

in the IRP, the IRP Panel shall award to ICANN (Internet Corporation for Assigned Names and Numbers) all reasonable fees and costs incurred by ICANN (Internet Corporation for Assigned Names and Numbers) in the IRP, including legal fees.

(iii) Either party may terminate the CEP efforts if that party: (A) concludes in good faith that further efforts are unlikely to produce agreement; or (B) requests the inclusion of an independent dispute resolution facilitator ("**IRP Mediator**") after at least one CEP meeting.

(iv) Unless all parties agree on the selection of a particular IRP Mediator, any IRP Mediator appointed shall be selected from the members of the Standing Panel (described in Section 4.3(j) below) by its Chair, but such IRP Mediator shall not thereafter be eligible to serve as a panelist presiding over an IRP on the matter.

(f) ICANN (Internet Corporation for Assigned Names and Numbers) hereby waives any defenses that may be afforded under Section 5141 of the California Corporations Code ("**CCC**") against any Claimant, and shall not object to the standing of any such Claimant to participate in or to compel an IRP, or to enforce an IRP decision on the basis that such Claimant may not otherwise be able to assert that a Covered Action is ultra vires.

(g) Upon the filing of a Claim, an Independent Review Process Panel ("**IRP Panel**", described in Section 4.3(k) below) shall be selected in accordance with the Rules of Procedure (as defined in Section 4.3(n)(i)). Following the selection of an IRP Panel, that IRP Panel shall be charged with hearing and resolving the Dispute, considering the Claim and ICANN (Internet Corporation for Assigned Names and Numbers)'s written response ("**Response**") in compliance

with the Articles of Incorporation and Bylaws, as understood in light of prior IRP Panel decisions decided under the same (or an equivalent prior) version of the provision of the Articles of Incorporation and Bylaws at issue, and norms of applicable law. If no Response is timely filed by ICANN (Internet Corporation for Assigned Names and Numbers), the IRP Panel may accept the Claim as unopposed and proceed to evaluate and decide the Claim pursuant to the procedures set forth in these Bylaws.

(h) After a Claim is referred to an IRP Panel, the parties are urged to participate in conciliation discussions for the purpose of attempting to narrow the issues that are to be addressed by the IRP Panel.

(i) Each IRP Panel shall conduct an objective, de novo examination of the Dispute.

(i) With respect to Covered Actions, the IRP Panel shall make findings of fact to determine whether the Covered Action constituted an action or inaction that violated the Articles of Incorporation or Bylaws.

(ii) All Disputes shall be decided in compliance with the Articles of Incorporation and Bylaws, as understood in the context of the norms of applicable law and prior relevant IRP decisions.

(iii) For Claims arising out of the Board's exercise of its fiduciary duties, the IRP Panel shall not replace the Board's reasonable judgment with its own so long as the Board's action or inaction is within the realm of reasonable business judgment.

(iv) With respect to claims that ICANN (Internet Corporation for Assigned Names and Numbers) has not enforced its contractual rights with respect to the IANA (Internet Assigned Numbers Authority) Naming

Function Contract, the standard of review shall be whether there was a material breach of ICANN (Internet Corporation for Assigned Names and Numbers)'s obligations under the IANA (Internet Assigned Numbers Authority) Naming Function Contract, where the alleged breach has resulted in material harm to the Claimant.

(v) For avoidance of doubt, IRPs initiated through the mechanism contemplated at Section 4.3(a)(iv) above, shall be subject to a separate standard of review as defined in the IANA (Internet Assigned Numbers Authority) Naming Function Contract.

(j) Standing Panel

(i) There shall be an omnibus standing panel of at least seven members (the "**Standing Panel**") each of whom shall possess significant relevant legal expertise in one or more of the following areas: international law, corporate governance, judicial systems, alternative dispute resolution and/or arbitration. Each member of the Standing Panel shall also have knowledge, developed over time, regarding the DNS (Domain Name System) and ICANN (Internet Corporation for Assigned Names and Numbers)'s Mission, work, policies, practices, and procedures. Members of the Standing Panel shall receive at a minimum, training provided by ICANN (Internet Corporation for Assigned Names and Numbers) on the workings and management of the Internet's unique identifiers and other appropriate training as recommended by the IRP Implementation Oversight Team (described in Section 4.3(n)(i)).

(ii) ICANN (Internet Corporation for Assigned Names and Numbers) shall, in consultation with the Supporting Organizations (Supporting Organizations)

and Advisory Committees (Advisory Committees), initiate a four-step process to establish the Standing Panel to ensure the availability of a number of IRP panelists that is sufficient to allow for the timely resolution of Disputes consistent with the Purposes of the IRP.

(A) ICANN (Internet Corporation for Assigned Names and Numbers), in consultation with the Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees), shall initiate a tender process for an organization to provide administrative support for the IRP Provider (as defined in Section 4.3(m)), beginning by consulting the "**IRP Implementation Oversight Team**" (described in Section 4.3(n)(i)) on a draft tender document.

(B) ICANN (Internet Corporation for Assigned Names and Numbers) shall issue a call for expressions of interest from potential panelists, and work with the Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees) and the Board to identify and solicit applications from well-qualified candidates, and to conduct an initial review and vetting of applications.

(C) The Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees) shall nominate a slate of proposed panel members from the well-qualified candidates identified per the process set forth in Section 4.3(j)(ii)(B).

(D) Final selection shall be subject to Board confirmation, which shall not be unreasonably withheld.

(iii) Appointments to the Standing Panel shall be made for a fixed term of five years with no removal except for specified cause in the nature of corruption, misuse of

position, fraud or criminal activity. The recall process shall be developed by the IRP Implementation Oversight Team.

(iv) Reasonable efforts shall be taken to achieve cultural, linguistic, gender, and legal tradition diversity, and diversity by Geographic Region (as defined in Section 7.5).

(k) IRP Panel

(i) A three-member IRP Panel shall be selected from the Standing Panel to hear a specific Dispute.

(ii) The Claimant and ICANN (Internet Corporation for Assigned Names and Numbers) shall each select one panelist from the Standing Panel, and the two panelists selected by the parties will select the third panelist from the Standing Panel. In the event that a Standing Panel is not in place when an IRP Panel must be convened for a given proceeding or is in place but does not have capacity due to other IRP commitments or the requisite diversity of skill and experience needed for a particular IRP proceeding, the Claimant and ICANN (Internet Corporation for Assigned Names and Numbers) shall each select a qualified panelist from outside the Standing Panel and the two panelists selected by the parties shall select the third panelist. In the event that no Standing Panel is in place when an IRP Panel must be convened and the two party-selected panelists cannot agree on the third panelist, the IRP Provider's rules shall apply to selection of the third panelist.

(iii) Assignment from the Standing Panel to IRP Panels shall take into consideration the Standing Panel members' individual experience and expertise in issues related to highly technical, civil society,

business, diplomatic, and regulatory skills as needed by each specific proceeding, and such requests from the parties for any particular expertise.

(iv) Upon request of an IRP Panel, the IRP Panel shall have access to independent skilled technical experts at the expense of ICANN (Internet Corporation for Assigned Names and Numbers), although all substantive interactions between the IRP Panel and such experts shall be conducted on the record, except when public disclosure could materially and unduly harm participants, such as by exposing trade secrets or violating rights of personal privacy.

(v) IRP Panel decisions shall be made by a simple majority of the IRP Panel.

(l) All IRP proceedings shall be administered in English as the primary working language, with provision of translation services for Claimants if needed.

(m) IRP Provider

(i) All IRP proceedings shall be administered by a well-respected international dispute resolution provider ("**IRP Provider**"). The IRP Provider shall receive and distribute IRP Claims, Responses, and all other submissions arising from an IRP at the direction of the IRP Panel, and shall function independently from ICANN (Internet Corporation for Assigned Names and Numbers).

(n) Rules of Procedure

(i) An IRP Implementation Oversight Team shall be established in consultation with the Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees) and comprised of members of the global Internet

community. The IRP Implementation Oversight Team, and once the Standing Panel is established the IRP Implementation Oversight Team in consultation with the Standing Panel, shall develop clear published rules for the IRP ("**Rules of Procedure**") that conform with international arbitration norms and are streamlined, easy to understand and apply fairly to all parties. Upon request, the IRP Implementation Oversight Team shall have assistance of counsel and other appropriate experts.

(ii) The Rules of Procedure shall be informed by international arbitration norms and consistent with the Purposes of the IRP. Specialized Rules of Procedure may be designed for reviews of PTI service complaints that are asserted by direct customers of the IANA (Internet Assigned Numbers Authority) naming functions and are not resolved through mediation. The Rules of Procedure shall be published and subject to a period of public comment that complies with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers), and take effect upon approval by the Board, such approval not to be unreasonably withheld.

(iii) The Standing Panel may recommend amendments to such Rules of Procedure as it deems appropriate to fulfill the Purposes of the IRP, however no such amendment shall be effective without approval by the Board after publication and a period of public comment that complies with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers).

(iv) The Rules of Procedure are intended to ensure fundamental fairness and due process and shall at a minimum address the following elements:

(A) The time within which a Claim must be filed after a Claimant becomes aware or reasonably should have become aware of the action or inaction giving rise to the Dispute;

(B) Issues relating to joinder, intervention, and consolidation of Claims;

(C) Rules governing written submissions, including the required elements of a Claim, other requirements or limits on content, time for filing, length of statements, number of supplemental statements, if any, permitted evidentiary support (factual and expert), including its length, both in support of a Claimant's Claim and in support of ICANN (Internet Corporation for Assigned Names and Numbers)'s Response;

(D) Availability and limitations on discovery methods;

(E) Whether hearings shall be permitted, and if so what form and structure such hearings would take;

(F) Procedures if ICANN (Internet Corporation for Assigned Names and Numbers) elects not to respond to an IRP; and

(G) The standards and rules governing appeals from IRP Panel decisions, including which IRP Panel decisions may be appealed.

(o) Subject to the requirements of this Section 4.3, each IRP Panel shall have the authority to:

(i) Summarily dismiss Disputes that are brought without standing, lack substance, or are frivolous or vexatious;

(ii) Request additional written submissions from the Claimant or from other parties;

(iii) Declare whether a Covered Action constituted an action or inaction that violated the Articles of Incorporation or Bylaws, declare whether ICANN (Internet Corporation for Assigned Names and Numbers) failed to enforce ICANN (Internet Corporation for Assigned Names and Numbers)'s contractual rights with respect to the IANA (Internet Assigned Numbers Authority) Naming Function Contract or resolve PTI service complaints by direct customers of the IANA (Internet Assigned Numbers Authority) naming functions, as applicable;

(iv) Recommend that ICANN (Internet Corporation for Assigned Names and Numbers) stay any action or decision, or take necessary interim action, until such time as the opinion of the IRP Panel is considered;

(v) Consolidate Disputes if the facts and circumstances are sufficiently similar, and take such other actions as are necessary for the efficient resolution of Disputes;

(vi) Determine the timing for each IRP proceeding; and

(vii) Determine the shifting of IRP costs and expenses consistent with Section 4.3(r).

(p) A Claimant may request interim relief. Interim relief may include prospective relief, interlocutory relief, or declaratory or injunctive relief, and specifically may include a stay of the challenged ICANN (Internet Corporation for Assigned Names and Numbers) action or decision until such time as the opinion of the IRP Panel is considered as described in Section 4.3(o)(iv), in order to maintain the *status quo*. A single member of the Standing Panel ("**Emergency Panelist**") shall be selected to adjudicate requests for interim relief. In the event that no Standing Panel is in place when an Emergency Panelist must be selected, the IRP Provider's rules shall apply to the selection of the Emergency Panelist.

Interim relief may only be provided if the Emergency Panelist determines that the Claimant has established all of the following factors:

(i) A harm for which there will be no adequate remedy in the absence of such relief;

(ii) Either: (A) likelihood of success on the merits; or (B) sufficiently serious questions related to the merits; and

(iii) A balance of hardships tipping decidedly toward the party seeking relief.

(q) Conflicts of Interest

(i) Standing Panel members must be independent of ICANN (Internet Corporation for Assigned Names and Numbers) and its Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees), and so must adhere to the following criteria:

(A) Upon consideration for the Standing Panel and on an ongoing basis, Panelists shall have an affirmative obligation to disclose any material relationship with ICANN (Internet Corporation for Assigned Names and Numbers), a Supporting Organization (Supporting Organization), an Advisory Committee (Advisory Committee), or any other participant in an IRP proceeding.

(B) Additional independence requirements to be developed by the IRP Implementation Oversight Team, including term limits and restrictions on post-term appointment to other ICANN (Internet Corporation for Assigned Names and Numbers) positions.

(ii) The IRP Provider shall disclose any material relationship with ICANN (Internet Corporation for Assigned Names and Numbers), a Supporting Organization (Supporting Organization), an Advisory Committee (Advisory Committee), or any other participant in an IRP proceeding.

(r) ICANN (Internet Corporation for Assigned Names and Numbers) shall bear all the administrative costs of maintaining the IRP mechanism, including compensation of Standing Panel members. Except as otherwise provided in Section 4.3(e)(ii), each party to an IRP proceeding shall bear its own legal expenses, except that ICANN (Internet Corporation for Assigned Names and Numbers) shall bear all costs associated with a Community IRP, including the costs of all legal counsel and technical experts. Nevertheless, except with respect to a Community IRP, the IRP Panel may shift and provide for the losing party to pay administrative costs and/or fees of the prevailing party in the event it identifies the losing party's Claim or defense as frivolous or abusive.

(s) An IRP Panel should complete an IRP proceeding expeditiously, issuing an early scheduling order and its written decision no later than six months after the filing of the Claim, except as otherwise permitted under the Rules of Procedure. The preceding sentence does not provide the basis for a Covered Action.

(t) Each IRP Panel shall make its decision based solely on the documentation, supporting materials, and arguments submitted by the parties, and in its decision shall specifically designate the prevailing party as to each part of a Claim.

(u) All IRP Panel proceedings shall be conducted on the record, and documents filed in connection with IRP Panel proceedings shall be posted on the Website, except for settlement negotiation or other proceedings that could

materially and unduly harm participants if conducted publicly. The Rules of Procedure, and all Claims, petitions, and decisions shall promptly be posted on the Website when they become available. Each IRP Panel may, in its discretion, grant a party's request to keep certain information confidential, such as trade secrets, but only if such confidentiality does not materially interfere with the transparency of the IRP proceeding.

(v) Subject to this Section 4.3, all IRP decisions shall be written and made public, and shall reflect a well-reasoned application of how the Dispute was resolved in compliance with the Articles of Incorporation and Bylaws, as understood in light of prior IRP decisions decided under the same (or an equivalent prior) version of the provision of the Articles of Incorporation and Bylaws at issue, and norms of applicable law.

(w) Subject to any limitations established through the Rules of Procedure, an IRP Panel decision may be appealed to the full Standing Panel sitting en banc within sixty (60) days of issuance of such decision.

(x) The IRP is intended as a final, binding arbitration process.

(i) IRP Panel decisions are binding final decisions to the extent allowed by law unless timely and properly appealed to the en banc Standing Panel. En banc Standing Panel decisions are binding final decisions to the extent allowed by law.

(ii) IRP Panel decisions and decisions of an en banc Standing Panel upon an appeal are intended to be enforceable in any court with jurisdiction over ICANN (Internet Corporation for Assigned Names and Numbers) without a *de novo* review of the decision of the IRP Panel or en banc Standing Panel, as

applicable, with respect to factual findings or conclusions of law.

(iii) ICANN (Internet Corporation for Assigned Names and Numbers) intends, agrees, and consents to be bound by all IRP Panel decisions of Disputes of Covered Actions as a final, binding arbitration.

(A) Where feasible, the Board shall consider its response to IRP Panel decisions at the Board's next meeting, and shall affirm or reject compliance with the decision on the public record based on an expressed rationale. The decision of the IRP Panel, or en banc Standing Panel, shall be final regardless of such Board action, to the fullest extent allowed by law.

(B) If an IRP Panel decision in a Community IRP is in favor of the EC (Empowered Community), the Board shall comply within 30 days of such IRP Panel decision.

(C) If the Board rejects an IRP Panel decision without undertaking an appeal to the en banc Standing Panel or rejects an en banc Standing Panel decision upon appeal, the Claimant or the EC (Empowered Community) may seek enforcement in a court of competent jurisdiction. In the case of the EC (Empowered Community), the EC (Empowered Community) Administration may convene as soon as possible following such rejection and consider whether to authorize commencement of such an action.

(iv) By submitting a Claim to the IRP Panel, a Claimant thereby agrees that the IRP decision is intended to be a final, binding arbitration decision with respect to such Claimant. Any Claimant that does not consent to the IRP being a final, binding arbitration may initiate a non-binding IRP if ICANN (Internet Corporation for Assigned Names and Numbers) agrees; provided that

such a non-binding IRP decision is not intended to be and shall not be enforceable.

(y) ICANN (Internet Corporation for Assigned Names and Numbers) shall seek to establish means by which community, non-profit Claimants and other Claimants that would otherwise be excluded from utilizing the IRP process may meaningfully participate in and have access to the IRP process.

Section 4.4. PERIODIC REVIEW OF ICANN (Internet Corporation for Assigned Names and Numbers) STRUCTURE AND OPERATIONS

(a) The Board shall cause a periodic review of the performance and operation of each Supporting Organization (Supporting Organization), each Supporting Organization (Supporting Organization) Council, each Advisory Committee (Advisory Committee) (other than the Governmental Advisory Committee (Advisory Committee)), and the Nominating Committee (as defined in Section 8.1) by an entity or entities independent of the organization under review. The goal of the review, to be undertaken pursuant to such criteria and standards as the Board shall direct, shall be to determine (i) whether that organization, council or committee has a continuing purpose in the ICANN (Internet Corporation for Assigned Names and Numbers) structure, (ii) if so, whether any change in structure or operations is desirable to improve its effectiveness and (iii) whether that organization, council or committee is accountable to its constituencies, stakeholder groups, organizations and other stakeholders.

These periodic reviews shall be conducted no less frequently than every five years, based on feasibility as determined by the Board. Each five-year cycle will be computed from the moment of the reception by the Board of the final report of the relevant review Working Group.

The results of such reviews shall be posted on the Website for public review and comment, and shall be considered by the Board no later than the second scheduled meeting of the Board after such results have been posted for 30 days. The consideration by the Board includes the ability to revise the structure or operation of the parts of ICANN (Internet Corporation for Assigned Names and Numbers) being reviewed by a two-thirds vote of all Directors, subject to any rights of the EC (Empowered Community) under the Articles of Incorporation and these Bylaws.

(b) The Governmental Advisory Committee (Advisory Committee) shall provide its own review mechanisms.

Section 4.5. ANNUAL REVIEW

ICANN (Internet Corporation for Assigned Names and Numbers) will produce an annual report on the state of the accountability and transparency reviews, which will discuss the status of the implementation of all review processes required by Section 4.6 and the status of ICANN (Internet Corporation for Assigned Names and Numbers)'s implementation of the recommendations set forth in the final reports issued by the review teams to the Board following the conclusion of such review ("**Annual Review Implementation Report**"). The Annual Review Implementation Report will be posted on the Website for public review and comment. Each Annual Review Implementation Report will be considered by the Board and serve as an input to the continuing process of implementing the recommendations from the review teams set forth in the final reports of such review teams required in Section 4.6.

Section 4.6. SPECIFIC REVIEWS

(a) Review Teams and Reports

(i) Review teams will be established for each applicable review, which will include both a limited number of members and an open number of observers. The chairs of the Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees) participating in the applicable review shall select a group of up to 21 review team members from among the prospective members nominated by the Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees), balanced for diversity and skill. In addition, the Board may designate one Director or Liaison to serve as a member of the review team. Specific guidance on the selection process is provided within the operating standards developed for the conduct of reviews under this Section 4.6 (the "Operating Standards"). The Operating Standards shall be developed through community consultation, including public comment opportunities as necessary that comply with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers). The Operating Standards must be aligned with the following guidelines:

(A) Each Supporting Organization (Supporting Organization) and Advisory Committee (Advisory Committee) participating in the applicable review may nominate up to seven prospective members for the review team;

(B) Any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) nominating at least one, two or three prospective review team members shall be entitled to have those one, two or three nominees selected as members to the review team, so long as the nominees

meet any applicable criteria for service on the team;
and

(C) If any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) has not nominated at least three prospective review team members, the Chairs of the Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees) shall be responsible for the determination of whether all 21 SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) member seats shall be filled and, if so, how the seats should be allocated from among those nominated.

(ii) Members and liaisons of review teams shall disclose to ICANN (Internet Corporation for Assigned Names and Numbers) and their applicable review team any conflicts of interest with a specific matter or issue under review in accordance with the most recent Board-approved practices and Operating Standards. The applicable review team may exclude from the discussion of a specific complaint or issue any member deemed by the majority of review team members to have a conflict of interest. Further details on the conflict of interest practices are included in the Operating Standards.

(iii) Review team decision-making practices shall be specified in the Operating Standards, with the expectation that review teams shall try to operate on a consensus basis. In the event a consensus cannot be found among the members of a review team, a majority vote of the members may be taken.

(iv) Review teams may also solicit and select independent experts to render advice as requested by the review team. ICANN (Internet Corporation for

Assigned Names and Numbers) shall pay the reasonable fees and expenses of such experts for each review contemplated by this Section 4.6 to the extent such fees and costs are consistent with the budget assigned for such review. Guidelines on how review teams are to work with and consider independent expert advice are specified in the Operating Standards.

(v) Each review team may recommend that the applicable type of review should no longer be conducted or should be amended.

(vi) Confidential Disclosure to Review Teams

(A) To facilitate transparency and openness regarding ICANN (Internet Corporation for Assigned Names and Numbers)'s deliberations and operations, the review teams, or a subset thereof, shall have access to ICANN (Internet Corporation for Assigned Names and Numbers) internal information and documents pursuant to the Confidential Disclosure Framework set forth in the Operating Standards (the "**Confidential Disclosure Framework**"). The Confidential Disclosure Framework must be aligned with the following guidelines:

(1) ICANN (Internet Corporation for Assigned Names and Numbers) must provide a justification for any refusal to reveal requested information. ICANN (Internet Corporation for Assigned Names and Numbers)'s refusal can be appealed to the Ombudsman and/or the ICANN (Internet Corporation for Assigned Names and Numbers) Board for a ruling on the disclosure request.

(2) ICANN (Internet Corporation for Assigned Names and Numbers) may designate certain documents and information as "for review team members only" or for a

subset of the review team members based on conflict of interest. ICANN (Internet Corporation for Assigned Names and Numbers)'s designation of documents may also be appealed to the Ombudsman and/or the ICANN (Internet Corporation for Assigned Names and Numbers) Board.

(3) ICANN (Internet Corporation for Assigned Names and Numbers) may require review team members to sign a non-disclosure agreement before accessing documents.

(vii) Reports

(A) Each report of the review team shall describe the degree of consensus or agreement reached by the review team on each recommendation contained in such report. Any member of a review team not in favor of a recommendation of its review team (whether as a result of voting against a matter or objecting to the consensus position) may record a minority dissent to such recommendation, which shall be included in the report of the review team. The review team shall attempt to prioritize each of its recommendations and provide a rationale for such prioritization.

(B) At least one draft report of the review team shall be posted on the Website for public review and comment. The review team must consider the public comments received in response to any posted draft report and shall amend the report as the review team deems appropriate and in the public interest before submitting its final report to the Board. The final report should include an explanation of how public comments were considered as well as a summary of changes made in response to public comments.

(C) Each final report of a review team shall be published for public comment in advance of the

Board's consideration. Within six months of receipt of a final report, the Board shall consider such final report and the public comments on the final report, and determine whether to approve the recommendations in the final report. If the Board does not approve any or all of the recommendations, the written rationale supporting the Board's decision shall include an explanation for the decision on each recommendation that was not approved. The Board shall promptly direct implementation of the recommendations that were approved.

(b) Accountability and Transparency Review

(i) The Board shall cause a periodic review of ICANN (Internet Corporation for Assigned Names and Numbers)'s execution of its commitment to maintain and improve robust mechanisms for public input, accountability, and transparency so as to ensure that the outcomes of its decision-making reflect the public interest and are accountable to the Internet community ("**Accountability and Transparency Review**").

(ii) The issues that the review team for the Accountability and Transparency Review (the "**Accountability and Transparency Review Team**") may assess include, but are not limited to, the following:

(A) assessing and improving Board governance which shall include an ongoing evaluation of Board performance, the Board selection process, the extent to which the Board's composition and allocation structure meets ICANN (Internet Corporation for Assigned Names and Numbers)'s present and future needs, and the appeal mechanisms for Board decisions contained in these Bylaws;

(B) assessing the role and effectiveness of the GAC (Governmental Advisory Committee)'s interaction with the Board and with the broader ICANN (Internet Corporation for Assigned Names and Numbers) community, and making recommendations for improvement to ensure effective consideration by ICANN (Internet Corporation for Assigned Names and Numbers) of GAC (Governmental Advisory Committee) input on the public policy aspects of the technical coordination of the DNS (Domain Name System);

(C) assessing and improving the processes by which ICANN (Internet Corporation for Assigned Names and Numbers) receives public input (including adequate explanation of decisions taken and the rationale thereof);

(D) assessing the extent to which ICANN (Internet Corporation for Assigned Names and Numbers)'s decisions are supported and accepted by the Internet community;

(E) assessing the policy development process to facilitate enhanced cross community deliberations, and effective and timely policy development; and

(F) assessing and improving the Independent Review Process.

(iii) The Accountability and Transparency Review Team shall also assess the extent to which prior Accountability and Transparency Review recommendations have been implemented and the extent to which implementation of such recommendations has resulted in the intended effect.

(iv) The Accountability and Transparency Review Team may recommend to the Board the termination or amendment of other periodic reviews required by this

Section 4.6, and may recommend to the Board the creation of additional periodic reviews.

(v) The Accountability and Transparency Review Team should issue its final report within one year of convening its first meeting.

(vi) The Accountability and Transparency Review shall be conducted no less frequently than every five years measured from the date the previous Accountability and Transparency Review Team was convened.

(c) Security (Security – Security, Stability and Resiliency (SSR)), Stability (Security, Stability and Resiliency), and Resiliency (Security Stability & Resiliency (SSR)) Review

(i) The Board shall cause a periodic review of ICANN (Internet Corporation for Assigned Names and Numbers)'s execution of its commitment to enhance the operational stability, reliability, resiliency, security, and global interoperability of the systems and processes, both internal and external, that directly affect and/or are affected by the Internet's system of unique identifiers that ICANN (Internet Corporation for Assigned Names and Numbers) coordinates ("**SSR Review**").

(ii) The issues that the review team for the SSR Review ("**SSR Review Team**") may assess are the following:

(A) security, operational stability and resiliency matters, both physical and network, relating to the coordination of the Internet's system of unique identifiers;

(B) conformance with appropriate security contingency planning framework for the Internet's system of unique

identifiers; and

(C) maintaining clear and globally interoperable security processes for those portions of the Internet's system of unique identifiers that ICANN (Internet Corporation for Assigned Names and Numbers) coordinates.

(iii) The SSR Review Team shall also assess the extent to which ICANN (Internet Corporation for Assigned Names and Numbers) has successfully implemented its security efforts, the effectiveness of the security efforts to deal with actual and potential challenges and threats to the security and stability of the DNS (Domain Name System), and the extent to which the security efforts are sufficiently robust to meet future challenges and threats to the security, stability and resiliency of the DNS (Domain Name System), consistent with ICANN (Internet Corporation for Assigned Names and Numbers)'s Mission.

(iv) The SSR Review Team shall also assess the extent to which prior SSR Review recommendations have been implemented and the extent to which implementation of such recommendations has resulted in the intended effect.

(v) The SSR Review shall be conducted no less frequently than every five years, measured from the date the previous SSR Review Team was convened.

(d) Competition, Consumer Trust and Consumer Choice Review

(i) ICANN (Internet Corporation for Assigned Names and Numbers) will ensure that it will adequately address issues of competition, consumer protection, security, stability and resiliency, malicious abuse

issues, sovereignty concerns, and rights protection prior to, or concurrent with, authorizing an increase in the number of new top-level domains in the root zone of the DNS (Domain Name System) pursuant to an application process initiated on or after the date of these Bylaws ("**New gTLD (generic Top Level Domain) Round**").

(ii) After a New gTLD (generic Top Level Domain) Round has been in operation for one year, the Board shall cause a competition, consumer trust and consumer choice review as specified in this Section 4.6(d). ("**CCT (Competition, Consumer Choice & Consumer Trust) Review**").

(iii) The review team for the CCT (Competition, Consumer Choice & Consumer Trust) Review ("**CCT (Competition, Consumer Choice & Consumer Trust) Review Team**") will examine (A) the extent to which the expansion of gTLDs has promoted competition, consumer trust and consumer choice and (B) the effectiveness of the New gTLD (generic Top Level Domain) Round's application and evaluation process and safeguards put in place to mitigate issues arising from the New gTLD (generic Top Level Domain) Round.

(iv) For each of its recommendations, the CCT (Competition, Consumer Choice & Consumer Trust) Review Team should indicate whether the recommendation, if accepted by the Board, must be implemented before opening subsequent rounds of new generic top-level domain applications periods.

(v) The CCT (Competition, Consumer Choice & Consumer Trust) Review Team shall also assess the extent to which prior CCT (Competition, Consumer Choice & Consumer Trust) Review recommendations have been implemented and the extent to which

implementation of such recommendations has resulted in the intended effect.

(e) Registration Directory Service Review

(i) Subject to applicable laws, ICANN (Internet Corporation for Assigned Names and Numbers) shall use commercially reasonable efforts to enforce its policies relating to registration directory services and shall work with Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees) to explore structural changes to improve accuracy and access to generic top-level domain registration data, as well as consider safeguards for protecting such data.

(ii) The Board shall cause a periodic review to assess the effectiveness of the then current gTLD (generic Top Level Domain) registry directory service and whether its implementation meets the legitimate needs of law enforcement, promoting consumer trust and safeguarding registrant data ("**Directory Service Review**").

(iii) The review team for the Directory Service Review ("**Directory Service Review Team**") will consider the Organisation for Economic Co-operation and Development ("**OECD (Organization for Economic Co-operation and Development)**") Guidelines on the Protection of Privacy and Transborder Flows of Personal Data as defined by the OECD (Organization for Economic Co-operation and Development) in 1980 and amended in 2013 and as may be amended from time to time.

(iv) The Directory Service Review Team shall assess the extent to which prior Directory Service Review recommendations have been implemented and the

extent to which implementation of such recommendations has resulted in the intended effect.

(v) The Directory Service Review shall be conducted no less frequently than every five years, measured from the date the previous Directory Service Review Team was convened, except that the first Directory Service Review to be conducted after 1 October 2016 shall be deemed to be timely if the applicable Directory Service Review Team is convened on or before 31 October 2016.

Section 4.7. COMMUNITY MEDIATION

(a) If the Board refuses or fails to comply with a duly authorized and valid EC (Empowered Community) Decision under these Bylaws, the EC (Empowered Community) Administration representative of any Decisional Participant who supported the exercise by the EC (Empowered Community) of its rights in the applicable EC (Empowered Community) Decision during the applicable decision period may request that the EC (Empowered Community) initiate a mediation process pursuant to this Section 4.7. The Board shall be deemed to have refused or failed to comply with a duly authorized and valid EC (Empowered Community) Decision if the Board has not complied with the EC (Empowered Community) Decision within 30 days of being notified of the relevant EC (Empowered Community) Decision.

(b) If a Mediation Initiation Notice (as defined in Section 4.1(a) of Annex D) is delivered to the Secretary pursuant to and in compliance with Section 4.1(a) of Annex D, as soon as reasonably practicable thereafter, the EC (Empowered Community) Administration shall designate individuals to represent the EC (Empowered Community) in the mediation ("**Mediation Administration**") and the Board shall designate representatives for the mediation ("**Board Mediation**")

Representatives"). Members of the EC (Empowered Community) Administration and the Board can designate themselves as representatives. ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post the Mediation Initiation Notice on the Website.

(c) There shall be a single mediator who shall be selected by the agreement of the Mediation Administration and Board Mediation Representatives. The Mediation Administration shall propose a slate of at least five potential mediators, and the Board Mediation Representatives shall select a mediator from the slate or request a new slate until a mutually-agreed mediator is selected. The Board Mediation Representatives may recommend potential mediators for inclusion on the slates selected by the Mediation Administration. The Mediation Administration shall not unreasonably decline to include mediators recommended by the Board Mediation Representatives on proposed slates and the Board Mediation Representatives shall not unreasonably withhold consent to the selection of a mediator on slates proposed by the Mediation Administration.

(d) The mediator shall be a licensed attorney with general knowledge of contract law and general knowledge of the DNS (Domain Name System) and ICANN (Internet Corporation for Assigned Names and Numbers). The mediator may not have any ongoing business relationship with ICANN (Internet Corporation for Assigned Names and Numbers), any Supporting Organization (Supporting Organization) (or constituent thereof), any Advisory Committee (Advisory Committee) (or constituent thereof), the EC (Empowered Community) Administration or the EC (Empowered Community). The mediator must confirm in writing that he or she is not, directly or indirectly, and will not become during the term of the mediation, an employee, partner, executive officer, director, consultant or advisor of ICANN (Internet Corporation for Assigned Names and Numbers), any Supporting Organization (Supporting

Organization) (or constituent thereof), any Advisory Committee (Advisory Committee) (or constituent thereof), the EC (Empowered Community) Administration or the EC (Empowered Community).

(e) The mediator shall conduct the mediation in accordance with these Bylaws, the laws of California and the rules and procedures of a well-respected international dispute resolution provider, which may be the IRP Provider. The arbitration will be conducted in the English language consistent with the provisions relevant for mediation under the IRP Rules of Procedure and will occur in Los Angeles County, California, unless another location is mutually-agreed between the Mediation Administration and Board Mediation Representatives.

(f) The Mediation Administration and the Board Mediation Representatives shall discuss the dispute in good faith and attempt, with the mediator's assistance, to reach an amicable resolution of the dispute.

(g) ICANN (Internet Corporation for Assigned Names and Numbers) shall bear all costs of the mediator.

(h) If the Mediation Administration and the Board Mediation Representatives have engaged in good faith participation in the mediation but have not resolved the dispute for any reason, the Mediation Administration or the Board Mediation Representatives may terminate the mediation at any time by declaring an impasse.

(i) If a resolution to the dispute is reached by the Mediation Administration and the Board Mediation Representatives, the Mediation Administration and the Board Mediation Representatives shall document such resolution including recommendations ("**Mediation Resolution**" and the date of such resolution, the "**Mediation Resolution Date**"). ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post the Mediation Resolution on the Website

(in no event later than 14 days after mediation efforts are completed) and the EC (Empowered Community) Administration shall promptly notify the Decisional Participants of the Mediation Resolution.

(j) The EC (Empowered Community) shall be deemed to have accepted the Mediation Resolution if it has not delivered an EC (Empowered Community) Community IRP Initiation Notice (as defined in Section 4.2(e) of Annex D) pursuant to and in compliance with Section 4.2 of Annex D within eighty (80) days following the Mediation Resolution Date.

ARTICLE 5 OMBUDSMAN

Section 5.1. OFFICE OF OMBUDSMAN

(a) ICANN (Internet Corporation for Assigned Names and Numbers) shall maintain an Office of Ombudsman ("**Office of Ombudsman**"), to be managed by an ombudsman ("**Ombudsman**") and to include such staff support as the Board determines is appropriate and feasible. The Ombudsman shall be a full-time position, with salary and benefits appropriate to the function, as determined by the Board.

(b) The Ombudsman shall be appointed by the Board for an initial term of two years, subject to renewal by the Board.

(c) The Ombudsman shall be subject to dismissal by the Board only upon a three-fourths (3/4) vote of the entire Board.

(d) The annual budget for the Office of Ombudsman shall be established by the Board as part of the annual ICANN (Internet Corporation for Assigned Names and Numbers) Budget process. The Ombudsman shall submit a proposed budget to the President, and the President shall include that budget submission in its entirety and without change in the

general ICANN (Internet Corporation for Assigned Names and Numbers) Budget recommended by the ICANN (Internet Corporation for Assigned Names and Numbers) President to the Board. Nothing in this Section 5.1 shall prevent the President from offering separate views on the substance, size, or other features of the Ombudsman's proposed budget to the Board.

Section 5.2. CHARTER

The charter of the Ombudsman shall be to act as a neutral dispute resolution practitioner for those matters for which the provisions of the Independent Review Process set forth in Section 4.3 have not been invoked. The principal function of the Ombudsman shall be to provide an independent internal evaluation of complaints by members of the ICANN (Internet Corporation for Assigned Names and Numbers) community who believe that the ICANN (Internet Corporation for Assigned Names and Numbers) staff, Board or an ICANN (Internet Corporation for Assigned Names and Numbers) constituent body has treated them unfairly. The Ombudsman shall serve as an objective advocate for fairness, and shall seek to evaluate and where possible resolve complaints about unfair or inappropriate treatment by ICANN (Internet Corporation for Assigned Names and Numbers) staff, the Board, or ICANN (Internet Corporation for Assigned Names and Numbers) constituent bodies, clarifying the issues and using conflict resolution tools such as negotiation, facilitation, and "shuttle diplomacy" to achieve these results. With respect to the Reconsideration Request Process set forth in Section 4.2, the Ombudsman shall serve the function expressly provided for in Section 4.2.

Section 5.3. OPERATIONS

The Office of Ombudsman shall:

- (a) facilitate the fair, impartial, and timely resolution of problems and complaints that affected members of the ICANN (Internet Corporation for Assigned Names and Numbers) community (excluding employees and vendors/suppliers of ICANN (Internet Corporation for Assigned Names and Numbers)) may have with specific actions or failures to act by the Board or ICANN (Internet Corporation for Assigned Names and Numbers) staff which have not otherwise become the subject of either a Reconsideration Request or Independent Review Process;
- (b) perform the functions set forth in Section 4.2 relating to review and consideration of Reconsideration Requests;
- (c) exercise discretion to accept or decline to act on a complaint or question, including by the development of procedures to dispose of complaints that are insufficiently concrete, substantive, or related to ICANN (Internet Corporation for Assigned Names and Numbers)'s interactions with the community so as to be inappropriate subject matters for the Ombudsman to act on. In addition, and without limiting the foregoing, the Ombudsman shall have no authority to act in any way with respect to internal administrative matters, personnel matters, issues relating to membership on the Board, or issues related to vendor/supplier relations;
- (d) have the right to have access to (but not to publish if otherwise confidential) all necessary information and records from ICANN (Internet Corporation for Assigned Names and Numbers) staff and constituent bodies to enable an informed evaluation of the complaint and to assist in dispute resolution where feasible (subject only to such confidentiality obligations as are imposed by the complainant or any generally applicable confidentiality policies adopted by ICANN (Internet Corporation for Assigned Names and Numbers));

(e) heighten awareness of the Ombudsman program and functions through routine interaction with the ICANN (Internet Corporation for Assigned Names and Numbers) community and online availability;

(f) maintain neutrality and independence, and have no bias or personal stake in an outcome; and

(g) comply with all ICANN (Internet Corporation for Assigned Names and Numbers) conflicts of interest and confidentiality policies.

Section 5.4. INTERACTION WITH ICANN (Internet Corporation for Assigned Names and Numbers) AND OUTSIDE ENTITIES

(a) No ICANN (Internet Corporation for Assigned Names and Numbers) employee, Board member, or other participant in Supporting Organizations (Supporting Organizations) or Advisory Committees (Advisory Committees) shall prevent or impede the Ombudsman's contact with the ICANN (Internet Corporation for Assigned Names and Numbers) community (including employees of ICANN (Internet Corporation for Assigned Names and Numbers)). ICANN (Internet Corporation for Assigned Names and Numbers) employees and Board members shall direct members of the ICANN (Internet Corporation for Assigned Names and Numbers) community who voice problems, concerns, or complaints about ICANN (Internet Corporation for Assigned Names and Numbers) to the Ombudsman, who shall advise complainants about the various options available for review of such problems, concerns, or complaints.

(b) ICANN (Internet Corporation for Assigned Names and Numbers) staff and other ICANN (Internet Corporation for Assigned Names and Numbers) participants shall observe and respect determinations made by the Office of

Ombudsman concerning confidentiality of any complaints received by that Office.

(c) Contact with the Ombudsman shall not constitute notice to ICANN (Internet Corporation for Assigned Names and Numbers) of any particular action or cause of action.

(d) The Ombudsman shall be specifically authorized to make such reports to the Board as he or she deems appropriate with respect to any particular matter and its resolution or the inability to resolve it. Absent a determination by the Ombudsman, in his or her sole discretion, that it would be inappropriate, such reports shall be posted on the Website.

(e) The Ombudsman shall not take any actions not authorized in these Bylaws, and in particular shall not institute, join, or support in any way any legal actions challenging ICANN (Internet Corporation for Assigned Names and Numbers) structure, procedures, processes, or any conduct by the ICANN (Internet Corporation for Assigned Names and Numbers) Board, staff, or constituent bodies.

Section 5.5. ANNUAL REPORT

The Office of Ombudsman shall publish on an annual basis a consolidated analysis of the year's complaints and resolutions, appropriately dealing with confidentiality obligations and concerns. Such annual report should include a description of any trends or common elements of complaints received during the period in question, as well as recommendations for steps that could be taken to minimize future complaints. The annual report shall be posted on the Website.

ARTICLE 6 EMPOWERED COMMUNITY

Section 6.1. COMPOSITION AND ORGANIZATION OF THE EMPOWERED

COMMUNITY

(a) The Empowered Community ("**EC (Empowered Community)**") shall be a nonprofit association formed under the laws of the State of California consisting of the ASO (Address Supporting Organization), the ccNSO (Country Code Names Supporting Organization) (as defined in Section 10.1), the GNSO (Generic Names Supporting Organization) (as defined in Section 11.1), the ALAC (At-Large Advisory Committee) (as defined in Section 12.2(d)(i)) and the GAC (Governmental Advisory Committee) (each a "**Decisional Participant**" or "associate," and collectively, the "**Decisional Participants**").

(b) This Article 6 shall constitute the articles of association of the EC (Empowered Community) and shall be considered the formational "governing document" (as defined in Section 18008 of the CCC) of the EC (Empowered Community), and the terms contained herein and in these Bylaws relating to the EC (Empowered Community) shall be the EC (Empowered Community)'s "governing principles" (as defined in Section 18010 of the CCC), which may only be amended as set forth in Section 25.2 . Where necessary for purposes of interpretation of these Bylaws, an "associate" shall be deemed to be a "member" of the EC (Empowered Community) as defined in Section 18015 of the CCC. Any change in the number and/or identity of Decisional Participants for any reason (including the resignation of any Decisional Participant or the addition of new Decisional Participants as a result of the creation of additional Supporting Organizations (Supporting Organizations) or Advisory Committees (Advisory Committees)), and any corresponding changes in the voting thresholds for exercise of the EC (Empowered Community)'s rights described in Annex D of these Bylaws, will only be effective following the completion of the process for amending Fundamental Bylaws described in Section 25.2 and Annex D. The EC (Empowered Community) may not be dissolved except upon the

completion of the process for amending Fundamental Bylaws described in Section 25.2 and Annex D.

(c) The sole purpose of the EC (Empowered Community) is to exercise its rights and perform its obligations under ICANN (Internet Corporation for Assigned Names and Numbers)'s Articles of Incorporation and these Bylaws, and the EC (Empowered Community) shall have no other powers or rights except as expressly provided therein. The EC (Empowered Community) may only act as provided in these Bylaws. Any act of the EC (Empowered Community) that is not in accordance with these Bylaws shall not be effective.

(d) The EC (Empowered Community) shall not acquire, hold, manage, encumber or transfer any interest in real or personal property, nor have any directors, officers or employees. The EC (Empowered Community) shall not merge with or into another entity nor shall it dissolve, except with the approval of the Board and as part of a Fundamental Bylaw Amendment (as defined in Section 25.2(b)).

(e) Decisional Participants shall not transfer their right to be an associate of the EC (Empowered Community). Any attempted transfer by any Decisional Participant of its right to be an associate of the EC (Empowered Community) shall be void ab initio.

(f) The location and street address of the EC (Empowered Community) shall be the principal office of ICANN (Internet Corporation for Assigned Names and Numbers).

(g) Each Decisional Participant shall, except as otherwise provided in Annex D, adopt procedures for exercising the rights of such Decisional Participant pursuant to the procedures set forth in Annex D, including (i) who can submit a petition to such Decisional Participant, (ii) the process for an individual to submit a petition to such Decisional Participant, including whether a petition must be accompanied by a rationale, (iii) how the Decisional

Participant determines whether to accept or reject a petition, (iv) how the Decisional Participant determines whether an issue subject to a petition has been resolved, (v) how the Decisional Participant determines whether to support or object to actions supported by another Decisional Participant, and (vi) the process for the Decisional Participant to notify its constituents of relevant matters.

Section 6.2. POWERS AND ACKNOWLEDGMENTS

(a) Pursuant to and in compliance with the terms and conditions of these Bylaws, the EC (Empowered Community) shall have the powers and rights, as set forth more fully elsewhere in these Bylaws, to:

(i) Appoint and remove individual Directors (other than the President);

(ii) Recall the entire Board;

(iii) Reject ICANN (Internet Corporation for Assigned Names and Numbers) Budgets, IANA (Internet Assigned Numbers Authority) Budgets, Operating Plans (as defined in [Section 22.5\(a\)\(i\)](#)) and Strategic Plans (as defined in [Section 22.5\(b\)\(i\)](#));

(iv) Reject Standard Bylaw Amendments (as defined in [Section 25.1\(a\)](#));

(v) Approve Fundamental Bylaw Amendments, Articles Amendments (as defined in [Section 25.2\(b\)](#)), and Asset Sales (as defined in [Article 26\(a\)](#));

(vi) Reject PTI Governance Actions (as defined in [Section 16.2\(d\)](#));,

(vii) Require the ICANN (Internet Corporation for Assigned Names and Numbers) Board to re-review its rejection of IFR Recommendation Decisions (as defined in Section 18.6(d)), Special IFR Recommendation Decisions (as defined in Section 18.12(e)), SCWG Creation Decisions (as defined in Section 19.1(d)) and SCWG Recommendation Decisions (as defined in Section 19.4(d));

(viii) Initiate a Community Reconsideration Request, mediation or a Community IRP; and

(ix) Take necessary and appropriate action to enforce its powers and rights, including through the community mechanism contained in Annex D or an action filed in a court of competent jurisdiction.

(b) The EC (Empowered Community) may pursue an action in any court with jurisdiction over ICANN (Internet Corporation for Assigned Names and Numbers) to enforce the EC (Empowered Community)'s rights under these Bylaws. ICANN (Internet Corporation for Assigned Names and Numbers) acknowledges the EC (Empowered Community)'s legal personhood and shall not raise the EC (Empowered Community)'s legal personhood as a defense in any proceeding between ICANN (Internet Corporation for Assigned Names and Numbers) and the EC (Empowered Community). ICANN (Internet Corporation for Assigned Names and Numbers) shall not assert as a defense that prior filing or completion of a Reconsideration Request or an IRP Claim was a prerequisite to an action in court regarding the EC (Empowered Community)'s power to appoint or remove an individual Director or recall the Board (except to the extent an IRP Panel award is applicable pursuant to Section 3.6(e)).

(c) By nominating a Director for designation by the EC (Empowered Community) or exercising the community mechanism contained in Annex D with respect to any rights

granted to the EC (Empowered Community) pursuant to these Bylaws, the EC (Empowered Community) and each of its Decisional Participants agrees and consents to the terms of these Bylaws and intends to be legally bound hereby.

Section 6.3. EC (Empowered Community) ADMINISTRATION

(a) The Decisional Participants shall act through their respective chairs or such other persons as may be designated by the Decisional Participants (collectively, such persons are the "**EC (Empowered Community) Administration**"). Each Decisional Participant shall deliver annually a written certification from its chair or co-chairs to the Secretary designating the individual who shall represent the Decisional Participant on the EC (Empowered Community) Administration.

(b) In representing a Decisional Participant on the EC (Empowered Community) Administration, the representative individual shall act solely as directed by the represented Decisional Participant and in accordance with processes developed by such Decisional Participant in accordance with Section 6.1(g).

(c) In representing the EC (Empowered Community) Administration, the individuals serving thereon shall act as required for the EC (Empowered Community) to follow the applicable procedures in Annex D, and to implement EC (Empowered Community) decisions made in accordance with such procedures.

(d) All communications and notices required or permitted to be given under these Bylaws by a Decisional Participant shall be provided by the Decisional Participant's representative on the EC (Empowered Community) Administration. All communications and notices required or permitted to be given under these Bylaws by the EC

(Empowered Community) shall be provided by any member of the EC (Empowered Community) Administration. Where a particular Bylaws notice provision does not require notice to the Secretary, the EC (Empowered Community) and the Decisional Participants shall provide a copy of the notice to the Secretary in accordance with Section 21.5, and ICANN (Internet Corporation for Assigned Names and Numbers) shall post it on the Website.

(e) ICANN (Internet Corporation for Assigned Names and Numbers) shall be entitled to rely on notices from a Decisional Participant's representative or an individual serving on the EC (Empowered Community) Administration delivered in accordance with Section 21.5 as evidence that the actions set forth therein have been approved by or are the actions of the Decisional Participant, the EC (Empowered Community) or the EC (Empowered Community) Administration, as applicable, pursuant to and in compliance with the requirements of these Bylaws (including Annex D) .

(f) No person participating in the EC (Empowered Community), the EC (Empowered Community) Administration or a Decisional Participant shall be liable for any debt, obligation or liability of ICANN (Internet Corporation for Assigned Names and Numbers) or the EC (Empowered Community), other than in the case of a fraudulent act committed by such person.

Section 6.4. CONSENT TO BOARD-INITIATED REMOVAL OF DIRECTOR WITHOUT CAUSE

In the event the EC (Empowered Community) Administration receives from the Secretary a valid notice as described in Section 7.11(a)(i)(B), indicating that the Board has voted to remove a Director without cause pursuant to Section 7.11(a)(i)(B), the EC (Empowered Community) shall without deliberation consent to such removal, and the EC

(Empowered Community) Administration shall provide notice to the Secretary of such consent.

ARTICLE 7 BOARD OF DIRECTORS

Section 7.1. COMPOSITION OF THE BOARD

The ICANN (Internet Corporation for Assigned Names and Numbers) Board of Directors ("**Board**") shall consist of sixteen voting directors ("**Directors**"). In addition, four non-voting liaisons ("**Liaisons**") shall be appointed for the purposes set forth in Section 7.9. Only Directors shall be included in determining the existence of quorums, and in establishing the validity of votes taken by the Board.

Section 7.2. DIRECTORS AND THEIR SELECTION; ELECTION OF CHAIR AND VICE-CHAIR

(a) As of the effective date of the amendment and restatement of these Bylaws on 1 October 2016, the EC (Empowered Community) shall be the sole designator of ICANN (Internet Corporation for Assigned Names and Numbers) and shall designate, within the meaning of Section 5220 of the CCC, all Directors except for the President ex officio. The EC (Empowered Community) shall notify promptly the Secretary in writing of the following designations:

(i) Eight Directors nominated by the Nominating Committee to be designated as Directors by the EC (Empowered Community). These seats on the Board are referred to in these Bylaws as Seats 1 through 8.

(ii) Two Directors nominated by the ASO (Address Supporting Organization) to be designated as Directors by the EC (Empowered Community). These

seats on the Board are referred to in these Bylaws as Seat 9 and Seat 10.

(iii) Two Directors nominated by the ccNSO (Country Code Names Supporting Organization) to be designated as Directors by the EC (Empowered Community). These seats on the Board are referred to in these Bylaws as Seat 11 and Seat 12.

(iv) Two Directors nominated by the GNSO (Generic Names Supporting Organization) to be designated as Directors by the EC (Empowered Community). These seats on the Board are referred to in these Bylaws as Seat 13 and Seat 14.

(v) One Director nominated by the At-Large Community to be designated as Directors by the EC (Empowered Community). This seat on the Board is referred to in these Bylaws as Seat 15.

In addition to the Directors designated by the EC (Empowered Community), the President shall serve ex officio as a Director. The seat held by the President on the Board is referred to in these Bylaws as Seat 16.

(b) In carrying out its responsibilities to nominate the Directors for Seats 1 through 8 for designation by the EC (Empowered Community), the Nominating Committee shall ensure that the Board is composed of Directors who, in the aggregate, display diversity in geography, culture, skills, experience, and perspective, by applying the criteria set forth in Section 7.3, Section 7.4 and Section 7.5. At no time when it makes its nomination shall the Nominating Committee nominate a Director to fill any vacancy or expired term whose designation would cause the total number of Directors (not including the President) from countries in any one Geographic Region to exceed five; and the Nominating Committee shall ensure when it makes its nominations that

the Board includes at least one Director who is from a country in each ICANN (Internet Corporation for Assigned Names and Numbers) Geographic Region ("Diversity Calculation"). For purposes of this Section 7.2(b), if any candidate for director maintains citizenship of more than one country, or has been domiciled for more than five years in a country of which the candidate does not maintain citizenship ("**Domicile**"), that candidate may be deemed to be from either country and must select in his or her Statement of Interest the country of citizenship or Domicile that he or she wants the Nominating Committee to use for Diversity Calculation purposes. For purposes of this Section 7.2(b), a person can only have one Domicile, which shall be determined by where the candidate has a permanent residence and place of habitation.

(c) In carrying out their responsibilities to nominate Directors for Seats 9 through 15 for designation by the EC (Empowered Community), the Supporting Organizations (Supporting Organizations) and the At-Large Community shall seek to ensure that the Board is composed of Directors who, in the aggregate, display diversity in geography, culture, skills, experience, and perspective, by applying the criteria set forth in Section 7.3, Section 7.4 and Section 7.5. The Supporting Organizations (Supporting Organizations) shall ensure that, at any given time, no two Directors nominated by a Supporting Organization (Supporting Organization) are citizens from the same country or of countries located in the same Geographic Region. For purposes of this Section 7.2(c), if any candidate for Director maintains citizenship or Domicile of more than one country, that candidate may be deemed to be from either country and must select in his or her Statement of Interest the country of citizenship or Domicile that he or she wants the Supporting Organization (Supporting Organization) or the At-Large Community, as applicable, to use for nomination purposes. For purposes of this Section 7.2(c), a person can only have one Domicile,

which shall be determined by where the candidate has a permanent residence and place of habitation.

(d) The Board shall annually elect a Chair and a Vice-Chair from among the Directors, not to include the President.

(e) The EC (Empowered Community) shall designate each person nominated as a Director by the Nominating Committee, the ASO (Address Supporting Organization), the ccNSO (Country Code Names Supporting Organization), the GNSO (Generic Names Supporting Organization) and the At-Large Community in accordance with this Section 7.2.

(f) As a condition to sitting on the Board, each Director other than the President ex officio shall sign a pre-service letter pursuant to which such Director:

(i) acknowledges and agrees to the EC (Empowered Community)'s right to remove the Director at any time and for any reason following the processes set forth in these Bylaws;

(ii) acknowledges and agrees that serving as a Director shall not establish any employment or other relationship (whether to ICANN (Internet Corporation for Assigned Names and Numbers), the EC (Empowered Community), any body entitled to nominate a Director, or any of their agents) that provides any due process rights related to termination of service as a Director; and

(iii) conditionally and irrevocably resigns as a Director automatically effective upon communication to the Director or, in the case of Board recall, communication to the Board of a final determination of removal following the processes set forth in these Bylaws.

Section 7.3. CRITERIA FOR NOMINATION OF DIRECTORS

Directors shall be:

- (a) Accomplished persons of integrity, objectivity, and intelligence, with reputations for sound judgment and open minds, and a demonstrated capacity for thoughtful group decision-making;
- (b) Persons with an understanding of ICANN (Internet Corporation for Assigned Names and Numbers)'s Mission and the potential impact of ICANN (Internet Corporation for Assigned Names and Numbers) decisions on the global Internet community, and committed to the success of ICANN (Internet Corporation for Assigned Names and Numbers);
- (c) Persons who will produce the broadest cultural and geographic diversity on the Board consistent with meeting the other criteria set forth in this Section 7.3;
- (d) Persons who, in the aggregate, have personal familiarity with the operation of gTLD (generic Top Level Domain) registries and registrars; with ccTLD (Country Code Top Level Domain) registries; with IP (Internet Protocol or Intellectual Property) address registries; with Internet technical standards and protocols; with policy-development procedures, legal traditions, and the public interest; and with the broad range of business, individual, academic, and non-commercial users of the Internet; and
- (e) Persons who are able to work and communicate in written and spoken English.

Section 7.4. ADDITIONAL QUALIFICATIONS

- (a) Notwithstanding anything herein to the contrary, no official of a national government or a multinational entity established by treaty or other agreement between national governments

may serve as a Director. As used herein, the term "official" means a person (i) who holds an elective governmental office or (ii) who is employed by such government or multinational entity and whose primary function with such government or entity is to develop or influence governmental or public policies.

(b) No person who serves in any capacity (including as a liaison) on any Supporting Organization (Supporting Organization) Council shall simultaneously serve as a Director or Liaison to the Board. If such a person is identified by, or presents themselves to, the Supporting Organization (Supporting Organization) Council or the At-Large Community for consideration for nomination to serve as a Director, the person shall not thereafter participate in any discussion of, or vote by, the Supporting Organization (Supporting Organization) Council or the committee designated by the At-Large Community relating to the nomination of Directors by the Council or At-Large Community, until the Council or committee(s) specified by the At-Large Community has nominated the full complement of Directors it is responsible for nominating. In the event that a person serving in any capacity on a Supporting Organization (Supporting Organization) Council is considered for nomination to serve as a Director, the constituency group or other group or entity that selected the person may select a replacement for purposes of the Council's nomination process. In the event that a person serving in any capacity on the At-Large Advisory Committee (Advisory Committee) is identified as or accepts a nomination to be considered for nomination by the At-Large Community as a Director, the Regional At-Large Organization or other group or entity that selected the person may select a replacement for purposes of the At-Large Community's nomination process.

(c) Persons serving in any capacity on the Nominating Committee shall be ineligible for nomination or designation to positions on the Board as provided by Section 8.8.

(d) No person who serves on the EC (Empowered Community) Administration while serving in that capacity shall be considered for nomination or designated to the Board, nor serve simultaneously on the EC (Empowered Community) Administration and as a Director or Liaison to the Board.

Section 7.5. INTERNATIONAL REPRESENTATION

In order to ensure broad international representation on the Board, the nomination of Directors by the Nominating Committee, each Supporting Organization (Supporting Organization) and the At-Large Community shall comply with all applicable diversity provisions of these Bylaws or of any memorandum of understanding referred to in these Bylaws concerning the Supporting Organization (Supporting Organization). One intent of these diversity provisions is to ensure that at all times each Geographic Region shall have at least one Director, and at all times no Geographic Region shall have more than five Directors on the Board (not including the President). As used in these Bylaws, each of the following is considered to be a "**Geographic Region**": (a) Europe; (b) Asia/Australia/Pacific; (c) Latin America/Caribbean islands; (d) Africa; and (e) North America. The specific countries included in each Geographic Region shall be determined by the Board, and this Section 7.5 shall be reviewed by the Board from time to time (and in any event at least once every three years) to determine whether any change is appropriate, taking account of the evolution of the Internet.

Section 7.6. DIRECTORS' CONFLICTS OF INTEREST

The Board, through the Board Governance Committee, shall require a statement from each Director not less frequently than once a year setting forth all business and other

affiliations that relate in any way to the business and other affiliations of ICANN (Internet Corporation for Assigned Names and Numbers). Each Director shall be responsible for disclosing to ICANN (Internet Corporation for Assigned Names and Numbers) any matter that could reasonably be considered to make such Director an "interested director" within the meaning of Section 5233 of the CCC. In addition, each Director shall disclose to ICANN (Internet Corporation for Assigned Names and Numbers) any relationship or other factor that could reasonably be considered to cause the Director to be considered to be an "interested person" within the meaning of Section 5227 of the CCC. The Board shall adopt policies specifically addressing Director, Officer, EC (Empowered Community) and Supporting Organization (Supporting Organization) conflicts of interest. No Director shall vote on any matter in which he or she has a material and direct financial interest that would be affected by the outcome of the vote.

Section 7.7. DUTIES OF DIRECTORS

Directors shall serve as individuals who have the duty to act in what they reasonably believe are the best interests of ICANN (Internet Corporation for Assigned Names and Numbers) and not as representatives of the EC (Empowered Community), the Nominating Committee, Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) that nominated them, as applicable, their employers, or any other organizations or constituencies.

Section 7.8. TERMS OF DIRECTORS

(a) The regular term of office of Director Seats 1 through 15 shall begin as follows:

- (i) The regular terms of Seats 1 through 3 shall begin at the conclusion of each ICANN (Internet Corporation

for Assigned Names and Numbers) annual meeting every third year after 2003;

(ii) The regular terms of Seats 4 through 6 shall begin at the conclusion of each ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting every third year after 2004;

(iii) The regular terms of Seats 7 and 8 shall begin at the conclusion of each ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting every third year after 2005;

(iv) The terms of Seats 9 and 12 shall begin at the conclusion of each ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting every third year after 2015;

(v) The terms of Seats 10 and 13 shall begin at the conclusion of each ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting every third year after 2013; and

(vi) The terms of Seats 11, 14 and 15 shall begin at the conclusion of each ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting every third year after 2014.

(b) Each Director holding any of Seats 1 through 15, including a Director nominated and designated to fill a vacancy, shall hold office for a term that lasts until the next term for that Seat commences and until a successor has been designated and qualified or until that Director resigns or is removed in accordance with these Bylaws. For the avoidance of doubt, the new governance provisions effective as of the amendment and restatement of these Bylaws on 1 October 2016 shall not have the effect of shortening or

terminating the terms of any Directors serving at the time of the amendment and restatement.

(c) At least two months before the commencement of each annual meeting, the Nominating Committee shall give the EC (Empowered Community) Administration (with a copy to the Decisional Participants and Secretary) written notice of its nomination of Directors for seats with terms beginning at the conclusion of the annual meeting, and the EC (Empowered Community) Administration shall promptly provide the Secretary (with a copy to the Decisional Participants) with written notice of the designation of those Directors. All such notices shall be posted promptly to the Website.

(d) At least six months before the date specified for the commencement of the term as specified in Section 7.8(a)(iv) through Section 7.8(a)(vi) above, any Supporting Organization (Supporting Organization) or the At-Large Community entitled to nominate a Director for a Seat with a term beginning that year shall give the EC (Empowered Community) Administration (with a copy to the Secretary and the Decisional Participants) written notice of its nomination of Directors for seats with terms beginning at the conclusion of the annual meeting, and the EC (Empowered Community) Administration shall promptly provide the Secretary (with a copy to the Decisional Participants) with written notice of the designation of those Directors. All such notices shall be posted promptly to the Website.

(e) No Director may serve more than three consecutive terms. For these purposes, a person designated to fill a vacancy in a term shall not be deemed to have served that term.

(f) The term as Director of the person holding the office of President shall be for as long as, and only for as long as, such person holds the office of President.

Section 7.9. NON-VOTING LIAISONS

(a) The non-voting Liaisons shall include:

- (i) One appointed by the Governmental Advisory Committee (Advisory Committee);
- (ii) One appointed by the Root Server System Advisory Committee (Advisory Committee) established by Section 12.2(c);
- (iii) One appointed by the Security (Security – Security, Stability and Resiliency (SSR)) and Stability (Security, Stability and Resiliency) Advisory Committee (Advisory Committee) established by Section 12.2(b); and
- (iv) One appointed by the Internet Engineering Task Force.

(b) The Liaisons shall serve terms that begin at the conclusion of each annual meeting. At least one month before the commencement of each annual meeting, each body entitled to appoint a Liaison shall give the Secretary written notice of its appointment.

(c) Each Liaison may be reappointed, and shall remain in that position until a successor has been appointed or until the Liaison resigns or is removed in accordance with these Bylaws.

(d) The Liaisons shall be entitled to attend Board meetings, participate in Board discussions and deliberations, and have access (under conditions established by the Board) to materials provided to Directors for use in Board discussions, deliberations and meetings, but shall otherwise not have any of the rights and privileges of Directors. Liaisons shall be entitled (under conditions established by the Board) to use any materials provided to them pursuant to this Section

7.9(d) for the purpose of consulting with their respective committee or organization.

Section 7.10. RESIGNATION OF A DIRECTOR OR NON-VOTING LIAISON

Subject to Section 5226 of the CCC, any Director or Liaison may resign at any time by giving written notice thereof to the Chair of the Board, the President, the Secretary, or the Board. Such resignation shall take effect at the time specified, and, unless otherwise specified, the acceptance of such resignation shall not be necessary to make it effective.

Section 7.11. REMOVAL OF A DIRECTOR OR NON-VOTING LIAISON

(a) Directors

(i) Any Director designated by the EC (Empowered Community) may be removed without cause:

(A) by the EC (Empowered Community) pursuant to and in compliance with procedures in Section 3.1 or Section 3.2 of Annex D, as applicable, or

(B) following notice to that Director, by a three-fourths (3/4) majority vote of all Directors; provided, however, that (x) each vote to remove a Director shall be a separate vote on the sole question of the removal of that particular Director; and (y) such removal shall not be effective until the Secretary has provided notice to the EC (Empowered Community) Administration of the Board's removal vote and the requirements of Section 6.4 have been met.

(ii) The Board may remove any Director who has been declared of unsound mind by a final order of court, or convicted of a felony, or been found by a final order or

judgment of any court to have breached any duty under Sections 5230 through 5239 of the CCC, and in the case of such removal, the Secretary shall promptly notify the EC (Empowered Community) Administration in writing, with a copy to the body that nominated such Director, and shall promptly post such notification to the Website. The vacancies created by such removal shall be filled in accordance with Section 7.12(a).

(iii) All Directors (other than the President) may be removed at the same time by the EC (Empowered Community) by the EC (Empowered Community) Administration delivering an EC (Empowered Community) Board Recall Notice to the Secretary pursuant to and in compliance with Section 3.3 of Annex D. The vacancies created by such removal shall be filled by the EC (Empowered Community) in accordance with Section 7.12(b).

(b) With the exception of the Liaison appointed by the Governmental Advisory Committee (Advisory Committee), any Liaison may be removed following notice to that Liaison and to the organization which selected that Liaison, by a three-fourths (3/4) majority vote of all Directors if the selecting organization fails to promptly remove that Liaison following such notice. The vacancies created by such removal shall be filled in accordance with Section 7.12. The Board may request the Governmental Advisory Committee (Advisory Committee) to consider the replacement of the Governmental Advisory Committee (Advisory Committee) Liaison if the Board, by a three-fourths (3/4) majority vote of all Directors, determines that such an action is appropriate.

Section 7.12. VACANCIES

(a) This Section 7.12(a) shall apply to Board vacancies other than those occurring by recall of all Directors (other than the President). A vacancy or vacancies in the Board shall be

deemed to exist in the case of the death, resignation, or removal of any Director or Interim Director (as defined in Section 7.12(b)), or if the authorized number of Directors is increased. Vacancies occurring in Seats 1 through 15 shall be filled by the EC (Empowered Community) after nomination as provided in Section 7.2 and Articles 8 through 12. A vacancy in Seat 16 shall be filled as provided in Article 15. A Director designated by the EC (Empowered Community) to fill a vacancy on the Board shall serve for the unexpired term of his or her predecessor in office and until a successor has been designated and qualified. No reduction of the authorized number of Directors shall have the effect of removing a Director prior to the expiration of the Director's term of office.

(b) This Section 7.12(b) shall apply to Board vacancies occurring when all Directors (other than the President) are recalled as provided by Section 7.11(a)(iii). Concurrently with delivery of any EC (Empowered Community) Board Recall Notice (as defined in Section 3.3(f) of Annex D), the EC (Empowered Community) Administration shall provide written notice of the EC (Empowered Community)'s designation of individuals to fill such vacancies (each such individual, an "**Interim Director**") to the Decisional Participants and to the Secretary, who shall cause such notice to be promptly posted to the Website. An Interim Director must meet the criteria specified in Section 7.3, Section 7.4 and Section 7.5, as applicable. An Interim Director shall hold office until the EC (Empowered Community) designates the Interim Director's successor in accordance with Section 7.12(a), and the successor's designation shall occur within 120 days of the Interim Director's designation. For avoidance of doubt, persons designated as Interim Directors may be eligible for designation as Directors as well.

(c) The organizations selecting the Liaisons identified in Section 7.9 are responsible for determining the existence of, and filling, any vacancies in those positions. Such

organizations shall give the Secretary written notice of their appointments to fill any such vacancies, subject to the requirements set forth in [Section 7.4](#), as applicable.

Section 7.13. ANNUAL MEETINGS

Annual meetings of [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) shall be held for the purpose of electing Officers and for the transaction of such other business as may come before the meeting. Each annual meeting of [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) shall be held at the principal office of [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#), or any other appropriate place of the Board's time and choosing, provided such annual meeting is held within 14 months of the immediately preceding annual meeting. If the Board determines that it is practical, the annual meeting should be distributed in real-time and archived video and audio formats on the Internet.

Section 7.14. REGULAR MEETINGS

Regular meetings of the Board shall be held on dates to be determined by the Board. In the absence of other designation, regular meetings shall be held at the principal office of [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#).

Section 7.15. SPECIAL MEETINGS

Special meetings of the Board may be called by or at the request of one-quarter (1/4) of the Directors, by the Chair of the Board or the President. A call for a special meeting shall be made by the Secretary. Special meetings shall be held at the principal office of [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) unless otherwise specified in the notice of the meeting.

Section 7.16. NOTICE OF MEETINGS

Notice of time and place of all meetings shall be delivered personally or by telephone or by electronic mail to each Director and Liaison, or sent by first-class mail (air mail for addresses outside the United States) or facsimile, charges prepaid, addressed to each Director and Liaison at the Director's or Liaison's address as it is shown on the records of ICANN (Internet Corporation for Assigned Names and Numbers). In case the notice is mailed, it shall be deposited in the United States mail at least fourteen (14) days before the time of the holding of the meeting. In case the notice is delivered personally or by telephone or facsimile or electronic mail it shall be delivered personally or by telephone or facsimile or electronic mail at least forty-eight (48) hours before the time of the holding of the meeting.

Notwithstanding anything in this Section 7.16 to the contrary, notice of a meeting need not be given to any Director or Liaison who signed a waiver of notice or a Director who signed a written consent to holding the meeting or an approval of the minutes thereof, whether before or after the meeting, or who attends the meeting without protesting, prior thereto or at its commencement, the lack of notice to such Director. All such waivers, consents and approvals shall be filed with the corporate records or made a part of the minutes of the meetings.

Section 7.17. QUORUM

At all annual, regular, and special meetings of the Board, a majority of the total number of Directors then in office shall constitute a quorum for the transaction of business, and the act of a majority of the Directors present at any meeting at which there is a quorum shall be the act of the Board, unless otherwise provided herein or by law. If a quorum shall not be present at any meeting of the Board, the Directors present thereat may adjourn the meeting from time to time to another place, time or date. If the meeting is adjourned for more than

twenty-four (24) hours, notice shall be given to those Directors not at the meeting at the time of the adjournment.

Section 7.18. ACTIONS BY TELEPHONE MEETING OR BY OTHER COMMUNICATIONS EQUIPMENT

Directors and Liaisons may participate in a meeting of the Board or Board Committee (as defined in [Section 14.1](#)) through use of (a) conference telephone or similar communications equipment, provided that all Directors participating in such a meeting can speak to and hear one another or (b) electronic video screen communication or other communication equipment; provided that (i) all Directors participating in such a meeting can speak to and hear one another, (ii) all Directors are provided the means of fully participating in all matters before the Board or Board Committee, and (iii) [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) adopts and implements means of verifying that (A) a person participating in such a meeting is a Director or other person entitled to participate in the meeting and (B) all actions of, or votes by, the Board or Board Committee are taken or cast only by Directors and not persons who are not Directors. Participation in a meeting pursuant to this [Section 7.18](#) constitutes presence in person at such meeting. [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) shall make available at the place of any meeting of the Board the telecommunications equipment necessary to permit Directors and Liaisons to participate by telephone.

Section 7.19. ACTION WITHOUT MEETING

Any action required or permitted to be taken by the Board or a Committee of the Board may be taken without a meeting if all of the Directors entitled to vote thereat shall individually or collectively consent in writing to such action. Such written consent shall have the same force and effect as the

unanimous vote of such Directors. Such written consent or consents shall be filed with the minutes of the proceedings of the Board.

Section 7.20. ELECTRONIC MAIL

If permitted by applicable law, communication by electronic mail shall be considered equivalent to any communication otherwise required to be in writing. ICANN (Internet Corporation for Assigned Names and Numbers) shall take such steps as it deems appropriate under the circumstances to assure itself that communications by electronic mail are authentic.

Section 7.21. BOARD RIGHTS OF INSPECTION

(a) Every Director shall have the right at any reasonable time to inspect and copy all books, records and documents of every kind, and to inspect the physical properties of ICANN (Internet Corporation for Assigned Names and Numbers).

(b) ICANN (Internet Corporation for Assigned Names and Numbers) shall establish reasonable procedures to protect against the inappropriate disclosure of confidential information.

Section 7.22. COMPENSATION

(a) Except for the President of ICANN (Internet Corporation for Assigned Names and Numbers), who serves ex officio as a Director, each of the Directors shall be entitled to receive compensation for his or her services as a Director. The President shall receive only his or her compensation for service as President and shall not receive additional compensation for service as a Director.

(b) If the Board determines to offer a compensation arrangement to one or more Directors (other than the President) for services to ICANN (Internet Corporation for Assigned Names and Numbers) as Directors, the Board shall follow the process that is calculated to pay an amount for service as a Director that is not an excess benefit under the standards set forth in Section 4958 of the Internal Revenue Code of 1986, as amended (the "**Code**").

(c) As part of the process, the Board shall retain an Independent Valuation Expert (as defined in Section 7.22(g)) (i) to consult with and to advise the Board regarding Director compensation arrangements and to issue to the Board a Reasoned Written Opinion (as defined in Section 7.22(g)(ii)) from such expert regarding the ranges of Reasonable Compensation (as defined in Section 7.22(g)(iii)) for any such services by a Director. The expert's opinion shall address all relevant factors affecting the level of compensation to be paid a Director, including offices held on the Board, attendance at Board and Board Committee meetings, the nature of service on the Board and on Board Committees, and appropriate data as to comparability regarding director compensation arrangements for U.S.-based, nonprofit, tax-exempt organizations possessing a global employee base.

(d) After having reviewed the Independent Valuation Expert's Reasoned Written Opinion, the Board shall meet with the expert to discuss the expert's opinion and to ask questions of the expert regarding the expert's opinion, the comparability data obtained and relied upon, and the conclusions reached by the expert.

(e) The Board shall adequately document the basis for any determination the Board makes regarding a Director compensation arrangement concurrently with making that determination.

(f) In addition to authorizing payment of compensation for services as Directors as set forth in this Section 7.22, the Board may also authorize the reimbursement of actual and necessary reasonable expenses incurred by any Director and by Liaisons performing their duties as Directors or Liaisons.

(g) As used in this Section 7.22, the following terms shall have the following meanings:

(i) An "**Independent Valuation Expert**" means a person retained by ICANN (Internet Corporation for Assigned Names and Numbers) to value compensation arrangements that: (A) holds itself out to the public as a compensation consultant; (B) performs valuations regarding compensation arrangements on a regular basis, with a majority of its compensation consulting services performed for persons other than ICANN (Internet Corporation for Assigned Names and Numbers); (C) is qualified to make valuations of the type of services involved in any engagement by and for ICANN (Internet Corporation for Assigned Names and Numbers); (D) issues to ICANN (Internet Corporation for Assigned Names and Numbers) a Reasoned Written Opinion regarding a particular compensation arrangement; and (E) includes in its Reasoned Written Opinion a certification that it meets the requirements set forth in (A) through (D) of this definition.

(ii) A "**Reasoned Written Opinion**" means a written opinion of a valuation expert who meets the requirements of Section 7.22(g)(i)(A) through (D). To be reasoned, the opinion must be based upon a full disclosure by ICANN (Internet Corporation for Assigned Names and Numbers) to the valuation expert of the factual situation regarding the compensation arrangement that is the subject of the opinion, the

opinion must articulate the applicable valuation standards relevant in valuing such compensation arrangement, the opinion must apply those standards to such compensation arrangement, and the opinion must arrive at a conclusion regarding whether the compensation arrangement is within the range of Reasonable Compensation for the services covered by the arrangement. A written opinion is reasoned even though it reaches a conclusion that is subsequently determined to be incorrect so long as the opinion addresses itself to the facts and the applicable standards. However, a written opinion is not reasoned if it does nothing more than recite the facts and express a conclusion.

(iii) "**Reasonable Compensation**" shall have the meaning set forth in §53.4958-4(b)(1)(ii) of the Regulations issued under §4958 of the Code.

(h) Each of the Liaisons, with the exception of the Governmental Advisory Committee (Advisory Committee) Liaison, shall be entitled to receive compensation for his or her services as a Liaison. If the Board determines to offer a compensation arrangement to one or more Liaisons, the Board shall approve that arrangement by a required three-fourths (3/4) vote.

Section 7.23. PRESUMPTION OF ASSENT

A Director present at a Board meeting at which action on any corporate matter is taken shall be presumed to have assented to the action taken unless his or her dissent or abstention is entered in the minutes of the meeting, or unless such Director files a written dissent or abstention to such action with the person acting as the secretary of the meeting before the adjournment thereof, or forwards such dissent or abstention by registered mail to the Secretary immediately after the adjournment of the meeting. Such right to dissent or

abstain shall not apply to a Director who voted in favor of such action.

Section 7.24 INTERIM BOARD

Except in circumstances in which urgent decisions are needed to protect the security, stability or resilience of the DNS (Domain Name System) or to the extent necessary to comply with its fiduciary obligations under applicable law, a Board that consists of a majority or more of Interim Directors (an "**Interim Board**") shall (a) consult with the chairs of the Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees) before making major decisions and (b) consult through a community forum (in a manner consistent with the process for a Rejection Action Community Forum pursuant to Section 2.3 of Annex D) prior to taking any action that would, if implemented, materially change ICANN (Internet Corporation for Assigned Names and Numbers)'s strategy, policies or management, including replacement of the then-serving President. Interim Directors shall be entitled to compensation as provided in this Article 7.

Section 7.25 COMMUNICATION OF DESIGNATION

Upon its receipt of nominations as provided in Articles 7 through 12, the EC (Empowered Community) Administration, on behalf of the EC (Empowered Community), shall promptly notify the Secretary of the EC (Empowered Community)'s designation of individuals to fill seats on the Board. ICANN (Internet Corporation for Assigned Names and Numbers) shall post all such designations promptly to the Website.

ARTICLE 8 NOMINATING COMMITTEE

Section 8.1. DESCRIPTION

There shall be a Nominating Committee of ICANN (Internet Corporation for Assigned Names and Numbers) ("**Nominating Committee**"), responsible for nominating all Directors except the President and those Directors nominated by Decisional Participants; for nominating two directors of PTI (in accordance with the articles of incorporation and bylaws of PTI); and for such other selections as are set forth in these Bylaws. Notification of the Nominating Committee's Director nominations shall be given by the Nominating Committee Chair in writing to the EC (Empowered Community) Administration, with a copy to the Secretary, and the EC (Empowered Community) shall promptly act on it as provided in Section 7.25. Notification of the Nominating Committee's PTI director nomination shall be given to the Secretary.

Section 8.2. COMPOSITION

The Nominating Committee shall be composed of the following persons:

- (a) A non-voting Chair, appointed by the Board;
- (b) A non-voting Chair-Elect, appointed by the Board as a non-voting advisor;
- (c) A non-voting liaison appointed by the Root Server System Advisory Committee (Advisory Committee) established by Section 12.2(c);
- (d) A non-voting liaison appointed by the Security (Security – Security, Stability and Resiliency (SSR)) and Stability (Security, Stability and Resiliency) Advisory Committee (Advisory Committee) established by Section 12.2(b);
- (e) A non-voting liaison appointed by the Governmental Advisory Committee (Advisory Committee);

(f) Five voting delegates selected by the At-Large Advisory Committee (Advisory Committee) established by Section 12.2(d);

(g) Voting delegates to the Nominating Committee shall be selected from the Generic Names Supporting Organization (Supporting Organization) established by Article 11, as follows:

- (i) One delegate from the Registries Stakeholder Group;
- (ii) One delegate from the Registrars Stakeholder Group;
- (iii) Two delegates from the Business Constituency, one representing small business users and one representing large business users;
- (iv) One delegate from the Internet Service Providers and Connectivity Providers Constituency (as defined in Section 11.5(a)(iii));
- (v) One delegate from the Intellectual Property Constituency; and
- (vi) One delegate from consumer and civil society groups, selected by the Non-Commercial Users Constituency.

(h) One voting delegate each selected by the following entities:

- (i) The Council of the Country Code Names Supporting Organization (Supporting Organization) established by Section 10.3;

(ii) The Council of the Address Supporting Organization (Supporting Organization) established by Section 9.2; and

(iii) The Internet Engineering Task Force.

(i) A non-voting Associate Chair, who may be appointed by the Chair, at his or her sole discretion, to serve during all or part of the term of the Chair. The Associate Chair may not be a person who is otherwise a member of the same Nominating Committee. The Associate Chair shall assist the Chair in carrying out the duties of the Chair, but shall not serve, temporarily or otherwise, in the place of the Chair.

Section 8.3. TERMS

(a) Each voting delegate shall serve a one-year term. A delegate may serve at most two successive one-year terms, after which at least two years must elapse before the individual is eligible to serve another term.

(b) The regular term of each voting delegate shall begin at the conclusion of an ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting and shall end at the conclusion of the immediately following ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting.

(c) Non-voting liaisons shall serve during the term designated by the entity that appoints them. The Chair, the Chair-Elect, and any Associate Chair shall serve as such until the conclusion of the next ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting.

(d) It is anticipated that upon the conclusion of the term of the Chair-Elect, the Chair-Elect will be appointed by the Board to the position of Chair. However, the Board retains the discretion to appoint any other person to the position of

Chair. At the time of appointing a Chair-Elect, if the Board determines that the person identified to serve as Chair shall be appointed as Chair for a successive term, the Chair-Elect position shall remain vacant for the term designated by the Board.

(e) Vacancies in the positions of delegate, non-voting liaison, Chair or Chair-Elect shall be filled by the entity entitled to select the delegate, non-voting liaison, Chair or Chair-Elect involved. For any term that the Chair-Elect position is vacant pursuant to Section 8.3(d), or until any other vacancy in the position of Chair-Elect can be filled, a non-voting advisor to the Chair may be appointed by the Board from among persons with prior service on the Board or a Nominating Committee, including the immediately previous Chair of the Nominating Committee. A vacancy in the position of Associate Chair may be filled by the Chair in accordance with the criteria established by Section 8.2(i).

(f) The existence of any vacancies shall not affect the obligation of the Nominating Committee to carry out the responsibilities assigned to it in these Bylaws.

Section 8.4. CRITERIA FOR SELECTION OF NOMINATING COMMITTEE DELEGATES

Delegates to the ICANN (Internet Corporation for Assigned Names and Numbers) Nominating Committee shall be:

(a) Accomplished persons of integrity, objectivity, and intelligence, with reputations for sound judgment and open minds, and with experience and competence with collegial large group decision-making;

(b) Persons with wide contacts, broad experience in the Internet community, and a commitment to the success of ICANN (Internet Corporation for Assigned Names and Numbers);

(c) Persons whom the selecting body is confident will consult widely and accept input in carrying out their responsibilities;

(d) Persons who are neutral and objective, without any fixed personal commitments to particular individuals, organizations, or commercial objectives in carrying out their Nominating Committee responsibilities;

(e) Persons with an understanding of ICANN (Internet Corporation for Assigned Names and Numbers)'s mission and the potential impact of ICANN (Internet Corporation for Assigned Names and Numbers)'s activities on the broader Internet community who are willing to serve as volunteers, without compensation other than the reimbursement of certain expenses; and

(f) Persons who are able to work and communicate in written and spoken English.

Section 8.5. DIVERSITY

In carrying out its responsibilities to nominate Directors to fill Seats 1 through 8 (and selections to any other ICANN (Internet Corporation for Assigned Names and Numbers) bodies as the Nominating Committee is responsible for under these Bylaws), the Nominating Committee shall take into account the continuing membership of the Board (and such other bodies), and seek to ensure that the persons it nominates to serve as Director and selects shall, to the extent feasible and consistent with the other criteria required to be applied by Section 8.4, be guided by Section 1.2(b)(ii).

Section 8.6. ADMINISTRATIVE AND OPERATIONAL SUPPORT

ICANN (Internet Corporation for Assigned Names and Numbers) shall provide administrative and operational

support necessary for the Nominating Committee to carry out its responsibilities.

Section 8.7. PROCEDURES

The Nominating Committee shall adopt such operating procedures as it deems necessary, which shall be published on the Website.

Section 8.8. INELIGIBILITY FOR SELECTION BY NOMINATING COMMITTEE

No person who serves on the Nominating Committee in any capacity shall be eligible for nomination by any means to any position on the Board or any other ICANN (Internet Corporation for Assigned Names and Numbers) body having one or more membership positions that the Nominating Committee is responsible for filling, until the conclusion of an ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting that coincides with, or is after, the conclusion of that person's service on the Nominating Committee.

Section 8.9. INELIGIBILITY FOR SERVICE ON NOMINATING COMMITTEE

No person who is an employee of or paid consultant to ICANN (Internet Corporation for Assigned Names and Numbers) (including the Ombudsman) shall simultaneously serve in any of the Nominating Committee positions described in Section 8.2.

ARTICLE 9 ADDRESS SUPPORTING ORGANIZATION

Section 9.1. DESCRIPTION

(a) The Address Supporting Organization (Supporting Organization) ("**Address Supporting Organization (Supporting Organization)**") or "**ASO (Address Supporting Organization)**") shall advise the Board with respect to policy issues relating to the operation, assignment, and management of Internet addresses.

(b) The ASO (Address Supporting Organization) shall be the entity established by the Memorandum of Understanding entered on 21 October 2004 between ICANN (Internet Corporation for Assigned Names and Numbers) and the Number Resource Organization ("NRO (Number Resource Organization)"), an organization of the existing RIRs.

Section 9.2. ADDRESS COUNCIL

(a) The ASO (Address Supporting Organization) shall have an Address Council, consisting of the members of the NRO (Number Resource Organization) Number Council.

(b) The Address Council shall nominate individuals to fill Seats 9 and 10 on the Board. Notification of the Address Council's nominations shall be given by the Address Council in writing to the EC (Empowered Community) Administration, with a copy to the Secretary, and the EC (Empowered Community) shall promptly act on it as provided in Section 7.25.

ARTICLE 10 COUNTRY-CODE NAMES SUPPORTING ORGANIZATION

Section 10.1. DESCRIPTION

There shall be a policy-development body known as the Country-Code Names Supporting Organization (Supporting Organization) ("**ccNSO (Country Code Names Supporting Organization)**"), which shall be responsible for:

- (a) developing and recommending to the Board global policies relating to country-code top-level domains;
- (b) Nurturing consensus across the ccNSO (Country Code Names Supporting Organization)'s community, including the name-related activities of ccTLDs;
- (c) Coordinating with other ICANN (Internet Corporation for Assigned Names and Numbers) Supporting Organizations (Supporting Organizations), committees, and constituencies under ICANN (Internet Corporation for Assigned Names and Numbers);
- (d) Nominating individuals to fill Seats 11 and 12 on the Board; and
- (e) Other responsibilities of the ccNSO (Country Code Names Supporting Organization) as set forth in these Bylaws.

Policies that apply to ccNSO (Country Code Names Supporting Organization) members by virtue of their membership are only those policies developed according to Section 10.4(j) and Section 10.4(k). However, the ccNSO (Country Code Names Supporting Organization) may also engage in other activities authorized by its members. Adherence to the results of these activities will be voluntary and such activities may include: seeking to develop voluntary best practices for ccTLD (Country Code Top Level Domain) managers, assisting in skills building within the global community of ccTLD (Country Code Top Level Domain) managers, and enhancing operational and technical cooperation among ccTLD (Country Code Top Level Domain) managers.

Section 10.2. ORGANIZATION

The ccNSO (Country Code Names Supporting Organization) shall consist of (a) ccTLD (Country Code Top Level Domain)

managers that have agreed in writing to be members of the ccNSO (Country Code Names Supporting Organization) (see [Section 10.4\(b\)](#)) and (b) a ccNSO (Country Code Names Supporting Organization) Council responsible for managing the policy-development process of the ccNSO (Country Code Names Supporting Organization).

Section 10.3. ccNSO (Country Code Names Supporting Organization) COUNCIL

(a) The ccNSO (Country Code Names Supporting Organization) Council shall consist of three ccNSO (Country Code Names Supporting Organization) Council members selected by the ccNSO (Country Code Names Supporting Organization) members within each of ICANN (Internet Corporation for Assigned Names and Numbers)'s Geographic Regions in the manner described in [Section 10.4\(g\)](#) through [Section 10.4\(i\)](#); (ii) three ccNSO (Country Code Names Supporting Organization) Council members selected by the ICANN (Internet Corporation for Assigned Names and Numbers) Nominating Committee; (iii) liaisons as described in [Section 10.3\(b\)](#); and (iv) observers as described in [Section 10.3\(c\)](#).

(b) There shall also be one liaison to the ccNSO (Country Code Names Supporting Organization) Council from each of the following organizations, to the extent they choose to appoint such a liaison: (i) the Governmental Advisory Committee (Advisory Committee); (ii) the At-Large Advisory Committee (Advisory Committee); and (iii) each of the Regional Organizations described in [Section 10.5](#). These liaisons shall not be members of or entitled to vote on the ccNSO (Country Code Names Supporting Organization) Council, but otherwise shall be entitled to participate on equal footing with members of the ccNSO (Country Code Names Supporting Organization) Council. Appointments of liaisons shall be made by providing written notice to the ICANN (Internet Corporation for Assigned Names and

Numbers) Secretary, with a notification copy to the ccNSO (Country Code Names Supporting Organization) Council Chair, and shall be for the term designated by the appointing organization as stated in the written notice. The appointing organization may recall from office or replace its liaison at any time by providing written notice of the recall or replacement to the ICANN (Internet Corporation for Assigned Names and Numbers) Secretary, with a notification copy to the ccNSO (Country Code Names Supporting Organization) Council Chair.

(c) The ccNSO (Country Code Names Supporting Organization) Council may agree with the Council of any other ICANN (Internet Corporation for Assigned Names and Numbers) Supporting Organization (Supporting Organization) to exchange observers. Such observers shall not be members of or entitled to vote on the ccNSO (Country Code Names Supporting Organization) Council, but otherwise shall be entitled to participate on equal footing with members of the ccNSO (Country Code Names Supporting Organization) Council. The appointing Council may designate its observer (or revoke or change the designation of its observer) on the ccNSO (Country Code Names Supporting Organization) Council at any time by providing written notice to the ICANN (Internet Corporation for Assigned Names and Numbers) Secretary, with a notification copy to the ccNSO (Country Code Names Supporting Organization) Council Chair.

(d) (i) the regular term of each ccNSO (Country Code Names Supporting Organization) Council member shall begin at the conclusion of an ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting and shall end at the conclusion of the third ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting thereafter;

(ii) the regular terms of the three ccNSO (Country Code Names Supporting Organization) Council members selected by the ccNSO (Country Code Names Supporting

Organization) members within each ICANN (Internet Corporation for Assigned Names and Numbers) Geographic Region shall be staggered so that one member's term begins in a year divisible by three, a second member's term begins in the first year following a year divisible by three, and the third member's term begins in the second year following a year divisible by three; and (iii) the regular terms of the three ccNSO (Country Code Names Supporting Organization) Council members selected by the Nominating Committee shall be staggered in the same manner. Each ccNSO (Country Code Names Supporting Organization) Council member shall hold office during his or her regular term and until a successor has been selected and qualified or until that member resigns or is removed in accordance with these Bylaws.

(e) A ccNSO (Country Code Names Supporting Organization) Council member may resign at any time by giving written notice to the ICANN (Internet Corporation for Assigned Names and Numbers) Secretary, with a notification copy to the ccNSO (Country Code Names Supporting Organization) Council Chair.

(f) ccNSO (Country Code Names Supporting Organization) Council members may be removed for not attending three consecutive meetings of the ccNSO (Country Code Names Supporting Organization) Council without sufficient cause or for grossly inappropriate behavior, both as determined by at least a 66% vote of all of the members of the ccNSO (Country Code Names Supporting Organization) Council.

(g) A vacancy on the ccNSO (Country Code Names Supporting Organization) Council shall be deemed to exist in the case of the death, resignation, or removal of any ccNSO (Country Code Names Supporting Organization) Council member. Vacancies in the positions of the three members selected by the Nominating Committee shall be filled for the unexpired term involved by the Nominating Committee giving

the ICANN (Internet Corporation for Assigned Names and Numbers) Secretary written notice of its selection, with a notification copy to the ccNSO (Country Code Names Supporting Organization) Council Chair. Vacancies in the positions of the ccNSO (Country Code Names Supporting Organization) Council members selected by ccNSO (Country Code Names Supporting Organization) members shall be filled for the unexpired term by the procedure described in Section 10.4(g) through (i).

(h) The role of the ccNSO (Country Code Names Supporting Organization) Council is to administer and coordinate the affairs of the ccNSO (Country Code Names Supporting Organization) (including coordinating meetings, including an annual meeting, of ccNSO (Country Code Names Supporting Organization) members as described in Section 10.4(f)) and to manage the development of policy recommendations in accordance with Section 10.6(a). The ccNSO (Country Code Names Supporting Organization) Council shall also undertake such other roles as the members of the ccNSO (Country Code Names Supporting Organization) shall decide from time to time.

(i) The ccNSO (Country Code Names Supporting Organization) Council shall nominate individuals to fill Seats 11 and 12 on the Board by written ballot or by action at a meeting; any such nomination must have affirmative votes of a majority of all the members of the ccNSO (Country Code Names Supporting Organization) Council then in office. Notification of the ccNSO (Country Code Names Supporting Organization) Council's nominations shall be given by the ccNSO (Country Code Names Supporting Organization) Council Chair in writing to the EC (Empowered Community) Administration, with a copy to the Secretary, and the EC (Empowered Community) shall promptly act on it as provided in Section 7.25.

(j) The ccNSO (Country Code Names Supporting Organization) Council shall select from among its members the ccNSO (Country Code Names Supporting Organization) Council Chair and such Vice Chair(s) as it deems appropriate. Selections of the ccNSO (Country Code Names Supporting Organization) Council Chair and Vice Chair(s) shall be by written ballot or by action at a meeting; any such selection must have affirmative votes of a majority of all the members of the ccNSO (Country Code Names Supporting Organization) Council then in office. The term of office of the ccNSO (Country Code Names Supporting Organization) Council Chair and any Vice Chair(s) shall be as specified by the ccNSO (Country Code Names Supporting Organization) Council at or before the time the selection is made. The ccNSO (Country Code Names Supporting Organization) Council Chair or any Vice Chair(s) may be recalled from office by the same procedure as used for selection.

(k) The ccNSO (Country Code Names Supporting Organization) Council, subject to direction by the ccNSO (Country Code Names Supporting Organization) members, shall adopt such rules and procedures for the ccNSO (Country Code Names Supporting Organization) as it deems necessary, provided they are consistent with these Bylaws. Rules for ccNSO (Country Code Names Supporting Organization) membership and operating procedures adopted by the ccNSO (Country Code Names Supporting Organization) Council shall be published on the Website.

(l) Except as provided by [Section 10.3\(i\)](#) and [Section 10.3\(j\)](#), the ccNSO (Country Code Names Supporting Organization) Council shall act at meetings. The ccNSO (Country Code Names Supporting Organization) Council shall meet regularly on a schedule it determines, but not fewer than four times each calendar year. At the discretion of the ccNSO (Country Code Names Supporting Organization) Council, meetings may be held in person or by other means, provided that all ccNSO (Country Code Names Supporting Organization)

Council members are permitted to participate by at least one means described in Section 10.3(n). Except where determined by a majority vote of the members of the ccNSO (Country Code Names Supporting Organization) Council present that a closed session is appropriate, physical meetings shall be open to attendance by all interested persons. To the extent practicable, ccNSO (Country Code Names Supporting Organization) Council meetings should be held in conjunction with meetings of the Board, or of one or more of ICANN (Internet Corporation for Assigned Names and Numbers)'s other Supporting Organizations (Supporting Organizations).

(m) Notice of time and place (and information about means of participation other than personal attendance) of all meetings of the ccNSO (Country Code Names Supporting Organization) Council shall be provided to each ccNSO (Country Code Names Supporting Organization) Council member, liaison, and observer by e-mail, telephone, facsimile, or a paper notice delivered personally or by postal mail. In case the notice is sent by postal mail, it shall be sent at least 21 days before the day of the meeting. In case the notice is delivered personally or by telephone, facsimile, or e-mail it shall be provided at least seven days before the day of the meeting. At least seven days in advance of each ccNSO (Country Code Names Supporting Organization) Council meeting (or if not practicable, as far in advance as is practicable), a notice of such meeting and, to the extent known, an agenda for the meeting shall be posted.

(n) Members of the ccNSO (Country Code Names Supporting Organization) Council may participate in a meeting of the ccNSO (Country Code Names Supporting Organization) Council through personal attendance or use of electronic communication (such as telephone or video conference), provided that (i) all ccNSO (Country Code Names Supporting Organization) Council members participating in the meeting can speak to and hear one

another, (ii) all ccNSO (Country Code Names Supporting Organization) Council members participating in the meeting are provided the means of fully participating in all matters before the ccNSO (Country Code Names Supporting Organization) Council, and (iii) there is a reasonable means of verifying the identity of ccNSO (Country Code Names Supporting Organization) Council members participating in the meeting and their votes. A majority of the ccNSO (Country Code Names Supporting Organization) Council members (i.e. those entitled to vote) then in office shall constitute a quorum for the transaction of business, and actions by a majority vote of the ccNSO (Country Code Names Supporting Organization) Council members present at any meeting at which there is a quorum shall be actions of the ccNSO (Country Code Names Supporting Organization) Council, unless otherwise provided in these Bylaws. The ccNSO (Country Code Names Supporting Organization) Council shall transmit minutes of its meetings to the ICANN (Internet Corporation for Assigned Names and Numbers) Secretary, who shall cause those minutes to be posted to the Website as soon as practicable following the meeting, and no later than 21 days following the meeting.

Section 10.4. MEMBERSHIP

(a) The ccNSO (Country Code Names Supporting Organization) shall have a membership consisting of ccTLD (Country Code Top Level Domain) managers. Any ccTLD (Country Code Top Level Domain) manager that meets the membership qualifications stated in Section 10.4(b) shall be entitled to be members of the ccNSO (Country Code Names Supporting Organization). For purposes of this Article 10, a ccTLD (Country Code Top Level Domain) manager is the organization or entity responsible for managing a ccTLD (Country Code Top Level Domain) according to and under the current heading "Delegation Record" in the Root Zone (Root Zone) Database, or under any later modification, for that country-code top-level domain.

For purposes of this Article, and Annexes B and C of these Bylaws, "Territory" is defined to be the country, dependency or other area of particular geopolitical interest listed on the 'International Standard ISO (International Organization for Standardization) 3166-1, Codes for the representation of names of countries and their subdivisions – Part 1: Country Codes', or, in some exceptional cases listed on the reserved ISO (International Organization for Standardization) 3166-1 code elements.

(b) Any ccTLD (Country Code Top Level Domain) manager may become a ccNSO (Country Code Names Supporting Organization) member by submitting an application to a person designated by the ccNSO (Country Code Names Supporting Organization) Council to receive applications. The application shall be in writing in a form designated by the ccNSO (Country Code Names Supporting Organization) Council. The application shall include the ccTLD (Country Code Top Level Domain) manager's recognition of the role of the ccNSO (Country Code Names Supporting Organization) within the ICANN (Internet Corporation for Assigned Names and Numbers) structure as well as the ccTLD (Country Code Top Level Domain) manager's agreement, for the duration of its membership in the ccNSO (Country Code Names Supporting Organization), (i) to adhere to rules of the ccNSO (Country Code Names Supporting Organization), including membership rules, (ii) to abide by policies developed and recommended by the ccNSO (Country Code Names Supporting Organization) and adopted by the Board in the manner described by Section 10.4(j) and Section 10.4(k), and (ii) to pay ccNSO (Country Code Names Supporting Organization) membership fees established by the ccNSO (Country Code Names Supporting Organization) Council under Section 10.7(c). A ccNSO (Country Code Names Supporting Organization) member may resign from membership at any time by giving written notice to a person designated by the ccNSO (Country Code Names Supporting Organization) Council to receive notices of resignation. Upon

resignation the ccTLD (Country Code Top Level Domain) manager ceases to agree to (A) adhere to rules of the ccNSO (Country Code Names Supporting Organization), including membership rules, (B) to abide by policies developed and recommended by the ccNSO (Country Code Names Supporting Organization) and adopted by the Board in the manner described by [Section 10.4\(j\)](#) and [Section 10.4\(k\)](#), and (C) to pay ccNSO (Country Code Names Supporting Organization) membership fees established by the ccNSO (Country Code Names Supporting Organization) Council under [Section 10.7\(c\)](#). In the absence of designation by the ccNSO (Country Code Names Supporting Organization) Council of a person to receive applications and notices of resignation, they shall be sent to the ICANN (Internet Corporation for Assigned Names and Numbers) Secretary, who shall notify the ccNSO (Country Code Names Supporting Organization) Council of receipt of any such applications and notices.

(c) Neither membership in the ccNSO (Country Code Names Supporting Organization) nor membership in any Regional Organization described in [Section 10.5](#) shall be a condition for access to or registration in the IANA (Internet Assigned Numbers Authority) database. Any individual relationship a ccTLD (Country Code Top Level Domain) manager has with ICANN (Internet Corporation for Assigned Names and Numbers) or the ccTLD (Country Code Top Level Domain) manager's receipt of IANA (Internet Assigned Numbers Authority) services is not in any way contingent upon membership in the ccNSO (Country Code Names Supporting Organization).

(d) The Geographic Regions of ccTLDs shall be as described in [Section 7.5](#). For purposes of this [Article 10](#), managers of ccTLDs within a Geographic Region that are members of the ccNSO (Country Code Names Supporting Organization) are referred to as ccNSO (Country Code Names Supporting Organization) members "within" the Geographic Region,

regardless of the physical location of the ccTLD (Country Code Top Level Domain) manager. In cases where the Geographic Region of a ccNSO (Country Code Names Supporting Organization) member is unclear, the ccTLD (Country Code Top Level Domain) member should self-select according to procedures adopted by the ccNSO (Country Code Names Supporting Organization) Council.

(e) Designation of Representative

(i) Each ccTLD (Country Code Top Level Domain) manager may designate in writing a person, organization, or entity to represent the ccTLD (Country Code Top Level Domain) manager in matters relating to the ccNSO (Country Code Names Supporting Organization) ("Representative"). In the absence of such a designation, the person, organization, or entity listed as the administrative contact in the IANA (Internet Assigned Numbers Authority) database shall be deemed to be the designate of the ccTLD (Country Code Top Level Domain) manager by whom the ccNSO (Country Code Names Supporting Organization) member shall be represented.

(ii) For any Territory for which there is a single ccTLD (Country Code Top Level Domain) manager that is a ccNSO (Country Code Names Supporting Organization) member, the Representative selected by that manager in accordance with Section 10.4(e) shall be the Territory's emissary ("Emissary") for the purpose of voting in the specific cases enumerated in this Article, Annex B, or Annex C of these Bylaws. In the event two or more ccTLD (Country Code Top Level Domain) managers from the same Territory are ccNSO (Country Code Names Supporting Organization) members, those ccTLD (Country Code Top Level Domain) managers are to appoint one of the Representatives from among those ccNSO (Country

Code Names Supporting Organization) members to serve as the Emissary to vote on behalf of the ccNSO (Country Code Names Supporting Organization) members from that Territory.

(iii) During any period in which an Emissary is not appointed, the ccTLD (Country Code Top Level Domain) manager that has been the member of the ccNSO (Country Code Names Supporting Organization) for the longest period is deemed to be the Emissary for that Territory.

(iv) Each Emissary, regardless of the number of ccTLD (Country Code Top Level Domain) managers within the relevant Territory, is entitled to cast a single vote in any round of any voting process defined within this Article, Annex B or Annex C that is reserved for Emissary voting. The ccTLD (Country Code Top Level Domain) managers within each Territory may define the process to determine how their respective Emissary's vote is determined.

(f) There shall be an annual meeting of ccNSO (Country Code Names Supporting Organization) members, which shall be coordinated by the ccNSO (Country Code Names Supporting Organization) Council. Annual meetings should be open for all to attend, and a reasonable opportunity shall be provided for ccTLD (Country Code Top Level Domain) managers that are not members of the ccNSO (Country Code Names Supporting Organization) as well as other non-members of the ccNSO (Country Code Names Supporting Organization) to address the meeting. To the extent practicable, annual meetings of the ccNSO (Country Code Names Supporting Organization) members shall be held in person and should be held in conjunction with meetings of the Board, or of one or more of ICANN (Internet Corporation for Assigned Names and Numbers)'s other Supporting Organizations (Supporting Organizations).

(g) The ccNSO (Country Code Names Supporting Organization) Council members selected by the ccNSO (Country Code Names Supporting Organization) members from each Geographic Region (see Section 10.3(a)(i)) shall be selected through nomination, and if necessary election, by the ccNSO (Country Code Names Supporting Organization) members within that Geographic Region. At least 90 days before the end of the regular term of any ccNSO (Country Code Names Supporting Organization)-member-selected member of the ccNSO (Country Code Names Supporting Organization) Council, or upon the occurrence of a vacancy in the seat of such a ccNSO (Country Code Names Supporting Organization) Council member, the ccNSO (Country Code Names Supporting Organization) Council shall establish a nomination and election schedule, which shall be sent to all ccNSO (Country Code Names Supporting Organization) members within the Geographic Region and posted on the Website.

(h) Any ccNSO (Country Code Names Supporting Organization) member may nominate an individual to serve as a ccNSO (Country Code Names Supporting Organization) Council member representing the ccNSO (Country Code Names Supporting Organization) member's Geographic Region. Nominations must be seconded by another ccNSO (Country Code Names Supporting Organization) member from a different Territory, from the same Geographic Region. By accepting their nomination, individuals nominated to the ccNSO (Country Code Names Supporting Organization) Council agree to support the policies committed to by ccNSO (Country Code Names Supporting Organization) members.

(i) If at the close of nominations there are no more candidates nominated (with seconds and acceptances) in a particular Geographic Region than there are seats on the ccNSO (Country Code Names Supporting Organization) Council available for that Geographic Region, then the nominated candidates shall be selected to serve on the

ccNSO (Country Code Names Supporting Organization) Council. Otherwise, an election by written ballot (which may be by electronic means) shall be held to select the ccNSO (Country Code Names Supporting Organization) Council members from among those nominated (with seconds and acceptances), with ccNSO (Country Code Names Supporting Organization) members from the Geographic Region being entitled to vote in the election through their Emissaries. In such an election, a majority of the Emissaries entitled to vote in the Geographic Region shall constitute a quorum, and the selected candidate must receive a plurality of the votes cast by the Emissaries within the Geographic Region. The ccNSO (Country Code Names Supporting Organization) Council Chair shall provide the ICANN (Internet Corporation for Assigned Names and Numbers) Secretary prompt written notice of the selection of ccNSO (Country Code Names Supporting Organization) Council members under this paragraph.

(j) Subject to Section 10.4(k), ICANN (Internet Corporation for Assigned Names and Numbers) policies shall apply to ccNSO (Country Code Names Supporting Organization) members by virtue of their membership to the extent, and only to the extent, that the policies (i) only address issues that are within scope of the ccNSO (Country Code Names Supporting Organization) according to Section 10.6(a) and Annex C; (ii) have been developed through the ccPDP as described in Section 10.6, and (iii) have been recommended as such by the ccNSO (Country Code Names Supporting Organization) to the Board, and (iv) are adopted by the Board as policies, provided that such policies do not conflict with the law applicable to the ccTLD (Country Code Top Level Domain) manager which shall, at all times, remain paramount. In addition, such policies shall apply to ICANN (Internet Corporation for Assigned Names and Numbers) in its activities concerning ccTLDs.

(k) A ccNSO (Country Code Names Supporting Organization) member shall not be bound if it provides a declaration to the ccNSO (Country Code Names Supporting Organization) Council stating that (i) implementation of the policy would require the member to breach custom, religion, or public policy (not embodied in the applicable law described in [Section 10.4\(j\)](#)), and (ii) failure to implement the policy would not impair DNS (Domain Name System) operations or interoperability, giving detailed reasons supporting its statements. After investigation, the ccNSO (Country Code Names Supporting Organization) Council will provide a response to the ccNSO (Country Code Names Supporting Organization) member's declaration. If there is a ccNSO (Country Code Names Supporting Organization) Council consensus disagreeing with the declaration, which may be demonstrated by a vote of 14 or more members of the ccNSO (Country Code Names Supporting Organization) Council, the response shall state the ccNSO (Country Code Names Supporting Organization) Council's disagreement with the declaration and the reasons for disagreement. Otherwise, the response shall state the ccNSO (Country Code Names Supporting Organization) Council's agreement with the declaration. If the ccNSO (Country Code Names Supporting Organization) Council disagrees, the ccNSO (Country Code Names Supporting Organization) Council shall review the situation after a six-month period. At the end of that period, the ccNSO (Country Code Names Supporting Organization) Council shall make findings as to (A) whether the ccNSO (Country Code Names Supporting Organization) members' implementation of the policy would require the member to breach custom, religion, or public policy (not embodied in the applicable law described in [Section 10.4\(j\)](#)) and (B) whether failure to implement the policy would impair DNS (Domain Name System) operations or interoperability. In making any findings disagreeing with the declaration, the ccNSO (Country Code Names Supporting Organization) Council shall proceed by consensus, which may be demonstrated by a vote of 14 or more members of the

ccNSO (Country Code Names Supporting Organization) Council.

Section 10.5. REGIONAL ORGANIZATIONS

The ccNSO (Country Code Names Supporting Organization) Council may designate a Regional Organization for each ICANN (Internet Corporation for Assigned Names and Numbers) Geographic Region, provided that the Regional Organization is open to full membership by all ccNSO (Country Code Names Supporting Organization) members within the Geographic Region. Decisions to designate or de-designate a Regional Organization shall require a 66% vote of all of the members of the ccNSO (Country Code Names Supporting Organization) Council and shall be subject to review according to procedures established by the Board.

Section 10.6. ccNSO (Country Code Names Supporting Organization) POLICY-DEVELOPMENT PROCESS AND SCOPE

(a) The scope of the ccNSO (Country Code Names Supporting Organization)'s policy-development role shall be as stated in Annex C to these Bylaws; any modifications to the scope shall be recommended to the Board by the ccNSO (Country Code Names Supporting Organization) by use of the procedures of the ccPDP, and shall be subject to approval by the Board.

(b) In developing global policies within the scope of the ccNSO (Country Code Names Supporting Organization) and recommending them to the Board, the ccNSO (Country Code Names Supporting Organization) shall follow the ccNSO (Country Code Names Supporting Organization) Policy-Development Process ("ccPDP"). The ccPDP shall be as stated in Annex B to these Bylaws; modifications shall be recommended to the Board by the ccNSO (Country Code

Names Supporting Organization) by use of the procedures of the ccPDP, and shall be subject to approval by the Board.

Section 10.7. STAFF SUPPORT AND FUNDING

(a) Upon request of the ccNSO (Country Code Names Supporting Organization) Council, a member of the ICANN (Internet Corporation for Assigned Names and Numbers) staff may be assigned to support the ccNSO (Country Code Names Supporting Organization) and shall be designated as the ccNSO (Country Code Names Supporting Organization) Staff Manager. Alternatively, the ccNSO (Country Code Names Supporting Organization) Council may designate, at ccNSO (Country Code Names Supporting Organization) expense, another person to serve as ccNSO (Country Code Names Supporting Organization) Staff Manager. The work of the ccNSO (Country Code Names Supporting Organization) Staff Manager on substantive matters shall be assigned by the Chair of the ccNSO (Country Code Names Supporting Organization) Council, and may include the duties of ccPDP Issue Manager.

(b) Upon request of the ccNSO (Country Code Names Supporting Organization) Council, ICANN (Internet Corporation for Assigned Names and Numbers) shall provide administrative and operational support necessary for the ccNSO (Country Code Names Supporting Organization) to carry out its responsibilities. Such support shall not include an obligation for ICANN (Internet Corporation for Assigned Names and Numbers) to fund travel expenses incurred by ccNSO (Country Code Names Supporting Organization) participants for travel to any meeting of the ccNSO (Country Code Names Supporting Organization) or for any other purpose. The ccNSO (Country Code Names Supporting Organization) Council may make provision, at ccNSO (Country Code Names Supporting Organization) expense, for administrative and operational support in addition or as an

alternative to support provided by ICANN (Internet Corporation for Assigned Names and Numbers).

(c) The ccNSO (Country Code Names Supporting Organization) Council shall establish fees to be paid by ccNSO (Country Code Names Supporting Organization) members to defray ccNSO (Country Code Names Supporting Organization) expenses as described in Section 10.7(a) and Section 10.7(b), as approved by the ccNSO (Country Code Names Supporting Organization) members.

(d) Written notices given to the Secretary under this Article 10 shall be permanently retained, and shall be made available for review by the ccNSO (Country Code Names Supporting Organization) Council on request. The Secretary shall also maintain the roll of members of the ccNSO (Country Code Names Supporting Organization), which shall include the name of each ccTLD (Country Code Top Level Domain) manager's designated representative, and which shall be posted on the Website.

ARTICLE 11 GENERIC NAMES SUPPORTING ORGANIZATION

Section 11.1. DESCRIPTION

There shall be a policy-development body known as the Generic Names Supporting Organization (Supporting Organization) (the "**Generic Names Supporting Organization (Supporting Organization)**" or "**GNSO (Generic Names Supporting Organization)**"), and collectively with the ASO (Address Supporting Organization) and ccNSO (Country Code Names Supporting Organization), the "**Supporting Organizations (Supporting Organizations)**"), which shall be responsible for developing and recommending to the Board substantive policies relating to generic top-level domains and other responsibilities of the

GNSO (Generic Names Supporting Organization) as set forth in these Bylaws.

Section 11.2. ORGANIZATION

The GNSO (Generic Names Supporting Organization) shall consist of:

(a) A number of Constituencies, where applicable, organized within the Stakeholder Groups as described in Section 11.5;

(b) Four Stakeholder Groups organized within Houses as described in Section 11.5;

(c) Two Houses within the GNSO (Generic Names Supporting Organization) Council as described in Section 11.3(h);

(d) A GNSO (Generic Names Supporting Organization) Council responsible for managing the policy development process of the GNSO (Generic Names Supporting Organization), as described in Section 11.3; and

(e) Except as otherwise defined in these Bylaws, the four Stakeholder Groups and the Constituencies will be responsible for defining their own charters with the approval of their members and of the Board.

Section 11.3. GNSO (Generic Names Supporting Organization) COUNCIL

(a) Subject to Section 11.5, the GNSO (Generic Names Supporting Organization) Council shall consist of:

(i) three representatives selected from the Registries Stakeholder Group;

(ii) three representatives selected from the Registrars Stakeholder Group;

(iii) six representatives selected from the Commercial Stakeholder Group;

(iv) six representatives selected from the Non-Commercial Stakeholder Group; and

(v) three representatives selected by the ICANN (Internet Corporation for Assigned Names and Numbers) Nominating Committee, one of which shall be non-voting, but otherwise entitled to participate on equal footing with other members of the GNSO (Generic Names Supporting Organization) Council including, e.g. the making and seconding of motions and of serving as Chair if elected. One Nominating Committee appointee voting representative shall be assigned to each House (as described in Section 11.3(h)) by the Nominating Committee.

No individual representative may hold more than one seat on the GNSO (Generic Names Supporting Organization) Council at the same time.

Stakeholder Groups should, in their charters, ensure their representation on the GNSO (Generic Names Supporting Organization) Council is as diverse as possible and practicable, including considerations of geography, GNSO (Generic Names Supporting Organization) Constituency, sector, ability and gender.

There may also be liaisons to the GNSO (Generic Names Supporting Organization) Council from other ICANN (Internet Corporation for Assigned Names and Numbers) Supporting Organizations (Supporting Organizations) and/or Advisory Committees (Advisory Committees), from time to time. The appointing organization shall designate, revoke, or change its

liaison on the GNSO (Generic Names Supporting Organization) Council by providing written notice to the Chair of the GNSO (Generic Names Supporting Organization) Council and to the ICANN (Internet Corporation for Assigned Names and Numbers) Secretary. Liaisons shall not be members of or entitled to vote, to make or second motions, or to serve as an officer on the GNSO (Generic Names Supporting Organization) Council, but otherwise liaisons shall be entitled to participate on equal footing with members of the GNSO (Generic Names Supporting Organization) Council.

(b) The regular term of each GNSO (Generic Names Supporting Organization) Council member shall begin at the conclusion of an ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting and shall end at the conclusion of the second ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting thereafter. The regular term of two representatives selected from Stakeholder Groups with three Council seats shall begin in even-numbered years and the regular term of the other representative selected from that Stakeholder Group shall begin in odd-numbered years. The regular term of three representatives selected from Stakeholder Groups with six Council seats shall begin in even-numbered years and the regular term of the other three representatives selected from that Stakeholder Group shall begin in odd-numbered years. The regular term of one of the three members selected by the Nominating Committee shall begin in even-numbered years and the regular term of the other two of the three members selected by the Nominating Committee shall begin in odd-numbered years. Each GNSO (Generic Names Supporting Organization) Council member shall hold office during his or her regular term and until a successor has been selected and qualified or until that member resigns or is removed in accordance with these Bylaws.

Except in a "special circumstance," such as, but not limited to, meeting geographic or other diversity requirements defined in the Stakeholder Group charters, where no alternative representative is available to serve, no Council member may be selected to serve more than two consecutive terms, in such a special circumstance a Council member may serve one additional term. For these purposes, a person selected to fill a vacancy in a term shall not be deemed to have served that term. A former Council member who has served two consecutive terms must remain out of office for one full term prior to serving any subsequent term as Council member. A "special circumstance" is defined in the GNSO (Generic Names Supporting Organization) Operating Procedures.

(c) A vacancy on the GNSO (Generic Names Supporting Organization) Council shall be deemed to exist in the case of the death, resignation, or removal of any member. Vacancies shall be filled for the unexpired term by the appropriate Nominating Committee or Stakeholder Group that selected the member holding the position before the vacancy occurred by giving the GNSO (Generic Names Supporting Organization) Secretariat written notice of its selection. Procedures for handling Stakeholder Group-appointed GNSO (Generic Names Supporting Organization) Council member vacancies, resignations, and removals are prescribed in the applicable Stakeholder Group Charter.

A GNSO (Generic Names Supporting Organization) Council member selected by the Nominating Committee may be removed for cause: (i) stated by a three-fourths (3/4) vote of all members of the applicable House to which the Nominating Committee appointee is assigned; or (ii) stated by a three-fourths (3/4) vote of all members of each House in the case of the non-voting Nominating Committee appointee (see Section 11.3(h)). Such removal shall be subject to reversal by the ICANN (Internet Corporation for Assigned Names and

Numbers) Board on appeal by the affected GNSO (Generic Names Supporting Organization) Council member.

(d) The GNSO (Generic Names Supporting Organization) Council is responsible for managing the policy development process of the GNSO (Generic Names Supporting Organization). It shall adopt such procedures (the "**GNSO (Generic Names Supporting Organization) Operating Procedures**") as it sees fit to carry out that responsibility, provided that such procedures are approved by a majority vote of each House. The GNSO (Generic Names Supporting Organization) Operating Procedures shall be effective upon the expiration of a twenty-one (21) day public comment period, and shall be subject to Board oversight and review. Until any modifications are recommended by the GNSO (Generic Names Supporting Organization) Council, the applicable procedures shall be as set forth in Section 11.6.

(e) No more than one officer, director or employee of any particular corporation or other organization (including its subsidiaries and affiliates) shall serve on the GNSO (Generic Names Supporting Organization) Council at any given time.

(f) The GNSO (Generic Names Supporting Organization) shall nominate by written ballot or by action at a meeting individuals to fill Seats 13 and 14 on the Board. Each of the two voting Houses of the GNSO (Generic Names Supporting Organization), as described in Section 11.3(h), shall make a nomination to fill one of two Board seats, as outlined below; any such nomination must have affirmative votes comprising sixty percent (60%) of all the respective voting House members:

(i) the Contracted Parties House (as described in Section 11.3(h)(i)) shall select a representative to fill Seat 13; and

(ii) the Non-Contracted Parties House (as described in Section 11.3(h)(ii)) shall select a representative to fill Seat 14.

Election procedures are defined in the GNSO (Generic Names Supporting Organization) Operating Procedures.

Notification of the Board seat nominations shall be given by the GNSO (Generic Names Supporting Organization) Chair in writing to the EC (Empowered Community) Administration, with a copy to the Secretary, and the EC (Empowered Community) shall promptly act on it as provided in Section 7.25.

(g) The GNSO (Generic Names Supporting Organization) Council shall select the GNSO (Generic Names Supporting Organization) Chair for a term the GNSO (Generic Names Supporting Organization) Council specifies, but not longer than one year. Each House (as described in Section 11.3(h)) shall select a Vice-Chair, who will be a Vice-Chair of the whole of the GNSO (Generic Names Supporting Organization) Council, for a term the GNSO (Generic Names Supporting Organization) Council specifies, but not longer than one year. The procedures for selecting the Chair and any other officers are contained in the GNSO (Generic Names Supporting Organization) Operating Procedures. In the event that the GNSO (Generic Names Supporting Organization) Council has not elected a GNSO (Generic Names Supporting Organization) Chair by the end of the previous Chair's term, the Vice-Chairs will serve as Interim GNSO (Generic Names Supporting Organization) Co-Chairs until a successful election can be held.

(h) Except as otherwise required in these Bylaws, for voting purposes, the GNSO (Generic Names Supporting Organization) Council (see Section 11.3(a)) shall be organized into a bicameral House structure as described below:

(i) the Contracted Parties House includes the Registries Stakeholder Group (three members), the Registrars Stakeholder Group (three members), and one voting member appointed by the ICANN (Internet Corporation for Assigned Names and Numbers) Nominating Committee for a total of seven voting members; and

(ii) the Non Contracted Parties House includes the Commercial Stakeholder Group (six members), the Non-Commercial Stakeholder Group (six members), and one voting member appointed by the ICANN (Internet Corporation for Assigned Names and Numbers) Nominating Committee to that House for a total of thirteen voting members.

Except as otherwise specified in these Bylaws, each member of a voting House is entitled to cast one vote in each separate matter before the GNSO (Generic Names Supporting Organization) Council.

(i) Except as otherwise specified in these Bylaws, Annex A, Annex A-1 or Annex A-2 hereto, or the GNSO (Generic Names Supporting Organization) Operating Procedures, the default threshold to pass a GNSO (Generic Names Supporting Organization) Council motion or other voting action requires a simple majority vote of each House. The voting thresholds described below shall apply to the following GNSO (Generic Names Supporting Organization) actions:

(i) Create an Issues Report: requires an affirmative vote of more than one-fourth (1/4) vote of each House or majority of one House.

(ii) Initiate a Policy Development Process ("**PDP (Policy Development Process)**") Within Scope (as described in Annex A): requires an affirmative vote of

more than one-third (1/3) of each House or more than two-thirds (2/3) of one House.

(iii) Initiate a PDP (Policy Development Process) Not Within Scope: requires an affirmative vote of GNSO (Generic Names Supporting Organization) Supermajority (as defined in Section 11.3(i)(xix)).

(iv) Approve a PDP (Policy Development Process) Team Charter for a PDP (Policy Development Process) Within Scope: requires an affirmative vote of more than one-third (1/3) of each House or more than two-thirds (2/3) of one House.

(v) Approve a PDP (Policy Development Process) Team Charter for a PDP (Policy Development Process) Not Within Scope: requires an affirmative vote of a GNSO (Generic Names Supporting Organization) Supermajority.

(vi) Changes to an Approved PDP (Policy Development Process) Team Charter: For any PDP (Policy Development Process) Team Charter approved under (iv) or (v) above, the GNSO (Generic Names Supporting Organization) Council may approve an amendment to the Charter through a simple majority vote of each House.

(vii) Terminate a PDP (Policy Development Process): Once initiated, and prior to the publication of a Final Report, the GNSO (Generic Names Supporting Organization) Council may terminate a PDP (Policy Development Process) only for significant cause, upon a motion that passes with a GNSO (Generic Names Supporting Organization) Supermajority Vote in favor of termination.

(viii) Approve a PDP (Policy Development Process) Recommendation Without a GNSO (Generic Names

Supporting Organization) Supermajority: requires an affirmative vote of a majority of each House and further requires that one GNSO (Generic Names Supporting Organization) Council member representative of at least 3 of the 4 Stakeholder Groups supports the Recommendation.

(ix) Approve a PDP (Policy Development Process) Recommendation With a GNSO (Generic Names Supporting Organization) Supermajority: requires an affirmative vote of a GNSO (Generic Names Supporting Organization) Supermajority,

(x) Approve a PDP (Policy Development Process) Recommendation Imposing New Obligations on Certain Contracting Parties: where an ICANN (Internet Corporation for Assigned Names and Numbers) contract provision specifies that "a two-thirds vote of the council" demonstrates the presence of a consensus, the GNSO (Generic Names Supporting Organization) Supermajority vote threshold will have to be met or exceeded.

(xi) Modification of Approved PDP (Policy Development Process) Recommendation: Prior to Final Approval by the Board, an Approved PDP (Policy Development Process) Recommendation may be modified or amended by the GNSO (Generic Names Supporting Organization) Council with a GNSO (Generic Names Supporting Organization) Supermajority vote.

(xii) Initiation of an Expedited Policy Development Process ("**EPDP**"): requires an affirmative vote of a GNSO (Generic Names Supporting Organization) Supermajority.

(xiii) Approve an EPDP Team Charter: requires an affirmative vote of a GNSO (Generic Names

Supporting Organization) Supermajority.

(xiv) Approval of EPDP Recommendations: requires an affirmative vote of a GNSO (Generic Names Supporting Organization) Supermajority.

(xv) Approve an EPDP Recommendation Imposing New Obligations on Certain Contracting Parties: where an ICANN (Internet Corporation for Assigned Names and Numbers) contract provision specifies that "a two-thirds vote of the council" demonstrates the presence of a consensus, the GNSO (Generic Names Supporting Organization) Supermajority vote threshold will have to be met or exceeded.

(xvi) Initiation of a GNSO (Generic Names Supporting Organization) Guidance Process ("GGP"): requires an affirmative vote of more than one-third (1/3) of each House or more than two-thirds (2/3) of one House.

(xvii) Rejection of Initiation of a GGP Requested by the Board: requires an affirmative vote of a GNSO (Generic Names Supporting Organization) Supermajority.

(xviii) Approval of GGP Recommendations: requires an affirmative vote of a GNSO (Generic Names Supporting Organization) Supermajority.

(xix) A "**GNSO (Generic Names Supporting Organization) Supermajority**" shall mean: (A) two-thirds (2/3) of the Council members of each House, or (B) three-fourths (3/4) of the Council members of one House and a majority of the Council members of the other House.

(j) The voting thresholds described below shall apply to the following GNSO (Generic Names Supporting Organization)

actions as a Decisional Participant in the Empowered Community. For any action not listed, the default threshold for the GNSO (Generic Names Supporting Organization) to act as a Decisional Participant in the Empowered community requires a simple majority vote of each House:

(i) Amendment of PTI Articles of Incorporation as contemplated in Section 16.2: requires an affirmative vote of a GNSO (Generic Names Supporting Organization) Supermajority.

(ii) GNSO (Generic Names Supporting Organization) Council Inspection Request as contemplated in Section 22.7: requires an affirmative vote of more than one-fourth (1/4) vote of each House or majority of one House.

(iii) GNSO (Generic Names Supporting Organization) Council Inspection Remedy, as contemplated in Section 22.7 - e, and Stakeholder Group / Constituency Inspection Remedy, as contemplated in Section 22.7 – e(ii) and e(iii), for an inspection requested by the GNSO (Generic Names Supporting Organization) as a Decisional Participant in the Empowered Community: requires an affirmative vote of more than one-fourth (1/4) vote of each House or majority of one House.

(iv) Amendments to Fundamental Bylaws and Article Amendments as contemplated by Section 25.2 of the Bylaws, Asset Sales, as contemplated by Article 26 of the Bylaws, amendments to ICANN (Internet Corporation for Assigned Names and Numbers) Articles of Incorporation: requires an affirmative vote of a GNSO (Generic Names Supporting Organization) Supermajority.

(v) Approval of a Nominating Committee Director Removal Petition as contemplated in Annex D, Article 3, Section 3.1(b) and support for a petition submitted by a Petitioning Decisional Participant as contemplated in Section 3.2(d): requires an affirmative vote of a GNSO (Generic Names Supporting Organization) Supermajority.

(vi) Approval of a Nominating Committee Director Removal Supported Petition as contemplated in Annex D, Article 3, Section 3.1(f): requires an affirmative vote of a GNSO (Generic Names Supporting Organization) Supermajority.

(vii) Approval of a petition to remove a director holding seat 13 or 14 as contemplated in Annex D, Article 3, Section 3.2(a): requires an affirmative vote of at least three-fourths (3/4) of the House that appointed that Director.

(viii) Approval of a petition notice to remove a director holding seat 13 or 14 as contemplated in Annex D, Article 3, Section 3.2(f): requires an affirmative vote of at least three-fourths (3/4) of the GNSO (Generic Names Supporting Organization) Council and at least three-fourths (3/4) of the House that appointed that Director.

(ix) Approval of a Board Recall Petition as contemplated in Annex D, Article 3, Section 3.3(b) and support for another Petitioning Decisional Participant: requires an affirmative vote of a GNSO (Generic Names Supporting Organization) Supermajority.

(x) Approval of a Board Recall Supported Petition as contemplated in Annex D, Article 3, Section 3.3(e): requires an affirmative vote of a GNSO (Generic Names Supporting Organization) Supermajority.

Section 11.4. STAFF SUPPORT AND FUNDING

(a) A member of the ICANN (Internet Corporation for Assigned Names and Numbers) staff shall be assigned to support the GNSO (Generic Names Supporting Organization), whose work on substantive matters shall be assigned by the Chair of the GNSO (Generic Names Supporting Organization) Council, and shall be designated as the GNSO (Generic Names Supporting Organization) Staff Manager ("Staff Manager").

(b) ICANN (Internet Corporation for Assigned Names and Numbers) shall provide administrative and operational support necessary for the GNSO (Generic Names Supporting Organization) to carry out its responsibilities. Such support shall not include an obligation for ICANN (Internet Corporation for Assigned Names and Numbers) to fund travel expenses incurred by GNSO (Generic Names Supporting Organization) participants for travel to any meeting of the GNSO (Generic Names Supporting Organization) or for any other purpose. ICANN (Internet Corporation for Assigned Names and Numbers) may, at its discretion, fund travel expenses for GNSO (Generic Names Supporting Organization) participants under any travel support procedures or guidelines that it may adopt from time to time.

Section 11.5. STAKEHOLDER GROUPS

(a) The following "**Stakeholder Groups**" are hereby recognized as representative of a specific group of one or more "**Constituencies**" or interest groups:

(i) Registries Stakeholder Group representing all gTLD (generic Top Level Domain) registries under contract to ICANN (Internet Corporation for Assigned Names and Numbers);

(ii) Registrars Stakeholder Group representing all registrars accredited by and under contract to ICANN (Internet Corporation for Assigned Names and Numbers);

(iii) Commercial Stakeholder Group representing the full range of large and small commercial entities of the Internet ("**Commercial Stakeholder Group**"), which includes the Business Constituency ("**Business Constituency**"), Intellectual Property Constituency ("**Intellectual Property Constituency**") and the Internet Service Providers and Connectivity Providers Constituency ("**Internet Service Providers and Connectivity Providers Constituency**"); and

(iv) Non-Commercial Stakeholder Group representing the full range of non-commercial entities of the Internet.

(b) Each Stakeholder Group is assigned a specific number of GNSO (Generic Names Supporting Organization) Council seats in accordance with Section 11.3(a).

(c) Each Stakeholder Group identified in Section 11.3(a) and each of its associated Constituencies, where applicable, shall maintain recognition with the ICANN (Internet Corporation for Assigned Names and Numbers) Board. Recognition is granted by the Board based upon the extent to which, in fact, the entity represents the global interests of the stakeholder communities it purports to represent and operates to the maximum extent feasible in an open and transparent manner consistent with procedures designed to ensure fairness. Stakeholder Group and Constituency Charters may be reviewed periodically as prescribed by the Board.

(d) Any group of individuals or entities may petition the Board for recognition as a new or separate Constituency in the

Non-Contracted Parties House. Any such petition shall contain:

- (i) A detailed explanation of why the addition of such a Constituency will improve the ability of the GNSO (Generic Names Supporting Organization) to carry out its policy-development responsibilities;
- (ii) A detailed explanation of why the proposed new Constituency adequately represents, on a global basis, the stakeholders it seeks to represent;
- (iii) A recommendation for organizational placement within a particular Stakeholder Group; and
- (iv) A proposed charter that adheres to the principles and procedures contained in these Bylaws.

Any petition for the recognition of a new Constituency and the associated charter shall be posted for public comment.

(e) The Board may create new Constituencies as described in Section 11.5(c) in response to such a petition, or on its own motion, if the Board determines that such action would serve the purposes of ICANN (Internet Corporation for Assigned Names and Numbers). In the event the Board is considering acting on its own motion it shall post a detailed explanation of why such action is necessary or desirable, set a reasonable time for public comment, and not make a final decision on whether to create such new Constituency until after reviewing all comments received. Whenever the Board posts a petition or recommendation for a new Constituency for public comment, the Board shall notify the GNSO (Generic Names Supporting Organization) Council and the appropriate Stakeholder Group affected and shall consider any response to that notification prior to taking action.

Section 11.6. POLICY DEVELOPMENT PROCESS

The policy-development procedures to be followed by the GNSO (Generic Names Supporting Organization) shall be as stated in Annex A to these Bylaws. These procedures may be supplemented or revised in the manner stated in Section 11.3(d).

ARTICLE 12 ADVISORY COMMITTEES

Section 12.1. GENERAL

The Board may create one or more "**Advisory Committees (Advisory Committees)**" in addition to those set forth in this Article 12. Advisory Committee (Advisory Committee) membership may consist of Directors only, Directors and non-directors, or non-directors only, and may also include non-voting or alternate members. Advisory Committees (Advisory Committees) shall have no legal authority to act for ICANN (Internet Corporation for Assigned Names and Numbers), but shall report their findings and recommendations to the Board.

Section 12.2. SPECIFIC ADVISORY COMMITTEES

There shall be at least the following Advisory Committees (Advisory Committees):

(a) Governmental Advisory Committee (Advisory Committee)

(i) The Governmental Advisory Committee (Advisory Committee) should consider and provide advice on the activities of ICANN (Internet Corporation for Assigned Names and Numbers) as they relate to concerns of governments, particularly matters where there may be an interaction between ICANN (Internet Corporation

for Assigned Names and Numbers)'s policies and various laws and international agreements or where they may affect public policy issues.

(ii) Membership in the Governmental Advisory Committee (Advisory Committee) shall be open to all national governments. Membership shall also be open to Distinct Economies as recognized in international fora, and multinational governmental organizations and treaty organizations, on the invitation of the Governmental Advisory Committee (Advisory Committee) through its Chair.

(iii) The Governmental Advisory Committee (Advisory Committee) may adopt its own charter and internal operating principles or procedures to guide its operations, to be published on the Website.

(iv) The chair of the Governmental Advisory Committee (Advisory Committee) shall be elected by the members of the Governmental Advisory Committee (Advisory Committee) pursuant to procedures adopted by such members.

(v) Each member of the Governmental Advisory Committee (Advisory Committee) shall appoint one accredited representative to the Governmental Advisory Committee (Advisory Committee). The accredited representative of a member must hold a formal official position with the member's public administration. The term "official" includes a holder of an elected governmental office, or a person who is employed by such government, public authority, or multinational governmental or treaty organization and whose primary function with such government, public authority, or organization is to develop or influence governmental or public policies.

(vi) The Governmental Advisory Committee (Advisory Committee) shall annually appoint one Liaison to the Board, without limitation on reappointment, and shall annually appoint one non-voting liaison to the ICANN (Internet Corporation for Assigned Names and Numbers) Nominating Committee.

(vii) The Governmental Advisory Committee (Advisory Committee) may designate a non-voting liaison to each of the Supporting Organization (Supporting Organization) Councils and Advisory Committees (Advisory Committees), to the extent the Governmental Advisory Committee (Advisory Committee) deems it appropriate and useful to do so.

(viii) The Board shall notify the Chair of the Governmental Advisory Committee (Advisory Committee) in a timely manner of any proposal raising public policy issues on which it or any of the Supporting Organizations (Supporting Organizations) or Advisory Committees (Advisory Committees) seeks public comment, and shall take duly into account any timely response to that notification prior to taking action.

(ix) The Governmental Advisory Committee (Advisory Committee) may put issues to the Board directly, either by way of comment or prior advice, or by way of specifically recommending action or new policy development or revision to existing policies.

(x) The advice of the Governmental Advisory Committee (Advisory Committee) on public policy matters shall be duly taken into account, both in the formulation and adoption of policies. In the event that the Board determines to take an action that is not consistent with Governmental Advisory Committee (Advisory Committee) advice, it shall so inform the Governmental Advisory Committee (Advisory

Committee) and state the reasons why it decided not to follow that advice. Any Governmental Advisory Committee (Advisory Committee) advice approved by a full Governmental Advisory Committee (Advisory Committee) consensus, understood to mean the practice of adopting decisions by general agreement in the absence of any formal objection ("**GAC (Governmental Advisory Committee) Consensus (Consensus) Advice**"), may only be rejected by a vote of no less than 60% of the Board, and the Governmental Advisory Committee (Advisory Committee) and the Board will then try, in good faith and in a timely and efficient manner, to find a mutually acceptable solution. The Governmental Advisory Committee (Advisory Committee) will state whether any advice it gives to the Board is GAC (Governmental Advisory Committee) Consensus (Consensus) Advice.

(xi) If GAC (Governmental Advisory Committee) Consensus (Consensus) Advice is rejected by the Board pursuant to Section 12.2(a)(x) and if no such mutually acceptable solution can be found, the Board will state in its final decision the reasons why the Governmental Advisory Committee (Advisory Committee) advice was not followed, and such statement will be without prejudice to the rights or obligations of Governmental Advisory Committee (Advisory Committee) members with regard to public policy issues falling within their responsibilities.

(b) Security (Security – Security, Stability and Resiliency (SSR)) and Stability (Security, Stability and Resiliency) Advisory Committee (Advisory Committee)

(i) The role of the Security (Security – Security, Stability and Resiliency (SSR)) and Stability (Security, Stability and Resiliency) Advisory Committee (Advisory Committee) ("**Security (Security – Security, Stability**

and Resiliency (SSR)) and Stability (Security, Stability and Resiliency) Advisory Committee (Advisory Committee)" or "SSAC (Security and Stability Advisory Committee)" is to advise the ICANN (Internet Corporation for Assigned Names and Numbers) community and Board on matters relating to the security and integrity of the Internet's naming and address allocation systems. It shall have the following responsibilities:

(A) To communicate on security matters with the Internet technical community and the operators and managers of critical DNS (Domain Name System) infrastructure services, to include the root name server operator community, the top-level domain registries and registrars, the operators of the reverse delegation trees such as in-addr.arpa and ip6.arpa, and others as events and developments dictate. The SSAC (Security and Stability Advisory Committee) shall gather and articulate requirements to offer to those engaged in technical revision of the protocols related to DNS (Domain Name System) and address allocation and those engaged in operations planning.

(B) To engage in ongoing threat assessment and risk analysis of the Internet naming and address allocation services to assess where the principal threats to stability and security lie, and to advise the ICANN (Internet Corporation for Assigned Names and Numbers) community accordingly. The SSAC (Security and Stability Advisory Committee) shall recommend any necessary audit activity to assess the current status of DNS (Domain Name System) and address allocation security in relation to identified risks and threats.

(C) To communicate with those who have direct responsibility for Internet naming and address

allocation security matters (IETF (Internet Engineering Task Force), RSSAC (Root Server System Advisory Committee) (as defined in Section 12.2(c)(i)), RIRs, name registries, etc.), to ensure that its advice on security risks, issues, and priorities is properly synchronized with existing standardization, deployment, operational, and coordination activities. The SSAC (Security and Stability Advisory Committee) shall monitor these activities and inform the ICANN (Internet Corporation for Assigned Names and Numbers) community and Board on their progress, as appropriate.

(D) To report periodically to the Board on its activities.

(E) To make policy recommendations to the ICANN (Internet Corporation for Assigned Names and Numbers) community and Board.

(ii) The SSAC (Security and Stability Advisory Committee)'s chair and members shall be appointed by the Board. SSAC (Security and Stability Advisory Committee) membership appointment shall be for a three-year term, commencing on 1 January and ending the second year thereafter on 31 December. Members may be re-appointed, and there are no limits to the number of terms members may serve. The SSAC (Security and Stability Advisory Committee) chair may provide recommendations to the Board regarding appointments to the SSAC (Security and Stability Advisory Committee). The SSAC (Security and Stability Advisory Committee) chair shall stagger appointment recommendations so that approximately one-third (1/3) of the membership of the SSAC (Security and Stability Advisory Committee) is considered for appointment or re-appointment each year. The Board shall also have the power to remove SSAC (Security and Stability Advisory Committee)

appointees as recommended by or in consultation with the SSAC (Security and Stability Advisory Committee).

(iii) The SSAC (Security and Stability Advisory Committee) shall annually appoint a Liaison to the Board according to Section 7.9.

(c) Root Server System Advisory Committee (Advisory Committee)

(i) The role of the Root Server System Advisory Committee (Advisory Committee) ("**Root Server System Advisory Committee (Advisory Committee)**" or "**RSSAC (Root Server System Advisory Committee)**") is to advise the ICANN (Internet Corporation for Assigned Names and Numbers) community and Board on matters relating to the operation, administration, security, and integrity of the Internet's Root Server System. It shall have the following responsibilities:

(A) Communicate on matters relating to the operation of the Root Servers (Root Servers) and their multiple instances with the Internet technical community and the ICANN (Internet Corporation for Assigned Names and Numbers) community. The RSSAC (Root Server System Advisory Committee) shall gather and articulate requirements to offer to those engaged in technical revision of the protocols and best common practices related to the operation of DNS (Domain Name System) servers.

(B) Communicate on matters relating to the administration of the Root Zone (Root Zone) with those who have direct responsibility for that administration. These matters include the processes and procedures for the production of the Root Zone (Root Zone) File.

(C) Engage in ongoing threat assessment and risk analysis of the Root Server System and recommend any necessary audit activity to assess the current status of root servers and the root zone.

(D) Respond to requests for information or opinions from the Board.

(E) Report periodically to the Board on its activities.

(F) Make policy recommendations to the ICANN (Internet Corporation for Assigned Names and Numbers) community and Board.

(ii) The RSSAC (Root Server System Advisory Committee) shall be led by a chair. The RSSAC (Root Server System Advisory Committee) chair and members shall be appointed by the Board.

(A) RSSAC (Root Server System Advisory Committee) membership appointment shall be for a three-year term, commencing on 1 January and ending the second year thereafter on 31 December. Members may be re-appointed, and there are no limits to the number of terms the members may serve. The RSSAC (Root Server System Advisory Committee) chair shall provide recommendations to the Board regarding appointments to the RSSAC (Root Server System Advisory Committee). If the Board declines to appoint a person nominated by the RSSAC (Root Server System Advisory Committee), then it will provide the rationale for its decision. The RSSAC (Root Server System Advisory Committee) chair shall stagger appointment recommendations so that approximately one-third (1/3) of the membership of the RSSAC (Root Server System Advisory Committee) is considered for appointment or re-appointment each year. The Board shall also have the power to remove RSSAC (Root Server System Advisory Committee) appointees as

recommended by or in consultation with the RSSAC (Root Server System Advisory Committee).

(B) The RSSAC (Root Server System Advisory Committee) shall recommend the appointment of the chair to the Board following a nomination process that it devises and documents.

(iii) The RSSAC (Root Server System Advisory Committee) shall annually appoint a Liaison to the Board according to Section 7.9jm.

(d) At-Large Advisory Committee (Advisory Committee)

(i) The At-Large Advisory Committee (Advisory Committee) ("**At-Large Advisory Committee (Advisory Committee)**" or "**ALAC (At-Large Advisory Committee)**") is the primary organizational home within ICANN (Internet Corporation for Assigned Names and Numbers) for individual Internet users. The role of the ALAC (At-Large Advisory Committee) shall be to consider and provide advice on the activities of ICANN (Internet Corporation for Assigned Names and Numbers), insofar as they relate to the interests of individual Internet users. This includes policies created through ICANN (Internet Corporation for Assigned Names and Numbers)'s Supporting Organizations (Supporting Organizations), as well as the many other issues for which community input and advice is appropriate. The ALAC (At-Large Advisory Committee), which plays an important role in ICANN (Internet Corporation for Assigned Names and Numbers)'s accountability mechanisms, also coordinates some of ICANN (Internet Corporation for Assigned Names and Numbers)'s outreach to individual Internet users.

(ii) The ALAC (At-Large Advisory Committee) shall consist of (A) two members selected by each of the Regional At-Large Organizations ("**RALOs**") established according to Section 12.2(d)(vii), and (B) five members selected by the Nominating Committee. The five members selected by the Nominating Committee shall include one citizen of a country within each of the five Geographic Regions established according to Section 7.5.

(iii) The regular terms of members of the ALAC (At-Large Advisory Committee) shall be as follows:

(A) The term of one member selected by each RALO shall begin at the conclusion of an ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting in an even-numbered year.

(B) The term of the other member selected by each RALO shall begin at the conclusion of an ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting in an odd-numbered year.

(C) The terms of three of the members selected by the Nominating Committee shall begin at the conclusion of an annual meeting in an odd-numbered year and the terms of the other two members selected by the Nominating Committee shall begin at the conclusion of an annual meeting in an even-numbered year.

(D) The regular term of each member shall end at the conclusion of the second ICANN (Internet Corporation for Assigned Names and Numbers) annual meeting after the term began.

(iv) The Chair of the ALAC (At-Large Advisory Committee) shall be elected by the members of the ALAC (At-Large Advisory Committee) pursuant to

procedures adopted by the ALAC (At-Large Advisory Committee).

(v) The ALAC (At-Large Advisory Committee) shall, after consultation with each RALO, annually appoint five voting delegates (no two of whom shall be citizens of countries in the same Geographic Region) to the Nominating Committee.

(vi) The At-Large Advisory Committee (Advisory Committee) may designate non-voting liaisons to each of the ccNSO (Country Code Names Supporting Organization) Council and the GNSO (Generic Names Supporting Organization) Council.

(vii) There shall be one RALO for each Geographic Region established according to Section 7.5. Each RALO shall serve as the main forum and coordination point for public input to ICANN (Internet Corporation for Assigned Names and Numbers) in its Geographic Region and shall be a non-profit organization certified by ICANN (Internet Corporation for Assigned Names and Numbers) according to criteria and standards established by the Board based on recommendations of the At-Large Advisory Committee (Advisory Committee). An organization shall become the recognized RALO for its Geographic Region upon entering a Memorandum of Understanding with ICANN (Internet Corporation for Assigned Names and Numbers) addressing the respective roles and responsibilities of ICANN (Internet Corporation for Assigned Names and Numbers) and the RALO regarding the process for selecting ALAC (At-Large Advisory Committee) members and requirements of openness, participatory opportunities, transparency, accountability, and diversity in the RALO's structure and procedures, as well as criteria and standards for

the RALO's constituent At-Large Structures ("**At-Large Structures**").

(viii) Each RALO shall be comprised of self-supporting At-Large Structures within its Geographic Region that have been certified to meet the requirements of the RALO's Memorandum of Understanding with ICANN (Internet Corporation for Assigned Names and Numbers) according to Section 12.2(d)(ix). If so provided by its Memorandum of Understanding with ICANN (Internet Corporation for Assigned Names and Numbers), a RALO may also include individual Internet users who are citizens or residents of countries within the RALO's Geographic Region.

(ix) Membership in the At-Large Community

(A) The criteria and standards for the certification of At-Large Structures within each Geographic Region shall be established by the Board based on recommendations from the ALAC (At-Large Advisory Committee) and shall be stated in the Memorandum of Understanding between ICANN (Internet Corporation for Assigned Names and Numbers) and the RALO for each Geographic Region.

(B) The criteria and standards for the certification of At-Large Structures shall be established in such a way that participation by individual Internet users who are citizens or residents of countries within the Geographic Region of the RALO will predominate in the operation of each At-Large Structure within the RALO, while not necessarily excluding additional participation, compatible with the interests of the individual Internet users within the region, by others.

(C) Each RALO's Memorandum of Understanding shall also include provisions designed to allow, to the greatest extent possible, every individual Internet user

who is a citizen of a country within the RALO's Geographic Region to participate in at least one of the RALO's At-Large Structures.

(D) To the extent compatible with these objectives, the criteria and standards should also afford to each RALO the type of structure that best fits the customs and character of its Geographic Region.

(E) Once the criteria and standards have been established as provided in this Section 12.2(d)(ix), the ALAC (At-Large Advisory Committee), with the advice and participation of the RALO where the applicant is based, shall be responsible for certifying organizations as meeting the criteria and standards for At-Large Structure accreditation.

(F) Decisions to certify or decertify an At-Large Structure shall be made as decided by the ALAC (At-Large Advisory Committee) in its rules of procedure, save always that any changes made to the rules of procedure in respect of an At-Large Structure applications shall be subject to review by the RALOs and by the Board.

(G) Decisions as to whether to accredit, not to accredit, or disaccredit an At-Large Structure shall be subject to review according to procedures established by the Board.

(H) On an ongoing basis, the ALAC (At-Large Advisory Committee) may also give advice as to whether a prospective At-Large Structure meets the applicable criteria and standards.

(x) The ALAC (At-Large Advisory Committee) is also responsible, working in conjunction with the RALOs, for coordinating the following activities:

(A) Nominating individuals to fill Seat 15 on the Board. Notification of the At-Large Community's nomination shall be given by the ALAC (At-Large Advisory Committee) Chair in writing to the EC (Empowered Community) Administration, with a copy to the Secretary, and the EC (Empowered Community) shall promptly act on it as provided in Section 7.25.

(B) Keeping the community of individual Internet users informed about the significant news from ICANN (Internet Corporation for Assigned Names and Numbers);

(C) Distributing (through posting or otherwise) an updated agenda, news about ICANN (Internet Corporation for Assigned Names and Numbers), and information about items in the ICANN (Internet Corporation for Assigned Names and Numbers) policy-development process;

(D) Promoting outreach activities in the community of individual Internet users;

(E) Developing and maintaining on-going information and education programs, regarding ICANN (Internet Corporation for Assigned Names and Numbers) and its work;

(F) Establishing an outreach strategy about ICANN (Internet Corporation for Assigned Names and Numbers) issues in each RALO's Geographic Region;

(G) Participating in the ICANN (Internet Corporation for Assigned Names and Numbers) policy development processes and providing input and advice that accurately reflects the views of individual Internet users;

(H) Making public, and analyzing, ICANN (Internet Corporation for Assigned Names and Numbers)'s proposed policies and its decisions and their (potential) regional impact and (potential) effect on individuals in the region;

(I) Offering Internet-based mechanisms that enable discussions among members of At-Large Structures; and

(xi) Establishing mechanisms and processes that enable two-way communication between members of At-Large Structures and those involved in ICANN (Internet Corporation for Assigned Names and Numbers) decision-making, so interested individuals can share their views on pending ICANN (Internet Corporation for Assigned Names and Numbers) issues.

Section 12.3. PROCEDURES

Each Advisory Committee (Advisory Committee) shall determine its own rules of procedure and quorum requirements; provided that each Advisory Committee (Advisory Committee) shall ensure that the advice provided to the Board by such Advisory Committee (Advisory Committee) is communicated in a clear and unambiguous written statement, including the rationale for such advice. The Board will respond in a timely manner to formal advice from all Advisory Committees (Advisory Committees) explaining what action it took and the rationale for doing so.

Section 12.4. TERM OF OFFICE

The chair and each member of an Advisory Committee (Advisory Committee) shall serve until his or her successor is appointed, or until such Advisory Committee (Advisory Committee) is sooner terminated, or until he or she is

removed, resigns, or otherwise ceases to qualify as a member of the Advisory Committee (Advisory Committee).

Section 12.5. VACANCIES

Vacancies on any Advisory Committee (Advisory Committee) shall be filled in the same manner as provided in the case of original appointments.

Section 12.6. COMPENSATION

Advisory Committee (Advisory Committee) members shall receive no compensation for their services as a member of such Advisory Committee (Advisory Committee). The Board may, however, authorize the reimbursement of actual and necessary expenses incurred by Advisory Committee (Advisory Committee) members, including Directors, performing their duties as Advisory Committee (Advisory Committee) members.

ARTICLE 13 OTHER ADVISORY MECHANISMS

Section 13.1. EXTERNAL EXPERT ADVICE

(a) Purpose. The purpose of seeking external expert advice is to allow the policy-development process within ICANN (Internet Corporation for Assigned Names and Numbers) to take advantage of existing expertise that resides in the public or private sector but outside of ICANN (Internet Corporation for Assigned Names and Numbers). In those cases where there are relevant public bodies with expertise, or where access to private expertise could be helpful, the Board and constituent bodies should be encouraged to seek advice from such expert bodies or individuals.

(b) Types of Expert Advisory Panels

(i) On its own initiative or at the suggestion of any ICANN (Internet Corporation for Assigned Names and Numbers) body, the Board may appoint, or authorize the President to appoint, Expert Advisory Panels consisting of public or private sector individuals or entities. If the advice sought from such Panels concerns issues of public policy, the provisions of Section 13.1(c) shall apply.

(ii) In addition, in accordance with Section 13.1(c), the Board may refer issues of public policy pertinent to matters within ICANN (Internet Corporation for Assigned Names and Numbers)'s Mission to a multinational governmental or treaty organization.

(c) Process for Seeking Advice: Public Policy Matters

(i) The Governmental Advisory Committee (Advisory Committee) may at any time recommend that the Board seek advice concerning one or more issues of public policy from an external source, as set out above.

(ii) In the event that the Board determines, upon such a recommendation or otherwise, that external advice should be sought concerning one or more issues of public policy, the Board shall, as appropriate, consult with the Governmental Advisory Committee (Advisory Committee) regarding the appropriate source from which to seek the advice and the arrangements, including definition of scope and process, for requesting and obtaining that advice.

(iii) The Board shall, as appropriate, transmit any request for advice from a multinational governmental or treaty organization, including specific terms of reference, to the Governmental Advisory Committee (Advisory Committee), with the suggestion that the

request be transmitted by the Governmental Advisory Committee (Advisory Committee) to the multinational governmental or treaty organization.

(d) Process for Seeking and Advice: Other Matters. Any reference of issues not concerning public policy to an Expert Advisory Panel by the Board or President in accordance with Section 13.1(b)(i), shall be made pursuant to terms of reference describing the issues on which input and advice is sought and the procedures and schedule to be followed.

(e) Receipt of Expert Advice and its Effect. External advice pursuant to this Section 13.1 shall be provided in written form. Such advice is advisory and not binding, and is intended to augment the information available to the Board or other ICANN (Internet Corporation for Assigned Names and Numbers) body in carrying out its responsibilities.

(f) Opportunity to Comment. The Governmental Advisory Committee (Advisory Committee), in addition to the Supporting Organizations (Supporting Organizations) and other Advisory Committees (Advisory Committees), shall have an opportunity to comment upon any external advice received prior to any decision by the Board.

Section 13.2. TECHNICAL LIAISON GROUP

(a) Purpose. The quality of ICANN (Internet Corporation for Assigned Names and Numbers)'s work depends on access to complete and authoritative information concerning the technical standards that underlie ICANN (Internet Corporation for Assigned Names and Numbers)'s activities. ICANN (Internet Corporation for Assigned Names and Numbers)'s relationship to the organizations that produce these standards is therefore particularly important. The Technical Liaison Group ("**TLG**") shall connect the Board with appropriate sources of technical advice on specific matters

pertinent to ICANN (Internet Corporation for Assigned Names and Numbers)'s activities.

(b) TLG Organizations. The TLG shall consist of four organizations: the European Telecommunications Standards Institute (ETSI (European Telecommunications Standards Institute)), the International Telecommunications Union's Telecommunication Standardization Sector (ITU (International Telecommunication Union)-T), the World Wide Web Consortium (W3C (World Wide Web Consortium)), and the Internet Architecture Board ("**IAB (Internet Architecture Board)**").

(c) Role. The role of the TLG organizations shall be to channel technical information and guidance to the Board and to other ICANN (Internet Corporation for Assigned Names and Numbers) entities. This role has both a responsive component and an active "watchdog" component, which involve the following responsibilities:

(i) In response to a request for information, to connect the Board or other ICANN (Internet Corporation for Assigned Names and Numbers) body with appropriate sources of technical expertise. This component of the TLG role covers circumstances in which ICANN (Internet Corporation for Assigned Names and Numbers) seeks an authoritative answer to a specific technical question. Where information is requested regarding a particular technical standard for which a TLG organization is responsible, that request shall be directed to that TLG organization.

(ii) As an ongoing "watchdog" activity, to advise the Board of the relevance and progress of technical developments in the areas covered by each organization's scope that could affect Board decisions or other ICANN (Internet Corporation for Assigned Names and Numbers) actions, and to draw attention to

global technical standards issues that affect policy development within the scope of ICANN (Internet Corporation for Assigned Names and Numbers)'s Mission. This component of the TLG role covers circumstances in which ICANN (Internet Corporation for Assigned Names and Numbers) is unaware of a new development, and would therefore otherwise not realize that a question should be asked.

(d) TLG Procedures. The TLG shall not have officers or hold meetings, nor shall it provide policy advice to the Board as a committee (although TLG organizations may individually be asked by the Board to do so as the need arises in areas relevant to their individual charters). Neither shall the TLG debate or otherwise coordinate technical issues across the TLG organizations; establish or attempt to establish unified positions; or create or attempt to create additional layers or structures within the TLG for the development of technical standards or for any other purpose.

(e) Technical Work with the IETF (Internet Engineering Task Force). The TLG shall have no involvement with ICANN (Internet Corporation for Assigned Names and Numbers)'s work for the Internet Engineering Task Force (IETF (Internet Engineering Task Force)), Internet Research Task Force, or the Internet Architecture Board (IAB (Internet Architecture Board)), as described in the IETF (Internet Engineering Task Force)-ICANN (Internet Corporation for Assigned Names and Numbers) Memorandum of Understanding Concerning the Technical Work of the Internet Assigned Numbers Authority ratified by the Board on 10 March 2000 and any supplemental agreements thereto.

(f) Individual Technical Experts. Each TLG organization shall designate two individual technical experts who are familiar with the technical standards issues that are relevant to ICANN (Internet Corporation for Assigned Names and Numbers)'s activities. These 8 experts shall be available as

necessary to determine, through an exchange of e-mail messages, where to direct a technical question from ICANN (Internet Corporation for Assigned Names and Numbers) when ICANN (Internet Corporation for Assigned Names and Numbers) does not ask a specific TLG organization directly.

ARTICLE 14 BOARD AND TEMPORARY COMMITTEES

Section 14.1. BOARD COMMITTEES

The Board may establish one or more committees of the Board (each, a "**Board Committee**"), which shall continue to exist until otherwise determined by the Board. Only Directors may be appointed to a Committee of the Board; provided, that a Liaison may be appointed as a liaison to a Committee of the Board consistent with their non-voting capacity. If a person appointed to a Committee of the Board ceases to be a Director, such person shall also cease to be a member of any Committee of the Board. Each Committee of the Board shall consist of two or more Directors. The Board may designate one or more Directors as alternate members of any such committee, who may replace any absent member at any meeting of the committee. Committee members may be removed from a committee at any time by a two-thirds (2/3) majority vote of all Directors; provided, however, that in no event shall a Director be removed from a committee unless such removal is approved by not less than a majority of all Directors.

Section 14.2. POWERS OF BOARD COMMITTEES

(a) The Board may delegate to Committees of the Board all legal authority of the Board except with respect to:

- (i) The filling of vacancies on the Board or on any committee;

- (ii) The amendment or repeal of Bylaws or the Articles of Incorporation or the adoption of new Bylaws or Articles of Incorporation;
- (iii) The amendment or repeal of any resolution of the Board which by its express terms is not so amendable or repealable;
- (iv) The appointment of committees of the Board or the members thereof;
- (v) The approval of any self-dealing transaction, as such transactions are defined in Section 5233(a) of the CCC;
- (vi) The approval of the ICANN (Internet Corporation for Assigned Names and Numbers) Budget or IANA (Internet Assigned Numbers Authority) Budget required by Section 22.4 or the Operating Plan or Strategic Plan required by Section 22.5; or
- (vii) The compensation of any Officer described in Article 15.

(b) The Board shall have the power to prescribe the manner in which proceedings of any Committee of the Board shall be conducted. In the absence of any such prescription, such committee shall have the power to prescribe the manner in which its proceedings shall be conducted. Unless these Bylaws, the Board or such committee shall otherwise provide, the regular and special meetings of committees shall be governed by the provisions of Article 7 applicable to meetings and actions of the Board. Each committee shall keep regular minutes of its proceedings and shall report the same to the Board from time to time, as the Board may require.

Section 14.3. TEMPORARY COMMITTEES

The Board may establish such temporary committees as it sees fit, with membership, duties, and responsibilities as set forth in the resolutions or charters adopted by the Board in establishing such committees.

ARTICLE 15 OFFICERS

Section 15.1. OFFICERS

The officers of ICANN (Internet Corporation for Assigned Names and Numbers) (each, an "**Officer**") shall be a President (who shall serve as Chief Executive Officer), a Secretary, and a Chief Financial Officer. ICANN (Internet Corporation for Assigned Names and Numbers) may also have, at the discretion of the Board, any additional officers that it deems appropriate. Any person, other than the President, may hold more than one office, except that no member of the Board (other than the President) shall simultaneously serve as an officer of ICANN (Internet Corporation for Assigned Names and Numbers).

Section 15.2. ELECTION OF OFFICERS

The officers of ICANN (Internet Corporation for Assigned Names and Numbers) shall be elected annually by the Board, pursuant to the recommendation of the President or, in the case of the President, of the Chair of the Board. Each such officer shall hold his or her office until he or she resigns, is removed, is otherwise disqualified to serve, or his or her successor is elected.

Section 15.3. REMOVAL OF OFFICERS

Any Officer may be removed, either with or without cause, by a two-thirds (2/3) majority vote of all Directors. Should any vacancy occur in any office as a result of death, resignation,

removal, disqualification, or any other cause, the Board may delegate the powers and duties of such office to any Officer or to any Director until such time as a successor for the office has been elected.

Section 15.4. PRESIDENT

The President shall be the Chief Executive Officer (CEO) of ICANN (Internet Corporation for Assigned Names and Numbers) in charge of all of its activities and business. All other officers and staff shall report to the President or his or her delegate, unless stated otherwise in these Bylaws. The President shall serve as an ex officio Director, and shall have all the same rights and privileges of any Director. The President shall be empowered to call special meetings of the Board as set forth herein, and shall discharge all other duties as may be required by these Bylaws and from time to time may be assigned by the Board.

Section 15.5. SECRETARY

The Secretary shall keep or cause to be kept the minutes of the Board in one or more books provided for that purpose, shall see that all notices are duly given in accordance with the provisions of these Bylaws or as required by law, and in general shall perform all duties as from time to time may be prescribed by the President or the Board.

Section 15.6. CHIEF FINANCIAL OFFICER

The Chief Financial Officer ("**CFO**") shall be the chief financial officer of ICANN (Internet Corporation for Assigned Names and Numbers). If required by the Board, the CFO shall give a bond for the faithful discharge of his or her duties in such form and with such surety or sureties as the Board shall determine. The CFO shall have charge and custody of all the funds of ICANN (Internet Corporation for Assigned Names and Numbers) and shall keep or cause to be kept, in

books belonging to ICANN (Internet Corporation for Assigned Names and Numbers), full and accurate amounts of all receipts and disbursements, and shall deposit all money and other valuable effects in the name of ICANN (Internet Corporation for Assigned Names and Numbers) in such depositories as may be designated for that purpose by the Board. The CFO shall disburse the funds of ICANN (Internet Corporation for Assigned Names and Numbers) as may be ordered by the Board or the President and, whenever requested by them, shall deliver to the Board and the President an account of all his or her transactions as CFO and of the financial condition of ICANN (Internet Corporation for Assigned Names and Numbers). The CFO shall be responsible for ICANN (Internet Corporation for Assigned Names and Numbers)'s financial planning and forecasting and shall assist the President in the preparation of the ICANN (Internet Corporation for Assigned Names and Numbers) Budget, the IANA (Internet Assigned Numbers Authority) Budget and Operating Plan. The CFO shall coordinate and oversee ICANN (Internet Corporation for Assigned Names and Numbers)'s funding, including any audits or other reviews of ICANN (Internet Corporation for Assigned Names and Numbers) or its Supporting Organizations (Supporting Organizations). The CFO shall be responsible for all other matters relating to the financial operation of ICANN (Internet Corporation for Assigned Names and Numbers).

Section 15.7. ADDITIONAL OFFICERS

In addition to the officers described above, any additional or assistant officers who are elected or appointed by the Board shall perform such duties as may be assigned to them by the President or the Board.

Section 15.8. COMPENSATION AND EXPENSES

The compensation of any Officer of ICANN (Internet Corporation for Assigned Names and Numbers) shall be approved by the Board. Expenses incurred in connection with performance of their officer duties may be reimbursed to Officers upon approval of the President (in the case of Officers other than the President), by another Officer designated by the Board (in the case of the President), or the Board.

Section 15.9. CONFLICTS OF INTEREST

The Board, through the Board Governance Committee, shall establish a policy requiring a statement from each Officer not less frequently than once a year setting forth all business and other affiliations that relate in any way to the business and other affiliations of ICANN (Internet Corporation for Assigned Names and Numbers).

ARTICLE 16 POST-TRANSITION IANA (Internet Assigned Numbers Authority) ENTITY

Section 16.1. DESCRIPTION

ICANN (Internet Corporation for Assigned Names and Numbers) shall maintain as a separate legal entity a California nonprofit public benefit corporation (**"PTI"**) for the purpose of providing IANA (Internet Assigned Numbers Authority) services, including providing IANA (Internet Assigned Numbers Authority) naming function services pursuant to the IANA (Internet Assigned Numbers Authority) Naming Function Contract, as well as other services as determined by ICANN (Internet Corporation for Assigned Names and Numbers) in coordination with the direct and indirect customers of the IANA (Internet Assigned Numbers Authority) functions. ICANN (Internet Corporation for Assigned Names and Numbers) shall at all times be the sole member of PTI as that term is defined in Section 5056 of the CCC (**"Member"**). For the purposes of these Bylaws, the

"IANA (Internet Assigned Numbers Authority) naming function" does not include the Internet Protocol (Protocol) numbers and Autonomous System numbers services (as contemplated by Section 1.1(a)(iii)), the protocol ports and parameters services and the root zone maintainer function.

Section 16.2. PTI Governance

(a) ICANN (Internet Corporation for Assigned Names and Numbers), in its capacity as the sole Member of PTI, shall elect the directors of PTI in accordance with the articles of incorporation and bylaws of PTI and have all other powers of a sole Member under the CCC except as otherwise provided in these Bylaws.

(b) No amendment or modification of the articles of incorporation of PTI shall be effective unless approved by the EC (Empowered Community) (pursuant to the procedures applicable to Articles Amendments described in Section 25.2, as if such Article Amendment referenced therein refers to an amendment of PTI's articles of incorporation).

(c) ICANN (Internet Corporation for Assigned Names and Numbers) shall not amend or modify the bylaws of PTI in a manner that would effect any of the matters set forth in clauses (i) through (xiv) below (a "**PTI Bylaw Amendment**") if such PTI Bylaw Amendment has been rejected by the EC (Empowered Community) pursuant to the procedures described in Section 16.2(e):

(i) any change to the corporate form of PTI to an entity that is not a California nonprofit public benefit corporation organized under the CCC or any successor statute;

(ii) any change in the corporate mission of PTI that is materially inconsistent with ICANN (Internet

Corporation for Assigned Names and Numbers)'s
Mission as set forth in these Bylaws;

(iii) any change to the status of PTI as a corporation
with members;

(iv) any change in the rights of ICANN (Internet
Corporation for Assigned Names and Numbers) as the
sole Member of PTI, including voting, classes of
membership, rights, privileges, preferences,
restrictions and conditions;

(v) any change that would grant rights to any person or
entity (other than ICANN (Internet Corporation for
Assigned Names and Numbers)) with respect to PTI
as designators or otherwise to: (A) elect or designate
directors of PTI; or (B) approve any amendments to
the articles of incorporation or bylaws of PTI;

(vi) any change in the number of directors of the board
of directors of PTI (the "**PTI Board**");

(vii) any changes in the allocation of directors on the
PTI Board between independent directors and
employees of ICANN (Internet Corporation for
Assigned Names and Numbers) or employees of PTI
or to the definition of "independent" (as used in PTI's
bylaws) for purposes of determining whether a director
of PTI is independent;

(viii) the creation of any committee of the PTI Board
with the power to exercise the authority of the PTI
Board;

(ix) any change in the procedures for nominating
independent PTI directors;

(x) the creation of classes of PTI directors or PTI
directors with different terms or voting rights;

(xi) any change in PTI Board quorum requirements or voting requirements;

(xii) any change to the powers and responsibilities of the PTI Board or the PTI officers;

(xiii) any change to the rights to exculpation and indemnification that is adverse to the exculpated or indemnified party, including with respect to advancement of expenses and insurance, provided to directors, officers, employees or other agents of PTI;
or

(xiv) any change to the requirements to amend the articles of incorporation or bylaws of PTI.

(d) ICANN (Internet Corporation for Assigned Names and Numbers) shall not take any of the following actions (together with the PTI Bylaw Amendments, "**PTI Governance Actions**") if such PTI Governance Action has been rejected by the EC (Empowered Community) pursuant to the procedures described in Section 16.2(e).

(i) Any resignation by ICANN (Internet Corporation for Assigned Names and Numbers) as sole Member of PTI or any transfer, disposition, cession, expulsion, suspension or termination by ICANN (Internet Corporation for Assigned Names and Numbers) of its membership in PTI or any transfer, disposition, cession, expulsion, suspension or termination by ICANN (Internet Corporation for Assigned Names and Numbers) of any right arising from its membership in PTI.

(ii) Any sale, transfer or other disposition of PTI's assets, other than (A) in the ordinary course of PTI's business, (B) in connection with an IANA (Internet Assigned Numbers Authority) Naming Function

Separation Process (as defined in Section 19.1(a)) that has been approved in accordance with Article 19 or (C) the disposition of obsolete, damaged, redundant or unused assets.

(iii) Any merger, consolidation, sale or reorganization of PTI.

(iv) Any dissolution, liquidation or winding-up of the business and affairs of PTI or the commencement of any other voluntary bankruptcy proceeding of PTI.

(e) Promptly after the Board approves a PTI Governance Action (a "**PTI Governance Action Approval**"), the Secretary shall provide a notice of the Board's decision to the EC (Empowered Community) Administration and the Decisional Participants ("Board Notice"), which Board Notice shall enclose a copy of the PTI Governance Action that is the subject of the PTI Governance Action Approval. ICANN (Internet Corporation for Assigned Names and Numbers) shall post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website promptly following the delivery of the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants. The EC (Empowered Community) Administration shall promptly commence and comply with the procedures and requirements specified in Article 2 of Annex D.

(i) A PTI Governance Action shall become effective upon the earliest to occur of the following:

(A)(1) A Rejection Action Petition Notice (as defined in Section 2.2(c)(i) of Annex D) is not timely delivered by the Rejection Action Petitioning Decisional Participant (as defined in Section 2.2(c)(i) of Annex D) to the Secretary pursuant to and in compliance with Section

2.2(c) of Annex D or (2) a Rejection Process Termination Notice (as defined in Section 2.2(c)(ii) of Annex D) is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D, in which case the PTI Governance Action that is the subject of the PTI Governance Action Approval shall be in full force and effect as of the date immediately following the expiration of the Rejection Action Petition Period (as defined in Section 2.2(b) of Annex D) relating to such PTI Governance Action Approval and the effectiveness of such PTI Governance Action shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D;

(B)(1) A Rejection Action Supported Petition (as defined in Section 2.2(d)(i) of Annex D) is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D, in which case the PTI Governance Action that is the subject of the PTI Governance Action Approval shall be in full force and effect as of the date immediately following the expiration of the Rejection Action Petition Support Period (as defined in Section 2.2(d)(i) of Annex D) relating to such PTI Governance Action Approval and the effectiveness of such PTI Governance Action shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D; and

(C)(1) An EC (Empowered Community) Rejection Notice (as defined in Section 2.4(b) of Annex D) is not timely delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4 of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4(c) of Annex D, in which case the PTI Governance Action that is the subject of the PTI Governance Action Approval shall be in full force and effect as of the date immediately following the expiration of the Rejection Action Decision Period (as defined in Section 2.4(a) of Annex D) relating to such PTI Governance Action Approval and the effectiveness of such PTI Governance Action shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D.

(ii) A PTI Governance Action that has been rejected by the EC (Empowered Community) pursuant to and in compliance with Article 2 of Annex D shall have no force and effect, and shall be void ab initio.

(iii) Following receipt of an EC (Empowered Community) Rejection Notice relating to a PTI Governance Action, ICANN (Internet Corporation for Assigned Names and Numbers) staff and the Board shall consider the explanation provided by the EC (Empowered Community) Administration as to why the EC (Empowered Community) has chosen to reject the PTI Governance Action in determining whether or not to develop a new PTI Governance Action and the substance of such new PTI Governance Action, which shall be subject to the procedures of this Section 16.2.

Section 16.3. IANA (Internet Assigned Numbers Authority) NAMING FUNCTION CONTRACT

(a) On or prior to 1 October 2016, ICANN (Internet Corporation for Assigned Names and Numbers) shall enter into a contract with PTI for the performance of the IANA (Internet Assigned Numbers Authority) naming function (as it may be amended or modified, the "**IANA (Internet Assigned Numbers Authority) Naming Function Contract**") and a related statement of work (the "**IANA (Internet Assigned Numbers Authority) Naming Function SOW**"). Except as to implement any modification, waiver or amendment to the IANA (Internet Assigned Numbers Authority) Naming Function Contract or IANA (Internet Assigned Numbers Authority) Naming Function SOW related to an IFR Recommendation or Special IFR Recommendation approved pursuant to [Section 18.6](#) or an SCWG Recommendation approved pursuant to [Section 19.4](#) (which, for the avoidance of doubt, shall not be subject to this [Section 16.3\(a\)](#)), ICANN (Internet Corporation for Assigned Names and Numbers) shall not agree to modify, amend or waive any Material Terms (as defined below) of the IANA (Internet Assigned Numbers Authority) Naming Function Contract or the IANA (Internet Assigned Numbers Authority) Naming Function SOW if a majority of each of the ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names Supporting Organization) Councils reject the proposed modification, amendment or waiver. The following are the "**Material Terms**" of the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA (Internet Assigned Numbers Authority) Naming Function SOW:

- (i) The parties to the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA (Internet Assigned Numbers Authority) Naming Function SOW;

(ii) The initial term and renewal provisions of the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA (Internet Assigned Numbers Authority) Naming Function SOW;

(iii) The manner in which the IANA (Internet Assigned Numbers Authority) Naming Function Contract or IANA (Internet Assigned Numbers Authority) Naming Function SOW may be terminated;

(iv) The mechanisms that are available to enforce the IANA (Internet Assigned Numbers Authority) Naming Function Contract or IANA (Internet Assigned Numbers Authority) Naming Function SOW;

(v) The role and responsibilities of the CSC (as defined in Section 17.1), escalation mechanisms and/or the IFR (as defined in Section 18.1);

(vi) The IANA (Internet Assigned Numbers Authority) Naming Function Contract's provisions requiring that fees charged by PTI be based on direct costs and resources incurred by PTI;

(vii) The IANA (Internet Assigned Numbers Authority) Naming Function Contract's prohibition against subcontracting;

(viii) The availability of the IRP as a point of escalation for claims of PTI's failure to meet defined service level expectations;

(ix) The IANA (Internet Assigned Numbers Authority) Naming Function Contract's audit requirements; and

(x) The requirements related to ICANN (Internet Corporation for Assigned Names and Numbers) funding of PTI.

(b) ICANN (Internet Corporation for Assigned Names and Numbers) shall enforce its rights under the IANA (Internet Assigned Numbers Authority) Naming Function Contract and the IANA (Internet Assigned Numbers Authority) Naming Function SOW.

ARTICLE 17 CUSTOMER STANDING COMMITTEE

Section 17.1. DESCRIPTION

ICANN (Internet Corporation for Assigned Names and Numbers) shall establish a Customer Standing Committee ("**CSC**") to monitor PTI's performance under the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA (Internet Assigned Numbers Authority) Naming Function SOW.

The mission of the CSC is to ensure continued satisfactory performance of the IANA (Internet Assigned Numbers Authority) naming function for the direct customers of the naming services. The direct customers of the naming services are top-level domain registry operators as well as root server operators and other non-root zone functions.

The CSC will achieve this mission through regular monitoring of the performance of the IANA (Internet Assigned Numbers Authority) naming function against the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA (Internet Assigned Numbers Authority) Naming Function SOW and through mechanisms to engage with PTI to remedy identified areas of concern.

The CSC is not authorized to initiate a change in PTI through a Special IFR (as defined in [Section 18.1](#)), but may escalate a failure to correct an identified deficiency to the ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names Supporting Organization), which might then

decide to take further action using consultation and escalation processes, which may include a Special IFR. The ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names Supporting Organization) may address matters escalated by the CSC, pursuant to their operating rules and procedures.

Section 17.2. COMPOSITION, APPOINTMENT, TERM AND REMOVAL

(a) The CSC shall consist of:

(i) Two individuals representing gTLD (generic Top Level Domain) registry operators appointed by the Registries Stakeholder Group;

(ii) Two individuals representing ccTLD (Country Code Top Level Domain) registry operators appointed by the ccNSO (Country Code Names Supporting Organization); and

(iii) One individual liaison appointed by PTI,

each appointed in accordance with the rules and procedures of the appointing organization; provided that such individuals should have direct experience and knowledge of the IANA (Internet Assigned Numbers Authority) naming function.

(b) If so determined by the ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names Supporting Organization), the CSC may, but is not required to, include one additional member: an individual representing top-level domain registry operators that are not considered a ccTLD (Country Code Top Level Domain) or gTLD (generic Top Level Domain), who shall be appointed by the ccNSO (Country Code Names Supporting Organization) and the GNSO (Generic Names Supporting Organization). Such

representative shall be required to submit a letter of support from the registry operator it represents.

(c) Each of the following organizations may also appoint one liaison to the CSC in accordance with the rules and procedures of the appointing organization: (i) GNSO (Generic Names Supporting Organization) (from the Registrars Stakeholder Group or the Non-Contracted Parties House), (ii) ALAC (At-Large Advisory Committee), (iii) either the NRO (Number Resource Organization) or ASO (Address Supporting Organization) (as determined by the ASO (Address Supporting Organization)), (iv) GAC (Governmental Advisory Committee), (v) RSSAC (Root Server System Advisory Committee), (vi) SSAC (Security and Stability Advisory Committee) and (vii) any other Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) established under these Bylaws.

(d) The GNSO (Generic Names Supporting Organization) and ccNSO (Country Code Names Supporting Organization) shall approve the initial proposed members and liaisons of the CSC, and thereafter, the ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names Supporting Organization) shall approve each annual slate of members and liaisons being recommended for a new term.

(e) The CSC members and liaisons shall select from among the CSC members who will serve as the CSC's liaison to the IFRT (as defined in Section 18.1) and any Separation Cross-Community Working Group ("**SCWG**").

(f) Any CSC member or liaison may be removed and replaced at any time and for any reason or no reason by the organization that appointed such member or liaison.

(g) In addition, the Chair of the CSC may recommend that a CSC member or liaison be removed by the organization that appointed such member or liaison, upon any of the following:

(i) (A) for not attending without sufficient cause a minimum of nine CSC meetings in a one-year period (or at least 75% of all CSC meetings in a one-year period if less than nine meetings were held in such one-year period) or (B) if such member or liaison has been absent for more than two consecutive meetings without sufficient cause; or (ii) for grossly inappropriate behavior.

(h) A vacancy on the CSC shall be deemed to exist in the event of the death, resignation or removal of any CSC member or liaison. Vacancies shall be filled by the organization(s) that appointed such CSC member or liaison. The appointing organization(s) shall provide written notice to the Secretary of its appointment to fill a vacancy, with a notification copy to the Chair of the CSC. The organization(s) responsible for filling such vacancy shall use its reasonable efforts to fill such vacancy within one month after the occurrence of such vacancy.

Section 17.3.CSC CHARTER; PERIODIC REVIEW

(a) The CSC shall act in accordance with its charter (the "**CSC Charter**").

(b) The effectiveness of the CSC shall be reviewed two years after the first meeting of the CSC; and then every three years thereafter. The method of review will be determined by the ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names Supporting Organization) and the findings of the review will be published on the Website.

(c) The CSC Charter shall be reviewed by a committee of representatives from the ccNSO (Country Code Names Supporting Organization) and the Registries Stakeholder Group selected by such organizations. This review shall commence one year after the first meeting of the CSC. Thereafter, the CSC Charter shall be reviewed by such

committee of representatives from the ccNSO (Country Code Names Supporting Organization) and the Registries Stakeholder Group selected by such organizations at the request of the CSC, ccNSO (Country Code Names Supporting Organization), GNSO (Generic Names Supporting Organization), the Board and/or the PTI Board and/or by an IFRT in connection with an IFR.

(d) Amendments to the CSC Charter shall not be effective unless ratified by the vote of a simple majority of each of the ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names Supporting Organization) Councils pursuant to each such organizations' procedures. Prior to any action by the ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names Supporting Organization), any recommended changes to the CSC Charter shall be subject to a public comment period that complies with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers). Notwithstanding the foregoing, to the extent any provision of an amendment to the CSC Charter conflicts with the terms of the Bylaws, the terms of the Bylaws shall control.

Section 17.4. ADMINISTRATIVE AND OPERATIONAL SUPPORT

ICANN (Internet Corporation for Assigned Names and Numbers) shall provide administrative and operational support necessary for the CSC to carry out its responsibilities, including providing and facilitating remote participation in all meetings of the CSC.

ARTICLE 18 IANA (Internet Assigned Numbers Authority) NAMING FUNCTION REVIEWS

Section 18.1. IANA (Internet Assigned Numbers Authority) NAMING FUNCTION REVIEW

The Board, or an appropriate committee thereof, shall cause periodic and/or special reviews (each such review, an "IFR") of PTI's performance of the IANA (Internet Assigned Numbers Authority) naming function against the contractual requirements set forth in the IANA (Internet Assigned Numbers Authority) Naming Function Contract and the IANA (Internet Assigned Numbers Authority) Naming Function SOW to be carried out by an IANA (Internet Assigned Numbers Authority) Function Review Team ("IFRT") established in accordance with Article 18, as follows:

- (a) Regularly scheduled periodic IFRs, to be conducted pursuant to Section 18.2 below ("**Periodic IFRs**"); and
- (b) IFRs that are not Periodic IFRs, to be conducted pursuant to Section 18.12 below ("**Special IFRs**").

Section 18.2. FREQUENCY OF PERIODIC IFRS

- (a) The first Periodic IFR shall be convened no later than [1 October 2018].
- (b) Periodic IFRs after the first Periodic IFR shall be convened no less frequently than every five years, measured from the date the previous IFRT for a Periodic IFR was convened.
- (c) In the event a Special IFR is ongoing at the time a Periodic IFR is required to be convened under this Section 18.2, the Board shall cause the convening of the Periodic IFR to be delayed if such delay is approved by the vote of (i) a supermajority of the ccNSO (Country Code Names Supporting Organization) Council (pursuant to the ccNSO (Country Code Names Supporting Organization)'s

procedures or, if such procedures do not define a supermajority, two-thirds (2/3) of the ccNSO (Country Code Names Supporting Organization) Council's members and (ii) a GNSO (Generic Names Supporting Organization) Supermajority. Any decision by the ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names Supporting Organization) to delay a Periodic IFR must identify the period of delay, which should generally not exceed 12 months after the completion of the Special IFR.

Section 18.3. IFR RESPONSIBILITIES

For each Periodic IFR, the IFRT shall:

- (a) Review and evaluate the performance of PTI against the requirements set forth in the IANA (Internet Assigned Numbers Authority) Naming Function Contract in relation to the needs of its direct customers and the expectations of the broader ICANN (Internet Corporation for Assigned Names and Numbers) community, and determine whether to make any recommendations with respect to PTI's performance;
- (b) Review and evaluate the performance of PTI against the requirements set forth in the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA (Internet Assigned Numbers Authority) Naming Function SOW;
- (c) Review the IANA (Internet Assigned Numbers Authority) Naming Function SOW and determine whether to recommend any amendments to the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA (Internet Assigned Numbers Authority) Naming Function SOW to account for the needs of the direct customers of the naming services and/or the community at large;
- (d) Review and evaluate the openness and transparency procedures of PTI and any oversight structures for PTI's

performance, including reporting requirements and budget transparency;

(e) Review and evaluate the performance and effectiveness of the EC (Empowered Community) with respect to actions taken by the EC (Empowered Community), if any, pursuant to Section 16.2, Section 18.6, Section 18.12, Section 19.1, Section 19.4, Section 22.4(b) and Annex D;

(f) Review and evaluate the performance of the IANA (Internet Assigned Numbers Authority) naming function according to established service level expectations during the IFR period being reviewed and compared to the immediately preceding Periodic IFR period;

(g) Review and evaluate whether there are any systemic issues that are impacting PTI's performance under the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA (Internet Assigned Numbers Authority) Naming Function SOW;

(h) Initiate public comment periods and other processes for community input on PTI's performance under the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA (Internet Assigned Numbers Authority) Naming Function SOW (such public comment periods shall comply with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers));

(i) Consider input from the CSC and the community on PTI's performance under the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA (Internet Assigned Numbers Authority) Naming Function SOW;

(j) Identify process or other areas for improvement in the performance of the IANA (Internet Assigned Numbers Authority) naming function under the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA

(Internet Assigned Numbers Authority) Naming Function SOW and the performance of the CSC and the EC (Empowered Community) as it relates to oversight of PTI; and

(k) Consider and assess any changes implemented since the immediately preceding IFR and their implications for the performance of PTI under the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA (Internet Assigned Numbers Authority) Naming Function SOW.

Section 18.4. IFR REQUIRED INPUTS

In conducting an IFR, the IFRT shall review and analyze the following information:

(a) Reports provided by PTI pursuant to the IANA (Internet Assigned Numbers Authority) Naming Function Contract and/or IANA (Internet Assigned Numbers Authority) Naming Function SOW during the IFR period being reviewed, any portion of which may be redacted pursuant to the Confidential Disclosure Framework set forth in the Operating Standards in accordance with Section 4.6(a)(vi);

(b) Reports provided by the CSC in accordance with the CSC Charter during the IFR period being reviewed;

(c) Community inputs through public consultation procedures as reasonably determined by the IFRT, including, among other things, public comment periods, input provided at in-person sessions during ICANN (Internet Corporation for Assigned Names and Numbers) meetings, responses to public surveys related to PTI's performance under the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA (Internet Assigned Numbers Authority) Naming Function SOW, and public inputs during meetings of the IFRT;

(d) Recommendations for technical, process and/or other improvements relating to the mandate of the IFR provided by the CSC or the community; and

(e) Results of any site visit conducted by the IFRT, which shall be conducted in consultation with ICANN (Internet Corporation for Assigned Names and Numbers) (i) upon reasonable notice, (ii) in a manner so as to not affect PTI's performance under the IANA (Internet Assigned Numbers Authority) Naming Function Contract or the IANA (Internet Assigned Numbers Authority) Naming Function SOW and (iii) pursuant to procedures and requirements reasonably developed by ICANN (Internet Corporation for Assigned Names and Numbers) and reasonably acceptable to the IFRT. Any such site visit shall be limited to matters reasonably related to the IFRT's responsibilities pursuant to Section 18.3.

Section 18.5. IFR RESULTS AND RECOMMENDATIONS

(a) The results of the IFR are not limited and could include a variety of recommendations or no recommendation; provided, however, that any recommendations must directly relate to the matters discussed in Section 18.3 and comply with this Section 18.5.

(b) Any IFRT recommendations should identify improvements that are supported by data and associated analysis about existing deficiencies and how they could be addressed. Each recommendation of the IFRT shall include proposed remedial procedures and describe how those procedures are expected to address such issues. The IFRT's report shall also propose timelines for implementing the IFRT's recommendations. The IFRT shall attempt to prioritize each of its recommendations and provide a rationale for such prioritization.

(c) In any case where a recommendation of an IFRT focuses on a service specific to gTLD (generic Top Level Domain) registry operators, no such recommendation shall be made by the IFRT in any report to the community (including any report to the Board) if opposition to such recommendation is expressed by any IFRT member appointed by the Registries Stakeholder Group. In any case where a recommendation of an IFRT focuses on a service specific to ccTLD (Country Code Top Level Domain) registry operators, no such recommendation shall be made by the IFRT in any report to the community (including any report to the Board) if opposition to such recommendation is expressed by any IFRT member appointed by the ccNSO (Country Code Names Supporting Organization).

(d) Notwithstanding anything herein to the contrary, the IFRT shall not have the authority to review or make recommendations relating to policy or contracting issues that are not included in the IANA (Internet Assigned Numbers Authority) Naming Function Contract or the IANA (Internet Assigned Numbers Authority) Naming Function SOW, including, without limitation, policy development, adoption processes or contract enforcement measures between contracted registries and ICANN (Internet Corporation for Assigned Names and Numbers).

Section 18.6. RECOMMENDATIONS TO AMEND THE IANA (Internet Assigned Numbers Authority) NAMING FUNCTION CONTRACT, IANA (Internet Assigned Numbers Authority) NAMING FUNCTION SOW OR CSC

(a) The IFRT may recommend, among other things to the extent reasonably related to the IFR responsibilities set forth in Section 18.3, amendments to the IANA (Internet Assigned Numbers Authority) Naming Function Contract, IANA (Internet Assigned Numbers Authority) Naming Function SOW and/or the CSC Charter. The IFRT shall, at a minimum,

take the following steps before an amendment to either the IANA (Internet Assigned Numbers Authority) Naming Function Contract, IANA (Internet Assigned Numbers Authority) Naming Function SOW or CSC Charter is proposed:

- (i) Consult with the Board (such consultation to be conducted in parallel with other processes set forth in this Section 18.6(a)) and PTI;
- (ii) Consult with the CSC;
- (iii) Conduct a public input session for ccTLD (Country Code Top Level Domain) and gTLD (generic Top Level Domain) registry operators; and
- (iv) Seek public comment on the amendments that are under consideration by the IFRT through a public comment period that complies with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers).

(b) A recommendation of an IFRT for a Periodic IFR that would amend the IANA (Internet Assigned Numbers Authority) Naming Function Contract or IANA (Internet Assigned Numbers Authority) Naming Function SOW shall only become effective if, with respect to each such recommendation (each, an "**IFR Recommendation**"), each of the following occurs:

- (i) The IFR Recommendation has been approved by the vote of (A) a supermajority of the ccNSO (Country Code Names Supporting Organization) Council (pursuant to the ccNSO (Country Code Names Supporting Organization)'s procedures or, if such procedures do not define a supermajority, two-thirds

(2/3) of the ccNSO (Country Code Names Supporting Organization) Council's members and (B) a GNSO (Generic Names Supporting Organization) Supermajority;

(ii) After a public comment period that complies with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers), the Board has approved the IFR Recommendation; and

(iii) The EC (Empowered Community) has not rejected the Board's approval of the IFR Recommendation pursuant to and in compliance with Section 18.6(d).

(c) If the Board (x) rejects an IFR Recommendation that was approved by the ccNSO (Country Code Names Supporting Organization) Council and GNSO (Generic Names Supporting Organization) Council pursuant to Section 18.6(b) (i) or (y) does not resolve to either accept or reject an IFR Recommendation within 45 days of the later of (1) the date that the condition in Section 18.6(b)(i) is satisfied or (2) the expiration of the public comment period contemplated by Section 18.6(b)(ii), the Secretary shall provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall enclose a copy of the applicable IFR Recommendation. ICANN (Internet Corporation for Assigned Names and Numbers) shall post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website promptly following the delivery of the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants.

(i) ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, convene a

Rejection Action Community Forum (as defined in Section 2.3(a) of Annex D), which Rejection Action Community Forum shall be conducted in accordance with Section 2.3 of Annex D, to discuss the Board Notice; provided, that, for purposes of Section 2.3 of Annex D, (A) the Board Notice shall be treated as the Rejection Action Supported Petition, (B) the EC (Empowered Community) Administration shall be treated as the Rejection Action Petitioning Decisional Participant (and there shall be no Rejection Action Supporting Decisional Participants (as defined in Section 2.2(d)(i) of Annex D) and (C) the Rejection Action Community Forum Period shall expire on the 21st day after the date the Secretary provides the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants.

(ii) No later than 45 days after the conclusion of such Rejection Action Community Forum Period, the Board shall resolve to either uphold its rejection of the IFR Recommendation or approve the IFR Recommendation (either, a "**Post-Forum IFR Recommendation Decision**").

(A) If the Board resolves to approve the IFR Recommendation, such IFR Recommendation will be subject to Section 18.6(d).

(B) For the avoidance of doubt, the Board shall not be obligated to change its decision on the IFR Recommendation as a result of the Rejection Action Community Forum.

(C) The Board's Post-Forum IFR Recommendation Decision shall be posted on the Website in accordance with the Board's posting obligations as set forth in Article 3.

(d) Promptly after the Board approves an IFR Recommendation (an "**IFR Recommendation Decision**"), the Secretary shall provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall enclose a copy of the IFR Recommendation that is the subject of the IFR Recommendation Decision. ICANN (Internet Corporation for Assigned Names and Numbers) shall post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website promptly following the delivery of the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants. The EC (Empowered Community) Administration shall promptly commence and comply with the procedures and requirements specified in Article 2 of Annex D.

(i) An IFR Recommendation Decision shall become final upon the earliest to occur of the following:

(A)(1) A Rejection Action Petition Notice is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D, in which case the IFR Recommendation Decision shall be final as of the date immediately following the expiration of the Rejection Action Petition Period relating to such IFR Recommendation Decision;

(B)(1) A Rejection Action Supported Petition is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D or (2) a Rejection Process Termination Notice is delivered by

the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D, in which case the IFR Recommendation Decision shall be final as of the date immediately following the expiration of the Rejection Action Petition Support Period relating to such IFR Recommendation Decision; and

(C)(1) An EC (Empowered Community) Rejection Notice is not timely delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4 of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4(c) of Annex D, in which case the IFR Recommendation Decision shall be final as of the date immediately following the expiration of the Rejection Action Decision Period relating to such IFR Recommendation Decision.

(ii) An IFR Recommendation Decision that has been rejected by the EC (Empowered Community) pursuant to and in compliance with Article 2 of Annex D shall have no force and effect, and shall be void ab initio.

(e) For the avoidance of doubt, Section 18.6(d) shall not apply when the Board acts in a manner that is consistent with an IFR Recommendation unless such IFR Recommendation relates to an IANA (Internet Assigned Numbers Authority) Naming Function Separation Process as described in Article 19.

(f) Timelines for implementing any amendments to the IANA (Internet Assigned Numbers Authority) Naming Function Contract or IANA (Internet Assigned Numbers Authority) Naming Function SOW shall be reasonably agreed between

the IFRT, ICANN (Internet Corporation for Assigned Names and Numbers) and PTI.

(g) A recommendation of an IFRT that would amend the CSC Charter shall only become effective if approved pursuant to Section 17.3(d).

Section 18.7. COMPOSITION OF IFR TEAMS

Each IFRT shall consist of the following members and liaisons to be appointed in accordance with the rules and procedures of the appointing organization:

(a) Three representatives who are associated with ccTLD (Country Code Top Level Domain) managers, appointed by the ccNSO (Country Code Names Supporting Organization) Council. Representatives need not be associated with a ccNSO (Country Code Names Supporting Organization) member. The ccNSO (Country Code Names Supporting Organization) Council should use an inclusive process, which is open to all ccTLD (Country Code Top Level Domain) managers, independent of their membership to the ccNSO (Country Code Names Supporting Organization). It is strongly recommended that the ccNSO (Country Code Names Supporting Organization) Council reaches out to all ccTLD (Country Code Top Level Domain) managers directly and or through regional ccTLD (Country Code Top Level Domain) organizations (i.e., AfTLD, APTLD (Council of the Asia Pacific country code Top Level Domains), LACTLD (Latin American and Caribbean ccTLDs), and CENTR (Council of European National Top level domain Registries)) in seeking volunteers;

(b) Two representatives appointed by the Registries Stakeholder Group;

(c) One representative appointed by the Registrars Stakeholder Group;

- (d) One representative appointed by the Commercial Stakeholder Group;
- (e) One representative appointed by the Non-Commercial Stakeholder Group;
- (f) One representative appointed by the GAC (Governmental Advisory Committee);
- (g) One representative appointed by the SSAC (Security and Stability Advisory Committee);
- (h) One representative appointed by the RSSAC (Root Server System Advisory Committee);
- (i) One representative appointed by the ALAC (At-Large Advisory Committee);
- (j) One liaison appointed by the CSC;
- (k) One liaison who may be appointed by the ASO (Address Supporting Organization); and
- (l) One liaison who may be appointed by the IAB (Internet Architecture Board).
- (m) The IFRT shall also include an unlimited number of non-member, non-liaison participants.
- (n) The IFRT shall not be a standing body. A new IFRT shall be constituted for each IFR and the IFRT shall automatically dissolve following the end of the process for approving such IFRT's IFR Recommendations pursuant to Section 18.6.

Section 18.8. MEMBERSHIP; ELECTION OF CO-CHAIRS, AND LIAISONS

- (a) All candidates for appointment to the IFRT as a member or liaison shall submit an expression of interest to the organization that would appoint such candidate as a member

or liaison to the IFRT, which shall state: (i) why the candidate is interested in becoming involved in the IFRT, (ii) what particular skills the candidate would bring to the IFRT, (iii) the candidate's knowledge of the IANA (Internet Assigned Numbers Authority) functions, (iv) the candidate's understanding of the purpose of the IFRT, and (v) that the candidate understands the time necessary to participate in the IFR process and can commit to the role.

(b) Members, liaisons and participants of the IFRT shall disclose to ICANN (Internet Corporation for Assigned Names and Numbers) and the IFRT any conflicts of interest with a specific complaint or issue under review. The IFRT may exclude from the discussion of a specific complaint or issue any member deemed by the majority of IFRT members to have a conflict of interest. The co-chairs of the IFRT shall record any such conflict of interest in the minutes of the IFRT.

(c) To the extent reasonably possible, the appointing organizations for the IFRT members and liaisons shall work together to achieve an IFRT that is balanced for diversity (including functional, geographic and cultural) and skill, and should seek to broaden the number of individuals participating across the various reviews; provided, that the IFRT should include members from each ICANN (Internet Corporation for Assigned Names and Numbers) Geographic Region, and the ccNSO (Country Code Names Supporting Organization) and Registries Stakeholder Group shall not appoint multiple members who are citizens of countries from the same ICANN (Internet Corporation for Assigned Names and Numbers) Geographic Region.

(d) The IFRT shall be led by two co-chairs: one appointed by the GNSO (Generic Names Supporting Organization) from one of the members appointed pursuant to clauses (c)-(f) of Section 18.7 and one appointed by the ccNSO (Country Code Names Supporting Organization) from one of the

members appointed pursuant to clauses (a)-(b) of Section 18.7.

(e) The PTI Board shall select a PTI staff member to serve as a point of contact to facilitate formal lines of communication between the IFRT and PTI. The Board shall select an ICANN (Internet Corporation for Assigned Names and Numbers) staff member to serve as a point of contact to facilitate formal lines of communication between the IFRT and ICANN (Internet Corporation for Assigned Names and Numbers).

(f) Liaisons to the IFRT are not members of or entitled to vote on any matters before the IFRT, but otherwise are entitled to participate on equal footing with members of the IFRT.

(g) Other participants are entitled to participate in the IFRT, but are not entitled to vote.

(h) Removal and Replacement of IFRT Members and Liaisons

(i) The IFRT members and liaisons may be removed from the IFRT by their respective appointing organization at any time upon such organization providing written notice to the Secretary and the co-chairs of the IFRT.

(ii) A vacancy on the IFRT shall be deemed to exist in the event of the death, resignation or removal of any IFRT member or liaison. Vacancies shall be filled by the organization that appointed such IFRT member or liaison. The appointing organization shall provide written notice to the Secretary of its appointment to fill a vacancy, with a notification copy to the IFRT co-chairs. The organization responsible for filling such vacancy shall use its reasonable efforts to fill such vacancy within one month after the occurrence of such vacancy.

Section 18.9. MEETINGS

(a) All actions of the IFRT shall be taken by consensus of the IFRT, which is where a small minority may disagree, but most agree. If consensus cannot be reached with respect to a particular issue, actions by the majority of all of the members of the IFRT shall be the action of the IFRT.

(b) Any members of the IFRT not in favor of an action (whether as a result of voting against a matter or objecting to the consensus position) may record a minority dissent to such action, which shall be included in the IFRT minutes and/or report, as applicable.

(c) IFRT meetings, deliberations and other working procedures shall be open to the public and conducted in a transparent manner to the fullest extent possible.

(d) The IFRT shall transmit minutes of its meetings to the Secretary, who shall cause those minutes to be posted to the Website as soon as practicable following each IFRT meeting. Recordings and transcripts of meetings, as well as mailing lists, shall also be posted to the Website.

Section 18.10. COMMUNITY REVIEWS AND REPORTS

(a) The IFRT shall seek community input as to the issues relevant to the IFR through one or more public comment periods that shall comply with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers) and through discussions during ICANN (Internet Corporation for Assigned Names and Numbers)'s public meetings in developing and finalizing its recommendations and any report.

(b) The IFRT shall provide a draft report of its findings and recommendations to the community for public comment. The

public comment period is required to comply with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers).

(c) After completion of the IFR, the IFRT shall submit its final report containing its findings and recommendations to the Board. ICANN (Internet Corporation for Assigned Names and Numbers) shall thereafter promptly post the IFRT's final report on the Website.

Section 18.11. ADMINISTRATIVE AND OPERATIONAL SUPPORT

ICANN (Internet Corporation for Assigned Names and Numbers) shall provide administrative and operational support necessary for each IFRT to carry out its responsibilities, including providing and facilitating remote participation in all meetings of the IFRT.

Section 18.12. SPECIAL IFRS

(a) A Special IFR may be initiated outside of the cycle for the Periodic IFRs to address any deficiency, problem or other issue that has adversely affected PTI's performance under the IANA (Internet Assigned Numbers Authority) Naming Function Contract and IANA (Internet Assigned Numbers Authority) Naming Function SOW (a "**PTI Performance Issue**"), following the satisfaction of each of the following conditions:

(i) The Remedial Action Procedures of the CSC set forth in the IANA (Internet Assigned Numbers Authority) Naming Function Contract shall have been followed and failed to correct the PTI Performance Issue and the outcome of such procedures shall have been reviewed by the ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names

Supporting Organization) according to each organization's respective operating procedures;

(ii) The IANA (Internet Assigned Numbers Authority) Problem Resolution Process set forth in the IANA (Internet Assigned Numbers Authority) Naming Function Contract shall have been followed and failed to correct the PTI Performance Issue and the outcome of such process shall have been reviewed by the ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names Supporting Organization) according to each organization's respective operating procedures;

(iii) The ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names Supporting Organization) shall have considered the outcomes of the processes set forth in the preceding clauses (i) and (ii) and shall have conducted meaningful consultation with the other Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees) with respect to the PTI Performance Issue and whether or not to initiate a Special IFR; and

(iv) After a public comment period that complies with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers), if a public comment period is requested by the ccNSO (Country Code Names Supporting Organization) and the GNSO (Generic Names Supporting Organization), a Special IFR shall have been approved by the vote of (A) a supermajority of the ccNSO (Country Code Names Supporting Organization) Council (pursuant to the ccNSO (Country Code Names Supporting Organization)'s procedures or if such procedures do not define a supermajority, two-thirds (2/3) of the Council members)

and (B) a GNSO (Generic Names Supporting Organization) Supermajority.

(b) Each Special IFR shall be conducted by an IFRT and shall follow the same procedures and requirements applicable to Periodic IFRs as set forth in this Section 18, except that:

(i) The scope of the Special IFR and the related inputs that are required to be reviewed by the IFRT shall be focused primarily on the PTI Performance Issue, its implications for overall IANA (Internet Assigned Numbers Authority) naming function performance by PTI and how to resolve the PTI Performance Issue;

(ii) The IFRT shall review and analyze the information that is relevant to the scope of the Special IFR; and

(iii) Each recommendation of the IFRT relating to the Special IFR, including but not limited to any recommendation to initiate an IANA (Internet Assigned Numbers Authority) Naming Function Separation Process, must be related to remediating the PTI Performance Issue or other issue with PTI's performance that is related to the IFRT responsibilities set forth in Section 18.3, shall include proposed remedial procedures and describe how those procedures are expected to address the PTI Performance Issue or other relevant issue with PTI's performance.

(c) A recommendation of an IFRT for a Special IFR shall only become effective if, with respect to each such recommendation (each, a "**Special IFR Recommendation**"), each of the following occurs:

(i) The Special IFR Recommendation has been approved by the vote of (A) a supermajority of the ccNSO (Country Code Names Supporting Organization) Council (pursuant to the ccNSO (Country Code Names Supporting Organization)'s procedures or, if such procedures do not define a supermajority, two-thirds (2/3) of the ccNSO (Country Code Names Supporting Organization) Council's members) and (B) a GNSO (Generic Names Supporting Organization) Supermajority;

(ii) After a public comment period that complies with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers), the Board has approved the Special IFR Recommendation; and

(iii) The EC (Empowered Community) has not rejected the Board's approval of the Special IFR Recommendation pursuant to and in compliance with Section 18.12(e).

(d) If the Board (x) rejects a Special IFR Recommendation that was approved by the ccNSO (Country Code Names Supporting Organization) Council and GNSO (Generic Names Supporting Organization) Council pursuant to Section 18.12(c)(i) or (y) does not resolve to either accept or reject a Special IFR Recommendation within 45 days of the later of (1) the date that the condition in Section 18.12(c)(i) is satisfied or (2) the expiration of the public comment period contemplated by Section 18.12(c)(ii), the Secretary shall provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall enclose a copy of the applicable Special IFR Recommendation. ICANN (Internet Corporation for Assigned Names and Numbers) shall post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants,

on the Website promptly following the delivery of the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants.

(i) ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, convene a Rejection Action Community Forum, which Rejection Action Community Forum shall be conducted in accordance with Section 2.3 of Annex D, to discuss the Board Notice; provided, that, for purposes of Section 2.3 of Annex D, (A) the Board Notice shall be treated as the Rejection Action Supported Petition, (B) the EC (Empowered Community) Administration shall be treated as the Rejection Action Petitioning Decisional Participant (and there shall be no Rejection Action Supporting Decisional Participants) and (C) the Rejection Action Community Forum Period shall expire on the 21st day after the date the Secretary provides the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants.

(ii) No later than 45 days after the conclusion of such Rejection Action Community Forum Period, the Board shall resolve to either uphold its rejection of the Special IFR Recommendation or approve the Special IFR Recommendation (either, a "**Post-Forum Special IFR Recommendation Decision**").

(A) If the Board resolves to approve the Special IFR Recommendation, such Special IFR Recommendation will be subject to Section 18.6(d).

(B) For the avoidance of doubt, the Board shall not be obligated to change its decision on the Special IFR Recommendation as a result of the Rejection Action Community Forum.

(C) The Board's Post-Forum Special IFR Recommendation Decision shall be posted on the Website in accordance with the Board's posting obligations as set forth in Article 3.

(e) Promptly after the Board approves a Special IFR Recommendation (a "**Special IFR Recommendation Decision**"), the Secretary shall provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall enclose a copy of the Special IFR Recommendation that is the subject of the Special IFR Recommendation Decision. ICANN (Internet Corporation for Assigned Names and Numbers) shall post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website promptly following the delivery of the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants. The EC (Empowered Community) Administration shall promptly commence and comply with the procedures and requirements specified in Article 2 of Annex D.

(i) A Special IFR Recommendation Decision shall become final upon the earliest to occur of the following:

(A)(1) A Rejection Action Petition Notice is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D, in which case the Special IFR Recommendation Decision shall be final as of the date immediately following the expiration of the Rejection

Action Petition Period relating to such Special IFR Recommendation Decision;

(B)(1) A Rejection Action Supported Petition is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D, in which case the Special IFR Recommendation Decision shall be final as of the date immediately following the expiration of the Rejection Action Petition Support Period relating to such Special IFR Recommendation Decision; and

(C)(1) An EC (Empowered Community) Rejection Notice is not timely delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4 of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4(c) of Annex D, in which case the Special IFR Recommendation Decision shall be final as of the date immediately following the expiration of the Rejection Action Decision Period relating to such Special IFR Recommendation Decision.

(ii) A Special IFR Recommendation Decision that has been rejected by the EC (Empowered Community) pursuant to and in compliance with Article 2 of Annex D shall have no force and effect, and shall be void ab initio.

(f) For the avoidance of doubt, Section 18.12(e) shall not apply when the Board acts in a manner that is consistent with a Special IFR Recommendation unless such Special IFR

Recommendation relates to an IANA (Internet Assigned Numbers Authority) Naming Function Separation Process as described in Article 19.

Section 18.13. PROPOSED SEPARATION PROCESS

The IFRT conducting either a Special IFR or Periodic IFR may, upon conclusion of a Special IFR or Periodic IFR, as applicable, determine that an IANA (Internet Assigned Numbers Authority) Naming Function Separation Process is necessary and, if so, it shall recommend the creation of an SCWG pursuant to Article 19.

ARTICLE 19 IANA (Internet Assigned Numbers Authority) NAMING FUNCTION SEPARATION PROCESS

Section 19.1. ESTABLISHING AN SCWG

(a) An "**IANA (Internet Assigned Numbers Authority) Naming Function Separation Process**" is the process initiated in accordance with this Article 19 pursuant to which PTI may cease to perform the IANA (Internet Assigned Numbers Authority) naming function including, without limitation, the initiation of a request for proposal to select an operator to perform the IANA (Internet Assigned Numbers Authority) naming function instead of PTI ("**IANA (Internet Assigned Numbers Authority) Naming Function RFP**"), the selection of an IANA (Internet Assigned Numbers Authority) naming function operator other than PTI, termination or non-renewal of the IANA (Internet Assigned Numbers Authority) Naming Function Contract, and/or divestiture, or other reorganization of PTI by ICANN (Internet Corporation for Assigned Names and Numbers).

(b) The Board shall establish an SCWG if each of the following occurs:

(i) The IFRT conducting either a Special IFR or Periodic IFR, upon conclusion of a Special IFR or Periodic IFR, as applicable, has recommended that an IANA (Internet Assigned Numbers Authority) Naming Function Separation Process is necessary and has recommended the creation of an SCWG (an "**SCWG Creation Recommendation**");

(ii) The SCWG Creation Recommendation has been approved by the vote of (A) a supermajority of the ccNSO (Country Code Names Supporting Organization) Council (pursuant to the ccNSO (Country Code Names Supporting Organization)'s procedures or, if such procedures do not define a supermajority, two-thirds (2/3) of the ccNSO (Country Code Names Supporting Organization) Council's members) and (B) a GNSO (Generic Names Supporting Organization) Supermajority;

(iii) After a public comment period that complies with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers), the Board has approved the SCWG Creation Recommendation. A determination by the Board to not approve an SCWG Creation Recommendation, where such creation has been approved by the ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names Supporting Organization) Councils pursuant to Section 19.1(b)(ii), shall require a vote of at least two-thirds (2/3) of the Board and the Board shall follow the same consultation procedures set forth in Section 9 of Annex A of these Bylaws that relate to Board rejection of a PDP (Policy Development Process) recommendation that is supported by a GNSO (Generic Names Supporting Organization) Supermajority; and

(iv) The EC (Empowered Community) has not rejected the Board's approval of the SCWG Creation Recommendation pursuant to and in compliance with Section 19.1(d).

(c) If the Board (x) rejects an SCWG Creation Recommendation that was approved by the ccNSO (Country Code Names Supporting Organization) Council and GNSO (Generic Names Supporting Organization) Council pursuant to Section 19.1(b)(ii) or (y) does not resolve to either accept or reject an SCWG Creation Recommendation within 45 days of the later of (1) the date that the condition in Section 19.1(b)(ii) is satisfied or (2) the expiration of the public comment period contemplated by Section 19.1(b)(iii), the Secretary shall provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall enclose a copy of the applicable SCWG Creation Recommendation. ICANN (Internet Corporation for Assigned Names and Numbers) shall post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website promptly following the delivery of the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants.

(i) ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, convene a Rejection Action Community Forum, which Rejection Action Community Forum shall be conducted in accordance with Section 2.3 of Annex D, to discuss the Board Notice; provided, that, for purposes of Section 2.3 of Annex D, (A) the Board Notice shall be treated as the Rejection Action Supported Petition, (B) the EC (Empowered Community) Administration shall be treated as the Rejection Action Petitioning Decisional

Participant (and there shall be no Rejection Action Supporting Decisional Participants) and (C) the Rejection Action Community Forum Period shall expire on the 21st day after the date the Secretary provides the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants.

(ii) No later than 45 days after the conclusion of such Rejection Action Community Forum Period, the Board shall resolve to either uphold its rejection of the SCWG Creation Recommendation or approve the SCWG Creation Recommendation (either, a "**Post-Forum SCWG Creation Recommendation Decision**").

(A) If the Board resolves to approve the SCWG Creation Recommendation, such SCWG Creation Recommendation will be subject to Section 19.1(d).

(B) For the avoidance of doubt, the Board shall not be obligated to change its decision on the SCWG Creation Recommendation as a result of the Rejection Action Community Forum.

(C) The Board's Post-Forum SCWG Creation Recommendation Decision shall be posted on the Website in accordance with the Board's posting obligations as set forth in Article 3.

(d) Promptly after the Board approves an SCWG Creation Recommendation (an "**SCWG Creation Decision**"), the Secretary shall provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall enclose a copy of the SCWG Creation Decision. ICANN (Internet Corporation for Assigned Names and Numbers) shall post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website promptly following the delivery

of the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants. The EC (Empowered Community) Administration shall promptly commence and comply with the procedures and requirements specified in Article 2 of Annex D.

(i) An SCWG Creation Decision shall become final upon the earliest to occur of the following:

(A)(1) A Rejection Action Petition Notice is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D, in which case the SCWG Creation Decision shall be final as of the date immediately following the expiration of the Rejection Action Petition Period relating to such SCWG Creation Decision;

(B)(1) A Rejection Action Supported Petition is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D, in which case the SCWG Creation Decision shall be final as of the date immediately following the expiration of the Rejection Action Petition Support Period relating to such SCWG Creation Decision; and

(C)(1) An EC (Empowered Community) Rejection Notice is not timely delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4 of Annex D or (2)

a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4(c) of Annex D, in which case the SCWG Creation Decision shall be final as of the date immediately following the expiration of the Rejection Action Decision Period relating to such SCWG Creation Decision.

(ii) An SCWG Creation Decision that has been rejected by the EC (Empowered Community) pursuant to and in compliance with Article 2 of Annex D shall have no force and effect, and shall be void ab initio.

Section 19.2. SCWG RESPONSIBILITIES

The responsibilities of the SCWG shall be as follows:

(a) The SCWG shall determine how to resolve the PTI Performance Issue(s) which the IFRT that conducted the Special IFR or Periodic IFR, as applicable, identified as triggering formation of this SCWG.

(b) If the SCWG recommends the issuance of an IANA (Internet Assigned Numbers Authority) Naming Function RFP, the SCWG shall:

(i) Develop IANA (Internet Assigned Numbers Authority) Naming Function RFP guidelines and requirements for the performance of the IANA (Internet Assigned Numbers Authority) naming function, in a manner consistent with ICANN (Internet Corporation for Assigned Names and Numbers)'s publicly available procurement guidelines (as in effect immediately prior to the formation of the SCWG); and

(ii) Solicit input from ICANN (Internet Corporation for Assigned Names and Numbers) as well as the global

Internet community (through community consultation, including public comment opportunities as necessary that comply with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers)) on requirements to plan and participate in the IANA (Internet Assigned Numbers Authority) Naming Function RFP process.

(c) If an SCWG Recommendation (as defined in Section 19.4(b)) to issue the IANA (Internet Assigned Numbers Authority) Naming Function RFP is approved pursuant to Section 19.4(b) and the EC (Empowered Community) does not reject the relevant SCWG Recommendation Decision pursuant to Section 19.4(d), the SCWG, in consultation with ICANN (Internet Corporation for Assigned Names and Numbers), shall:

(i) Issue the IANA (Internet Assigned Numbers Authority) Naming Function RFP;

(ii) Review responses from interested candidates to the IANA (Internet Assigned Numbers Authority) Naming Function RFP, which may be received from PTI and/or any other entity or person; and

(iii) Recommend the entity that ICANN (Internet Corporation for Assigned Names and Numbers) should contract with to perform the IANA (Internet Assigned Numbers Authority) naming function.

(d) If the SCWG recommends an IANA (Internet Assigned Numbers Authority) Naming Function Separation Process other than the issuance of an IANA (Internet Assigned Numbers Authority) Naming Function RFP, the SCWG shall develop recommendations to be followed with respect to that process and its implementation consistent with the terms of this Article 19. The SCWG shall monitor and manage the

implementation of such IANA (Internet Assigned Numbers Authority) Naming Function Separation Process.

Section 19.3. COMMUNITY REVIEWS AND REPORTS

(a) The SCWG shall seek community input through one or more public comment periods (such public comment period shall comply with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers)) and may recommend discussions during ICANN (Internet Corporation for Assigned Names and Numbers)'s public meetings in developing and finalizing its recommendations and any report.

(b) The SCWG shall provide a draft report of its findings and recommendations to the community after convening of the SCWG, which such draft report will be posted for public comment on the Website. The SCWG may post additional drafts of its report for public comment until it has reached its final report.

(c) After completion of its review, the SCWG shall submit its final report containing its findings and recommendations to the Board. ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post the SCWG's final report on the Website.

Section 19.4. SCWG RECOMMENDATIONS

(a) The recommendations of the SCWG are not limited and could include a variety of recommendations or a recommendation that no action is required; provided, however, that any recommendations must directly relate to the matters discussed in Section 19.2 and comply with this Section 19.4.

(b) ICANN (Internet Corporation for Assigned Names and Numbers) shall not implement an SCWG recommendation (including an SCWG recommendation to issue an IANA (Internet Assigned Numbers Authority) Naming Function RFP) unless, with respect to each such recommendation (each, an "**SCWG Recommendation**"), each of the following occurs:

(i) The SCWG Recommendation has been approved by the vote of (A) a supermajority of the ccNSO (Country Code Names Supporting Organization) Council (pursuant to the ccNSO (Country Code Names Supporting Organization)'s procedures or, if such procedures do not define a supermajority, two-thirds (2/3) of the ccNSO (Country Code Names Supporting Organization) Council's members) and (B) a GNSO (Generic Names Supporting Organization) Supermajority;

(ii) After a public comment period that complies with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers), the Board has approved the SCWG Recommendation. A determination by the Board to not approve an SCWG Recommendation, where such SCWG Recommendation has been approved by the ccNSO (Country Code Names Supporting Organization) and GNSO (Generic Names Supporting Organization) Councils pursuant to Section 19.4(b)(i), shall require a vote of at least two-thirds (2/3) of the Board and the Board shall follow the same consultation procedures set forth in Section 9 of Annex A of these Bylaws that relate to Board rejection of a PDP (Policy Development Process) recommendation that is supported by a GNSO (Generic Names Supporting Organization) Supermajority; and

(iii) The EC (Empowered Community) has not rejected the Board's approval of the SCWG Recommendation pursuant to and in compliance with Section 19.4(d).

(c) If the Board (x) rejects an SCWG Recommendation that was approved by the ccNSO (Country Code Names Supporting Organization) Council and GNSO (Generic Names Supporting Organization) Council pursuant to Section 19.4(b)(i) or (y) does not resolve to either accept or reject an SCWG Recommendation within 45 days of the later of (1) the date that the condition in Section 19.4(b)(i) is satisfied or (2) the expiration of the public comment period contemplated by Section 19.4(b)(ii), the Secretary shall provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall enclose a copy of the applicable SCWG Recommendation. ICANN (Internet Corporation for Assigned Names and Numbers) shall post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website promptly following the delivery of the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants.

(i) ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, convene a Rejection Action Community Forum, which Rejection Action Community Forum shall be conducted in accordance with Section 2.3 of Annex D, to discuss the Board Notice; provided, that, for purposes of Section 2.3 of Annex D, (A) the Board Notice shall be treated as the Rejection Action Supported Petition, (B) the EC (Empowered Community) Administration shall be treated as the Rejection Action Petitioning Decisional Participant (and there shall be no Rejection Action Supporting Decisional Participants) and (C) the

Rejection Action Community Forum Period shall expire on the 21st day after the date the Secretary provides the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants.

(ii) No later than 45 days after the conclusion of such Rejection Action Community Forum Period, the Board shall resolve to either uphold its rejection of the SCWG Recommendation or approve the SCWG Recommendation (either, a "**Post-Forum SCWG Recommendation Decision**").

(A) If the Board resolves to approve the SCWG Recommendation, such SCWG Recommendation will be subject to Section 19.4(d).

(B) For the avoidance of doubt, the Board shall not be obligated to change its decision on the SCWG Recommendation as a result of the Rejection Action Community Forum.

(C) The Board's Post-Forum SCWG Recommendation Decision shall be posted on the Website in accordance with the Board's posting obligations as set forth in Article 3.

(d) Promptly after the Board approves an SCWG Recommendation (an "**SCWG Recommendation Decision**"), the Secretary shall provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall enclose a copy of the SCWG Recommendation that is the subject of the SCWG Recommendation Decision. ICANN (Internet Corporation for Assigned Names and Numbers) shall post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website promptly following the delivery of the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants.

The EC (Empowered Community) Administration shall promptly commence and comply with the procedures and requirements specified in Article 2 of Annex D.

(i) An SCWG Recommendation Decision shall become final upon the earliest to occur of the following:

(A)(1) A Rejection Action Petition Notice is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D, in which case the SCWG Recommendation Decision shall be final as of the date immediately following the expiration of the Rejection Action Petition Period relating to such SCWG Recommendation Decision;

(B)(1) A Rejection Action Supported Petition is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D, in which case the SCWG Recommendation Decision shall be final as of the date immediately following the expiration of the Rejection Action Petition Support Period relating to such SCWG Recommendation Decision; and

(C)(1) An EC (Empowered Community) Rejection Notice is not timely delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4 of Annex D or (2) a Rejection Process Termination Notice is delivered by

the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4(c) of Annex D, in which case the SCWG Recommendation Decision shall be final as of the date immediately following the expiration of the Rejection Action Decision Period relating to such SCWG Recommendation Decision.

(ii) An SCWG Recommendation Decision that has been rejected by the EC (Empowered Community) pursuant to and in compliance with Article 2 of Annex D shall have no force and effect, and shall be void ab initio.

(e) ICANN (Internet Corporation for Assigned Names and Numbers) shall absorb the costs relating to recommendations made by the SCWG, including, without limitation, costs related to the process of selecting or potentially selecting a new operator for the IANA (Internet Assigned Numbers Authority) naming function and the operating costs of the successor operator that are necessary for the successor operator's performance of the IANA (Internet Assigned Numbers Authority) naming function as ICANN (Internet Corporation for Assigned Names and Numbers)'s independent contractor. ICANN (Internet Corporation for Assigned Names and Numbers) shall not be authorized to raise fees from any TLD (Top Level Domain) registry operators to cover the costs associated with implementation of any SCWG Recommendations that specifically relate to the transition to a successor operator. For avoidance of doubt, this restriction shall not apply to collecting appropriate fees necessary to maintain the ongoing performance of the IANA (Internet Assigned Numbers Authority) naming function, including those relating to the operating costs of the successor operator.

(f) In the event that (i) an SCWG Recommendation that selects an entity (other than PTI) as a new operator of the IANA (Internet Assigned Numbers Authority) naming function is approved pursuant to Section 19.4(b) and (ii) the EC (Empowered Community) does not reject the relevant SCWG Recommendation Decision pursuant to Section 19.4(d), ICANN (Internet Corporation for Assigned Names and Numbers) shall enter into a contract with the new operator on substantially the same terms recommended by the SCWG and approved as part of such SCWG Recommendation.

(g) As promptly as practical following an SCWG Recommendation Decision becoming final in accordance with this Section 19.4, ICANN (Internet Corporation for Assigned Names and Numbers) shall take all steps reasonably necessary to effect such SCWG Recommendation Decision as soon as practicable.

Section 19.5. SCWG COMPOSITION

(a) Each SCWG shall consist of the following members and liaisons to be appointed in accordance with the rules and procedures of the appointing organization:

(i) Two representatives appointed by the ccNSO (Country Code Names Supporting Organization) from its ccTLD (Country Code Top Level Domain) registry operator representatives;

(ii) One non-ccNSO (Country Code Names Supporting Organization) ccTLD (Country Code Top Level Domain) representative who is associated with a ccTLD (Country Code Top Level Domain) registry operator that is not a representative of the ccNSO (Country Code Names Supporting Organization),

appointed by the ccNSO (Country Code Names Supporting Organization); it is strongly recommended that the ccNSO (Country Code Names Supporting Organization) consult with the regional ccTLD (Country Code Top Level Domain) organizations (i.e., AfTLD, APTLD (Council of the Asia Pacific country code Top Level Domains), LACTLD (Latin American and Caribbean ccTLDs) and CENTR (Council of European National Top level domain Registries)) in making its appointment;

(iii) Three representatives appointed by the Registries Stakeholder Group;

(iv) One representative appointed by the Registrars Stakeholder Group;

(v) One representative appointed by the Commercial Stakeholder Group;

(vi) One representative appointed by the Non-Commercial Stakeholder Group;

(vii) One representative appointed by the GAC (Governmental Advisory Committee);

(viii) One representative appointed by the SSAC (Security and Stability Advisory Committee);

(ix) One representative appointed by the RSSAC (Root Server System Advisory Committee);

(x) One representative appointed by the ALAC (At-Large Advisory Committee);

(xi) One liaison appointed by the CSC;

(xii) One liaison appointed by the IFRT that conducted the Special IFR or Periodic IFR, as applicable, that

recommended the creation of the SCWG, who shall be named in the IFRT's recommendation to convene the Special IFR;

(xiii) One liaison who may be appointed by the ASO (Address Supporting Organization);

(xiv) One liaison who may be appointed by the IAB (Internet Architecture Board); and

(xv) One liaison who may be appointed by the Board.

(xvi) The SCWG may also include an unlimited number of non-member, non-liaison participants.

(b) All candidates for appointment to the SCWG as a member or liaison shall submit an expression of interest to the organization that would appoint such candidate as a member or liaison, which shall state (i) why the candidate is interested in becoming involved in the SCWG, (ii) what particular skills the candidate would bring to the SCWG, (iii) the candidate's knowledge of the IANA (Internet Assigned Numbers Authority) naming function, (iv) the candidate's understanding of the purpose of the SCWG, and (v) that the candidate understands the time necessary to participate in the SCWG process and can commit to the role.

(c) Members and liaisons of the SCWG shall disclose to ICANN (Internet Corporation for Assigned Names and Numbers) and the SCWG any conflicts of interest with a specific complaint or issue under review. The SCWG may exclude from the discussion of a specific complaint or issue any member, liaison or participant deemed by the majority of SCWG members to have a conflict of interest. The co-chairs of the SCWG shall record any such conflict of interest in the minutes of the SCWG.

(d) To the extent reasonably possible, the appointing organizations for SCWG members and liaisons shall work together to:

(i) achieve an SCWG that is balanced for diversity (including functional, geographic and cultural) and skill, and should seek to broaden the number of individuals participating across the various reviews; provided, that the SCWG should include members from each ICANN (Internet Corporation for Assigned Names and Numbers) Geographic Region, and the ccNSO (Country Code Names Supporting Organization) and Registries Stakeholder Group shall not appoint multiple members who are citizens of countries from the same ICANN (Internet Corporation for Assigned Names and Numbers) Geographic Region;

(ii) ensure that the SCWG is comprised of individuals who are different from those individuals who comprised the IFRT that conducted the Special IFR or Periodic IFR, as applicable, that recommended the creation of the SCWG, other than the liaison to the IFRT appointed by the CSC; and

(iii) seek to appoint as representatives of the SCWG as many individuals as practicable with experience managing or participating in RFP processes.

(e) ICANN (Internet Corporation for Assigned Names and Numbers) shall select an ICANN (Internet Corporation for Assigned Names and Numbers) staff member and a PTI staff member to serve as points of contact to facilitate formal lines of communication between the SCWG and ICANN (Internet Corporation for Assigned Names and Numbers) and the SCWG and PTI. Communications between the SCWG and the ICANN (Internet Corporation for Assigned Names and Numbers) and PTI points of contact shall be communicated by the SCWG co-chairs.

(f) The SCWG shall not be a standing body. Each SCWG shall be constituted when and as required under these Bylaws and shall dissolve following the end of the process for approving such SCWG's SCWG Recommendations pursuant to Section 19.4(d).

Section 19.6. ELECTION OF CO-CHAIRS AND LIAISONS

(a) The SCWG shall be led by two co-chairs: one appointed by the GNSO (Generic Names Supporting Organization) from one of the members appointed pursuant to clauses (iii)-(vi) of Section 19.5(a) and one appointed by the ccNSO (Country Code Names Supporting Organization) from one of the members appointed pursuant to clauses (i)-(ii) of Section 19.5(a).

(b) Liaisons to the SCWG shall not be members of or entitled to vote on any matters before the SCWG, but otherwise shall be entitled to participate on equal footing with SCWG members.

(c) Removal and Replacement of SCWG Members and Liaisons

(i) The SCWG members and liaisons may be removed from the SCWG by their respective appointing organization at any time upon such organization providing written notice to the Secretary and the co-chairs of the SCWG.

(ii) A vacancy on the SCWG shall be deemed to exist in the event of the death, resignation or removal of any SCWG member or liaison. Vacancies shall be filled by the organization that appointed such SCWG member or liaison. The appointing organization shall provide written notice to the Secretary of its appointment to fill a vacancy, with a notification copy to the SCWG co-

chairs. The organization responsible for filling such vacancy shall use its reasonable efforts to fill such vacancy within one month after the occurrence of such vacancy.

Section 19.7. MEETINGS

- (a) The SCWG shall act by consensus, which is where a small minority may disagree, but most agree.
- (b) Any members of the SCWG not in favor of an action may record a minority dissent to such action, which shall be included in the SCWG minutes and/or report, as applicable.
- (c) SCWG meetings and other working procedures shall be open to the public and conducted in a transparent manner to the fullest extent possible.
- (d) The SCWG shall transmit minutes of its meetings to the Secretary, who shall cause those minutes to be posted to the Website as soon as practicable following each SCWG meeting, and no later than five business days following the meeting.
- (e) Except as otherwise provided in these Bylaws, the SCWG shall follow the guidelines and procedures applicable to ICANN (Internet Corporation for Assigned Names and Numbers) Cross Community Working Groups that will be publicly available and may be amended from time to time.

Section 19.8. ADMINISTRATIVE SUPPORT

ICANN (Internet Corporation for Assigned Names and Numbers) shall provide administrative and operational support necessary for the SCWG to carry out its responsibilities, including providing and facilitating remote participation in all meetings of the SCWG.

Section 19.9. CONFLICTING PROVISIONS

In the event any SCWG Recommendation that is approved in accordance with this [Article 19](#) requires [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) to take any action that is inconsistent with a provision of the Bylaws (including any action taken in implementing such SCWG Recommendation), the requirements of such provision of these Bylaws shall not apply to the extent of that inconsistency.

ARTICLE 20 INDEMNIFICATION OF DIRECTORS, OFFICERS, EMPLOYEES, AND OTHER AGENTS

Section 20.1. INDEMNIFICATION GENERALLY

[ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) shall, to the maximum extent permitted by the CCC, indemnify each of its agents against expenses, judgments, fines, settlements, and other amounts actually and reasonably incurred in connection with any proceeding arising by reason of the fact that any such person is or was an agent of [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#), provided that the indemnified person's acts were done in good faith and in a manner that the indemnified person reasonably believed to be in [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#)'s best interests and not criminal. For purposes of this [Article 20](#), an "agent" of [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) includes any person who is or was a Director, Officer, employee, or any other agent of [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) (including a member of the [EC \(Empowered Community\)](#), the [EC \(Empowered Community\) Administration](#), any [Supporting Organization \(Supporting Organization\)](#), any [Advisory Committee \(Advisory Committee\)](#), the [Nominating Committee](#), any other [ICANN \(Internet Corporation for](#)

Assigned Names and Numbers) committee, or the Technical Liaison Group) acting within the scope of his or her responsibility; or is or was serving at the request of ICANN (Internet Corporation for Assigned Names and Numbers) as a Director, Officer, employee, or agent of another corporation, partnership, joint venture, trust, or other enterprise. The Board may adopt a resolution authorizing the purchase and maintenance of insurance on behalf of any agent of ICANN (Internet Corporation for Assigned Names and Numbers) against any liability asserted against or incurred by the agent in such capacity or arising out of the agent's status as such, whether or not ICANN (Internet Corporation for Assigned Names and Numbers) would have the power to indemnify the agent against that liability under the provisions of this Article 20.

Section 20.2. INDEMNIFICATION WITH RESPECT TO DIRECTOR REMOVAL

If a Director initiates any proceeding in connection with his or her removal or recall pursuant to the Bylaws, to which a person who is a member of the leadership council (or equivalent body) of a Decisional Participant or representative of a Decisional Participant in the EC (Empowered Community) Administration is a party or is threatened to be made a party (as a party or witness) (a "**Director Removal Proceeding**"), ICANN (Internet Corporation for Assigned Names and Numbers) shall, to the maximum extent permitted by the CCC, indemnify any such person, against expenses, judgments, fines, settlements, and other amounts actually and reasonably incurred by such person in connection with such Director Removal Proceeding, for actions taken by such person in his or her representative capacity within his or her Decisional Participant pursuant to the processes and procedures set forth in these Bylaws, provided that all such actions were taken by such person in good faith and in a manner that such person reasonably believed to be in ICANN (Internet Corporation for Assigned

Names and Numbers)'s best interests and not criminal. The actual and reasonable legal fees of a single firm of counsel and other expenses actually and reasonably incurred by such person in defending against a Director Removal Proceeding shall be paid by ICANN (Internet Corporation for Assigned Names and Numbers) in advance of the final disposition of such Director Removal Proceeding, provided, however, that such expenses shall be advanced only upon delivery to the Secretary of an undertaking (which shall be in writing and in a form provided by the Secretary) by such person to repay the amount of such expenses if it shall ultimately be determined that such person is not entitled to be indemnified by ICANN (Internet Corporation for Assigned Names and Numbers). ICANN (Internet Corporation for Assigned Names and Numbers) shall not be obligated to indemnify such person against any settlement of a Director Removal Proceeding, unless such settlement is approved in advance by the Board in its reasonable discretion. Notwithstanding Section 20.1, the indemnification provided in this Section 20.2 shall be ICANN (Internet Corporation for Assigned Names and Numbers)'s sole indemnification obligation with respect to the subject matter set forth in this Section 20.2.

ARTICLE 21 GENERAL PROVISIONS

Section 21.1. CONTRACTS

The Board may authorize any Officer or Officers, agent or agents, to enter into any contract or execute or deliver any instrument in the name of and on behalf of ICANN (Internet Corporation for Assigned Names and Numbers), and such authority may be general or confined to specific instances. In the absence of a contrary Board authorization, contracts and instruments may only be executed by the following Officers: President, any Vice President, or the CFO. Unless authorized or ratified by the Board, no other Officer, agent, or employee shall have any power or authority to bind ICANN

(Internet Corporation for Assigned Names and Numbers) or to render it liable for any debts or obligations.

Section 21.2. DEPOSITS

All funds of ICANN (Internet Corporation for Assigned Names and Numbers) not otherwise employed shall be deposited from time to time to the credit of ICANN (Internet Corporation for Assigned Names and Numbers) in such banks, trust companies, or other depositories as the Board, or the President under its delegation, may select.

Section 21.3. CHECKS

All checks, drafts, or other orders for the payment of money, notes, or other evidences of indebtedness issued in the name of ICANN (Internet Corporation for Assigned Names and Numbers) shall be signed by such Officer or Officers, agent or agents, of ICANN (Internet Corporation for Assigned Names and Numbers) and in such a manner as shall from time to time be determined by resolution of the Board.

Section 21.4. LOANS

No loans shall be made by or to ICANN (Internet Corporation for Assigned Names and Numbers) and no evidences of indebtedness shall be issued in its name unless authorized by a resolution of the Board. Such authority may be general or confined to specific instances; provided, however, that no loans shall be made by ICANN (Internet Corporation for Assigned Names and Numbers) to its Directors or Officers.

Section 21.5. NOTICES

All notices to be given to the EC (Empowered Community) Administration, the Decisional Participants, or the Secretary pursuant to any provision of these Bylaws shall be given either (a) in writing at the address of the appropriate party as

set forth below or (b) via electronic mail as provided below, unless that party has given a notice of change of postal or email address, as provided in this Section 21.5. Any change in the contact information for notice below will be given by the party within 30 days of such change. Any notice required by these Bylaws will be deemed to have been properly given (i) if in paper form, when delivered in person or via courier service with confirmation of receipt or (ii) if via electronic mail, upon confirmation of receipt by the recipient's email server, provided that such notice via electronic mail shall be followed by a copy sent by regular postal mail service within three days. In the event other means of notice become practically achievable, such as notice via a secure website, the EC (Empowered Community) Administration, the Decisional Participants, and ICANN (Internet Corporation for Assigned Names and Numbers) will work together to implement such notice means.

If to ICANN (Internet Corporation for Assigned Names and Numbers), addressed to:

Internet Corporation for Assigned Names and Numbers

12025 Waterfront Drive, Suite 300

Los Angeles, CA 90094-2536

USA

Email:

Attention: Secretary

If to a Decisional Participant or the EC (Empowered Community) Administration, addressed to the contact information available at [insert Website reference].

ARTICLE 22 FISCAL AND STRATEGIC MATTERS, INSPECTION AND INDEPENDENT INVESTIGATION

Section 22.1. ACCOUNTING

The fiscal year end of ICANN (Internet Corporation for Assigned Names and Numbers) shall be determined by the Board.

Section 22.2. AUDIT

At the end of the fiscal year, the books of ICANN (Internet Corporation for Assigned Names and Numbers) shall be closed and audited by certified public accountants. The appointment of the fiscal auditors shall be the responsibility of the Board.

Section 22.3. ANNUAL REPORT AND ANNUAL STATEMENT

The Board shall publish, at least annually, a report describing its activities, including an audited financial statement, a description of any payments made by ICANN (Internet Corporation for Assigned Names and Numbers) to Directors (including reimbursements of expenses) and a description of ICANN (Internet Corporation for Assigned Names and Numbers)'s progress towards the obligations imposed under the Bylaws as revised on 1 October 2016 and the Operating Plan and Strategic Plan. ICANN (Internet Corporation for Assigned Names and Numbers) shall cause the annual report and the annual statement of certain transactions as required by the CCC to be prepared and sent to each member of the Board and to such other persons as the Board may designate, no later than one hundred twenty (120) days after the close of ICANN (Internet Corporation for Assigned Names and Numbers)'s fiscal year.

Section 22.4. BUDGETS

(a) ICANN (Internet Corporation for Assigned Names and Numbers) Budget

(i) In furtherance of its Commitment to transparent and accountable budgeting processes, at least forty-five (45) days prior to the commencement of each fiscal year, ICANN (Internet Corporation for Assigned Names and Numbers) staff shall prepare and submit to the Board a proposed annual operating plan and budget of ICANN (Internet Corporation for Assigned Names and Numbers) for the next fiscal year (the "**ICANN (Internet Corporation for Assigned Names and Numbers) Budget**"), which shall be posted on the Website. The ICANN (Internet Corporation for Assigned Names and Numbers) Budget shall identify anticipated revenue sources and levels and shall, to the extent practical, identify anticipated material expense items by line item.

(ii) Prior to approval of the ICANN (Internet Corporation for Assigned Names and Numbers) Budget by the Board, ICANN (Internet Corporation for Assigned Names and Numbers) staff shall consult with the Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees) during the ICANN (Internet Corporation for Assigned Names and Numbers) Budget development process, and comply with the requirements of this Section 22.4(a).

(iii) Prior to approval of the ICANN (Internet Corporation for Assigned Names and Numbers) Budget by the Board, a draft of the ICANN (Internet Corporation for Assigned Names and Numbers) Budget shall be posted on the Website and shall be subject to public comment.

(iv) After reviewing the comments submitted during the public comment period, the Board may direct ICANN (Internet Corporation for Assigned Names and Numbers) staff to post a revised draft of the ICANN (Internet Corporation for Assigned Names and Numbers) Budget and may direct ICANN (Internet Corporation for Assigned Names and Numbers) Staff to conduct one or more additional public comment periods of lengths determined by the Board, in accordance with ICANN (Internet Corporation for Assigned Names and Numbers)'s public comment processes.

(v) Promptly after the Board approves an ICANN (Internet Corporation for Assigned Names and Numbers) Budget (an "**ICANN (Internet Corporation for Assigned Names and Numbers) Budget Approval**"), the Secretary shall provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall enclose a copy of the ICANN (Internet Corporation for Assigned Names and Numbers) Budget that is the subject of the ICANN (Internet Corporation for Assigned Names and Numbers) Budget Approval. ICANN (Internet Corporation for Assigned Names and Numbers) shall post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website promptly following the delivery of the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants. The EC (Empowered Community) Administration shall promptly commence and comply with the procedures and requirements specified in Article 2 of Annex D.

(vi) An ICANN (Internet Corporation for Assigned Names and Numbers) Budget shall become effective

upon the earliest to occur of the following:

(A)(1) A Rejection Action Petition Notice is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D, in which case the ICANN (Internet Corporation for Assigned Names and Numbers) Budget that is the subject of the ICANN (Internet Corporation for Assigned Names and Numbers) Budget Approval shall be in full force and effect as of the 28th day following the Rejection Action Board Notification Date (as defined in Section 2.2(a) of Annex D) relating to such ICANN (Internet Corporation for Assigned Names and Numbers) Budget Approval and the effectiveness of such ICANN (Internet Corporation for Assigned Names and Numbers) Budget shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D;

(B)(1) A Rejection Action Supported Petition is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D, in which case the ICANN (Internet Corporation for Assigned Names and Numbers) Budget that is the subject of the ICANN (Internet Corporation for Assigned Names and Numbers) Budget Approval shall be in full force and effect as of the date immediately following the expiration of the

Rejection Action Petition Support Period relating to such ICANN (Internet Corporation for Assigned Names and Numbers) Budget Approval and the effectiveness of such ICANN (Internet Corporation for Assigned Names and Numbers) Budget shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D; and

(C)(1) An EC (Empowered Community) Rejection Notice is not timely delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4 of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4(c) of Annex D, in which case the ICANN (Internet Corporation for Assigned Names and Numbers) Budget that is the subject of the ICANN (Internet Corporation for Assigned Names and Numbers) Budget Approval shall be in full force and effect as of the date immediately following the expiration of the Rejection Action Decision Period relating to such ICANN (Internet Corporation for Assigned Names and Numbers) Budget Approval and the effectiveness of such ICANN (Internet Corporation for Assigned Names and Numbers) Budget shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D.

(vii) An ICANN (Internet Corporation for Assigned Names and Numbers) Budget that has been rejected by the EC (Empowered Community) pursuant to and in compliance with Article 2 of Annex D shall have no force and effect, and shall be void ab initio.

(viii) Following receipt of an EC (Empowered Community) Rejection Notice relating to an ICANN (Internet Corporation for Assigned Names and Numbers) Budget, ICANN (Internet Corporation for Assigned Names and Numbers) staff and the Board shall consider the explanation provided by the EC (Empowered Community) Administration as to why the EC (Empowered Community) has chosen to reject the ICANN (Internet Corporation for Assigned Names and Numbers) Budget in determining the substance of such new ICANN (Internet Corporation for Assigned Names and Numbers) Budget, which shall be subject to the procedures of this Section 22.4(a).

(ix) If an ICANN (Internet Corporation for Assigned Names and Numbers) Budget has not come into full force and effect pursuant to this Section 22.4(a) on or prior to the first date of any fiscal year of ICANN (Internet Corporation for Assigned Names and Numbers), the Board shall adopt a temporary budget in accordance with Annex E hereto ("**Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget**"), which Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget shall be effective until such time as an ICANN (Internet Corporation for Assigned Names and Numbers) Budget has been effectively approved by the Board and not rejected by the EC (Empowered Community) pursuant to this Section 22.4(a).

(b) IANA (Internet Assigned Numbers Authority) Budget

(i) At least 45 days prior to the commencement of each fiscal year, ICANN (Internet Corporation for Assigned Names and Numbers) shall prepare and submit to the Board a proposed annual operating plan and budget of PTI and the IANA (Internet Assigned Numbers Authority) department, which budget shall include

itemization of the direct costs for ICANN (Internet Corporation for Assigned Names and Numbers)'s IANA (Internet Assigned Numbers Authority) department, all costs for PTI, direct costs for shared resources between ICANN (Internet Corporation for Assigned Names and Numbers) and PTI and support functions provided by ICANN (Internet Corporation for Assigned Names and Numbers) to PTI and ICANN (Internet Corporation for Assigned Names and Numbers)'s IANA (Internet Assigned Numbers Authority) department for the next fiscal year (the "**IANA (Internet Assigned Numbers Authority) Budget**"), which shall be posted on the Website. Separately and in addition to the general ICANN (Internet Corporation for Assigned Names and Numbers) planning process, ICANN (Internet Corporation for Assigned Names and Numbers) shall require PTI to prepare and submit to the PTI Board a proposed annual operating plan and budget for PTI's performance of the IANA (Internet Assigned Numbers Authority) functions for the next fiscal year ("**PTI Budget**"). ICANN (Internet Corporation for Assigned Names and Numbers) shall require PTI to consult with the Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees), as well as the Registries Stakeholder Group, the IAB (Internet Architecture Board) and RIRs, during the PTI Budget development process, and shall seek public comment on the draft PTI Budget prior to approval of the PTI Budget by PTI. ICANN (Internet Corporation for Assigned Names and Numbers) shall require PTI to submit the PTI Budget to ICANN (Internet Corporation for Assigned Names and Numbers) as an input prior to and for the purpose of being included in the proposed Operating Plan (as defined in [Section 22.5\(a\)](#)) and ICANN (Internet Corporation for Assigned Names and Numbers) Budget.

(ii) Prior to approval of the IANA (Internet Assigned Numbers Authority) Budget by the Board, ICANN (Internet Corporation for Assigned Names and Numbers) staff shall consult with the Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees), as well as the Registries Stakeholder Group, IAB (Internet Architecture Board) and RIRs, during the IANA (Internet Assigned Numbers Authority) Budget development process, and comply with the requirements of this Section 22.4(b).

(iii) Prior to approval of the IANA (Internet Assigned Numbers Authority) Budget by the Board, a draft of the IANA (Internet Assigned Numbers Authority) Budget shall be posted on the Website and shall be subject to public comment.

(iv) After reviewing the comments submitted during the public comment period, the Board may direct ICANN (Internet Corporation for Assigned Names and Numbers) staff to post a revised draft of the IANA (Internet Assigned Numbers Authority) Budget and may direct ICANN (Internet Corporation for Assigned Names and Numbers) staff to conduct one or more additional public comment periods of lengths determined by the Board, in accordance with ICANN (Internet Corporation for Assigned Names and Numbers)'s public comment processes.

(v) Promptly after the Board approves an IANA (Internet Assigned Numbers Authority) Budget (an **"IANA (Internet Assigned Numbers Authority) Budget Approval"**), the Secretary shall provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall enclose a copy of the IANA (Internet Assigned Numbers Authority) Budget that is

the subject of the IANA (Internet Assigned Numbers Authority) Budget Approval. ICANN (Internet Corporation for Assigned Names and Numbers) shall post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website promptly following the delivery of the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants. The EC (Empowered Community) Administration shall promptly commence and comply with the procedures and requirements specified in Article 2 of Annex D.

(vi) An IANA (Internet Assigned Numbers Authority) Budget shall become effective upon the earliest to occur of the following:

(A)(1) A Rejection Action Petition Notice is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D, in which case the IANA (Internet Assigned Numbers Authority) Budget that is the subject of the IANA (Internet Assigned Numbers Authority) Budget Approval shall be in full force and effect as of the 28th day following the Rejection Action Board Notification Date relating to such IANA (Internet Assigned Numbers Authority) Budget Approval and the effectiveness of such IANA (Internet Assigned Numbers Authority) Budget shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D;

(B)(1) A Rejection Action Supported Petition is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D, in which case the IANA (Internet Assigned Numbers Authority) Budget that is the subject of the IANA (Internet Assigned Numbers Authority) Budget Approval shall be in full force and effect as of the date immediately following the expiration of the Rejection Action Petition Support Period relating to such IANA (Internet Assigned Numbers Authority) Budget Approval and the effectiveness of such IANA (Internet Assigned Numbers Authority) Budget shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D; and

(C)(1) An EC (Empowered Community) Rejection Notice is not timely delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4 of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4(c) of Annex D, in which case the IANA (Internet Assigned Numbers Authority) Budget that is the subject of the IANA (Internet Assigned Numbers Authority) Budget Approval shall be in full force and effect as of the date immediately following the expiration of the Rejection Action Decision Period relating to such IANA (Internet Assigned Numbers Authority) Budget Approval and the effectiveness of such IANA (Internet Assigned Numbers Authority) Budget shall not be subject to further challenge by the

EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D.

(vii) An IANA (Internet Assigned Numbers Authority) Budget that has been rejected by the EC (Empowered Community) pursuant to and in compliance with Article 2 of Annex D shall have no force and effect, and shall be void ab initio.

(viii) Following receipt of an EC (Empowered Community) Rejection Notice relating to an IANA (Internet Assigned Numbers Authority) Budget, ICANN (Internet Corporation for Assigned Names and Numbers) staff and the Board shall consider the explanation provided by the EC (Empowered Community) Administration as to why the EC (Empowered Community) has chosen to reject the IANA (Internet Assigned Numbers Authority) Budget in determining the substance of such new IANA (Internet Assigned Numbers Authority) Budget, which shall be subject to the procedures of this Section 22.4(b).

(ix) If an IANA (Internet Assigned Numbers Authority) Budget has not come into full force and effect pursuant to this Section 22.4(b) on or prior to the first date of any fiscal year of ICANN (Internet Corporation for Assigned Names and Numbers), the Board shall adopt a temporary budget in accordance with Annex F hereto ("**Caretaker IANA (Internet Assigned Numbers Authority) Budget**"), which Caretaker IANA (Internet Assigned Numbers Authority) Budget shall be effective until such time as an IANA (Internet Assigned Numbers Authority) Budget has been effectively approved by the Board and not rejected by the EC (Empowered Community) pursuant to this Section 22.4(b).

(c) If an IANA (Internet Assigned Numbers Authority) Budget does not receive an EC (Empowered Community) Rejection Notice but an ICANN (Internet Corporation for Assigned Names and Numbers) Budget receives an EC (Empowered Community) Rejection Notice, any subsequent revised ICANN (Internet Corporation for Assigned Names and Numbers) Budget shall not alter the expenditures allocated for the IANA (Internet Assigned Numbers Authority) Budget.

(d) If an ICANN (Internet Corporation for Assigned Names and Numbers) Budget does not receive an EC (Empowered Community) Rejection Notice but an IANA (Internet Assigned Numbers Authority) Budget receives an EC (Empowered Community) Rejection Notice, any subsequent revised IANA (Internet Assigned Numbers Authority) Budget shall, once approved, be deemed to automatically modify the ICANN (Internet Corporation for Assigned Names and Numbers) Budget in a manner determined by the Board without any further right of the EC (Empowered Community) to reject the ICANN (Internet Corporation for Assigned Names and Numbers) Budget.

(e) Under all circumstances, the Board will have the ability to make out-of-budget funding decisions for unforeseen expenses necessary to maintaining ICANN (Internet Corporation for Assigned Names and Numbers)'s Mission or to fulfilling ICANN (Internet Corporation for Assigned Names and Numbers)'s pre-existing legal obligations and protecting ICANN (Internet Corporation for Assigned Names and Numbers) from harm or waste.

(f) To maintain ongoing operational excellence and financial stability of the IANA (Internet Assigned Numbers Authority) functions (so long as they are performed by ICANN (Internet Corporation for Assigned Names and Numbers) or pursuant to contract with ICANN (Internet Corporation for Assigned Names and Numbers)) and PTI, ICANN (Internet Corporation for Assigned Names and Numbers) shall be required to plan

for and allocate funds to ICANN (Internet Corporation for Assigned Names and Numbers)'s performance of the IANA (Internet Assigned Numbers Authority) functions and to PTI, as applicable, that are sufficient to cover future expenses and contingencies to ensure that the performance of those IANA (Internet Assigned Numbers Authority) functions and PTI in the future are not interrupted due to lack of funding.

(g) The ICANN (Internet Corporation for Assigned Names and Numbers) Budget and the IANA (Internet Assigned Numbers Authority) Budget shall be published on the Website.

Section 22.5. PLANS

(a) Operating Plan

(i) At least 45 days prior to the commencement of each fiscal year, ICANN (Internet Corporation for Assigned Names and Numbers) staff shall prepare and submit to the Board a proposed operating plan of ICANN (Internet Corporation for Assigned Names and Numbers) for the next five fiscal years (the "**Operating Plan**"), which shall be posted on the Website.

(ii) Prior to approval of the Operating Plan by the Board, ICANN (Internet Corporation for Assigned Names and Numbers) staff shall consult with the Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees) during the Operating Plan development process, and comply with the requirements of this Section 22.5(a).

(iii) Prior to approval of the Operating Plan by the Board, a draft of the Operating Plan shall be posted on the Website and shall be subject to public comment.

(iv) After reviewing the comments submitted during the public comment period, the Board may direct ICANN (Internet Corporation for Assigned Names and Numbers) staff to post a revised draft of the Operating Plan and may direct ICANN (Internet Corporation for Assigned Names and Numbers) staff to conduct one or more additional public comment periods of lengths determined by the Board, in accordance with ICANN (Internet Corporation for Assigned Names and Numbers)'s public comment processes.

(v) Promptly after the Board approves an Operating Plan (an "**Operating Plan Approval**"), the Secretary shall provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall enclose a copy of the Operating Plan that is the subject of the Operating Plan Approval. ICANN (Internet Corporation for Assigned Names and Numbers) shall post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website promptly following the delivery of the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants. The EC (Empowered Community) Administration shall promptly commence and comply with the procedures and requirements specified in Article 2 of Annex D.

(vi) An Operating Plan shall become effective upon the earliest to occur of the following:

(A)(1) A Rejection Action Petition Notice is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the

Secretary pursuant to and in compliance with Section 2.2(c) of Annex D, in which case the Operating Plan that is the subject of the Operating Plan Approval shall be in full force and effect as of the 28th day following the Rejection Action Board Notification Date relating to such Operating Plan Approval and the effectiveness of such Operating Plan shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D;

(B)(1) A Rejection Action Supported Petition is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D, in which case the Operating Plan that is the subject of the Operating Plan Approval shall be in full force and effect as of the date immediately following the expiration of the Rejection Action Petition Support Period relating to such Operating Plan Approval and the effectiveness of such Operating Plan shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D; and

(C)(1) An EC (Empowered Community) Rejection Notice is not timely delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4 of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4(c) of Annex D, in which case the Operating Plan that is the subject of the Operating Plan Approval shall

be in full force and effect as of the date immediately following the expiration of the Rejection Action Decision Period relating to such Operating Plan Approval and the effectiveness of such Operating Plan shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D.

(vii) An Operating Plan that has been rejected by the EC (Empowered Community) pursuant to and in compliance with Article 2 of Annex D shall have no force and effect, and shall be void ab initio.

(viii) Following receipt of an EC (Empowered Community) Rejection Notice relating to an Operating Plan, ICANN (Internet Corporation for Assigned Names and Numbers) staff and the Board shall consider the explanation provided by the EC (Empowered Community) Administration as to why the EC (Empowered Community) has chosen to reject the Operating Plan in determining the substance of such new Operating Plan, which shall be subject to the procedures of this Section 22.5(a).

(b) Strategic Plan

(i) At least 45 days prior to the commencement of each five fiscal year period, with the first such period covering fiscal years 2021 through 2025, ICANN (Internet Corporation for Assigned Names and Numbers) staff shall prepare and submit to the Board a proposed strategic plan of ICANN (Internet Corporation for Assigned Names and Numbers) for the next five fiscal years (the "**Strategic Plan**"), which shall be posted on the Website.

(ii) Prior to approval of the Strategic Plan by the Board, ICANN (Internet Corporation for Assigned Names and Numbers) staff shall consult with the Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees) during the Strategic Plan development process, and comply with the requirements of this Section 22.5(b).

(iii) Prior to approval of the Strategic Plan by the Board, a draft of the Strategic Plan shall be posted on the Website and shall be subject to public comment.

(iv) After reviewing the comments submitted during the public comment period, the Board may direct ICANN (Internet Corporation for Assigned Names and Numbers) staff to submit a revised draft of the Strategic Plan and may direct ICANN (Internet Corporation for Assigned Names and Numbers) staff to conduct one or more additional public comment periods of lengths determined by the Board, in accordance with ICANN (Internet Corporation for Assigned Names and Numbers)'s public comment processes.

(v) Promptly after the Board approves a Strategic Plan (a "**Strategic Plan Approval**"), the Secretary shall provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall enclose a copy of the Strategic Plan that is the subject of the Strategic Plan Approval. ICANN (Internet Corporation for Assigned Names and Numbers) shall post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website promptly following the delivery of the Board Notice to the EC (Empowered Community) Administration and the Decisional Participants. The EC (Empowered

Community) Administration shall promptly commence and comply with the procedures and requirements specified in Article 2 of Annex D.

(vi) A Strategic Plan shall become effective upon the earliest to occur of the following:

(A)(1) A Rejection Action Petition Notice is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D, in which case the Strategic Plan that is the subject of the Strategic Plan Approval shall be in full force and effect as of the 28th day following the Rejection Action Board Notification Date relating to such Strategic Plan Approval and the effectiveness of such Strategic Plan shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D;

(B)(1) A Rejection Action Supported Petition is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D, in which case the Strategic Plan that is the subject of the Strategic Plan Approval shall be in full force and effect as of the date immediately following the expiration of the Rejection Action Petition Support Period relating to such Strategic Plan Approval and the effectiveness of such Strategic Plan shall not be subject to further challenge by the EC

(Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D; and

(C)(1) An EC (Empowered Community) Rejection Notice is not timely delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4 of Annex D or (2) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4(c) of Annex D, in which case the Strategic Plan that is the subject of the Strategic Plan Approval shall be in full force and effect as of the date immediately following the expiration of the Rejection Action Decision Period relating to such Strategic Plan Approval and the effectiveness of such Strategic Plan shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D.

(vii) A Strategic Plan that has been rejected by the EC (Empowered Community) pursuant to and in compliance with Article 2 of Annex D shall have no force and effect, and shall be void ab initio.

(viii) Following receipt of an EC (Empowered Community) Rejection Notice relating to a Strategic Plan, ICANN (Internet Corporation for Assigned Names and Numbers) staff and the Board shall consider the explanation provided by the EC (Empowered Community) Administration as to why the EC (Empowered Community) has chosen to reject the Strategic Plan in determining the substance of such new Strategic Plan, which shall be subject to the procedures of this Section 22.5(b).

Section 22.6. FEES AND CHARGES

The Board may set fees and charges for the services and benefits provided by ICANN (Internet Corporation for Assigned Names and Numbers), with the goal of fully recovering the reasonable costs of the operation of ICANN (Internet Corporation for Assigned Names and Numbers) and establishing reasonable reserves for future expenses and contingencies reasonably related to the legitimate activities of ICANN (Internet Corporation for Assigned Names and Numbers). Such fees and charges shall be fair and equitable, shall be published for public comment prior to adoption, and once adopted shall be published on the Website in a sufficiently detailed manner so as to be readily accessible.

Section 22.7. INSPECTION

(a) A Decisional Participant (the "**Inspecting Decisional Participant**") may request to inspect the accounting books and records of ICANN (Internet Corporation for Assigned Names and Numbers), as interpreted pursuant to the provisions of Section 6333 of the CCC, and the minutes of the Board or any Board Committee for a purpose reasonably related to such Inspecting Decisional Participant's interest as a Decisional Participant in the EC (Empowered Community). The Inspecting Decisional Participant shall make such a request by providing written notice from the chair of the Inspecting Decisional Participant to the Secretary stating the nature of the documents the Inspecting Decisional Participant seeks to inspect ("**Inspection Request**"). Any Inspection Request must be limited to the accounting books and records of ICANN (Internet Corporation for Assigned Names and Numbers) relevant to the operation of ICANN (Internet Corporation for Assigned Names and Numbers) as a whole, and shall not extend to the underlying sources of such accounting books or records or to documents only relevant to a small or isolated aspect of ICANN (Internet Corporation for Assigned Names and Numbers)'s operations

or that relate to the minutiae of ICANN (Internet Corporation for Assigned Names and Numbers)'s financial records or details of its management and administration (the "**Permitted Scope**"). Unless ICANN (Internet Corporation for Assigned Names and Numbers) declines such request (as provided below), ICANN (Internet Corporation for Assigned Names and Numbers) shall make the records requested under an Inspection Request available for inspection by such Inspecting Decisional Participant within 30 days of the date the Inspection Request is received by the Secretary or as soon as reasonably practicable thereafter. All materials and information made available by ICANN (Internet Corporation for Assigned Names and Numbers) for inspection pursuant to an Inspection Request may only be used by the Inspecting Decisional Participant for purposes reasonably related to such Inspecting Decisional Participant's interest as a Decisional Participant in the EC (Empowered Community). ICANN (Internet Corporation for Assigned Names and Numbers) shall post all Inspection Requests to the Website.

(b) ICANN (Internet Corporation for Assigned Names and Numbers) may decline an Inspection Request on the basis that such Inspection Request (i) is motivated by a Decisional Participant's financial, commercial or political interests, or those of one or more of its constituents, (ii) relates to documents that are not reasonably related to the purpose specified in the Inspection Request or the Inspecting Decisional Participant's interest as a Decisional Participant in the EC (Empowered Community), (iii) requests identical records provided in a prior request of such Decisional Participant, (iv) is not within the Permitted Scope, (v) relates to personnel records, (vi) relates to documents or communications covered by attorney-client privilege, work product doctrine or other legal privilege or (vii) relates to documents or communications that ICANN (Internet Corporation for Assigned Names and Numbers) may not make available under applicable law because such documents or communications contain confidential

information that ICANN (Internet Corporation for Assigned Names and Numbers) is required to protect. If an Inspection Request is overly broad, ICANN (Internet Corporation for Assigned Names and Numbers) may request a revised Inspection Request from the Inspecting Decisional Participant.

(c) Any such inspections shall be conducted at the times and locations reasonably determined by ICANN (Internet Corporation for Assigned Names and Numbers) and shall not be conducted in a manner that unreasonably interferes with ICANN (Internet Corporation for Assigned Names and Numbers)'s operations. All such inspections shall be subject to reasonable procedures established by ICANN (Internet Corporation for Assigned Names and Numbers), including, without limitation, the number of individuals authorized to conduct any such inspection on behalf of the Inspecting Decisional Participant. ICANN (Internet Corporation for Assigned Names and Numbers) may require the inspectors to sign a non-disclosure agreement. The Inspecting Decisional Participant may, at its own cost, copy or otherwise reproduce or make a record of materials inspected. ICANN (Internet Corporation for Assigned Names and Numbers) may redact or determine not to provide requested materials on the same basis that such information is of a category or type described in Section 22.7(b), in which case ICANN (Internet Corporation for Assigned Names and Numbers) will provide the Inspecting Decisional Participant a written rationale for such redactions or determination.

(d) The inspection rights provided to the Decisional Participants pursuant to this Section 22.7 are granted to the Decisional Participants and are not granted or available to any other person or entity. Notwithstanding the foregoing, nothing in this Section 22.7 shall be construed as limiting the accessibility of ICANN (Internet Corporation for Assigned Names and Numbers)'s document information disclosure policy ("**DIDP**").

(e) If the Inspecting Decisional Participant believes that ICANN (Internet Corporation for Assigned Names and Numbers) has violated the provisions of this Section 22.7, the Inspecting Decisional Participant may seek one or more of the following remedies: (i) appeal such matter to the Ombudsman and/or the Board for a ruling on the matter, (ii) initiate the Reconsideration Request process in accordance with Section 4.2, (iii) initiate the Independent Review Process in accordance with Section 4.3, or (iv) petition the EC (Empowered Community) to initiate (A) a Community IRP pursuant to Section 4.2 of Annex D or (B) a Board Recall Process pursuant to Section 3.3 of Annex D. Any determination by the Ombudsman is not binding on ICANN (Internet Corporation for Assigned Names and Numbers) staff, but may be submitted by the Inspecting Decisional Participant when appealing to the Board for a determination, if necessary.

Section 22.8. INDEPENDENT INVESTIGATION

If three or more Decisional Participants deliver to the Secretary a joint written certification from the respective chairs of each such Decisional Participant that the constituents of such Decisional Participants have, pursuant to the internal procedures of such Decisional Participants, determined that there is a credible allegation that ICANN (Internet Corporation for Assigned Names and Numbers) has committed fraud or that there has been a gross mismanagement of ICANN (Internet Corporation for Assigned Names and Numbers)'s resources, ICANN (Internet Corporation for Assigned Names and Numbers) shall retain a third-party, independent firm to investigate such alleged fraudulent activity or gross mismanagement. ICANN (Internet Corporation for Assigned Names and Numbers) shall post all such certifications to the Website. The independent firm shall issue a report to the Board. The Board shall consider the recommendations and findings set forth in such report. Such report shall be posted on the Website,

which may be in a redacted form as determined by the Board, in order to preserve attorney-client privilege, work product doctrine or other legal privilege or where such information is confidential, in which case ICANN (Internet Corporation for Assigned Names and Numbers) will provide the Decisional Participants that submitted the certification a written rationale for such redactions.

ARTICLE 23 MEMBERS

ICANN (Internet Corporation for Assigned Names and Numbers) shall not have members, as contemplated by Section 5310 of the CCC, notwithstanding the use of the term "member" in these Bylaws, in any ICANN (Internet Corporation for Assigned Names and Numbers) document, or in any action of the Board or staff. For the avoidance of doubt, the EC (Empowered Community) is not a member of ICANN (Internet Corporation for Assigned Names and Numbers).

ARTICLE 24 OFFICES AND SEAL

Section 24.1. OFFICES

The principal office for the transaction of the business of ICANN (Internet Corporation for Assigned Names and Numbers) shall be in the County of Los Angeles, State of California, United States of America. ICANN (Internet Corporation for Assigned Names and Numbers) may also have an additional office or offices within or outside the United States of America as it may from time to time establish.

Section 24.2. SEAL

The Board may adopt a corporate seal and use the same by causing it or a facsimile thereof to be impressed or affixed or reproduced or otherwise.

ARTICLE 25 AMENDMENTS

Section 25.1. AMENDMENTS TO THE STANDARD BYLAWS

(a) Except as otherwise provided in the Articles of Incorporation or these Bylaws, these Bylaws may be altered, amended, or repealed and new Bylaws adopted only upon approval by a two-thirds vote of all Directors and in compliance with the terms of this Section 25.1 (a "**Standard Bylaw Amendment**").

(b) Prior to approval of a Standard Bylaw Amendment by the Board, a draft of the Standard Bylaw Amendment shall be posted on the Website and shall be subject to public comment in accordance with ICANN (Internet Corporation for Assigned Names and Numbers)'s public comment processes.

(c) After reviewing the comments submitted during the public comment period, the Board may direct ICANN (Internet Corporation for Assigned Names and Numbers) staff to post a revised draft of the Standard Bylaw Amendment and may conduct one or more additional public comment periods in accordance with ICANN (Internet Corporation for Assigned Names and Numbers)'s public comment processes.

(d) Within seven days after the Board's approval of a Standard Bylaw Amendment ("**Standard Bylaw Amendment Approval**"), the Secretary shall (i) provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall contain the form of the approved amendment and the Board's rationale for adopting such amendment, and (ii) post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website. The steps contemplated in Article 2 of Annex D shall then be followed.

(e) A Standard Bylaw Amendment shall become effective upon the earliest to occur of the following:

(i) (A) A Rejection Action Petition Notice is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D or (B) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(c) of Annex D, in which case the Standard Bylaw Amendment that is the subject of the Standard Bylaw Amendment Approval shall be in full force and effect as of the 30th day following the Rejection Action Board Notification Date relating to such Standard Bylaw Amendment Approval and the effectiveness of such Standard Bylaw Amendment shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D;

(ii) (A) A Rejection Action Supported Petition is not timely delivered by the Rejection Action Petitioning Decisional Participant to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D or (B) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.2(d) of Annex D, in which case the Standard Bylaw Amendment that is the subject of the Standard Bylaw Amendment Approval shall be in full force and effect as of the date immediately following the expiration of the Rejection Action Petition Support Period relating to such Standard Bylaw Amendment and the effectiveness of such Standard Bylaw Amendment shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC

(Empowered Community)'s rejection right as described in Article 2 of Annex D; or

(iii) (A) An EC (Empowered Community) Rejection Notice is not timely delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4 of Annex D or (B) a Rejection Process Termination Notice is delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and in compliance with Section 2.4(c) of Annex D, in which case the Standard Bylaw Amendment that is the subject of the Standard Bylaw Amendment Approval shall be in full force and effect as of the date immediately following the expiration of the Rejection Action Decision Period relating to such Standard Bylaw Amendment and the effectiveness of such Standard Bylaw Amendment shall not be subject to further challenge by the EC (Empowered Community) pursuant to the EC (Empowered Community)'s rejection right as described in Article 2 of Annex D.

(f) If an EC (Empowered Community) Rejection Notice is timely delivered by the EC (Empowered Community) Administration to the Secretary pursuant to and compliance with Section 2.4 of Annex D, the Standard Bylaw Amendment contained in the Board Notice shall be deemed to have been rejected by the EC (Empowered Community). A Standard Bylaw Amendment that has been rejected by the EC (Empowered Community) shall be null and void and shall not become part of these Bylaws, notwithstanding its approval by the Board.

(g) The Secretary shall promptly inform the Board of the receipt and substance of any Rejection Action Petition, Rejection Action Supported Petition or EC (Empowered Community) Rejection Notice delivered by the Rejection Action Petitioning Decisional Participant or the EC

(Empowered Community) Administration, as applicable, to the Secretary hereunder.

(h) Following receipt of an EC (Empowered Community) Rejection Notice pertaining to a Standard Bylaw Amendment, ICANN (Internet Corporation for Assigned Names and Numbers) staff and the Board shall consider the explanation provided by the EC (Empowered Community) Administration as to why the EC (Empowered Community) has chosen to reject the Standard Bylaw Amendment in determining whether or not to develop a new Standard Bylaw Amendment and the substance of such new Standard Bylaw Amendment, which shall be subject to the procedures of this Section 25.1.

Section 25.2. AMENDMENTS TO THE FUNDAMENTAL BYLAWS AND ARTICLES OF INCORPORATION

(a) Article 1; Sections 4.2, 4.3 and 4.7; Article 6; Sections 7.1 through 7.5, inclusive, and Sections 7.8, 7.11, 7.12, 7.17, 7.24 and 7.25; those portions of Sections 8.1, 9.2(b), 10.3(i), 11.3(f) and 12.2(d)(x)(A) relating to the provision to the EC (Empowered Community) of nominations of Directors by the nominating body, Articles 16, 17, 18 and 19, Sections 22.4, 22.5, 22.7 and 22.8, Article 26, Section 27.1; Annexes D, E and F; and this Article 25 are each a "**Fundamental Bylaw**" and, collectively, are the "**Fundamental Bylaws**".

(b) Notwithstanding any other provision of these Bylaws, a Fundamental Bylaw or the Articles of Incorporation may be altered, amended, or repealed (a "**Fundamental Bylaw Amendment**" or an "**Articles Amendment**"), only upon approval by a three-fourths vote of all Directors and the approval of the EC (Empowered Community) as set forth in this Section 25.2.

(c) Prior to approval of a Fundamental Bylaw Amendment, or an Articles Amendment by the Board, a draft of the

Fundamental Bylaw Amendment or Articles Amendment, as applicable, shall be posted on the Website and shall be subject to public comment in accordance with ICANN (Internet Corporation for Assigned Names and Numbers)'s public comment processes.

(d) After reviewing the comments submitted during the public comment period, the Board may direct ICANN (Internet Corporation for Assigned Names and Numbers) staff to submit a revised draft of the Fundamental Bylaw Amendment or Articles Amendment, as applicable, and may direct ICANN (Internet Corporation for Assigned Names and Numbers) staff to conduct one or more additional public comment periods in accordance with ICANN (Internet Corporation for Assigned Names and Numbers)'s public comment processes.

(e) Within seven days after the Board's approval of a Fundamental Bylaw Amendment or Articles Amendment, as applicable, the Secretary shall (i) provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall contain the form of the approved amendment and (ii) post the Board Notice, along with a copy of the notification(s) sent to the EC (Empowered Community) Administration and the Decisional Participants, on the Website. The steps contemplated in Article 1 of Annex D shall then be followed.

(f) If the EC (Empowered Community) Administration timely delivers an EC (Empowered Community) Approval Notice (as defined in Section 1.4(b) of Annex D), the Fundamental Bylaw Amendment or Articles Amendment, as applicable, set forth in the Board Notice shall be deemed approved by the EC (Empowered Community), and, as applicable, (i) such Fundamental Bylaw Amendment shall be in full force and effect as part of these Bylaws as of the date immediately following the Secretary's receipt of the EC (Empowered Community) Approval Notice; or (ii) the Secretary shall cause

such Articles Amendment promptly to be certified by the appropriate officers of ICANN (Internet Corporation for Assigned Names and Numbers) and filed with the California Secretary of State. In the event of such approval, neither the Fundamental Bylaw Amendment nor the Articles Amendment shall be subject to any further review or approval of the EC (Empowered Community). The Secretary shall promptly inform the Board of the receipt of an EC (Empowered Community) Approval Notice.

(g) If an EC (Empowered Community) Approval Notice is not timely delivered by the EC (Empowered Community) Administration to the Secretary, the Fundamental Bylaw Amendment or Articles Amendment, as applicable, set forth in the Board Notice shall be deemed not approved by the EC (Empowered Community), shall be null and void, and, notwithstanding its approval by the Board, the Fundamental Bylaw Amendment shall not be part of these Bylaws and the Articles Amendment shall not be filed with the Secretary of State.

(h) If a Fundamental Bylaw Amendment or Articles Amendment, as applicable, is not approved by the EC (Empowered Community), ICANN (Internet Corporation for Assigned Names and Numbers) staff and the Board shall consider the concerns raised by the EC (Empowered Community) in determining whether or not to develop a new Fundamental Bylaws Amendment or Articles Amendment, as applicable, and the substance thereof, which shall be subject to the procedures of this Section 25.2.

Section 25.3. AMENDMENTS RESULTING FROM A POLICY DEVELOPMENT PROCESS

The Board shall not combine an amendment of these Bylaws that was the result of a policy development process of a Supporting Organization (Supporting Organization) (a "**PDP (Policy Development Process) Amendment**") with any

other amendment. The Board shall indicate in the applicable Board Notice whether such amendment is a PDP (Policy Development Process) Amendment.

Section 25.4. OTHER AMENDMENTS

For the avoidance of doubt, these Bylaws can only be amended as set forth in this Article 25. Neither the EC (Empowered Community), the Decisional Participants, the Supporting Organizations (Supporting Organizations), the Advisory Committees (Advisory Committees) nor any other entity or person shall have the power to directly propose amendments to these Bylaws.

ARTICLE 26 SALE OR OTHER DISPOSITION OF ALL OR SUBSTANTIALLY ALL OF ICANN (Internet Corporation for Assigned Names and Numbers)'S ASSETS

(a) ICANN (Internet Corporation for Assigned Names and Numbers) may consummate a transaction or series of transactions that would result in the sale or disposition of all or substantially all of ICANN (Internet Corporation for Assigned Names and Numbers)'s assets (an "Asset Sale") only upon approval by a three-fourths vote of all Directors and the approval of the EC (Empowered Community) as set forth in this Article 26.

(b) Prior to approval of an Asset Sale by the Board, a draft of the definitive Asset Sale agreement (an "**Asset Sale Agreement**"), shall be posted on the Website and shall be subject to public comment in accordance with ICANN (Internet Corporation for Assigned Names and Numbers)'s public comment processes.

(c) After reviewing the comments submitted during the public comment period, the Board may direct ICANN (Internet Corporation for Assigned Names and Numbers) staff to

submit a revised draft of the Asset Sale Agreement, as applicable, and may direct ICANN (Internet Corporation for Assigned Names and Numbers) staff to conduct one or more additional public comment periods in accordance with ICANN (Internet Corporation for Assigned Names and Numbers)'s public comment processes.

(d) Within seven days after the Board's approval of an Asset Sale the Secretary shall (i) provide a Board Notice to the EC (Empowered Community) Administration and the Decisional Participants, which Board Notice shall contain the form of the Asset Sale Agreement and (ii) post the Board Notice on the Website. The steps contemplated in Article 1 of Annex D shall then be followed.

(e) If the EC (Empowered Community) Administration timely delivers an EC (Empowered Community) Approval Notice for the Asset Sale pursuant to and in compliance with the procedures and requirements of Section 1.4(b) of Annex D, the Asset Sale set forth in the Board Notice shall be deemed approved by the EC (Empowered Community), and the Asset Sale may be consummated by ICANN (Internet Corporation for Assigned Names and Numbers), but only under the terms set forth in the Asset Sale Agreement. In the event of such approval, the Asset Sale shall not be subject to any further review or approval of the EC (Empowered Community). The Secretary shall promptly inform the Board of the receipt of an EC (Empowered Community) Approval Notice.

(f) If an EC (Empowered Community) Approval Notice is not timely delivered by the EC (Empowered Community) Administration to the Secretary, the Asset Sale set forth in the Board Notice shall be deemed not approved by the EC (Empowered Community), shall be null and void, and, notwithstanding its approval by the Board, ICANN (Internet Corporation for Assigned Names and Numbers) shall not consummate the Asset Sale.

(g) If an Asset Sale is not approved by the EC (Empowered Community), ICANN (Internet Corporation for Assigned Names and Numbers) staff and the Board shall consider the concerns raised by the EC (Empowered Community) in determining whether or not to consider a new Asset Sale, and the substance thereof, which shall be subject to the procedures of this Article 26.

ARTICLE 27 TRANSITION ARTICLE

Section 27.1. WORK STREAM 2

(a) The Cross-Community Working Group on Enhancing ICANN (Internet Corporation for Assigned Names and Numbers) Accountability ("CCWG-Accountability") was established pursuant to a charter dated 3 November 2014 ("**CCWG-Accountability Charter**"). The CCWG-Accountability Charter was subsequently adopted by the GNSO (Generic Names Supporting Organization), ALAC (At-Large Advisory Committee), ccNSO (Country Code Names Supporting Organization), GAC (Governmental Advisory Committee), ASO (Address Supporting Organization) and SSAC (Security and Stability Advisory Committee) ("**CCWG Chartering Organizations**"). The CCWG-Accountability Charter as in effect on 3 November 2014 shall remain in effect throughout Work Stream 2 (as defined therein).

(b) The CCWG-Accountability recommended in its Supplemental Final Proposal on Work Stream 1 Recommendations to the Board, dated 23 February 2016 ("**CCWG-Accountability Final Report**") that the below matters be reviewed and developed following the adoption date of these Bylaws ("**Work Stream 2 Matters**"), in each case, to the extent set forth in the CCWG-Accountability Final Report:

(i) Improvements to ICANN (Internet Corporation for Assigned Names and Numbers)'s standards for

diversity at all levels;

(ii) ICANN (Internet Corporation for Assigned Names and Numbers) staff accountability;

(iii) Supporting Organization (Supporting Organization) and Advisory Committee (Advisory Committee) accountability, including but not limited to improved processes for accountability, transparency, and participation that are helpful to prevent capture;

(iv) Improvements to ICANN (Internet Corporation for Assigned Names and Numbers)'s transparency, focusing on enhancements to ICANN (Internet Corporation for Assigned Names and Numbers)'s existing DIDP, transparency of ICANN (Internet Corporation for Assigned Names and Numbers)'s interactions with governments, improvements to ICANN (Internet Corporation for Assigned Names and Numbers)'s whistleblower policy and transparency of Board deliberations;

(v) Developing and clarifying the FOI-HR (as defined in Section 27.2);

(vi) Addressing jurisdiction-related questions, including how choice of jurisdiction and applicable laws for dispute settlement impact ICANN (Internet Corporation for Assigned Names and Numbers)'s accountability;

(vii) Considering enhancements to the Ombudsman's role and function;

(viii) Guidelines for standards of conduct presumed to be in good faith associated with exercising removal of individual Directors; and

(ix) Reviewing the CEP (as set forth in Section 4.3).

(c) As provided in the CCWG-Accountability Charter and the Board's 2014.10.16.16 resolution, the Board shall consider consensus-based recommendations from the CCWG-Accountability on Work Stream 2 Matters ("**Work Stream 2 Recommendations**") with the same process and criteria it committed to using to consider the CCWG-Accountability recommendations in the CCWG-Accountability Final Report ("**Work Stream 1 Recommendations**"). For the avoidance of doubt, that process and criteria includes:

(i) All Work Stream 2 Recommendations must further the following principles:

(A) Support and enhance the multistakeholder model;

(B) Maintain the security, stability and resiliency of the DNS (Domain Name System);

(C) Meet the needs and expectations of the global customers and partners of the IANA (Internet Assigned Numbers Authority) services;

(D) Maintain the openness of the Internet; and

(E) Not result in ICANN (Internet Corporation for Assigned Names and Numbers) becoming a government-led or an inter-governmental organization.

(ii) If the Board determines, by a vote of a two-thirds majority of the Board, that it is not in the global public interest to implement a Work Stream 2 Recommendation, it must initiate a dialogue with the CCWG-Accountability.

(iii) The Board shall provide detailed rationale to accompany the initiation of dialogue. The Board and the CCWG-Accountability shall mutually agree upon the method (e.g., by teleconference, email or

otherwise) by which the dialogue will occur. Discussions shall be held in good faith and in a timely and efficient manner in an effort to find a mutually acceptable solution.

(iv) The CCWG-Accountability shall have an opportunity to address the Board's concerns and report back to the Board on further deliberations regarding the Board's concerns. The CCWG-Accountability shall discuss the Board's concerns within 30 days of the Board's initiation of the dialogue.

If a Work Stream 2 Recommendation is modified by the CCWG-Accountability, the CCWG-Accountability shall submit the modified Work Stream 2 Recommendation to the Board for further consideration along with detailed rationale on how the modification addresses the concerns raised by the Board.

(v) If, after the CCWG-Accountability modifies a Work Stream 2 Recommendation, the Board still believes it is not in the global public interest to implement the Work Stream 2 Recommendation, the Board may, by a vote of a two-thirds majority of the Board, send the matter back to the CCWG-Accountability for further consideration. The Board shall provide detailed rationale to accompany its action. If the Board determines not to accept a modified version of a Work Stream 2 Recommendation, unless required by its fiduciary obligations, the Board shall not establish an alternative solution on the issue addressed by the Work Stream 2 Recommendation until such time as the CCWG-Accountability and the Board reach agreement.

(d) ICANN (Internet Corporation for Assigned Names and Numbers) shall provide adequate support for work on Work

Stream 2 Matters, within budgeting processes and limitations reasonably acceptable to the CCWG-Accountability.

(e) The Work Stream 2 Matters specifically referenced in Section 27.1(b) shall be the only matters subject to this Section 27.1 and any other accountability enhancements should be developed through ICANN (Internet Corporation for Assigned Names and Numbers)'s other procedures.

(f) The outcomes of each Work Stream 2 Matter are not limited and could include a variety of recommendations or no recommendation; provided, however, that any resulting recommendations must directly relate to the matters discussed in Section 27.1(b).

Section 27.2. HUMAN RIGHTS

(a) The Core Value set forth in Section 1.2(b)(viii) shall have no force or effect unless and until a framework of interpretation for human rights ("**FOI-HR**") is (i) approved for submission to the Board by the CCWG-Accountability as a consensus recommendation in Work Stream 2, with the CCWG Chartering Organizations having the role described in the CCWG-Accountability Charter, and (ii) approved by the Board, in each case, using the same process and criteria as for Work Stream 1 Recommendations.>

(b) No person or entity shall be entitled to invoke the reconsideration process provided in Section 4.2, or the independent review process provided in Section 4.3, based solely on the inclusion of the Core Value set forth in Section 1.2(b)(viii). (i) until after the FOI-HR contemplated by Section 27.2(a) is in place or (ii) for actions of ICANN (Internet Corporation for Assigned Names and Numbers) or the Board that occurred prior to the effectiveness of the FOI-HR.

Section 27.3. EXISTING GROUPS AND TASK

FORCES

Notwithstanding the adoption or effectiveness of these Bylaws, task forces and other groups in existence prior to the date of these Bylaws shall continue unchanged in membership, scope, and operation unless and until changes are made by ICANN (Internet Corporation for Assigned Names and Numbers) in compliance with the Bylaws.

Section 27.4. CONTRACTS WITH ICANN (Internet Corporation for Assigned Names and Numbers)

Notwithstanding the adoption or effectiveness of these Bylaws, all agreements, including employment and consulting agreements, entered into by ICANN (Internet Corporation for Assigned Names and Numbers) shall continue in effect according to their terms.

Annex A: GNSO (Generic Names Supporting Organization) Policy Development Process

The following process shall govern the GNSO (Generic Names Supporting Organization) policy development process ("**PDP (Policy Development Process)**") until such time as modifications are recommended to and approved by the Board. The role of the GNSO (Generic Names Supporting Organization) is outlined in Article 11 of these Bylaws. If the GNSO (Generic Names Supporting Organization) is conducting activities that are not intended to result in a Consensus (Consensus) Policy, the Council may act through other processes.

Section 1. Required Elements of a Policy Development Process

The following elements are required at a minimum to form Consensus (Consensus) Policies as defined within ICANN (Internet Corporation for Assigned Names and Numbers)

contracts, and any other policies for which the GNSO (Generic Names Supporting Organization) Council requests application of this Annex A:

- a. Final Issue Report requested by the Board, the GNSO (Generic Names Supporting Organization) Council ("Council") or Advisory Committee (Advisory Committee), which should include at a minimum a) the proposed issue raised for consideration, b) the identity of the party submitting the issue, and c) how that party is affected by the issue;
- b. Formal initiation of the Policy Development Process by the Council;
- c. Formation of a Working Group or other designated work method;
- d. Initial Report produced by a Working Group or other designated work method;
- e. Final Report produced by a Working Group, or other designated work method, and forwarded to the Council for deliberation;
- f. Council approval of PDP (Policy Development Process) Recommendations contained in the Final Report, by the required thresholds;
- g. PDP (Policy Development Process) Recommendations and Final Report shall be forwarded to the Board through a Recommendations Report approved by the Council; and
- h. Board approval of PDP (Policy Development Process) Recommendations.

Section 2. **Policy Development Process Manual**

The GNSO (Generic Names Supporting Organization) shall maintain a Policy Development Process Manual ("PDP

(Policy Development Process) Manual") within the operating procedures of the GNSO (Generic Names Supporting Organization) maintained by the GNSO (Generic Names Supporting Organization) Council. The PDP (Policy Development Process) Manual shall contain specific additional guidance on completion of all elements of a PDP (Policy Development Process), including those elements that are not otherwise defined in these Bylaws. The PDP (Policy Development Process) Manual and any amendments thereto are subject to a twenty-one (21) day public comment period at minimum, as well as Board oversight and review, as specified at Section 11.3(d).

Section 3. Requesting an Issue Report

Board Request. The Board may request an Issue Report by instructing the GNSO (Generic Names Supporting Organization) Council ("Council") to begin the process outlined the PDP (Policy Development Process) Manual. In the event the Board makes a request for an Issue Report, the Board should provide a mechanism by which the GNSO (Generic Names Supporting Organization) Council can consult with the Board to provide information on the scope, timing, and priority of the request for an Issue Report.

Council Request. The GNSO (Generic Names Supporting Organization) Council may request an Issue Report by a vote of at least one-fourth (1/4) of the members of the Council of each House or a majority of one House.

Advisory Committee (Advisory Committee) Request. An Advisory Committee (Advisory Committee) may raise an issue for policy development by action of such committee to request an Issue Report, and transmission of that request to the Staff Manager and GNSO (Generic Names Supporting Organization) Council.

Section 4. Creation of an Issue Report

Within forty-five (45) calendar days after receipt of either (i) an instruction from the Board; (ii) a properly supported motion from the GNSO (Generic Names Supporting Organization) Council; or (iii) a properly supported motion from an Advisory Committee (Advisory Committee), the Staff Manager will create a report (a "**Preliminary Issue Report**"). In the event the Staff Manager determines that more time is necessary to create the Preliminary Issue Report, the Staff Manager may request an extension of time for completion of the Preliminary Issue Report.

The following elements should be considered in the Issue Report:

- a. The proposed issue raised for consideration;
- b. The identity of the party submitting the request for the Issue Report;
- c. How that party is affected by the issue, if known;
- d. Support for the issue to initiate the PDP (Policy Development Process), if known;
- e. The opinion of the ICANN (Internet Corporation for Assigned Names and Numbers) General Counsel regarding whether the issue proposed for consideration within the Policy Development Process is properly within the scope of the Mission, policy process and more specifically the role of the GNSO (Generic Names Supporting Organization) as set forth in the Bylaws.
- f. The opinion of ICANN (Internet Corporation for Assigned Names and Numbers) Staff as to whether the Council should initiate the PDP (Policy Development Process) on the issue.

Upon completion of the Preliminary Issue Report, the Preliminary Issue Report shall be posted on the Website for

a public comment period that complies with the designated practice for public comment periods within ICANN (Internet Corporation for Assigned Names and Numbers).

The Staff Manager is responsible for drafting a summary and analysis of the public comments received on the Preliminary Issue Report and producing a Final Issue Report based upon the comments received. The Staff Manager should forward the Final Issue Report, along with any summary and analysis of the public comments received, to the Chair of the GNSO (Generic Names Supporting Organization) Council for consideration for initiation of a PDP (Policy Development Process).

Section 5. Initiation of the PDP (Policy Development Process)

The Council may initiate the PDP (Policy Development Process) as follows:

Board Request: If the Board requested an Issue Report, the Council, within the timeframe set forth in the PDP (Policy Development Process) Manual, shall initiate a PDP (Policy Development Process). No vote is required for such action.

GNSO (Generic Names Supporting Organization) Council or Advisory Committee (Advisory Committee) Requests: The Council may only initiate the PDP (Policy Development Process) by a vote of the Council. Initiation of a PDP (Policy Development Process) requires a vote as set forth in Section 11.3(i)(ii) and Section 11.3(i)(iii) in favor of initiating the PDP (Policy Development Process).

Section 6. Reports

An Initial Report should be delivered to the GNSO (Generic Names Supporting Organization) Council and posted for a public comment period that complies with the designated practice for public comment periods within ICANN (Internet

Corporation for Assigned Names and Numbers), which time may be extended in accordance with the PDP (Policy Development Process) Manual. Following the review of the comments received and, if required, additional deliberations, a Final Report shall be produced for transmission to the Council.

Section 7. Council Deliberation

Upon receipt of a Final Report, whether as the result of a working group or otherwise, the Council chair will (i) distribute the Final Report to all Council members; and (ii) call for Council deliberation on the matter in accordance with the PDP (Policy Development Process) Manual.

The Council approval process is set forth in Section 11.3(i)(iv) through Section 11.3(vii), as supplemented by the PDP (Policy Development Process) Manual.

Section 8. Preparation of the Board Report

If the PDP (Policy Development Process) recommendations contained in the Final Report are approved by the GNSO (Generic Names Supporting Organization) Council, a Recommendations Report shall be approved by the GNSO (Generic Names Supporting Organization) Council for delivery to the Board.

Section 9. Board Approval Processes

The Board will meet to discuss the GNSO (Generic Names Supporting Organization) Council recommendation as soon as feasible, but preferably not later than the second meeting after receipt of the Board Report from the Staff Manager. Board deliberation on the PDP (Policy Development Process) Recommendations contained within the Recommendations Report shall proceed as follows:

- a. Any PDP (Policy Development Process) Recommendations approved by a GNSO (Generic Names Supporting Organization) Supermajority Vote shall be adopted by the Board unless, by a vote of more than two-thirds (2/3) of the Board, the Board determines that such policy is not in the best interests of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers). If the GNSO (Generic Names Supporting Organization) Council recommendation was approved by less than a GNSO (Generic Names Supporting Organization) Supermajority Vote, a majority vote of the Board will be sufficient to determine that such policy is not in the best interests of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers).
- b. In the event that the Board determines, in accordance with paragraph a above, that the policy recommended by a GNSO (Generic Names Supporting Organization) Supermajority Vote or less than a GNSO (Generic Names Supporting Organization) Supermajority vote is not in the best interests of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers) (the Corporation), the Board shall (i) articulate the reasons for its determination in a report to the Council (the "**Board Statement**"); and (ii) submit the Board Statement to the Council.
- c. The Council shall review the Board Statement for discussion with the Board as soon as feasible after the Council's receipt of the Board Statement. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board will discuss the Board Statement.

- d. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its recommendation, and communicate that conclusion (the "**Supplemental Recommendation**") to the Board, including an explanation for the then-current recommendation. In the event that the Council is able to reach a GNSO (Generic Names Supporting Organization) Supermajority Vote on the Supplemental Recommendation, the Board shall adopt the recommendation unless more than two-thirds (2/3) of the Board determines that such policy is not in the interests of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers). For any Supplemental Recommendation approved by less than a GNSO (Generic Names Supporting Organization) Supermajority Vote, a majority vote of the Board shall be sufficient to determine that the policy in the Supplemental Recommendation is not in the best interest of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers).

Section 10. Implementation of Approved Policies

Upon a final decision of the Board adopting the policy, the Board shall, as appropriate, give authorization or direction to ICANN (Internet Corporation for Assigned Names and Numbers) staff to work with the GNSO (Generic Names Supporting Organization) Council to create an implementation plan based upon the implementation recommendations identified in the Final Report, and to implement the policy. The GNSO (Generic Names Supporting Organization) Council may, but is not required to, direct the creation of an implementation review team to assist in implementation of the policy.

Section 11. Maintenance of Records

Throughout the PDP (Policy Development Process), from policy suggestion to a final decision by the Board, ICANN (Internet Corporation for Assigned Names and Numbers) will maintain on the Website, a status web page detailing the progress of each PDP (Policy Development Process) issue. Such status page will outline the completed and upcoming steps in the PDP (Policy Development Process) process, and contain links to key resources (e.g. Reports, Comments Fora, WG (Working Group) Discussions, etc.).

Section 12. Additional Definitions

"Comment Site", "Comment Forum", "Comments For a" and "Website" refer to one or more websites designated by ICANN (Internet Corporation for Assigned Names and Numbers) on which notifications and comments regarding the PDP (Policy Development Process) will be posted.

"Supermajority Vote" means a vote of more than sixty-six (66) percent of the members present at a meeting of the applicable body, with the exception of the GNSO (Generic Names Supporting Organization) Council.

"Staff Manager" means an ICANN (Internet Corporation for Assigned Names and Numbers) staff person(s) who manages the PDP (Policy Development Process).

"GNSO (Generic Names Supporting Organization) Supermajority Vote" shall have the meaning set forth in the Bylaws.

Section 13. Applicability

The procedures of this Annex A shall be applicable to all requests for Issue Reports and PDPs initiated after 8 December 2011. For all ongoing PDPs initiated prior to 8 December 2011, the Council shall determine the feasibility of

transitioning to the procedures set forth in this Annex A for all remaining steps within the PDP (Policy Development Process). If the Council determines that any ongoing PDP (Policy Development Process) cannot be feasibly transitioned to these updated procedures, the PDP (Policy Development Process) shall be concluded according to the procedures set forth in Annex A in force on 7 December 2011.

Annex A-1: GNSO (Generic Names Supporting Organization) Expedited Policy Development Process

The following process shall govern the specific instances where the GNSO (Generic Names Supporting Organization) Council invokes the GNSO (Generic Names Supporting Organization) Expedited Policy Development Process ("EPDP"). The GNSO (Generic Names Supporting Organization) Council may invoke the EPDP in the following limited circumstances: (1) to address a narrowly defined policy issue that was identified and scoped after either the adoption of a GNSO (Generic Names Supporting Organization) policy recommendation by the Board or the implementation of such an adopted recommendation; or (2) to create new or additional recommendations for a specific policy issue that had been substantially scoped previously such that extensive, pertinent background information already exists, e.g. (a) in an Issue Report for a possible PDP (Policy Development Process) that was not initiated; (b) as part of a previous PDP (Policy Development Process) that was not completed; or (c) through other projects such as a GGP. The following process shall be in place until such time as modifications are recommended to and approved by the Board. Where a conflict arises in relation to an EPDP between the PDP (Policy Development Process) Manual (see Annex 2 of the GNSO (Generic Names Supporting Organization) Operating Procedures) and the procedures

described in this Annex A-1, the provisions of this Annex A-1 shall prevail.

The role of the GNSO (Generic Names Supporting Organization) is outlined in Article 11 of these Bylaws. Provided the Council believes and documents via Council vote that the above-listed criteria are met, an EPDP may be initiated to recommend an amendment to an existing Consensus (Consensus) Policy; however, in all cases where the GNSO (Generic Names Supporting Organization) is conducting policy-making activities that do not meet the above criteria as documented in a Council vote, the Council should act through a Policy Development Process (see Annex A).

Section 1. Required Elements of a GNSO (Generic Names Supporting Organization) Expedited Policy Development Process

The following elements are required at a minimum to develop expedited GNSO (Generic Names Supporting Organization) policy recommendations, including recommendations that could result in amendments to an existing Consensus (Consensus) Policy, as part of a GNSO (Generic Names Supporting Organization) Expedited Policy Development Process:

- a. Formal initiation of the GNSO (Generic Names Supporting Organization) Expedited Policy Development Process by the GNSO (Generic Names Supporting Organization) Council, including an EPDP scoping document;
- b. Formation of an EPDP Team or other designated work method;
- c. Initial Report produced by an EPDP Team or other designated work method;

- d. Final EPDP Policy Recommendation(s) Report produced by an EPDP Team, or other designated work method, and forwarded to the Council for deliberation;
- e. GNSO (Generic Names Supporting Organization) Council approval of EPDP Policy Recommendations contained in the Final EPDP Policy Recommendation(s) Report, by the required thresholds;
- f. EPDP Recommendations and Final EPDP Recommendation(s) Report forwarded to the Board through a Recommendations Report approved by the Council; and
- g. Board approval of EPDP Recommendation(s).

Section 2. **Expedited Policy Development Process Manual**

The GNSO (Generic Names Supporting Organization) shall include a specific section(s) on the EPDP process as part of its maintenance of the GNSO (Generic Names Supporting Organization) Policy Development Process Manual (PDP (Policy Development Process) Manual), described in Annex 5 of the GNSO (Generic Names Supporting Organization) Operating Procedures. The EPDP Manual shall contain specific additional guidance on completion of all elements of an EPDP, including those elements that are not otherwise defined in these Bylaws. The E PDP (Policy Development Process) Manual and any amendments thereto are subject to a twenty-one (21) day public comment period at minimum, as well as Board oversight and review, as specified at Section 11.3(d).

Section 3. **Initiation of the EPDP**

The Council may initiate an EPDP as follows:

The Council may only initiate the EPDP by a vote of the Council. Initiation of an EPDP requires an affirmative Supermajority vote of the Council (as defined in Section 11.3(i)(xii) of these Bylaws) in favor of initiating the EPDP.

The request to initiate an EPDP must be accompanied by an EPDP scoping document, which is expected to include at a minimum the following information:

1. Name of Council Member / SG (Stakeholder Group) / C;
2. Origin of issue (e.g. previously completed PDP (Policy Development Process));
3. Scope of the effort (detailed description of the issue or question that the EPDP is expected to address);
4. Description of how this issue meets the criteria for an EPDP, i.e. how the EPDP will address either: (1) a narrowly defined policy issue that was identified and scoped after either the adoption of a GNSO (Generic Names Supporting Organization) policy recommendation by the Board or the implementation of such an adopted recommendation, or (2) new or additional policy recommendations on a specific GNSO (Generic Names Supporting Organization) policy issue that had been scoped previously as part of a PDP (Policy Development Process) that was not completed or other similar effort, including relevant supporting information in either case;
5. If not provided as part of item 4, the opinion of the ICANN (Internet Corporation for Assigned Names and Numbers) General Counsel as to whether the issue proposed for consideration is properly within the scope of the Mission, policy process and more specifically the role of the GNSO (Generic Names Supporting Organization);

6. Proposed EPDP mechanism (e.g. WG (Working Group), DT (Drafting Team), individual volunteers);
7. Method of operation, if different from GNSO (Generic Names Supporting Organization) Working Group Guidelines;
8. Decision-making methodology for EPDP mechanism, if different from GNSO (Generic Names Supporting Organization) Working Group Guidelines;
9. Target completion date.

Section 4. **Council Deliberation**

Upon receipt of an EPDP Final Recommendation(s) Report, whether as the result of an EPDP Team or otherwise, the Council chair will (i) distribute the Final EPDP Recommendation(s) Report to all Council members; and (ii) call for Council deliberation on the matter in accordance with the PDP (Policy Development Process) Manual.

Approval of EPDP Recommendation(s) requires an affirmative vote of the Council meeting the thresholds set forth in Section 11.3(i)(xiv) and (xv), as supplemented by the PDP (Policy Development Process) Manual.

Section 5. **Preparation of the Board Report**

If the EPDP Recommendation(s) contained in the Final EPDP Recommendation(s) Report are approved by the GNSO (Generic Names Supporting Organization) Council, a Recommendation(s) Report shall be approved by the GNSO (Generic Names Supporting Organization) Council for delivery to the Board.

Section 6. **Board Approval Processes**

The Board will meet to discuss the EPDP recommendation(s) as soon as feasible, but preferably not later than the second

meeting after receipt of the Recommendations Report from the Staff Manager. Board deliberation on the EPDP Recommendations contained within the Recommendations Report shall proceed as follows:

- a. Any EPDP Recommendations approved by a GNSO (Generic Names Supporting Organization) Supermajority Vote shall be adopted by the Board unless, by a vote of more than two-thirds (2/3) of the Board, the Board determines that such policy is not in the best interests of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers). If the GNSO (Generic Names Supporting Organization) Council recommendation was approved by less than a GNSO (Generic Names Supporting Organization) Supermajority Vote, a majority vote of the Board will be sufficient to determine that such policy is not in the best interests of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers).
- b. In the event that the Board determines, in accordance with paragraph a above, that the proposed EPDP Recommendations are not in the best interests of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers) (the Corporation), the Board shall (i) articulate the reasons for its determination in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council.
- c. The Council shall review the Board Statement for discussion with the Board as soon as feasible after the Council's receipt of the Board Statement. The Board shall determine the method (e.g., by

teleconference, e-mail, or otherwise) by which the Council and Board will discuss the Board Statement.

At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its recommendation, and communicate that conclusion (the "Supplemental Recommendation") to the Board, including an explanation for the then-current recommendation. In the event that the Council is able to reach a GNSO (Generic Names Supporting Organization) Supermajority Vote on the Supplemental Recommendation, the Board shall adopt the recommendation unless more than two-thirds (2/3) of the Board determines that such guidance is not in the interests of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers). For any Supplemental Recommendation approved by less than a GNSO (Generic Names Supporting Organization) Supermajority Vote, a majority vote of the Board shall be sufficient to determine that the guidance in the Supplemental Recommendation is not in the best interest of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers).

Section 7. **Implementation of Approved Policies**

Upon a final decision of the Board adopting the EPDP recommendations, the Board shall, as appropriate, give authorization or direction to ICANN (Internet Corporation for Assigned Names and Numbers) staff to implement the EPDP Recommendations. If deemed necessary, the Board shall direct ICANN (Internet Corporation for Assigned Names and Numbers) staff to work with the GNSO (Generic Names Supporting Organization) Council to create a guidance implementation plan, based upon the guidance recommendations identified in the Final EPDP Recommendation(s) Report.

Section 8. **Maintenance of Records**

Throughout the EPDP, from initiation to a final decision by the Board, ICANN (Internet Corporation for Assigned Names and Numbers) will maintain on the Website, a status web page detailing the progress of each EPDP issue. Such status page will outline the completed and upcoming steps in the EPDP process, and contain links to key resources (e.g. Reports, Comments Fora, EPDP Discussions, etc.).

Section 9. **Applicability**

The procedures of this Annex A-1 shall be applicable from 28 September 2015 onwards.

Annex A-2: GNSO (Generic Names Supporting Organization) Guidance Process

The following process shall govern the GNSO (Generic Names Supporting Organization) guidance process ("**GGP**") until such time as modifications are recommended to and approved by the Board . The role of the GNSO (Generic Names Supporting Organization) is outlined in Article 11 of these Bylaws. If the GNSO (Generic Names Supporting Organization) is conducting activities that are intended to result in a Consensus (Consensus) Policy, the Council should act through a Policy Development Process (see Annex A).

Section 1. Required Elements of a GNSO (Generic Names Supporting Organization) Guidance Process

The following elements are required at a minimum to develop GNSO (Generic Names Supporting Organization) guidance:

1. Formal initiation of the GNSO (Generic Names Supporting Organization) Guidance Process by the Council, including a GGP scoping document;

2. Identification of the types of expertise needed on the GGP Team;
3. Recruiting and formation of a GGP Team or other designated work method;
4. Proposed GNSO (Generic Names Supporting Organization) Guidance Recommendation(s) Report produced by a GGP Team or other designated work method;
5. Final GNSO (Generic Names Supporting Organization) Guidance Recommendation(s) Report produced by a GGP Team, or other designated work method, and forwarded to the Council for deliberation;
6. Council approval of GGP Recommendations contained in the Final Recommendation(s) Report, by the required thresholds;
7. GGP Recommendations and Final Recommendation(s) Report shall be forwarded to the Board through a Recommendations Report approved by the Council; and
8. Board approval of GGP Recommendation(s).

Section 2. **GNSO (Generic Names Supporting Organization) Guidance Process Manual**

The GNSO (Generic Names Supporting Organization) shall maintain a GNSO (Generic Names Supporting Organization) Guidance Process (GGP Manual) within the operating procedures of the GNSO (Generic Names Supporting Organization) maintained by the GNSO (Generic Names Supporting Organization) Council. The GGP Manual shall contain specific additional guidance on completion of all elements of a GGP, including those elements that are not otherwise defined in these Bylaws. The GGP Manual and any amendments thereto are subject to a twenty-one (21)

day public comment period at minimum, as well as Board oversight and review, as specified at [Section 11.3\(d\)](#).

Section 3. Initiation of the GGP

The Council may initiate a GGP as follows:

The Council may only initiate the GGP by a vote of the Council or at the formal request of the [ICANN \(Internet Corporation for Assigned Names and Numbers\) Board](#). Initiation of a GGP requires a vote as set forth in [Section 11.3\(i\)\(xvi\)](#) in favor of initiating the GGP. In the case of a GGP requested by the Board, a GGP will automatically be initiated unless the [GNSO \(Generic Names Supporting Organization\) Council](#) votes against the initiation of a GGP as set forth in [Section 11.3\(i\)\(xvii\)](#).

The request to initiate a GGP must be accompanied by a GGP scoping document, which is expected to include at a minimum the following information:

1. Name of Council Member / [SG \(Stakeholder Group\)](#) / C
2. Origin of issue (e.g., board request)
3. Scope of the effort (detailed description of the issue or question that the GGP is expected to address)
4. Proposed GGP mechanism (e.g. [WG \(Working Group\)](#), [DT \(Drafting Team\)](#), individual volunteers)
5. Method of operation, if different from [GNSO \(Generic Names Supporting Organization\) Working Group Guidelines](#)
6. Decision-making methodology for GGP mechanism, if different from [GNSO \(Generic Names Supporting Organization\) Working Group Guidelines](#)
7. Desired completion date and rationale

In the event the Board makes a request for a GGP, the Board should provide a mechanism by which the GNSO (Generic Names Supporting Organization) Council can consult with the Board to provide information on the scope, timing, and priority of the request for a GGP.

Section 4. **Council Deliberation**

Upon receipt of a Final Recommendation(s) Report, whether as the result of a GGP Team or otherwise, the Council chair will (i) distribute the Final Recommendation(s) Report to all Council members; and (ii) call for Council deliberation on the matter in accordance with the GGP Manual.

The Council approval process is set forth in Section 11.3(xviii) as supplemented by the GGP Manual.

Section 5. **Preparation of the Board Report**

If the GGP recommendations contained in the Final Recommendation(s) Report are approved by the GNSO (Generic Names Supporting Organization) Council, a Recommendations Report shall be approved by the GNSO (Generic Names Supporting Organization) Council for delivery to the Board.

Section 6. **Board Approval Processes**

The Board will meet to discuss the GNSO (Generic Names Supporting Organization) Guidance recommendation(s) as soon as feasible, but preferably not later than the second meeting after receipt of the Board Report from the Staff Manager. Board deliberation on the GGP Recommendations contained within the Recommendations Report shall proceed as follows:

- a. Any GGP Recommendations approved by a GNSO (Generic Names Supporting Organization) Supermajority Vote shall be adopted by the Board

unless, by a vote of more than two-thirds (2/3) of the Board, the Board determines that such guidance is not in the best interests of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers).

- b. In the event that the Board determines, in accordance with paragraph a above, that the proposed GNSO (Generic Names Supporting Organization) Guidance recommendation(s) adopted by a GNSO (Generic Names Supporting Organization) Supermajority Vote is not in the best interests of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers) (the Corporation), the Board shall (i) articulate the reasons for its determination in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council.
- c. The Council shall review the Board Statement for discussion with the Board as soon as feasible after the Council's receipt of the Board Statement. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board will discuss the Board Statement.
- d. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its recommendation, and communicate that conclusion (the "Supplemental Recommendation") to the Board, including an explanation for the then-current recommendation. In the event that the Council is able to reach a GNSO (Generic Names Supporting Organization) Supermajority Vote on the Supplemental Recommendation, the Board shall adopt the recommendation unless more than two-thirds (2/3) of the Board determines that such

guidance is not in the interests of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers).

Section 7. Implementation of Approved GNSO (Generic Names Supporting Organization) Guidance

Upon a final decision of the Board adopting the guidance, the Board shall, as appropriate, give authorization or direction to ICANN (Internet Corporation for Assigned Names and Numbers) staff to implement the GNSO (Generic Names Supporting Organization) Guidance. If deemed necessary, the Board may direct ICANN (Internet Corporation for Assigned Names and Numbers) Staff to work with the GNSO (Generic Names Supporting Organization) Council to create a guidance implementation plan, if deemed necessary, based upon the guidance recommendations identified in the Final Recommendation(s) Report.

Section 8. Maintenance of Records

Throughout the GGP, from initiation to a final decision by the Board, ICANN (Internet Corporation for Assigned Names and Numbers) will maintain on the Website, a status web page detailing the progress of each GGP issue. Such status page will outline the completed and upcoming steps in the GGP process, and contain links to key resources (e.g. Reports, Comments Fora, GGP Discussions, etc.).

Section 9. Additional Definitions

"Comment Site", **"Comment Forum"**, **"Comments Fora"** and **"Website"** refer to one or more websites designated by ICANN (Internet Corporation for Assigned Names and Numbers) on which notifications and comments regarding the GGP will be posted.

"**GGP Staff Manager**" means an ICANN (Internet Corporation for Assigned Names and Numbers) staff person(s) who manages the GGP.

Annex B: ccNSO (Country Code Names Supporting Organization) Policy-Development Process (ccPDP)

The following process shall govern the ccNSO (Country Code Names Supporting Organization) policy-development process ("**PDP (Policy Development Process)**").

1. Request for an Issue Report

An Issue Report may be requested by any of the following:

- a. *Council*. The ccNSO (Country Code Names Supporting Organization) Council (in this Annex B, the "**Council**") may call for the creation of an Issue Report by documentation of support from at least seven of the members of the Council present at any meeting or voting by electronic means.
- b. *Board*. The Board may call for the creation of an Issue Report by requesting the Council to begin the policy-development process.
- c. *Regional Organization*. One or more of the Regional Organizations representing ccTLDs in the ICANN (Internet Corporation for Assigned Names and Numbers) recognized Regions may call for creation of an Issue Report by requesting the Council to begin the policy-development process.
- d. *ICANN (Internet Corporation for Assigned Names and Numbers) Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee)*. An ICANN (Internet Corporation for Assigned Names and Numbers) Supporting

Organization (Supporting Organization) or an ICANN (Internet Corporation for Assigned Names and Numbers) Advisory Committee (Advisory Committee) may call for creation of an Issue Report by requesting the Council to begin the policy-development process.

- e. *Members of the ccNSO (Country Code Names Supporting Organization)*. At least ten members of the ccNSO (Country Code Names Supporting Organization) from at least ten different Territories may call for the creation of an Issue Report at any meeting or by electronic means.

Any request for an Issue Report must be in writing and must set out the issue upon which an Issue Report is requested in sufficient detail to enable the Issue Report to be prepared. It shall be open to the Council to request further information or undertake further research or investigation.

2. Creation of the Issue Report and Initiation Threshold

Within fourteen (14) days after the receipt of a request as outlined in Item 1 above the Council shall appoint an Issue Manager. The Issue Manager may be a staff member of ICANN (Internet Corporation for Assigned Names and Numbers) (in which case the costs of the Issue Manager shall be borne by ICANN (Internet Corporation for Assigned Names and Numbers)) or such other person or persons selected by the Council (in which case the ccNSO (Country Code Names Supporting Organization) shall be responsible for the costs of the Issue Manager).

Within fifteen (15) calendar days after appointment (or such other time as the Council shall, in consultation with the Issue Manager, deem to be appropriate), the Issue Manager shall create an Issue Report. Each Issue Report shall contain at least the following:

- a. The proposed issue raised for consideration;

- b. The identity of the party submitting the issue;
- c. How that party is affected by the issue;
- d. Support for the issue to initiate the PDP (Policy Development Process);
- e. A recommendation from the Issue Manager as to whether the Council should move to initiate the PDP (Policy Development Process) for this issue (the "**Manager Recommendation**"). Each Manager Recommendation shall include, and be supported by, an opinion of the ICANN (Internet Corporation for Assigned Names and Numbers) General Counsel regarding whether the issue is properly within the scope of the ICANN (Internet Corporation for Assigned Names and Numbers) policy process and within the scope of the ccNSO (Country Code Names Supporting Organization). In coming to his or her opinion, the General Counsel shall examine whether:
 - 1) The issue is within the scope of the Mission;
 - 2) Analysis of the relevant factors according to Section 10.6(b) and Annex C affirmatively demonstrates that the issue is within the scope of the ccNSO (Country Code Names Supporting Organization);In the event that the General Counsel reaches an opinion in the affirmative with respect to points 1 and 2 above then the General Counsel shall also consider whether the issue:
 - 3) Implicates or affects an existing ICANN (Internet Corporation for Assigned Names and Numbers) policy;
 - 4) Is likely to have lasting value or applicability, albeit with the need for occasional updates, and to establish a guide or framework for future decision-making.

In all events, consideration of revisions to the ccPDP (this Annex B) or to the scope of the ccNSO (Country Code Names Supporting Organization) (Annex C) shall be within the scope of ICANN (Internet Corporation for Assigned Names and Numbers) and the ccNSO (Country Code Names Supporting Organization).

In the event that General Counsel is of the opinion the issue is not properly within the scope of the ccNSO (Country Code Names Supporting Organization) Scope, the Issue Manager shall inform the Council of this opinion. If after an analysis of the relevant factors according to Section 10.6 and Annex C a majority of 10 or more Council members is of the opinion the issue is within scope the Chair of the ccNSO (Country Code Names Supporting Organization) shall inform the Issue Manager accordingly. General Counsel and the ccNSO (Country Code Names Supporting Organization) Council shall engage in a dialogue according to agreed rules and procedures to resolve the matter. In the event no agreement is reached between General Counsel and the Council as to whether the issue is within or outside Scope of the ccNSO (Country Code Names Supporting Organization) then by a vote of 15 or more members the Council may decide the issue is within scope. The Chair of the ccNSO (Country Code Names Supporting Organization) shall inform General Counsel and the Issue Manager accordingly. The Issue Manager shall then proceed with a recommendation whether or not the Council should move to initiate the PDP (Policy Development Process) including both the opinion and analysis of General Counsel and Council in the Issues Report.

- f. In the event that the Manager Recommendation is in favor of initiating the PDP (Policy Development Process), a proposed time line for conducting each of

the stages of PDP (Policy Development Process) outlined herein ("**PDP (Policy Development Process) Time Line**").

- g. g. If possible, the issue report shall indicate whether the resulting output is likely to result in a policy to be approved by the Board. In some circumstances, it will not be possible to do this until substantive discussions on the issue have taken place. In these cases, the issue report should indicate this uncertainty. Upon completion of the Issue Report, the Issue Manager shall distribute it to the full Council for a vote on whether to initiate the PDP (Policy Development Process).

3. Initiation of PDP (Policy Development Process)

The Council shall decide whether to initiate the PDP (Policy Development Process) as follows:

- a. Within 21 days after receipt of an Issue Report from the Issue Manager, the Council shall vote on whether to initiate the PDP (Policy Development Process). Such vote should be taken at a meeting held in any manner deemed appropriate by the Council, including in person or by conference call, but if a meeting is not feasible the vote may occur electronic means.
- b. A vote of ten or more Council members in favor of initiating the PDP (Policy Development Process) shall be required to initiate the PDP (Policy Development Process) provided that the Issue Report states that the issue is properly within the scope of the Mission and the ccNSO (Country Code Names Supporting Organization) Scope.

4. Decision Whether to Appoint Task Force; Establishment of Time Line

At the meeting of the Council where the PDP (Policy Development Process) has been initiated (or, where the Council employs a vote by electronic means, in that vote) pursuant to Item 3 above, the Council shall decide, by a majority vote of members present at the meeting (or voting by electronic means), whether or not to appoint a task force to address the issue. If the Council votes:

- a. In favor of convening a task force, it shall do so in accordance with Item 7 below.
- b. Against convening a task force, then it shall collect information on the policy issue in accordance with Item 8 below.

The Council shall also, by a majority vote of members present at the meeting or voting by electronic means, approve or amend and approve the PDP (Policy Development Process) Time Line set out in the Issue Report.

5. Composition and Selection of Task Forces

- a. Upon voting to appoint a task force, the Council shall invite each of the Regional Organizations (see Section 10.5) to appoint two individuals to participate in the task force (the "**Representatives**"). Additionally, the Council may appoint up to three advisors (the "**Advisors**") from outside the ccNSO (Country Code Names Supporting Organization) and, following formal request for GAC (Governmental Advisory Committee) participation in the Task Force, accept up to two Representatives from the Governmental Advisory Committee (Advisory Committee) to sit on the task force. The Council may increase the number of Representatives that may sit on a task force in its discretion in circumstances that it deems necessary or appropriate.

- b. Any Regional Organization wishing to appoint Representatives to the task force must provide the names of the Representatives to the Issue Manager within ten (10) calendar days after such request so that they are included on the task force. Such Representatives need not be members of the Council, but each must be an individual who has an interest, and ideally knowledge and expertise, in the subject matter, coupled with the ability to devote a substantial amount of time to the task force's activities.
- c. The Council may also pursue other actions that it deems appropriate to assist in the PDP (Policy Development Process), including appointing a particular individual or organization to gather information on the issue or scheduling meetings for deliberation or briefing. All such information shall be submitted to the Issue Manager in accordance with the PDP (Policy Development Process) Time Line.

6. Public Notification of Initiation of the PDP (Policy Development Process) and Comment Period

After initiation of the PDP (Policy Development Process), ICANN (Internet Corporation for Assigned Names and Numbers) shall post a notification of such action to the Website and to the other ICANN (Internet Corporation for Assigned Names and Numbers) Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees). A comment period (in accordance with the PDP (Policy Development Process) Time Line, and ordinarily at least 21 days long) shall be commenced for the issue. Comments shall be accepted from ccTLD (Country Code Top Level Domain) managers, other Supporting Organizations (Supporting Organizations), Advisory Committees (Advisory Committees), and from the public. The Issue Manager, or some other designated Council representative shall review the comments and incorporate them into a report (the "**Comment Report**") to be included in

either the Preliminary Task Force Report or the Initial Report, as applicable.

7. Task Forces

a. *Role of Task Force.* If a task force is created, its role shall be responsible for (i) gathering information documenting the positions of the ccNSO (Country Code Names Supporting Organization) members within the Geographic Regions and other parties and groups; and (ii) otherwise obtaining relevant information that shall enable the Task Force Report to be as complete and informative as possible to facilitate the Council's meaningful and informed deliberation.

The task force shall not have any formal decision-making authority. Rather, the role of the task force shall be to gather information that shall document the positions of various parties or groups as specifically and comprehensively as possible, thereby enabling the Council to have a meaningful and informed deliberation on the issue.

b. *Task Force Charter or Terms of Reference.* The Council, with the assistance of the Issue Manager, shall develop a charter or terms of reference for the task force (the "**Charter**") within the time designated in the PDP (Policy Development Process) Time Line. Such Charter shall include:

1. The issue to be addressed by the task force, as such issue was articulated for the vote before the Council that initiated the PDP (Policy Development Process);
2. The specific time line that the task force must adhere to, as set forth below, unless the Council determines that there is a compelling reason to extend the timeline; and
3. Any specific instructions from the Council for the task force, including whether or not the task force should

solicit the advice of outside advisors on the issue.

The task force shall prepare its report and otherwise conduct its activities in accordance with the Charter. Any request to deviate from the Charter must be formally presented to the Council and may only be undertaken by the task force upon a vote of a majority of the Council members present at a meeting or voting by electronic means. The quorum requirements of Section 10.3(n) shall apply to Council actions under this Item 7(b).

c. Appointment of Task Force Chair. The Issue Manager shall convene the first meeting of the task force within the time designated in the PDP (Policy Development Process) Time Line. At the initial meeting, the task force members shall, among other things, vote to appoint a task force chair. The chair shall be responsible for organizing the activities of the task force, including compiling the Task Force Report. The chair of a task force need not be a member of the Council.

d. Collection of Information.

1. Regional Organization Statements. The Representatives shall each be responsible for soliciting the position of the Regional Organization for their Geographic Region, at a minimum, and may solicit other comments, as each Representative deems appropriate, including the comments of the ccNSO (Country Code Names Supporting Organization) members in that region that are not members of the Regional Organization, regarding the issue under consideration. The position of the Regional Organization and any other comments gathered by the Representatives should be submitted in a formal statement to the task force chair (each, a "**Regional Statement**") within the time designated in the PDP (Policy Development Process) Time Line. Every Regional Statement shall include at least the following:

(i) If a Supermajority Vote (as defined by the Regional Organization) was reached, a clear statement of the

Regional Organization's position on the issue;

(ii) If a Supermajority Vote was not reached, a clear statement of all positions espoused by the members of the Regional Organization;

(iii) A clear statement of how the Regional Organization arrived at its position(s). Specifically, the statement should detail specific meetings, teleconferences, or other means of deliberating an issue, and a list of all members who participated or otherwise submitted their views;

(iv) A statement of the position on the issue of any ccNSO (Country Code Names Supporting Organization) members that are not members of the Regional Organization;

(v) An analysis of how the issue would affect the Region, including any financial impact on the Region; and

(vi) An analysis of the period of time that would likely be necessary to implement the policy.

2. *Outside Advisors.* The task force may, in its discretion, solicit the opinions of outside advisors, experts, or other members of the public. Such opinions should be set forth in a report prepared by such outside advisors, and (i) clearly labeled as coming from outside advisors; (ii) accompanied by a detailed statement of the advisors' (a) qualifications and relevant experience and (b) potential conflicts of interest. These reports should be submitted in a formal statement to the task force chair within the time designated in the PDP (Policy Development Process) Time Line.

e. *Task Force Report.* The chair of the task force, working with the Issue Manager, shall compile the Regional Statements, the Comment Report, and other information or reports, as applicable, into a single document ("**Preliminary Task Force Report**") and distribute the Preliminary Task Force Report to the full task force within the time designated

in the PDP (Policy Development Process) Time Line. The task force shall have a final task force meeting to consider the issues and try and reach a Supermajority Vote. After the final task force meeting, the chair of the task force and the Issue Manager shall create the final task force report (the "**Task Force Report**") and post it on the Website and to the other ICANN (Internet Corporation for Assigned Names and Numbers) Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees). Each Task Force Report must include:

1. A clear statement of any Supermajority Vote (being 66% of the task force) position of the task force on the issue;
2. If a Supermajority Vote was not reached, a clear statement of all positions espoused by task force members submitted within the time line for submission of constituency reports. Each statement should clearly indicate (i) the reasons underlying the position and (ii) the Regional Organizations that held the position;
3. An analysis of how the issue would affect each Region, including any financial impact on the Region;
4. An analysis of the period of time that would likely be necessary to implement the policy; and
5. The advice of any outside advisors appointed to the task force by the Council, accompanied by a detailed statement of the advisors' (i) qualifications and relevant experience and (ii) potential conflicts of interest.

8. Procedure if No Task Force is Formed

- a. If the Council decides not to convene a task force, each Regional Organization shall, within the time designated in the PDP (Policy Development Process) Time Line, appoint a representative to solicit the

Region's views on the issue. Each such representative shall be asked to submit a Regional Statement to the Issue Manager within the time designated in the PDP (Policy Development Process) Time Line.

- b. The Council may, in its discretion, take other steps to assist in the PDP (Policy Development Process), including, for example, appointing a particular individual or organization, to gather information on the issue or scheduling meetings for deliberation or briefing. All such information shall be submitted to the Issue Manager within the time designated in the PDP (Policy Development Process) Time Line.
- c. The Council shall formally request the Chair of the GAC (Governmental Advisory Committee) to offer opinion or advice.
- d. The Issue Manager shall take all Regional Statements, the Comment Report, and other information and compile (and post on the Website) an Initial Report within the time designated in the PDP (Policy Development Process) Time Line. Thereafter, the Issue Manager shall, in accordance with Item 9 below, create a Final Report.

9. Comments to the Task Force Report or Initial Report

- a. A comment period (in accordance with the PDP (Policy Development Process) Time Line, and ordinarily at least 21 days long) shall be opened for comments on the Task Force Report or Initial Report. Comments shall be accepted from ccTLD (Country Code Top Level Domain) managers, other Supporting Organizations (Supporting Organizations), Advisory Committees (Advisory Committees), and from the public. All comments shall include the author's name, relevant experience, and interest in the issue.

- b. At the end of the comment period, the Issue Manager shall review the comments received and may, in the Issue Manager's reasonable discretion, add appropriate comments to the Task Force Report or Initial Report, to prepare the "**Final Report**". The Issue Manager shall not be obligated to include all comments made during the comment period, nor shall the Issue Manager be obligated to include all comments submitted by any one individual or organization.
- c. The Issue Manager shall prepare the Final Report and submit it to the Council chair within the time designated in the PDP (Policy Development Process) Time Line.

10. Council Deliberation

- a. Upon receipt of a Final Report, whether as the result of a task force or otherwise, the Council chair shall (i) distribute the Final Report to all Council members; (ii) call for a Council meeting within the time designated in the PDP (Policy Development Process) Time Line wherein the Council shall work towards achieving a recommendation to present to the Board; and (iii) formally send to the GAC (Governmental Advisory Committee) Chair an invitation to the GAC (Governmental Advisory Committee) to offer opinion or advice. Such meeting may be held in any manner deemed appropriate by the Council, including in person or by conference call. The Issue Manager shall be present at the meeting.
- b. The Council may commence its deliberation on the issue prior to the formal meeting, including via in-person meetings, conference calls, e-mail discussions, or any other means the Council may choose.

- c. The Council may, if it so chooses, solicit the opinions of outside advisors at its final meeting. The opinions of these advisors, if relied upon by the Council, shall be (i) embodied in the Council's report to the Board, (ii) specifically identified as coming from an outside advisor; and (iii) accompanied by a detailed statement of the advisor's (a) qualifications and relevant experience and (b) potential conflicts of interest.

11. Recommendation of the Council

In considering whether to make a recommendation on the issue (a "**Council Recommendation**"), the Council shall seek to act by consensus. If a minority opposes a consensus position, that minority shall prepare and circulate to the Council a statement explaining its reasons for opposition. If the Council's discussion of the statement does not result in consensus, then a recommendation supported by 14 or more of the Council members shall be deemed to reflect the view of the Council, and shall be conveyed to the Members as the Council's Recommendation. Notwithstanding the foregoing, as outlined below, all viewpoints expressed by Council members during the PDP (Policy Development Process) must be included in the Members Report.

12. Council Report to the Members

In the event that a Council Recommendation is adopted pursuant to Item 11 then the Issue Manager shall, within seven days after the Council meeting, incorporate the Council's Recommendation together with any other viewpoints of the Council members into a Members Report to be approved by the Council and then to be submitted to the Members (the "**Members Report**"). The Members Report must contain at least the following:

- a. A clear statement of the Council's recommendation;
- b. The Final Report submitted to the Council; and

- c. A copy of the minutes of the Council's deliberation on the policy issue (see Item 10), including all the opinions expressed during such deliberation, accompanied by a description of who expressed such opinions.

13. Members Vote

Following the submission of the Members Report and within the time designated by the PDP (Policy Development Process) Time Line, the ccNSO (Country Code Names Supporting Organization) members shall be given an opportunity to vote on the Council Recommendation. The vote of members shall be electronic and lodged through their designated Emissaries. The members' votes shall be lodged over such a period of time as designated in the PDP (Policy Development Process) Time Line (at least 21 days long).

In the event that at least 50% of the Emissaries lodge votes within the voting period, the resulting vote will be employed without further process. In the event that fewer than 50% of the ccNSO (Country Code Names Supporting Organization) members lodge votes in the first round of voting, the first round will not be employed and the results of a final, second round of voting, conducted after at least thirty days notice to the ccNSO (Country Code Names Supporting Organization) members, will be employed irrespective of whether at least 50% of the Emissaries lodge votes. In the event that more than 66% of the votes received at the end of the voting period shall be in favor of the Council Recommendation, then the recommendation shall be conveyed to the Board in accordance with Item 14 below as the ccNSO (Country Code Names Supporting Organization) Recommendation.

14. Board Report

The Issue Manager shall within seven days after a ccNSO (Country Code Names Supporting Organization) Recommendation being made in accordance with Item 13

incorporate the ccNSO (Country Code Names Supporting Organization) Recommendation into a report to be approved by the Council and then to be submitted to the Board (the "**Board Report**"). The Board Report must contain at least the following:

- a. A clear statement of the ccNSO (Country Code Names Supporting Organization) recommendation;
- b. The Final Report submitted to the Council; and
- c. the Members' Report.

15. Board Vote

- a. The Board shall meet to discuss the ccNSO (Country Code Names Supporting Organization) Recommendation as soon as feasible after receipt of the Board Report from the Issue Manager, taking into account procedures for Board consideration.
- b. The Board shall adopt the ccNSO (Country Code Names Supporting Organization) Recommendation unless by a vote of more than 66% the Board determines that such policy is not in the best interest of the ICANN (Internet Corporation for Assigned Names and Numbers) community or of ICANN (Internet Corporation for Assigned Names and Numbers).
 1. In the event that the Board determines not to act in accordance with the ccNSO (Country Code Names Supporting Organization) Recommendation, the Board shall (i) state its reasons for its determination not to act in accordance with the ccNSO (Country Code Names Supporting Organization) Recommendation in a report to the Council (the "**Board Statement**"); and (ii) submit the Board Statement to the Council.
 2. The Council shall discuss the Board Statement with the Board within thirty days after the Board Statement

is submitted to the Council. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board shall discuss the Board Statement. The discussions shall be held in good faith and in a timely and efficient manner, to find a mutually acceptable solution.

3. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its Council Recommendation. A recommendation supported by 14 or more of the Council members shall be deemed to reflect the view of the Council (the Council's "**Supplemental Recommendation**"). That Supplemental Recommendation shall be conveyed to the Members in a Supplemental Members Report, including an explanation for the Supplemental Recommendation. Members shall be given an opportunity to vote on the Supplemental Recommendation under the same conditions outlined in Item 13 . In the event that more than 66% of the votes cast by ccNSO (Country Code Names Supporting Organization) Members during the voting period are in favor of the Supplemental Recommendation then that recommendation shall be conveyed to Board as the ccNSO (Country Code Names Supporting Organization) Supplemental Recommendation and the Board shall adopt the recommendation unless by a vote of more than 66% of the Board determines that acceptance of such policy would constitute a breach of the fiduciary duties of the Board to the Company.
4. In the event that the Board does not accept the ccNSO (Country Code Names Supporting Organization) Supplemental Recommendation, it shall state its reasons for doing so in its final decision ("**Supplemental Board Statement**").

5. In the event the Board determines not to accept a ccNSO (Country Code Names Supporting Organization) Supplemental Recommendation, then the Board shall not be entitled to set policy on the issue addressed by the recommendation and the status quo shall be preserved until such time as the ccNSO (Country Code Names Supporting Organization) shall, under the ccPDP, make a recommendation on the issue that is deemed acceptable by the Board.

16. Implementation of the Policy

Upon adoption by the Board of a ccNSO (Country Code Names Supporting Organization) Recommendation or ccNSO (Country Code Names Supporting Organization) Supplemental Recommendation, the Board shall, as appropriate, direct or authorize ICANN (Internet Corporation for Assigned Names and Numbers) staff to implement the policy.

17. Maintenance of Records

With respect to each ccPDP for which an Issue Report is requested (see Item 1), ICANN (Internet Corporation for Assigned Names and Numbers) shall maintain on the Website a status web page detailing the progress of each ccPDP, which shall provide a list of relevant dates for the ccPDP and shall also link to the following documents, to the extent they have been prepared pursuant to the ccPDP:

- a. Issue Report;
- b. PDP (Policy Development Process) Time Line;
- c. Comment Report;
- d. Regional Statement(s);
- e. Preliminary Task Force Report;

- f. Task Force Report;
- g. Initial Report;
- h. Final Report;
- i. Members' Report;
- j. Board Report;
- k. Board Statement;
- l. Supplemental Members' Report; and
- m. Supplemental Board Statement.

In addition, ICANN (Internet Corporation for Assigned Names and Numbers) shall post on the Website comments received in electronic written form specifically suggesting that a ccPDP be initiated.

Annex C: The Scope of the ccNSO (Country Code Names Supporting Organization)

This annex describes the scope and the principles and method of analysis to be used in any further development of the scope of the ccNSO (Country Code Names Supporting Organization)'s policy-development role. As provided in Section 10.6(b) of the Bylaws, that scope shall be defined according to the procedures of the ccPDP.

The scope of the ccNSO (Country Code Names Supporting Organization)'s authority and responsibilities must recognize the complex relation between ICANN (Internet Corporation for Assigned Names and Numbers) and ccTLD (Country Code Top Level Domain) managers/registries with regard to policy issues. This annex shall assist the ccNSO (Country Code Names Supporting Organization), the ccNSO (Country Code Names Supporting Organization) Council, and the Board and staff in delineating relevant global policy issues.

Policy areas

The ccNSO (Country Code Names Supporting Organization)'s policy role should be based on an analysis of the following functional model of the DNS (Domain Name System):

1. Data is registered/maintained to generate a zone file,
2. A zone file is in turn used in TLD (Top Level Domain) name servers.

Within a **TLD (Top Level Domain)** two functions have to be performed (these are addressed in greater detail below):

1. Entering data into a database ("**Data Entry Function**") and
2. Maintaining and ensuring upkeep of name-servers for the TLD (Top Level Domain) ("**Name Server Function**").

These two core functions must be performed at the ccTLD (Country Code Top Level Domain) registry level as well as at a higher level (IANA (Internet Assigned Numbers Authority) function and root servers) and at lower levels of the DNS (Domain Name System) hierarchy. This mechanism, as RFC (Request for Comments) 1591 points out, is recursive:

There are no requirements on sub domains of top-level domains beyond the requirements on higher-level domains themselves. That is, the requirements in this memo are applied recursively. In particular, all sub domains shall be allowed to operate their own domain name servers, providing in them whatever information the sub domain manager sees fit (as long as it is true and correct).

The Core Functions

1. Data Entry Function (DEF):

Looking at a more detailed level, the first function (entering and maintaining data in a database) should be fully defined by a naming policy. This naming policy must specify the rules and conditions:

- a. under which data will be collected and entered into a database or data changed (at the TLD (Top Level Domain) level among others, data to reflect a transfer from registrant to registrant or changing registrar) in the database.
- b. for making certain data generally and publicly available (be it, for example, through Whois or nameservers).

2. The Name-Server Function (NSF (National Science Foundation (USA)))

The name-server function involves essential interoperability and stability issues at the heart of the domain name system. The importance of this function extends to nameservers at the ccTLD (Country Code Top Level Domain) level, but also to the root servers (and root-server system) and nameservers at lower levels.

On its own merit and because of interoperability and stability considerations, properly functioning nameservers are of utmost importance to the individual, as well as to the local and the global Internet communities.

With regard to the nameserver function, therefore, policies need to be defined and established. Most parties involved, including the majority of ccTLD (Country Code Top Level Domain) registries, have accepted the need for common policies in this area by adhering to the relevant RFCs, among others RFC (Request for Comments) 1591.

Respective Roles with Regard to Policy, Responsibilities, and Accountabilities

It is in the interest of ICANN (Internet Corporation for Assigned Names and Numbers) and ccTLD (Country Code Top Level Domain) managers to ensure the stable and proper functioning of the domain name system. ICANN (Internet Corporation for Assigned Names and Numbers) and the ccTLD (Country Code Top Level Domain) registries each have a distinctive role to play in this regard that can be defined by the relevant policies. The scope of the ccNSO (Country Code Names Supporting Organization) cannot be established without reaching a common understanding of the allocation of authority between ICANN (Internet Corporation for Assigned Names and Numbers) and ccTLD (Country Code Top Level Domain) registries.

Three roles can be distinguished as to which responsibility must be assigned on any given issue:

- Policy role: i.e. the ability and power to define a policy;
- Executive role: i.e. the ability and power to act upon and implement the policy; and
- Accountability role: i.e. the ability and power to hold the responsible entity accountable for exercising its power.

Firstly, responsibility presupposes a policy and this delineates the policy role. Depending on the issue that needs to be addressed those who are involved in defining and setting the policy need to be determined and defined. Secondly, this presupposes an executive role defining the power to implement and act within the boundaries of a policy. Finally, as a counter-balance to the executive role, the accountability role needs to be defined and determined.

The information below offers an aid to:

1. delineate and identify specific policy areas;
2. define and determine roles with regard to these specific policy areas.

This annex defines the scope of the ccNSO (Country Code Names Supporting Organization) with regard to developing policies. The scope is limited to the policy role of the ccNSO (Country Code Names Supporting Organization) policy-development process for functions and levels explicitly stated below. It is anticipated that the accuracy of the assignments of policy, executive, and accountability roles shown below will be considered during a scope-definition ccPDP process.

Name Server Function (as to ccTLDs)

Level 1: Root Name Servers

Policy role: IETF (Internet Engineering Task Force), RSSAC (Root Server System Advisory Committee) (ICANN (Internet Corporation for Assigned Names and Numbers))

Executive role: Root Server System Operators

Accountability role: RSSAC (Root Server System Advisory Committee) (ICANN (Internet Corporation for Assigned Names and Numbers))

Level 2: ccTLD (Country Code Top Level Domain) Registry Name Servers in respect to interoperability

Policy role: ccNSO (Country Code Names Supporting Organization) Policy Development Process (ICANN (Internet Corporation for Assigned Names and Numbers)), for best practices a ccNSO (Country Code Names Supporting Organization) process can be organized

Executive role: ccTLD (Country Code Top Level Domain) Manager

Accountability role: part ICANN (Internet Corporation for Assigned Names and Numbers) (IANA (Internet Assigned Numbers Authority)), part Local Internet Community, including local government

Level 3: User's Name Servers

Policy role: ccTLD (Country Code Top Level Domain) Manager, IETF (Internet Engineering Task Force) (RFC (Request for Comments))

Executive role: Registrant (Registrant)

Accountability role: ccTLD (Country Code Top Level Domain) Manager

Data Entry Function (as to ccTLDs)

Level 1: Root Level Registry

Policy role: ccNSO (Country Code Names Supporting Organization) Policy Development Process (ICANN (Internet Corporation for Assigned Names and Numbers))

Executive role: ICANN (Internet Corporation for Assigned Names and Numbers) (IANA (Internet Assigned Numbers Authority))

Accountability role: ICANN (Internet Corporation for Assigned Names and Numbers) community, ccTLD (Country Code Top Level Domain) Managers, (national authorities in some cases)

Level 2: ccTLD (Country Code Top Level Domain) Registry

Policy role: Local Internet Community, including local government, and/or ccTLD (Country Code Top Level Domain) Manager according to local structure

Executive role: ccTLD (Country Code Top Level Domain) Manager

Accountability role: Local Internet Community, including national authorities in some cases

Level 3: Second and Lower Levels

Policy role: Registrant (Registrant)

Executive role: Registrant (Registrant)

Accountability role: Registrant (Registrant), users of lower-level domain names

ANNEX D: EC (Empowered Community) MECHANISM

ARTICLE 1 PROCEDURE FOR EXERCISE OF EC (Empowered Community)'S RIGHTS TO

APPROVE APPROVAL ACTIONS

Section 1.1. APPROVAL ACTIONS

The processes set forth in this Article 1 shall govern the escalation procedures for the EC (Empowered Community)'s exercise of its right to approve the following (each, an "**Approval Action**") under the Bylaws:

- a. Fundamental Bylaw Amendments, as contemplated by Section 25.2 of the Bylaws;
- b. Articles Amendments, as contemplated by Section 25.2 of the Bylaws; and
- c. Asset Sales, as contemplated by Article 26 of the Bylaws.

Section 1.2. APPROVAL PROCESS

Following the delivery of a Board Notice for an Approval Action ("**Approval Action Board Notice**") by the Secretary to the EC (Empowered Community) Administration and the Decisional Participants (which delivery date shall be referred to herein as the "**Approval Action Board Notification Date**"), the Decisional Participants shall thereafter promptly inform their constituents of the delivery of the Approval Action Board Notice. Any Approval Action Board Notice relating to a Fundamental Bylaw Amendment or Articles Amendment shall include a statement, if applicable, that the Fundamental Bylaw Amendment or Articles Amendment, as applicable, is based solely on the outcome of a PDP (Policy Development Process), citing the specific PDP (Policy Development Process) and the provision in the Fundamental Bylaw Amendment or Articles Amendment subject to the Approval Action Board Notice that implements such PDP (Policy Development Process) (as applicable, a "**PDP (Policy Development Process) Fundamental Bylaw Statement**" or "**PDP (Policy Development Process) Articles Statement**") and the name of the Supporting Organization (Supporting

Organization) that is a Decisional Participant that undertook the PDP (Policy Development Process) relating to the Fundamental Bylaw Amendment or Articles Amendment, as applicable (as applicable, the "**Fundamental Bylaw Amendment PDP (Policy Development Process) Decisional Participant**" or "**Articles Amendment PDP (Policy Development Process) Decisional Participant**"). The process set forth in this Section 1.2 of this Annex D as it relates to a particular Approval Action is referred to herein as the "**Approval Process**."

Section 1.3. APPROVAL ACTION COMMUNITY FORUM

- a. ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, convene a forum at which the Decisional Participants and interested parties may discuss the Approval Action (an "**Approval Action Community Forum**").
- b. If the EC (Empowered Community) Administration requests a publicly-available conference call by providing a notice to the Secretary, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, schedule such call prior to any Approval Action Community Forum, and inform the Decisional Participants of the date, time and participation methods of such conference call, which ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website.
- c. The Approval Action Community Forum shall be convened and concluded during the period beginning upon the Approval Action Board Notification Date and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 30th day after the Approval Action Board

Notification Date ("**Approval Action Community Forum Period**"). If the EC (Empowered Community) Administration requests that the Approval Action Community Forum be held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, the Approval Action Community Forum shall be held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting on the date and at the time determined by ICANN (Internet Corporation for Assigned Names and Numbers), taking into account any date and/or time requested by the EC (Empowered Community) Administration. If the Approval Action Community Forum is held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting and that public meeting is held after 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 30th day after the Approval Action Board Notification Date, the Approval Action Community Forum Period for the Approval Action shall expire at 11:59 p.m., local time of the city hosting such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting on the official last day of such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting.

- d. The Approval Action Community Forum shall be conducted via remote participation methods such as teleconference, web-based meeting room and/or such other form of remote participation as the EC (Empowered Community) Administration selects, and/or, only if the Approval Action Community Forum is held during an ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, face-to-face meetings. If the Approval Action Community Forum will not be held during an ICANN (Internet

Corporation for Assigned Names and Numbers) public meeting, the EC (Empowered Community) Administration shall promptly inform ICANN (Internet Corporation for Assigned Names and Numbers) of the date, time and participation methods of such Approval Action Community Forum, which ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website.

- e. The EC (Empowered Community) Administration shall manage and moderate the Approval Action Community Forum in a fair and neutral manner.
- f. ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional Participants) may deliver to the EC (Empowered Community) Administration in writing its views and questions on the Approval Action prior to the convening of and during the Approval Action Community Forum. Any written materials delivered to the EC (Empowered Community) Administration shall also be delivered to the Secretary for prompt posting on the Website in a manner deemed appropriate by ICANN (Internet Corporation for Assigned Names and Numbers).
- g. ICANN (Internet Corporation for Assigned Names and Numbers) staff and Directors representing the Board are expected to attend the Approval Action Community Forum in order to address any questions or concerns regarding the Approval Action.
- h. For the avoidance of doubt, the Approval Action Community Forum is not a decisional body.
- i. During the Approval Action Community Forum Period, an additional one or two Community Forums may be held at the discretion of the Board or the EC

(Empowered Community) Administration. If the Board decides to hold an additional one or two Approval Action Community Forums, it shall provide a rationale for such decision, which rationale ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website.

- j. ICANN (Internet Corporation for Assigned Names and Numbers) will provide support services for the Approval Action Community Forum and shall promptly post on the Website a public record of the Approval Action Community Forum as well as all written submissions of ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional Participants) related to the Approval Action Community Forum.

Section 1.4. DECISION WHETHER TO APPROVE AN APPROVAL ACTION

(a) Following the expiration of the Approval Action Community Forum Period, at any time or date prior to 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the Approval Action Community Forum Period (such period, the "**Approval Action Decision Period**"), with respect to each Approval Action, each Decisional Participant shall inform the EC (Empowered Community) Administration in writing as to whether such Decisional Participant (i) supports such Approval Action, (ii) objects to such Approval Action or (iii) has determined to abstain from the matter (which shall not count as supporting or objecting to such Approval Action), and each Decisional Participant shall forward such notice to the Secretary for ICANN (Internet Corporation for Assigned Names and Numbers) to promptly post on the Website. If a Decisional Participant does not inform the EC (Empowered

Community) Administration of any of the foregoing prior to the expiration of the Approval Action Decision Period, the Decisional Participant shall be deemed to have abstained from the matter (even if such Decisional Participant informs the EC (Empowered Community) Administration of its support or objection following the expiration of the Approval Action Decision Period).

(b) The EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Approval Action Decision Period, deliver a written notice ("**EC (Empowered Community) Approval Notice**") to the Secretary certifying that, pursuant to and in compliance with the procedures and requirements of this Article 1 of this Annex D, the EC (Empowered Community) has approved the Approval Action if:

- (i) The Approval Action does not relate to a Fundamental Bylaw Amendment or Articles Amendment and is (A) supported by three or more Decisional Participants and (B) not objected to by more than one Decisional Participant;
- (ii) The Approval Action relates to a Fundamental Bylaw Amendment and is (A) supported by three or more Decisional Participants (including the Fundamental Bylaw Amendment PDP (Policy Development Process) Decisional Participant if the Board Notice included a PDP (Policy Development Process) Fundamental Bylaw Statement) and (B) not objected to by more than one Decisional Participant; or
- (iii) The Approval Action relates to an Articles Amendment and is (A) supported by three or more Decisional Participants (including the Articles Amendment PDP (Policy Development Process) Decisional Participant if the Board Notice included a PDP (Policy Development Process) Articles

Statement) and (B) not objected to by more than one Decisional Participant.

(c) If the Approval Action does not obtain the support required by Section 1.4(b)(i), (ii) or (iii) of this Annex D, as applicable, the Approval Process will automatically be terminated and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Approval Action Decision Period, deliver to the Secretary a notice certifying that the Approval Process has been terminated with respect to the Approval Action ("**Approval Process Termination Notice**").

(d) ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post to the Website any (i) Approval Action Board Notice, (ii) EC (Empowered Community) Approval Notice, (iii) Approval Process Termination Notice, (iv) written explanation provided by the EC (Empowered Community) Administration related to any of the foregoing, and (v) other notices the Secretary receives under this Article 1.

ARTICLE 2 PROCEDURE FOR EXERCISE OF EC (Empowered Community)'S RIGHTS TO REJECT SPECIFIED ACTIONS

Section 2.1. Rejection Actions

The processes set forth in this Article 2 shall govern the escalation procedures for the EC (Empowered Community)'s exercise of its right to reject the following (each, a "**Rejection Action**") under the Bylaws:

- a. PTI Governance Actions, as contemplated by Section 16.2(d) of the Bylaws;
- b. IFR Recommendation Decisions, as contemplated by Section 18.6(d) of the Bylaws;

- c. Special IFR Recommendation Decisions, as contemplated by Section 18.12(e) of the Bylaws;
- d. SCWG Creation Decisions, as contemplated by Section 19.1(d) of the Bylaws;
- e. SCWG Recommendation Decisions, as contemplated by Section 19.4(d) of the Bylaws;
- f. ICANN (Internet Corporation for Assigned Names and Numbers) Budgets, as contemplated by Section 22.4(a)(v) of the Bylaws;
- g. IANA (Internet Assigned Numbers Authority) Budgets, as contemplated by Section 22.4(b)(v) of the Bylaws;
- h. Operating Plans, as contemplated by Section 22.5(a)(v) of the Bylaws;
- i. Strategic Plans, as contemplated by Section 22.5(b)(v) of the Bylaws; and
- j. Standard Bylaw Amendments, as contemplated by Section 25.1(e) of the Bylaws.

Section 2.2. PETITION PROCESS FOR SPECIFIED ACTIONS

(a) Following the delivery of a Board Notice for a Rejection Action ("**Rejection Action Board Notice**") by the Secretary to the EC (Empowered Community) Administration and Decisional Participants (which delivery date shall be referred to herein as the "**Rejection Action Board Notification Date**"), the Decisional Participants shall thereafter promptly inform their constituents of the delivery of the Rejection Action Board Notice. The process set forth in this Section 2.2 of this Annex D as it relates to a particular Rejection Action is referred to herein as the "**Rejection Process**."

(b) During the period beginning on the Rejection Action Board Notification Date and ending at 11:59 p.m. (as

calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the date that is the 21st day after the Rejection Action Board Notification Date (as it relates to a particular Rejection Action, the "**Rejection Action Petition Period**"), subject to the procedures and requirements developed by the applicable Decisional Participant, an individual may submit a petition to a Decisional Participant, seeking to reject the Rejection Action and initiate the Rejection Process (a "**Rejection Action Petition**").

(c) A Decisional Participant that has received a Rejection Action Petition shall either accept or reject such Rejection Action Petition; provided that a Decisional Participant may only accept such Rejection Action Petition if it was received by such Decisional Participant during the Rejection Action Petition Period.

(i) If, in accordance with the requirements of Section 2.2(c) of this Annex D, a Decisional Participant accepts a Rejection Action Petition during the Rejection Action Petition Period, the Decisional Participant shall promptly provide to the EC (Empowered Community) Administration, the other Decisional Participants and the Secretary written notice ("**Rejection Action Petition Notice**") of such acceptance (such Decisional Participant, the "**Rejection Action Petitioning Decisional Participant**"), and ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post such Rejection Action Petition Notice on the Website. The Rejection Action Petition Notice shall also include:

(A) the rationale upon which rejection of the Rejection Action is sought. Where the Rejection Action Petition Notice relates to an ICANN (Internet Corporation for Assigned Names and Numbers) Budget, an IANA (Internet Assigned Numbers Authority) Budget, an

Operating Plan or a Strategic Plan, the Rejection Action Petition Notice shall not be valid and shall not be accepted by the EC (Empowered Community) Administration unless the rationale set forth in the Rejection Action Petition Notice is based on one or more significant issues that were specifically raised in the applicable public comment period(s) relating to perceived inconsistencies with the Mission, purpose and role set forth in ICANN (Internet Corporation for Assigned Names and Numbers)'s Articles of Incorporation and Bylaws, the global public interest, the needs of ICANN (Internet Corporation for Assigned Names and Numbers)'s stakeholders, financial stability, or other matter of concern to the community; and

(B) where the Rejection Action Petition Notice relates to a Standard Bylaw Amendment, a statement, if applicable, that the Standard Bylaw Amendment is based solely on the outcome of a PDP (Policy Development Process), citing the specific PDP (Policy Development Process) and the provision in the Standard Bylaw Amendment subject to the Board Notice that implements such PDP (Policy Development Process) ("**PDP (Policy Development Process) Standard Bylaw Statement**") and the name of the Supporting Organization (Supporting Organization) that is a Decisional Participant that undertook the PDP (Policy Development Process) relating to the Standard Bylaw Amendment ("**Standard Bylaw Amendment PDP (Policy Development Process) Decisional Participant**").

The Rejection Process shall thereafter continue pursuant to Section 2.2(d) of this Annex D.

(ii) If the EC (Empowered Community) Administration has not received a Rejection Action Petition Notice

pursuant to Section 2.2(c)(i) of this Annex D during the Rejection Action Petition Period, the Rejection Process shall automatically be terminated and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Rejection Action Petition Period, deliver to the Secretary a notice certifying that the Rejection Process has been terminated with respect to the Rejection Action contained in the Approval Notice ("**Rejection Process Termination Notice**"). ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post such Rejection Process Termination Notice on the Website.

(d) Following the delivery of a Rejection Action Petition Notice to the EC (Empowered Community) Administration pursuant to Section 2.2(c)(i) of this Annex D, the Rejection Action Petitioning Decisional Participant shall contact the EC (Empowered Community) Administration and the other Decisional Participants to determine whether any other Decisional Participants support the Rejection Action Petition. The Rejection Action Petitioning Decisional Participant shall forward such communication to the Secretary for ICANN (Internet Corporation for Assigned Names and Numbers) to promptly post on the Website.

(i) If the Rejection Action Petitioning Decisional Participant obtains the support of at least one other Decisional Participant (a "**Rejection Action Supporting Decisional Participant**") during the period beginning upon the expiration of the Rejection Action Petition Period and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 7th day after the expiration of the Rejection Action Petition Period (the "**Rejection Action Petition Support Period**"), the

Rejection Action Petitioning Decisional Participant shall provide a written notice to the EC (Empowered Community) Administration, the other Decisional Participants and the Secretary ("**Rejection Action Supported Petition**") within twenty-four (24) hours of receiving the support of at least one Rejection Action Supporting Decisional Participant, and ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post such Rejection Action Supported Petition on the Website. Each Rejection Action Supporting Decisional Participant shall provide a written notice to the EC (Empowered Community) Administration, the other Decisional Participants and the Secretary within twenty-four (24) hours of providing support to the Rejection Action Petition, and ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post each such notice on the Website. Such Rejection Action Supported Petition shall include:

- (A) a supporting rationale in reasonable detail;
- (B) contact information for at least one representative who has been designated by the Rejection Action Petitioning Decisional Participant who shall act as a liaison with respect to the Rejection Action Supported Petition;
- (C) a statement as to whether or not the Rejection Action Petitioning Decisional Participant and/or the Rejection Action Supporting Decisional Participant requests that ICANN (Internet Corporation for Assigned Names and Numbers) organize a publicly-available conference call prior to the Rejection Action Community Forum (as defined in Section 2.3 of this Annex D) for the community to discuss the Rejection Action Supported Petition;
- (D) a statement as to whether the Rejection Action Petitioning Decisional Participant and the Rejection

Action Supporting Decisional Participant have determined to hold the Rejection Action Community Forum during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, taking into account the limitation on holding such a Rejection Action Community Forum when the Rejection Action Supported Petition relates to an ICANN (Internet Corporation for Assigned Names and Numbers) Budget or IANA (Internet Assigned Numbers Authority) Budget as described in Section 2.3(c) of this Annex D; and

(E) a PDP (Policy Development Process) Standard Bylaw Statement, if applicable.

The Rejection Process shall thereafter continue for such Rejection Action Supported Petition pursuant to Section 2.3 of this Annex D. The foregoing process may result in more than one Rejection Action Supported Petition relating to the same Rejection Action.

(ii) The Rejection Process shall automatically be terminated and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Rejection Action Petition Support Period, deliver to the Secretary a Rejection Process Termination Notice, which ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website, if:

(A) no Rejection Action Petitioning Decisional Participant is able to obtain the support of at least one other Decisional Participant for its Rejection Action Petition during the Rejection Action Petition Support Period; or

(B) where the Rejection Action Supported Petition includes a PDP (Policy Development Process)

Standard Bylaw Statement, the Standard Bylaw Amendment PDP (Policy Development Process) Decisional Participant is not (x) the Rejection Action Petitioning Decisional Participant or (y) one of the Rejection Action Supporting Decisional Participants.

Section 2.3. REJECTION ACTION COMMUNITY FORUM

- a. If the EC (Empowered Community) Administration receives a Rejection Action Supported Petition under Section 2.2(d) of this Annex D during the Rejection Action Petition Support Period, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, convene a forum at which the Decisional Participants and interested parties may discuss the Rejection Action Supported Petition ("**Rejection Action Community Forum**"). If the EC (Empowered Community) Administration receives more than one Rejection Action Supported Petition relating to the same Rejection Action, all such Rejection Action Supported Petitions shall be discussed at the same Rejection Action Community Forum.
- b. If a publicly-available conference call has been requested in a Rejection Action Supported Petition, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, schedule such call prior to any Rejection Action Community Forum relating to that Rejection Action Supported Petition, and inform the Decisional Participants of the date, time and participation methods of such conference call, which ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website. If a conference call has been requested in relation to more than one Rejection

Action Supported Petition relating to the same Rejection Action, all such Rejection Action Supported Petitions shall be discussed during the same conference call.

- c. The Rejection Action Community Forum shall be convened and concluded during the period beginning upon the expiration of the Rejection Action Petition Support Period and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the Rejection Action Petition Support Period ("**Rejection Action Community Forum Period**") unless all Rejection Action Supported Petitions relating to the same Rejection Action requested that the Rejection Action Community Forum be held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, in which case the Rejection Action Community Forum shall be held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting (except as otherwise provided below with respect to a Rejection Action Supported Petition relating to an ICANN (Internet Corporation for Assigned Names and Numbers) Budget or IANA (Internet Assigned Numbers Authority) Budget) on the date and at the time determined by ICANN (Internet Corporation for Assigned Names and Numbers), taking into account any date and/or time requested by the Rejection Action Petitioning Decisional Participant(s) and the Rejection Action Supporting Decisional Participant(s). If the Rejection Action Community Forum is held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting and that public meeting is held after 11:59 p.m. (as calculated by local time at the location of

ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the Rejection Action Petition Support Period, the Rejection Action Community Forum Period shall expire at 11:59 p.m., local time of the city hosting such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting on the official last day of such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting. Notwithstanding the foregoing and notwithstanding any statement in the Rejection Action Supported Petition, a Rejection Action Community Forum to discuss a Rejection Action Supported Petition relating to an ICANN (Internet Corporation for Assigned Names and Numbers) Budget or IANA (Internet Assigned Numbers Authority) Budget may only be held at a scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting if such Rejection Action Community Forum occurs during the Rejection Action Community Forum Period, without any extension of such Rejection Action Community Forum Period.

- d. The Rejection Action Community Forum shall be conducted via remote participation methods such as teleconference, web-based meeting room and/or such other form of remote participation as the EC (Empowered Community) Administration selects, and/or, only if the Rejection Action Community Forum is held during an ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, face-to-face meetings. If the Rejection Action Community Forum will not be held during an ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, the EC (Empowered Community) Administration shall promptly inform ICANN (Internet Corporation for Assigned Names and Numbers) of the date, time and participation methods of such

- Rejection Action Community Forum, which ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website.
- e. The EC (Empowered Community) Administration shall manage and moderate the Rejection Action Community Forum in a fair and neutral manner.
- f. ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional Participants) may deliver to the EC (Empowered Community) Administration in writing its views and questions on the Rejection Action Supported Petition prior to the convening of and during the Rejection Action Community Forum. Any written materials delivered to the EC (Empowered Community) Administration shall also be delivered to the Secretary for prompt posting on the Website in a manner deemed appropriate by ICANN (Internet Corporation for Assigned Names and Numbers).
- g. ICANN (Internet Corporation for Assigned Names and Numbers) staff (including the CFO when the Rejection Action Supported Petition relates to an ICANN (Internet Corporation for Assigned Names and Numbers) Budget, IANA (Internet Assigned Numbers Authority) Budget or Operating Plan) and Directors representing the Board are expected to attend the Rejection Action Community Forum in order to address the concerns raised in the Rejection Action Supported Petition.
- h. If the Rejection Action Petitioning Decisional Participant and each of the Rejection Action Supporting Decisional Participants for an applicable Rejection Action Supported Petition agree before, during or after the Rejection Action Community Forum

that the issue raised in such Rejection Action Supported Petition has been resolved, such Rejection Action Supported Petition shall be deemed withdrawn and the Rejection Process with respect to such Rejection Action Supported Petition will be terminated. If all Rejection Action Supported Petitions relating to a Rejection Action are withdrawn, the Rejection Process will automatically be terminated. If a Rejection Process is terminated, the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the resolution of the issue raised in the Rejection Action Supported Petition, deliver to the Secretary a Rejection Process Termination Notice. For the avoidance of doubt, the Rejection Action Community Forum is not a decisional body and the foregoing resolution process shall be handled pursuant to the internal procedures of the Rejection Action Petitioning Decisional Participant and the Rejection Action Supporting Decisional Participant(s).

- i. During the Rejection Action Community Forum Period, an additional one or two Rejection Action Community Forums may be held at the discretion of a Rejection Action Petitioning Decisional Participant and a related Rejection Action Supporting Decisional Participant, or the EC (Empowered Community) Administration.
- j. ICANN (Internet Corporation for Assigned Names and Numbers) will provide support services for the Rejection Action Community Forum and shall promptly post on the Website a public record of the Rejection Action Community Forum as well as all written submissions of ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional Participants) related to the Rejection Action Community Forum.

Section 2.4. DECISION WHETHER TO REJECT A REJECTION ACTION

(a) Following the expiration of the Rejection Action Community Forum Period, at any time or date prior to 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the Rejection Action Community Forum Period (such period, the "**Rejection Action Decision Period**"), with respect to each Rejection Action Supported Petition, each Decisional Participant shall inform the EC (Empowered Community) Administration in writing as to whether such Decisional Participant (i) supports such Rejection Action Supported Petition and has determined to reject the Rejection Action, (ii) objects to such Rejection Action Supported Petition or (iii) has determined to abstain from the matter (which shall not count as supporting or objecting to such Rejection Action Supported Petition), and each Decisional Participant shall forward such notice to the Secretary for ICANN (Internet Corporation for Assigned Names and Numbers) to promptly post on the Website. If a Decisional Participant does not inform the EC (Empowered Community) Administration of any of the foregoing prior to expiration of the Rejection Action Decision Period, the Decisional Participant shall be deemed to have abstained from the matter (even if such Decisional Participant informs the EC (Empowered Community) Administration of its support or objection following the expiration of the Rejection Action Decision Period).

(b) The EC (Empowered Community) Administration, within twenty-four (24) hours of the expiration of the Rejection Action Decision Period, shall promptly deliver a written notice ("**EC (Empowered Community) Rejection Notice**") to the Secretary certifying that, pursuant to and in compliance with the procedures and requirements of this Article 2 of Annex D, the EC (Empowered Community) has resolved to reject the Rejection Action if (after accounting for any adjustments to

the below as required by the GAC (Governmental Advisory Committee) Carve-out pursuant to Section 3.6(e) of the Bylaws if the Rejection Action Supported Petition included a GAC (Governmental Advisory Committee) Consensus (Consensus) Statement):

(i) A Rejection Action Supported Petition relating to a Rejection Action other than a Standard Bylaw Amendment is (A) supported by four or more Decisional Participants and (B) not objected to by more than one Decisional Participant; or

(ii) A Rejection Action Supported Petition relating to a Standard Bylaw Amendment that is (A) supported by three or more Decisional Participants (including the Standard Bylaw Amendment PDP (Policy Development Process) Decisional Participant if the Rejection Action Supported Petition included a PDP (Policy Development Process) Standard Bylaw Statement) and (B) not objected to by more than one Decisional Participant.

(c) If no Rejection Action Supported Petition obtains the support required by Section 2.4(b)(i) or (ii) of this Annex D, as applicable, the Rejection Process will automatically be terminated and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Rejection Action Decision Period, deliver to the Secretary a Rejection Process Termination Notice.

(d) ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post to the Website any (i) Rejection Action Board Notice, (ii) Rejection Action Petition, (iii) Rejection Action Petition Notice, (iv) Rejection Action Supported Petition, (v) EC (Empowered Community) Rejection Notice and the written explanation provided by the EC (Empowered Community) Administration as to why the EC (Empowered Community) has chosen to reject the

Rejection Action, (vi) Rejection Process Termination Notice, and (vii) other notices the Secretary receives under this [Article 2](#).

ARTICLE 3 PROCEDURE FOR EXERCISE OF EC (Empowered Community)'S RIGHTS TO REMOVE DIRECTORS AND RECALL THE BOARD

Section 3.1. NOMINATING COMMITTEE DIRECTOR REMOVAL PROCESS

(a) Subject to the procedures and requirements developed by the applicable Decisional Participant, an individual may submit a petition to a Decisional Participant seeking to remove a Director holding Seats 1 through 8 and initiate the Nominating Committee Director Removal Process ("**Nominating Committee Director Removal Petition**"). Each Nominating Committee Director Removal Petition shall set forth the rationale upon which such individual seeks to remove such Director. The process set forth in this [Section 3.1](#) of [Annex D](#) is referred to herein as the "**Nominating Committee Director Removal Process**."

(b) During the period beginning on the date that the Decisional Participant received the Nominating Committee Director Removal Petition (such date of receipt, the "**Nominating Committee Director Removal Petition Date**") and ending at 11:59 p.m. (as calculated by local time at the location of [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#)'s principal office) on the date that is the 21st day after the Nominating Committee Director Removal Petition Date (as it relates to a particular Director, the "**Nominating Committee Director Removal Petition Period**"), the Decisional Participant that has received a Nominating Committee Director Removal Petition ("**Nominating Committee Director Removal Petitioned Decisional Participant**") shall either accept or reject such

Nominating Committee Director Removal Petition; provided that a Nominating Committee Director Removal Petitioned Decisional Participant shall not accept a Nominating Committee Director Removal Petition if, during the same term, the Director who is the subject of such Nominating Committee Director Removal Petition had previously been subject to a Nominating Committee Director Removal Petition that led to a Nominating Committee Director Removal Community Forum (as discussed in [Section 3.1\(e\)](#) of this [Annex D](#)).

(c) During the Nominating Committee Director Removal Petition Period, the Nominating Committee Director Removal Petitioned Decisional Participant shall invite the Director subject to the Nominating Committee Director Removal Petition and the Chair of the Board (or the Vice Chair of the Board if the Chair is the affected Director) to a dialogue with the individual(s) bringing the Nominating Committee Director Removal Petition and the Nominating Committee Director Removal Petitioned Decisional Participant's representative on the [EC \(Empowered Community\) Administration](#). The Nominating Committee Director Removal Petition may not be accepted unless this invitation has been extended upon reasonable notice and accommodation to the affected Director's availability. If the invitation is accepted by either the Director who is the subject of the Nominating Committee Director Removal Petition or the Chair of the Board (or the Vice Chair of the Board if the Chair is the affected Director), the Nominating Committee Director Removal Petitioned Decisional Participant shall not accept the Nominating Committee Director Removal Petition until the dialogue has occurred or there have been reasonable efforts to have the dialogue.

(i) If, in accordance with [Section 3.1\(b\)](#) of this [Annex D](#), a Nominating Committee Director Removal Petitioned Decisional Participant accepts a Nominating Committee Director Removal Petition during the

Nominating Committee Director Removal Petition Period (such Decisional Participant, the "**Nominating Committee Director Removal Petitioning Decisional Participant**"), the Nominating Committee Director Removal Petitioning Decisional Participant shall, within twenty-four (24) hours of its acceptance of the Nominating Committee Director Removal Petition, provide written notice ("**Nominating Committee Director Removal Petition Notice**") of such acceptance to the EC (Empowered Community) Administration, the other Decisional Participants and the Secretary. The Nominating Committee Director Removal Petition Notice shall include the rationale upon which removal of the affected Director is sought. The Nominating Committee Director Removal Process shall thereafter continue pursuant to Section 3.1(d) of this Annex D.

(ii) If the EC (Empowered Community) Administration has not received a Nominating Committee Director Removal Petition Notice pursuant to Section 3.1(c)(i) of this Annex D during the Nominating Committee Director Removal Petition Period, the Nominating Committee Director Removal Process shall automatically be terminated with respect to the applicable Nominating Committee Director Removal Petition and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Nominating Committee Director Removal Petition Period, deliver to the Secretary a notice certifying that the Nominating Committee Director Removal Process has been terminated with respect to the applicable Nominating Committee Director Removal Petition ("**Nominating Committee Director Removal Process Termination Notice**").

(d) Following the delivery of a Nominating Committee Director Removal Petition Notice to the EC (Empowered

Community) Administration by a Nominating Committee Director Removal Petitioning Decisional Participant pursuant to Section 3.1(c)(i) of this Annex D, the Nominating Committee Director Removal Petitioning Decisional Participant shall contact the EC (Empowered Community) Administration and the other Decisional Participants to determine whether any other Decisional Participants support the Nominating Committee Director Removal Petition. The Nominating Committee Director Removal Petitioning Decisional Participant shall forward such communication to the Secretary for ICANN (Internet Corporation for Assigned Names and Numbers) to promptly post on the Website.

(i) If the Nominating Committee Director Removal Petitioning Decisional Participant obtains the support of at least one other Decisional Participant (a **"Nominating Committee Director Removal Supporting Decisional Participant"**) during the period beginning upon the expiration of the Nominating Committee Director Removal Petition Period and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 7th day after the expiration of the Nominating Committee Director Removal Petition Period (the **"Nominating Committee Director Removal Petition Support Period"**), the Nominating Committee Director Removal Petitioning Decisional Participant shall provide a written notice to the EC (Empowered Community) Administration, the other Decisional Participants and the Secretary (**"Nominating Committee Director Removal Supported Petition"**) within twenty-four (24) hours of receiving the support of at least one Nominating Committee Director Removal Supporting Decisional Participant. Each Nominating Committee Director Removal Supporting Decisional Participant shall provide a written notice to the EC (Empowered Community) Administration, the other Decisional

Participants and the Secretary within twenty-four (24) hours of providing support to the Nominating Committee Director Removal Petition. Such Nominating Committee Director Removal Supported Petition shall include:

(A) a supporting rationale in reasonable detail;

(B) contact information for at least one representative who has been designated by the Nominating Committee Director Removal Petitioning Decisional Participant who shall act as a liaison with respect to the Nominating Committee Director Removal Supported Petition;

(C) a statement as to whether or not the Nominating Committee Director Removal Petitioning Decisional Participant and/or the Nominating Committee Director Removal Supporting Decisional Participant requests that ICANN (Internet Corporation for Assigned Names and Numbers) organize a publicly-available conference call prior to the Nominating Committee Director Removal Community Forum (as defined in Section 3.1(e) of this Annex D) for the community to discuss the Nominating Committee Director Removal Supported Petition; and

(D) a statement as to whether the Nominating Committee Director Removal Petitioning Decisional Participant and the Nominating Committee Director Removal Supporting Decisional Participant have determined to hold the Nominating Committee Director Removal Community Forum during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting.

The Nominating Committee Director Removal Process shall thereafter continue for such Nominating

Committee Director Removal Petition pursuant to Section 3.1(e) of this Annex D.

(ii) The Nominating Committee Director Removal Process shall automatically be terminated and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Nominating Committee Director Removal Petition Support Period, deliver to the Secretary a Nominating Committee Director Removal Process Termination Notice if the Nominating Committee Director Removal Petitioning Decisional Participant is unable to obtain the support of at least one other Decisional Participant for its Nominating Committee Director Removal Petition during the Nominating Committee Director Removal Petition Support Period.

(e) If the EC (Empowered Community) Administration receives a Nominating Committee Director Removal Supported Petition under Section 3.1(d) of this Annex D during the Nominating Committee Director Removal Petition Support Period, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, convene a forum at which the Decisional Participants and interested parties may discuss the Nominating Committee Director Removal Supported Petition ("**Nominating Committee Director Removal Community Forum**").

(i) If a publicly-available conference call has been requested in a Nominating Committee Director Removal Supported Petition, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, schedule such call prior to any Nominating Committee Director Removal Community Forum, and inform the Decisional Participants of the date, time and participation methods of such

conference call, which ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website. The date and time of any such conference call shall be determined after consultation with the Director who is the subject of the Nominating Committee Director Removal Supported Petition regarding his or her availability.

(ii) The Nominating Committee Director Removal Community Forum shall be convened and concluded during the period beginning upon the expiration of the Nominating Committee Director Removal Petition Support Period and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the Nominating Committee Director Removal Petition Support Period ("**Nominating Committee Director Removal Community Forum Period**") unless the Nominating Committee Director Removal Supported Petition requested that the Nominating Committee Director Removal Community Forum be held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, in which case the Nominating Committee Director Removal Community Forum shall be held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting on the date and at the time determined by ICANN (Internet Corporation for Assigned Names and Numbers), taking into account any date and/or time requested by the Nominating Committee Director Removal Petitioning Decisional Participant and the Nominating Committee Director Removal Supporting Decisional Participant(s); provided, that, the date and time of any Nominating Committee Director Removal Community Forum shall be determined after consultation with the Director who

is the subject of the Nominating Committee Director Removal Supported Petition regarding his or her availability. If the Nominating Committee Director Removal Community Forum is held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting and that public meeting is held after 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the Nominating Committee Director Removal Petition Support Period, the Nominating Committee Director Removal Community Forum Period shall expire at 11:59 p.m., local time of the city hosting such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting on the official last day of such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting.

(iii) The Nominating Committee Director Removal Community Forum shall be conducted via remote participation methods such as teleconference, web-based meeting room and/or such other form of remote participation as the EC (Empowered Community) Administration selects, and/or, only if the Nominating Committee Director Removal Community Forum is held during an ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, face-to-face meetings. If the Nominating Committee Director Removal Community Forum will not be held during an ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, the EC (Empowered Community) Administration shall promptly inform ICANN (Internet Corporation for Assigned Names and Numbers) of the date, time and participation methods of the Nominating Committee Director Removal Community Forum, which ICANN

(Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website.

(iv) The EC (Empowered Community) Administration shall manage and moderate the Nominating Committee Director Removal Community Forum in a fair and neutral manner; provided that no individual from the Nominating Committee Director Removal Petitioning Decisional Participant or the Nominating Committee Director Removal Supporting Decisional Participant, nor the individual who initiated the Nominating Committee Director Removal Petition, shall be permitted to participate in the management or moderation of the Nominating Committee Director Removal Community Forum.

(v) The Director subject to the Nominating Committee Director Removal Supported Petition, ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional Participants) may deliver to the EC (Empowered Community) Administration in writing its views and questions on the Nominating Committee Director Removal Supported Petition prior to the convening of and during the Nominating Committee Director Removal Community Forum. Any written materials delivered to the EC (Empowered Community) Administration shall also be delivered to the Secretary for prompt posting on the Website in a manner deemed appropriate by ICANN (Internet Corporation for Assigned Names and Numbers).

(vi) The Director who is the subject of the Nominating Committee Director Removal Supported Petition and the Chair of the Board (or the Vice Chair of the Board if the Chair is the affected Director) are expected to

attend the Nominating Committee Director Removal Community Forum in order to address the issues raised in the Nominating Committee Director Removal Supported Petition.

(vii) If the Nominating Committee Director Removal Petitioning Decisional Participant and each of the Nominating Committee Director Removal Supporting Decisional Participants for an applicable Nominating Committee Director Removal Supported Petition agree before, during or after the Nominating Committee Director Removal Community Forum that the issue raised in such Nominating Committee Director Removal Supported Petition has been resolved, such Nominating Committee Director Removal Supported Petition shall be deemed withdrawn and the Nominating Committee Director Removal Process with respect to such Nominating Committee Director Removal Supported Petition will be terminated. If a Nominating Committee Director Removal Process is terminated, the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the resolution of the issue raised in the Nominating Committee Director Removal Supported Petition, deliver to the Secretary a Nominating Committee Director Removal Process Termination Notice. For the avoidance of doubt, the Nominating Committee Director Removal Community Forum is not a decisional body and the foregoing resolution process shall be handled pursuant to the internal procedures of the Nominating Committee Director Removal Petitioning Decisional Participant and the Nominating Committee Director Removal Supporting Decisional Participant(s).

(viii) During the Nominating Committee Director Removal Community Forum Period, an additional one or two Nominating Committee Director Removal

Community Forums may be held at the discretion of a Nominating Committee Director Removal Petitioning Decisional Participant and a related Nominating Committee Director Removal Supporting Decisional Participant, or the EC (Empowered Community) Administration.

(ix) ICANN (Internet Corporation for Assigned Names and Numbers) will provide support services for the Nominating Committee Director Removal Community Forum and shall promptly post on the Website a public record of the Nominating Committee Director Removal Community Forum as well as all written submissions of the Director who is the subject of the Nominating Committee Director Removal Supported Petition, ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional Participants) related to the Nominating Committee Director Removal Community Forum.

(f) Following the expiration of the Nominating Committee Director Removal Community Forum Period, at any time or date prior to 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the Nominating Committee Director Removal Community Forum Period (such period, the "**Nominating Committee Director Removal Decision Period**"), each Decisional Participant shall inform the EC (Empowered Community) Administration in writing as to whether such Decisional Participant (i) supports such Nominating Committee Director Removal Supported Petition, (ii) objects to such Nominating Committee Director Removal Supported Petition or (iii) has determined to abstain from the matter (which shall not count as supporting or objecting to the Nominating Committee Director Removal Supported

Petition), and each Decisional Participant shall forward such notice to the Secretary for ICANN (Internet Corporation for Assigned Names and Numbers) to promptly post on the Website. If a Decisional Participant does not inform the EC (Empowered Community) Administration of any of the foregoing prior to the expiration of the Nominating Committee Director Removal Decision Period, the Decisional Participant shall be deemed to have abstained from the matter (even if such Decisional Participant informs the EC (Empowered Community) Administration of its support or objection following the expiration of the Nominating Committee Director Removal Decision Period).

(g) The EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Nominating Committee Director Removal Decision Period, deliver a written notice ("**Nominating Committee Director Removal Notice**") to the Secretary certifying that, pursuant to and in compliance with the procedures and requirements of Section 3.1 of this Annex D, the EC (Empowered Community) has approved of the removal of the Director who is subject to the Nominating Committee Director Removal Process if the Nominating Committee Director Removal Supported Petition is (i) supported by three or more Decisional Participants and (ii) not objected to by more than one Decisional Participant.

(h) Upon the Secretary's receipt of a Nominating Committee Director Removal Notice, the Director subject to such Nominating Committee Director Removal Notice shall be effectively removed from office and shall no longer be a Director and such Director's vacancy shall be filled in accordance with Section 7.12 of the Bylaws.

(i) If the Nominating Committee Director Removal Supported Petition does not obtain the support required by Section 3.1(g) of this Annex D, the Nominating Committee Director Removal Process will automatically be terminated and the

EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Nominating Committee Director Removal Decision Period, deliver to the Secretary a Nominating Committee Director Removal Process Termination Notice. The Director who was subject to the Nominating Committee Director Removal Process shall remain on the Board and not be subject to the Nominating Committee Director Removal Process for the remainder of the Director's current term.

(j) If neither a Nominating Committee Director Removal Notice nor a Nominating Committee Director Removal Process Termination Notice are received by the Secretary prior to 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the Nominating Committee Director Removal Community Forum Period, the Nominating Committee Director Removal Process shall automatically terminate and the Director who was subject to the Nominating Committee Director Removal Process shall remain on the Board and shall not be subject to the Nominating Committee Director Removal Process for the remainder of the Director's current term.

(k) Notwithstanding anything in this Section 3.1 to the contrary, if, for any reason, including due to resignation, death or disability, a Director who is the subject of a Nominating Committee Director Removal Process ceases to be a Director, the Nominating Committee Director Removal Process for such Director shall automatically terminate without any further action of ICANN (Internet Corporation for Assigned Names and Numbers) or the EC (Empowered Community) Administration.

(l) ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post to the Website any (i) Nominating Committee Director Removal Petition, (ii)

Nominating Committee Director Removal Petition Notice, (iii) Nominating Committee Director Removal Supported Petition, (iv) Nominating Committee Director Removal Notice and the written explanation provided by the EC (Empowered Community) Administration as to why the EC (Empowered Community) has chosen to remove the relevant Director, (v) Nominating Committee Director Removal Process Termination Notice, and (vi) other notices the Secretary receives under this Section 3.1.

Section 3.2. SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) DIRECTOR REMOVAL PROCESS

(a) Subject to the procedures and requirements developed by the applicable Decisional Participant, an individual may submit a petition to the ASO (Address Supporting Organization), ccNSO (Country Code Names Supporting Organization), GNSO (Generic Names Supporting Organization) or At-Large Community (as applicable, the "**Applicable Decisional Participant**") seeking to remove a Director who was nominated by that Supporting Organization (Supporting Organization) or the At-Large Community in accordance with Section 7.2(a) of the Bylaws, and initiate the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process ("**SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition**"). The process set forth in this Section 3.2 of this Annex D is referred to herein as the "**SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process.**"

(b) During the period beginning on the date that the Applicable Decisional Participant received the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director

Removal Petition (such date of receipt, the "**SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Date**") and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the date that is the 21st day after the **SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Date** (as it relates to a particular Director, the "**SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Period**"), the Applicable Decisional Participant shall either accept or reject such **SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition** pursuant to the internal procedures of the Applicable Decisional Participant for the **SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition**; provided that the Applicable Decisional Participant shall not accept an **SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition** if, during the same term, the Director who is the subject of such **SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition** had previously been subject to an **SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition** that led to an **SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum** (as defined in [Section 3.2\(d\)](#) of this [Annex D](#)).

(c) During the **SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Period**, the

Applicable Decisional Participant shall invite the Director subject to the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition and the Chair of the Board (or the Vice Chair of the Board if the Chair is the affected Director) to a dialogue with the individual(s) bringing the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition and the Applicable Decisional Participant's representative on the EC (Empowered Community) Administration. The SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition may not be accepted unless this invitation has been extended upon reasonable notice and accommodation to the affected Director's availability. If the invitation is accepted by either the Director who is the subject of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition or the Chair of the Board (or the Vice Chair of the Board if the Chair is the affected Director), the Applicable Decisional Participant shall not accept the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition until the dialogue has occurred or there have been reasonable efforts to have the dialogue.

(i) If, in accordance with Section 3.2(b), the Applicable Decisional Participant accepts an SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition during the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Period, the Applicable Decisional Participant shall, within twenty-four (24) hours of the Applicable Decisional Participant's acceptance of the SO (Supporting Organization)/AC

(Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition, provide written notice ("**SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice**") of such acceptance to the EC (Empowered Community) Administration, the other Decisional Participants and the Secretary. Such SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice shall include:

- (A) a supporting rationale in reasonable detail;
- (B) contact information for at least one representative who has been designated by the Applicable Decisional Participant who shall act as a liaison with respect to the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice;
- (C) a statement as to whether or not the Applicable Decisional Participant requests that ICANN (Internet Corporation for Assigned Names and Numbers) organize a publicly-available conference call prior to the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum (as defined in Section 3.2(d) of this Annex D) for the community to discuss the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition; and
- (D) a statement as to whether the Applicable Decisional Participant has determined to hold the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration))

Director Removal Community Forum during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting.

The SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process shall thereafter continue for such SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition pursuant to Section 3.2(d) of this Annex D.

(ii) If the EC (Empowered Community) Administration has not received an SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice pursuant to Section 3.2(c)(i) during the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Period, the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process shall automatically be terminated with respect to the applicable SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Period, deliver to the Secretary a notice certifying that the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process has been terminated with respect to the applicable SO (Supporting

Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition ("**SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process Termination Notice**").

(d) If the EC (Empowered Community) Administration receives an SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice under Section 3.2(c) of this Annex D during the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Period, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, convene a forum at which the Decisional Participants and interested parties may discuss the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice ("**SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum**").

(i) If a publicly-available conference call has been requested in an SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, schedule such call prior to any SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum, and inform the Decisional Participants of the date, time and participation methods of such conference call, which

ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website. The date and time of any such conference call shall be determined after consultation with the Director who is the subject of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice regarding his or her availability.

(ii) The SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum shall be convened and concluded during the period beginning upon the expiration of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Period and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Period (**"SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum Period"**) unless the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice requested that the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum be held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, in which case the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum shall be held

during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting on the date and at the time determined by ICANN (Internet Corporation for Assigned Names and Numbers), taking into account any date and/or time requested by the Applicable Decisional Participant; provided, that the date and time of any SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum shall be determined after consultation with the Director who is the subject of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice regarding his or her availability. If the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum is held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting and that public meeting is held after 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Period, the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum Period shall expire at 11:59 p.m., local time of the city hosting such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting on the official last day of such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting.

(iii) The SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain

registration)) Director Removal Community Forum shall be conducted via remote participation methods such as teleconference, web-based meeting room and/or such other form of remote participation as the EC (Empowered Community) Administration selects, and/or, only if the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum is held during an ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, face-to-face meetings. If the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum will not be held during an ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, the EC (Empowered Community) Administration shall promptly inform ICANN (Internet Corporation for Assigned Names and Numbers) of the date, time and participation methods of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum, which ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website.

(iv) The EC (Empowered Community) Administration shall manage and moderate the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum in a fair and neutral manner; provided that no individual from the Applicable Decisional Participant, nor the individual who initiated the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition, shall be permitted to participate in the management or moderation of the SO (Supporting Organization)/AC

(Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum.

(v) The Director subject to the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice, ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional Participants) may deliver to the EC (Empowered Community) Administration in writing its views and questions on the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice prior to the convening of and during the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum. Any written materials delivered to the EC (Empowered Community) Administration shall also be delivered to the Secretary for prompt posting on the Website in a manner deemed appropriate by ICANN (Internet Corporation for Assigned Names and Numbers).

(vi) The Director who is the subject of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice and the Chair of the Board (or the Vice Chair of the Board if the Chair is the affected Director) are expected to attend the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum in order to address the issues raised in the SO (Supporting Organization)/AC (Advisory Committee; or

Administrative Contact (of a domain registration))
Director Removal Petition Notice.

(vii) If the Applicable Decisional Participant agrees before, during or after the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum that the issue raised in such SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice has been resolved, such SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice shall be deemed withdrawn and the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process with respect to such SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice will be terminated. If an SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process is terminated, the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the resolution of the issue raised in the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice, deliver to the Secretary an SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process Termination Notice. For the avoidance of doubt, the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum is not a

decisional body and the foregoing resolution process shall be handled pursuant to the internal procedures of the Applicable Decisional Participant.

(viii) During the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum Period, an additional one or two SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forums may be held at the discretion of the Applicable Decisional Participant or the EC (Empowered Community) Administration.

(ix) ICANN (Internet Corporation for Assigned Names and Numbers) will provide support services for the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum and shall promptly post on the Website a public record of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum as well as all written submissions of the Director who is the subject of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice, ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional Participants) related to the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Community Forum.

(e) Following the expiration of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative

Contact (of a domain registration)) Director Removal Community Forum Period, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the request of the EC (Empowered Community) Administration, issue a request for comments and recommendations from the community, which shall be delivered to the Secretary for prompt posting on the Website along with a means for comments and recommendations to be submitted to ICANN (Internet Corporation for Assigned Names and Numbers) on behalf of the EC (Empowered Community) Administration. This comment period shall remain open until 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 7th day after the request for comments and recommendations was posted on the Website (the "**SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Comment Period**"). ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website all comments and recommendations received by ICANN (Internet Corporation for Assigned Names and Numbers) during the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Comment Period.

(f) Following the expiration of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Comment Period, at any time or date prior to 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Comment Period (such period, the "**SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration))**")

Director Removal Decision Period"), the Applicable Decisional Participant shall inform the EC (Empowered Community) Administration in writing as to whether the Applicable Decisional Participant has support for the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice within the Applicable Decisional Participant of a three-quarters majority as determined pursuant to the internal procedures of the Applicable Decisional Participant ("**SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Notice**"). The Applicable Decisional Participant shall, within twenty-four (24) hours of obtaining such support, deliver the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Notice to the EC (Empowered Community) Administration, the other Decisional Participants and Secretary, and ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the Applicable Decisional Participant, concurrently post on the Website an explanation provided by the Applicable Decisional Participant as to why the Applicable Decisional Participant has chosen to remove the affected Director. Upon the Secretary's receipt of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Notice from the EC (Empowered Community) Administration, the Director subject to such SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Notice shall be effectively removed from office and shall no longer be a Director and such Director's vacancy shall be filled in accordance with Section 7.12 of the Bylaws.

(g) If the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice does not obtain the support required by Section 3.2(f) of this Annex D,

the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process will automatically be terminated and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the failure to obtain such support, deliver to the Secretary an SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process Termination Notice. The Director who was subject to the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process shall remain on the Board and shall not be subject to the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process for the remainder of the Director's current term.

(h) If neither an SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Notice nor an SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process Termination Notice are received by the Secretary prior to the expiration of the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Decision Period, the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process shall automatically terminate and the Director who was subject to the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process shall remain on the Board and shall not be subject to the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process for the remainder of the Director's current term.

(i) Notwithstanding anything in this Section 3.2 to the contrary, if, for any reason, including due to resignation, death or disability, a Director who is the subject of an SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process ceases to be a Director, the SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process for such Director shall automatically terminate without any further action of ICANN (Internet Corporation for Assigned Names and Numbers) or the EC (Empowered Community) Administration.

(j) ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post to the Website any (i) SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition, (ii) SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Petition Notice, (iii) SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Notice and the written explanation provided by the EC (Empowered Community) Administration as to why the EC (Empowered Community) has chosen to remove the relevant Director, (iv) SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Process Termination Notice, and (v) other notices the Secretary receives under this Section 3.2.

Section 3.3. BOARD RECALL PROCESS

(a) Subject to the procedures and requirements developed by the applicable Decisional Participant, an individual may submit a petition to a Decisional Participant seeking to remove all Directors (other than the President) at the same time and initiate the Board Recall Process ("**Board Recall**

Petition"), provided that a Board Recall Petition cannot be submitted solely on the basis of a matter decided by a Community IRP if (i) such Community IRP was initiated in connection with the Board's implementation of GAC (Governmental Advisory Committee) Consensus (Consensus) Advice and (ii) the EC (Empowered Community) did not prevail in such Community IRP. Each Board Recall Petition shall include a rationale setting forth the reasons why such individual seeks to recall the Board. The process set forth in this Section 3.3 of this Annex D is referred to herein as the "**Board Recall Process.**"

(b) A Decisional Participant that has received a Board Recall Petition shall either accept or reject such Board Recall Petition during the period beginning on the date the Decisional Participant received the Board Recall Petition ("**Board Recall Petition Date**") and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the date that is the 21st day after the Board Recall Petition Date (the "**Board Recall Petition Period**").

(i) If, in accordance with Section 3.3(b) of this Annex D, a Decisional Participant accepts a Board Recall Petition during the Board Recall Petition Period (such Decisional Participant, the "**Board Recall Petitioning Decisional Participant**"), the Board Recall Petitioning Decisional Participant shall, within twenty-four (24) hours of the expiration of its acceptance of the Board Recall Petition, provide written notice ("**Board Recall Petition Notice**") of such acceptance to the EC (Empowered Community) Administration, the other Decisional Participants and the Secretary. The Board Recall Petition Notice shall include the rationale upon which removal of the Board is sought. The Board Recall Process shall thereafter continue pursuant to Section 3.3(c) of this Annex D.

(ii) If the EC (Empowered Community) Administration has not received a Board Recall Petition Notice pursuant to Section 3.3(b)(i) of this Annex D during the Board Recall Petition Period, the Board Recall Process shall automatically be terminated with respect to the Board Recall Petition and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Board Recall Petition Period, deliver to the Secretary a notice certifying that the Board Recall Process has been terminated with respect to the Board Recall Petition ("**Board Recall Process Termination Notice**").

(c) Following the delivery of a Board Recall Petition Notice to the EC (Empowered Community) Administration by a Board Recall Petitioning Decisional Participant pursuant to Section 3.3(b)(i) of this Annex D, the Board Recall Petitioning Decisional Participant shall contact the EC (Empowered Community) Administration and the other Decisional Participants to determine whether any other Decisional Participants support the Board Recall Petition. The Board Recall Petitioning Decisional Participant shall forward such communication to the Secretary for ICANN (Internet Corporation for Assigned Names and Numbers) to promptly post on the Website.

(i) If the Board Recall Petitioning Decisional Participant obtains the support of at least two other Decisional Participants (each, a "**Board Recall Supporting Decisional Participant**") during the period beginning upon the expiration of the Board Recall Petition Period and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 7th day after the expiration of the Board Recall Petition Period (the "**Board Recall Petition Support Period**"), the Board Recall Petitioning Decisional

Participant shall provide a written notice to the EC (Empowered Community) Administration, the other Decisional Participants and the Secretary ("**Board Recall Supported Petition**") within twenty-four hours of receiving the support of at least two Board Recall Supporting Decisional Participants. Each Board Recall Supporting Decisional Participant shall provide a written notice to the EC (Empowered Community) Administration, the other Decisional Participants and the Secretary within twenty-four (24) hours of providing support to the Board Recall Petition. Such Board Recall Supported Petition shall include:

- (A) a supporting rationale in reasonable detail;
- (B) contact information for at least one representative who has been designated by the Board Recall Petitioning Decisional Participant who shall act as a liaison with respect to the Board Recall Supported Petition;
- (C) a statement as to whether or not the Board Recall Petitioning Decisional Participant and/or the Board Recall Supporting Decisional Participants requests that ICANN (Internet Corporation for Assigned Names and Numbers) organize a publicly-available conference call prior to the Board Recall Community Forum (as defined in Section 3.3(d) of this Annex D) for the community to discuss the Board Recall Supported Petition; and
- (D) a statement as to whether the Board Recall Petitioning Decisional Participant and the Board Recall Supporting Decisional Participants have determined to hold the Board Recall Community Forum during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting.

The Board Recall Process shall thereafter continue for such Board Recall Supported Petition pursuant to Section 3.3(d) of this Annex D.

(ii) The Board Recall Process shall automatically be terminated and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Board Recall Petition Support Period, deliver to the Secretary a Board Recall Process Termination Notice if the Board Recall Petitioning Decisional Participant is unable to obtain the support of at least two other Decisional Participants for its Board Recall Petition during the Board Recall Petition Support Period.

(d) If the EC (Empowered Community) Administration receives a Board Recall Supported Petition under Section 3.3(c) of this Annex D during the Board Recall Petition Support Period, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, convene a forum at which the Decisional Participants and interested parties may discuss the Board Recall Supported Petition ("**Board Recall Community Forum**").

(i) If a publicly-available conference call has been requested in a Board Recall Supported Petition, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, schedule such call prior to any Board Recall Community Forum, and inform the Decisional Participants of the date, time and participation methods of such conference call, which ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website. The date and time of any such conference call shall be determined after consultation with the Board regarding the availability of the Directors.

(ii) The Board Recall Community Forum shall be convened and concluded during the period beginning upon the expiration of the Board Recall Petition Support Period and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the Board Recall Petition Support Period (**"Board Recall Community Forum Period"**) unless the Board Recall Supported Petition requested that the Board Recall Community Forum be held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, in which case the Board Recall Community Forum shall be held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting on the date and at the time determined by ICANN (Internet Corporation for Assigned Names and Numbers), taking into account any date and/or time requested by the Board Recall Petitioning Decisional Participant and the Board Recall Supporting Decisional Participants; provided, that, the date and time of any Board Recall Community Forum shall be determined after consultation with the Board regarding the availability of the Directors. If the Board Recall Community Forum is held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting and that public meeting is held after 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the Board Recall Petition Support Period, the Board Recall Community Forum Period shall expire at 11:59 p.m., local time of the city hosting such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting on the official last day of such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting.

(iii) The Board Recall Community Forum shall have at least one face-to-face meeting and may also be conducted via remote participation methods such as teleconference, web-based meeting room and/or such other form of remote participation as the EC (Empowered Community) Administration selects. If the Board Recall Community Forum will not be held during an ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, the EC (Empowered Community) Administration shall promptly inform ICANN (Internet Corporation for Assigned Names and Numbers) of the date, time and participation methods of the Board Recall Community Forum, which ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website.

(iv) The EC (Empowered Community) Administration shall manage and moderate the Board Recall Community Forum in a fair and neutral manner; provided that no individual from the Board Recall Petitioning Decisional Participant or a Board Recall Supporting Decisional Participant, nor the individual who initiated the Board Recall Petition, shall be permitted to participate in the management or moderation of the Board Recall Community Forum.

(v) ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional Participants) may deliver to the EC (Empowered Community) Administration in writing its views and questions on the Board Recall Supported Petition prior to the convening of and during the Board Recall Community Forum. Any written materials delivered to the EC (Empowered Community) Administration shall also be delivered to the Secretary for prompt posting on the Website in a manner deemed appropriate by

ICANN (Internet Corporation for Assigned Names and Numbers).

(vi) ICANN (Internet Corporation for Assigned Names and Numbers) staff and the full Board are expected to attend the Board Recall Community Forum in order to address the issues raised in the Board Recall Supported Petition.

(vii) If the Board Recall Petitioning Decisional Participant and each of the Board Recall Supporting Decisional Participants for the Board Recall Supported Petition agree before, during or after the Board Recall Community Forum that the issue raised in such Board Recall Supported Petition has been resolved, such Board Recall Supported Petition shall be deemed withdrawn and the Board Recall Process with respect to such Board Recall Supported Petition will be terminated. If a Board Recall Process is terminated, the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the resolution of the issue raised in the Board Recall Supported Petition, deliver to the Secretary a Board Recall Process Termination Notice. For the avoidance of doubt, the Board Recall Community Forum is not a decisional body and the foregoing resolution process shall be handled pursuant to the internal procedures of the Board Recall Petitioning Decisional Participant and the Board Recall Supporting Decisional Participants.

(viii) During the Board Recall Community Forum Period, an additional one or two Board Recall Community Forums may be held at the discretion of the Board Recall Petitioning Decisional Participant and the Board Recall Supporting Decisional Participants, or the EC (Empowered Community) Administration.

(ix) ICANN (Internet Corporation for Assigned Names and Numbers) will provide support services for the

Board Recall Community Forum and shall promptly post on the Website a public record of the Board Recall Community Forum as well as all written submissions of ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional Participants) related to the Board Recall Community Forum.

(e) Following the expiration of the Board Recall Community Forum Period, at any time or date prior to 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the Board Recall Community Forum Period (such period, the "**Board Recall Decision Period**"), each Decisional Participant shall inform the EC (Empowered Community) Administration in writing as to whether such Decisional Participant (i) supports such Board Recall Supported Petition, (ii) objects to such Board Recall Supported Petition or (iii) has determined to abstain from the matter (which shall not count as supporting or objecting to such Board Recall Supported Petition), and each Decisional Participant shall forward such notice to the Secretary for ICANN (Internet Corporation for Assigned Names and Numbers) to promptly post on the Website. If a Decisional Participant does not inform the EC (Empowered Community) Administration of any of the foregoing prior to expiration of the Board Recall Decision Period, the Decisional Participant shall be deemed to have abstained from the matter (even if such Decisional Participant informs the EC (Empowered Community) Administration of its support or objection following the expiration of the Board Recall Decision Period).

(f) The EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Board Recall Decision Period, deliver a written notice ("**EC**

(Empowered Community) Board Recall Notice") to the Secretary certifying that, pursuant to and in compliance with the procedures and requirements of this Section 3.3 of this Annex D, the EC (Empowered Community) has resolved to remove all Directors (other than the President) if (after accounting for any adjustments to the below as required by the GAC (Governmental Advisory Committee) Carve-out pursuant to Section 3.6(e) of the Bylaws if an IRP Panel found that, in implementing GAC (Governmental Advisory Committee) Consensus (Consensus) Advice, the Board acted inconsistently with the Articles or Bylaws) a Board Recall Supported Petition (i) is supported by four or more Decisional Participants, and (ii) is not objected to by more than one Decisional Participant.

(g) Upon the Secretary's receipt of an EC (Empowered Community) Board Recall Notice, all Directors (other than the President) shall be effectively removed from office and shall no longer be Directors and such vacancies shall be filled in accordance with Section 7.12 of the Bylaws.

(h) If the Board Recall Supported Petition does not obtain the support required by Section 3.3(f) of this Annex D, the Board Recall Process will automatically be terminated and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Board Recall Decision Period, deliver to the Secretary a Board Recall Process Termination Notice. All Directors shall remain on the Board.

(i) If neither an EC (Empowered Community) Board Recall Notice nor a Board Recall Process Termination Notice are received by the Secretary prior to the expiration of the Board Recall Decision Period, the Board Recall Process shall automatically terminate and all Directors shall remain on the Board.

(j) ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post to the Website any (i) Board Recall Petition, (ii) Board Recall Petition Notice, (iii) Board

Recall Supported Petition, (iv) EC (Empowered Community) Board Recall Notice and the written explanation provided by the EC (Empowered Community) Administration as to why the EC (Empowered Community) has chosen to recall the Board, (v) Board Recall Process Termination Notice, and (vi) other notices the Secretary receives under this Section 3.3.

Article 4 PROCEDURE FOR EXERCISE OF EC (Empowered Community)'S RIGHTS TO INITIATE MEDIATION, A COMMUNITY IRP OR RECONSIDERATION REQUEST

Section 4.1. MEDIATION INITIATION

(a) If the Board refuses or fails to comply with a decision by the EC (Empowered Community) delivered to the Secretary pursuant to an EC (Empowered Community) Approval Notice, EC (Empowered Community) Rejection Notice, Nominating Committee Director Removal Notice, SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Director Removal Notice or EC (Empowered Community) Board Recall Notice pursuant to and in compliance with Article 1, Article 2 or Article 3 of this Annex D, or rejects or otherwise does not take action that is consistent with a final IFR Recommendation, Special IFR Recommendation, SCWG Creation Recommendation or SCWG Recommendation, as applicable (each, an "**EC (Empowered Community) Decision**"), the EC (Empowered Community) Administration representative of any Decisional Participant who supported the exercise by the EC (Empowered Community) of its rights in the applicable EC (Empowered Community) Decision during the applicable decision period may request that the EC (Empowered Community) initiate mediation with the Board in relation to that EC (Empowered Community) Decision as contemplated by Section 4.7 of the Bylaws, by delivering a notice to the EC (Empowered Community) Administration, the Decisional Participants and the Secretary

requesting the initiation of a mediation ("**Mediation Initiation Notice**"). ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post to the Website any Mediation Initiation Notice.

(b) As soon as practicable after receiving a Mediation Initiation Notice, the EC (Empowered Community) Administration and the Secretary shall initiate mediation, which shall proceed in accordance with Section 4.7 of the Bylaws.

Section 4.2. COMMUNITY IRP

(a) After completion of a mediation under Section 4.7 of the Bylaws, the EC (Empowered Community) Administration representative of any Decisional Participant who supported the exercise by the EC (Empowered Community) of its rights in the applicable EC (Empowered Community) Decision during the applicable decision period may request that the EC (Empowered Community) initiate a Community IRP (a "**Community IRP Petitioning Decisional Participant**"), as contemplated by Section 4.3 of the Bylaws, by delivering a notice to the EC (Empowered Community) Administration and the Decisional Participants requesting the initiation of a Community IRP ("**Community IRP Petition**"). The Community IRP Petitioning Decisional Participant shall forward such notice to the Secretary for ICANN (Internet Corporation for Assigned Names and Numbers) to promptly post on the Website. The process set forth in this Section 4.2 of this Annex D as it relates to a particular Community IRP Petition is referred to herein as the "**Community IRP Initiation Process**."

(b) Following the delivery of a Community IRP Petition to the EC (Empowered Community) Administration by a Community IRP Petitioning Decisional Participant pursuant to Section 4.2(a) of this Annex D (which delivery date shall be referred to herein as the "**Community IRP Notification Date**"), the Community IRP Petitioning Decisional Participant shall

contact the EC (Empowered Community) Administration and the other Decisional Participants to determine whether any other Decisional Participants support the Community IRP Petition. The Community IRP Petitioning Decisional Participant shall forward such communication to the Secretary for ICANN (Internet Corporation for Assigned Names and Numbers) to promptly post on the Website.

(i) If the Community IRP Petitioning Decisional Participant obtains the support of at least one other Decisional Participant (a "**Community IRP Supporting Decisional Participant**") during the period beginning on the Community IRP Notification Date and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the Community IRP Notification Date (the "**Community IRP Petition Support Period**"), the Community IRP Petitioning Decisional Participant shall provide a written notice to the EC (Empowered Community) Administration, the other Decisional Participants and the Secretary ("**Community IRP Supported Petition**") within twenty-four (24) hours of receiving the support of at least one Community IRP Supporting Decisional Participant. Each Community IRP Supporting Decisional Participant shall provide a written notice to the EC (Empowered Community) Administration, the other Decisional Participants and the Secretary within twenty-four (24) hours of providing support to the Community IRP Petition. Such Community IRP Supported Petition shall include:

(A) a supporting rationale in reasonable detail;

(B) contact information for at least one representative who has been designated by the Community IRP Petitioning Decisional Participant who shall act as a

liaison with respect to the Community IRP Supported Petition;

(C) a statement as to whether or not the Community IRP Petitioning Decisional Participant and/or the Community IRP Supporting Decisional Participant requests that ICANN (Internet Corporation for Assigned Names and Numbers) organize a publicly-available conference call prior to the Community IRP Community Forum (as defined in Section 4.2(c) of this Annex D) for the community to discuss the Community IRP Supported Petition;

(D) a statement as to whether the Community IRP Petitioning Decisional Participant and the Community IRP Supporting Decisional Participant have determined to hold the Community IRP Community Forum during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting;

(E) where the Community IRP Supported Petition relates to a Fundamental Bylaw Amendment, a PDP (Policy Development Process) Fundamental Bylaw Statement if applicable and, if so, the name of the Fundamental Bylaw Amendment PDP (Policy Development Process) Decisional Participant;

(F) where the Community IRP Supported Petition relates to an Articles Amendment, a PDP (Policy Development Process) Articles Statement if applicable and, if so, the name of the Articles Amendment PDP (Policy Development Process) Decisional Participant;

(G) where the Community IRP Supported Petition relates to a Standard Bylaw Amendment, a PDP (Policy Development Process) Standard Bylaw Statement if applicable and, if so, the name of the

Standard Bylaw Amendment PDP (Policy Development Process) Decisional Participant; and

(H) where the Community IRP Supported Petition relates to a policy recommendation of a cross community working group chartered by more than one Supporting Organization (Supporting Organization) ("**CCWG Policy Recommendation**"), a statement citing the specific CCWG Policy Recommendation and related provision in the Community IRP Supported Petition ("**CCWG Policy Recommendation Statement**"), and, if so, the name of any Supporting Organization (Supporting Organization) that is a Decisional Participant that approved the CCWG Policy Recommendation ("**CCWG Policy Recommendation Decisional Participant**").

The Community IRP Initiation Process shall thereafter continue for such Community IRP Supported Petition pursuant to Section 4.2(c) of this Annex D.

(ii) The Community IRP Initiation Process shall automatically be terminated and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Community IRP Petition Support Period, deliver to the Secretary a notice certifying that the Community IRP Initiation Process has been terminated with respect to the Community IRP included in the Community IRP Petition ("**Community IRP Termination Notice**") if:

(A) no Community IRP Petitioning Decisional Participant is able to obtain the support of at least one other Decisional Participant for its Community IRP Petition during the Community IRP Petition Support Period;

(B) where the Community IRP Supported Petition includes a PDP (Policy Development Process)

Fundamental Bylaw Statement, the Fundamental Bylaw Amendment PDP (Policy Development Process) Decisional Participant is not (x) the Community IRP Petitioning Decisional Participant or (y) one of the Community IRP Supporting Decisional Participants;

(C)where the Community IRP Supported Petition includes a PDP (Policy Development Process) Articles Statement, the Articles Amendment PDP (Policy Development Process) Decisional Participant is not (x) the Community IRP Petitioning Decisional Participant or (y) one of the Community IRP Supporting Decisional Participants;

(D)where the Community IRP Supported Petition includes a PDP (Policy Development Process) Standard Bylaw Statement, the Standard Bylaw Amendment PDP (Policy Development Process) Decisional Participant is not (x) the Community IRP Petitioning Decisional Participant or (y) one of the Community IRP Supporting Decisional Participants; or

(E) where the Community IRP Supported Petition includes a CCWG Policy Recommendation Statement, the CCWG Policy Recommendation Decisional Participant is not (x) the Community IRP Petitioning Decisional Participant or (y) one of the Community IRP Supporting Decisional Participants.

(c) If the EC (Empowered Community) Administration receives a Community IRP Supported Petition under Section 4.2(b) of this Annex D during the Community IRP Petition Support Period, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, convene a forum at which the Decisional Participants and interested third parties may discuss the Community IRP Supported Petition ("**Community IRP Community Forum**").

(i) If a publicly-available conference call has been requested in a Community IRP Supported Petition, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, schedule such call prior to any Community IRP Community Forum, and inform the Decisional Participants of the date, time and participation methods of such conference call, which ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website.

(ii) The Community IRP Community Forum shall be convened and concluded during the period beginning on the expiration of the Community IRP Petition Support Period and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 30th day after the expiration of the Community IRP Petition Support Period ("**Community IRP Community Forum Period**") unless the Community IRP Supported Petition requested that the Community IRP Community Forum be held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, in which case the Community IRP Community Forum shall be held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting on the date and at the time determined by ICANN (Internet Corporation for Assigned Names and Numbers), taking into account any date and/or time requested by the Community IRP Petitioning Decisional Participant and the Community IRP Supporting Decisional Participant(s). If the Community IRP Community Forum is held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting and that public meeting is held after 11:59 p.m. (as calculated by local

time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 30th day after the expiration of the Community IRP Petition Support Period, the Community IRP Community Forum Period shall expire at 11:59 p.m., local time of the city hosting such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting on the official last day of such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting.

(iii) The Community IRP Community Forum shall be conducted via remote participation methods such as teleconference, web-based meeting room and/or such other form of remote participation as the EC (Empowered Community) Administration selects and/or, only if the Community IRP Community Forum is held during an ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, face-to-face meetings. If the Community IRP Community Forum will not be held during an ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, the EC (Empowered Community) Administration shall promptly inform ICANN (Internet Corporation for Assigned Names and Numbers) of the date, time and participation methods of such Community IRP Community Forum, which ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website.

(iv) The EC (Empowered Community) Administration shall manage and moderate the Community IRP Community Forum in a fair and neutral manner.

(v) ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional

Participants) may deliver to the EC (Empowered Community) Administration in writing its views and questions on the Community IRP Supported Petition prior to the convening of and during the Community IRP Community Forum. Any written materials delivered to the EC (Empowered Community) Administration shall also be delivered to the Secretary for prompt posting on the Website in a manner deemed appropriate by ICANN (Internet Corporation for Assigned Names and Numbers).

(vi) ICANN (Internet Corporation for Assigned Names and Numbers) staff and Directors representing the Board are expected to attend the Community IRP Community Forum in order to discuss the Community IRP Supported Petition.

(vii) If the Community IRP Petitioning Decisional Participant and each of the Community IRP Supporting Decisional Participants for the Community IRP Supported Petition agree before, during or after a Community IRP Community Forum that the issue raised in such Community IRP Supported Petition has been resolved, such Community IRP Supported Petition shall be deemed withdrawn and the Community IRP Initiation Process with respect to such Community IRP Supported Petition will be terminated. If a Community IRP Initiation Process is terminated, the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the resolution of the issue raised in the Community IRP Supported Petition, deliver to the Secretary a Community IRP Termination Notice. For the avoidance of doubt, the Community IRP Community Forum is not a decisional body and the foregoing resolution process shall be handled pursuant to the internal procedures of the Community IRP Petitioning Decisional Participant and the Community IRP Supporting Decisional Participant(s).

(viii) During the Community IRP Community Forum Period, an additional one or two Community IRP Community Forums may be held at the discretion of a Community IRP Petitioning Decisional Participant and a related Community IRP Supporting Decisional Participant, or the EC (Empowered Community) Administration.

(ix) ICANN (Internet Corporation for Assigned Names and Numbers) will provide support services for the Community IRP Community Forum and shall promptly post on the Website a public record of the Community IRP Community Forum as well as all written submissions of ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional Participants) related to the Community IRP Community Forum.

(d) Following the expiration of the Community IRP Community Forum Period, at any time or date prior to 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the Community IRP Community Forum Period (such period, the "**Community IRP Decision Period**"), each Decisional Participant shall inform the EC (Empowered Community) Administration in writing as to whether such Decisional Participant (i) supports such Community IRP Supported Petition, (ii) objects to such Community IRP Supported Petition or (iii) has determined to abstain from the matter (which shall not count as supporting or objecting to the Community IRP Supported Petition), and each Decisional Participant shall forward such notice to the Secretary for ICANN (Internet Corporation for Assigned Names and Numbers) to promptly post on the Website. If a Decisional Participant does not inform the EC (Empowered Community)

Administration of any of the foregoing prior to the expiration of the Community IRP Decision Period, the Decisional Participant shall be deemed to have abstained from the matter (even if such Decisional Participant informs the EC (Empowered Community) Administration of its support or objection following the expiration of the Community IRP Decision Period).

(e) The EC (Empowered Community) Administration, within twenty-four (24) hours of the expiration of the Community IRP Decision Period, shall promptly deliver a written notice ("**EC (Empowered Community) Community IRP Initiation Notice**") to the Secretary certifying that, pursuant to and in compliance with the procedures and requirements of this Section 4.2 of this Annex D, the EC (Empowered Community) has resolved to accept the Community IRP Supported Petition if:

(i) A Community IRP Supported Petition that does not include a PDP (Policy Development Process) Fundamental Bylaw Statement, a PDP (Policy Development Process) Articles Statement, a PDP (Policy Development Process) Standard Bylaw Statement or a CCWG Policy Recommendation Statement (A) is supported by three or more Decisional Participants, and (B) is not objected to by more than one Decisional Participant;

(ii) A Community IRP Supported Petition that (A) includes a PDP (Policy Development Process) Fundamental Bylaw Statement, (B) is supported by three or more Decisional Participants (including the Fundamental Bylaw Amendment PDP (Policy Development Process) Decisional Participant), and (C) is not objected to by more than one Decisional Participant;

(iii) A Community IRP Supported Petition that (A) includes a PDP (Policy Development Process) Articles Statement, (B) is supported by three or more Decisional Participants (including the Articles Amendment PDP (Policy Development Process) Decisional Participant), and (C) is not objected to by more than one Decisional Participant;

(iv) A Community IRP Supported Petition that (A) includes a PDP (Policy Development Process) Standard Bylaw Statement, (B) is supported by three or more Decisional Participants (including the Standard Bylaw Amendment PDP (Policy Development Process) Decisional Participant), and (C) is not objected to by more than one Decisional Participant; or

(v) A Community IRP Supported Petition that (A) includes a CCWG Policy Recommendation Statement, (B) is supported by three or more Decisional Participants (including the CCWG Policy Recommendation Decisional Participant), and (C) is not objected to by more than one Decisional Participant.

(f) If the Community IRP Supported Petition does not obtain the support required by Section 4.2(e) of this Annex D, the Community IRP Initiation Process will automatically be terminated and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Community IRP Decision Period, deliver to the Secretary a Community IRP Termination Notice.

(g) ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post to the Website any (i) Community IRP Petition, (ii) Community IRP Supported Petition, (iii) EC (Empowered Community) Community IRP Initiation Notice, (iv) Community IRP Termination Notice, (v)

written explanation provided by the EC (Empowered Community) Administration related to any of the foregoing, and (vi) other notices the Secretary receives under this Section 4.2.

Section 4.3. COMMUNITY RECONSIDERATION REQUEST

(a) Any Decisional Participant may request that the EC (Empowered Community) initiate a Reconsideration Request (a "**Community Reconsideration Petitioning Decisional Participant**"), as contemplated by Section 4.2(b) of the Bylaws, by delivering a notice to the EC (Empowered Community) Administration and the other Decisional Participants, with a copy to the Secretary for ICANN (Internet Corporation for Assigned Names and Numbers) to promptly post on the Website, requesting the review or reconsideration of an action or inaction of the ICANN (Internet Corporation for Assigned Names and Numbers) Board or staff ("**Community Reconsideration Petition**"). A Community Reconsideration Petition must be delivered within 30 days after the occurrence of any of the conditions set forth in Section 4.2(g)(i)(A), (B) or (C) of the Bylaws. In that instance, the Community Reconsideration Petition must be delivered within 30 days from the initial posting of the rationale. The process set forth in this Section 4.3 of this Annex D as it relates to a particular Community Reconsideration Petition is referred to herein as the "**Community Reconsideration Initiation Process**."

(b) Following the delivery of a Community Reconsideration Petition to the EC (Empowered Community) Administration by a Community Reconsideration Petitioning Decisional Participant pursuant to Section 4.3(a) of this Annex D (which delivery date shall be referred to herein as the "**Community Reconsideration Notification Date**"), the Community Reconsideration Petitioning Decisional Participant shall contact the EC (Empowered Community) Administration and the other Decisional Participants to determine whether any

other Decisional Participants support the Community Reconsideration Petition. The Community Reconsideration Petitioning Decisional Participant shall forward such communication to the Secretary for ICANN (Internet Corporation for Assigned Names and Numbers) to promptly post on the Website.

(i) If the Community Reconsideration Petitioning Decisional Participant obtains the support of at least one other Decisional Participant (a "**Community Reconsideration Supporting Decisional Participant**") during the period beginning on the Community Reconsideration Notification Date and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the Community Reconsideration Notification Date (the "**Community Reconsideration Petition Support Period**"), the Community Reconsideration Petitioning Decisional Participant shall provide a written notice to the EC (Empowered Community) Administration, the other Decisional Participants and the Secretary ("**Community Reconsideration Supported Petition**") within twenty-four (24) hours of receiving the support of at least one Community Reconsideration Supporting Decisional Participant. Each Community Reconsideration Supporting Decisional Participant shall provide a written notice to the EC (Empowered Community) Administration, the other Decisional Participants and the Secretary within twenty-four (24) hours of providing support to the Community Reconsideration Petition. Such Community Reconsideration Supported Petition shall include:

(A) a supporting rationale in reasonable detail;

(B) contact information for at least one representative who has been designated by the Community

Reconsideration Petitioning Decisional Participant who shall act as a liaison with respect to the Community Reconsideration Supported Petition;

(C) a statement as to whether or not the Community Reconsideration Petitioning Decisional Participant and/or the Community Reconsideration Supporting Decisional Participant requests that ICANN (Internet Corporation for Assigned Names and Numbers) organize a publicly-available conference call prior to the Community Reconsideration Community Forum (as defined in Section 4.3(c) of this Annex D) for the community to discuss the Community Reconsideration Supported Petition; and

(D) a statement as to whether the Community Reconsideration Petitioning Decisional Participant and the Community Reconsideration Supporting Decisional Participant have determined to hold the Community Reconsideration Community Forum during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting.

The Community Reconsideration Initiation Process shall thereafter continue for such Community Reconsideration Supported Petition pursuant to Section 4.3(c) of this Annex D.

(ii) The Community Reconsideration Initiation Process shall automatically be terminated and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Community Reconsideration Petition Support Period, deliver to the Secretary a notice certifying that the Community Reconsideration Initiation Process has been terminated with respect to the Reconsideration Request included in the Community Reconsideration Petition ("**Community Reconsideration Termination Notice**") if the Community Reconsideration Petitioning

Decisional Participant is unable to obtain the support of at least one other Decisional Participant for its Community Reconsideration Petition during the Community Reconsideration Petition Support Period.

(c) If the EC (Empowered Community) Administration receives a Community Reconsideration Supported Petition under Section 4.3(b) of this Annex D during the Community Reconsideration Petition Support Period, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, convene a forum at which the Decisional Participants and interested third parties may discuss the Community Reconsideration Supported Petition ("**Community Reconsideration Community Forum**").

(i) If a publicly-available conference call has been requested in a Community Reconsideration Supported Petition, ICANN (Internet Corporation for Assigned Names and Numbers) shall, at the direction of the EC (Empowered Community) Administration, schedule such call prior to any Community Reconsideration Community Forum, and inform the Decisional Participants of the date, time and participation methods of such conference call, which ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website.

(ii) The Community Reconsideration Community Forum shall be convened and concluded during the period beginning on the expiration of the Community Reconsideration Petition Support Period and ending at 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 30th day after the expiration of the Community Reconsideration Petition Support Period ("**Community Reconsideration Forum Period**") unless the

Community Reconsideration Supported Petition requested that the Community Reconsideration Community Forum be held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, in which case the Community Reconsideration Community Forum shall be held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting on the date and at the time determined by ICANN (Internet Corporation for Assigned Names and Numbers), taking into account any date and/or time requested by the Community Reconsideration Petitioning Decisional Participant and the Community Reconsideration Supporting Decisional Participant(s). If the Community Reconsideration Community Forum is held during the next scheduled ICANN (Internet Corporation for Assigned Names and Numbers) public meeting and that public meeting is held after 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 30th day after the expiration of the Community Reconsideration Petition Support Period, the Community Reconsideration Community Forum Period shall expire at 11:59 p.m., local time of the city hosting such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting on the official last day of such ICANN (Internet Corporation for Assigned Names and Numbers) public meeting.

(iii) The Community Reconsideration Community Forum shall be conducted via remote participation methods such as teleconference, web-based meeting room and/or such other form of remote participation as the EC (Empowered Community) Administration selects and/or, only if the Community Reconsideration Community Forum is held during an ICANN (Internet Corporation for Assigned Names and Numbers) public

meeting, face-to-face meetings. If the Community Reconsideration Community Forum will not be held during an ICANN (Internet Corporation for Assigned Names and Numbers) public meeting, the EC (Empowered Community) Administration shall promptly inform ICANN (Internet Corporation for Assigned Names and Numbers) of the date, time and participation methods of such Community Reconsideration Community Forum, which ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post on the Website.

(iv) The EC (Empowered Community) Administration shall manage and moderate the Community Reconsideration Community Forum in a fair and neutral manner.

(v) ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional Participants) may deliver to the EC (Empowered Community) Administration in writing its views and questions on the Community Reconsideration Supported Petition prior to the convening of and during the Community Reconsideration Community Forum. Any written materials delivered to the EC (Empowered Community) Administration shall also be delivered to the Secretary for prompt posting on the Website in a manner deemed appropriate by ICANN (Internet Corporation for Assigned Names and Numbers).

(vi) ICANN (Internet Corporation for Assigned Names and Numbers) staff and Directors representing the Board are expected to attend the Community Reconsideration Community Forum in order to discuss the Community Reconsideration Supported Petition.

(vii) If the Community Reconsideration Petitioning Decisional Participant and each of the Community Reconsideration Supporting Decisional Participants for a Community Reconsideration Supported Petition agree before, during or after the Community Reconsideration Community Forum that the issue raised in such Community Reconsideration Supported Petition has been resolved, such Community Reconsideration Supported Petition shall be deemed withdrawn and the Community Reconsideration Initiation Process with respect to such Community Reconsideration Supported Petition will be terminated. If a Community Reconsideration Initiation Process is terminated, the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the resolution of the issue raised in the Community Reconsideration Supported Petition, deliver to the Secretary a Community Reconsideration Termination Notice. For the avoidance of doubt, the Community Reconsideration Community Forum is not a decisional body and the foregoing resolution process shall be handled pursuant to the internal procedures of the Community Reconsideration Petitioning Decisional Participant and the Community Reconsideration Supporting Decisional Participant(s).

(viii) During the Community Reconsideration Community Forum Period, an additional one or two Community Reconsideration Community Forums may be held at the discretion of a Community Reconsideration Petitioning Decisional Participant and a related Community Reconsideration Supporting Decisional Participant, or the EC (Empowered Community) Administration.

(ix) ICANN (Internet Corporation for Assigned Names and Numbers) will provide support services for the Community Reconsideration Community Forum and

shall promptly post on the Website a public record of the Community Reconsideration Community Forum as well as all written submissions of ICANN (Internet Corporation for Assigned Names and Numbers) and any Supporting Organization (Supporting Organization) or Advisory Committee (Advisory Committee) (including Decisional Participants) related to the Community Reconsideration Community Forum.

(d) Following the expiration of the Community Reconsideration Community Forum Period, at any time or date prior to 11:59 p.m. (as calculated by local time at the location of ICANN (Internet Corporation for Assigned Names and Numbers)'s principal office) on the 21st day after the expiration of the Community Reconsideration Community Forum Period (such period, the "**Community Reconsideration Decision Period**"), each Decisional Participant shall inform the EC (Empowered Community) Administration in writing as to whether such Decisional Participant (i) supports such Community Reconsideration Supported Petition, (ii) objects to such Community Reconsideration Supported Petition or (iii) has determined to abstain from the matter (which shall not count as supporting or objecting to the Community Reconsideration Supported Petition), and each Decisional Participant shall forward such notice to the Secretary for ICANN (Internet Corporation for Assigned Names and Numbers) to promptly post on the Website. If a Decisional Participant does not inform the EC (Empowered Community) Administration of any of the foregoing prior to the expiration of the Community Reconsideration Decision Period, the Decisional Participant shall be deemed to have abstained from the matter (even if such Decisional Participant informs the EC (Empowered Community) Administration of its support or objection following the expiration of the Community Reconsideration Decision Period).

(e) If (i) three or more Decisional Participants support the Community Reconsideration Supported Petition and (ii) no more than one Decisional Participant objects to the Community Reconsideration Supported Petition, then the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Community Reconsideration Decision Period, deliver a notice to the Secretary certifying that, pursuant to and in compliance with the procedures and requirements of this Section 4.3 of this Annex D, the EC (Empowered Community) has resolved to accept the Community Reconsideration Supported Petition ("**EC (Empowered Community) Reconsideration Initiation Notice**"). The Reconsideration Request shall then proceed in accordance with Section 4.2 of the Bylaws.

(f) If the Community Reconsideration Supported Petition does not obtain the support required by Section 4.3(e) of this Annex D, the Community Reconsideration Initiation Process will automatically be terminated and the EC (Empowered Community) Administration shall, within twenty-four (24) hours of the expiration of the Community Reconsideration Decision Period, deliver to the Secretary a Community Reconsideration Termination Notice.

(g) ICANN (Internet Corporation for Assigned Names and Numbers) shall promptly post to the Website any (i) Community Reconsideration Petition, (ii) Community Reconsideration Supported Petition, (iii) EC (Empowered Community) Reconsideration Initiation Notice, (iv) Community Reconsideration Termination Notice, (v) written explanation provided by the EC (Empowered Community) Administration related to any of the foregoing, and (vi) other notices the Secretary receives under this Section 4.3.

Annex E: Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget Principles

1. Principles

The caretaker ICANN (Internet Corporation for Assigned Names and Numbers) budget (the "**Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget**") is defined as an annual operating plan and budget that is established by the CFO in accordance with the following principles (the "**Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget Principles**"):

- a. It is based on then-current ICANN (Internet Corporation for Assigned Names and Numbers) operations;
- b. It allows ICANN (Internet Corporation for Assigned Names and Numbers) to "take good care" and not expose itself to additional enterprise risk(s) as a result of the rejection of an ICANN (Internet Corporation for Assigned Names and Numbers) Budget by the EC (Empowered Community) pursuant to the Bylaws;
- c. It allows ICANN (Internet Corporation for Assigned Names and Numbers) to react to emergency situations in a fashion that preserves the continuation of its operations;
- d. It allows ICANN (Internet Corporation for Assigned Names and Numbers) to abide by its existing obligations (including Articles of Incorporation, Bylaws, and contracts, as well as those imposed under law);
- e. It enables ICANN (Internet Corporation for Assigned Names and Numbers) to avoid waste of its resources during the rejection period (i.e., the period between when an ICANN (Internet Corporation for Assigned Names and Numbers) Budget is rejected by the EC (Empowered

Community) pursuant to the Bylaws and when an ICANN (Internet Corporation for Assigned Names and Numbers) Budget becomes effective in accordance with the Bylaws) or immediately thereafter, by being able to continue activities during the rejection period that would otherwise need to be restarted at a materially incremental cost; and

- f. Notwithstanding any other principle listed above, it prevents ICANN (Internet Corporation for Assigned Names and Numbers) from initiating activities that remains subject to community consideration (or for which that community consideration has not concluded) with respect to the applicable ICANN (Internet Corporation for Assigned Names and Numbers) Budget, including without limitation, preventing implementation of any expenditure or undertaking any action that was the subject of the ICANN (Internet Corporation for Assigned Names and Numbers) Budget that was rejected by the EC (Empowered Community) that triggered the need for the Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget.

1. Examples

Below is a non-exhaustive list of examples, to assist with the interpretation of the Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget Principles, of what a Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget would logically include:

- i. the functioning of the EC (Empowered Community), the Decisional Participants, and any Supporting Organizations (Supporting Organizations) or Advisory Committees (Advisory Committees) that are not Decisional Participants;

- ii. the functioning of all redress mechanisms, including without limitation the office of the Ombudsman, the IRP, and mediation;
- iii. employment of staff (i.e., employees and individual long term paid contractors serving in locations where ICANN (Internet Corporation for Assigned Names and Numbers) does not have the mechanisms to employ such contractors) across all locations, including all related compensation, benefits, social security, pension, and other employment costs;
- iv. hiring staff (i.e., employees and individual long term paid contractors serving in locations where ICANN (Internet Corporation for Assigned Names and Numbers) does not have the mechanisms to employ such contractors) in the normal course of business;
- v. necessary or time-sensitive travel costs for staff (i.e., employees and individual long term paid contractors serving in locations where ICANN (Internet Corporation for Assigned Names and Numbers) does not have the mechanisms to employ such contractors) or vendors as needed in the normal course of business;
- vi. operating all existing ICANN (Internet Corporation for Assigned Names and Numbers) offices, and continuing to assume obligations relative to rent, utilities, maintenance, and similar matters;
- vii. contracting with vendors as needed in the normal course of business;
- viii. conducting ICANN (Internet Corporation for Assigned Names and Numbers) meetings and ICANN (Internet Corporation for Assigned Names and Numbers) intercessional meetings previously contemplated; and

ix. participating in engagement activities in furtherance of the approved Strategic Plan.

b. Below is a non-limitative list of examples, to assist with the interpretation of the Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget Principles, of what a Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget would logically exclude:

i. hiring staff (i.e., employees and individual long term paid contractors serving in locations where ICANN (Internet Corporation for Assigned Names and Numbers) does not have the mechanisms to employ such contractors) or entering into new agreements in relation to activities that are the subject of the rejection of the ICANN (Internet Corporation for Assigned Names and Numbers) Budget by the EC (Empowered Community) pursuant to the Bylaws, unless excluding these actions would violate any of the Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget Principles;

ii. in the normal course of business, travel not deemed indispensable during the rejection period, unless the lack of travel would violate any of the Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget Principles;

iii. entering into new agreements in relation to opening or operating new ICANN (Internet Corporation for Assigned Names and Numbers) locations/offices, unless the lack of commitment would violate any of the Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget Principles;

iv. entering into new agreements with governments (or their affiliates), unless the lack of commitment would violate any of the Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget Principles; and

v. the proposed expenditure that was the basis for the rejection by the EC (Empowered Community) that triggered the need for the Caretaker ICANN (Internet Corporation for Assigned Names and Numbers) Budget.

Annex F: Caretaker IANA (Internet Assigned Numbers Authority) Budget Principles

1. Principles

The caretaker IANA (Internet Assigned Numbers Authority) Budget (the "**Caretaker IANA (Internet Assigned Numbers Authority) Budget**") is defined as an annual operating plan and budget that is established by the CFO in accordance with the following principles (the "**Caretaker IANA (Internet Assigned Numbers Authority) Budget Principles**"):

- a. It is based on then-current operations of the IANA (Internet Assigned Numbers Authority) functions;
- b. It allows ICANN (Internet Corporation for Assigned Names and Numbers), in its responsibility to fund the operations of the IANA (Internet Assigned Numbers Authority) functions, to "take good care" and not expose itself to additional enterprise risk(s) as a result of the rejection of an IANA (Internet Assigned Numbers Authority) Budget by the EC (Empowered Community) pursuant to the Bylaws;
- c. It allows ICANN (Internet Corporation for Assigned Names and Numbers), in its responsibility to fund the operations of the IANA (Internet Assigned Numbers Authority) functions, to react to emergency situations in a fashion that preserves the continuation of its operations;
- d. It allows ICANN (Internet Corporation for Assigned Names and Numbers), in its responsibility to fund the operations of the IANA

(Internet Assigned Numbers Authority) functions, to abide by its existing obligations (including Articles of Incorporation, Bylaws, and contracts, as well as those imposed under law);

- e. It allows ICANN (Internet Corporation for Assigned Names and Numbers), in its responsibility to fund the operations of the IANA (Internet Assigned Numbers Authority) functions, to avoid waste of its resources during the rejection period (i.e., the period between when an IANA (Internet Assigned Numbers Authority) Budget is rejected by the EC (Empowered Community) pursuant to the Bylaws and when an IANA (Internet Assigned Numbers Authority) Budget becomes effective in accordance with the Bylaws) or immediately thereafter, by being able to continue activities during the rejection period that would have otherwise need to be restarted at an incremental cost; and
- f. Notwithstanding any other principle listed above, it prevents ICANN (Internet Corporation for Assigned Names and Numbers), in its responsibility to fund the operations of the IANA (Internet Assigned Numbers Authority) functions, from initiating activities that remain subject to community consideration (or for which that community consultation has not concluded) with respect to the applicable IANA (Internet Assigned Numbers Authority) Budget, including without limitation, preventing implementation of any expenditure or undertaking any action that was the subject of the IANA (Internet Assigned Numbers Authority) Budget that was rejected by the EC (Empowered Community) that triggered the need for the Caretaker IANA (Internet Assigned Numbers Authority) Budget.

1. Examples

a. Below is a non-exhaustive list of examples, to assist with the interpretation of the Caretaker IANA (Internet Assigned Numbers Authority) Budget Principles, of what a Caretaker IANA (Internet Assigned Numbers Authority) Budget would logically include:

i. employment of staff (i.e., employees and individual long term paid contractors serving in locations where the entity or entities performing the IANA (Internet Assigned Numbers Authority) functions does not have the mechanisms to employ such contractors) across all locations, including all related compensation, benefits, social security, pension, and other employment costs;

ii. hiring staff (i.e., employees and individual long term paid contractors serving in locations where the entity or entities performing the IANA (Internet Assigned Numbers Authority) functions does not have the mechanisms to employ such contractors) in the normal course of business;

iii. necessary or time-sensitive travel costs for staff (i.e., employees and individual long term paid contractors serving in locations where the entity or entities performing the IANA (Internet Assigned Numbers Authority) functions does not have the mechanisms to employ such contractors) or vendors as needed in the normal course of business;

iv. operating all existing offices used in the performance of the IANA (Internet Assigned Numbers Authority) functions, and continuing to assume obligations relative to rent, utilities, maintenance, and similar matters;

v. contracting with vendors as needed in the normal course of business;

vi. participating in meetings and conferences previously contemplated;

vii. participating in engagement activities with ICANN (Internet Corporation for Assigned Names and Numbers)'s Customer Standing Committee or the customers of the IANA (Internet Assigned Numbers Authority) functions;

viii. fulfilling obligations (including financial obligations under agreements and memoranda of understanding to which ICANN (Internet Corporation for Assigned Names and Numbers) or its affiliates is a party that relate to the IANA (Internet Assigned Numbers Authority) functions; and

ix. participating in engagement activities in furtherance of the approved Strategic Plan.

b. Below is a non-limitative list of examples, to assist with the interpretation of the Caretaker IANA (Internet Assigned Numbers Authority) Budget Principles, of what a Caretaker IANA (Internet Assigned Numbers Authority) Budget would logically exclude:

i. hiring staff (i.e., employees and individual long term paid contractors serving in locations where the entity or entities performing the IANA (Internet Assigned Numbers Authority) functions does not have the mechanisms to employ such contractors) or entering into new agreements in relation to activities that are the subject of the rejection of the IANA (Internet Assigned Numbers Authority) Budget by the EC (Empowered Community) pursuant to the Bylaws, unless excluding these actions would violate any of the Caretaker IANA (Internet Assigned Numbers Authority) Budget Principles;

ii. in the normal course of business, travel not deemed indispensable during the rejection period, unless the lack of

travel would violate any of the Caretaker IANA (Internet Assigned Numbers Authority) Budget Principles;

iii. entering into new agreements in relation to opening or operating new locations/offices where the IANA (Internet Assigned Numbers Authority) functions shall be performed, unless the lack of commitment would violate any of the Caretaker IANA (Internet Assigned Numbers Authority) Budget Principles;

iv. entering into new agreements with governments (or their affiliates), unless the lack of commitment would violate any of the Caretaker IANA (Internet Assigned Numbers Authority) Budget Principles; and

v. the proposed expenditure that was the basis for the rejection by the EC (Empowered Community) that triggered the need for the Caretaker IANA (Internet Assigned Numbers Authority) Budget.

ANNEX G-1

The topics, issues, policies, procedures and principles referenced in Section 1.1(a)(i) with respect to gTLD (generic Top Level Domain) registrars are:

- issues for which uniform or coordinated resolution is reasonably necessary to facilitate interoperability, security and/or stability of the Internet, registrar services, registry services, or the DNS (Domain Name System);
- functional and performance specifications for the provision of registrar services;
- registrar policies reasonably necessary to implement Consensus (Consensus) Policies relating to a gTLD (generic Top Level Domain) registry;

- resolution of disputes regarding the registration of domain names (as opposed to the use of such domain names, but including where such policies take into account use of the domain names); or
- restrictions on cross-ownership of registry operators and registrars or resellers and regulations and restrictions with respect to registrar and registry operations and the use of registry and registrar data in the event that a registry operator and a registrar or reseller are affiliated.

Examples of the above include, without limitation:

- principles for allocation of registered names in a TLD (Top Level Domain) (e.g., first-come/first-served, timely renewal, holding period after expiration);
- prohibitions on warehousing of or speculation in domain names by registries or registrars;
- reservation of registered names in a TLD (Top Level Domain) that may not be registered initially or that may not be renewed due to reasons reasonably related to (i) avoidance of confusion among or misleading of users, (ii) intellectual property, or (iii) the technical management of the DNS (Domain Name System) or the Internet (e.g., establishment of reservations of names from registration);
- maintenance of and access to accurate and up-to-date information concerning registered names and name servers;
- procedures to avoid disruptions of domain name registrations due to suspension or termination of operations by a registry operator or a registrar, including procedures for allocation of responsibility among continuing registrars of the registered names

sponsored in a TLD (Top Level Domain) by a registrar losing accreditation; and

- the transfer of registration data upon a change in registrar sponsoring one or more registered names.

ANNEX G-2

The topics, issues, policies, procedures and principles referenced in Section 1.1(a)(i) with respect to gTLD (generic Top Level Domain) registries are:

- issues for which uniform or coordinated resolution is reasonably necessary to facilitate interoperability, security and/or stability of the Internet or DNS (Domain Name System);
- functional and performance specifications for the provision of registry services;
- security and stability of the registry database for a TLD (Top Level Domain);
- registry policies reasonably necessary to implement Consensus (Consensus) Policies relating to registry operations or registrars;
- resolution of disputes regarding the registration of domain names (as opposed to the use of such domain names); or
- restrictions on cross-ownership of registry operators and registrars or registrar resellers and regulations and restrictions with respect to registry operations and the use of registry and registrar data in the event that a registry operator and a registrar or registrar reseller are affiliated.

Examples of the above include, without limitation:

- principles for allocation of registered names in a TLD (Top Level Domain) (e.g., first-come/first-served, timely renewal, holding period after expiration);
- prohibitions on warehousing of or speculation in domain names by registries or registrars;
- reservation of registered names in the TLD (Top Level Domain) that may not be registered initially or that may not be renewed due to reasons reasonably related to (i) avoidance of confusion among or misleading of users, (ii) intellectual property, or (iii) the technical management of the DNS (Domain Name System) or the Internet (e.g., establishment of reservations of names from registration);
- maintenance of and access to accurate and up-to-date information concerning domain name registrations; and
- procedures to avoid disruptions of domain name registrations due to suspension or termination of operations by a registry operator or a registrar, including procedures for allocation of responsibility for serving registered domain names in a TLD (Top Level Domain) affected by such a suspension or termination.

This page reflects the current string contention sets as of the most recent update (**04 May 2021**) to this page. String contention sets will be updated from time to time to reflect any changes. Please note that the current status of string contention sets could change due to changes to application status as a result of withdrawals, evaluation results, dispute resolution proceedings, contention resolution processes, or the potential impact of ICANN accountability mechanisms. Except for the application statuses "Withdrawn" and "Delegated", application statuses are not final.

A change in application status or update to a contention set is intended to inform the applicants and the community of an application's current status. A change or update is not a definite indication that an application may proceed to another phase of the program. For more information including definitions of application statuses see the [applicant advisory \(http://newgtlds.icann.org/en/applicants/advisories/application-contention-set-14mar14-en\)](http://newgtlds.icann.org/en/applicants/advisories/application-contention-set-14mar14-en).

Notes:

1. **On Hold:** One or more applications in the contention set may have a status of On Hold. Applications in the set cannot proceed to New gTLD Program Auctions until the set is no longer on hold.
2. Winning applicant results are preliminary until the winning price is received in full.
3. Per the 4 February 2018 Board [resolution \(https://www.icann.org/resources/board-material/resolutions-2018-02-04-en#2.c\)](https://www.icann.org/resources/board-material/resolutions-2018-02-04-en#2.c), the Board directed the President and CEO that the applications for .CORP, .HOME, and .MAIL should not proceed in the New gTLD Program. As the applications for the strings .CORP, .HOME, and .MAIL were not approved to proceed in the New gTLD Program, contention no longer exists, and the contention set status has been updated to "Resolved".

Proof of Legal Establishment

8(a). Legal form of the Applicant

Limited liability company

8(b). State the specific national or other jurisdiction that defines the type of entity identified in 8(a).

NU DOTCO LLC is a UNITED STATES entity, registered in the STATE of DELAWARE as a limited liability company.

8(c). Attach evidence of the applicant's establishment.

Attachments are not displayed on this form.

9(a). If applying company is publicly traded, provide the exchange and symbol.

9(b). If the applying entity is a subsidiary, provide the parent company.

9(c). If the applying entity is a joint venture, list all joint venture partners.

Applicant Background

11(a). Name(s) and position(s) of all directors

Jose Ignacio Rasco III	Manager
Juan Diego Calle	Manager
Nicolai Bezsonoff	Manager

11(b). Name(s) and position(s) of all officers and partners

Jose Ignacio Rasco III	CFO
Juan Diego Calle	CEO
Nicolai Bezsonoff	COO

11(c). Name(s) and position(s) of all shareholders holding at least 15% of shares

Domain Marketing Holdings, LLC	Not Applicable
NUCO LP, LLC	Not Applicable

11(d). For an applying entity that does not have directors, officers, partners, or shareholders: Name(s) and position(s) of all individuals having legal or executive responsibility

Applied-for gTLD string

13. Provide the applied-for gTLD string. If an IDN, provide the U-label.

WEB

14(a). If an IDN, provide the A-label (beginning with "xn--").

14(b). If an IDN, provide the meaning or restatement of the string in English, that is, a description of the literal meaning of the string in the opinion of the applicant.

14(c). If an IDN, provide the language of the label (in English).

14(c). If an IDN, provide the language of the label (as referenced by ISO-639-1).

14(d). If an IDN, provide the script of the label (in English).

14(d). If an IDN, provide the script of the label (as referenced by ISO 15924).

14(e). If an IDN, list all code points contained in the U-label according to Unicode form.

15(a). If an IDN, Attach IDN Tables for the proposed registry.

Attachments are not displayed on this form.

15(b). Describe the process used for development of the IDN tables submitted, including consultations and sources used.

15(c). List any variant strings to the applied-for gTLD string according to the relevant IDN tables.

16. Describe the applicant's efforts to ensure that there are no known operational or rendering problems concerning the applied-for gTLD string. If such issues are known, describe steps that will be taken to mitigate these issues in software and other applications.

NU DOTCO, LLC (“NU.CO”) foresees no known rendering issues in connection with the proposed .LAW TLD which it is seeking to apply for as a gTLD. This answer is based upon consultation with NU.CO’s backend provider, Neustar, which has successfully launched a number of new gTLDs over the last decade. In reaching this determination, the following data points were analyzed:

- ICANN’s Security Stability Advisory Committee (SSAC) entitled Alternative TLD Name Systems and Roots: Conflict, Control and Consequences (SAC009);
- IAB - RFC3696 “Application Techniques for Checking and Transformation of Names”
- Known software issues which Neustar has encountered during the last decade launching new gTLDs;
- Character type and length;
- ICANN supplemental notes to Question 16; and
- ICANN’s presentation during its Costa Rica regional meeting on TLD Universal Acceptance;

17. (OPTIONAL) Provide a representation of the label according to the International Phonetic Alphabet (<http://www.langsci.ucl.ac.uk/ipa/>).

Mission/Purpose

18(a). Describe the mission/purpose of your proposed gTLD.

18.1 Mission/purpose of .WEB

The mission of .WEB is to provide the internet community at-large with an alternative “home domain” for their online presence. We envision that through strategic marketing campaigns designed to brand the domain, it will become a premium online namespace for a variety of businesses and websites. This general domain will provide new registrants with better, more relevant alternatives to the limited options remaining for current commercial TLD names.

18(b). How do you expect that your proposed gTLD will benefit registrants, Internet users, and others?

18.2 How will .WEB benefit registrants, Internet users, and others?

.WEB seeks to offer registrants and the broader internet community, with a reliable, trusted, and secure top level domain (TLD). Congestion in the current availability of commercial TLD names fundamentally advantages older incumbent players. Providing access to additional high-value second level domain names (i.e. shorter and more memorable) will provide an opportunity for new entrants to compete effectively for internet users’ finite attention. The domain’s coherent and consistent branding will assist registrants in developing meaningful emotional connection with users, allowing them to further differentiate themselves as premium destinations. These marketing efforts along with the initial adoption of key industry players, should reinforce the implicit attribution of “cutting-edge” and “innovativeness” upon its registrants. Prospective users benefit from the long-term commitment of a proven executive team that has a track-record of building and successfully marketing affinity TLD’s (e.g., .CO targeting innovative businesses and entrepreneurs).

The demand for having an online presence continues to grow worldwide, especially as more people and

businesses become active internet users, enjoying the increases in productivity and promotional effectiveness that the internet offers. A clear example of this is the number of worldwide internet users, which has grown at an average 18% annual rate over the past decade, and domain registrations which have experienced similar adoption rates having grown from approximately 25mm in 2000 to over 225mm today.

In particular for small businesses and entrepreneurs, the Internet offers an incredibly useful way to promote themselves to a wider audience, both locally and globally. Moreover, it allows them to cost-effective offer their products and services directly to consumers, leveling the playing field with larger and more established competitors. A number of new and innovative business models have been established that were not possible prior to the Internet, creating substantial value for society.

However, until a few years ago it was difficult and costly for individuals and small businesses to establish an internet presence. This has changed as prices decreased dramatically and offerings became more accessible and intuitive. This is the result of having many retailers (i.e. registrars or resellers) that compete amongst each other on price, along with product and service differentiation. Differentiation has mainly centered around higher value-add services ancillary to the domain registration itself, such as hosting, web-site builders, SSL, e-mail, etc. The basic product (a domain) has not changed much, and until now, there have been few feasible alternatives to the commercial TLDs. The proposed new TLDs will provide users with more relevant and customized options. Just as ICANN opened up the market for the distribution and registration of domains and created the Registrar industry, which ultimately benefitted hundreds of millions of people and businesses worldwide, we expect that the introduction of new TLDs will yield similar benefits.

The experienced team behind this application initially launched and currently operates the .CO ccTLD. The intention is for .WEB to be added to .CO's product portfolio, where it can benefit from economies of scale along with the firm's experience and expertise in marketing and branding TLD properties. Their successful track record proves that properly branded affinity domains can help sites form deeper emotional connections with their users, providing significant value-add. The .CO re-launch is a great illustration of how a new option in TLDs can address the unmet needs an affinity group (e.g., small businesses and start ups), and we continue to firmly believe that the new .WEB domain will provide better, more relevant solutions for registrants .

Since its launch, .CO's marketing has primarily focused on developing a worldwide ecosystem of innovative small businesses and entrepreneurs. To date, the .CO registry, .CO Internet S.A.S, has reached close to 1.3 million domains under management, with more than one million individual new Registrations in the first year alone and a renewal rate for domains purchased during launch of nearly 70% and a current average renewal rate of 65%. The renewal rate is one of the highest amongst the industry and especially high considering it has not yet reached the multiple year expiration dates, where it's expected to climb even higher. In addition, .CO has become the standard secondary option to .COM for the leading global registrars, having the most conversions when presented with a non-.COM option. Further, .CO has secured a strong position with the tech startup community by securing such high profile users as Twitter (t.co), Google (g.co), tech influencers like Angel list (angel.co) and 500 Startups (500.co), and entrepreneurship organizations like Startup America (s.co).

.CO has differentiated itself from other existing TLDs by combining innovative branding with the highest standards in trademark protection, unprecedented marketing campaigns, and pro active security monitoring. We plan to implement a very similar strategy for .WEB in its launch, operation, promotion and growth.

We plan to target a similar community of entrepreneurs, startups, and progressive corporate entities that are looking for an online presence with a suitable domain name. We anticipate the addressable community will continue to grow as traditional businesses choose to launch an online presence for their pre-existing operations and as entrepreneurs launch new start-ups. The domain's marketing strategy will utilize a 3 pillar framework, similar to that used with .CO:

- Awareness: We plan to launch marketing campaigns to both the small businesses and entrepreneurs promoting .WEB via a combination of:
 - o Media placements online and offline
 - o Social media campaigns
 - o Events
 - o Sponsorships
 - o Endorsements
 - o PR efforts
 - o Direct marketing

o Channel marketing

Usage: We plan to foster the community of users of .WEB via a combination community engagement and outreach, use-case development and direct marketing to base.

- Distribution: The distribution will be done through the existing ICANN accredited registrar channel and will include marketing at the point of sale, packages and bundles, campaigns, etc.

The marketing plans will evolve depending on market conditions, but using .CO as an example, we implemented an awareness and branding strategy that included the creation of a brand identity and logo; mass media placements including 2 super bowl commercials with one of our partners plus many TV placements; billboards and other outdoors campaigns; several online media campaigns including networks, re-targeting and videos; ongoing Twitter, Facebook engagements; sponsorship and presence in a variety of events for TMs (INTA), Tech startups (SxSW, Web 2.0, Internetweek, etc.), Startups (Task Rabbit TR.co), Community (ICANN, LACTLD, etc.), etc. We also implemented for .CO a strong usage promotion of the domain by creating and fostering a community of .CO users and case studies. We achieved this through a combination of events, sponsorships, and partnerships with different entities like Angel.co, 500.co, Startup America (s.co), founders institute (fi.co), etc. We also cultivated many case studies of successful .CO users, remaining in close contact with them. Finally, we implemented a rigorous channel marketing and sales plan that included marketing placements at the point of purchase plus co-marketing and community outreach.

While we do plan to follow a similar strategy to achieve widespread awareness, usage and distribution, the budget and actual placements for promoting .WEB will be scaled down accordingly, as neither its volume of registrations or revenues is expected to be in line with that of .CO.

By launching the .WEB domain we expect to provide more descriptive/ relevant options for end users, including access to desirable second level domain names which are unavailable or occupied by current general TLD's. As illustrated with .CO, the rapid growth to 1.3 million domains is evidence of pent up demand in the marketplace for good, descriptive domain names. We expect that our marketing strategies will result in a new branded and available option that will emotionally connect with potential users and allow them to differentiate themselves through the use of a branded premium domain.

We will also follow the same ICANN rules and distribution methods of major gTLDs thereby ensuring Registrars and Resellers do not have to change their systems to distribute the .WEB domain. As our systems are already integrated with largest registrars in the world and we have implemented industry best practices, the transition to delegation and launch should be seamless to the registrar channel as well as consumers.

We will also implement a thick whois and adopt any ICANN recommendations or requirements in the future. In order to protect the privacy of our users, we will allow the use of Privacy or Proxy registrations by reputable registrars that comply with applicable policies specified by ICANN. We find this service is highly valuable for registrants that want to ensure their information is not available online and would like to maintain a higher level privacy.

18(c). What operating rules will you adopt to eliminate or minimize social costs?

18.3 .WEB operating rules to benefit consumers

We plan to follow all ICANN policies, including the best practices and recommendations for gTLDs. This will allow us to ensure end users, have an easy way to register/purchase, administer, and use their domains. Adopting these policies will also prevent malicious behavior by third parties and ensure a smooth operation of the domain. The plans for the launch will be similar to the launch process used in .CO, which included:

- Gradual Offering Plan: The .CO launch included a very comprehensive gradual opening plan that both protected trademarks and provided transparency to end users. The launch was lauded by ICANN for its comprehensiveness and management. For the launch of .WEB we will follow ICANN's policies especially as it relates to the Trademark Clearinghouse which was similar to the process we used for .CO:

-
o Sunrise: Provide a period of a few weeks to allow the TM and IP community to register their .WEB domains prior to the opening to the public. Trademark validations will be done by the Trademark Clearinghouse or as specified by ICANN in their policies. If there are multiple validated

applications, these would go to auction and allocated based on these results.

o Landrush: Provide a period of a few weeks to allow domain investors and others that are interested in premium domains to apply for these domains. Once the period of the Landrush phase is over, a process to check the applications will determine if these were unique or if there were multiple applicants. If single applicants, then the domain is awarded at that time. If multiple applicants then the domain would go to an auction in which all applicants would be able to participate. For .CO this process included close to 30,000 applications and the resulting auctions were managed by Pool.com. The process was very successful managing to allocate very efficiently domains according to their perceived value by applicants and bidders at the resulting auctions.

- General Availability: For .CO we had 100k registrations in the first 10 minutes and we didn't have a single issue nor service degradation through the launch or afterwards. We achieved this through a combination of strong planning between our partners, especially Neustar our back-end provider; communication with our Registrars prior and during the launch in a very structured way; strong infrastructure planning and provisioning; and effective load, contingency, and disaster recovery planning. We plan to use similar methods for the launch of .WEB.

o First come first serve during GA and afterwards, which we believe is the best mechanism to ensure a fair allocation of domains once the domain has been launched.

o Use of UDRP and any other best-practices in rights protection mechanisms

o Highly managed General Availability launch

- Premium Domains: We will keep some domains for premium sales and these will be restricted prior to the Gradual Offering Plan begins, but can be applied for during the Sunrise phase. These premium domains will be brokered or sold via auction directly or through an accredited 3rd party. With .CO we used this mechanism as a way to allocate high value domains and also to promote the usage of the domain by high profile companies including Twitter with t.co, Google with g.co, Startup America with s.co, as well as a myriad of smaller startups and other endorsements.

Community-based Designation

19. Is the application for a community-based TLD?

No

20(a). Provide the name and full description of the community that the applicant is committing to serve.

20(b). Explain the applicant's relationship to the community identified in 20(a).

20(c). Provide a description of the community-based purpose of the applied-for gTLD.

20(d). Explain the relationship between the applied-for gTLD string and the community identified in 20(a).

20(e). Provide a description of the applicant's intended registration policies in support of the community-based purpose of the applied-for gTLD.

20(f). Attach any written endorsements from institutions/groups representative of the community identified in 20(a).

Attachments are not displayed on this form.

Geographic Names

21(a). Is the application for a geographic name?

No

Protection of Geographic Names

22. Describe proposed measures for protection of geographic names at the second and other levels in the applied-for gTLD.

In preparation for answering this question, NU DOTCO, LLC (NU.CO) reviewed the following relevant background material regarding the protection of geographic names in the DNS, including:

- ICANN Board Resolution 01-92 regarding the methodology developed for the reservation and release of country names in the .INFO top-level domain (see <http://www.icann.org/en/minutes/minutes-10sep01.htm>);
- ICANN's Proposed Action Plan on .INFO Country Names (see <http://www.icann.org/en/meetings/montevideo/action-plan-country-names-09oct01.htm>);
- "Report of the Second WIPO Internet Domain Name Process: The Recognition and Rights and the Use of Names in the Internet Domain Name System," Section 6, Geographical Identifiers (see <http://www.wipo.int/amc/en/processes/process2/report/html/report.html>);
- ICANN's Governmental Advisory Committee (GAC) Principles Regarding New gTLDs, (see https://gacweb.icann.org/download/attachments/1540128/gTLD_principles_0.pdf?version=1&modificationDate=1312358178000); and
- ICANN's Generic Names Supporting Organization (GNSO) Reserved Names Working Group – Final Report (see <http://gnso.icann.org/issues/new-gtlds/final-report-rn-wg-23may07.htm>).

Initial Reservation of Country and Territory Names

NU.CO is committed to initially reserving the country and territory names contained in the internationally recognized lists described in Article 5 of Specification 5 attached to the New gTLD Applicant Guidebook at the second level and at all other levels within the .WEB gTLD at which domain name registrations will be provided. Specifically, NU.CO will reserve:

- The short form (in English) of all country and territory names contained on the ISO 3166- 1 list, as updated from time to time, including the European Union, which is exceptionally reserved on the ISO 3166-1 list, and its scope extended in August 1999 to any application needing to represent the name European Union (see http://www.iso.org/iso/support/country_codes/iso_3166_code_lists/iso-3166-1_decoding_table.htm#EU);
- The United Nations Group of Experts on Geographical Names, Technical Reference Manual for the Standardization of Geographical Names, Part III Names of Countries of the World; and
- The list of United Nations member states in six official United Nations languages prepared by the Working Group on Country Names of the United Nations Conference on the Standardization of Geographical Names.

Potential Future Release of Two Character Names

While NU.CO foresees no immediate need for plans to make use of these initially reserved country names at the second level within the .WEB namespace, NU.CO recognizes that there has been several successful and non-misleading use of country names by new gTLD operators as evidenced below:

AUSTRALIA.COOP – Is operated by Co-operatives Australia the national body for State Co-operative Federations and provides a valuable resource about cooperatives within Australia.

UK.COOP – Is operated by Co-operatives UK the national trade body that campaigns for co-operation and works to promote, develop and unite co-operative enterprises within the United Kingdom.

NZ.COOP – Is operated by the New Zealand Cooperatives Association which brings together the country’s cooperative mutual business in a not-for-profit incorporated society.

USA.JOBS - Is operated by DirectEmployers Association (DE). While Employ Media the registry operator of the .JOBS gTLD is currently in a dispute with ICANN regarding the allocation of this and other domain names. Direct Employers has a series of partnerships and programs with the United States Department of Labor, the National Association of State Workforce Agencies and Facebook to help unemployed workers find jobs.

MALDIVIAN.AERO - Is the dominant domestic air carrier in Maldives, and provides a range of commercial and leisure air transport services.

The more likely request by NU.CO will come in connection with the un-reservation and allocation of two-letter .WEB domain names, e.g. US.WEB, UK.WEB, etc. If NU.CO should decide in the future to attempt and allocate these domain names, it would submit the proper Registry Service Evaluation Processes (RSEP) with ICANN. In evaluating similar RSEP requests that have been submitted to ICANN by other gTLD registry operators, NU.CO believes that its request would be favorably granted.

Creation and Updating the Policies

NU.CO is committed to continually reviewing and updating when necessary its policies in this area. Consistent with this commitment, NU.CO intends to remain an active participant in any ongoing ICANN policy discussion regarding the protection of geographic names within the DNS.

Registry Services

23. Provide name and full description of all the Registry Services to be provided.

23.1 Introduction

NU DOTCO LLC has elected to partner with NeuStar, Inc (“Neustar”) to provide back-end services for the .WEB registry. In making this decision, NU DOTCO LLC recognized that Neustar already possesses a production-proven registry system that can be quickly deployed and smoothly operated over its robust,

flexible, and scalable world-class infrastructure. The existing registry services will be leveraged for the .WEB registry. The following section describes the registry services to be provided.

23.2 Standard Technical and Business Components

Neustar will provide the highest level of service while delivering a secure, stable and comprehensive registry platform. NU DOTCO LLC will use Neustar's Registry Services platform to deploy the .WEB registry, by providing the following Registry Services (none of these services are offered in a manner that is unique to .WEB):

- Registry-Registrar Shared Registration Service (SRS)
- Extensible Provisioning Protocol (EPP)
- Domain Name System (DNS)
- WHOIS
- DNSSEC
- Data Escrow
- Dissemination of Zone Files using Dynamic Updates
- Access to Bulk Zone Files
- Dynamic WHOIS Updates
- IPv6 Support
- Rights Protection Mechanisms
- Internationalized Domain Names (IDN)

The following is a description of each of the services.

23.2.1 SRS

Neustar's secure and stable SRS is a production-proven, standards-based, highly reliable, and high-performance domain name registration and management system. The SRS includes an EPP interface for receiving data from registrars for the purpose of provisioning and managing domain names and name servers. The response to Question 24 provides specific SRS information.

23.2.2 EPP

The .WEB registry will use the Extensible Provisioning Protocol (EPP) for the provisioning of domain names. The EPP implementation will be fully compliant with all RFCs. Registrars are provided with access via an EPP API and an EPP based Web GUI. With more than 10 gTLD, ccTLD, and private TLDs implementations, Neustar has extensive experience building EPP-based registries. Additional discussion on the EPP approach is presented in the response to Question 25.

23.2.3 DNS

NU DOTCO LLC will leverage Neustar's world-class DNS network of geographically distributed nameserver sites to provide the highest level of DNS service. The service utilizes "Anycast" routing technology, and supports both IPv4 and IPv6. The DNS network is highly proven, and currently provides service to over 20 TLDs and thousands of enterprise companies. Additional information on the DNS solution is presented in the response to Questions 35.

23.2.4 WHOIS

Neustar's existing standard WHOIS solution will be used for the .WEB. The service provides supports for near real-time dynamic updates. The design and construction is agnostic with regard to data display policy is flexible enough to accommodate any data model. In addition, a searchable WHOIS service that complies with all ICANN requirements will be provided. The following WHOIS options will be provided:

- Standard WHOIS (Port 43)
- Standard WHOIS (Web)
- Searchable WHOIS (Web)

23.2.5 DNSSEC

An RFC compliant DNSSEC implementation will be provided using existing DNSSEC capabilities. Neustar is an experienced provider of DNSSEC services, and currently manages signed zones for three large top level domains: .biz, .us, and .co. Registrars are provided with the ability to submit and manage DS

records using EPP, or through a web GUI. Additional information on DNSSEC, including the management of security extensions is found in the response to Question 43.

23.2.6 Data Escrow

Data escrow will be performed in compliance with all ICANN requirements in conjunction with an approved data escrow provider. The data escrow service will:

- Protect against data loss
- Follow industry best practices
- Ensure easy, accurate, and timely retrieval and restore capability in the event of a hardware failure
- Minimizes the impact of software or business failure.

Additional information on the Data Escrow service is provided in the response to Question 38.

23.2.7 Dissemination of Zone Files using Dynamic Updates

Dissemination of zone files will be provided through a dynamic, near real-time process. Updates will be performed within the specified performance levels. The proven technology ensures that updates pushed to all nodes within a few minutes of the changes being received by the SRS. Additional information on the DNS updates may be found in the response to Question 35.

23.2.8 Access to Bulk Zone Files

NU DOTCO LLC will provide third party access to the bulk zone file in accordance with specification 4, Section 2 of the Registry Agreement. Credentialing and dissemination of the zone files will be facilitated through the Central Zone Data Access Provider.

23.2.9 Dynamic WHOIS Updates

Updates to records in the WHOIS database will be provided via dynamic, near real-time updates. Guaranteed delivery message oriented middleware is used to ensure each individual WHOIS server is refreshed with dynamic updates. This component ensures that all WHOIS servers are kept current as changes occur in the SRS, while also decoupling WHOIS from the SRS. Additional information on WHOIS updates is presented in response to Question 26.

23.2.10 IPv6 Support

The .WEB registry will provide IPv6 support in the following registry services: SRS, WHOIS, and DNS/DNSSEC. In addition, the registry supports the provisioning of IPv6 AAAA records. A detailed description on IPv6 is presented in the response to Question 36.

23.2.11 Required Rights Protection Mechanisms

NU DOTCO LLC, will provide all ICANN required Rights Mechanisms, including:

- Trademark Claims Service
- Trademark Post-Delegation Dispute Resolution Procedure (PDDRP)
- Registration Restriction Dispute Resolution Procedure (RRDRP)
- UDRP
- URS
- Sunrise service.

More information is presented in the response to Question 29.

23.2.12 Internationalized Domain Names (IDN)

IDN registrations are provided in full compliance with the IDNA protocol. Neustar possesses extensive experience offering IDN registrations in numerous TLDs, and its IDN implementation uses advanced technology to accommodate the unique bundling needs of certain languages. Character mappings are easily constructed to block out characters that may be deemed as confusing to users. A detailed description of the IDN implementation is presented in response to Question 44.

23.3 Unique Services

NU DOTCO LLC will not be offering services that are unique to .WEB.

23.4 Security or Stability Concerns

All services offered are standard registry services that have no known security or stability concerns. Neustar has demonstrated a strong track record of security and stability within the industry.

Demonstration of Technical & Operational Capability

24. Shared Registration System (SRS) Performance

24.1 Introduction

NU DOTCO LLC has partnered with NeuStar, Inc ("Neustar"), an experienced TLD registry operator, for the operation of the .WEB Registry. The applicant is confident that the plan in place for the operation of a robust and reliable Shared Registration System (SRS) as currently provided by Neustar will satisfy the criterion established by ICANN.

Neustar built its SRS from the ground up as an EPP based platform and has been operating it reliably and at scale since 2001. The software currently provides registry services to five TLDs (.BIZ, .US, TEL, .CO and .TRAVEL) and is used to provide gateway services to the .CN and .TW registries. Neustar's state of the art registry has a proven track record of being secure, stable, and robust. It manages more than 6 million domains, and has over 300 registrars connected today. The following describes a detailed plan for a robust and reliable SRS that meets all ICANN requirements including compliance with Specifications 6 and 10.

24.2 The Plan for Operation of a Robust and Reliable SRS

24.2.1 High-level SRS System Description

The SRS to be used for .WEB will leverage a production-proven, standards-based, highly reliable and high-performance domain name registration and management system that fully meets or exceeds the requirements as identified in the new gTLD Application Guidebook.

The SRS is the central component of any registry implementation and its quality, reliability and capabilities are essential to the overall stability of the TLD. Neustar has a documented history of deploying SRS implementations with proven and verifiable performance, reliability and availability. The SRS adheres to all industry standards and protocols. By leveraging an existing SRS platform, NU DOTCO LLC is mitigating the significant risks and costs associated with the development of a new system. Highlights of the SRS include:

- State-of-the-art, production proven multi-layer design
- Ability to rapidly and easily scale from low to high volume as a TLD grows
- Fully redundant architecture at two sites
- Support for IDN registrations in compliance with all standards
- Use by over 300 Registrars
- EPP connectivity over IPv6
- Performance being measured using 100% of all production transactions (not sampling).

24.2.2 SRS Systems, Software, Hardware, and Interoperability

The systems and software that the registry operates on are a critical element to providing a high quality of service. If the systems are of poor quality, if they are difficult to maintain and operate, or if the registry personnel are unfamiliar with them, the registry will be prone to outages. Neustar has a decade of experience operating registry infrastructure to extremely high service level requirements. The infrastructure is designed using best of breed systems and software. Much of the application software that performs registry-specific operations was developed by the current engineering team and a result the team is intimately familiar with its operations.

The architecture is highly scalable and provides the same high level of availability and performance as volumes increase. It combines load balancing technology with scalable server technology to provide a cost effective and efficient method for scaling.

The Registry is able to limit the ability of any one registrar from adversely impacting other registrars by consuming too many resources due to excessive EPP transactions. The system uses network layer 2 level packet shaping to limit the number of simultaneous connections registrars can open to the protocol layer.

All interaction with the Registry is recorded in log files. Log files are generated at each layer of the system. These log files record at a minimum:

- The IP address of the client
- Timestamp
- Transaction Details
- Processing Time.

In addition to logging of each and every transaction with the SRS Neustar maintains audit records, in the database, of all transformational transactions. These audit records allow the Registry, in support of the applicant, to produce a complete history of changes for any domain name.

24.2.3 SRS Design

The SRS incorporates a multi-layer architecture that is designed to mitigate risks and easily scale as volumes increase. The three layers of the SRS are:

- Protocol Layer
- Business Policy Layer
- Database.

Each of the layers is described below.

24.2.4 Protocol Layer

The first layer is the protocol layer, which includes the EPP interface to registrars. It consists of a high availability farm of load-balanced EPP servers. The servers are designed to be fast processors of transactions. The servers perform basic validations and then feed information to the business policy engines as described below. The protocol layer is horizontally scalable as dictated by volume.

The EPP servers authenticate against a series of security controls before granting service, as follows:

- The registrar's host exchanges keys to initiates a TLS handshake session with the EPP server.
- The registrar's host must provide credentials to determine proper access levels.
- The registrar's IP address must be preregistered in the network firewalls and traffic-shapers.

24.2.5 Business Policy Layer

The Business Policy Layer is the "brain" of the registry system. Within this layer, the policy engine servers perform rules-based processing as defined through configurable attributes. This process takes individual transactions, applies various validation and policy rules, persists data and dispatches notification through the central database in order to publish to various external systems. External systems fed by the Business Policy Layer include backend processes such as dynamic update of DNS, WHOIS and Billing.

Similar to the EPP protocol farm, the SRS consists of a farm of application servers within this layer. This design ensures that there is sufficient capacity to process every transaction in a manner that meets or exceeds all service level requirements. Some registries couple the business logic layer directly in the protocol layer or within the database. This architecture limits the ability to scale the registry. Using a decoupled architecture enables the load to be distributed among farms of inexpensive servers that can be scaled up or down as demand changes.

The SRS today processes over 30 million EPP transactions daily.

24.2.6 Database

The database is the third core components of the SRS. The primary function of the SRS database is to provide highly reliable, persistent storage for all registry information required for domain registration services. The database is highly secure, with access limited to transactions from authenticated registrars, trusted application-server processes, and highly restricted access by the registry database administrators. A full description of the database can be found in response to Question 33.

Figure 24-1 attached depicts the overall SRS architecture including network components.

24.2.7 Number of Servers

As depicted in the SRS architecture diagram above Neustar operates a high availability architecture where at each level of the stack there are no single points of failures. Each of the network level devices run with dual pairs as do the databases. For the .WEB registry, the SRS will operate with 8 protocol servers and 6 policy engine servers. These expand horizontally as volume increases due to additional TLDs, increased load, and through organic growth. In addition to the SRS servers described above, there are multiple backend servers for services such as DNS and WHOIS. These are discussed in detail within those respective response sections.

24.2.8 Description of Interconnectivity with Other Registry Systems

The core SRS service interfaces with other external systems via Neustar's external systems layer. The services that the SRS interfaces with include:

- WHOIS
- DNS
- Billing
- Data Warehouse (Reporting and Data Escrow).

Other external interfaces may be deployed to meet the unique needs of a TLD. At this time there are no additional interfaces planned for .WEB.

The SRS includes an "external notifier" concept in its business policy engine as a message dispatcher. This design allows time-consuming backend processing to be decoupled from critical online registrar transactions. Using an external notifier solution, the registry can utilize "control levers" that allow it to tune or to disable processes to ensure optimal performance at all times. For example, during the early minutes of a TLD launch, when unusually high volumes of transactions are expected, the registry can elect to suspend processing of one or more back end systems in order to ensure that greater processing power is available to handle the increased load requirements. This proven architecture has been used with numerous TLD launches, some of which have involved the processing of over tens of millions of transactions in the opening hours. The following are the standard three external notifiers used the SRS:

24.2.9 WHOIS External Notifier

The WHOIS external notifier dispatches a work item for any EPP transaction that may potentially have an impact on WHOIS. It is important to note that, while the WHOIS external notifier feeds the WHOIS system, it intentionally does not have visibility into the actual contents of the WHOIS system. The WHOIS external notifier serves just as a tool to send a signal to the WHOIS system that a change is ready to occur. The WHOIS system possesses the intelligence and data visibility to know exactly what needs to change in WHOIS. See response to Question 26 for greater detail.

24.2.10 DNS External Notifier

The DNS external notifier dispatches a work item for any EPP transaction that may potentially have an impact on DNS. Like the WHOIS external notifier, the DNS external notifier does not have visibility into the actual contents of the DNS zones. The work items that are generated by the notifier indicate to the dynamic DNS update sub-system that a change occurred that may impact DNS. That DNS system has the ability to decide what actual changes must be propagated out to the DNS constellation. See response to Question 35 for greater detail.

24.2.11 Billing External Notifier

The billing external notifier is responsible for sending all billable transactions to the downstream financial systems for billing and collection. This external notifier contains the necessary logic to determine what types of transactions are billable. The financial systems use this information to apply appropriate debits and credits based on registrar.

24.2.12 Data Warehouse

The data warehouse is responsible for managing reporting services, including registrar reports, business intelligence dashboards, and the processing of data escrow files. The Reporting Database is used to create both internal and external reports, primarily to support registrar billing and contractual reporting requirement. The data warehouse databases are updated on a daily basis with full copies of the production SRS data.

24.2.13 Frequency of Synchronization between Servers

The external notifiers discussed above perform updates in near real-time, well within the prescribed service level requirements. As transactions from registrars update the core SRS, update notifications are pushed to the external systems such as DNS and WHOIS. These updates are typically live in the external system within 2-3 minutes.

24.2.14 Synchronization Scheme (e.g., hot standby, cold standby)

Neustar operates two hot databases within the data center that is operating in primary mode. These two databases are kept in sync via synchronous replication. Additionally, there are two databases in the secondary data center. These databases are updated real time through asynchronous replication. This model allows for high performance while also ensuring protection of data. See response to Question 33 for greater detail.

24.2.15 Compliance with Specification 6 Section 1.2

The SRS implementation for .WEB is fully compliant with Specification 6, including section 1.2. EPP Standards are described and embodied in a number of IETF RFCs, ICANN contracts and practices, and registry-registrar agreements. Extensible Provisioning Protocol or EPP is defined by a core set of RFCs that standardize the interface that make up the registry-registrar model. The SRS interface supports EPP 1.0 as defined in the following RFCs shown in Table 24-1 attached.

Additional information on the EPP implementation and compliance with RFCs can be found in the response to Question 25.

24.2.16 Compliance with Specification 10

Specification 10 of the New TLD Agreement defines the performance specifications of the TLD, including service level requirements related to DNS, RDDS (WHOIS), and EPP. The requirements include both availability and transaction response time measurements. As an experienced registry operator, Neustar has a long and verifiable track record of providing registry services that consistently exceed the performance specifications stipulated in ICANN agreements. This same high level of service will be provided for the .WEB Registry. The following section describes Neustar's experience and its capabilities to meet the requirements in the new agreement.

To properly measure the technical performance and progress of TLDs, Neustar collects data on key essential operating metrics. These measurements are key indicators of the performance and health of the registry. Neustar's current .biz SLA commitments are among the most stringent in the industry today, and exceed the requirements for new TLDs. Table 24-2 compares the current SRS performance levels compared to the requirements for new TLDs, and clearly demonstrates the ability of the SRS to exceed those requirements.

Their ability to commit and meet such high performance standards is a direct result of their philosophy towards operational excellence. See response to Question 31 for a full description of their philosophy for building and managing for performance.

24.3 Resourcing Plans

The development, customization, and on-going support of the SRS are the responsibility of a combination of technical and operational teams, including:

- Development/Engineering
- Database Administration
- Systems Administration
- Network Engineering.

Additionally, if customization or modifications are required, the Product Management and Quality Assurance teams will be involved in the design and testing. Finally, the Network Operations and Information Security play an important role in ensuring the systems involved are operating securely and reliably.

The necessary resources will be pulled from the pool of operational resources described in detail in the response to Question 31. Neustar's SRS implementation is very mature, and has been in production for over 10 years. As such, very little new development related to the SRS will be required for the implementation of the .WEB registry. The following resources are available from those teams:

- Development/Engineering - 19 employees
- Database Administration- 10 employees
- Systems Administration - 24 employees
- Network Engineering - 5 employees

The resources are more than adequate to support the SRS needs of all the TLDs operated by Neustar, including the .WEB registry.

25. Extensible Provisioning Protocol (EPP)

25.1 Introduction

NU DOTCO LLC's back-end registry operator, Neustar, has over 10 years of experience operating EPP based registries. They deployed one of the first EPP registries in 2001 with the launch of .biz. In 2004, they were the first gTLD to implement EPP 1.0. Over the last ten years Neustar has implemented numerous extensions to meet various unique TLD requirements. Neustar will leverage its extensive experience to ensure NU DOTCO LLC is provided with an unparalleled EPP based registry. The following discussion explains the EPP interface which will be used for the .WEB registry. This interface exists within the protocol farm layer as described in Question 24 and is depicted in Figure 25-1 attached.

25.2 EPP Interface

Registrars are provided with two different interfaces for interacting with the registry. Both are EPP based, and both contain all the functionality necessary to provision and manage domain names. The primary mechanism is an EPP interface to connect directly with the registry. This is the interface registrars will use for most of their interactions with the registry.

However, an alternative web GUI (Registry Administration Tool) that can also be used to perform EPP transactions will be provided. The primary use of the Registry Administration Tool is for performing administrative or customer support tasks.

The main features of the EPP implementation are:

- Standards Compliance: The EPP XML interface is compliant to the EPP RFCs. As future EPP RFCs are published or existing RFCs are updated, Neustar makes changes to the implementation keeping in mind of any backward compatibility issues.
- Scalability: The system is deployed keeping in mind that it may be required to grow and shrink the footprint of the Registry system for a particular TLD.
- Fault-tolerance: The EPP servers are deployed in two geographically separate data centers to provide for quick failover capability in case of a major outage in a particular data center. The EPP servers adhere to strict availability requirements defined in the SLAs.
- Configurability: The EPP extensions are built in a way that they can be easily configured to turn on or off for a particular TLD.
- Extensibility: The software is built ground up using object oriented design. This allows for easy extensibility of the software without risking the possibility of the change rippling through the

whole application.

-Auditable: The system stores detailed information about EPP transactions from provisioning to DNS and WHOIS publishing. In case of a dispute regarding a name registration, the Registry can provide comprehensive audit information on EPP transactions.

-Security: The system provides IP address based access control, client credential-based authorization test, digital certificate exchange, and connection limiting to the protocol layer.

25.3 Compliance with RFCs and Specifications

The registry-registrar model is described and embodied in a number of IETF RFCs, ICANN contracts and practices, and registry-registrar agreements. As shown in Table 25-1 attached, EPP is defined by the core set of RFCs that standardize the interface that registrars use to provision domains with the SRS. As a core component of the SRS architecture, the implementation is fully compliant with all EPP RFCs.

Neustar ensures compliance with all RFCs through a variety of processes and procedures. Members from the engineering and standards teams actively monitor and participate in the development of RFCs that impact the registry services, including those related to EPP. When new RFCs are introduced or existing ones are updated, the team performs a full compliance review of each system impacted by the change. Furthermore, all code releases include a full regression test that includes specific test cases to verify RFC compliance.

Neustar has a long history of providing exceptional service that exceeds all performance specifications. The SRS and EPP interface have been designed to exceed the EPP specifications defined in Specification 10 of the Registry Agreement and profiled in Table 25-2 attached. Evidence of Neustar's ability to perform at these levels can be found in the .biz monthly progress reports found on the ICANN website.

25.3.1 EPP Toolkits

Toolkits, under open source licensing, are freely provided to registrars for interfacing with the SRS. Both Java and C++ toolkits will be provided, along with the accompanying documentation. The Registrar Tool Kit (RTK) is a software development kit (SDK) that supports the development of a registrar software system for registering domain names in the registry using EPP. The SDK consists of software and documentation as described below.

The software consists of working Java and C++ EPP common APIs and samples that implement the EPP core functions and EPP extensions used to communicate between the registry and registrar. The RTK illustrates how XML requests (registration events) can be assembled and forwarded to the registry for processing. The software provides the registrar with the basis for a reference implementation that conforms to the EPP registry-registrar protocol. The software component of the SDK also includes XML schema definition files for all Registry EPP objects and EPP object extensions. The RTK also includes a "dummy" server to aid in the testing of EPP clients.

The accompanying documentation describes the EPP software package hierarchy, the object data model, and the defined objects and methods (including calling parameter lists and expected response behavior). New versions of the RTK are made available from time to time to provide support for additional features as they become available and support for other platforms and languages.

25.4 Proprietary EPP Extensions

The .WEB registry will not include proprietary EPP extensions. Neustar has implemented various EPP extensions for both internal and external use in other TLD registries. These extensions use the standard EPP extension framework described in RFC 5730. Table 25-3 attached provides a list of extensions developed for other TLDs. Should the .WEB registry require an EPP extension at some point in the future, the extension will be implemented in compliance with all RFC specifications including RFC 3735.

The full EPP schema to be used in the .WEB registry is attached in the document titled "EPP Schema Files."

25.5 Resourcing Plans

The development and support of EPP is largely the responsibility of the Development/Engineering and Quality Assurance teams. As an experience registry operator with a fully developed EPP solution, on-going support is largely limited to periodic updates to the standard and the implementation of TLD specific extensions.

The necessary resources will be pulled from the pool of available resources described in detail in the response to Question 31. The following resources are available from those teams:

- Development/Engineering - 19 employees
- Quality Assurance - 7 employees.

These resources are more than adequate to support any EPP modification needs of the .WEB registry.

26. Whois

26.1 Introduction

.WEB recognizes the importance of an accurate, reliable, and up-to-date WHOIS database to governments, law enforcement, intellectual property holders and the public as a whole and is firmly committed to complying with all of the applicable WHOIS specifications for data objects, bulk access, and lookups as defined in Specifications 4 and 10 to the Registry Agreement. .WEB's back-end registry services provider, Neustar, has extensive experience providing ICANN and RFC-compliant WHOIS services for each of the TLDs that it operates both as a Registry Operator for gTLDs, ccTLDs and back-end registry services provider. As one of the first "thick" registry operators in the gTLD space, Neustar's WHOIS service has been designed from the ground up to display as much information as required by a TLD and respond to a very stringent availability and performance requirement.

Some of the key features of .WEB's solution include:

- Fully compliant with all relevant RFCs including 3912
- Production proven, highly flexible, and scalable with a track record of 100% availability over the past 10 years
- Exceeds current and proposed performance specifications
- Supports dynamic updates with the capability of doing bulk updates
- Geographically distributed sites to provide greater stability and performance
- In addition, .WEB's thick-WHOIS solution also provides for additional search capabilities and mechanisms to mitigate potential forms of abuse as discussed below. (e.g., IDN, registrant data).

26.2 Software Components

The WHOIS architecture comprises the following components:

- An in-memory database local to each WHOIS node: To provide for the performance needs, the WHOIS data is served from an in-memory database indexed by searchable keys.
- Redundant servers: To provide for redundancy, the WHOIS updates are propagated to a cluster of WHOIS servers that maintain an independent copy of the database.
- Attack resistant: To ensure that the WHOIS system cannot be abused using malicious queries or DOS attacks, the WHOIS server is only allowed to query the local database and rate limits on queries based on IPs and IP ranges can be readily applied.
- Accuracy auditor: To ensure the accuracy of the information served by the WHOIS servers, a daily audit is done between the SRS information and the WHOIS responses for the domain names which are updated during the last 24-hour period. Any discrepancies are resolved proactively.
- Modular design: The WHOIS system allows for filtering and translation of data elements between the SRS and the WHOIS database to allow for customizations.

-Scalable architecture: The WHOIS system is scalable and has a very small footprint. Depending on the query volume, the deployment size can grow and shrink quickly.

-Flexible: It is flexible enough to accommodate thin, thick, or modified thick models and can accommodate any future ICANN policy, such as different information display levels based on user categorization.

-SRS master database: The SRS database is the main persistent store of the Registry information. The Update Agent computes what WHOIS updates need to be pushed out. A publish-subscribe mechanism then takes these incremental updates and pushes to all the WHOIS slaves that answer queries.

26.3 Compliance with RFC and Specifications 4 and 10

Neustar has been running thick-WHOIS Services for over 10+ years in full compliance with RFC 3912 and with Specifications 4 and 10 of the Registry Agreement. RFC 3912 is a simple text based protocol over TCP that describes the interaction between the server and client on port 43. Neustar built a home-grown solution for this service. It processes millions of WHOIS queries per day.

Table 26-1 attached describes Neustar's compliance with Specifications 4 and 10.

Neustar ensures compliance with all RFCs through a variety of processes and procedures. Members from the engineering and standards teams actively monitor and participate in the development of RFCs that impact the registry services, including those related to WHOIS. When new RFCs are introduced or existing ones are updated, the team performs a full compliance review of each system impacted by the change. Furthermore, all code releases include a full regression test that includes specific test cases to verify RFC compliance.

26.4 High-level WHOIS System Description

26.4.1 WHOIS Service (port 43)

The WHOIS service is responsible for handling port 43 queries. Our WHOIS is optimized for speed using an in-memory database and master-slave architecture between the SRS and WHOIS slaves.

The WHOIS service also has built-in support for IDN. If the domain name being queried is an IDN, the returned results include the language of the domain name, the domain name's UTF-8 encoded representation along with the Unicode code page.

26.4.2 Web Page for WHOIS queries

In addition to the WHOIS Service on port 43, Neustar provides a web based WHOIS application (www.whois.WEB). It is an intuitive and easy to use application for the general public to use. WHOIS web application provides all of the features available in the port 43 WHOIS. This includes full and partial search on:

- Domain names
- Nameservers
- Registrant, Technical and Administrative Contacts
- Registrars

It also provides features not available on the port 43 service. These include:

1. Redemption Grace Period calculation: Based on the registry's policy, domains in pendingDelete can be restorable or scheduled for release depending on the date/time the domain went into pendingDelete. For these domains, the web based WHOIS displays "Restorable" or "Scheduled for Release" to clearly show this additional status to the user.
2. Extensive support for international domain names (IDN)
3. Ability to perform WHOIS lookups on the actual Unicode IDN
4. Display of the actual Unicode IDN in addition to the ACE-encoded name
5. A Unicode to Punycode and Punycode to Unicode translator

6. An extensive FAQ

7. A list of upcoming domain deletions

26.5 IT and Infrastructure Resources

As described above the WHOIS architecture uses a workflow that decouples the update process from the SRS. This ensures SRS performance is not adversely affected by the load requirements of dynamic updates. It is also decoupled from the WHOIS lookup agent to ensure the WHOIS service is always available and performing well for users. Each of Neustar's geographically diverse WHOIS sites use:

- Firewalls, to protect this sensitive data
- Dedicated servers for MQ Series, to ensure guaranteed delivery of WHOIS updates
- Packetshaper for source IP address-based bandwidth limiting
- Load balancers to distribute query load
- Multiple WHOIS servers for maximizing the performance of WHOIS service.

The WHOIS service uses HP BL 460C servers, each with 2 X Quad Core CPU and a 64GB of RAM. The existing infrastructure has 6 servers, but is designed to be easily scaled with additional servers should it be needed.

Figure 26-1 attached depicts the different components of the WHOIS architecture.

26.6 Interconnectivity with Other Registry System

As described in Question 24 about the SRS and further in response to Question 31, "Technical Overview", when an update is made by a registrar that impacts WHOIS data, a trigger is sent to the WHOIS system by the external notifier layer. The update agent processes these updates, transforms the data if necessary and then uses messaging oriented middleware to publish all updates to each WHOIS slave. The local update agent accepts the update and applies it to the local in-memory database. A separate auditor compares the data in WHOIS and the SRS daily and monthly to ensure accuracy of the published data.

26.7 Frequency of Synchronization between Servers

Updates from the SRS, through the external notifiers, to the constellation of independent WHOIS slaves happens in real-time via an asynchronous publish/subscribe messaging architecture. The updates are guaranteed to be updated in each slave within the required SLA of 95%, less than or equal to 60 minutes. Please note that Neustar's current architecture is built towards the stricter SLAs (95%, less than or equal to 15 minutes) of .BIZ. The vast majority of updates tend to happen within 2-3 minutes.

26.8 Provision for Searchable WHOIS Capabilities

Neustar will create a new web-based service to address the new search features based on requirements specified in Specification 4 Section 1.8. The application will enable users to search the WHOIS directory using any one or more of the following fields:

-Domain name

-Registrar ID

-Contacts and registrant's name

-Contact and registrant's postal address, including all the sub-fields described in EPP (e.g., street, city, state or province, etc.)

-Name server name and name server IP address

-The system will also allow search using non-Latin character sets which are compliant with IDNA specification.

The user will choose one or more search criteria, combine them by Boolean operators (AND, OR, NOT) and provide partial or exact match regular expressions for each of the criterion name-value pairs. The domain names matching the search criteria will be returned to the user.

Figure 26-2 attached shows an architectural depiction of the new service.

To mitigate the risk of this powerful search service being abused by unscrupulous data miners, a layer of security will be built around the query engine which will allow the registry to identify rogue activities and then take appropriate measures. Potential abuses include, but are not limited to:

- Data Mining
- Unauthorized Access
- Excessive Querying
- Denial of Service Attacks

To mitigate the abuses noted above, Neustar will implement any or all of these mechanisms as appropriate:

- Username-password based authentication
- Certificate based authentication
- Data encryption
- CAPTCHA mechanism to prevent robo invocation of Web query
- Fee-based advanced query capabilities for premium customers.

The searchable WHOIS application will adhere to all privacy laws and policies of the .WEB registry.

26.9 Resourcing Plans

As with the SRS, the development, customization, and on-going support of the WHOIS service is the responsibility of a combination of technical and operational teams. The primary groups responsible for managing the service include:

- Development/Engineering - 19 employees
- Database Administration - 10 employees
- Systems Administration - 24 employees
- Network Engineering - 5 employees

Additionally, if customization or modifications are required, the Product Management and Quality Assurance teams will also be involved. Finally, the Network Operations and Information Security play an important role in ensuring the systems involved are operating securely and reliably. The necessary resources will be pulled from the pool of available resources described in detail in the response to Question 31. Neustar's WHOIS implementation is very mature, and has been in production for over 10 years. As such, very little new development will be required to support the implementation of the .WEB registry. The resources are more than adequate to support the WHOIS needs of all the TLDs operated by Neustar, including the .WEB registry.

27. Registration Life Cycle

27.1 Registration Life Cycle

27.1.1 Introduction

.WEB will follow the lifecycle and business rules found in the majority of gTLDs today. Our back-end operator, Neustar, has over ten years of experience managing numerous TLDs that utilize standard and unique business rules and lifecycles. This section describes the business rules, registration states, and the overall domain lifecycle that will be use for .WEB.

27.1.2 Domain Lifecycle - Description

The registry will use the EPP 1.0 standard for provisioning domain names, contacts and hosts. Each domain record is comprised of three registry object types: domain, contacts, and hosts.

Domains, contacts and hosts may be assigned various EPP defined statuses indicating either a particular state or restriction placed on the object. Some statuses may be applied by the Registrar; other statuses may only be applied by the Registry. Statuses are an integral part of the domain lifecycle and serve the dual purpose of indicating the particular state of the domain and indicating

any restrictions placed on the domain. The EPP standard defines 17 statuses, however only 14 of these statuses will be used in the .WEB registry per the defined .WEB business rules.

The following is a brief description of each of the statuses. Server statuses may only be applied by the Registry, and client statuses may be applied by the Registrar.

- OK - Default status applied by the Registry.
- Inactive - Default status applied by the Registry if the domain has less than 2 nameservers.
- PendingCreate - Status applied by the Registry upon processing a successful Create command, and indicates further action is pending. This status will not be used in the .WEB registry.
- PendingTransfer - Status applied by the Registry upon processing a successful Transfer request command, and indicates further action is pending.
- PendingDelete - Status applied by the Registry upon processing a successful Delete command that does not result in the immediate deletion of the domain, and indicates further action is pending.
- PendingRenew - Status applied by the Registry upon processing a successful Renew command that does not result in the immediate renewal of the domain, and indicates further action is pending. This status will not be used in the .WEB registry.
- PendingUpdate - Status applied by the Registry if an additional action is expected to complete the update, and indicates further action is pending. This status will not be used in the .WEB registry.
- Hold - Removes the domain from the DNS zone.
- UpdateProhibited - Prevents the object from being modified by an Update command.
- TransferProhibited - Prevents the object from being transferred to another Registrar by the Transfer command.
- RenewProhibited - Prevents a domain from being renewed by a Renew command.
- DeleteProhibited - Prevents the object from being deleted by a Delete command.

The lifecycle of a domain begins with the registration of the domain. All registrations must follow the EPP standard. Upon registration a domain will either be in an active or inactive state. Domains in an active state are delegated and have their delegation information published to the zone. Inactive domains either have no delegation information or their delegation information is not published in the zone. Following the initial registration of a domain, one of five actions may occur during its lifecycle:

- Domain may be updated
- Domain may be deleted, either within or after the add-grace period
- Domain may be renewed at anytime during the term
- Domain may be auto-renewed by the Registry
- Domain may be transferred to another registrar.

Each of these actions may result in a change in domain state. This is described in more detail in the following section. Every domain must eventually be renewed, auto-renewed, transferred, or deleted. A registrar may apply EPP statuses described above to prevent specific actions such as updates, renewals, transfers, or deletions.

27.2 Registration States

27.2.1 Domain Lifecycle - Registration States

As described above the .WEB registry will implement a standard domain lifecycle found in most gTLD registries today. There are five possible domain states:

- Active
- Inactive
- Locked
- Pending Transfer
- Pending Delete.

All domains are always in either an Active or Inactive state, and throughout the course of the lifecycle may also be in a Locked, Pending Transfer, and Pending Delete state. Specific conditions such as applied EPP policies and registry business rules will determine whether a domain can be transitioned between states. Additionally, within each state, domains may be subject to various timed events such as grace periods, and notification periods.

27.2.2 Active State

The active state is the normal state of a domain and indicates that delegation data has been provided and the delegation information is published in the zone. A domain in an Active state may also be in the Locked or Pending Transfer states.

27.2.3 Inactive State

The Inactive state indicates that a domain has not been delegated or that the delegation data has not been published to the zone. A domain in an Inactive state may also be in the Locked or Pending Transfer states. By default all domain in the Pending Delete state are also in the Inactive state.

27.2.4 Locked State

The Locked state indicates that certain specified EPP transactions may not be performed to the domain. A domain is considered to be in a Locked state if at least one restriction has been placed on the domain; however up to eight restrictions may be applied simultaneously. Domains in the Locked state will also be in the Active or Inactive, and under certain conditions may also be in the Pending Transfer or Pending Delete states.

27.2.5 Pending Transfer State

The Pending Transfer state indicates a condition in which there has been a request to transfer the domain from one registrar to another. The domain is placed in the Pending Transfer state for a period of time to allow the current (losing) registrar to approve (ack) or reject (nack) the transfer request. Registrars may only nack requests for reasons specified in the Inter-Registrar Transfer Policy.

27.2.6 Pending Delete State

The Pending Delete State occurs when a Delete command has been sent to the Registry after the first 5 days (120 hours) of registration. The Pending Delete period is 35-days during which the first 30-days the name enters the Redemption Grace Period (RGP) and the last 5-days guarantee that the domain will be purged from the Registry Database and available to public pool for registration on a first come, first serve basis.

27.3 Typical Registration Lifecycle Activities

27.3.1 Domain Creation Process

The creation (registration) of domain names is the fundamental registry operation. All other operations are designed to support or compliment a domain creation. The following steps occur when a domain is created.

1. Contact objects are created in the SRS database. The same contact object may be used for each contact type, or they may all be different. If the contacts already exist in the database this step may be skipped.
2. Nameservers are created in the SRS database. Nameservers are not required to complete the registration process; however any domain with less than 2 name servers will not be resolvable.
3. The domain is created using the each of the objects created in the previous steps. In addition, the term and any client statuses may be assigned at the time of creation.

The actual number of EPP transactions needed to complete the registration of a domain name can be as few as one and as many as 40. The latter assumes seven distinct contacts and 13 nameservers, with Check and Create commands submitted for each object.

27.3.2 Update Process

Registry objects may be updated (modified) using the EPP Modify operation. The Update transaction updates the attributes of the object.

For example, the Update operation on a domain name will only allow the following attributes to be updated:

-Domain statuses

- Registrant ID
- Administrative Contact ID
- Billing Contact ID
- Technical Contact ID
- Nameservers
- AuthInfo
- Additional Registrar provided fields.

The Update operation will not modify the details of the contacts. Rather it may be used to associate a different contact object (using the Contact ID) to the domain name. To update the details of the contact object the Update transaction must be applied to the contact itself. For example, if an existing registrant wished to update the postal address, the Registrar would use the Update command to modify the contact object, and not the domain object.

27.3.4 Renew Process

The term of a domain may be extended using the EPP Renew operation. ICANN policy general establishes the maximum term of a domain name to be 10 years, and .WEB will follow that term restriction. A domain may be renewed/extended at any point time, even immediately following the initial registration. The only stipulation is that the overall term of the domain name may not exceed 10 years. If a Renew operation is performed with a term value will extend the domain beyond the 10 year limit, the Registry will reject the transaction entirely.

27.3.5 Transfer Process

The EPP Transfer command is used for several domain transfer related operations:

- Initiate a domain transfer
- Cancel a domain transfer
- Approve a domain transfer
- Reject a domain transfer.

To transfer a domain from one Registrar to another the following process is followed:

1. The gaining (new) Registrar submits a Transfer command, which includes the AuthInfo code of the domain name.
2. If the AuthInfo code is valid and the domain is not in a status that does not allow transfers the domain is placed into pendingTransfer status
3. A poll message notifying the losing Registrar of the pending transfer is sent to the Registrar's message queue
4. The domain remains in pendingTransfer status for up to 120 hours, or until the losing (current) Registrar Acks (approves) or Nack (rejects) the transfer request
5. If the losing Registrar has not Acked or Nacked the transfer request within the 120 hour timeframe, the Registry auto-approves the transfer
6. The requesting Registrar may cancel the original request up until the transfer has been completed.

A transfer adds an additional year to the term of the domain. In the event that a transfer will cause the domain to exceed the 10 year maximum term, the Registry will add a partial term up to the 10 year limit. Unlike with the Renew operation, the Registry will not reject a transfer operation.

27.3.6 Deletion Process

A domain may be deleted from the SRS using the EPP Delete operation. The Delete operation will result in either the domain being immediately removed from the database or the domain being placed in pendingDelete status. The outcome is dependent on when the domain is deleted. If the domain is deleted within the first five days (120 hours) of registration, the domain is immediately removed from the database. A deletion at any other time will result in the domain being placed in pendingDelete status and entering the Redemption Grace Period (RGP). Additionally, domains that are deleted within five days (120) hours of any billable (add, renew, transfer) transaction may be deleted for credit.

27.4 Applicable Time Elements

The following section explains the time elements that are involved.

27.4.1 Grace Periods

There are six grace periods:

- Add-Delete Grace Period (AGP)
- Renew-Delete Grace Period
- Transfer-Delete Grace Period
- Auto-Renew-Delete Grace Period
- Auto-Renew Grace Period
- Redemption Grace Period (RGP).

The first four grace periods listed above are designed to provide the Registrar with the ability to cancel a revenue transaction (add, renew, or transfer) within a certain period of time and receive a credit for the original transaction.

The following describes each of these grace periods in detail.

27.4.2 Add-Delete Grace Period

The APG is associated with the date the Domain was registered. Domains may be deleted for credit during the initial 120 hours of a registration, and the Registrar will receive a billing credit for the original registration. If the domain is deleted during the Add Grace Period, the domain is dropped from the database immediately and a credit is applied to the Registrar's billing account.

27.4.3 Renew-Delete Grace Period

The Renew-Delete Grace Period is associated with the date the Domain was renewed. Domains may be deleted for credit during the 120 hours after a renewal. The grace period is intended to allow Registrars to correct domains that were mistakenly renewed. It should be noted that domains that are deleted during the renew grace period will be placed into pendingDelete and will enter the RGP (see below).

27.4.4 Transfer-Delete Grace Period

The Transfer-Delete Grace Period is associated with the date the Domain was transferred to another Registrar. Domains may be deleted for credit during the 120 hours after a transfer. It should be noted that domains that are deleted during the renew grace period will be placed into pendingDelete and will enter the RGP. A deletion of domain after a transfer is not the method used to correct a transfer mistake. Domains that have been erroneously transferred or hijacked by another party can be transferred back to the original registrar through various means including contacting the Registry.

27.4.5 Auto-Renew-Delete Grace Period

The Auto-Renew-Delete Grace Period is associated with the date the Domain was auto-renewed. Domains may be deleted for credit during the 120 hours after an auto-renewal. The grace period is intended to allow Registrars to correct domains that were mistakenly auto-renewed. It should be noted that domains that are deleted during the auto-renew delete grace period will be placed into pendingDelete and will enter the RGP.

27.4.6 Auto-Renew Grace Period

The Auto-Renew Grace Period is a special grace period intended to provide registrants with an extra amount of time, beyond the expiration date, to renew their domain name. The grace period lasts for 45 days from the expiration date of the domain name. Registrars are not required to provide registrants with the full 45 days of the period.

27.4.7 Redemption Grace Period

The RGP is a special grace period that enables Registrars to restore domains that have been inadvertently deleted but are still in pendingDelete status within the Redemption Grace Period. All domains enter the RGP except those deleted during the AGP.

The RGP period is 30 days, during which time the domain may be restored using the EPP RenewDomain command as described below. Following the 30day RGP period the domain will remain in pendingDelete status for an additional five days, during which time the domain may NOT be restored. The domain is released from the SRS, at the end of the 5 day non-restore period. A restore fee applies and is detailed in the Billing Section. A renewal fee will be automatically applied for any domain past expiration.

Neustar has created a unique restoration process that uses the EPP Renew transaction to restore the domain and fulfill all the reporting obligations required under ICANN policy. The following describes the restoration process.

27.5 State Diagram

Figure 27 1 attached provides a description of the registration lifecycle.

The different states of the lifecycle are active, inactive, locked, pending transfer, and pending delete. Please refer to section 27.2 for detailed descriptions of each of these states. The lines between the states represent triggers that transition a domain from one state to another.

The details of each trigger are described below:

- Create: Registry receives a create domain EPP command.
- WithNS: The domain has met the minimum number of nameservers required by registry policy in order to be published in the DNS zone.
- WithoutNS: The domain has not met the minimum number of nameservers required by registry policy. The domain will not be in the DNS zone.
- Remove Nameservers: Domain's nameserver(s) is removed as part of an update domain EPP command. The total nameserver is below the minimum number of nameservers required by registry policy in order to be published in the DNS zone.
- Add Nameservers: Nameserver(s) has been added to domain as part of an update domain EPP command. The total number of nameservers has met the minimum number of nameservers required by registry policy in order to be published in the DNS zone.
- Delete: Registry receives a delete domain EPP command.
- DeleteAfterGrace: Domain deletion does not fall within the add grace period.
- DeleteWithinAddGrace: Domain deletion falls within add grace period.
- Restore: Domain is restored. Domain goes back to its original state prior to the delete command.
- Transfer: Transfer request EPP command is received.
- Transfer Approve/Cancel/Reject: Transfer requested is approved or cancel or rejected.
- TransferProhibited: The domain is in clientTransferProhibited and/or serverTransferProhibited status. This will cause the transfer request to fail. The domain goes back to its original state.
- DeleteProhibited: The domain is in clientDeleteProhibited and/or serverDeleteProhibited status. This will cause the delete command to fail. The domain goes back to its original state.

Note: the locked state is not represented as a distinct state on the diagram as a domain may be in a locked state in combination with any of the other states: inactive, active, pending transfer, or pending delete.

27.5.1 EPP RFC Consistency

As described above, the domain lifecycle is determined by ICANN policy and the EPP RFCs. Neustar has been operating ICANN TLDs for the past 10 years consistent and compliant with all the ICANN policies and related EPP RFCs.

27.6 Resources

The registration lifecycle and associated business rules are largely determined by policy and business requirements; as such the Product Management and Policy teams will play a critical role in working with NU DOTCO LLC to determine the precise rules that meet the requirements of the TLD. Implementation of the lifecycle rules will be the responsibility of Development/Engineering team, with testing performed by the Quality Assurance team. Neustar's SRS implementation is very flexible and configurable, and in many case development is not required to support business rule changes.

The .WEB registry will be using standard lifecycle rules, and as such no customization is anticipated. However should modifications be required in the future, the necessary resources will be

pulled from the pool of available resources described in detail in the response to Question 31. The following resources are available from those teams:

- Development/Engineering - 19 employees
- Registry Product Management - 4 employees

These resources are more than adequate to support the development needs of all the TLDs operated by Neustar, including the .WEB registry.

28. Abuse Prevention and Mitigation

28.1 Abuse Prevention and Mitigation

Strong abuse prevention of a new gTLD is an important benefit to the internet community. .WEB and its registry operator and back end registry services provider, Neustar agree that a registry must not only aim for the highest standards of technical and operational competence, but also needs to act as a steward of the space on behalf of the Internet community and ICANN in promoting the public interest. Neustar brings extensive experience establishing and implementing registration policies. This experience will be leveraged to help .WEB combat abusive and malicious domain activity within the new gTLD space.

One of those public interest functions for a responsible domain name registry includes working towards the eradication of abusive domain name registrations, including but not limited to those resulting from:

- Illegal or fraudulent actions
 - Spam
- Phishing
- Pharming
- Distribution of malware
 - Fast flux hosting
- Botnets
- Distribution of child pornography
- Online sale or distribution of illegal pharmaceuticals.

More specifically, although traditionally botnets have used Internet Relay Chat (IRC) servers to control registry and the compromised PCs, or bots, for DDoS attacks and the theft of personal information, an increasingly popular technique, known as fast-flux DNS, allows botnets to use a multitude of servers to hide a key host or to create a highly available control network. This ability to shift the attacker's infrastructure over a multitude of servers in various countries creates an obstacle for law enforcement and security researchers to mitigate the effects of these botnets. But a point of weakness in this scheme is its dependence on DNS for its translation services. By taking an active role in researching and monitoring these sorts of botnets, NU DOTCO LLC's partner, Neustar has developed the ability to efficiently work with various law enforcement and security communities to begin a new phase of mitigation of these types of threats.

28.1.1 Policies and Procedures to Minimize Abusive Registrations

A Registry must have the policies, resources, personnel, and expertise in place to combat such abusive DNS practices. As .WEB's registry provider, Neustar is at the forefront of the prevention of such abusive practices and is one of the few registry operators to have actually developed and implemented an active "domain takedown" policy. We also believe that a strong program is essential given that registrants have a reasonable expectation that they are in control of the data associated with their domains, especially its presence in the DNS zone. Because domain names are sometimes used as a mechanism to enable various illegitimate activities on the Internet often the best preventative measure to thwart these attacks is to remove the names completely from the DNS before they can impart harm, not only to the domain name registrant, but also to millions of unsuspecting Internet users.

Removing the domain name from the zone has the effect of shutting down all activity associated with the domain name, including the use of all websites and e-mail. The use of this technique should not be entered into lightly. .WEB has an extensive, defined, and documented process for taking the necessary action of removing a domain from the zone when its presence in the zone poses a threat to the security and stability of the infrastructure of the Internet or the registry.

28.1.2 Abuse Point of Contact

As required by the Registry Agreement, .WEB will establish and publish on its website a single abuse point of contact responsible for addressing inquiries from law enforcement and the public related to malicious and abusive conduct. .WEB will also provide such information to ICANN prior to the delegation of any domain names in the TLD. This information shall consist of, at a minimum, a valid e-mail address dedicated solely to the handling of malicious conduct complaints, and a telephone number and mailing address for the primary contact. We will ensure that this information will be kept accurate and up to date and will be provided to ICANN if and when changes are made. In addition, with respect to inquiries from ICANN-Accredited registrars, our registry services provider, Neustar shall have an additional point of contact, as it does today, handling requests by registrars related to abusive domain name practices.

28.2 Policies Regarding Abuse Complaints

One of the key policies each new gTLD registry will need to have is an Acceptable Use Policy that clearly delineates the types of activities that constitute "abuse" and the repercussions associated with an abusive domain name registration. In addition, the policy will be incorporated into the applicable Registry-Registrar Agreement and reserve the right for the registry to take the appropriate actions based on the type of abuse. This will include locking down the domain name preventing any changes to the contact and nameserver information associated with the domain name, placing the domain name "on hold" rendering the domain name non-resolvable, transferring to the domain name to another registrar, and/or in cases in which the domain name is associated with an existing law enforcement investigation, substituting name servers to collect information about the DNS queries to assist the investigation.

.WEB will adopt an Acceptable Use Policy that clearly defines the types of activities that will not be permitted in the TLD and reserves the right of NU DOTCO LLC to lock, cancel, transfer or otherwise suspend or take down domain names violating the Acceptable Use Policy and allow the Registry where and when appropriate to share information with law enforcement. Each ICANN-Accredited Registrar must agree to pass through the Acceptable Use Policy to its Resellers (if applicable) and ultimately to the TLD registrants. Below is the Registry's initial Acceptable Use Policy that we will use in connection with .WEB.

28.2.1 .WEB Acceptable Use Policy

This Acceptable Use Policy gives the Registry the ability to quickly lock, cancel, transfer or take ownership of any .WEB domain name, either temporarily or permanently, if the domain name is being used in a manner that appears to threaten the stability, integrity or security of the Registry, or any of its registrar partners - and/or that may put the safety and security of any registrant or user at risk. The process also allows the Registry to take preventive measures to avoid any such criminal or security threats.

The Acceptable Use Policy may be triggered through a variety of channels, including, among other things, private complaint, public alert, government or enforcement agency outreach, and the on-going monitoring by the Registry or its partners. In all cases, the Registry or its designees will alert Registry's registrar partners about any identified threats, and will work closely with them to bring offending sites into compliance.

The following are some (but not all) activities that may be subject to rapid domain compliance:

- Phishing: the attempt to acquire personally identifiable information by masquerading as a website other than .WEB's own.
- Pharming: the redirection of Internet users to websites other than those the user intends to visit, usually through unauthorized changes to the Hosts file on a victim's computer or DNS records in DNS servers.
- Dissemination of Malware: the intentional creation and distribution of "malicious" software designed to infiltrate a computer system without the owner's consent, including, without limitation, computer viruses, worms, key loggers, and Trojans.
- Fast Flux Hosting: a technique used to shelter Phishing, Pharming and Malware sites and networks from detection and to frustrate methods employed to defend against such practices, whereby the IP address associated with fraudulent websites are changed rapidly so as to make the true location of the sites difficult to find.
- Botnetting: the development and use of a command, agent, motor, service, or software which is

implemented: (1) to remotely control the computer or computer system of an Internet user without their knowledge or consent, (2) to generate direct denial of service (DDOS) attacks.

-Malicious Hacking: the attempt to gain unauthorized access (or exceed the level of authorized access) to a computer, information system, user account or profile, database, or security system.

-Child Pornography: the storage, publication, display and/or dissemination of pornographic materials depicting individuals under the age of majority in the relevant jurisdiction.

The Registry reserves the right, in its sole discretion, to take any administrative and operational actions necessary, including the use of computer forensics and information security technological services, among other things, in order to implement the Acceptable Use Policy. In addition, the Registry reserves the right to deny, cancel or transfer any registration or transaction, or place any domain name(s) on registry lock, hold or similar status, that it deems necessary, in its discretion; (1) to protect the integrity and stability of the registry; (2) to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process; (3) to avoid any liability, civil or criminal, on the part of Registry as well as its affiliates, subsidiaries, officers, directors, and employees; (4) per the terms of the registration agreement or (5) to correct mistakes made by the Registry or any Registrar in connection with a domain name registration. Registry also reserves the right to place upon registry lock, hold or similar status a domain name during resolution of a dispute. \

28.2.2 Taking Action Against Abusive and/or Malicious Activity

The Registry is committed to ensuring that those domain names associated with abuse or malicious conduct in violation of the Acceptable Use Policy are dealt with in a timely and decisive manner. These include taking action against those domain names that are being used to threaten the stability and security of the TLD, or is part of a real-time investigation by law enforcement.

Once a complaint is received from a trusted source, third-party, or detected by the Registry, the Registry will use commercially reasonable efforts to verify the information in the complaint. If that information can be verified to the best of the ability of the Registry, the sponsoring registrar will be notified and be given 12 hours to investigate the activity and either take down the domain name by placing the domain name on hold or by deleting the domain name in its entirety or providing a compelling argument to the Registry to keep the name in the zone. If the registrar has not taken the requested action after the 12-hour period (i.e., is unresponsive to the request or refuses to take action), the Registry will place the domain on "ServerHold". Although this action removes the domain name from the TLD zone, the domain name record still appears in the TLD WHOIS database so that the name and entities can be investigated by law enforcement should they desire to get involved.

28.2.2.1 Coordination with Law Enforcement

With the assistance of Neustar as its back-end registry services provider, .WEB can meet its obligations under Section 2.8 of the Registry Agreement where required to take reasonable steps to investigate and respond to reports from law enforcement and governmental and quasi-governmental agencies of illegal conduct in connection with the use of its TLD. The Registry will respond to legitimate law enforcement inquiries within one business day from receiving the request. Such response shall include, at a minimum, an acknowledgement of receipt of the request, Questions or comments concerning the request, and an outline of the next steps to be taken by .WEB for rapid resolution of the request.

In the event such request involves any of the activities which can be validated by the Registry and involves the type of activity set forth in the Acceptable Use Policy, the sponsoring registrar is then given 12 hours to investigate the activity further and either take down the domain name by placing the domain name on hold or by deleting the domain name in its entirety or providing a compelling argument to the registry to keep the name in the zone. If the registrar has not taken the requested action after the 12-hour period (i.e., is unresponsive to the request or refuses to take action), the Registry will place the domain on "serverHold".

28.2.3 Monitoring for Malicious Activity

.WEB's partner, Neustar is at the forefront of the prevention of abusive DNS practices. Neustar is one of only a few registry operators to have actually developed and implemented an active "domain takedown" policy in which the registry itself takes down abusive domain names.

Neustar's approach is quite different from a number of other gTLD Registries and the results have been unmatched. Neustar targets verified abusive domain names and removes them within 12 hours regardless of whether or not there is cooperation from the domain name registrar. This is because

Neustar has determined that the interest in removing such threats from the consumer outweighs any potential damage to the registrar/registrant relationship.

Neustar's active prevention policies stem from the notion that registrants in the TLD have a reasonable expectation that they are in control of the data associated with their domains, especially its presence in the DNS zone. Because domain names are sometimes used as a mechanism to enable various illegitimate activities on the Internet, including malware, bot command and control, pharming, and phishing, the best preventative measure to thwart these attacks is often to remove the names completely from the DNS before they can impart harm, not only to the domain name registrant, but also to millions of unsuspecting Internet users.

28.2.3.1 Rapid Takedown Process

Since implementing the program, Neustar has developed two basic variations of the process. The more common process variation is a light-weight process that is triggered by "typical" notices. The less-common variation is the full process that is triggered by unusual notices. These notices tend to involve the need for accelerated action by the registry in the event that a complaint is received by Neustar which alleges that a domain name is being used to threaten the stability and security of the TLD, or is part of a real-time investigation by law enforcement or security researchers. These processes are described below:

28.2.3.2 Lightweight Process

In addition to having an active Information Security group that, on its own initiatives, seeks out abusive practices in the TLD, Neustar is an active member in a number of security organizations that have the expertise and experience in receiving and investigating reports of abusive DNS practices, including but not limited to, the Anti-Phishing Working Group, Castle Cops, NSP-SEC, the Registration Infrastructure Safety Group and others. Each of these sources are well-known security organizations that have developed a reputation for the prevention of harmful agents affecting the Internet. Aside from these organizations, Neustar also actively participates in privately run security associations whose basis of trust and anonymity makes it much easier to obtain information regarding abusive DNS activity.

Once a complaint is received from a trusted source, third-party, or detected by Neustar's internal security group, information about the abusive practice is forwarded to an internal mail distribution list that includes members of the operations, legal, support, engineering, and security teams for immediate response ("CERT Team"). Although the impacted URL is included in the notification e-mail, the CERT Team is trained not to investigate the URLs themselves since often times the URLs in Question have scripts, bugs, etc. that can compromise the individual's own computer and the network safety. Rather, the investigation is done by a few members of the CERT team that are able to access the URLs in a laboratory environment so as to not compromise the Neustar network. The lab environment is designed specifically for these types of tests and is scrubbed on a regular basis to ensure that none of Neustar's internal or external network elements are harmed in any fashion.

Once the complaint has been reviewed and the alleged abusive domain name activity is verified to the best of the ability of the CERT Team, the sponsoring registrar is given 12 hours to investigate the activity and either take down the domain name by placing the domain name on hold or by deleting the domain name in its entirety or providing a compelling argument to the registry to keep the name in the zone.

If the registrar has not taken the requested action after the 12-hNeustar's period (i.e., is unresponsive to the request or refuses to take action), Neustar places the domain on "ServerHold". Although this action removes the domain name from the TLD zone, the domain name record still appears in the TLD WHOIS database so that the name and entities can be investigated by law enforcement should they desire to get involved.

28.2.3.3 Full Process

In the event that Neustar receives a complaint which claims that a domain name is being used to threaten the stability and security of the TLD or is a part of a real-time investigation by law enforcement or security researchers, Neustar follows a slightly different course of action.

Upon initiation of this process, members of the CERT Team are paged and a teleconference bridge is immediately opened up for the CERT Team to assess whether the activity warrants immediate action. If the CERT Team determines the incident is not an immediate threat to the security and the stability of

critical internet infrastructure, they provide documentation to the Neustar Network Operations Center to clearly capture the rationale for the decision and either refers the incident to the Lightweight process set forth above. If no abusive practice is discovered, the incident is closed.

However, if the CERT TEAM determines there is a reasonable likelihood that the incident warrants immediate action as described above, a determination is made to immediately remove the domain from the zone. As such, Customer Support contacts the responsible registrar immediately to communicate that there is a domain involved in a security and stability issue. The registrar is provided only the domain name in Question and the broadly stated type of incident. Given the sensitivity of the associated security concerns, it may be important that the registrar not be given explicit or descriptive information in regards to data that has been collected (evidence) or the source of the complaint. The need for security is to fully protect the chain of custody for evidence and the source of the data that originated the complaint.

28.2.3.3.1 Coordination with Law Enforcement & Industry Groups

One of the reasons for which Neustar was selected to serve as the back-end registry services provider by .WEB is Neustar's extensive experience with its industry-leading abusive domain name and malicious monitoring program and its close working relationship with a number of law enforcement agencies, both in the United States and internationally. For example, in the United States, Neustar is in constant communication with the Federal Bureau of Investigation, US CERT, Homeland Security, the Food and Drug Administration, and the National Center for Missing and Exploited Children.

Neustar is also a participant in a number of industry groups aimed at sharing information amongst key industry players about the abusive registration and use of domain names. These groups include the Anti-Phishing Working Group and the Registration Infrastructure Safety Group (where Neustar served for several years as on the Board of Directors). Through these organizations and others, Neustar shares information with other registries, registrars, ccTLDs, law enforcement, security professionals, etc. not only on abusive domain name registrations within its own TLDs, but also provides information uncovered with respect to domain names in other registries' TLDs. Neustar has often found that rarely are abuses found only in the TLDs for which it manages, but also within other TLDs, such as .com and .info. Neustar routinely provides this information to the other registries so that it can take the appropriate action.

With the assistance of Neustar as its back-end registry services provider, .WEB can meet its obligations under Section 2.8 of the Registry Agreement where required to take reasonable steps to investigate and respond to reports from law enforcement and governmental and quasi-governmental agencies of illegal conduct in connection with the use of its TLD. .WEB and/or Neustar will respond to legitimate law enforcement inquiries within one business day from receiving the request. Such response shall include, at a minimum, an acknowledgement of receipt of the request, Questions or comments concerning the request, and an outline of the next steps to be taken by .WEB and/or Neustar for rapid resolution of the request.

In the event such request involves any of the activities which can be validated by .WEB and/or Neustar and involves the type of activity set forth in the Acceptable Use Policy, the sponsoring registrar is then given 12 hours to investigate the activity further and either take down the domain name by placing the domain name on hold or by deleting the domain name in its entirety or providing a compelling argument to the registry to keep the name in the zone. If the registrar has not taken the requested action after the 12-hour period (i.e., is unresponsive to the request or refuses to take action), Neustar places the domain on "serverHold".

28.3 Measures for Removal of Orphan Glue Records

As the Security and Stability Advisory Committee of ICANN (SSAC) rightly acknowledges, although orphaned glue records may be used for abusive or malicious purposes, the "dominant use of orphaned glue supports the correct and ordinary operation of the DNS." See <http://www.icann.org/en/committees/security/sac048.pdf>.

While orphan glue often support correct and ordinary operation of the DNS, we understand that such glue records can be used maliciously to point to name servers that host domains used in illegal phishing, bot-nets, malware, and other abusive behaviors. Problems occur when the parent domain of the glue record is deleted but its children glue records still remain in DNS. Therefore, when the Registry has written evidence of actual abuse of orphaned glue, the Registry will take action to remove those records from the zone to mitigate such malicious conduct.

Neustar run a daily audit of entries in its DNS systems and compares those with its provisioning system. This serves as an umbrella protection to make sure that items in the DNS zone are valid. Any DNS record that shows up in the DNS zone but not in the provisioning system will be flagged for investigation and removed if necessary. This daily DNS audit serves to not only prevent orphaned hosts but also other records that should not be in the zone.

In addition, if either .WEB or Neustar become aware of actual abuse on orphaned glue after receiving written notification by a third party through its Abuse Contact or through its customer support, such glue records will be removed from the zone.

28.4 Measures to Promote WHOIS Accuracy

.WEB acknowledges that ICANN has developed a number of mechanisms over the past decade that are intended to address the issue of inaccurate WHOIS information. Such measures alone have not proven to be sufficient and therefore .WEB will put forth additional efforts to address this by undertaking the following measures:

- 1) A mechanism a procedures to address domain names with inaccurate or incomplete WHOIS data
- 2) Policies and Procedures to ensure compliance including include audits

- Mechanism to address with inaccurate WHOIS data: a procedure whereby third parties can submit complaints directly to the Applicant (as opposed to ICANN or the sponsoring Registrar) about inaccurate or incomplete WHOIS data. Such information shall be forwarded to the sponsoring Registrar, who shall be required to address those complaints with their registrants. Thirty days after forwarding the complaint to the registrar, .WEB will examine the current WHOIS data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the Registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, Applicant reserves the right to suspend the applicable domain name(s) until such time as the Registrant is able to cure the deficiencies.

- Policies and Procedures to ensure compliance: .WEB shall on its own initiative, no less than twice per year, perform a manual review of a random sampling of .WEB domain names to test the accuracy of the WHOIS information. Although this will not include verifying the actual information in the WHOIS record, .WEB will be examining the WHOIS data for prima facie evidence of inaccuracies. In the event that such evidence exists, it shall be forwarded to the sponsoring Registrar, who shall be required to address those complaints with their registrants. Thirty days after forwarding the complaint to the registrar, the Applicant will examine the current WHOIS data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the Registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, .WEB reserves the right to suspend the applicable domain name(s) until such time as the Registrant is able to cure the deficiencies.

28.5 Resourcing Plans

Responsibility for abuse mitigation rests with a variety of functional groups. The Abuse Monitoring team is primarily responsible for providing analysis and conducting investigations of reports of abuse. The customer service team also plays an important role in assisting with the investigations, responded to customers, and notifying registrars of abusive domains. Finally, the Policy/Legal team is responsible for developing the relevant policies and procedures.

The necessary resources will be pulled from the pool of available resources described in detail in the response to Question 31. The following resources are available from those teams:

- Customer Support - 12 employees
- Policy/Legal - 2 employees

The resources are more than adequate to support the abuse mitigation procedures of the .WEB registry.

29. Rights Protection Mechanisms

29.1 Rights Protection Mechanisms

NU DOTCO LLC is firmly committed to the protection of Intellectual Property rights and to implementing the mandatory rights protection mechanisms contained in the Applicant Guidebook and detailed in Specification 7 of the Registry Agreement. .WEB recognizes that although the New gTLD program includes significant protections beyond those that were mandatory for a number of the current TLDs, a key motivator for .WEB's selection of Neustar as its registry services provider is Neustar's experience in successfully launching a number of TLDs with diverse rights protection mechanisms, including many the ones required in the Applicant Guidebook. More specifically, .WEB will implement the following rights protection mechanisms in accordance with the Applicant Guidebook as further described below:

- Trademark Clearinghouse: a one-stop shop so that trademark holders can protect their trademarks with a single registration.
- Sunrise and Trademark Claims processes for the TLD.
- Implementation of the Uniform Dispute Resolution Policy to address domain names that have been registered and used in bad faith in the TLD.
- Uniform Rapid Suspension: A quicker, more efficient and cheaper alternative to the Uniform Dispute Resolution Policy to deal with clear cut cases of cybersquatting.
- Implementation of a Thick WHOIS making it easier for rights holders to identify and locate infringing parties

29.1.1 Trademark Clearinghouse Including Sunrise and Trademark Claims

The first mandatory rights protection mechanism ("RPM") required to be implemented by each new gTLD Registry is support for, and interaction with, the trademark clearinghouse. The trademark clearinghouse is intended to serve as a central repository for information to be authenticated, stored and disseminated pertaining to the rights of trademark holders. The data maintained in the clearinghouse will support and facilitate other RPMs, including the mandatory Sunrise Period and Trademark Claims service. Although many of the details of how the trademark clearinghouse will interact with each registry operator and registrars, .WEB is actively monitoring the developments of the Implementation Assistance Group ("IAG") designed to assist ICANN staff in firming up the rules and procedures associated with the policies and technical requirements for the trademark clearinghouse. In addition, .WEB's back-end registry services provider is actively participating in the IAG to ensure that the protections afforded by the clearinghouse and associated RPMs are feasible and implementable.

Utilizing the trademark clearinghouse, all operators of new gTLDs must offer: (i) a sunrise registration service for at least 30 days during the pre-launch phase giving eligible trademark owners an early opportunity to register second-level domains in new gTLDs; and (ii) a trademark claims service for at least the first 60 days that second-level registrations are open. The trademark claim service is intended to provide clear notice" to a potential registrant of the rights of a trademark owner whose trademark is registered in the clearinghouse.

.WEB's registry service provider, Neustar, has already implemented Sunrise and/or Trademark Claims programs for numerous TLDs including .biz, .us, .travel, .tel and .co and will implement the both of these services on behalf of .WEB.

29.1.1.1 Neustar's Experience in Implementing Sunrise and Trademark Claims Processes

In early 2002, Neustar became the first registry operator to launch a successful authenticated Sunrise process. This process permitted qualified trademark owners to pre-register their trademarks as domain names in the .us TLD space prior to the opening of the space to the general public. Unlike any other "Sunrise" plans implemented (or proposed before that time), Neustar validated the authenticity of Trademark applications and registrations with the United States Patent and Trademark Office (USPTO).

Subsequently, as the back-end registry operator for the .tel gTLD and the .co ccTLD, Neustar launched validated Sunrise programs employing processes. These programs are very similar to those that are to be employed by the Trademark Clearinghouse for new gTLDs.

Below is a high level overview of the implementation of the .co Sunrise period that demonstrates Neustar's experience and ability to provide a Sunrise service and an overview of Neustar's experience in implementing a Trademark Claims program to trademark owners for the launch of .BIZ. Neustar's experience in each of these rights protection mechanisms will enable it to seamlessly provide these

services on behalf of .WEB as required by ICANN.

a) Sunrise and .co

The Sunrise process for .co was divided into two sub-phases:

-Local Sunrise giving holders of eligible trademarks that have obtained registered status from the Colombian trademark office the opportunity apply for the .CO domain names corresponding with their marks

-Global Sunrise program giving holders of eligible registered trademarks of national effect, that have obtained a registered status in any country of the world the opportunity apply for the .CO domain names corresponding with their marks for a period of time before registration is open to the public at large.

Like the new gTLD process set forth in the Applicant Guidebook, trademark owners had to have their rights validated by a Clearinghouse provider prior to the registration being accepted by the Registry. The Clearinghouse used a defined process for checking the eligibility of the legal rights claimed as the basis of each Sunrise application using official national trademark databases and submitted documentary evidence.

Applicants and/or their designated agents had the option of interacting directly with the Clearinghouse to ensure their applications were accurate and complete prior to submitting them to the Registry pursuant to an optional "Pre-validation Process". Whether or not an applicant was "pre-validated", the applicant had to submit its corresponding domain name application through an accredited registrar. When the Applicant was pre-validated through the Clearinghouse, each was given an associated approval number that it had to supply the registry. If they were not pre-validated, applicants were required to submit the required trademark information through their registrar to the Registry.

As the registry level, Neustar, subsequently either delivered the:

-Approval number and domain name registration information to the Clearinghouse
-When there was no approval number, trademark information and the domain name registration information was provided to the Clearinghouse through EPP (as is currently required under the Applicant Guidebook).

Information was then used by the Clearinghouse as either further validation of those pre-validated applications, or initial validation of those that did not go through pre-validation. If the applicant was validated and their trademark matched the domain name applied-for, the Clearinghouse communicated that fact to the Registry via EPP.

When there was only one validated sunrise application, the application proceeded to registration when the .co launched. If there were multiple validated applications (recognizing that there could be multiple trademark owners sharing the same trademark), those were included in the .co Sunrise auction process. Neustar tracked all of the information it received and the status of each application and posted that status on a secure Website to enable trademark owners to view the status of its Sunrise application.

Although the exact process for the Sunrise program and its interaction between the trademark owner, Registry, Registrar, and IP Clearinghouse is not completely defined in the Applicant Guidebook and is dependent on the current RFI issued by ICANN in its selection of a Trademark Clearinghouse provider, Neustar's expertise in launching multiple Sunrise processes and its established software will implement a smooth and compliant Sunrise process for the new gTLDs.

b) Trademark Claims Service Experience

With Neustar's biz TLD launched in 2001, Neustar became the first TLD with a Trademark Claims service. Neustar developed the Trademark Claim Service by enabling companies to stake claims to domain names prior to the commencement of live .biz domain registrations.

During the Trademark Claim process, Neustar received over 80,000 Trademark Claims from entities around the world. Recognizing that multiple intellectual property owners could have trademark rights in a particular mark, multiple Trademark Claims for the same string were accepted. All applications were logged into a Trademark Claims database managed by Neustar. The Trademark Claimant was required to provide various information about their trademark rights, including the:

- Particular trademark or service mark relied on for the trademark Claim
- Date a trademark application on the mark was filed, if any, on the string of the domain name
- Country where the mark was filed, if applicable
- Registration date, if applicable
- Class or classes of goods and services for which the trademark or service mark was registered
- Name of a contact person with whom to discuss the claimed trademark rights.

Once all Trademark Claims and domain name applications were collected, Neustar then compared the claims contained within the Trademark Claims database with its database of collected domain name applications (DNAs). In the event of a match between a Trademark Claim and a domain name application, an e-mail message was sent to the domain name applicant notifying the applicant of the existing Trademark Claim. The e-mail also stressed that if the applicant chose to continue the application process and was ultimately selected as the registrant, the applicant would be subject to Neustar's dispute proceedings if challenged by the Trademark Claimant for that particular domain name.

The domain name applicant had the option to proceed with the application or cancel the application. Proceeding on an application meant that the applicant wanted to go forward and have the application proceed to registration despite having been notified of an existing Trademark Claim. By choosing to "cancel," the applicant made a decision in light of an existing Trademark Claim notification to not proceed.

If the applicant did not respond to the e-mail notification from Neustar, or elected to cancel the application, the application was not processed. This resulted in making the applicant ineligible to register the actual domain name. If the applicant affirmatively elected to continue the application process after being notified of the claimant's (or claimants') alleged trademark rights to the desired domain name, Neustar processed the application.

This process is very similar to the one ultimately adopted by ICANN and incorporated in the latest version of the Applicant Guidebook. Although the collection of Trademark Claims for new gTLDs will be by the Trademark Clearinghouse, many of the aspects of Neustar's Trademark Claims process in 2001 are similar to those in the Applicant Guidebook. This makes Neustar uniquely qualified to implement the new gTLD Trademark Claims process.

29.1.2 Uniform Dispute Resolution Policy (UDRP) and Uniform Rapid Suspension (URS)

29.1.2.1 UDRP

Prior to joining Neustar, Mr. Neuman was a key contributor to the development of the Uniform Dispute Resolution Policy ("UDRP") in 1998. This became the first "Consensus Policy" of ICANN and has been required to be implemented by all domain name registries since that time. The UDRP is intended as an alternative dispute resolution process to transfer domain names from those that have registered and used domain names in bad faith. Although there is not much of an active role that the domain name registry plays in the implementation of the UDRP, Neustar has closely monitored UDRP decisions that have involved the TLDs for which it supports and ensures that the decisions are implemented by the registrars supporting its TLDs. When alerted by trademark owners of failures to implement UDRP decisions by its registrars, Neustar either proactively implements the decisions itself or reminds the offending registrar of its obligations to implement the decision.

29.1.2.2 URS

In response to complaints by trademark owners that the UDRP was too cost prohibitive and slow, and the fact that more than 70 percent of UDRP cases were "clear cut" cases of cybersquatting, ICANN adopted the IRT's recommendation that all new gTLD registries be required, pursuant to their contracts with ICANN, to take part in a Uniform Rapid Suspension System ("URS"). The purpose of the URS is to provide a more cost effective and timely mechanism for brand owners than the UDRP to protect their trademarks and to promote consumer protection on the Internet.

The URS is not meant to address Questionable cases of alleged infringement (e.g., use of terms in a generic sense) or for anti-competitive purposes or denial of free speech, but rather for those cases in which there is no genuine contestable issue as to the infringement and abuse that is taking place.

Unlike the UDRP which requires little involvement of gTLD registries, the URS envisages much more of an active role at the registry-level. For example, rather than requiring the registrar to lock down a domain name subject to a UDRP dispute, it is the registry under the URS that must lock the domain

within 24 hours of receipt of the complaint from the URS Provider to restrict all changes to the registration data, including transfer and deletion of the domain names.

In addition, in the event of a determination in favor of the complainant, the registry is required to suspend the domain name. This suspension remains for the balance of the registration period and would not resolve the original website. Rather, the nameservers would be redirected to an informational web page provided by the URS Provider about the URS.

Additionally, the WHOIS reflects that the domain name will not be able to be transferred, deleted, or modified for the life of the registration. Finally, there is an option for a successful complainant to extend the registration period for one additional year at commercial rates.

.WEB is fully aware of each of these requirements and will have the capability to implement these requirements for new gTLDs. In fact, during the IRT's development of the URS, Neustar began examining the implications of the URS on its registry operations and provided the IRT with feedback on whether the recommendations from the IRT would be feasible for registries to implement.

Although there have been a few changes to the URS since the IRT recommendations, Neustar continued to participate in the development of the URS by providing comments to ICANN, many of which were adopted. As a result, Neustar is committed to supporting the URS for all of the registries that it provides back-end registry services.

29.1.3 Implementation of Thick WHOIS

The .WEB registry will include a thick WHOIS database as required in Specification 4 of the Registry agreement. A thick WHOIS provides numerous advantages including a centralized location of registrant information, the ability to more easily manage and control the accuracy of data, and a consistent user experience.

29.1.4 Policies Handling Complaints Regarding Abuse

In addition to the Rights Protection mechanisms addressed above, NU DOTCO LLC will implement a number of measures to handle complaints regarding the abusive registration of domain names in its TLD as described in .WEB's response to Question 28.

29.1.4.1 Registry Acceptable Use Policy

One of the key policies each new gTLD registry is the need to have is an Acceptable Use Policy that clearly delineates the types of activities that constitute "abuse" and the repercussions associated with an abusive domain name registration. The policy must be incorporated into the applicable Registry-Registrar Agreement and reserve the right for the registry to take the appropriate actions based on the type of abuse. This may include locking down the domain name preventing any changes to the contact and nameserver information associated with the domain name, placing the domain name "on hold" rendering the domain name non-resolvable, transferring to the domain name to another registrar, and/or in cases in which the domain name is associated with an existing law enforcement investigation, substituting name servers to collect information about the DNS queries to assist the investigation. .WEB's Acceptable Use Policy, set forth in our response to Question 28, will include prohibitions on phishing, pharming, dissemination of malware, fast flux hosting, hacking, and child pornography. In addition, the policy will include the right of the registry to take action necessary to deny, cancel, suspend, lock, or transfer any registration in violation of the policy.

29.1.4.2 Monitoring for Malicious Activity

.WEB is committed to ensuring that those domain names associated with abuse or malicious conduct in violation of the Acceptable Use Policy are dealt with in a timely and decisive manner. These include taking action against those domain names that are being used to threaten the stability and security of the TLD, or is part of a real-time investigation by law enforcement.

Once a complaint is received from a trusted source, third-party, or detected by the Registry, the Registry will use commercially reasonable efforts to verify the information in the complaint. If that information can be verified to the best of the ability of the Registry, the sponsoring registrar will be notified and be given 12 hours to investigate the activity and either take down the domain name by placing the domain name on hold or by deleting the domain name in its entirety or providing a compelling argument to the Registry to keep the name in the zone. If the registrar has not taken the requested action after the 12-hour period (i.e., is unresponsive to the request or refuses to take action), the Registry will place the domain on "ServerHold". Although this action removes the domain

name from the TLD zone, the domain name record still appears in the TLD WHOIS database so that the name and entities can be investigated by law enforcement should they desire to get involved.

29.3 Resourcing Plans

The rights protection mechanisms described in the response above involve a wide range of tasks, procedures, and systems. The responsibility for each mechanism varies based on the specific requirements. In general the development of applications such as sunrise and IP claims is the responsibility of the Engineering team, with guidance from the Product Management team. Customer Support and Legal play a critical role in enforcing certain policies such as the rapid suspension process. These teams have years of experience implementing these or similar processes.

The necessary resources will be pulled from the pool of available resources described in detail in the response to Question 31. The following resources are available from those teams:

- Development/Engineering - 19 employees
- Product Management- 4 employees
- Customer Support - 12 employees

The resources are more than adequate to support the rights protection mechanisms of the .WEB registry.

30(a). Security Policy: Summary of the security policy for the proposed registry

30.(a).1 Security Policies

NU DOTCO LLC and our back-end operator, Neustar recognize the vital need to secure the systems and the integrity of the data in commercial solutions. The .WEB registry solution will leverage industry-best security practices including the consideration of physical, network, server, and application elements.

Neustar's approach to information security starts with comprehensive information security policies. These are based on the industry best practices for security including SANS (SysAdmin, Audit, Network, Security) Institute, NIST (National Institute of Standards and Technology), and CIS (Center for Internet Security). Policies are reviewed annually by Neustar's information security team.

The following is a summary of the security policies that will be used in the .WEB registry, including:

1. Summary of the security policies used in the registry operations
2. Description of independent security assessments
3. Description of security features that are appropriate for .WEB
4. List of commitments made to registrants regarding security levels

All of the security policies and levels described in this section are appropriate for the .WEB registry.

30.(a).2 Summary of Security Policies

Neustar has developed a comprehensive Information Security Program in order to create effective administrative, technical, and physical safeguards for the protection of its information assets, and to comply with Neustar's obligations under applicable law, regulations, and contracts. This Program establishes Neustar's policies for accessing, collecting, storing, using, transmitting, and protecting electronic, paper, and other records containing sensitive information.

- The policies for internal users and our clients to ensure the safe, organized and fair use of information resources.
- The rights that can be expected with that use.
- The standards that must be met to effectively comply with policy.
- The responsibilities of the owners, maintainers, and users of Neustar's information resources.
- Rules and principles used at Neustar to approach information security issues

The following policies are included in the Program:

1. Acceptable Use Policy

The Acceptable Use Policy provides the “rules of behavior” covering all Neustar Associates for using Neustar resources or accessing sensitive information.

2. Information Risk Management Policy

The Information Risk Management Policy describes the requirements for the on-going information security risk management program, including defining roles and responsibilities for conducting and evaluating risk assessments, assessments of technologies used to provide information security and monitoring procedures used to measure policy compliance.

3. Data Protection Policy

The Data Protection Policy provides the requirements for creating, storing, transmitting, disclosing, and disposing of sensitive information, including data classification and labeling requirements, the requirements for data retention. Encryption and related technologies such as digital certificates are also covered under this policy.

4. Third Party Policy

The Third Party Policy provides the requirements for handling service provider contracts, including specifically the vetting process, required contract reviews, and on-going monitoring of service providers for policy compliance.

5. Security Awareness and Training Policy

The Security Awareness and Training Policy provide the requirements for managing the on-going awareness and training program at Neustar. This includes awareness and training activities provided to all Neustar Associates.

6. Incident Response Policy

The Incident Response Policy provides the requirements for reacting to reports of potential security policy violations. This policy defines the necessary steps for identifying and reporting security incidents, remediation of problems, and conducting “lessons learned” post-mortem reviews in order to provide feedback on the effectiveness of this Program. Additionally, this policy contains the requirement for reporting data security breaches to the appropriate authorities and to the public, as required by law, contractual requirements, or regulatory bodies.

7. Physical and Environmental Controls Policy

The Physical and Environment Controls Policy provides the requirements for securely storing sensitive information and the supporting information technology equipment and infrastructure. This policy includes details on the storage of paper records as well as access to computer systems and equipment locations by authorized personnel and visitors.

8. Privacy Policy

Neustar supports the right to privacy, including the rights of individuals to control the dissemination and use of personal data that describes them, their personal choices, or life experiences. Neustar supports domestic and international laws and regulations that seek to protect the privacy rights of such individuals.

9. Identity and Access Management Policy

The Identity and Access Management Policy covers user accounts (login ID naming convention, assignment, authoritative source) as well as ID lifecycle (request, approval, creation, use, suspension, deletion, review), including provisions for system/application accounts, shared/group accounts, guest/public accounts, temporary/emergency accounts, administrative access, and remote access. This policy also includes the user password policy requirements.

10. Network Security Policy

The Network Security Policy covers aspects of Neustar network infrastructure and the technical controls in place to prevent and detect security policy violations.

11. Platform Security Policy

The Platform Security Policy covers the requirements for configuration management of servers, shared systems, applications, databases, middle-ware, and desktops and laptops owned or operated by Neustar Associates.

12. Mobile Device Security Policy

The Mobile Device Policy covers the requirements specific to mobile devices with information storage or processing capabilities. This policy includes laptop standards, as well as requirements for PDAs,

mobile phones, digital cameras and music players, and any other removable device capable of transmitting, processing or storing information.

13. Vulnerability and Threat Management Policy

The Vulnerability and Threat Management Policy provides the requirements for patch management, vulnerability scanning, penetration testing, threat management (modeling and monitoring) and the appropriate ties to the Risk Management Policy.

14. Monitoring and Audit Policy

The Monitoring and Audit Policy covers the details regarding which types of computer events to record, how to maintain the logs, and the roles and responsibilities for how to review, monitor, and respond to log information. This policy also includes the requirements for backup, archival, reporting, forensics use, and retention of audit logs.

15. Project and System Development and Maintenance Policy

The System Development and Maintenance Policy covers the minimum security requirements for all software, application, and system development performed by or on behalf of Neustar and the minimum security requirements for maintaining information systems.

30.(a).3 Independent Assessment Reports

Neustar IT Operations is subject to yearly Sarbanes-Oxley (SOX), Statement on Auditing Standards #70 (SAS70) and ISO audits. Testing of controls implemented by Neustar management in the areas of access to programs and data, change management and IT Operations are subject to testing by both internal and external SOX and SAS70 audit groups. Audit Findings are communicated to process owners, Quality Management Group and Executive Management. Actions are taken to make process adjustments where required and remediation of issues is monitored by internal audit and QM groups. External Penetration Test is conducted by a third party on a yearly basis. As authorized by Neustar, the third party performs an external Penetration Test to review potential security weaknesses of network devices and hosts and demonstrate the impact to the environment. The assessment is conducted remotely from the Internet with testing divided into four phases:

- A network survey is performed in order to gain a better knowledge of the network that was being tested
- Vulnerability scanning is initiated with all the hosts that are discovered in the previous phase
- Identification of key systems for further exploitation is conducted
- Exploitation of the identified systems is attempted.

Each phase of the audit is supported by detailed documentation of audit procedures and results. Identified vulnerabilities are classified as high, medium and low risk to facilitate management's prioritization of remediation efforts. Tactical and strategic recommendations are provided to management supported by reference to industry best practices.

30.(a).4 Augmented Security Levels and Capabilities

There are no increased security levels specific for .WEB. However, Neustar will provide the same high level of security provided across all of the registries it manages. A key to Neustar's Operational success is Neustar's highly structured operations practices. The standards and governance of these processes:

- Include annual independent review of information security practices
- Include annual external penetration tests by a third party
- Conform to the ISO 9001 standard (Part of Neustar's ISO-based Quality Management System)
- Are aligned to Information Technology Infrastructure Library (ITIL) and CoBIT best practices
- Are aligned with all aspects of ISO IEC 17799
- Are in compliance with Sarbanes-Oxley (SOX) requirements (audited annually)
- Are focused on continuous process improvement (metrics driven with product scorecards reviewed monthly).

A summary view to Neustar's security policy in alignment with ISO 17799 can be found in section 30.(a).5 below.

30.(a).5 Commitments and Security Levels

The .WEB registry commits to high security levels that are consistent with the needs of the TLD.

These commitments include:

Compliance with High Security Standards

- Security procedures and practices that are in alignment with ISO 17799
- Annual SOC 2 Audits on all critical registry systems
- Annual 3rd Party Penetration Tests
- Annual Sarbanes Oxley Audits

Highly Developed and Document Security Policies

- Compliance with all provisions described in section 30.(b) and in the attached security policy document.
- Resources necessary for providing information security
- Fully documented security policies
- Annual security training for all operations personnel

High Levels of Registry Security

- Multiple redundant data centers
- High Availability Design
- Architecture that includes multiple layers of security
- Diversified firewall and networking hardware vendors
- Multi-factor authentication for accessing registry systems
- Physical security access controls
- A 24x7 manned Network Operations Center that monitors all systems and applications
- A 24x7 manned Security Operations Center that monitors and mitigates DDoS attacks
- DDoS mitigation using traffic scrubbing technologies

3. Executive Session:	81
a. Confidential Matter	81

1. Consent Agenda:

a. Appointment of Independent Audit Firm for FY23

Whereas, the Board Audit Committee has discussed a recommendation from ICANN org to engage [Redacted – Confidential Negotiation Information] to carry out the independent audit for the fiscal year ending 30 June 2023 and has recommended that the Board authorize the Interim President and CEO, or her designee(s), to take all steps necessary to carry out the engagement.

Resolved (2023.04.30.01), the Board authorizes the Interim President and CEO, or her designee(s), to take all steps necessary to engage Moss Adams and Moss Adams member firms as the audit firm(s) for the financial statements for the fiscal year ending 30 June 2023.

Resolved (2023.04.30.02), specific items within this resolution shall remain confidential for negotiation purposes pursuant to Article 3, section 3.5(b) of the ICANN Bylaws until the Interim President and CEO, or her designee(s), determines that the confidential information may be released.

Rationale for Resolutions 2023.04.30.01 – 2023.04.30.02

The audit firm [Redacted – Confidential Negotiation Information]. Based on the report from the organization and the Audit Committee's evaluation [Redacted – Confidential Negotiation Information], the Committee has recommended that the Board authorize the Interim President and CEO, or her designee(s), to take all steps necessary to engage [Redacted – Confidential Negotiation Information] as ICANN's

independent audit firm(s) for fiscal year 2023 for any annual independent audit requirements in any jurisdiction.

This furthers ICANN's accountability to its Mission and processes, and the results of the independent auditors' work will be publicly available. Taking this decision is both consistent with ICANN's Mission and in the public interest as the engagement of an independent audit firm is in fulfillment of ICANN's obligations to undertake an audit of ICANN's financial statements and helps serve ICANN's stakeholders in a more accountable manner.

This decision will have a fiscal impact on ICANN, which is accounted for in the FY23 ICANN Operating Plan and Budget. This decision should not have any direct impact on the security, stability and resiliency of the domain name system.

This is an Organizational Administrative Function not requiring public comment.

b. Recommendation on Board Committee Appointment

Whereas, the Board Governance Committee has recommended that the Board appoint Nicolas Caballero to the Board Technical Committee (BTC) and the Chair of the BTC agrees with the recommendation.

Resolved (2023.04.30.03), the Board appoints Nicolas Caballero to the Board Technical Committee.

Rationale for Resolution 2023.04.30.03

Article 7, Section 7.2 and Article 14 of the ICANN Bylaws call for the Board to appoint, among other things, membership of each Board Committee. Nicolas “Nico” Caballero joined the Board in March 2023 as the non-voting Governmental Advisory Committee Liaison to the Board. Upon joining the Board, Nico expressed interest in serving on the Board Technical Committee (BTC). His experience as outlined in his [biography](#) shows that he will bring valuable skills to the BTC.

The appointment of the Board Committee membership is consistent with ICANN’s Mission and is in the public interest as it is important to ensure that the Board and its Committees have the properly skilled expertise to carry forth ICANN’s Mission, Commitments and Core Values. This decision will have no direct fiscal impact on the organization and no impact on the security, stability, or resiliency of the domain name system.

This is an Organizational Administrative Function that does not require public comment.

2. Main Agenda:

a. Amendments to Registrar Accreditation Agreement & Registry Agreement for RDAP

Whereas, the ICANN Board [accepted](#) the advice from SAC051 on 28 October 2011 and directed ICANN organization to produce, in consultation with the community, a roadmap for the coordination of the technical and policy discussions necessary to evaluate and adopt a replacement for the WHOIS protocol.

Whereas, the [Base gTLD Registry Agreement \(RA\)](#) and [2013 Registrar Accreditation Agreement \(RAA\)](#) both provide that, until ICANN requires a different protocol, the contracted party will operate a WHOIS service available via port 43 in accordance with RFC 3912, and a web-based Directory Service providing free public query-based access in the required format. The RA and RAA further provide that ICANN reserves the right to specify alternative formats and protocols, and upon such specification, the contracted party will implement such alternative specification as soon as reasonably practicable.

Whereas, ICANN org and members of the gTLD Registries Stakeholder Group (RySG) and the Registrar Stakeholder Group (RrSG), collectively the Contracted Party House Negotiating Team (CPH-NT), worked together to draft proposed Global Amendments to the RA and RAA to specify the operational requirements for providing Registration Data Directory Services (RDDS) via the Registration Data Access Protocol (RDAP).

Whereas, the proposed Global Amendments include reporting requirements for registries that include changes to address the advice from the ICANN Security and Stability Advisory Committee in [SAC097](#) related to inconsistent reporting of RDDS queries.

Whereas, the proposed Global Amendments include a change to the language of Specification 4, Section 3.1 of the RA that will enable ICANN org to use the existing Bulk Registration Data Access (BRDA) for research purposes.

Whereas, the proposed Global Amendments were posted for the contracted parties' approval and received Registry Operator Approval, Registrar Approval, and Brand Registry Operator Approval, as defined in each of the RA, RAA, and Specification 13 of the RA.

Whereas, the Board determined that no further revisions to the proposed Global Amendments are necessary after taking the public comments and voting results into account.

Resolved (2023.04.30.04), the Board approves the proposed Global Amendments to the Base gTLD Registry Agreement, the 2013 Registrar Accreditation Agreement, and Specification 13 to the Base gTLD Registry Agreement.

Resolved (2023.04.30.05), the Board directs the ICANN Interim President and CEO, or her designee(s), to take the actions necessary to finalize and effect the Global Amendments.

Rationale for Resolutions 2023.04.30.04 – 2023.04.30.05

Why is the Board addressing the issue now?

In 2010, the ICANN community held [discussions](#) about the need for the technical evolution of the WHOIS system, citing that the WHOIS protocol did not meet the community's needs. On 19 September 2011, the Security and Stability Advisory Committee (SSAC) issued [SAC051](#) advising the ICANN community to evaluate and adopt a replacement for the WHOIS protocol. The SSAC made the recommendation based on the shortcomings found with the WHOIS protocol such as the lack of (1) support for internationalization, (2) secure access to data, (3) differentiated access, and (4) standardized query, response, and error responses.

In 2011, the ICANN Board passed a [resolution](#) directing staff to produce, in consultation with the community, a roadmap for the

coordination of the technical and policy discussions necessary to implement the recommendations outlined in SAC051.

Subsequently, RDAP was developed by the technical community through the Internet Engineering Task Force (IETF) as described in [STD95](#). In 2017, ICANN launched the voluntary [RDAP pilot program](#) at the [request](#) of the gTLD Registries Stakeholder Group and with the support of the Registrar Stakeholder Group.

On 17 May 2018, the ICANN Board passed a [resolution](#) adopting a [Temporary Specification for gTLD Registration Data](#) requiring (1) registry operators and registrars to operate a RDAP service, (2) ICANN org and the community to define the appropriate RDAP profile(s), and (3) registry operators and registrars to implement the service no later than 135 days after being requested by ICANN. Both the 2013 RAA and the RA include an obligation to implement the new RDDS protocol within 135 days of ICANN's request once the IETF produces a standard; and for registries, the implementation of the standard must be considered commercially reasonable in the context of the overall operation of the registry.

In February 2019, pursuant to requirements in the RA, RAA, and the Temporary Specification for gTLD Registration Data, ICANN org triggered the obligations for all registries and registrars to implement RDAP by [26 August 2019](#). Subsequently in October 2019, ICANN org initiated negotiations with the RySG and RrSG to develop amendments to the [RA](#) and the [RAA](#) to specify the operating requirements for RDAP and to define the plan to sunset obligations to provide RDDS via the WHOIS protocol.

In July 2022, ICANN and the CPH-NT reached agreement on the proposed amendments and the amendments were posted for [public comment](#) from 6 September through 16 November 2022. As set out in

the Public Comment Summary [Report](#), ICANN org and the CPH-NT confirmed that the proposed amendments met the stated objective of creating clear contractual obligations for registry operators and registrars to provide RDDS via RDAP and phasing out certain obligations to provide RDDS via the WHOIS protocol.

On 4 January 2023, ICANN org notified applicable registries, applicable brand registries, and applicable registrars of their eligibility to vote on the proposed Global Amendments to the RA, Specification 13 of the RA, and RAA. The 60-day voting period opened at 17:00 UTC on 19 January 2023 and closed at 23:59 UTC on 20 March 2023. Table 1 below provides an overview of the required thresholds to be considered approved by Applicable Registry Operators, Applicable Brand Registry Operators, and Applicable Registrars, respectively. All calculations of the vote were conducted pursuant to Section 7.6(j)(ii) of the RA, Section 9 of Specification 13 to the RA, and Section 1.18.1 of the RAA.

Table 1: Global Amendment Vote Thresholds and Tabulations

	Required Threshold	Final Vote Tabulations
Applicable Registry Operator - Fee Threshold	\$25,668,185.81	\$28,559,070.20
Applicable Brand Registry Operator - Fee Threshold	\$6,639,529.04	\$6,827,060.77
Applicable Registry Operator - Majority Threshold	581	856

Applicable Brand Registry Operator - Majority Threshold	202	272
Applicable Registrar Approval - Threshold	90%	91.74%

What is the proposal being considered?

The contractual amendments negotiated between ICANN org and the CPH-NT include:

- A requirement to comply with the RDAP profile.
- Updated definitions for RDDS-related terms; this includes updating Specification 13 for .BRAND Registry Operators.
- Reporting requirements for registries that include changes to address the advice from the SSAC in [SAC097](#) related to inconsistent reporting of RDDS queries.
- Service Level Requirements for RDAP availability, round-trip time, and update time.
- The sunset of the requirements to provide RDDS via the WHOIS protocol over a period of 18 months from the amendment effective date.
- The requirement for registrars to provide RDAP for all gTLD Domains Under Management, eliminating the option for registrars supporting registries that provide complete contact information in their RDDS to relay the registration data from the registry.

- A change to the language of Specification 4, Section 3.1 of the RA that will permit ICANN org to use the existing Bulk Registration Data Access (BRDA) for research purposes. This amendment will enable ICANN to use BRDA data to conduct important research for projects such as the [Domain Abuse Activity Reporting System \(DAAR\)](#). DAAR is a system for studying and reporting on domain name registration and security threats. The overarching purpose of DAAR is to develop a robust, reliable, and reproducible methodology for [analyzing security threat activity](#), which the ICANN community may use to make informed policy decisions.
- Updates to Uniform Resource Locator (URL) web addresses in the RA and miscellaneous changes (e.g., URLs updated to “https” from “http”) to address outdated links.

Which stakeholders or others were consulted?

ICANN org conducted a Public Comment proceeding on the proposed Global Amendments from 06 September 2022 through 16 November 2022. The Global Amendments received Registry Operator Approval, Brand Registry Operator Approval, and Registrar Approval in accordance with Section 7.6(j)(ii) of the RA, Section 9 of Specification 13 to the RA, and Section 1.18.1 of the RAA.

What concerns or issues were raised by the community?

ICANN org received five (5) comments from five (5) organizations. Comments noted in the Public Comment Summary [Report](#) provided general support for the proposed amendments with three (3) organizations offering feedback for ICANN org to consider before additional steps were taken. Two organizations, the SSAC and the

Business Constituency, raised the concern that the sunseting of web-based WHOIS may have a negative impact for end users as the deployment of RDAP lookup services may vary by registry and the loss of human-readable output to queries via web-based WHOIS may be lost in the transition.

However, tools such as <https://lookup.icann.org> from ICANN org provides a domain name registration data lookup tool, freely available to the general public. This tool uses the RDAP protocol to perform domain registration data queries and provides results in a human-friendly output and similar tools are also readily available. The advantages of the RDAP protocol and the provisions contained in the proposed Global Amendment, such as adherence to certain output requirements (i.e., the RDAP Profile), allow for tools such as these mentioned to exist.

Following a review of the public comments by ICANN org and the CPH-NT, the comments confirmed that the proposed amendments met the stated objective of creating clear contractual obligations for registry operators and registrars to provide RDDS via RDAP and phasing out certain obligations to provide RDDS via the WHOIS protocol. ICANN org and the CPH NT also determined that based on the comment from the SSAC, a modification to the proposed RA Specification 3 was appropriate and was made before the amendments were posted for the contracted parties' approval.

What significant materials did the Board review?

As part of its deliberations, the Board reviewed various materials, including, but not limited to, the following materials and documents:

- [Base gTLD Registry Agreement \(RA\)](#)

- [Proposed Global Amendment to the Base gTLD Registry Agreement](#)
- [Proposed REDLINE of the Base gTLD Registry Agreement](#)
- [Proposed CLEAN Base gTLD Registry Agreement](#)
- [2013 Registrar Accreditation Agreement \(RAA\)](#)
- [Proposed Global Amendment to the 2013 Registrar Accreditation Agreement](#)
- [Proposed REDLINE of the 2013 Registrar Accreditation Agreement](#)
- [Proposed CLEAN 2013 Registrar Accreditation Agreement](#)
- [Specification 13 to the Base gTLD Registry Agreement \(Spec 13\)](#)
- [Proposed Global Amendment to Specification 13 of the Base gTLD Registry Agreement](#)
- [Proposed REDLINE of Specification 13 of the Base New gTLD Registry Agreement](#)
- [Proposed CLEAN Specification 13 of the Base gTLD Registry Agreement](#)
- [Public Comment Summary Report](#)

What factors has the Board found to be significant?

The Board carefully considered the public comments received for the proposed Global Amendments, along with the summary and analysis of those comments. The Board also considered the terms agreed upon by the CPH-NT as part of the negotiations with ICANN org. The Board appreciates the general support from the ICANN community for the new contractual obligations for RDAP negotiated between ICANN and the CPH-NT and for the steps taken to enable the use of BRDA for research purposes, e.g., to combat DNS abuse.

The Board also acknowledges the concern expressed by some community members regarding the sunset of the WHOIS protocol and that the proposed RAA amendment removes the “interactive web page” currently offered by registrars. However, the Board notes that users will have suitable, if not improved, tools to conduct queries for domain name registration data based on the current implementation of RDAP by all registries and registrars, the lookup tool from ICANN and other similar offerings, and furthered by the requirements set forth in the proposed Global Amendments. This is because Domain Name Registration Data is decentralized, meaning it is held at each of the relevant ICANN Accredited registrars and gTLD registry operators. After the transition to RDAP, the individual, interactive web-pages offered by each registrar and registry for WHOIS queries are no longer necessary because the RDAP protocol allows for user-friendly lookup queries from a centralized client such as the ICANN lookup tool (<https://lookup.icann.org>). Thus, finding sources to look up registration data should not be a challenge as searching for “domain registration lookup” in most search engines today will offer free tools, frequently with the ICANN org tool as the first result. Guiding users to centralized tools where the only required knowledge is the domain name they seek registration date for (as opposed to the user needing to know which registrar was used to register the name, as is the case with the WHOIS protocol) is a better solution than explaining the

number of steps required to find the correct sponsoring registrar and its interactive web page for querying domain name registration data.

The Board further recognizes the input from the SSAC regarding SAC097 and that the originally proposed language in Specification 13 of the amendment to the RA may still report per-TLD statistics inaccurately for TLDs under shared registry systems. While ICANN and the CPH-NT were satisfied that the originally proposed language was a significant improvement over the existing language of the RA, additional language has been added to the RA amendment to further clarify (see below in blue). Once implemented this will provide additional accuracy for reporting for TLDs in this scenario.

For gTLDs that are part of a single-instance Shared Registry System: (1) the fields whois43-queries, web-whois-queries, searchable-whois-queries and rdap-queries in the Registry Functions Activity Report should match the sum of queries reported for the gTLDs in the single-instance Shared Registry System; (2) in case of queries related to the fields in (1) above for which the Registry Operator cannot determine the TLD to count the query to (e.g., a registrar lookup query for a registrar operating in more than one TLD sharing the same RDAP base URL), registries have the flexibility to choose how to allocate those queries across the gTLDs utilizing the single-instance Shared Registry System; and (3) the Registry Functions Activity Report may include the total contact or host transactions for all the gTLDs in the system.

The Board is confident the contractual language added by ICANN org and the CPH-NT following the Public Comment period adequately clarifies what is required and, once implemented, will provide additional accuracy for reporting for TLDs under share registry systems.

Are there fiscal impacts or ramifications on ICANN org (e.g., strategic plan, operating plan, and budget), the community, and/or the public?

There is no significant fiscal impact expected from the approved amendments to the RA, Specification 13, or the RAA. In February 2019, pursuant to requirements in the RA, RAA, and the Temporary Specification for gTLD Registration Data, ICANN org triggered the obligations for all registries and registrars to implement RDAP by [26 August 2019](#) and no additional cost considerations or impacts to registries and registrars should be incurred.

Are there any security, stability or resiliency issues relating to the DNS?

The approved amendments to the RA, Specification 13, and RAA are not expected to create any security, stability, or resiliency issues related to the DNS.

b. ICANN FY24-28 Operating and Financial Plan, ICANN FY24 Operating Plan and Budget

Whereas, the draft ICANN FY24-28 Operating and Financial Plan and draft ICANN FY24 Operating Plan and Budget were posted for public comment in accordance with the Bylaws on 14 December 2022.

Whereas, the public comments received were considered and revisions were applied as appropriate and feasible to the Proposed for Adoption ICANN FY24-28 Operating and Financial Plan and Proposed for Adoption ICANN FY24 Operating Plan and Budget.

Whereas, in addition to the public comment process, ICANN organization actively solicited community feedback and consultation with the ICANN Community by other means, including a public session during ICANN 76.

Whereas, the Board Finance Committee (BFC) has discussed and oversaw ICANN organization's development of the Proposed for Adoption ICANN FY24-28 Operating and Financial Plan and the Proposed for Adoption ICANN FY24 Operating Plan and Budget.

Whereas, the BFC reviewed and discussed suggested changes to the ICANN FY24-28 Operating and Financial Plan and the ICANN FY24 Operating Plan and Budget resulting from public comment and consultations, as well as those resulting from recent Board decisions, and recommended that the Board approve the Proposed for Adoption ICANN FY24-28 Operating and Financial Plan and the Proposed for Adoption ICANN FY24 Operating Plan and Budget.

Whereas, per section 3.9 of the 2013 Registrar Accreditation Agreements, the Board is to establish the Registrar Accreditation Fees and Variable Accreditation Fees, which must be established to develop the annual budget.

Whereas, the description of the Registrar fees, including the recommended Registrar Accreditation Fees Variable Accreditation Fees, for FY24 are included in the Proposed for Adoption ICANN FY24 Operating Plan and Budget.

Resolved (2023.04.30.06), the Board adopts the ICANN FY24-28 Operating and Financial Plan, which describes the activities ICANN will undertake and the resources needed to achieve the Board-adopted ICANN Strategic Plan for Fiscal Years 2021-2025.

Resolved (2023.04.30.07), the Board adopts the ICANN FY24 Operating Plan and Budget including the FY24 ICANN Caretaker Budget that would be in effect in the event the FY24 ICANN Operating Plan and Budget is not in effect at the beginning of FY24.

Rationale for Resolutions 2023.04.30.06 – 2023.04.30.07

On 14 December 2022, a draft of the ICANN FY24-28 Operating and Financial Plan and draft ICANN FY24 Operating Plan and Budget were posted for public comment. The published draft ICANN FY24-28 Operating and Financial Plan and draft ICANN FY24 Operating Plan and Budget were based on numerous discussions with members of ICANN organization and the ICANN community, including extensive consultations with ICANN Supporting Organizations, Advisory Committees, and other stakeholder groups throughout the prior several months.

Public comments received were considered, as well as recent decisions by the ICANN Board, and revisions were applied as appropriate and feasible to the Proposed for Adoption ICANN FY24-28 Operating and Financial Plan and Proposed for Adoption ICANN FY24 Operating Plan and Budget.

In addition, the following consultation activities were carried out:

- 8 September 2022 – Community webinar held at ICANN 75 Prep Week on the Planning and Finance Update
- 15 December 2022 – Community webinars were held to review the draft ICANN FY24-28 Operating and Financial Plan and draft

ICANN FY24 Operating Plan and Budget published for public comment

- 28 February 2023 – the summary of comments received through the public comment process were shared in a public session during the ICANN 76 Prep week, including with representatives of the ICANN bodies that submitted the public comments, to help ensure the comments were adequately understood and appropriate consideration was given to them.
- In addition to the public comment process, from December 2022 – February 2023 ICANN actively solicited community feedback and consulted with the ICANN community by other means, including attendance and presentations for At-Large Operations, Finance, and Budget Working Group, Generic Names Supporting Organization Standing Committee on ICANN Budget and Operations Plan, and Country Code Names Supporting Organisation Strategic and Operational Planning Standing Committee.

All comments received were considered in developing the Proposed for Adoption ICANN FY24-28 Operating and Financial Plan and the Proposed for Adoption ICANN FY24 Operating Plan and Budget. Where feasible and appropriate these inputs have been incorporated into the Proposed for Adoption ICANN FY24-28 Operating and Financial Plan and the Proposed for Adoption ICANN FY24 Operating Plan and Budget.

There were no changes to the Operating Plans, Funding or Expenses for the Proposed for Adoption ICANN FY24-28 Operating and Financial Plan and the Proposed for Adoption ICANN FY24 Operating Plan and Budget as a result of public comment. The only changes made to the

Proposed for Adoption Plans were the result of Board passing resolutions for the New gTLD Program Next Round and Registration for Data Request implementations after the Draft Plans were posted for public comment. The remainder of the changes were in narrative and presentation only.

In addition to the day-to-day operational requirements, the ICANN FY24 Operating Plan and Budget allocates amounts to various FY24 budget requests received from community leadership. The ICANN FY24 Operating Plan and Budget also discloses financial information on the 2012 Round of the New gTLD Program, relative to expenses, funding and net remaining funds. Further, because the Registrar Fees are key to the development of the Budget, the ICANN FY24 Operating Plan and Budget sets out and establishes those fees, which are consistent with recent years, and will be reviewed for approval by the Registrars.

The ICANN FY24-28 Operating and Financial Plan and the ICANN FY24 Operating Plan and Budget will have a positive impact on ICANN in that together they provide a proper framework by which ICANN will be managed and operated, which also provides the basis for the organization to be held accountable in a transparent manner.

This decision is in the public interest and within ICANN's mission, as it is fully consistent with ICANN's strategic and operational plans, and the results of which allow ICANN to satisfy its mission.

This decision will have a fiscal impact on ICANN org and the Community as is intended. This should have a positive impact on the security, stability and resiliency of the domain name system (DNS) with respect to any funding that is dedicated to those aspects of the DNS.

This is an Organizational Administrative Function that has already been subject to public comment as noted above.

c. Policy Recommendations concerning Curative Rights Protections for International Governmental Organizations (IGOs)

Whereas, on 5 June 2014, the Generic Names Supporting Organization (GNSO) Council resolved¹ to initiate a Policy Development Process (PDP) to evaluate whether ICANN's second-level dispute resolution mechanisms, the Uniform Domain Name Dispute Resolution Policy (UDRP) and the Uniform Rapid Suspension System (URS), should be amended to enable their access and use by International Governmental Organizations (IGOs) and International Non-Governmental Organizations (INGOs), or if a separate, narrowly-tailored procedure modeled on these curative rights protection measures should be developed to apply only to protected IGO and INGO identifiers.

Whereas, on 17 July 2018, the GNSO IGO-INGO Access to Curative Rights Protection Mechanisms Policy Development Process (PDP) Working Group completed its work and submitted its Final Report² to the GNSO Council.

Whereas, on 18 April 2019, the GNSO Council approved³ the first four recommendations from the PDP Working Group. With respect to Recommendation #5, the GNSO Council directed the Review of All

¹ <https://gns0.icann.org/en/council/resolutions#20140605-2>.

³ <https://gns0.icann.org/en/council/resolutions#201905>.

Rights Protection Mechanisms (RPMs) PDP Working Group to consider, as part of its Phase 2 work, whether an appropriate policy solution can be developed that is generally consistent with the four recommendations that the GNSO Council approved and in line with specific considerations laid out by the GNSO Council, including recognizing the possibility that an IGO may have jurisdictional immunity in some circumstances and preserving a registrant's right to a judicial review of a UDRP or URS panel decision.

Whereas, on 19 August 2021, in view of its decision to review the scope of Phase 2 of the RPMs PDP, the GNSO Council took the procedural step⁴ of initiating an Expedited Policy Development Process (EPDP) on Specific Curative Rights Protections for IGOs, to continue the work originally launched as a separate IGO Work Track within the RPMs PDP and with the same scope of work.⁵

Whereas, on 4 April 2022, the EPDP on Specific Curative Rights Protections for IGOs completed its work and submitted its Final Report⁶ to the GNSO Council.

Whereas, on 15 June 2022, the GNSO Council unanimously approved⁷ all five Full Consensus recommendations from the EPDP on Specific Curative Rights Protections for IGOs and transmitted its Recommendations Report⁸ to the Board on 21 July 2022.

⁴ <https://gns0.icann.org/en/council/resolutions/2020-current#20210819-2>.

⁵ <https://gns0.icann.org/en/issues/specific-crp-igo-epdp-charter-16aug21-en.pdf>.

⁸ <https://gns0.icann.org/sites/default/files/policy/2022/draft/draft-epdp-specific-curative-rights-protections-for-igos-report-11jul22-en.pdf>.

Whereas, the IGO-INGO Access to Curative Rights Protection Mechanisms PDP and the EPDP on Specific Curative Rights Protections for IGOs have followed all the necessary steps and processes required by the ICANN Bylaws, the GNSO PDP Manual and the GNSO Working Group Guidelines, including the publication of Initial Reports⁹ for Public Comments and consideration of the public comments received.

Whereas, on 11 July 2019 and 28 November 2022, respectively, the Final Reports of the IGO-INGO Access to Curative Rights Protection Mechanisms PDP and the EPDP on Specific Curative Rights Protections for IGOs were published for Public Comment¹⁰ to inform Board action on the reports, in accordance with the Bylaws.

Whereas, on 11 July 2019, the ICANN Board notified¹¹ the Governmental Advisory Committee (GAC) of the GNSO Council's approval of four of the five recommendations from the IGO-INGO Access to Curative Rights Protection Mechanisms PDP, in accordance with the Bylaws, and on 20 August 2019, the GAC advised the Board to abstain from taking a decision to allow the parties sufficient time to explore possible ways forward.¹²

Whereas, on 14 October 2019, the Board informed the GAC that the Board had formed a new Caucus Group on the topic, and it did not intend to act at the time on the four PDP recommendations until the

Caucus Group has reviewed and formulated suggestions for possible paths forward¹³.

Whereas, on 1 December 2022, the Board notified¹⁴ the GAC of the GNSO Council's approval of all five recommendations from the EPDP on Specific Curative Rights Protections for IGOs.

Whereas, on 20 March 2023, in its Cancun Communiqué,¹⁵ the GAC advised the Board, to proceed with the approval of the recommendations of the EPDP on Specific Curative Rights Protections for IGOs for implementation.

Whereas, following review of the matter by the Board's Caucus Group, the Board has considered the recommendations that the GNSO Council approved from the two policy development processes as well as the Public Comments submitted.

Resolved (2023.04.30.08) the Board thanks the members of the IGO-INGO Access to Curative Rights Protection Mechanisms PDP Working Group and the members of the EPDP team on Specific Curative Rights Protections for IGOs for their dedication and work on these longstanding policy issues.

Resolved (2023.04.30.09), the ICANN Board adopts the four recommendations that the GNSO Council approved from the IGO-INGO Access to Curative Rights Protection Mechanisms PDP and the five recommendations that the GNSO Council approved from the EPDP on Specific Curative Rights Protections for IGOs.

Resolved (2023.04.30.10), the ICANN Board directs the ICANN Interim President and CEO, or her designee(s), to proceed with the implementation of these recommendations as soon as feasible. The Board further directs the ICANN Interim President and CEO, or her designee(s), to develop and submit to the Board an implementation plan, including estimates on staffing, resources and timelines, to inform the Board as to how the implementation of these recommendations fit into ICANN org’s operational planning and prioritization of its ongoing work to implement other community-developed recommendations that the Board has adopted.

Rationale for Resolutions 2023.04.30.08 – 2023.04.30.10

Why is the Board addressing the issue?

The appropriate nature and scope of policy protections for the names and acronyms associated with International Governmental Organizations (IGOs) has been a longstanding issue in the community. In April 2014, following an initial GNSO PDP on Protection of IGO and INGO Identifiers in All gTLDs conducted between October 2012 and November 2013, the Board voted to adopt several GNSO PDP recommendations concerning top and second level protections for the full names of IGOs on a list prepared by the GAC. Those recommendations are now the subject of an ICANN Consensus Policy (effective 1 August 2018).¹⁶

The GNSO PDP had also recommended that the GNSO Council consider policy work to explore possible amendments to the UDRP

¹⁶ The full text of the Policy can be found at <https://www.icann.org/resources/pages/igo-ingo-protection-policy-2020-02-18-en>.

and URS, to enable their use by protected IGOs and INGOs. The GNSO Council initiated the IGO-INGO Access to Curative Rights Protection Mechanisms PDP to consider the issue in June 2014. In July 2019, the GNSO Council approved four of the five recommendations from the GNSO IGO-INGO Access to Curative Rights Protection Mechanisms PDP and directed that additional policy work be conducted on the subject of the fifth recommendation that it decided not to approve. This resulted in the GNSO Council's chartering of the EPDP on Specific Curative Rights Protections for IGOs in August 2021.

Throughout the various policy processes, the GAC had provided Consensus Advice to the Board on the overall topic of IGO protections, including, specifically, on the question of second-level curative rights protections in the Los Angeles (October 2014), Hyderabad (November 2016) and Johannesburg (June 2017) Communiqués. In its most recent Cancun Communiqué (March 2023), the GAC advised the Board to proceed to adopt the EPDP recommendations and noted that this advice superseded those from the previous Communiqués insofar as the EPDP recommendations propose "targeted amendments to the UDRP Rules to accommodate IGOs in addressing the abuse of IGO identifiers in the DNS".

Under Section 11.3(i)(x) of the ICANN Bylaws, the GNSO Council's Supermajority support for the four PDP recommendations and its unanimous approval of the five subsequent EPDP recommendations obligates the Board to adopt the recommendations unless, by a vote of more than two-thirds, the Board determines that the policy is not in the best interests of the ICANN community or ICANN.

What is the proposal being considered?

The four recommendations that the GNSO Council approved from the 2019 PDP included specific recommendations not to create a new and separate dispute resolution mechanism for IGOs and INGOs. For INGOs (but not IGOs), there was an additional recommendation not to amend the UDRP or URS. The remainder of the recommendations focused on the provision of Policy Guidance on the UDRP and URS by ICANN org to IGOs, registrants and the GAC, noting the procedural options available to IGOs that do not hold trademarks in their acronyms.

The five recommendations that the GNSO Council approved from the 2022 EPDP achieved Full Consensus across the EPDP team, which included participants from the GAC and several IGOs. The recommendations include the addition of a definition of “IGO Complainant” and a voluntary arbitration component to both the UDRP and URS Rules, without affecting the respondent-registrant’s ability to file judicial proceedings against an IGO at any time during a UDRP or URS proceeding. The recommendations also address the question of what the applicable law in an arbitration proceeding should be, and the EPDP team provided high-level implementation guidance regarding the selection of arbitration provider(s) and the applicable arbitration rules.

As required by Article 3, Section 6.a.iii of the ICANN Bylaws, the GNSO Council-approved recommendations from both the PDP and EPDP were posted for Public Comment to inform Board action on the final recommendations. In considering the recommendations, the Board also reviewed the Public Comments and received briefings from ICANN org as well as a briefing from the GNSO Council on the EPDP outcomes.

Which stakeholders or others were consulted?

In accordance with the requirements of the GNSO PDP Manual, the Working Group for the IGO-INGO Access to Curative Rights Protection Mechanisms PDP solicited early input from the Supporting Organizations and Advisory Committees as well as the GNSO's Stakeholder Groups and Constituencies. It also engaged an external legal expert, Professor Edward Swaine of the George Washington University Law School in the United States, to provide advice on the topic of IGO jurisdictional immunity.

Concerns expressed by several GNSO Council members representing different sectors of the community regarding the one recommendation from the IGO-INGO Access to Curative Rights Protection Mechanisms PDP that the GNSO Council did not approve meant that the scope of work for the EPDP on Specific Curative Rights Protections for IGOs was the subject of extensive deliberations within the GNSO Council. The Council also consulted with the GAC and IGO representatives in drawing up the final charter for the work.

As mandated by the GNSO's PDP Manual, the PDP Working Group and the EPDP team both published their Initial Reports for Public Comments. There were 46 comments submitted to the Initial Report from the PDP Working Group on IGO-INGO Access to Curative Rights Protection Mechanisms, 21 of which were from IGOs, with five from different ICANN community structures. The EPDP team on Specific Curative Rights for IGOs received 33 comments, including six from IGOs and six from various ICANN community groups. Both the PDP Working Group and EPDP team considered all the input received in finalizing their recommendations, in some cases amending their preliminary proposals due to the Public Comments received.

As required by the ICANN Bylaws, additional Public Comment proceedings for both Final Reports were conducted, to allow the public to comment on the proposed recommendations prior to Board action. In addition, as also required by the Bylaws, the Board notified the GAC of the recommendations that the GNSO Council had transmitted to the Board, to allow the GAC to provide timely advice on any public policy concerns that it may have with the recommendations.

What concerns or issues were raised by the community?

The community provided feedback through Public Comments on the Initial and Final Reports from both the PDP Working Group and the EPDP team. ICANN org provided the Board with a summary report of all the Public Comments received to both sets of final recommendations.

In general, the community was divided in its support for the recommendations from the IGO-INGO Access to Curative Rights Protection Mechanisms PDP, with IGOs considering that the recommendations did not go far enough to protect IGO identifiers against abuse at the second level of the domain name system, while commentators representing registrants welcomed the PDP Working Group's recommendation not to create a new and separate dispute resolution procedure for IGOs and INGOs as well as its decision not to amend the UDRP and URS. For the subsequent EPDP recommendations, which will, if implemented, result in modifications to the UDRP and URS Rules, commentators representing registrants focused on the risk that registrant rights could be adversely affected or reduced if the recommendations were implemented in a way as to restrict a registrant's ability to file judicial proceedings against an IGO or to effectively compel a registrant to agree to arbitration. Those

commentators representing the domain investor community were largely against the recommendations, while the IGO community and those ICANN community groups that submitted input were generally supportive.

What significant materials did the Board review?

The Board reviewed the following materials:

- From the IGO-INGO Access to Curative Rights Protection Mechanisms PDP:
 - Initial Report: <https://gnso.icann.org/en/issues/igo-ingo-crp-access-initial-19jan17-en.pdf>
 - Final Report: <https://gnso.icann.org/en/issues/igo-ingo-crp-access-final-17jul18-en.pdf>
 - GNSO Council resolution approving four of the five final recommendations:

What factors did the Board find to be significant?

The Board appreciates the extensive work from across the community, including the GAC and IGOs, that resulted in the two sets of GNSO policy recommendations that are the subject of this vote, as well as the input provided throughout the policy process from numerous stakeholders, including individuals and governments. The

Board notes that the community's policy work on the topic of curative rights protections for IGOs has spanned over ten years, culminating in the recent EPDP in which the GAC and IGO representatives participated, and which saw Full Consensus amongst all the members of the EPDP team on the final outcomes.

Are there positive or negative community impacts?

Adopting the final recommendations will have a positive impact on ICANN in that it will demonstrate that ICANN will have addressed complex issues and public policy concerns that have been the subject of longstanding and extensive community work. Board adoption of the recommendations will mean that IGOs that meet the criteria in the updated UDRP and URS Rules will be able to use these second-level dispute resolution mechanisms to address abusive registrations and use of domain names relating to their missions.

Are there fiscal impacts or ramifications on ICANN (strategic plan, operating plan, budget); the community; and/or the public?

Implementing the two sets of recommendations is expected to have financial and resourcing impacts on ICANN org. Modifying the UDRP and URS Rules will impact the various dispute resolution service providers as well as ICANN-accredited gTLD registrars who will have to implement the new requirements and update their processes. To ensure successful implementation, it will be necessary to seek the cooperation and guidance of ICANN's current dispute resolution service providers.

In addition, as implementing the earlier PDP recommendations will require drafting of Policy Guidance to numerous parties and implementing the subsequent EPDP recommendations will require

drafting of new provisions and the selection of appropriate arbitration rules and providers, it may be necessary to engage the services of external vendors and legal experts. Using third-party services will likely facilitate more efficient and timelier implementation of the relevant recommendations, but will result in increased costs to ICANN org.

Are there any security, stability or resiliency issues relating to the DNS?

None.

Is this decision in the public interest and within ICANN's mission?

This action is within ICANN's Mission and mandate and in the public interest as set forth in the ICANN Bylaws. The multistakeholder policy development process of bottom-up, consensus policies and guidelines helps advance the stable and secure operation of the Internet's unique identifier systems.

Is this either a defined policy process within ICANN's Supporting Organizations or ICANN's Organizational Administrative Function decision requiring public comment or not requiring public comment?

As required by the ICANN Bylaws and the GNSO's policy procedures, the recommendations were published for Public Comment as discussed above.

d. Further Consideration of the Issues Regarding the .GCC Application

Whereas, GCCIX, W.L.L. (the applicant for .GCC) initiated an Independent Review Process (.GCC IRP) challenging the ICANN Board's acceptance of Governmental Advisory Committee (GAC) consensus advice that the .GCC application should not proceed (GAC Advice).

Whereas, in light of certain findings in prior IRP final declarations, the Board [resolved to](#) "authoriz[e] the President and CEO, or his designee(s), to seek a stay of the .GCC IRP and open an informal dialogue with the GAC regarding the rationale for the GAC consensus advice on the .GCC application."

Whereas, ICANN organization sought but was not granted a stay of the .GCC IRP; and ICANN org [asked](#) the GAC Chair to open the "informal dialogue."

Whereas, the GAC Chair [responded](#) to ICANN org, indicating that the GAC had reviewed "GAC discussions from 2013" and that the rationale for the GAC Advice was as follows (and as expressed in the [GAC Early Warning](#)): (i) "The applied-for string (GCC) is an exact match of the known acronym for an Intergovernmental Organization (IGO), the Gulf Cooperation Council and as such, warrants special protection to its name and acronym."; and (ii) "The application clearly targeted the GCC community without any support from the GCC, its six members or its community."

Whereas, following a recommendation from the Board Accountability Mechanisms Committee (BAMC) in May 2022, the Board, in a [resolution](#): (a) "ask[ed] the BAMC to review, consider, and evaluate the underlying basis for the GAC consensus advice that the .GCC application should not proceed, the Board's acceptance of that

advice, and relevant related materials; and (b) ask[ed] the BAMC to provide the Board with recommendations regarding next steps.”

Whereas, in furtherance of the Board’s resolution, the BAMC reviewed and considered the GAC Advice, the .GCC application, and relevant related materials as set forth in the Rationale and the Reference Materials, and carefully considered and discussed what is in the public interest.

Whereas, the BAMC has recommended that the analysis of the GAC Advice and other issues relating to the .GCC application be conducted now, rather than waiting for the completion of the .GCC IRP, in light of certain findings in prior IRP declarations and for the sake of efficiency.

Whereas, the BAMC has further recommended that the Board reaffirm its acceptance of the GAC Advice and its decision to not proceed with the .GCC application based on the second issue identified in the GAC’s rationale for the GAC Advice, based on information contained in other materials relevant to the .GCC application as set forth in the Rationale and the Reference Materials, and based on consideration of whether proceeding with the .GCC application is in the public interest.

Resolved (2023.04.30.11), the Board: (a) has analyzed the GAC Advice and other issues relating to the .GCC application, as well as the BAMC’s recommendation; (b) reaffirms its acceptance of the GAC Advice and its decision to not proceed with the .GCC application based on the second issue identified in the GAC’s rationale for the GAC Advice, based on the Board’s evaluation of other materials relevant to the .GCC application, which are set forth in the Rationale and the Reference Materials, and based on the Board’s determination that proceeding with the .GCC application is not in the public interest;

and (c) directs the Interim President and CEO, or her designee(s), to continue to not proceed with the .GCC application.

Rationale for Resolution 2023.04.30.11

After careful review of the underlying facts, prior applicable Independent Review Process (IRP) final declarations and the importance of respecting ICANN's accountability mechanisms, information from the Governmental Advisory Committee (GAC), the public interest, materials relevant to the .GCC application, and the Board Accountability Mechanisms Committee's (BAMC) recommendations, the Board decided to conduct an independent analysis of the GAC consensus advice that the .GCC application should not proceed (GAC Advice) and other issues relating to the .GCC application now, rather than waiting for the completion of the *GCCIX, W.L.L. v. ICANN* IRP (.GCC IRP). After having conducted said analysis, the Board has reaffirmed its acceptance of the GAC Advice and its decision to not proceed with the .GCC application based on the concern raised in the GAC's rationale for the GAC Advice regarding lack of support and involvement from the relevant community, based on the Board's evaluation of the GAC Advice and other inputs and materials relevant to the .GCC application as set forth in this Rationale and the Reference Materials, and based on the Board's determination that proceeding with the .GCC application is not in the public interest. Accordingly, the Board has directed ICANN org's Interim President and CEO, or her designee(s), to continue to not proceed with the .GCC application.

Background Information

Additional background information regarding GCCIX, W.L.L.'s .GCC application, the objections to the .GCC application, the GAC Advice,

the prior applicable IRP final declarations, and the current .GCC IRP initiated by GCCIX, W.L.L. (Claimant or GCCIX) can be found in the supporting Board materials for this Resolution and for Board Resolutions [2021.09.12.08](#) and [2022.06.12.18](#), and is incorporated herein by reference.

In furtherance of the Board’s September 2021 [Resolution](#) “authoriz[ing] the President and CEO, or his designee(s), to seek a stay of the .GCC IRP and open an informal dialogue with the GAC regarding the rationale for the GAC consensus advice on the .GCC application,” ICANN org sought a stay of the .GCC IRP and engaged in an informal dialogue with the GAC regarding the GAC Advice. ICANN org sent a [letter](#) to the GAC Chair on 9 November 2021 to open the informal dialogue, seek input from the GAC regarding how it would like to engage with ICANN org in this dialogue, and asking whether the GAC would like to receive any additional information from ICANN org on the topic. As an initial response, the GAC requested that ICANN org provide some factual background to the GAC on the matter, which ICANN org did on 14 December 2021. The GAC discussed the matter on 14 December 2021 and on 20 January 2022.

On 25 January 2022, the GAC Chair sent a [letter](#) to ICANN org indicating that the GAC had reviewed “GAC discussions from 2013 held in closed sessions at ICANN46 in Beijing on the .GCC application, which helped inform the language included in the Beijing Communiqué consensus advice text.” In the letter, while acknowledging that the GAC did not provide a written rationale in the Beijing Communiqué for its advice relating to .GCC (properly noting that such a written rationale was not required to be included with the advice in 2013), the GAC Chair explained that: in November 2012, “the governments of Bahrain, Oman, Qatar and UAE issued a GAC Early Warning to the Applicant expressing serious concerns against

the application”; in February 2013, “the GAC received requests from several GAC members (Bahrain, Oman, Qatar and UAE) as well as the Gulf Cooperation Council (GCC) to include ‘.GCC’ in a GAC Objection Advice that the application should not proceed for the reasons highlighted in the GAC Early Warning”; and “that the GAC, during ICANN46 Beijing (April 2013) deliberated and reached consensus on ‘GAC Objection Advice’ [...] for the reasons expressed by the concerned GAC members” as follows (and as expressed in the [GAC Early Warning](#)): (i) “The applied-for string (GCC) is an exact match of the known acronym for an Intergovernmental Organization (IGO), the Gulf Cooperation Council and as such, warrants special protection to its name and acronym.”; and (ii) “The application clearly targeted the GCC community without any support from the GCC, its six members or its community.”

Following a recommendation from the BAMC in May 2022, the Board passed a [resolution](#): (a) “ask[ing] the BAMC to review, consider, and evaluate the underlying basis for the GAC consensus advice that the .GCC application should not proceed, the Board's acceptance of that advice, and relevant related materials; and (b) ask[ing] the BAMC to provide the Board with recommendations regarding next steps.” In furtherance of the Board’s resolution, the BAMC provided GCCIX with an opportunity to submit a response to the GAC’s January 2022 communication (which the GCCIX submitted on 7 September 2022). As noted in further detail below, the BAMC proceeded to review, consider and evaluate the GAC Advice, the Board’s acceptance of the GAC Advice, other inputs and materials relevant to the .GCC application, as well as what is in the public interest.

Discussion of the BAMC’s Consideration and Recommendation

Pursuant to the Board's directive, the BAMC reviewed, considered and discussed the .GCC application, the GAC Advice, other relevant materials, and the public interest in order to be able to provide an informed recommendation to the Board. With regard to the .GCC application, of particular interest to both the BAMC and the Board were the statements in the [application](#) that:

- “.GCC is an open Top Level Domain (TLD) created specifically to enhance and develop the provision of Internet services for users in the Gulf and Middle East region.”
- “We are committed to providing exemplary functional utility as well as an opportunity for Internet users with a connection to the Gulf and Middle East to secure a domain name in a new, innovative and competitive TLD.”
- “.GCC will create a region-specific new TLD that allows previously excluded and disadvantaged users to take a stake in a meaningful cultural and economic tool that is specifically designed to respond to their linguistic, cultural and specific business needs.”
- “GCC refers generally, but not exclusively, to the Cooperation Council for the Arab States of the Gulf. Formed in May 1981 as a regional organization, it consists of six Gulf countries including Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and United Arab Emirates. Its main objectives are to enhance coordination, integration and inter-connection between its members in different spheres. This application is not connected with or sponsored by the Council. .GCC does not purport to represent the Council.”

- “.GCC represents a strong competitive alternative to existing regional ccTLDs by providing instant registration and delegation under the most liberal framework permitted by law, within a TLD which has local significance.”
- “.GCC will be a valuable digital asset dedicated [to] residents living and working in the region.”
- .GCC is “[a] unique and meaningful three letter string.”

The BAMC also considered the [public comments](#) regarding the .GCC application, as did the Board. While some of the comments were in support of a .GCC gTLD generally, the vast majority of comments were opposed to GCCIX’s application for .GCC. For instance, the United Arab Emirates (UAE) stated that the application “is targeting the GCC community which basically covers the 6 member states of the GCC,” but that the applicant “did not consult the targeted community in regards to launch of the proposed TLD, its strategy and policies.” Likewise, a representative of Saudi Arabia stated that “[s]ince the applicant is not endorsed by the GCC or a majority of its members we strongly request ICANN not to accept this application.” And several other commenters stated that the application is “sensitive” because “[t]he applicant (GCCIX WLL) is clearly not known as GCC and is not endorsed by the GCC (Gulf Cooperation Council).”

In addition, the BAMC and the Board considered the GAC [Early Warning](#) stating that the governments of Bahrain, Oman, Qatar and United Arab Emirates, and the GCC, expressed “serious concerns” with Claimant’s .GCC application. Of particular import were the statements that the .GCC application “[lacks] . . . community involvement and support” and that “the applicant did not consult the targeted community in regards to launch of the proposed TLD, its

strategy and policies. The applicant did not obtain any endorsement from the GCC Secretariat General or any of its organizations, or any governmental or nongovernmental organization within the GCC member states.”

The BAMC, and the Board, also reviewed the ICANN Independent Objector’s (IO) comments regarding the .GCC application. In particular, the IO stated his “opinion that the applied for gTLD string explicitly targets the community of the Arab States of the Gulf, even if the applicant indicates that the application does not intend to represent the international organization itself.” “[T]hat [since] five of the six governments as well as the international organization directly targeted by the gTLD expressed their disagreement with the application, it must be considered that there is an obvious and substantial opposition from a significant portion of the community.” The IO also noted that use of a .GCC gTLD without the endorsement of the GCC or its member states could lead to confusion and “adverse effects on the mission pursued by the [GCC]” and “could interfere with the legitimate interests of the community of the [GCC], especially since the gTLD is not expected to be managed on behalf of the organization and its interests.”

Ultimately, the IO chose not to file an objection to the .GCC application because “the Gulf Cooperation Council is an established institution representing and associated with a significant part of the targeted community. The Gulf Cooperation Council is already fully aware of the controversial issues and is better placed than the IO to file an objection, if it deems appropriate[,]” which the GCC did when it initiated a Legal Rights Objection (LRO) proceeding against GCCIX’s

.GCC application. Although the LRO filings of GCCIX and the GCC¹⁷ focused mainly on intellectual property rights, which are beyond the scope of the BAMC's and the Board's consideration, the filings provided some helpful insights. For instance, the GCC's LRO brief set forth the founding and history of the GCC as well as the GCC's view that use of .GCC by GCCIX could cause confusion and the impression that the GCC has endorsed the operation of the .GCC gTLD and/or the content on domains using the .GCC gTLD. In its LRO filing, GCCIX argued that it "does not expect confusion."

In addition, the BAMC and the Board further considered the [GAC Advice](#) contained in the April 2013 Beijing Communiqué as well as the GAC's [25 January 2022 letter](#), which delineated the GAC's rationale for that advice. Of particular importance was the portion of the GAC's rationale that the .GCC "application clearly targeted the GCC community without any support from the GCC, its six members or its community," which is a view expressed in public comments on the .GCC application, in the GAC Early Warning on the .GCC application, and in the IO's comments on the .GCC application. Moreover, this view does not appear to have been meaningfully addressed by GCCIX in any of its communications to ICANN. For example, the BAMC and the Board considered several communications from GCCIX about its application, including: (i) GCCIX's [15 April 2013 letter](#) to ICANN in response to the GAC Advice in the Beijing Communiqué; (ii) GCCIX's further [response](#) to the Beijing Communiqué, submitted on or around 10 May 2013; (iii) GCCIX's [Reconsideration Request 13-17](#); and (iv) GCCIX's [7 September 2022 letter](#) to ICANN regarding the GAC's 25 January 2022 letter. Despite these various communications that have spanned the past several years, as well as GCCIX's IRP filings, there

¹⁷ The LRO filings the BAMC had access to are those attached to GCCIX's Amended IRP Request of 19 May 2022.

has been no substantive response from GCCIX to the particular claim that the .GCC application is (and the selection of “GCC” for its applied-for string seems) aimed at attracting and engaging with members of the community represented by the GCC and its member states without the support of that community, the GCC, or the GCC member states, which represent approximately 60 million people in the Gulf and Middle East region.

The BAMC and the Board also considered materials relating to previous IRPs and to the current .GCC IRP. In particular, the IRP panels’ findings in the .AFRICA and .AMAZON IRPs and their recommendations regarding the steps ICANN should have taken regarding GAC consensus advice that, when presented, did not include a written rationale, and regarding the independent analysis ICANN should have done in evaluating such advice. The BAMC and the Board also considered the actions ICANN took after the Final Declarations were issued in the .AFRICA and .AMAZON IRPs and evaluated the claims asserted by GCCIX in its Amended IRP Request. Specifically, GCCIX claims that: (i) ICANN should have sought from the GAC a rationale for the GAC Advice; (ii) that ICANN should have done an independent evaluation of that rationale; (iii) that ICANN should have provided GCCIX with treatment equal to that provided to similarly situated applicants, such as those for .AFRICA and .AMAZON; and (iv) that ICANN should provide a rationale for any action it takes on account of the GAC Advice regarding the .GCC application.

After extensive analysis and discussion, and after considering several options regarding the .GCC application, the BAMC has recommended that the independent analysis of the GAC Advice and other issues relating to the .GCC application be conducted now, rather than waiting for the completion of the .GCC IRP. Notwithstanding the fact that ICANN’s acceptance of the GAC Advice in 2013 was consistent

with the terms of Guidebook, two subsequent IRP panels have held that the Board should have conducted a further evaluation of the issues raised in the respective GAC Communiqués. In light of those findings, conducting such a further evaluation now in the .GCC matter is the prudent course of action, demonstrates the seriousness with which the Board considers ICANN's Accountability Mechanisms, and should allow the current IRP to proceed more efficiently. This is also in keeping with ICANN's Core Value to "remain accountable to the Internet community through mechanisms defined in [the] Bylaws that enhance ICANN's effectiveness."

The BAMC has further recommended that the Board reaffirm its acceptance of the GAC Advice and its decision to not proceed with the .GCC application based on the second issue identified in the GAC's rationale for the GAC Advice (regarding lack of support and involvement from the relevant community), based on information contained in other inputs and materials relevant to the .GCC application as set forth in this Rationale and the Reference Materials, and based on consideration of whether proceeding with the .GCC application is in the public interest.

Consistent with certain of the concerns raised in the GAC Early Warning, in the GAC's rationale for the GAC Advice, in the IO's comments, as well as by members of the community, the BAMC and the Board note that GCCIX's .GCC application appears to be directly aimed at attracting and engaging with members of the community represented by the GCC and its member states without the support of that community, the GCC, or the GCC's member states. And, in fact, it is not a mere lack of support, the GCC and its member states have repeatedly objected to GCCIX's .GCC application. Moreover, the BAMC noted its concern that GCCIX's selection of the term "GCC" for its applied-for string seems intentional in order to attract (and/or will

have the effect of attracting) the relevant community as a result of the association of the Gulf Cooperation Council with the “GCC” acronym and the reputation and goodwill that the GCC and its member states have developed through their representation of over 60 million people in the Gulf and Middle East region over the last forty years, despite the fact that the application is not sponsored or endorsed by the GCC or its member states. Indeed, the .GCC application explicitly states that its intention is to target Internet “users in the Gulf and Middle East.” In addition, the BAMC and the Board agree with the IO’s comment that this dichotomy between appearances and actual support could lead to confusion as to what entity or group is behind the .GCC gTLD and its content, and it could interfere with the legitimate interests, mission, and community outreach of the GCC and its member states because they do not endorse the .GCC gTLD and will have no role in evaluating or moderating its operation or content. While official “support” is not necessarily required by the Guidebook because “GCC” is not a geographic name, as defined in the Guidebook, the lack of support from the relevant community, the GCC, and the GCC member states (Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, and the United Arab Emirates) was relevant to both the BAMC’s and the Board’s analysis of whether this .GCC application is in the public interest.

The BAMC and the Board are committed to ICANN’s Mission and Core Values as set forth in the Bylaws, including ensuring that this decision is in the public interest. The community most likely impacted by the proposed .GCC gTLD has voiced their concerns through the public comments received regarding the .GCC application, the GAC Early Warning and the GAC Advice regarding the .GCC application, correspondence, and the LRO materials, which “reflect [both] the interests of [the] affected parties and the roles of bodies internal to ICANN.” In addition, the IO’s comments as well as the GCC’s own

comments specifically note that use of .GCC by GCCIX could cause confusion and the false impression that the GCC has endorsed the operation of the .GCC gTLD and/or the content on domains using the .GCC gTLD. Potentially causing confusion for Internet users both within the relevant community as well as more broadly is not in the global public interest. Even more so when it appears that GCCIX intentionally chose the “GCC” string in an effort to benefit from the reputation and goodwill that the GCC and its member states have developed through their representation of over 60 million people in the Gulf and Middle East region over the last forty years. Similarly, ICANN’s decisions should be guided by the Core Value of “recognizing that governments and public authorities are responsible for public policy and duly taking into account the public policy advice of governments and public authorities.” Here, the GAC, through its GAC Advice and subsequent rationale supporting that advice, set forth its public policy position, and the Board is obligated under the Bylaws to consider the GAC’s input as part of the Board’s independent evaluation of the .GCC application, the GAC Advice, and other relevant materials. For all of these reasons, the BAMC and the Board are of the view that proceeding with GCCIX’s .GCC application is not in the public interest.

The BAMC’s recommendations are consistent with the approach ICANN has taken regarding other gTLD applications that were lacking support in the communities targeted by the applications, such as .ISLAM, .HALAL and .PERSIANGULF. And these recommendations are generally consistent with the findings and recommendations in the .AFRICA and .AMAZON IRP Final Declarations as well as the actions taken by ICANN in addressing those IRP Final Declarations.

The BAMC also made clear that its recommendation to reaffirm acceptance of the GAC Advice is not based on the GAC’s reference to

intergovernmental organization (IGO) acronyms at the top-level. While the BAMC respects the GAC's view, the BAMC did not want or intend to recommend that the Board set any type of precedent regarding the level or source of IGO name and acronym protections in gTLDs, which has been and continues to be the subject of community-driven policy work.

Board Decision

The Board agrees with the BAMC's recommendations and reaffirms the Board's acceptance of the GAC Advice and its decision to not proceed with the .GCC application based on the concern raised in the GAC's rationale for the GAC Advice regarding lack of support and involvement from the relevant community, based on the Board's evaluation of the GAC Advice and other inputs and materials relevant to the .GCC application, which are set forth in this Rationale and the Reference Materials, and based on the Board's determination that proceeding with the .GCC application is not in the public interest. The Board also agrees that it is important to do this analysis now, rather than waiting for the .GCC IRP to be completed, because taking these steps is appropriate in light of certain findings in prior IRP final declarations and in light of ICANN's actions in response to those prior IRP declarations, and will benefit the community, including GCCIX, the GCC and the people it represents. This analysis, Resolution, and Rationale provides the parties and the .GCC IRP Panel with a complete picture of the BAMC and Board evaluation of the GAC Advice and the .GCC application, and these steps are generally consistent with the Board's actions in response to the .AFRICA and .AMAZON IRP Final Declarations and address several of the claims raised in the current .GCC IRP. Moreover, taking this action now is consistent with the purposes of the IRP, as set forth in ICANN's Bylaws, in that this action may narrow and focus the claims in the .GCC IRP, should avoid having

multiple IRPs regarding the same application, and should lead to the just resolution of the claims in the .GCC IRP in the most efficient manner possible. In furtherance of the aim of limiting the issues in dispute in the .GCC IRP, the Board acknowledges, as did the GAC, that there was no written rationale for the GAC Advice in the Beijing Communiqué in 2013 and that the NGPC did not provide a written rationale when it accepted the GAC Advice beyond reliance on Section 3.1 of the Applicant Guidebook. The GAC has now detailed its rationale for the 2013 GAC Advice in its January 2022 letter and, in this Resolution and Rationale, the Board has described the independent analysis that the BAMC and the Board have conducted regarding the GAC Advice and the .GCC application.

The Board, in exercising its independent judgment, thinks that not proceeding with GCCIX's .GCC application is the right thing to do and is in the public interest. This view is based upon the Board's review, analysis, and discussion of the BAMC's analysis and recommendations, and the Board's independent analysis of the GAC Advice, the .GCC application and other materials relevant to the .GCC application, and what is in the public interest, while taking into consideration the Mission and Core Values set forth in ICANN's Bylaws.

Based on the Board's review and analysis of GCCIX's .GCC application, public comments regarding the .GCC application, the GAC Early Warning regarding the .GCC application, the IO's comments on the .GCC application, the available LRO filings, the GAC Advice in the Beijing Communiqué, the GAC's 25 January 2022 letter to ICANN regarding the Beijing Communiqué, and various communications from GCCIX to ICANN (including GCCIX's 15 April 2013 letter to ICANN in response to the GAC Advice; GCCIX's further response to the Beijing Communiqué, submitted on or around 10 May 2013; GCCIX's

Reconsideration Request 13-17; and GCCIX's 7 September 2022 letter to ICANN regarding the GAC's 25 January 2022 letter), GCCIX's .GCC application appears to be directly aimed at attracting and engaging with members of the community represented by the GCC and the GCC member states (as stated in GCCIX's .GCC application) without the support of that community, the GCC, or the GCC's member states. And it is noteworthy that it is not a mere lack of support; the GCC and its member states have repeatedly objected to GCCIX's .GCC application. While official "support" is not necessarily required by the Guidebook because "GCC" is not a geographic name as defined in the Guidebook, the lack of support from the relevant community, the GCC, and the GCC member states is relevant to the Board's analysis of whether or not ICANN should proceed with this .GCC application.

Based on consideration of these materials, it also appears that GCCIX's selection of the "GCC" string is intended to attract, and/or will have the effect of attracting, the relevant community as a result of the association that the Gulf Cooperation Council and its member states have with the "GCC" acronym and the region within which the GCC operates. Further, GCCIX's selection of .GCC also appears to capitalize on the reputation and goodwill that the GCC and its member states have developed through their representation of over 60 million people in the Gulf and Middle East region over the last 40 years, even though the application is not sponsored or endorsed by the GCC or its member states.

Based on its analysis of these materials, the Board believes that this dichotomy between appearances and actual support could lead to confusion and could create the false impression that the GCC and its member states have endorsed the operation of the .GCC gTLD and/or the content of domains using the .GCC gTLD, which the GCC and its member states have not done. In addition, this confusion could

interfere with the legitimate interests, mission, and community outreach of the GCC and its member states since they do not endorse or support, and in fact have objected to, this .GCC application and will have no role in evaluating or moderating its operation or content, as mentioned in the IO's comments on the .GCC application.

The Board takes this action based not only on its due diligence and care in reviewing the relevant materials, but also on its adherence to ICANN's Mission, Commitments, and Core Values set forth in the Bylaws, including ensuring that this decision is in the public interest and that it respects the concerns raised by the community likely impacted by the proposed .GCC gTLD. The Board is of the view that proceeding with GCCIX's .GCC application is not in the public interest.

This action is consistent with the approach ICANN has taken with regard to other gTLD applications that were lacking support in the communities specifically targeted by the applications, such as .ISLAM, .HALAL and .PERSIANGULF. Further, this action is generally consistent with certain findings and recommendations in the .AFRICA and .AMAZON IRP Final Declarations as well as the actions taken by ICANN in addressing those IRP Final Declarations. Moreover, this action addresses several of GCCIX's claims in the current .GCC IRP, including its claims that ICANN should have sought from the GAC a written rationale for the GAC Advice, should have done an independent evaluation of that rationale, should have provided GCCIX with treatment equal to that provided to similarly situated applicants (such as .AFRICA and .AMAZON), and should provide a rationale for any action it takes on account of the GAC Advice regarding the .GCC application.

To be clear, however, the Board is not basing its decision to reaffirm acceptance of the GAC Advice on the GAC's reference to IGO

acronyms at the top-level. While the Board respects the GAC's view, the Board does not want or intend to set any type of precedent regarding the level or source of IGO name and acronym protections in gTLDs, which has been and continues to be the subject of community-driven policy work.

Taking the decision to continue to not proceed with GCCIX's .GCC application, after reviewing and considering the aims of the application, the materials relevant to the application, and the objections of those most likely to be impacted by a .GCC gTLD, is in the public interest and reflects the Board's adherence to ICANN's Mission, Commitments, and Core Values as set forth in the Bylaws.

More specifically with regard to ICANN's Core Values as set forth in the Bylaws, this decision takes into consideration the broad, informed participation of the Internet community and those members most affected, it respects ICANN's Accountability Mechanisms, and it recognizes the concerns expressed by the countries and entities representing the majority of the affected community (noted in the Bylaws applicable to the .GCC IRP, <https://www.icann.org/resources/pages/bylaws-2012-02-25-en>; and similarly reflected in the current Bylaws, <https://www.icann.org/resources/pages/governance/bylaws-en>):

- Seeking and supporting broad, informed participation reflecting the functional, geographic, and cultural diversity of the Internet at all levels of policy development and decision-making.
- Acting with a speed that is responsive to the needs of the Internet while, as part of the decision-making process, obtaining informed input from those entities most affected.

- Remaining accountable to the Internet community through mechanisms that enhance ICANN's effectiveness.
- While remaining rooted in the private sector, recognizing that governments and public authorities are responsible for public policy and duly taking into account governments' or public authorities' recommendations.

While the Board strives to follow all the Core Values in making its decisions, it is also the Board's duty to exercise its independent judgment to determine if certain Core Values are particularly relevant to a given situation. And, in fact, the Bylaws anticipate and acknowledge that ICANN may not be able to comply with all the Core Values in every decision made and allows for the Board to exercise its judgment in the best interests of the Internet community: "...because [the Core Values] are statements of principle rather than practice, situations will inevitably arise in which perfect fidelity to all eleven core values simultaneously is not possible. Any ICANN body making a recommendation or decision shall exercise its judgment to determine which core values are most relevant and how they apply to the specific circumstances of the case at hand, and to determine, if necessary, an appropriate and defensible balance among competing values." (Bylaws, <https://www.icann.org/resources/pages/bylaws-2012-02-25-en>.)

Taking this decision is within ICANN's Mission as the ultimate result of ICANN's consideration of this matter is a key aspect of coordinating the allocation and assignment of names in the root zone of the domain name system (DNS). Further, the Board's decision is in the public interest, taking into consideration and balancing the goals of resolving outstanding new gTLD disputes, respecting ICANN's accountability mechanisms and advisory committees, recognizing the

input received from the Internet community, and abiding by the policies and procedures set forth in the Guidebook, which were developed through a bottom-up consensus-based multistakeholder process over numerous years of community efforts and input, and is consistent with ICANN's Core Values.

Taking this decision is not expected to have any immediate direct financial impact on the ICANN organization and will not have any direct impact on the security, stability or resiliency of the domain name system.

This is an Organizational Administrative function that does not require public comment.

e. Further Consideration of the Afilias Domains No. 3 Ltd. v. ICANN (.WEB) Independent Review Process Final Declaration

Whereas, on 16 January 2022, the Board considered the Final Declaration in the Afilias Domains No. 3 Ltd. (Altanovo)¹⁸ v. ICANN Independent Review Process regarding .WEB (.WEB IRP) and, in part, resolved that further consideration was needed regarding the IRP Panel's non-binding recommendation.

Whereas, pursuant to its 16 January 2022 [resolution](#), the Board asked the Board Accountability Mechanisms Committee (BAMC) to review, consider, and evaluate the IRP Panel's Final Declaration and recommendation, and to provide the Board with its findings to

¹⁸ Afilias Domains No. 3 Ltd. is now known as Altanovo Domains Limited and will be referred to herein as "Altanovo."

consider and act upon before the organization takes any further action toward contracting for or delegation of .WEB.

Whereas, the BAMC complied with the Board's request and recommended next steps related to the .WEB applications.

Whereas, on 10 March 2022, the Board considered the BAMC's recommendation, as well as the relevant related materials, and resolved to: (a) ask the BAMC to review, consider and evaluate the claims relating to the Domain Acquisition Agreement (DAA) between Nu Dotco LLC (NDC) and Verisign, Inc. and the claims relating to Altanovo's conduct during the Auction Blackout Period; (b) ask the BAMC to provide the Board with its findings and recommendations as to whether the alleged actions of NDC and/or Altanovo warrant disqualification or other consequences, if any, related to any relevant .WEB application; and (c) direct ICANN organization to continue refraining from contracting for or delegation of .WEB until ICANN has made its determination regarding the .WEB application(s).

Whereas, in furtherance of that resolution, the BAMC requested that Altanovo, NDC and Verisign provide comprehensive written summaries of their claims and the materials supporting their claims, which they did in July and August 2022.

Whereas, after the BAMC reviewed and considered the parties' July/August 2022 submissions and supporting materials, as well as relevant related materials, and discussed the matter extensively, the BAMC recommended that the Board: (a) determine that NDC did not violate the Guidebook or the Auction Rules, either through entering into the DAA or through its participation in the .WEB auction; (b) direct the Interim President and CEO, or her designee(s), to continue processing NDC's .WEB application; and (c) in light of the above,

conclude that is not necessary to make a final determination at this time as to whether Altanovo violated the “Blackout Period” of the .WEB auction.

Whereas, noting the questions raised regarding certain conduct by both both NDC and Altanovo, the BAMC further recommended that the Board direct the Interim President and CEO, or her designee(s), to carefully consider the issues raised by the parties and the Panel in the .WEB IRP with regard to agreements similar to the DAA and communications prior to an ICANN auction when developing the Guidebook and auction rules for the next round of the New gTLD Program in order to provide greater clarity to applicants regarding the transparency and notification requirements throughout the application and auction processes.

Resolved (2023.04.30.12), the Board hereby: (a) determines that NDC did not violate the Guidebook or the Auction Rules, either through entering into the DAA or through its participation in the .WEB auction; (b) directs the Interim President and CEO, or her designee(s), to continue processing NDC’s .WEB application; and (c) in light of the above, concludes that is not necessary to make a final determination at this time as to whether Altanovo violated the “Blackout Period” of the .WEB auction.

Resolved (2023.04.30.13), the Board hereby notes the questions raised regarding certain conduct by both NDC and Altanovo and directs the Interim President and CEO, or her designee(s), to carefully consider the issues raised by the parties and the Panel in the .WEB IRP with regard to agreements similar to the DAA and communications prior to an ICANN auction when developing the Guidebook and auction rules for the next round of the New gTLD Program in order to provide greater clarity to applicants regarding the transparency and

notification requirements throughout the application and auction processes.

Resolved (2023.04.30.14), specific items within this resolution shall remain confidential pursuant to Article 3, section 3.5(b) of the ICANN Bylaws unless and until the Interim President and CEO, or her designee(s), determines that the confidential information may be released.

Rationale for Resolutions 2023.04.30.12 – 2023.04.30.14

After careful review of the underlying facts, the submissions and supporting materials provided by Altanovo Domains Limited (Altanovo),¹⁹ Nu Dotco LLC (NDC) and Verisign, Inc. in July and August 2022, including, but not limited to, the Domain Acquisition Agreement (DAA) between NDC and Verisign and affiliated documents, NDC's .WEB application, relevant provisions of the Guidebook, Auction Rules and Bidder Agreement, and various other materials, as well as the Board Accountability Mechanisms Committee's (BAMC) analysis and recommendations, the Board has determined that NDC did not violate the Guidebook or the Auction Rules, either through entering into the DAA or through its participation in the .WEB auction. In addition, and in light of the above determination, the Board has also concluded that it is not necessary to make a final determination at this time as to whether Altanovo violated the "Blackout Period" of the .WEB auction.

The Board, however, does note the claims asserted regarding NDC's non-disclosure of its arrangement with Verisign and regarding Altanovo's communications prior to the ICANN auction and, thus, has

¹⁹ Afilias Domains No. 3 Ltd. is now known as Altanovo Domains Limited and will be referred to herein as "Altanovo."

directed ICANN organization to carefully consider such issues when developing the Guidebook and the auction rules for the next round of the New gTLD Program. It would be beneficial to both the applicants and the application process as a whole to provide greater clarity in the next iteration of the Guidebook and auction rules regarding the transparency and notification requirements throughout the application and auction processes, in particular with regard to proposed registry agreement assignments and/or arrangements similar to the DAA as well as communications during the Blackout Period.

Background Information

Additional background information regarding the .WEB applications and the .WEB auction, the Independent Review Process initiated by Altanovo (.WEB IRP), and the IRP Panel's Final Declaration can be found in the Resolution, Rationale and supporting Board materials for Board Resolutions [2022.01.16.12 - 2022.01.16.15](#) and [2022.03.10.06](#), and is incorporated herein by reference.

The .WEB Auction and the DAA:

Seven applicants submitted applications for the right to operate .WEB, including Altanovo and NDC. The members of the .WEB contention set did not privately resolve contention; accordingly, the applicants went to an ICANN auction of last resort. An auction was held on 27-28 July 2016, which concluded with NDC prevailing with a bid of US\$135 million. Shortly thereafter, Verisign publicly disclosed (through both a press release and a filing with the Securities and Exchange Commission) that, pursuant to an agreement it had entered with NDC, Verisign provided the funds for NDC's auction bid in

exchange for, among other things, NDC's future assignment of the .WEB registry agreement to Verisign, subject to ICANN's consent.

The commitment Verisign referenced arose out of an agreement between NDC and Verisign known as the Domain Acquisition Agreement (DAA). The DAA "sets forth the terms and conditions upon which [Verisign] proposes for Verisign and [NDC] to work together to effect (i) [NDC's] award to be the sole and exclusive operator of [.WEB] ...; (ii) the consummation of a registry agreement between [NDC] and ICANN for [NDC's] right to be the registry operator of [.WEB]; and (iii) the subsequent sale, assignment, grant, transfer, and conveyance to Verisign of all of [NDC's] right, title, interest in and to being the registry operator for [.WEB], including, without limitation, the sale, assignment, grant, transfer, and conveyance of the Registry Agreement and all materials and information related thereto," subject to ICANN's consent to an assignment request regarding the Registry Agreement.

Under the terms of the DAA, NDC agreed that it "will not alter or modify [its .WEB] Application without Verisign's prior written consent," that it "will not take any action to participate in a Private Auction for the Domain without the prior written consent of Verisign," and that it will not "participate in any discussions or negotiations with, any party (other than Verisign) regarding (a) [NDC] participating in the Auction for the benefit of any person or entity or otherwise resolving the [.WEB] contention set], or (b) the sale, assignment, grant, transfer or conveyance of any of [NDC's] right, title or interest in, to or under the Registry Agreement or the operation of the registry for [.WEB] to any person or entity."

NDC and Verisign agreed that "the existence and terms" of the DAA would be kept confidential, except that: (1) Verisign had sole

discretion to discuss or share the terms of the DAA with ICANN or to disclose that “it is indirectly participating in the resolution of the .WEB Contention Set or otherwise seeking to become the registry operator for the Domain”; and (2) NDC had the right to communicate with ICANN and provide information “to the extent required to preserve [NDC’s] rights with respect to the Application or being the registry operator for the Domain,” provided that NDC notifies Verisign in advance and affords Verisign a reasonable opportunity to comment, except that NDC “shall in no case reference or disclose the existence of [the DAA] without Verisign’s consent.”

Upon learning of an agreement between Verisign and NDC, Altanovo sent ICANN a letter asking ICANN to disqualify NDC’s .WEB application and its bid for .WEB, and award .WEB to Altanovo as the next highest bidder. ICANN undertook an initial investigation, which was followed by a competition investigation by the United States Department of Justice Antitrust Division (DOJ). The DOJ process took approximately a year and a half. In early 2018, the DOJ closed its investigation and took no action. Thereafter, ICANN proceeded to the contracting phase with NDC for .WEB.

IRP Panel Final Declaration:

Altanovo initiated the .WEB IRP in November 2018, alleging that NDC had violated the Guidebook and/or Auction Rules as a result of its arrangement with Verisign, and that ICANN had violated the Bylaws by failing to disqualify NDC. NDC and Verisign asked to participate as *amici curiae* in the IRP, which the Panel granted. The merits hearing took place on 3-11 August 2020, and the IRP Panel issued its Final Declaration on 20 May 2021, which the Panel later corrected for certain typographical errors, effective 15 July 2021. Altanovo then filed a further challenge to the Final Declaration, which the Panel

denied in its entirety in December 2021, at which time the Final Declaration was deemed “final.”

In its Final Declaration, the Panel accepted Altanovo’s claim that ICANN violated provisions in its Articles of Incorporation (Articles) and Bylaws by proceeding toward entering a Registry Agreement with NDC without having reached a determination about whether the DAA or NDC’s conduct warranted rejection of NDC’s application for .WEB. The Panel also found that ICANN violated its Bylaws’ obligation to operate in an open and transparent manner and consistent with procedures to ensure fairness by not advising Altanovo of the ICANN Board’s choice in November 2016 to defer consideration of the .WEB matter while an Accountability Mechanism regarding .WEB was pending.

The Panel, however, denied Altanovo’s requested relief that the Panel issue a binding declaration that ICANN must disqualify NDC’s bid for .WEB, that the Panel specify a winning bid price, and that the Panel order ICANN to proceed with contracting for .WEB with Altanovo. The Panel found that the questions raised by Altanovo were “serious and deserving of [ICANN’s] consideration,” but the Panel expressed no view as to the proper resolution of those questions. Instead, the Panel found that the resolution of those questions is a matter within the discretion of ICANN. The Panel noted that: “it is for [ICANN], that has the requisite knowledge, expertise, and experience, to pronounce in the first instance on the propriety of the DAA under the New gTLD Program Rules, and on the question of whether NDC’s application should be rejected and its bids at the auction disqualified by reason of its alleged violations of the Guidebook and Auction Rules.”

The Panel also stated that it “accepts the submission that ICANN does not have the power, authority, or expertise to act as a competition

regulator by challenging or policing anticompetitive transactions or conduct.” The Panel further noted that “[c]ompelling evidence to that effect” was presented by several of the ICANN witnesses at the final hearing, and “it is consistent with a public statement once endorsed by [Altanovo], in which it was asserted [that] ‘[...] Neither ICANN nor the GNSO have the authority or expertise to act as anti-trust regulators.’”

Board Resolutions and BAMC Review:

Once the Final Declaration became “final,” after resolution of Afiliat’s separate request for “interpretation and correction” (which the Panel determined was “frivolous”) on 21 December 2021, the Board considered the Final Declaration at its 16 January 2022 meeting. The Board acknowledged the Panel’s findings, directed payment to Altanovo of the amount set forth by the Panel, and determined that further consideration of the Panel’s recommendation was needed. Accordingly, the Board asked the BAMC to “review, consider, and evaluate the IRP Panel’s Final Declaration and recommendation, and to provide the Board with its findings to consider and act upon before the organization takes any further action toward contracting for or delegation of .WEB.”

After conducting its initial review of the IRP Panel’s Final Declaration and recommendation, and related materials, the BAMC recommended that the Board: (a) ask the BAMC to review, consider and evaluate the claims relating to the DAA, and the claims relating to Altanovo’s conduct during the Auction Blackout Period; (b) ask the BAMC to provide the Board with its findings and recommendations as to whether the alleged actions of NDC and/or Altanovo warrant disqualification or other consequences, if any, related to any relevant .WEB application; and (c) direct ICANN organization to continue

refraining from contracting for or delegation of .WEB until the Board has made its determination regarding the .WEB application(s).

As set forth in Board Resolution [2022.03.10.06](#), the Board agreed with the BAMC's recommendation and noted that, "in light of certain of the Panel's determinations, it is appropriate and prudent for ICANN to undertake an analysis of the allegations regarding the DAA as well as the allegations regarding the Auction Blackout Period in order to determine if any consequences are warranted with respect to any of the .WEB applications" before proceeding further.

In furtherance of the Board's Resolution, the BAMC [requested](#) that the interested parties (Altanovo, NDC and Verisign) "provide a comprehensive written summary of their claims and the materials supporting their claims." On 29 July 2022, Altanovo and NDC/Verisign provided their initial submissions. Altanovo also submitted two supporting declarations with its submission. On 29 August 2022, Altanovo submitted its reply submission, and NDC/Verisign submitted their reply submission along with two supporting declarations.

The BAMC reviewed and considered the submissions and supporting materials including, but not limited to, the DAA and affiliated documents, NDC's .WEB application, relevant provisions of the Guidebook, Auction Rules and Bidder Agreement, and various other materials. The BAMC carefully considered the parties' positions and supporting materials, and the BAMC extensively discussed the matter and options regarding next steps relating to the .WEB gTLD during at least four separate meetings.

Summary of the Parties' Positions

The following is a summary of the parties' positions but does not capture the entirety of their positions, which are set forth in their submissions to the BAMC and are available on ICANN's [.WEB IRP webpage](#).

Altanovo's Position Regarding the .WEB Auction and the DAA:

Altanovo contends that the gTLD application process is designed to promote fairness, transparency and non-discrimination and that it requires key parts of each application to be posted for a public comment period, which guarantees that other applicants and the Internet community at large know what entity is applying for a gTLD and the purpose for which it is sought and have an opportunity to comment on the application. Altanovo claims that transparency is required so that all applicants know who they are competing against. Altanovo argues that the DAA "decimate[s] [the] fundamental principles underlying the New gTLD Program" and that, according to Altanovo, "the DAA was specifically designed to evade and subvert the most basic purposes that the Program was meant to serve." Further, Altanovo argues that, by submitting an application to ICANN through the New gTLD Program, the applicant enters into a contract with ICANN; and that ICANN enters into these contracts and promulgates the rules in the Guidebook to carry out its Mission on behalf of the Internet community as a whole.

Altanovo argues that the Guidebook prohibits the sale, assignment, or transfer of "any of applicant's rights or obligations in connection with the application," referencing Paragraph 10 of Module 6 of the Applicant Guidebook, which states:

Applicant understands and agrees that it will acquire rights in connection with a gTLD only in the event that

it enters into a registry agreement with ICANN, and that applicant's rights in connection with such gTLD will be limited to those expressly stated in the registry agreement. In the event ICANN agrees to recommend the approval of the application for applicant's proposed gTLD, applicant agrees to enter into the registry agreement with ICANN in the form published in connection with the application materials. (Note: ICANN reserves the right to make reasonable updates and changes to this proposed draft agreement during the course of the application process, including as the possible result of new policies that might be adopted during the course of the application process). Applicant may not resell, assign, or transfer any of applicant's rights or obligations in connection with the application.

Altanovo argues that this provision is not merely limited to the total sale or transfer of an application but, rather, prohibits the transfer of individual rights or obligations in an application. And, according to Altanovo, the DAA constituted a resale, assignment and/or transfer of several of NDC's individual rights and/or obligations relating to its .WEB application.

Specifically, Altanovo asserts that NDC transferred to Verisign the right and obligation to negotiate and enter into a Registry Agreement with ICANN and to operate .WEB because the terms of the DAA require that NDC "follow Verisign's instructions concerning the completion, negotiation and execution of the Registry Agreement," and to "obtain Verisign's prior written approval" before executing the Registry Agreement with ICANN. According to Altanovo, the "most basic right under a gTLD application is . . . the applicant's opportunity

to operate the applied-for registry,” but the DAA operates as “an absolute bar to NDC” acquiring the right to operate .WEB, citing to the portion of the DAA that indicates that, if NDC was unable to assign the Registry Agreement to Verisign, NDC “will seek ICANN’s permission to withdraw the Application or terminate the Registry Agreement (as the case may be).”

Altanovo argues that NDC also transferred to Verisign its right to participate in the .WEB auction on its own behalf by agreeing that it would do so only upon “Verisign’s election, in Verisign’s sole discretion, and only upon Verisign’s prior written approval.” Altanovo also argues that NDC transferred this right by agreeing to participate in the auction “solely as directed by Verisign” and “from Verisign’s corporate headquarters.” According to Altanovo, each and every bid at the .WEB auction was made “on behalf of Verisign, using Verisign’s money, . . . at Verisign’s direction” and from Verisign’s headquarters.

Altanovo disagrees with NDC/Verisign’s contention that the DAA comprises a “future” assignment of rights because Verisign exercised its then-existing rights to “prevent NDC from participating in the planned private auction for .WEB,” and to “instruct NDC to enter into a Bidder Agreement for the ICANN Auction for .WEB.” Verisign, according to Altanovo, also controlled NDC’s bids at the ICANN Auction.

Altanovo also contends that “virtually all” of the information in NDC’s application became untrue, inaccurate, and incomplete when NDC entered into the DAA and “deprived” the Internet community of the ability to submit public comments on Verisign’s involvement in .WEB. For instance, in Section 18 (Mission/Purpose) of the application, NDC stated that “[p]rospective users benefit from the long-term commitment of a proven executive team that has a track-record of

building and successfully marketing affinity TLD's," and that NDC plans to implement "a very similar strategy for .WEB to the one that it used for .CO." But, according to Altanovo, that was no longer accurate once the DAA was signed because, under the DAA, there was no circumstance where NDC could operate .WEB. Thus, the mission and purpose, including the "long-term commitment of a proven executive team," became an "outright lie," according to Altanovo. Altanovo asserts that this information was published for the members of the Internet community so that they can understand who is applying for a given gTLD, regardless of whether Section 18 is part of ICANN's evaluation. Altanovo contends that this is the reason that Paragraph 1 of the Applicant Guidebook requires applicants to notify ICANN of "any change in circumstances that would render any information in the application false or misleading."

Position of NDC and Verisign Regarding the .WEB Auction and the DAA:

NDC and Verisign claim that Altanovo has lodged a series of attacks designed to disqualify NDC from the .WEB contention set since even before the .WEB auction, and the IRP was yet another such attack. NDC and Verisign also note that Altanovo sought to exclude NDC and Verisign from participating in the IRP while simultaneously asking the IRP Panel to disqualify NDC and its .WEB application. NDC and Verisign contend that Altanovo's proposed relief and proposed reading of the Guidebook are "draconian" and "would create uncertain and destabilizing precedent far beyond this matter." For instance, they assert that ICANN is bound by the Bylaws to act in a non-discriminatory manner, and that awarding Altanovo the relief it seeks would amount to singling out NDC and Verisign because ICANN has approved hundreds of assignments of Registry Agreements, some similar to the assignment envisioned by the DAA, including

assignments that change the mission and purpose of the original application. They further claim that numerous applicants have entered into agreements with third parties and that ICANN has never disqualified an applicant on that basis.

NDC and Verisign argue that Paragraph 10 of Guidebook Module 6 does not apply to the DAA because the paragraph only prohibits the sale of a total application itself; it does not address agreements, such as the DAA, “to support an application, finance a resolution of a contention set, or assign a registry agreement post-delegation (upon consent of ICANN).” NDC and Verisign argue that the DAA did not transfer NDC’s rights or obligations under the application to Verisign. The DAA contemplates only “a possible, contingent, future assignment of the registry agreement following (i) resolution of the contention set, (ii) execution of a registry agreement, and (iii) ICANN’s consent to the assignment.” Moreover, the DAA confirmed that NDC did not need Verisign’s consent to “take any action or to communicate with ICANN to the extent required to preserve [NDC’s] rights in the Application or avoid being in material default of the Registry Agreement.”

According to NDC and Verisign, the DAA fails to meet the legal elements for an assignment, which requires “(1) a specific *intention* to make (2) a *present transfer of ownership* of the application, and (3) the transferor have *no remaining interest* in the application.” Instead, the Confirmation of Understanding (a subsequent agreement dated 26 July 2016 between NDC and Verisign relating to the DAA) states that the parties “do not assign or transfer, any rights or obligations between ICANN and NDC regarding the Application”; and that NDC does not need Verisign’s consent to “take any action or to communicate with ICANN to the extent required to preserve [NDC’s] rights in the Application or avoid being in material default of the

Registry Agreement.” NDC and Verisign argue that the only transfer contemplated by the DAA was a future, conditional assignment of a Registry Agreement.

NDC and Verisign also rely upon the Auction Rules, which they contend implicitly authorize agreements such as the DAA. The Auction Rules state that pre-auction agreements regarding post-auction ownership transfer arrangements cannot be discussed during the Blackout Period, impliedly permitting such arrangements to be discussed at other times. Finally, NDC and Verisign argue that when drafting the Applicant Guidebook, ICANN “rejected” a proposal to limit agreements for post-delegation assignments of Registry Agreements, which further confirms that the Guidebook was not intended to limit these assignments.

NDC and Verisign argue that NDC made the bids for itself as the applicant, and that the DAA provisions to which Altanovo cites were designed to protect Verisign because of the amount of money involved. For instance, the DAA was designed to make sure NDC would not engage in a deal with anyone else. Further, NDC and Verisign claim that not only do the Auction Rules not govern the extent to which an applicant may obtain third-party financing for an auction, but Altanovo even admitted that it received a loan for its participation in the .WEB auction, much like other participants in both private auctions and other ICANN auctions.

NDC and Verisign further contend that NDC is still the applicant for .WEB, and that NDC may become the registry operator because Verisign’s rights under the DAA are subject to numerous contingencies. For instance, Verisign could terminate the DAA “for any or no reason,” which would allow NDC to operate .WEB. NDC also could breach the DAA and keep the .WEB registry for itself (even if

that action would carry its own consequences). Additionally, if ICANN did not consent to the assignment, NDC and Verisign could modify the DAA such that NDC would remain the registry operator.

NDC and Verisign further contend that new gTLDs have been transferred “hundreds of times post-delegation,” and that “ICANN has never objected or refused to consent to an assignment on the grounds that: (i) the pre-delegation agreement provided for a post-delegation assignment of the registry agreement, and/or (ii) there was a lack of pre-delegation public scrutiny of the registry operator because the assignment was effected after the application evaluation period had closed.”

NDC and Verisign argue that ICANN has never applied the Guidebook in the manner proposed by Altanovo, and that new gTLDs have been transferred numerous times after execution of a Registry Agreement. NDC and Verisign refer to Christine Willett’s testimony at the IRP hearing that “‘applicants all the time were assigning rights and designating third parties to operate on their behalf,’ with respect to ‘all sorts of aspects of their application and future gTLD operations,’ including assigning new gTLDs immediately upon execution of the registry agreement.”

NDC and Verisign argue that the DAA did not render any statements in the application false or misleading. NDC and Verisign contend that ICANN is generally unconcerned with third-party agreements like the DAA and only is concerned with the ownership, management, and contact personnel for the applicant. The representations regarding NDC’s ownership, management, and contact personnel remain accurate.

Additionally, NDC and Verisign argue that there were no changes to Section 18 (Mission/Purpose) of the application about which NDC was required to notify ICANN. The DAA did not alter the mission or purpose as stated in NDC's application, where NDC described "its general strategy at the time [in 2012] as to how .WEB might be successfully and productively introduced and used to benefit consumers." That general strategy was not "intended to be a definitive statement of NDC's plans for .WEB," and, according to NDC and Verisign, they were not "required to be" definitive statements under the Guidebook. NDC and Verisign further contend that any purported inaccuracy in Section 18 is immaterial because Module 2 of the Guidebook states that the information provided in response to Question 18 "is not used as part of the evaluation or scoring of the application."

Allegations regarding the .WEB Auction Blackout Period:

Clause 68 of the Auction Rules and Sections 2.6 and 2.10 of the Bidder Agreement prohibit members of a contention set from, among other things, "cooperating or collaborating with respect to, discussing with each other, or disclosing to each other in any manner the substance of their own, or each other's, or any other competing applicants' bids or bidding strategies, or discussing or negotiating settlement agreements" during the period from the deposit deadline for the auction until full payment has been received from the auction winner. This is referred to as the "Blackout Period." According to NDC and Verisign, an agreement had been reached to resolve .WEB through a "private auction" by all members of the contention set except NDC, which refused to participate in a private auction. The proposed private auction would have been structured so that the proceeds of the winning bid would be distributed to the losing bidders. On 7 June 2016, a representative of Altanovo asked NDC to reconsider entering

into a private auction and offered to guarantee that NDC would receive at least \$16 million if NDC participated in a private auction and lost. NDC declined. Altanovo offered to increase the guaranteed payment to \$17.02 million. NDC declined again.

On 20 July 2016, the deposit deadline for the .WEB action passed, and the Blackout Period began. On 22 July 2016, Altanovo sent a text message to NDC stating:

If ICANN delays the auction next week would you again consider a private auction? Y-N

NDC did not respond to the text message. NDC and Verisign contend that Altanovo's communication violated the Blackout Period.

NDC and Verisign argue that Altanovo's 22 July 2016 message asking if NDC would consider a private auction in the event that the .WEB auction were to be postponed amounted to seeking a "settlement of" the .WEB contention set in breach of paragraph 68 of the Auction Rules and Section 2.6 of the Bidder Agreement. They argue that the text message "unambiguously referred back to Altanovo's prior attempts days earlier to induce NDC to agree to a private auction for .WEB by guaranteeing NDC over \$17 million to go to such an auction and lose." NDC and Verisign further argue that Altanovo's text message also intended to probe NDC's strategies for the upcoming auction, which NDC and Verisign contend the Bidder Agreement prohibits.

Altanovo argues that the first two texts NDC and Verisign identified occurred six weeks prior to the Blackout Period, and that while the 22 July 2016 text occurred during the Blackout Period, it did not violate any rules. According to Altanovo, the Blackout Period is "designed to

prevent bid rigging by prohibiting bidders from coordinating in advance of the auction.” According to Altanovo, its text message did not seek to coordinate or otherwise rig auction bids and did not violate the terms or spirit of the Blackout Period; and the text did not relate to bids, bidding strategies, settlement agreements or post-Auction ownership transfer agreements.

Parties’ Request for Remedies:

The parties’ submissions propose radically different remedies in the event the Board were to find a violation of the Guidebook or Auction Rules, notwithstanding the fact that the IRP Panel found that the Guidebook and Auction Rules provide ICANN with considerable discretion to address and to remedy breaches of their terms.

Altanovo contends that, if a violation is found, the Articles and Bylaws require the Board to exercise its discretion to disqualify NDC’s application/bids and deem NDC ineligible to enter into a Registry Agreement for .WEB, based on Guidebook Module 6 (which provides that ICANN may reject an application if an applicant makes a “material misstatement or misrepresentation” in the application or omits any “material information” from the application). Altanovo further argues that its bid (which was the second highest bid) should be declared the winning bid because certain provisions of the Auction Rules indicate that a bidder may be subject to various penalties, including forfeiture of its application, and that ICANN may make a determination that a winning applicant is “ineligible” to enter into a Registry Agreement.

NDC’s and Verisign’s overarching theme is that granting Altanovo the relief it seeks would amount to treating NDC and Verisign differently from all other similarly situated new gTLD applicants that have assigned their Registry Agreements to third parties, or otherwise

entered into financing agreements related to their applications. NDC and Verisign further argue that Altanovo's argument implies that the Board has no discretion but to award Altanovo its "draconian" relief, thereby resulting in Altanovo obtaining the right to operate .WEB for "far less than its market value." NDC and Verisign, however, assert that Altanovo's argument is contrary to the Guidebook and the IRP Panel's Final Declaration, which held that ICANN has "the requisite knowledge, expertise, and experience to pronounce . . . on the question of whether NDC's application should be rejected and its bid at the auction disqualified."

NDC and Verisign also argue that, even if the DAA violated Paragraph 10 of the Guidebook, forfeiture is not the appropriate remedy and is inconsistent with how ICANN has interpreted Paragraph 10 in the past. Moreover, the fundamental purpose of Paragraph 10 is to ensure that the applicant continues to have responsibility for the application, and the DAA did not interfere with that fundamental purpose, according to NDC and Verisign. As to the alleged violation of NDC's disclosure obligations, again NDC and Verisign argue that the remedy cannot be forfeiture, in part because there is no evidence that the result of the .WEB auction would have been different had the arrangement been disclosed. And conceding to Altanovo's demand "would be singling out NDC for disqualification based on the same conduct by other applicants for which ICANN took no action." Finally, NDC and Verisign argue that the alleged violations of the Auction Rules or the Bidder Agreement cannot support forfeiture because they relate only to the mechanics of the ICANN Auction, and the DAA did not interfere with those mechanics.

Discussion of the BAMC's Consideration and Recommendation

Pursuant to the Board's directive in [Resolution 2022.03.10.06](#), the BAMC, and then the Board, considered various materials relevant to this matter including, but not limited to, the IRP Panel's Final Declaration and the submissions and supporting materials submitted to the BAMC in July and August 2022 by Altanovo, NDC and Verisign.

After careful review of and discussion regarding the Guidebook and Auction Rules, the BAMC, and the Board, found that there is no Guidebook or Auction Rules provision that directly addresses arrangements such as the DAA, despite the parties' respective contentions. The BAMC believes, and the Board agrees, that the DAA falls into a gray area that the Guidebook and Auction Rules do not specifically address. Thus, while both sides make plausible arguments, none of those arguments exactly fits the DAA and the parties' conduct under the current Guidebook and Auction Rules.

More specifically, the BAMC and the Board found that the DAA does not violate Paragraph 10 of the Guidebook, including the last sentence, which states that "Applicant may not resell, assign, or transfer any of applicant's rights or obligations in connection with the Application." NDC remains the applicant of its .WEB application because NDC did not sell or transfer the application. While NDC has agreed that the DAA grants Verisign various rights with respect to how NDC proceeds, including with respect to a possible private or ICANN auction, NDC did not resell, assign, or transfer its rights or obligations with regard to the .WEB application itself, and retained the right to communicate with ICANN and to provide information "to the extent required to preserve [NDC's] rights with respect to the Application or being the registry operator for the Domain." In the event NDC negotiates with and enters into a Registry Agreement with ICANN for .WEB, NDC would become the Registry Operator for .WEB. Only after NDC secures a Registry Agreement (if it does) can NDC then

submit a request to ICANN to have the agreement assigned to Verisign.

Accordingly, the BAMC and the Board agree with NDC and Verisign that no assignment of NDC's application has occurred and the information provided in NDC's application has not been rendered false. Instead, the DAA contemplates a possible future assignment of the Registry Agreement that NDC might enter into with ICANN, not an assignment of NDC's .WEB application. NDC remains the applicant and, if NDC enters into a Registry Agreement with ICANN, NDC will become the Registry Operator for .WEB. Whether or not NDC then attempts to assign the Registry Agreement to Verisign is, at this point, an event that has not occurred and conceivably may not occur depending on the circumstances at the time. And if NDC subsequently decides to request such an assignment, there are processes in place to review such a request, including the need for ICANN's approval of that request. Such an assignment does not equate to a "circumvention" of the application process but, rather, is a necessary component for servicing Registry Operators and allowing the continued operation of gTLDs.

The BAMC also noted, as does the Board, that Registry Agreements for new gTLDs have been assigned dozens of times, if not more, following contracting and/or delegation of the gTLD and that, generally, there have been no formal objections regarding possible pre-contracting agreements that provided for a post-delegation transfer subject to ICANN approval.²⁰ Although ICANN does not know

²⁰ For instance, in 2012, Demand Media publicly announced an agreement regarding 107 of Donuts' gTLD applications before any Registry Agreements were executed, stating that "it ha[d] entered into a strategic arrangement with Donuts Inc. [...], through which it may acquire rights in certain gTLDs after they have been awarded to Donuts by ICANN. These rights are shared equally with Donuts and are associated with 107 gTLDs for

the circumstances or details of other potential pre-contracting agreements that may have been in place, the BAMC and the Board note that there are examples where assignment requests were submitted shortly after (even as short as one week after) contracting, including for gTLDs that had been the subject of auctions.

Furthermore, if such pre-contracting agreements occurred between private companies, ICANN might not have any direct knowledge of the extent of those agreements because private companies do not have a public disclosure requirement and the Guidebook does not contain a disclosure requirement for such agreements. The primary reason that ICANN and Altanovo became aware of the DAA was due to the fact that Verisign is a public company that was required to make a public disclosure. Verisign should not be treated differently because it is a public company that has a disclosure requirement as compared to private companies that do not have a public disclosure requirement. That being said, the BAMC thinks it is important for applicants and the application process as a whole that ICANN provide greater clarity to applicants regarding the transparency requirements and the notification requirements applicable throughout the various stages of the application process and the ICANN auction process. The Board agrees and has directed ICANN org to consider these issues when developing the Guidebook and auction rules for the next round of the New gTLD Program.

In terms of any Guidebook requirement to update an application for a gTLD, the BAMC and the Board found that NDC did not violate that requirement by entering into the DAA. First and foremost, NDC is still

which Donuts is the applicant.” Ultimately, approximately 24 new gTLDs that Donuts applied for were subsequently transferred via Registry Agreement assignment to Demand Media.

the applicant; that has not changed. And, if NDC enters into a Registry Agreement with ICANN, NDC will become the Registry Operator for .WEB. Second, NDC and Verisign are correct that ICANN does not use the mission and purpose information (set forth in Section 18 of the application) as part of the evaluation or scoring of an application. In this regard, NDC and Verisign also noted that numerous other applicants have changed the mission and purpose for their gTLDs over the course of time without revising those applications and without ICANN taking any punitive action in such circumstances. Moreover, as noted above, it is not uncommon for a Registry Agreement to be assigned to a different Registry Operator, which may have a different mission or purpose for the gTLD. Such an assignment does not equate to a “circumvention” of the application process but, rather, is a necessary component for servicing Registry Operators and allowing the continued operation of gTLDs.

In terms of the Auction Rules and the Bidder Agreement, the BAMC and the Board found that NDC did not violate those provisions because NDC always remained the bidder, the bids that it submitted were legitimate, and NDC was in fact able to fulfill its bid when it became the prevailing party at the auction. The Auction Rules and Bidder Agreement primarily relate to the mechanics of the auction, not the qualifications of an applicant, and the BAMC found that the language in these documents to which Altanovo points was not intended to disqualify an otherwise qualified applicant in these circumstances, a conclusion with which the Board agrees.

With regard to Altanovo’s claims regarding ICANN’s Core Value relating to competition, the BAMC and the Board note that the Panel understood and explicitly accepted that ICANN “does not have the power, authority, or expertise to act as a competition regulator by challenging or policing anticompetitive transactions or conduct.” The

Panel further noted that this “is consistent with a public statement once endorsed by [Altanovo], in which it was asserted [that] ‘[...] Neither ICANN nor the GNSO have the authority or expertise to act as anti-trust regulators.’” The BAMC and the Board note that ICANN’s Commitment and Core Value are directed at “enabl[ing] competition and open entry in Internet-related markets” and “[i]ntroducing and promoting competition in the registration of domain names where practicable and beneficial to the public interest as identified through the bottom-up, multistakeholder policy development process.” This sets the table for innovation and ensuring a stable, secure and interoperable Internet. This does not equate to being a competition “regulator,” as explicitly stated in the Bylaws (“For the avoidance of doubt, ICANN does not hold any governmentally authorized regulatory authority.”).

Based on the BAMC’s extensive review and discussion of the allegations relating to the DAA, the BAMC has recommended that the Board determine that NDC did not violate the Guidebook or the Auction Rules, either through entering into the DAA or through its participation in the .WEB auction, and that the Board direct the Interim President and CEO, or her designee(s), to continue processing NDC’s .WEB application.

The BAMC then discussed the allegations regarding Altanovo’s conduct during the “Blackout Period” of the .WEB auction but, ultimately, concluded and recommended that the Board need not make a final determination at this time as to whether Altanovo violated the Auction Rules. The Board agrees, but notes that auction participants have sufficient time in advance of an ICANN auction to discuss potential private resolution and, thus, should respect the no-communication rule during the designated Blackout Period.

Finally, there was considerable discussion within the BAMC regarding the fact that, in the next round of the New gTLD Program, ICANN org should consider whether to provide more guidance, in the Applicant Guidebook or otherwise, regarding agreements similar to the DAA, including whether those agreements should be disclosed and, if so, when, as well as what communications are and are not permissible leading up to an ICANN auction. The BAMC believes, and the Board agrees, that it is important for both the applicants and the application process as a whole that ICANN provide greater clarity in the next iteration of the Guidebook and auction rules regarding the transparency and notification requirements applicable throughout the various stages of the application and auction processes. Accordingly, the BAMC has recommended that the Board direct ICANN org to carefully consider such issues when developing the Guidebook and auction rules for the next round of the New gTLD Program.

Board Decision:

The BAMC requested, received, and considered the parties' submissions, and it devoted considerable portions of four separate meetings to this matter before issuing its recommendation. The auction for .WEB generated more money than any other ICANN auction but, regrettably, the ensuing disputes have also generated millions of dollars in legal fees by each of the relevant parties and delayed the delegation of .WEB for more than six years. The BAMC's work and recommendations on this matter were critical to the Board's evaluation of this matter.

The Board thanks Altanovo, NDC and Verisign for their participation in this process. It has been somewhat unique in ICANN's history for ICANN to request submissions from the interested parties, and Altanovo, NDC and Verisign participated fully and in good faith. The

Board respects the differences of opinion and has worked diligently to address the issues that the Panel recommended the Board address.

In consideration of the underlying facts, the submissions and supporting materials provided by the parties in July and August 2022 including, but not limited to, the DAA and affiliated documents, NDC's .WEB application, relevant provisions of the Guidebook, Auction Rules and Bidder Agreement, and various other materials, as well as the BAMC's analysis and recommendations, the Board has determined that NDC did not violate the Guidebook or the Auction Rules, either through entering into the DAA or through its participation in the .WEB auction.

No assignment of NDC's application has occurred and the information provided in NDC's application has not been rendered false. Rather, the DAA contemplates a possible future assignment of the Registry Agreement that NDC might enter into with ICANN, not an assignment of NDC's .WEB application. NDC remains the applicant and, in the event NDC enters into a Registry Agreement with ICANN, NDC will become the Registry Operator of .WEB. Whether or not NDC requests and is able to assign that agreement to Verisign is, at this point, an event that has not yet occurred. If NDC subsequently decides to request such an assignment, there are processes in place to review such a request, including the need for ICANN's approval of that request. Assignment of a Registry Agreement is not uncommon and it does not equate to a "circumvention" of the application process but, rather, is a necessary component for servicing Registry Operators and allowing the continued operation of gTLDs.

The Board further finds that NDC did not violate any Guidebook provision by not updating its application as a result of entering into the DAA. The Board notes that numerous other applicants have

changed the mission and purpose for their requested gTLDs over the course of time without revising those applications; in addition to the numerous occasions in which the mission and purpose for a gTLD has changed as a result of assignment of the Registry Agreement to a new Registry Operator. The Board further finds that NDC did not violate the Auction Rules or Bidder Agreement in that NDC always remained the bidder, the bids that it submitted were legitimate, and NDC was in fact able to fulfill its bid when it became the prevailing party at the auction, and as set forth above.

With regard to the Blackout Period claims, while the Board notes the issue raised regarding Altanovo's conduct during the Blackout Period, the Board has concluded that, in light of the Board's decision to continue processing NDC's .WEB application, it is not necessary to make a final determination at this time as to whether Altanovo violated the Blackout Period of the .WEB auction.

Finally, the Board acknowledges and agrees with the BAMC's recommendation regarding the importance of greater clarity regarding the transparency and notification requirements in the application and auction processes. The Board recognizes that numerous new gTLD Registry Agreements have been assigned and the Applicant Guidebook applicable to the 2012 round of the New gTLD Program does not address the myriad of circumstances under which such assignments might occur, and when such agreements may be entered into. In this respect, the Board has determined that it is prudent to take that into consideration when developing the guidelines, rules and procedures for the next round of the New gTLD Program. Thus, the Board is directing ICANN org to carefully consider the issues raised by the parties and the Panel in the .WEB IRP with regard to agreements similar to the DAA and communications prior to an ICANN auction when developing the Guidebook and auction rules

for the next round of the New gTLD Program in order to provide greater clarity to applicants regarding the transparency and notification requirements throughout the application and auction processes.

This action is within ICANN's Mission and is in the public interest as it is important to ensure that, in carrying out its Mission, ICANN is accountable to the community for operating within the Articles, Bylaws, and other established procedures. This accountability includes having a process in place by which a person or entity materially and adversely affected by a Board or organization action or inaction may challenge that action or inaction.

Taking this decision is not expected to have any immediate direct financial impact on ICANN. Further, this action should not have any direct impact on the security, stability or resiliency of the domain name system.

This is an Organizational Administrative function that does not require public comment.

3. Executive Session:

a. Confidential Matter

The Board entered into a confidential discussion and took action that shall remain confidential pursuant to Article 3, section 3.5.b of the ICANN Bylaws unless and until it is decided that the information be publicly released.

FINAL REPORT: PART B

ABSTRACT

This is the Generic Names Supporting Organization's Final Report on the Introduction of New Top-Level Domains. The Report is in two parts. Part A contains the substantive discussion of the Principles, Policy Recommendations and Implementation Guidelines and Part B contains a range of supplementary materials that have been used by the Committee during the course of the Policy Development Process.

The GNSO Committee on New Top-Level Domains consisted of all GNSO Council members. All meetings were open to a wide range of interested stakeholders and observers. A set of participation data is found in Part B.

Many of the terms found here have specific meaning within the context of ICANN and new top-level domains discussion. A full glossary of terms is available in the Reference Material section at the end of Part A.

BACKGROUND

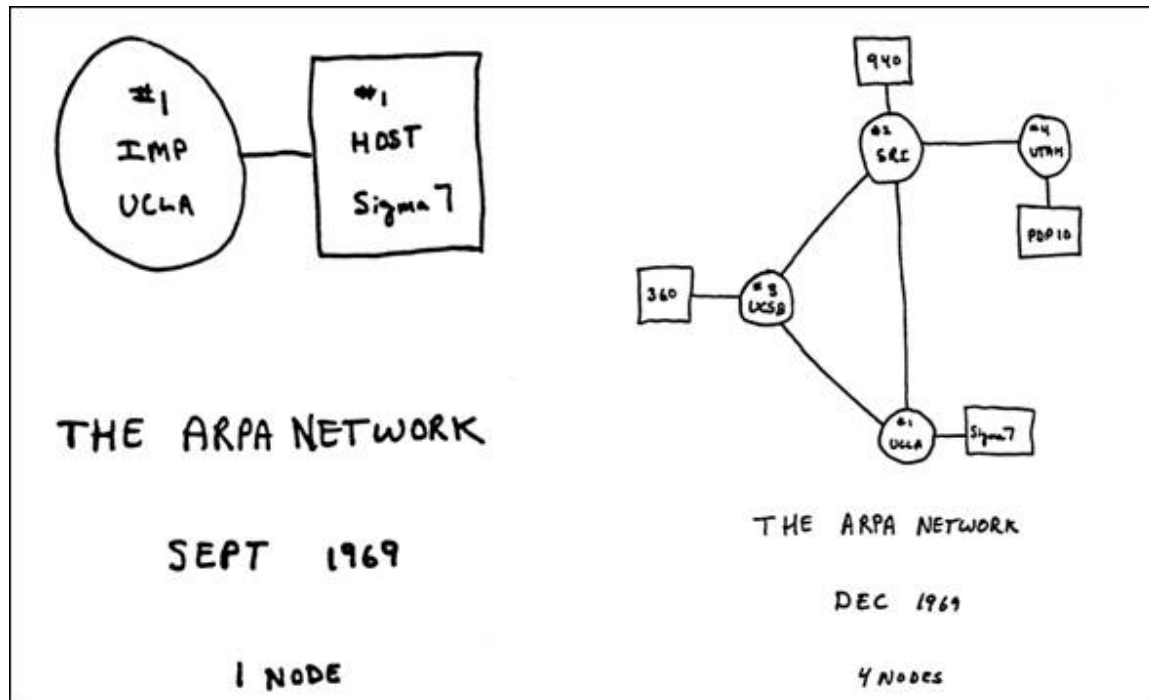

1. The Internet Corporation for Assigned Names and Numbers (ICANN) is responsible for the overall coordination of "the global Internet's system of unique identifiers" and ensuring the "stable and secure operation of the Internet's unique identifier systems. In particular, ICANN coordinates the "allocation and assignment of the three sets of unique identifiers for the Internet". These are "domain names"(forming a system called the DNS); Internet protocol (IP) addresses and autonomous system (AS) numbers and Protocol port and parameter numbers". ICANN is also responsible for the "operation and evolution of the DNS root name server system and policy development reasonably and appropriately related to these technical functions". These elements are all contained in ICANN's Mission and Core Values[1] in addition to provisions which enable policy development work that, once approved by the ICANN Board, become binding on the organization. The results of the policy development process found here relate to the introduction of new generic top-level domains.

2. This document is the *Final Report* of the Generic Names Supporting Organisation's (GNSO) Policy Development Process (PDP) that has been conducted using ICANN's Bylaws and policy development guidelines that relate to the work of the GNSO. This *Report* reflects a comprehensive examination of four Terms of Reference designed to establish a stable and ongoing process that facilitates the introduction of new top-level domains. The policy development process (PDP) is part of the Generic Names Supporting Organisation's (GNSO) mandate within the ICANN structure. However, close consultation with other ICANN Supporting Organisations and Advisory Committees has been an integral part of the process. The consultations and negotiations have also included a wide range of interested stakeholders from within and outside the ICANN community[2].

3. The *Final Report* is in two parts. This document is Part A and contains the full explanation of each of the Principles, Recommendations and Implementation Guidelines that the Committee has developed since December 2005[3]. Part B of the *Report* contains a wide range of supplementary materials which have been used in the policy development process including Constituency Impact Statements (CIS), a series of Working

Group Reports on important sub-elements of the Committee's deliberations, a collection of external reference materials, and the procedural documentation of the policy development process[4].

4. The finalisation of the policy for the introduction of new top-level domains is part of a long series of events that have dramatically changed the nature of the Internet. The 1969 ARPANET diagram shows the initial design of a network that is now global in its reach and an integral part of many lives and businesses. The policy recommendations found here illustrate the complexity of the Internet of 2007 and, as a package, propose a system to add new top-level domains in an orderly and transparent way. The ICANN Staff Implementation Team, consisting of policy, operational and legal staff members, has worked closely with the Committee on all aspects of the policy development process[5]. The ICANN Board has received regular information and updates about the process and the substantive results of the Committee's work.

5. The majority of the early work on the introduction of new top-level domains is found in the IETF's Request for Comment series. RFC 1034[6] is a fundamental resource that explains key concepts of the naming system. Read in conjunction with RFC920[7], an historical picture emerges of how and why the domain name system hierarchy has been organised. Postel & Reynolds set out in their RFC920 introduction about the "General Purpose Domains" that ... "While the initial domain name "ARPA" arises from the history of the development of this system and environment, in the future most of the top level names will be very general categories like "government", "education", or "commercial". The motivation is to provide an organization name that is free of undesirable semantics."

6. In 2007, the Internet is multi-dimensional and its development is driven by widespread access to inexpensive communications technologies in many parts of the world. In addition, global travel is now relatively inexpensive, efficient and readily available to a diverse range of travellers. As a consequence, citizens no longer automatically associate themselves with countries but with international communities of linguistic, cultural or professional interests independent of physical location. Many people now exercise multiple citizenship rights, speak many different languages and quite often live far from where they were born or educated. The 2007 OECD *Factbook*[8] provides comprehensive statistics about the impact of migration on OECD member countries. In essence, many populations are fluid and changing due in part to easing labour movement restrictions but also because technology enables workers to live in one place and work in

another relatively easily. As a result, companies and organizations are now global and operate across many geographic borders and jurisdictions. The following illustration[9] shows how rapidly the number of domain names under registration has increased and one could expect that trend to continue with the introduction of new top-level domains.

7. A key driver of change has been the introduction of competition in the registration of domain names through ICANN Accredited Registrars[10]. In June 2007, there were more than 800 accredited registrars who register names for end users with ongoing downward pressure on the prices end-users pay for domain name registration.

8. ICANN's work on the introduction of new top-level domains has been underway since 1999. By mid-1999, Working Group C[11] had quickly reached consensus on two issues, namely that "...ICANN should add new gTLDs to the root. The second is that ICANN should begin the deployment of new gTLDs with an initial rollout of six to ten new gTLDs, followed by an evaluation period". This work was undertaken throughout 2000 and saw the introduction of, for example, .coop, .aero and .biz.

9. After an evaluation period, a further round of sponsored TLDs was introduced during 2003 and 2004 which included, amongst others, .mobi and .travel[12].

10. The July 2007 zone file survey statistics from www.registrarstats.com[13] shows that there are slightly more than 96,000,000 top level domains registered across a selection of seven top-level domains including

.com, .net and .info. Evidence from potential new applicants provides more impetus to implement a system that enables the ongoing introduction of new top level domains[14]. In addition, interest from Internet users who could use Internationalised Domain Names (IDNs) in a wide variety of scripts beyond ASCII is growing rapidly.

11. To arrive at the full set of policy recommendations which are found here, the Committee considered the responses to a Call for Expert Papers issued at the beginning of the policy development process[15], and which was augmented by a full set of GNSO Constituency Statements[16]. These are all found in Part B of the *Final Report* and should be read in conjunction with this document. In addition, the Committee received detailed responses from the Implementation Team about proposed policy recommendations and the implementation of the recommendations package as an on-line application process that could be used by a wide array of potential applicants.

12. The Committee reviewed and analysed a wide variety of materials including Working Group C's findings, the evaluation reports from the 2003 & 2004 round of sponsored top-level domains and a full range of other historic materials[17].

13. In the past, a number of different approaches to new top level domains have been considered including the formulation of a structured taxonomy[18] of names, for example, .auto, .books, .travel and .music. The Committee has opted to enable potential applicants to self-select strings that are either the most appropriate for their customers or potentially the most marketable. It is expected that applicants will apply for targeted community strings such as .travel for the travel industry and .cat for the Catalan community as well as some generic strings. The Committee identified five key drivers for the introduction of new top-level domains.

- (i) It is consistent with the reasons articulated in 1999 when the first proof-of-concept round was initiated
- (ii) There are no technical impediments to the introduction of new top-level domains as evidenced by the two previous rounds
- (iii) Expanding the domain name space to accommodate the introduction of both new ASCII and internationalised domain name (IDN) top-level domains will give end users more choice about the nature of their presence on the Internet. In addition, users will be able to use domain names in their language of choice.
- (iv) There is demand for additional top-level domains as a business opportunity. The GNSO Committee expects that this business opportunity will stimulate competition at the registry service level which is consistent with ICANN's Core Value 6.
- (v) No compelling reason has been articulated to not proceed with accepting applications for new top-level domains.

14. The remainder of this Report is structured around the four *Terms of Reference*. This includes an explanation of the Principles that have guided the work taking into account the Governmental Advisory Committee's March 2007 *Public Policy Principles for New gTLDs*[19]; a comprehensive set of Recommendations which has majority Committee support and a set of Implementation Guidelines which has been discussed in great detail with the ICANN Staff Implementation Team. The Implementation Team has released two *ICANN Staff Discussion Points* documents (in November 2006 and June 2007). Version 2 provides detailed analysis of the proposed recommendations from an implementation standpoint and provides suggestions about the way in which the implementation plan may come together. The ICANN Board will make the final decision about the actual structure of the application and evaluation process.

15. In each of the sections below the Committee's recommendations are discussed in more detail with an explanation of the rationale for the decisions. The recommendations have been the subject of numerous

public comment periods and intensive discussion across a range of stakeholders including ICANN's GNSO Constituencies, ICANN Supporting Organisations and Advisory Committees and members of the broader Internet-using public that is interested in ICANN's work[20]. In particular, detailed work has been conducted through the Internationalised Domain Names Working Group (IDN-WG)[21], the Reserved Names Working Group (RN-WG)[22] and the Protecting the Rights of Others Working Group (PRO-WG) [23]. The Working Group Reports are found in full in Part B of the *Final Report* along with the March 2007 GAC Public Policy Principles for New Top-Level Domains, Constituency Impact Statements. A minority statement from the NCUC about Recommendations 6 & 20 are found Annexes for this document along with individual comments from Nominating Committee appointee Ms Avri Doria.

SUMMARY -- PRINCIPLES, RECOMMENDATIONS & IMPLEMENTATION GUIDELINES

1. This section sets out, in table form, the set of Principles, proposed Policy Recommendations and Guidelines that the Committee has derived through its work. The addition of new gTLDs will be done in accordance with ICANN's primary mission which is to ensure the security and stability of the DNS and, in particular, the Internet's root server system[24].
2. The Principles are a combination of GNSO Committee priorities, ICANN staff implementation principles developed in tandem with the Committee and the March 2007 GAC Public Policy Principles on New Top-Level Domains. The Principles are supported by all GNSO Constituencies.[25]
3. ICANN's Mission and Core Values were key reference points for the development of the Committee's Principles, Recommendations and Implementation Guidelines. These are referenced in the right-hand column of the tables below.
4. The Principles have support from all GNSO Constituencies.

	PRINCIPLES	MISSION & CORE VALUES
A	New generic top-level domains (gTLDs) must be introduced in an orderly, timely and predictable way.	M1 & CV1 & 2, 4-10
B	Some new generic top-level domains should be internationalised domain names (IDNs) subject to the approval of IDNs being available in the root.	M1-3 & CV 1, 4 & 6
C	The reasons for introducing new top-level domains include that there is demand from potential applicants for new top-level domains in both ASCII and IDN formats. In addition the introduction of new top-level domain application process has the potential to promote competition in the provision of registry services, to add to consumer choice, market differentiation and geographical and service-provider diversity.	M3 & CV 4-10
D	A set of technical criteria must be used for assessing a new gTLD registry applicant to minimise the risk of harming the operational stability, security and global interoperability of the Internet.	M1-3 & CV 1
E	A set of capability criteria for a new gTLD registry applicant must be used to provide an assurance that an applicant has the	M1-3 & CV 1

	capability to meets its obligations under the terms of ICANN's registry agreement.	
F	A set of operational criteria must be set out in contractual conditions in the registry agreement to ensure compliance with ICANN policies.	M1-3 & CV 1
G	The string evaluation process must not infringe the applicant's freedom of expression rights that are protected under internationally recognized principles of law.	

	RECOMMENDATIONS[26]	MISSION & CORE VALUES
1	<p>ICANN must implement a process that allows the introduction of new top-level domains.</p> <p>The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination.</p> <p>All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.</p>	M1-3 & CV1-11
2	Strings must not be confusingly similar to an existing top-level domain or a Reserved Name.	M1-3 & C1-6-11
3	<p>Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law.</p> <p>Examples of these legal rights that are internationally recognized include, but are not limited to, rights defined in the Paris Convention for the Protection of Industry Property (in particular trademark rights), the Universal Declaration of Human Rights (UDHR) and the International Covenant on Civil and Political Rights (ICCPR) (in particular freedom of expression rights).</p>	CV3
4	Strings must not cause any technical instability.	M1-3 & CV 1
5	Strings must not be a Reserved Word[27].	M1-3 & CV 1 & 3
6*	<p>Strings must not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law.</p> <p>Examples of such principles of law include, but are not limited to, the Universal Declaration of Human Rights (UDHR), the International Covenant on Civil and Political Rights (ICCPR), the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) and the International Convention on the Elimination of All Forms of Racial Discrimination, intellectual property treaties administered by the World Intellectual Property Organisation (WIPO) and the WTO Agreement on Trade-Related Aspects of Intellectual Property (TRIPS).</p>	M3 & CV 4

7	Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.	M1-3 & CV1
8	Applicants must be able to demonstrate their financial and organisational operational capability.	M1-3 & CV1
9	There must be a clear and pre-published application process using objective and measurable criteria.	M3 & CV6-9
10	There must be a base contract provided to applicants at the beginning of the application process.	CV7-9
11	[Replaced with Recommendation 20 and Implementation Guideline P and inserted into Term of Reference 3 Allocation Methods section]	
12	Dispute resolution and challenge processes must be established prior to the start of the process.	CV7-9
13	Applications must initially be assessed in rounds until the scale of demand is clear.	CV7-9
14	The initial registry agreement term must be of a commercially reasonable length.	CV5-9
15	There must be renewal expectancy.	CV5-9
16	Registries must apply existing Consensus Policies and adopt new Consensus Policies as they are approved.	CV5-9
17	A clear compliance and sanctions process must be set out in the base contract which could lead to contract termination.	M1 & CV1
18	If an applicant offers an IDN service, then ICANN's IDN guidelines ^[28] must be followed.	M1 & CV1
19	Registries must use only ICANN accredited registrars in registering domain names and may not discriminate among such accredited registrars.	M1 & CV1
20*	An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted.	

* The NCUC submitted Minority Statements on Recommendations 6 and 20. The remainder of the Recommendations have support from all GNSO Constituencies.

	IMPLEMENTATION GUIDELINES	MISSION & CORE VALUES
IG A	The application process will provide a pre-defined roadmap for applicants that encourages the submission of applications for new top-level domains.	CV 2, 5, 6, 8 & 9
IG B	Application fees will be designed to ensure that adequate resources exist to cover the total cost to administer the new gTLD process. Application fees may differ for applicants.	CV 5, 6, 8 & 9
IG C	ICANN will provide frequent communications with applicants and the public including comment forums.	CV 9 & 10
IG D	A first come first served processing schedule within the application round will be implemented and will continue for an ongoing process, if necessary. Applications will be time and date stamped on receipt.	CV 8-10
IG E	The application submission date will be at least four months after the issue of the Request for Proposal and ICANN will promote the opening of the application round.	CV 9 & 10
IG F*	If there is contention for strings, applicants may[29]: i) resolve contention between them within a pre-established timeframe ii) if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and; iii) the ICANN Board may be used to make a final decision, using advice from staff and expert panels.	CV 7-10
IG H*	Where an applicant lays any claim that the TLD is intended to support a particular community such as a sponsored TLD, or any other TLD intended for a specified community, that claim will be taken on trust with the following exceptions:	CV 7 - 10

	<p>(i) the claim relates to a string that is also subject to another application and the claim to support a community is being used to gain priority for the application; and</p> <p>(ii) a formal objection process is initiated.</p> <p>Under these exceptions, Staff Evaluators will devise criteria and procedures to investigate the claim.</p> <p>Under exception (ii), an expert panel will apply the process, guidelines, and definitions set forth in IG P.</p>	
IG H	External dispute providers will give decisions on objections.	CV 10
IG I	An applicant granted a TLD string must use it within a fixed timeframe which will be specified in the application process.	CV 10
IG J	The base contract should balance market certainty and flexibility for ICANN to accommodate a rapidly changing market place.	CV 4-10
IG K	ICANN should take a consistent approach to the establishment of registry fees.	CV 5
IG L	The use of personal data must be limited to the purpose for which it is collected.	CV 8
IG M	ICANN may establish a capacity building and support mechanism aiming at facilitating effective communication on important and technical Internet governance functions in a way that no longer requires all participants in the conversation to be able to read and write English[30].	CV 3 - 7
IG N	ICANN may put in place a fee reduction scheme for gTLD applicants from economies classified by the UN as least developed.	CV 3 - 7
IG O	ICANN may put in place systems that could provide information about the gTLD process in major languages other than English, for example, in the six working languages of the United Nations.	CV 8 -10
IG P*	<p>The following process, definitions and guidelines refer to Recommendation 20.</p> <p>Process</p>	

Opposition must be objection based.

Determination will be made by a dispute resolution panel constituted for the purpose.

The objector must provide verifiable evidence that it is an established institution of the community (perhaps like the RSTEP pool of panelists from which a small panel would be constituted for each objection).

Guidelines

The task of the panel is the determination of substantial opposition.

- a) **substantial** – in determining substantial the panel will assess the following: signification portion, community, explicitly targeting, implicitly targeting, established institution, formal existence, detriment
- b) **significant portion** – in determining significant portion the panel will assess the balance between the level of objection submitted by one or more established institutions and the level of support provided in the application from one or more established institutions. The panel will assess significance proportionate to the explicit or implicit targeting.
- c) **community** – community should be interpreted broadly and will include, for example, an economic sector, a cultural community, or a linguistic community. It may be a closely related community which believes it is impacted.
- d) **explicitly targeting** – explicitly targeting means there is a description of the intended use of the TLD in the application.
- e) **implicitly targeting** – implicitly targeting means that the objector makes an assumption of targeting or that the objector believes there may be confusion by users over its intended use.
- f) **established institution** – an institution that has been in formal existence for at least 5 years. In exceptional cases, standing may be granted to an institution that has been in existence for fewer than 5 years.

Exceptional circumstances include but are not limited to a re-organization, merger or an inherently younger community.

	<p>The following ICANN organizations are defined as established institutions: GAC, ALAC, GNSO, ccNSO, ASO.</p> <p style="padding-left: 40px;">g) formal existence – formal existence may be demonstrated by appropriate public registration, public historical evidence, validation by a government, intergovernmental organization, international treaty organization or similar.</p> <p style="padding-left: 40px;">h) detriment – the objector must provide sufficient evidence to allow the panel to determine that there would be a likelihood of detriment to the rights or legitimate interests of the community or to users more widely.</p>	
IG Q	<p>ICANN staff will provide an automatic reply to all those who submit public comments that will explain the objection procedure.</p>	
IG R	<p>Once formal objections or disputes are accepted for review there will be a cooling off period to allow parties to resolve the dispute or objection before review by the panel is initiated.</p>	

* The NCUC submitted Minority Statements on Implementation Guidelines F, H & P. The remainder of the Implementation Guidelines have support from all GNSO Constituencies.

1. This set of implementation guidelines is the result of detailed discussion, particularly with respect to the two *ICANN Staff Discussion Points*[31] documents that were prepared to facilitate consultation with the GNSO Committee about the implementation impacts of the proposed policy Recommendations. The Implementation Guidelines will be used to inform the final Implementation Plan which is approved by the ICANN Board

2. The *Discussion Points* documents contain draft flowcharts which have been developed by the Implementation Team and which will be updated, based on the final vote of the GNSO Council and the direction of the ICANN Board. The *Discussion Points* documents have been used in the ongoing internal implementation discussions that have focused on ensuring that draft recommendations proposed by the Committee are implementable in an efficient and transparent manner[32]. The flowchart setting out the proposed Contention Evaluation Process is a more detailed component within the Application Evaluation Process and will be amended to take into account the inputs from Recommendation 20 and its related Implementation Guidelines.

3. This policy development process has been designed to produce a systemised and ongoing mechanism for applicants to propose new top-level domains. The Request for Proposals (RFP) for the first round will include scheduling information for the subsequent rounds to occur within one year. After the first round of new applications, the application system will be evaluated by ICANN's TLDs Project Office to assess the effectiveness of the application system. Success metrics will be developed and any necessary adjustments made to the process for subsequent rounds.

4. The following sections set out in detail the explanation for the Committee's recommendations for each Term of Reference.

TERM OF REFERENCE ONE -- WHETHER TO INTRODUCE NEW TOP-LEVEL DOMAINS

1. **Recommendation 1 Discussion – All GNSO Constituencies supported the introduction of new top-level domains.**
2. The GNSO Committee was asked to address the question of whether to introduce new top-level domains. The Committee recommends that ICANN should implement a process that allows the introduction of new top level domains and that work should proceed to develop policies that will enable the introduction of new generic top-level domains, taking into account the recommendations found in the latter sections of the *Report* concerning Selection Criteria (Term of Reference 2), Allocation Methods (Term of Reference 3) and Policies for Contractual Conditions (Term of Reference 4).
3. ICANN's work on the introduction of new top-level domains has been ongoing since 1999. The early work included the 2000 Working Group C Report[33] that also asked the question of "whether there should be new TLDs". By mid-1999, the Working Group had quickly reached consensus on two issues, namely that "...ICANN should add new gTLDs to the root. The second is that ICANN should begin the deployment of new gTLDs with an initial rollout of six to ten new gTLDs, followed by an evaluation period". This work was undertaken throughout 2000 and saw the introduction of, for example, .coop, .aero and .biz.
4. After an evaluation period, a further round of sponsored TLDs was introduced during 2003 and 2004 which included, amongst others, .mobi and .travel.
5. In addressing Term of Reference One, the Committee arrived at its recommendation by reviewing and analysing a wide variety of materials including Working Group C's findings; the evaluation reports from the 2003-2004 round of sponsored top-level domains and full range of other historic materials which are posted at <http://gns0.icann.org/issues/new-gtlds/>
6. In addition, the Committee considered the responses to a Call for Expert Papers issued at the beginning of the policy development process[34]. These papers augmented a full set of GNSO Constituency Statements[35] and a set of Constituency Impact Statements[36] that addressed specific elements of the Principles, Recommendations and Implementation Guidelines.
7. The Committee was asked, at its February 2007 Los Angeles meeting, to confirm its rationale for recommending that ICANN introduce new top-level domains. In summary, there are five threads which have emerged:
 - (i) It is consistent with the reasons articulated in 1999 when the first proof-of-concept round was initiated
 - (ii) There are no technical impediments to the introduction of new top-level domains as evidenced by the two previous rounds
 - (iii) It is hoped that expanding the domain name space to accommodate the introduction of both new ASCII and internationalised domain name (IDN) top-level domains will give end users more choice about the nature of their presence on the Internet. In addition, users will be able to use domain names in their language of choice.
 - (iv) In addition, the introduction of a new top-level domain application process has the potential to promote competition in the provision of registry services, and to add to consumer choice, market differentiation and geographic and service-provider diversity which is consistent with ICANN's Core Value 6.

(v) No compelling reason has been articulated to not proceed with accepting applications for new top-level domains.

8. Article X, Part 7, Section E of the GNSO's Policy Development Process requires the submission of "constituency impact statements" which reflect the potential implementation impact of policy recommendations. By 4 July 2007 all GNSO Constituencies had submitted Constituency Impact Statements (CIS) to the gtld-council mailing list[37]. Each of those statements is referred to throughout the next sections[38] and are found in full in Part B of the *Report*. The NCUC submitted Minority Statements on Recommendations 6 & 20 and on Implementation Guidelines F, H & P. These statements are found in full here in Annex A & C, respectively, as they relate specifically to the finalised text of those two recommendations. GNSO Committee Chair and Nominating Committee appointee Ms Avri Doria also submitted individual comments on the recommendation package. Her comments are found in Annex B here.

9. All Constituencies support the introduction of new TLDs particularly if the application process is transparent and objective. For example, the ISPCP said that, "...the ISPCP is highly supportive of the principles defined in this section, especially with regards to the statement in [principle A] (A): New generic top-level domains must be introduced in an orderly, timely and predictable way. Network operators and ISPs must ensure their customers do not encounter problems in addressing their emails, and in their web searching and access activities, since this can cause customer dissatisfaction and overload help-desk complaints. Hence this principle is a vital component of any addition sequence to the gTLD namespace. The various criteria as defined in D, E and F, are also of great importance in contributing to minimise the risk of moving forward with any new gTLDs, and our constituency urges ICANN to ensure they are scrupulously observed during the applications evaluation process". The Business Constituency's (BC) CIS said that "...if the outcome is the best possible there will be a beneficial impact on business users from: a reduction in the competitive concentration in the Registry sector; increased choice of domain names; lower fees for registration and ownership; increased opportunities for innovative on-line business models." The Registrar Constituency (RC) agreed with this view stating that "...new gTLDs present an opportunity to Registrars in the form of additional products and associated services to offer to its customers. However, that opportunity comes with the costs if implementing the new gTLDs as well as the efforts required to do the appropriate business analysis to determine which of the new gTLDs are appropriate for its particular business model."

10. The Registry Constituency (RyC) said that "...Regarding increased competition, the RyC has consistently supported the introduction of new gTLDs because we believe that: there is a clear demand for new TLDs; competition creates more choices for potential registrants; introducing new TLDs with different purposes increases the public benefit; new gTLDs will result in creativity and differentiation in the domain name industry; the total market for all TLDs, new and old, will be expanded." In summary, the Committee recommended, "ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process". Given that this recommendation has support from all Constituencies, the following sections set out the other Terms of Reference recommendations.

TERM OF REFERENCE -- SELECTION CRITERIA

1. Recommendation 2 Discussion -- Strings must not be confusingly similar to an existing top-level domain.

- i) This recommendation has support from all the GNSO Constituencies. Ms Doria accepted the recommendation with the concern expressed below[39].
- ii) The list of existing top-level domains is maintained by IANA and is listed in full on ICANN's website[40]. Naturally, as the application process enables the operation of new top-level domains this list will get much longer and the test more complex. The RyC, in its Impact Statement, said that "...This recommendation is especially important to the RyC. ... It is of prime concern for the RyC that the introduction of new gTLDs results in a ubiquitous experience for Internet users that minimizes user confusion. gTLD registries will be impacted operationally and financially if new gTLDs are introduced that create confusion with currently existing gTLD strings or with strings that are introduced in the future. There is a strong possibility of significant impact on gTLD registries if IDN versions of existing ASCII gTLDs are introduced by registries different than the ASCII gTLD registries. Not only could there be user confusion in both email and web applications, but dispute resolution processes could be greatly complicated." The ISPCP also stated that this recommendation was "especially important in the avoidance of any negative impact on network activities." The RC stated that "...Registrars would likely be hesitant to offer confusingly similar gTLDs due to customer demand and support concerns. On the other hand, applying the concept too broadly would inhibit gTLD applicants and ultimately limit choice to Registrars and their customers".
- iii) There are two other key concepts within this recommendation. The first is the issue of "confusingly similar" [41] and the second "likelihood of confusion". There is extensive experience within the Committee with respect to trademark law and the issues found below have been discussed at length, both within the Committee and amongst the Implementation Team.
- iv) The Committee used a wide variety of existing law[42], international treaty agreements and covenants to arrive at a common understanding that strings should not be confusingly similar either to existing top-level domains like .com and .net or to existing trademarks[43]. For example, the Committee considered the World Trade Organisation's TRIPS agreement, in particular Article 16 which discusses the rights which are conferred to a trademark owner.[44] In particular, the Committee agreed upon an expectation that strings must avoid increasing opportunities for entities or individuals, who operate in bad faith and who wish to defraud consumers. The Committee also considered the Universal Declaration of Human Rights[45] and the International Covenant on Civil and Political Rights which address the "freedom of expression" element of the Committee's deliberations.
- v) The Committee also benefited from the work of the Protecting the Rights of Others Working Group (PRO-WG). The PRO-WG presented its *Final Report*[46] to the Committee at the June 2007 San Juan meeting. The Committee agreed that the Working Group could develop some reference implementation guidelines on rights protection mechanisms that may inform potential new TLD applicants during the application process. A small ad-hoc group of interested volunteers are preparing those materials for consideration by the Council by mid-October 2007.
- vi) The Committee had access to a wide range of differing approaches to rights holder protection mechanisms including the United Kingdom, the USA, Jordan, Egypt and Australia[47].
- vii) In addition, the Committee referred to the 1883 *Paris Convention on the Protection of Industrial Property*[48]. It describes the notion of confusion and describes creating confusion as "to create confusion by any means whatever" {Article 10bis (3) (1)} and, further, being "liable to mislead the public" {Article 10bis (3) (3)}. The treatment of confusingly similar is also contained in

European Union law (currently covering twenty-seven countries) and is structured as follows. "...because of its identity with or similarity to...there exists a likelihood of confusion on the part of the public...; the likelihood of confusion includes the likelihood of association..." {Article 4 (1) (b) of the 1988 EU Trade Mark directive 89/104/EEC}. Article 8 (1) (b) of the 1993 European Union Trade Mark regulation 40/94 is also relevant.

- viii) In the United States, existing trade mark law requires applicants for trademark registration to state under penalty of perjury that "...to the best of the verifier's knowledge and belief, no other person has the right to use such mark in commerce either in the identical form thereof or in such near resemblance thereto as to be likely, when used on or in connection with the goods of such other person, to cause confusion, or to cause mistake, or to deceive..." which is contained in Section 1051 (3) (d) of the US Trademark Act 2005 (found at <http://www.bitlaw.com/source/15usc/1051.html>).[49]
- ix) In Australia, the Australian Trade Marks Act 1995 Section 10 says that "...For the purposes of this Act, a trade mark is taken to be deceptively similar to another trade mark if it so nearly resembles that other trade mark that it is likely to deceive or cause confusion" (found at http://www.ipaustralia.gov.au/resources/legislation_index.shtml)
- x) A number of different trademark offices provide guidance on how to interpret confusion. For example, the European Union Trade Mark Office provides guidance on how to interpret confusion. "...confusion may be visual, phonetic or conceptual. A mere aural similarity may create a likelihood of confusion. A mere visual similarity may create a likelihood of confusion. Confusion is based on the fact that the relevant public does not tend to analyse a word in detail but pays more attention to the distinctive and dominant components. Similarities are more significant than dissimilarities. The visual comparison is based on an analysis of the number and sequence of the letters, the number of words and the structure of the signs. Further particularities may be of relevance, such as the existence of special letters or accents that may be perceived as an indication of a specific language. For words, the visual comparison coincides with the phonetic comparison unless in the relevant language the word is not pronounced as it is written. It should be assumed that the relevant public is either unfamiliar with that foreign language, or even if it understands the meaning in that foreign language, will still tend to pronounce it in accordance with the phonetic rules of their native language. The length of a name may influence the effect of differences. The shorter a name, the more easily the public is able to perceive all its single elements. Thus, small differences may frequently lead in short words to a different overall impression. In contrast, the public is less aware of differences between long names. The overall phonetic impression is particularly influenced by the number and sequence of syllables." (found at <http://oami.europa.eu/en/mark/marque/direc.htm>).
- xi) An extract from the United Kingdom's Trade Mark Office's Examiner's Guidance Manual is useful in explaining further the Committee's approach to developing its Recommendation. "For likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average consumer. Likelihood of association is not an alternative to likelihood of confusion, "but serves to define its scope". Mere association, in the sense that the later mark brings the earlier mark to mind is insufficient to find a likelihood of confusion, unless the average consumer, in bringing the earlier mark to mind, is led to expect the goods or services of both marks to be under the control of one single trade source. "The risk that the public might believe that the goods/services in question come from the same undertaking or, as the case may be, from economically-linked undertakings, constitutes a likelihood of confusion..." (found at <http://www.patent.gov.uk/tm/t-decisionmaking/t-law/t-law-manual.htm>)

- xii) The Committee also looked in detail at the existing provisions of ICANN's Registrar Accreditation Agreement, particularly Section 3.7.7.9[50] which says that "...The Registered Name Holder shall represent that, to the best of the Registered Name Holder's knowledge and belief, neither the registration of the Registered Name nor the manner in which it is directly or indirectly used infringes the legal rights of any third party."
- xiii) The implications of the introduction of Internationalised Domain Names (IDNs) are, in the main, the same as for ASCII top-level domains. On 22 March 2007 the IDN-WG released its *Outcomes Report*[51] that the Working Group presented to the GNSO Committee. The Working Group's exploration of IDN-specific issues confirmed that the new TLD recommendations are valid for IDN TLDs. The full IDN WG Report is found in Part B of the *Report*.
- xiv) The technical testing for IDNs at the top-level is not yet completed although strong progress is being made. Given this and the other work that is taking place around the introduction of IDNs at the top-level, there are some critical factors that may impede the immediate acceptance of new IDN TLD applications. The conditions under which those applications would be assessed would remain the same as for ASCII TLDs.
- xv) Detailed work continues on the preparation of an Implementation Plan that reflects both the Principles and the Recommendations. The proposed Implementation Plan deals with a comprehensive range of potentially controversial (for whatever reason) string applications which balances the need for reasonable protection of existing legal rights and the capacity to innovate with new uses for top level domains that may be attractive to a wide range of users[52].
- xvi) The draft Implementation Plan (included in the *Discussion Points* document), illustrates the flow of the application and evaluation process and includes a detailed dispute resolution and extended evaluation tracks designed to resolve objections to applicants or applications.
- xvii) There is tension between those on the Committee who are concerned about the protection of existing TLD strings and those concerned with the protection of trademark and other rights as compared to those who wish, as far as possible, to preserve freedom of expression and creativity. The *Implementation Plan* sets out a series of tests to apply the recommendation during the application evaluation process.

2. Recommendation 3 Discussion -- Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law. Examples of these legal rights that are internationally recognized include, but are not limited to, rights defined in the Paris Convention for the Protection of Industry Property (in particular trademark rights), the Universal Declaration of Human Rights (UDHR) and the International Covenant on Civil and Political Rights (ICCPR) (in particular freedom of expression rights).

- i. This recommendation has support from all GNSO Constituencies. Ms Doria supported the recommendation with concern expressed below[53].
- ii. This recommendation was discussed in detail in the lead up to the Committee's 7 June 2007 conference call and it was agreed that further work would be beneficial. That work was conducted through a series of teleconferences and email exchanges. The Committee decided to leave the recommendation text as it had been drafted and insert a new Principle G that reads "...The string evaluation process must not infringe the applicant's freedom of expression rights that are protected under internationally recognized principles of law."

- iii. Prior to this, the Committee engaged in comprehensive discussion about this recommendation and took advice from a number of experts within the group^[54]. The original text of the recommendation has been modified to recognise that an applicant would be bound by the laws of the country where they are located and an applicant may be bound by another country that has jurisdiction over them. In addition, the original formulation that included "freedom of speech" was modified to read the more generally applicable "freedom of expression".
- iv. Before reaching agreement on the final text, the IPC and the NCUC, in their respective Constituency Impact Statements (CIS), had differing views. The NCUC argued that "...there is no recognition that trade marks (and other legal rights have legal limits and *defenses*." The IPC says "agreed [to the recommendation], and, as stated before, appropriate mechanisms must be in place to address conflicts that may arise between any proposed new string and the IP rights of others."

3. Recommendation 4 Discussion -- Strings must not cause any technical instability.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. It was agreed by the Committee that the string should not cause any technical issues that threatened the stability and security of the Internet.
- iii. In its CIS, the ISPCP stated that "...this is especially important in the avoidance of any negative impact on network activities...The ISPCP considers recommendations 7 and 8 to be fundamental. The technical, financial, organizational and operational capability of the applicant are the evaluators' instruments for preventing potential negative impact on a new string on the activities of our sector (and indeed of many other sectors)." The IPC also agreed that "technical and operational stability are imperative to any new gTLD introduction." The RC said "...This is important to Registrars in that unstable registry and/or zone operations would have a serious and costly impact on its operations and customer service and support."
- iv. The Security and Stability Advisory Committee (SSAC) has been involved in general discussions about new top level domains and will be consulted formally to confirm that the implementation of the recommendations will not cause any technical instability.
- v. A reserved word list, which includes strings which are reserved for technical reasons, has been recommended by the RN-WG. This table is found in the section below.

4. Recommendation 5 Discussion -- Strings must not be a Reserved Word.^[55]

- i. This recommendation is supported by all GNSO Constituencies. Ms Doria supported the recommendation but expressed some concerns outlined in the footnote below.^[56]
- ii. The RN WG developed a definition of "reserved word" in the context of new TLDs which said "...depending on the specific reserved name category as well as the type (ASCII or IDN), the reserved name requirements recommended may apply in any one or more of the following levels as indicated:
 - 1. At the top level regarding gTLD string restrictions
 - 2. At the second-level as contractual conditions
 - 3. At the third-level as contractual conditions for any new gTLDs that offer domain name registrations at the third-level.
- iii. The notion of "reserved words" has a specific meaning within the ICANN context. Each of the existing ICANN registry contracts has provisions within it that govern the use of reserved words. Some

of these recommendations will become part of the contractual conditions for new registry operators.

- iv. The Reserved Names Working Group (RN-WG) developed a series of recommendations across a broad spectrum of reserved words. The Working Group's *Final Report*[57] was reviewed and the recommendations updated by the Committee at ICANN's Puerto Rico meeting and, with respect to the recommendations relating to IDNs, with IDN experts. The final recommendations are included in the following table.

	Reserved Name Category	Domain Name Level(s)	Recommendation
1	ICANN & IANA	All ASCII	The names listed as ICANN and IANA names will be reserved at all levels.
2	ICANN & IANA	Top level, IDN	Any names that appear in the IDN evaluation facility[58] which consist exclusively of translations of 'example' or 'test' that appear in the document at http://www.icann.org/topics/idn/idn-evaluation-plan-v2%209.pdf shall be reserved.
3	ICANN & IANA	2 nd & 3 rd levels, IDN	Any names that appear in the IDN evaluation facility which consist exclusively of translations of 'example' or 'test' that appear in the document at http://www.icann.org/topics/idn/idn-evaluation-plan-v2%209.pdf shall be reserved.
4	Symbols	All	We recommend that the current practice be maintained, so that no symbols other than the '-' [hyphen] be considered for use, with further allowance for any equivalent marks that may explicitly be made available in future revisions of the IDNA protocol.
5	Single and Two Character IDNs	IDNA-valid strings at all levels	Single and two-character U-labels on the top level and second level of a domain name should not be restricted in general. At the top level, requested strings should be analyzed on a case-by-case basis in the new gTLD process depending on the script and language used in order to determine whether the string should be granted for allocation in the DNS with particular caution applied to U-labels in Latin script (see Recommendation 10 below). Single and two character labels at the second level and the third level if applicable should be available for registration, provided they are consistent with the IDN Guidelines.

	Reserved Name Category	Domain Name Level(s)	Recommendation
6	Single Letters	Top Level	We recommend reservation of single letters at the top level based on technical questions raised. If sufficient research at a later date demonstrates that the technical issues and concerns are addressed, the topic of releasing reservation status can be reconsidered.
7	Single Letters and Digits	2 nd Level	In future gTLDs we recommend that single letters and single digits be available at the second (and third level if applicable).
8	Single and Two Digits	Top Level	A top-level label must not be a plausible component of an IPv4 or IPv6 address. (e.g., .3, .99, .123, .1035, .0xAF, .1578234)
9	Single Letter, Single Digit Combinations	Top Level	Applications may be considered for single letter, single digit combinations at the top level in accordance with the terms set forth in the new gTLD process. Examples include .3F, .A1, .u7.
10	Two Letters	Top Level	We recommend that the current practice of allowing two letter names at the top level, only for ccTLDs, remains at this time. [59] Examples include .AU, .DE, .UK.
11	Any combination of Two Letters, Digits	2 nd Level	Registries may propose release provided that measures to avoid confusion with any corresponding country codes are implemented.[60] Examples include ba.aero, ub.cat, 53.com, 3M.com, e8.org.
12	Tagged Names	Top Level ASCII	In the absence of standardization activity and appropriate IANA registration, all labels with hyphens in both the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n") must be reserved at the top-level.[61]
13	N/A	Top Level IDN	For each IDN gTLD proposed, applicant must provide both the "ASCII compatible encoding" ("A-label") and the "Unicode display form" ("U-label")[62] For example:

	Reserved Name Category	Domain Name Level(s)	Recommendation
			<ul style="list-style-type: none"> If the Chinese word for 'Beijing' is proposed as a new gTLD, the applicant would be required to provide the A-label (xn--1lq90i) and the U-label (北京). If the Japanese word for 'Tokyo' is proposed as a new gTLD, the applicant would be required to provide the A-label (xn--1lqs71d) and the U-label (東京).
14	Tagged Names	2 nd Level ASCII	The current reservation requirement be reworded to say, " <i>In the absence of standardization activity and appropriate IANA registration, all labels with hyphens in both the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n") must be reserved in ASCII at the second (2nd level.</i> [63] – added words in <i>italics</i> . (Note that names starting with "xn--" may only be used if the current ICANN IDN Guidelines are followed by a gTLD registry.)
15	Tagged Names	3 rd Level ASCII	All labels with hyphens in both the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n") must be reserved in ASCII at the third (3 rd level) for gTLD registries that register names at the third level." <i>[64] – added words in italics</i> . (Note that names starting with "xn--" may only be used if the current ICANN IDN Guidelines are followed by a gTLD registry.)
16	NIC, WHOIS, WWW	Top ASCII	The following names must be reserved: nic, whois, www.
17	NIC, WHOIS, WWW	Top IDN	Do not try to translate nic, whois and www into Unicode versions for various scripts or to reserve any ACE versions of such translations or transliterations if they exist.
18	NIC, WHOIS, WWW	Second and Third* ASCII	The following names must be reserved for use in connection with the operation of the registry for the Registry TLD: nic, whois, www Registry Operator may use them, but upon conclusion of Registry Operator's designation as operator of the registry for the Registry TLD, they shall be transferred as specified by ICANN. (*Third level only applies in cases where a registry offers registrations at the third level.)
19	NIC, WHOIS, WWW	Second and Third* IDN	Do not try to translate nic, whois and www into Unicode versions for various scripts or to reserve any ACE versions of such translations or transliterations if they exist, except on a case by case basis as proposed by given registries. (*Third

	Reserved Name Category	Domain Name Level(s)	Recommendation
			level only applies in cases where a registry offers registrations at the third level.)
20	Geographic and geopolitical	Top Level ASCII and IDN	<p>There should be no geographical reserved names (i.e., no exclusionary list, no presumptive right of registration, no separate administrative procedure, etc.). The proposed challenge mechanisms currently being proposed in the draft new gTLD process would allow national or local governments to initiate a challenge, therefore no additional protection mechanisms are needed. Potential applicants for a new TLD need to represent that the use of the proposed string is not in violation of the national laws in which the applicant is incorporated.</p> <p>However, new TLD applicants interested in applying for a TLD that incorporates a country, territory, or place name should be advised of the GAC Principles, and the advisory role vested to it under the ICANN Bylaws. Additionally, a summary overview of the obstacles encountered by previous applicants involving similar TLDs should be provided to allow an applicant to make an informed decision. Potential applicants should also be advised that the failure of the GAC, or an individual GAC member, to file a challenge during the TLD application process, does not constitute a waiver of the authority vested to the GAC under the ICANN Bylaws.</p> <p><i>Note New gTLD Recommendation 20</i></p>
21	Geographic and geopolitical	All Levels ASCII and IDN	<p>The term 'geopolitical names' should be avoided until such time that a useful definition can be adopted. The basis for this recommendation is founded on the potential ambiguity regarding the definition of the term, and the lack of any specific definition of it in the WIPO Second Report on Domain Names or GAC recommendations.</p> <p><i>Note New gTLD Recommendation 20</i></p>
22	Geographic and geopolitical	Second Level & Third Level if applicable,	<p>The consensus view of the working group is given the lack of any established international law on the subject, conflicting legal opinions, and conflicting recommendations emerging from various governmental fora, the current geographical reservation provision contained in the sTLD contracts during the 2004 Round should be removed, and harmonized with the</p>

	Reserved Name Category	Domain Name Level(s)	Recommendation
		ASCII & IDN	<p>more recently executed .COM, .NET, .ORG, .BIZ and .INFO registry contracts. The only exception to this consensus recommendation is those registries incorporated/organized under countries that require additional protection for geographical identifiers. In this instance, the registry would have to incorporate appropriate mechanisms to comply with their national/local laws.</p> <p>For those registries incorporated/organized under the laws of those countries that have expressly supported the guidelines of the WIPO Standing Committee on the Law of Trademarks, Industrial Designs and Geographical Indications as adopted by the WIPO General Assembly, it is strongly recommended (but not mandated) that these registries take appropriate action to promptly implement protections that are in line with these WIPO guidelines and are in accordance with the relevant national laws of the applicable Member State.</p> <p><i>Note New gTLD Recommendation 20</i></p>
23	gTLD Reserved Names	Second & Third Level ASCII and IDN (when applicable)	Absent justification for user confusion[65], the recommendation is that gTLD strings should no longer be reserved from registration for new gTLDs at the second or when applicable at the third level. Applicants for new gTLDs should take into consideration possible abusive or confusing uses of existing gTLD strings at the second level of their corresponding gTLD, based on the nature of their gTLD, when developing the startup process for their gTLD.
24	Controversial Names	All Levels, ASCII & IDN	There should not be a new reserved names category for Controversial Names.
25	Controversial Names	Top Level, ASCII & IDN	<p>There should be a list of disputed names created as a result of the dispute process to be created by the new gTLD process.</p> <p><i>Note New gTLD Recommendation 6</i></p>
26	Controversial Names	Top Level, ASCII & IDN	In the event of the initiation of a CN-DRP process, applications for that label will be placed in a HOLD status that

	Reserved Name Category	Domain Name Level(s)	Recommendation
			<p>work allowed for the dispute to be further examined. If the dispute is dismissed or otherwise resolved favorably, the applications will reenter the processing queue. The period of time allowed for dispute should be finite and should be relegated to the CN-DRP process. The external dispute process should be defined to be objective, neutral, and transparent. The outcome of any dispute shall not result in the development of new categories of Reserved Names.[66]</p> <p><i>Note New gTLD Recommendation 6</i></p>
27	Controversial Names	Top Level, ASCII & IDN	<p>The new GTLD Controversial Names Dispute Resolution Panel should be established as a standing mechanism that is convened at the time a dispute is initiated. Preliminary elements of that process are provided in this report but further work is needed in this area.</p> <p><i>Note New gTLD Recommendation 6</i></p>
28	Controversial Names	Top Level, ASCII & IDN	<p>Within the dispute process, disputes would be initiated by the ICANN Advisory Committees (e.g, ALAC or GAC) or supporting organizations (e.g, GNSO or ccNSO). As these organizations do not currently have formal processes for receiving, and deciding on such activities, these processes would need to be defined:</p> <ul style="list-style-type: none"> o The Advisory Groups and the Supporting Organizations, using their own processes and consistent with their organizational structure, will need to define procedures for deciding on any requests for dispute initiation. o Any consensus or other formally supported position from an ICANN Advisory Committee or ICANN Supporting Organization must document the position of each member within that committee or organization (i.e., support, opposition, abstention) in compliance with both the spirit and letter of the ICANN bylaws regarding openness and transparency. <p><i>Note New gTLD Recommendation 6</i></p>
29	Controversial Names	Top Level, ASCII & IDN	<p>Further work is needed to develop predictable and transparent criteria that can be used by the Controversial Resolution Panel. These criteria must take into account the need to:</p> <ul style="list-style-type: none"> ▪ 

- i. This Recommendation is supported by all GNSO Constituencies except the NCUC. The NCUC has submitted a Minority Statement which is found in full in Annex A. The NCUC's earlier Constituency Impact Statement is found, along with all the GNSO Constituency Impact Statements, in Part B of this report. Ms Doria has submitted individual comments^[67]. The Committee has discussed this recommendation in great detail and has attempted to address the experiences of the 2003-2004 sTLD round and the complex issues surrounding the .xxx application. The Committee has also recognised the GAC's Public Policy Principles, most notably Principle 2.1 a) and b) which refer to both freedom of expression and terms with significance in a variety of contexts. In addition, the Committee recognises the tension respecting freedom of expression and being sensitive to the legitimate concerns others have about offensive terms. The NCUC's earlier CIS says "...we oppose any string criteria based on morality and public order".
- ii. Other Constituencies did not address this recommendation in their CISs. The Implementation Team has tried to balance these views by establishing an Implementation Plan that recognises the practical effect of opening a new top-level domain application system that will attract applications that some members of the community do not agree with. Whilst ICANN does have a technical co-ordination remit, it must also put in place a system of handling objections to strings or to applicants, using pre-published criteria, that is fair and predictable for applicants. It is also necessary to develop guidance for independent evaluators tasked with making decisions about objections.
- iii. In its consideration of public policy aspects of new top-level domains the Committee examined the approach taken in a wide variety of jurisdictions to issues of morality and public order. This was done not to make decisions about acceptable strings but to provide a series of potential tests for independent evaluators to use should an objection be raised to an application. The use of the phrase "morality and public order" within the recommendation was done to set some guidelines for potential applicants about areas that may raise objections. The phrasing was also intended to set parameters for potential objectors so that any objection to an application could be analysed within the framework of broadly accepted legal norms that independent evaluators could use across a broad spectrum of possible objections. The Committee also sought to ensure that the objections process would have parameters set for who could object. Those suggested parameters are found within the Implementation Guidelines.
- iv. In reaching its decision about the recommendation, the Committee sought to be consistent with, for example, Article 3 (1) (f) of the 1988 European Union Trade Mark Directive 89/104/EEC and within Article 7 (1) (f) of the 1993 European Union Trade Mark Regulation 40/94. In addition, the phrasing "contrary to morality or public order and in particular of such a nature as to deceive the public" comes from Article 6quinques (B)(3) of the 1883 *Paris Convention*. The reference to the *Paris Convention* remains relevant to domain names even though, when it was drafted, domain names were completely unheard of.
- v. The concept of "morality" is captured in Article 19 United Nations Convention on Human Rights (<http://www.unhcr.ch/udhr/lang/eng.htm>) says "...Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers." Article 29 continues by saying that "...In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society".

- vi. The EU Trade Mark Office's Examiner's guidelines provides assistance on how to interpret morality and deceit. "...Contrary to morality or public order. Words or images which are offensive, such as swear words or racially derogatory images, or which are blasphemous are not acceptable. There is a dividing line between this and words which might be considered in poor taste. The latter do not offend against this provision." The further element is deception of the public which is treated in the following way. "...Deceive the public. To deceive the public, is for instance as to the nature, quality or geographical origin. For example, a word may give rise to a real expectation of a particular locality which is untrue." For more information, see Sections 8.7 and 8.8 at <http://oami.europa.eu/en/mark/marque/direc.htm>
- vii. The UK Trade Mark office provides similar guidance in its Examiner's Guidance Manual. "Marks which offend fall broadly into three types: those with criminal connotations, those with religious connotations and explicit/taboo signs. Marks offending public policy are likely to offend accepted principles of morality, e.g. illegal drug terminology, although the question of public policy may not arise against marks offending accepted principles of morality, for example, taboo swear words. If a mark is merely distasteful, an objection is unlikely to be justified, whereas if it would cause outrage or would be likely significantly to undermine religious, family or social values, then an objection will be appropriate. Offence may be caused on matters of race, sex, religious belief or general matters of taste and decency. Care should be taken when words have a religious significance and which may provoke greater offence than mere distaste, or even outrage, if used to parody a religion or its values. Where a sign has a very sacred status to members of a religion, mere use may be enough to cause outrage." For more information, see <http://www.patent.gov.uk/tm/t-decisionmaking/t-law/t-law-manual.htm>)
- viii. This recommendation has been the subject of detailed Committee and small group work in an attempt to reach consensus about both the text of the recommendation and the examples included as guidance about generally accepted legal norms. The work has been informed by detailed discussion within the GAC and through interactions between the GNSO Committee and the GAC.

6. Recommendation 7 Discussion -- Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. The Committee agreed that the technical requirements for applicants would include compliance with a minimum set of technical standards and that this requirement would be part of the new registry operator's contractual conditions included in the proposed base contract. The more detailed discussion about technical requirements has been moved to the contractual conditions section.
- iii. Reference was made to numerous Requests for Comment (RFCs) and other technical standards which apply to existing registry operators. For example, Appendix 7 of the June 2005 .net agreement^[68] provides a comprehensive listing of technical requirements in addition to other technical specifications in other parts of the agreement. These requirements are consistent with that which is expected of all current registry operators. These standards would form the basis of any new top-level domain operator requirements.
- iv. This recommendation is referred to in two CISs. "The ISPCP considers recommendations 7 and 8 to be fundamental. The technical, financial, organisational and operational capabilities of the applicant are the evaluators' instruments for preventing potential negative impact on a new string on the activities of our sector (and indeed of many other sectors)." The NCUC submitted "...we record that this must be limited to transparent, predictable and minimum technical

requirements only. These must be published. They must then be adhered to neutrally, fairly and without discrimination."

v. The GAC supported this direction in its Public Policy Principles 2.6, 2.10 and 2.11.

7. Recommendation 8 Discussion -- Applicants must be able to demonstrate their financial and organisational operational capability.

i. This recommendation is supported by all GNSO Constituencies and accepted with concern by Ms Doria[69].

ii. The Committee discussed this requirement in detail and determined that it was reasonable to request this information from potential applicants. It was also consistent with past practices including the prior new TLD rounds in 2000 and 2003-2004; the .net and .org rebids and the conditions associated with ICANN registrar accreditation.

iii. This is also consistent with best practice procurement guidelines recommended by the World Bank (www.worldbank.org), the OECD (www.oecd.org) and the Asian Development Bank (www.adb.org) as well as a range of federal procurement agencies such as the UK telecommunications regulator, Ofcom; the US Federal Communications Commission and major public companies.

iv. The challenging aspect of this recommendation is to develop robust and objective criteria against which applicants can be measured, recognising a vast array of business conditions and models. This will be an important element of the ongoing development of the Implementation Plan.

v. The ISPCP discussed the importance of this recommendation in its CIS, as found in Recommendation 7 above.

vi. The NCUC's CIS addressed this recommendation by saying "...we support this recommendation to the extent that the criteria is truly limited to minimum financial and organizational operational capability...All criteria must be transparent, predictable and minimum. They must be published. They must then be adhered to neutrally, fairly and without discrimination."

vii. The GAC echoed these views in its Public Policy Principle 2.5 that said "...the evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process."

8. Recommendation 9 Discussion -- There must be a clear and pre-published process using objective and measurable criteria.

i. This recommendation is supported by all GNSO Constituencies and by Ms Doria. It is consistent with ICANN's previous TLD rounds in 2000 and 2003-2004 and with its re-bid of both the .net and .org registry contracts.

ii. It is also consistent with ICANN's Mission and Core Values especially 7, 8 and 9 which address openness in decision-making processes and the timeliness of those processes.

iii. The Committee decided that the "process" criteria for introducing new top-level domains would follow a pre-published application system including the levying of an application fee to

recover the costs of the application process. This is consistent with ICANN's approach to the introduction of new TLDs in the previous 2000 and 2004 round for new top-level domains.

iv. The RyC reiterated its support for this recommendation in its CIS. It said that "...this Recommendation is of major importance to the RyC because the majority of constituency members incurred unnecessarily high costs in previous rounds of new gTLD introductions as a result of excessively long time periods from application submittal until they were able to start their business. We believe that a significant part of the delays were related to selection criteria and processes that were too subjective and not very measurable. It is critical in our opinion that the process for the introduction of new gTLDs be predictable in terms of evaluation requirements and timeframes so that new applicants can properly scope their costs and develop reliable implementation plans." The NCUC said that "...we strongly support this recommendation and again stress the need for all criteria to be limited to minimum operational, financial, and technical considerations. We all stress the need that all evaluation criteria be objective and measurable."

9. Recommendation 10 Discussion -- There must be a base contract provided to applicants at the beginning of the process.

- i. This recommendation is supported by all GNSO Constituencies and by Ms Doria.
- ii. The General Counsel's office has been involved in discussions about the provision of a base contract which would assist applicants both during the application process and in any subsequent contract negotiations.
- iii. A framework for the base contract was developed for discussion at the June 2007 ICANN meeting in Puerto Rico. The base contract will not be completed until the policy recommendations are in place. Completion of the policy recommendations will enable the completion of a draft base contract that would be available to applicants prior to the start of the new gTLD process, that is, prior to the beginning of the four-month window preceding the application submittal period.
- iv. The RyC, in its CIS, said, "...like the comments for Recommendation 9, we believe that this recommendation will facilitate a more cost-effective and timely application process and thereby minimize the negative impacts of a process that is less well-defined and objective. Having a clear understanding of base contractual requirements is essential for a new gTLD applicant in developing a complete business plan."

10. Recommendation 11 Discussion -- (This recommendation has been removed and is left intentionally blank. Note Recommendation 20 and its Implementation Guidelines).

11. Recommendation 12 Discussion -- Dispute resolution and challenge processes must be established prior to the start of the process.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
 - ii. The Committee has provided clear direction on its expectations that all the dispute resolution and challenge processes would be established prior to the opening of the application round. The full system will be published prior to an application round starting. However, the finalisation of this process is contingent upon a completed set of recommendations being agreed; a public comment period and the final agreement of the ICANN Board.
 - iii. The draft Implementation Plan in the Implementation Team *Discussion Points* document sets out the way in which the ICANN Staff proposes that disputes between applicants and challenge

processes may be handled. Expert legal and other professional advice from, for example, auctions experts is being sought to augment the Implementation Plan.

TERM OF REFERENCE THREE -- ALLOCATION METHODS

12. Recommendation 13 Discussion -- Applications must initially be assessed in rounds until the scale of demand is clear.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. This recommendation sets out the principal allocation methods for TLD applications. The narrative here should be read in conjunction with the draft flowcharts and the draft Request for Proposals.
- iii. An application round would be opened on Day 1 and closed on an agreed date in the future with an unspecified number of applications to be processed within that round.
- iv. This recommendation may be amended, after an evaluation period and report that may suggest modifications to this system. The development of objective "success metrics" is a necessary part of the evaluation process that could take place within the new TLDs Project Office.
- v. The ISPCP expressed its support for this recommendation. Its CIS said that "...this is an essential element in the deployment of new gTLDs, as it enables any technical difficulties to be quickly identified and sorted out, working with reduced numbers of new strings at a time, rather than many all at once. Recommendation 18 on the use of IDNs is also important in preventing any negative impact on network operators and ISPs."

13. Recommendation 20 Discussion -- An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted.

- i. This recommendation is supported by the majority of GNSO Constituencies. Ms Doria supports the recommendation but has concerns about its implementation^[70]. The NCUC has submitted a Minority Statement which is found in full in Annex C about the recommendation and its associated Implementation Guidelines F, H and P.
- ii. This recommendation was developed during the preparations for the Committee's 7 June 2007 conference call and during subsequent Committee deliberations. The intention was to factor into the process the very likely possibility of objections to applications from a wide variety of stakeholders.
- iii. The language used here is relatively broad and the implementation impact of the proposed recommendation is discussed in detail in the Implementation Team's *Discussion Points* document.
- iv. The NCUC's response to this recommendation in its earlier CIS says, in part, "...recommendation 20 swallows up any attempt to narrow the string criteria to technical, operational and financial evaluations. It asks for objections based on entirely subjective and unknowable criteria and for unlimited reasons and by unlimited parties." This view has, in part, been addressed in the Implementation Team's proposed plan but this requires further discussion and agreement by the Committee.

TERM OF REFERENCE FOUR -- CONTRACTUAL CONDITIONS

14. Recommendation 14 Discussion -- The initial registry agreement term must be of a commercially reasonable length.

- i. The remainder of the recommendations address Term of Reference Four on policies for contractual conditions and should be read in conjunction with Recommendation 10 on the provision of a base contract prior to the opening of an application round. The recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. This recommendation is consistent with the existing registry contract provisions found in, for example, the .com and .biz agreements.
- iii. These conditions would form the baseline conditions of term length for new TLD operators. It was determined that a term of ten years would reasonably balance the start up costs of registry operations with reasonable commercial terms.
- iv. The RyC commented on this recommendation in its CIS saying that "...the members of the RyC have learned first hand that operating a registry in a secure and stable manner is a capital intensive venture. Extensive infrastructure is needed both for redundant registration systems and global domain name constellations. Even the most successful registries have taken many years to recoup their initial investment costs. The RyC is convinced that these two recommendations [14 & 15] will make it easier for new applicants to raise the initial capital necessary and to continue to make investments needed to ensure the level of service expected by registrants and users of their TLDs. These two recommendations will have a very positive impact on new gTLD registries and in turn on the quality of the service they will be able to provide to the Internet community."

15. Recommendation 15 -- There must be renewal expectancy.

- i. This recommendation is consistent with the existing registry contract provisions found in, for example, the .com and .biz agreements and is supported by all Constituencies. Ms Doria supported the recommendation and provided the comments found in the footnote below.[71]
- ii. These conditions would form the baseline conditions of term length for new TLD operators. It was determined that a term of ten years would reasonably balance the start up costs of registry operations with reasonable commercial terms.
- iii. See the CIS comments from the RyC in the previous section.

16. Recommendation 16 -- Registries must apply existing Consensus Policies[72] and adopt new Consensus Policies as they are approved.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. The full set of existing ICANN registry contracts can be found here <http://www.icann.org/registries/agreements.htm> and ICANN's seven current Consensus Policies are found at <http://www.icann.org/general/consensus-policies.htm>.
- iii. ICANN develops binding Consensus Policies through its policy development processes, in this case, through the GNSO[73].

17. Recommendation 17 -- A clear compliance and sanctions process must be set out in the base contract which could lead to contract termination.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. Referring to the recommendations on contractual conditions above, this section sets out the discussion of the policies for contractual conditions for new top-level domain registry operators. The recommendations are consistent with the existing provisions for registry operators which were the subject of detailed community input throughout 2006[74].
- iii. The Committee developed its recommendations during the Brussels and Amsterdam face-to-face consultations, with assistance from the ICANN General Counsel's office. The General Counsel's office has also provided a draft base contract which will be completed once the policy recommendations are agreed. Reference should also be made to Recommendation 5 on reserved words as some of the findings could be part of the base contract.
- iv. The Committee has focused on the key principles of consistency, openness and transparency. It was also determined that a scalable and predictable process is consistent with industry best practice standards for services procurement. The Committee referred in particular to standards within the broadcasting, telecommunications and Internet services industries to examine how regulatory agencies in those environments conducted, for example, spectrum auctions, broadcasting licence distribution and media ownership frameworks.
- v. Since then ICANN has developed and published a new approach to its compliance activities. These are found on ICANN's website at <http://www.icann.org/compliance/> and will be part of the development of base contract materials.
- vi. The Committee found a number of expert reports[75] beneficial. In particular, the World Bank report on mobile licensing conditions provides some guidance on best practice principles for considering broader market investment conditions. "...A major challenge facing regulators in developed and developing countries alike is the need to strike the right balance between ensuring certainty for market players and preserving flexibility of the regulatory process to accommodate the rapidly changing market, technological and policy conditions. As much as possible, policy makers and regulators should strive to promote investors' confidence and give incentives for long-term investment. They can do this by favouring the principle of 'renewal expectancy', but also by promoting regulatory certainty and predictability through a fair, transparent and participatory renewal process. For example, by providing details for license renewal or reissue, clearly establishing what is the discretion offered to the licensing body, or ensuring sufficient lead-times and transitional arrangements in the event of non-renewal or changes in licensing conditions. Public consultation procedures and guaranteeing the right to appeal regulatory decisions maximizes the prospects for a successful renewal process. As technological changes and convergence and technologically neutral approaches gain importance, regulators and policy makers need to be ready to adapt and evolve licensing procedures and practices to the new environment."
- vii. The Recommendations which the Committee has developed with respect to the introduction of new TLDs are consistent with the World Bank principles.

18. Recommendation 18 Discussion -- If an applicant offers an IDN service, then ICANN's IDN guidelines must be followed.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria. The introduction of internationalised domain names at the root presents ICANN with a series of implementation challenges. This recommendation would apply to any new gTLD (IDN or ASCII

TLD) offering IDN services. The initial technical testing[76] has been completed and a series of live root tests will take place during the remainder of 2007.

ii. The Committee recognises that there is ongoing work in other parts of the ICANN organisation that needs to be factored into the application process that will apply to IDN applications. The work includes the President's Committee on IDNs and the GAC and ccNSO joint working group on IDNs.

19. Recommendation 19 Discussion -- Registries must use only ICANN accredited registrars in registering domain names and may not discriminate among such accredited registrars.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. There is a long history associated with the separation of registry and registrar operations for top-level domains. The structural separation of VeriSign's registry operations from Network Solutions registrar operations explains much of the ongoing policy to require the use of ICANN accredited registrars.
- iii. In order to facilitate the stable and secure operation of the DNS, the Committee agreed that it was prudent to continue the current requirement that registry operators be obliged to use ICANN accredited registrars.
- iv. ICANN's Registrar Accreditation Agreement has been in place since 2001[77]. Detailed information about the accreditation of registrars can be found on the ICANN website[78]. The accreditation process is under active discussion but the critical element of requiring the use of ICANN accredited registrars remains constant.
- v. In its CIS, the RyC noted that "...the RyC has no problem with this recommendation for larger gTLDs; the requirement to use accredited registrars has worked well for them. But it has not always worked as well for very small, specialized gTLDs. The possible impact on the latter is that they can be at the mercy of registrars for whom there is no good business reason to devote resources. In the New gTLD PDP, it was noted that this requirement would be less of a problem if the impacted registry would become a registrar for its own TLD, with appropriate controls in place. The RyC agrees with this line of reasoning but current registry agreements forbid registries from doing this. Dialog with the Registrars Constituency on this topic was initiated and is ongoing, the goal being to mutually agree on terms that could be presented for consideration and might provide a workable solution."

NEXT STEPS

1. Under the GNSO's Policy Development Process, the production of this *Final Report* completes Stage 9. The next steps are to conduct a twenty-day public comment period running from 10 August to 30 August 2007. The GNSO Council is due to meet on 6 September 2007 to vote on the package of principles, policy recommendations and implementation guidelines.
2. After the GNSO Council have voted the Council Report to the Board is prepared. The GNSO's PDP guidelines stipulate that "the Staff Manager will be present at the final meeting of the Council, and will have five (5) calendar days after the meeting to incorporate the views of the Council into a report to be submitted to the Board (the "Board Report"). The Board Report must contain at least the following:
 - a. A clear statement of any Supermajority Vote recommendation of the Council;

- b. If a Supermajority Vote was not reached, a clear statement of all positions held by Council members. Each statement should clearly indicate (i) the reasons underlying each position and (ii) the constituency(ies) that held the position;
 - c. An analysis of how the issue would affect each constituency, including any financial impact on the constituency;
 - d. An analysis of the period of time that would likely be necessary to implement the policy;
 - e. The advice of any outside advisors relied upon, which should be accompanied by a detailed statement of the advisor's (i) qualifications and relevant experience; and (ii) potential conflicts of interest;
 - f. The Final Report submitted to the Council; and
 - g. A copy of the minutes of the Council deliberation on the policy issue, including the all opinions expressed during such deliberation, accompanied by a description of who expressed such opinions.
3. It is expected that, according to the Bylaws, "...The Board will meet to discuss the GNSO Council recommendation as soon as feasible after receipt of the Board Report from the Staff Manager. In the event that the Council reached a Supermajority Vote, the Board shall adopt the policy according to the Council Supermajority Vote recommendation unless by a vote of more than sixty-six (66%) percent of the Board determines that such policy is not in the best interests of the ICANN community or ICANN. In the event that the Board determines not to act in accordance with the Council Supermajority Vote recommendation, the Board shall (i) articulate the reasons for its determination in a report to the Council (the "Board Statement"); and (ii) submit the Board Statement to the Council. The Council shall review the Board Statement for discussion with the Board within twenty (20) calendar days after the Council's receipt of the Board Statement. The Board shall determine the method (e.g., by teleconference, e-mail, or otherwise) by which the Council and Board will discuss the Board Statement. At the conclusion of the Council and Board discussions, the Council shall meet to affirm or modify its recommendation, and communicate that conclusion (the "Supplemental Recommendation") to the Board, including an explanation for its current recommendation. In the event that the Council is able to reach a Supermajority Vote on the Supplemental Recommendation, the Board shall adopt the recommendation unless more than sixty-six (66%) percent of the Board determines that such policy is not in the interests of the ICANN community or ICANN. In any case in which the Council is not able to reach Supermajority, a majority vote of the Board will be sufficient to act. When a final decision on a GNSO Council Recommendation or Supplemental Recommendation is timely, the Board shall take a preliminary vote and, where practicable, will publish a tentative decision that allows for a ten (10) day period of public comment prior to a final decision by the Board."
4. The final stage in the PDP is the implementation of the policy which is also governed by the Bylaws as follows, "...Upon a final decision of the Board, the Board shall, as appropriate, give authorization or direction to the ICANN staff to take all necessary steps to implement the policy."

Annex A – NCUC Minority Statement: Recommendation 6

STATEMENT OF DISSENT ON RECOMMENDATION #6 OF

GNSO'S NEW GTLD REPORT FROM

the Non-Commercial Users Constituency (NCUC)

20 July 2007

NCUC supports most of the recommendations in the GNSO's Final Report, but Recommendation #6 is one we cannot support.[79]

We oppose Recommendation #6 for the following reasons:

- 1) It will completely undermine ICANN's efforts to make the gTLD application process predictable, and instead make the evaluation process arbitrary, subjective and political;
- 2) It will have the effect of suppressing free and diverse expression;
- 3) It exposes ICANN to litigation risks;
- 4) It takes ICANN too far away from its technical coordination mission and into areas of legislating morality and public order.

We also believe that the objective of Recommendation #6 is unclear, in that much of its desirable substance is already covered by Recommendation #3. At a minimum, we believe that the words "relating to morality and public order" must be struck from the recommendation.

1) Predictability, Transparency and Objectivity

Recommendation #6 poses severe implementation problems. It makes it impossible to achieve the GNSO's goals of predictable and transparent evaluation criteria for new gTLDs.

Principle 1 of the New gTLD Report states that the evaluation process must be "predictable," and Recommendation #1 states that the evaluation criteria must be transparent, predictable, and fully available to applicants prior to their application.

NCUC strongly supports those guidelines. But no gTLD applicant can possibly know in advance what people or governments in a far away land will object to as "immoral" or contrary to "public order." When applications are challenged on these grounds, applicants cannot possibly know what decision an expert panel – which will be assembled on an ad hoc basis with no precedent to draw on – will make about it.

Decisions by expert panels on "morality and public order" *must* be subjective and arbitrary, because there is no settled and well-established international law regarding the relationship between TLD strings and morality and public order. There is no single "community standard" of morality that ICANN can apply to all applicants in every corner of the globe. What is considered "immoral" in Teheran may be easily accepted in Los Angeles or Stockholm; what is considered a threat to "public order" in China and Russia may not be in Brazil and Qatar.

2) Suppression of expression of controversial views

gTLD applicants will respond to the uncertainty inherent in a vague "morality and public order" standard and lack of clear standards by suppressing and avoiding any ideas that might generate controversy. Applicants will have to invest sizable sums of money to develop a gTLD application and see it through the ICANN process. Most of them will avoid risking a challenge under Recommendation #6. In other words, the presence of Recommendation #6 will result in self-censorship by most applicants.

That policy would strip citizens everywhere of their rights to express controversial ideas because someone else finds them offensive. This policy recommendation ignores international and national laws, in particular

freedom of expression guarantees that permit the expression of "immoral" or otherwise controversial speech on the Internet.

3) Risk of litigation

Some people in the ICANN community are under the mistaken impression that suppressing controversial gTLDs will protect it from litigation. Nothing could be further from the truth. By introducing subjective and culturally divisive standards into the evaluation process Recommendation #6 will increase the likelihood of litigation.

ICANN operates under authority from the US Commerce Department. It is undisputed that the US Commerce Department is prohibited from censoring the expression of US citizens in the manner proposed by Recommendation #6. The US Government cannot "contract away" the constitutional protections of its citizens to ICANN any more than it can engage in the censorship itself.

Adoption of Recommendation #6 invites litigation against ICANN to determine whether its censorship policy is compatible with the US First Amendment. An ICANN decision to suppress a gTLD string that would be permitted under US law could and probably would lead to legal challenges to the decision as a form of US Government action.

If ICANN left the adjudication of legal rights up to courts, it could avoid the legal risk and legal liability that this policy of censorship brings upon it.

4) ICANN's mission and core values

Recommendation #6 exceeds the scope of ICANN's technical mission. It asks ICANN to create rules and adjudicate disputes about what is permissible expression. It enables it to censor expression in domain names that would be lawful in some countries. It would require ICANN and "expert panels" to make decisions about permitting top-level domain names based on arbitrary "morality" judgments and other subjective criteria. Under Recommendation #6, ICANN will evaluate domain names based on ideas about "morality and public order" -- concepts for which there are varying interpretations, in both law and culture, in various parts of the world. Recommendation #6 risks turning ICANN into the arbiter of "morality" and "appropriate" public policy through global rules.

This new role for ICANN conflicts with its intended narrow technical mission, as embodied in its mission and core values. ICANN holds no legitimate authority to regulate in this entirely non-technical area and adjudicate the legal rights of others. This recommendation takes the adjudication of people's rights to use domain names out of the hands of democratically elected representatives and into the hands of "expert panels" or ICANN staff and board with no public accountability.

Besides exceeding the scope of ICANN's authority, Recommendation #6 seems unsure of its objective. It mandates "morality and public order" in domain names, but then lists, as examples of the type of rights to protect, the WTO TRIPS Agreement and all 24 World Intellectual Property (WIPO) Treaties, which deal with economic and trade rights, and have little to do with "morality and public order". Protection for intellectual property rights was fully covered in Recommendation #3, and no explanation has been provided as to why intellectual property rights would be listed again in a recommendation on "morality and public order", an entirely separate concept.

In conclusion Recommendation #6 exceeds ICANN's authority, ignores Internet users' free expression rights, and its adoption would impose an enormous burden on and liability for ICANN. It should not be adopted by the Board of Directors in the final policy decision for new gTlds.

Annex B – Nominating Committee Appointee Avri Doria[80]: Individual Comments

Comments from Avri Doria

The "Personal level of support" indications fall into 3 categories:

I Support: these are principles, recommendations or guidelines that are compatible with my personal opinions

I Support with concerns: While these principles, recommendations and guidelines are not incompatible with my personal opinions, I have some concerns about them.

I Accept with concern: these recommendations and guidelines do not necessarily correspond to my personal opinions, but I am able to accept them in that they have the broad support of the committee. I do, however, have concerns with these recommendations and guideline.

I believe these comments are consistent with comments I have made throughout the process and do not constitute new input.

Principles

#	Personal level of support	Explanation
A	Support	
B	Support with concerns	While I strongly support the introduction of IDN TLDS, I am concerned that the unresolved issues with IDN ccTLD equivalents may interfere with the introduction of IDN TLDS. I am also concerned that some of these issues could impede the introduction of some new ASCII TLDS dealing with geographically related identifiers.
C	Support	
D	Support with concerns	While I favor the establishment of a minimum set of necessary technical criteria, I am concerned that this set actually be the basic minimum set necessary to protect the stability, security and global interoperability.
E-G	Support	

Recommendations

#	Level of support	Explanation
1	Support	<p>My concern involves using definitions that rely on legal terminology established for trademarks for what I believe should be a policy based on technical criteria.</p> <p>I In the first instance I believe that this is essentially a technical issue that should have been resolved with reference to typography, homologies, orthographic neighbourhood, transliteration and other technically defined attributes of a name that would make it unacceptable. There is a large body of scientific and technical knowledge and description in this field that we could have drawn on.</p>
2	Accept with concern	<p>I By using terms that rely on the legal language of trademark law, I believe we have created an implicit redundancy between recommendations 2 and 3. I.e., I believe both 2 and 3 can be used to protect trademarks and other intellectual property rights, and while 3 has specific limitations, 2 remains open to full and varied interpretation.</p> <p>I As we begin to consider IDNs, I am concerned that the interpretations of confusingly similar may be used to eliminate many potential TLDs based on translation. That is, when a translation may have the same or similar meaning to an existing TLD, that the new name may be eliminated because it is considered confusing to users who know both languages.</p>
3	Support with concerns	<p>My first concern relates to the protection of what can be called the linguistic commons. While it is true that much of trademark law and practice does protect general vocabulary and common usage from trademark protection, I am not sure that this is always the case in practice.</p> <p>I am also not convinced that trademark law and policy that applies to specific product type within a specific locale is entirely compatible with a general and global naming system.</p>
4	Support	
5	Support with concerns	<p>Until such time as the technical work on IDNAbis is completed, I am concerned about establishing reserved name rules connected to IDNs. My primary concern involves policy decisions made in ICANN for reserved names becoming hard coded in the IDNAbis technical solution and thus becoming technical constraints that are no longer open to future policy reconsideration.</p>
6	Accept with concern	<p>My primary concern focuses on the term 'morality'. While public order is frequently codified in national laws and occasionally in international law and conventions, the definition of what constitutes morality is not generally codified, and when it is, I believe it could be referenced as public order.</p>

#	Level of support	Explanation
		<p>This concern is related to the broad set of definitions used in the world to define morality. By including morality in the list of allowable exclusions we have made the possible exclusion list indefinitely large and have subjected the process to the consideration of all possible religious and ethical systems. ICANN or the panel of reviewers will also have to decide between different sets of moral principles, e.g, a morality that holds that people should be free to express themselves in all forms of media and those who believe that people should be free from exposure to any expression that is prohibited by their faith or moral principles. This recommendation will also subject the process to the fashion and occasional demagoguery of political correctness. I do not understand how ICANN or any expert panel will be able to judge that something should be excluded based on reasons of morality without defining, at least de-facto, an ICANN definition of morality? And while I am not a strict constructionist and sometimes allow for the broader interpretation of ICANN's mission, I do not believe it includes the definition of a system of morality.</p>
7	Support	
8	Accept with concern	<p>While I accept that a prospective registry must show adequate operational capability, creating a financial criteria is of concern. There may be many different ways of satisfying the requirement for operational capability and stability that may not be demonstrable in a financial statement or traditional business plan. E.g., in the case of an less developed community, the registry may rely on volunteer effort from knowledgeable technical experts.</p> <p>Another concern I have with financial requirements and high application fees is that they may act to discourage applications from developing nations or indigenous and minority peoples that have a different set of financial opportunities or capabilities than those recognized as acceptable within an expensive and highly developed region such as Los Angeles or Brussels.</p>
9,10,12-14	Support	
15	Support with concerns	<p>In general I support the idea that a registry that is doing a good job should have the expectancy of renewal. I do, however, believe that a registry, especially a registry with general market dominance, or specific or local market dominance, should be subject to comment from the relevant user public and to evaluation of that public comment before renewal. When performance is satisfactory, there should an expectation of renewal. When performance is not satisfactory, there should be some procedure for correcting the situation before renewal.</p>
16-19	Support	

#	Level of support	Explanation
20	Support with concerns	In general I support the policy though I do have concerns about the implementation which I discuss below in relation to IG (P)

Implementation Guidelines

#	Level of support	Explanation
A-E	Support	
F	Accept with concern	In designing a New gTLD process, one of the original design goals had been to design a predictable and timely process that did not include the involvement of the Board of Directors except for very rare and exceptional cases and perhaps in the due diligence check of a final approval. My concern is that the use of Board in step (iii) may make them a regular part of many of the application procedure and may overload both the Board and the process. If every dispute can fall through to Board consideration in the process sieve, then the incentive to resolve the dispute earlier will be lessened.
G-M	Support	
N	Support with concerns	I strongly support the idea of financial assistance programs and fee reduction for less developed communities. I am concerned that not providing pricing that enables applications from less developed countries and communities may serve to increase the divide between the haves and the have nots in the Internet and may lead to a foreign 'land grab' of choice TLD names, especially IDN TLD names in a new form of resource colonialism because only those with well developed funding capability will be able to participate in the process as currently planned.
O	Support	
P	Support with concerns	<p>While I essentially agree with the policy recommendation and its implementation guideline, its social justice and fairness depends heavily on the implementation issues. While the implementation details are not yet settled, I have serious concerns about the published draft plans of the ICANN staff in this regard. The current proposal involves using fees to prevent vexatious or unreasonable objections. In my personal opinion this would be a cause of social injustice in the application of the policy as it would prejudice the objection policy in favor of the rich. I also believe that an objection policy based on financial means would allow for well endowed entities to object to any term they found objectionable, hence enabling them to be as vexatious as they wish to be.</p> <p>In order for an objection system to work properly, it must be fair and it must allow for any applicant to understand the basis on which they might have to answer an</p>

#	Level of support	Explanation
		<p>objection. If the policy and implementation are clear about objections only being considered when they can be shown to cause irreparable harm to a community then it may be possible to build a just process. In addition to the necessity for there to be strict filters on which potential objections are actually processed for further review by an objections review process, it is essential that an external and impartial professional review panel have a clear basis for judging any objections.</p> <p>I do not believe that the ability to pay for a review will provide a reasonable criteria, nor do I believe that financial barriers are an adequate filter for stopping vexatious or unreasonable objections though they are a sufficient barrier for the poor.</p> <p>I believe that ICANN should investigate other methods for balancing the need to allow even the poorest to raise an issue of irreparable harm while filtering out unreasonable disputes. I believe, as recommend in the Reserved Names Working group report, that the ALAC and GAC may be an important part of the solution. IG (P) currently includes support for treating ALAC and GAC as established institutions in regard to raising objections to TLD concerns. I believe this is an important part of the policy recommendation and should be retained in the implementation. I believe that it should be possible for the ALAC or GAC, through some internal procedure that they define, to take up the cause of the individual complainant and to request a review by the external expert review panel. Some have argued that this is unacceptable because it operationalizes these Advisory Committees. I believe we do have precedence for such an operational role for volunteers within ICANN and that it is in keeping with their respective roles and responsibilities as representatives of the user community and of the international community of nations. I strongly recommend that such a solution be included in the Implementation of the New gTLD process.</p>

Annex C – NCUC Minority Statement: Recommendation 20 and Implementation Guidelines F, H & P

STATEMENT OF DISSENT ON RECOMMENDATION #20 &

IMPLEMENTATION GUIDELINES F, H, & P IN THE

GNSO NEW GTLD COMMITTEE'S FINAL REPORT

FROM THE

NON-COMMERCIAL USERS CONSTITUENCY (NCUC)

RE: Domain Name Objection and Rejection Process

25 July 2007

Text of Recommendation #20:

"An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted."

Text of Implementation Guideline F:

If there is contention for strings, applicants may:

- i) resolve contention between them within a pre-established timeframe
- ii) if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and;
- iii) the ICANN Board may be used to make a final decision, using advice from staff and expert panels.

Text of Implementation Guideline H:

External dispute providers will give decisions on complaints.

Text of Implementation Guideline P:

The following process, definitions, and guidelines refer to Recommendation 20.

Process

Opposition must be objection based.

Determination will be made by a dispute resolution panel constituted for the purpose.

The objector must provide verifiable evidence that it is an established institution of the community (perhaps like the RSTEP pool of panelists from which a small panel would be constituted for each objection).

Guidelines

The task of the panel is the determination of substantial opposition.

a) substantial

In determining substantial the panel will assess the following: significant portion, community, explicitly targeting, implicitly targeting, established institution, formal existence, detriment.

b) significant portion:

In determining significant portion the panel will assess the balance between the level of objection submitted by one or more established institutions and the level of support provided in the application from one or more established institutions. The panel will assess significance proportionate to the explicit or implicit targeting.

c) community

Community should be interpreted broadly and will include for example an economic sector, a cultural community, or a linguistic community. It may also be a closely related community which believes it is impacted.

d) explicitly targeting

Explicitly targeting means there is a description of the intended use of the TLD in the application.

e) implicitly targeting

Implicitly targeting means that the objector makes an assumption of targeting or that the objector believes there may be confusion by users over its intended use.

f) established institution

An institution that has been in formal existence for at least 5 years. In exceptional cases, standing may be granted to an institution that has been in existence for fewer than 5 years. Exceptional circumstance include but are not limited to reorganisation, merger, or an inherently younger community. The following ICANN organizations are defined as established institutions: GAC, ALAC, GNSO, ccNSO, ASO.

g) formal existence

Formal existence may be demonstrated by: appropriate public registration, public historical evidence, validation by a government, intergovernmental organization, international treaty organisation or similar.

h) detriment

<< A >> Evidence of detriment to the community or to users more widely must be provided.

<< B >> [A likelihood of detriment to the community or to users more widely must be provided.]

Recommendation #20

The Non-Commercial Users Constituency (NCUC) Dissenting Statement on Recommendation #20 of the New GTLD Committee's Final Report[81] should be read in combination with Implementation Guidelines F, H & P, which detail the implementation of Recommendation #20. This statement should also be read in conjunction with its statement[82] of 13 June 2007 on the committee's draft report.

NCUC cannot support the committee's proposal for ICANN to establish a broad objection and rejection process for domain names that empowers ICANN and its "experts" to adjudicate the legal rights of domain name applicants (and objectors). The proposal would also empower ICANN and its "experts" to invent entirely new rights to domain names that do not exist in law and that will compete with existing legal rights to domains.

However "good-intentioned", the proposal would inevitably set up a system that decides legal rights based on subjective beliefs of "expert panels" and the amount of insider lobbying. The proposal would give "established institutions" veto power over applications for domain names to the detriment of innovators and start-ups. The proposal is further flawed because it makes no allowances for generic words to which no community claims exclusive "ownership" of. Instead, it wants to assign rights to use language based on subjective standards and will over-regulate to the detriment of competition, innovation, and free expression.

There is no limitation on the type of objections that can be raised to kill a domain name, no requirement that actual harm be shown to deny an application, and no recourse for the wrongful denial of legal rights by ICANN and its experts under this proposal. An applicant must be able to appeal decisions of ICANN and its experts to courts, who have more competence and authority to decide the applicant's legal rights. Legal due process requires maintaining a right to appeal these decisions to real courts.

The proposal is hopelessly flawed and will result in the improper rejection of many legitimate domain names. The reasons permitted to object to a domain are infinite in number. Anyone may make an objection; and an application will automatically be rejected upon a very low threshold of "detriment" or an even lower standard of "a likelihood of detriment" to anyone. Not a difficult bar to meet.

If ICANN attempted to put this policy proposal into practice it would intertwine itself in general policy debates, cultural clashes, business feuds, religious wars, and national politics, among a few of the disputes ICANN would have to rule on through this domain name policy.

The proposal operates under false assumptions of "communities" that can be defined, and that parties can be rightfully appointed representatives of "the community" by ICANN. The proposal gives preference to "established institutions" for domain names, and leaves applicants' without the backing of "established institutions" with little right to a top-level domain. The proposal operates to the detriment of small-scale start-ups and innovators who are clever enough to come up with an idea for a domain first, but lack the insider-connections and financial resources necessary to convince an ICANN panel of their worthiness.

It will be excessively expensive to apply for either a controversial or a popular domain name, so only well-financed "established institutions" will have both the standing and financial wherewithal to be awarded a top-level domain. The proposal privileges who is awarded a top-level domain, and thus discourages diversity of thought and the free flow of information by making it more difficult to obtain information on controversial ideas or from innovative new-comers.

Implementation Guideline F

NCUC does not agree with the part of Implementation Guideline F that empowers ICANN identified "communities" to support or oppose applications. Why should all "communities" agree before a domain name can be issued? How to decide who speaks for a "community"?

NCUC also notes that ICANN's Board of Directors would make the final decisions on applications and thus the legal rights of applicants under proposed IG-F. ICANN Board Members are not democratically elected, accountable to the public in any meaningful way, or trained in the adjudication of legal rights. Final decisions regarding legal rights should come from legitimate law-making processes, such as courts.

"Expert panels" or corporate officers are not obligated to respect an applicant's free expression rights and there is no recourse for a decision by the panel or ICANN for rights wrongfully denied. None of the "expert" panelists are democratically elected, nor accountable to the public for their decisions. Yet they will take decisions on the boundaries between free expression and trademark rights in domain names; and "experts" will decide what ideas are too controversial to be permitted in a domain name under this process.

Implementation Guideline H

Implementation Guideline H recommends a system to adjudicate legal rights that exists entirely outside of legitimate democratic law-making processes. The process sets up a system of unaccountable "private law" where "experts" are free to pick and choose favored laws, such as trademark rights, and ignore disfavored laws, such as free expression guarantees.

IG-H operates under the false premise that external dispute providers are authorized to adjudicate the legal rights of domain name applicants and objectors. It further presumes that such expert panels will be qualified to adjudicate the legal rights of applicants and others. But undertaking the creation of an entirely new international dispute resolution process for the adjudication of legal rights and the creation of new rights is not something that can be delegated to a team of experts. Existing international law that takes into account conflict of laws, choice of laws, jurisdiction, standing, and due process must be part of any legitimate process; and the applicant's legal rights including freedom of expression rights must be respected in the process.

Implementation Guideline P

"The devil is in the details" of Implementation Guideline P as it describes in greater detail the proposed adversarial dispute process to adjudicate legal rights to top-level domain names in Recommendation #20. IG-P mandates the rejection of an application if there is "substantial opposition" to it according to ICANN's expert panel. But "substantial" is defined in such a way so as to actually mean "insubstantial" and as a result many legitimate domain names would be rejected by such an extremely low standard for killing an application.

Under IG-P, opposition against and support for an application must be made by an "established institution" for it to count as "significant", again favoring major industry players and mainstream cultural institutions over cultural diversity, innovative individuals, small niche, and medium-sized Internet businesses.

IG-P states that "community" should be interpreted broadly, which will allow for the maximum number of objections to a domain name to count against an application. It includes examples of "the economic sector, cultural community or linguistic community" as those who have a right to complain about an application. It also includes any "related community which believes it is impacted." So anyone who claims to represent a community and believes to be impacted by a domain name can file a complaint and have standing to object to another's application.

There is no requirement that the objection be based on legal rights or the operational capacity of the applicant. There is no requirement that the objection be reasonable or the belief about impact to be

reasonable. There is no requirement that the harm be actual or verifiable. The standard for "community" is entirely subjective and based on the personal beliefs of the objector.

The definition of "implicitly targeting" further confirms this subjective standard by inviting objections where "the objector makes the assumption of targeting" and also where "the objector believes there may be confusion by users". Such a subjective process will inevitably result in the rejection of many legitimate domain names.

Picking such a subjective standard conflicts with Principle A in the Final Report that states domain names must be introduced in a "predictable way", and also with Recommendation 1 that states "All applicants for a new gTLD registry should be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process." The subjectivity and unpredictability invited into the process by Recommendation #20 turn Principle A and Recommendation 1 from the same report upside down.

Besides the inherent subjectivity, the standard for killing applications is remarkably low. An application need not be intended to serve a particular community for "community-based" objections to kill the application under the proposal. Anyone who believed that he or she was part of the targeted community or who believes others face "detriment" have standing to object to a domain name, and the objection weighs in favor of "significant opposition". This standard is even lower than the "reasonable person" standard, which would at least require that the belief be "reasonable" for it to count against an applicant. The proposed standard for rejecting domains is so low it even permits unreasonable beliefs about a domain name to weigh against an applicant.

If a domain name does cause confusion, existing trademark law and unfair competition law have dealt with it for years and already balanced intellectual property rights against free expression rights in domain names. There is neither reason nor authority for ICANN processes to overtake the adjudication of legal rights and invite unreasonable and illegitimate objections to domain names.

IG-P falsely assumes that the number of years in operation is indicative of one's right to use language. It privileges entities over 5 years old with objection rights that will effectively veto innovative start-ups who cannot afford the dispute resolution process and will be forced to abandon their application to the incumbents.

IG-P sets the threshold for harm that must be shown to kill an application for a domain name remarkably low. Indeed harm need not be actual or verified for an application to be killed based on "substantial opposition" from a single objector.

Whether the committee selects the unbounded definition for "detriment" that includes a "likelihood of detriment" or the narrower definition of "evidence of detriment" as the standard for killing an application for a domain name is largely irrelevant. The difference is akin to re-arranging the deck chairs on the Titanic. ICANN will become bogged down with the approval of domain names either way, although it is worth noting that "likelihood of detriment" is a very long way from "substantial harm" and an easy standard to meet, so will result in many more domain names being rejected.

The definitions and guidelines detailed in IG-P invite a lobby-fest between competing businesses, instill the "heckler's veto" into domain name policy, privilege incumbents, price out of the market non-commercial applicants, and give third-parties who have no legal rights to domain names the power to block applications for those domains. A better standard for killing an application for non-technical reasons would be for a domain name to be shown to be illegal in the applicant's jurisdiction before it can be rejected.

In conclusion, the committee's recommendation for domain name objection and rejection processes are far too broad and unwieldy to be put into practice. They would stifle freedom of expression, innovation, cultural diversity, and market competition. Rather than follow existing law, the proposal would set up an illegitimate process that usurps jurisdiction to adjudicate peoples' legal rights (and create new rights) in a process

designed to favor incumbents. The adoption of this "free-for-all" objection and rejection process will further call into question ICANN's legitimacy to govern and its ability to serve the global public interest that respects the rights of all citizens.

NCUC respectfully submits that ICANN will best serve the global public interest by resisting the temptation to stray from its technical mandate and meddle in international lawmaking as proposed by Rec. #20 and IG-F, IG-H, and IG-P of the New GTLD Committee Final Report.

REFERENCE MATERIAL -- GLOSSARY[83]

TERM	ACRONYM & EXPLANATION
A-label	The A-label is what is transmitted in the DNS protocol and this is the ASCII-compatible (ACE) form of an IDNA string; for example "xn--11b5bs1di".
ASCII Compatible Encoding	ACE ACE is a system for encoding Unicode so each character can be transmitted using only the letters a-z, 0-9 and hyphens. Refer also to http://www.ietf.org/rfc/rfc3467.txt?number=3467
American Standard Code for Information Exchange	ASCII ASCII is a common numerical code for computers and other devices that work with text. Computers can only understand numbers, so an ASCII code is the numerical representation of a character such as 'a' or '@'. See above referenced RFC for more information.
Advanced Research Projects Agency	ARPA http://www.darpa.mil/body/arpa_darpa.html
Commercial & Business Users Constituency	CBUC http://www.bizconst.org/
Consensus Policy	A defined term in all ICANN registry contracts usually found in Article 3 (Covenants). See, for example, http://www.icann.org/tlds/agreements/biz/registry-agmt-08dec06.htm

Country Code Names Supporting Organization	<p>ccNSO</p> <p>http://ccnso.icann.org/</p>
Country Code Top Level Domain	<p>ccTLD</p> <p>Two letter domains, such as .uk (United Kingdom), .de (Germany) and .jp (Japan) (for example), are called country code top level domains (ccTLDs) and correspond to a country, territory, or other geographic location. The rules and policies for registering domain names in the ccTLDs vary significantly and ccTLD registries limit use of the ccTLD to citizens of the corresponding country.</p> <p>Some ICANN-accredited registrars provide registration services in the ccTLDs in addition to registering names in .biz, .com, .info, .name, .net and .org, however, ICANN does not specifically accredit registrars to provide ccTLD registration services.</p> <p>For more information regarding registering names in ccTLDs, including a complete database of designated ccTLDs and managers, please refer to http://www.iana.org/cctld/cctld.htm.</p>
Domain Names	<p>The term domain name has multiple related meanings: A name that identifies a computer or computers on the internet. These names appear as a component of a Web site's URL, e.g. www.wikipedia.org. This type of domain name is also called a hostname.</p> <p>The product that Domain name registrars provide to their customers. These names are often called registered domain names.</p> <p>Names used for other purposes in the Domain Name System (DNS), for example the special name which follows the @ sign in an email address, or the Top-level domains like .com, or the names used by the Session Initiation Protocol (VoIP), or DomainKeys.</p> <p>http://en.wikipedia.org/wiki/Domain_names</p>
Domain Name System	<p>The Domain Name System (DNS) helps users to find their way around the Internet. Every computer on the Internet has a unique address - just like a telephone number - which is a rather complicated string of numbers. It is called its "IP address" (IP stands for "Internet Protocol"). IP Addresses are hard to remember. The DNS makes using the Internet easier by allowing a familiar string of letters (the "domain name") to be used instead of the arcane IP address. So instead of typing 207.151.159.3, you can type www.internic.net. It is a "mnemonic" device that makes addresses easier to remember.</p>
Generic Top Level Domain	<p>gTLD</p>

	<p>Most TLDs with three or more characters are referred to as "generic" TLDs, or "gTLDs". They can be subdivided into two types, "sponsored" TLDs (sTLDs) and "unsponsored TLDs (uTLDs), as described in more detail below.</p> <p>In the 1980s, seven gTLDs (.com, .edu, .gov, .int, .mil, .net, and .org) were created. Domain names may be registered in three of these (.com, .net, and .org) without restriction; the other four have limited purposes.</p> <p>In 2001 & 2002 four new unsponsored TLDs (.biz, .info, .name, and .pro) were introduced. The other three new TLDs (.aero, .coop, and .museum) were sponsored.</p> <p>Generally speaking, an unsponsored TLD operates under policies established by the global Internet community directly through the ICANN process, while a sponsored TLD is a specialized TLD that has a sponsor representing the narrower community that is most affected by the TLD. The sponsor thus carries out delegated policy-formulation responsibilities over many matters concerning the TLD.</p>
Governmental Advisory Committee	<p>GAC</p> <p>http://gac.icann.org/web/index.shtml</p>
Intellectual Property Constituency	<p>IPC</p> <p>http://www.ipconstituency.org/</p>
Internet Service & Connection Providers Constituency	<p>ISPCP</p>
Internationalized Domain Names	<p>IDNs</p> <p>IDNs are domain names represented by local language characters. These domain names may contain characters with diacritical marks (required by many European languages) or characters from non-Latin scripts like Arabic or Chinese.</p>
Internationalized Domain Names in Application	<p>IDNA</p> <p>IDNA is a protocol that makes it possible for applications to handle domain names with non-ASCII characters. IDNA converts domain names with non-ASCII characters to ASCII labels that the DNS can accurately understand. These standards are developed within the IETF (http://www.ietf.org)</p>

<p>Internationalized Domain Names – Labels</p>	<p>IDN A Label</p> <p>The A-label is what is transmitted in the DNS protocol and this is the ASCII-compatible ACE) form of an IDN A string. For example "xn-1lq90i".</p> <p>IDN U Label</p> <p>The U-label is what should be displayed to the user and is the representation of the IDN in Unicode. For example "北京" ("Beijing" in Chinese).</p> <p>LDH Label</p> <p>The LDH-label strictly refers to an all-ASCII label that obeys the "hostname" (LDH) conventions and that is not an IDN; for example "icann" in the domain name "icann.org"</p>
<p>Internationalized Domain Names Working Group</p>	<p>IDN-WG</p> <p>http://forum.icann.org/lists/gnso-idn-wg/</p>
<p>Letter Digit Hyphen</p>	<p>LDH</p> <p>The hostname convention used by domain names before internationalization. This meant that domain names could only practically contain the letters a-z, digits 0-9 and the hyphen "-". The term "LDH code points" refers to this subset. With the introduction of IDNs this rule is no longer relevant for all domain names.</p> <p>The LDH-label strictly refers to an all-ASCII label that obeys the "hostname" (LDH) conventions and that is not an IDN; for example "icann" in the domain name "icann.org".</p>
<p>Nominating Committee</p>	<p>NomCom</p> <p>http://nomcom.icann.org/</p>
<p>Non-Commercial Users Constituency</p>	<p>NCUC</p> <p>http://www.ncdnhc.org/</p>
<p>Policy Development Process</p>	<p>PDP</p> <p>See http://www.icann.org/general/archive-bylaws/bylaws-28feb06.htm#AnnexA</p>

Protecting the Rights of Others Working Group	<p>PRO-WG</p> <p>See the mailing list archive at http://forum.icann.org/lists/gnso-pro-wg/</p>
Punycode	<p>Punycode is the ASCII-compatible encoding algorithm described in Internet standard [RFC3492]. This is the method that will encode IDNs into sequences of ASCII characters in order for the Domain Name System (DNS) to understand and manage the names. The intention is that domain name registrants and users will never see this encoded form of a domain name. The sole purpose is for the DNS to be able to resolve for example a web-address containing local characters.</p>
Registrar	<p>Domain names ending with .aero, .biz, .com, .coop, .info, .museum, .name, .net, .org, and .pro can be registered through many different companies (known as "registrars") that compete with one another. A listing of these companies appears in the Accredited Registrar Directory.</p> <p>The registrar asks registrants to provide various contact and technical information that makes up the domain name registration. The registrar keeps records of the contact information and submits the technical information to a central directory known as the "registry."</p>
Registrar Constituency	<p>RC</p> <p>http://www.icann-registrars.org/</p>
Registry	<p>A registry is the authoritative, master database of all domain names registered in each Top Level Domain. The registry operator keeps the master database and also generates the "zone file" which allows computers to route Internet traffic to and from top-level domains anywhere in the world. Internet users don't interact directly with the registry operator. Users can register names in TLDs including .biz, .com, .info, .net, .name, .org by using an ICANN-Accredited Registrar.</p>
Registry Constituency	<p>RyC</p> <p>http://www.gtldregistries.org/</p>
Request for Comment	<p>RFC</p> <p>ftp://ftp.rfc-editor.org/in-notes/rfc1591.txt</p>

<p>A full list of all Requests for Comment http://www.rfc-editor.org/rfcxx00.html</p> <p>Specific references used in this report are shown in the next column.</p> <p>This document uses language, for example, "should", "must" and "may", consistent with RFC2119.</p>	<p>ftp://ftp.rfc-editor.org/in-notes/rfc2119.txt</p> <p>ftp://ftp.rfc-editor.org/in-notes/rfc2606.txt</p>
<p>Reserved Names Working Group</p>	<p>RN-WG</p> <p>See the mailing list archive at http://forum.icann.org/lists/gnso-rn-wg/</p>
<p>Root server</p>	<p>A root nameserver is a DNS server that answers requests for the root namespace domain, and redirects requests for a particular top-level domain to that TLD's nameservers. Although any local implementation of DNS can implement its own private root nameservers, the term "root nameserver" is generally used to describe the thirteen well-known root nameservers that implement the root namespace domain for the Internet's official global implementation of the Domain Name System.</p> <p>All domain names on the Internet can be regarded as ending in a full stop character e.g. "en.wikipedia.org.". This final dot is generally implied rather than explicit, as modern DNS software does not actually require that the final dot be included when attempting to translate a domain name to an IP address. The empty string after the final dot is called the root domain, and all other domains (i.e. .com, .org, .net, etc.) are contained within the root domain.</p> <p>http://en.wikipedia.org/wiki/Root_server</p>
<p>Sponsored Top Level Domain</p>	<p>sTLD</p> <p>A Sponsor is an organization to which some policy making is delegated from ICANN. The sponsored TLD has a Charter, which defines the purpose for which the sponsored TLD has been created and will be operated. The Sponsor is responsible for developing policies on the delegated topics so that the TLD is operated for the benefit of a defined group of stakeholders, known as the Sponsored TLD Community, that are most directly interested in the operation of the TLD. The Sponsor also is responsible for selecting the registry operator and to varying degrees for establishing the roles played by registrars and their relationship with the registry operator. The Sponsor must exercise its delegated authority according to fairness standards</p>

	and in a manner that is representative of the Sponsored TLD Community.
U-label	The U-label is what should be displayed to the user and is the representation of the Internationalized Domain Name (IDN) in Unicode.
Unicode Consortium	A not-for-profit organization found to develop, extend and promote use of the Unicode standard. See http://www.unicode.org
Unicode	Unicode is a commonly used single encoding scheme that provides a unique number for each character across a wide variety of languages and scripts. The Unicode standard contains tables that list the code points for each local character identified. These tables continue to expand as more characters are digitalized.

[39] "My concern involves using definitions that rely on legal terminology established for trademarks for what I believe should be a policy based on technical criteria.

In the first instance I believe that this is essentially a technical issue that should have been resolved with reference to typography, homologues, orthographic neighbourhood, transliteration and other technically defined attributes of a name that would make it unacceptable. There is a large body of scientific and technical knowledge and description in this field that we could have drawn on.

By using terms that rely on the legal language of trademark law, I believe we have created an implicit redundancy between recommendations 2 and 3. I.e., I believe both 2 and 3 can be used to protect trademarks and other intellectual property rights, and while 3 has specific limitations, 2 remains open to full and varied interpretation.

As we begin to consider IDNs, I am concerned that the interpretations of confusingly similar may be used to eliminate many potential TLDs based on translation. That is, when a translation may have the same or similar meaning to an existing TLD, that the new name may be eliminated because it is considered confusing to users who know both languages."

[40] <http://data.iana.org/TLD/tlds-alpha-by-domain.txt>

[41] See section 4A -- <http://www.icann.org/udrp/udrp-policy-24oct99.htm>.

[42] In addition to the expertise within the Committee, the NCUC provided, as part of its Constituency Impact Statement expert outside advice from Professor Christine Haight Farley which said, in part, "...A determination about whether use of a mark by another is "confusingly similar" is simply a first step in the analysis of infringement. As the committee correctly notes, account will be taken of visual, phonetic and conceptual similarity. But this determination does not end the analysis. Delta Dental and Delta Airlines are confusingly similar, but are not like to cause confusion, and therefore do not infringe. ... In trademark law, where there is confusing similarity and the mark is used on similar goods or services, a likelihood of confusion will usually be found. European trademark law recognizes this point perhaps more readily than U.S. trademark law. As a result, sometimes "confusingly similar" is used as shorthand for "likelihood of confusion". However, these concepts must remain distinct in domain name policy where there is no opportunity to consider how the mark is being used."

[43] In addition, advice was sought from experts within WIPO who continue to provide guidance on this and other elements of dispute resolution procedures.

[44] Kristina Rosette provided the reference to the *Agreement on Trade-Related Aspects of Intellectual Property Rights* which is found online at http://www.wto.org/english/tratop_e/trips_e/t_agm1_e.htm

"...Article 16^[SEP] Rights Conferred^[SEP]1. The owner of a registered trademark shall have the exclusive right to prevent all third parties not having the owner's consent from using in the course of trade identical or similar signs for goods or services which are identical or similar to those in respect of which the trademark is registered where such use would result in a likelihood of confusion. In case of the use of an identical sign for identical goods or services, a likelihood of confusion shall be presumed. The rights described above shall not prejudice any existing prior rights, nor shall they affect the possibility of Members making rights available on the basis of use...."

[45] <http://www.ohchr.org/english/bodies/hrc/comments.htm>

[46] <http://gnso.icann.org/drafts/GNSO-PRO-WG-final-01Jun07.pdf>

[47] Charles Sha'ban provided a range of examples from Arabic speaking countries. For example, in Jordan, Article 7^[SEP] Trademarks eligible for registration are^[SEP]1- A trademark shall be registered if it is distinctive, as to words, letters, numbers, figures, colors, or other signs or any combination thereof and visually perceptible.^[SEP]2- For the purposes of this Article, "distinctive" shall mean applied in a manner which secures distinguishing the goods of the proprietor of the trademark from those of other persons. Article 8^[SEP] Marks which may not be registered as trademarks. The following may not be registered as trademarks: 10- A mark identical with one belonging to a different proprietor which is already entered in the register in respect of the same goods or class of goods for which the mark is intended to be registered, or so closely resembling such trademark to the extent that it may lead to deceiving third parties.

12- The trademark which is identical or similar to, or constitutes a translation of, a well-known trademark for use on similar or identical goods to those for which that one is well-known for and whose use would cause confusion with the well-known mark, or for use of different goods in such a way as to prejudice the interests of the owner of the well-known mark and leads to believing that there is a connection between its owner and those goods as well as the marks which are similar or identical to the honorary badges, flags, and other insignia as well as the names and abbreviations relating to international or regional organizations or those that offend our Arab and Islamic age-old values.

In Oman for example, Article 2 of the Sultan Decree No. 38/2000 states:

"The following shall not be considered as trademarks and shall not be registered as such: ^[SEP]If the mark is identical, similar to a degree which causes confusion, or a translation of a trademark or a commercial name known in the Sultanate of Oman with respect to identical or similar goods or services belonging to another business, or if it is known and registered in the Sultanate of Oman on goods and service which are neither identical nor similar to those for which the mark is sought to be registered provided that the usage of the mark on those goods or services in this last case will suggest a connection between those goods or services and the owner of the known trademark and such use will cause damage to the interests of the owner of the known trademark."

Although the laws In Egypt do not have specific provisions regarding confusion they stress in great detail the importance of distinctiveness of a trade mark.

Article 63 in the IP Law of Egypt No.82 for the year 2002 states:

"A trademark is any sign distinguishing goods, whether products or services, and include is particular names represented in a distinctive manner, signatures, words, letters, numerals, design, symbols, signposts, stamps, seal, drawings, engravings, a combination of distinctly formed colors and any other combination of these elements if used, or meant to be used, to distinguish the precedents of a particular industry, agriculture,

forest or mining venture or any goods, or to indicate the origin of products or goods or their quality, category, guarantee, preparation process, or to indicate the provision of any service. In all cases, a trademark shall be a sign that is recognizable by sight."

[48] Found at http://www.wipo.int/treaties/en/ip/paris/trtdocs_wo020.ht with 171 contracting parties.

[49] Further information can be found at the US Patent and Trademark Office's website <http://www.uspto.gov/>

[50] Found at <http://www.icann.org/registrars/ra-agreement-17may01.htm#3>

[51] Found at <http://gnso.icann.org/drafts/idn-wg-fr-22mar07.htm>.

[52] The 2003 correspondence between ICANN's then General Counsel and the then GAC Chairman is also useful <http://www.icann.org/correspondence/touton-letter-to-tarmizi-10feb03.htm>.

[53] "My first concern relates to the protection of what can be called the linguistic commons. While it is true that much of trademark law and practice does protect general vocabulary and common usage from trademark protection, I am not sure that this is always the case in practice. I am also not convinced that trademark law and policy that applies to specific product type within a specific locale is entirely compatible with a general and global naming system."

[54] For example, David Maher, Jon Bing, Steve Metalitz, Philip Sheppard and Michael Palage.

[55] Reserved Word has a specific meaning in the ICANN context and includes, for example, the reserved word provisions in ICANN's existing registry contracts. See <http://www.icann.org/registries/agreements.htm>.

[56] "Until such time as the technical work on IDNAbis is completed, I am concerned about establishing reserved name rules connected to IDNs. My primary concern involves policy decisions made in ICANN for reserved names becoming hard coded in the IDNAbis technical solution and thus becoming technical constraints that are no longer open to future policy reconsideration."

[57] Found online at <http://gnso.icann.org/issues/new-gtlds/final-report-rn-wg-23may07.htm> and in full in Part B of the *Report*.

[58] The Committee are aware that the terminology used here for the purposes of policy recommendations requires further refinement and may be at odds with similar terminology developed in other context. The terminology may be imprecise in other contexts than the general discussion about reserved words found here.

[59] The subgroup was encouraged by the ccNSO not to consider removing the restriction on two-letter names at the top level. IANA has based its allocation of two-letter names at the top level on the ISO 3166 list. There is a risk of collisions between any interim allocations, and ISO 3166 assignments which may be desired in the future.

[60] The existing gTLD registry agreements provide for a method of potential release of two-character LDH names at the second level. In addition, two character LDH strings at the second level may be released through the process for new registry services, which process involves analysis of any technical or security concerns and provides opportunity for public input. Technical issues related to the release of two-letter and/or number strings have been addressed by the RSTEP Report on GNR's proposed registry service. The GAC has previously noted the WIPO II Report statement that "If ISO 3166 alpha-2 country code elements are to be registered as domain names in the gTLDs, it is recommended that this be done in a manner that minimises the potential for confusion with the ccTLDs."

[61] Considering that the current requirement in all 16 registry agreement reserves "All labels with hyphens in the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n")", this requirement reserves any names having any of a combination of 1296 different prefixes (36x36).

[62] Internet Draft IDNAbis Issues: <http://www.ietf.org/internet-drafts/draft-klensin-idnabis-issues-01.txt> (J. Klensin), Section 3.1.1.1

[63] Considering that the current requirement in all 16 registry agreement reserves "All labels with hyphens in the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n")", this requirement reserves any names having any of a combination of 1296 different prefixes (36x36).

[64] Considering that the current requirement in all 16 registry agreement reserves "All labels with hyphens in the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n")", this requirement reserves any names having any of a combination of 1296 different prefixes (36x36).

[65] With its recommendation, the sub-group takes into consideration that justification for potential user confusion (i.e., the minority view) as a result of removing the contractual condition to reserve gTLD strings for new TLDs may surface during one or more public comment periods.

[66] Note that this recommendation is a continuation of the recommendation in the original RN-WG report, modified to synchronize with the additional work done in the 30-day extension period.

[67] Ms Doria said "...My primary concern focuses on the term 'morality'. While public order is frequently codified in national laws and occasionally in international law and conventions, the definition of what constitutes morality is not generally codified, and when it is, I believe it could be referenced as public order. This concern is related to the broad set of definitions used in the world to define morality. By including morality in the list of allowable exclusions we have made the possible exclusion list indefinitely large and have subjected the process to the consideration of all possible religious and ethical systems. ICANN or the panel of reviewers will also have to decide between different sets of moral principles, e.g, a morality that holds that people should be free to express themselves in all forms of media and those who believe that people should be free from exposure to any expression that is prohibited by their faith or moral principles. This recommendation will also subject the process to the fashion and occasional demagoguery of political correctness. I do not understand how ICANN or any expert panel will be able to judge that something should be excluded based on reasons of morality without defining, at least de-facto, an ICANN definition of morality? And while I am not a strict constructionist and sometimes allow for the broader interpretation of ICANN's mission, I do not believe it includes the definition of a system of morality."

[68] <http://www.icann.org/tlds/agreements/net/appendix7.html>

[69] 'While I accept that a prospective registry must show adequate operational capability, creating a financial criteria is of concern. There may be many different ways of satisfying the requirement for operational capability and stability that may not be demonstrable in a financial statement or traditional business plan. E.g., in the case of an less developed community, the registry may rely on volunteer effort from knowledgeable technical experts.

Another concern I have with financial requirements and high application fees is that they may act to discourage applications from developing nations or indigenous and minority peoples that have a different set of financial opportunities or capabilities than those recognized as acceptable within an expensive and highly developed region such as Los Angeles or Brussels."

[70] "In general I support the policy though I do have concerns about the implementation which I discuss below in relation to IG (P)".

[71] "In general I support the idea that a registry that is doing a good job should have the expectancy of renewal. I do, however, believe that a registry, especially a registry with general market dominance, or specific or local market dominance, should be subject to comment from the relevant user public and to evaluation of that public comment before renewal. When performance is satisfactory, there should an

expectation of renewal. When performance is not satisfactory, there should be some procedure for correcting the situation before renewal."

[72] Consensus Policies has a particular meaning within the ICANN environment. Refer to <http://www.icann.org/general/consensus-policies.htm> for the full list of ICANN's Consensus Policies.

[79] Text of Recommendation #6: "Strings must not be contrary to generally accepted legal norms relating to morality and public order that are enforceable under generally accepted and internationally recognized principles of law. Examples of such principles of law include, but are not limited to, the Universal Declaration of Human Rights (UDHR), the International Covenant on Civil and Political Rights (ICCPR), the Convention on the Elimination of all forms of Discrimination Against Women (CEDAW) and the International Convention on the Elimination of All Forms of Racial Discrimination, intellectual property treaties administered by the World Intellectual Property Organisation (WIPO) and the WTO Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS)."

[80] Ms Doria took over from former GNSO Council Chairman (and GNSO new TLDs Committee Chairman) Dr Bruce Tonkin on 7 June 2007. Ms Doria's term runs until 31 January 2008.

International Dispute Resolution Procedures

(Including Mediation and Arbitration Rules)

Introduction

The International Centre for Dispute Resolution® (“ICDR®”) is the international division of the American Arbitration Association® (“AAA®”). The ICDR provides dispute resolution services around the world in locations chosen by the parties. ICDR arbitrations and mediations may be conducted in any language chosen by the parties. The ICDR Procedures reflect best international practices that are designed to deliver efficient, economic, and fair proceedings.

These Procedures are designed to provide a complete dispute resolution framework for parties to a dispute, their counsel, arbitrators, and mediators. They provide a balance between the autonomy of the parties to agree to the dispute resolution process they want and the need for process management by mediators and arbitrators.

The UNCITRAL (The United National Commission on International Trade Law) Model Law’s definition of an international arbitration has been incorporated by the ICDR for the purpose of determining whether a case is international. An arbitration may be deemed international and administered by the ICDR if the parties to an arbitration agreement have:

- their places of business in different countries;
- the place where a substantial part of the obligations of their commercial relationship to be performed is situated outside the country of any party;
- the place with which the subject-matter of the dispute is most closely connected is situated outside the country of any party;
- the place of arbitration is situated outside the country of any party; or
- one party with more than one place of business (including parent and/or subsidiary) is situated outside the country of any party.

Whenever a singular term is used in the International Mediation Rules or International Arbitration Rules, such as “party,” “claimant,” or “arbitrator,” that

term shall include the plural if there is more than one such entity. Whenever any party is not participating, the reference to the “parties” shall mean the participating party or parties.

The English-language version of these Rules is the official text.

International Mediation

The parties may seek to settle their dispute through mediation. Mediation may be scheduled independently of arbitration or concurrently with the scheduling of the arbitration. In mediation, an impartial and independent mediator assists the parties in reaching a settlement but does not have the authority to make a binding decision or award. The updated International Mediation Rules provide an enhanced framework that allows for a broad range of practices, cultures and approaches towards the resolution of international disputes from parties located around the world.

Features of the International Mediation Rules:

- Focus on how the ICDR will assist the parties in finding and appointing a mediator to best meet their needs;
- More clearly reference the duties and responsibilities of the mediator to expand party participation and authority;
- Contains a rule “Mediation Proceedings,” emphasizing party control and a focus on an efficient and effective mediation process by considering a preparatory conference, the use of technology, document exchange, *ex parte* meetings, communications, and more;
- Refer to the Singapore Convention (United Nations Convention on International Settlement Agreements Resulting from Mediation);
- Provide that the parties and the mediator consider compliance and practice related to cybersecurity, privacy, and data protection; and
- The International Arbitration Rules now provide for the presumptive application of the International Mediation Rules during the arbitration proceeding.

The following pre-dispute mediation clause may be included in contracts:

In the event of any controversy or claim arising out of or relating to this contract, or a breach thereof, the parties hereto agree first to try and settle the dispute by mediation, administered by the International Centre for Dispute Resolution under its International Mediation Rules, before

resorting to arbitration, litigation, or some other dispute resolution procedure.

The parties should consider adding:

- a. *The place of mediation shall be [city, (province or state), country]; and*
- b. *The language of the mediation shall be _____.*

If the parties want to use a mediator to resolve an existing dispute, they may enter into the following submission agreement:

The parties hereby submit the following dispute to mediation administered by the International Centre for Dispute Resolution in accordance with its International Mediation Rules. (The clause may also provide for the qualifications of the mediator(s), the place of mediation, and any other item of concern to the parties.)

International Arbitration

A dispute can be submitted to an arbitral tribunal for a final and binding decision. In ICDR arbitration, each party is given the opportunity to make a case presentation following the process provided by these Rules and the tribunal.

Features of the International Arbitration Rules:

- Codify the ICDR's practice of having the International Administrative Review Council, which is comprised of current and former ICDR executives, decide arbitrator challenges and other administrative disputes;
- Give the arbitral tribunal the authority to decide issues of arbitrability and jurisdiction without any need to refer such matters first to a court;
- Provide that the parties and tribunal shall discuss in the procedural hearing issues related to cybersecurity, privacy, and data protection;
- Create a presumption that parties will mediate during the arbitration, with any party being able to opt out;
- Allow parties to request permission to submit an early disposition application for issues that have a reasonable possibility of success, will dispose of or narrow issues, or add economy;
- Authorize access to a special emergency arbitrator for urgent measures of protection within three (3) business days of filing with a criteria for the filing party to set forth reasoning why relief is likely to be found and what injury will be suffered if relief is not granted;

- Allow tribunal to manage the scope of document and electronic document requests and to manage, limit, or avoid U.S. litigation-style discovery practices;
- Permit a party or the tribunal to request disclosure of third-party funders and other non-parties;
- Contain express provisions allowing for “video, audio or other electronic means” during the proceedings;
- Provide that electronically-signed orders and awards can be issued unless law, the administrator, or party agreement provides otherwise; and
- Permit a party to request the tribunal make a separate award for any fees the party pays in advance on behalf of another party.

Parties can provide for arbitration of future disputes by inserting the following clause into their contracts:

Any controversy or claim arising out of or relating to this contract, or the breach thereof, shall be determined by arbitration administered by the International Centre for Dispute Resolution in accordance with its International Arbitration Rules.

The parties should consider adding:

- The number of arbitrators shall be (one or three);*
- The place of arbitration shall be [city, (province or state), country]; and*
- The language of the arbitration shall be _____.*

For more complete clause-drafting guidance, please refer to the *ICDR Guide to Drafting International Dispute Resolution Clauses* on the Clause Drafting page at **www.icdr.org**. When writing a dispute resolution clause or agreement, the parties may choose to confer with the ICDR on useful options. Please see the contact information provided in *How to File a Case with the ICDR*. The AAA and ICDR have also developed the ClauseBuilder® (**www.clausebuilder.org**) online tool, a simple, self-guided process to assist individuals and organizations in developing clear and effective arbitration and mediation agreements.

International Expedited Procedures

The Expedited Procedures provide parties with an expedited and simplified arbitration procedure designed to reduce the time and cost of an arbitration.

The Expedited Procedures shall apply in any case in which no disclosed claim or counterclaim exceeds \$500,000 USD exclusive of interest and the costs of arbitration. The parties may agree to the application of these Expedited Procedures on matters of any claim size.

Features of the International Expedited Procedures:

- May apply to cases of any size with party agreement;
- Set forth comprehensive filing requirements;
- Provide for expedited arbitrator appointment process with party input;
- Access to and appointment from an experienced pool of arbitrators ready to serve on an expedited basis;
- Call for an early procedural hearing with the arbitrator requiring participation of parties and their representatives;
- Presume that cases up to \$100,000 USD will be decided on documents only;
- Provide for an expedited schedule and limited hearing days, if any; and
- Require an award within 30 calendar days of the close of the hearing or the date established for the receipt of the parties' final statements and proofs.

Where parties intend that the Expedited Procedures shall apply regardless of the amount in dispute, they may consider the following clause:

Any controversy or claim arising out of or relating to this contract, or the breach thereof, shall be determined by arbitration administered by the International Centre for Dispute Resolution in accordance with its International Expedited Procedures.

The parties should consider adding:

- The place of arbitration shall be (city, [province or state], country); and*
- The language of the arbitration shall be _____.*

How to File a Case with the ICDR

Parties initiating a case with the International Centre for Dispute Resolution or the American Arbitration Association may file online via AAA WebFile® (File & Manage a Case) at **www.icdr.org**, by email, mail, courier, or facsimile (fax). For filing assistance, parties may contact the ICDR directly at any ICDR or AAA office.

Mail:

International Mediation Rules

M-1. Agreement of Parties

Whenever parties have agreed in writing to mediate disputes under these International Mediation Rules, or have provided for mediation or conciliation of existing or future international disputes under the auspices of either the International Centre for Dispute Resolution (“ICDR”), the international division of the American Arbitration Association (“AAA”), or the AAA without designating particular rules, they shall be deemed to have made these International Mediation Rules, as amended and in effect as of the date of the submission of the dispute, a part of their agreement. The parties by mutual agreement may vary any part of these Rules including, but not limited to, agreeing to conduct all or part of the mediation via video, audio, or other electronic means.

M-2. Initiation of Mediation

1. Any party or parties to a dispute may initiate mediation under the ICDR’s auspices by filing a request for mediation to any of the ICDR’s regional offices or case management centers via email, mail, courier, or fax. Requests for mediation may also be filed online through the ICDR’s AAA WebFile at www.icdr.org or via email at casefiling@adr.org.
2. The party initiating the mediation shall simultaneously notify the other party or parties of the request. The initiating party shall provide the following information to the ICDR and the other party or parties as applicable:
 - a. the names, regular mail addresses, email addresses, and telephone numbers of all parties to the dispute and representatives, if any, in the mediation;
 - b. a copy of the mediation provision of the parties’ contract or the parties’ stipulation to mediate;
 - c. a brief statement of the nature of the dispute and the relief requested; and
 - d. any recommendations for a specific mediator or qualifications the mediator should possess.
3. Where there is no pre-existing stipulation or contract by which the parties have provided for mediation of existing or future disputes under the auspices of the ICDR, a party may request the ICDR to invite another party to participate in “mediation by voluntary submission.” Upon receipt of such a request, the ICDR will contact the other party or parties involved in the dispute and attempt to obtain a submission to mediation.

M-3. Representation

Subject to any applicable law, any party may be represented by persons of the party's choice. The names and addresses of such persons shall be communicated in writing to all parties and to the ICDR.

M-4. Appointment of the Mediator

The ICDR shall assist the parties in finding a mutually agreeable mediator. If the parties are not able to agree on the appointment of a mediator and have not provided any other method of appointment, the mediator shall be appointed in the following manner:

- a. Upon receipt of a request for mediation, the ICDR will send to each party a list of mediators from the ICDR's Panel of Mediators. The parties are encouraged to agree on a mediator from the submitted list and to advise the ICDR of their agreement.
- b. If the parties are unable to agree on a mediator, each party shall strike unacceptable names from the list, number the remaining names in order of preference, and return the list to the ICDR. If a party does not return the list within the time specified, all mediators on the list shall be deemed acceptable. The ICDR shall appoint a mutually acceptable mediator from the list, based upon the parties' designated preferences.
- c. If for any reason the appointment cannot be made from the submitted list, the ICDR shall have the authority to make the appointment from among other members of the Panel of Mediators without the submission of additional lists.

M-5. Mediator's Impartiality and Duty to Disclose

1. ICDR mediators are required to abide by the *Model Standards of Conduct for Mediators* in effect at the time a mediator is appointed to a case. Where there is a conflict between the *Model Standards* and any provision of these Mediation Rules, these Mediation Rules shall govern. The *Model Standards* require mediators to (i) decline a mediation if the mediator cannot conduct it in an impartial manner, and (ii) disclose, as soon as practicable, all actual and potential conflicts of interest that are reasonably known to the mediator and could reasonably be seen as raising a question about the mediator's impartiality.
2. Prior to accepting an appointment, ICDR mediators are required to make a reasonable inquiry to determine whether there are any facts that a reasonable individual would consider likely to create a potential or actual conflict of interest for the mediator. ICDR mediators are required to disclose any circumstance likely to create a presumption of bias or prevent a resolution of the parties' dispute within the time frame desired by the parties. Upon receipt of such disclosures,

the ICDR shall immediately communicate the disclosures to the parties for their comments.

3. The parties may, upon receiving disclosure of actual or potential conflicts of interest of the mediator, waive such conflicts and proceed with the mediation. In the event that a party disagrees as to whether the mediator shall serve, or in the event that the mediator's conflict of interest might reasonably be viewed as undermining the integrity of the mediation, the mediator shall be replaced.

M-6. Vacancies

If any mediator shall become unwilling or unable to serve, the ICDR will appoint another mediator, unless the parties agree otherwise, in accordance with Rule M-4.

M-7. Language

If the parties have not agreed otherwise, the language of the mediation shall be that of the documents containing the mediation agreement.

M-8. Duties and Responsibilities of the Mediator

1. The mediator shall conduct the mediation based on the principle of party self-determination. Self-determination is the act of coming to a voluntary, uncoerced decision in which each party makes free and informed choices as to process and outcome.
2. The mediator does not have the authority to impose a settlement on the parties but will attempt to help them reach a satisfactory resolution of their dispute.
3. The mediator is not a legal representative of any party and has no fiduciary duty to any party.

M-9. Mediation Proceedings

1. The mediator shall conduct the proceedings with a view to expediting the resolution of the dispute. The mediator may conduct a preparatory conference with the parties promptly after being appointed for the purpose of organizing the proceedings of the case. In establishing procedures for the case, the mediator and the parties may conduct all or part of the mediation via video, audio, or other electronic means to increase the efficiency and economy of the proceedings.
2. The parties are encouraged to exchange all documents pertinent to the relief requested. The mediator may request the exchange of memoranda on issues, including the underlying interests and the history of the parties' negotiations. Information that a party wishes to keep confidential may be sent to the mediator, as necessary, in a separate communication with the mediator.

3. The mediator may conduct separate or *ex parte* meetings and other communications with the parties and/or their representatives, before, during, and after any scheduled mediation conference. Such communications may be conducted in person, in writing, via video, audio or other electronic means.
4. The mediator may make oral or written recommendations for settlement to a party privately or, if the parties agree, to all parties jointly.
5. In the event that a complete settlement of all or some issues in dispute is not achieved within the scheduled mediation conference(s), the mediator may continue to communicate with the parties for a period of time in an ongoing effort to facilitate a complete settlement.
6. Early in the proceeding or at the preparatory conference, the mediator and the parties shall consider cybersecurity, privacy, and data protection to provide for an appropriate level of security and compliance in connection with the proceeding.

M-10. Responsibilities of the Parties

1. The parties shall ensure that appropriate representatives of each party, having authority to commit to the execution of a settlement agreement, attend the mediation conference.
2. Prior to and during the scheduled mediation conference(s), the parties and their representatives shall, as appropriate to each party's circumstances, exercise their best efforts to prepare for and engage in a meaningful and productive mediation.

M-11. Privacy

Mediation conferences and related mediation communications are private proceedings. The parties and their representatives may attend mediation conferences. Other persons may attend only with the permission of the parties and with the consent of the mediator.

M-12. Confidentiality

1. Subject to applicable law or the parties' agreement, confidential information disclosed to a mediator by the parties or by other participants in the course of the mediation shall not be divulged by the mediator. The mediator shall maintain the confidentiality of all information obtained in the mediation, and all records, reports, or other documents received by a mediator while serving in that capacity shall be confidential.
2. The mediator shall not be compelled to divulge such records or to testify in regard to the mediation in any adversary proceeding or judicial forum.
3. The parties shall maintain the confidentiality of the mediation and shall not rely on, or introduce as evidence in any arbitral, judicial, or other proceeding the following, unless agreed to by the parties or required by applicable law:

- a. views expressed or suggestions made by a party or other participant with respect to a possible settlement of the dispute;
- b. admissions made by a party or other participant in the course of the mediation proceedings;
- c. proposals made or views expressed by the mediator; or
- d. the fact that a party had or had not indicated willingness to accept a proposal for settlement made by the mediator.

M-13. No Stenographic Record

There shall be no stenographic record of the mediation process.

M-14. Termination of Mediation

The mediation shall be terminated:

- a. By the execution of a settlement agreement by the parties; or
- b. By a written or verbal declaration of the mediator to the effect that further efforts at mediation would not contribute to a resolution of the parties' dispute; or
- c. By a written or verbal declaration of any party to the effect that the mediation proceedings are terminated; or
- d. When there has been no communication between the mediator and any party or party's representative for 21 days following the conclusion of the mediation conference; or
- e. The parties may request the mediator (by signing the settlement agreement or otherwise) or the ICDR to issue an attestation that a settlement was reached in the course of a mediation to assist in the enforcement of such settlement agreement under the United Nations Convention on International Settlement Agreements Resulting from Mediation or other applicable law.

M-15. Exclusion of Liability

Neither the ICDR nor any mediator is a necessary party in judicial proceedings relating to the mediation. Neither the ICDR nor any mediator shall be liable to any party for any error, act or omission in connection with any mediation conducted under these Rules.

M-16. Interpretation and Application of Rules

The mediator shall interpret and apply these Rules insofar as they relate to the mediator's duties and responsibilities. All other Rules shall be interpreted and applied by the ICDR.

M-17. Deposits

Unless otherwise directed by the mediator, the ICDR will require the parties to deposit in advance of the mediation conference such sums of money as it, in consultation with the mediator, deems necessary to cover the costs and expenses of the mediation, and the ICDR shall render an accounting to the parties and return any unexpended balance at the conclusion of the mediation.

M-18. Expenses

All expenses of the mediation, including required travel and other expenses or charges of the mediator, shall be borne equally by the parties unless they agree otherwise. The expenses of participants for either side shall be paid by the party requesting the attendance of such participants.

M-19. Costs of Mediation

International Arbitration Rules

Article 1: Scope of these Rules

1. Where parties have agreed to arbitrate disputes under these International Arbitration Rules (“Rules”), or have provided for arbitration of an international dispute by either the International Centre for Dispute Resolution (“ICDR”), the international division of the American Arbitration Association (“AAA”), or the AAA without designating particular rules, the arbitration shall take place in accordance with these Rules as in effect at the date of commencement of the arbitration, subject to modifications that the parties may adopt in writing. The ICDR is the Administrator of these Rules.
2. These Rules govern the arbitration, except that, where any such rule is in conflict with any provision of the law applicable to the arbitration from which the parties cannot derogate, that provision shall prevail.
3. When parties agree to arbitrate under these Rules, or when they provide for arbitration of an international dispute by the ICDR or the AAA without designating particular rules, they thereby authorize the ICDR to administer the arbitration. These Rules specify the duties and responsibilities of the ICDR as the Administrator. The Administrator may provide services through any of the ICDR’s case management offices or through the facilities of the AAA or arbitral institutions with which the ICDR or the AAA has agreements of cooperation. Arbitrations administered under these Rules shall be administered only by the ICDR or by an individual or organization authorized by the ICDR to do so.
4. Unless the parties agree or the Administrator determines otherwise, the International Expedited Procedures shall apply in any case in which no disclosed claim or counterclaim exceeds \$500,000 USD exclusive of interest and the costs of arbitration. The parties may also agree to use the International Expedited Procedures in other cases. The International Expedited Procedures shall be applied as described in Articles E-1 through E-10 of these Rules, in addition to any other portion of these Rules that is not in conflict with the Expedited Procedures. Where no party’s claim or counterclaim exceeds \$100,000 USD exclusive of interest, attorneys’ fees, and other arbitration costs, the dispute shall be resolved by written submissions only unless the arbitrator determines that an oral hearing is necessary.

Commencing the Arbitration

Article 2: Notice of Arbitration and Statement of Claim

1. The party initiating arbitration (“Claimant”) shall, in compliance with Article 11, give written Notice of Arbitration to the Administrator and at the same time to the party against whom a claim is being made (“Respondent”). The Claimant may also initiate the arbitration online through the Administrator’s AAA WebFile at **www.icdr.org** or via email at **casefiling@adr.org**.

2. The arbitration shall be deemed to commence on the date on which the Administrator receives the Notice of Arbitration.
3. The Notice of Arbitration shall contain the following information:
 - a. a demand that the dispute be referred to arbitration;
 - b. the names, addresses, telephone numbers, fax numbers, and email addresses of the parties and, if known, of their representatives;
 - c. a copy of the entire arbitration clause or agreement being invoked, and, where claims are made under more than one arbitration agreement, a copy of the arbitration agreement under which each claim is made;
 - d. a reference to any contract out of or in relation to which the dispute arises;
 - e. a description of the claim and of the facts supporting it;
 - f. the relief or remedy sought and any amount claimed; and
 - g. optionally, proposals, consistent with any prior agreement between or among the parties, as to the means of designating the arbitrators, the number of arbitrators, the place of arbitration, the language of the arbitration, and whether the party filing the Notice of Arbitration is willing to mediate the dispute prior to or concurrently with the arbitration.
4. The Notice of Arbitration shall be accompanied by the appropriate filing fee.
5. Upon receipt of the Notice of Arbitration, the Administrator shall communicate with all parties with respect to the arbitration and shall acknowledge the commencement of the arbitration.

Article 3: Answer and Counterclaim

1. Within 30 days after the Administrator confirms receipt of the Notice of Arbitration, Respondent shall submit to Claimant, to any other parties, and to the Administrator a written Answer to the Notice of Arbitration.
2. At the time Respondent submits its Answer, Respondent may make any counterclaims covered by the agreement to arbitrate or assert any setoffs and Claimant shall within 30 days submit to Respondent, to any other parties, and to the Administrator a written Answer to the counterclaim or setoffs.
3. A counterclaim or setoff shall contain the same information required of a Notice of Arbitration under Article 2(3) and shall be accompanied by the appropriate filing fee.
4. Respondent shall within 30 days after the Administrator confirms receipt of the Notice of Arbitration submit to Claimant, to any other parties, and to the Administrator a response to any proposals by Claimant not previously agreed upon, or submit its own proposals, consistent with any prior agreement between or among the parties, as to the means of designating the arbitrators, the number of arbitrators, the place of the arbitration, the language of the arbitration, and whether Respondent is willing to mediate the dispute prior to or concurrently with the arbitration.

5. The arbitral tribunal, or the Administrator if the tribunal has not yet been constituted, may extend any of the time limits established in this Article if it considers such an extension justified.
6. Failure of Respondent to submit an Answer shall not preclude the arbitration from proceeding.
7. In arbitrations with multiple parties, Respondent may make claims or assert setoffs against another Respondent and Claimant may make claims or assert setoffs against another Claimant in accordance with the provisions of this Article 3.

Article 4: Administrative Conference

The Administrator may conduct an administrative conference before the arbitral tribunal is constituted to facilitate party discussion and agreement on issues such as arbitrator selection, mediating the dispute, process efficiencies, and any other administrative matters.

Article 5: International Administrative Review Council

When the Administrator is called upon to act under these Rules, the Administrator may act through its International Administrative Review Council (IARC) to take any action. Such actions may include determining challenges to the appointment or continuing service of an arbitrator, deciding disputes regarding the number of arbitrators to be appointed, or determining whether a party has met the administrative requirements to initiate or file an arbitration contained in the Rules. If the parties do not agree on the place of arbitration, the IARC may make an initial determination as to the place of arbitration, subject to the power of the arbitral tribunal to make a final determination.

Article 6: Mediation

Subject to (a) any agreement of the parties otherwise or (b) the right of any party to elect not to participate in mediation, the parties shall mediate their dispute pursuant to the ICDR's International Mediation Rules concurrently with the arbitration.

Article 7: Emergency Measures of Protection

1. A party may apply for emergency relief before the constitution of the arbitral tribunal by submitting a written application to the Administrator and to all other parties setting forth:
 - a. the nature of the relief sought;

- b. the reasons why such relief is required on an emergency basis before the tribunal is appointed;
- c. the reasons why the party is likely to be found to be entitled to such relief; and
- d. what injury or prejudice the party will suffer if relief is not provided.

The application shall be submitted concurrent with or following the submission of a Notice of Arbitration. Such application may be filed by email, or as otherwise permitted by Article 11, and must include payment of any applicable fees and a statement certifying that all parties have been notified or an explanation of the steps taken in good faith to notify all parties.

2. Within one business day of receipt of the application for emergency relief as provided in Article 7(1), and upon being satisfied that the requirements of Article 7(1) have been met, the Administrator shall appoint a single emergency arbitrator. Upon accepting appointment, a prospective emergency arbitrator shall, in accordance with Article 14, disclose to the Administrator any circumstances that may give rise to justifiable doubts as to the arbitrator's impartiality or independence. Any challenge to the appointment of the emergency arbitrator must be made within one business day of the communication by the Administrator to the parties of the appointment of the emergency arbitrator and the circumstances disclosed.
3. The emergency arbitrator shall as soon as possible, and in any event within two business days of appointment, establish a schedule for consideration of the application for emergency relief. Such schedule shall provide a reasonable opportunity to all parties to be heard and may provide for proceedings by telephone, video, written submissions, or other suitable means, as alternatives to an in-person hearing. The emergency arbitrator shall have the authority vested in the arbitral tribunal under Article 21, including the authority to rule on the emergency arbitrator's jurisdiction, and shall resolve any disputes over the applicability of this Article.
4. The emergency arbitrator shall have the power to order or award any interim or conservatory measures that the emergency arbitrator deems necessary, including injunctive relief and measures for the protection or conservation of property. Any such measures may take the form of an interim award or an order. The emergency arbitrator shall give reasons in either case. The emergency arbitrator may modify or vacate the interim award or order. Any interim award or order shall have the same effect as an interim measure made pursuant to Article 27 and shall be binding on the parties when rendered. The parties shall undertake to comply with such an interim award or order without delay.
5. The emergency arbitrator shall have no further power to act after the arbitral tribunal is constituted. Once the tribunal has been constituted, the tribunal may affirm, reconsider, modify, or vacate the interim award or order of emergency relief issued by the emergency arbitrator. The emergency arbitrator may not serve as a member of the tribunal unless the parties agree otherwise.

6. Any interim award or order of emergency relief may be conditioned on provision of appropriate security by the party seeking such relief.
7. A request for interim measures addressed by a party to a judicial authority shall not be deemed incompatible with this Article 7 or with the agreement to arbitrate or a waiver of the right to arbitrate.
8. The costs associated with applications for emergency relief shall be addressed by the emergency arbitrator, subject to the power of the arbitral tribunal to determine finally the allocation of such costs.

Article 8: Joinder

1. A party wishing to join an additional party to the arbitration shall submit to the Administrator a Notice of Arbitration against the additional party. No additional party may be joined after the appointment of any arbitrator, unless (a) all parties, including the additional party, otherwise agree, or (b) the arbitral tribunal once constituted determines that the joinder of an additional party is appropriate, and the additional party consents to such joinder. The party wishing to join the additional party shall, at that same time, send the Notice of Arbitration to the additional party and all other parties. The date on which such Notice of Arbitration is received by the Administrator shall be deemed to be the date of the commencement of arbitration against the additional party. Any joinder shall be subject to the provisions of Articles 13 and 21.
2. The request for joinder shall contain the same information required of a Notice of Arbitration under Article 2(3) and shall be accompanied by the appropriate filing fee.
3. The additional party shall submit an Answer in accordance with the provisions of Article 3.
4. The additional party may make claims, counterclaims, or assert setoffs against any other party in accordance with the provisions of Article 3.

Article 9: Consolidation

1. At the request of a party or on its own initiative, the Administrator may appoint a consolidation arbitrator, who will have the power to consolidate two or more arbitrations pending under these Rules, or these and other arbitration rules administered by the AAA or ICDR, into a single arbitration where:
 - a. the parties have expressly agreed to appoint a consolidation arbitrator; or
 - b. all of the claims and counterclaims in the arbitrations are made under the same arbitration agreement; or
 - c. the claims, counterclaims, or setoffs in the arbitrations are made under more than one arbitration agreement; the arbitrations involve the same or related parties; the disputes in the arbitrations arise in connection with the same legal relationship; and the arbitration agreements may be compatible.

2. A consolidation arbitrator shall be appointed as follows:
 - a. The Administrator shall notify the parties in writing of its intention to appoint a consolidation arbitrator and invite the parties to agree upon a procedure for the appointment of a consolidation arbitrator.
 - b. If the parties have not within 15 days of such notice agreed upon a procedure for appointment of a consolidation arbitrator, the Administrator shall appoint the consolidation arbitrator.
 - c. Absent the agreement of all parties, the consolidation arbitrator shall not be an arbitrator who is appointed to any pending arbitration subject to potential consolidation under this Article.
 - d. The provisions of Articles 14-16 of these Rules shall apply to the appointment of the consolidation arbitrator.
3. In deciding whether to consolidate, the consolidation arbitrator shall consult the parties, may consult the arbitral tribunal(s), and may take into account all relevant circumstances, including:
 - a. applicable law;
 - b. whether one or more arbitrators have been appointed in more than one of the arbitrations and, if so, whether the same or different persons have been appointed;
 - c. the progress already made in the arbitrations;
 - d. whether the arbitrations raise common issues of law and/or facts; and
 - e. whether the consolidation of the arbitrations would serve the interests of justice and efficiency.
4. The consolidation arbitrator may order that any or all arbitrations subject to potential consolidation be stayed pending a ruling on a request for consolidation.
5. When arbitrations are consolidated, they shall be consolidated into the arbitration that commenced first, unless otherwise agreed by all parties or the consolidation arbitrator decides otherwise.
6. Where the consolidation arbitrator decides to consolidate an arbitration with one or more other arbitrations, each party in those arbitrations shall be deemed to have waived its right to appoint an arbitrator. The consolidation arbitrator may revoke the appointment of any arbitrators and may select one of the previously-appointed tribunals to serve in the consolidated proceeding. The Administrator shall, as necessary, complete the appointment of the tribunal in the consolidated proceeding. Absent the agreement of all parties, the consolidation arbitrator shall not be appointed in the consolidated proceedings.
7. The decision as to consolidation, which need not include a statement of reasons, shall be rendered within 15 days of the date for final submissions on consolidation.

Article 10: Amendment or Supplement of Claim, Counterclaim, or Defense

Any party may amend or supplement its claim, counterclaim, setoff, or defense unless the arbitral tribunal considers it inappropriate to allow such amendment or supplement because of the party's delay in making it, prejudice to the other parties, or any other circumstances. A party may not amend or supplement a claim or counterclaim if the amendment or supplement would fall outside the scope of the agreement to arbitrate. The tribunal may permit an amendment or supplement subject to an award of costs and/or the payment of filing fees as determined by the Administrator.

Article 11: Notices

1. Unless otherwise agreed by the parties or ordered by the arbitral tribunal, all notices and written communications may be transmitted by any means of communication that allows for a record of its transmission, including email, mail, courier, fax, or other written forms of electronic communication addressed to the party or its representative at its last-known address, or by personal service.
2. For the purpose of calculating a period of time under these Rules, such period shall begin to run on the day following the day when a notice is made. If the last day of such period is an official holiday at the place received, the period is extended until the first business day that follows. Official holidays occurring during the running of the period of time are included in calculating the period.

The Tribunal

Article 12: Number of Arbitrators

If the parties have not agreed on the number of arbitrators, one arbitrator shall be appointed unless the Administrator determines that three arbitrators are appropriate because of the size, complexity, or other circumstances of the case.

Article 13: Appointment of Arbitrators

1. The parties may agree upon any procedure for appointing arbitrators and shall inform the Administrator as to such procedure. In the absence of party agreement as to the method of appointment, the Administrator may use the ICDR list method as provided in Article 13(6).
2. The parties may agree to select arbitrators, with or without the assistance of the Administrator. When such selections are made, the parties shall take into account the arbitrators' availability to serve and shall notify the Administrator so that a Notice of Appointment can be communicated to the arbitrators, together with a copy of these Rules.

3. If within 45 days after the commencement of the arbitration, all parties have not agreed on a procedure for appointing the arbitrator(s) or have not agreed on the selection of the arbitrator(s), the Administrator shall, at the written request of any party, appoint the arbitrator(s). Where the parties have agreed upon a procedure for selecting the arbitrator(s), but all appointments have not been made within the time limits provided by that procedure, the Administrator shall, at the written request of any party, perform all functions provided for in that procedure that remain to be performed.
4. In making appointments, the Administrator shall, after inviting consultation with the parties, endeavor to appoint suitable arbitrators, taking into account their availability to serve. At the request of any party or on its own initiative, the Administrator may appoint or submit a list(s) including nationals of a country other than that of any of the parties.
5. If there are more than two parties to the arbitration, the Administrator may appoint all arbitrators unless the parties have agreed otherwise no later than 45 days after the commencement of the arbitration.
6. If the parties have not selected an arbitrator(s) and have not agreed upon any other method of appointment, the Administrator, at its discretion, may appoint the arbitrator(s) in the following manner using the ICDR list method. The Administrator shall send simultaneously to each party an identical list of names of persons for consideration as arbitrator(s). The parties are encouraged to agree to an arbitrator(s) from the submitted list and shall advise the Administrator of their agreement. If, after receipt of the list, the parties are unable to agree upon an arbitrator(s), each party shall have 15 days from the transmittal date in which to strike names objected to, number the remaining names in order of preference, and return the list to the Administrator. The parties are not required to exchange selection lists. If a party does not return the list within the time specified, all persons named therein shall be deemed acceptable. From among the persons who have been approved on the parties' lists, and in accordance with the designated order of mutual preference, the Administrator shall invite an arbitrator(s) to serve. If the parties fail to agree on any of the persons listed, or if acceptable arbitrators are unable or unavailable to act, or if for any other reason the appointment cannot be made from the submitted lists, the Administrator shall have the power to make the appointment without the submission of additional lists. The Administrator shall, if necessary, designate the presiding arbitrator in consultation with the tribunal.
7. The appointment of an arbitrator is effective upon receipt by the Administrator of the Administrator's Notice of Appointment completed and signed by the arbitrator.

Article 14: Impartiality and Independence of Arbitrator

1. Arbitrators acting under these Rules shall be impartial and independent and shall act in accordance with these Rules, the terms of the Notice of Appointment provided by the Administrator, and with *The Code of Ethics for Arbitrators in Commercial Disputes*.

2. Upon accepting appointment, an arbitrator shall sign the Notice of Appointment provided by the Administrator affirming that the arbitrator is available to serve and is independent and impartial. The arbitrator shall disclose any circumstances that may give rise to justifiable doubts as to the arbitrator's impartiality or independence and any other relevant facts the arbitrator wishes to bring to the attention of the parties.
3. If, at any stage during the arbitration, circumstances arise that may give rise to such doubts, an arbitrator or party shall promptly disclose such information to all parties and to the Administrator. Upon receipt of such information from an arbitrator or a party, the Administrator shall communicate it to all parties and to the tribunal.
4. Disclosure by an arbitrator or party does not necessarily indicate belief by the arbitrator or party that the disclosed information gives rise to justifiable doubts as to the arbitrator's impartiality or independence.
5. Failure of a party to disclose any circumstances that may give rise to justifiable doubts as to an arbitrator's impartiality or independence within a reasonable period after the party becomes aware of such information constitutes a waiver of the right to challenge an arbitrator based on those circumstances.
6. No party or anyone acting on its behalf shall have any *ex parte* communication relating to the case with any arbitrator, or with any candidate for party-appointed arbitrator, except to advise the candidate of the general nature of the controversy and of the anticipated proceedings and to discuss the candidate's qualifications, availability, or impartiality and independence in relation to the parties, or to discuss the suitability of candidates for selection as a presiding arbitrator where the parties or party-appointed arbitrators are to participate in that selection. No party or anyone acting on its behalf shall have any *ex parte* communication relating to the case with any candidate for presiding arbitrator.
7. On the application of a party, or on its own initiative after consulting the parties, the tribunal may require the parties to disclose:
 - a. Whether any non-party (such as a third-party funder or an insurer) has undertaken to pay or to contribute to the cost of a party's participation in the arbitration, and if so, to identify the person or entity concerned and to describe the nature of the undertaking.
 - b. Whether any non-party (such as a funder, insurer, parent company, or ultimate beneficial owner) has an economic interest in the outcome of the arbitration, and if so, to identify the person or entity concerned and to describe the nature of the interest.

Article 15: Challenge of an Arbitrator

1. A party may challenge an arbitrator whenever circumstances exist that give rise to justifiable doubts as to the arbitrator's impartiality, or independence, or for failing to perform the arbitrator's duties. Unless a shorter time period is otherwise agreed by the parties, specified by law, or determined by the Administrator, a party shall

send a written notice of the challenge to the Administrator within 15 days after being notified of the appointment of the arbitrator or within 15 days after the circumstances giving rise to the challenge become known to that party. The challenge shall state in writing the reasons for the challenge. The party shall not send this notice to any member of the arbitral tribunal.

2. Upon receipt of such a challenge, the Administrator shall notify the other party of the challenge and give such party an opportunity to respond. The Administrator shall not send the notice of challenge to any member of the tribunal but shall notify the tribunal that a challenge has been received, without identifying the party challenging. When an arbitrator has been challenged by a party, the other party may agree to the acceptance of the challenge and, if there is agreement, the arbitrator shall be removed. The Administrator may advise the challenged arbitrator of the challenge and request information from the challenged arbitrator relating to the challenge. The challenged arbitrator, after consultation with the Administrator, also may withdraw in the absence of such agreement. In neither case does withdrawal imply acceptance of the validity of the grounds for the challenge.
3. If the other party does not agree to the challenge or the challenged arbitrator does not withdraw, the Administrator shall make the decision on the challenge.
4. The Administrator, on its own initiative, may remove an arbitrator for failing to perform or if the arbitrator becomes incapable of performing the duties of an arbitrator.

Article 16: Replacement of an Arbitrator

1. If an arbitrator withdraws, is incapable of performing the duties of an arbitrator, or is removed for any reason, and the office becomes vacant, a substitute arbitrator, if needed, shall be appointed pursuant to the provisions of Article 13, unless the parties otherwise agree.
2. If a substitute arbitrator is appointed under this Article, unless the parties otherwise agree the arbitral tribunal shall determine at its sole discretion whether all or part of the case shall be repeated.
3. If an arbitrator on a three-person arbitral tribunal fails to participate in the arbitration for any reason, and unless otherwise agreed to by the parties, the two other arbitrators shall have the power in their sole discretion to continue the arbitration and to make any decision, ruling, order, or award, notwithstanding the failure of the third arbitrator to participate. In determining whether to continue the arbitration or to render any decision, ruling, order, or award without the participation of an arbitrator, the two other arbitrators shall take into account the stage of the arbitration, the reason, if any, expressed by the third arbitrator for such non-participation and such other matters as they consider appropriate in the circumstances of the case.
4. In the event that the two other arbitrators do not agree to continue the arbitration without the participation of the third arbitrator, the Administrator on proof

satisfactory to it shall declare the office vacant, and a substitute arbitrator shall be appointed pursuant to the provisions of Article 13, unless the parties otherwise agree.

Article 17: Arbitral Tribunal Secretary

The tribunal may, with the consent of the parties, appoint an arbitral tribunal secretary, who will serve in accordance with ICDR guidelines.

General Conditions

Article 18: Party Representation

Any party may be represented in the arbitration. The names, addresses, telephone numbers, fax numbers, and email addresses of representatives shall be communicated in writing to the other party and to the Administrator. Unless instructed otherwise by the Administrator, once the arbitral tribunal has been established, the parties or their representatives may communicate in writing directly with the tribunal with simultaneous copies to the other party and, unless otherwise instructed by the Administrator, to the Administrator. The conduct of party representatives shall be in accordance with such guidelines as the ICDR may issue on the subject.

Article 19: Place of Arbitration

1. If the parties do not agree on the place of arbitration by a date established by the Administrator, the Administrator may initially determine the place of arbitration, subject to the power of the arbitral tribunal to determine finally the place of arbitration within 45 days after its constitution.
2. The tribunal may meet at any location it deems appropriate for any purpose, including to conduct hearings, hold conferences, hear witnesses, inspect property or documents, or deliberate, and, if done elsewhere than the place of arbitration, the arbitration shall be deemed conducted at the place of arbitration and any award shall be deemed made at the place of arbitration.

Article 20: Language

If the parties have not agreed otherwise, the language(s) of the arbitration shall be the language(s) of the documents containing the arbitration agreement, subject to the power of the arbitral tribunal to determine otherwise. The tribunal may order that any documents delivered in another language shall be accompanied by a translation into the language(s) of the arbitration.

Article 21: Arbitral Jurisdiction

1. The arbitral tribunal shall have the power to rule on its own jurisdiction, including any objections with respect to arbitrability, to the existence, scope, or validity of the arbitration agreement(s), or with respect to whether all of the claims, counterclaims, and setoffs made in the arbitration may be determined in a single arbitration, without any need to refer such matters first to a court.
2. The tribunal shall have the power to determine the existence or validity of a contract of which an arbitration clause forms a part. Such an arbitration clause shall be treated as an agreement independent of the other terms of the contract. A decision by the tribunal that the contract is null and void shall not for that reason alone render invalid the arbitration clause.
3. A party must object to the jurisdiction of the tribunal or to arbitral jurisdiction respecting the admissibility of a claim, counterclaim, or setoff no later than the filing of the Answer, as provided in Article 3, to the claim, counterclaim, or setoff that gives rise to the objection. The tribunal may extend such time limit and may rule on any objection under this Article as a preliminary matter or as part of the final award.
4. Issues regarding arbitral jurisdiction raised prior to the constitution of the tribunal shall not preclude the Administrator from proceeding with administration and shall be referred to the tribunal once constituted for determination.

Article 22: Conduct of Proceedings

1. Subject to these Rules, the arbitral tribunal may conduct the arbitration in whatever manner it considers appropriate, provided that the parties are treated with equality and that each party has the right to be heard and is given a fair opportunity to present its case.
2. The tribunal shall conduct the proceedings with a view to expediting the resolution of the dispute. The tribunal may, promptly after being constituted, conduct a procedural hearing with the parties for the purpose of organizing, scheduling, and agreeing to procedures, including the setting of deadlines for any submissions by the parties. In establishing procedures for the case, the tribunal and the parties may consider how technology, including video, audio, or other electronic means, could be used to increase the efficiency and economy of the proceedings.
3. At the procedural hearing, the tribunal shall discuss with the parties cybersecurity, privacy, and data protection to provide for an appropriate level of security and compliance in connection with the proceeding.
4. The tribunal may decide preliminary issues, bifurcate proceedings, direct the order of proof, exclude cumulative or irrelevant testimony or other evidence, and direct the parties to focus their presentations on issues whose resolution could dispose of all or part of the case.

5. At any time during the proceedings, the tribunal may order the parties to produce documents, exhibits, or other evidence it deems necessary or appropriate. Unless the parties agree otherwise in writing, the tribunal shall apply Article 24.
6. Documents or information submitted to the tribunal by one party shall at the same time be transmitted by that party to all parties and, unless instructed otherwise by the Administrator, to the Administrator.
7. The tribunal shall determine the admissibility, relevance, materiality, and weight of the evidence.
8. The parties shall make every effort to avoid unnecessary delay and expense in the arbitration. The arbitral tribunal may allocate costs, draw adverse inferences, and take such additional steps as are necessary to protect the efficiency and integrity of the arbitration.

Article 23: Early Disposition

1. A party may request leave from the arbitral tribunal to submit an application for disposition of any issue presented by any claim or counterclaim in advance of the hearing on the merits ("early disposition"). The tribunal shall allow a party to submit an application for early disposition if it determines that the application (a) has a reasonable possibility of succeeding, (b) will dispose of, or narrow, one or more issues in the case, and (c) that consideration of the application is likely to be more efficient or economical than leaving the issue to be determined with the merits.
2. Each party shall have the right to be heard and a fair opportunity to present its case regarding whether or not such application should be heard and, if permission to make the application is given, whether early disposition should be granted.
3. The arbitral tribunal shall have the power to make any order or award in connection with the early disposition of any issue presented by any claim or counterclaim that the tribunal deems necessary or appropriate. The tribunal shall provide reasoning for any award.

Article 24: Exchange of Information

1. The arbitral tribunal shall manage the exchange of information between the parties with a view to maintaining efficiency and economy. The tribunal and the parties should endeavor to avoid unnecessary delay and expense while at the same time avoiding surprise, assuring equality of treatment, and safeguarding each party's opportunity to present its claims and defenses fairly.
2. The parties may provide the tribunal with their views on the appropriate level of information exchange for each case, but the tribunal retains final authority. To the extent that the parties wish to depart from this Article, they may do so only by written agreement and in consultation with the tribunal.
3. The parties shall exchange all documents upon which each intends to rely on a schedule set by the tribunal.

4. The tribunal may, upon application, require a party to make available to another party documents in that party's possession not otherwise available to the party seeking the documents, that are reasonably believed to exist and to be relevant and material to the outcome of the case. Requests for documents shall contain a description of specific documents or classes of documents, along with an explanation of their relevance and materiality to the outcome of the case.
5. The tribunal may condition any exchange of information subject to claims of commercial or technical confidentiality on appropriate measures to protect such confidentiality.
6. When documents to be exchanged are maintained in electronic form, the party in possession of such documents may make them available in the form (which may be paper copies) most convenient and economical for it, unless the tribunal determines, on application, that there is a compelling need for access to the documents in a different form. Requests for documents maintained in electronic form should be narrowly focused and structured to make searching for them as economical as possible. The tribunal may direct testing or other means of focusing and limiting any search.
7. The tribunal may, on application, require a party to permit inspection on reasonable notice of relevant premises or objects.
8. In resolving any dispute about pre-hearing exchanges of information, the tribunal shall require a requesting party to justify the time and expense that its request may involve and may condition granting such a request on the payment of part or all of the cost by the party seeking the information. The tribunal may also allocate the costs of providing information among the parties, either in an interim order or in an award.
9. In the event a party fails to comply with an order for information exchange, the tribunal may draw adverse inferences and may take such failure into account in allocating costs.
10. Depositions, interrogatories, and requests to admit as developed for use in U.S. court procedures generally are not appropriate procedures for obtaining information in an arbitration under these Rules.

Article 25: Privilege

The arbitral tribunal shall take into account applicable principles of privilege, such as those involving the confidentiality of communications between a lawyer and client. When the parties, their counsel, or their documents would be subject under applicable law to different rules, the tribunal should, to the extent possible, apply the same rule to all parties, giving preference to the rule that provides the highest level of protection.

Article 26: Hearing

1. The arbitral tribunal shall give the parties reasonable notice of the date, time, and place of any oral hearing.
2. A hearing or a portion of a hearing may be held by video, audio, or other electronic means when: (a) the parties so agree; or (b) the tribunal determines, after allowing the parties to comment, that doing so would be appropriate and would not compromise the rights of any party to a fair process. The tribunal may at any hearing direct that witnesses be examined through means that do not require their physical presence.
3. The tribunal shall determine the manner in which witnesses are examined and who shall be present during witness examination.
4. Unless otherwise agreed by the parties or directed by the tribunal, evidence of witnesses should be presented in the form of written statements signed by them. In accordance with a schedule set by the tribunal, each party shall notify the tribunal and the other parties of the names of any witnesses who have presented a witness statement whom it requests to examine. The tribunal may require any witness to appear at a hearing. If a witness whose appearance has been requested fails to appear without valid excuse as determined by the tribunal, the tribunal may make such order it deems appropriate, which may include reducing the weight to be given to the statement(s) or disregarding such statement(s).
5. At least 15 days before the hearings, each party shall give the tribunal and the other parties the names and contact information of any witnesses it intends to present, the subject of their testimony, and the languages in which such witnesses will give their testimony.
6. Hearings are private unless the parties agree otherwise or the law provides to the contrary.

Article 27: Interim Measures

1. At the request of any party, the arbitral tribunal may order or award any interim or conservatory measures it deems necessary, including injunctive relief and measures for the protection or conservation of property.
2. Such interim measures may take the form of an interim order or award, and the tribunal may require security for the costs of such measures.
3. A request for interim measures addressed by a party to a judicial authority shall not be deemed incompatible with the agreement to arbitrate or a waiver of the right to arbitrate.
4. The arbitral tribunal may allocate costs associated with applications for interim relief in any interim order or award or in the final award.
5. An application for emergency relief prior to the constitution of the arbitral tribunal may be made as provided for in Article 7.

Article 28: Tribunal-Appointed Expert

1. The arbitral tribunal, after consultation with the parties, may appoint one or more independent experts to report to it, in writing, on issues designated by the tribunal and communicated to the parties.
2. The parties shall provide such an expert with any relevant information or produce for inspection any relevant documents or goods that the expert may require. Any dispute between a party and the expert as to the relevance of the requested information or goods shall be referred to the tribunal for decision.
3. Upon receipt of an expert's report, the tribunal shall send a copy of the report to all parties and shall give the parties an opportunity to express, in writing, their opinion of the report. A party may examine any document on which the expert has relied in such a report.
4. At the request of any party, the tribunal shall give the parties an opportunity to question the expert at a hearing. At this hearing, parties may present expert witnesses to testify on the points at issue.

Article 29: Default

1. If a party fails to submit an Answer in accordance with Article 3, the arbitral tribunal may proceed with the arbitration.
2. If a party, duly notified under these Rules, fails to appear at a hearing without showing sufficient cause for such failure, the tribunal may proceed with the hearing.
3. If a party, duly invited or ordered to produce evidence or take any other steps in the proceedings, fails to do so within the time established by the tribunal without showing sufficient cause for such failure, the tribunal may make the award on the evidence before it.

Article 30: Closure of Hearing

1. The arbitral tribunal may ask the parties if they have any further submissions and upon receiving negative replies or if satisfied that the record is complete, the tribunal may declare the arbitral hearing closed.
2. The tribunal on its own motion, or upon application of a party, may reopen the arbitral hearing at any time before the award is made.

Article 31: Waiver

A party who knows of any non-compliance with any provision or requirement of the Rules or the arbitration agreement, and proceeds with the arbitration without promptly stating an objection in writing, waives the right to object.

Article 32: Awards, Orders, Decisions and Rulings

1. In addition to making a final award, the arbitral tribunal may make interim, interlocutory, or partial awards, orders, decisions, and rulings.
2. When there is more than one arbitrator, any award, order, decision, or ruling of the tribunal shall be made by a majority of the arbitrators.
3. When the parties or the tribunal so authorize, the presiding arbitrator may make orders, decisions, or rulings on questions of procedure, including exchanges of information, subject to revision by the tribunal.
4. An order or award may be signed electronically, unless (a) the applicable law requires a physical signature, (b) the parties agree otherwise, or (c) the arbitral tribunal or Administrator determines otherwise.

Article 33: Time, Form, and Effect of the Award

1. Awards shall be made in writing by the arbitral tribunal and shall be final and binding on the parties. The tribunal shall make every effort to deliberate and prepare the award as quickly as possible after the hearing. Unless otherwise agreed by the parties, specified by law, or determined by the Administrator, the final award shall be made no later than 60 days from the date of the closing of the hearing pursuant to Article 30. The parties shall carry out any such award without delay and, absent agreement otherwise, waive irrevocably their right to any form of appeal, review, or recourse to any court or other judicial authority, insofar as such waiver can validly be made. The tribunal shall state the reasons upon which an award is based, unless the parties have agreed that no reasons need be given.
2. An award shall be signed by the arbitrator(s) and shall state the date on which the award was made and the place of arbitration pursuant to Article 19. Where there is more than one arbitrator and any of them fails to sign an award, the award shall include or be accompanied by a statement of the reason for the absence of such signature.
3. The award shall be transmitted in draft form by the tribunal to the Administrator. The award shall be communicated to the parties by the Administrator.
4. If applicable law requires an award to be filed or registered, the tribunal shall cause such requirement to be satisfied. It is the responsibility of the parties to bring such requirements or any other procedural requirements of the place of arbitration to the attention of the tribunal.

Article 34: Applicable Laws and Remedies

1. The arbitral tribunal shall apply the substantive law(s) or rules of law agreed by the parties as applicable to the dispute. Failing such an agreement by the parties, the tribunal shall apply such law(s) or rules of law as it determines to be appropriate.

2. In arbitrations involving the application of contracts, the tribunal shall decide in accordance with the terms of the contract and shall take into account usages of the trade applicable to the contract.
3. The tribunal shall not decide as *amiable compositeur* or *ex aequo et bono* unless the parties have expressly authorized it to do so.
4. A monetary award shall be in the currency or currencies of the contract unless the tribunal considers another currency more appropriate, and the tribunal may award such pre-award and post-award interest, simple or compound, as it considers appropriate, taking into consideration the contract and applicable law(s).
5. Unless the parties agree otherwise, the parties expressly waive and forego any right to punitive, exemplary, or similar damages unless any applicable law(s) requires that compensatory damages be increased in a specified manner. This provision shall not apply to an award of arbitration costs to a party to compensate for misconduct in the arbitration.

Article 35: Settlement or Other Reasons for Termination

1. If the parties settle the dispute before a final award is made, the arbitral tribunal shall terminate the arbitration and, if requested by all parties, may record the settlement in the form of a consent award on agreed terms. The tribunal is not obliged to give reasons for such an award.
2. If continuation of the arbitration becomes unnecessary or impossible due to the non-payment of deposits required by the Administrator, the arbitration may be suspended or terminated as provided in Article 39(3).
3. If continuation of the arbitration becomes unnecessary or impossible for any reason other than as stated in Sections 1 and 2 of this Article, the tribunal shall inform the parties of its intention to terminate the arbitration. The tribunal shall thereafter issue an order terminating the arbitration, unless a party raises justifiable grounds for objection.

Article 36: Interpretation and Correction of Award

1. Within 30 days after the receipt of an award, any party, with notice to the other party, may request the arbitral tribunal to interpret the award or correct any clerical, typographical, or computational errors or make an additional award as to claims, counterclaims, or setoffs presented but omitted from the award.
2. If the tribunal considers such a request justified after considering the contentions of the parties, it shall comply with such a request within 30 days after receipt of the parties' last submissions respecting the requested interpretation, correction, or additional award. Any interpretation, correction, or additional award made by the tribunal shall contain reasoning and shall form part of the award.
3. The tribunal on its own initiative may, within 30 days of the date of the award, correct any clerical, typographical, or computational errors or make an additional award as to claims presented but omitted from the award.

4. The parties shall be responsible for all costs associated with any request for interpretation, correction, or an additional award, and the tribunal may allocate such costs.

Article 37: Costs of Arbitration

The arbitral tribunal shall fix the costs of arbitration in its award(s). The tribunal may allocate such costs among the parties if it determines that allocation is reasonable, taking into account the circumstances of the case.

Such costs may include:

- a. the fees and expenses of the arbitrators, including applicable taxes;
- b. the costs of any assistance required by the tribunal;
- c. the fees and expenses of the Administrator;
- d. the reasonable legal and other costs incurred by the parties;
- e. any costs incurred in connection with a request for interim or emergency relief pursuant to Articles 7 or 27;
- f. any costs incurred in connection with a request for consolidation pursuant to Article 9; and
- g. any costs associated with information exchange pursuant to Article 24.

Article 38: Fees and Expenses of Arbitral Tribunal

1. The fees and expenses of the arbitrators shall be reasonable in amount, taking into account the time spent by the arbitrators, the size and complexity of the case, and any other relevant circumstances.
2. As soon as practicable after the commencement of the arbitration, the Administrator shall designate an appropriate daily or hourly rate of compensation in consultation with the parties and all arbitrators, taking into account the arbitrators' stated rate of compensation and the size and complexity of the case.
3. Any dispute regarding the fees and expenses of the arbitrators shall be determined by the Administrator.

Article 39: Deposits

1. The Administrator may request that the parties deposit appropriate amounts as an advance for the costs referred to in Article 37.
2. During the course of the arbitration, the Administrator may request supplementary deposits from the parties.

3. Failure of a party asserting a claim or counterclaim to pay the required fees or deposits shall be deemed a withdrawal of the claim or counterclaim. In no event, however, shall a party be precluded from defending a claim or counterclaim.
4. If the deposits requested as referred to in Article 37(a) and 37(b) are not paid promptly and in full, the Administrator shall so inform the parties in order that one or more of them may make the required deposits. If any such deposit is made by one or more of the parties, the tribunal may, upon request, make a separate award in favor of the paying party(s) for recovery of the deposit, together with any interest.
5. If no party is willing to make the requested deposits, the arbitral tribunal may order the suspension or termination of the proceedings. If the tribunal has not yet been appointed, the Administrator may suspend or terminate the proceedings.
6. After the final award has been made, the Administrator shall render an accounting to the parties of the deposits received and return any unexpended balance to the parties.

Article 40: Confidentiality

1. Confidential information disclosed during the arbitration by the parties or by witnesses shall not be divulged by an arbitrator or by the Administrator. Except as provided in Article 40.3, unless otherwise agreed by the parties or required by applicable law, the members of the arbitral tribunal and the Administrator shall keep confidential all matters relating to the arbitration or the award.
2. Unless the parties agree otherwise, the tribunal may make orders concerning the confidentiality of the arbitration or any matters in connection with the arbitration and may take measures for protecting trade secrets and confidential information.
3. An award may be made public only with the consent of all parties or as required by law, except that the Administrator may publish or otherwise make publicly available selected awards, orders, decisions, and rulings that have become public in the course of enforcement or otherwise.
4. The ICDR may also publish selected awards, orders, decisions, and rulings that have been edited to conceal the names of the parties and other identifying details unless a party has objected in writing to publication within 6 months from the date of the award.

Article 41: Exclusion of Liability

The members of the arbitral tribunal, any emergency arbitrator appointed under Article 7, any consolidation arbitrator appointed under Article 9, any arbitral tribunal secretary, and the Administrator shall not be liable to any party for any act or omission in connection with any arbitration under these Rules, except to the extent that such a limitation of liability is prohibited by applicable law. The

parties agree that no arbitrator, emergency arbitrator, consolidation arbitrator, or arbitral tribunal secretary, nor the Administrator shall be under any obligation to make any statement about the arbitration, and no party shall seek to make any of these persons a party or witness in any judicial or other proceedings relating to the arbitration.

Article 42: Interpretation of Rules

The arbitral tribunal, any emergency arbitrator appointed under Article 7, and any consolidation arbitrator appointed under Article 9, shall interpret and apply these Rules insofar as they relate to their powers and duties. The Administrator shall interpret and apply all other Rules.

International Expedited Procedures

Article E-1: Scope of Expedited Procedures

These Expedited Procedures supplement the International Arbitration Rules as provided in Article 1(4).

Article E-2: Detailed Submissions

Parties are to present detailed submissions on the facts, claims, counterclaims, setoffs and defenses, together with all of the evidence then available on which such party intends to rely, in the Notice of Arbitration and the Answer. The arbitrator, in consultation with the parties, shall establish a procedural order, including a timetable, for completion of any written submissions.

Article E-3: Administrative Conference

The Administrator may conduct an administrative conference with the parties and their representatives to discuss the application of these procedures, arbitrator selection, mediating the dispute, and any other administrative matters.

Article E-4: Objection to the Applicability of the Expedited Procedures

If an objection is submitted before the arbitrator is appointed, the Administrator may initially determine the applicability of these Expedited Procedures, subject to the power of the arbitrator to make a final determination. The arbitrator shall take into account the amount in dispute and any other relevant circumstances.

Article E-5: Changes of Claim or Counterclaim

If, after filing of the initial claims and counterclaims, a party amends its claim or counterclaim to exceed \$500,000 USD exclusive of interest and the costs of arbitration, the case will continue to be administered pursuant to these Expedited Procedures unless the parties agree otherwise, or the Administrator or the arbitrator determines otherwise. After the arbitrator is appointed, no new or different claim, counterclaim or setoff and no change in amount may be submitted except with the arbitrator's consent.

Article E-6: Appointment and Qualifications of the Arbitrator

A sole arbitrator shall be appointed as follows. The Administrator shall simultaneously submit to each party an identical list of five proposed arbitrators.

The parties may agree to an arbitrator from this list and shall so advise the Administrator. If the parties are unable to agree upon an arbitrator, each party may strike two names from the list, number the remaining names in order of preference, and return the list to the Administrator within 10 days from the transmittal date of the list to the parties. The parties are not required to exchange selection lists. If the parties fail to agree on any of the arbitrators or if acceptable arbitrators are unable or unavailable to act, or if for any other reason the appointment cannot be made from the submitted lists, the Administrator may make the appointment without the circulation of additional lists. The parties will be given notice by the Administrator of the appointment of the arbitrator, together with any disclosures.

Article E-7: Procedural Hearing and Order

After the arbitrator's appointment, the arbitrator may schedule a procedural hearing with the parties, their representatives, and the Administrator to discuss the procedure and schedule for the case. Within 14 days of appointment, the arbitrator shall issue a procedural order.

Article E-8: Proceedings by Written Submissions

In expedited proceedings based on written submissions, all submissions are due within 60 days of the date of the procedural order, unless the arbitrator determines otherwise. The arbitrator may require an oral hearing if deemed necessary.

Article E-9: Proceedings with an Oral Hearing

In expedited proceedings in which an oral hearing is to be held, the arbitrator shall set the date, time, and location of the hearing. The oral hearing shall take place within 60 days of the date of the procedural order unless the arbitrator deems it necessary to extend that period. Hearings may take place in person or via video, audio, or other electronic means, at the discretion of the arbitrator. Generally, there will be no transcript or stenographic record. Any party desiring a stenographic record may arrange for one. The oral hearing shall not exceed one day unless the arbitrator determines otherwise. The Administrator will notify the parties in advance of the hearing date.

Article E-10: The Award

Awards shall be made in writing and shall be final and binding on the parties. Unless otherwise agreed by the parties, specified by law, or determined by the Administrator, the award shall be made not later than 30 days from the date of the closing of the hearing or from the time established for final written submissions.

Interim Supplementary Procedures for Internet Corporation for Assigned Names and Numbers (ICANN) Independent Review Process (IRP)¹

Adopted 25 October 2018

Table of Contents

1. Definitions	2
2. Scope.....	4
3. Composition of Independent Review Panel	4
4. Time for Filing.....	5
5. Conduct of the Independent Review	5
6. Written Statements	7
7. Consolidation, Intervention and Participation as an <i>Amicus</i>	8
8. Exchange of Information.....	11
9. Summary Dismissal.....	11
10. Interim Measures of Protection	12
11. Standard of Review	12
12. IRP PANEL Decisions	13
13. Form and Effect of an IRP PANEL DECISION.....	13
14. Appeal of IRP PANEL Decisions.....	14
15. Costs	14

These interim procedures (Interim Supplementary Procedures) supplement the International Centre for Dispute Resolution’s international arbitration rules in accordance with the independent review process set forth in Article 4, Section 4.3 of ICANN’s Bylaws. These procedures apply to all independent review process proceedings filed after 1 May 2018.

In drafting these Interim Supplementary Procedures, the IRP Implementation Oversight Team (IOT) applied the following principles: (1) remain as close as possible to the current Supplementary Procedures or the Updated Supplementary Procedures (USP) posted for public comment on 28 November 2016²; (2) to the extent public comments received in response to the USP reflected clear movement away from either the current Supplementary Procedures or the

¹ CONTEXTUAL NOTE: These Interim Supplementary Procedures are intended to supplement the ICDR RULES. Therefore, when the ICDR RULES appropriately address an item, there is no need to re-state that Rule within the Supplemental Procedures. The IOT, through its work, may identify additional places where variance from the ICDR RULES is recommended, and that would result in addition or modification to the Supplemental Procedures.

² See <https://www.icann.org/public-comments/irp-supp-procedures-2016-11-28-en>.

USP, to reflect that movement unless doing so would require significant drafting that should be properly deferred for broader consideration; (3) take no action that would materially expand any part of the Supplementary Procedures that the IOT has not clearly agreed upon, or that represent a significant change from what was posted for comment and would therefore require further public consultation prior to changing the supplemental rules to reflect those expansions or changes.

1. Definitions

In these Interim Supplementary Procedures:

A CLAIMANT is any legal or natural person, group, or entity including, but not limited to the Empowered Community, a Supporting Organization, or an Advisory Committee, that has been materially affected by a Dispute. To be materially affected by a Dispute, the Claimant must suffer an injury or harm that is directly and causally connected to the alleged violation.

COVERED ACTIONS are any actions or failures to act by or within ICANN committed by the Board, individual Directors, Officers, or Staff members that give rise to a DISPUTE.

DISPUTES are defined as:

(A) Claims that COVERED ACTIONS violated ICANN's Articles of Incorporation or Bylaws, including, but not limited to, any action or inaction that:

- 1) exceeded the scope of the Mission;
- 2) resulted from action taken in response to advice or input from any Advisory Committee or Supporting Organization that are claimed to be inconsistent with the Articles of Incorporation or Bylaws;
- 3) resulted from decisions of process-specific expert panels that are claimed to be inconsistent with the Articles of Incorporation or Bylaws;
- 4) resulted from a response to a DIDP (as defined in Section 22.7(d)) request that is claimed to be inconsistent with the Articles of Incorporation or Bylaws; or
- 5) arose from claims involving rights of the EC as set forth in the Articles of Incorporation or Bylaws;

(B) Claims that ICANN, the Board, individual Directors, Officers or Staff members have not enforced ICANN's contractual rights with respect to the IANA Naming Function Contract; and

(C) Claims regarding the Post-Transition IANA entity service complaints by direct customers of the IANA naming functions that are not resolved through mediation.

EMERGENCY PANELIST refers to a single member of the STANDING PANEL designated to adjudicate requests for interim relief or, if a STANDING PANEL is not in place at the time the relevant IRP is initiated, it shall refer to the panelist appointed by the ICDR pursuant to ICDR RULES relating to appointment of panelists for emergency relief (ICDR RULES Article 6).

IANA refers to the Internet Assigned Numbers Authority.

ICDR refers to the International Centre for Dispute Resolution, which has been designated and approved by ICANN's Board of Directors as the IRP Provider (IRPP) under Article 4, Section 4.3 of ICANN's Bylaws.

ICANN refers to the Internet Corporation for Assigned Names and Numbers.

INDEPENDENT REVIEW PROCESS or IRP refers to the procedure that takes place upon the Claimant's filing of a written statement of a DISPUTE with the ICDR.

IRP PANEL refers to the panel of three neutral members appointed to decide the relevant DISPUTE.

IRP PANEL DECISION refers to the final written decision of the IRP PANEL that reflects the reasoned analysis of how the DISPUTE was resolved in compliance with ICANN's Articles and Bylaws.

ICDR RULES refers to the ICDR's International Arbitration rules in effect at the time the relevant request for independent review is submitted.

PROCEDURES OFFICER refers to a single member of the STANDING PANEL designated to adjudicate requests for consolidation, intervention, and/or participation as an *amicus*, or, if a STANDING PANEL is not in place at the time the relevant IRP is initiated, it shall refer to the panelist appointed by the ICDR pursuant to its International Arbitration Rules relating to appointment of panelists for consolidation (ICDR Rules Article 8)

PURPOSES OF THE IRP are to hear and resolve Disputes for the reasons specified in the ICANN Bylaws, Article 4, Section 4.3(a).

STANDING PANEL refers to an omnibus standing panel of at least seven members from which three-member IRP PANELS are selected to hear and resolve DISPUTES consistent with the purposes of the IRP.

2. Scope

The ICDR will apply these Interim Supplementary Procedures, in addition to the ICDR RULES, in all cases submitted to the ICDR in connection with Article 4, Section 4.3 of the ICANN Bylaws after the date these Interim Supplementary Procedures go into effect. In the event there is any inconsistency between these Interim Supplementary Procedures and the ICDR RULES, these Interim Supplementary Procedures will govern. These Interim Supplementary Procedures and any amendment of them shall apply in the form in effect at the time the request for an INDEPENDENT REVIEW is commenced. IRPs commenced prior to the adoption of these Interim Supplementary Procedures shall be governed by the Supplementary Procedures in effect at the time such IRPs were commenced.

In the event that any of these Interim Supplementary Procedures are subsequently amended, the rules surrounding the application of those amendments will be defined therein.

3. Composition of Independent Review Panel

The IRP PANEL will comprise three panelists selected from the STANDING PANEL, unless a STANDING PANEL is not in place when the IRP is initiated. The CLAIMANT and ICANN shall each select one panelist from the STANDING PANEL, and the two panelists selected by the parties will select the third panelist from the STANDING PANEL. A STANDING PANEL member's appointment will not take effect unless and until the STANDING PANEL member signs a Notice of STANDING PANEL Appointment affirming that the member is available to serve and is Independent and Impartial pursuant to the ICDR RULES. In addition to disclosing relationships with parties to the DISPUTE, IRP PANEL members must also disclose the existence of any material relationships with ICANN, and/or an ICANN Supporting Organization or Advisory Committee. In the event that a STANDING PANEL is not in place when the relevant IRP is initiated or is in place but does not have capacity due to other IRP commitments, the CLAIMANT and ICANN shall each select a qualified panelist from outside the STANDING PANEL, and the two panelists selected by the parties shall select the third panelist. In the event that the two party-selected panelists cannot agree on the third panelist, the ICDR RULES shall apply to selection of the third panelist. In the event that a panelist resigns, is incapable of performing the duties of a panelist, or is removed and the position becomes vacant, a substitute arbitrator shall be appointed pursuant to the provisions of this Section [3] of these Interim Supplementary Procedures.

4. Time for Filing³

An INDEPENDENT REVIEW is commenced when CLAIMANT files a written statement of a DISPUTE. A CLAIMANT shall file a written statement of a DISPUTE with the ICDR no more than 120 days after a CLAIMANT becomes aware of the material effect of the action or inaction giving rise to the DISPUTE; provided, however, that a statement of a DISPUTE may not be filed more than twelve (12) months from the date of such action or inaction.

In order for an IRP to be deemed to have been timely filed, all fees must be paid to the ICDR within three business days (as measured by the ICDR) of the filing of the request with the ICDR.

5. Conduct of the Independent Review

It is in the best interests of ICANN and of the ICANN community for IRP matters to be resolved expeditiously and at a reasonably low cost while ensuring fundamental fairness and due process consistent with the PURPOSES OF THE IRP. The IRP PANEL shall consider accessibility, fairness, and efficiency (both as to time and cost) in its conduct of the IRP.

In the event that an EMERGENCY PANELIST has been designated to adjudicate a request for interim relief pursuant to the Bylaws, Article 4, Section 4.3(p), the EMERGENCY PANELIST shall comply with the rules applicable to an IRP PANEL, with such modifications as appropriate.

5A. Nature of IRP Proceedings

The IRP PANEL should conduct its proceedings by electronic means to the extent feasible.

Hearings shall be permitted as set forth in these Interim Supplementary Procedures. Where necessary, the IRP PANEL may conduct hearings via telephone, video conference or similar technologies). The IRP PANEL should conduct its proceedings with the presumption that in-person hearings shall not be permitted. For purposes of these Interim Supplementary Procedures, an “in-person hearing” refers to any IRP proceeding held face-to-face, with participants physically present in the same location. The presumption against in-person hearings may be rebutted only under extraordinary circumstances, where, upon motion by a Party, the IRP PANEL determines that the party seeking an in-person hearing has demonstrated that: (1) an in-

³ The IOT recently sought additional public comment to consider the Time for Filing rule that will be recommended for inclusion in the final set of Supplementary Procedures. In the event that the final Time for Filing procedure allows additional time to file than this interim Supplementary Procedure allows, ICANN committed to the IOT that the final Supplementary Procedures will include transition language that provides potential claimants the benefit of that additional time, so as not to prejudice those potential claimants.

person hearing is necessary for a fair resolution of the claim; (2) an in-person hearing is necessary to further the PURPOSES OF THE IRP; *and* (3) considerations of fairness and furtherance of the PURPOSES OF THE IRP outweigh the time and financial expense of an in-person hearing. In no circumstances shall in-person hearings be permitted for the purpose of introducing new arguments or evidence that could have been previously presented, but were not previously presented, to the IRP PANEL.

All hearings shall be limited to argument only unless the IRP Panel determines that a the party seeking to present witness testimony has demonstrated that such testimony is: (1) necessary for a fair resolution of the claim; (2) necessary to further the PURPOSES OF THE IRP; *and* (3) considerations of fairness and furtherance of the PURPOSES OF THE IRP outweigh the time and financial expense of witness testimony and cross examination.

All evidence, including witness statements, must be submitted in writing 15 days in advance of any hearing.

With due regard to ICANN Bylaws, Article 4, Section 4.3(s), the IRP PANEL retains responsibility for determining the timetable for the IRP proceeding. Any violation of the IRP PANEL's timetable may result in the assessment of costs pursuant to Section 10 of these Interim Supplementary Procedures.

5B. Translation

As required by ICANN Bylaws, Article 4, Section 4.3(l), "All IRP proceedings shall be administered in English as the primary working language, with provision of translation services for CLAIMANTS if needed." Translation may include both translation of written documents/transcripts as well as interpretation of oral proceedings.

The IRP PANEL shall have discretion to determine (i) whether the CLAIMANT has a need for translation services, (ii) what documents and/or hearing that need relates to, and (iii) what language the document, hearing or other matter or event shall be translated into. A CLAIMANT not determined to have a need for translation services must submit all materials in English (with the exception of the request for translation services if the request includes CLAIMANT's certification to the IRP PANEL that submitting the request in English would be unduly burdensome).

In determining whether a CLAIMANT needs translation, the IRP PANEL shall consider the CLAIMANT's proficiency in spoken and written English and, to the extent that the CLAIMANT is represented in the proceedings by an attorney or other agent, that representative's proficiency

in spoken and written English. The IRP PANEL shall only consider requests for translations from/to English and the other five official languages of the United Nations (i.e., Arabic, Chinese, French, Russian, or Spanish).

In determining whether translation of a document, hearing or other matter or event shall be ordered, the IRP PANEL shall consider the CLAIMANT's proficiency in English as well as in the requested other language (from among Arabic, Chinese, French, Russian or Spanish). The IRP PANEL shall confirm that all material portions of the record of the proceeding are available in English.

In considering requests for translation, the IRP PANEL shall consider the materiality of the particular document, hearing or other matter or event requested to be translated, as well as the cost and delay incurred by translation, pursuant to ICDR Article 18 on Translation, and the need to ensure fundamental fairness and due process under ICANN Bylaws, Article 4, Section 4.3(n)(iv).

Unless otherwise ordered by the IRP PANEL, costs of need-based translation (as determined by the IRP PANEL) shall be covered by ICANN as administrative costs and shall be coordinated through ICANN's language services providers. Even with a determination of need-based translation, if ICANN or the CLAIMANT coordinates the translation of any document through its legal representative, such translation shall be considered part of the legal costs and not an administrative cost to be born by ICANN. Additionally, in the event that either the CLAIMANT or ICANN retains a translator for the purpose of translating any document, hearing or other matter or event, and such retention is not pursuant to a determination of need-based translation by the IRP PANEL, the costs of such translation shall not be charged as administrative costs to be covered by ICANN.

6. Written Statements

A CLAIMANT'S written statement of a DISPUTE shall include all claims that give rise to a particular DISPUTE, but such claims may be asserted as independent or alternative claims.

The initial written submissions of the parties shall not exceed 25 pages each in argument, double-spaced and in 12-point font. All necessary and available evidence in support of the CLAIMANT'S claim(s) should be part of the initial written submission. Evidence will not be included when calculating the page limit. The parties may submit expert evidence in writing, and there shall be one right of reply to that expert evidence. The IRP PANEL may request additional written submissions from the party seeking review, the Board, the Supporting Organizations, or from other parties.

In addition, the IRP PANEL may grant a request for additional written submissions from any person or entity who is intervening as a CLAIMANT or who is participating as an amicus upon the showing of a compelling basis for such request. In the event the IRP PANEL grants a request for additional written submissions, any such additional written submission shall not exceed 15 pages, double-spaced and in 12-point font.

For any DISPUTE resulting from a decision of a process-specific expert panel that is claimed to be inconsistent with ICANN's Articles of Incorporation or Bylaws, as specified at Bylaw Section 4.3(b)(iii)(A)(3), any person, group or entity that was previously identified as within a contention set with the CLAIMANT regarding the issue under consideration within such expert panel proceeding shall reasonably receive notice from ICANN that the INDEPENDENT REVIEW PROCESS has commenced. ICANN shall undertake reasonable efforts to provide notice by electronic message within two business days (calculated at ICANN's principal place of business) of receiving notification from the ICDR that the IRP has commenced.

7. Consolidation, Intervention and Participation as an *Amicus*

A PROCEDURES OFFICER shall be appointed from the STANDING PANEL to consider any request for consolidation, intervention, and/or participation as an *amicus*. Except as otherwise expressly stated herein, requests for consolidation, intervention, and/or participation as an *amicus* are committed to the reasonable discretion of the PROCEDURES OFFICER. In the event that no STANDING PANEL is in place when a PROCEDURES OFFICER must be selected, a panelist may be appointed by the ICDR pursuant to its INTERNATIONAL ARBITRATION RULES relating to appointment of panelists for consolidation.

In the event that requests for consolidation or intervention are granted, the restrictions on Written Statements set forth in Section 6 shall apply to all CLAIMANTS collectively (for a total of 25 pages exclusive of evidence) and not individually unless otherwise modified by the IRP PANEL in its discretion consistent with the PURPOSES OF THE IRP.

Consolidation

Consolidation of DISPUTES may be appropriate when the PROCEDURES OFFICER concludes that there is a sufficient common nucleus of operative fact among multiple IRPs such that the joint resolution of the DISPUTES would foster a more just and efficient resolution of the DISPUTES than addressing each DISPUTE individually. If DISPUTES are consolidated, each existing DISPUTE shall no longer be subject to further separate consideration. The PROCEDURES OFFICER may in its discretion order briefing to consider the propriety of consolidation of DISPUTES.

Intervention

Any person or entity qualified to be a CLAIMANT pursuant to the standing requirement set forth in the Bylaws may intervene in an IRP with the permission of the PROCEDURES OFFICER, as provided below. This applies whether or not the person, group or entity participated in an underlying proceeding (a process-specific expert panel per ICANN Bylaws, Article 4, Section 4.3(b)(iii)(A)(3)).

Intervention is appropriate to be sought when the prospective participant does not already have a pending related DISPUTE, and the potential claims of the prospective participant stem from a common nucleus of operative facts based on such briefing as the PROCEDURES OFFICER may order in its discretion.

In addition, the Supporting Organization(s) which developed a Consensus Policy involved when a DISPUTE challenges a material provision(s) of an existing Consensus Policy in whole or in part shall have a right to intervene as a CLAIMANT to the extent of such challenge. Supporting Organization rights in this respect shall be exercisable through the chair of the Supporting Organization.

Any person, group or entity who intervenes as a CLAIMANT pursuant to this section will become a CLAIMANT in the existing INDEPENDENT REVIEW PROCESS and have all of the rights and responsibilities of other CLAIMANTS in that matter and be bound by the outcome to the same extent as any other CLAIMANT. All motions to intervene or for consolidation shall be directed to the IRP PANEL within 15 days of the initiation of the INDEPENDENT REVIEW PROCESS. All requests to intervene or for consolidation must contain the same information as a written statement of a DISPUTE and must be accompanied by the appropriate filing fee. The IRP PANEL may accept for review by the PROCEDURES OFFICER any motion to intervene or for consolidation after 15 days in cases where it deems that the PURPOSES OF THE IRP are furthered by accepting such a motion.

Excluding materials exempted from production under Rule 8 (Exchange of Information) below, the IRP PANEL shall direct that all materials related to the DISPUTE be made available to entities that have intervened or had their claim consolidated unless a CLAIMANT or ICANN objects that such disclosure will harm commercial confidentiality, personal data, or trade secrets; in which case the IRP PANEL shall rule on objection and provide such information as is consistent with the PURPOSES OF THE IRP and the appropriate preservation of confidentiality as recognized in Article 4 of the Bylaws.

Participation as an *Amicus Curiae*

Any person, group, or entity that has a material interest relevant to the DISPUTE but does not satisfy the standing requirements for a CLAIMANT set forth in the Bylaws may participate as an *amicus curiae* before an IRP PANEL, subject to the limitations set forth below. Without limitation to the persons, groups, or entities that may have such a material interest, the following persons, groups, or entities shall be deemed to have a material interest relevant to the DISPUTE and, upon request of person, group, or entity seeking to so participate, shall be permitted to participate as an *amicus* before the IRP PANEL:

- i. A person, group or entity that participated in an underlying proceeding (a process-specific expert panel per ICANN Bylaws, Article 4, Section 4.3(b)(iii)(A)(3));
- ii. If the IRP relates to an application arising out of ICANN's New gTLD Program, a person, group or entity that was part of a contention set for the string at issue in the IRP; and
- iii. If the briefings before the IRP PANEL significantly refer to actions taken by a person, group or entity that is external to the DISPUTE, such external person, group or entity.

All requests to participate as an *amicus* must contain the same information as the Written Statement (set out at Section 6), specify the interest of the *amicus curiae*, and must be accompanied by the appropriate filing fee.

If the PROCEDURES OFFICER determines, in his or her discretion, subject to the conditions set forth above, that the proposed *amicus curiae* has a material interest relevant to the DISPUTE, he or she shall allow participation by the *amicus curiae*. Any person participating as an *amicus curiae* may submit to the IRP Panel written briefing(s) on the DISPUTE or on such discrete questions as the IRP PANEL may request briefing, in the discretion of the IRP PANEL and subject to such deadlines, page limits, and other procedural rules as the IRP PANEL may specify in its discretion.⁴ The IRP PANEL shall determine in its discretion what materials related to the DISPUTE to make available to a person participating as an *amicus curiae*.

⁴ During the pendency of these Interim Supplementary Rules, in exercising its discretion in allowing the participation of *amicus curiae* and in then considering the scope of participation from *amicus curiae*, the IRP PANEL shall lean in favor of allowing broad participation of an *amicus curiae* as needed to further the purposes of the IRP set forth at Section 4.3 of the ICANN Bylaws.

8. Exchange of Information

The IRP PANEL shall be guided by considerations of accessibility, fairness, and efficiency (both as to time and cost) in its consideration of requests for exchange of information.

On the motion of either Party and upon finding by the IRP PANEL that such exchange of information is necessary to further the PURPOSES OF THE IRP, the IRP PANEL may order a Party to produce to the other Party, and to the IRP PANEL if the moving Party requests, documents or electronically stored information in the other Party's possession, custody, or control that the Panel determines are reasonably likely to be relevant and material to the resolution of the CLAIMS and/or defenses in the DISPUTE and are not subject to the attorney-client privilege, the work product doctrine or otherwise protected from disclosure by applicable law (including, without limitation, disclosures to competitors of the disclosing person, group or entity, of any competition-sensitive information of any kind). Where such method(s) for exchange of information are allowed, all Parties shall be granted the equivalent rights for exchange of information.

A motion for exchange of documents shall contain a description of the specific documents, classes of documents or other information sought that relate to the subject matter of the Dispute along with an explanation of why such documents or other information are likely to be relevant and material to resolution of the Dispute.

Depositions, interrogatories, and requests for admission will not be permitted.

In the event that a Party submits what the IRP PANEL deems to be an expert opinion, such opinion must be provided in writing and the other Party must have a right of reply to such an opinion with an expert opinion of its own.

9. Summary Dismissal

An IRP PANEL may summarily dismiss any request for INDEPENDENT REVIEW where the Claimant has not demonstrated that it has been materially affected by a DISPUTE. To be materially affected by a DISPUTE, a Claimant must suffer an injury or harm that is directly and causally connected to the alleged violation.

An IRP PANEL may also summarily dismiss a request for INDEPENDENT REVIEW that lacks substance or is frivolous or vexatious.

10. Interim Measures of Protection

A Claimant may request interim relief from the IRP PANEL, or if an IRP PANEL is not yet in place, from the STANDING PANEL. Interim relief may include prospective relief, interlocutory relief, or declaratory or injunctive relief, and specifically may include a stay of the challenged ICANN action or decision in order to maintain the status quo until such time as the opinion of the IRP PANEL is considered by ICANN as described in ICANN Bylaws, Article 4, Section 4.3(o)(iv).

An EMERGENCY PANELIST shall be selected from the STANDING PANEL to adjudicate requests for interim relief. In the event that no STANDING PANEL is in place when an EMERGENCY PANELIST must be selected, a panelist may be appointed by the ICDR pursuant to ICDR RULES relating to appointment of panelists for emergency relief. Interim relief may only be provided if the EMERGENCY PANELIST determines that the Claimant has established all of the following factors:

- (i) A harm for which there will be no adequate remedy in the absence of such relief;
- (ii) Either: (A) likelihood of success on the merits; or (B) sufficiently serious questions related to the merits; and
- (iii) A balance of hardships tipping decidedly toward the party seeking relief.

Interim relief may be granted on an ex parte basis in circumstances that the EMERGENCY PANELIST deems exigent, but any Party whose arguments were not considered prior to the granting of such interim relief may submit any opposition to such interim relief, and the EMERGENCY PANELIST must consider such arguments, as soon as reasonably possible. The EMERGENCY PANELIST may modify or terminate the interim relief if the EMERGENCY PANELIST deems it appropriate to do so in light of such further arguments.

11. Standard of Review

Each IRP PANEL shall conduct an objective, de novo examination of the DISPUTE.

- a. With respect to COVERED ACTIONS, the IRP PANEL shall make findings of fact to determine whether the COVERED ACTION constituted an action or inaction that violated ICANN'S Articles or Bylaws.

- b. All DISPUTES shall be decided in compliance with ICANN's Articles and Bylaws, as understood in the context of the norms of applicable law and prior relevant IRP decisions.
- c. For Claims arising out of the Board's exercise of its fiduciary duties, the IRP PANEL shall not replace the Board's reasonable judgment with its own so long as the Board's action or inaction is within the realm of reasonable business judgment.
- d. With respect to claims that ICANN has not enforced its contractual rights with respect to the IANA Naming Function Contract, the standard of review shall be whether there was a material breach of ICANN's obligations under the IANA Naming Function Contract, where the alleged breach has resulted in material harm to the Claimant.
- e. IRPs initiated through the mechanism contemplated at Article 4, Section 4.3(a)(iv) of ICANN's Bylaws shall be subject to a separate standard of review as defined in the IANA Naming Function Contract.

12. IRP PANEL Decisions

IRP PANEL DECISIONS shall be made by a simple majority of the IRP PANEL. If any IRP PANEL member fails to sign the IRP PANEL DECISION, the IRP PANEL member shall endeavor to provide a written statement of the reason for the absence of such signature.

13. Form and Effect of an IRP PANEL DECISION

- a. IRP PANEL DECISIONS shall be made in writing, promptly by the IRP PANEL, based on the documentation, supporting materials and arguments submitted by the parties. IRP PANEL DECISIONS shall be issued in English, and the English version will be authoritative over any translations.
- b. The IRP PANEL DECISION shall specifically designate the prevailing party as to each Claim.
- c. Subject to Article 4, Section 4.3 of ICANN's Bylaws, all IRP PANEL DECISIONS shall be made public, and shall reflect a well-reasoned application of how the DISPUTE was resolved in compliance with ICANN's Articles and Bylaws, as understood in light of prior IRP PANEL DECISIONS decided under

the same (or an equivalent prior) version of the provision of the Articles and Bylaws at issue, and norms of applicable law.

14. Appeal of IRP PANEL Decisions

An IRP PANEL DECISION may be appealed to the full STANDING PANEL sitting en banc within 60 days of the issuance of such decision. The en banc STANDING PANEL will review such appealed IRP PANEL DECISION based on a clear error of judgment or the application of an incorrect legal standard. The en banc STANDING PANEL may also resolve any disputes between panelists on an IRP PANEL or the PROCEDURES OFFICER with respect to consolidation of CLAIMS or intervention.

15. Costs

The IRP PANEL shall fix costs in its IRP PANEL DECISION. Except as otherwise provided in Article 4, Section 4.3(e)(ii) of ICANN's Bylaws, each party to an IRP proceeding shall bear its own legal expenses, except that ICANN shall bear all costs associated with a Community IRP, as defined in Article 4, Section 4.3(d) of ICANN's Bylaws, including the costs of all legal counsel and technical experts.

Except with respect to a Community IRP, the IRP PANEL may shift and provide for the losing party to pay administrative costs and/or fees of the prevailing party in the event it identifies the losing party's Claim or defense as frivolous or abusive.

1. OBJECTIVE AND SUMMARY OF OPINIONS

1. I have been asked by Dechert LLP, counsel to the Claimants, to describe the history of the Internet Corporation for Assigned Names and Numbers (“**ICANN**”), its mandate to introduce and promote competition in the provision and supply of generic domain names (ICANN’s “**Competition Mandate**”),¹ and the unique importance that the .WEB registry plays in achieving ICANN’s Competition Mandate in the context of ICANN’s New gTLD Program. Although this expert opinion has been requested by Claimants’ counsel, I understand that my duty is to the IRP Panel.

2. As set forth in greater detail below, ICANN was conceived with objectives to, and has operated to, expand the Internet namespace and to introduce and promote competition in the provision and supply of generic domain names, which are fundamental to the architecture of the Internet. Competition in fundamental Internet naming provisioning, while maintaining interoperability, has been a touchstone for the Internet technical community, digital entrepreneurs, telecommunications regulators, and end-users—those who formed and remain stakeholders of ICANN—since the commercialization of the Internet in the early 1990s. ICANN’s Competition Mandate represents an obligation by ICANN to do more than just comply with applicable antitrust and competition laws. Rather, it is an affirmative undertaking by ICANN to

¹ “The launch of the new gTLD program was part of ICANN’s founding mandate when it was formed by the U.S. Government over 12 years ago. That **mandate is to introduce competition** and choice into the domain name system in a stable and secure manner”. Statement of Kurt Pritz (ICANN Senior Vice President for Shareholder Relations) (“**Pritz Statement**”), S. Hrg. 112-394, ICANN’s Expansion of Top Level Domains, Hearing before the Committee on Commerce, Science, and Transportation, U.S. Senate, 112th Congress, First Session, December 8, 2011, *available at* <https://www.gpo.gov/fdsys/pkg/CHRG-112shrg74251/html/CHRG-112shrg74251.htm> (“**December 2011 Senate Hearing**”), [Ex. JZ-2], at 8 (emphasis added). Herein, I refer to the “mandate” identified by Mr. Pritz as ICANN’s “**Competition Mandate**”.

ensure that its decisions and actions are consistent with its mission to create a competitive environment within the DNS in which market forces can operate without restraint.

3. In the late 1990s, when ICANN was formed, the mandate to introduce and promote competition for the provision and supply of domain names meant creating competition for Network Solutions, Inc. (“**NSI**”), which controlled the .COM registry among others, and which was acquired in 2000 by VeriSign, Inc. (“**VeriSign**”).

4. To realize its Competition Mandate, ICANN launched a program that would allow for the formation of new registries (the “**New gTLD Program**”) to compete with NSI/VeriSign. Since the first round of the New gTLD Program in 2000, the industry has recognized that the most important new registry could be .WEB, which, of all existing and potential new gTLDs, is the closest and best potential competitor to VeriSign.

5. VeriSign’s presumptive acquisition of .WEB runs counter to ICANN’s Competition Mandate, is inapposite to the intent and purpose of the New gTLD Program, and is contrary to ICANN’s fundamental objective of adopting and acting pursuant to processes that are transparent, fair, and non-discriminatory. A recent analyst report from JP Morgan described the current situation thusly:

Verisign is paying \$135M for the ownership rights to be the registry operator of .web. This could offer a new growth opportunity for the company into the future, but just as important, we think it is a very good defensive strategic move keeping .web out of the hands of the potential competitor as we believe .web could be the closest thing to .com in the minds of customers looking for domain names.²

2. QUALIFICATIONS AND EXPERIENCE

6. I am the George Bemis Professor of International Law and Professor of Computer Science at Harvard University, holding faculty appointments at Harvard Law School, the Harvard John F. Kennedy School of Government, and the Harvard John A. Paulson School of Engineering and Applied Sciences. I co-founded and served as executive director of the Berkman Center for Internet and Society at Harvard Law School from 1996 to 2000. I was an assistant professor of law at Harvard Law School from 2000 to 2005, the Professor of Internet Governance and Regulation at the University of Oxford from 2005 to 2008, when I rejoined the Harvard Law School faculty as professor of law.

7. I write and teach about the impact of the Internet on society and on law. Some of my relevant works include *The Future of the Internet and How to Stop It*³ and numerous articles, such as “The Generative Internet,”⁴ published in the *Harvard Law Review*; “A History of Online Gatekeeping,”⁵ published in the *Harvard Journal of Law & Technology*; “Better Data for a Better Internet,”⁶ published in *Science*; and “ICANN: Between the Public and the Private,”⁷ published in *The Best in E-Commerce Law*.

8. In addition to my academic appointments, I was the Distinguished Scholar in Residence at the Federal Communications Commission (“FCC”) in 2011 and chaired the FCC’s Open Internet Advisory Committee from 2012 to 2014. In July 1999, I testified before the United

⁷ Jonathan Zittrain, “ICANN: Between the Public and the Private,” in *The Best in E-Commerce Law* (2001).

States House of Representatives Subcommittee on Investigations and Oversight about ICANN's role in domain name system privatization. I testified before the United States House of Representatives Subcommittee on Courts and Intellectual Property in June 2000 about issues and obstacles relating to the Internet and federal courts. In April 2000, I testified before the United States Senate Committee on Commerce, Science, and Technology about the Internet Tax Freedom Act, and in October 2006 I testified before the British House of Lords Select Committee on Science and Technology on cybersecurity. I served on the board of trustees of The Internet Society, which facilitates the development of Internet standards, from 2009 through 2012, and I am currently a board member of the Electronic Frontier Foundation, which advances digital rights in the public interest.

9. I was a member of ICANN's Membership Advisory Committee, which advised the ICANN board on the creation of its membership framework in the organization's early years. I participated in the discussions that gave rise to ICANN, and the Berkman Klein Center (then the Berkman Center) hosted ICANN's first public meeting in 1998.

10. A copy of my *curriculum vitae* is attached as **Exhibit JZ-1**.

11. Although I am participating in this case on a paid basis, the views expressed in this report are my own, and do not represent any organization or institution. I reserve the right to supplement or amend this report if additional evidence comes to my attention.

3. INTRODUCTION

12. Competition is a recurring concern in the communications space. When the goal of a system is to ensure the ability of any person to communicate with any other person, the easiest way to do that often entails assigning the coordination of that system to a single entity.

With a single party at the reins, the argument goes, we could be sure that everybody will be properly interconnected. For decades this was the argument made by AT&T in its insistent defense of its monopoly for U.S. telephonic communication. And it's true that calls from California to Connecticut did go through reliably. But those calls, made on universally-rented, company-issued telephones, were expensive. Innovation was limited, and, when companies like Hush-A-Phone tried to make things better, AT&T would use its dominant position to ensure that nothing happened on its system without its consent.⁸

13. Looking back from a world with dozens of smartphone makers and four major wireless networks in the U.S. alone, it is clear that there are alternatives to centralized proprietary coordination. And it seemed that way as well in the mid- to late 1990s, when the community that created the modern Internet was rapidly building a governance infrastructure for the most significant digital communications platform in history. At nearly every step of the process of developing our current Internet governance infrastructure, ensuring competition has not just been a factor but a primary objective when making decisions, including the design of technical architectures. Stakeholders remain vigilant regarding anticompetitive behavior in the context of major Internet infrastructure issues like the assignment of new generic Top Level Domains (“gTLDs”).

4. ORIGIN AND DEVELOPMENT OF THE DOMAIN NAME SYSTEM

14. The Internet started out as an academic experiment aimed at connecting geographically separated computer networks. In these early days, it was easy to connect to other

⁸ Matthew Lasar, “Any lawful device: Revisiting Carterfone on the eve of the Net Neutrality vote”, *Ars Technica*, December 13, 2017, available at <https://arstechnica.com/tech-policy/2017/12/carterfone-40-years/>, [Ex. JZ-4].

Internet users because there were so few people on the network. However, as the Internet began to expand, users developed ways to make navigation on the Internet more straightforward. As a result, the domain name system (“DNS”) was created by a handful of researchers, including Paul Mockapetris.⁹ In short, the DNS is a hierarchical distributed database that serves as a “directory” for points of presence on the Internet.¹⁰ Every website has a numeric “IP address” that corresponds to its location on the Internet. IP addresses are usually represented in dot-decimal notation, consisting of four decimal numbers, each ranging from 0 to 255, separated by dots, *e.g.*, 172.16.254.1. Because IP addresses are difficult to remember, the DNS uses human-friendly “domain names” such as www.google.com. The DNS translates these domain names into IP addresses and directs us to the website we have requested.¹¹

15. DNS records are stored on servers all over the world that are organized in a hierarchical structure. At the very top of the DNS hierarchy are thirteen “root” servers that store DNS information about all top-level domains (“TLDs”).¹² Top-level domains are found at the far right end of any given domain name. For example, the TLD of www.google.com is .COM. Next in the DNS chain of command are top-level domain nameservers which keep DNS records for all subdomains within that TLD. For example, the .COM domain nameserver contains all DNS records for www.google.com, while the .EDU domain name server contains DNS records for

⁹ See Cricket Liu and Paul Albitz, *DNS and BIND* (5th ed. 2006), [Ex. JZ-5], Ch. 1, Secs. 1-2, 4 (“A (Very) Brief History of the Internet”, “On the Internet and Internets”, and “The History of BIND”).

¹⁰ The DNS performs a variety of functions, but for the purposes of this document, we focus on its role as a directory. For example, in addition to translating domain names into IP addresses, DNS servers can also be used to direct and balance Internet traffic so that no individual server is burdened by too many requests. These types of functions are called load balancing and traffic steering. See *id.*, Ch. 10, Sec. 7 (“Round-Robin Load Distribution”).

¹¹ Keith Shaw, “What is DNS and how does it work?”, *Network World*, April 11, 2018, available at <https://www.networkworld.com/article/3268449/internet/what-is-dns-and-how-does-it-work.html>, [Ex. JZ-6].

¹² Cricket Liu and Paul Albitz, *DNS and BIND*, [Ex. JZ-5], Ch. 2, Sec. 6 (“Resolution”).

www.harvard.edu and www.berkeley.edu. These second level domains store the DNS records for websites within that second level domain and so on and so forth.¹³

16. At the dawn of TLD creation and assignment in 1984, the Internet community thought of TLDs in terms of general purpose categories: commercial, education, government, etc. The seven original TLDs (.COM, .NET, .ORG, .EDU, .MIL, .INT, .GOV) reflect this approach. .COM was designated for commercial businesses, .EDU was reserved for education institutions like universities, .GOV was set aside for U.S. government organizations, .MIL was created for U.S. military groups, .NET was designated for “organizations providing network infrastructure,” .ORG was created for non-profits, and the seventh TLD, .INT, was set aside for international organizations.¹⁴ These seven were the original members of a set of TLDs which would later become known as gTLDs. .COM, .NET, and .ORG were open gTLDs, meaning that anyone could register a second-level domain in one or more of these gTLDs, while .INT, .MIL, .EDU, and .GOV were closed gTLDs, meaning that only registrants meeting certain criteria could own a second-level domain in that gTLD.

17. .COM emerged as the dominant gTLD even for non-commercial use. From the outset, gTLDs were confusing to most users. They were too technical for the general public to fully understand. The difference between .COM and .NET, for instance, was lost on many. Many early users did not understand how to use domain names and URLs to navigate the Web. Instead,

¹³ Keith Shaw, “What is DNS and how does it work?”, [Ex. JZ-6]; Cricket Liu and Paul Albitz, *DNS and BIND*, [Ex. JZ-5], Ch. 1, Sec. 3 (“The Domain Name System, in a Nutshell”).

¹⁴ Cricket Liu and Paul Albitz, *DNS and BIND*, [Ex. JZ-5], Ch. 2, Sec. 2 (“The Internet Domain Namespace”). See also Jon Postel and J. Reynolds, Network Working Group, Request for Comments: 920, Domain Requirements, October 1984, available at <https://tools.ietf.org/pdf/rfc920.pdf>, [Ex. JZ-7], at 2. Note that .net was eventually opened to commercial traffic as well.

they treated their browsers' URL bars as search engines and simply typed in the name of the entity they were looking for. In an attempt to make their browsers more user-friendly, developers designed browsers to append ".COM" to any non-URL the user typed into the browser window. This increased the commercial value of .COM domains and further cemented .COM's status in the hierarchy of gTLDs in this formative era of the Web in the 1990s.¹⁵

18. .COM continues to be the dominant gTLD today, but in many ways it is an imperfect flag-bearer for the general-purpose Internet. Colloquially, when we think of .COM, we think of businesses, start-ups, and the "dot com bubble". Though .COM is semantically associated as a commercial gTLD, many .COM domains are not commercial, and no test for commercial use is applied for acquisition or renewal of a domain.

5. THE BIRTH OF NSI/VERISIGN

19. In the beginning of the Internet age, gTLDs were managed and domain names were assigned by one man, Jon Postel, acting in a non-commercial capacity. The fact that there was just one man responsible for managing gTLDs and acting as the root may seem bewildering today, and it was remarkable even back then. In an effort to become more formal, Postel's work was formalized under an entity known as **IANA**—the Internet Assigned Number Authority—(informally, he was sometimes referred to as the "Internet Main Man"¹⁶ or even the "God" of the Internet¹⁷). Postel did not wish to be the "owner" of the franchise, but rather saw himself as

¹⁵ Milton L. Mueller, *Ruling the Root: Internet Governance and the Taming of Cyberspace* (2006), [Ex. JZ-8], Sec. 6.1.2.

¹⁶ "Fallout over Unsanctioned DNS Test", *Wired News Report*, May 2, 1999, available at <https://www.wired.com/1998/02/fallout-over-unsanctioned-dns-test/>, [Ex. JZ-9].

performing a task that was necessary for the greater community. IANA was not merely a formalization but also a recognition that this essential function existed independently of Postel as an individual.

20. Despite having a more formal-sounding moniker, Postel could not scale his work at the rate of the Internet, and eventually the task of managing gTLDs and assigning domain names became too burdensome for one person to manage. Postel's insufficient scale became acutely evident in 1991, when the United States government officially opened the Internet to commercial traffic. The commercialization of the Internet resulted in a massive spike in demand for domains.¹⁸ To help manage the increased demand, the National Science Foundation ("NSF") in 1993 entered into a five year, \$5.2 million agreement with NSI to manage its gTLD registries.¹⁹

21. In 1995, NSI was acquired by defense contractor Science Applications International Corporation ("SAIC") for \$4.7 million.²⁰ Shortly thereafter, NSF agreed to arrange for the company to charge a domain registration fee rather than have the government pay for domain name management services.²¹ As a result of being the sole source of generic domain names, NSI started earning a significant amount of money from registration fees (NSI charged \$100 for the initial registration and a \$50 annual renewal fee after the first two years). Over a period of a few years, NSI's income from registration fees would escalate from tens to hundreds

¹⁸ Heather N. Mewes, "Memorandum of Understanding on the Generic Top-Level Domain Name Space of the Internet Domain Name System", 13(1) *Berkeley Technology Law Journal* 235 (1998), [Ex. JZ-11], at 236.

of millions of dollars.²² Five short years after its acquisition by SAIC, VeriSign would acquire NSI for \$21 billion.²³

22. The shift from free to paid domain registration marks the point at which Internet stakeholders started to think critically about the importance of competition in the domain assignment space. Given that NSI was the sole source of generic domain names, Internet stakeholders became concerned that the company could and would adopt aggressive and predatory behavior. Jon Postel himself said:

I think this introduction of charging . . . for domain registrations is sufficient cause to take steps to set up a small number of alternate top level domains managed by other registration centers. I'd like to see some competition between registration services to encourage good service at low prices.²⁴

As NSI's five-year contract with the NSF was running out, calls were made to break the NSI monopoly and introduce meaningful competition into the domain name space.²⁵

23. NSI, however, resisted efforts to force it to relinquish its control of domain registration at the end of its contract. The company argued that it owned its registry of domains and should be allowed to continue its registration business unencumbered.²⁶ Ultimately,

however, NSI did endorse the basic concept of introducing competition by adding new gTLDs to the root.

24. The urgent need for competition in the gTLD space was a position also endorsed by Jon Postel, who saw competition as a necessary step to prevent an abuse of monopolistic market power by NSI. Writing in 1996, he said:

What are the priorities here? My list is:

1. Introduce competition in the domain name registry business.
2. Everything else.

So lets [sic] focus on how to accomplish the top priority.

General observation: Changing things is hard, introducing separate new things is easier.²⁷

Postel's comment reflected his frustration with the development of how the DNS was being managed: NSI had leveraged its position as the sole source of generic domain names for private gain whereas Postel had managed the DNS as an academic in the public interest. Postel's concerns were reflected throughout the Internet community and NSI encountered a significant amount of criticism.²⁸ Notably, the president of the Internet Society ("ISOC"), Donald Heath, accused NSI of "tak[ing] the low road" and valuing its market position above what was in "the

²⁷ Postel Priorities, July 3, 1996, available at <https://web.archive.org/web/19970227141952/Http://www.iiia.org/lists/newdom/current/0233.html>, [Ex. JZ-18], at 1-2.

²⁸ According to *Ruling the Root*, "[a] rift was growing between Network Solutions and the Internet technical community. The community had reacted uncomfortably to the acquisition of the InterNIC registry by a multibillion-dollar defense contractor in March 1996. Many of its participants did not approve of the commercialization of domain names generally". Milton L. Mueller, *Ruling the Root*, [Ex. JZ-8], Sec. 6.3.2 (citation omitted).

best interest of the Internet”.²⁹ By 1997, the Internet community and the U.S. government were starting to consider proposals to break NSI’s monopoly.³⁰

6. THE ORIGIN OF THE NEW GTLD PROGRAM: DRAFT-POSTEL, THE GTLD-MOU, THE GREEN PAPER, AND THE WHITE PAPER

25. As noted above, Jon Postel was one of the first to suggest expanding the number of gTLDs as a mechanism to promote competition among registries. In 1996, Postel submitted a draft Request for Comment titled, “New Registries and the Delegation of International Top-Level Domains,” that became popularly known as the “**draft-postel**”.³¹ The draft proposed to create fifty new registries to compete with NSI and allow each to control three new gTLDs.³² Every year, ten new registries would be designated to manage new gTLDs in order to keep up with the demand for domain names.³³ Although the draft-postel was never adopted, it was the first of many proposals that suggested adding new gTLDs to the root as a means of introducing competition in the provision and supply of generic domain names.³⁴

26. Soon after the draft-postel was issued, eleven representatives from several Internet governance groups, led by ISOC and including Postel, formed the International Ad Hoc Committee (“**IAHC**”) to create a “global governance structure for the domain name system” as

²⁹ David S. Hilzenrath, “Network Solutions Dropped as Registrar of Internet Domains”, [Ex. JZ-15], at 2, “They’ve taken the low road and tried to protect their monopoly instead of taking a leadership role in the best interest of the Internet,” quoting Donald Heath.

an alternative to NSI.³⁵ The Committee’s ultimate proposal (the “gTLD-MOU”) differed from the draft-postel in that it planned to initially add only seven new gTLDs rather than hundreds and to create a “global monopoly registry” that would operate as a non-profit.³⁶ This registry would be owned by a group of registrars (the Council of Registrars (“CORE”))³⁷ that would share control over all of the gTLDs instead of dividing exclusive control of different gTLDs among various registries.³⁸

27. The gTLD-MOU was an important step for the Internet community. Before the gTLD-MOU, Internet governance groups had focused on developing technical standards, not policymaking. But it had become increasingly clear to members of the IAHC that the commercialization of Internet infrastructure, and NSI, in particular, posed a challenge to a free and open Internet. With the gTLD-MOU, the leaders of the Internet community recognized that policy neutrality was no longer a viable model and that they had to take a position that directly opposed NSI’s *existing* business model.³⁹ This should not be understood to reflect an opposition

³⁵ Other members of the IAHC were from the International Trademark Association, the World Intellectual Property Association, Intellectual property attorney, Keio University, Japan, WIDE Project, Telstra, Australia education and research Internet, IBM Israel, International Telecommunication Union, Internet Engineering Task Force, and the National Science Foundation. *See id.*, Sec. 7.1 (citation omitted).

³⁶ The gTLD-MoU defined a new role in the domain name registration process called a registrar in an attempt to separate the “wholesale” function of operating the registry database from the “retail” function of selling second-level domains to consumers. *Id.* A TLD’s registry is responsible for maintaining databases of all of the domain names allocated under that TLD. Registrars facilitate the process of selling domains within a TLD’s namespace to companies and individuals. A registry can serve as the registrar for the TLDs under its control, or it may delegate that function to other registrars (GoDaddy, etc.). In effect, registries function as domain name wholesalers whereas registrars function as consumer-facing retailers. *See* GoDaddy, *Domain Help: What is the difference between a registry, registrar and registrant?*, available at <https://www.godaddy.com/help/what-is-the-difference-between-a-registry-registrar-and-registrant-8039>, [Ex. JZ-20].

³⁹ *Id.*, Sec. 7.2.

to NSI in general. In fact, the IAHC publicly encouraged NSI to join the Council of Registrars so that it could fully participate in a new, more evenly distributed world of gTLD administration.⁴⁰

28. NSI, however, refused to participate in this effort to democratize the Internet's infrastructure.⁴¹ NSI thus walked away from the position of its former partner, the U.S. government. Up until the gTLD-MoU, the U.S. government had remained silent on struggles over domain name registration. However, the controversy over the gTLD-MoU, as well as the looming expiration of the NSF-NSI agreement, pushed a change of course.⁴² In 1997, the NSF announced that it did not intend to renew its agreement with NSI.

29. In a congressional subcommittee hearing, the deputy director of NSF, Joseph Bordogna, told the committee, "Today, the vast majority of domain name registrants are commercial interests whose activities go far beyond the research and education community that NSF is chartered to serve".⁴³ Bordogna later went on to emphasize that "the Internet community and others will eventually develop mechanisms to handle Internet registration without NSF's involvement".⁴⁴ In the same statement, Bordogna spoke highly of IAHC as one entity in the community that could address the domain name controversy, which IAHC Chair Donald Heath interpreted as support for IAHC's gTLD-MoU. "This is NSF's way of saying that domain names

should be handled by the IAHC,” said Heath.⁴⁵ Even without officially endorsing the gTLD-MoU, Bordogna made clear that NSF would no longer play a role in domain name assignment.

30. Once NSF decided against renewing the NSF-NSI agreement, Ira Magaziner, President Clinton’s chief Internet Policy Advisor, assumed responsibility to set policy regarding domain name assignment moving forward. Magaziner formed the Interagency Working Group (“**IWG**”) on domain names in March 1997. When NSF officially bowed out of its role overseeing management of the DNS, the working group, with the help of the U.S. Department of Commerce, designated the National Telecommunications and Information Administration (“**NTIA**”) to take NSF’s place and assist in determining what role the government should play in domain registration.⁴⁶

31. For Magaziner, NSI’s market dominance was a serious problem. He said in 1998 that for whatever solution was ultimately reached,

The goal should be to get NSI to a competitive playing field. I would welcome suggestions on how to create this competitive playing field, whereby other registries can compete and commence.⁴⁷

Magaziner further commented:

Right now, there already seems to be some consensus i.e. 1) people want the US government to move aside, 2) most agree that it should be a private not-for-profit organization and 3) most agree that NSI is a monopoly that should be ended and competition be introduced.⁴⁸

⁴⁸ *Id.*, at 8.

Magaziner’s IWG on domain names and the NTIA did not have any alternative solutions. The NTIA issued a “Request for Comment on the Registration and Administration of Internet Domain Names” that asked “for comment on the appropriate principles to use to guide the transition and on the proper organizational framework, and for suggestions on specific issues such as new TLD creation, shared vs. exclusive top-level domains, and trademark protection”.⁴⁹ The NITA received over 430 comments between July and August of 1997,⁵⁰ which were incorporated into a Notice of Proposed Rulemaking, technically called “A Proposal to Improve the Technical Management of Internet Names and Addresses” but more commonly known as the “**Green Paper**”.⁵¹

32. The Green Paper, released in 1998, officially rejected the draft-postel and the gTLD-MoU, proposing instead that a new, private, non-profit organization be established and take on domain registration responsibility, gTLD creation, and management of the root. To the disappointment of the IAHC, the Green Paper firmly established U.S. government control over the DNS and the transfer of responsibility to the to-be-determined new entity. However, like the IAHC and Jon Postel, the Green Paper emphasized the need for competition in the new system.

33. The Green Paper expressly stated, “we believe that consumers will benefit from competition among market oriented registries. . .”;⁵² however, some of the comments received in response to the Green Paper indicated some disagreement about what form competition

JZ-26], at 7.

among registries should take.⁵³ Specifically, there was a debate as to whether competitive registries should be made non-profit, in order to avoid the type of price-gouging and domain price bait-and-switch that made people concerned about NSI's business model in the first place.⁵⁴ In an effort to recognize that there was a lack of consensus and to gather more information, the Green Paper proposal planned to create five new gTLDs and assign each to a new registry. By adding only a small number of gTLDs and authorizing a limited number of new registries, the Green Paper authors hoped to conduct a low-risk experiment in registry competition.⁵⁵

34. The process of transitioning from the "God of the Internet" model to one with robust competition was inevitably going to be messy. Businesses, governments, and the public at large had all witnessed the Internet's growth and wanted to have a say.⁵⁶ As a result, the volume and variety of stakeholders was extraordinary, and there was no way that the Green Paper would be able to satisfy all or even most of them, as many stakeholder positions seemed to be directly at odds with one another. Some groups lamented the slight drift from the

⁵³ *Id.*: "Some have made a strong case for establishing a market-driven registry system. Competition among registries would allow registrants to choose among TLDs rather than face a single option. Competing TLDs would seek to heighten their efficiency, lower their prices, and provide additional value-added services. Investments in registries could be recouped through branding and marketing. The efficiency, convenience, and service levels associated with the assignment of names could ultimately differ from one TLD registry to another. Without these types of market pressures, they argue, registries will have very little incentive to innovate. Others feel strongly, however, that if multiple registries are to exist, they should be undertaken on a not-for-profit basis. They argue that lack of portability among registries (that is, the fact that users cannot change registries without adjusting at least part of their domain name string) could create lock-in problems and harm consumers. For example, a registry could induce users to register in a top-level domain by charging very low prices initially and then raise prices dramatically, knowing that name holders will be reluctant to risk established business by moving to a different top-level domain".

⁵⁴ *Id.*

⁵⁵ *Id.*: "On balance, we believe that consumers will benefit from competition among market oriented registries, and we thus support limited experimentation with competing registries during the transition to private sector administration of the domain name system".

⁵⁶ Milton L. Mueller, *Ruling the Root*, [Ex. JZ-8], Table 8.1.

theoretically more egalitarian, simple gTLD-MOU approach. Others simply resented the U.S. government's continued outsized role in the proposed processes.⁵⁷

35. The response to the Green Paper demonstrated to the U.S. government that it would better serve the cause by remaining in the background rather than leading the charge for change. In June 1998, after a series of negotiations with members of the Internet community and telecommunications companies, the Clinton Administration released a non-binding statement of policy titled, "The Management of Internet Names and Addresses," also known as the "**White Paper**".⁵⁸ Unlike the Green Paper, the White Paper did not dictate exactly how the new entity would function. Rather it left all major decisions, such as gTLD creation and the authorization of new registries, up to the yet-to-be-created organization.⁵⁹ Although the White Paper set general guidelines regarding the structure of the new organization, the authors refrained from establishing any set policy. Instead, the paper directed the private sector to produce a consensus-based proposal by the time that the NSI-NSF contract expired on September 30, 1998.⁶⁰ This approach largely removed the U.S. government from the process of creating what would become ICANN and pushed various stakeholders in the Internet community to come to some resolution on their own.

36. The release of the White Paper started conversations in the Internet community about the nature and policies of the new domain name registration entity. There were several

groups working on different proposals in parallel: The International Forum on the White Paper, IANA and ISOC, the Boston Working Group (an offshoot of the International Forum on the White Paper), Network Solutions (which later teamed up with IANA),⁶¹ and the Open Root Server Confederation. The lack of collaboration among these groups generated considerable tension and meant that the government's expectation that it would receive exactly one consensus-based proposal failed.⁶² Instead, the government received multiple proposals, each produced by a different group within the community.

37. One of these groups, IANA-NSI led by Jon Postel, had moved forward with its proposed bylaws and articles of incorporation and had formed an initial board of directors for an organization called a "new IANA," which was later renamed the Internet Corporation for Assigned Names and Numbers ("ICANN").⁶³ Because there was no consensus on any proposal, the government solicited comments from the community on all the proposals it received in an attempt to make the process as inclusive as possible.

38. In the end, the government chose Postel's plan with NSI for the "new IANA" called ICANN.⁶⁴ On November 25, 1998, ICANN signed a MoU with the Department of Commerce in

which it agreed to take over DNS maintenance and name/number assignment functions.⁶⁵ And on December 24, 1998, ICANN officially assumed responsibility for the IANA function.⁶⁶

7. ICANN EMERGES, AND PROPOSES TO INTRODUCE NEW gTLDs AS A MEANS FOR CREATING COMPETITION

39. Once ICANN assumed responsibility, subject to its agreement with the NTIA, for performing the IANA functions, it quickly turned its attention to developing policies and programs that would introduce and promote competition for the provision and supply of generic domain names. Concerns about NSI specifically dominated the conversation. Mere months after ICANN's formation, Esther Dyson, the first Chairman of ICANN, accused NSI of attempting to thwart ICANN's initial efforts to introduce competition:

Of course, 'I want to protect my monopoly' is hardly an attractive slogan, and so NSI uses the language of democracy instead. In addition, [NSI] encourages and supports others who have a variety of reasons[,] economic, philosophical or political to be unhappy with the way the community consensus has formed.⁶⁷

40. Following the lead of its Chairman, ICANN took steps to reduce the influence of NSI on issues related to competition. These efforts took a variety of forms, but the first was to designate NSI as an accredited ICANN registry. Due to a renegotiation between the Department

⁶⁵ ICANN, Memorandum of Understanding between the U.S. Department of Commerce and Internet Corporation for Assigned Names and Numbers, November 25, 1998, *available at* <https://www.icann.org/resources/unthemed-pages/icann-mou-1998-11-25-en>, [Ex. JZ-29].

⁶⁶ ICANN, Transition Agreement between University of Southern California and Internet Corporation for Assigned Names and Numbers, February 25, 2012, *available at* <https://www.icann.org/resources/unthemed-pages/usc-icann-transition-2012-02-25-en>, [Ex. JZ-30].

⁶⁷ ICANN, Esther Dyson's Response to Ralph Nader's Questions, June 15, 1999, *available at* <https://www.icann.org/resources/unthemed-pages/dyson-response-to-nader-1999-06-15-en>, [Ex. JZ-31], at 2.

of Commerce and NSI, NSI remained the official gTLD registry. But as part of the new agreement, NSI was now required to allow nascent competing registrars to sell domain registrations.⁶⁸

41. Despite the entry of dozens of registrars, consumer choice at the retail registrar level did not create a competitive environment consistent with ICANN's Competition Mandate. Indeed, although ICANN's policies had greatly increased consumer choice at the registrar (retail) level, ICANN leadership continued to express concerns about the lack of competition at the registry (that is, wholesale) level. NSI was still the only gTLD registry and, in the growing consensus that was forming in the broader Internet community, the best way to introduce competition to NSI at the registry level was to create new gTLDs.⁶⁹

42. There was disagreement, however, about the number of new domains that should be created. Some argued that adding as many as 500 gTLDs would do more to increase competition whereas others worried that adding more than just a few domains would trigger trademark disputes and cause regulatory problems.⁷⁰ In response to the debate, the Domain

⁶⁸ As part of the new contract, NSI agreed to become an ICANN accredited registry and adhere to ICANN's policies and fees in exchange for continued operation as the registry for the .COM, .NET, and .ORG TLDs for four years. If NSI also separated its registry and registrar functions within the first 18 months of the arrangement, which would further break up its monopoly, NSI could extend its control of .COM, .NET, and .ORG for an additional four years or until ICANN designated a Successor Registry to assume NSI's responsibilities. Both parties also agreed not to "unreasonably restrain competition" and to re-evaluate the agreement if ICANN failed to recruit competing accredited registries or if NSI was "adversely affected from a competitive perspective". See ICANN, Registry Agreement between Internet Corporation for Assigned Names and Numbers and Network Solutions, Inc., November 10, 1999, *available at* <https://archive.icann.org/en/nsi/nsi-registry-agreement-04nov99.htm>, [Ex. JZ-32], at 4, 9; Prepared Testimony of Esther Dyson (Interim Chairman of the Board of Directors, ICANN), U.S. House of Representatives, Committee on Commerce, Subcommittee on Oversight and Investigations, July 22, 1999, *available at* <https://www.icann.org/resources/unthemed-pages/dyson-testimony-1999-07-22-en>, [Ex. JZ-33]; Milton L. Mueller, *Ruling the Root*, [Ex. JZ-8], Sec. 9.3.

⁶⁹ ICANN, ICANN Yokohama Meeting Topic: Introduction of New Top-Level Domains, June 13, 2000, *available at* <https://archive.icann.org/en/meetings/yokohama/new-tld-topic.htm>, [Ex. JZ-34], II(C) (at 5-8).

⁷⁰ ICANN, Report (Part One) of Working Group C (New gTLDs) Presented to Names Council, March 21, 2000, *available at* <https://archive.icann.org/en/dnso/wgc-report-21mar00.htm>, [Ex. JZ-35], at 3.

Name Supporting Organization (“DNSO”), a supporting organization of ICANN,⁷¹ created a working group to devise a compromise. The working group suggested “that a limited number of new top-level domains be introduced initially and that the future introduction of additional top-level domains be done only after careful evaluation of the initial introduction”.⁷² The group also proposed creating several different types of new domains including “fully open top-level domains, restricted and chartered top-level domains with limited scope, non-commercial domains and personal domains”.⁷³ The DNSO proposal proved persuasive to the larger ICANN Board, which ultimately “invite[d] expressions of interest from parties seeking to operate and/or sponsor any new TLD registry”.⁷⁴

43. In August 2000, ICANN began accepting applications from registries to operate new gTLDs. Throughout the application process, ICANN leadership emphasized that the introduction of new gTLDs was “a proof of concept” intended to explore the technical, business, and legal impact of adding new gTLDs to the root. The criteria for evaluating applications clearly indicated that ICANN was not only intent on introducing competition for NSI: evaluators were instructed to consider how likely it was that the proposed gTLD and registry would be competitive with existing gTLDs given their “proposed pricing and service levels”.⁷⁵ They were also

⁷¹ ICANN has three supporting organizations that were formed to advise the ICANN board of directors on issues directly related to their area of expertise. The three supporting organizations include: the Generic Names Supporting Organization (the successor to the DNSO), the Country Code Names Supporting Organization, and the Address Supporting Organization. See ICANN, *Groups*, February 6, 2012, available at <https://www.icann.org/resources/pages/groups-2012-02-06-en>, [Ex. JZ-36].

⁷² DNSO Names Council Statement on new gTLDs, April 19, 2000, available at <http://www.dnso.org/dnso/notes/20000419.NCgtlds-statement.html>, [Ex. JZ-37].

⁷³ *Id.*

⁷⁴ ICANN, ICANN Yokohama Meeting Topic: Introduction of New Top-Level Domains, [Ex. JZ-34], at 13.

⁷⁵ ICANN, Criteria for Assessing TLD Proposals, August 15, 2000, available at <https://archive.icann.org/en/tlds/tld-criteria-15aug00.htm>, [Ex. JZ-38], at 3.

encouraged to think about whether the proposed gTLD would meet a consumer need not currently addressed by existing gTLDs, how it might impact competition among registrars, and whether the new gTLD could have a broader negative impact on competition by, for example, “lead[ing] to lock-in of domain-name holders[] so that inter-TLD competition is constrained”.⁷⁶

44. ICANN received 47 applications for over 200 different gTLD strings by the deadline in October 2000.⁷⁷ The application review team prepared a report explaining their evaluation of each application given the aforementioned criteria. It is apparent from the report that the evaluators were most concerned with a given applicant’s ability to compete with .COM. For that reason, the evaluators favored more established entities such as Afilias, LLC and NeuStar, Inc. that could show that they had the resources to operate a larger, more competitive gTLD and were willing to charge a registration price that was comparable to fees⁷⁸ charged by VeriSign, which, as mentioned earlier, had recently agreed to acquire NSI.⁷⁹ Smaller entities were therefore less likely to be granted a gTLD because their limited resources made it less likely that they would be able to compete with VeriSign.

45. After careful consideration of all of the proposals, on November 16, 2000, ICANN announced seven new gTLDs and their registries:⁸⁰

TLD	Operator(s)
.AERO	Societe Int'l de Telecommunications Aeronautiques SC, (SITA)
.BIZ	JVTeam, LLC
.COOP	National Cooperative Bus. Assn, (NCBA)
.INFO	Afilias, LLC
.MUSEUM	Museum Domain Management Association, (MDMA)
.NAME	Global Name Registry, Ltd.
.PRO	RegistryPro, Ltd.

8. .WEB IS THE BEST AND CLOSEST POTENTIAL COMPETITOR FOR VERISIGN

46. In addition to its high brand awareness, there are other reasons why .WEB is the strongest potential competitor of all new gTLDs: .WEB has a unique association with the Internet. The explosion in the mid 1990s of the World Wide Web⁸¹ lent massive semantic weight to the word “web”. As the public increasingly adopted web-based technology, “web” came to be something of a catch-all term for the services and technologies constituting the Internet as a whole.⁸² In the minds of many in the 1990s, everything from AOL to Compuserve was “on the web,” even if it had nothing to do with the web. It is worth noting, therefore, that the terminological power of “web” had and continues to have the potential to meaningfully compete with .COM as a standard-bearer for web-based entities.

⁸¹ While it is difficult to pinpoint the exact moment at which the World Wide Web was invented, it is the product of research and development originally conducted by Tim Berners Lee at CERN in the early 1990s. CERN, *Topic: The birth of the web*, available at <https://home.cern/topics/birth-web>, [Ex. JZ-42].

⁸² Milton L. Mueller, *Ruling the Root*, [Ex. JZ-8], Sec. 6.1.2.

47. At the time of the 2000 trial round, there was a lot of discussion about the purpose of .WEB. Many believed that .WEB would serve as an alternative to .COM because .COM still had a commercial connotation and .WEB could be used more broadly. On the message board where public commenters debated the merits of .WEB, one commenter listed eight reasons why the .WEB gTLD should be chosen:

Why .WEB ?

1. All inclusive (unlike .Mall, .Biz, .news, et)
2. Non controversial (Unlike .Sex, .XXX, .Aids, et)
3. Most recognized and well known prefix (unlike .nom, .wap, .ypi, .svc, etc)
4. Poses as a serious contender to the already depleted .com, .net, .org suffixes
5. .WEB registry has been in continuous operation since July 31, 1996
6. .WEB already holds a strong following and tremendous support all over the world, from Internet and non-Internet users
7. Image Online Design's .WEB application meets all of ICANN's criteria
8. Over 20,000 registrants have approved of .WEB a their TLD selection⁸³

Not only was .WEB thought to be one of the most generic of all potential gTLDs, its name was intrinsically related to the Internet, which, following the invention of the World Wide Web, was now commonly referred to as “**the Web**,” built around a series of “websites,” each with its own unique “web address”. As many argued at the time, and continue to do so today, .WEB, because

⁸³ ICANN, *Forum: Why IOD? Over 20,025 Reasons Why*, October 30, 2000, available at <https://forum.icann.org/tldapps/39FDEC910000D1C.html>, [Ex. JZ-43], at 1. .WEB was created in 1996 by Christopher Ambler of Image Online Design (“IOD”) specifically to compete with .COM. Ambler had launched a .WEB registry on an alternative root, and despite the limited appeal of that platform, had registered over 20,000 .WEB domains by 2000. Although IOD had applied for .WEB in 2000, ICANN had rejected IOD’s application on the grounds that IOD was not equipped to operate a major registry that would be “a vigorous competitor with .com.” See ICANN, *Report on TLD Applications: Application of the August 15 Criteria to Each Category or Group*, November 9, 2000, available at <https://archive.icann.org/en/tlds/report/report-iiib1a-09nov00.htm>, [Ex. JZ-40].

of its strong association with the Web, would be a natural choice for users seeking to register a web address for their website, competing on equal footing with .COM.

48. Although Afilias had applied for and had been initially awarded .WEB in 2000, ICANN ultimately chose not award .WEB to Afilias, in part due to concerns about VeriSign's non-controlling ownership stake in Afilias. Indeed, certain Board members, including Chairman Dyson, had expressed some "queasiness" about awarding .WEB to an entity that was associated with VeriSign, the very entity that the .WEB registry was supposed to compete with.⁸⁴ Afilias was instead awarded .INFO, its second choice. Since that time, however, VeriSign has sold all of its equity in Afilias and there is no longer any ownership link between the two companies.

49. WEB would not be available for acquisition for another 12 years. In 2012, .WEB again attracted the most applications and the greatest interest from the community. Indeed, the strong association between .WEB and the Web was cited by multiple applicants for .WEB in 2012 as a reason why the proposed gTLD would be a strong competitor for VeriSign. For example, Web.com wrote:

In looking to expand the gTLD landscape beyond the existing robustness of gTLD offerings, an easy-to-remember and intuitively logical gTLD such as .web is a relevant addition. Consumers will instantly understand that a .web domain is an Internet website thereby ensuring quick adoption by users. Due to its ubiquitous nature, .web will compete directly with all gTLDs, both existing

⁸⁴ Patrick Thibodeau, ".com gets company; controversy flares," *Computer World*, November 20, 2000, available at <https://www.computerworld.com/article/2589104/enterprise-applications/-com-gets-company---controversy-flares.html>, [Ex. JZ-49], at 3 ("Particularly controversial was a proposal by Afilias LLC, an organization that includes 19 registrars, including Herndon, Va.-based Network Solutions Inc., the domain registration unit of VeriSign Inc., to run the registry for a .web domain. Dyson said the formation of the Afilias consortium could potentially impede competition among domain names. "The whole thing gives me a queasy feeling, is the short way to say it," she said.").

ones and others to be approved by ICANN. It has universal appeal to anyone looking to operate on the World Wide Web.⁸⁵

9. VERISIGN'S PRESUMPTIVE ACQUISITION OF .WEB RUNS COUNTER TO ICANN'S COMPETITION MANDATE AND IS INCONSISTENT WITH THE INTENT OF THE NEW GTLD PROGRAM

9.1 *The Meaning of ICANN's Competition Mandate*

50. As a U.S. government official testified in 2011, “[s]ince its inception in 1998, ICANN has been charged with promoting competition in the registration of domain names while ensuring the security and stability of the DNS”.⁸⁶ As former ICANN Chairwoman Esther Dyson would later recall during her Senate testimony at the same hearing: “***our primary mission was to break the monopoly of Network Solutions*** (which managed .com among other registries), first by separating the functions of registry (which manages the list of names in a particular top-level domain) and registrar (which resells second-level domain names to the public)”.⁸⁷ Yet, as Dyson conceded, even following ICANN’s separation of registry and registrar functions and two trial rounds of the New gTLD Program, “it’s fair to say that .com retained its first-mover advantage as by far the leading TLD”.⁸⁸ This view was shared by ICANN institutionally. In approving the New gTLD Program, the ICANN Board conceded that, “[t]o date, ICANN has not created meaningful competition at the registry level”.⁸⁹

⁸⁵ ICANN, New gTLD Application Submitted to ICANN by Web.com Group, Inc., Application ID: 1-1009-97005, June 13, 2012, [Ex. JZ-44], at 7.

⁸⁸ *Id.*

⁸⁹ ICANN Board Rationales for the Approval of the Launch of the New gTLD Program, June 21, 2011, [Ex. JZ-45], at 27.

51. For this reason, ICANN’s Competition Mandate required, and indeed envisioned, that ICANN must do more. Kurt Pritz, ICANN Senior Vice-President, testified at the U.S. Senate’s hearing on the New gTLD Program that the New gTLD Program was intrinsically intertwined with ICANN’s Competition Mandate: “The launch of the new gTLD program was part of ICANN’s founding mandate when it was formed by the U.S. Government over 12 years ago. That mandate is to introduce competition and choice into the domain name system in a stable and secure manner”.⁹⁰ Pritz would go on to specifically testify that the “founding mandate for ICANN, included within the United States Government’s ‘White Paper’ . . . is to create competition in the domain name market and specifically[] to ‘oversee policy for determining the circumstances under which new TLDs are added to the root system.’”⁹¹ ICANN’s Board agreed. In explaining its rationale to approve the launch of the New gTLD Program, the Board wrote:

The launch of the new gTLD program is in fulfillment of a core part of ICANN’s Bylaws: the introduction of competition and consumer choice in the DNS. . . . This decision represents ICANN’s continued adherence to its mandate to introduce competition in the DNS, and also represents the culmination of an ICANN community policy recommendation of how this can be achieved.⁹²

52. ICANN’s Board was crystal clear that the purpose of the New gTLD Program was to create competition for VeriSign. As the ICANN Board wrote in approving the launch of the full round of the New gTLD Program in 2011:

- “When ICANN was formed in 1998 . . . [its] purpose was to promote competition in the DNS marketplace, including by developing a process for the introduction of new generic top-level domains. . . . The introduction of new top-level domains into the DNS has thus been a fundamental part of ICANN’s mission from its

⁹⁰ Pritz Statement at December 2011 Senate Hearing, [Ex. JZ-2], at 8.

⁹¹ *Id.*, at 11.

⁹² ICANN Board Rationales for the Approval of the Launch of the New gTLD Program, [Ex. JZ-45], at 7.

inception, and was specified in ICANN's [MOU] with the U.S. Department of Commerce".⁹³

- "ICANN's Bylaws and other foundational documents articulate that the promotion of competition in the registration of domain names is one of ICANN's core missions. See ICANN Bylaws, Article 1, Section 2.6. One part of this mission is fostering competition by allowing additional Top Level Domains ("TLDs") to be created".⁹⁴
- "ICANN's mission statement and one of its founding principles is to promote competition. The expansion of gTLDs will allow for more innovation and choice in the Internet's addressing system".⁹⁵
- ICANN's "economic studies indicated that . . . the introduction of new gTLDs will bring benefits in the form of increased competition, choice and new services to Internet users".⁹⁶
- "A broad consensus was achieved [within the GNSO] that new gTLDs should be added to the root in order to stimulate competition further . . .".⁹⁷
- "[A]n important objective of the new [g]TLD process is to diversify the namespace, with different registry . . . models . . .".⁹⁸
- "[T]he addition of new gTLDs to the root in order to stimulate competition at the registry level[]".⁹⁹
- "The launch of the new gTLD program is anticipated to result in improvements to consumer choice and competition in the DNS".¹⁰⁰
- "New gTLDs would promote consumer welfare".¹⁰¹

¹⁰⁰ *Id.*, at 17.

¹⁰¹ *Id.*, at 119.

53. In its planning process for the New gTLD Program, ICANN retained Dennis Carlton, the former Deputy Attorney General for Economic Analysis for the Antitrust Division of the U.S. Department of Justice, to study ICANN's proposal to introduce new gTLDs as a means to "promote competition".¹⁰² Dr. Carlton opined that: "ICANN's plan to introduce new gTLDs is likely to benefit consumers by facilitating entry which would be expected to both bring new services to consumers and *mitigate market power associated with .com* and the other major TLDs and to increase competition".¹⁰³ Dr. Carlton's views are consistent with Ms. Dyson's interpretation of ICANN's Competition Mandate, namely that ICANN's "primary mission was to break the monopoly of Network Solutions".¹⁰⁴

54. ICANN's Competition Mandate, which is intrinsic to ICANN's mission, must therefore be considered and reflected in all significant decisions and actions taken by ICANN: given the choice, ICANN must pursue the option that "promotes" competition as opposed to an option that lessens competition or even simply preserves the status quo. As the ICANN Board observed:

ICANN's "default" position should be for creating more competition as opposed to having rules that restrict the ability of Internet stakeholders to innovate. New gTLDs offer new and innovative opportunities to Internet stakeholders.¹⁰⁵

¹⁰² ICANN, *Rationale for Board Decision on Economic Studies Associated with the New gTLD Program*, March 21, 2011, available at <https://www.icann.org/en/system/files/bm/rationale-economic-studies-21mar11-en.pdf>, [Ex. JZ-46], at 8.

¹⁰³ Dennis Carlton (Compass Lexecon), Report regarding ICANN's Proposed Mechanism for Introducing New gTLDs, June 5, 2009, available at <https://archive.icann.org/en/topics/new-gtlds/carlton-re-proposed-mechanism-05jun09-en.pdf>, [Ex. JZ-47], at ¶ 23 (emphasis added).

¹⁰⁴ Dyson Statement at December 2011 Senate Hearing, [Ex. JZ-2], at 46 (emphasis added).

¹⁰⁵ ICANN Board Rationales for the Approval of the Launch of the New gTLD Program, [Ex. JZ-45], at 62.

9.2 VeriSign's Presumptive Acquisition of .WEB Violates ICANN's Competition Mandate

55. As Esther Dyson succinctly summarized in her Senate testimony, ICANN's mission to promote competition has been specifically tied to breaking the NSI/VeriSign monopoly—with so far mixed results. Further to and as an intrinsic element of its Competition Mandate, ICANN created a process to add new gTLDs to the root: the New gTLD Program. The primary purpose of the New gTLD Program was create “meaningful competition at the registry level”.¹⁰⁶ By VeriSign's own survey, from the end of 2017, .COM had 131.9 million registrations. The next most popular gTLD is VeriSign's .NET at 14.5 million registrations or 11% of the size of the .COM registry.¹⁰⁷ The third most popular gTLD is .ORG, still predominately used by non-profits in accordance with its original purpose, with only 10.3 million registrations.¹⁰⁸

56. ICANN's procedures, decisions and actions taken in connection with its New gTLD Program therefore must be evaluated in the broader context of ICANN's Competition Mandate. In that regard, ICANN's decision to award the exclusive license to operate the .WEB registry to NDC/VeriSign is inconsistent with ICANN's obligations under its Competition Mandate. .WEB is the best and closest potential competitor to VeriSign. Allowing this unique asset to fall under VeriSign's control does nothing to promote competition. If anything, ICANN's proposed course of conduct will only strengthen VeriSign's market position, contrary to the objectives of the New gTLD Program.

JONATHAN ZITTRAIN

Date: September 26, 2018

GLOSSARY

CORE – Council of Registries. An association of domain name registries originating from the gTLD-MoU.

DNS – Domain Name System. A distributed hierarchical database that functions as a directory for the Internet, mapping human-readable domain names to computer-readable numerical IP addresses. For example, an IP address for the Google search website at www.google.com is 216.58.193.196.

Domain name – A string of characters which defines a section of the Internet namespace. A domain name comprises a top level domain (TLD) (e.g., .com) and a unique second level domain (SLD) (e.g., google). Thus, “google.com” is the domain name for the Google search website.

DNSO – Domain Name Supporting Organization. An ICANN supporting organization which, among other activities, generated early proposals for gTLD expansion.

GNSO – Generic Names Supporting Organization. Successor to the DNSO. ICANN supporting organization responsible for monitoring and developing proposals for ICANN’s management of gTLDs.

gTLD – Generic Top-Level Domain (e.g., .COM, .NET, .WEB). Only gTLDs may be used by all users, regardless of geography and purpose. Some gTLDs may be less “generic” than others, such as location-specific gTLDs (e.g., .NYC); sponsored gTLDs made on behalf of a specific community (e.g., .EDU) or otherwise have limited relevance beyond a particular industry or subject (e.g., .WINE).

gTLD-MOU – Generic Top-Level Domain Memorandum of Understanding. A document prepared by the IAHC that proposed the introduction of new gTLDs as a mechanism for introducing competition for the provision and supply of generic domain names. Many of the principles and policies outlined in gTLD-MOU were formally embraced by the U.S. government in the Green Paper and the White Paper, as well as by ICANN in its New gTLD Program.

IAHC – International Ad Hoc Committee. A group formed from a wide range of Internet stakeholders including ISOC, IANA, and WIPO to create proposals for the introduction of new TLDs. While it was initially largely dismissed by the U.S. government, the group’s ultimate proposal (the gTLD-MoU) contained many of the principles that would later find a place in the Green Paper and White Paper, and, ultimately, the New gTLD Program.

IANA – Internet Assigned Numbers Authority. An ICANN affiliate responsible for the allocation of several key numerical identification and addressing systems, including IP addresses. Originally administered by Jon Postel, IANA traces its history to the early days of the pre-ICANN Internet.

ICANN – Internet Corporation for Assigned Names and Numbers. A non-profit founded in 1998 which, among other responsibilities, coordinates numerous aspects of the DNS. ICANN is also responsible for authorizing and managing the introduction of new gTLDs.

IETF – Internet Engineering Task Force. A group under the umbrella of the ISOC that develops Internet standards.

IOD – Image Online Design. A private company which has repeatedly claimed the rights to .WEB, running its own .WEB registry on an alternate root not approved by ICANN. It has repeatedly and unsuccessfully applied for ownership of the .WEB gTLD.

IP address – Internet Protocol address. A number assigned to a networked device which serves as its address on the Internet, allowing it to be identified and to send and receive web traffic.

ISOC – Internet Society. A group formed in 1992 to contribute to the development and governance of the Internet. Umbrella for the unincorporated Internet Engineering Task Force (IETF), which develops Internet standards.

IWG - Interagency working group. The government working group created by the U.S. Clinton Administration to set policy for domain name assignment.

Nameserver – A server within the DNS hierarchy which either provides the IP address corresponding to a domain name or otherwise points to another nameserver at a lower level of the hierarchy.

NSF – National Science Foundation. A U.S. government agency tasked with supporting scientific research and development efforts. Supported the development of the early Internet through grants and logistical coordination but abdicated its central role in Internet governance prior to the rise of ICANN.

NSI – Network Solutions, Inc. A technology company which held an NSF-sanctioned monopoly over domain name registration services from 1993 to 1998. Became the target of significant criticism from the Internet community and was acquired by VeriSign in 2000 for \$21 billion.

NTIA – National Telecommunications and Information Administration. A U.S. government agency tasked by the Clinton Administration with developing a plan for scalable and competition-friendly Internet governance. Its work led to the publication of the Green Paper and White Paper, which laid the groundwork for the introduction of ICANN.

Registry – The registry operator (such as VeriSign or Afilias) for a gTLD is responsible for maintaining a database of all domains allocated under that gTLD.

Registrar – A registrar contracts with one or more registries to sell domains within gTLD namespaces to individuals and organizations. A registry may act as its own registrar, or it may empower other registrars to sell domains within its namespace in exchange for compensation.

Registrant – A registrant is an individual or organization which contracts with a registrar to purchase control of a domain name for its use.

RFC – Request for Comment. A type of document published by the Internet Engineering Task Force to foster public discussion and deliberation on proposed changes or additions to the structures and protocols governing the Internet.

Root – The authoritative “root” of the Internet is a collection of mirrored servers administered by a range of governmental and civilian organizations. Root servers provide authoritative nameserver listings for gTLDs, pointing to the uppermost rung of the DNS hierarchy and allowing users to access domains within the namespaces of those gTLDs. In other words, an authoritative root nameserver would provide a user looking to access the Google search home page with instructions for accessing the “.com” nameservers, which would in turn provide instructions for accessing “google.com”. ICANN is responsible for managing the list of gTLDs in the root zone.

SLD – Second-Level Domain. The second highest rung in the DNS hierarchy, located to the left of the TLD string (e.g., the “example” in <https://www.example.com>).

TLD – Top-Level Domain. The uppermost rung in the DNS hierarchy, TLDs can be found at the rightmost end of a URL (e.g., the “com” in <https://www.example.com>). So that the DNS can function, the manager of a TLD’s registry is responsible for maintaining a database of the domains (such as “example,” in this case) registered under that TLD.

URL – Uniform Resource Locator. A structured identifier for referencing the location of a resource on the Internet (e.g., <https://www.example.com/page.html>). URLs can be used to retrieve web pages, files, and other types of content.

WIPO – World Intellectual Property Organization. A specialized agency of the United Nations tasked with supporting intellectual property rights on a global level. Participated as a stakeholder in debates surrounding Internet governance.

INDEX OF EXAMINATION

---o0o---

BECKWITH "BECKY" BURR	PAGE
CROSS-EXAMINATION BY MR. LITWIN	260
REDIRECT EXAMINATION BY MR. ENSO	391
SAMANTHA EISNER	PAGE
CROSS-EXAMINATION BY MR. LITWIN	402

1 CALIFORNIA, CALIFORNIA, AUGUST 4, 2020

2 ---o0o---

3 ARBITRATOR BIENVENU: Welcome, everyone,
4 to Day 2 of this hearing. Can you hear me?

5 MR. LITWIN: Yes, Mr. Chairman.

6 MR. ENSON: Yes.

7 ARBITRATOR BIENVENU: Welcome, everyone.
8 We parted yesterday with Mr. Ali requesting an
9 opportunity to say a very brief word. I believe it
10 is in response to a comment by Mr. Johnston.

11 So Mr. Ali.

12 MR. ALI: Thank you, Mr. Chairman. Good
13 morning to you and to Mr. Chernick and good
14 afternoon to Professor Kessedjian.

15 Yesterday, Mr. Chairman, Mr. Johnston
16 referred to the fact that I had used the word
17 "bribery" and alluded to or, in fact, said that I
18 accused ICANN or VeriSign of bribery or that our
19 client Afilias had.

20 I think that he misspoke or misremembered
21 what was on the transcript. I would simply ask
22 that Mr. Johnston be directed to review the
23 transcript carefully to verify that I did not make
24 any such accusations or, in fact, use the word
25 "bribery" or "blackmail" or anything of that

1 nature.

2 I ask this because all of this entire
3 transcript is going to be made public, with some
4 appropriate redactions.

5 However, knowing that it will be made
6 public and that people can get up to all sorts of
7 mischief, I would be grateful if Mr. Johnston could
8 retract his statement or make whatever comment he
9 sees fit, and I'll respond thereafter. Thank you.

10 ARBITRATOR BIENVENU: My recollection is
11 that Mr. Johnston was looking for the word that you
12 had used. And if my memory serves me right, I
13 think the word he was looking for but couldn't
14 remember was the word "sinister" that Mr. Enson had
15 used during one of our procedural hearings.

16 But what I propose is that Mr. Johnston
17 take the next break to consider your request and
18 maybe ask to briefly address the Tribunal on this
19 question when we resume after the first break.

20 But your comments are noted and are now on
21 the record, Mr. Ali.

22 MR. ALI: Thank you.

23 MR. JOHNSTON: If I might comment, I have
24 looked at the transcript, and because Mr. Ali
25 raised this yesterday afternoon, and what my

1 argument related to is what I do regard as a
2 reckless accusation without any support that ICANN
3 is a regulator and specifically Ms. Willett, of
4 course, did not ask and the policy was don't ask,
5 not tell, quote, when you're getting millions of
6 dollars to not say anything.

7 And that comment by Mr. Ali was at Page
8 49, Lines 13 through 18 of the rough transcript,
9 Line 13 through Line 18 on Page 49 -- 46 of the
10 final last night, I guess, transcript.

11 The Panel Chair is also correct that
12 Mr. Ali did accuse and adopt a word used in another
13 context by Mr. Enson to accuse Mr. Enson and I of
14 having a sinister conversation, which I also
15 addressed yesterday.

16 MR. ALI: Mr. Chairman, if I may respond.
17 This is going on longer than I would have expected.
18 I would have thought that Mr. Johnston would have
19 done the right thing. Obviously I did not use the
20 word "bribery," number one.

21 Number two, Mr. Johnston might actually
22 want to read the transcript carefully because what
23 I was referring to, don't ask, don't tell, that was
24 money that was being paid to NDC rather than --

25 ARBITRATOR CHERNICK: Can you speak up,

1 please, Mr. Ali?

2 MR. ALI: I was referring to money that
3 was being paid to NDC. With respect to the first
4 point, would you like me to repeat it again whoever
5 said they couldn't hear me?

6 ARBITRATOR CHERNICK: Not necessary.

7 MR. ALI: So my second point was, again,
8 to clarify the context in which a 15 million --
9 when I was referring to the 15 million. So -- and
10 the third point in terms of the inappropriateness
11 of this phone call at a point in time when ICANN
12 didn't know -- apparently didn't know about the DAA
13 but nonetheless felt it was appropriate for
14 counsel, litigation counsel to call VeriSign's
15 litigation counsel to request information as
16 opposed to the actual applicant is something that I
17 stand by. Thank you.

18 ARBITRATOR BIENVENU: Very well. So we
19 begin, then, with the witness evidence, and the
20 first witness called is Ms. J. Beckwith Burr.

21 Ms. Burr, are you with us? I don't see
22 you on my screen.

23 Good morning, Ms. Burr, this is Pierre
24 Bienvenu. I serve as the Chair of the Panel
25 hearing in this case. I am joined by my colleagues

1 Catherine Kessedjian and Richard Chernick. Now, I
2 cannot see you on my screen.

3 JD, could you help us out here?

4 (Discussion off the record.)

5 ARBITRATOR BIENVENU: So good morning,
6 Ms. Burr, and welcome. Ms. Burr, you have filed in
7 relation to this case a witness statement dated
8 31st May 2019.

9 THE WITNESS: That's correct.

10 ARBITRATOR BIENVENU: At the end of this
11 statement, you swear that the content of the
12 statement is true and correct?

13 THE WITNESS: Correct.

14 ARBITRATOR BIENVENU: May I ask you,
15 Ms. Burr, in relation to the evidence that you will
16 give today to this panel, likewise, solemnly to
17 affirm that it will be the truth, the whole truth
18 and nothing but the truth.

19 THE WITNESS: I do.

20 ARBITRATOR BIENVENU: Thank you very much.

21 Mr. Enson, your witness. Please proceed.

22 MR. ENSON: Thank you very much. Good
23 morning, Ms. Burr.

24 THE WITNESS: Morning.

25 MR. ENSON: We are going to try to do this

1 anyway, is put a copy of your witness statement up
2 on the screen so that you can see it.

3 THE WITNESS: That looks like the
4 document.

5 MR. ENSON: Okay. Ms. Burr, do you wish
6 to make any corrections to this witness statement
7 before we proceed?

8 THE WITNESS: No.

9 MR. ENSON: I'm sorry?

10 THE WITNESS: No.

11 MR. ENSON: Okay. Then, Mr. Chairman, we
12 tender Ms. Burr for cross-examination and reserve
13 time for redirect as it stands necessary.

14 ARBITRATOR BIENVENU: Thank you,
15 Mr. Enson. I believe the cross-examination will be
16 conducted by Mr. Litwin.

17 MR. LITWIN: That is correct,
18 Mr. Chairman.

19 ARBITRATOR BIENVENU: Good morning,
20 Mr. Litwin.

21 MR. LITWIN: Good morning.

22 ARBITRATOR BIENVENU: Please proceed.

1 CROSS-EXAMINATION

2 BY MR. LITWIN

3 Q. Good morning, Ms. Burr. My name is Ethan
4 Litwin. I am from the law firm of Constantine
5 Cannon here in New York City.

6 How are you today?

7 A. I am good.

8 Q. Okay. Can you please confirm that you
9 have received the exhibit bundle in a box or a
10 package or something of that sort?

11 A. I have received it.

12 Q. Okay. Can you please open it on camera,
13 please? Thank you.

14 MR. LITWIN: While you're doing that, I
15 would ask, Mr. Chairman, that the Panel confirm
16 with counsel for ICANN that counsel has also not
17 looked at the bundle for Ms. Burr yet.

18 MR. ENSON: I have not. I'd like to open
19 it up as the witness opens it up.

20 MR. LITWIN: Please do so. Thank you,
21 Mr. Enson.

22 THE WITNESS: I have got it.

23 ARBITRATOR BIENVENU: I can confirm that
24 we have received the -- "we" being the members of
25 the Tribunal -- have received the cross-examination

1 bundle.

2 MR. LITWIN: Thank you, Mr. Chairman.

3 Q. Ms. Burr, from time to time I will direct
4 your attention to a particular document in that
5 bundle. When I do that, I will refer to the tab
6 number in the binder that you have just opened.

7 And if you just open it to a random page,
8 you'll see that we have marked each page of each of
9 those documents in the lower right-hand corner with
10 a new, unique page number. So for everyone's
11 reference, I am going to refer to those page
12 numbers in the binder, even if the original page
13 number is different. That way it is clear in the
14 transcript and to everybody here today.

15 If you have any questions as to what page
16 I'm referring to, please ask and I will clarify.

17 A. Okay.

18 Q. So before we begin, Ms. Burr, I just
19 wanted to clarify one small point in your witness
20 statement. I would direct your attention to Page 7
21 of your witness statement, and at the end of
22 Paragraph 20, at the top of the page, I think you
23 write that, you know, "which had acquired
24 VeriSign." I think what you mean is that VeriSign
25 had acquired NSI.

1 So that second reference should be NSI; is
2 that correct?

3 A. Correct, yes.

4 Q. Okay. Now, Ms. Burr, what documents did
5 you review in preparation for your testimony here
6 today?

7 A. I reviewed my witness statement. I
8 reviewed a witness statement submitted by George
9 Sadowsky and Jonathan Zittrain. I looked through
10 the various requests and responses for independent
11 review.

12 Q. Anything --

13 A. And then a couple of other -- I looked at
14 the bylaws. I looked at the 2008 bylaws and the
15 current bylaws, and I looked at a couple of letters
16 from Afilias to Akram Atallah and I think a couple
17 of other documents that counsel may have shown me
18 during prep.

19 Q. Do you recall what those couple other
20 documents were?

21 A. I think there were -- there were two
22 letters from Afilias to Akram. I think I also
23 looked at a letter from the acting Attorney General
24 for Antitrust to the associate administrator of
25 NTIA.

1 Q. That's the 2008 letter from Ms. Garza?

2 I'm sorry, I didn't get your response.

3 A. Yes, that's correct.

4 Q. Okay. Did you review the Domain
5 Acquisition Agreement that was executed between
6 VeriSign and NDC in August of 2005 -- '15, rather?

7 A. I did not.

8 Q. Okay. Have you ever reviewed it?

9 A. No.

10 Q. Now, Ms. Burr, you're an attorney,
11 correct?

12 A. I am.

13 Q. Have you ever represented Afiliias or any
14 subsidiary in any capacity?

15 A. I think in 2007 or something like that
16 Afiliias and Neustar and one other participant hired
17 me to discuss some of the vertical integration
18 issues. I don't know if I was ever paid by
19 Afiliias, but I was certainly speaking with an
20 Afiliias representative.

21 Q. When did that representation -- I'll just
22 generally call it a representation -- conclude?

23 A. Honestly, over a decade ago.

24 Q. Okay. Have you ever represented VeriSign
25 or any of its subsidiaries or any of its affiliates

1 in any capacity?

2 A. I have never represented VeriSign. When I
3 was a partner at WilmerHale, I had partners who did
4 represent VeriSign. Again, I have not been at
5 WilmerHale since 2012, and that representation
6 would have been much earlier, in any case.

7 Q. Have you ever represented NU DOT CO or any
8 of its subsidiaries or affiliates in any capacity?

9 A. No.

10 Q. And you were employed by Neustar for
11 several years ending in 2019; is that correct?

12 A. That's correct.

13 Q. And Neustar is an Internet registry
14 company much like Afilias and VeriSign; is that
15 right?

16 A. Well, it was until yesterday. It sold its
17 registry business.

18 Q. Okay. At the time that you were there,
19 though, it was an Internet registry company?

20 A. Yes. I started there as chief privacy
21 counsel. So my -- my primary job was deputy job
22 counsel, chief privacy counsel. I started there in
23 June of 2012.

24 Q. And I guess until yesterday Neustar was
25 one of the larger Internet registry companies; is

1 that right?

2 A. Yes.

3 Q. And, in fact, Neustar was identified as
4 the entity that would be providing back-end
5 registry services in NDC's .WEB application; is
6 that right?

7 A. I believe that's correct. I was not
8 involved in those contracting documents, but I did
9 come to learn that after.

10 Q. When you say "after," what do you mean?

11 A. Well, once I -- once I joined the Board, I
12 looked at all of the back end, all of the
13 registry -- actually it was before that, as I was
14 going on the Board. But there would have been a
15 list after the 2012 -- after everybody tendered
16 their applications, there was a list that came out
17 that said Afilias is the back-end registry for
18 these applications, Neustar is for these, et
19 cetera.

20 So shortly after the submission, that list
21 would have been available to me.

22 Q. Sorry. Which submission are you talking
23 about?

24 A. Submission of new gTLD applications.

25 Q. I see. This is not your first time

1 testifying in an IRP, is it?

2 A. It is not.

3 Q. Which other IRPs have you testified in?

4 A. I testified in an IRP in 2010, I believe,
5 between ICANN and ICM Registry with respect to
6 ICM's application to operate .XXX.

7 Q. Any others?

8 A. I don't think so. Not that I recall.

9 Q. Did you review your testimony from the ICM
10 IRP in preparation for your testimony here today?

11 A. I looked briefly at it.

12 Q. You also served as an attorney advisor to
13 the United States Federal Trade Commission; is that
14 correct?

15 A. Correct.

16 Q. And the United States Federal Trade
17 Commission, or FTC, is one of the two U.S. agencies
18 authorized to enforce U.S. antitrust laws; is that
19 correct?

20 A. That's correct. I am not -- I have never
21 practiced antitrust law or competition law. I was
22 largely involved in privacy-related issues but also
23 the DNS issues and worked on competition issues
24 from a policy perspective.

25 Chairman Pitofsky in 2005 and '6 had a

1 long series of hearings on innovation economy and
2 competition and consumer protection. So I have
3 some familiarity, but I am not an antitrust lawyer.

4 Q. You are currently a member of the ICANN
5 Board; is that right?

6 A. That's correct.

7 Q. And you are also a member of the BAMC, the
8 Board Accountability Mechanisms Committee; is that
9 right?

10 A. Yes.

11 Q. That committee reviews all reconsideration
12 requests; is that right?

13 A. It reviews -- it essentially reviews all
14 reconsideration requests. During the new gTLD
15 Program, there may have been times when, for a
16 variety of reasons, largely to get people who had
17 no relationship to the new gTLD Program,
18 reconsiderations may have come directly to the
19 board as opposed to through the BAMC, but the
20 standard practice is it would come to the BAMC.

21 Q. And what about IRP decisions, is the
22 standard practice that the BAMC reviews IRP
23 decisions as well?

24 A. Yes.

25 Q. And you have been on the board since

1 November of 2016; is that correct?

2 A. Yes. I was seated at the end of the
3 annual general meeting in Hyderabad in 2016.

4 Q. And in November 2016 you were still
5 employed by Neustar; is that right?

6 A. That's correct.

7 Q. Did you participate in any Board
8 discussions regarding .WEB?

9 A. In 2016, no. I observed a Board
10 discussion at a Board workshop before I was on the
11 Board. I did not participate in that discussion.

12 Q. Is that the November 3rd, 2016, workshop
13 session?

14 A. Sounds like it.

15 Q. Okay. Did you receive or review any
16 documents regarding .WEB prior to attending that
17 workshop session?

18 A. Not that I recall.

19 Q. Did you receive any documents as a Board
20 member regarding .WEB after the November 3rd, 2016,
21 workshop session?

22 A. I don't have a specific recollection.
23 It's possible that in connection -- well, it is
24 almost certain that in connection with the DIDP
25 request, the document request, there was some

1 material that the BAMC received and I would have
2 received.

3 Q. And those were Afilias's DIDP requests in
4 2018; is that right?

5 A. Yeah. I don't remember exactly the
6 documentation what the Board received, but I am
7 certain that we got the information we needed for
8 the reconsideration request.

9 Q. Okay. At the Board workshop session on
10 November 3rd, 2016 -- and before I ask my
11 questions, I want to instruct you not to reveal the
12 substance of anything that was discussed there
13 pursuant to the Panel's ruling regarding privilege.

14 But I would like to ask if the Board
15 members who attended that workshop session were
16 shown a copy of the Domain Acquisition Agreement
17 between VeriSign and NDC?

18 A. I honestly have no idea. I do not believe
19 that I have ever seen it, but I have no idea
20 whether Board members saw it or not. I don't
21 recall any documents being circulated.

22 Q. Okay. Now, you stated in Paragraph 31 of
23 your witness statement that you are aware of the
24 DOJ's .WEB investigation. How did you learn about
25 it?

1 A. Neustar received a CID, and I coordinated
2 the response.

3 Q. Board members have an obligation to be
4 familiar with the governing documents of their
5 organization; is that correct?

6 A. Correct.

7 Q. And that would include bylaws or articles
8 of incorporation, right?

9 A. Absolutely.

10 Q. And nonprofit Board members in particular
11 have an obligation to understand the organization's
12 mission; is that correct?

13 A. I am not going to opine on what California
14 law requires. I certainly think that members of a
15 Board should understand what the mission of the
16 organization is.

17 Q. Thank you. And to be clear, if I -- I am
18 not going to ask you for a legal opinion. I am
19 only asking you about your views as a witness here
20 today.

21 A. Okay.

22 Q. Now, in your view, again, nonprofit Board
23 members need to understand the mission because the
24 primary duty of a nonprofit Board member is to
25 protect the organization's mission; is that

1 correct?

2 A. Again, "primary duties" sounds like legal
3 terms. Let me just tell you, ICANN is an
4 organization with a specified mission and a limited
5 mission and limited authority. It is absolutely
6 incumbent on members of the Board to understand
7 that and to ensure that ICANN stays within its
8 mission.

9 Q. And, in fact, the bylaws provide that
10 directors have a duty to act in what they
11 reasonably believe are the best interests of ICANN;
12 is that right?

13 A. Yes, I believe that's correct.

14 Q. Now, Section 7 of the bylaws -- and
15 that's, for your reference, Tab 2 in your bundle.
16 Section 7 concerns the Board of Directors
17 specifically; is that correct?

18 A. Yes.

19 ARBITRATOR CHERNICK: Do you have a cite
20 to the pages?

21 MR. LITWIN: It starts on Page 42,
22 Mr. Chernick.

23 ARBITRATOR CHERNICK: Thank you.

24 ARBITRATOR BIENVENU: Which tab,
25 Mr. Litwin?

1 MR. LITWIN: This is Tab 2, and the next
2 series of questions will relate to Article 7 of the
3 bylaws that begin on Page 42 of that exhibit.

4 Q. Now, the bylaws provide that the directors
5 should be provided with notice for all Board
6 meetings; is that correct?

7 A. I'm sure that that is correct for all
8 formal Board meetings. You'd have to point me to
9 the specifics.

10 Q. So if you can look at Article 7.16, which
11 is on Page 51, that's the section on notices.

12 A. Okay.

13 Q. Again, I'll ask that the bylaws,
14 particularly Section 7.16, provides that directors
15 shall be provided with notice for all Board
16 meetings; is that correct?

17 A. Notice of time and place of all meetings.

18 Q. And that would -- I'm sorry. Is there
19 anything else that you wanted to add?

20 A. That is in turn referring back to 7.13,
21 14 and 15, annual meetings, regular meetings and
22 special meetings.

23 Q. You just obviated the next three questions
24 I had. Thank you.

25 Now, annual meetings, which are at 7.13,

1 are held for the purpose of electing officers and
2 for the transaction of any other business that may
3 come before the meeting; is that correct?

4 A. Yes.

5 Q. And regular meetings, which is Section
6 7.14, those are meetings that are held periodically
7 on dates that the Board determines, correct?

8 A. Yes, formal Board meetings where they are
9 noticed and agendas and resolutions are distributed
10 and the like.

11 Q. And the bylaws also provide for special
12 meetings at Section 7.15, which may be called at
13 any time at the request of 25 percent of the Board
14 by the Chair or by the president of ICANN; is that
15 correct?

16 A. Correct. Again, this would be for formal
17 meetings, where people are voting on resolutions
18 and the like.

19 Q. Okay. Now, turning to Section 7.17. Just
20 wait a minute to get that up on the screen.

21 7.17, which is the quorum provision,
22 provides that at annual, regular or special
23 meetings, that a quorum is comprised of a majority
24 of the total number of directors then in office and
25 that an act of the majority of the directors

1 present in any meeting at which there is a quorum
2 shall be the act of the Board; is that correct?

3 A. Yes. Again, this is referring to formal
4 meetings.

5 Q. Now, the bylaws also provide that the
6 Board is able to act without a meeting, correct?

7 A. Yes.

8 Q. I refer you to Section 7.19.

9 A. Correct.

10 Q. But the Board can only act without a
11 meeting if all the directors entitled to vote
12 thereat shall individually or collectively consent
13 in writing to such action; is that right?

14 A. Correct, at a formal meeting where there's
15 going to be resolution and votes.

16 Q. Okay. I would now refer you to Section 3
17 of the bylaws. And I'll wait a minute for that to
18 come up on the screen. We can start at, I believe,
19 Page 8, which is Section 3.1.

20 MR. ENSON: Ethan, may I ask, is this a
21 complete copy of the ICANN bylaws?

22 MR. LITWIN: I believe what is in here is
23 excerpts that I am referring to. We do have a
24 complete set of the bylaws electronically if the
25 witness would like to refer to anything I am not

1 showing her.

2 MR. ENSON: Thank you.

3 MR. LITWIN: Sure.

4 Q. So at 3.1 the bylaws provide that ICANN
5 shall operate to the maximum extent feasible in an
6 open and transparent manner and consistent with
7 procedures designed to ensure fairness; is that
8 correct?

9 A. That's what it says.

10 Q. And if you look further down in Section
11 3.1, part of ICANN's obligation to operate open and
12 transparently provides that, "ICANN shall also
13 implement procedures for the documentation and
14 public disclosure of the rationale for decisions
15 made by the Board."

16 Do you see that?

17 A. Yes.

18 Q. Now, ICANN's bylaws don't just say you
19 have to act transparently. They say you have to
20 act transparently to the maximum extent feasible,
21 correct?

22 A. That's what the words say, yes.

23 Q. You would agree that "feasible" means, in
24 general, possible, right?

25 A. Yes.

1 Q. So what the bylaws provide is that ICANN
2 must act transparently to the maximum extent if
3 it's possible to do so; is that fair?

4 A. I think that this is a general admonition
5 that goes all the way through the bylaws and all
6 the way through ICANN's operating procedures that
7 basically says you should act in an open and
8 transparent way. It doesn't mean you can't have
9 conversations and discussions that are not public.

10 Q. Well, it says to the "maximum extent
11 feasible," correct?

12 A. If you are asking me, does this stand for
13 the proposition that the ICANN should meet in
14 public at all times, the answer to that is no.
15 ICANN Board has to have the opportunity to meet in
16 workshops, for example, to get its work done. From
17 time to time we'll provide information to the
18 community before or after about the general topics
19 that we are looking at during our workshop, but I
20 have never understood the requirement to act in an
21 open and transparent way to mandate that every
22 single interaction of the Board and every Board
23 discussion be public.

24 Q. Well, let me ask you this, Ms. Burr: As a
25 member of the Board, when you understand -- what do

1 you understand the bylaw requirement that ICANN
2 should operate in the maximum extent feasible to
3 mean?

4 A. I think there's a practical -- essentially
5 ICANN should act openly. It should be informed,
6 and it should act openly and transparently.

7 Q. And that includes the disclosure of
8 rationales for the Board's decisions, correct?

9 A. That certainly includes an explanation of
10 the rationale for formal decisions for all votes it
11 takes. So that is why ICANN goes to great length
12 to publish significant, detailed documents that
13 explain what information the Board had when it
14 resolved to do one thing or another, yes.

15 We also, you know, have blogs,
16 conversations with different parts of the community
17 and the community as a whole. That is all part of
18 ensuring that there's as much information exchange
19 with the community as makes sense.

20 Q. And these bylaws are disclosed publicly,
21 correct?

22 A. Yes, they are.

23 Q. And, in fact, they are available on
24 ICANN's website?

25 A. Yes.

1 Q. And it's reasonable for members of the
2 global Internet community to expect that ICANN will
3 operate transparently, correct?

4 A. They not only expect it, they demand it,
5 and they have mechanisms to enforce that as well.

6 Q. And those are the accountability
7 mechanisms?

8 A. Accountability mechanisms, DIDP
9 mechanisms.

10 Q. So turning to Section 3.2, ICANN is
11 required to maintain a website, correct?

12 A. Correct.

13 Q. And ICANN is also required to post
14 information about its policy development
15 activities?

16 ARBITRATOR BIENVENU: Are you referring to
17 a specific provision in 3.2, Mr. Litwin?

18 MR. LITWIN: Yes, I am, Mr. Chairman,
19 sub --

20 ARBITRATOR BIENVENU: What is it?

21 MR. LITWIN: Yes, it is --

22 THE WITNESS: (b), I believe.

23 MR. LITWIN: Yes, (b), I believe, correct.

24 THE WITNESS: Of course, you understand
25 that it is the community, not the Board, that

1 develops policy at ICANN?

2 Q. BY MR. LITWIN: And yet -- but just in
3 general, the development of Internet policy, there
4 needs to be disclosure about what's going on on
5 ICANN's website; is that right?

6 A. Well, policy development matters is a very
7 specific reference to a bylaws-described provision
8 for the process for policy development. That is a
9 bottom-up community process that involves different
10 supporting organizations and sometimes advisory
11 committees. There's a very specific proposal.

12 I believe this refers to a docket of
13 pending -- what we would call PDP, Policy
14 Development Process, matters.

15 Q. In fact, part of ICANN's development of
16 policy is to allow for public comment on draft
17 policies, correct?

18 A. Yes. Again, "policies" meaning policies
19 developed by a community.

20 Q. And Section 3.2 requires ICANN to post on
21 its website public comments on draft policies?

22 A. Again, yes, on things that fall within the
23 Policy Development Process mandate for policy to
24 the community.

25 Q. And the bylaws also require ICANN to post

1 on its website notice of upcoming Board meetings?

2 A. Correct, formal Board meetings.

3 Q. And agendas for upcoming Board meetings;
4 is that correct?

5 A. Correct. And I presume -- I don't recall,
6 but we probably did have a formal Board meeting in
7 November, and it probably was -- and if we did, it
8 was noticed.

9 Q. And minutes from those Board meetings,
10 correct?

11 A. Correct.

12 Q. Those have to be posted as well?

13 A. From the formal Board meetings, yes.

14 Q. And any resolution passed by the Board at
15 a formal Board meeting also has to be produced --
16 published on the website, correct?

17 A. Yes. A resolution passed at a Board
18 meeting must be posted, yes.

19 Q. And the bylaws require these documents to
20 be publicly posted because ICANN is obligated to
21 act transparently, correct?

22 A. Uh-huh, yes.

23 Q. And it's fair to say that because it's
24 important for the public to know when the Board is
25 meeting, what the Board will be considering, what

1 the Board discussed, and what decisions the Board
2 has taken, correct?

3 A. Correct. And as I said, this very
4 specific -- yes. All of the very specific
5 procedural requirements for transparency and
6 posting and agendas and explanations and all of
7 that, yes, are applied to decisions taken at
8 annual, specific or general meetings of the Board
9 of Directors.

10 Q. And when you say "general," you're
11 referring to regular Board meetings?

12 A. Regular Board meetings, yes.

13 Q. Okay. Now, ICANN holds three public
14 meetings a year; is that correct?

15 A. Yes. They have been virtual so far this
16 year.

17 Q. Understood. And I think earlier in your
18 testimony we were referring to the Hyderabad
19 meeting in November 2016. That was one of those
20 public meetings, correct?

21 A. Correct.

22 Q. Now, the ICANN Board meets during those
23 public meetings, correct?

24 A. Yes. So there are several ways in which
25 the Board works. We have a workshop beforehand.

1 It sometimes happens that there is a Board meeting
2 at the end of the workshop before the annual
3 general meeting itself opens.

4 We then have a variety of meetings with
5 the community as a whole and with different parts
6 of the community throughout the course of the
7 meeting, and generally we will have -- if this
8 doesn't take place at one of the policy meetings,
9 then at two of the three meetings, and indeed at
10 the end of the general meeting, there is a Board
11 meeting at the end of the workshop. In fact, there
12 are two, because the new Board is seated, and
13 there's a brief meeting of the new Board as well.

14 Q. Okay. Let me just unpack that a little
15 bit. So these workshops are not regular Board
16 meetings; is that right?

17 A. Correct.

18 Q. And they are not special meetings, and
19 they are certainly not an annual meeting, right?

20 A. No.

21 Q. There's no bylaw provision that provides
22 for Board workshops; is that right?

23 A. Not that I'm aware of.

24 Q. And these workshops don't require a quorum
25 of Board members to be in attendance, do they?

1 A. No. The workshops are essentially working
2 sessions for the Board. Generally all members of
3 the Board are there, but since no -- you know, we
4 are not passing resolutions and the like, I don't
5 suppose there's a requirement for a quorum, but
6 again, that's -- yeah.

7 Q. Do you take attendance?

8 A. I do not take attendance. Certainly we
9 know who is participating, and they are in the
10 room.

11 Q. Because you can see them; is that right?

12 A. Yes, or Zoom them.

13 Q. Okay. It is a brave new world we are all
14 in.

15 There aren't minutes taken at workshop
16 sessions, are there?

17 A. I don't believe so. I mean, they are
18 really working sessions. We go through a variety
19 of discussions, you know, about the work that's
20 ongoing in the community, the work that's going to
21 be -- our discussions with the community in the
22 coming week during the meeting. It's preparing to
23 interact with the community and move forward and
24 various things and getting caught up and briefed on
25 other matters.

1 Q. So is it fair to say that the Board uses
2 these workshops to make its formal Board meetings
3 more efficient?

4 A. Well, we don't actually spend most of the
5 time at the workshop on the formal Board meetings.
6 We spend much more time on understanding policy
7 development, work that is ongoing in the community,
8 conversations that we will have with the community
9 in the coming week, topics that are important to
10 them.

11 But it is -- I would say, you know, a --
12 we get resolution, we get draft resolution in
13 advance of any formal Board meeting. And to the
14 extent that -- I think we probably review them
15 quickly, but that is a tiny percentage of the time,
16 and I don't think it happens all the time.

17 Q. Okay. I think I wasn't clear. If the
18 Board didn't have those workshop sessions, you'd
19 have to do all of what you described that the Board
20 does in a workshop session at a regular Board
21 meeting, correct?

22 A. No, that's not true. Right now we
23 basically have Board informational meetings a
24 couple of times a week. We have sort of changed
25 the workshop schedule around so that rather than

1 packing it into three days with very complex time
2 zones, because the Board of Directors is global, we
3 in the post-COVID era have spread out those
4 informational calls and discussions over the course
5 of the weeks in between the meeting.

6 It was a convenience to sort of pack them
7 into a three-day workshop, but that's not an
8 inviolate process. Really the question is what's
9 the way for the Board to work together, exchange
10 information, get up to speed on what's going on in
11 the community, take care of various Board
12 housekeeping matters and the like.

13 Q. Now, the Board doesn't vote during
14 workshop sessions, does it?

15 A. The Board does -- I think there's one
16 exception, which is we have a straw poll at the
17 September workshop on the elections for the Board
18 officers. It is not -- it is a straw poll.

19 Q. Other than the straw poll, the Board
20 doesn't actually vote during the workshop session?

21 A. The Board is not taking formal
22 resolutions, not passing formal resolutions, and we
23 work on consensus.

24 Q. Right. That's because the bylaws, I
25 think, clearly provide that the Board can only act

1 at one of the formal meetings we discussed and only
2 if a quorum is present; is that correct?

3 A. So the Board act is absolute, yes, the
4 Board can only act in a formal sense. It can only
5 adopt a resolution at a formal meeting.

6 You know, the Board can decide to follow
7 procedures that it typically follows. There's lots
8 of housekeeping issues that the Board can decide.
9 I am uncomfortable with the absoluteness of the
10 term "act."

11 Q. Okay. Let's look back --

12 A. The formal Board resolution, that must be
13 taken at a formal Board meeting.

14 Q. Okay. Let's look back at Section 7.17.

15 Chuck, if you can put that back up on the
16 screen, please.

17 This is the quorum section again. What it
18 provides here is that the act of a majority of
19 directors present at any meeting -- and I think we
20 clarified that the term "meeting" there refers to
21 the three types of formal meetings -- at which
22 there is a quorum shall be the act of the Board,
23 right? That's what it says, it uses the term
24 "act."

25 A. Yes.

1 Q. And if we look at Section 7.19 -- Chuck,
2 if you could throw that up on the screen again --
3 what it says here is that the Board can act, this
4 is action without a meeting, but it can only do
5 that if the directors entitled to vote all consent
6 in writing to the Board taking an act outside of
7 one of those formal meetings; is that right?

8 A. Yes. If the Board wants to take a formal
9 action, it can do it outside of the meeting under
10 these circumstances.

11 Q. Well, Section 7.19 doesn't say formal
12 action; it says "action," right?

13 A. Right. And I think that actions here
14 applies to formal actions that the Board takes
15 during its annual regular or special meeting or a
16 formal action without a meeting.

17 Q. Can you point me to a provision of the
18 bylaws that defines "action" as formal actions
19 limited to resolutions?

20 A. No. But if you're suggesting that every
21 time the Board decides to follow a practice that it
22 has always followed, it has to take a formal vote,
23 then we would be voting constantly. I mean, it is
24 just not practical to insist that every time the
25 Board makes a decision, including a decision to

1 follow its standard practice, that it has to have a
2 formal vote. That's -- I don't -- I don't
3 understand that to be typical of any organization,
4 of any Board of Directors.

5 Q. Do other Boards of Directors have these
6 same provisions in their bylaws regarding
7 transparency and accountability to a broader
8 community?

9 A. I suspect that there are lots of
10 California corporations that have these, but I have
11 not read all of their bylaws.

12 Q. Okay. Now, you were a member of the Cross
13 Community Working Group on Accountability, or the
14 CCWG-Accountability, right?

15 A. I was, indeed.

16 Q. Now, I am just going to --

17 MR. ALI: Ethan -- sorry, Ms. Burr.

18 Mr. Chairman, may I take a 30-second break
19 to speak with Mr. Litwin before he continues since
20 he's moving on to a different topic?

21 ARBITRATOR BIENVENU: Yes, you may. Is JD
22 available to put you in a separate room, or do you
23 have means to communicate with one another?

24 MR. ALI: We have means to communicate
25 with one another. We don't need to be put in a

1 separate room.

2 ARBITRATOR BIENVENU: We'll just pause for
3 a few seconds to let you do that.

4 (Whereupon a recess was taken.)

5 ARBITRATOR BIENVENU: Go ahead and
6 proceed.

7 Q. BY MR. LITWIN: Ms. Burr, I ask you just
8 to turn, before we move subjects, to Page 10 in Tab
9 2, which is Section 3.5(c) of ICANN's bylaws. And
10 there you'll see that the bylaws require that
11 ICANN, within seven days of concluding a meeting,
12 must post any action taken by the Board, and that
13 shall be made publicly available in a preliminary
14 report.

15 So that seems to go far beyond -- any
16 actions goes far beyond just a formal Board
17 resolution; would you agree with that?

18 A. No.

19 Q. How do you --

20 A. It is the same word, "any actions." I am
21 reading "actions" throughout this section to refer
22 to the formal decisions that the Board makes by
23 resolution during Board meetings. And that's the
24 way this has always been interpreted from the
25 beginning of time.

1 I don't know if this changed, but the
2 Board has always had an obligation to post the
3 results of its Board meeting within this period. I
4 don't know "always," but for many years.

5 Q. And how did you come to learn that the
6 Board has interpreted the term "any actions" to
7 encompass Board resolution only?

8 A. I think personally it is plain-text
9 reading of the bylaws. It is consistent with words
10 used throughout the -- when they are talking about
11 formal actions by the Board, and it is consistent
12 with ICANN's practice for many years --

13 Q. Okay. So --

14 A. -- at our Board meetings.

15 Q. So when the Panel is reviewing the bylaws
16 and they see references to actions taken by the
17 Board, they should understand that to mean only
18 action by Board resolution; is that what you're
19 saying?

20 A. I have not memorized the 250 pages of the
21 bylaws. In this section where they are talking
22 about the operations of the Board, I read this in
23 the same way that I read the provisions related to
24 regular, annual and other meetings, meaning the
25 formal action by the Board in a Board meeting by

1 resolution.

2 Q. Well, is there a reference that you are
3 aware of in the bylaws to an action, a Board action
4 that does not refer to a formal resolution?

5 A. Well, there are inactions in the IRP
6 context, which would not rise to the form of a
7 formal action, I suspect, right, because it
8 wouldn't be by resolution. These provisions of the
9 bylaws that you're talking about are about how the
10 Board operates when it is formal.

11 If you read this to say anything the Board
12 thinks about, decides to move on with in the way
13 that it, you know, decides to have another meeting
14 to discuss further, all of this has to be contained
15 on the publicly available and the preliminary
16 report seven days later, the Board would spend all
17 of its time approving these preliminary reports.

18 Q. Actually --

19 A. It is a very active Board.

20 Q. Yeah, actually, your reference to the IRP
21 is interesting. There in Section 4.3 the members
22 of the Internet community are given standing to
23 challenge ICANN actions; is that right?

24 A. And failure to act.

25 Q. Yes. In particular, ICANN Board actions

1 and failures to act, correct?

2 A. Yes, and/or, yes.

3 Q. Yes. Just focusing in on the Board
4 actions there, does that mean by using the word
5 "actions" there, that it is limited to challenging
6 a resolution of the Board?

7 A. It's -- I mean, IRPs are specifically -- I
8 want to say, I am not going to make a case that all
9 256 pages of these bylaws are absolutely
10 consistent, having had a huge role in the creation
11 of the post-transition bylaws and the fact that the
12 bylaws went from 50 pages to 250 pages.

13 I will say that with respect to the IRP,
14 the question is did the Board do something or fail
15 to do something? Did the Board do something that
16 violated the bylaws or the articles of
17 incorporation? Did the Board fail to take an
18 action that it was bound to take lest it violate
19 the bylaws and the articles of incorporation?

20 Q. Okay. So in Section 4.3, the word
21 "action," Board action, the phrase "Board action,"
22 refers to did the Board do something.

23 And then looking back at Section 3.5, it
24 says, "Any Board action has to be posted to the
25 website." So --

1 MR. ENSON: Mr. Litwin, I apologize for
2 interrupting, but if you are going to represent
3 something is in 4.3 of the bylaws, I request that
4 you point it out to Ms. Burr so she can review it.

5 Q. BY MR. LITWIN: So, for example, Ms. Burr,
6 I would direct your attention to Page 28 of Tab 2,
7 which is Section 4.3(o). And looking at little
8 Roman numeral iii, this provision gives the IRP
9 Panel the authority to declare whether a covered
10 action constituted an action or inaction that
11 violated the articles or bylaws; is that right?

12 A. Right. I think you have to refer back to
13 the definition of "covered action," which is in
14 4.3(b), which is -- includes actions or inactions
15 by the Board, individual directors, officers or
16 staff members.

17 So I do not believe that this is -- that
18 it's limited to -- I mean, the words are in
19 different -- the word "action" has a different
20 context here.

21 Q. So let me see if I can break this down.
22 Section 3.1, which we referred to earlier,
23 requires ICANN to operate in an open and
24 transparent manner, correct?

25 A. Correct.

1 Q. And open and transparent to the maximum
2 extent feasible, correct?

3 A. Correct. Which to me does not mean it has
4 to do everything in public.

5 Q. I understand what your prior testimony
6 was. I am just asking about the plain text of the
7 bylaw.

8 And Section 4.3(b)(ii), which you just
9 referred us to, maybe it is -- yeah, (b)(ii), says
10 that a covered action is an action or failure to
11 act within ICANN committed by the Board, correct?
12 So that would encompass Board actions, right?

13 A. No. If you go to (b) in the packet,
14 covered actions include the actions or failure to
15 act by within ICANN committed by the Board,
16 individual directors, officers or staff members
17 that give rise to a dispute.

18 Q. Right. It says "or." It can refer to
19 simply an action by the Board, correct?

20 A. Correct. Although I think it is in a
21 different context than the context of the Board
22 voting in the course of a formal Board meeting.

23 Q. Your testimony, therefore, is that when it
24 says "Board action" in 4.3(b)(ii), that is, you
25 know, did the Board do anything?

1 A. Well, I can't -- I don't want to
2 speculate. I believe that most of the ways in
3 which the IRP has been invoked with respect to the
4 Board is a formal action of the Board, but I do not
5 rule out the possibility that the Board could do
6 something outside of a formal Board meeting that
7 would violate the bylaws or exceed the mission.

8 Q. Well, if the Board did something outside
9 of a formal meeting and nothing was posted to the
10 website about it, how would the members of the
11 Internet community know that they had grounds to
12 bring an IRP?

13 A. Well, I am a little confused about this,
14 because it is my understanding that Afilias
15 received notice in writing about the Board's
16 decision in the November workshop to honor its
17 standard practice, so I don't understand the
18 transparency issue.

19 Q. Okay. I was talking generally, but I am
20 happy to talk specifically with you.

21 What is the basis for your statement that
22 Afilias received notice from ICANN that the Board
23 had made a decision during a November 3rd, 2016,
24 workshop session about its complaint?

25 A. I believe that Afilias received a written

1 communication from Akram saying that the matter was
2 on hold because one of the accountability
3 mechanisms had been invoked.

4 The Board in November, as I recall -- as I
5 said, I was not on the Board then, but I was in the
6 room -- continued to follow its usual practice of
7 not intervening once an accountability mechanism
8 has been invoked so as to respect the
9 accountability mechanisms themselves. That is what
10 the Board typically does. That is what org
11 typically does.

12 Q. So did you review Mr. Akram's letter?

13 A. I didn't review it in advance of this. I
14 have seen it in the past. I believe it was posted.

15 Q. Okay. Now, I'll represent to you,
16 Ms. Burr, that Mr. Atallah's letter was dated
17 September 30th, 2016.

18 Do you recall that?

19 A. I don't recall the date of the letter.

20 Q. Okay. This isn't in your binder. I
21 didn't expect to ask you about this.

22 But I would ask that Chuck put up on the
23 screen Exhibit C-61, please. If you can focus in
24 on just the date, please, so that everybody can see
25 it. Thank you.

1 You can see here, Ms. Burr, Mr. Atallah --
2 let me first ask, is this the letter that you are
3 referring to?

4 MR. ENSON: Mr. Litwin, she needs to be
5 able to see the letter.

6 Q. BY MR. LITWIN: Can you see the letter?

7 A. I can.

8 Q. You are doing better than I can. I can
9 barely see it.

10 So does this refresh your recollection
11 that Mr. Atallah's letter was sent to Afilias on
12 September 30th, 2016?

13 A. Yes. That doesn't change the fact that
14 this letter reflects what ICANN org typically does
15 when an accountability mechanism has been invoked,
16 and the Board -- the practice of the Board is to
17 respect and follow that.

18 Q. So I would --

19 A. And that would be the Board deciding in
20 November that it was going to continue to follow
21 its practice.

22 Q. Okay. So stating the obvious here,
23 September 30th is before November 3rd, correct?

24 A. Correct.

25 Q. Focusing in on the second-to-last

1 paragraph -- if you could blow that up, Chuck -- it
2 says, "We will continue to take Afilias' comments,
3 and other inputs that we have sought, into
4 consideration as we consider this matter," correct?

5 A. That's what it says, yes.

6 Q. Did you understand that Mr. Atallah was
7 referring, when he says "Afilias' comments," to the
8 two letters from Mr. Hemphill that you reviewed in
9 preparation for your testimony here today?

10 A. I have no basis for thinking that it's
11 limited to the two letters to Afilias. There was
12 general noise about the auction, and Ruby Glen, for
13 example, had filed an accountability mechanism. I
14 would think that would be wrapped up in this, and
15 it would be in a larger bundle of issues.

16 Q. Well, I appreciate that, Ms. Burr, but
17 what it says, particularly here in the highlighted
18 language, is that, "We will continue to take
19 Afilias' comments into consideration as we continue
20 to consider this matter."

21 And what my question is just very simply,
22 really yes or no, do you understand, when he says
23 "Afilias' comments," he's referring to the two
24 letters that Mr. Hemphill had sent to him in August
25 and September of 2018 -- 2016, rather?

1 A. I would imagine that they were among the
2 things that would be Afiliias' comments.

3 Q. Is there anything else?

4 A. I don't know. I have seen those two
5 letters.

6 Q. Okay.

7 Chuck, can you pull up the first
8 paragraph, please.

9 So Mr. Atallah begins his letter by
10 saying, "Thank you for your letters of August 8th,
11 2016, and September 9th, 2016. We note your
12 comments regarding the NU DOT CO application for
13 .WEB in the ICANN auction of July 27, 2016."

14 Does that help refresh your recollection
15 that when Mr. Atallah is referring to Afiliias'
16 comments, he's referring to Mr. Hemphill's two
17 letters?

18 MR. ENSON: Mr. Chairman, this is Eric
19 Enson. I apologize for the interruption, but I
20 feel I need to make an objection at this point.

21 Ms. Burr has no way of knowing what
22 Mr. Atallah meant when he wrote this letter. She
23 didn't write it.

24 ARBITRATOR BIENVENU: Mr. Litwin, do you
25 want to respond to that objection?

1 MR. LITWIN: I think it is pretty clear
2 what I am asking is just Ms. Burr's understanding
3 based on her earlier testimony that this -- about
4 Mr. Atallah's letter, and I am just trying to
5 understand what Ms. Burr understood about it. I am
6 not asking Ms. Burr to get inside Mr. Atallah's
7 head. I am just asking on -- her understanding
8 based on reading the letter.

9 ARBITRATOR BIENVENU: I'll allow the
10 question, but I think you have gone as far -- as,
11 in my view, as useful in trying to elicit an
12 interpretation of this letter from this witness,
13 but I'll allow the question.

14 Please answer the question, Ms. Burr.

15 THE WITNESS: I am aware that in addition
16 to those two letters, we had litigation that had
17 been filed, a CEP had been filed by Ruby Glen. I
18 take this to reference to the broader matter.

19 Afilias' comments certainly include those
20 two letters that are noted, but I have no idea if
21 that's all that he's referencing with respect to
22 Afilias' comments or not.

23 Q. BY MR. LITWIN: Okay. Is there a portion
24 of this letter that, in your mind, refers to the
25 broader dispute with Ruby Glen and other comments,

1 other than what was specifically referred to in the
2 first paragraph?

3 A. The .WEB/.WEBS contention set was placed
4 on the 19th of August. That's clearly reflecting
5 the pending ICANN accountability mechanism
6 initiated by another member of the contention set.
7 So yes.

8 MR. LITWIN: I will move on, Mr. Chairman.
9 I take your point.

10 Q. So when we left off earlier, we were
11 talking about your role on CCWG-Accountability, and
12 I was about to say that CCWG-Accountability is kind
13 of a mouthful, so I am just going to refer to the
14 CCWG. I am aware that there are other CCWGs, but
15 I'd like you to understand that when I refer to the
16 CCWG, I am referring only to CCWG-Accountability;
17 is that okay?

18 A. Sure.

19 Q. Okay. Now, the CCWG was formed in
20 response to the United States government's
21 announced intention in 2014 to transition
22 stewardship of the Internet, that is, the IANA
23 functions, to the global multistakeholder
24 community; is that correct?

25 A. Yes.

1 Q. And ICANN would become the new steward of
2 the Internet on behalf of the community; is that
3 right?

4 A. Well, ICANN has throughout its life been
5 charged with responsibility for coordinating policy
6 development. It would, following the transition,
7 do that without a formal backstop agreement with
8 the United States government.

9 Q. And when you mean a backstop agreement,
10 just in lay terms, that means that the United
11 States government was no longer going to provide
12 oversight of ICANN; is that right?

13 A. Not separate from whatever role it
14 participated in in the Government Advisory
15 Committee, correct.

16 Q. So the CCWG was created to determine how
17 ICANN's then accountability mechanisms could be
18 strengthened to compensate for the absence of U.S.
19 government oversight; is that right?

20 A. Among other things, yes.

21 Q. And the CCWG submitted its recommendations
22 to the ICANN Board; is that right?

23 A. Correct.

24 Q. And one of those recommendations concerned
25 enhancements to the IRP; is that right?

1 A. That is correct.

2 Q. So the CCWG's recommendations for
3 strengthening or enhancing the IRP were contained
4 in its 2016 report; is that correct?

5 A. Yes. The CCWG was split up into two work
6 streams. One was the accountability mechanisms and
7 the mission, commitment for value statement of the
8 bylaws, and then there were other issues that
9 another work stream took. I was the rapporteur for
10 the accountability work stream.

11 Q. And the ICANN Board was engaged and had
12 monitored the development of its 2016 report,
13 right?

14 A. Yes. There were ICANN Board members who
15 were liaisons on the CCWG. I was part of the CCWG.
16 I was not on the Board at that time.

17 Q. And the Board actually provided comments
18 on two prior drafts of the 2016 report, correct?

19 A. That seems reasonable. I haven't gone
20 back and reviewed it. So I don't know.

21 Q. Fair enough. The work stream one report,
22 the one that contained the proposal to enhance the
23 IRP was presented to the Board in 2016, correct?

24 A. Yes. The final report of
25 CCWG-Accountability was in February of 2016.

1 Q. And the Board accepted by resolution the
2 CCWG 2016 report, correct?

3 A. Correct.

4 Q. And the Board actually approved the
5 transmission of the CCWG report to the NTIA to
6 accompany ICANN's proposal regarding the transition
7 of stewardship responsibilities from the U.S.
8 government to ICANN; is that right?

9 A. I actually don't know if a report went --
10 I assume the report did go along with the revised
11 bylaws that were a product of the report.

12 Q. And that's because improving ICANN's
13 accountability was an important part of the
14 transition, right?

15 A. That is correct.

16 Q. And the Board instructed ICANN to
17 implement the CCWG's recommendations that were set
18 forth in its report, correct?

19 A. I don't have firsthand knowledge of what
20 the Board did. The Board accepted them, and I
21 assume that means it directed the Board to
22 implement. There certainly were implementation
23 efforts. I don't know what the specific wording of
24 the Board's resolution says.

25 Q. Okay. Now, in the ICANN bylaws -- and I

1 would refer you, again, in Tab 2, to Section
2 1.2(a)(v).

3 Give Chuck a minute to throw that up on
4 the screen.

5 MR. ENSON: Sorry, Ethan, would you repeat
6 that?

7 MR. LITWIN: Yes, Section 1.2(a)(v), which
8 is on Page 6 of Tab 2.

9 MR. ENSON: Got it. Thank you.

10 MR. LITWIN: You're welcome.

11 Q. Do you see that, Ms. Burr? It is up on
12 the screen, too.

13 A. I do.

14 Q. Okay. Now, that require -- that bylaw
15 requires that -- or in that bylaw, rather, ICANN
16 commits to make decisions by applying documented
17 policies consistently, neutrally, objectively and
18 fairly; is that right?

19 A. Correct.

20 Q. That's because -- sorry.

21 A. No, I just was going to read the rest of
22 it.

23 Q. And that's because the global Internet
24 community needs to have confidence that ICANN is
25 going to abide by the plain meaning of its rules

1 and not treat anyone differently; is that right?

2 A. That particular language has been in the
3 ICANN bylaws, I think, since the original bylaws.
4 So I had -- I was very significantly involved in
5 rewriting Article 1 and Article 4 of the bylaws for
6 the accountability CCWG.

7 This particular language was in the old
8 bylaws. It was in a separate section. We moved
9 things around, and we split what had been core
10 values into two kinds of things, commitments and
11 core values. And we moved this, which had been in
12 neither of those places, up into the commitments.

13 So yes, it is a commitment -- continuation
14 of its commitment to apply documented policies
15 consistently, neutrally, objectively and fairly
16 without singling out any particular party for
17 discriminatory treatment.

18 Q. And I appreciate that answer, but I would
19 ask that you actually answer the question that I
20 asked, which is: ICANN makes this commitment
21 because it's important to the global Internet
22 community to have confidence that ICANN is going to
23 abide by the plain meaning of its rules?

24 A. Yes. And it has been from the beginning
25 of time, right.

1 Q. Now, the applicant guidebook for the new
2 gTLD Program is an example of ICANN's documented
3 policies; is that correct?

4 A. Well, there was a policy that the
5 community developed, the new gTLD policy.

6 The applicant guidebook, strictly
7 speaking, is implementation of a
8 community-developed policy.

9 Q. So are you aware that a previous IRP Panel
10 interpreted the guidebook's reference to itself as
11 the implementation of Board-approved consensus
12 policy, as the, quote, crystallization of
13 Board-approved consensus policy concerning the
14 introduction of new gTLDs?

15 A. I am not aware of that statement. I mean,
16 I believe you that that was the case, but I am not
17 aware of it.

18 Q. Would you also agree that ICANN must
19 implement the various procedures and rules and
20 policies set forth in the guidebook consistently,
21 neutrally, objectively and fairly?

22 A. Yes, I believe ICANN is obligated to make
23 decisions by applying documented policies
24 consistently, neutrally, objectively and fairly in
25 accordance with the bylaws.

1 Q. Now, in general, the basic procedure
2 that's set forth in the guidebook -- and I am going
3 to speak very generally -- is the applicant submits
4 an application. ICANN publishes the
5 nonconfidential parts of that application for
6 public view. ICANN evaluates the application while
7 the community is given an opportunity to comment on
8 or file objections to the application. The
9 application is then rejected or approved.

10 If it's approved and it is the only one to
11 have applied for the gTLD, then the applicant moves
12 on to execute a registry agreement with ICANN.

13 But if more than one application is
14 approved for that gTLD, a contention set is
15 created. The applicants are expected to try to
16 resolve the contention set among themselves, and if
17 they cannot, then ICANN will auction the gTLD among
18 them and the winner will proceed to contracting.

19 Is that just a fair general overview of
20 the process?

21 A. Yes, at a very high level. There are, of
22 course, many different moving parts in the
23 applicant guidebook and in the application process,
24 but yes.

25 Q. So you note in your witness statement that

1 nothing in the guidebook prevents VeriSign for
2 applying for any gTLD that it wanted; is that what
3 you -- is that a fair statement of what you
4 testified to?

5 A. Yes, the community-developed policy did
6 not impose limitations on who could apply for what.

7 Q. And, in fact, VeriSign did apply for
8 several gTLDs, correct?

9 A. I actually don't know the answer to that.
10 I know they were the back end for several of them,
11 but I don't know if they applied for independent --
12 individual ones as well.

13 Q. To the extent that VeriSign did, in fact,
14 apply for an applicant for a gTLD, its application
15 or the nonconfidential portions of its application
16 would have been published for public view; is that
17 correct?

18 A. That's correct, if it did apply to be a
19 registry operator as opposed to a back end.

20 Q. Understood. So if they apply to be the
21 registry operator, for example, for the Arabic form
22 of .COM, that application would be published on
23 ICANN's website for public view, right?

24 A. Right.

25 Q. But VeriSign did not submit an application

1 for .WEB, did it?

2 A. That's my understanding.

3 Q. So there would have been no .WEB
4 application from VeriSign for ICANN to publish,
5 right?

6 A. Correct.

7 Q. And because there was no VeriSign .WEB
8 application published, there would have been no
9 reason for anyone to believe at any time prior to
10 the .WEB auction that VeriSign was pursuing the
11 acquisition of .WEB, was there?

12 A. There was no published application. I
13 have no way of knowing what anybody believed about
14 anything.

15 Q. Now, one member of the Internet community
16 that comments routinely on new gTLD applications is
17 ICANN's Government Advisory Committee, right?

18 A. Right.

19 Q. And I am just going to refer to that as
20 the GAC; is that okay?

21 A. Yeah.

22 Q. Now, GAC members have lodged what they
23 call early-warning notices regarding various
24 applications; is that correct?

25 A. Yes. Those are expressions of individual

1 governments within the GAC as opposed to a GAC
2 statement of any kind of consensus policy or
3 anything like that. So the members had the ability
4 to raise their hand and say, "We have a problem
5 with that," very early in the process to give
6 applicants a heads-up.

7 Q. And, in fact, I'll just give you a quote,
8 what the GAC says, that, "An early-warning notice
9 is a notice from members of ICANN's Government
10 Advisory Committee that an application is seen as
11 potentially sensitive or problematic by one or more
12 governments."

13 Is that a fair statement about what an
14 early notice is?

15 A. Yes.

16 Q. I'm sorry --

17 A. Yes.

18 Q. So I'd like to direct your attention to
19 Tab 4 in your binder and to the first page of that.
20 It is a copy of the early-warning notice filed by
21 the GAC regarding Google's pursuit of .BLOG through
22 its Charleston Road subsidiary.

23 Do you see that?

24 A. Yes.

25 Q. And in this early-warning notice, the

1 government of Australia writes -- and, Chuck, if
2 you could bring up the box that's marked, "Reason/
3 Rationale for the Warning."

4 "Charleston Road Registry is proposing to
5 exclude other entities, including potential
6 competitors, from using the TLD. Restricting
7 common generic strings for the exclusive use of a
8 single entity could have unintended consequences,
9 including a negative impact on competition."

10 That's what they wrote, correct?

11 A. Yes. And I believe this was one among
12 many of the -- objections to closed generic
13 applications.

14 Q. And those objections remain on competition
15 grounds, right?

16 A. That's what the government of Australia --
17 how they described it. It was the exclusive access
18 to a common generic string that generally -- that
19 generally perturbed individual members of the GAC
20 and ultimately -- ultimately resulted in advice
21 from the GAC on closed generics and a temporary
22 prohibition on closed generics in the first round.

23 Q. So Chuck, if you could bring up the box
24 above that.

25 I'll repeat my question, Ms. Burr.

1 The basis for the government of
2 Australia's early-warning notice regarding Google's
3 proposed acquisition of .BLOG was, as it says,
4 "competition," correct?

5 A. That's how the government of Australia
6 described its concern.

7 Q. Now, it is true that every member of the
8 .WEB contention set submitted an application for
9 .WEB, correct?

10 A. Yes, yes.

11 Q. And the nonconfidential portions of those
12 applications were posted to ICANN's website,
13 correct?

14 A. Yes.

15 Q. And each of those applications were
16 evaluated by ICANN, correct?

17 A. Yes. I assume so, that would be the
18 process.

19 Q. Well, you couldn't get into a contention
20 set unless you had been evaluated by ICANN and
21 passed that evaluation, right?

22 A. Right. Which is why I said that's the
23 process.

24 Q. And the community, including the GAC,
25 would have had an opportunity to comment on each of

1 those .WEB applications during the evaluation
2 period, correct?

3 A. Yes. Individual members of the GAC -- so
4 this is not GAC advice, this is an individual
5 member of the GAC expressing a concern -- could
6 have filed an early warning. And the GAC also had
7 the ability to provide consensus advice.

8 Q. Now, you state in your witness
9 statement --

10 MR. LITWIN: Before I move on,
11 Mr. Chairman, we have been going for about an hour
12 and a half. I want to check as to when the Panel
13 and the witness want to break.

14 ARBITRATOR CHERNICK: Mr. Litwin, before
15 we do that, can I ask a question about the document
16 that's on the screen?

17 MR. LITWIN: Absolutely, Mr. Chernick.

18 ARBITRATOR CHERNICK: Is there a record
19 reference to this document, an exhibit reference so
20 that we can keep track of these things?

21 MR. LITWIN: There is. It is not on my
22 copy. I will have someone on my team email you
23 that directly.

24 ARBITRATOR CHERNICK: All right. Thank
25 you.

1 Go ahead, Mr. Chairman.

2 ARBITRATOR BIENVENU: Yes, well, I was
3 saying to Mr. Litwin that he had read my mind. I
4 was about to ask him to advise when would be an
5 appropriate time for our first break, and I take it
6 from your intervention, Mr. Litwin, that it would
7 be.

8 MR. LITWIN: This would be an opportune
9 time. I am happy that I am able to, even under the
10 small Zoom screen, ascertain when it might be time
11 for a break.

12 ARBITRATOR BIENVENU: Right. So we will
13 break for 15 minutes.

14 Ms. Burr, you, of course, are familiar
15 with a process like this one, and you would know
16 that throughout the course of your
17 cross-examination, and that includes any redirect
18 examination, you are not to discuss your testimony
19 or the case with anyone.

20 THE WITNESS: Yes, sir.

21 ARBITRATOR BIENVENU: Thank you very much.
22 So we'll take a 15-minute break.

23 (Whereupon a recess was taken.)

24 ARBITRATOR BIENVENU: Mr. Litwin, please
25 proceed.

1 Q. BY MR. LITWIN: Hello, Ms. Burr. Are you
2 ready to proceed?

3 A. I am.

4 Q. Okay. So you state in your witness
5 statement that ICANN has various ways in which it
6 holds itself accountable to the global Internet
7 community; is that correct?

8 A. Yes.

9 Q. And those are called accountability
10 mechanisms, correct?

11 A. Correct.

12 Q. And the IRP, the Independent Review
13 Process, is one of those accountability mechanisms,
14 right?

15 A. Absolutely.

16 Q. I would like to direct your attention now
17 to Tab 5 in your binder. This is a copy of Annex 7
18 to the CCWG report that we were discussing before
19 we went on break.

20 Annex 7 provides for -- Chuck, if you can
21 turn to Annex 7, please -- the CCWG's proposal for
22 the enhanced IRP?

23 A. Correct.

24 Q. So if you could turn to Page 10, and I
25 will direct your attention to Paragraph 34, and

1 I'll wait a minute for that to come up on the
2 screen here. This is under the heading "Standard
3 of Review."

4 MR. ENSON: Ethan, I am sorry to
5 interrupt. There's two sets of page numbers on my
6 copy. There's the exhibit page number and the
7 exhibit number of the actual document.

8 MR. LITWIN: Yes. Hopefully I have it all
9 correct in my notes, but I am referring to the
10 exhibit page numbers only.

11 MR. ENSON: Okay. Thank you.

12 MR. LITWIN: You're welcome.

13 Q. Ms. Burr, under "Standard of Review," the
14 CCWG states that "The IRP Panel shall decide the
15 issues presented to it based on its own independent
16 determination of ICANN's articles of incorporation
17 and bylaws in the context of applicable governing
18 law and prior IRP decisions. The standard of
19 review shall be an objective examination as to
20 whether the complained-of action exceeds the scope
21 of ICANN's mission and/or violates ICANN's articles
22 of incorporation and/or bylaws and prior IRP
23 decisions. Decisions will be based on each IRP
24 panelist's assessment of the merits of the
25 claimant's case. The Panel may undertake a de novo

1 review of the case, make findings of fact, and
2 issue decisions based on those facts."

3 Do you see that there?

4 A. I see that paragraph, yes.

5 Q. Okay. Let's just break that down. The
6 IRP Panel is supposed to decide disputes based on
7 its own independent interpretation of ICANN's
8 articles and bylaws; is that right?

9 A. I think we need to look -- I mean, this
10 is -- so Annex 7 is sort of an explication of the
11 recommendations that the CCWG-Accountability Group
12 put together with respect to those accountability
13 mechanisms. They were then translated into the
14 ICANN bylaws.

15 So this is a description where the actual
16 absolute standard of review, I would -- we should
17 refer to the bylaws. I believe it's quite -- I
18 believe it is a -- did an action or inaction
19 violate the -- exceed the mission or violate the
20 bylaws with respect to these.

21 I am just -- the official source has to be
22 the bylaws, because that's where the rules come
23 from.

24 Q. So the CCWG report, as we talked about
25 earlier today, was transmitted by ICANN to the NTIA

1 as part of the transition process; is that right?

2 A. As I said, I don't know the answer to
3 that. I think that's right, but I have no idea.
4 But bylaws certainly would have been as well. And
5 the bylaws, the language in the bylaws is the final
6 implementation of the CCWG's recommendations, and
7 those were, in fact -- I worked on the writing of
8 the bylaws as the rapporteur for this provision,
9 and those were, again, submitted to that community
10 for comment and the like.

11 All I'm saying is to the extent there's
12 any discrepancy between this document and the
13 bylaws, the bylaws is the relevant document.

14 Q. And we are going to look at the bylaws in
15 a minute, but right now I just want to ask you
16 questions about what the CCWG intended. And the
17 CCWG intended that the IRP Panel is supposed to
18 decide disputes based on its own independent
19 interpretation of ICANN's articles and bylaws,
20 correct?

21 A. That is what this says. I have no idea if
22 that particular sentence is in the bylaws itself,
23 but it is definitely --

24 Q. I am not asking --

25 A. -- a de novo review.

1 Q. I am not asking you about the bylaws. I
2 am only asking you in the context of the next
3 several questions about what the CCWG intended --

4 A. Okay.

5 Q. -- as reflected in Annex 7.

6 And the CCWG intended that the decisions
7 of the Panel should be based on each panelist's
8 individual assessments of the merits of the claim,
9 right?

10 A. Presented on the Panel's independent
11 interpretation of the bylaws and articles of
12 incorporation and examination, objective
13 examination of whether the complaint of action
14 exceeds the scope of ICANN's missions or violates
15 the bylaws, and it is based on each IRP's
16 assessment of those.

17 Q. Each IRP panelist's assessment of the
18 merits of the claimant's case, correct?

19 A. Right. And the case is if this act or
20 failure to act violated the bylaws.

21 Q. And this standard of review that the CCWG
22 provided for here says that the Panel should
23 undertake a de novo review of the case, correct?

24 A. Correct. That is in the bylaws, I know.

25 Q. And by "de novo," that essentially means

1 that the Panel should start anew, right, that's
2 what "de novo" means?

3 A. Yes. In other words, it is not acting --
4 it evaluates the facts.

5 Q. And you understand that a de novo review
6 is a nondeferential standard of review, correct?

7 A. I have to say I am not a litigator, but I
8 think this is with respect to the findings of the
9 facts about what happened.

10 Q. Well, it says here that the Panel may
11 undertake a de novo review of the case. And solely
12 as to that provision, I am saying that where it
13 says "de novo review," that means nondeferential
14 standard of review; it is not an abuse of
15 discretion standard?

16 A. That's a legal conclusion that -- I mean,
17 it may be true, but I have no idea.

18 All I'm saying is what this says to me is
19 you get to -- the IRP Panel gets to decide what the
20 facts are.

21 Q. Wait. So you were on the CCWG, right?

22 A. Yes. But you're asking me for a sort of
23 legal term-of-art conclusion. I am not a
24 litigator. I can tell you what that means to me.
25 Yes, ICANN doesn't get to say, "Here are the facts.

1 You must accept them."

2 So to that extent, they are not deferring
3 to ICANN's -- ICANN's articulation of what the
4 facts are, that's correct.

5 Q. Right. And the Panel should make its
6 decisions based on the facts as the Panel finds
7 them, right?

8 A. Yes. That is what this is saying.

9 Q. Okay. Let's turn back to Page 5 in this
10 exhibit and look at the first bullet point, which
11 starts with "Standing."

12 A. Yes.

13 Q. You see that, Ms. Burr? Here what the
14 CCWG is saying is that, "Any person, group or
15 entity that has been materially affected by" --
16 here's your language -- "an ICANN action or
17 inaction in violation of ICANN's articles of
18 incorporation or bylaws shall have a right to file
19 a complaint under the IRP and seek redress."

20 Do you see that? Ms. Burr?

21 A. Yes, I am just looking at this.

22 Q. Okay.

23 A. This is Page 5?

24 ARBITRATOR BIENVENU: It is Page 5 of the
25 exhibit, 3 of the document.

1 MR. LITWIN: Yes. So there's Exhibit C-1,
2 Page 5.

3 Thank you, Mr. Chairman.

4 THE WITNESS: Yes.

5 Q. BY MR. LITWIN: So what it says here at
6 the second bullet -- and it is up on the screen for
7 your ease of reference, Ms. Burr -- is that if an
8 entity is materially affected by an ICANN action or
9 inaction that violates ICANN's articles of
10 incorporation or bylaws, that that entity shall
11 have a right to file a complaint under the IRP and
12 to seek redress.

13 That's what it says, right?

14 A. That's what it says.

15 Q. So the CCWG is providing for those
16 entities a due-process right to file an IRP; is
17 that right?

18 A. I mean, it is saying if you have been
19 materially affected, you have a right to file a
20 complaint under the IRP.

21 Q. And to seek redress?

22 A. Yes, for the violation of the bylaws.

23 Q. Right. And "redress" means to remedy,
24 right?

25 A. The bylaws are clear, and this was always

1 the intention. I was the rapporteur for this, and
2 I was the person who wrote the -- was fundamentally
3 charged with a relevant bylaws provision.

4 This means -- and it is very clear in the
5 bylaws, and that is what the CCWG meant -- that
6 they had a right to get a decision about whether an
7 action or an inaction violated the bylaws.

8 This does not say to me, it was never the
9 intention of the CCWG, in my hearing, that the
10 Panel could prescribe a remedy. And that totally
11 makes sense in the context of ICANN IRPs, because
12 often there are many, many parties who are affected
13 by this. There are a lot of moving parts.

14 So I do not see that as a statement, and I
15 participated in both the CCWG discussions and the
16 bylaws' drafting, which was not intended to, you
17 know, damages, recovery, remedy, that kind of
18 stuff, but the -- the IRP's authority is limited to
19 finding -- making a determination about whether an
20 action or inaction violated the articles of
21 incorporation and bylaws, and that's what's binding
22 on ICANN.

23 Q. Ms. Burr, I really must ask that you
24 respond to the question that I'm asking, otherwise
25 we are just never going to get done today.

1 What I'm asking here is that in Annex 7 on
2 Page 5, at the second bullet point, the CCWG
3 provided that, "Entities shall have standing if
4 they are materially affected by an ICANN action or
5 inaction that violates ICANN's articles of
6 incorporation or bylaws, that they shall have a
7 right to file a complaint and to seek redress."

8 That's what it says, correct?

9 A. That's what it says in the annex
10 explicating the recommendation.

11 Q. That's all I'm asking.

12 If we could turn to Page 6.

13 ARBITRATOR BIENVENU: Just for the record,
14 Mr. Litwin, you were referring to the first bullet
15 point, not the second bullet point.

16 MR. LITWIN: Oh, I'm sorry about that.
17 Yes, first bullet point.

18 Q. If you could please, Ms. Burr, turn to
19 Page 6, Paragraph 9, please. And here the CCWG
20 states in its explicative Annex 7 that the role of
21 the IRP will be to hear and resolve claims,
22 correct?

23 A. That ICANN has acted or failed to act in
24 violation of its articles and bylaws.

25 Q. And that resolution of claims are intended

1 to be both final and binding, correct?

2 A. Yes, with respect to binding of a bylaws
3 violation or an action exceeding the mission.

4 Q. Okay. Now, Ms. Burr, earlier today, you
5 testified about the Ruby Glen litigation concerning
6 .WEB.

7 Do you recall that testimony?

8 A. I think I mentioned that litigation had
9 been filed and a CEP was filed.

10 Q. In that litigation, ICANN defended its
11 conduct by reference to the litigation waiver in
12 the new gTLD guidebook's terms and conditions in
13 Module 6; is that correct?

14 A. I have not read the pleadings in the Ruby
15 Glen litigation.

16 Q. Are you aware that the new gTLD guidebook
17 provides for a litigation waiver?

18 A. My understanding is that the application
19 itself includes a litigation waiver and refers to
20 the accountability mechanisms to resolve disputes.

21 Q. Okay. In fact, what the guidebook says is
22 that, "The applicant agrees not to challenge in
23 court or in any other judicial forum any final
24 decision made by ICANN with respect to its
25 application, provided that the applicant may

1 utilize any accountability mechanism set forth in
2 ICANN's bylaws for the purpose of challenging any
3 final decision made by ICANN with respect to the
4 application."

5 Is that right?

6 A. I don't have the applicant guidebook in
7 front of me. That sounds right. You read it, so I
8 assume it's correct, but I don't have it.

9 Q. I'll represent to you that I have read it.
10 In general -- let me just -- now, in terms of that
11 application waiver, is it ICANN's position,
12 therefore, that applicants are not left with any
13 form -- without any form of redress because they
14 can initiate the accountability mechanisms in the
15 bylaws?

16 A. I don't believe that is a correct
17 statement of ICANN's position. You'd have to ask
18 ICANN itself about that.

19 Here's what I think: That bylaws provide
20 accountability mechanisms for -- in order to
21 identify instances where ICANN -- either ICANN or
22 the Board has acted in violation of the bylaws, and
23 the Board must -- if there is a finding that ICANN
24 has violated its bylaws, the Board must act to
25 resolve that, to fix that.

1 Q. So I am not sure of the difference. Would
2 it be a fair statement that applicants in the new
3 gTLD Program are not left without any form of
4 redress because of the litigation waiver because
5 the litigation waiver provides that they may
6 initiate an accountability mechanism, including the
7 Independent Review Process?

8 A. Right. And the result of the Independent
9 Review Process is if the Independent Review Panel
10 finds that the bylaws have been violated, the Board
11 has to take appropriate action to fix that.

12 Q. And the IRP is effectively an arbitration
13 that is operated by the ICDR, correct?

14 A. It is operated by the ICDR, and it very
15 much follows arbitration forms, yes.

16 Q. And the IRP gives an applicant, therefore,
17 the ability to have independent third parties
18 evaluate its challenges to ICANN's actions or
19 inactions under ICANN's articles and bylaws in
20 addition to claims under the guidebook; is that a
21 fair statement?

22 A. Its claims under the guidebook that ICANN
23 has violated its bylaws. The IRP is limited to
24 claims that ICANN has -- in this context, there's
25 the IANA and different things, but in this context,

1 the authority -- the purpose of the IRP is to
2 determine whether or not, in taking some action or
3 inaction or failing to act, ICANN has violated its
4 bylaws, and that would be including in its -- in
5 its application of the rules of the applicant
6 guidebook if it's violated the bylaws somehow.

7 Q. Would you also agree that, you know, that
8 the applicants have not been left without any form
9 of redress because ICANN has provided for a robust
10 form of review in which these challenges could be
11 addressed, namely the IRP; is that a fair
12 statement?

13 A. Yes. And the point is that the violations
14 of ICANN's bylaws can be identified through an IRP.

15 Q. So just to be clear here, where the limits
16 of a court's jurisdiction for review of ICANN's
17 conduct ends because of the litigation waiver,
18 ICANN is essentially saying that the IRP Panel's
19 jurisdiction starts; is that fair?

20 A. Only if there's a question about whether
21 the way ICANN has administered the applicant
22 guidebook is in violation of the bylaws or articles
23 of incorporation or exceeds ICANN's mission.

24 Q. Let me try this another way.

25 So in light of the litigation waiver, an

1 IRP Panel's jurisdiction must cover all matters
2 that could not be addressed by a court of
3 competition -- competent jurisdiction, otherwise a
4 new gTLD applicant who was required to agree to the
5 waiver would have no effective means of redress; is
6 that fair?

7 A. So there's a contract here, right, and
8 people are applying for a new gTLD, and the
9 contract, the application, includes a provision
10 that says, "We are not going to sue you in a court.
11 To the extent we have a complaint about violations
12 of the bylaws, we'll use the -- the bylaws-provided
13 remedies."

14 You're passing this in, like -- sort of in
15 big terms, but I think the issue is there's an
16 agreement here, when you apply for a new gTLD, you
17 are agreeing that disputes related to violation of
18 the bylaws are going to be decided through ICANN's
19 accountability mechanism, and otherwise you don't
20 have a contractual right to sue.

21 Q. So when Ruby Glen sought to enforce its
22 contractual rights in court, ICANN's position was,
23 "You can't do that. You have waived your right to
24 seek judicial review. And that's okay because we
25 have provided a robust form of independent review

1 by way of the IRP"; isn't that right?

2 A. I don't know what the Court in Ruby Glen
3 said. I haven't reviewed that for this. I haven't
4 reviewed it in ages.

5 MR. ENSON: Mr. Chairman, I would request
6 that we move on. This is an area where Mr. Litwin
7 is seeking legal conclusions on topics that were
8 not in Ms. Burr's witness statement, and I think in
9 light of the time estimates for Ms. Burr's cross, I
10 think our time is best spent on matters that are
11 within her witness statement.

12 ARBITRATOR BIENVENU: Mr. Litwin.

13 MR. LITWIN: Well, I was just about to
14 move on, so that's perfectly fine with me.

15 MR. ALI: Sorry, Mr. Chairman.

16 Before you do, I'd like to consult with
17 you.

18 Secondly, Mr. Chairman, I think you made
19 it very clear in your -- in a recent procedure
20 ruling --

21 ARBITRATOR BIENVENU: Mr. Ali, I am going
22 to cut you off. You don't need to respond to that.
23 I will give you an opportunity to consult with
24 Mr. Litwin. He said he was planning on moving on.
25 So consult about that, and we'll go from there.

1 MR. ALI: Sure, but, Mr. Chairman, you
2 will understand that we will need to do this fairly
3 often because we are not in the same place.
4 Mr. Litwin is in New York, and I am in Washington,
5 D.C.

6 ARBITRATOR BIENVENU: That's fine. No one
7 has a problem with that, Mr. Ali.

8 MR. ALI: All right. Mr. Chairman, thank
9 you.

10 ARBITRATOR BIENVENU: Thank you.

11 (Whereupon a recess was taken.)

12 Q. BY MR. LITWIN: Ms. Burr, I would like to
13 direct your attention to Page 13 of the CCWG
14 report, Paragraph 57.

15 A. Yes.

16 Q. Now, here the CCWG provided -- and I will
17 again stipulate that this is in Annex 7, which was
18 an explication on the CCWG report and its
19 recommendations -- that if a Panel determines that
20 an action or inaction by Board staff violates the
21 bylaws or articles, then that decision is binding
22 and the ICANN Board and staff shall be directed to
23 take appropriate action to remedy the breach.

24 Do you see that?

25 A. Yes.

1 Q. Okay. So the CCWG intended that an IRP
2 Panel, if it were to find that ICANN breached its
3 bylaws or articles, should issue a binding
4 declaration that ICANN breached its articles and
5 bylaws and further that the Panel should direct
6 ICANN how to remedy that breach, correct?

7 A. That is not what the CCWG intended. What
8 the CCWG intended is that the Panel would issue a
9 binding determination regarding a bylaws violation,
10 and in response to that finding, ICANN must take
11 appropriate action to remedy the breach.

12 Q. Now, I guess I'm confused by this. The
13 CCWG obviously put a lot of work into preparing its
14 report in this Annex 7, correct?

15 A. Yes. We spent a lot of time doing it.

16 Q. I know, because I have been through all
17 those materials, and they are quite voluminous.

18 And here in Annex 7, the CCWG refers to
19 itself, it says, "We intend that the Panel shall
20 issue a binding decision and that ICANN's Board and
21 staff shall be directed to take appropriate action
22 to remedy the breach."

23 Did the CCWG just not mean what it says
24 here?

25 A. Well, so, first of all, I can read that

1 construction, which is passive and which was put up
2 as we were working this out. I do not read it to
3 say that the Panel is going to direct ICANN to take
4 a specific action to remedy the breach.

5 The Panel, by making a finding that ICANN
6 has violated its articles, ICANN must take -- then
7 take appropriate action to remedy the breach.

8 That is not the same as saying that the
9 Panel has the authority to say what the appropriate
10 action is to remedy the breach.

11 And the reason is there are so many moving
12 parts and parties here, imagine if this Panel said
13 "ICANN violated the bylaws, and you must award this
14 to, you know, X, Y or Z." There are going to be
15 two or three other parties who then have a cause of
16 action.

17 So ICANN must -- ICANN has an obligation
18 to take appropriate action, but the CCWG did not
19 contemplate that the Panel, the IRP Panel would
20 decide what that appropriate action was.

21 Q. Okay. Why don't we look at the bylaws.
22 So if you could turn back to Tab 2 in your binder,
23 and I would refer you to Page 30 at Section 4.3(x).
24 And there the bylaws provide that the IRP is
25 intended to be a final binding arbitration process;

1 is that correct?

2 A. Yes.

3 Q. And that IRP Panel's decisions are binding
4 final decisions to the extent allowed by law,
5 correct?

6 A. Yes. And that, of course, is subject to
7 the authority of the IRP Panel in Section (o).

8 Q. Well, I think we can all agree that
9 arbitral bodies, in fact, any judicial body must
10 act within its jurisdiction, correct?

11 A. Right. All I am saying is Section (o)
12 specifies what the IRP has authority to do, and
13 within that context its decisions regarding
14 binding -- about a bylaws violation is binding.

15 Q. Okay. So can we turn to Page 24, Rule
16 4.3(i), please. Here, much like the CCWG report we
17 just referred to earlier, the bylaws provide that
18 the IRP Panel shall conduct an objective de novo
19 examination of the dispute, correct?

20 A. Correct.

21 Q. And under Roman Numeral i, the bylaws
22 provide that the IRP Panel shall make findings of
23 fact to determine whether the covered action
24 constituted an action or inaction that violated the
25 articles of incorporation or the bylaws, correct?

1 A. Yes.

2 Q. And it says that the Panel should make
3 those findings pursuant to a de novo examination,
4 correct?

5 A. Yes. The Panel makes a finding of the
6 facts that determine whether or not the action or
7 inaction violated the bylaws. That's the fact that
8 they are determining, whether the covered action
9 constituted an action or inaction that violates the
10 articles of incorporation or bylaws.

11 Q. Well, what this says is that the Panel
12 shall make findings of fact to determine --

13 A. Right.

14 Q. -- whether or not there was a violation,
15 correct?

16 A. Correct.

17 Q. Okay. Now, let's look at Roman Numeral
18 iii that talks about claims arising out of the
19 Board's exercise of its fiduciary duties.

20 So this provision relates only to those
21 claims that arise out of a Board's exercise of its
22 fiduciary duties, correct?

23 A. Yes. Although, a Board -- it is very hard
24 for me to see that a Board can act without respect
25 for its fiduciary duties, but yes.

1 Q. Let's talk about the ICANN Board's
2 fiduciary duties.

3 Would you agree that each member of
4 ICANN's Board is accountable to the participating
5 community as a whole through his or her fiduciary
6 duties and is required to make decisions that are
7 in the best interest of the corporation and the
8 community at large; is that fair?

9 A. It is certainly true that the members of
10 the Board are each obligated to act in the interest
11 of the organization, including the organization's
12 commitment to the community. You started this out
13 by saying it has a fiduciary duty to individual
14 members.

15 I think there's a fiduciary duty to the
16 organization that encompasses staying within its
17 mission and acting in the global public interest
18 and all those other things that individual
19 participants in ICANN have an interest in.

20 But I am not sure I have a fiduciary duty
21 to an individual member of the community, if that's
22 what you're asking me, and I suspect that's a
23 matter of California law.

24 Q. Yeah, I think that's right. I think
25 ICANN, in fact, has said that the general legal

1 duties of an ICANN director are owed to the
2 corporation itself, that is to ICANN itself, and
3 the public at large, not to the individual
4 interests within the ICANN community; is that
5 right?

6 A. That's my understanding. I certainly do
7 not reflect any individual interest.

8 Q. So ICANN doesn't act as Afilias'
9 fiduciary, right?

10 A. I am not comfortable with this
11 construction because it is -- ICANN is acting --
12 the ICANN Board, when it acts, has an obligation to
13 the organization, including to the global public
14 interest, through the bylaws.

15 I don't know -- you're asking me to make a
16 legal conclusion about whether ICANN is Afilias'
17 fiduciary, and I just don't quite know what to make
18 of that.

19 Q. Okay. Well, let me ask you this, then:
20 In terms of your understanding of bylaws, and
21 particularly with respect to the bylaw that's on
22 the screen, little Roman Numeral iii, that says,
23 "For claims arising out of the Board's exercise of
24 its fiduciary duties," can Afilias or any
25 individual member of the ICANN community bring

1 claims for breach of fiduciary duty against ICANN?

2 A. Anybody can bring a claim that says that
3 ICANN, either the Board or org, violated the
4 bylaws. So if something that violated the bylaws
5 had something to do with fiduciary duties, you
6 would still be able to bring that.

7 But the fiduciary issue here doesn't
8 swallow the ultimate fact that the determination
9 about whether something violates the ICANN bylaws
10 or not is left to the IRP Panel.

11 The question is: In the course of acting
12 there are, at every step of the way, a bunch of
13 potentially reasonable courses of action. And to
14 me this says unless the Panel finds that ICANN
15 violated its -- the bylaws, it's not -- it doesn't
16 have the authority to say, you know, you should
17 have done it a different way if that -- if failing
18 to do it a different way does not amount to a
19 violation of the bylaws.

20 So this doesn't swallow anything. If
21 there's a violation of the bylaws, there's a
22 violation of the bylaws. This is only sort of in
23 the decision-making and carrying things out that --
24 activities that -- actions that do not violate the
25 bylaws that the Board should -- substitute its

1 judgment for the Board's reasonable judgment.

2 Q. Let me see if I can come across this in a
3 different way.

4 If the IRP's jurisdiction is limited in
5 the way that you have just described, do matters
6 falling outside of the IRP's jurisdiction fall
7 within the jurisdiction of a court of competent
8 jurisdiction?

9 A. There are -- in the contracts with
10 contracted parties, there are provisions for how
11 disputes are resolved. I don't -- I mean, I think
12 that calls for a legal conclusion I am not prepared
13 to make.

14 With respect to the applicant guidebook,
15 the applicant guidebook and the application
16 provided for a waiver of a lawsuit and reversion to
17 a -- these accountability mechanisms for
18 determination about whether the bylaws and articles
19 of incorporation were complied with, and that seems
20 to me it is sort of a contractual resolution.

21 Q. So I guess what I'm trying to figure out
22 is if there is a gap. Is there a gap between what
23 applicants are prevented from bringing to a court
24 and between -- and what an IRP Panel can decide?
25 Are there claims simply that an applicant can't

1 bring anywhere because it's waived its right to a
2 court hearing and the IRP Panel can't decide it?

3 A. Again, that's a legal conclusion that I
4 don't think I can make. I am telling you that with
5 respect to anything that involves an alleged
6 violation of the bylaws, the IRP is the process
7 that's available.

8 Q. Well, you were a member of the CCWG that
9 developed the process for the enhanced IRP.

10 What I'm asking is just in general terms,
11 was there an intent by the CCWG to fill the gap for
12 applicants where courts were prevented from hearing
13 a claim due to litigation waiver?

14 MR. ENSON: Mr. Chairman, if I might
15 interject for a moment. We do object to this
16 continued line of questioning. He's asking for a
17 legal conclusion from Ms. Burr that she's not
18 prepared to give, and she's said three or four
19 times she cannot do it.

20 I think it is appropriate for us to move
21 on to something else at this point in time.

22 MR. LITWIN: Mr. Chairman, if I can
23 respond to this. This is a really important line
24 of questioning. Ms. Burr talked about ICANN's
25 accountability mechanisms in her witness statement.

1 She was a member of the CCWG that drafted the
2 report that we have been referring to today. She
3 was the rapporteur for the translation of those
4 recommendations by the CCWG into the bylaws. Those
5 bylaws were discussed extensively yesterday by
6 ICANN's counsel.

7 And what I'm simply trying to get an
8 understanding of is not in a legal sense, but in
9 Ms. Burr's sense, as a member of the CCWG and as
10 the rapporteur, as she's testified here today,
11 whether she intended and whether the CCWG intended
12 there to be a gap or whether or not they saw the
13 enhanced IRP as filling that gap. It is that
14 simple.

15 ARBITRATOR BIENVENU: I'll allow the
16 question directed to Ms. Burr's understanding of
17 the intent of the CCWG insofar as the risk of an
18 existence of a gap between the litigation privilege
19 and the scope of the accountability mechanisms.
20 You can ask her about her understanding.

21 MR. LITWIN: Thank you, Mr. Chairman.

22 Q. Ms. Burr, as a member of the CCWG, did you
23 have an understanding as to whether or not the CCWG
24 intended the enhanced IRP to be a gap-filler in
25 light of the litigation waiver provided for in the

1 applicant guidebook?

2 A. No, I do not believe there was a
3 discussion about a gap-filler. The CCWG intended
4 that, and I don't recall any specific obligations
5 with the applicant guidebook, although there could
6 have been.

7 The point here was that if ICANN violated
8 the bylaws, if it exercised -- if it separated out
9 somebody for disparate treatment unfairly without
10 just cause, that the IRP would be there to provide
11 a recourse for the applicant.

12 In other words, ICANN could not immunize
13 itself from a bylaws violation through a contract.
14 That's -- to the extent that there's any
15 gap-filling, it is that -- and this is, like, so
16 central to what the IRP is about.

17 It's about saying to ICANN, no, you can't
18 make people agree that you're allowed to violate
19 the bylaws.

20 But it did not go to other issues that
21 were outside of the bylaws. The IRP is so
22 absolutely specific over and over and over again
23 about what it's intended to address. So to the
24 extent there was a gap-filling, it was, we are not
25 going to allow you to say you get to violate your

1 bylaws via a contract provision.

2 ARBITRATOR BIENVENU: Ms. Burr, was there,
3 so far as you can recollect, a discussion of the
4 fact of a gap between the litigation waiver and the
5 scope of the accountability mechanisms, including
6 any possible limitation on the remedies that an IRP
7 Panel could award? Do you recall a discussion of
8 that topic?

9 THE WITNESS: I don't recall a discussion
10 of that topic. It was several years ago, so I
11 apologize. We were -- completed nearly four --
12 maybe more than four years ago.

13 ARBITRATOR BIENVENU: Thank you.

14 Q. BY MR. LITWIN: Is it possible in your
15 view, given the litigation waiver in the guidebook
16 and the limited role of the IRP Panel that you have
17 just explained, that applicants may, in fact, be
18 left without a form of redress if their claim does
19 not rise to the level that you have discussed
20 that's appropriate for an IRP Panel's
21 determination?

22 A. All I can tell you is the exercise here in
23 the CCWG -- first of all, it wasn't a specific
24 reference to the applicant guidebook. It was in
25 reference to ICANN's overall accountability.

1 And second, I can tell you personally that
2 I was motivated by making sure that ICANN could not
3 say that it had the ability to insulate itself from
4 violations of its bylaws. That's what I was
5 thinking about as I was working on this and
6 drafting it. It is what you will recall -- well,
7 you won't recall, but Arif will recall I took
8 objection to in the ICM case.

9 But here there's no issue here. It is
10 quite clear that if there's a breach of the bylaws,
11 that's -- the IRP Panel is entitled to identify
12 that in a binding way.

13 So you're asking me a question. I don't
14 think that we ever talked about -- I don't recall
15 talking about it, but it was not intended to be --
16 it was intended to address violations of the
17 bylaws. That's what the IRP was about.

18 Q. So if a claimant -- if an IRP doesn't have
19 jurisdiction to decide a claim, then you have to be
20 able to bring it to court, right, because it is not
21 arbitral? If it is not arbitral, you have to be
22 able to bring it to court?

23 A. This is a matter of equitable law. I
24 don't know the answer to that. I don't know.

25 Q. Okay. I will move on, subject to any

1 comments from my team.

2 Okay. I am going to move on.

3 MR. ALI: No comments. Thank you.

4 Q. BY MR. LITWIN: So, Ms. Burr, you state in
5 your witness statement, and I am going to quote
6 from it, that, "ICANN'S core mission is the
7 technical coordination of the Internet's DNS," that
8 is, the Domain Name Space, "on behalf of the
9 Internet community, ensuring the DNS's continued
10 security, stability and integrity."

11 Is that correct?

12 MR. ENSON: Ethan, sorry, where are you in
13 the witness statement?

14 MR. LITWIN: I actually don't have the
15 reference to it, Eric. Let me pull it up real
16 quick.

17 MR. ENSON: Is it Paragraph 11?

18 MR. LITWIN: Yes, thank you. Paragraph
19 11.

20 MR. ENSON: Thank you.

21 Q. BY MR. LITWIN: Is that a correct reading
22 of your testimony?

23 A. It's as originally envisioned by NTIA,
24 ICANN's core mission is the technical coordination,
25 that is correct.

1 Q. Are you aware that ICANN's Board has
2 stated in one of its rationales that, quote,
3 ICANN's mission statement and one of its founding
4 principles is to promote user choice, consumer
5 trust and competition?

6 A. Yes. As somebody who was deeply involved
7 in the global international process that led to the
8 creation of ICANN, that has -- the notion that
9 increasing the table for innovation and competition
10 is that ICANN, in carrying out its DNS security
11 mission, should do so in a way that creates
12 opportunities for competition and innovation.

13 Q. Okay. I'd like to direct your attention
14 to Tab 7 of your binder. This is a copy of ICANN's
15 articles of incorporation. And if you look at
16 Section 2, Roman iii, which I think is on the
17 second page, "ICANN's articles provide that the
18 corporation shall operate in a manner consistent
19 with these articles and its bylaws for the benefit
20 of the Internet community as a whole, carrying out
21 its activities in conformity with the relevant
22 principles of international law and international
23 conventions and applicable local law and through
24 open and transparent processes that enable
25 competition and open entry into Internet-related

1 markets."

2 That's what it says, correct?

3 A. That is what it says, yes.

4 Q. It is this same open and transparent
5 processes that the bylaws talk about at Section
6 3.1, correct?

7 A. Sorry, 3.1 of the bylaws?

8 Q. Yes, that we referred to earlier today
9 that talks about open and transparent processes.

10 A. I would have to look at the words side by
11 side to know if they are exact.

12 Q. I withdraw the question, Ms. Burr.

13 Now, this paragraph of the articles states
14 that ICANN must carry out its activities in
15 conformity with principles of international law,
16 correct?

17 A. Yes.

18 Q. In your view as a lawyer, as a Board
19 member, what are the relevant principles of
20 international law and applicable international
21 conventions that are referenced here?

22 A. You know, this would be based on relevant
23 treaties, respect for trademark treaties,
24 international conventions on -- I mean, I don't
25 know in particular, but -- because I am also not an

1 international law expert, nor am I an arbitrator.

2 So I --

3 Q. Okay.

4 A. -- I am not able to say all of these, what
5 they all are.

6 Q. There's a reference to competition here,
7 and the articles clearly say "enable competition,"
8 not "comply with U.S. antitrust law," correct?

9 A. Correct. And enabling competition has
10 always from the white paper -- so just to put this
11 in context, which I think is really important, in
12 1998 the United States government actually proposed
13 to add new top-level domains to expand the name
14 space to enable competition by expanding the name
15 space by creating five new top-level domains.

16 The global community came back to us and
17 said, "Forget it. We don't want you to do that,
18 USG." We want the community to develop the
19 policies that will -- for enabling competition
20 through new gTLDs.

21 So we were asked specifically about
22 antitrust immunity in the green paper, and we said,
23 "No, we are not going to -- we think that's a bad
24 idea because all of this should be -- continue to
25 be subject to applicable law relating to

1 competition," but ICANN's role is setting a table
2 where competition can take place. ICANN's role, as
3 it says in the -- as the RSEP process with respect
4 to competition, is to refer issues where
5 competition is a concern to relevant authorities.

6 But ICANN is not a regulator, and ICANN
7 does not have competition law competence, whether
8 it is U.S. or otherwise.

9 Q. Thank you, Ms. Burr. I will ask again --
10 and I think I have been quite indulgent in letting
11 you speak your mind here today because we all do
12 want to hear what you have to say, but I would ask
13 you again to not respond to something that's a
14 yes-or-no question with a monologue that does not
15 respond to the question.

16 Because what I asked is that Article 3
17 that we are looking at here does not say "comply
18 with U.S. antitrust law," does it?

19 A. No.

20 Q. Thank you. Now, I'd like to direct your
21 attention back to Tab 2 in your binder, which is
22 the bylaws, and if you could please turn to Section
23 1.2 on Page 5.

24 Again, this is ICANN's commitment and core
25 values section. If you can turn to the next page,

1 Page 6, that's where the core values begin. And
2 what the bylaws state is that the core values are
3 intended to guide ICANN's decisions and actions,
4 correct?

5 A. Are we talking about commitments or core
6 values?

7 Q. Core values on Page 6, under (b), "Core
8 Values."

9 A. Yes.

10 Q. Okay. Now, turning to the next page, I am
11 going to direct your attention to Paragraph 4,
12 where the bylaws provide that "One of ICANN's core
13 values is the introduction and promotion of
14 competition into the registration of domain names."

15 Do you see that?

16 A. Yes. "Where practical and beneficial to
17 the public interest as identified through the
18 bottom-up multistakeholder Policy Development
19 Process."

20 Q. Correct. Now, in other words, putting
21 those two concepts together, the bylaws provide
22 that ICANN should consider how its actions and
23 decisions will help further the objectives of this
24 Paragraph 4, the introduction and promotion of
25 competition, correct?

1 A. Where practical and beneficial as
2 identified through the bottom-up multistakeholder
3 Policy Development Process, yes.

4 Q. And the competition concerns identified in
5 Paragraph 4 are those competition concerns or
6 issues or maxims as identified through the Policy
7 Development Process, correct?

8 A. I'm sorry. Could you repeat that?

9 Q. Sorry. That was a horrible question. I
10 apologize.

11 In particular, when ICANN is making its
12 decisions and taking actions and has to consider
13 and be guided by this Paragraph 4, it needs to
14 identify those competition concerns that are
15 specifically identified in ICANN's policies,
16 correct?

17 A. This is saying in the public interest
18 through the bottom-up multistakeholder Policy
19 Development Process.

20 The point here is the public interest is
21 the product. The Policy Development Process is the
22 process by which the public interest is identified,
23 and that would be -- so here, introducing and
24 promoting competition in domain name registration
25 where practical and beneficial to the public

1 interest.

2 And then it says -- and that public
3 interest, by the way, is identified through the
4 Policy Development Process.

5 Q. Correct. And there is a public interest
6 in competition, right?

7 A. Yes, of course there's a public interest
8 in competition. The question is in terms of how
9 that works into the new gTLD process.

10 Q. Okay.

11 A. One has to take into mind the
12 consideration of the Policy Development Process and
13 what public interest is identified in the Policy
14 Development Process. It is important because, of
15 course, competition is in the public interest. So
16 are 10,000 other things.

17 So the question is: In any case when
18 you're deciding what's practical and beneficial, we
19 are looking to the Policy Development Process to
20 identify that.

21 Q. Okay. I'd like to direct your attention
22 to Section 2.3.

23 Chuck, if you can put that up.

24 So here the bylaws provide that, "ICANN
25 shall not apply its standards, policies, procedures

1 or practices inequitably or single out any
2 particular party for disparate treatment unless
3 justified by a substantial and reasonable cause,
4 such as the promotion of effective competition."

5 That's what it says, right?

6 A. Yes.

7 Q. What do you understand -- strike that.

8 By "inequitably," do you understand that
9 to mean unjustly or unfairly?

10 A. Yes.

11 Q. And what this particular bylaw provides is
12 that although ICANN must in general apply its
13 standards, policies, procedures and practices
14 equitably, it does not have to do so in a
15 particular instance where justified by the
16 promotion of effective competition; is that fair?

17 A. This is an example where there might be
18 substantial and reasonable cause. I am just a
19 little bit confused because we -- we moved -- so
20 this particular 2.3 was an issue, and we moved it
21 into the commitment statement. I didn't realize we
22 had also left it in Section 2.

23 But in the commitment statement there's
24 also an obligation to apply "documented policies
25 consistently, neutrally, objectively, and fairly,

1 without singling out any particular party for
2 discriminatory treatment, making an unjustified
3 prejudicial distinction between or among different
4 parties."

5 Q. Okay. But what I'm really referring you
6 to, Ms. Burr, is Section 2.3, which says you have
7 got to treat everybody the same, but you can treat
8 one party differently if there's a substantial and
9 reasonable cause to do that, that's what 2.3
10 provides, right?

11 A. Yes, if there's a substantial or
12 reasonable cause.

13 Q. In fact, the only example provided in the
14 bylaws is the promotion of effective competition.
15 The bylaws state that the promotion of effective
16 competition is, in fact, a substantial and
17 reasonable cause to treat somebody differently,
18 right?

19 A. Yes. I have to say that I thought we had
20 moved this statement out, but apparently it is
21 still there, at least based on this document.

22 Q. Okay. I'll represent to you that this is
23 a copy of the bylaws that appears on ICANN's
24 website, and again, I would ask you to confirm, yes
25 or no, that the bylaws, Section 2.3, provides that

1 ICANN must treat everybody the same and can't treat
2 anybody differently unless there's a substantial
3 and reasonable cause to do so. The only example
4 given of that is the promotion of effective
5 competition, correct?

6 A. Yes, that is what 2.3 says.

7 Q. Okay. Now, in your witness statement you
8 state that ICANN has historically referred
9 competition concerns to the Department of Justice
10 for analysis and possible government response or
11 action, correct?

12 A. Correct.

13 MR. ENSON: Ethan, again, I just ask for a
14 cite in the declaration.

15 MR. LITWIN: I apologize, Eric.

16 MR. ENSON: 23, perhaps.

17 MR. LITWIN: 23, yes. You beat me by a
18 second.

19 Q. Now, and I'll apologize if I mispronounce
20 his name, but, Ms. Burr, do you know John Kneuer,
21 formerly of the U.S. Commerce Department?

22 A. Yes.

23 Q. Did I pronounce his name correctly?

24 A. Kneuer.

25 Q. Thank you. Are you aware that Mr. Kneuer

1 submitted an expert report in this IRP on behalf of
2 Amici?

3 A. I did see that, yes.

4 Q. Did you review it?

5 A. I did not review it in depth. I took a
6 quick look at it.

7 Q. Okay. Well, in his report Mr. Kneuer
8 opines -- this is Page 3, Paragraph 4(a) of his
9 report.

10 A. Is that in one of these tabs?

11 Q. Yes. I can give you the cite. It is a
12 pretty basic point, but if you'd like to refer, it
13 is Tab 9 on Page 3, and there at the bottom of
14 Paragraph (a), and I will read it to you. It says,
15 "ICANN is obligated to refer relevant matters of
16 competitive concern to appropriate government
17 authorities, such as the U.S. Department of
18 Justice."

19 Do you agree with that?

20 A. I am not aware of any place where it says
21 it must do that.

22 ICANN does, for example, in the registry
23 services approval process, reserve the right to
24 refer things to appropriate antitrust competition
25 authority.

1 Q. Well, if I can just summarize, what I
2 think Mr. Kneuer is saying there is that where
3 ICANN finds a competitive concern, it is obligated
4 to refer those concerns to DOJ or another
5 competition regulator; is that your understanding
6 of what ICANN is obligated to do where it finds
7 competition concerns?

8 A. That is my personal view about what ICANN
9 can do. I am not aware of a place where it says it
10 must do that.

11 Q. Okay. Now, where ICANN does do this, I'd
12 just like to get a better sense of how the process
13 works. Perhaps we can just use a recent example, a
14 recent request or referral as an example. When was
15 the last time ICANN asked the DOJ to advise ICANN
16 on a competition issue?

17 A. I don't know the answer to that question.

18 Q. Are you aware of any instances where ICANN
19 has asked DOJ to advise it on a competition issue?

20 A. The place where it is most likely to come
21 up is when somebody seeks -- when a registry
22 operator seeks authority to introduce a new
23 registry service.

24 In that case, if the registry service that
25 they were proposing raised competition concerns,

1 they have the right -- ICANN has the ability to
2 refer.

3 Q. Has ICANN ever done that, do you know?

4 A. I don't know the answer to that question.

5 Q. If ICANN was going to refer something to
6 the Department of Justice, would it use the
7 business review letter process?

8 A. I have no idea how -- I don't know what
9 ICANN would do.

10 Q. So you don't know if they would send a
11 letter, pick up the phone and call somebody?

12 A. I don't know.

13 Q. Okay. If ICANN were to ask the DOJ to
14 opine, would it ask the DOJ to opine on whether
15 something violated its obligation to introduce and
16 promote competition?

17 A. At least in the RSEP program, the question
18 is whether the service -- and I would have to look
19 at the exact words, but whether it poses -- I don't
20 know, whether it raises competition concerns. So
21 I'd have to look at that RSEP, because that's where
22 I would have to look to find out what they would
23 ask about.

24 Q. Now, a new registry service would be
25 potentially, and most likely introduced globally,

1 correct, because the Internet is global, right?

2 A. It certainly could be.

3 Q. And in the event that it was global, would
4 ICANN be obligated to take a survey of competition
5 regulators globally to determine whether or not
6 that service raised competition concerns?

7 A. I don't believe ICANN is obligated to do a
8 global survey.

9 Q. Well, how would ICANN determine whether an
10 action complied with competition law across
11 multiple jurisdictions?

12 A. I think in the RSEP context, the referral
13 is whether a proposed service or arrangement raises
14 competition concerns, and that it would be
15 reviewing it -- referring it to the relevant
16 competition authorities, which could be Europe,
17 could be the U.S., could be someplace else.

18 Q. Well, because competition law varies,
19 right?

20 A. Correct.

21 Q. By jurisdiction?

22 MR. ENSON: Mr. Litwin, the RSEP Policy is
23 attached as Exhibit D to Ms. Burr's witness
24 statement. Our staff referred to it a couple
25 times. If you want to examine her on that, I would

1 request that you would allow her to look at the
2 document.

3 MR. LITWIN: I am done with this. If you
4 want to take that up on redirect, you can be my
5 guest.

6 MR. ENSON: Very well.

7 Q. BY MR. LITWIN: So would ICANN be
8 obligated to post communications that it's had with
9 a relevant competition regulator on its website?

10 A. I am quite certain that would depend on
11 the circumstances. So general correspondence ICANN
12 posts on its website. I suspect ICANN does not
13 post CIDs on its website.

14 Q. Are you aware -- I think you said that you
15 referred, in preparing for your testimony here
16 today, to a 2008 letter that the United States
17 Department of Justice wrote to the U.S. Department
18 of Commerce, correct?

19 A. Correct.

20 Q. That's Tab 8 of your binder, and I'd ask
21 you to open that to the first page, please.

22 Now, is it fair to say that in this letter
23 the Department of Justice is opining on competition
24 concerns raised by ICANN's proposal to launch the
25 new gTLD Program, which, in fact, it did several

1 years later; is that correct?

2 A. So this is a letter from Deb Garza, acting
3 assistant Attorney General for Antitrust, to
4 Meredith Baker, who was the acting assistant
5 Secretary for Communications at NTIA, conveying to
6 Meredith Baker the Justice Department's
7 observations regarding the very earliest version of
8 the policy. I don't even know if there was an -- a
9 draft applicant guidebook out at this point.

10 But yes, this is an input to NTIA, which I
11 believe was forwarded, regarding the Justice
12 Department's recommendations at that point in time.

13 Q. Okay.

14 A. This is part of the process.

15 Q. So essentially NTIA had asked the
16 Department of Justice -- and I am referring to the
17 first paragraph of Ms. Garza's letter. The
18 Department of Commerce was simply asking advice
19 concerning competition issues raised by the draft
20 request for proposal that would govern the issuance
21 of new generic top-level domains, correct?

22 A. Uh-huh.

23 Q. I'm sorry, you need to answer "yes" or
24 "no" for the record.

25 A. Sorry. Yes. Sorry.

1 Q. No worries. We all fall into that.

2 This is a request made by the Department
3 of Commerce, not ICANN, right?

4 A. Apparently, yes.

5 Q. And I think I heard you testify a moment
6 ago that this letter was subsequently sent by
7 Ms. Baker to ICANN, correct?

8 A. That's my understanding.

9 Q. In fact, I will represent to you that
10 Ms. Baker sent this letter on December 18, 2008, to
11 Mr. Peter Dengate-Thrush, who at the time was the
12 chairman of the Board of ICANN?

13 A. Peter Dengate-Thrush, yes.

14 Q. Now, I'd like to direct you to a few
15 points in Ms. Garza's letter, just to a few points
16 because I know Mr. Enson and I are very familiar
17 with Ms. Garza.

18 Ms. Garza was the head of DOJ's Antitrust
19 Division, correct?

20 A. Yes, she's the acting assistant Attorney
21 General at the end of the second Bush
22 administration.

23 Q. Okay. So in the world of DOJ, in just
24 general parlance, she was the top dog in the
25 Antitrust Division, right, she was the one that ran

1 the show?

2 A. Yes.

3 Q. Now, Ms. Garza -- I'd like to direct your
4 attention to Page 4 of her letter in the section
5 entitled "Recommendations."

6 A. Uh-huh.

7 Q. You'll see there that under
8 "Recommendations," Ms. Garza writes that, "ICANN is
9 obligated to manage gTLDs in the interest of
10 registrants and to protect the public interest in
11 competition," correct?

12 A. That is what she says.

13 Q. This conforms to what you said earlier,
14 that there's a public interest in competition,
15 correct?

16 A. She is citing to the articles of
17 incorporation, and I want to go back to the
18 specific language about enabling competition that's
19 in the articles of incorporation.

20 Q. Now, turning to Page 6, I would direct
21 your attention to Footnote 10, at the bottom of the
22 page, obviously, and they are in quite small type.

23 Ms. Garza writes that, "ICANN has
24 consistently told us that its primary concern is
25 with DNS management from a technical perspective,

1 that it does not have the expertise or inclination
2 to protect or preserve the public interest in
3 competition and low domain costs, preferring
4 instead to allow government competition authorities
5 to take whatever action may be necessary to address
6 issues of competitive abuse."

7 This is, in fact, what you said in your
8 witness statement was ICANN's historical practice,
9 correct?

10 A. Correct. ICANN refers out -- it certainly
11 is my consistent view throughout this that ICANN
12 has neither the authority nor expertise to serve as
13 a competition regulator.

14 Q. And you state at Paragraph 23 of your
15 witness statement that ICANN was not designed to
16 and does not have specific expertise in antitrust
17 for competition law, right?

18 A. I'd have to look at Paragraph 23, but yes.

19 Q. Continuing on to Paragraph 24, you write,
20 "ICANN has historically referred competition
21 concerns to DOJ for analysis and possible
22 government response or actions," correct?

23 A. Uh-huh.

24 Q. I'm sorry. I need a "yes" or "no" for the
25 record.

1 A. Yes. I'm so sorry. Yes. I'm so sorry.

2 Q. No worries.

3 What you write in your witness statement
4 is consistent with what Ms. Garza writes in
5 Footnote 10, correct? It is the highlighted
6 portion on the screen about what ICANN has
7 consistently told the DOJ.

8 A. I don't know what ICANN has consistently
9 told the DOJ, but that's consistent with my views
10 on ICANN's expertise.

11 Q. That was, in fact, the question. Thank
12 you.

13 Continuing on in Footnote 10 in
14 Ms. Garza's letter, "The problem with ICANN's
15 preferred approach is that antitrust laws," meaning
16 U.S. antitrust laws, "do not prescribe a registry
17 operator's unilateral decisions." "And
18 accordingly," skipping to the end of the paragraph,
19 "ICANN should create rules fostering a competitive
20 environment to the greatest extent possible."

21 So in other words, the DOJ disagreed with
22 ICANN's preferred approach to handling competition
23 concerns, correct?

24 A. Well, she is certainly citing what she
25 describes as a problem with ICANN's views, yes,

1 that's what she's saying. I mean, in creating
2 rules, fostering a competitive environment to the
3 greatest extent possible, for example, in this
4 case, this is largely in 2008, this is largely
5 about trademark concerns and the implication for
6 consumers and trademark holders through the
7 introduction of new top-level domains.

8 And before the new gTLD Program launched,
9 there were any number of steps taken to address the
10 kinds of issues she is talking about in here, such
11 as the Trademark Clearinghouse and stuff. So it
12 is -- so, you know, this is a letter that ICANN
13 received and fed into the policy and implementation
14 process.

15 Q. What Ms. Garza's really getting at here is
16 there are certain blind spots in U.S. antitrust
17 law, such as the failure to proscribe a registry
18 operator's unilateral decisions, correct?

19 A. Well, she is certainly saying that the
20 antitrust laws generally do not proscribe a
21 registry operator's unilateral decisions, yes.

22 Q. And because of that, ICANN should create
23 rules for fostering a competitive environment to
24 the greatest extent possible, right?

25 A. That's what she says, yes.

1 Q. In fact, you note at Footnote 11 of your
2 witness statement, which is on Page 8, you say
3 that, "The pressure of competition is likely to be
4 the most effective means of discouraging registries
5 from acting monopolistically," correct?

6 A. I believe this is a quote -- sorry, I just
7 need to understand where this is coming from.

8 Yes, this is from the white paper, and
9 this was in response -- this was in response -- I
10 mean, this had very particular genesis because this
11 goes back to the proposal in the green paper that
12 the United States government was going to
13 unilaterally introduce five new top-level domains
14 to add competition.

15 Q. Ms. Burr, I'm sorry, I am just asking a
16 very basic question.

17 When you write at paragraph -- at Footnote
18 11 that, "The pressure of competition is likely to
19 be the most effective means of discouraging
20 registries from acting monopolistically," do you
21 agree with that statement?

22 MR. ENSON: Mr. Litwin, I have to object.
23 Ms. Burr was in the middle of a response to your
24 question.

25 ARBITRATOR BIENVENU: The objection is

1 sustained. Mr. Litwin, she does not write this.
2 She quotes from a response, as you can see. So if
3 you want to reformulate your question, you're at
4 liberty to do so, but she doesn't say that.

5 MR. LITWIN: I will reformulate. Thank
6 you, Mr. Chairman.

7 Q. Ms. Burr, you quote from the white paper
8 at Footnote 11 that, "The pressure of competition
9 is likely to be the most effective means of
10 discouraging registries from acting
11 monopolistically."

12 Do you agree with that statement in the
13 white paper?

14 A. As a general matter, the white paper was
15 saying that competition is -- more competition is
16 better, but it also goes on to say, "But we are
17 deferring to the community, who said we should not
18 be making that decision."

19 I mean, that's what this is about. It is
20 really, really, really -- yes, it was the United
21 States government's position in 1998 that the
22 pressure of competition is likely to be the most
23 effective way of discouraging registries from
24 acting monopolistically.

25 Q. Okay. Now, do you understand, as someone

1 who has some familiarity with competition laws as a
2 result of your work at the FTC, that acting
3 monopolistically is the same thing that Ms. Garza
4 writes in Footnote 10 of her letter about a
5 registry operator making unilateral decisions?

6 MR. ENSON: Mr. Chairman, again, I
7 apologize for interrupting, but I feel that I have
8 to object. We have established what Ms. Garza said
9 in the letter in 2008. We established what is said
10 in the white paper. Ms. Burr has answered these
11 questions. There's nothing more to examine her on.
12 Mr. Litwin is unfortunately seeking a legal
13 conclusion on these issues.

14 MR. LITWIN: If she doesn't have an
15 understanding, I am happy to move on.

16 ARBITRATOR BIENVENU: I think it goes to
17 weight. You can ask the question.

18 MR. LITWIN: Thank you, Mr. Chairman.

19 Q. Again --

20 A. Let me be very clear, I am not an
21 antitrust expert. She's talking about unilateral
22 decisions made under processes established by
23 ICANN. Those might or might not be monopolistic
24 behaviors. I have to know the circumstances. I
25 don't read those two sentences as saying the same

1 thing.

2 Q. Okay. When Ms. Garza writes that, "ICANN
3 should create rules for fostering a competitive
4 environment to the greatest extent possible," what
5 do you understand "to the greatest extent possible"
6 to mean?

7 A. I would go back and look at ICANN's bylaws
8 and articles of interpretation to parse that, which
9 is that where practical and feasible, consistent
10 with the global public interest as identified
11 through policy development processes.

12 Q. Is it possible that what Ms. Garza's
13 saying here is that where ICANN is faced with a
14 decision where one outcome may promote competition
15 and an alternative may harm competition, that ICANN
16 should err on the side of promoting competition
17 because antitrust laws have certain blind spots
18 when dealing with dominant entities?

19 MR. ENSON: Mr. Chairman, Ms. Burr cannot
20 answer or speculate about what Ms. Garza meant in
21 2008 with the use of that phrase. Ms. Garza wrote
22 it, not Ms. Burr.

23 ARBITRATOR BIENVENU: I'll allow the
24 question. I believe it goes to the weight of the
25 resulting evidence, but I'll allow the question.

1 Ms. Burr is a very sophisticated witness with
2 intimate knowledge of ICANN and its provenance.
3 I'll allow the question.

4 MR. ENSON: Thank you, your Honor.

5 Q. BY MR. LITWIN: Ms. Burr --

6 A. If you would, just give me a moment here.

7 Q. Sure.

8 A. To me this letter is really about
9 pressures on trademark owners who will feel
10 compelled to register in new gTLDs and that ICANN
11 should analyze that issue, the trademark issue, and
12 proceed cautiously in authorizing new gTLDs,
13 attempting to assess both the likely costs and
14 benefits of any new gTLD.

15 To me what this letter is about is -- it's
16 possible that new top-level domain operators will
17 be able to impose costs on trademark owners who
18 feel compelled to protect their marks, and you need
19 to do this analysis before you proceed with new
20 gTLDs.

21 Beyond -- this is in a very particular
22 context, and I have to respond to it in the context
23 in which it was written.

24 Q. Okay. Let's look at this from another
25 angle. So if you could turn to Tab 6 in your

1 binder, and this is a document called the
2 "Rationale for Board Decisions on Economic Studies
3 Associated with the new gTLD Program."

4 Do you see that?

5 A. Yes.

6 Q. And these are the explanatives of Board
7 resolution that the Board issues from time to time
8 to explain why it took certain actions; is that a
9 fair statement?

10 A. I actually don't know what this document
11 is. Could you give me a little bit more?

12 Q. Sure.

13 A. Could somebody tell me in what context or
14 what this was attached to?

15 Q. I can tell you that -- I'll represent to
16 you, Ms. Burr, that we downloaded it from ICANN's
17 website, and I'll also represent to you that even
18 though it is undated, it was issued in 2011, which
19 we know from the web address from it.

20 And you'll see, if you look at Page 3,
21 that refers to events that took place in 2009 and
22 2010 and was issued -- well, I won't testify to why
23 it was issued, but I would direct your attention to
24 Page 8, which is entitled "Board Determinations."

25 And there -- and the Board states that,

1 "ICANN's default position should be to foster
2 competition."

3 Do you see that?

4 A. "As opposed to having rules that restrict
5 the ability of gTLDs to innovate."

6 Q. Correct. I just want to ask this question
7 again. Because ICANN's default position, according
8 to the Board, should be to foster competition, that
9 where ICANN is faced with a choice, one of which
10 may promote competition, the other which may harm
11 competition, ICANN should act in conformity with
12 its default position to foster competition; is that
13 a fair statement?

14 A. So this is talking about a default
15 position to allow the introduction of new gTLDs,
16 set a table where competition can thrive through --
17 and innovation through the addition of new gTLDs.

18 I would read this also in the context of
19 other provisions of ICANN's bylaws that require to
20 rely on market mechanisms in the same -- you just
21 can't take this out of -- I mean, yes, foster
22 competition. Does that mean that ICANN should act
23 like a regulator? No. But it should make a choice
24 to allow competitive forces to go out and battle it
25 out and introduce innovation.

1 Q. But what I'm asking is that where ICANN
2 faces a choice, and we have already established
3 that you are not aware of any instance where ICANN,
4 in fact, has asked the advice of a competition
5 regulator and ICANN has to make a choice, isn't it
6 fair to say, based on what we have seen, that its
7 default position should be to make the choice that
8 promotes competition?

9 A. ICANN has -- ICANN must operate consistent
10 with the community-developed policies. I had not
11 seen this before. I don't know everything that it
12 goes through. I feel like I am speculating based
13 on one position. But basically this is consistent
14 with my view that in all cases, the point is to
15 allow an environment in which competition can take
16 place.

17 Q. Okay. Turning back to Page 6 of
18 Ms. Garza's letter.

19 ARBITRATOR BIENVENU: Mr. Litwin, I am
20 sorry to interrupt. We are beyond the point at
21 which the agenda provided you with a break for our
22 second break. And for planning purposes, I should
23 mention that, according to the administrative
24 secretary, you have reached and are a little bit
25 beyond your estimate of three hours for the cross.

1 So I don't want to break your flow, but
2 please bear this in mind as you proceed.

3 MR. LITWIN: Thank you, Mr. Chairman. I
4 am almost done here.

5 Q. So, Ms. Burr, are you back on Page 6 of
6 Ms. Garza's letter?

7 A. I am now, yes.

8 Q. I think I recall that you said that DOJ
9 said that -- you know, opined that ICANN should
10 consider competition as part of its evaluation of
11 each new gTLD application; is that fair?

12 I'll just turn your attention to right
13 above the Number 2 point heading on Page 6. It
14 refers to the evaluation of each new gTLD
15 application.

16 A. Yes. What they are saying there is you
17 should consider the impact of new gTLDs on
18 trademark owners and others who have marks that
19 they need to -- that they feel the need to protect.

20 Q. Okay. Now, the next section of
21 Ms. Garza's letter is captioned, "ICANN should
22 revise its RFP process and the proposed registry
23 agreement to protect consumers from the exercise of
24 market power."

25 Do you see that?

1 A. I do.

2 Q. And in that section, in fact, in the first
3 paragraph under that, Ms. Garza writes, "The RFP
4 process should require ICANN to consider and allow
5 objections for and retain authority to address any
6 adverse consumer welfare effects that may arise
7 during the new gTLD process."

8 Do you see that?

9 A. I do.

10 Q. So the view of the United States
11 Department of Justice was that ICANN had and should
12 retain the authority to address adverse consumer
13 welfare effects that may arise during its
14 administration of the new gTLD Program; isn't that
15 right?

16 A. That is what the Department of Justice
17 said in 2008, at the very beginning of the new gTLD
18 process, based on the very first applicant
19 guidebook.

20 Q. And that's consistent with what we looked
21 at earlier in Section 2.3 of the bylaws that allows
22 ICANN, in specific instances, to treat a party
23 differently to promote effective competition,
24 right?

25 A. That is what Section 2.3 says.

1 Q. Now, I'll direct your attention to the
2 last page of Ms. Garza's letter under the three
3 asterisks. She writes, "ICANN's approach to TLD
4 management demonstrates that it has adopted an
5 ineffective approach with respect to its obligation
6 to promote competition," right?

7 A. Yes, in December of 2008.

8 Q. Okay. Now, when we began discussing
9 Ms. Garza's letter, I represented to you, and I
10 think, as you recall, that the Commerce Department
11 had sent Ms. Garza's letter to ICANN.

12 Are you aware that the Commerce Department
13 also advised ICANN back in 2008 to revise, among
14 other things, its applicant guidebook, this first
15 iteration of the guidebook so that ICANN could, as
16 Ms. Garza says in her letter, "consider, allow
17 objections for, and retain authority to address any
18 adverse competitive welfare effects that may arise
19 during the approval of new gTLDs"?

20 A. I don't have the transmittal letter from
21 NTIA here, so I don't know if NTIA said that or
22 simply transmitted Deb Garza's letter. I'm sorry.
23 I don't have it in front of me.

24 Q. I'd like to direct your attention to Tab 3
25 of your binder, which is an excerpt from the

1 applicant guidebook, and if you could turn to
2 page -- I apologize. The page numbers here are
3 incredibly small -- to Pages 6 and 7, which are in
4 the upper right-hand corner. May be easier to
5 refer to the guidebook. It is A-11 and A-12 in the
6 guidebook.

7 Do you see that?

8 A. Yes, I am looking at the same chart, A-11
9 and -12.

10 Q. I will represent to you this is a section
11 from the guidebook that provides instructions on
12 how to complete the new gTLD application, and this
13 excerpt is taken out of Section 18, the
14 Mission/Purpose.

15 Do you see that?

16 A. Yes.

17 Q. And if you turn to the next page, A-12,
18 which is Exhibit Page 7, the guidebook states that
19 the answers to Section 18(b) should address the
20 following points, one of which is, "What do you
21 anticipate your proposed gTLD will add to the
22 current space, in terms of competition,
23 differentiation or innovation," correct?

24 A. I see that, yes.

25 Q. And that's exactly what DOJ asked for,

1 that ICANN should consider in each application how
2 it would affect competition, differentiation and
3 innovation, correct?

4 A. I think Deb Garza's admonition was
5 slightly different.

6 Q. Well, I will agree with you it is slightly
7 different, but it is the same concept, right, that
8 ICANN should consider competition concerns in
9 connection with its approval of new gTLD
10 applications, correct?

11 A. What it says, I think this is what you're
12 referring to, is that the letter says ICANN should
13 explicitly analyze the imposition of the possible
14 impetus -- imposition of costs on registrants who
15 feel compelled to register their names in the new
16 gTLD.

17 Q. Well, actually, what I was referring to --
18 and this is on Page 2 of Ms. Garza's letter. It
19 says, "The division makes two specific
20 recommendations. First, ICANN's general approach
21 to new gTLDs should be revised to give greater
22 consideration to consumer interests. ICANN should
23 more carefully weigh potential consumer harms
24 against potential consumer benefits before adding
25 new gTLDs and renewing new gTLD registry

1 agreements."

2 A. Yes.

3 Q. And all I am asking is that is consistent
4 with what ICANN eventually put in its guidebook to
5 require applicants to describe how their proposed
6 gTLD will add to the current space in terms of
7 competition, differentiation and innovation?

8 A. Yes. ICANN did ask for information in the
9 applicant guidebook about how it would contribute
10 to competition, differentiation or innovation, and
11 yes, in 2008, after the first of, you know, nine
12 versions of an applicant guidebook, the Justice
13 Department suggested that ICANN should look harder
14 at consumer interests and cost-benefit analysis
15 about adding new gTLDs.

16 It is really about a cost-benefit analysis
17 about new gTLDs all together. ICANN went through
18 eight more versions of the applicant guidebook, a
19 lot of policy development and practice around
20 protecting consumers and trademark holders and, you
21 know, the economic analysis that you referred me to
22 earlier.

23 So yes, that's what the Department of
24 Justice said in 2008, four years before the final
25 applicant guidebook.

1 Q. And if we could just turn briefly, again,
2 to that paragraph on Page 6 that I referred you to
3 earlier. Ms. Garza writes, "ICANN should
4 explicitly include this type of analysis as part of
5 its evaluation of each new gTLD application and
6 should proceed cautiously in authorizing new gTLDs,
7 attempting to assess both the likely costs and
8 benefits of any new gTLD."

9 So it is not just in the general, it is in
10 the specific, too, right?

11 A. And the community process calls for a
12 different approach. The community Policy
13 Development Process essentially said applicants
14 should resolve contention sets among themselves, as
15 opposed to a beauty contest.

16 Q. So in -- is your testimony here today that
17 the United States Department of Justice opined on
18 competition issues raised by the new gTLD Program
19 and then ICANN went a different route?

20 A. After four more years of community
21 development addressing a whole bunch of competition
22 issues that are raised in this letter, did ICANN
23 follow this letter to the -- did ICANN do
24 everything that Deb Garza wanted them to do? I
25 mean, I read this letter as Deb Garza essentially

1 saying, you know, you don't have the -- you have to
2 work through the cost-benefits of what this is
3 going to do to trademark holders, and then that was
4 the motivation, and ICANN spent four more years
5 working on that.

6 Q. Okay. After which they introduced the
7 language of the guidebook that instructed
8 applicants on how to complete 18(b), correct?

9 A. Yes. I saw that language as well.

10 Q. Right. And that section, Section 18, and
11 18(b) in particular is part of the nonconfidential
12 portion of the application that ICANN posted on its
13 website, correct?

14 A. Correct.

15 Q. So --

16 A. I don't know the answer to that, but I
17 assume that.

18 ARBITRATOR BIENVENU: Mr. Litwin, I hate
19 to do it, but I think there are many participants
20 looking at their watch and wondering when we are
21 going to take our break. I didn't want to break
22 your flow, but I feel indebted to others.

23 MR. LITWIN: Mr. Chairman, if I could just
24 indulge your time for two more minutes, I am
25 virtually at the end.

1 ARBITRATOR BIENVENU: Very well.

2 Q. BY MR. LITWIN: So during the evaluation
3 process, Ms. Burr, members of the global Internet
4 community would be able to see what the applicant
5 believed the applied-for gTLD would contribute
6 competitively to the DNS, right?

7 A. Yes, if that provision was part of the
8 public application.

9 Q. And that's the entire point of ICANN's
10 obligation to act transparently, right, to post
11 this stuff for public view?

12 A. It is certainly a point of ICANN's
13 transparency commitment.

14 Q. Because the global Internet community
15 needed to understand who was applying for which
16 gTLDs and why, correct?

17 A. The program -- I mean -- I think the
18 applicant guidebook speaks for itself in terms of
19 what you're required to produce and what will be
20 made public, and all of that was part of being as
21 transparent as possible in this process.

22 MR. LITWIN: Thank you, Ms. Burr. I have
23 no further questions. Thank you, members of the
24 Panel, for indulging me. And to everybody else on
25 the phone, I apologize that I went over the break

1 time.

2 ARBITRATOR BIENVENU: Thank you,
3 Mr. Litwin.

4 So we will take our 15-minute break, but
5 just before we do so, Mr. Enson, any redirect?

6 MR. ENSON: Yes, Mr. Chairman, not much,
7 but we will probably need 20 minutes or so.

8 ARBITRATOR BIENVENU: And to my
9 co-panelists, do you have questions for the witness
10 before the redirect?

11 ARBITRATOR CHERNICK: I do not.

12 ARBITRATOR KESSEDJIAN: I do not. Thank
13 you.

14 ARBITRATOR BIENVENU: I have a few
15 questions. I'll ask them before your redirect,
16 Mr. Enson, and then we'll proceed with Ms. Burr.

17 MR. ENSON: Very well. Thank you.

18 (Whereupon a recess was taken.)

19 ARBITRATOR BIENVENU: Thank you.
20 Ms. Burr, I have two questions, very brief
21 questions for you.

22 In Paragraph 23 of your witness statement,
23 you describe ICANN in relation to competition, I
24 believe, as a coordinator rather than a regulator.

25 Could I ask you to expand upon this?

1 THE WITNESS: Yes. So ICANN has very
2 specific authority in the bylaws, and with respect
3 to names, its job is to coordinate the development
4 of policy with respect to the introduction of new
5 gTLDs and other areas where stability and security
6 needs of the DNS and the Internet require
7 coordinated policy development.

8 So the ICANN Board, for example, and org
9 don't make policy. The community makes policy.
10 ICANN -- the ICANN Board gets that, accepts that
11 policy recommendation and will adopt it, but it
12 doesn't have policy authority itself.

13 And specifically in the context of the new
14 bylaws that were adopted in 2016 in anticipation of
15 the transition, there's a specific reference that
16 says ICANN -- ICANN's mission is enumerated, not
17 exemplary. So if ICANN doesn't have authority, it
18 is not articulated in here, ICANN doesn't have the
19 authority to do it.

20 And ICANN shall not regulate in certain
21 circumstances, and it specifically says that for
22 the avoidance of doubt, ICANN does not hold any
23 governmentally-authorized regulatory authority.

24 ICANN's role is policy -- coordination of
25 policy development and implementation.

1 ARBITRATOR BIENVENU: My second question
2 relates to evidence early in your testimony, when
3 you discussed participating as an observer in the
4 November 2016 Board workshop.

5 Do you remember being asked questions
6 about this?

7 THE WITNESS: Yes.

8 ARBITRATOR BIENVENU: And you said in
9 looking at Page 44 of the transcript, you said that
10 your understanding was that Afilias had received
11 notice of the Board's decision made during this
12 November workshop, the Board's decision not to act
13 upon the claims regarding the various claims
14 regarding .WEB.

15 Do you remember that?

16 THE WITNESS: Yes, and I probably misspoke
17 a bit.

18 ARBITRATOR BIENVENU: Right. So my
19 question is this: Was it your belief that Afilias
20 had, indeed, received a notice of the decision of
21 the Board in the course of that workshop in
22 November 2016?

23 THE WITNESS: So my reference -- what I
24 meant to say was that Afilias had received notice
25 that because of the pendency of the accountability

1 mechanism -- and I think at a certain point the
2 litigation became a CEP filed by Ruby Glen -- that
3 a contention set had been put on hold, consistent
4 with what ICANN always does.

5 The Board didn't change that. The Board
6 just in the -- again, I didn't participate. I
7 happened to have been in the room, but I wasn't on
8 the Board yet. And the Board did not change, did
9 not deviate from the standard practice, which was
10 once there is an accountability mechanism
11 litigation, the process goes on hold, pending
12 resolution.

13 ARBITRATOR BIENVENU: Ms. Burr, are you
14 aware as a Board member and perhaps because of your
15 participation in this case as a witness, are you
16 aware of the fact that it is the contention of
17 Afiliias that it was made aware of this Board
18 decision for the first time when ICANN filed its
19 rejoinder in this IRP, were you aware of that?

20 THE WITNESS: I am not aware of that.
21 Again, the Board was simply -- agreed to continue
22 to abide by the standard practice.

23 ARBITRATOR BIENVENU: So if I were to ask
24 you, Ms. Burr, as a Board member, does it come as a
25 surprise to you, having been a witness of the

1 workshop back in November 2016, does it come as a
2 surprise to you that Afiliias was never formally
3 advised of that decision?

4 THE WITNESS: Well, so it is complicated
5 because we are referring to this as a decision,
6 where what I observed was a confirmation to
7 continue to follow the standard practice, which was
8 that the contention set was on hold, and I believe
9 that Afiliias was well-aware of the fact that the
10 contention set was on hold.

11 Now, I don't -- if you're asking me
12 whether Afiliias was surprised to learn that the
13 Board had been updated on the situation in the
14 November workshop, I mean, I don't know. I don't
15 know when they may or may not have been aware of
16 that. But they certainly were aware -- my
17 understanding is that they were aware throughout
18 this process that -- that the contention set was on
19 hold.

20 ARBITRATOR BIENVENU: Thank you. Forgive
21 me. I have another question.

22 You have stated when you were questioned
23 about the CCWG final report that the bylaws have
24 precedence over the recommendations of the CCWG.

25 Do you remember that?

1 THE WITNESS: Yes.

2 ARBITRATOR BIENVENU: Now, what is your
3 understanding -- and can you help us by pointing,
4 if one exists, to a statement of the status of the
5 CCWG report, insofar as the bylaws or their
6 interpretation are concerned?

7 THE WITNESS: So the bylaws' effort took
8 the recommendation -- and the process was over
9 several days -- the entire recommendation, all of
10 the aspects of the recommendation were reflected
11 back into the bylaws, and then those bylaws, the
12 draft bylaws were published for comment, that is my
13 recollection of those, to make sure that they
14 faithfully represented the input of the CCWG.

15 ARBITRATOR BIENVENU: Thank you. Thank
16 you, Ms. Burr.

17 So, Mr. Enson, you ready for your
18 redirect?

19 MR. ENSON: I am, Chairman.

20 ARBITRATOR BIENVENU: Please proceed.

21 MR. ENSON: Thank you very much.

REDIRECT EXAMINATION

BY MR. ENSON

Q. Ms. Burr, thank you for the time you have given us this morning and --

(Discussion off the record.)

Q. BY MR. ENSON: Ms. Burr, several times in your testimony, you referred to ICANN org. What is ICANN org?

A. So we kind of think of this community at large as having a bit of a three-legged stool. So one leg is the Board. One leg is the community in the form of the supporting organizations and advisory committees, and one is ICANN the organization. When I refer to ICANN org, I mean the CEO, staff, the ICANN organization.

Q. Ms. Burr, what's your view of whether or not Board members exercise their fiduciary duties to ICANN outside of annual, regular, or special meetings?

MR. ALI: Mr. Chairman, this is Arif Ali here raising an objection.

This is redirect, and as I understand, the questions cannot be open-ended in a way which Mr. Enson is presenting.

ARBITRATOR BIENVENU: Mr. Enson, I think

1 Mr. Ali has a point. Perhaps you can direct the
2 witness to the part of her cross-examination about
3 which you wish to ask a clarifying question.

4 MR. ENSON: Sure.

5 Q. Mr. Litwin, Ms. Burr, asked you questions
6 about ICANN Board member fiduciary duties, correct?

7 A. Yes, he did.

8 Q. Okay. And he also asked you about certain
9 Board meetings, correct?

10 A. Correct.

11 Q. And he asked whether the Board is able to
12 take actions and make decisions in and out of
13 certain types of Board meetings, correct?

14 A. Yes.

15 Q. So what's your view of whether a Board
16 member must be within an annual, regular, or
17 special meeting in order to exercise his or her
18 fiduciary duties?

19 MR. ALI: Objection. Sorry, Eric, but you
20 have just done the same thing. This goes beyond
21 the customary practice for how redirect should be
22 conducted, Mr. Chairman.

23 ARBITRATOR BIENVENU: I'll allow the
24 question.

25 THE WITNESS: I believe I have an

1 obligation to exercise my fiduciary -- respect my
2 fiduciary obligations to ICANN in everything that I
3 do related to ICANN.

4 Q. BY MR. ENSON: Thank you, Ms. Burr.

5 I want to talk a little bit about the
6 redrafting, or the revising, I should say, of
7 ICANN's bylaws. Was the revising of the ICANN
8 bylaws in 2016 that you were involved in, was that
9 in connection with the new gTLD Program?

10 A. No, it was several years after the new
11 gTLD Program had launched.

12 Q. And would you --

13 Kelly, would you put up Exhibit C-11, and
14 in particular Page 28.

15 ARBITRATOR BIENVENU: Is that a document
16 in the document -- in the witness bundle,
17 Mr. Enson?

18 MR. ENSON: It is. It is. It is the
19 bylaws. I just have different page numbers than
20 Mr. Litwin does.

21 ARBITRATOR BIENVENU: It is in Tab 2.

22 MR. ENSON: It is 4.3(o), which is Page 28
23 of the exhibit. I believe it's --

24 ARBITRATOR BIENVENU: We are familiar with
25 the provision.

1 Q. BY MR. ENSON: Ms. Burr, were you involved
2 in the drafting of this particular provision?

3 A. Yes, I was.

4 Q. Sorry, go ahead.

5 A. I was involved in Section 4, Article 4.

6 Q. Would you describe for us what is set
7 forth here in Section 4.3(o)?

8 A. 4.3(o) is a statement of the authority of
9 the IRP Panel, and it includes the three provisions
10 that had been in the bylaws for some time, which is
11 to dismiss -- actually, that may have been a new
12 one, declare whether covered actions constituted an
13 action or inaction that violated the articles.

14 There was also an existing authority to
15 stay actions or decisions, and we then added a few
16 additional provisions relating to, for example, the
17 PTI, determining the shift of IRP costs and
18 expenses was actually moved from a different part
19 of the section.

20 So this was an attempt to gather the
21 authority of the Panel and articulate the full
22 authority of the Panel.

23 Q. Is Section 4.3(o) an exhaustive listing of
24 the IRP Panel's authority?

25 A. Of the authority which is binding on

1 ICANN, yes.

2 Q. Mr. Litwin spent a fair amount of time
3 with you with respect to Ms. Garza's 2008 letter.

4 Do you recall that?

5 A. Yes, I do.

6 Q. Do you have any idea the level of
7 familiarity Ms. Garza had of ICANN in 2008?

8 A. I really don't have any idea of her
9 familiarity with it.

10 Q. Do you know whether ICANN commissioned any
11 economic studies to evaluate some of the issues set
12 forth in Ms. Garza's letter?

13 A. Yes. ICANN did evaluate a study, I think
14 along the lines that was discussed in Ms. Garza's
15 letter. Over time that study evolved a bit, but
16 that paper that Mr. Litwin showed before that
17 discusses the -- was the basis for ICANN's
18 decision -- I can't remember which tab it is, Tab 8
19 or 6, sorry -- lists a bunch of the work that was
20 done there.

21 Q. Is it Tab 6, Ms. Burr?

22 A. Yeah, and there are -- the economic
23 studies are outlined in that on Page 4.

24 Q. Ms. Burr, in your testimony you referred
25 to the white paper several times.

1 Would you just explain for the Panel what
2 the white paper is?

3 A. Sure. In 1997 -- '6, really, when the
4 cooperative agreement between Network Solutions and
5 the National Science Foundation and a contract
6 between the University of Southern California
7 Information Sciences Institute and DARPA, the
8 Defense Advanced Research Project Agency, which had
9 provided initially the funding, but subsequently
10 the oversight for the work that was being done on
11 the Internet, those contracts were coming to the
12 end of their terms, but the National Science
13 Foundation and DARPA had indicated these -- the
14 project was no longer a research project and that
15 they did not intend to renew the contracts.

16 At that time the Clinton administration,
17 like governments around the world, was working on a
18 sort of policy statement on global electronic
19 commerce. One of the things that we heard quite a
20 lot about was the Domain Name System, the need to
21 internationalize but maintain private-sector
22 management of the system.

23 There was a proposal on the table that
24 those of us who were working in the administration
25 heard a number of concerns about. So we issued

1 essentially what we called the green paper. Here's
2 how we propose to handle this, how we propose to
3 transition this system into the private sector
4 management, tell us what you think.

5 And we got thousands of comments from
6 around the world, and we took those comments, and
7 we turned the green paper into a white paper, which
8 was the Clinton administration's policy statement
9 with respect to the process to transition
10 coordination management of the Domain Name System
11 out of the government into the global private
12 sector.

13 Q. And a copy of the white paper's attached
14 as an exhibit to your witness statement, correct?

15 A. I believe so.

16 Q. Final question, Ms. Burr. Are you aware
17 of ICANN ever taking affirmative action to block
18 potentially anticompetitive activity or
19 transactions?

20 A. No. As I said, I really believe that, you
21 know, ICANN's obligation with respect to
22 competition is to create a table in which -- and to
23 coordinate the development of policy under which
24 competition can emerge. But I am not aware of
25 ICANN blocking something.

1 I am just trying to think, and in truth, I
2 mean, as I have said, ICANN -- you know,
3 competition law, as we have talked about, is
4 highly -- requires a high degree of expertise.
5 There's a lot we don't know about these markets,
6 and the view always was that competition law and
7 competition authorities would provide a check on
8 the behavior of the organization and the players
9 that were valuable.

10 MR. ENSON: Thank you very much for your
11 time, Ms. Burr, for your time today.

12 Mr. Chairman, those are my questions. I
13 thank you for the opportunity.

14 ARBITRATOR BIENVENU: Thank you,
15 Mr. Enson.

16 Ms. Burr, there is a sequestration order
17 applicable to fact witnesses that extends to a
18 prohibition to communicate with other witnesses in
19 this case whose testimony has not yet been heard.

20 So in accordance with that order, I am
21 instructing you not to discuss your testimony or
22 this case with other fact witnesses who have not
23 yet testified before us.

24 THE WITNESS: Absolutely.

25 ARBITRATOR BIENVENU: Having said that, I

1 know that my co-panelists join me, Ms. Burr, in
2 thanking you for your evidence and for accepting to
3 participate in this IRP. We are very grateful.

4 THE WITNESS: Thank you, and thank you for
5 your service. So I'll just leave?

6 MR. ENSON: Yes, I think so.

7 MR. LITWIN: Thank you very much,
8 Ms. Burr.

9 ARBITRATOR BIENVENU: Very well. Can we
10 bring in the next witness, Ms. Samantha Eisner?

11 (Discussion off the record.)

12 ARBITRATOR BIENVENU: May I ask counsel
13 for the parties who will be introducing Ms. Eisner
14 and who will be conducting her cross-examination?

15 MR. WALLACH: This is David Wallach for
16 Jones Day for ICANN. I will be introducing
17 Ms. Eisner.

18 MR. LITWIN: Mr. Chairman, this is Ethan
19 Litwin again from Constantine Cannon. I will be
20 doing the cross-examination of Ms. Eisner.

21 ARBITRATOR BIENVENU: Welcome to you,
22 Mr. Wallach.

23 Ms. Eisner, my name is Pierre Bienvenu. I
24 serve as Chair of the Panel in this case. My
25 co-panelists are Catherine Kessedjian,

1 participating from Paris, and Mr. Richard Chernick
2 in Los Angeles.

3 First of all, welcome.

4 THE WITNESS: Thank you.

5 ARBITRATOR BIENVENU: You have contributed
6 a witness statement to this Independent Review
7 Process dated January 16, 2019, correct?

8 THE WITNESS: Yeah.

9 ARBITRATOR BIENVENU: In that statement at
10 the end you affirm that the content of your
11 statement is true and correct to the best of your
12 knowledge and belief.

13 Do you see that?

14 THE WITNESS: It is not on the screen.
15 May I open the packet of documents? I do confirm
16 that I submitted that in the declaration.

17 ARBITRATOR BIENVENU: Very well. May I
18 ask you, Ms. Eisner, in relation to the evidence
19 that you will give today to likewise solidly affirm
20 that it will be the truth, the whole truth and
21 nothing but the truth?

22 THE WITNESS: I do.

23 ARBITRATOR BIENVENU: Thank you very much.
24 Mr. Wallach, your witness.

25 MR. WALLACH: Hello, Ms. Eisner, and good

1 afternoon. I have only a couple of very brief
2 questions to ask before I will turn the floor over.

3 First, is the information in the witness
4 statement, which hopefully you have on the screen
5 in front of you, true and correct to the best of
6 your knowledge?

7 THE WITNESS: Yes.

8 MR. WALLACH: Okay. Could we turn to the
9 final page of the witness statement on the screen,
10 please.

11 Is that your signature that appears on
12 that page?

13 THE WITNESS: Yes, it is.

14 MR. WALLACH: Is there anything in your
15 witness statement that you would like to correct or
16 amend in any way?

17 THE WITNESS: No, there's not.

18 MR. WALLACH: I have no further questions.

19 ARBITRATOR BIENVENU: Thank you,
20 Mr. Wallach.

21 Mr. Litwin, your witness.

22 MR. LITWIN: Thank you, Mr. Chairman.

1 CROSS-EXAMINATION

2 BY MR. LITWIN

3 Q. Ms. Eisner, can you please confirm that
4 you have not looked at any of the documents in the
5 exhibit bundle that was provided to you?

6 A. Yes, I can confirm. It is still sealed.

7 Q. Can you please open the bundle on camera
8 now, please?

9 MR. LITWIN: Again, Mr. Wallach, do you
10 want to open yours on camera as Mr. Enson did?

11 MR. WALLACH: Yeah.

12 Q. BY MR. LITWIN: Ms. Eisner, from time to
13 time during our discussion today, I will direct
14 your attention to a document. When I do that, I
15 will refer to the tab that's reflected in your
16 binder for that document and the binder that you
17 have in front of you right now, and you will see
18 that, generally on the bottom right-hand corner of
19 the page, we have given each page in the exhibit a
20 unique page number. So when I direct you to a
21 particular page, I will be referring to that
22 particular page number that we have provided, okay?

23 A. Yeah.

24 Q. Thank you. Ms. Eisner, you are a deputy
25 general counsel of ICANN; is that right?

1 A. Yes.

2 Q. Do you have particular areas of
3 responsibility as deputy general counsel for
4 litigation or something like that?

5 A. It is not appended to my title, but I am
6 responsible for a couple of different areas within
7 ICANN. I lead the support to our multistakeholder
8 strategic initiative team as well as our global
9 stakeholder engagement team and our governmental
10 engagement team.

11 As part of that work to the
12 multistakeholder strategic initiative team, I work
13 on many special projects that interact with the
14 community.

15 Q. And how long have you been in this role?

16 A. I have been in this role since 2014.

17 Q. How many lawyers are in the ICANN legal
18 department?

19 A. I believe we have 11 or 12.

20 Q. Do you have regular department meetings?

21 A. Yes.

22 Q. And is it fair to say -- and please do not
23 discuss the specifics of any of the discussions of
24 any of those meetings -- that you discuss sort of
25 the legal issues that the department is dealing

1 with at that time and provide status updates on
2 that; is that fair to say?

3 A. It depends -- in general, yes. We often
4 don't go into great detail about specifics because
5 we each have our own lines of discussion. So we
6 would speak about it enough to have some general
7 level of understanding amongst the deputies within
8 the department. We might not go into as much
9 detail with an all-hands departmental meeting. But
10 then each deputy also has their time with the
11 general counsel where you have much more in-depth
12 status discussions.

13 Q. Okay. You state in your witness statement
14 that you joined the IRP Implementation Oversight
15 Team -- which I will for convenience's sake refer
16 to as the IOT today because that's quite a
17 mouthful -- in November 2015; is that the right
18 date?

19 A. I believe so, yes.

20 Q. Okay. And you joined as a staff liaison,
21 correct?

22 A. Correct.

23 Q. The IOT was the committee and still is the
24 committee tasked with drafting the rules and
25 procedures and conduct for the IRP, right?

1 A. Yes.

2 Q. Please. In fact, ICANN's bylaws
3 explicitly provide for the establishment of the
4 IOT; is that right?

5 A. Yes, the bylaws that went into effect in
6 October 2016.

7 Q. So if you could draw your attention to Tab
8 2 in your binder and to Page 15 of that exhibit,
9 you'll see at the bottom Section 4.3(n)(i), which
10 it is continued on to the next page, Page 16. This
11 is, in fact, that paragraph that provides for the
12 creation of the IOT, correct?

13 A. Correct.

14 Q. And what it says is that the IOT should be
15 "comprised of members of the global Internet
16 community"; is that right?

17 A. Yes. In consultation --

18 Q. In consultation with what? You broke up.

19 A. The supporting organizations and advisory
20 committee.

21 Q. And the IOT, once the Standing Panel is
22 established, the IOT "in consultation with the
23 Standing Panel, shall develop clear published rules
24 for the IRP"; is that right?

25 A. Yes, that's what the bylaws say.

1 Q. And those rules of procedure need to
2 conform to international arbitration norms,
3 correct?

4 A. Yes.

5 Q. Now, the Standing Panel, as of today, has
6 not yet been established, correct?

7 A. That's correct.

8 Q. So the IOT did not follow the bylaws
9 provision that says that, "Once the Standing Panel
10 is established, the IOT in consultation with the
11 Standing Panel, shall develop" the rules of
12 procedure; is that right?

13 A. Well, there wasn't yet a Standing Panel to
14 coordinate with.

15 Q. The Standing Panel -- the establishment of
16 the Standing Panel is also entrusted to the IOT,
17 correct?

18 A. No, it is not.

19 Q. Is the IOT right now processing
20 applications for the Standing Panel?

21 A. No, it's not. ICANN is in the process of
22 receiving those applications and is also in the
23 process of coordinating with the more general
24 community through the leaders of the supporting
25 organizations and advisory committees to finalize

1 how those will be processed.

2 Q. So was there any discussion with the IOT
3 whether or not you should wait for the Standing
4 Panel to be created before developing rules of
5 procedure?

6 A. No, there was not. The IOT was actually
7 kicked into gear before the bylaws went into
8 effect, so that they are -- there could be work
9 done to get supplemental procedures in place that
10 would conform with the new bylaws, recognizing that
11 there was always the opportunity to update those
12 once a Standing Panel was in place, and we needed
13 to go back -- or if we needed to go back over them
14 with a Standing Panel.

15 Q. Okay. Now, the bylaws provide that the
16 rules of procedure shall conform with international
17 arbitration norms. So is that like the ICDR rules?

18 A. That surely is one example, yes.

19 Q. And the ICC rules, JAMS rules, these are
20 all norms of international arbitration, right?

21 A. Without being an international arbitration
22 provider, I assume so -- I am not a practitioner of
23 international arbitration, but yes, I assume so.

24 Q. So I'll represent that I have been a
25 frequent visitor to the IOT's Wiki page, and there

1 it shows that the IOT was provided with ten or so
2 examples of arbitration rules.

3 Do you recall that?

4 A. Yes.

5 Q. And that was for your reference in
6 drafting the rules of procedure, correct?

7 A. In part, yes.

8 Q. The U.S. Rules of Civil Procedure,
9 however, are not a norm of international
10 arbitration, are they?

11 A. Again, without being a practitioner of
12 international arbitrations, having done litigation
13 in the past, civil procedure rules go to our
14 federal court system and don't govern in
15 arbitration, right.

16 Q. And I am very much in the same boat as you
17 are, Ms. Eisner. I spend most of my time in
18 federal court.

19 At least I understand arbitration to be an
20 alternative dispute resolution to that federal
21 judicial process; is that fair to say?

22 A. Yes.

23 Q. In August of 2016, Afilias' general
24 counsel, Mr. Scott Hemphill, wrote to ICANN's Board
25 regarding Afilias' concern about the resolution of

1 the .WEB contention set. ICANN posted the letter
2 to its website.

3 Were you aware of Afilias' complaint at
4 the time?

5 A. I don't recall.

6 Q. Do you recall the first time you became
7 aware that Afilias had complained about the
8 resolution of the .WEB contention set?

9 A. It likely would have been in that period
10 of 2016, in that later period of it, but I don't
11 recall specifically what brought it to my
12 attention.

13 Q. Are you aware that ICANN sent a
14 questionnaire to Afilias, VeriSign, NDC and, as we
15 heard today, Neustar, in September of 2016
16 concerning Afilias' complaint, were you aware of
17 that?

18 A. No, I'm not.

19 Q. So you were not involved in the drafting
20 of that questionnaire?

21 A. I was not.

22 Q. Do you know who was?

23 A. No, I don't know who was.

24 Q. We have also heard about a November 3rd,
25 2016, Board workshop session where Afilias'

1 complaints were allegedly discussed. I'll
2 represent to you that that meeting -- at least the
3 testimony is that meeting took place in Hyderabad.
4 Are you aware of that meeting?

5 A. I am aware of the Board workshop that took
6 place in Hyderabad. I don't have specific
7 recollection of the specific subject matters that
8 were discussed at that meeting.

9 Q. Did you attend that meeting?

10 A. Yes. I was in Hyderabad, and I
11 participated in many, if not all, support workshop
12 sessions.

13 Q. Was there a Board workshop session that
14 specifically concerned Afiliias' complaint regarding
15 the resolution of the .WEB contention set?

16 A. I don't recall.

17 Q. Do you recall anything about -- and
18 without giving me any specifics, just a yes-or-no
19 question, Ms. Eisner, do you recall any specifics
20 about a Board workshop session in November of 2016
21 where Afiliias' complaints about the resolution of
22 the .WEB contention set were discussed?

23 A. I really don't recall specifics about it.
24 Our Board workshop sessions are basically done by
25 one- to two-hour blocks, and they go from

1 discussion to discussion to discussion, and so I --
2 without having any notes in front of me or
3 anything, and it is something -- it is a meeting I
4 haven't thought about in over three years, so I
5 really don't remember.

6 Q. Just for my edification and the Panel's
7 edification, Ms. Eisner, when you say the workshops
8 are organized into one- or two-hour blocks, is each
9 block devoted to a particular subject or to a group
10 of subjects?

11 A. Typically each block would be reserved for
12 a particular topic.

13 Q. On June 18, 2018, Afilias initiated the
14 cooperative engagement process with ICANN
15 concerning its complaints about the resolution of
16 the .WEB contention set.

17 Were you aware in June of 2018 that
18 Afilias had initiated a CEP?

19 A. I don't recall being aware at the time.

20 Q. Now, ICANN publicly discloses on a chart
21 who has initiated an accountability mechanism; is
22 that right?

23 A. Yes.

24 Q. So on that chart published after June
25 18th, there would be a section for CEPs, right?

1 A. Yes.

2 Q. Yes. And Afiliias' name would have been
3 listed under it, correct?

4 A. I presume it would have been, in
5 accordance with ICANN's general practice of
6 publishing that.

7 Q. Well, is it a practice -- let me rephrase.

8 Was it your practice to review those
9 charts from time to time to keep yourself informed
10 about who had initiated accountability mechanisms?

11 A. No, it is not my practice.

12 Q. Were -- was the status of accountability
13 mechanisms discussed in your legal department
14 meetings?

15 A. At times they were. Clearly when we have
16 IRPs going or other things of a large interest, I
17 could imagine we would discuss them.

18 Q. To the best of your recollection, when did
19 you become aware that Afiliias had requested CEP
20 regarding the -- its complaints about the
21 resolution of the .WEB contention set?

22 A. I'm really not sure, though I would say it
23 was some point in that latter half of 2018, but I
24 don't know when it occurred.

25 Q. Now, the CEP process is a process that's

1 voluntarily invoked by a party prior to filing an
2 IRP; is that correct?

3 A. Yes.

4 Q. And the stated purpose of a CEP is to
5 resolve or narrow issues that are contemplated as
6 issues that may be brought in an IRP; is that
7 right?

8 A. Yes.

9 Q. And the IOT from time to time has, in
10 fact, discussed the CEP and at least appears it is
11 on its to-do list to develop standards for the CEP,
12 correct?

13 A. Yes. It was a responsibility it took over
14 from a different community group.

15 Q. Now, if a complainant does not participate
16 in the CEP in good faith and ICANN prevails in a
17 subsequent IRP, the complainant is liable to pay
18 ICANN's legal fees; is that correct?

19 A. I believe that's correct. I'd have to go
20 back and look physically at the documents, but I
21 believe that's correct.

22 Q. Okay. Well, I'll represent to you that's
23 my understanding. And if my understanding's
24 correct, would you agree with me that's a pretty
25 strong incentive to initiate CEP prior to filing an

1 IRP; is that right?

2 A. Without a doubt, yeah.

3 Q. Yeah. So if you understood that someone
4 had initiated a CEP, is it fair to say that you
5 would also understand that that party was
6 considering filing an IRP in the future?

7 A. Yes.

8 Q. Now, I'll represent to you that ICANN
9 terminated the CEP that Afilias initiated on June
10 18 later that year, on November 13. Were you aware
11 that ICANN had terminated CEP on November 13th?

12 A. I don't recall specifically about that.
13 There was a period of time around there that I was
14 on vacation, too. I took a couple of weeks of
15 vacation after our ICANN meeting. So I can't
16 recall when I was back in the office.

17 Q. So that would have been the second half or
18 middle of November 2018; is that right?

19 A. My vacation?

20 Q. Yes.

21 A. Yes. It would have been directly after
22 the end of the ICANN meeting, and we traveled for a
23 period of at least ten days after that.

24 Q. Were you aware that on August 28th, 2018,
25 in the context of its CEP, Afilias offered to

1 provide ICANN with a draft of its IRP request?

2 A. No, I was not aware. The CEP discussions
3 are considered confidential, and we also consider
4 them confidential within ICANN. So as I am not on
5 the team that participates in those, I don't
6 participate in those discussions.

7 Q. Okay. Now, I'll represent to you,
8 Ms. Eisner, and I think you are aware of this
9 because of what you write in your witness
10 statement, that Afilias, in fact, provided this
11 draft IRP request to ICANN on October 10th, 2018.

12 Were you aware of that?

13 A. I became aware of that.

14 Q. When did you become aware of that?

15 A. I don't -- I don't recall when I became
16 aware of it. Can I refer back to my witness
17 statement?

18 Q. Absolutely. It is Tab 1 in your binder
19 for reference, Ms. Eisner.

20 A. Thank you. Thank you. I wanted to refer
21 back because I thought I heard you say that I had
22 mentioned that in my witness statement, but I
23 didn't recall mentioning that.

24 Q. I think you mentioned that you stated you
25 were not aware at the time; is that fair to say?

1 A. Yes, that's correct. I was not aware at
2 the time.

3 Q. Okay. And are you aware that three weeks,
4 approximately 19 days after receiving Afilias'
5 draft IRP request, ICANN terminated CEP without
6 engaging in any substantive discussion of Afilias'
7 claims?

8 A. No, I am not aware of the substance of the
9 conversations between ICANN and Afilias about the
10 CEP.

11 Q. So in general, based on your work on the
12 CEP in the context of the IOT, is it appropriate
13 for ICANN to refuse to engage on the merits of a
14 claim during CEP while at the same time dragging
15 that CEP out for five months?

16 A. Without knowing the specifics of the
17 conversation, I really can't testify to that.

18 Q. Okay. The IOT, as I understand, had a
19 meeting in June of 2018, but then did not hold any
20 meetings in July or August or September of 2018; is
21 that correct?

22 A. I know that we had difficulties bringing
23 people together for a quorum. I don't know the
24 exact dates that we did or did not have meetings,
25 but there was a significant period of time that we

1 didn't have meetings.

2 Q. Is it fair to say that when the IOT has a
3 meeting, the transcript of that meeting is
4 published on the IOT Wiki page?

5 A. Yes.

6 Q. I will represent to you that there are no
7 transcripts on the IOT Wiki page for either July,
8 August or September of 2018. If my representation
9 is correct, that would mean that the IOT didn't
10 meet during those months; is that fair to say?

11 A. Yes.

12 ARBITRATOR BIENVENU: Mr. Litwin, sorry to
13 interrupt you, but we have come to the end of the
14 scheduled time for the hearing today. As you know,
15 one Panel member is sitting in Paris, so it is
16 quite late for that Panel member.

17 So I think we will break.

18 Ms. Eisner, you are not to discuss your
19 evidence with anyone until you are completed giving
20 your evidence. So I will instruct you not to do
21 so.

22 We will resume tomorrow morning at 8:00
23 a.m. Pacific and continue with your
24 cross-examination, Mr. Litwin.

25 MR. LITWIN: Thank you very much,

1 Mr. Chairman.

2 MR. ALI: Mr. Chairman, if I can raise a
3 point. This addresses --

4 (Discussion off the record.)

5 MR. ALI: This is a point you now raised a
6 couple of times referring to the status of the
7 CCWG-Accountability.

8 ARBITRATOR BIENVENU: Sorry, I cannot hear
9 you, Mr. Ali. Can you speak a bit louder?

10 (Discussion off the record.)

11 MR. ALI: Mr. Chairman, there's a point
12 you have raised a couple times, actually a question
13 you put to, I think to us in -- during opening
14 presentations and then also to Ms. Burr, which is
15 the status of the CCWG-Accountability's reports.
16 And just as an FYI, and I don't know how you'd like
17 to handle this, but the CCWG-Accountability reports
18 were approved by the Board on 10 March 2016.

19 Now, that's not a document that is on
20 record in terms of the Board resolution, but the
21 Board resolution followed by what are known as
22 Board rationale is associated with the approval of
23 all the CCWG-Accountability and its reports and its
24 transmissions to the NTIA.

25 So if that's a document that the Panel

1 would be interested in, we can try to agree with
2 the other side that it be made part of the record,
3 given that this is a matter that seems to be of
4 interest to the Panel.

5 ARBITRATOR BIENVENU: Yeah, thank you.
6 That's helpful, especially if it addresses the
7 point I have raised.

8 I see Mr. LeVee -- Mr. LeVee, do you want
9 to clarify?

10 MR. LeVEE: All I would suggest,
11 Mr. Chairman, is that these types of things ought
12 to be addressed by counsel separately after the
13 hearing as opposed to proposing something to the
14 Panel that then should be discussed among the
15 lawyers.

16 ARBITRATOR KESSEDJIAN: Particularly
17 because the witness is still there, and I am not
18 sure she should hear all we are saying right now.

19 MR. LeVEE: I think this is something the
20 lawyers should be addressing privately and not
21 having argument about or even suggestions as to
22 what is or is not appropriate in the record.

23 ARBITRATOR BIENVENU: Okay. So that was,
24 I think, something that Mr. Ali referred to. So
25 why don't you take it up together and see if

1 something comes out of your consultations.

2 Thank you all, and we will resume tomorrow
3 morning.

4 (Whereupon the proceedings were
5 concluded at 1:05 p.m.)

COURT REPORTERS CERTIFICATE

STATE OF CALIFORNIA)
) ss.
COUNTY OF SAN FRANCISCO)

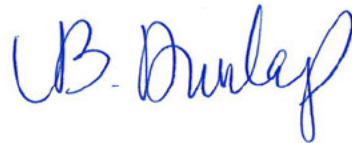

I, BALINDA DUNLAP, hereby certify:

I am a duly qualified Certified Shorthand Reporter, in the State of California, holder of Certificate Number CSR 10710 issued by the Court Reporters Board of California and which is in full force and effect.

I am not financially interested in this action and am not a relative or employee of any attorney of the parties, or of any of the parties.

I am the reporter that stenographically recorded the testimony in the foregoing proceeding and the foregoing transcript is a true record of the testimony given.

Dated: 08/12/20

AMENDED AND RESTATED ARTICLES OF INCORPORATION OF INTERNET CORPORATION FOR ASSIGNED NAMES AND NUMBERS

As approved by the ICANN Board on 9 August 2016, and filed with the California Secretary of State on 3 October 2016

The undersigned certify that:

1. They are the president and the secretary, respectively, of Internet Corporation for Assigned Names and Numbers, a California nonprofit public benefit corporation.
2. The Articles of Incorporation of this corporation are amended and restated to read as follows:
 - I. The name of this corporation is Internet Corporation for Assigned Names and Numbers (the “**Corporation**”).
 - II. This Corporation is a nonprofit public benefit corporation and is not organized for the private gain of any person. It is organized under the Nonprofit Public Benefit Corporation Law for charitable and public purposes. The Corporation is organized, and will be operated, exclusively for charitable, educational, and scientific purposes within the meaning of § 501(c)(3) of the Internal Revenue Code of 1986, as amended (the “**Code**”), or the corresponding provision of any future United States tax code. Any reference in these Articles to the Code shall include the corresponding provisions of any future United States tax code. In furtherance of the foregoing purposes, and in recognition of the fact that the Internet is an international network of networks, owned by no single nation, individual or organization, the Corporation shall, except as limited by Article IV hereof, pursue the charitable and public purposes of lessening the burdens of

government and promoting the global public interest in the operational stability of the Internet by carrying out the mission set forth in the bylaws of the Corporation (“**Bylaws**”). Such global public interest may be determined from time to time. Any determination of such global public interest shall be made by the multistakeholder community through an inclusive bottom-up multistakeholder community process.

- III. The Corporation shall operate in a manner consistent with these Articles and its Bylaws for the benefit of the Internet community as a whole, carrying out its activities in conformity with relevant principles of international law and international conventions and applicable local law and through open and transparent processes that enable competition and open entry in Internet-related markets. To this effect, the Corporation shall cooperate as appropriate with relevant international organizations.
- IV. Notwithstanding any other provision of these Articles:
 - a. The Corporation shall not carry on any other activities not permitted to be carried on (i) by a corporation exempt from United States income tax under § 501(c)(3) of the Code or (ii) by a corporation, contributions to which are deductible under § 170(c)(2) of the Code.
 - b. No substantial part of the activities of the Corporation shall be the carrying on of propaganda, or otherwise attempting to influence legislation, and the Corporation shall be empowered to make the election under § 501 (h) of the Code.
 - c. The Corporation shall not participate in, or intervene in (including the publishing or distribution of statements) any political campaign on behalf of or in opposition to any candidate for public office.
 - d. No part of the net earnings of the Corporation shall inure to the benefit of or be distributable to its directors, trustees, officers, or other private persons, except that the Corporation shall be authorized and empowered to pay reasonable compensation for services rendered and to make payments and distributions in furtherance of the purposes set forth in Article II hereof.
- V. To the full extent permitted by the California Nonprofit Public Benefit Corporation Law or any other applicable laws presently or hereafter

in effect, no director of the Corporation shall be personally liable to the Corporation for or with respect to any acts or omissions in the performance of his or her duties as a director of the Corporation. Any repeal or modification of this Article V shall not adversely affect any right or protection of a director of the Corporation existing immediately prior to such repeal or modification.

- VI. Upon the dissolution of the Corporation, the Corporation's assets shall be distributed for one or more of the exempt purposes set forth in Article II hereof and, if possible, to a § 501(c)(3) organization organized and operated exclusively to lessen the burdens of government and promote the global public interest in the operational stability of the Internet, or shall be distributed to a governmental entity for such purposes, or for such other charitable and public purposes that lessen the burdens of government by providing for the operational stability of the Internet. Any assets not so disposed of shall be disposed of by a court of competent jurisdiction of the county in which the principal office of the Corporation is then located, exclusively for such purposes or to such organization or organizations, as such court shall determine, that are organized and operated exclusively for such purposes, unless no such corporation exists, and in such case any assets not disposed of shall be distributed to a § 501(c)(3) corporation chosen by such court.
- VII. Any amendment to these Articles shall require (a) the affirmative vote of at least three-fourths of the directors of the Corporation, and (b) approval in writing by the Empowered Community, a California nonprofit association established by the Bylaws (the “**Empowered Community**”), following procedures set forth in Article 25.2 of the Bylaws.
- VIII. Any transaction or series of transactions that would result in the sale or disposition of all or substantially all of ICANN's assets shall require (a) the affirmative vote of at least three-fourths of the directors of the Corporation, and (b) approval in writing by the Empowered Community prior to the consummation of the transaction, following procedures set forth in Article 26 of the Bylaws.

3. The foregoing amendment and restatement of Articles of Incorporation has been duly approved by the board of directors.

4. The corporation has no members.

We further declare under penalty of perjury under the laws of the State of

California that the matters set forth in this certificate are true and correct of our own knowledge.

1 **I. INTRODUCTION**

2 Plaintiff Ruby Glen LLC and six other applicants are all vying to operate the
3 “.WEB” Internet generic top-level domain (“gTLD”). After a detailed review,
4 started in 2012, the Internet Corporation for Assigned Names and Numbers
5 (“ICANN”), the nonprofit public benefit corporation responsible for evaluating
6 such applications, determined that all .WEB applications met the established
7 criteria. But, because each unique gTLD can only have one operator, ICANN
8 placed the .WEB applications into a “Contention Set” according to procedures in
9 place since 2012. On April 27, 2016, again according to procedures in place since
10 2012, ICANN scheduled an auction for July 27, 2016 (“Auction”) to resolve which
11 application in the Contention Set will proceed. Now, to avoid this competition and
12 the auction procedures it agreed to, Plaintiff seeks a temporary restraining order
13 (“TRO”) against ICANN to halt the Auction.¹ But there is no basis in either the
14 Auction procedures, the law or the evidence to grant Plaintiff the relief it seeks.

15 In submitting their applications, Plaintiff and all other applicants agreed to a
16 detailed set of procedures for the application process, which ICANN developed
17 over several years with extensive public participation, including from Plaintiff’s
18 ultimate parent company Donuts, Inc., which through its subsidiaries like Plaintiff,
19 submitted over 300 new gTLD applications. Those procedures are embodied in a
20 338-page New gTLD Applicant Guidebook (“Guidebook”) and, of particular
21 importance here, a 22-page set of “Auction Rules.” Per the Auction Rules, an
22 auction *may* be postponed if all participants agree and each submits such a request
23 to ICANN at least 45 days before the auction. In addition, an ICANN auction can

24 ¹ Despite filing over three days ago, ***Plaintiff still has not served ICANN***
25 with the Complaint or TRO application. ICANN’s counsel had to obtain copies on
26 PACER. Moreover, it is inexplicable why Plaintiff, with its claims of such urgency,
27 would not serve ICANN in the hope of making its TRO application ripe for
28 decision under the Court’s Standing Order, which requires such service. (Standing
Order at ¶ 11 (“The Court will not rule on any application for [TRO] for at least 24
hours after the party subject to the requested order has been served; such party may
file opposing or responding papers in the interim.”).)

1 be avoided altogether, as ICANN encourages in the Guidebook, if all participants
2 agree to private resolution of a contention set.

3 Here, at least one Auction participant, Nu Dotco LLC (“Nu Dotco”), refused
4 to agree to postpone the Auction or private resolution of the Contention Set. As a
5 result, no postponement request was made by the deadline, and ultimately only
6 three participants requested a delay after the deadline. Plaintiff has nonetheless
7 sought to delay, and perhaps ultimately avoid, the Auction by making
8 unsubstantiated claims regarding Nu Dotco’s application for .WEB, arguing that
9 ICANN’s investigation of those claims was insufficient. Specifically, Plaintiff
10 asserts that, on June 7, 2016, it received an email from Nu Dotco’s CFO that,
11 according to Plaintiff, “indicated a potential change in both [Nu Dotco’s]
12 management and ownership.” Plaintiff contends that this – and this alone – should
13 have caused ICANN to postpone the Auction for further investigation.

14 But three separate ICANN bodies – ICANN’s staff, ICANN’s Ombudsman,
15 and ICANN’s Board – have already looked into the alleged change in Nu Dotco’s
16 ownership or management. All three found no credible evidence that any such
17 change had occurred within Nu Dotco, and therefore nothing supported a delay of
18 the Auction. Plaintiff’s TRO application, filed nearly three months after the
19 Auction was scheduled and just two business days before bidding is set to officially
20 begin, relies solely on a strained, and now completely discredited, interpretation of
21 the Nu Dotco CFO’s June 7 email. However, the evidence accompanying this
22 opposition – sworn declarations from ICANN and Nu Dotco executives – confirms
23 that Nu Dotco has not made any change in its ownership or management, much less
24 a “disqualifying” change that should derail the Auction processes already under
25 way or the official start of bidding.

26 Separate and apart from the fact that ICANN performed a thorough
27 investigation of Plaintiff’s allegations and confirmed that nothing had changed,
28 Plaintiff’s TRO application is deficient for other reasons. First, the “emergency”

1 that Plaintiff invokes is an emergency of Plaintiff's own making. **By June 7, 2016**,
2 Plaintiff had the email from Nu Dotco's CFO that forms the entire basis of this suit,
3 and which made clear that Nu Dotco did not consent to private resolution or
4 postponement. Yet Plaintiff waited over two weeks to raise the matter with
5 ICANN. **By July 13, 2016**, Plaintiff was well aware that, based on its investigation,
6 ICANN concluded that the Auction should proceed as scheduled. Yet Plaintiff
7 waited over another week to bring this action. Second, Plaintiff fails to satisfy any
8 of the four requirements for emergency injunctive relief: (1) Plaintiff is not likely
9 to succeed on the merits of its claims because its claims have no merit, particularly
10 since Plaintiff agreed to the Auction Rules that it now seeks to avoid; (2) Plaintiff
11 will not suffer irreparable harm in the absence of injunctive relief because the
12 Auction Rules provide means to address these issues post-Auction and any injuries
13 can be compensated by financial adjustments; (3) the balance of equities weighs
14 against injunctive relief because it would disrupt long-agreed gTLD-assignment
15 procedures that provide needed certainty to applicants; and (4) the public interest
16 strongly favors denying the TRO because the Guidebook and Auction Rules that
17 Plaintiff now seeks to upend have been in place for years and have been relied upon
18 by hundreds of applicants. Third, in its application for .WEB, like the over 300
19 applications submitted by other subsidiaries of Plaintiff's ultimate parent, Plaintiff
20 agreed to a covenant not to sue ICANN for claims associated with Plaintiff's
21 application. This lawsuit plainly violates Plaintiff's contractual obligation and bars
22 the relief sought.

23 To be clear, everything that Plaintiff complains about in this suit is an
24 express term or aspect of the New gTLD Program agreed to by Plaintiff when it
25 applied for .WEB in 2012. For instance, the contention set procedures, the auction
26 provisions, and the covenant not to sue ICANN, were acknowledged and accepted
27 by Plaintiff when it submitted its application pursuant to the Guidebook. Likewise,
28 the principle that ICANN will consider postponing an auction only when **all**

1 participants make such a request is express in the very Auction Rules that Plaintiff
2 accepted when it executed a “Bidder Agreement,” in May 2016, stating that
3 Plaintiff ***agrees to be bound by the Auction Rules.***

4 ICANN, as a nonprofit, has no financial motivation in the Auction
5 proceeding. As has been widely publicized, all auction funds will be utilized for
6 charitable goals to be determined by the broader Internet community. ICANN’s
7 only motivation in the Auction proceeding is ensuring that the Guidebook and
8 Auction Rules are followed, as Plaintiff and all applicants agreed long ago.

9 **II. FACTUAL BACKGROUND**

10 **A. ICANN AND THE NEW GTLD PROCESS.**

11 ICANN is a California non-profit public benefit corporation that oversees the
12 technical coordination of the Internet’s domain name system (“DNS”) on behalf of
13 the Internet community, ensuring the DNS’s continued security, stability and
14 integrity. *See Name.Space, Inc. v. Internet Corp. for Assigned Names & Nos.*, 795
15 F.3d 1124, 1127–28 (9th Cir. 2015). The DNS’s essential function is to convert
16 easily-remembered domain names, such as “uscourts.gov” or “icann.org,” into
17 numeric IP addresses understood by computers. (Willett Decl. ¶ 2.) The portion of
18 a domain name to the right of the last dot (such as “.gov” and “.org”) is known as a
19 generic top-level domain (“gTLD”). *Name.Space, Inc.*, 795 F.3d at 1127.

20 Throughout its history, ICANN has sought to expand the number of gTLDs
21 to promote consumer choice and competition. (Willett Decl. ¶ 3.) In 2012, ICANN
22 launched a “New gTLD Program” application round, in which it invited any
23 interested party to apply for the creation of a new gTLD and for the opportunity to
24 be designated as the operator of that gTLD. (Willett Decl. ¶ 3.) As the operator,
25 the applicant would be responsible for managing the assignment of names within
26 the gTLD and maintaining the gTLD’s database of names and IP addresses.
27 (Willett Decl. ¶ 3.)

28 In connection with the New gTLD Program, ICANN published the

1 Guidebook, which prescribes the requirements for new gTLD applications to be
2 approved, and the criteria by which they are evaluated. (Willett Decl. ¶ 4.) The
3 Guidebook was developed in a years-long public consultation process in which
4 numerous versions were published for public comment and revised based on
5 comments received from the public. (Willett Decl. ¶ 4.)

6 Because technical, operational and financial capabilities are critical to an
7 applicant's suitability to run a gTLD, applicants are required to identify the entities
8 and people who will be involved in the management of the gTLD applied for.
9 (Zecchini Decl., Ex. C [Guidebook § 2].) Each applicant must also be screened and
10 submit to certain background checks. (*Id.*, §§ 1.2.1, 2.1.) Important to this lawsuit
11 is the Guidebook's provision that, "[i]f at any time during the evaluation process
12 information previously submitted by an applicant becomes untrue or inaccurate, the
13 applicant must promptly notify ICANN." (*Id.*, § 1.2.7.)

14 In the event that more than one application for the same or similar gTLDs
15 passes all of the prescribed levels of evaluation, the applications are placed in a
16 string contention set (since only one registry operator can operate a gTLD
17 consisting of the exact same letters) that can be resolved through a number of
18 processes. (Zecchini Decl., Ex. C [Guidebook § 1.1.2.10].) The Guidebook
19 "encourage[s applicants] to resolve string contention cases among themselves prior
20 to the string contention resolution stage." (*Id.*) Should such a private resolution not
21 occur, the contention set will proceed to an auction of last resort governed by the
22 Auction Rules that all applicants agreed to by applying. (*Id.*)

23 The Auction Rules provide that an auction will be scheduled after ICANN
24 reviews and investigates the applications in a contention set. Then, to facilitate
25 private resolution, "if each and every member of the Contention Set submits a
26 postponement request through the ICANN Customer Portal, ICANN at its sole
27 discretion may postpone the Auction for that Contention Set to a future date."
28 (Zecchini Decl., Ex. J [Auction Rules ¶ 10].) The Auction Rules elaborate that the

1 request “must be submitted at least 45 days prior to the scheduled Auction Date [in
2 this instance, June 13, 2016] and ICANN must receive a request from each member
3 of the contention set.”

4 Any financial proceeds of such an auction initially flow to ICANN. (*Id.* §
5 4.3.) However, these auction proceeds have been fully segregated in separate bank
6 and investment accounts, and earmarked until the community develops and the
7 ICANN Board authorizes a plan for the appropriate use of the funds. (Weinstein
8 Decl. ¶ 12; *see also* Zecchini Decl., Ex. C [Guidebook § 4.3, n.1].) The ICANN
9 community has indicated that it will create a Cross-Community Working Group to
10 develop a proposal for eventual consideration by the ICANN Board on the manner
11 in which the new gTLD auction proceeds should be allocated, and the formation of
12 that working group was discussed at a June 28, 2016 meeting during the ICANN56
13 Public Meeting in Helsinki. (Weinstein Decl. ¶ 13.)²

14 The Guidebook includes critical terms and conditions that all applicants,
15 including Plaintiff, acknowledged and accepted by submitting a gTLD application.
16 (Zecchini Decl., Ex. C [Guidebook § 6].) For instance, the Guidebook contains a
17 release (the “Covenant Not to Sue”), which bars lawsuits against ICANN arising
18 out of its evaluation of any new gTLD application:

19 Applicant hereby releases ICANN and the ICANN Affiliated Parties
20 from any and all claims by applicant that arise out of, are based upon,
21 or are in any way related to, any action, or failure to act, by ICANN or
22 any ICANN Affiliated Party in connection with ICANN’s or an
23 ICANN Affiliated Party’s review of this application, investigation or
24 verification, any characterization or description of applicant or the
25 information in this application, any withdrawal of this application or

27 ² *See* <https://icann562016.sched.org/event/7NE0/cross-community-session-charter-for-the-ccwg-on-auction-proceeds?iframe=no&w=i:100;&sidebar=yes&bg=no>.
28

1 the decision by ICANN to recommend, or not to recommend, the
2 approval of applicant’s gTLD application. APPLICANT AGREES
3 NOT TO CHALLENGE, IN COURT OR IN ANY OTHER
4 JUDICIAL FORA, ANY FINAL DECISION MADE BY ICANN
5 WITH RESPECT TO THE APPLICATION, AND IRREVOCABLY
6 WAIVES ANY RIGHT TO SUE OR PROCEED IN COURT OR
7 ANY OTHER JUDICIAL FORA ON THE BASIS OF ANY OTHER
8 LEGAL CLAIM AGAINST ICANN AND ICANN AFFILIATED
9 PARTIES WITH RESPECT TO THE APPLICATION. . . .

10 (*Id.* § 6.6 (emphasis in original).)

11 Although all gTLD applicants agreed not to file lawsuits against ICANN
12 related to their applications, applicants are not left without recourse. ICANN’s
13 Bylaws provide for several accountability mechanisms to ensure that ICANN
14 operates in accordance with its Articles of Incorporation (“Articles”), Bylaws,
15 policies and procedures. (Zecchini Decl., Ex. B [Bylaws, Art. IV].) One such
16 provision establishes an Ombudsman to informally resolve disputes. In addition,
17 reconsideration requests may be used to challenge ICANN Board actions alleged to
18 have been undertaken “without consideration of material information” or with
19 “reliance on false or inaccurate material information,” or may be used to challenge
20 staff action alleged to contravene ICANN’s established policies. (*Id.*, Art. IV, § 2].)

21 Another accountability mechanism provided for in ICANN’s Bylaws is a
22 request for an independent review process (“IRP”), under which an aggrieved
23 applicant can ask independent panelists to evaluate whether an action of ICANN’s
24 Board was inconsistent with ICANN’s Articles and Bylaws. (*Id.*, Art. IV, § 2.)

25 **B. THE APPLICATIONS FOR .WEB AND PLAINTIFF’S CLAIMS**
26 **REGARDING NU DOTCO.**

27 In June 2012, Plaintiff, Nu Dotco, and five other applicants applied for .WEB.
28 Another applicant applied for .WEBS. The seven applications for .WEB and the

1 remaining application for .WEBS passed all applicable evaluations and were placed
2 in the Contention Set, pursuant to the procedures set forth in the Guidebook.
3 (Willet Decl. ¶ 6.)

4 Nu Dotco's application stated that it was a Delaware Limited Liability
5 Company, and listed three people as its officers: Jose Ignacio Rasco III, CFO; Juan
6 Diego Calle, CEO; and Nicolai Bezsonoff, COO. (Zecchini Decl., Ex. E.) It listed
7 Mr. Rasco as its "Primary Contact" and Mr. Bezsonoff as its "Secondary Contact."
8 (*Id.*) It identified two owners having at least 15% interests: Domain Marketing
9 Holdings, LLC and Nuco LP, LLC. (*Id.*)

10 On April 27, 2016, ICANN scheduled the Auction, notified all active
11 members of the Contention Set, and provided them with instructions and deadlines
12 to participate in the Auction. (Willet Decl. ¶ 7.) On May 24, 2016, Plaintiff
13 executed the Bidder Agreement thereby "agree[ing] to be bound by the Auction
14 Rules as published on ICANN's website." (Weinstein Decl., Exs. B-C.) Plaintiff
15 alleges that Nu Dotco is the only applicant in the Contention Set that did not agree
16 to resolve the Contention Set privately. (Compl. ¶ 36.) Thus, on or about June 7,
17 2016, Plaintiff contacted Nu Dotco and asked it to reconsider its decision to forego
18 private resolution of the Contention Set.

19 On June 7, 2016, Mr. Rasco, Nu Dotco's CFO, made clear in his response
20 that Nu Dotco would not be changing its position, explaining: "Nicolai [Bezsonoff]
21 is at NSR full-time and is no longer involved with our TLD applications. I am still
22 running our program and Juan [Diego Calle] sits on the board with me and several
23 others. Based on your request, I went back to check with all the powers that be and
24 there was no change in response and will not be seeking an extension." (Nevett
25 Decl., Ex. A.) Over two weeks later, on June 23, 2016, based solely on this email
26 from Nu Dotco's CFO, Plaintiff suggested to ICANN that Nu Dotco had changed
27 its ownership and/or management structure, but had not reported the change to
28 ICANN, as required. (Willet Decl. ¶ 12.) Plaintiff requested that the Auction be

1 delayed pending further investigation. Plaintiff also formally raised the issue with
2 the ICANN Ombudsman during the ICANN56 Public Meeting in late June 2016.
3 (Compl. ¶ 40; Willet Decl. ¶ 16.)

4 After receiving Plaintiff's allegations regarding Nu Dotco and the request to
5 postpone the Auction, ICANN investigated Plaintiff's claims. (Willett Decl. ¶¶ 12-
6 13.) On June 27, 2016, ICANN sent an email to Nu Dotco, asking it to confirm that
7 there had not been any "changes to your application or the [Nu Dotco] organization
8 that need to be reported to ICANN. This may include any information that is no
9 longer true and accurate in the application, including changes that occur as part of
10 regular business operations (*e.g.*, changes to officers and directors, application
11 contacts)." (Willett Decl. ¶ 13, Ex. B.) Mr. Rasco responded that same day to
12 "confirm that there have been no changes to the [Nu Dotco] organization that would
13 need to be reported to ICANN." (Willett Decl. ¶ 13, Ex. B.)

14 Subsequently, both ICANN staff and the Ombudsman contacted Mr. Rasco
15 to again inquire about the claims of potential changes in Nu Dotco's organization.
16 Specifically, ICANN staff interviewed Mr. Rasco by telephone on July 8, 2016
17 regarding the allegations. (Willett Decl. ¶ 18.) During that call, and later in a
18 confirming email on July 11, 2016, Mr. Rasco stated that: "Neither the ownership
19 nor the control of Nu Dotco, LLC has changed since we filed our application. The
20 Managers designated pursuant to the company's LLC operating agreement (the
21 LLC equivalent of a corporate Board) have not changed. And there have been no
22 changes to the membership of the LLC either." (Willett Decl. ¶ 18, Ex. F.) Mr.
23 Rasco also stated that he had already provided this same information to the ICANN
24 Ombudsman in responding to the Ombudsman's investigation of the complaint
25 lodged with him. (Willett Decl. ¶ 18.) After receiving information from Nu Dotco
26 and ICANN, the Ombudsman informed ICANN that, in his opinion, there was
27 nothing to justify a postponement of the Auction based on unfairness to the other
28 applicants. (Willett Decl. ¶ 21, Ex. G.)

1 After completing its investigation of the allegations regarding Nu Dotco's
2 application, on July 13, 2016, ICANN sent a letter to the members of the
3 Contention Set stating, among other things, that "in regards to potential changes of
4 control of [Nu Dotco], we have investigated the matter, and to date we have found
5 no basis to initiate the application change request process or postpone the auction."
6 (Zecchini Decl., Ex. G.)

7 On 17 July 2016, Plaintiff filed a reconsideration request ("Reconsideration
8 Request"), seeking postponement of the Auction and requesting a "thorough and
9 transparent investigation into the apparent discrepancies and/or changes in [Nu
10 Dotco's] .WEB/.WEBS application." (Zecchini Decl., Ex. H., § 9, Pg. 11.) On
11 July 21, 2016, ICANN's Board Governance Committee ("BGC") issued a twelve-
12 page determination denying Plaintiff's Reconsideration Request. ("Reconsideration
13 Request Determination," Zecchini Decl., Ex. I.) The Reconsideration Request
14 Determination explained that no postponement of the Auction was warranted
15 because: (1) ICANN had thoroughly investigated Plaintiff's claims and found that
16 Nu Dotco had not undergone a change in leadership or control; and (2) there was no
17 pending accountability mechanism (*i.e.*, a reconsideration request or IRP) that could
18 support a postponement of the Auction, because the accountability mechanisms
19 were not initiated before April 27, 2016, the day on which the Auction was
20 scheduled. As the BGC pointed out, under the agreed-upon Auction Rules, an
21 auction postponement is only warranted if there is a pending accountability
22 mechanism "prior to the scheduling of an Auction." (Zecchini Decl., Ex. J ¶ 10.)

23 Plaintiff is correct that the Auction is scheduled to officially begin on July 27,
24 2016 at 6:00 am Pacific time. But as Plaintiff knows well, many facets of the
25 Auction process ***are already underway***. For instance, by July 20, the Auction
26 participants transferred deposits into escrow accounts overseen by the Auction
27 provider, which may amount to as much as \$16 million in total. (Weinstein Decl. ¶
28 7.) Likewise, on July 20, the "blackout period" began, which is a period of time

1 called for in the Auction Rules during which auction participants are prohibited
2 from communicating, or cooperating, with one another in terms of the auction.
3 (Weinstein Decl. ¶ 7.) Tomorrow, on July 26, around 6:00 am Pacific time, the
4 Auction provider will conduct a “mock auction” in order to allow participants to
5 test connectivity and familiarize themselves with the system, if they are not already
6 familiar with it. (Weinstein Decl. ¶ 7.) About an hour later, the Auction provider
7 will open “early bidding,” which allows participants to submit their first round bids
8 in preparation for the start of the Auction. (Weinstein Decl. ¶ 7.) These early bids,
9 however, will not be accepted until after the Auction officially begins at 6:00 am
10 Pacific time on July 27. (Weinstein Decl. ¶ 7.)

11 **III. LEGAL STANDARD**

12 “The opportunities for legitimate ex parte applications are extremely
13 limited.” *Horne v. Wells Fargo Bank*, 969 F. Supp. 2d 1203, 1205 (C.D. Cal. 2013)
14 (citation and internal quotation marks omitted). A successful ex parte application
15 must demonstrate that there is good cause to allow the moving party to “go to the
16 head of the line in front of all other litigants and receive special treatment.”
17 *Mission Power Eng’g Co. v. Cont’l Cas. Co.*, 883 F. Supp. 488, 492 (C.D. Cal.
18 1995). “The use of such a procedure is justified only when (1) there is a threat of
19 immediate or irreparable injury; (2) there is danger that notice to the other party
20 may result in the destruction of evidence or the party’s flight; or (3) the party seeks
21 a routine procedural order that cannot be obtained through a regularly noticed
22 motion (*i.e.*, to file an overlong brief or shorten the time within which a motion may
23 be brought).” *Horne*, 969 F. Supp. 2d at 1205.

24 A temporary restraining order is available when the applicant may suffer
25 irreparable injury before the court can hear the application for a preliminary
26 injunction. 11A Charles Alan Wright, Arthur R. Miller & Mary Kay Kane, *Federal*
27 *Practice and Procedure* § 2951 (3d. 1998); *see* Fed. R. Civ. P. 65(b). But requests
28 for temporary restraining orders are governed by the same general standards that

1 govern the issuance of a preliminary injunction. *See New Motor Vehicle Bd. Of*
2 *Cal. v. Orrin W. Fox Co.*, 434 U.S. 1345, 1347 n.2 (1977); *L.A. Unified Sch. Dist. v.*
3 *U.S. Dist. Ct.*, 650 F.2d 1004, 1008 (9th Cir. 1981).

4 A preliminary injunction is an “extraordinary and drastic remedy” that is
5 never awarded as of right. *Munaf v. Geren*, 553 U.S. 674, 689-90 (2008) (citation
6 omitted). The court must determine whether the plaintiff has established **all** of the
7 following: (1) it is likely to succeed on the merits; (2) it is likely to suffer
8 irreparable harm in the absence of preliminary relief; (3) the balance of equities tips
9 in its favor; and (4) an injunction is in the public interest. *Winter v. Nat. Res. Def.*
10 *Council, Inc.*, 555 U.S. 7, 20 (2008).

11 Before these standards were announced in *Winter*, courts in the Ninth Circuit
12 applied an alternative “sliding-scale” test for evaluating preliminary injunctions that
13 allowed the movant to offset the weakness of a showing on one factor with the
14 strength of another, which is what Plaintiff erroneously relies upon as an
15 “alternative” test. *See Mot. at 20-21; Alliance for Wild Rockies v. Cottrell*, 632
16 F.3d 1127, 1132-35 (9th Cir. 2011). The Ninth Circuit has since held, however,
17 that “[t]o the extent our cases have suggested a lesser standard, they are no longer
18 controlling, or even viable.” *Am. Trucking Assocs. v. City of L.A.*, 559 F.3d 1046,
19 1052 (9th Cir. 2009). Accordingly, Plaintiff must show it can meet all four of the
20 preliminary injunction requirements set forth above. Plaintiff has not.

21 **IV. ARGUMENT**

22 **A. PLAINTIFF SEEKS EMERGENCY RELIEF ONLY BECAUSE** 23 **OF ITS OWN DELAY.**

24 *Ex parte* relief may not be awarded if the “emergency” nature of the request
25 is of the plaintiff’s “own making.” *See, e.g., Pascascio v. New Century Mortg.*
26 *Corp.*, No. CV 12-839 PSG (FMOx), 2012 U.S. Dist. LEXIS 68533, at *7 (C.D.
27 Cal. May 16, 2012) (denying temporary restraining order). Here, the urgent timing
28 of Plaintiff’s *ex parte* TRO was caused by its own delay.

1 Plaintiff's Complaint squarely admits that as of June 7, 2016, it was in
2 possession of all facts that it now submits as support for this dispute. Namely, that
3 as of at least June 7, 2016, Plaintiff purportedly believed there was a discrepancy
4 between Nu Dotco's application and its current ownership or management, and that
5 Nu Dotco would not agree to postpone the Auction. (Compl. ¶ 38.) On June 29,
6 2016, ICANN met with Mr. Nevett to discuss a number of business matters,
7 including his claims regarding Nu Dotco's management. (Willett Decl. ¶ 15.)
8 During that meeting, Mr. Nevett requested that the Auction be postponed because
9 of his claimed concerns that Nu Dotco had undergone a change in ownership or
10 management. (Willett Decl. ¶ 15.) ICANN informed him that it had already
11 investigated the alleged management changes with Nu Dotco's representative, who
12 had confirmed that no such changes had occurred. (Willett Decl. ¶ 15.) Based on
13 the fact that ICANN had no evidence of such a management change, ICANN was
14 continuing to proceed with the Auction as scheduled. Thus, in *early June* Plaintiff
15 could have filed its action and sought the relief it now seeks on an *ex parte* basis.
16 And at the very latest, Plaintiff could have sought relief shortly after ICANN
17 informed Plaintiff, on July 13, 2016, that ICANN "has investigated the matter" and
18 had no intention of postponing the Auction. (Compl. ¶ 43.) Instead, Plaintiff
19 waited until July 22 to file this matter, after many facets of the Auction process had
20 already begun (*see* Weinstein Decl. ¶ 7), and just two business days before bidding
21 officially begins.

22 ICANN and the Court are both therefore forced to rush into this matter,
23 which Plaintiff could have commenced weeks earlier. Because the emergency
24 Plaintiff invokes is entirely of Plaintiff's own making, the relief must be denied.
25 *See, e.g., Carnero v. Wash. Mut.*, No. C 09-5330 JF (RS), 2009 U.S. Dist. LEXIS
26 123532, at *4 (N.D. Cal. Dec. 30, 2009) ("Plaintiffs would have had to receive
27 notice of any sale some time ago; accordingly, the 'emergency' nature of their
28 application appears to be of their own making.").

1 **B. PLAINTIFF DOES NOT MEET THE REQUIREMENTS FOR**
 2 **THE ISSUANCE OF A TEMPORARY RESTRAINING ORDER.**

3 **1. Plaintiff Is Unlikely To Succeed On The Merits Of Its**
 4 **Claims.**

5 Plaintiff is not likely to succeed on the merits of its claims. Each of
 6 Plaintiff's causes of action is completely dependent on the assertion that there was a
 7 change to Nu Dotco's ownership or management that required ICANN to halt the
 8 Auction. The evidence submitted by ICANN with this Opposition—in particular,
 9 the sworn declarations of Nu Dotco's officers—demonstrate that Plaintiff's
 10 assertion is false and that ICANN reached the correct conclusion in finding no basis
 11 to delay the Auction. For instance, Nu Dotco's CFO, Mr. Rasco, has again
 12 confirmed, now under penalty of perjury, that "[t]here have been no changes or
 13 amendments made to Nu Dotco's management since the time that Nu Dotco
 14 submitted its .WEB application to ICANN" and that "[t]here have been no changes
 15 or amendments made to Nu Dotco's membership, nor has any transfer of
 16 membership otherwise occurred, since the time that Nu Dotco submitted its
 17 application to ICANN." (Rasco Decl. ¶¶ 6, 8.) Nu Dotco's COO, Mr. Bezsonoff,
 18 confirms the same in his declaration and explains that even though he is employed
 19 by another company currently, he is still performing his duties as an officer of Nu
 20 Dotco while they await resolution of the .WEB Contention Set. (Bezsonoff Decl.
 21 ¶¶ 5-6, 8-9.) Finally, Mr. Rasco explains in his declaration that the single email
 22 Plaintiff relies upon to support its claims was taken completely out of context and
 23 in no way communicated a change of ownership or management at Nu Dotco
 24 because there was no such change. (Rasco Decl. ¶¶ 11-15.)

25 Because there is no evidence justifying postponement of the Auction, each of
 26 Plaintiff's claims fail. And each claim is further deficient for the following reasons.

27 **(a) Plaintiff Is Unlikely To Succeed On The Merits Of The**
 28 **Contract Claim.**

 Plaintiff's breach of contract claim alleges that ICANN did not fulfill its

1 obligations set forth in the Bylaws, Articles or Guidebook in two ways, yet Plaintiff
2 will not succeed on the merits of either. (Compl. ¶¶ 54-63.)

3 First, Plaintiff alleges that ICANN breached its commitments under the
4 Bylaws to operate in a transparent, expedient, neutral and prompt manner. (Compl.
5 ¶ 60.) To start, the only contractual relationship between ICANN and Plaintiff is by
6 virtue of its status as an applicant for .WEB; Plaintiff does not cite any reasoning or
7 authority that suggests the terms of ICANN’s Bylaws are incorporated into the
8 contractual relationship between Plaintiffs and ICANN. *See Klein v. Chevron*
9 *U.S.A., Inc.*, 202 Cal. App. 4th 1342, 1384 (2012) (courts “must determine whether
10 the alleged agreement is ‘reasonably susceptible’ to the meaning ascribed to it in
11 the complaint” for breach of contract claims) (citation omitted); *Republic Bank v.*
12 *Marine Nat’l Bank*, 45 Cal. App. 4th 919, 923 (1996) (“A secondary document
13 becomes part of a contract as though recited verbatim *when it is incorporated into*
14 *the contract by reference* provided that the terms of the incorporated document are
15 readily available to the other party.”) (emphasis added and citation omitted).
16 Indeed, this Court has considered this precise issue in connection with another case
17 filed by a disappointed applicant against ICANN, and held that ICANN is only
18 bound by the contractual obligations set forth in the application documents to which
19 ICANN agreed to be bound, not other extraneous materials. *See Image Online*
20 *Design, Inc. v. Internet Corp. for Assigned Names & Nos.*, No. CV 12-08968 DDP
21 (JCx), 2013 U.S. Dist. LEXIS 16896, at *9, 11 (C.D. Cal. Feb. 7, 2013) (dismissing
22 breach of contract claim because the contract’s “provisions give ICANN no
23 responsibilities with respect to [the plaintiff’s new gTLD] Application beyond its
24 initial consideration of the Application . . . [the applicant] has pointed to no contract
25 terms that ICANN has breached.”) (Pregerson, J.).

26 Moreover, ICANN did *not* breach any of the cited Bylaws. As discussed
27 above, and as is replete in the evidence, ICANN engaged in a thorough and
28 transparent investigation of Plaintiff’s claims about Nu Dotco’s ownership or

1 management. Through multiple steps, ICANN staff verified that this claim was
2 factually inaccurate, and transparently informed Plaintiff of the results of its
3 investigation in its July 13, 2016 letter. (Compl. ¶ 43.) In addition, ICANN’s
4 Ombudsman investigated Plaintiff’s claims and found there was no support for
5 them. (Willett Decl. ¶¶ 11, 17, 19, 21.) Finally, ICANN’s BGC independently
6 evaluated Plaintiff’s assertions and concluded that there was no evidence showing
7 that postponement was necessary. (Zecchini Decl., Ex. I.) And, tellingly, each of
8 these separate findings have been confirmed by the declarations of Nu Dotco
9 executives stating, under penalty of perjury, that no ownership or management
10 change has occurred. (*See generally* Rasco Decl.; Bezsonoff Decl.)

11 As to the second portion of Plaintiff’s breach of contract claim, Plaintiff
12 alleges that “ICANN also promised that a contention set would only proceed to
13 auction where all active applications in the contention set have ‘no pending ICANN
14 Accountability Mechanisms’.” (Compl. ¶ 61.) This argument ignores the plain text
15 of the Auction Rules. All applicants agreed to the terms of the Guidebook when
16 they applied, and Plaintiff has recently signed a Bidder’s Agreement agreeing that
17 the Auction is governed by the Auction Rules. The operative Auction Rules, dated
18 February 24, 2015, state that all “*pending* ICANN Accountability Mechanisms”
19 must be resolved “prior to the *scheduling* of an Auction.” (Zecchini Decl., Ex. J ¶
20 10 (emphasis added).) Here, the Auction was *scheduled* on April 27, well before
21 Plaintiff invoked any ICANN accountability mechanism. Plaintiff did not lodge a
22 complaint with the Ombudsman until late June, two months after the Auction was
23 scheduled. (Compl. ¶ 40.) Similarly, Plaintiff did not submit a Reconsideration
24 Request until July 17. (Compl. ¶ 49.) And Plaintiff did not even attempt to initiate
25 a Request for Independent Review until July 22, 2016. (Nevett Decl. ¶ 9.) Thus,
26 no ICANN accountability mechanisms were pending on April 27, 2016 when the
27 Auction was scheduled. Indeed, the Auction Rules were designed to, among other
28 things, prevent exactly this sort of late, unilateral attempt to delay an auction.

1 Finally, Plaintiff's allegation that ICANN was motivated by money to not
2 investigate Plaintiff's claims regarding Nu Dotco because ICANN receives the
3 financial proceeds of all new gTLD auctions (Compl. ¶ 62), is misguided. As a
4 nonprofit, ICANN has no interest in financial gain for its own sake. The plain text
5 of the Guidebook makes clear that ICANN will put all proceeds stemming from
6 new gTLD auctions toward charitable purposes: "Any proceeds from auctions will
7 be reserved and earmarked until the uses of funds are determined. Funds must be
8 used in a manner that supports directly ICANN's Mission and Core Values and also
9 allows ICANN to maintain its not for profit status." (Guidebook § 4.3, n.1.) More
10 specifically, the Guidebook provides that "[p]ossible uses of auction funds include
11 formation of a foundation with a clear mission and a transparent way to allocate
12 funds to projects that are of interest to the greater Internet community" (*Id.*)
13 As has been widely publicized, the auction proceeds will be utilized in a manner to
14 be determined by the community, which is likely to predominantly include various
15 global charitable purposes, as the Guidebook suggests. These auction proceeds
16 have been reserved until the ICANN Board authorizes a plan for the appropriate use
17 of the funds. (Weinstein Decl. ¶ 7.) The ICANN community has indicated that it
18 wants to create a Cross-Community Working Group to develop proposals for
19 eventual consideration by the ICANN Board. (Weinstein Decl. ¶ 7.) During the
20 ICANN56 Public Meeting, a meeting took place on June 28, 2016 to discuss the
21 formation of that Cross-Community Working Group.³

22 **(b) Plaintiff Is Unlikely To Succeed On The Merits Of The**
23 **Breach Of Implied Covenant Of Good Faith And Fair**
24 **Dealing Claim.**

25 Plaintiff's breach of the implied covenant of good faith and fair dealing claim
26 relies on the same allegations asserted in the breach of contract claims—that

27 ³ See <https://icann562016.sched.org/event/7NE0/cross-community-session-charter-for-the-ccwg-on-auction-proceeds?iframe=no&w=i:100;&sidebar=yes&bg=no>.

1 ICANN did not conduct an “adequate investigation” of Nu Dotco and improperly
2 failed to postpone the Auction. (Compl. ¶ 67.) Thus, Plaintiff’s breach of the
3 implied covenant claims is as deficient as its breach of contract claim.

4 **(c) Plaintiff Is Unlikely To Succeed On The Merits Of The**
5 **Negligence Claim.**

6 Plaintiff is on even less firm footing with respect to its negligence claim.
7 “Actionable negligence is traditionally regarded as involving the following: (a) a
8 legal duty to use due care; (b) a breach of such legal duty; (c) the breach as the
9 proximate or legal cause of the resulting injury.” *Jackson v. AEG Live, Inc.*, 233
10 Cal. App. 4th 1156, 1173 (2015) (citation omitted). ICANN, however, owes
11 Plaintiff no legal duty of care, and, in any event, ICANN did not breach any duty
12 owed to Plaintiff.

13 To start, the economic loss rule bars Plaintiff’s negligence claim, because
14 ICANN owes no legal duty to Plaintiff above and beyond its contractual
15 obligations. As the California Supreme Court has recognized, “[t]he economic loss
16 rule requires a [contractual party] to recover in contract for purely economic loss
17 due to disappointed expectations, unless he can demonstrate harm above and
18 beyond a broken contractual promise.” *Robinson Helicopter Co. v. Dana Corp.*, 34
19 Cal. 4th 979, 988 (2004); *In re iPhone Application Litig.*, 844 F. Supp. 2d 1040,
20 1064 (N.D. Cal. 2012) (“Purely economic damages to a plaintiff which stem from
21 disappointed expectations from a commercial transaction must be addressed
22 through contract law; negligence is not a viable cause of action for such claims.”).
23 Plaintiff has not alleged any harm other than purported damages stemming from its
24 contractual relationship with ICANN. The negligence claim must therefore fail as a
25 matter of law. *See In re Sony Gaming Networks & Customer Data Sec. Breach*
26 *Litig.*, 996 F. Supp. 2d 942, 973 (S.D. Cal. 2014) (granting motion to dismiss
27 negligence claim with prejudice based on economic loss rule).
28

1 **(d) Plaintiff Is Unlikely To Succeed On The Merits Of The**
2 **Unfair Competition Claim.**

3 Plaintiff makes allegations under all three prongs of Section 17200. First,
4 Plaintiff claims that ICANN acted in an “unlawful” manner by the including the
5 Covenant Not to Sue in the Guidebook. (Compl. ¶ 77.) Second, Plaintiff alleges
6 that ICANN acted “unfair[ly] when it conducted what Plaintiff views as a “cursory
7 investigation” into Plaintiff’s claims about Nu Dotco, and decided based on that
8 investigation not to postpone the Auction. (Compl. ¶ 78.) Third, Plaintiff alleges
9 that ICANN acted in a fraudulent manner when it represented that it would adhere
10 to the terms of its Bylaws and the Auction Rules. (Compl. ¶ 79.) All three claims
11 fail because there is nothing unlawful about the Covenant Not to Sue, as discussed
12 below, ICANN fully investigated Plaintiff’s claims regarding Nu Dotco and
13 ICANN’s conduct at all times complied with its obligations under its Bylaws and
14 the Guidebook. In addition, Plaintiff has not established standing to assert its
15 Section 17200 claim because Plaintiff has not “lost money or property” because of
16 the alleged violations of the statute, as required. Cal. Bus. & Prof. Code § 17203.

17 **(e) Plaintiff Is Unlikely To Succeed On The Merits Of The**
18 **Declaratory Relief Claim.**

19 Plaintiff’s declaratory relief claim seeks a judicial declaration concerning one
20 and only one matter: “the legality and effect” of the Covenant Not to Sue. Yet for
21 all of the reasons discussed below, the Covenant Not to Sue is fully enforceable.
22 *See generally Commercial Connect v. Internet Corp. for Assigned Names & Nos.*,
23 No. 3:16-cv-00012-JHM, 2016 U.S. Dist. LEXIS 8550 (W.D. Ky. Jan. 26, 2016)
24 (denying an application for emergency injunctive relief seeking to prevent a new
25 gTLD auction from taking place the next day). Moreover, the enforceability of the
26 Covenant Not to Sue has no bearing on whether the Auction should proceed. Even
27 if Plaintiff were successful in challenging the Covenant Not to Sue, Plaintiff has no
28 cause of action against ICANN. In other words, the Auction could and should

1 proceed while Plaintiff litigates whether it can litigate with ICANN.

2 **2. Plaintiff Will Not Suffer Irreparable Harm In The Absence**
3 **Of The Requested Injunctive Relief.**

4 Plaintiff will *not* suffer irreparable harm in the absence of the requested
5 injunctive relief. To start, monetary loss does not comprise irreparable injury for
6 purposes of assessing the propriety of injunctive relief. *Amylin Pharms., Inc. v. Eli*
7 *Lilly & Co.*, 456 F. App'x 676, 678 (9th Cir. 2011) (affirming denial of preliminary
8 injunction because “harm that is fully compensable through money damages . . .
9 does not support injunctive relief”). Whatever the results of the Auction, any harm
10 Plaintiff might claim to have suffered is purely financial. Indeed, Plaintiff may well
11 win the Auction for .WEB. Should that occur, its only claim would arise from the
12 presence of Nu Dotco in the Auction, possibly raising Plaintiff’s winning bid. But
13 the risk that an auction might include a participant subject to later disqualification is
14 already fully addressed in the agreed Auction Rules. In particular, paragraph 62 of
15 the Auction Rules concerns “Effect of Ineligibility of Winner To Sign a Registry
16 Agreement or To Be Delegated the Contention String.” It provides mechanisms to
17 address the situation when an auction took place with a participant that is later
18 disqualified. Having agreed to these mechanisms, Plaintiff has no basis to assert
19 that losses from such circumstances are irreparable. To the extent it is concerned
20 about “disclosure of how each of the applicant’s [sic] valued .WEB as well as the
21 bidding strategies for each bidder,” (Mot. at 28) it has already agreed that such
22 disclosure does not justify cancelling an auction.

23 Moreover, the results of an auction “could be undone” if a disqualification is
24 discovered even long afterward. (*Cf.* Mot. at 28.) There is no technological barrier
25 that would prevent the transfer of the Registry Agreement for a gTLD from one
26 registry operator to another after the gTLD is contracted or even delegated into the
27 root zone and in operation. (Weinstein Decl. ¶ 15.) In fact, Section 7.5 of the
28 Registry Agreement defines the rules and regulations regarding the process for

1 transferring a gTLD from one registry operator to another. (Weinstein Decl. ¶ 15.)
2 For that reason as well, Plaintiff cannot demonstrate that it will suffer irreparable
3 harm if the Auction goes forward.

4 Plaintiff has not shown irreparable harm, and that failure alone serves as a
5 basis to deny the requested relief. *ET Trading, Ltd. v. ClearPlex Direct, LLC*, No.
6 15-CV-00426-LHK, 2015 U.S. Dist. LEXIS 25894, at *8 (N.D. Cal. Mar. 2, 2015)
7 (“The Court need not address all of the *Winter* factors because the Court finds that
8 Plaintiff has failed to carry its burden of demonstrating that it would be irreparably
9 harmed absent a temporary restraining order”).

10 **3. The Balance Of The Equities Weighs Against The Issuance**
11 **Of Injunctive Relief.**

12 As for the balance of the harms, Plaintiff claims that “ICANN cannot claim
13 any actual harm” were the Auction to be postponed. Not so. If ICANN postpones
14 the Auction with no basis (and there is none here), it would be manifestly unfair to
15 the other applicants that have invested time and money in their applications, and
16 have deposited funds into an escrow account in preparation for the Auction. In
17 addition, should the Auction be cancelled, ICANN would suffer a monetary loss of
18 at least \$10,000, in the form of a fee the Auction provider would charge ICANN,
19 and then pay more fees and invest more administrative expense when the Auction is
20 almost certainly re-scheduled. (*See* Weinstein Decl. ¶ 13.) Others of the scheduled
21 participants, many of which did not join Plaintiff’s request to postpone, would also
22 be harmed by delay. They have made large deposits (up to \$2 million each) in
23 anticipation of the auction and have otherwise engaged in significant preparation.
24 (Weinstein Decl. ¶ 7.) In short, a delay in the Auction and resolution of the
25 Contention Set will disrupt the orderly progression of the New gTLD Program.

26 **4. The Public Interest Strongly Favors Denying Plaintiff’s**
27 **Application For A Temporary Restraining Order.**

28 Plaintiff bears the burden of showing that its requested injunctive relief is in

1 the public interest. *Stormans, Inc. v. Selecky*, 586 F.3d 1109, 1139 (9th Cir. 2009).
2 Indeed, where rules are at play that all relevant parties have relied upon, the public
3 interest weighs in favor of enforcing those rules. *Id.* at 1140. Here, there is no
4 authority in the Guidebook, Auction Rules, elsewhere that requires ICANN to
5 postpone the Auction. Such delay would set a precedent that would upset the
6 orderly expansion of gTLDs. Should the Court award Plaintiff the relief it seeks,
7 any applicant headed to auction could concoct a minor discrepancy it claims exists
8 with respect to another applicant within the same contention set, and seek to rely on
9 this Court’s ruling to support postponement of the auction. When such widespread
10 harm could result from the issuance of injunctive relief, affecting public rights as
11 well as those of the parties to the lawsuit, “the court may in the public interest
12 withhold relief until a final determination of the rights of the parties, though the
13 postponement [of the requested relief] may be burdensome to the plaintiff.”
14 *Weinberger v. Romero-Barcelo*, 456 U.S. 305, 312 (1982) (citation omitted).

15 **C. THE COVENANT NOT TO SUE BARS THIS LAWSUIT.**

16 Apart from Plaintiff’s delay in bring this action and Plaintiff’s inability to
17 satisfy the elements required for issuance of the TRO, Plaintiff’s claims against
18 ICANN are barred by the Covenant Not to Sue, which Plaintiff acknowledged and
19 Plaintiff’s ultimate parent company accepted over 300 times through its
20 subsidiaries. Indeed, as the district court in the Western District of Kentucky
21 recently held under nearly identical circumstances, the Covenant Not to Sue is
22 “clear and comprehensive” and bars claims “aris[ing] out of ICANN’s review of [a
23 new gTLD application]” *Commercial Connect*, 2016 U.S. Dist. LEXIS 8550,
24 at *9-10.

25 A written release extinguishes any claim covered by its terms. *Skrbina v.*
26 *Fleming Cos.*, 45 Cal. App. 4th 1353, 1366 (1996). Further, “a general release can
27 be completely enforceable and act as a complete bar to all claims (known or
28 unknown at the time of the release) despite protestations by one of the parties that

1 he did not intend to release certain types of claims.” *San Diego Hospice v. Cty. of*
2 *San Diego*, 31 Cal. App. 4th 1048, 1053 (1995).

3 Plaintiff recognizes these principles, and argues that the Covenant Not to Sue
4 is unenforceable for one and only one reason: California Civil Code § 1668
5 (“Section 1668”). (See Mot. at 25, 27.) But Section 1668 only invalidates contracts
6 that “exempt anyone from responsibility for his own fraud, or willful injury to the
7 person or property of another.” Cal. Civ. Code § 1668. Courts have interpreted
8 Section 1668’s phrase “willful injury to the person or property of another” to mean
9 more than merely intentional conduct (such as breach of the contract), but instead
10 “**intentional wrongs.**” *Frittelli, Inc. v. 350 N. Canon Drive, LP*, 202 Cal. App. 4th
11 35, 43 (2011) (“Ordinarily, the statute invalidates contracts that purport to exempt
12 an individual or entity from liability for future intentional wrongs and gross
13 negligence.”) (emphasis added and citations omitted).

14 The most Plaintiff alleges in its Complaint is that ICANN failed to
15 thoroughly investigate Nu Dotco’s ownership and management because ICANN
16 preferred the Auction to proceed. (Compl. ¶ 68.) But even such wild accusations
17 do not comprise the kind of intentional wrongs covered by Section 1668. Indeed,
18 *Food Safety Net Servs. v. Eco Safe Sys. USA, Inc.*, 209 Cal. App. 4th 1118 (2012),
19 is on point. There, a food-disinfectant equipment manufacturer alleged that a food-
20 safety equipment tester failed to test the equipment using agreed-upon standards, in
21 bad faith, and employed “slovenly procedures which seemed to be slanted towards
22 a preconceived conclusion.” *Id.* at 1125 (citation omitted). Despite these
23 allegations and an invocation of Section 1668, the court held that a limitation of
24 liability clause in the parties’ contract was enforceable and barred not only the
25 plaintiff’s claim for breach of contract but also plaintiff’s “bad faith” claim. *Id.* at
26 1125–27, 1130.

27 In addition, interpreting Section 1668 to invalidate the Covenant Not to Sue
28 runs contrary to the public interest. The Guidebook is not merely a contract

1 between two parties. It was adopted through an extensive public comment process
2 to govern the nearly 2,000 applications that ICANN received and was tasked with
3 evaluating—including competing applications for the same gTLD such as those of
4 Plaintiff and Nu Dotco. The Covenant Not to Sue ensures that the processing of
5 these applications does not get ensnared in endless litigation by disappointed
6 applicants. If Plaintiff’s argument is accepted, the Covenant Not to Sue could
7 become dead letter—and the important purposes it serves frustrated.

8 Plaintiff argues that the recent, unpublished district court decision in
9 *DotConnectAfrica Trust v. ICANN* supports its position. (See Mot. at 9 (citing
10 *DotConnectAfrica Trust v. Internet Corporation for Assigned Names & Nos., et al.*,
11 Case No. 2:16-cv-00862-RGK-JC (C.D. Cal. Apr. 12, 2016) (“*DCA*”).) That
12 argument is unavailing for three reasons. First, it cannot be squared with another
13 recent ruling upholding the Covenant Not to Sue, namely *Commercial Connect,*
14 *LLC v. Internet Corp. for Assigned Names and Numbers*, No. 3:16CV-00012-JHM,
15 2016 U.S. Dist. LEXIS 8550, at *1 (W.D. Ky. Jan. 26, 2016). In *Commercial*
16 *Connect*—which, unlike *DCA*, involved an effort to enjoin an auction – the court
17 denied a temporary restraining order requested by an applicant for the .SHOP gTLD
18 one day before the auction was to take place. *Id.* at *1, 11. The district court ruled
19 that the Covenant Not to Sue appeared enforceable and for that reason denied the
20 requested injunctive relief. *Id.* at *10-11. That Plaintiff does not cite the case from
21 Kentucky in its TRO is telling; it comprises a well-reasoned, directly on point
22 decision. Second, the district court’s ruling in *DCA* was issued at the preliminary
23 injunction stage, so it is merely the view of one court that there are “serious
24 questions” as to its enforceability. Third, that very ruling is currently on appeal to
25 the Ninth Circuit on an expedited basis.

26 **V. PLAINTIFF’S EXPEDITED DISCOVERY REQUEST MUST ALSO**
27 **BE DENIED.**

28 Plaintiff’s request for expedited discovery, from both ICANN and non-

1 parties alike, is unjustifiably onerous and there is no legal basis for the request.

2 Such an extreme demand may only be granted with good cause, which
3 exists only where the need for expedited discovery, in consideration of the
4 administration of justice, outweighs the prejudice to the responding party.
5 *Semitoool, Inc. v. Tokyo Electron Am., Inc.*, 208 F.R.D. 273, 276 (N.D. Cal. 2002).
6 Here there is no good cause. To put it simply, whether Nu Dotco changed
7 ownership or management is a yes or no question. After a reasonable investigation,
8 ICANN determined that the answer is no.⁴ Now, Nu Dotco’s managers have
9 declared the same under penalty of perjury. No discovery could possibly aid the
10 Court in resolving the baseless claims Plaintiff raises here, and the request for
11 expedited discovery should therefore be denied, along with the TRO application.
12 *See Dimension Data N. Am., Inc. v. Netstar-1, Inc.*, 226 F.R.D. 528, 532 (E.D.N.C.
13 2005) (denying expedited discovery where requests not narrowly tailored to obtain
14 information relevant to requested preliminary injunction).

15 **VI. CONCLUSION**

16 For the foregoing reasons, Plaintiff’s TRO application must be denied.

23 ⁴ Even if the answer were “yes,” the ordinary response would be to allow Nu
24 Dotco to amend its application. And even if Nu Dotco had submitted a change
25 request because it had undergone a change of control or ownership, it would not
26 have been disqualified from the auction set to take place on July 27, 2016. (Willett
27 Decl. ¶ 11.) In fact, a large number of applications have made a change the
28 questions pertaining to ownership or control of the applicant, and no application has
been disqualified to date over one of these changes. (Willett Decl. ¶ 11.) The
Auction Rules also provide that “ICANN reserves the right . . . to postpone a
scheduled Auction if a change request by one or more applicants in the Contention
Set is pending, *but believes that in most instances the Auction should be able to
proceed without further delay.*” (Zecchini Decl., Ex. C ¶ 8 (emphasis added).)

.WEB Acquired for \$135 Million. Too much? How does it compare?

SHARE

Twitter

Linkedin

Email

At \$135 million, .WEB is the highest valued first round new Top Level Domain registry sold at auction. It sets a new high bar on the value of TLDs. Nu Dot Co and its investors, prevailed in an ICANN auction and are now the proud owners of the .WEB

TLD	VALUE (USD)	BUYER
.WEB	\$135,000,000	Nu Dot Co
.SHOP	\$41,500,000	GMO Registry, Inc.
.APP	\$25,000,000	Charleston Road Registry Inc. (Google)
.BLOG (1)	\$19,000,000	Automattic Inc. (Wordpress)
.TECH	\$6,760,000	Dot Tech LLC (Radix)

In the past two years, other TLD registries have sold for millions of dollars. Now that the big one (.WEB) is done, it is interesting to look at the relative value of these acquisitions and consider how these

investments make sense for the buyers. The top 5 new TLD acquisition prices are listed below and a discussion follows.

Source: <https://gtldresult.icann.org/application-result/applicationstatus/auctionresults>

¹ Reported but unverified

In March 2015, I wrote an article; [Did Google Overpay for .APP?](#) The conclusion was, “no they did not overpay”. This was based on Google’s leading mobile app market position and .APP would allow them to own a new channel, introduce a new paradigm on app discoverability, and leverage Google’s Android market position in the application distribution market.

Then there was .SHOP, purchased for \$41.5 million by GMO Registry. This one, I find to be a head scratcher in terms of the valuation. It is a good TLD, no question. It has clear meaning as an ecommerce destination but \$41.5 million for a niche or single purpose TLD seems rich to me. .SHOP operators and investors will need to take a long view, dedicate significant marketing spend to develop a value proposition to deliver a new, better, and different offering to ecommerce merchants, and gain market traction. Did GMO overpay? Probably.

How about .BLOG, purchased for a reported \$19 million by Automattic Inc., parent of WordPress? Wordpress is a leading website building and blogging software company. By various reports 25 – 27% of all websites use WordPress and millions of

to drive growth. They can offer services that are unique in the market, increasing the value of their entire business. Secondly, as a defensive position, they ensure competitors are not armed with a powerful digital asset to disrupt their respective positions. .BLOG gets a thumbs up and in my view a good buy for Automattic. Not only will they sell millions of .BLOG domains, they will dramatically increase the worldwide awareness of new TLDs. That's a win for the industry as well.

Where .APP and .BLOG have explicit meanings and added power due to the market positions of the acquirers, .SHOP is seeking to carve a new extension as an ecommerce destination alternative. This all makes sense but \$41.5 million is a big number to dig out of, from a return on investment perspective.

.WEB is a different animal. This acquisition valuation is proof. .WEB is what we call a "super generic" and arguably the best new TLD alternative to .COM. It is a word that is commonly used with intuitive meaning. WEB could make a serious dent to .COM over the long run. With an initial investment of \$135 million you have to assume the owners will follow their acquisition capital with serious marketing spend. Domain speculation in the .WEB space will be furious at launch. Premium domain sales for .WEB are likely to be orders of magnitude larger than in any other TLD introduced and as the .WEB space matures, those premium values will rise. Of course, this assumes Nu Dot Co drives forward with the now familiar premium domain strategy.

\$135 million is a shocking number. It can be a winner assuming funds to support a major marketing and communication plan as the best alternative to .COM, or if Verisign, a cozy super-generic companion to .COM. .CO positioned as a viable alternative and currently have under 2 million registrations versus .COM at 126 million. Recall, Neustar acquired .CO for \$109 million on \$21 million in revenue with approximately 1.5 million domains under management.

Let's assume Verisign is indeed the .WEB backer. Today, Verisign generates over \$1 billion in revenue and a +60% operating profit. Nice business. The challenge for Verisign is not EBITDA or cash flow, it is growth. In their recent quarterly financial release, Verisign grew by 9% in the quarter compared to the same quarter in 2015.

.WEB, the company now owns a new growth engine and they are uniquely positioned to drive it. Some suggest they would bury it to protect .COM. That is not in the best interest of shareholders. .COM is still king, will be for some time and .WEB can immediately contribute healthy operating profits out of the gate. If well executed, .WEB can add significant shareholder value.

If the tea leaves are misleading and everybody is wrong about Verisign, then we will have to write another blog on those implications. If it is Neustar, for example, then the market dynamics are entirely different. We are also likely to see a gun fight on how this all materialized with the secret backer of Nu Dot Co.

The Economics of a TLD Registry

Let's now assume it is not Verisign, the economics of a TLD registry are very good at scale from 1 million to 100 million Domains Under Management (DUM).

This chart models Domain Under Management (DUM), an assumed registry price of \$8, the annual revenue, (ignoring one-time premium domain revenues) and assumed EBITDA improving from 10% to 50% as economies of scale kick in for a well run registry. Then apply business valuations at 5 times revenue (conservative low bar) or 20 times EBITDA, whichever you prefer.

Revenue	\$8,000,000	\$16,000,000	\$40,000,000	\$80,000,000	\$800,000,000
EBITDA	\$800,000	\$3,200,000	\$12,000,000	\$32,000,000	\$400,000,000
<i>Operating Margins</i>	10%	20%	30%	40%	50%
Value @ 5x Revenue	\$40,000,000	\$80,000,000	\$200,000,000	\$400,000,000	\$4,000,000,000
Value @ 20x Profit	\$16,000,000	\$64,000,000	\$240,000,000	\$640,000,000	\$8,000,000,000

For comparison, Verisign with 126 million DUM, \$1B in revenue, generates 60% in profit and a \$9B Market Cap and .CO was acquired by Neustar for \$109 with revenue at \$21 million and 1.6 million DUM.

The trick of course is getting to scale, how much additional investment will be required to get to scale and will the market demand exist for .WEB. For the investors at Nu Dot Co, you now own a valuable asset that will take time and skilled execution to monetize. We will need a few years to determine if \$135 million was too much, just right or a home run investment. The potential to create a highly valuable business that generates tremendous profit and cash is there if they drive to scale.

If it is Verisign, it is a brilliant move, not unlike .BLOG and .APP, it extends Verisign's .COM position and is the growth engine they need.

The new TLD market continues to be increasingly dynamic and interesting with each passing day.

Technology

How a \$135 million auction affects the domain name industry and your business

The cost of protecting assets and creating a new revenue stream

By Cybele Negris | August 10, 2016, 11:24am

niroworld/Shutterstock

On July 27, the Internet Corporation for Assigned Names and Numbers (ICANN) ran an auction for the generic top-level domain (gTLD) .web that culminated in a winning bid of \$135 million. Nu Dot Co LLC produced the winning bid and on August 1, Verisign, a global leader in domain names and internet security, confirmed in a [press release](#) that they

provided the necessary funds for Nu Dot Co's successful bid. But wait one second, let's back this up - \$135 million for .web?

The previous highest public price for a gTLD happened just over seven months ago when GMO Registry of Japan acquired the .shop gTLD for \$41.5 million. While not a number to sneeze at, Verisign blew away the previous record high. And while we're making comparisons, remember that \$100 million venture capital investment in Shopify back in 2013? Shopify is now a public company and an absolute force in the e-commerce game while its value is soaring past a billion dollars.

So that brings us back to Verisign and their brand new \$135-million baby. What exactly are Verisign's plans for .web? To turn the new investment into a billion-dollar web sensation? According to their press release, "as the most experienced and reliable registry operator, Verisign is well-positioned to widely distribute .web." They plan on utilizing their "expertise, infrastructure, and partner relationships to quickly grow .web and establish it as an additional option for registrants worldwide." This can certainly hold true as .web is widely considered the gTLD with the most potential out of 1,930 applications for new domain extensions ICANN received to battle .com and .net for widespread adoption.

In the past 30 years, Verisign has registered over 127 million .com domain names and nearly 16 million .net domain names. These are two of the most popular top-level domains available while the most adopted new gTLD, .xyz, has garnered over six million registrations since entering the market a little over two years ago. If Verisign is able to average three million .web registrations year-over-year, like .xyz, at a guesstimated price of \$10 USD, with an annual renewal rate of 50%, they would break even on their investment in about 3 years (\$30,000,000 in year one, \$45,000,000 in year two and \$52,500,000 in year three). Of course, if renewal rates are lower or Verisign cannot achieve three million domains a year, it will take longer to reach break-even.

The runner-up in the .web auction, potentially a giant with immense resources such as Google, could eat into Verisign's top-level domain market share, taking aim at its .com and .net properties. Let's say Verisign bowed out of the auction early and allowed another registry to directly compete against .net with a synonymous .web domain name. With a stagnating stock price, Verisign would not be in a fantastic position to improve on that with a strong competitor nipping at its heels. From this perspective, the cost of doing business for Verisign is more than worthwhile, even if they happen to not generate a single dollar of revenue from .web for years to come.

What does this all mean for your business and web presence?

.Web will not be publicly available for some time; and while Verisign may or may not have acquired the gTLD mainly to keep competitors away, most pundits believe that they will make it publicly available. Once released, it would be prudent for all businesses that already own a .com and/or .net to register the .web variation for their business to avoid resellers from scooping them up and charging a premium.

Be sure to [pre-register for .web](#) domain names as soon as you can so that you are alerted as soon as .web launches and becomes publicly available.

If you are a trademark owner, be sure to register with the [Trademark Clearinghouse](#) in advance to ensure that yourtrademark.web can be secured during the [sunrise period](#)." This stretch of time is designed specifically for trademark holders to reserve their domain names before anyone else has access.

Perhaps you missed out on the .com or .net variation of your business; now you have an excellent opportunity to grab the .web version of your domain name and once you register the domain, a simple 301 redirect from your existing domain to the .web variation will provide a seamless transition to your ideal domain name.

Put your thinking cap on and begin generating lists of relevant generic domain names for your industry that will not infringe on another businesses' trademarks. Once .web launches, consider registering these domain names under the .web gTLD. These could be incredibly useful as landing pages for search engine marketing tactics or as a new revenue stream for your business as others may start knocking on your door looking to take these domain names off your hands for a price.

If you have a .com or .net domain name, keep a close eye on the costs of these as Verisign might be looking to boost their margins on these assets. While [Verisign cannot increase their price for .com](#) under their current contract with ICANN which ends in 2018, they are able to increase the price of .net by 10% every year until the end of that agreement in 2017.

Cybele Negris (cybele@webnames.ca) is president, CEO and co-founder of Webnames.ca, Canada's original .CA registrar. She serves on the boards of Small Business BC, Small Business Roundtable of BC, Capilano University and the Capilano University Foundation.

THIS WEEK IN SEO 60

BRANDS, DOMAINS, AND YOUTUBE

THE DEATH OF GENERICS AND THE DOMINANCE OF BRANDS

<http://www.seobook.com/brands-beat-generics>

Aaron Wall, the Cormac McCarthy of SEO (google it), published a great post looking at how generic domains like cooking.com and drugstore.com have failed to thrive, but the big brands behind them (Target and Walgreens, respectively) are doing just fine.

If you invest in zero-sum markets there needs to be some point of differentiation to drive switching. There might be opportunity for a cooking.com or a drugstore.com targeting emerging and frontier markets where brands are under-represented online (much like launching Drugstore.com in the US back in 1999), but it is unlikely pure-play ecommerce sites will be able to win in established markets if they use generically descriptive domains which make building brand awareness and perceived differentiation next to impossible.

Digging in to how brands succeed/fail in SEO (and business in general) is one of the topics that hasn't yet been beaten to death by the SEO conference-circuit (R.I.P., my interest in reading about content marketing).

I enjoyed this article, definitely give it a read.

THE NEXT BIG DOMAIN EXTENSION

<http://domainnamewire.com/2016/07/29/verisign-paid-135-million-web-top-level-domain/>
com

Speaking of domain names...

Verisign, the juggernaut of a company behind .com/.net (a.k.a.the big 3) just paid \$135,000,000 to acquire the .web extension.

You've seen these new extensions over the last few years—.ninja, .rent, .guru (side note: still waiting for <http://seo.guru> to be developed...).

Some of these new extensions are kind of garbage, like .FYI, but .web makes sense to a lot of people, and is poised to be one of the most popular new extensions.

Here's why Verisign paid 3x as much as any other new gTLD for .web:

It views it as competitive to .com – a handful of industry watchers and top level domain name companies have said that .web is the one domain that could unseat .com. While that's open to debate, Verisign might have viewed this as an opportunity to take the greatest threat from the new TLD program off the table.

It views it as competitive of .net – this might sound odd, but keep in mind .net is a 9-figure-a-year business for Verisign. You can argue that .web has a similar connotation to .net. It could be a viable alternative for people who traditionally buy a .net when the .com is taken.

So start coming up with those domain names now, so hit the ground running when this domain hits the registrars (no date on that yet).

Announcement: 30 September 2014 – [ICANN Updates Application Change Request Process](#)

Announcement: 30 September 2014 – [Change Request Advisory](#)

Change Request Overview

Per section 1.2.7 of the Applicant Guidebook:

If at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

This section of the Applicant Guidebook further states:

ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round.

Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application.

The Application Change Request ("ACR") process was created during the application window in order to allow applicants to notify ICANN of changes to application materials.

Change Request Determination Criteria

Determination of whether changes will be approved will balance the following factors:

1. **Explanation** – Is a reasonable explanation provided?
2. **Evidence that original submission was in error** – Are there indicia to support an assertion that the change merely corrects an error?
3. **Other third parties affected** – Does the change affect other third parties materially?
4. **Precedents** – Is the change similar to others that have already been approved? Could the change lead others to request similar changes that could affect third parties or result in undesirable effects on the program?
5. **Fairness to applicants** – Would allowing the change be construed as fair to the general community? Would disallowing the change be construed as unfair?
6. **Materiality** – Would the change affect the evaluation score or require re-evaluation of some or all of the application? Would the change affect string contention or community priority consideration?
7. **Timing** – Does the timing interfere with the evaluation process in some way? ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round. (AGB §1.2.7.)

These criteria were carefully developed to enable applicants to make necessary changes to their applications while ensuring a fair and equitable process for all applicants.

In evaluating each change request, all available information is considered against the seven criteria above. The weight of each criterion may vary on a case-by-case basis, depending on the facts and circumstances surrounding the change request, the application, and the string.

Explanation – This criterion requires that the applicant provide an explanation for the requested changes. If an explanation is not provided, the applicant is given an opportunity to remediate. As such, this criterion is always met and does not bear as much weight as the other criteria.

Evidence that original submission was in error – This criterion is applicable in cases where the applicant requests a change to correct an error. In this case, the criterion requires that the applicant provide adequate information to support the request. There are few cases of change requests to correct an error. However, when such a case is submitted, this criterion is heavily weighted.

Other third parties affected – This criterion evaluates whether the change request materially impacts other third parties, particularly other applicants. In cases where a change to application material has the potential to materially impact the status of another applicant's application, this criterion is heavily weighted.

Precedents – This criterion assesses whether approval of the change request would create a new precedent, or if it would be in-line with other similar requests that have been approved. At this stage of the New gTLD Program, it is unlikely that a change request that would create a new precedent would be approved.

Fairness to applicants – This criterion evaluates whether approving a change request would put the applicant in a position of advantage or disadvantage compared to other applicants. This criterion is related to the "Other third parties affected" criterion, and if a change request is found to materially impact other third parties, it will likely be found to cause issues of unfairness.

Materiality – This criterion assesses how the change request will impact the status of the application and its competing applications, the string, the contention set, and any additional Program processes that it or its competing applications must complete such as Community Priority Evaluation ("CPE"). A change that is determined to be material in and of itself will not cause a change request to be rejected. However, it will cause other criteria to weigh more when considered in conjunction with each other.

Timing – This criterion determines whether the timing of the change request impacts the materiality, fairness to applicants, and other third parties affected criteria. In cases where timing of the change request

is found to impact these criteria, it will be heavily weighted.

How to Submit a Change Request

Requests for changes to application materials may be submitted to the [Naming Services Portal \(NSp\)](#) by following these 2 steps:

1. Download and complete a [gTLD Application Change Request Form](#) [DOCX, 564 KB].
2. Log into the NSp with the primary contact's credentials and submit the Form, along with redlines of the changes being requested. An example of a redline document can be viewed [here](#).

The standard change request process requires that any change to the application, including changes to the Primary Contact, be initiated by the Primary Contact and submitted via the appropriate login in the NSp. If the Primary Contact is no longer available to initiate the change, then the Secondary Contact may contact the GSC at newgtd@icann.org to submit the change request.

Change Request Process

Below is a graphic depicting the change request process.

Verification & Validation – In this step, ICANN verifies the applicant's credentials in order to ensure that only those authorized to make changes to the application are able to do so. Additionally, ICANN reviews the change request materials submitted by the applicant to ensure that a completed Change Request Form, appropriate redline documents, as well as all relevant supporting documentations are provided. This step is not counted in the 4-6 week Service Level Target ("SLT") for change requests, because the amount of time to complete this step is highly dependent upon the applicant providing the required information. ICANN's work during this step is minimal. ICANN typically performs its work within 2 business days of receiving the requests or information from the applicant. Submission of incomplete information, and non-response to ICANN's request for required information are typical causes of delay in this step. ICANN will inform the applicant once this step is completed.

ICANN Review – Once verification and validation of the change request is completed, ICANN reviews the change request materials against the seven criteria above. In the event that additional information is required before a determination can be made, ICANN will reach out to the applicant to request the information. The SLT for this step of the process is 2-4 weeks, depending on the complexity of the change request and whether additional information is required.

Notification of Determination – Once ICANN completes its review of the change request, the applicant will be informed of the determination. Possible determinations include approval of the change request, denial of the change request, or deferral of the change request to a later time. The SLT for this step is one week to account for the drafting of denial or deferral letters if the change request is denied or deferred.

Changes Made and Posted – In this step, ICANN makes the requested and approved changes to the application. Changes that require a 30-day comment window will be posted on the [Application Status page](#) of the New gTLD Microsite. Changes that do not require a 30-day comment window will not be posted. Refer to the "Change Requests Requiring 30-day Comment Window" section below for information on which changes will be posted for comments and which ones will not. Applicants will be notified once the

changes are made. The notification will also inform applicants whether the changes are posted for comments, and whether application re-evaluation will be required.

Re-evaluation – This step is applicable to those change requests that require re-evaluation of the application. Once ICANN notifies the applicant that the changes are made and that re-evaluation is required, the change request case will be closed and a new re-evaluation case will be opened to assist the applicant through the re-evaluation process. Under the re-evaluation step, the applicant will be sent an invoice for the re-evaluation fee. Once payment is made, ICANN will proceed with the re-evaluation of the application. The re-evaluation will follow the same process and timelines as Extended Evaluation:

- 3 weeks: evaluators review the updated application, and issue Clarifying Questions if required.
- 6 weeks: applicants respond to Clarifying Questions.
- 2 weeks: evaluators review response to Clarifying Questions and deliver results to ICANN.
- 1 week: ICANN reviews and processes the results for publication. Note that if the re-evaluation results in any scoring changes, ICANN will update either the Initial or Extended Evaluation report and post it on the [Application Status page](#) of the New gTLD Microsite. If the re-evaluation does not result in any scoring changes, no updates will be made.

Change Requests That Do Not Require A 30-day Comment Window

In the interest of allowing applicants to expeditiously move forward in the New gTLD Program, effective 1 October 2014, the following types of change requests will generally not be posted for comments for 30 days:

- Changes to confidential portions of the application
- Changes to primary and secondary contacts of the application
- Changes to the applicant's contact information (address, phone, fax, web address)
- Changes to applicant's stock symbol
- Changes to applicant's business/tax ID
- Changes to applicant's officers/directors
- Changes to name of applying entity*
- Changes to parent entity

Although these types of change requests generally will not be posted for comments, ICANN reserves the right to make exceptions in ICANN's discretion.

* This item refers to a simple name change of the applying entity only. It does not apply to changes in the applying entity itself such as the case of the application being assigned from a parent entity to a wholly-owned subsidiary.

How Change Requests Impact Other New gTLD Program Processes

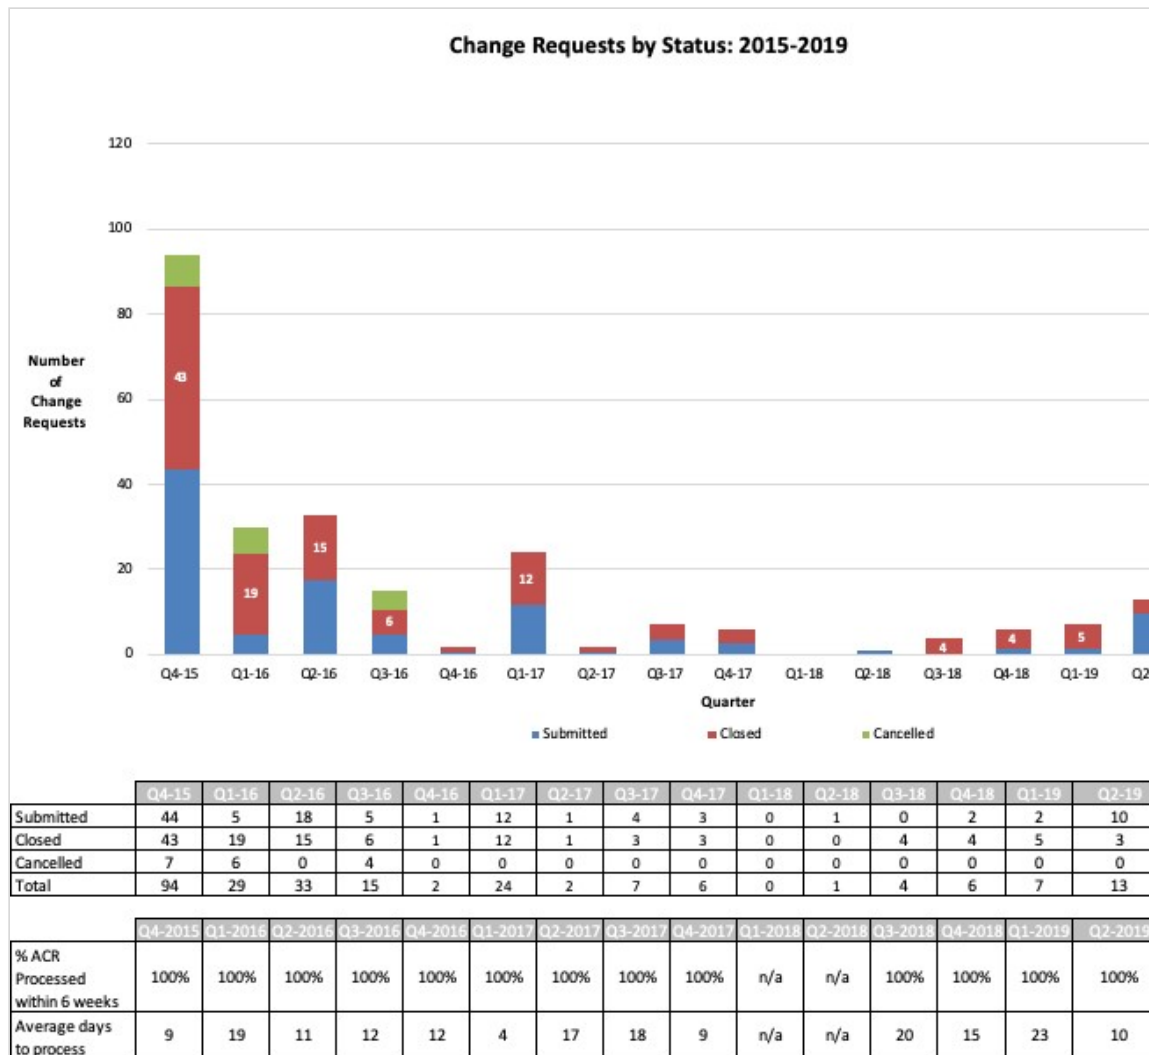

Contracting – If an applicant is eligible to be invited to Contracting, but there is a pending change request on the application, the applicant will not be invited until the change request completes processing. If the applicant has been invited to contracting and is progressing through the contracting process, a pending change request will cause delays and may impact the applicant's ability to execute the Registry Agreement in a timely manner. If the applicant anticipates not being able to execute the Registry Agreement by the Registry Agreement execution deadline, ICANN recommends that the applicant [submit an extension request](#) [DOCX, 565 KB] in order to avoid missing the Registry Agreement execution deadline. Applicants will not receive a Registry Agreement until the change request completes processing, and the 30-comment window (if required) has concluded.

Contention Resolution – For Community Priority Evaluation, the applicant will only be invited once the change request completes processing and the 30-day comment window (if required) has concluded. For

Auction, a pending change request will not prevent an Auction from being scheduled, but in some circumstances, the Auction may be delayed.

Statistics

Below are quarterly change request statistics (as of December 2019).

Happy to discuss further over a call (prefer AM US time). In addition, wanted to make the point that given the relatively tight time-lines, it would be helpful if all applicants filed for a postponement of the ICANN auction. Just gives us all a contingency buffer. Something that might just come into use given the more complex situation we have here with the indirect contention set.

PS: Resort island works just as well too, so long as it is under 20hrs flying time from India :)

Thanks for laying out options for including VistaPrint in an auction. I agree a call would be helpful to discuss that component. We could also meet on a resort island for 2-3 days to discuss as well:).

JLK

Contact Information Redacted

On Apr 28, 2016, at 9:22 AM, Jon Nevett wrote:

Thanks John. We are good with private auction as well. We agree that we need to get it done before ICANN Helsinki starts (week of June 27) and we need to do it in earlier than late June due to the Google-required 30 day notice to ICANN. Our first choice would be the week of June 6, but could do the week of June 13 or even early the week of June 20 if necessary.

As for Vistaprint, it seems like there are three options: 1) we include them and do an indirect contention set auction mirroring the ICANN auction, but with all sellers splitting the proceeds (there might be one buyer or two depending on the outcome); 2) we include them in a direct contention set auction and guarantee that there only would be one winner with all sellers splitting the proceeds; or 3) we exclude them and do a direct contention set auction of just the .WEB applicants (if web.com wins, they still are in contention with Vistaprint).

Happy to hop on a call to discuss.

Best,

Jon

Guys

Most of you most likely have seen that ICANN just scheduled the .WEB/WEBS auction for July 27. If we are still in agreement for a private auction we can likely get one in done in late June before ICANN. That would allow the winner to announce it and discuss plans at the meeting with attendees.

Might make sense to take a straw poll to see if everyone is on the same page. Happy to arrange a call to discuss as a group as well.

Afilias would participate in a private auction for .Web. Open to including VistaPrint WEBS if others want to as well.

FYI-Vistaprint dropped their community Webs application and only have generic one left.

Subject: .WEB Applicants

Folks:

In light of the recent VistaPrint decision (<https://www.icann.org/resources/files/1194117-2015-10-09-en>), I thought it would be a good idea to get the .WEB applicants together to figure out if we can get this one resolved in the not-too-distant future. It's a string that we would love to see out there regardless of who operates it. I know that we all have discussed various options on how to get this resolved without it getting caught up in another round of ICANN policy hurdles -- CPE, indirect contention sets, string similarity appeals, etc.

Do you all think it makes sense to get together for a bit in Dublin to discuss next steps? If so, let's figure out a time that works with everyone. I arrive on Friday and leave the following Saturday.

Look forward to seeing folks over there.

Best,

Jon

DECLARATION OF CHRISTINE WILLETT

I, Christine Willett, declare as follows:

1. I am the Vice President, gTLD Operations, Global Domains Division of the Internet Corporation for Assigned Names and Numbers (“ICANN”), the defendant in this action. I have personal knowledge of the matters set forth herein and am competent to testify as to those matters. I make this declaration in support of ICANN’s Opposition to Plaintiff Ruby Glen LLC’s (“Ruby Glen’s”) *Ex Parte* Application For A Temporary Restraining Order.

2. ICANN is a California non-profit public benefit corporation that oversees the technical coordination of the Internet’s domain name system (“DNS”) on behalf of the Internet community, ensuring the DNS’s continued security, stability and integrity. The DNS’s essential function is to convert easily-remembered domain names, such as “uscourts.gov” or “icann.org,” into numeric IP addresses understood by computers. The portion of a domain name to the right of the last dot (such as, “.gov” and “.org”) is known as a generic top-level domain (“gTLD”).

3. Throughout its history, ICANN has sought to expand the number of gTLDs to promote consumer choice and competition. In 2012, ICANN launched a “New gTLD Program” application round, in which it invited any interested party to apply for the creation of a new gTLD and for the opportunity to be designated as the operator of that gTLD. As the operator, the applicant would be responsible for managing the assignment of names within the gTLD and maintaining the gTLD’s database of names and IP addresses.

4. In connection with the New gTLD Program, ICANN published an Applicant Guidebook (“Guidebook”), which prescribes the requirements for new gTLD applications to be approved, and the criteria by which they are evaluated. The Guidebook was developed in a years-long public consultation process in which numerous versions were published for public comment and revised based on

1 comments received from the public. A true and correct copy of the Guidebook is
2 attached to the declaration of Paula Zecchini (“Zecchini Decl.”) as Exhibit C.

3 5. In my role as Vice President, gTLD Operations, I have been
4 responsible for overseeing the evaluation of the 1,930 new gTLD applications that
5 ICANN received in 2012 as part of ICANN’s New gTLD Program.

6 6. In June 2012, Ruby Glen, Nu Dotco, and five other applicants applied
7 for .WEB. Another applicant applied for .WEBS. The seven applications for
8 .WEB and the remaining application for .WEBS passed all applicable evaluations
9 and were placed in a contention set (“Contention Set”), pursuant to the procedures
10 set forth in the Guidebook.

11 7. Upon the resolution of several accountability mechanisms relating to
12 the composition of the Contention Set, ICANN notified all active members of the
13 Contention Set on April 27, 2016 that the auction of last resort was scheduled for a
14 July 27, 2016 auction date (“Auction”). ICANN also provided them with
15 instructions and deadlines to participate in the Auction.

16 8. The auction rules governing indirect contention sets (“Auction Rules”)
17 set forth a prescribed and limited period of time within which members of a
18 contention set may request a postponement of an auction: “an applicant may
19 request an advancement/postponement request via submission of the Auction Date
20 Advancement/Postponement Request Form. The form must be submitted at least 45
21 days prior to the scheduled Auction Date and ICANN must receive a request from
22 each member of the contention set.” (Zecchini Decl., Ex. J [Auction Rules] ¶ 10.)
23 The last day to file any such requests for this Contention Set was June 12, 2016,
24 namely 45 days before July 27, 2016. ICANN did not receive any such request by
25 that date. After the deadline had passed, ICANN received requests, via email and
26 correspondence, to postpone the Auction from three of the seven applicants for
27 .WEB in the Contention Set (Ruby Glen, Radiz FZC, and Schlund Technologies
28 GmbH) on July 11, 2016. This correspondence did not comply with the Auction

1 Rules' requirements regarding postponement requests because they were sent
2 nearly a month after the deadline to do so passed, and requests were not submitted
3 by all of the members of the Contention Set, which is required for ICANN to
4 consider whether to postpone the Auction pursuant to such requests.

5 9. The application for new gTLDs requires applicants to provide the
6 names and positions of "directors," "officers and partners" and "shareholders
7 holding at least 15% of shares." (*See* Zecchini Decl., Ex. E [Nu Dot's application].)
8 This information is required so that ICANN can conduct a thorough background
9 check into the persons or entities that, on a practical level, control or own the
10 applicant entity. The precise title or position of each listed person or entity is not of
11 the utmost importance, so long as the persons or entities who control or own the
12 applicant are listed. Indeed, the terminology of the application form is tailored
13 towards a corporation, as opposed to an LLC such as Nu Dotco. Understandably,
14 Nu Dotco (like many other LLC applicants) sought to provide information about its
15 management and ownership that was analogous to the corporate information
16 requested. Nu Dotco listed its CEO, COO, and CFO by title and also as its
17 Directors (referring to them as its "managers"). Like many other applications
18 submitted by LLCs, this showed that those were the persons in control of the
19 company for all practical purposes (as a director would be at a corporation).

20 10. As for the background check, ICANN contracts with
21 PricewaterhouseCoopers to conduct a background check of each applicant. ICANN
22 also ensures that no person or entity that owns or controls an applicant for a new
23 gTLD is on the list of persons and entities with which the U.S. Office of Foreign
24 Assets Control restricts the ability to do business absent a license. Both checks
25 were conducted with respect to the names listed in Nu Dotco's application, as was
26 done with the same information listed in all other new gTLD applications.

27 11. Even if Nu Dotco had submitted a change request indicating that it had
28 undergone a change of control and/or ownership, Nu Dotco would not have been

1 disqualified from the auction set to take place on July 27, 2016. In fact, ICANN
2 has received over 2,700 application change requests. Nearly 800 of those requests
3 made changes to the responses provided to questions pertaining to ownership or
4 control of the applicant. No application has been disqualified to date in connection
5 with a change to responses to those questions.

6 12. ICANN was first notified that Ruby Glen had concerns that Nu Dotco
7 had undergone a change of control or ownership on June 23, 2016 by way of an
8 email from Donuts Inc.'s CEO, Jon Nevett, sent to ICANN's customer portal.
9 Donuts is the ultimate parent company of Ruby Glen. (ECF 4.) ICANN responded
10 that it was "reviewing the information provided" and would follow up with Nu
11 Dotco as needed. ICANN also informed Mr. Nevett that Ruby Glen should
12 continue to follow the "standard auction process" and that ICANN would inform
13 Mr. Nevett if any postponement of the Auction was going to take place. A true and
14 correct copy of that email exchange is attached hereto as **Exhibit A**.

15 13. In view of Ruby Glen's concerns, ICANN immediately investigated.
16 Upon receipt of Mr. Nevett's June 23, 2016 email, I instructed my staff to
17 investigate the claims raised therein. On June 27, 2016, a member of my staff sent
18 an email to Nu Dotco, asking it to confirm that "there have not been changes to
19 your application or the NU DOT CO LLC organization that need to be reported to
20 ICANN." Mr. Jose Ignacio Rasco III, Nu Dotco's Chief Financial Officer,
21 responded: "I can confirm that there have been no changes to the NU DOT CO
22 LLC organization that would need to be reported to ICANN." A true and correct
23 copy of this email exchange is attached hereto as **Exhibit B**.

24 14. One purpose of this investigation was to determine whether Nu Dotco
25 had any previously undisclosed owners or managers that should be subject to
26 background checks. I also instructed my staff that, if appropriate in view of the
27 investigation, they should request that Nu Dotco update its application with respect
28 to any change in ownership and/or control.

1 15. On June 29, 2016, during the ICANN56 Public Meeting in Helsinki, I
2 met with Mr. Nevett to discuss a number of business matters, including his claims
3 regarding Nu Dotco's management. During that meeting, Mr. Nevett requested that
4 the Auction be postponed because of his concerns that Nu Dotco had undergone a
5 change in ownership or management. During this meeting, I informed Mr. Nevett
6 that my team had already investigated the alleged management changes with Nu
7 Dotco's representative, and that Nu Dotco asserted that no such changes had
8 occurred. I further informed Mr. Nevett that, based on the fact that ICANN had
9 found no evidence of such a management change, ICANN was continuing to
10 proceed with the Auction as scheduled.

11 16. During my meeting with Mr. Nevett at the ICANN56 Public Meeting
12 in Helsinki, I suggested to Mr. Nevett that if he was not satisfied with ICANN's
13 course of action he had the option to invoke one of ICANN's accountability
14 mechanisms. Mr. Nevett indicated that he intended to contact ICANN's
15 Ombudsman, Mr. Chris LaHatte ("Ombudsman") while in Helsinki. He did so, and
16 the Ombudsman then asked me for the contact information for Nu Dotco's
17 application contact, Mr. Jose Ignacio Rasco III, which I provided. On July 6, 2016,
18 the Ombudsman sent an email to Nu Dotco on which I was blind-copied, inquiring
19 as to whether any change in ownership/control had taken place and noting that he
20 had "opened an ombudsman complaint file about this matter." A true and correct
21 copy of that email is attached hereto as **Exhibit C**, and a true and correct copy of
22 the email exchange that followed between the Ombudsman and Mr. Nevett is
23 attached hereto as **Exhibit D**.

24 17. On July 7, 2016, the Ombudsman sent another email to Mr Rasco
25 about this issue, and Mr. Rasco's response stated: "There have been no changes to
26 the Nu Dotco, LLC application. Neither the governance, management nor the
27 ownership in Nu Dotco has changed." A true and correct copy of that email
28 exchange is attached hereto as **Exhibit E**. At the time, on July 7, 2016, I was not

1 aware that Mr. Rasco had responded to the Ombudsman's email.

2 18. On July 8, 2016, I emailed Mr. Rasco to again inquire as to whether
3 Nu Dotco had undergone any change in ownership or control. A true and correct
4 copy of that email is attached hereto as **Exhibit F**. Mr. Rasco called me within a
5 few hours, and stated that neither the managers nor the members of the Nu Dotco
6 organization had changed since the application's submission. He further explained
7 that his June 27, 2016 email through the applicant portal confirming the same had
8 been rather brief because he had been under the impression that ICANN was simply
9 conducting a routine and automatic check of all applicants within the Contention
10 Set prior to the Auction; it was not until the Ombudsman reached out to Mr. Rasco
11 that he realized there had been a complaint made to ICANN about a possible
12 change in Nu Dotco's control or ownership. He also explained that his email to "a
13 competing applicant," which ultimately gave rise to this controversy, was not
14 intended to suggest that any change in ownership or control had taken place,
15 because none had, as further discussed in Mr. Rasco's declaration, filed
16 concurrently herewith.

17 19. On July 8, 2016 (received by the Ombudsman on July 9, 2016), I
18 emailed the Ombudsman to again provide information as to ICANN's investigation
19 of the matter, including a summary of my July 8, 2016 phone call with Mr. Rasco.
20 That email stated, among other things, "As you know, my team had reached out to
21 NU DOT CO LLC previously, and we received confirmation that NU DOT's
22 application materials were still true and accurate. In an effort to be extremely
23 cautious, I reached out to Mr. Jose Ignacio Rasco (the application primary contact
24 for NU DOT's .WEB application) again today to ensure that our understanding of
25 his previous response was accurate." A true and correct copy of that email is
26 attached hereto as **Exhibit D**.

27 20. On July 11, 2016, Mr. Rasco emailed me and again confirmed that
28 "[n]either the ownership nor the control of [Nu Dotco] has changed since we filed

1 our application.” Mr. Rasco further explained that: “The Managers designated
2 pursuant to the company’s LLC operating agreement (the LLC equivalent of a
3 corporate Board) have not changed. And there have been no changes to the
4 membership of the LLC either.” A true and correct copy of that email is attached
5 hereto as **Exhibit F**.

6 21. It is not accurate to say that Ruby Glen’s inquiry to the Ombudsman
7 remains pending. In fact, the Ombudsman informed me on July 12, 2016 that he
8 had determined there was no reason to postpone the Auction because he found no
9 evidence of a change to the ownership or control of Nu Dotco. A true and correct
10 copy of the Ombudsman’s email in this regard is attached hereto as **Exhibit G**.

11 22. On July 13, 2016, ICANN informed Ruby Glen and all applicants in
12 the Contention Set that it had “investigated the matter” and “found no basis to
13 initiate the application change request process or postpone the auction.” A true and
14 correct copy of that letter is attached to the Declaration of Paula Zecchini as Exhibit
15 G.

16 23. The Ombudsman re-confirmed that he has concluded his investigation
17 on July 23, 2016. A true and correct copy of the Ombudsman’s email in this regard
18 is attached hereto as **Exhibit H**.

Subject	.WEB Auction Postponement – Required Applicant Update
Description	<p>ICANN,</p> <p>It has come to our attention that one of the applicants for .WEB has failed to properly update its application. Upon information and belief, there have been changes to the Board of Directors and potential control of Nu Dot Co LLC ("NDC") that has materially changed its application. To our knowledge, however, NDC has not filed the required application change request.</p> <p>As you know, Section 1.2.7 of the Applicant Guidebook specifically states, "[i]f at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in the financial position and changes in ownership or control of the applicant... Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application." As you also know, ICANN has been clear that such requirements are in full force and effect until the registry agreement is executed with the successful applicant.</p> <p>Failure by No Dot Co LLC to maintain the accuracy of its application is detrimental to the other competing applicants, especially in light of the pending ICANN auction, creating an unfair competitive advantage for NDC.</p> <p>We request that ICANN investigate the change in NDC's Board and potential control and that the ICANN auction scheduled for July 27 be immediately postponed. The auction should be rescheduled after the final investigation is complete and NDC's requisite change request is resolved.</p> <p>We do not make this request lightly and haven't done so in well over 100 other scheduled ICANN auctions.</p> <p>Thank you and best regards, Jonathon Nevett</p>

Subject: Application for Dot Web

Dear Mr Rasco

I have received a complaint from one of the applicants for dot web as follows:-

One or more applicants for dot web made a complaint to the Ombudsman about changes to the dot web application by one of the applicants, being NU DOT CO LLC.

There is evidence from them (which I have seen) which reveals that there have been changes to the composition of NU DOT CO LLC's Board that require it to go through an ICANN change process.

The complaint is that because there has been a failure to disclose material changes, that it is unfair to the other applicants until the disclosure has been made and that accordingly, the auction ought to be postponed until disclosure has been made. So I have opened an ombudsman complaint file about this matter. It may be an issue where the enquiry ought to be directed to this applicant or they could contact this office if they wish to discuss the matter. I am not sure of their appropriate contact details, and it may be useful to pass this on to them. When I have this information, I can investigate the facts of this matter and be able to make a recommendation.

Subject: Re: Dot Web Auction

Dear Chris,

I hope that this email finds you well. I know that you have been in communication with NU DOT CO LLC, to inquire about the recent complaint filed by Donuts regarding its ownership and potential impact on the .WEB/.WEBS auction.

As you know, my team had reached out to NU DOT CO LLC previously, and we received confirmation that NU DOT's application materials were still true and accurate. In an effort to be extremely cautious, I reached out to Mr. Jose Ignacio Rasco (the application primary contact for NU DOT's .WEB application) again today to ensure that our understanding of his previous response was accurate. During the call, he explained the following:

1. When ICANN previously contacted him about potential application changes, he assumed that the confirmation was part of the standard auction process, and his response was relatively brief. The email from the Ombudsman provided him with more context. Now that he has a better understanding about the complaint and what is going on, he can provide us with more detailed information.
2. NU DOT is structured as an LLC, which does not have "directors," but rather "managers" and "members." Neither the managers nor the members have changed since the application's submission.
3. NU DOT's operating agreement has not changed since the application's submission.
4. He understands that the .WEB/WEBS auction price is expected to be high, and that some of his competitors are upset that he was not willing to resolve contention outside of the ICANN auction.
5. He was contacted by a competitor who took some of his words out of context and is using them as evidence regarding the alleged change in ownership. In communicating with that competitor, he used language to give the impression that the decision to not resolve contention privately was not entirely his. However, this decision was in fact his. He does not believe that it is appropriate that this email conversation is being used as evidence.

Mr. Rasco indicated that he had provided you with similar information, but I wanted to share the details of our conversation in case they can provide you with a more complete picture. If you have any questions, please let me know.

Best,
Christine

Hi folks. When do you think we will have a decision on this request? Time is really of the essence. Thanks. Jon

Jonathon Nevett
Co-Founder & EVP, Donuts Inc.
[REDACTED]

On Jul 3, 2016, at 11:09 AM, Jon Nevett [REDACTED] wrote:

Hi folks. I understand that Chris's paragraph may be sent verbatim to NU Dot Co, so I make the following suggested changes in redline form below. We would like to renew our request for an immediate postponement of the auction scheduled in just over three weeks time for the following reasons:

1. The auction is in about 3 weeks and there is credible evidence that one of the applicants has a material change to its application and hasn't gone through the ICANN change process. The material change includes a change to the Board of Directors and a potential change of control and/or ownership. Such a change may be in violation of Module 1, Section 1.2.7 and Module 6, Section 10 of the AGB.
2. It is unfair for the other applicants to be preparing for an auction against a party that has had non-public changes to its application and hasn't gone through the ICANN change process. We just have the transparency in the process to know with whom we are participating in an auction.
3. Most of the .web applicants already asked for a voluntary extension of the auction.
4. There is a pending ICANN accountability mechanism being utilized to investigate potential violations of the AGB and precedent dictates that ICANN should postpone the auction pending the result of the accountability mechanism.
5. .WEB likely will be one of the larger auctions and it is better that it be

conducted cleanly and not with a pending ICANN accountability mechanism or a cloud surrounding the TLD based on a potential change of control in violation of the AGB.

6. Even if the other applicant denies that any changes have been made, we have credible evidence that needs to be investigated and all the other applicants deserve at least 30 days from the end of the investigation to prepare for the auction.

Because of upcoming triggers and financial preparations necessary before this auction, please announce the postponement as soon as possible. It doesn't make sense to even wait to hear back from the other applicant before a postponement is announced because regardless of what they say, an extension is the appropriate action considering the time period before the auction. What they say and the result of the investigation should just go to when the auction is rescheduled.

Please let me know if you have any questions.

Thanks again for your help and consideration.

Best,

Jon

EXHIBIT E

Mr. LaHatte,

Thank you for bringing this to my attention. There have been no changes to the Nu Dotco, LLC application. Neither the governance, management nor the ownership in Nu Dotco has changed. In an LLC, there are no directors, it is a manager managed company, as designated by the Members of the LLC within the Operating Agreement of the Limited Liability Company. There has never been an amendment to that operating agreement. There are no new "directors," nor have any left the company, and while the managers are ultimately responsible for the LLC, as a Manager, I take my duties very seriously and for major decisions, I confer with the Members (i.e. shareholders), which again for clarification, have never changed. I hope this clarification puts this matter to rest.

Regards,

Jose I. Rasco

Nu Dotco, LLC

On Jul 7, 2016, at 11:24 AM, Chris LaHatte <chris.lahatte@icann.org> wrote:

Dear Mr Rasco

I have been shown an email which suggests that one of your directors is no longer taking an active part in the application, and that there are other directors now involved. The complainant also suggested that your shareholders have changed since the original application. It was suggested that this would change the auction by making knowledge of your applicant company different, and therefore it was unfair to the other applicants. I'm sure you can clarify this.

What they were seeking was a postponement of the auction for a further period.

Subject Re: ICANN Question regarding your .WEB New gTLD Application

Description Dear Christine:

Thank you for taking the time to speak with me last Friday, July 8, concerning the complaint that another applicant for the .web TLD made to the ICANN Ombudsman (Chris La Hatto) relating to an alleged change in the composition of Nu Dotco, LLC's "Board". I'm writing to reiterate the information I provided you on our call so the facts are clear.

Neither the ownership nor the control of Nu Dotco, LLC has changed since we filed our application. The Managers designated pursuant to the company's LLC operating agreement (the LLC equivalent of a corporate Board) have not changed. And there have been no changes to the membership of the LLC either. As you know, I provided this same information to Mr. La Hatto via email on July 7. Attached is a copy of that email for your records.

My understanding from our discussion is that ICANN is satisfied with the information I provided and has concluded there is no basis for any complaint, re-evaluation, or other process relating to our application, nor for any delay in the ICANN auction. Please let me know if that is not the case.

As you know, Rule 10 of the Auction Rules for New gTLDs (2014-11-03) requires (i) that "each and every member of the contention set" join in a request for postponement of the auction and (ii) that they do so by specified dates. The applicable date for any request to postpone the .web auction has come and gone. As we discussed, I share your understanding that the complaint was raised in order to get more time to convince us to resolve the contention set via a private auction, even though we have made it very clear to them (and all other applicants) that we will not participate in a private auction and that we are committed to participating in ICANN's auction as scheduled.

I appreciate your time and attention in getting this resolved. Please let me know immediately if ICANN has any other questions or concerns regarding this matter.

Regards,

Jose I. Rasco
Nu Dotco, LLC

Subject: RE: Postponement of the .WEB auction
Date: July 12, 2016 at 8:25:25 PM PDT
To: Christine Willett <christine.willett@icann.org>
Cc: Amy Stathos <amy.stathos@icann.org>

Hi Christine

I have not seen any evidence which would satisfy me that there has been a material change to the application. So my tentative recommendation is that there is nothing which would justify a postponement of the auction based on unfairness to the other applicants. Is there any particular reason why a postponement could not be made anyway or is the preparation for the auction too far advanced? I make that suggestion not because I agree with the complaint made by Donuts, but because it would prevent them from perhaps taking further accountability action based on a refusal to postpone, as of course this company has demonstrated that they will be aggressive about use of such accountability functions.

Regards

Chris LaHatte

Date: July 23, 2016 at 7:41:43 PM PDT

To: Amy Stathos <amy.stathos@icann.org>

My investigation came to an end when they filed the reconsideration but really after I reported that could not see any issue with the ownership of NuCon. I haven't formally closed the file but effectively it is at an end. So any of the emails you describe which are to Christine and you are open and I agree to the use.

Re: .WEB/.WEBS Auction on 27 July 2016

Dear Members of the .WEB/.WEBS Contention Set,

We are writing in regards to inquiries we have received concerning potential changes of control of NU DOT CO LLC, an applicant in the .WEB/.WEBS contention set, and requests to postpone the auction to investigate the matter. We would like to provide some clarification regarding this issue and how it may or may not impact the .WEB/.WEBS auction scheduled for 27 July 2016.

Firstly, as a reminder, in regards to a request for postponement, Rule 10 of the Auction Rules for Indirect Contention states:

“...Postponement requests must be submitted by all members of the Contention Set by the due date specified within the ICANN Customer Portal, generally twenty eight (28) days after receipt of Intent to Auction notice from ICANN. If a postponement request is not submitted by the due date specified within the ICANN Customer Portal or is not accommodated by ICANN, an applicant may request an advancement/postponement request via submission of the Auction Date Advancement/Postponement Request Form. The form must be submitted at least 45 days prior to the scheduled Auction Date and ICANN must receive a request from each member of the contention set...” (<https://newgtlds.icann.org/en/applicants/auctions/rules-indirect-contention-24feb15-en.pdf>)

The date to submit the postponement form passed on 12 June 2016, and we did not receive consensus from the contention set. As such, no postponement was granted.

Secondly, in regards to potential changes of control of NU DOT CO LLC, we have investigated the matter, and to date we have found no basis to initiate the application change request process or postpone the auction.

The Internet Corporation for Assigned Names and Numbers

Finally, as you are aware, ICANN provided confirmation to all members of the .WEB/.WEBS contention set on 6 July 2016 that the auction will be proceeding as scheduled on 27 July 2016. Please follow all instructions provided to you by Power Auctions, the Auction Manager, regarding next steps, including mini and mock auctions as well as the deposit deadline.

Regarding the deposit deadline, Rule 28 of the Auction Rules for Indirect Contention states:

“All wires and all instructions associated with Deposits, including instructions regarding the allocation of funds among Contention Sets from wires and funds rolled over from previous Auctions, must be received no later than 16:00 UTC on the day that is seven (7) calendar days prior to the Commencement Date of the relevant Auction (the “Deposit Deadline”), unless this deadline is waived, at the Auction Manager’s sole discretion.”

As per Rule 28, the Deposit Deadline for the upcoming auction is 16:00 UTC on 20 July 2016.

While the auction is currently set to proceed as scheduled, applicants may continue to work toward self-resolution of the contention set. Applicants may withdraw their application up until the Deposit Deadline noted above. Once the Deposit Deadline is reached, there is a quiet period in which applicants are no longer allowed to withdraw their application until after conclusion of the auction.

I hope this information has been helpful to you. Please do not hesitate to respond with any additional questions or concerns. Should you have specific questions regarding next steps for the auction, you may submit a case to globalsupport@icann.org, and someone from my team will contact you promptly.

Sincerely,

Christine A. Willett
Vice President, GDD Operations
ICANN

VERISIGN, INC.
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

Note 1. Basis of Presentation

Interim Financial Statements

The accompanying unaudited Condensed Consolidated Financial Statements have been prepared by VeriSign, Inc. (“Verisign” or the “Company”) in accordance with the instructions to Form 10-Q pursuant to the rules and regulations of the Securities and Exchange Commission (“SEC”) and, therefore, do not include all information and notes normally provided in audited financial statements. In the opinion of management, all adjustments (consisting of normal recurring accruals and other adjustments) considered necessary for a fair presentation have been included. The results of operations for any interim period are not necessarily indicative of, nor comparable to, the results of operations for any other interim period or for a full fiscal year. These unaudited Condensed Consolidated Financial Statements should be read in conjunction with the Consolidated Financial Statements and related notes contained in Verisign’s fiscal 2015 Annual Report on Form 10-K (the “2015 Form 10-K”) filed with the SEC on February 19, 2016.

Recent Accounting Pronouncements

In May 2014, the Financial Accounting Standards Board (“FASB”) issued Accounting Standards Update (“ASU”) No. 2014-09, *Revenue from Contracts with Customers*, which requires an entity to recognize the amount of revenue to which it expects to be entitled for the transfer of promised goods or services to customers. The ASU will replace most existing revenue recognition guidance in U.S. GAAP when it becomes effective. The new standard will become effective for the Company on January 1, 2018. The standard permits the use of either the retrospective or cumulative effect transition method. The Company is evaluating the effect that ASU 2014-09 will have on its consolidated financial statements and related disclosures. The Company has not yet selected a transition method nor has it determined the effect of the standard on its ongoing financial reporting.

In February 2016, the FASB issued ASU No. 2016-02, *Leases*. The guidance introduces a lessee model that requires most leases to be reported on the balance sheet. This ASU will become effective for the Company on January 1, 2019 and requires the modified retrospective transition method. The Company is currently evaluating the impact of this ASU on its consolidated financial statements and related disclosures.

In March 2016, the FASB issued ASU No. 2016-09, *Improvements to Employee Share-Based Payment Accounting*, which simplifies several aspects of the accounting for share-based payment award transactions, including income tax consequences, classification of awards as either equity or liabilities, and classification on the statement of cash flows. The ASU requires that excess tax benefits and tax deficiencies (the difference between the deduction for tax purposes and the compensation cost recognized for financial reporting purposes) be recognized as income tax expense or benefit in the Consolidated Statement of Comprehensive Income. This change may lead to increased volatility in the provision for income taxes. There are different transition methods for different aspects of the standard. The new standard will be effective for the Company on January 1, 2017 with early adoption permitted. The Company is evaluating the timing of adoption, transition methods and the effect that this ASU will have on its consolidated financial statements and related disclosures.

Note 2. Cash, Cash Equivalents, and Marketable Securities

The following table summarizes the Company's cash, cash equivalents, and marketable securities:

	June 30, 2016	December 31, 2015
	(In thousands)	
Cash	\$ 37,588	\$ 99,027
Money market funds	141,209	137,593
Time deposits	3,932	4,007
Debt securities issued by the U.S. Treasury	1,733,258	1,685,882
Equity securities of public companies	2,772	890
Total	<u>\$ 1,918,759</u>	<u>\$ 1,927,399</u>
Included in Cash and cash equivalents	\$ 170,966	\$ 228,659
Included in Marketable securities	\$ 1,736,030	\$ 1,686,771
Included in Other long-term assets (Restricted cash)	\$ 11,763	\$ 11,969

The fair value of the debt securities held as of June 30, 2016 was \$1.7 billion, including less than \$0.6 million of gross and net unrealized gains. All of the debt securities held as of June 30, 2016 are scheduled to mature in less than one year.

Note 3. Fair Value of Financial Instruments

(1) Included in Other current assets

(2) Included in Accounts payable and accrued liabilities

The fair value of the Company's investments in money market funds approximates their face value. Such instruments are classified as Level 1 and are included in Cash and cash equivalents. The fair value of the debt securities consisting of U.S. Treasury bills is based on their quoted market prices and are classified as Level 1. Debt securities purchased with original maturities in excess of three months are included in Marketable securities. The fair value of the equity securities of public companies is based on quoted market prices and are classified as Level 1. Investments in equity securities of public companies are included in Marketable securities. The fair value of the Company's foreign currency forward contracts is based on foreign currency rates quoted by banks or foreign currency dealers and other public data sources.

The Company utilizes a valuation model to estimate the fair value of the contingent interest derivative on the subordinated convertible debentures due 2037 ("the Subordinated Convertible Debentures"). The inputs to the model include stock price, bond price, risk free interest rates, volatility, and credit spread observations. As several significant inputs are not observable, the overall fair value measurement of the derivative is classified as Level 3. The volatility and credit spread assumptions used in the calculation are the most significant unobservable inputs. As of June 30, 2016, the valuation of the contingent interest derivative assumed a volatility rate of approximately 26% and a credit spread of approximately 6%. The fair value of the contingent interest derivative would not have significantly changed using a volatility rate of either 21% or 31%, or a credit spread of either 5% or 7%.

[Table of Contents](#)

The following table summarizes the change in the fair value of the Company's contingent interest derivative on the Subordinated Convertible Debentures during the three and six months ended June 30, 2016 and 2015:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2016	2015	2016	2015
	(In thousands)			
Beginning balance	\$ 22,517	\$ 28,549	\$ 30,126	\$ 26,755
Payment of contingent interest	-	-	(6,544)	(5,225)
Unrealized loss (gain)	94	(2,708)	(971)	4,311
Ending balance	\$ 22,611	\$ 25,841	\$ 22,611	\$ 25,841

On February 15, 2016, the Company paid contingent interest of \$6.5 million in addition to the normal coupon interest to holders of record of the Subordinated Convertible Debentures as of February 1, 2016. In February 2016, the upside trigger on the Subordinated Convertible Debentures was met for the six month interest period ending in August 2016. On August 15, 2016, the Company will pay contingent interest of \$6.8 million in addition to the normal coupon interest to holders of record of the Subordinated Convertible Debentures as of August 1, 2016. The \$6.8 million contingent interest payable in August 2016 is included in the balance of the contingent interest derivative on the Subordinated Convertible Debentures as of June 30, 2016.

The Company's other financial instruments include cash, accounts receivable, restricted cash, and accounts payable. As of June 30, 2016, the carrying value of these financial instruments approximated their fair value. The fair value of the Company's Subordinated Convertible Debentures was \$3.1 billion as of June 30, 2016. The fair values of the senior notes due 2023 (the "2023 Senior Notes") and the senior notes due 2025 (the "2025 Senior Notes") were \$761.3 million and \$512.8 million, respectively, as of June 30, 2016. The fair values of these debt instruments are based on available market information from public data sources and are classified as Level 2.

Note 4. Other Balance Sheet Items

Other Current Assets

Other current assets consist of the following:

	June 30, 2016	December 31, 2015
	(In thousands)	
Prepaid expenses	\$ 18,194	\$ 14,823
Income tax receivables	2,104	23,098
Other	2,275	1,935
Total other current assets	\$ 22,573	\$ 39,856

The Income tax receivables as of December 31, 2015 primarily consists of the remaining U.S. federal income tax overpayment from prior years. As of June 30, 2016, substantially all of the remaining overpayment has been used to offset current year income taxes.

Accounts Payable and Accrued Liabilities

Accounts payable and accrued liabilities consist of the following:

	June 30, 2016	December 31, 2015
	(In thousands)	
Accounts payable	\$ 17,661	\$ 23,298
Accrued employee compensation	40,118	51,851
Customer deposits, net	39,558	48,307
Interest Payable	27,701	27,701
Income taxes payable and other tax liabilities	4,485	16,943
Other accrued liabilities	14,838	20,071
Total accounts payable and accrued liabilities	\$ 144,361	\$ 188,171

Accrued employee compensation primarily consists of liabilities for employee leave, salaries, payroll taxes, employee contributions to the employee stock purchase plan, and incentive compensation. Accrued employee incentive compensation as of December 31, 2015, was paid during the six months ended June 30, 2016. Income taxes payable and other tax liabilities decreased in the six months ended June 30, 2016 as a result of payments made for income taxes in certain non-U.S. jurisdictions. Interest payable includes coupon interest on the Subordinated Convertible Debentures, the 2023 Senior Notes and the 2025 Senior Notes.

Note 5. Stockholders' Deficit

On February 11, 2016, the Company's Board of Directors authorized the repurchase of approximately \$611.2 million of its common stock, in addition to the \$388.8 million remaining available for repurchase under the previous share repurchase program for a total repurchase authorization of up to \$1.0 billion of its common stock. The share repurchase program has no expiration date. Purchases made under the program could be effected through open market transactions, block purchases, accelerated share repurchase agreements or other negotiated transactions. During the three and six months ended June 30, 2016 the Company repurchased 1.7 million and 3.5 million shares of its common stock, respectively, at an average stock price of \$86.46 and \$84.63, respectively. The aggregate cost of the repurchases in the three and six months ended June 30, 2016 was \$149.9 million and \$299.8 million, respectively. As of June 30, 2016, \$765.9 million remained available for further repurchases under the share repurchase program.

During the six months ended June 30, 2016, the Company placed 0.3 million shares, at an average stock price of \$80.92, and for an aggregate cost of \$24.4 million, into treasury stock for purposes related to tax withholding upon vesting of Restricted Stock Units ("RSUs").

Since inception the Company has repurchased 216.8 million shares of its common stock for an aggregate cost of \$7.8 billion, which is presented as a reduction of Additional paid-in capital.

Note 6. Calculation of Earnings per Share

The following table presents the computation of weighted-average shares used in the calculation of basic and diluted earnings per share:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2016	2015	2016	2015
	(In thousands)			
Weighted-average shares of common stock outstanding	108,067	115,656	108,829	116,394
Weighted-average potential shares of common stock outstanding:				
Conversion spread related to Convertible Debentures	21,872	16,973	21,472	16,392
Unvested RSUs, stock options, and ESPP	649	622	783	760
Shares used to compute diluted earnings per share	130,588	133,251	131,084	133,546

The calculation of diluted weighted average shares outstanding, excludes potentially dilutive securities, the effect of which would have been anti-dilutive, as well as performance based RSUs granted by the Company for which the relevant performance criteria have not been achieved. The number of potential shares excluded from the calculation was not significant in any period presented.

Note 7. Stock-based Compensation

Stock-based compensation is classified in the Condensed Consolidated Statements of Comprehensive Income in the same expense line items as cash compensation. The following table presents the classification of stock-based compensation:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2016	2015	2016	2015
	(In thousands)			
Cost of revenues	\$ 1,747	\$ 1,741	\$ 3,588	\$ 3,480
Sales and marketing	1,457	1,818	3,090	3,117
Research and development	1,587	1,691	3,290	3,412
General and administrative	6,341	6,751	12,923	12,120
Total stock-based compensation expense	\$ 11,132	\$ 12,001	\$ 22,891	\$ 22,129

The following table presents the nature of the Company's total stock-based compensation:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2016	2015	2016	2015
	(In thousands)			
RSUs	\$ 8,625	\$ 9,210	\$ 17,758	\$ 17,504
Performance-based RSUs	2,285	2,385	4,662	3,838
ESPP	822	1,113	1,670	2,194
Capitalization (Included in Property and equipment, net)	(600)	(707)	(1,199)	(1,407)
Total stock-based compensation expense	\$ 11,132	\$ 12,001	\$ 22,891	\$ 22,129

Note 8. Debt and Interest Expense

The following table presents the components of the Company's interest expense:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2016	2015	2016	2015
	(In thousands)			
Contractual interest on Subordinated Convertible Debentures	\$ 10,156	\$ 10,156	\$ 20,312	\$ 20,312
Contractual interest on Senior Notes	15,234	15,234	30,469	24,271
Amortization of debt discount on the Subordinated Convertible Debentures	2,744	2,527	5,433	5,004
Credit facility fees and other interest expense	725	586	1,449	933
Total interest expense	\$ 28,859	\$ 28,503	\$ 57,663	\$ 50,520

Note 9. Non-operating Income (Loss), Net

The following table presents the components of Non-operating income (loss), net:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2016	2015	2016	2015
	(In thousands)			
Unrealized (loss) gain on contingent interest derivative on Subordinated Convertible Debentures	\$ (94)	\$ 2,708	\$ 971	\$ (4,311)
Interest income	1,522	373	2,564	632
Other, net	281	120	1,295	1,325
Total non-operating income (loss), net	\$ 1,709	\$ 3,201	\$ 4,830	\$ (2,354)

Unrealized gains and losses on the contingent interest derivative on the Subordinated Convertible Debentures reflect the change in value of the derivative that results primarily from changes in the Company's stock price.

Note 10. Income Taxes

The following table presents income tax expense and the effective tax rate:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2016	2015	2016	2015
	(Dollars in thousands)			
Income tax expense	\$ 35,907	\$ 30,652	\$ 69,535	\$ 59,079
Effective tax rate	24%	25%	24%	25%

The effective tax rate for the three and six months ended June 30, 2016 and 2015 is lower than the statutory federal rate of 35% primarily due to tax benefits from foreign income taxed at lower rates, partially offset by state income taxes.

Deferred tax liabilities as of June 30, 2016 reflect the use of a portion of U.S. foreign tax credits during the six months ended June 30, 2016, and an increase in the deferred tax liability related to the Subordinated Convertible Debentures.

Note 11. Subsequent Event

Subsequent to June 30, 2016, the Company incurred a commitment to pay approximately \$130.0 million for the future assignment of contractual rights, which are subject to third-party consent. The payment is expected to occur during the third quarter of 2016.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

You should read the following discussion in conjunction with the interim unaudited Condensed Consolidated Financial Statements and related notes.

This Quarterly Report on Form 10-Q contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"). These forward-looking statements involve risks and uncertainties, including, among other things, statements regarding our anticipated costs and expenses and revenue mix. Forward-looking statements include, among others, those statements including the words "expects," "anticipates," "intends," "believes" and similar language. Our actual results may differ significantly from those projected in the forward-looking statements. Factors that might cause or contribute to such differences include, but are not limited to, those discussed in the section titled "Risk Factors" in Part II, Item 1A of this Quarterly Report on Form 10-Q. You should also carefully review the risks described in other documents we file from time to time with the Securities and Exchange Commission, including the Quarterly Reports on Form 10-Q or Current Reports on Form 8-K that we file in 2016 and our 2015 Form 10-K, which was filed on February 19, 2016, which discuss our business in greater detail. You are cautioned not to place undue reliance on the forward-looking statements, which speak only as of the date of this Quarterly Report on Form 10-Q. We undertake no obligation to publicly release any revisions to the forward-looking statements or reflect events or circumstances after the date of this document.

Overview

We are a global provider of domain name registry services and internet security, enabling internet navigation for many of the world's most recognized domain names and providing protection for websites and enterprises around the world. Our Registry Services ensure the security, stability and resiliency of key internet infrastructure and services, including the .com and .net domains, two of the internet's root servers, and the operation of the root zone maintainer function for the core of the internet's DNS. Our product suite also includes Security Services, consisting of DDoS Protection Services, iDefense Services, and Managed DNS Services. Revenues from Security Services are not significant in relation to our consolidated revenues.

As of June 30, 2016, we had approximately 143.2 million names in the domain name base for .com and .net, our principal registries. The number of domain names registered is largely driven by continued growth in online advertising, e-commerce, and the number of internet users, which is partially driven by greater availability of internet access, as well as marketing activities carried out by us and third-party registrars. Growth in the number of domain names under our management may be hindered by certain factors, including overall economic conditions, competition from ccTLDs, the introduction of new gTLDs, and ongoing changes in the internet practices and behaviors of consumers and businesses. Factors such as the evolving practices and preferences of internet users, and how they navigate the internet, as well as the motivation of domain name registrants and how they will manage their investment in domain names, can negatively impact our business and the demand for new domain name registrations and renewals.

Business Highlights and Trends

- We recorded revenues of \$286.5 million and \$568.3 million during the three and six months ended June 30, 2016. This represents an increase of 9%, as compared to the same periods in 2015.
- We recorded operating income of \$176.3 million and \$343.0 million during the three and six months ended June 30, 2016. This represents an increase of 18% and 17%, respectively, as compared to the same periods in 2015.
- We added 0.8 million net new names during the second quarter, ending with 143.2 million names in the domain name base for .com and .net, which represents a 7% increase over the base at the end of the second quarter in 2015.
- During the three months ended June 30, 2016, we processed 8.6 million new domain name registrations for .com and .net as compared to 8.7 million for the same period in 2015.
- The final .com and .net renewal rate for the first quarter of 2016 was 74.4% compared with 73.4% for the same quarter in 2015. Renewal rates are not fully measurable until 45 days after the end of the quarter.
- During the three months ended June 30, 2016, we repurchased 1.7 million shares of our common stock under the share repurchase program for \$149.9 million. As of June 30, 2016, \$765.9 million remained available for further repurchases under our share repurchase program.

[Table of Contents](#)

- Through July 27, 2016, we repurchased an additional 0.5 million shares for \$42.3 million under our share repurchase program.
- We generated cash flows from operating activities of \$304.3 million during the six months ended June 30, 2016, compared to \$307.6 million in the same period last year.
- On July 28, 2016, we announced an increase in the annual fee for the *.net* domain name registration from \$7.46 to \$8.20, effective February 1, 2017, per our agreement with ICANN.

Pursuant to our agreements with ICANN, we make available on our website (at www.Verisign.com/zone) files containing all active domain names registered in the *.com* and *.net* registries. At the same website address, we make available a summary of the active zone count registered in the *.com* and *.net* registries and the number of *.com* and *.net* domain names in the domain name base. The domain name base is the active zone plus the number of domain names that are registered but not configured for use in the respective top level domain zone file plus the number of domain names that are in a client or server hold status. These files and the related summary data are updated at least once per day. The update times may vary each day. The number of domain names provided in this Form 10-Q are as of midnight of the date reported. Information available on, or accessible through, our website is not incorporated herein by reference.

Results of Operations

The following table presents information regarding our results of operations as a percentage of revenues:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2016	2015	2016	2015
Revenues	100.0%	100.0%	100.0%	100.0%
Costs and expenses:				
Cost of revenues	17.0	18.4	17.5	18.5
Sales and marketing	6.9	9.3	7.0	9.0
Research and development	5.0	6.2	5.5	6.4
General and administrative	9.6	9.4	9.7	9.8
Total costs and expenses	38.5	43.3	39.7	43.7
Operating income	61.5	56.7	60.3	56.3
Interest expense	(10.1)	(10.9)	(10.1)	(9.7)
Non-operating income (loss), net	0.6	1.2	0.8	(0.5)
Income before income taxes	52.0	47.0	51.0	46.1
Income tax expense	(12.5)	(11.7)	(12.2)	(11.3)
Net income	39.5%	35.3%	38.8%	34.8%

Revenues

Revenues related to our Registry Services are primarily derived from registrations for domain names in the *.com* and *.net* domain name registries. We also derive revenues from operating domain name registries for several other TLDs and from providing back-end registry services to a number of TLD registry operators, all of which are not significant in relation to our consolidated revenues. For domain names registered with the *.com* and *.net* registries we receive a fee from third-party registrars per annual registration that is fixed pursuant to our agreements with ICANN. Individual customers, called registrants, contract directly with third-party registrars or their resellers, and the third-party registrars in turn register the domain names with Verisign. Changes in revenues are driven largely by changes in the number of new domain name registrations and the renewal rate for existing registrations as well as the impact of new and prior price increases, to the extent permitted by ICANN and the DOC. New registrations and the renewal rate for existing registrations are impacted by continued growth in online advertising, e-commerce, and the number of internet users, as well as marketing activities carried out by us and third-party registrars. We increased the annual fee for a *.net* domain name registration from \$6.18 to \$6.79 on February 1, 2015, and from \$6.79 to \$7.46 on February 1, 2016. On July 28, 2016, we announced an increase in the annual fee for the *.net* domain name registration from \$7.46 to \$8.20, effective February 1, 2017. The annual fee for a *.com* domain name registration is fixed at \$7.85 for the duration of the current *.com* Registry Agreement through November 30, 2018, except that prices may be raised by up to 7% each year due to the imposition of any new Consensus Policy or documented extraordinary expense resulting from an attack or threat of attack on the Security and Stability (each as defined in the *.com* Registry Agreement) of the DNS, subject to approval of the DOC. We offer promotional marketing programs for our registrars based upon market conditions and the business environment in which the registrars operate. All fees paid to us for *.com* and *.net* registrations are in U.S. dollars.

[Table of Contents](#)

Revenues from Security Services are not significant in relation to our total consolidated revenues.

A comparison of revenues is presented below:

	Three Months Ended June 30,			Six Months Ended June 30,		
	2016	% Change	2015	2016	% Change	2015
(Dollars in thousands)						
Revenues	\$ 286,466	9%	\$ 262,539	\$ 568,342	9%	\$ 520,961

The following table compares domain name base for .com and .net managed by our Registry Services business:

	June 30, 2016	% Change	June 30, 2015
Domain name base for .com and .net	143.2 million	7%	133.5 million

Revenues increased by \$23.9 million and \$47.4 million during the three and six months ended June 30, 2016, respectively, as compared to the same periods last year, primarily due to an increase in revenues from the operation of the registries for the .com and .net TLDs. The increase in revenues from the operation of the registries for the .com and .net TLDs was driven by a 7% increase in the domain name base for .com and .net and an increase in the .net domain name registration fees in February 2015 and 2016.

Growth in the domain name base has been primarily driven by continued internet growth and marketing activities carried out by us and third-party registrars. During the second half of 2015 and the first quarter of 2016 we experienced an increased volume of new domain name registrations primarily from our registrars in China. The volume of these new registrations has been inconsistent and periodic compared to prior periods, and by the end of the first quarter of 2016, reverted back to a more normalized registration pace. However, ongoing economic uncertainty, competitive pressure from ccTLDs, the introduction of new gTLDs, ongoing changes in internet practices and behaviors of consumers and business, as well as the motivation of existing domain name registrants and how they will manage their investment in domain names, has limited the rate of growth of the domain name base in recent years and may continue to do so in the remainder of 2016 and beyond.

We expect revenues to remain consistent in the second half of 2016, as compared to the six months ended June 30, 2016.

Geographic revenues

We generate revenues in the U.S.; Europe, the Middle East and Africa (“EMEA”); China; and certain other countries including Canada, Australia and Japan.

The following table presents a comparison of our geographic revenues:

	Three Months Ended June 30,			Six Months Ended June 30,		
	2016	% Change	2015	2016	% Change	2015
(Dollars in thousands)						
U.S.	\$ 165,756	4%	\$ 159,208	\$ 329,799	4%	\$ 316,716
EMEA	52,710	9%	48,233	103,665	9%	95,239
China	32,727	71%	19,092	63,926	73%	36,969
Other	35,273	(2)%	36,006	70,952	(2)%	72,037
Total revenues	\$ 286,466		\$ 262,539	\$ 568,342		\$ 520,961

Revenues for our Registry Services business are attributed to the country of domicile and the respective regions in which our registrars are located, however, this may differ from the regions where the registrars operate or where registrants are located. Revenue growth for each region may be impacted by registrars reincorporating, relocating, or from acquisitions or changes in affiliations of resellers. Revenue growth for each region may also be impacted by registrars domiciled in one region, registering domain names in another region. Although revenues continued to grow in the more mature markets of the U.S. and EMEA, China saw the highest growth rate for both the three and six months ended June 30, 2016 due to the increased volume of new registrations during the second half of 2015 and the first quarter of 2016.

Cost of revenues

Cost of revenues consist primarily of salaries and employee benefits expenses for our personnel who manage the operational systems, depreciation expenses, operational costs associated with the delivery of our services, fees paid to ICANN, customer support and training, consulting and development services, costs of facilities and computer equipment used in these activities, telecommunications expense and allocations of indirect costs such as corporate overhead.

A comparison of cost of revenues is presented below:

	Three Months Ended June 30,			Six Months Ended June 30,		
	2016	% Change	2015	2016	% Change	2015
(Dollars in thousands)						
Cost of revenues	\$ 48,753	1%	\$ 48,221	\$ 99,335	3%	\$ 96,574

Cost of revenues expenses remained consistent during the three months ended June 30, 2016, as compared to the same period last year.

Cost of revenues increased by \$2.8 million during the six months ended June 30, 2016, as compared to the same period last year, primarily due to a \$3.4 million increase in salary and employee benefits expenses. Salary and employee benefits expenses increased primarily due to an increase in average headcount and an increase in bonus expenses.

We expect cost of revenues as a percentage of revenues to remain consistent during the remainder of 2016 compared to the six months ended June 30, 2016.

Sales and marketing

Sales and marketing expenses consist primarily of salaries, sales commissions, sales operations and other personnel-related expenses, travel and related expenses, trade shows, costs of lead generation, costs of computer and communications equipment and support services, facilities costs, consulting fees, costs of marketing programs, such as online, television, radio, print and direct mail advertising costs, and allocations of indirect costs such as corporate overhead.

A comparison of sales and marketing expenses is presented below:

	Three Months Ended June 30,			Six Months Ended June 30,		
	2016	% Change	2015	2016	% Change	2015
(Dollars in thousands)						
Sales and marketing	\$ 19,757	(19)%	\$ 24,329	\$ 39,784	(15)%	\$ 46,711

Sales and marketing expenses decreased by \$4.6 million during the three months ended June 30, 2016, as compared to the same period last year, primarily due to a \$3.3 million decrease in advertising and consulting expenses. Advertising and consulting expenses decreased primarily due to the timing of marketing programs for our Registry Services business and a decrease in expenses related to our Security Services business.

Sales and marketing expenses decreased by \$6.9 million during the six months ended June 30, 2016, as compared to the same period last year, primarily due to a \$5.5 million decrease in advertising and consulting expenses. Advertising and consulting expenses decreased primarily due to the timing of marketing programs for our Registry Services business and a decrease in expenses related to our Security Services business.

We expect sales and marketing expenses as a percentage of revenues to increase during the remainder of 2016 compared to the six months ended June 30, 2016 as the volume of marketing initiatives increases. We expect sales and marketing expenses as a percent of revenues for full year 2016 to be at comparable levels to 2015.

Research and development

Research and development expenses consist primarily of costs related to research and development personnel, including salaries and other personnel-related expenses, consulting fees, facilities costs, computer and communications equipment, support services used in our service and technology development, and allocations of indirect costs such as corporate overhead.

A comparison of research and development expenses is presented below:

	Three Months Ended June 30,			Six Months Ended June 30,		
	2016	% Change	2015	2016	% Change	2015
(Dollars in thousands)						
Research and development	\$ 14,288	(13)%	\$ 16,347	\$ 31,031	(7)%	\$ 33,499

[Table of Contents](#)

Research and development expenses decreased by \$2.1 million during the three months ended June 30, 2016, as compared to the same period last year, primarily due to a decrease in salary and employee benefits expenses and allocated overhead expenses resulting from a reduction in headcount.

Research and development expenses decreased by \$2.5 million during the six months ended June 30, 2016, as compared to the same period last year, primarily due to a decrease in salary and employee benefits expenses and allocated overhead expenses resulting from a reduction in headcount.

We expect research and development expenses as a percentage of revenues to remain consistent during the remainder of 2016 compared to the six months ended June 30, 2016.

General and administrative

General and administrative expenses consist primarily of salaries and other personnel-related expenses for our executive, administrative, legal, finance, information technology and human resources personnel, costs of facilities, computer and communications equipment, management information systems, support services, professional services fees, certain tax and license fees, and bad debt expense, offset by allocations of indirect costs such as facilities and shared services expenses to other cost types.

A comparison of general and administrative expenses is presented below:

	Three Months Ended June 30,			Six Months Ended June 30,		
	2016	% Change	2015	2016	% Change	2015
(Dollars in thousands)						
General and administrative	\$ 27,401	11%	\$ 24,677	\$ 55,158	8%	\$ 50,975

General and administrative expenses increased by \$2.7 million during the three months ended June 30, 2016, as compared to the same period last year, primarily due to a \$1.6 million increase in legal expenses and a \$1.4 million increase in salary and employee benefits expenses. Legal expenses increased primarily due to an increase in services performed by external legal counsel. Salary and employee benefits expenses increased primarily due to increases in bonus expenses and average headcount.

General and administrative expenses increased by \$4.2 million during the six months ended June 30, 2016, as compared to the same period last year, primarily due to a \$3.4 million increase in salary and employee benefits expenses, and a \$2.3 million increase in legal expenses, partially offset by a \$1.4 million decrease in depreciation expenses. Salary and employee benefits expenses increased primarily due to increases in bonus expenses and headcount. Legal expenses increased due to an increase in services performed by external legal counsel. Depreciation expense decreased due to a decrease in capital expenditures in recent years.

We expect general and administrative expenses as a percentage of revenues to remain consistent during the remainder of 2016 compared to the six months ended June 30, 2016.

Interest expense

The following table presents the components of Interest expense:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2016	2015	2016	2015
(In thousands)				
Contractual interest on Subordinated Convertible Debentures	\$ 10,156	\$ 10,156	\$ 20,312	\$ 20,312
Contractual interest on Senior Notes	15,234	15,234	30,469	24,271
Amortization of debt discount on the Subordinated Convertible Debentures	2,744	2,527	5,433	5,004
Credit facility fees and other interest expense	725	586	1,449	933
Total interest expense	\$ 28,859	\$ 28,503	\$ 57,663	\$ 50,520

Contractual interest on Senior Notes increased during the six months ended June 30, 2016 due to a \$6.2 million increase in interest expense related to the 2025 Senior Notes which were issued in March 2015. We expect interest expense to remain consistent during the remainder of 2016 as compared to the six months ended June 30, 2016.

Non-operating income (loss), net

The following table presents the components of Non-operating income (loss), net:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2016	2015	2016	2015
	(In thousands)			
Unrealized (loss) gain on contingent interest derivative on Subordinated Convertible Debentures	\$ (94)	\$ 2,708	\$ 971	\$ (4,311)
Interest income	1,522	373	2,564	632
Other, net	281	120	1,295	1,325
Total non-operating income (loss), net	\$ 1,709	\$ 3,201	\$ 4,830	\$ (2,354)

Unrealized gains and losses on the contingent interest derivative on the Subordinated Convertible Debentures reflect the change in value of the derivative that results primarily from changes in our stock price. Interest income increased during both the three and six months ended June 30, 2016 primarily due to an increase in interest rates and a higher average invested balance.

Income tax expense

The following table presents income tax expense and the effective tax rate:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2016	2015	2016	2015
	(Dollars in thousands)			
Income tax expense	\$ 35,907	\$ 30,652	\$ 69,535	\$ 59,079
Effective tax rate	24%	25%	24%	25%

The effective tax rate for the three and six months ended June 30, 2016 and 2015 was lower than the statutory federal rate of 35% primarily due to tax benefits from foreign income taxed at lower rates, partially offset by state income taxes.

Liquidity and Capital Resources

	June 30, 2016	December 31, 2015
	(In thousands)	
Cash and cash equivalents	\$ 170,966	\$ 228,659
Marketable securities	1,736,030	1,686,771
Total	<u>\$ 1,906,996</u>	<u>\$ 1,915,430</u>

As of June 30, 2016, our principal source of liquidity was \$171.0 million of cash and cash equivalents and \$1.7 billion of marketable securities. The marketable securities primarily consist of debt securities issued by the U.S. Treasury meeting the criteria of our investment policy, which is focused on the preservation of our capital through investment in investment grade securities. The cash equivalents consist of amounts invested in money market funds and U.S. Treasury bills purchased with original maturities of less than 90 days. As of June 30, 2016, all of our debt securities have contractual maturities of less than one year. Our cash and cash equivalents are readily accessible. For additional information on our investment portfolio, see Note 2, "Cash, Cash Equivalents, and Marketable Securities," of our Notes to Condensed Consolidated Financial Statements in Part I, Item I of this Quarterly Report on Form 10-Q.

As of June 30, 2016, the amount of cash and cash equivalents and marketable securities held by foreign subsidiaries was \$1.3 billion. Our intent remains to indefinitely reinvest these funds outside of the U.S. and accordingly, we have not provided deferred U.S. taxes for these funds. In the event funds from foreign operations are needed to fund operations in the U.S. and if U.S. tax has not already been provided, we would be required to accrue and pay additional U.S. taxes in order to repatriate these funds.

As of June 30, 2016, we had \$500.0 million principal amount outstanding of the 5.25% senior unsecured notes due 2025 and \$750.0 million principal amount outstanding of the 4.625% senior unsecured notes due 2023.

As of June 30, 2016, there were no borrowings outstanding under the \$200.0 million unsecured revolving credit facility that will expire in 2020.

As of June 30, 2016, we had \$1.25 billion principal amount outstanding of 3.25% subordinated convertible debentures due 2037. The price of our common stock exceeded the conversion price threshold trigger during the second quarter of 2016. Accordingly, the Subordinated Convertible Debentures are convertible at the option of each holder through September 30, 2016. We do not expect a material amount of the Subordinated Convertible Debentures to be converted in the near term as the trading price of the debentures exceeds the value that is likely to be received upon conversion. However, we cannot provide any assurance that the trading price of the debentures will continue to exceed the value that would be derived upon conversion or that the holders will not elect to convert the Subordinated Convertible Debentures. If a holder elects to convert its Subordinated Convertible Debentures, we are permitted under the Indenture to pursue an exchange in lieu of conversion or to settle the conversion value (as defined in the Indenture) in cash, stock, or a combination thereof. If we choose not to pursue or cannot complete an exchange in lieu of conversion, we currently have the intent and the ability (based on current facts and circumstances) to settle the principal amount of the Subordinated Convertible Debentures in cash. However, if the principal amount of the Subordinated Convertible Debentures that holders actually elect to convert exceeds our cash on hand and cash from operations, we will need to draw cash from existing financing or pursue additional sources of financing to settle the Subordinated Convertible Debentures in cash. We cannot provide any assurances that we will be able to obtain new sources of financing on terms acceptable to us or at all, nor can we assure that we will be able to obtain such financing in time to settle the Subordinated Convertible Debentures that holders elect to convert.

On February 15, 2016, we paid contingent interest of \$6.5 million in addition to the normal coupon interest on our Subordinated Convertible Debentures. In February 2016, the upside trigger on the Subordinated Convertible Debentures was met for the six month interest period ending in August 2016. On August 15, 2016, we will pay contingent interest of \$6.8 million in addition to the normal coupon interest to holders of record of the Subordinated Convertible Debentures as of August 1, 2016. The upside trigger is met if the Subordinated Convertible Debentures' average trading price is at least 150% of par during the 10 trading days before each semi-annual interest period. The upside trigger is tested semi-annually for the following six months. The semi-annual upside contingent interest payment, for a given period, can be approximated by applying the annual rate of 0.5% to the aggregate market value of all outstanding Subordinated Convertible Debentures and dividing by two for that semi-annual period payment amount.

We derive significant tax savings from the Subordinated Convertible Debentures. During the first half of 2016 and 2015, the interest deduction, for income tax purposes, related to our Subordinated Convertible Debentures, excluding contingent interest, was \$87.7 million and \$82.4 million, respectively, compared to coupon interest expense of \$20.3 million for each of the same periods. For income tax purposes, we deduct interest expense on the Subordinated Convertible Debentures calculated at 8.5% of the adjusted issue price, subject to adjustment for actual versus projected contingent interest. The adjusted issue price, and consequently the interest deduction for income tax purposes, grows over the term due to the difference between the

[Table of Contents](#)

interest deduction taken using a comparable yield of 8.5% on the adjusted issue price, and the coupon rate of 3.25% on the principal amount, compounded annually. The interest deduction taken is subject to recapture upon settlement to the extent that the amount paid (in cash or stock) to settle the Subordinated Convertible Debentures is less than the adjusted issue price. Interest recognized in accordance with GAAP, which is calculated at 8.39% of the liability component of the Subordinated Convertible Debentures, will also grow over the term, but at a slower rate. This difference will result in a continuing increase in the deferred tax liability on our Condensed Consolidated Balance Sheet.

Subsequent to June 30, 2016, we incurred a commitment to pay approximately \$130.0 million for the future assignment of contractual rights, which are subject to third-party consent. The payment is expected to occur during the third quarter of 2016.

We believe existing cash, cash equivalents and marketable securities, and funds generated from operations, together with our borrowing capacity under the unsecured revolving credit facility should be sufficient to meet our working capital, capital expenditure requirements, and to service our debt for at least the next 12 months. We regularly assess our cash management approach and activities in view of our current and potential future needs.

In summary, our cash flows for the six months ended June 30, 2016 and 2015 are as follows:

	Six Months Ended June 30,	
	2016	2015
	(In thousands)	
Net cash provided by operating activities	\$ 304,291	\$ 307,625
Net cash used in investing activities	(58,508)	(489,285)
Net cash (used in) provided by financing activities	(303,443)	176,732
Effect of exchange rate changes on cash and cash equivalents	(33)	606
Net decrease in cash and cash equivalents	\$ (57,693)	\$ (4,322)

Cash flows from operating activities

Our largest source of operating cash flows is cash collections from our customers. Our primary uses of cash from operating activities are for personnel related expenditures, and other general operating expenses, as well as payments related to taxes, interest and facilities.

Net cash provided by operating activities decreased during the six months ended June 30, 2016, primarily due to an increase in cash paid for interest and cash paid to employees and vendors, partially offset by an increase in cash collected from customers. Cash paid for interest increased due to the interest paid on the 2025 Senior Notes and higher contingent interest related to the Subordinated Convertible Debentures. Payments to employees and vendors increased primarily due to the timing of payments. Cash received from customers increased primarily due to an increase in the number of new and renewal domain name registrations during the six months ended June 30, 2016, and the increases in the .net domain name registration fees in February 2016.

Cash flows from investing activities

The changes in cash flows from investing activities primarily relate to purchases, maturities and sales of marketable securities, and purchases of property and equipment.

The decrease in cash flows used in investing activities was primarily due to a decrease in purchases of marketable securities, net of proceeds from sales and maturities, during the first half of 2016, compared to the same period in 2015, and a decrease in purchases of property and equipment and other investing activities.

Cash flows from financing activities

The changes in cash flows from financing activities primarily relate to share repurchases, proceeds from and repayments of borrowings, our employee stock purchase plan, and excess tax benefits from stock-based compensation.

The change in cash (used in) provided by financing activities during the six months ended June 30, 2016 was primarily due to a decrease in proceeds from borrowings as we issued the 2025 Senior Notes in March 2015, partially offset by a decrease in share repurchases.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

There have been no significant changes in our market risk exposures since December 31, 2015.

ITEM 4. CONTROLS AND PROCEDURES

Based on our management's evaluation, with the participation of our Chief Executive Officer (our principal executive officer) and our Chief Financial Officer (our principal financial officer), as of June 30, 2016, our principal executive officer and principal financial officer have concluded that our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act) are effective to ensure that information required to be disclosed by us in reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in SEC rules and forms and is accumulated and communicated to our management, including our principal executive officer and principal financial officer, as appropriate, to allow timely decisions regarding required disclosure.

Changes in Internal Control over Financial Reporting

There was no change in our internal control over financial reporting (as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) during the three months ended June 30, 2016 that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting.

Inherent Limitations of Disclosure Controls and Internal Control over Financial Reporting

Because of their inherent limitations, our disclosure controls and procedures and our internal control over financial reporting may not prevent material errors or fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. The effectiveness of our disclosure controls and procedures and our internal control over financial reporting is subject to risks, including that the control may become inadequate because of changes in conditions or that the degree of compliance with our policies or procedures may deteriorate.

PART II-OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

Verisign is involved in various investigations, claims and lawsuits arising in the normal conduct of its business, none of which, in its opinion, will have a material adverse effect on its financial condition, results of operations, or cash flows. The Company cannot assure you that it will prevail in any litigation. Regardless of the outcome, any litigation may require the Company to incur significant litigation expense and may result in significant diversion of management attention.

ITEM 1A. RISK FACTORS

In addition to other information in this Form 10-Q, the following risk factors should be carefully considered in evaluating us and our business because these factors currently have a significant impact or may have a significant impact on our business, operating results or financial condition. Actual results could differ materially from those projected in the forward-looking statements contained in this Form 10-Q as a result of the risk factors discussed below and elsewhere in this Form 10-Q and in other filings we make with the SEC.

Risks arising from our agreements governing our Registry Services business could limit our ability to maintain or grow our business.

We are parties to (i) a Cooperative Agreement (as amended) with the DOC with respect to the .com gTLD and certain other aspects of the DNS and (ii) Registry Agreements with ICANN for .com, .net, .name and other gTLDs including our IDN gTLDs. As substantially all of our revenues are derived from our Registry Services business, limitations in these agreements could have a material impact on our business.

Pricing. Under the terms of the Cooperative Agreement with the DOC and the .com Registry Agreement with ICANN, we are generally restricted from increasing the price of registrations or renewals of .com domain names except that we are entitled to increase the price up to 7%, with the prior approval of the DOC, due to the imposition of any new Consensus Policies or documented extraordinary expense resulting from an attack or threat of attack on the security and stability of the DNS. However, it is uncertain that such circumstances will arise, or if they do, that the DOC will approve our request to increase the price for .com domain name registrations. We also have the right under the Cooperative Agreement to seek the removal of these pricing restrictions if we demonstrate that market conditions no longer warrant such restrictions. However, it is uncertain that such circumstances will arise, or if they do, that the DOC will agree to the removal of these pricing restrictions. In connection with a renewal of the .com Registry Agreement, we can seek an increase of the price for .com domain name registrations. Regardless of whether we seek such an increase, there can be no assurance of the price that DOC will approve in connection with a renewal of the .com Registry Agreement. Under the terms of the .net and .name Registry Agreements with ICANN, we are permitted to increase the price of registrations and renewals in these TLDs up to 10% per year. Additionally, ICANN's registry agreements for the new gTLDs do not contain such pricing restrictions.

Vertical integration. Under the .com, .net and .name Registry Agreements with ICANN, as well as the Cooperative Agreement with the DOC, we are not permitted to acquire, directly or indirectly, control of, or a greater than 15% ownership interest in, any ICANN-accredited registrar. Historically, all gTLD registry operators were subject to this vertical integration prohibition; however, ICANN has established a process whereby registry operators may seek ICANN's approval to remove this restriction, and ICANN has approved such removal in some instances. If we were to seek removal of the vertical integration restrictions contained in our agreements, it is uncertain whether ICANN and/or DOC approval would be obtained. Additionally, ICANN's registry agreement for new gTLDs generally permits such vertical integration, with certain limitations including ICANN's right, but not the obligation, to refer such vertical integration activities to competition authorities. Furthermore, unless prohibited by ICANN as noted above, such vertical integration restrictions do not generally apply to ccTLD registry operators. If registry operators of new or existing gTLDs, or ccTLDs, are able to obtain competitive advantages through such vertical integration, it could materially harm our business.

Termination or non-renewal. Under the Cooperative Agreement (as amended) the DOC must approve any renewal or extension of the .com Registry Agreement. The DOC, under certain circumstances, could refuse to grant its approval to the renewal of the .com Registry Agreement on similar terms, or at all. Any failure of the DOC to approve the renewal of the .com Registry Agreement prior to the expiration of its current term on November 30, 2018 would have a material adverse effect on our business. Under certain circumstances, ICANN could terminate or refuse to renew one or more of our Registry Agreements including those for .com, .net, and our other gTLDs. The Company and ICANN completed the drafting of the Root Zone Maintainer Service Agreement ("RZMA") and the .com Registry Agreement extension amendment (".com Extension"), which extends the expiration date of the .com Registry Agreement to November 30, 2024 and is intended to coincide with the eight year term of the RZMA. In June 2016, ICANN posted on its website the RZMA for public review and the .com Extension for

public comment. We can provide no assurance that the .com Extension or the RZMA will be approved or, if approved, will be in the form described. See the “Industry Regulation” section in Part I, Item 1 of the Company’s Annual Report on Form 10-K for the year ended December 31, 2015, which was filed on February 19, 2016, for further information on the Cooperative Agreement and the RZMA.

Modification or amendment. Our Registry Agreements for new gTLDs, including the Registry Agreements for our IDN gTLDs, include ICANN’s right to amend the agreement without our consent, which could impose unfavorable contract obligations on us that could impact our plans and competitive positions with respect to new gTLDs. At the time of renewal of our .com or .net Registry Agreements, ICANN might also attempt to impose this same unilateral right to amend these registry agreements under certain conditions. ICANN has also included new mandatory obligations on new gTLD registry operators, including us, that may increase the risks and potential liabilities associated with operating new gTLDs. ICANN might seek to impose these new mandatory obligations in our other Registry Agreements under certain conditions.

Legal challenges. Our Registry Agreements have faced, and could continue to face, challenges, including possible legal challenges resulting from our activities or the activities of ICANN, registrars, registrants and others, and any adverse outcome from such challenges could have a material adverse effect on our business.

Consensus Policies. Our Registry Agreements with ICANN require us to implement Consensus Policies. ICANN could adopt Consensus Policies that are unfavorable to us as the registry operator of .com, .net and our other gTLDs, that are inconsistent with our current or future plans, that impose substantial costs on our business, or that affect our competitive position. Such Consensus Policies could have a material adverse effect on our business.

Governmental regulation and the application of new and existing laws in the U.S. and overseas may slow business growth, increase our costs of doing business, create potential liability and have an adverse effect on our business.

Application of new and existing laws and regulations in the U.S. or overseas to the internet and communications industry can be unclear. The costs of complying or failing to comply with these laws and regulations could limit our ability to operate in our current markets, expose us to compliance costs and substantial liability and result in costly and time-consuming litigation. For example, the government of the People’s Republic of China (“PRC”) has indicated that it will issue new regulations, and has begun to enforce existing regulations, that could impose additional costs on our provision of Registry Services in the PRC and could impact the growth or renewal rates of domain name registrations in the PRC. In addition to registry operators, the regulations will require registrars to obtain a government-issued license for each TLD whose domain name registrations they intend to sell directly to registrants. Their failure to obtain the required licenses could also impact the growth of our business in the PRC.

Foreign, federal or state laws could have an adverse impact on our business, financial condition, results of operations and cash flows, and our ability to conduct business in certain foreign countries. For example, laws designed to restrict who can register and who can distribute domain names, the online distribution of certain materials deemed harmful to children, online gambling, counterfeit goods, and cybersquatting; laws designed to require registrants to provide additional documentation or information in connection with domain name registrations; and laws designed to promote cyber security may impose significant additional costs on our business or subject us to additional liabilities. We have contracts pursuant to which we provide services to the U.S. government and they impose compliance costs, including compliance with the Federal Acquisition Regulation, which could be significant to the Company.

Due to the nature of the internet, it is possible that state or foreign governments might attempt to regulate internet transmissions or prosecute us for violations of their laws. We might unintentionally violate such laws, such laws may be modified and new laws may be enacted in the future. In addition, as we launch our IDN gTLDs, we may raise our profile in certain foreign countries thereby increasing the regulatory and other scrutiny of our operations. Any such developments could increase the costs of regulatory compliance for us, affect our reputation, force us to change our business practices or otherwise materially harm our business. In addition, any such new laws could impede growth of or result in a decline in domain name registrations, as well as impact the demand for our services.

Undetected or unknown defects in our service, security breaches, and DDoS attacks could expose us to liability and harm our business and reputation.

Services as complex as those we offer or develop could contain undetected defects or errors. Despite testing, defects or errors may occur in our existing or new services, which could result in compromised customer data, including DNS data, diversion of development resources, injury to our reputation, tort or contract claims, increased insurance costs or increased service costs, any of which could harm our business. Performance of our services could have unforeseen or unknown adverse effects on the networks over which they are delivered as well as, more broadly, on internet users and consumers, and third-party applications and services that utilize our services, which could result in legal claims against us, harming our business. Our failure to identify, remediate and mitigate security breaches or our inability to meet customer expectations in a timely manner

could also result in loss of or delay in revenues, loss of market share, failure to achieve market acceptance, injury to our reputation and increased costs.

In addition to undetected defects or errors, we are also subject to cyber-attacks and attempted security breaches. We retain certain customer and employee information in our data centers and various domain name registration systems. It is critical to our business strategy that our facilities and infrastructure remain secure and are perceived by the marketplace to be secure. The Company, as an operator of critical internet infrastructure, is frequently targeted and experiences a high rate of attacks. These include the most sophisticated forms of attacks, such as advanced persistent threat attacks and zero-hour threats, which means that the threat is not compiled or has been previously unobserved within our observation and threat indicators space until the moment it is launched, and may well target specific unidentified or unresolved vulnerabilities that exist only within the target's operating environment, making these attacks virtually impossible to anticipate and difficult to defend against. The Shared Registration System, the root zone servers, the Root Zone Management System, the TLD name servers and the TLD zone files that we operate are critical to our Registry Services operations. Despite the significant time and money expended on our security measures, we have been subject to a security breach, as disclosed in our Quarterly Report on Form 10-Q for the quarter ended September 30, 2011, and our infrastructure may in the future be vulnerable to physical break-ins, outages resulting from destructive malware, computer viruses, attacks by hackers or nefarious actors or similar disruptive problems, including hacktivism. It is possible that we may have to expend additional financial and other resources to address such problems. Any physical or electronic break-in or other security breach or compromise of the information stored at our data centers or domain name registration systems may cause an outage of or jeopardize the security of information stored on our premises or in the computer systems and networks of our customers. In such an event, we could face significant liability, customers could be reluctant to use our services and we could be at risk for loss of various security and standards-based compliance certifications needed for operation of our businesses, all or any of which could adversely affect our reputation and harm our business. Such an occurrence could also result in adverse publicity and therefore adversely affect the market's perception of the security of e-commerce and communications over the internet as well as of the security or reliability of our services.

Additionally, our networks have been, and likely will continue to be, subject to DDoS attacks. While we have adopted mitigation techniques, procedures and strategies to defend against such attacks, there can be no assurance that we will be able to defend against every attack, especially as the attacks increase in size and sophistication. Any attack, even if only partially successful, could disrupt our networks, increase response time, negatively impact our ability to meet our contracted service level obligations, and generally hamper our ability to provide reliable service to our Registry Services customers and the broader internet community. Further, we sell DDoS protection services to our Security Services customers. Although we increase our knowledge of and develop new techniques in the identification and mitigation of attacks through the protection of our Security Services customers, the DDoS protection services share some of the infrastructure used in our Registry Services business. Therefore the provision of such services might expose our critical Registry Services infrastructure to temporary degradations or outages caused by DDoS attacks against those customers, in addition to any directed specifically against us and our networks.

Changes to the present multi-stakeholder model of internet governance could materially and adversely impact our business.

The internet is governed under a multi-stakeholder model comprising civil society, the private sector including for-profit and not-for-profit organizations such as ICANN, governments including the U.S. government, academia, non-governmental organizations and international organizations. Changes to the present multi-stakeholder model of internet governance could materially and adversely impact our business.

Role of ICANN. ICANN plays a central coordination role in the multi-stakeholder system. ICANN is mandated by the non-binding Affirmation of Commitments ("AOC") between the DOC and ICANN to uphold a private sector-led multi-stakeholder approach to internet governance for the public benefit. If ICANN fails to uphold or significantly redefines the multi-stakeholder model, it could harm our business and our relationship with ICANN. Additionally, the AOC could be terminated or replaced with a different agreement between ICANN and some other authority which may establish new or different procedures for internet governance that may be unfavorable to us. Also, legal, regulatory or other challenges could be brought challenging the legal authority underlying the roles and actions of ICANN.

Role of foreign governments. Some governments and members of the multi-stakeholder community have questioned ICANN's role with respect to internet governance and, as a result, could seek a multilateral oversight body as a replacement. Additionally, the role of ICANN's Governmental Advisory Committee, which is comprised of representatives of national governments, could change, giving governments more control of internet governance. For example, the AOC has established several multi-party review panels and contemplates a greater involvement by foreign governments and governmental authorities in the oversight and review of ICANN. These periodic review panels may take positions that are unfavorable to us. Some governments and governmental authorities outside the U.S. have in the past disagreed, and may in the future disagree, with the actions, policies or programs of ICANN, the U.S. Government and us relating to the DNS.

Role of the U.S. Government. The U.S. Government through the NTIA coordinates the management of important aspects of the DNS including the IANA functions and the root zone. On March 14, 2014, NTIA announced its intent to transition its oversight of the IANA function to the global multi-stakeholder community. NTIA asked ICANN to convene global stakeholders to develop a proposal to transition the current role played by NTIA in the coordination of the DNS. The NTIA is also coordinating a related and parallel transition of related root zone management functions. These related root zone management functions involve our role as Root Zone Maintainer under the Cooperative Agreement. At NTIA's request, we submitted a proposal with ICANN to NTIA as to how best to remove NTIA's administrative role associated with root zone maintenance in a manner that maintains the security, stability and resiliency of the DNS. We have performed the Root Zone Maintainer function as a community service spanning three decades without compensation at the request of the DOC under the Cooperative Agreement. While it is uncertain how the transition of oversight of the IANA functions and related root zone management functions will affect our role as Root Zone Maintainer, it is anticipated that performance of the root zone maintainer function would be conducted by us under a new Root Zone Maintainer Service Agreement with ICANN once our root zone maintainer function obligations under the Cooperative Agreement are completed. Although our Root Zone Maintainer function is separate from our Registry Agreements, there can be no assurance that the transition of the IANA functions, the transition of the related root zone management functions, and associated transition processes will not negatively impact our business.

As a result of these and other risks, internet governance may change in ways that could materially harm our Registry Services business. For example, after the transition, if we perform the root zone maintainer function under a new agreement, we may be subject to claims challenging the agreement and we may not have immunity from or sufficient indemnification for such claims. If another party is designated to perform the Root Zone Maintainer function, there could be new or increased risks in availability, integrity and publication of the root zone file, which is critical to the operation of the DNS and our operation of our TLDs, including *.com*.

In addition to harming our Registry Services business, changes to internet governance may make it more difficult for us to introduce new services in our Registry Services business and we could also be subject to additional restrictions on how our business is conducted, or to fees or taxes applicable to this business, which may not be equally applicable to our competitors.

We operate two root zone servers and are contracted to perform the Root Zone Maintainer function. Under ICANN's New gTLD program, we face increased risk from these operations.

We operate two of the 13 root zone servers. Root zone servers are name servers that contain authoritative data for the very top of the DNS hierarchy. These servers have the software and DNS configuration data necessary to locate name servers that contain authoritative data for the TLDs. These root zone servers are critical to the functioning of the internet. Under the Cooperative Agreement, we play a key operational role in support of the IANA function as the Root Zone Maintainer. In this role, we provision and publish the authoritative data for the root zone itself multiple times daily and distribute it to all root server operators.

Under its New gTLD Program, ICANN has recommended delegations into the root zone of a large number of new gTLDs. In view of our role as the Root Zone Maintainer, and as a root server operator, we face increased risks should ICANN's delegation of these new gTLDs, which represent unprecedented changes to the root zone in volume and frequency, cause security and stability problems within the DNS and/or for parties who rely on the DNS. Such risks include potential instability of the DNS including potential fragmentation of the DNS should ICANN's delegations create sufficient instability, and potential claims based on our role in the root zone provisioning and delegation process. These risks, alone or in the aggregate, have the potential to cause serious harm to our Registry Services business. Further, our business could also be harmed through security, stability and resiliency degradation if the delegation of new gTLDs into the root zone causes problems to certain components of the DNS ecosystem or other aspects of the global DNS, or other relying parties are negatively impacted as a result of domain name collisions or other new gTLD security issues, such as exposure or other leakage of private or sensitive information.

Additionally, DNSSEC enabled in the root zone and at other levels of the DNS requires new preventative maintenance functions and complex operational practices that did not exist prior to the introduction of DNSSEC. Any failure by us or the IANA functions operator to comply with stated practices, such as those outlined in relevant DNSSEC Practice Statements, introduces risk to DNSSEC relying parties and other internet users and consumers of the DNS, which could have a material adverse impact on our business.

The evolution of internet practices and behaviors and the adoption of substitute technologies may impact the demand for domain names.

Domain names and the domain name system have been used by consumers and businesses to access or disseminate information, conduct e-commerce, and develop an online identity for many years. The growth of technologies such as social media, mobile devices, apps and the dominance of search engines has evolved and changed the internet practices and behaviors of consumers and businesses alike. These changes can impact the demand for domain names by those who purchase domain names for personal, commercial and investment reasons. Factors such as the evolving practices and preferences of internet users

and how they navigate the internet as well the motivation of domain name registrants and how they will monetize their investment in domain names can negatively impact our business. Some domain name registrars and registrants seek to purchase and resell domain names following an increase in their value. Adverse changes in the resale value of domain names could result in a decrease in the demand and/or renewal rates for domain names obtained for resale.

Some domain name registrants use a domain name to access or disseminate information, conduct ecommerce, and develop an online identity. Currently, internet users often navigate to a website either by directly typing its domain name into a web browser, the use of an app on their smart phone or mobile device, the use of a voice recognition technology such as Siri, Cortana, or Echo, or through the use of a search engine. If (i) web browser or internet search technologies were to change significantly; (ii) internet users' preferences or practices shift away from recognizing and relying on web addresses for navigation through the use of new and existing technologies; (iii) internet users were to significantly decrease the use of web browsers in favor of applications to locate and access content; or (iv) internet users were to increasingly use third level domains or alternate identifiers, such as social networking and microblogging sites, in each case the demand for domain names registered by us could decrease. This may trigger current or prospective customers and parties in our target markets to reevaluate their need for registration or renewal of domain names.

Some domain name registrars and registrants seek to generate revenue through advertising on their websites; changes in the way these registrars and registrants are compensated (including changes in methodologies and metrics) by advertisers and advertisement placement networks, such as Google, Yahoo!, Baidu and Bing, have, and may continue to, adversely affect the market for those domain names favored by such registrars and registrants which has resulted in, and may continue to result in, a decrease in demand and/or the renewal rate for those domain names. For example, according to published reports, Google has in the past changed (and may change in the future) its search algorithm, which may decrease site traffic to certain websites and provide less pay-per-click compensation for certain types of websites. This has made such websites less profitable which has resulted in, and may continue to result in, fewer domain registrations and renewals. In addition, as a result of the general economic environment, spending on online advertising and marketing may not increase or may be reduced, which in turn, may result in a further decline in the demand for those domain names.

If any of the above factors negatively impact the renewal of domain names or the demand for new domain names, we may experience material adverse impacts on our business, operating results, financial condition and cash flows.

Many of our target markets are evolving, and if these markets fail to develop or if our products and services are not widely accepted in these markets, our business could be harmed.

We target many new, developing and emerging markets to grow our business. These markets are rapidly evolving, and may not grow. Even if these markets grow, our services may not be widely used or accepted. Accordingly, the demand for our services in these markets is very uncertain. The factors that may affect market acceptance or adoption of our services in these markets include the following:

- regional internet infrastructure development, expansion, penetration and adoption;
- market acceptance and adoption of products and services based upon technologies other than those we use, which are substitutes for our products and services;
- public perception of the security of our technologies and of IP and other networks;
- the introduction and consumer acceptance of new generations of mobile devices, and in particular the use of alternative internet navigation mechanisms other than web browsers;
- increasing cyber threats and the associated customer need and demand for our Security Services offerings;
- government regulations affecting internet access and availability, domain name registrations or the provision of registry services, or e-commerce and telecommunications over the internet;
- preference by markets for the use of their own country's ccTLDs as a substitute or alternative to our TLDs; and
- increased acceptance and use of new gTLDs as substitutes for established gTLDs.

If the market for e-commerce and communications over IP and other networks does not grow or these services are not widely accepted in the market, our business could be materially harmed.

We may face operational and other risks from the introduction of new gTLDs by ICANN and our provision of back-end registry services.

Approximately 1,000 new gTLDs have already been delegated in this initial round of new gTLDs. ICANN plans on offering a second round of new gTLDs after the completion of the initial round, the timing of which is uncertain. As set forth in

the Verisign Labs Technical Report #1130007 version 2.2: New gTLD Security and Stability Considerations released on March 28, 2013, and reiterated in our further publications since then, we continue to believe there are issues regarding the deployment of the new gTLDs that should have been addressed before any new gTLDs were delegated, and despite our and others' efforts, some of these issues have not been addressed by ICANN sufficiently, if at all. For example, domain name collisions have been reported to ICANN, which have resulted in various network interruptions for enterprises as well as confusion and usability issues that have led to phishing attacks. It is anticipated that as additional new gTLDs are delegated more domain name collisions and associated security issues will occur.

We have entered into agreements to provide back-end registry services to other registry operators and applicants for new gTLDs. We may face risks regarding ICANN requirements for mitigating name collisions in the new gTLDs which we operate or for which we provide back-end registry services. For example, the possibility exists that "controlled interruption" periods may disrupt network services or that privacy or secure communications may be impacted as a result of insufficient preparedness by ICANN and the community for the launch of new gTLDs.

Our agreements with ICANN to provide registry services in connection with our new gTLDs, including our IDN gTLDs, and our agreements to provide back-end registry services directly to other applicants and indirectly through reseller relationships expose us to operational and other risks. For example, the increase in the number of gTLDs for which we provide registry services on a standalone basis or as a back-end service provider could further increase costs or increase the frequency or scope of targeted attacks from nefarious actors.

The business environment is highly competitive and, if we do not compete effectively, we may suffer lower demand for our products, price reductions, reduced gross margins and loss of market share.

The internet and communications network services industries are characterized by rapid technological change and frequent new product and service announcements which require us continually to improve the performance, features and reliability of our services, particularly in response to competitive offerings or alternatives to our products and services. In order to remain competitive and retain our market position, we must continually improve our access to technology and software, support the latest transmission technologies, and adapt our products and services to changing market conditions and our customers' and internet users' preferences and practices, or launch entirely new products and services such as new gTLDs in anticipation of, or in response to, market trends. We cannot assure that competing technologies developed by others or the emergence of new industry standards will not adversely affect our competitive position or render our services or technologies noncompetitive or obsolete. In addition, our markets are characterized by announcements of collaborative relationships involving our competitors. The existence or announcement of any such relationships could adversely affect our ability to attract and retain customers. As a result of the foregoing and other factors, we may not be able to compete effectively with current or future competitors, and competitive pressures that we face could materially harm our business.

We face competition in the domain name registry space from other gTLD and ccTLD registries that are competing for the business of entities and individuals that are seeking to obtain a domain name registration and/or establish a web presence. We have applied for new gTLDs including certain IDN gTLDs; however, there is no guarantee that such new gTLDs will be as or more successful than the new gTLDs obtained by our competitors. For example, some of the new gTLDs, including our new gTLDs, may face additional universal acceptance and usability challenges in that current desktop and mobile device software does not ubiquitously recognize these new gTLDs and may be slow to adopt standards or support these gTLDs, even if demand for such products is strong. This is particularly true for IDN gTLDs, but applies to conventional gTLDs as well. As a result of these challenges, it is possible that resolution of domain names within some of these new gTLDs may be blocked within certain state or organizational environments, challenging universal resolvability of these strings and their general acceptance and usability on the internet.

See the "Competition" section in Part I, Item 1 of the Company's Annual Report on Form 10-K for the year ended December 31, 2015, which was filed on February 19, 2016, for further information.

We must establish and maintain strong relationships with registrars and their resellers to maintain their focus on marketing our products and services otherwise our Registry Service business could be harmed.

One registrar accounts for approximately 30% of our revenues. All of our domain name registrations occur through registrars. Registrars and their resellers utilize substantial marketing efforts to increase the demand and/or renewal rates for domain names. Consolidation in the registrar or reseller industry or changes in ownership, management, or strategy among individual registrars or resellers could result in significant changes to their business, operating model and cost structure. Such changes could include reduced marketing efforts or other operational changes that could adversely impact the demand and/or the renewal rates for domain names. With the introduction of new gTLDs, many of our registrars have chosen to, and may continue to choose to, focus their short or long-term marketing efforts on these new offerings and/or reduce the prominence or visibility of our products and services on their e-commerce platforms. Our registrars and resellers not only sell domain name registrations of other competing registries but also sell and support their own services for websites such as email, website hosting, as well as

other services. To the extent that registrars and their resellers focus more on selling and supporting other services and less on the registration and renewal of our TLDs, our revenues could be adversely impacted. Our ability to successfully market our services to, and build and maintain strong relationships with, new and existing registrars or resellers is a factor upon which successful operation of our business is dependent. If we are unable to keep a significant portion of their marketing efforts focused on selling our TLDs as opposed to other competing TLDs or their own services, our business could be harmed.

If we encounter system interruptions or failures, we could be exposed to liability and our reputation and business could suffer.

We depend on the uninterrupted operation of our various systems, secure data centers and other computer and communication networks. Our systems and operations are vulnerable to damage or interruption from:

- power loss, transmission cable cuts and other telecommunications failures;
- damage or interruption caused by fire, earthquake, and other natural disasters;
- attacks, including hacktivism, by miscreants or other nefarious actors;
- computer viruses or software defects;
- physical or electronic break-ins, sabotage, intentional acts of vandalism, terrorist attacks and other events beyond our control;
- risks inherent in or arising from the terms and conditions of our agreements with service providers to operate our networks and data centers;
- state suppression of internet operations; and
- any failure to implement effective and timely remedial actions in response to any damage or interruption.

Most of the computing infrastructure for our Shared Registration System is located at, and most of our customer information is stored in, our facilities in New Castle, Delaware; Dulles, Virginia; and Fribourg, Switzerland. To the extent we are unable to partially or completely switch over to our primary alternate or tertiary sites, any damage or failure that causes interruptions in any of these facilities or our other computer and communications systems could materially harm our business. Although we carry insurance for property damage, we do not carry insurance or financial reserves for such interruptions, or for potential losses arising from terrorism.

In addition, our Registry Services business and certain of our other services depend on the efficient operation of the internet connections to and from customers to our Shared Registration System residing in our secure data centers. These connections depend upon the efficient operation of internet service providers and internet backbone service providers, all of which have had periodic operational problems or experienced outages in the past beyond our scope of control. In addition, if these service providers do not protect, maintain, improve, and reinvest in their networks or present inconsistent data regarding the DNS through their networks, our business could be harmed.

A failure in the operation or update of the root zone servers, the root zone file, the root zone management system, the TLD name servers, or the TLD zone files that we operate, or other network functions, could result in a DNS resolution or other service outage or degradation; the deletion of one or more TLDs from the internet; the deletion of one or more second-level domain names from the internet for a period of time; or a misdirection of a domain name to a different server. A failure in the operation or update of the supporting cryptographic and other operational infrastructure that we maintain could result in similar consequences. A failure in the operation of our Shared Registration System could result in the inability of one or more registrars to register or maintain domain names for a period of time. In the event that a registrar has not implemented back-up services in conformance with industry best practices, the failure could result in permanent loss of transactions at the registrar during that period. Any of these problems or outages could create potential liability, including liability arising from a failure to meet our service level agreements in our Registry Agreements, and could decrease customer satisfaction, harming our business or resulting in adverse publicity that could adversely affect the market's perception of the security of e-commerce and communications over the internet as well as of the security or reliability of our services.

Our operating results may be adversely affected as a result of unfavorable market, economic, social and political conditions.

An unstable global economic, social and political environment, including hostilities and conflicts in various regions both inside and outside the U.S., natural disasters, currency fluctuations, and country specific operating regulations may have a negative impact on demand for our services, our business and our foreign operations. The economic, social and political environment has impacted or may negatively impact, among other things:

[Table of Contents](#)

- our customers' continued growth and development of their businesses and our customers' ability to continue as going concerns or maintain their businesses, which could affect demand for our products and services;
- current and future demand for our services, including decreases as a result of reduced spending on information technology and communications by our customers;
- price competition for our products and services;
- the price of our common stock;
- our liquidity and our associated ability to execute on any share repurchase plans;
- our ability to service our debt, to obtain financing or assume new debt obligations; and
- our ability to obtain payment for outstanding debts owed to us by our customers or other parties with whom we do business.

In addition, to the extent that the economic, social and political environment impacts specific industry and geographic sectors in which many of our customers are concentrated, that may have a disproportionate negative impact on our business.

Our international operations subject our business to additional economic and political risks that could have an adverse impact on our revenues and business.

A significant portion of our revenues is derived from customers outside the U.S. Doing business in international markets has required and will continue to require significant management attention and resources. We may also need to tailor some of our services for a particular market and to enter into international distribution and operating relationships. We may fail to maintain our ability to conduct business, including potentially material business operations in some international locations, or we may not succeed in expanding our services into new international markets or expand our presence in existing markets. Failure to do so could materially harm our business. Moreover, local laws and customs in many countries differ significantly from those in the U.S. In many foreign countries, particularly in those with developing economies, it is common for others to engage in business practices that are prohibited by our internal policies and procedures or U.S. law or regulations applicable to us. There can be no assurance that our employees, contractors and agents will not take actions in violation of such policies, procedures, laws and/or regulations. Violations of laws, regulations or internal policies and procedures by our employees, contractors or agents could result in financial reporting problems, investigations, fines, penalties, or prohibition on the importation or exportation of our products and services and could have a material adverse effect on our business. In addition, we face risks inherent in doing business on an international basis, including, among others:

- competition with foreign companies or other domestic companies entering the foreign markets in which we operate, as well as foreign governments actively promoting ccTLDs, which we do not operate;
- legal uncertainty regarding liability, enforcing our contracts and compliance with foreign laws;
- tariffs and other trade barriers and restrictions;
- difficulties in staffing and managing foreign operations;
- currency fluctuations;
- potential problems associated with adapting our services to technical conditions existing in different countries;
- difficulty of verifying customer information, including complying with the customer verification requirements of certain countries;
- more stringent privacy policies in some foreign countries;
- additional vulnerability from terrorist groups targeting U.S. interests abroad;
- potentially conflicting or adverse tax consequences;
- reliance on third parties in foreign markets in which we only recently started doing business; and
- potential concerns of international customers and prospects regarding doing business with U.S. technology companies due to alleged U.S. government data collection policies.
