We rely on our intellectual property rights to protect our proprietary assets, and any failure by us to protect or enforce, or any misappropriation of, our intellectual property could harm our business.

Our success depends in part on our internally developed technologies and related intellectual property. Despite our precautions, it may be possible for a third party to copy or otherwise obtain and use our intellectual property without authorization. Furthermore, the laws of foreign countries may not protect our proprietary rights in those countries to the same

extent U.S. law protects these rights in the U.S. In addition, it is possible that others may independently develop substantially equivalent intellectual property. If we do not effectively protect our intellectual property, our business could suffer. Additionally, we have filed patent applications with respect to some of our technology in the U.S. Patent and Trademark Office and patent offices outside the U.S. Patents may not be awarded with respect to these applications and even if such patents are awarded, third parties may seek to oppose or otherwise challenge our patents, and such patents' scope may differ significantly from what was requested in the patent applications and may not provide us with sufficient protection of our intellectual property. In the future, we may have to resort to litigation to enforce and protect our intellectual property rights, to protect our trade secrets or to determine the validity and scope of the proprietary rights of others. This type of litigation is inherently unpredictable and, regardless of its outcome, could result in substantial costs and diversion of management attention and technical resources. Some of the software and protocols used in our business are based on standards set by standards setting organizations such as the Internet Engineering Task Force. To the extent any of our patents are considered "standards essential patents," we may be required to license such patents to our competitors on reasonable and non-discriminatory terms.

We also license third-party technology that is used in some of our products and services to perform key functions. These third-party technology licenses may not continue to be available to us on commercially reasonable terms or at all. The loss of or our inability to obtain or maintain any of these technology licenses could hinder or increase the cost of our launching new products and services, entering into new markets and/or otherwise harm our business. Some of the software and protocols used in our Registry Services business are in the public domain or may otherwise become publicly available, which means that such software and protocols are equally available to our competitors.

We rely on the strength of our Verisign brand to help differentiate ourselves in the marketing of our products. Dilution of the strength of our brand could harm our business. We are at risk that we will be unable to fully register, build equity in, or enforce the Verisign logo in all markets where Verisign products and services are sold. In addition, in the U.S. and most other countries' word marks for TLDs have currently not been successfully registered as trademarks. Accordingly, we may not be able to fully realize or maintain the value of these intellectual property assets.

We could become subject to claims of infringement of intellectual property of others, which could be costly to defend and could harm our business.

We cannot be certain that we do not and will not infringe the intellectual property rights of others. Claims relating to infringement of intellectual property of others or other similar claims have been made against us in the past and could be made against us in the future. It is possible that we could become subject to additional claims for infringement of the intellectual property of third parties. The international use of our logo could present additional potential risks for third party claims of infringement. Any claims, with or without merit, could be time consuming, result in costly litigation and diversion of technical and management personnel attention, cause delays in our business activities generally, or require us to develop a non-infringing logo or technology or enter into royalty or licensing agreements. Royalty or licensing agreements, if required, may not be available on acceptable terms or at all. If a successful claim of infringement were made against us, we could be required to pay damages or have portions of our business enjoined. If we could not identify and adopt an alternative non-infringing logo, develop non-infringing technology or license the infringed or similar technology on a timely and cost-effective basis, our business could be harmed.

A third party could claim that the technology we license from other parties infringes a patent or other proprietary right. Litigation between the licensor and a third party or between us and a third party could lead to royalty obligations for which we are not indemnified or for which indemnification is insufficient, or we may not be able to obtain any additional license on commercially reasonable terms or at all.

In addition, legal standards relating to the validity, enforceability, and scope of protection of intellectual property rights in internet-related businesses, including patents related to software and business methods, are uncertain and evolving. Because of the growth of the internet and internet-related businesses, patent applications are continuously being filed in connection with internet-related technology. There are a significant number of U.S. and foreign patents and patent applications in our areas of interest, and we believe that there has been, and is likely to continue to be, significant litigation in the industry regarding patent and other intellectual property rights.

We could become involved in claims, lawsuits or investigations that may result in adverse outcomes.

In addition to possible intellectual property litigation and infringement claims, we are, and may in the future, become involved in other claims, lawsuits and investigations, including with respect to the root zone maintainer agreement now under negotiation with ICANN. Such proceedings may initially be viewed as immaterial but could prove to be material. Litigation is inherently unpredictable, and excessive verdicts do occur. Adverse outcomes in lawsuits and investigations could result in significant monetary damages, including indemnification payments, or injunctive relief that could adversely affect our ability to conduct our business and may have a material adverse effect on our financial condition, results of operations and cash flows. Given the inherent uncertainties in litigation, even when we are able to reasonably estimate the amount of possible loss or range

of loss and therefore record an aggregate litigation accrual for probable and reasonably estimable loss contingencies, the accrual may change in the future due to new developments or changes in approach. In addition, such investigations, claims and lawsuits could involve significant expense and diversion of management's attention and resources from other matters.

We continue to explore new strategic initiatives, the pursuit of any of which may pose significant risks and could have a material adverse effect on our business, financial condition and results of operations.

We are exploring a variety of possible strategic initiatives which may include, among other things, the investment in, and the pursuit of, new revenue streams, services or products, changes to our offerings, initiatives to leverage our patent portfolio, our Security Services business, back-end registry services and IDN gTLDs. In addition, we have evaluated and are pursuing and will continue to evaluate and pursue acquisitions of TLDs that are currently in operation and those that have not yet been awarded as long as they support our growth strategy.

Any such strategic initiative may involve a number of risks, including: the diversion of our management's attention from our existing business to develop the initiative, related operations and any requisite personnel; possible regulatory scrutiny or third-party claims; possible material adverse effects on our results of operations during and after the development process; our possible inability to achieve the intended objectives of the initiative; as well as damage to our reputation if we are unsuccessful in pursuing a strategic initiative. Such initiatives may result in a reduction of cash or increased costs. We may not be able to successfully or profitably develop, integrate, operate, maintain and manage any such initiative and the related operations or employees in a timely manner or at all. Furthermore, under our agreements with ICANN, we are subject to certain restrictions in the operation of *.com*, *.net*, *.name* and other TLDs, including required ICANN approval of new registry services for such TLDs. If any new initiative requires ICANN review or ICANN determines that such a review is required, we cannot predict whether this process will prevent us from implementing the initiative in a timely manner or at all. Any strategic initiative to leverage our patent portfolio will likely increase litigation risks from potential licensees and we may have to resort to litigation to enforce our intellectual property rights.

We depend on key employees to manage our business effectively, and we may face difficulty attracting and retaining qualified leaders.

We operate in a unique competitive and highly regulated environment and we depend on the knowledge, experience, and performance of our senior management team and other key employees in this regard and otherwise. We periodically experience changes in our management team. If we are unable to attract, integrate, retain and motivate these key individuals and additional highly skilled technical, sales and marketing, and other experienced employees, and implement succession plans for these personnel, our business may suffer. For example, our service products are highly technical and require individuals skilled and knowledgeable in unique platforms and software implementation.

Changes in, or interpretations of, tax rules and regulations or our tax positions may adversely affect our effective tax rates.

We are subject to income taxes in both the U.S. and numerous foreign jurisdictions. Significant judgment is required in determining our worldwide provision for income taxes. In the ordinary course of our business, there are many transactions and calculations where the ultimate tax determination is uncertain. We are subject to audit by various tax authorities. In accordance with U.S. GAAP, we recognize income tax benefits, net of required valuation allowances and accrual for uncertain tax positions. For example, we claimed a worthless stock deduction on our 2013 federal income tax return and recorded a net income tax benefit of \$380.1 million. Although we believe our tax estimates are reasonable, the final determination of tax audits and any related litigation could be materially different than that which is reflected in historical income tax provisions and accruals. Should additional taxes be assessed as a result of an audit or litigation, an adverse effect on our results of operations, financial condition and cash flows in the period or periods for which that determination is made could result.

A significant portion of our foreign earnings for the current fiscal year was earned in low tax jurisdictions. Our effective tax rate could fluctuate significantly on a quarterly basis and could be adversely affected to the extent earnings are lower than anticipated in countries where we have lower statutory rates and higher than anticipated in countries where we have higher statutory rates.

Various legislative proposals that would reform U.S. corporate tax laws have been proposed by the Obama administration as well as members of Congress, including proposals that would significantly impact how U.S. multinational corporations are taxed on foreign earnings. We are unable to predict whether these or other proposals will be implemented. Although we cannot predict whether or in what form any proposed legislation may pass, if enacted, such legislation could have a material adverse impact on our tax expense or cash flow.

Our foreign earnings, which are indefinitely reinvested offshore, constitute a majority of our cash, cash equivalents and marketable securities, and there is a high cost associated with a change in our indefinite reinvestment assertion or a repatriation of those funds to the U.S.

A majority of our cash, cash equivalents and marketable securities are held by our foreign subsidiaries. Our foreign earnings are indefinitely reinvested offshore and are not available to be used in the U.S. for working capital needs, debt obligations, acquisitions, share repurchases, dividends or other general corporate purposes. In the event that funds from our foreign operations are needed in the U.S. for any purpose, we would be required to accrue and pay additional U.S. taxes in order to repatriate those funds, which could be significant. Further, if we are unable to indefinitely reinvest our foreign earnings our effective tax rate would increase. These could adversely impact our business valuation and stock price.

Our marketable securities portfolio could experience a decline in market value, which could materially and adversely affect our financial results.

As of June 30, 2016, we had \$1.9 billion in cash, cash equivalents, marketable securities and restricted cash, of which \$1.7 billion was invested in marketable securities. The marketable securities consist primarily of debt securities issued by the U.S. Treasury meeting the criteria of our investment policy, which is focused on the preservation of our capital through the investment in investment grade securities. We currently do not use derivative financial instruments to adjust our investment portfolio risk or income profile.

These investments, as well as any cash deposited in bank accounts, are subject to general credit, liquidity, market and interest rate risks, which may be exacerbated by unusual events, such as the U.S. debt ceiling crisis and the Eurozone crisis, which affected various sectors of the financial markets and led to global credit and liquidity issues. During the 2008 financial crisis, the volatility and disruption in the global credit market reached unprecedented levels. If the global credit market deteriorates again or other events negatively impact the market for U.S. Treasury securities, our investment portfolio may be impacted and we could determine that some of our investments have experienced an other-than-temporary decline in fair value, requiring an impairment charge which could adversely impact our results of operations and cash flows.

We are subject to the risks of owning real property.

We own the land and building in Reston, Virginia, which constitutes our headquarters facility. Ownership of this property, as well as our data centers in Dulles, Virginia and New Castle, Delaware, may subject us to risks, including:

- adverse changes in the value of the properties, due to interest rate changes, changes in the commercial property markets, or other factors;
- ongoing maintenance expenses and costs of improvements;
- the possible need for structural improvements in order to comply with environmental, health and safety, zoning, seismic, disability law, or other requirements;
- the possibility of environmental contamination or notices of violation from federal or state environmental agencies; and
- possible disputes with neighboring owners, tenants, service providers or others.

We have anti-takeover protections that may discourage, delay or prevent a change in control that could benefit our stockholders.

Our amended and restated Certificate of Incorporation and Bylaws contain provisions that could make it more difficult for a third party to acquire us without the consent of our Board of Directors ("Board"). These provisions include:

- our stockholders may take action only at a duly called meeting and not by written consent;
- special meetings of our stockholders may be called only by the chairman of the board of directors, the president, our Board, or the secretary (acting as a representative of the stockholders) whenever a stockholder or group of stockholders owning at least thirty-five percent (35%) in the aggregate of the capital stock issued, outstanding and entitled to vote, and who held that amount in a net long position continuously for at least one year, so request in writing;
- vacancies on our Board can be filled until the next annual meeting of stockholders by a majority of directors then in office; and
- our Board has the ability to designate the terms of and issue new series of preferred stock without stockholder approval.

In addition, Section 203 of the General Corporation Law of Delaware prohibits a publicly held Delaware corporation from engaging in a business combination with an interested stockholder, generally a person which together with its affiliates owns or within the last three years has owned 15% or more of our voting stock, for a period of three years after the date of the transaction in which the person became an interested stockholder, unless in the same transaction the interested stockholder acquired 85% ownership of our voting stock (excluding certain shares) or the business combination is approved in a prescribed manner. Section 203 therefore may impact the ability of an acquirer to complete an acquisition of us after a successful tender offer and accordingly could discourage, delay or prevent an acquirer from making an unsolicited offer without the approval of our Board.

We have a considerable number of common shares subject to future issuance.

As of June 30, 2016, we had one billion authorized common shares, of which 107.2 million shares were outstanding. In addition, of our authorized common shares, 12.7 million common shares were reserved for issuance pursuant to outstanding equity and employee stock purchase plans (“Equity Plans”), and 36.4 million shares were reserved for issuance upon conversion of our 3.25% Junior Subordinated Convertible Debentures due 2037 (“Subordinated Convertible Debentures”). As a result, we keep substantial amounts of our common stock available for issuance upon exercise or settlement of equity awards outstanding under our Equity Plans and/or the conversion of Subordinated Convertible Debentures into our common stock. Issuance of all or a large portion of such shares would be dilutive to existing security holders, could adversely affect the prevailing market price of our common stock and could impair our ability to raise additional capital through the sale of equity securities.

Our financial condition and results of operations could be adversely affected if we do not effectively manage our indebtedness.

We have a significant amount of outstanding debt, and we may incur additional indebtedness in the future. Our substantial indebtedness, including any future indebtedness, requires us to dedicate a significant portion of our cash flow from operations or to arrange alternative liquidity sources to make principal and interest payments, when due, or to repurchase or settle our debt, if triggered, by certain corporate events, certain events of default, or conversion. It could also limit our flexibility in planning for or reacting to changes in our business and our industry, or make required capital expenditures and investments in our business; make it difficult or more expensive to refinance our debt or obtain new debt; trigger an event of default; and increase our vulnerability to adverse changes in general economic and industry conditions. Some of our debt contains covenants which may limit our operating flexibility, including restrictions on share repurchases, dividends, prepayment or repurchase of debt, acquisitions, disposing of assets, if we do not continue to meet certain financial ratios. Any rating assigned to our debt securities could be lowered or withdrawn by a rating agency, which could make it more difficult or more expensive for us to obtain additional debt financing in the future. The settlement amount, contingent interest, and potential recapture of income tax deductions related to our Subordinated Convertible Debentures can be substantial, and can increase significantly based on changes in our stock price. The occurrence of any of the foregoing factors could have a material adverse effect on our business, cash flows, results of operations and financial condition.

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS

The following table presents the share repurchase activity during the three months ended June 30, 2016:

	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs (1)	Approximate Dollar Value of Shares That May Yet Be Purchased Under the Plans or Programs (1)
	(Shares in thousands)			
April 1 - 30, 2016	550	\$ 89.22	550	\$ 866.7million
May 1 - 31, 2016	576	\$ 85.40	576	\$ 817.5million
June 1 - 30, 2016	608	\$ 84.95	608	\$ 765.9million
	<u>1,734</u>		<u>1,734</u>	

(1) Effective February 11, 2016, our Board of Directors authorized the repurchase of approximately \$611.2 million of our common stock, in addition to the \$388.8 million of our common stock remaining available for repurchase under the previous share repurchase program, for a total repurchase authorization of up to \$1.0 billion of our common stock. The share repurchase program has no expiration date. Purchases made under the program could be effected through open market transactions, block purchases, accelerated share repurchase agreements or other negotiated transactions.

ITEM 5. OTHER INFORMATION

On July 27, 2016, our Board of Directors amended our Bylaws to implement the changes discussed in the Company's proxy statement for the 2016 Annual Meeting of Stockholders. The amended Bylaws were effective upon approval by the Board of Directors.

The Bylaws were amended to provide for "proxy access" by eligible stockholders. Specifically, the Bylaws permit a stockholder, or a group of up to twenty stockholders, that has continuously owned at least 3% of the Company's outstanding stock entitled to vote in the election of directors for at least three years, to nominate and include in the Company's proxy materials for an annual meeting of stockholders up to the greater of two directors or 20% of the number of the directors then in office provided that the nominating stockholder(s) and nominee(s) satisfy the requirements described in the provision. (Article I, Section 14). As a result of these amendments, if any stockholder intends to include a director nominee in the proxy statement for the Company's 2017 Annual Meeting of Stockholders, the stockholder must notify the Secretary of the Company in writing and the notice must be delivered to the Secretary at the principal executive office of the Company not earlier than the close of business on November 30, 2016, nor later than the close of business on December 30, 2016. The nomination must otherwise comply with the applicable requirements of the Bylaws.

In addition, the Bylaws were amended to, among other things:

- Conform the definition of stock ownership used in the provisions on stockholder-requested special meetings to the definition used in the proxy access bylaw. (Article I, Section 2)
- Clarify the methods for giving notice for meetings of stockholders and Board of Directors meetings. (Article I, Section 4 and Article II, Section 11)
- Implement majority voting in uncontested director elections with plurality voting retained for contested elections. (Article I, Section 10 and Article II, Section 3)
- Add provisions requiring all director nominees, regardless of whether nominees are nominated by the Board or a stockholder, to provide certain information and representations. (Article I, Section 12)
- Include an advance notice provision regarding nominating persons for election to the Board and proposing other business to be considered at annual and special stockholder meetings. For annual meetings, this provision requires a stockholder to provide notice and certain information about the stockholder and the nominee or item of business generally not later than the close of business on the 90th day nor earlier than the close of business on the 120th day prior to the first anniversary of the previous year's annual meeting of stockholders. (Article I, Section 13) As a result of the amendments, if any stockholder intends to nominate a director candidate or propose other business for consideration at the Company's 2017 Annual Meeting of Stockholders (not including a proposal intended for inclusion in the Company's proxy statement in accordance with the SEC's Rule 14a-8 under the Securities Exchange Act of 1934), the stockholder must notify the Secretary of the Company in writing and the notice must be delivered to the Secretary at the principal executive office of the Company not earlier than the close of business on February 9, 2017, nor later than the close of business on March 11, 2017. The notice also must comply with the applicable requirements of the Bylaws.
- Clarify the Board's ability to use the methods in Delaware General Corporation Law Section 141(f) when the Board is taking action by unanimous consent in lieu of a meeting, which includes the use of electronic transmission. (Article II, Section 14)
- Conform provisions relating to Board committees and subcommittees to amendments to the Delaware General Corporation Law set to take effect on August 1, 2016. (Article II, Section 17)
- Clarify the Board's ability to delegate authority to officers, employees and agents outside the Bylaws. (Article III, Section 1)
- Remove inoperative language about stockholder action by written consent without a meeting of stockholders.
- Other miscellaneous wording changes throughout the document to make corrections, to clarify language and to conform the language in the Bylaws to that of the Certificate or the Delaware General Corporation Law.

This description of the amendments to the Bylaws is qualified in its entirety by reference to the text of the Bylaws filed as Exhibit 3.02 to this Form 10-Q.

ITEM 6. EXHIBITS

As required under Item 6-Exhibits, the exhibits filed as part of this report are provided in this separate section. The exhibits included in this section are as follows:

Exhibit Number	Exhibit Description
3.02	Bylaws of VeriSign, Inc.
31.01	Certification of Principal Executive Officer pursuant to Exchange Act Rule 13a-14(a).
31.02	Certification of Principal Financial Officer pursuant to Exchange Act Rule 13a-14(a).
32.01	Certification of Principal Executive Officer pursuant to Exchange Act Rule 13a-14(b) and Section 1350 of Chapter 63 of Title 18 of the U.S. Code (18 U.S.C. 1350). *
32.02	Certification of Principal Financial Officer pursuant to Exchange Act Rule 13a-14(b) and Section 1350 of Chapter 63 of Title 18 of the U.S. Code (18 U.S.C. 1350). *
101.INS	XBRL Instance Document
101.SCH	XBRL Taxonomy Extension Schema

101.PRE	XBRL Taxonomy Extension Presentation Linkbase

* As contemplated by SEC Release No. 33-8212, these exhibits are furnished with this Quarterly Report on Form 10-Q and are not deemed filed with the SEC and are not incorporated by reference in any filing of VeriSign, Inc. under the Securities Act of 1933 or the Securities Exchange Act of 1934, whether made before or after the date hereof and irrespective of any general incorporation language in such filings.

BYLAWS

of

VERISIGN, INC.

ARTICLE I

Stockholders

Section 1. Annual Meeting. An annual meeting of the stockholders of the corporation, for the election of the directors to succeed those whose terms expire and for the transaction of such other business as may properly come before the meeting, shall be held at such place, on such date and at such time as the Board of Directors shall each year fix.

Section 2. Special Meetings. (a) Special meetings of the stockholders, for any purpose or purposes prescribed in the notice of the meeting, shall be held at such place, on such date, and at such time as determined by the Board of Directors and may be called only by (i) the Board of Directors pursuant to a resolution adopted by a majority of the total number of directors authorized by resolutions (whether or not there exist any vacancies in previously authorized directorships at the time any such resolution is presented to the Board of Directors for adoption), (ii) the Chairman of the Board of Directors, (iii) the President or (iv) the Secretary whenever a stockholder or group of stockholders Owning (as defined below) at least thirty-five percent (35%) in the aggregate of the capital stock issued, outstanding and entitled to vote, and who held that amount in a net long position continuously for at least one year (the "Eligibility Criteria"), so request in writing. Business transacted at special meetings shall be confined to the purpose or purposes stated in the notice of the meeting.

In the case of clause (iv) of the immediately preceding sentence, each such written request must be signed by each stockholder making the request and delivered to the Secretary at the principal executive office of the corporation and shall set forth (a) a brief description of the business desired to be brought before the special meeting of the stockholders, including the complete text of any resolutions to be presented at the special meeting of the stockholders with respect to such business, and the reasons for conducting such business at the meeting; (b) the date of request; (c)(i) if any stockholder making the request is a registered holder of the corporation's stock, the name, address and ownership information, as they appear on the corporation's books, of each such stockholder and (ii) if any stockholder making the request is not a registered holder of the corporation's stock, proof of satisfaction by each such stockholder of the Eligibility Criteria which shall be substantially similar to the proof specified by Rule 14a-8(b)(2)(i) or (ii) under the Securities Exchange Act of 1934 (the "Exchange Act"), as amended from time to time, in each case, including a written agreement to update and supplement such information upon the occurrence of any changes thereto; (d) a representation that each requesting stockholder intends to appear in person or by proxy at the special meeting of the stockholders to transact the business specified; and (e) a representation that each requesting stockholder intends to hold the shares of the corporation's stock set forth in the written request through the date of the special meeting of the stockholders; provided that, if any such requesting stockholder (x) fails to satisfy the Eligibility Criteria or to follow one of the procedural requirements described in clauses (a) through (e) of this sentence (the "Procedural Requirements"), the corporation shall not be obligated to call a special meeting unless the remaining requesting stockholders continue to satisfy the Eligibility Criteria and the Procedural Requirements or (y) fails to hold the required number of shares through the date of the special meeting (a "Non Performing Holder"), the corporation may cancel the special meeting (if previously called but not yet held) unless the remaining requesting stockholders have not failed to hold such shares through such date and continue to satisfy the Eligibility Criteria; provided, further, that the corporation may disregard future requests to call special meetings from each Non Performing Holder for the following two calendar years. Following receipt by the Secretary of a written request of stockholders that complies with the requirements set forth in this Section 2 (a "Special Meeting Request"), the Secretary shall call a special meeting of the stockholders.

(b) Revocation of Special Meeting Request. A stockholder may revoke a Special Meeting Request at any time by written revocation. Following such revocation, the Board of Directors, in its discretion, may cancel the special meeting unless, in the case of a Special Meeting Request, any remaining requesting stockholders continue to satisfy the Eligibility Criteria and the Procedural Requirements. For purposes of this Section 2, written revocation shall mean delivering a notice of revocation to the Secretary.

(c) Limitations. The Secretary shall not call a special meeting in response to a Special Meeting Request if (i) an identical or substantially similar item (as determined by the Board of Directors, a "Similar Item") is included or will be included in the corporation's notice of meeting as an item of business to be brought before a meeting of stockholders that will be held not later than ninety (90) days after the delivery date of the Special Meeting Request (the "Delivery Date"); (ii) the Delivery Date is during the period commencing ninety (90) days prior to the date of the next annual meeting of stockholders and ending on the date of the next annual meeting of stockholders; (iii) a Similar Item was presented at any meeting of stockholders held within one hundred and eighty (180) days prior to the Delivery Date; (iv) the Special Meeting Request relates to an item of business that is not a proper subject for stockholder action under applicable law; or (v) such Special Meeting Request was made in a manner that involved a violation of Regulation 14A under the Exchange Act or other applicable law. For purposes of this Section 2, the election of directors shall be deemed to be a Similar Item with respect to all items of business involving the election or removal of directors.

For the purposes of this Section 2, a stockholder or beneficial owner is deemed to "Own" only those outstanding shares of capital stock as to which the person possesses both (A) the full voting and investment rights pertaining to the shares and (B) the full economic interest in (including the opportunity for profit and risk of loss on) such shares, except that the number of shares calculated in accordance with clauses (A) and (B) shall not include any shares (1) sold by such person in any transaction that has not been settled or closed, (2) borrowed by the person for any purposes or purchased by the person pursuant to an agreement to resell, or (3) subject to any option, warrant, forward contract, swap, contract of sale, or other derivative or similar agreement entered into by the person, whether the instrument or agreement is to be settled with shares or with cash based on the notional amount or value of outstanding shares of capital stock, if the instrument or agreement has, or is intended to have, or if exercised would have, the purpose or effect of (x) reducing in any manner, to any extent or at any time in the future, the person's full right to vote or direct the voting of the shares, and/or (y) hedging, offsetting, or altering to any degree any gain or loss arising from the full economic ownership of the shares by the person. The terms "Owned," "Owning" and other variations of the word "Own," when used with respect to a stockholder or beneficial owner, have correlative meanings. For purposes of clauses (1) through (3), the term "person" includes its affiliates. A stockholder or beneficial owner "Owns" shares held in the name of a nominee or other intermediary so long as the person retains the right to instruct how the shares are voted with respect to the election of directors and the right to direct the disposition thereof and possesses the full economic interest in the shares. The person's Ownership of shares is deemed to continue during any period in which the person has delegated any voting power by means of a proxy, power of attorney, or other instrument or arrangement that is revocable at any time by the stockholder.

Section 3. Place of Meetings. All meetings of stockholders shall be held at the principal office of the corporation unless a different place is fixed by the person or persons calling the meeting and stated in the notice of the meeting.

Section 4. Notices of Meetings and Adjourned Meetings. A written notice of each annual or special meeting of the stockholders stating the place, date, and hour thereof, shall be given by the Secretary (or the person or persons calling the meeting), not less than 10 nor more than 60 days before the date of the meeting, to each stockholder entitled to such notice, and, if mailed, shall be given by depositing it postage prepaid in the United States mail, directed to each stockholder at his or her address as it appears on the records of the corporation. Notices of all special meetings of stockholders shall state the purpose or purposes for which the meeting is called. An affidavit of the Secretary, Assistant Secretary, or transfer agent of the corporation that the notice has been given shall, in the absence of fraud, be prima facie evidence of the facts stated therein. No notice need be given to any person with whom communication is unlawful or to any person who has waived such notice in the manner permitted by Section 229 of the Delaware General Corporation Law (the "DGCL"). When a meeting is adjourned to another time and place, notice need not be given of the adjourned meeting if the time and place thereof are announced at the meeting at which the adjournment is taken except that, if the adjournment is for more than 30 days or if, after the adjournment, a new record date is fixed for the adjourned meeting, a notice of the adjourned meeting shall be given as provided in this Section 4.

Section 5. Quorum. At any meeting of the stockholders, a quorum for the transaction of business shall consist of one or more individuals appearing in person or represented by proxy and owning or representing a majority of the shares of the corporation then outstanding and entitled to vote thereat, unless or except to the extent that the presence of a larger number may be required by law (including as required from time to time by the DGCL or the Certificate of Incorporation of the corporation (the "Certificate of Incorporation")). Where a separate vote by a class or classes is required, a majority of the shares of such class or classes then outstanding and entitled to vote present in person or by proxy shall constitute a quorum entitled to take action with respect to that vote on that matter. If a quorum shall fail to attend any meeting, the chairman of the meeting or the holders of a majority of the shares of stock entitled to vote thereat who are present, in person or by proxy, may adjourn the meeting to another place, date, or time.

Section 6. Organization. Such person as the Board of Directors may have designated or, in the absence of such a person, the President of the corporation or, in his or her absence, such person as may be chosen by the holders of a majority of the shares entitled to vote thereat who are present, in person or by proxy, shall call to order any meeting of the stockholders and act as chairman of the meeting. In the absence of the Secretary of the corporation, the secretary of the meeting shall be such person as the chairman appoints.

Section 7. Conduct of Business. The chairman of any meeting of stockholders shall determine the order of business and the procedure at the meeting, including such regulation of the manner of voting and the conduct of discussion as seems to him or her in order.

Section 8. Voting. Unless otherwise provided in the Certificate of Incorporation and subject to the provisions of Section 6 of Article IV hereof, each stockholder shall have one vote for each share of stock entitled to vote held by him or her of record according to the records of the corporation. Persons holding stock in a fiduciary capacity shall be entitled to vote the shares so held. Persons whose stock is pledged shall be entitled to vote unless the pledgor in a transfer on the books of the corporation has expressly empowered the pledgee to vote the pledged shares, in which case only the pledgee or his or her proxy shall be entitled to vote. If shares stand of record in the names of two or more persons or if two or more persons have the same fiduciary relationship respecting the shares then, unless the Secretary is given written notice to the contrary and is furnished with a copy of the instrument or order appointing them or creating the relationship wherein it is so provided to the contrary: (a) if only one votes, his or her act binds all; (b) if more than one votes, the act of the majority so voting binds all; and (c) if more than one votes and the vote is evenly split, the effect shall be as provided by law.

Section 9. Proxies. Each stockholder entitled to vote at a meeting of stockholders may authorize another person or any group of persons to act for him or her by proxy, but no such proxy shall be voted or acted upon after three years from its date, unless the proxy provides for a longer period.

Section 10. Action at Meeting.

(a) Voting - General. When a quorum is present at any meeting, action of the stockholders on any matter properly brought before such meeting, other than the election of directors, shall require, and may be effected by, the affirmative vote of the holders of a majority in interest of the stock present or represented by proxy and entitled to vote on the subject matter, except where a different vote is expressly required by law, the Certificate of Incorporation or these Bylaws, in which case such express provision shall govern and control.

(b) Voting - Directors. Except as provided in Section 7 of Article II of these Bylaws, each director shall be elected by the affirmative vote of the Majority of the Votes Cast (as defined herein) with respect to that director at any meeting for the election of directors at which a quorum is present, provided that if as of a date that is five business days in advance of the date the corporation files its definitive proxy statement (regardless of whether or not thereafter revised or supplemented) with the Securities and Exchange Commission ("SEC") the number of nominees exceeds the number of directors to be elected, the directors shall be elected by the vote of a plurality of the votes cast at such meeting. If the Certificate of Incorporation so provides, no ballot shall be required for the election of directors unless requested by a stockholder present or represented at the meeting and entitled to vote in the election. For purposes of this paragraph (b), the term "Majority of the Votes Cast" means, with respect to a nominee for director, that the number of shares voted "for" the election of that nominee must exceed the number of votes cast "against" that nominee.

Section 11. Stockholder Lists. The officer who has charge of the stock ledger of the corporation shall prepare and make available, at least 10 days before every meeting of stockholders, a complete list of stockholders entitled to vote at the meeting, arranged in alphabetical order, and showing the address of each stockholder and the number of shares registered in the name of each stockholder. Such list shall be open to the examination of any stockholder for any purpose germane to the meeting for a period of at least 10 days prior to the meeting during ordinary business hours, at the principal place of business of the corporation. Such list shall also be produced and kept at the time and place of the meeting during the whole time thereof, and may be inspected by any stockholder who is present. The stock ledger shall be the only evidence as to who are the stockholders entitled to examine the stock ledger, the list required by this section or the books of the corporation, or to vote in person or by proxy at any meeting of stockholders.

Section 12. Submission of Information by Director Nominees. (a) To be eligible to be a nominee for election or re-election as a director of the corporation, a person must deliver to the Secretary at the principal executive office of the corporation the following information:

(i) a written representation and agreement, which shall be signed by such person and shall represent and agree that such person: (A) consents to serving as a director if elected and (if applicable) to being named in the corporation's proxy statement and form of proxy as a nominee; (B) is not and will not become a party to any agreement, arrangement or understanding with, and has not given any commitment or assurance to, any person or entity: (1) as to how the person, if elected as a director, will act or vote on any issue or question that has not been disclosed to the corporation, or (2) that could limit or interfere with the person's ability to comply, if elected as a director, with such person's fiduciary duties under applicable law; (C) is not and will not become a party to any agreement, arrangement or understanding with any person or entity other than the corporation with respect to any direct or indirect compensation, reimbursement or indemnification in connection with service or action as a director that has not been disclosed to the corporation; and (D) if elected as a director, will comply with all of the corporation's corporate governance, conflict of interest, confidentiality, and stock ownership and trading policies and guidelines, and any other corporation policies and guidelines applicable to directors (which will be provided to such person promptly following a request therefor); and

(ii) all completed and signed questionnaires required of the corporation's directors (which will be provided to such person promptly following a request therefor).

(b) A nominee for election or re-election as a director of the corporation shall also provide to the corporation such other information as it may reasonably request. The corporation may request such additional information as necessary to permit the corporation to determine the eligibility of such person to serve as a director of the corporation, including information relevant to a determination whether such person can be considered an independent director.

(c) Notwithstanding any other provision of these Bylaws, if a stockholder has submitted notice of an intent to nominate a candidate for election or re-election as a director pursuant to Section 13 of this Article I or Section 14 of this Article I, the questionnaires described in Section 12(a)(ii) above and the additional information described in clause (b) of this Section 12 above shall be considered timely if provided to the corporation promptly upon request by the corporation, but in any event within the time period for delivery of a stockholder's notice pursuant to Section 13 of this Article I or Section 14 of this Article I, respectively, and all information provided pursuant to this Section 12 shall be deemed part of the stockholder's notice submitted pursuant to Section 13 of this Article I or Section 14 of this Article I, respectively.

Section 13. Notice of Stockholder Business; Nominations.

(a) Annual Meeting.

(i) Nominations of persons for election to the Board of Directors and the proposal of business other than nominations to be considered by the stockholders may be made at an annual meeting of stockholders only (A) pursuant to the corporation's notice of meeting (or any supplement thereto), (B) by or at the direction of the Board of Directors (C) by any stockholder of the corporation who is a stockholder of record at the time the notice provided for in this Section 13(a) is delivered to the Secretary of the corporation, who is entitled to vote at the meeting and who complies with the notice procedures set forth in this Section 13(a) or (D) by an Eligible Stockholder (as defined in clause (c) of Section 14 of this Article I) pursuant to the requirements of Section 14 of this Article I. For the avoidance of doubt, the foregoing clauses (C) and (D) shall be the exclusive means for a stockholder to make nominations or propose other business at an annual meeting of stockholders (other than a proposal included in the corporation's proxy statement pursuant to and in compliance with Rule 14a-8 under the Exchange Act).

(ii) For nominations or other business to be properly brought before an annual meeting by a stockholder pursuant to clause (C) of the foregoing paragraph, the stockholder must have given timely notice thereof in writing to the Secretary of the corporation and, in the case of business other than nominations, such business must be a proper subject for stockholder action. To be timely, a stockholder's notice must be delivered to the Secretary at the principal executive office of the corporation not later than the close of business (as defined in clause (c)(ii) of this Section 13) on the 90th day nor earlier than the close of business on the 120th day prior to the first anniversary of the preceding year's annual meeting; provided, however, that in the event that the date of the annual meeting is more than 30 days before or more than 60 days after such anniversary date, or if no annual meeting was held in the preceding year, notice by the stockholder to be timely must be so delivered not earlier than the close of business on the 120th day prior to such annual meeting and not later than the close of business on the later of the 90th day prior to such annual meeting or the 10th day following the date on which public announcement (as defined in clause (c)(ii) of this Section 13) of the date of such meeting is first made by the corporation. In no event shall an adjournment or recess of an annual meeting, or a postponement of an annual meeting for which notice of the meeting has already been given to stockholders or with respect to which there has been a public announcement of the date of the meeting, commence a new time period (or extend any time period) for the giving of a stockholder's notice as described above. Such stockholder's notice shall set forth:

(A) as to each person whom the stockholder proposes to nominate for election or re-election as a director (1) all information relating to such person that is required to be disclosed in solicitations of proxies for election of directors in an election contest, or is otherwise required, in each case pursuant to and in accordance with Regulation 14A under the Exchange Act, and (2) the information required to be submitted by nominees pursuant to clause (a)(i) of Section 12 of this Article I above;

(B) as to any other business that the stockholder proposes to bring before the meeting, a brief description of the business desired to be brought before the meeting, the text of the proposal or business (including the text of any resolutions proposed for consideration and in the event that such business includes a proposal to amend these Bylaws, the language of the proposed amendment), the reasons for conducting such business at the meeting and any substantial interest (within the meaning of Item 5 of Schedule 14A under the Exchange Act) in such business of such stockholder and the beneficial owner (within the meaning of Section 13(d) of the Exchange Act), if any, on whose behalf the proposal is made;

(C) as to the stockholder giving the notice and the beneficial owner, if any, on whose behalf the nomination is made or the other business is proposed:

(1) the name and address of such stockholder, as they appear on the corporation's books, and the name and address of such beneficial owner,

(2) the class or series and number of shares of stock of the corporation which are owned of record by such stockholder and such beneficial owner as of the date of the notice, and a representation that the stockholder will notify the corporation in writing within five business days after the record date for such meeting of the class or series and number of shares of stock of the corporation owned of record by the stockholder and such beneficial owner as of the record date for the meeting, and

(3) a representation that the stockholder (or a qualified representative of the stockholder) intends to appear at the meeting to make such nomination or propose such business;

(D) as to the stockholder giving the notice or, if the notice is given on behalf of a beneficial owner on whose behalf the nomination is made or the other business is proposed, as to such beneficial owner, and if such stockholder or beneficial owner is an entity, as to each director, executive, managing member or control person of such entity (any such individual or control person, a "Control Person"):

(1) the class or series and number of shares of stock of the corporation which are beneficially owned (as defined in clause (c)(ii) of this Section 13) by such stockholder or beneficial owner and by any Control Person as of the date of the notice, and a representation that the stockholder will notify the corporation in writing within five business days after the record date for such meeting of the class or series and number of shares of stock of the corporation beneficially owned by such stockholder or beneficial owner and by any Control Person as of the record date for the meeting,

(2) a description of any agreement, arrangement or understanding with respect to the nomination or other business between or among such stockholder, beneficial owner or Control Person and any other person, including without limitation any agreements that would be required to be disclosed pursuant to Item 5 or Item 6 of Exchange Act Schedule 13D (regardless of whether the requirement to file a Schedule 13D is applicable) and a representation that the stockholder will notify the corporation in writing within five business days after the record date for such meeting of any such agreement, arrangement or understanding in effect as of the record date for the meeting,

(3) a description of any agreement, arrangement or understanding (including without limitation any derivative or short positions, profit interests, options, hedging transactions, and borrowed or loaned shares) that has been entered into as of the date of the stockholder's notice by, or on behalf of, such stockholder, beneficial owner or Control Person, the effect or intent of which is to mitigate loss, manage risk or benefit from changes in the share price of any class or series of the corporation's stock, or maintain, increase or decrease the voting power of the stockholder, beneficial owner or Control Person with respect to securities of the corporation, and a representation that the stockholder will notify the corporation in writing within five business days after the record date for such meeting of any such agreement, arrangement or understanding in effect as of the record date for the meeting,

(4) a representation whether the stockholder or the beneficial owner, if any, will engage in a solicitation, within the meaning of Exchange Act Rule 14a-1(l), with respect to the nomination or other business and, if so, the name of each participant (as defined in Item 4 of Schedule 14A under the Exchange Act) in such solicitation and whether such person intends or is part of a group which intends to deliver a proxy statement and/or form of proxy to holders of at least

fifty percent (50%) of the corporation's stock entitled to vote generally in the election of directors in the case of a nomination and to holders of at least the percentage of the corporation's stock required to approve or adopt the business to be proposed, in the case of a proposal.

(iii) Notwithstanding anything in clause (ii) of this Section 13(a) or clause (b) of this Section 13 to the contrary, if the record date for determining the stockholders entitled to vote at any meeting of stockholders is different from the record date for determining the stockholders entitled to notice of the meeting, a stockholder's notice required by this Section 13 shall set forth a representation that the stockholder will notify the corporation in writing within five business days after the record date for determining the stockholders entitled to vote at the meeting, or by the opening of business on the date of the meeting (whichever is earlier), of the information required under clauses (ii)(C)(2) and (ii)(D)(1)-(3) of this Section 13(a), and such information when provided to the corporation shall be current as of the record date for determining the stockholders entitled to vote at the meeting.

(iv) This Section 13(a) shall not apply to a proposal proposed to be made by a stockholder if the stockholder has notified the corporation of his or her intention to present the proposal at an annual or special meeting only pursuant to and in compliance with Rule 14a-8 under the Exchange Act and such proposal has been included in a proxy statement that has been prepared by the corporation to solicit proxies for such meeting.

(v) Notwithstanding anything in this Section 13(a) to the contrary, in the event that the number of directors to be elected to the Board of Directors at an annual meeting is increased and there is no public announcement by the corporation naming all of the nominees for directors or specifying the size of the increased Board of Directors made by the corporation at least 10 days prior to the last day a stockholder may deliver a notice in accordance with clause (ii) of this Section 13(a), a stockholder's notice required by this Section 13(a) shall also be considered timely, but only with respect to nominees for any new positions created by such increase, if it shall be delivered to the Secretary of the corporation at the principal executive office of the corporation not later than the close of business on the 10th day following the day on which such public announcement is first made by the corporation.

(b) Special Meeting. Only such business shall be conducted at a special meeting of stockholders as shall have been brought before the meeting pursuant to the corporation's notice of meeting. Nominations of persons for election to the Board of Directors may be made at a special meeting of stockholders at which directors are to be elected pursuant to the corporation's notice of meeting (i) by or at the direction of the Board of Directors, (ii) provided that one or more directors are to be elected at such meeting, by any stockholder of the corporation who is a stockholder of record at the time the notice provided for in this Section 13(b) is delivered to the Secretary of the corporation, who is entitled to vote at the meeting and upon such election and who delivers a written notice setting forth the information required by clause (a) of this Section 13 and provides the additional information required by clause (a) of Section 12 of this Article I above, or (iii) in the case of a stockholder-requested special meeting, by any stockholder of the corporation pursuant to clause (a)(iv) of Section 2 of this Article I. In the event the corporation calls a special meeting of stockholders for the purpose of electing one or more directors to the Board of Directors, any stockholder entitled to vote in such election of directors may nominate a person or persons (as the case may be) for election to such position(s) as specified in the corporation's notice of meeting, if the notice required by this Section 13(b) shall be delivered to the Secretary at the principal executive office of the corporation not earlier than the close of business on the 120th day prior to such special meeting and not later than the close of business on the later of the 90th day prior to such special meeting or the 10th day following the date on which public announcement of the date of the special meeting and of the nominees proposed by the Board of Directors to be elected at such meeting is first made by the corporation. In no event shall an adjournment, recess or postponement of a special meeting commence a new time period (or extend any time period) for the giving of a stockholder's notice as described above.

(c) General.

(i) Except as otherwise required by law, only such persons who are nominated in accordance with the procedures set forth in this Section 13 shall be eligible to be elected or re-elected at any meeting of stockholders of the corporation to serve as directors and only such other business shall be conducted at a meeting of stockholders as shall have been brought before the meeting in accordance with the procedures set forth in this Section 13. Except as otherwise required by law, each of the Chairman of the Board of Directors, the Board of Directors or the chairman of the meeting shall have the power to determine whether a nomination or any other business proposed to be brought before the meeting was made or proposed, as the case may be, in accordance with the procedures set forth in this Section 13. If any proposed nomination or other business is not in compliance with this Section 13, then except as otherwise required by law, the chairman of the meeting shall have the power to declare that such nomination shall be disregarded or that such other business shall not be transacted. Notwithstanding the foregoing provisions of this Section 13, unless otherwise required by law, or otherwise determined by the Chairman of the Board of Directors, the Board of Directors or the chairman of the meeting, if the stockholder does not provide

the information required under Section 12 of this Article I above or clauses (a)(ii)(C)(2) and (a)(ii)(D)(1)-(3) of this Section 13 to the corporation within the time frames specified herein, or if the stockholder (or a qualified representative of the stockholder) does not appear at the annual or special meeting of stockholders of the corporation to present a nomination or other business, such nomination shall be disregarded and such other business shall not be transacted, notwithstanding that proxies in respect of such vote may have been received by the corporation. For purposes of these Bylaws, to be considered a qualified representative of a stockholder, a person must be a duly authorized officer, manager or partner of such stockholder or authorized by a writing executed by such stockholder (or a reliable reproduction or electronic transmission of the writing) delivered to the corporation prior to the making of such nomination or proposal at such meeting stating that such person is authorized to act for such stockholder as proxy at the meeting of stockholders.

(ii) For purposes of this Section 13, the “close of business” shall mean 6:00 p.m. local time at the principal executive office of the corporation on any calendar day, whether or not the day is a business day, and a “public announcement” shall mean disclosure in a press release reported by the Dow Jones News Service, Associated Press or a comparable national news service or in a document publicly filed by the corporation with the SEC pursuant to Sections 13, 14 or 15(d) of the Exchange Act. For purposes of clause (a)(ii)(D)(1) of this Section 13, shares shall be treated as “beneficially owned” by a person if the person beneficially owns such shares, directly or indirectly, for purposes of Section 13(d) of the Exchange Act and Regulations 13D and 13G thereunder or has or shares pursuant to any agreement, arrangement or understanding (whether or not in writing): (A) the right to acquire such shares (whether such right is exercisable immediately or only after the passage of time or the fulfillment of a condition or both), (B) the right to vote such shares, alone or in concert with others and/or (C) investment power with respect to such shares, including the power to dispose of, or to direct the disposition of, such shares.

Section 14. Proxy Access for Director Nominations.

(a) Subject to the terms and conditions of these Bylaws, in connection with an annual meeting of stockholders at which directors are to be elected, the corporation (i) shall include in its proxy statement and on its form of proxy the names of, and (ii) shall include in its proxy statement the “Additional Information” (as defined below) relating to, a number of nominees specified pursuant to clause (b) of this Section 14 below (the “Authorized Number”) for election to the Board of Directors submitted pursuant to this Section 14 (each, a “Stockholder Nominee”), if:

(i) the Stockholder Nominee satisfies the eligibility requirements in this Section 14;

(ii) the Stockholder Nominee is identified in a timely notice (the “Stockholder Notice”) that satisfies this Section 14 and is delivered by a stockholder that qualifies as, or is acting on behalf of, an Eligible Stockholder (as defined below);

(iii) the Eligible Stockholder satisfies the requirements in this Section 14 and expressly elects at the time of the delivery of the Stockholder Notice to have the Stockholder Nominee included in the corporation’s proxy materials; and

(iv) the additional requirements of these Bylaws are met.

(b) The maximum number of Stockholder Nominees appearing in the corporation’s proxy materials with respect to an annual meeting of stockholders (the “Authorized Number”) shall not exceed the greater of (i) two or (ii) twenty percent (20%) of the number of directors in office as of the last day on which a Stockholder Notice may be delivered pursuant to this Section 14 with respect to the annual meeting, or if such amount is not a whole number, the closest whole number (rounding down) below twenty percent (20%); provided that the Authorized Number shall be reduced (i) by any Stockholder Nominee whose name was submitted for inclusion in the corporation’s proxy materials pursuant to this Section 14 but whom the Board of Directors decides to nominate as a Board of Directors nominee, and (ii) by any nominees who were previously elected to the Board of Directors as Stockholder Nominees at any of the preceding two annual meetings and who are nominated for election at the annual meeting by the Board of Directors as a Board of Directors nominee. In the event that one or more vacancies for any reason occurs after the date of the Stockholder Notice but before the annual meeting and the Board of Directors resolves to reduce the size of the Board of Directors in connection therewith, the Authorized Number shall be calculated based on the number of directors in office as so reduced.

(c) To qualify as an “Eligible Stockholder,” a stockholder or a group as described in this Section 14(c) must:

(i) Own and have Owned (as defined below), continuously for at least three years as of the date of the Stockholder Notice, a number of shares (as adjusted to account for any stock dividend, stock split, subdivision, combination, reclassification or recapitalization of the shares of capital stock issued, outstanding and entitled to vote generally in the

election of directors (for purposes of this Section 14, "Voting Capital Stock")) that represents at least three percent (3%) of the outstanding shares of Voting Capital Stock as of the date of the Stockholder Notice (the "Required Shares"); and

(ii) thereafter continue to Own the Required Shares through such annual meeting of stockholders.

For purposes of satisfying the ownership requirements of this Section 14(c), a group of not more than twenty (20) stockholders and/or beneficial owners may aggregate the number of shares of Voting Capital Stock that each group member has individually Owned continuously for at least three years as of the date of the Stockholder Notice if all other requirements and obligations for an Eligible Stockholder set forth in this Section 14 are satisfied by and as to each stockholder or beneficial owner comprising the group whose shares are aggregated. No shares may be attributed to more than one Eligible Stockholder, and no stockholder or beneficial owner, alone or together with any of its affiliates, may individually or as a member of a group qualify as or constitute more than one Eligible Stockholder under this Section 14. A group of any two or more funds shall be treated as only one stockholder or beneficial owner for this purpose if they are (A) under common management and investment control or (B) under common management and funded primarily by a single employer. For the purposes of this Section 14, the term "affiliate" or "affiliates" shall have the meanings ascribed thereto under the rules and regulations promulgated under the Exchange Act.

(d) For purposes of this Section 14:

(i) The terms "Own," "Owned," "Owning" and other variations of the word "Own" when used with respect to a stockholder or beneficial owner shall have the same meanings as defined in Section 2 of this Article I.

(ii) A stockholder or beneficial owner's Ownership of shares shall be deemed to continue during any period in which the person has loaned the shares if the person has the power to recall the loaned shares on not more than five business days' notice.

(e) For purposes of this Section 14, the "Additional Information" referred to in clause (a) of this Section 14 that the corporation will include in its proxy statement is:

(i) the information set forth in the Schedule 14N provided with the Stockholder Notice concerning each Stockholder Nominee and the Eligible Stockholder that is required to be disclosed in the corporation's proxy statement by the applicable requirements of the Exchange Act and the rules and regulations thereunder; and

(ii) if the Eligible Stockholder so elects, a written statement of the Eligible Stockholder (or, in the case of a group, a written statement of the group), not to exceed 500 words, in support of its Stockholder Nominee(s), which must be provided at the same time as the Stockholder Notice for inclusion in the corporation's proxy statement for the annual meeting (the "Statement").

Notwithstanding anything to the contrary contained in this Section 14, the corporation may omit from its proxy materials any information or Statement that it, in good faith, believes is untrue in any material respect (or omits a material fact necessary in order to make the statements made, in light of the circumstances under which they are made, not misleading) or would violate any applicable law, rule, regulation or listing standard. Nothing in this Section 14 shall limit the corporation's ability to solicit against and include in its proxy materials its own statements relating to any Eligible Stockholder or Stockholder Nominee.

(f) The Stockholder Notice shall set forth all information, representations and agreements required under clause (a)(ii) of Section 13 of this Article I above, including the information required with respect to (i) any nominee for election as a director, (ii) any stockholder giving notice of an intent to nominate a candidate for election, and (iii) any stockholder, beneficial owner or other person on whose behalf the nomination is made under this Section 14. In addition, such Stockholder Notice shall include:

(i) a copy of the Schedule 14N that has been or concurrently is filed with the SEC under the Exchange Act;

(ii) a written statement of the Eligible Stockholder (and in the case of a group, the written statement of each stockholder or beneficial owner whose shares are aggregated for purposes of constituting an Eligible Stockholder), which statement(s) shall also be included in the Schedule 14N filed with the SEC: (A) setting forth and certifying to the number of shares of Voting Capital Stock the Eligible Stockholder Owns and has Owned (as defined in clause (d) of this Section 14) continuously for at least three years as of the date of the Stockholder Notice, and (B) agreeing to continue to Own such shares through the annual meeting;

(iii) the written agreement of the Eligible Stockholder (and in the case of a group, the written agreement of each stockholder or beneficial owner whose shares are aggregated for purposes of constituting an Eligible Stockholder) addressed to the corporation, setting forth the following additional agreements, representations, and warranties:

(A) it shall provide (1) within five business days after the date of the Stockholder Notice, one or more written statements from the record holder(s) of the Required Shares and from each intermediary through which the Required Shares are or have been held, in each case during the requisite three-year holding period, specifying the number of shares that the Eligible Stockholder Owns, and has Owned continuously in compliance with this Section 14, (2) within five business days after the record date for the annual meeting both the information required under clause (a)(ii)(D)(1) of Section 13 of this Article I and notification in writing verifying the Eligible Stockholder's continuous Ownership of the Required Shares, in each case, as of such date, and (3) immediate notice to the corporation if the Eligible Stockholder ceases to own any of the Required Shares prior to the annual meeting;

(B) it (1) acquired the Required Shares in the ordinary course of business and not with the intent to change or influence control at the corporation, and does not presently have this intent, (2) has not nominated and shall not nominate for election to the Board of Directors at the annual meeting any person other than the Stockholder Nominee(s) being nominated pursuant to this Section 14, (3) has not engaged and shall not engage in, and has not been and shall not be a participant (as defined in Item 4 of Exchange Act Schedule 14A) in, a solicitation within the meaning of Exchange Act Rule 14a-1(l), in support of the election of any individual as a director at the annual meeting other than its Stockholder Nominee or a nominee of the Board of Directors, and (4) shall not distribute to any stockholder any form of proxy for the annual meeting other than the form distributed by the corporation; and

(C) it will (1) assume all liability stemming from any legal or regulatory violation arising out of the Eligible Stockholder's communications with the stockholders of the corporation or out of the information that the Eligible Stockholder provided to the corporation, (2) indemnify and hold harmless the corporation and each of its directors, officers and employees individually against any liability, loss or damages in connection with any threatened or pending action, suit or proceeding, whether legal, administrative or investigative, against the corporation or any of its directors, officers or employees arising out of the nomination or solicitation process pursuant to this Section 14, (3) comply with all laws, rules, regulations and listing standards applicable to its nomination or any solicitation in connection with the annual meeting, (4) file with the SEC any solicitation or other communication by or on behalf of the Eligible Stockholder relating to the corporation's annual meeting of stockholders, one or more of the corporation's directors or director nominees or any Stockholder Nominee, regardless of whether the filing is required under Exchange Act Regulation 14A, or whether any exemption from filing is available for such materials under Regulation 14A under the Exchange Act, and (5) at the request of the corporation, promptly, but in any event within five business days after such request, (or by the day prior to the day of the annual meeting, if earlier) provide to the corporation such additional information as reasonably requested by the corporation; and

(iv) in the case of a nomination by a group, the designation by all group members of one group member that is authorized to act on behalf of all members of the group with respect to the nomination and matters related thereto, including withdrawal of the nomination and the written agreement, representation, and warranty of the Eligible Stockholder that it shall provide within five business days after the date of the Stockholder Notice, documentation reasonably satisfactory to the corporation demonstrating that the number of stockholders and/or beneficial owners within such group does not exceed twenty (20), including whether a group of funds qualifies as one stockholder or beneficial owner within the meaning of clause (c) of this Section 14.

All information provided pursuant to this Section 14(f) shall be deemed part of the Stockholder Notice for purposes of this Section 14.

(g) To be timely under this Section 14, the Stockholder Notice must be delivered by a stockholder to the Secretary of the corporation at the principal executive office of the corporation not later than the close of business (as defined in clause (c)(ii) of Section 13 of this Article I) on the 120th day nor earlier than the close of business on the 150th day prior to the first anniversary of the date or approximate date (as stated in the corporation's proxy materials) the definitive proxy statement was first released to stockholders in connection with the preceding year's annual meeting of stockholders; provided, however, that in the event the annual meeting is more than 30 days before or after the anniversary of the previous year's annual meeting, or if no annual meeting was held in the preceding year, to be timely, the Stockholder Notice must be so delivered not earlier than the close of business on the 150th day prior to such annual meeting and not later than the close of business on the later of the 120th day prior to such annual meeting or the 10th day following the day on which public announcement (as defined in clause (c)(ii) of Section 13 of this Article I) of the date of such meeting is first made by the corporation. In no event shall an adjournment or recess of an annual meeting, or a postponement of an annual meeting for which notice has been given or with

respect to which there has been a public announcement of the date of the meeting, commence a new time period (or extend any time period) for the giving of the Stockholder Notice as described above.

(h) Within the time period for delivery of the Stockholder Notice, for each Stockholder Nominee, all written and signed representations and agreements and all completed and signed questionnaires required pursuant to clause (a) of Section 12 of this Article I, including consent to being named in the corporation's proxy statement and form of proxy as a nominee, shall be delivered to the Secretary of the corporation at the principal executive office of the corporation. The Stockholder Nominee must promptly, but in any event within five business days after such request, provide to the corporation such other information as it may reasonably request. The corporation may request such additional information as necessary to permit the Board of Directors to determine if each Stockholder Nominee satisfies the requirements of this Section 14.

(i) In the event that any information or communications provided by the Eligible Stockholder or any Stockholder Nominees to the corporation or its stockholders is not, when provided, or thereafter ceases to be, true, correct and complete in all material respects (including omitting a material fact necessary to make the statements made, in light of the circumstances under which they were made, not misleading), such Eligible Stockholder or Stockholder Nominee, as the case may be, shall promptly notify the Secretary and provide the information that is required to make such information or communication true, correct, complete and not misleading; it being understood that providing any such notification shall not be deemed to cure any defect or limit the corporation's right to omit a Stockholder Nominee from its proxy materials as provided in this Section 14.

(j) Notwithstanding anything to the contrary contained in this Section 14, the corporation may omit from its proxy materials any Stockholder Nominee, and such nomination shall be disregarded and no vote on such Stockholder Nominee shall occur, notwithstanding that proxies in respect of such vote may have been received by the corporation, if:

(i) the Eligible Stockholder or Stockholder Nominee breaches any of its agreements, representations, or warranties set forth in the Stockholder Notice (or otherwise submitted pursuant to this Section 14), any of the information in the Stockholder Notice (or otherwise submitted pursuant to this Section 14) was not, when provided, true, correct and complete, or the Eligible Stockholder or applicable Stockholder Nominee otherwise fails to comply with its obligations pursuant to these Bylaws, including, but not limited to, its obligations under this Section 14;

(ii) the Stockholder Nominee (A) is not independent under any applicable listing standards, any applicable rules of the SEC, and any publicly disclosed standards used by the Board of Directors in determining and disclosing the independence of the corporation's directors, (B) is or has been, within the past three years, an officer or director of a competitor, as defined in Section 8 of the Clayton Antitrust Act of 1914, as amended, (C) is a named subject of a pending criminal proceeding (excluding traffic violations and other minor offenses) or has been convicted in a criminal proceeding (excluding traffic violations and other minor offenses) within the past 10 years or (D) is subject to any order of the type specified in Rule 506(d) of Regulation D promulgated under the Securities Act of 1933, as amended;

(iii) the corporation has received a notice (whether or not subsequently withdrawn) that a stockholder intends to nominate any candidate for election to the Board of Directors pursuant to the advance notice requirements for stockholder nominees for director in clause (a)(i) (C) of Section 13 of this Article I; or

(iv) the election of the Stockholder Nominee to the Board of Directors would cause the corporation to violate the Certificate of Incorporation of the corporation, these Bylaws, any applicable law, rule, regulation or listing standard.

(k) An Eligible Stockholder submitting more than one Stockholder Nominee for inclusion in the corporation's proxy materials pursuant to this Section 14 shall rank such Stockholder Nominees based on the order that the Eligible Stockholder desires such Stockholder Nominees to be selected for inclusion in the corporation's proxy materials and include such assigned rank in its Stockholder Notice submitted to the corporation. In the event that the number of Stockholder Nominees submitted by Eligible Stockholders pursuant to this Section 14 exceeds the Authorized Number, the Stockholder Nominees to be included in the corporation's proxy materials shall be determined in accordance with the following provisions: one Stockholder Nominee who satisfies the eligibility requirements in this Section 14 shall be selected from each Eligible Stockholder for inclusion in the corporation's proxy materials until the Authorized Number is reached, going in order of the amount (largest to smallest) of shares of the corporation each Eligible Stockholder disclosed as Owned in its Stockholder Notice submitted to the corporation and going in the order of rank (highest to lowest) assigned to each Stockholder Nominee by such Eligible Stockholder. If the Authorized Number is not reached after one Stockholder Nominee who satisfies the eligibility requirements in this Section 14 has been selected from each Eligible Stockholder, this selection process shall continue as many times as necessary, following the same order each time, until the Authorized Number is reached. Following such determination, if any Stockholder Nominee who satisfies the eligibility requirements in this Section 14 thereafter is

nominated by the Board of Directors, thereafter is not included in the corporation's proxy materials or thereafter is not submitted for director election for any reason (including the Eligible Stockholder's or Stockholder Nominee's failure to comply with this Section 14), no other nominee or nominees shall be included in the corporation's proxy materials or otherwise submitted for election as a director at the applicable annual meeting in substitution for such Stockholder Nominee.

(l) Any Stockholder Nominee who is included in the corporation's proxy materials for a particular annual meeting of stockholders but withdraws from or becomes ineligible or unavailable for election at the annual meeting for any reason, including for the failure to comply with any provision of these Bylaws (provided that in no event shall any such withdrawal, ineligibility or unavailability commence a new time period (or extend any time period) for the giving of a Stockholder Notice), shall be ineligible to be a Stockholder Nominee pursuant to this Section 14 for the next two annual meetings.

(m) Notwithstanding the foregoing provisions of this Section 14, unless otherwise required by law or otherwise determined by the Chairman of the Board of Directors, the Board of Directors or the chairman of the meeting, if the stockholder delivering the Stockholder Notice (or a qualified representative of the stockholder, as defined in clause (c)(i) of Section 13 of this Article I) does not appear at the annual meeting of stockholders of the corporation to present its Stockholder Nominee or Stockholder Nominees, such nomination or nominations shall be disregarded, notwithstanding that proxies in respect of the election of the Stockholder Nominee or Stockholder Nominees may have been received by the corporation. Without limiting the Board of Directors' power and authority to interpret any other provisions of these Bylaws, the Board of Directors (and any other person or body authorized by the Board of Directors) shall have the power and authority to interpret this Section 14 and to make any and all determinations necessary or advisable to apply this Section 14 to any persons, facts or circumstances, in each case, acting in good faith. This Section 14 shall be the exclusive method for stockholders to include nominees for director election in the corporation's proxy materials.

ARTICLE II

Directors

Section 1. Powers. The business and affairs of the corporation shall be managed by or under the direction of the Board of Directors, which may exercise all such powers of the corporation and do all such lawful acts and things as are not by law or these Bylaws directed or required to be exercised or done by the stockholders.

Section 2. Number of Directors. The Board of Directors shall consist of one or more members. The number of directors shall be no less than six (6) and no more than nine (9), the number thereof to be fixed from time to time by resolution of the Board of Directors.

Section 3. Election and Tenure. Each director shall be elected by the vote specified in clause (b) of Section 10 of Article I or as provided in Section 7 of this Article II. Each director shall serve until his or her successor is elected and qualified, or until his or her earlier resignation or removal.

Section 4. Qualification. No director need be a stockholder.

Section 5. Removal. Any director or the entire Board of Directors may be removed with or without cause, by the holders of a majority of the shares then entitled to vote at an election of the directors except as otherwise provided by law.

Section 6. Resignation. Any director of the corporation may resign at any time by giving written notice to the Board of Directors, to the Chairman of the Board of Directors, if any, to the President, or to the Secretary, and any member of a committee may resign therefrom at any time by giving notice as aforesaid or to the chairman or secretary of such committee. Any such resignation shall take effect at the time (or upon the happening of an event) specified therein, or, if the time (or event) be not specified, upon receipt thereof; and unless otherwise specified therein, the acceptance of such resignation shall not be necessary to make it effective.

Section 7. Vacancies and Newly Created Directorships. Vacancies and newly created directorships resulting from any increase in the authorized number of directors may be filled (a) by the stockholders at any meeting, (b) by a majority of the directors then in office, although less than a quorum, or (c) by a sole remaining director. Whenever the holders of any class or classes of stock or series thereof are entitled to elect one or more Directors by the Certificate of Incorporation, vacancies and newly created directorships of such class or classes or series may be filled by a majority of the Directors elected by such class, classes or series then in office or by the sole remaining director so elected. When one or more directors shall resign from the Board of Directors, effective at a future date, a majority of directors who are entitled to act on the filling of

such vacancy or vacancies and who are then in office, including those who have so resigned, shall have power to fill such vacancy or vacancies by vote to take effect when such resignation or resignations shall become effective.

Section 8. Annual Meeting. The first meeting of each newly elected Board of Directors may be held without notice immediately after an annual meeting of stockholders (or a special meeting of stockholders held in lieu of an annual meeting) at the same place as that at which such meeting of stockholders was held; or such first meeting may be held at such place and time as shall be fixed by the consent in writing of all the directors, or may be called in the manner hereinafter provided with respect to the call of special meetings.

Section 9. Regular Meetings. Regular meetings of the directors may be held at such times and places as shall from time to time be fixed by resolution of the Board of Directors, and no notice need be given of regular meetings held at times and places so fixed, provided, however, that any resolution relating to the holding of regular meetings shall remain in force only until the next annual meeting of stockholders and that, if at any meeting of Directors at which a resolution is adopted fixing the times or place or places for any regular meetings any Director is absent, no meeting shall be held pursuant to such resolution without notice to or waiver by such absent Director pursuant to Section 11 of this Article II.

Section 10. Special Meetings. Special meetings of the directors may be called by the Chairman of the Board of Directors, if any, the President, or by at least one- third of the directors then in office (rounded up to the nearest whole number), and shall be held at the place and on the date and hour designated in the call thereof.

Section 11. Notices. Notices of any special meeting of the directors shall be given to each director by the Secretary or an Assistant Secretary (a) by mailing to him or her, postage prepaid, and addressed to him or her at his or her address as registered on the books of the corporation, or if not so registered at his or her last known home or business address, a written notice of such meeting at least 4 days before the meeting, (b) by delivering such notice by hand or by telegram, teletype, telex, facsimile or electronic transmission (including without limitation e-mail) to him or her at least 48 hours before the meeting, or (c) by giving such notice in person or by telephone at least 48 hours in advance of the meeting. Any notice given personally or by telephone, telegram, teletype, telex, facsimile or electronic transmission (including without limitation e-mail) may be communicated either to the director or to a person at the office of the director who the person giving the notice has reason to believe will promptly communicate it to the director. In the absence of the Secretary or an Assistant Secretary, such notice may be given by the officer or one of the directors calling the meeting. Notice need not be given to any director who has waived notice in accordance with Section 229 of the DGCL. A notice or waiver of notice of a meeting of the directors need not specify the business to be transacted at or the purpose of the meeting.

Section 12. Quorum. At any meeting of the directors, a majority of the authorized number of directors shall constitute a quorum for the transaction of business. If a quorum shall not be present at any meeting of the Board of Directors, a majority of those present (or, if not more than two directors are present, any director present) may adjourn the meeting from time to time to another place, date or time, without notice other than announcement at the meeting prior to adjournment, until a quorum shall be present.

Section 13. Participation in Meetings by Conference Telephone. One or more members of the Board of Directors, or any committee thereof, may participate in a meeting of such Board of Directors or committee by means of conference telephone or other communications equipment by means of which all persons participating in the meeting can hear each other, and participation in a meeting pursuant to this Section 13 shall constitute presence in person at such meeting.

Section 14. Conduct of Business: Action by Written Consent. At any meeting of the Board of Directors at which a quorum is present, business shall be transacted in such order and manner as the Board of Directors may from time to time determine, and all matters shall be determined by the vote of a majority of the directors present, except as otherwise provided in these Bylaws or required by law. Without limiting the manner by which a consent of directors may be given under Section 141(f) of the DGCL, action may be taken by the Board of Directors, or any committee thereof, without a meeting if all members of the Board of Directors or committee, as the case may be, consent thereto in writing, and the writing or writings are filed with the records of proceedings of the Board of Directors or committee.

Section 15. Place of Meetings. The Board of Directors may hold its meetings, and have an office or offices, within or without the State of Delaware.

Section 16. Compensation. The Board of Directors shall have the authority to fix stated salaries for directors for their service in such capacity and to provide for payment of a fixed sum and expenses of attendance, if any, for attendance at each regular or special meeting of the Board of Directors. The Board of Directors shall also have the authority to provide for payment of a fixed sum and expenses of attendance, if any, payable to members of committees for attending committee

meetings. Nothing herein contained shall preclude any director from serving the corporation in any other capacity and receiving compensation for such services.

Section 17. Committees. (a) The Board of Directors, by resolution passed by a majority of the number of directors required at the time to constitute a full Board of Directors as fixed in or determined pursuant to these Bylaws as then in effect, may from time to time designate one or more committees, each committee to consist of one or more of the directors of the corporation. The Board of Directors may designate one or more directors as alternate members of any committee, who may replace any absent or disqualified member at any meeting of the committee. In the absence or disqualification of a member of a committee, the member or members thereof present at any meeting and not disqualified from voting, whether or not he or she or they constitute a quorum, may unanimously appoint another member of the Board of Directors to act at the meeting in the place of any such absent or disqualified member. Any such committee, to the extent provided in the resolution of the Board of Directors, shall have and may exercise all the powers and authority of the Board of Directors in the management of the business and affairs of the corporation, and may authorize the seal of the corporation to be affixed to all papers which may require it; but no such committee shall have such power or authority in reference to amending the Certificate of Incorporation (except that a committee may, to the extent authorized in the resolution or resolutions providing for the issuance of shares of stock adopted by the Board of Directors as provided in Subsection (a) of Section 151 of the DGCL, fix the designations and any preferences or rights of such shares relating to dividends, redemption, dissolution, any distribution of assets of the corporation or conversion into, or the exchange of such shares for, shares of any other class or classes or any other series of the same or any other class or classes of stock of the corporation or fix the number of shares in a series of stock or authorize the increase or decrease in the shares of any series), adopting an agreement of merger or consolidation under Sections 251, 252, 254, 255, 256, 257, 258, 263, or 264 of the DGCL, recommending to the stockholders the sale, lease or exchange of all or substantially all of the corporation's property or assets, recommending to the stockholders a dissolution of the corporation or a revocation of a dissolution, or amending the Bylaws of the corporation. Such a committee may, to the extent expressly provided in the resolution of the Board of Directors, have the power or authority to declare a dividend or to authorize the issuance of stock or to adopt a certificate of ownership and merger pursuant to Section 253 of the DGCL.

(b) At any meeting of any committee or subcommittee of a committee, a majority of the directors then serving on such committee of the Board of Directors or subcommittee of a committee shall constitute a quorum for the transaction of business by the committee or subcommittee, unless the Certificate of Incorporation, these Bylaws, a resolution of the Board of Directors or a resolution of a committee that created the subcommittee requires a greater or lesser number, provided that in no case shall a quorum be less than 1/3 of the directors then serving on the committee or subcommittee. The vote of the majority of the members of a committee or subcommittee present at a meeting at which a quorum is present shall be the act of the committee or subcommittee, unless the Certificate of Incorporation, these Bylaws, a resolution of the Board of Directors or a resolution of a committee that created the subcommittee requires a greater number.

(c) Each committee, except as otherwise provided by resolution of the Board of Directors, shall fix the time and place of its meetings within or without the State of Delaware, shall adopt its own rules and procedures, and shall keep a record of its acts and proceedings and report the same from time to time to the Board of Directors.

(d) Unless otherwise provided in the Certificate of Incorporation, these Bylaws or the resolution of the Board of Directors designating the committee, a committee may create one or more subcommittees, each subcommittee to consist of one or more members of the committee, and delegate to a subcommittee any or all of the powers and authority of the committee.

ARTICLE III

Officers

Section 1. Officers and Their Election. The officers of the corporation shall be a Chief Executive Officer, a President, a Secretary, a Chief Financial Officer and such Vice Presidents, Assistant Secretaries, Assistant Chief Financial Officers and other officers as the Board of Directors may from time to time determine and elect or appoint. The Board of Directors may appoint one of its members to the office of Chairman of the Board of Directors and another of its members to the office of Vice-Chairman of the Board of Directors and from time to time define the powers and duties of these and other officers, employees or agents of the corporation notwithstanding any other provisions of these Bylaws. All officers shall be elected by the Board of Directors and shall serve at the will of the Board of Directors. Any officer may, but need not, be a director. Two or more offices may be held by the same person. All officers shall perform such duties and have such powers as the Board of Directors shall designate by resolution, or in the absence of such resolution, as set forth in these Bylaws. The Board of Directors may from time to time delegate the powers or duties of any officer to any other officers or agents, notwithstanding the foregoing provisions of this Article III.

Section 2. Term of Office. The Chief Executive Officer, the President, the Chief Financial Officer and the Secretary shall hold office until his or her successor is elected and qualified or until his or her earlier resignation or removal.

Section 3. Vacancies. Any vacancy at any time existing in any office may be filled by the Board of Directors.

Section 4. Chairman of the Board of Directors. The Board of Directors may, in its discretion, elect a Chairman of the Board of Directors from among its members. He or she may be the Chief Executive Officer of the corporation if so designated by the Board of Directors, and he or she shall preside at all meetings of the Board of Directors at which he or she is present and shall exercise and perform such other powers and duties as may from time to time be assigned to him or her by the Board of Directors or prescribed by the Bylaws.

Section 5. Chief Executive Officer. The Board of Directors may elect a Chief Executive Officer of the corporation who may also be the Chairman of the Board of Directors or President of the corporation or both. It shall be his or her duty and he or she shall have the power to see that all orders and resolutions of the Board of Directors are carried into effect. He or she shall from time to time report to the Board of Directors all matters within his or her knowledge which the interests of the corporation may require to be brought to its notice.

Section 6. President. If there is no Chief Executive Officer, the President shall be the chief executive officer of the corporation except as the Board of Directors may otherwise provide. The President shall perform such duties and have such powers additional to the foregoing as the Board of Directors shall designate.

Section 7. Vice Presidents. In the absence or disability of the President, his or her powers and duties shall be performed by the vice president, if only one, or, if more than one, by the one designated for the purpose by the Board of Directors. Each vice president shall perform such duties and have such powers additional to the foregoing as the Board of Directors shall designate.

Section 8. Chief Financial Officer. The Chief Financial Officer shall be the treasurer of the corporation and shall keep full and accurate accounts of receipts and disbursements in books belonging to the corporation and shall deposit all monies and other valuable effects in the name and to the credit of the corporation in such depositories as shall be designated by the Board of Directors or in the absence of such designation in such depositories as he or she shall from time to time deem proper. The Chief Financial Officer (or any Assistant Chief Financial Officer) shall sign all stock certificates as treasurer of the corporation. He or she shall disburse the funds of the corporation as shall be ordered by the Board of Directors, taking proper vouchers for such disbursements. He or she shall promptly render to the Chief Executive Officer and to the Board of Directors such statements of his or her transactions and accounts as the Chief Executive Officer and Board of Directors respectively may from time to time require. The Chief Financial Officer shall perform such duties and have such powers additional to the foregoing as the Board of Directors may designate.

Section 9. Assistant Chief Financial Officers. In the absence or disability of the Chief Financial Officer, his or her powers and duties shall be performed by the Assistant Chief Financial Officer, if only one, or if more than one, by the one designated for the purpose by the Board of Directors. Each Assistant Chief Financial Officer shall perform such duties and have such powers additional to the foregoing as the Board of Directors shall designate.

Section 10. Secretary. The Secretary shall issue notices of all meetings of stockholders, of the Board of Directors and of committees thereof where notices of such meetings are required by law or these Bylaws. He or she shall record the proceedings of the meetings of the stockholders and of the Board of Directors and shall be responsible for the custody thereof in a book to be kept for that purpose. He or she shall also record the proceedings of the committees of the Board of Directors unless such committees appoint their own respective secretaries. Unless the Board of Directors shall appoint a transfer agent and/or registrar, the Secretary shall be charged with the duty of keeping, or causing to be kept, accurate records of all stock outstanding, stock certificates issued and stock transfers. He or she shall sign such instruments as require his or her signature. The Secretary shall have custody of the corporate seal and shall affix and attest such seal on all documents whose execution under seal is duly authorized. In his or her absence at any meeting, an Assistant Secretary or the Secretary pro tempore shall perform his or her duties thereat. He or she shall perform such duties and have such powers additional to the foregoing as the Board of Directors shall designate.

Section 11. Assistant Secretaries. In the absence or disability of the Secretary, his or her powers and duties shall be performed by the Assistant Secretary, if only one, or, if more than one, by the one designated for the purpose by the Board of Directors. Each Assistant Secretary shall perform such duties and have such powers additional to the foregoing as the Board of Directors shall designate.

Section 12. Salaries. The salaries and other compensation of officers, agents and employees shall be fixed from time to time by or under authority from the Board of Directors. No officer shall be prevented from receiving a salary or other compensation by reason of the fact that he or she is also a director of the corporation.

Section 13. Removal. The Board of Directors may remove any officer, either with or without cause, at any time.

Section 14. Bond. The corporation may secure the fidelity of any or all of its officers or agents by bond or otherwise.

Section 15. Resignations. Any officer of the corporation may resign at any time by giving written notice to the Board of Directors, to the Chairman of the Board of Directors, if any, to the Chief Executive Officer or to the Secretary of the corporation. Any such resignation shall take effect at the time specified therein, or, if the time be not specified, upon receipt thereof; and unless otherwise specified therein, the acceptance of such resignation shall not be necessary to make it effective.

ARTICLE IV

Capital Stock

Section 1. Stock Certificates: Uncertificated Shares. The shares of capital stock of the corporation shall be represented by certificates, provided that the Board of Directors may provide by resolution or resolutions that some or all of any or all classes or series of its stock may be uncertificated shares. Any such resolution shall not apply to shares represented by a certificate until such certificate is surrendered to the corporation (or the transfer agent or registrar, as the case may be). Notwithstanding the adoption of such a resolution, every holder of stock represented by certificates and upon request every holder of uncertificated shares shall be entitled to have a certificate signed by, or in the name of, the corporation by the Chairman or Vice-Chairman of the Board of Directors or the President or a Vice President, and by the Chief Financial Officer (in his or her capacity as treasurer) or an Assistant Chief Financial Officer (in his or her capacity as assistant treasurer), or the Secretary or an Assistant Secretary, certifying the number of shares owned by him or her in the corporation. Any or all of the signatures on the certificate may be a facsimile. In case any officer, transfer agent, or registrar who has signed or whose facsimile signature has been placed upon a certificate shall have ceased to be such officer, transfer agent or registrar before the certificate is issued, such certificate may nevertheless be issued by the corporation with the same effect as if he or she were such officer, transfer agent or registrar at the date of issue.

Section 2. Classes of Stock. If the corporation shall be authorized to issue more than one class of stock or more than one series of any class, the face or back of each certificate issued by the corporation to represent such class or series shall either (a) set forth in full or summarize the powers, designations, preferences and relative, participating, optional or other special rights of each class of stock or series thereof and the qualifications, limitations or restrictions thereof, or (b) contain a statement that the corporation will furnish a statement of the same without charge to each stockholder who so requests. Within a reasonable time after the issuance or transfer of uncertificated shares, the corporation shall send to the registered holder thereof such written notice as may be required by law as to the information required by law to be set forth or stated on stock certificates.

Section 3. Transfer of Stock. Shares of stock shall be transferable only upon the books of the corporation pursuant to applicable law and such rules and regulations as the Board of Directors shall from time to time prescribe. The Board of Directors may at any time or from time to time appoint a transfer agent or agents or a registrar or registrars for the transfer or registration of shares of stock. Except where a certificate, or uncertificated shares, are issued in accordance with Section 5 of Article IV of these Bylaws, one or more outstanding certificates representing in the aggregate the number of shares involved shall be surrendered for cancellation before a new certificate, or uncertificated shares, are issued representing such shares.

Section 4. Holders of Record. Prior to due presentment for registration of transfer the corporation may treat the holder of record of a share of its stock as the complete owner thereof exclusively entitled to vote, to receive notifications and otherwise entitled to all the rights and powers of a complete owner thereof, notwithstanding notice to the contrary.

Section 5. Stock Certificates. The Board of Directors may direct that a new stock certificate or certificates, or uncertificated shares, be issued in place of any certificate or certificates theretofore issued by the corporation alleged to have been lost, stolen, or destroyed upon the making of an affidavit of that fact by the person claiming the certificate of stock to be lost, stolen or destroyed. When authorizing such issue of a new certificate or certificates, or uncertificated shares, the Board of Directors may, in its discretion and as a condition precedent to the issuance thereof, require the owner of such lost, stolen or destroyed certificate or certificates or his or her legal representative, to give the corporation a bond sufficient to indemnify it

against any claim that may be made against the corporation on account of the alleged loss, theft, or destruction, of such certificates or the issuance of such new certificate or certificates, or uncertificated shares.

Section 6. Record Date. In order that the corporation may determine the stockholders entitled to notice of or to vote at any meeting of stockholders, or to receive payment of any dividend or other distribution or allotment of any rights or to exercise any rights in respect of any change, conversion or exchange of stock or for the purpose of any other lawful action other than stockholder action by written consent, the Board of Directors may fix a record date, which record date shall not precede the date on which the resolution fixing the record date is adopted and which record date shall not be more than 60 nor less than 10 days before the date of any meeting of stockholders, nor more than 60 days prior to the time for such other action as hereinbefore described; provided, however, that if no record date is fixed by the Board of Directors, the record date for determining stockholders entitled to notice of or to vote at a meeting of stockholders shall be at the close of business on the day next preceding the day on which notice is given or, if notice is waived, at the close of business on the day next preceding the day on which the meeting is held, and, for determining stockholders entitled to receive payment of any dividend or other distribution or allotment of rights or to exercise any rights of change, conversion or exchange of stock or for any other purpose, the record date shall be at the close of business on the day on which the Board of Directors adopts a resolution relating thereto. A determination of stockholders of record entitled to notice of or to vote at a meeting of stockholders shall apply to any adjournment of the meeting; provided, however, that the Board of Directors may fix a new record date for the adjourned meeting.

ARTICLE V

Miscellaneous Provisions

Section 1. Interested Directors and Officers. (a) No contract or transaction between the corporation and one or more of its directors or officers, or between the corporation and any other corporation, partnership, association, or other organization in which one or more of its directors or officers are directors or officers, or have a financial interest, shall be void or voidable solely for this reason, or solely because the director or officer is present at or participates in the meeting of the Board of Directors or committee thereof which authorizes the contract or transaction, or solely because his or her or their votes are counted for such purpose, if:

(i) the material facts as to his or her relationship or interest and as to the contract or transaction are disclosed or are known to the Board of Directors or the committee, and the Board of Directors or committee in good faith authorizes the contract or transaction by the affirmative vote of a majority of the disinterested directors, even though the number of disinterested directors is less than a quorum; or

(ii) the material facts as to his or her relationship or interest and as to the contract or transaction are disclosed or are known to the stockholders entitled to vote thereon, and the contract or transaction is specifically approved in good faith by vote of the stockholders; or

(iii) the contract or transaction is fair as to the corporation as of the time it is authorized, approved or ratified, by the Board of Directors, a committee thereof, or the shareholders.

(b) Common or interested directors may be counted in determining the presence of a quorum at a meeting of the Board of Directors or of a committee which authorizes the contract or transaction.

Section 2. Indemnification.

(a) Right to Indemnification. The corporation shall indemnify and hold harmless each person who was or is made a party or is threatened to be made a party to or is otherwise involved in any action, suit or proceeding, whether civil, criminal, administrative or investigative (hereinafter a "proceeding"), by reason of the fact that he or she is or was a director or an officer of the corporation or is or was serving at the request of the corporation as a director, officer, employee or agent of another corporation or of a partnership, joint venture, trust or other enterprise, including service with respect to an employee benefit plan (hereinafter an "indemnitee"), whether the basis of such proceeding is alleged action in an official capacity as a director, officer, employee or agent or in any other capacity while serving as a director or officer, to the fullest extent authorized by law, as the same exists or may hereafter be amended (but, in the case of any such amendment, only to the extent that such amendment permits the corporation to provide broader indemnification rights than such law permitted the corporation to provide prior to such amendment), against all expense, liability and loss (including attorneys' fees, judgments, fines, ERISA excise taxes or penalties and amounts paid in settlement) reasonably incurred or suffered by such indemnitee in connection therewith; provided, however, that except as provided in Subsection (c) of this Section with respect to proceedings

to enforce rights to indemnification, the corporation shall indemnify any such indemnitee in connection with a proceeding (or part thereof) initiated by such indemnitee only if such proceeding (or part thereof) was authorized by the Board of Directors of the corporation; and provided further that as to any matter disposed of by a compromise payment by such person, pursuant to a consent decree or otherwise, no indemnification either for said payment or for any other expenses shall be provided unless such compromise and indemnification therefor shall be appropriated:

(i) by a majority vote of a quorum consisting of disinterested directors;

(ii) if such a quorum cannot be obtained, then by a majority vote of a committee of the Board of Directors consisting of all the disinterested directors;

(iii) if there are not two or more disinterested directors in office, then by a majority of the directors then in office, provided they have obtained a written finding by special independent legal counsel appointed by a majority of the directors to the effect that, based upon a reasonable investigation of the relevant facts as described in such opinion, the person to be indemnified appears to have acted in good faith in the reasonable belief that his or her action was in the best interests of the corporation (or, to the extent that such matter relates to service with respect to an employee benefit plan, in the best interests of the participants or beneficiaries of such employee benefit plan);

(iv) by the holders of a majority of the shares of stock entitled to vote for the election of directors, which majority may include interested directors and officers; or

(v) by a court of competent jurisdiction.

An “interested” director or officer is one against whom in such capacity the proceeding in question or other proceeding on the same or similar grounds is then pending. The termination of any action, suit or proceeding by judgment, order, settlement, conviction, or upon a plea of nolo contendere or its equivalent, shall not, of itself, create a presumption that the person did not act in good faith and in a manner which he or she reasonably believed to be in or not opposed to the best interests of the corporation, and, with respect to any criminal action or proceeding, had reasonable cause to believe that his or her conduct was unlawful.

(b) Right to Advancement of Expenses. The right to indemnification conferred in Subsection (a) of this Section shall include the right to be paid by the corporation the expenses incurred in defending any such proceeding in advance of its final disposition (hereinafter an “advancement of expenses”); provided, however, that if the DGCL requires, an advancement of expenses incurred by an indemnitee in his or her capacity as a director or officer (and not in any other capacity in which service was or is rendered by such indemnitee, including, without limitation, service to an employee benefit plan) shall be made only upon delivery to the corporation of an undertaking (hereinafter an “undertaking”), by or on behalf of such indemnitee, to repay all amounts so advanced if it shall ultimately be determined by final judicial decision from which there is no further right to appeal (hereinafter a “final adjudication”) that such indemnitee is not entitled to be indemnified for such expenses under this Section or otherwise, which undertaking may be accepted without reference to the financial ability of such person to make repayment.

(c) Right of Indemnitee to Bring Suit. If a claim under Subsection (a) or (b) of this Section is not paid in full by the corporation within 60 days after a written claim has been received by the corporation, except in the case of a claim for an advancement of expenses, in which case the applicable period shall be 20 days, the indemnitee may at any time thereafter bring suit against the corporation to recover the unpaid amount of the claim. If successful in whole or in part in any such suit, or in a suit brought by the corporation to recover an advancement of expenses pursuant to the terms of an undertaking, the indemnitee shall be entitled to be paid also the expense of prosecuting or defending such suit. In (i) any suit brought by the indemnitee to enforce a right to indemnification hereunder (but not in a suit brought by the indemnitee to enforce a right to an advancement of expenses) it shall be a defense that, and (ii) any suit by the corporation to recover an advancement of expenses pursuant to the terms of an undertaking the corporation shall be entitled to recover such expenses upon a final adjudication that, the indemnitee has not met any applicable standard for indemnification set forth in the DGCL. Neither the failure of the corporation (including its Board of Directors, independent legal counsel, or its stockholders) to have made a determination prior to the commencement of such suit that indemnification of the indemnitee is proper in the circumstances because the indemnitee has met the applicable standard of conduct set forth in the DGCL, nor an actual determination by the corporation (including its Board of Directors, independent legal counsel, or its stockholders) that the indemnitee has not met such applicable standard of conduct, shall create a presumption that the indemnitee has not met the applicable standard of conduct or, in the case of such a suit brought by the indemnitee, be a defense to such suit. In any suit brought by the indemnitee to enforce a right to indemnification or to an advancement of expenses hereunder, or by the corporation to recover an

advancement of expenses pursuant to the terms of an undertaking, the burden of proving that the indemnitee is not entitled to be indemnified, or to such advancement of expenses, under this Section or otherwise shall be on the corporation.

(d) Non-exclusivity of Rights. The rights to indemnification and to the advancement of expenses conferred in this Section shall not be exclusive of any other right which any person may have or hereafter acquire under any statute, certificate of incorporation, bylaw, agreement, vote of disinterested directors or otherwise. The corporation's indemnification under this Section 2 of any person who is or was a director or officer of the corporation, or is or was serving, at the request of the corporation, as a director, officer, employee or agent of another corporation, partnership, joint venture, trust or other enterprise, shall be reduced by any amounts such person receives as indemnification (i) under any policy of insurance purchased and maintained on his or her behalf by the corporation, (ii) from such other corporation, partnership, joint venture, trust or other enterprise, or (iii) under any other applicable indemnification provision.

(e) Joint Representation. If both the corporation and any person to be indemnified are parties to an action, suit or proceeding (other than an action or suit by or in the right of the corporation to procure a judgment in its favor), counsel representing the corporation therein may also represent such indemnified person (unless such dual representation would involve such counsel in a conflict of interest in violation of applicable principles of professional ethics), and the corporation shall pay all fees and expenses of such counsel incurred during the period of dual representation other than those, if any, as would not have been incurred if counsel were representing only the corporation; and any allocation made in good faith by such counsel of fees and disbursements payable under this paragraph by the corporation versus fees and disbursements payable by any such indemnified person shall be final and binding upon the corporation and such indemnified person.

(f) Indemnification of Employees and Agents of the Corporation. Except to the extent that rights to indemnification and advancement of expenses of employees or agents of the corporation may be required by any statute, the Certificate of Incorporation, this Section or any other bylaw, agreement, vote of disinterested directors or otherwise, the corporation may, to the extent authorized from time to time by the Board of Directors, grant rights to indemnification and to the advancement of expenses to any employee or agent of the corporation to the fullest extent of the provisions of this Section with respect to the indemnification and advancement of expenses of directors and officers of the corporation.

(g) Insurance. The corporation may maintain insurance, at its expense, to protect itself and any director, officer, employee or agent of the corporation or another corporation, partnership, joint venture, trust or other enterprise against any expense, liability or loss, whether or not the corporation would have the power to indemnify such person against such expense, liability or loss under the DGCL (as currently in effect or hereafter amended), the Certificate of Incorporation or these Bylaws.

(h) Nature of Indemnification Right; Modification or Repeal of Indemnification. Each person who is or becomes a director or officer as described in subsection (a) of this Section 2 shall be deemed to have served or to have continued to serve in such capacity in reliance upon the indemnity provided for in this Section 2. All rights to indemnification (and the advancement of expenses) under this Section 2 shall be deemed to be provided by a contract between the corporation and the person who serves as a director or officer of the corporation at any time while these Bylaws and other relevant provisions of the DGCL and other applicable law, if any, are in effect. Such rights shall continue as to an indemnitee who has ceased to be a director, officer, employee or agent and shall inure to the benefit of the indemnitee's heirs, executors and administrators. Any modification or repeal of this Section 2 shall not adversely affect any right or protection existing under this Section 2 at the time of such modification or repeal.

Section 3. Stock in Other Corporations. Subject to any limitations that may be imposed by the Board of Directors, the President or any person or persons authorized by the Board of Directors may, in the name and on behalf of the corporation, (a) call meetings of the holders of stock or other securities of any corporation or other organization, stock or other securities of which are held by this corporation, (b) act, or appoint any other person or persons (with or without powers of substitution) to act in the name and on behalf of the corporation, or (c) express consent or dissent, as a holder of such securities, to corporate or other action by such other corporation or organization.

Section 4. Checks, Notes, Drafts and Other Instruments. Checks, notes drafts and other instruments for the payment of money drawn or endorsed in the name of the corporation may be signed by any officer or officers or person or persons authorized by the Board of Directors to sign the same. No officer or person shall sign any such instrument as aforesaid unless authorized by the Board of Directors to do so.

Section 5. Corporate Seal. The seal of the corporation shall be circular in form, bearing the name of the corporation, the word "Delaware", and the year of incorporation, and the same may be used by causing it or a facsimile thereof to be impressed or affixed or in any other manner reproduced.

Section 6. Books and Records. The books, accounts and records of the corporation, except as may be otherwise required by law, may be kept outside of the State of Delaware, at such place or places as the Board of Directors may from time to time appoint. Except as may otherwise be provided by law, the Board of Directors shall determine whether and to what extent the books, accounts, records and documents of the corporation, or any of them, shall be open to the inspection of the stockholders.

Section 7. Severability. If any term or provision of the Bylaws, or the application thereof to any person or circumstances or period of time, shall to any extent be invalid or unenforceable, the remainder of the Bylaws shall be valid and enforced to the fullest extent permitted by law.

Section 8. Interpretations. Words importing persons include firms, associations and corporations, all words importing the singular number include the plural number and vice versa, and all words importing the masculine gender include the feminine gender.

Section 9. Amendments. The Board of Directors is expressly empowered to adopt, amend or repeal these Bylaws; provided that the Board of Directors shall not have the power to alter, amend or repeal any bylaw adopted by the stockholders that by its terms may be altered, amended or repealed only by the stockholders. The stockholders also have the power to adopt, amend or repeal the Bylaws of the corporation.

Re: .WEB Auction

Dear Akram:

Afilias Domains No. 3 Limited, a wholly-owned subsidiary of Afilias plc, is an applicant for the .WEB top-level domain under the ICANN new gTLD program. On 27-28 August 2016, ICANN conducted an auction (the "Auction") for the .WEB string per the rules and procedures set forth in the New gTLD Applicant Guidebook (the "Guidebook"). As announced by ICANN on 28 August 2016 (<https://www.icann.org/news/announcement-2-2016-07-28-en>), the successful bidder in the Auction was Nu Dot Co LLC ("NDC").

Subsequent to the conclusion of the auction, it has been publically disclosed that VeriSign, Inc. acquired rights in the NDC application for .WEB. VeriSign's press release, dated 1 August 2016, states "*The Company [i.e., VeriSign] entered into an agreement with Nu Dot Co LLC wherein the Company provided funds for Nu Dot Co's bid for the .web TLD. We are pleased that the Nu Dot Co bid was successful. We anticipate that Nu Dot Co will execute the .web Registry Agreement with the Internet Corporation for Assigned Names and Numbers (ICANN) and will then seek to assign the Registry Agreement to Verisign upon consent from ICANN.*" (<https://investor.verisign.com/releasedetail.cfm?ReleaseID=981994>)

Further, in its 10-Q for the quarter ended 30 June 2016, filed with the U.S. Securities and Exchange Commission on 28 July 2016, VeriSign states "*Subsequent to June 30, 2016, the Company incurred a commitment to pay approximately \$130.0 million for the future assignment of contractual rights, which are subject to third-party consent. The payment is expected to occur during the third quarter of 2016.*"

Paragraph 10 of the Terms and Conditions set forth in the Guidebook includes in part the following language: "Applicant may not resell, assign or transfer any of applicant's rights or obligations in connection with the application." We have not been able to review a copy of the agreement(s) between NDC and VeriSign with respect to this arrangement, but it appears likely, given the public statements of VeriSign, that DNC and VeriSign entered into an agreement in the form of an option or similar arrangement with respect to the rights and obligations of NDC regarding its .WEB application. An option to acquire a string won at auction, together with a promise to fund the auction, is exactly the type of transfer of rights and obligations in connection with an application that ICANN was attempting to stop by including this language in the Terms and Conditions. Otherwise, such language would have no real purpose. The language of paragraph 10 precludes not only a transfer of all rights or obligations in an application, but of any rights or obligations. There is no materiality threshold, and

no procedure to seek consent or waiver of these terms. It is an absolute prohibition of this type of arrangement in clear and unambiguous terms.

The purposes of a prohibition on transferring rights and obligations in an application are obvious. ICANN and the community spent years engaged in a stakeholder driven process to develop the important processes and procedures by which one could submit an application for a new gTLD. These procedures were developed to endure a level playing field for gTLD applicants and to protect the integrity of the process. The application requirements and associated filing deadlines were clear and strictly enforced from the beginning. To allow third parties to circumvent the entire Guidebook process simply by buying rights in an application once filed renders the entire Guidebook and ICANN process mere folly and negatively impacts to a material degree the rights and expectations of applicants that have played by the rules.

There is no cure provided in the Guidebook for violations of paragraph 10 of the Terms and Conditions. The only reasonable and fair solution is to disqualify the NDC application and proceed to the next highest bidder in the auction to contract for the string, at the price at which the third highest bidder exited the auction.

Further, section 1.2.7 of the Guidebook provides:

If at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round.

Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application.

Clearly, an agreement to provide at least \$135 Million to an applicant constitutes a material change in that applicant's financial condition. Further, the type of option agreement that apparently exists between NDC and VeriSign likely constitutes a change in control of the applicant. A change in control can be effected by contract as well as by changes in equity ownership. It is our understanding that NDC never notified ICANN of these changes per the terms of the Guidebook. In the interest of fairness to the other .WEB auction participants, ICANN should exercise its right under paragraph 1.2.7 and deny NDC's application.

We request that ICANN promptly undertake an investigation of the matters set forth in this letter and take appropriate action against NDC and its .WEB application for violations of the Guidebook as we have requested.

In addition to this letter, we are filing a complaint with the ICANN Ombudsman with regard to this matter. We strongly urge ICANN to stay any further action in this matter with respect to NDC, including entering into a registry agreement for .WEB with NDC, or acting on any request of NDC or VeriSign to

assign such agreement to VeriSign, until the Ombudsman has had an opportunity to investigate and report on this matter.

Re: .WEB auction

Dear Mr. Atallah:

On behalf of Afilias Domains No. 3 Limited ("Afilias"), a wholly-owned subsidiary of Afilias plc, I write with reference to our letter of 8 August 2016, in which we requested that ICANN disqualify and reject Nu Dot Co LLC's ("NDC") application for .WEB.

Specifically, NDC entered into an agreement to transfer any rights it acquired in connection with its application for .WEB to VeriSign, Inc. ("VeriSign"), which it did not disclose prior to the .WEB auction. The evidence strongly suggests that NDC acted as a front for and participated in the .WEB auction (the "Auction") for and on behalf of VeriSign. Given ICANN's failure to respond to our prior letter, we request that ICANN promptly, and by no later than 16 September, 2016, (1) disclose the steps (if any) that it has taken to disqualify NDC's bid on the basis that NDC violated the rules applicable to its application; and (2) provide an undertaking that it has not, and will not, enter into a registry agreement for .WEB with NDC until (a) the Ombudsman has completed his investigation; (b) ICANN's Board has reviewed NDC's conduct and determined whether or not to disqualify NDC's bid and reject its application; and, (c) to the extent Afilias seeks review of any decision of ICANN relating to .WEB through ICANN's accountability mechanisms, such mechanisms are completed. We nonetheless emphasize that Afilias reserves all of its rights to pursue any and all rights or remedies available to it in any forum against ICANN, NDC or VeriSign in connection with the delegation of the .WEB gTLD.

We take the opportunity of this letter to further explain the reasons why ICANN must disqualify NDC's application for .WEB and proceed to contract for .WEB with Afilias, the next highest bidder in the Auction, in compliance with its obligations under ICANN's Articles of Incorporation and Bylaws (as well as principles of international law and California law), as set forth below.

NDC violated the New gTLD Applicant Guidebook and the Auction Rules for New gTLDs

First, NDC violated Paragraph 10 of the Terms and Conditions in Module 6 of the New gTLD Applicant Guidebook (the "Guidebook"), which expressly prohibits any applicant for a gTLD to "*resell, assign or transfer any of applicant's rights or obligations in connection with the application*". As we explained in our letter of August 8, 2016, Verisign publicly disclosed that it "*provided funds*" for NDC's bid for .WEB and that NDC would "*seek to assign the Registry Agreement to VeriSign.*" Although the specific terms of the agreement between VeriSign and NDC have not been disclosed, it is clear from Verisign's own press release and its disclosure in its Form 10-Q filed with the U.S. Securities and Exchange Commission for the quarter ended June 30, 2016, that both companies entered into an arrangement well in advance of the Auction to transfer NDC's rights and obligations regarding its .WEB application to VeriSign.

Second, NDC violated Section 1.2.7 of the Guidebook, which requires applicants to "*promptly notify ICANN via submission of the appropriate forms*" "*if at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate,*" including "*changes in financial position and changes in ownership or control of the applicant*". In this regard, we find remarkable that the Form 10-Q VeriSign filed with the U.S. Securities and Exchange Commission on 28 July, 2016—the day after the Auction—contained the following statement: "*Subsequent to June 30, 2016, the Company incurred a commitment to pay approximately \$130.0 million for the future assignment of contractual rights, which are subject to third-party consent. The payment is expected to occur during the third quarter of 2016.*" When rumors surfaced that another company was behind NDC's application for .WEB, NDC sent a note to ICANN's Ombudsman on 8 July 2016, stating merely that "*neither the governance, management nor the ownership in NuDotcoco [sic] has changed.*" Clearly, by then, relevant changes concerning NDC's financial position had, at a minimum, been agreed to and should have been reported to ICANN, namely, that the VeriSign had agreed to fund NDC's bid for .WEB.

Third, NDC violated the Auction Rules for New gTLDs ("Auction Rules"). Rule 12 provides that "*participation in an Auction is limited to Bidders, which is defined by the Auction Rules as a "Qualified Applicant" or a "party designated by a Qualified Applicant to bid on its behalf*". This rule prohibits bids placed on behalf of a third-party that is not a "Qualified Applicant", defined by the Auction Rules as "*an entity that has submitted an Application for a new gTLD, has received all necessary approvals from ICANN, and which is included within a Contention Set to be resolved by an Auction.*" Accordingly, Rule 40(b) provides that "*in order to be valid*" "*a Bid must be placed by a Bidder for its Application in an Open Contention Set.*"

ICANN has the duty to deny NDC's application, disqualify its bid and proceed to contract with the next highest bidder in the Auction

ICANN's governing documents clearly dictate the appropriate response ICANN should take in connection with NDC's improper conduct:

- ICANN is required to *"...operate for the benefit of the Internet community as a whole, carrying out its activities in conformity with relevant principles of international law and applicable international conventions and local law and, to the extent appropriate and consistent with these Articles and its Bylaws, through open and transparent processes that enable competition and open entry in Internet-related markets."* [Articles of Incorporation, Art.4]
- ICANN is required to *"mak[e] decisions by applying documented policies neutrally and objectively, with integrity and fairness"* [Bylaws, Art.I § 2 (8)]
- ICANN is required to *"not apply its standards, policies, procedures, or practices inequitably or single out any particular party for disparate treatment unless justified by substantial and reasonable cause, such as the promotion of effective competition."* [Bylaws, Art. II3]
- ICANN is required to *"Act[] with a speed that is responsive to the needs of the Internet while, as part of the decision-making process, obtaining informed input from those entities most affected."* [Bylaws, Art. I§ 2 (9)]
- ICANN is directed to *"operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness"* [Bylaws, Art. III § 1].
- ICANN is required to *"promot[e] competition in the registration of domain names where practicable and beneficial in the public interest"* [Bylaws, Art. I § 2 (6)]
- ICANN is required to *"Remain[] accountable to the Internet community through mechanisms that enhance ICANN's effectiveness."* [Bylaws, Art. I. § 2 (10)]

VeriSign chose not to apply for .WEB, as it could have done. Instead, VeriSign improperly and surreptitiously funded NDC's application. NDC's and VeriSign's attempt to game the system and obtain control over .WEB for VeriSign (which already controls.COM), must be sanctioned by ICANN by disqualifying NDC's bid and rejecting its application.

In these circumstances, we submit that ICANN should disqualify NDC's bid and offer to accept the application of Afilias, which placed the second highest exit bid. Consistent with Auction Rules No. 46 and No. 47, the winning price should be deemed to be the second-highest remaining exit bid after disqualifying NDC and striking its exit bid as invalid.

This course of action is consistent not only with ICANN's Guidebook and Auction Rules, but also with the principles of due process and fairness that ICANN is obligated to observe pursuant to its governing documents. In this regard, we note that NDC's violations must not affect the rights of other applicants that participated in the Auction in full compliance with the applicable rules, and that a new auction would be improper since the bidders have already

seen the outcome of the first Auction. Thus, ICANN must protect the integrity of the gTLD auction and delegation process from being tainted by the actions of one bidder. The only way to do this is to disqualify NDC and proceed as we have outlined above.

Finally, we remind ICANN that "ICANN's Board of Directors has ultimate responsibility for the New gTLD Program" (Bylaws, Art. II, § 1; Guidebook, Section 5.1), and that "material changes in circumstances" require "additional Board review" before "formal approval" of a registry agreement for the delegation of a gTLD. We therefore request that ICANN provide us with an undertaking that it has not, and will not, enter into a registry agreement for .WEB with NDC until ICANN's Board has reviewed NDC's conduct and reached a considered decision on whether or not to disqualify NDC's bid and reject its application; the Ombudsman has completed his investigation and the Board has considered and reached a decision on his report; and, to the extent Afilias seeks review of any decision of ICANN relating to .WEB through ICANN's accountability mechanisms, Afilias has exhausted such mechanisms.

Conclusion

For the reasons set out above, ICANN's Board and officers are obligated under the Articles of Incorporation, Bylaws and the Guidebook (as well as international law and California law) to disqualify NDC's bid immediately and proceed with the contracting of a registry agreement with Afilias, the second highest bidder. We look forward to receiving a response from ICANN by no later than 16 September 2016.

Afilias reserves all of its rights at law and in equity, including, without limitation, relating to the issues raised in this letter.

Sincerely,

A handwritten signature in black ink, appearing to read "M. Scott Hemphill".

**EMERGENCY PANELIST’S DECISION ON AFILIAS’ REQUEST FOR PRODUCTION
OF DOCUMENTS IN SUPPORT OF ITS REQUEST FOR INTERIM MEASURES**

1. Procedural Background

- 1.1. Scheduling Order No. 1, dated 3 December 2018, took note of Affilias Domains No. 3 Limited’s (“Affilias”) request for documentary disclosures in support of its Request for Interim Measures (“Interim Request”). The parties had preliminarily addressed the issue of document discovery during a scheduling conference held on 30 November 2018. It appeared that there had been agreement that limited disclosures would be in order. Affilias agreed to submit a narrowly tailored list of document requests on 3 December 2018. The Internet Corporation for Assigned Names and Numbers (“ICANN”) agreed to produce, by 14 December 2018, documents responsive to a narrowly tailored list of documents if they were necessary for Affilias to present its case in this emergency proceeding. Scheduling Order No. 1 at ¶ 6.2.
- 1.2. On 3 December 2018, Affilias submitted a chart identifying eight (8) specific documents or categories of documents. On 5 December 2018, ICANN submitted Responses and Objections to Affilias’ Request. ICANN raised general objections and several specific objections to each document request. ICANN did not agree to produce any of the documents requested.
- 1.3. On 7 December 2018, Affilias filed a Reply to ICANN’s Responses and Objections. Affilias argued that the documents requested are “highly relevant” to the emergency proceeding. Affilias’ Reply to Document Request at 2.
- 1.4. In this Order, the Emergency Panelist will review ICANN’s general objections and then, its objections to each of the eight document categories identified in Affilias’ Request.

2. ICANN's General Objections

- 2.1. **Jurisdiction.** ICANN contends that ICANN's Bylaws and relevant procedures do not permit discovery during an interim measures phase of an Independent Review Process ("IRP"). ICANN argues that such discovery is "outside the jurisdiction of the Emergency Panelist." ICANN's Responses and Objections at 1. ICANN does not cite to any specific Bylaws, rules or procedures in support of its objection.
- 2.2. Afilias argues that neither the Interim Supplementary Procedures (*e.g.*, Art. 8) nor the ICDR Rules (*e.g.*, Art. 21) prohibit document exchange during an emergency proceeding. Afilias cites to an order of an Emergency Panelist in an IRP emergency proceeding to support its position that emergency panelists have authority to order discovery. Afilias' Reply at 3 (citing *Donuts, Inc. v. ICANN*, ICDR Case No. 01-14-0000-1579, Procedural Order No. 1 (5 Nov. 2014)). In *Donuts, Inc. v. ICANN*, the Emergency Panelist was appointed under the ICDR Rules. He advised the parties in Procedural Order No. 1 that "[t]he Emergency Arbitrator will also consider [during the hearing] whether any oral or written or oral discovery is needed." *Id.* This suggests that the arbitrator believed that discovery would be appropriate during the interim measures phase of an IRP.
- 2.3. Afilias also relies upon U.K. civil litigation standards and U.S. court norms in copyright litigation for the proposition that written discovery is commonly permitted during interim measures proceedings. Afilias' Reply at 3.
- 2.4. The undersigned Emergency Panelist finds no basis in the Bylaws, ICDR Rules or Interim Supplementary Procedures to limit its authority to resolve Claimant's application for interim measures, including by permitting document discovery as necessary to decide the application. Under ICDR Rules, Art. 6(3), an Emergency Panelist is required to provide "a reasonable opportunity to all parties to be heard." Further, ICDR Rules, Art. 20(4), provides that a tribunal shall have power to order the parties to produce documents "[a]t any time during the proceedings." ICDR Rules, Art. 6(3), clarifies that an emergency arbitrator is vested with the same authorities as that of an arbitral tribunal.
- 2.5. The Emergency Panelist concludes it has jurisdiction to rule on Afilias' document request and authority to order production of documents as necessary to resolve Afilias' Interim Request.
- 2.6. **Standards To Be Applied.** Afilias' Request for Production of Documents seeks documents "relevant and material" to its Interim Request. ICANN contends that discovery during an interim proceeding should only be permitted upon a "showing" that it is "required on an urgent basis to prevent serious imminent harm." ICANN's Response at 1. ICANN appears to conflate the standard for deciding whether an interim measure may be ordered with the lower threshold for deciding whether documentary discovery in support of an application for interim measures is justified.
- 2.7. Under Article 8 of the Interim Supplementary Procedures, an IRP Panel may order production of documents that are: (1) "necessary to further the Purposes of the IRP;" (2) "in the other Party's possession, custody or control;" (3) "reasonably likely to be relevant and material to the resolution of the Claims and/or defenses in the Dispute;" and (4) "are not subject to the attorney-client privilege, the work product doctrine or otherwise protected from disclosure by applicable law." Int. Supp. Proc. at Art. 8.

- 2.8. These standards for disclosure are consistent with ICDR Rules, Art. 21, which provides that an arbitral tribunal (and by the extension of Art. 6(3), the emergency arbitrator):

may... require a party to make available to another party documents in that party's possession not otherwise available to the party seeking the documents, that are reasonably believed to exist and to be relevant and material to the outcome of the case.

ICDR Rules at Art. 21(4).

- 2.9. ICANN does not dispute (a) that the documents requested by Claimant are in its possession and (b) are not otherwise available to Claimant. Therefore, after dealing with ICANN's other general objections, I will turn to whether the documents requested are "necessary," "relevant and material" to Claimant's Interim Request.
- 2.10. **Confidentiality.** ICANN objects to Afiliás' Document Requests Nos. 1, 2 and 8 on grounds that they call for production of "confidential information of non-parties." ICANN's Response at 2, 3, 6 and 8. ICANN does not explain this objection nor cite to authority showing that the requested information is "protected from disclosure by applicable law."
- 2.11. In response to this confidentiality concern, Afiliás offered to enter into a protective order under which ICANN would disclose all responsive documents, but ICANN could designate those documents that reveal confidential information of non-parties. Under Afiliás' proposal, appropriately designated documents would be disclosed only to "outside-counsel" and not to Afiliás itself. Afiliás' Reply at 5.
- 2.12. In considering Afiliás' document request and ICANN's objection to production of documents containing confidential information, the Bylaws, Interim Supplementary Procedures and ICDR Rules must be reviewed.
- 2.12.1. **Bylaws.** The ICANN Bylaws emphasize the transparency of IRP proceedings, including that "documents *filed in* connection with IRP Panel Proceedings shall be posted on the Website." Bylaws at Art. 4, Sec. 4.3(u)(emphasis added). This instruction likely does not apply to document exchanges, but even if it did, an IRP Panel is expressly authorized, "in its discretion," to "grant a party's request to keep certain information confidential, such as trade secrets, but only if such confidentiality does not materially interfere with the transparency of the IRP proceeding." *Id.*
- 2.12.2. **Interim Supplementary Procedures.** The Interim Supplementary Procedures address exchanges of information. The panel "shall be guided by considerations of accessibility, fairness and efficiency ... in its consideration of requests for exchange of information." Int. Supp. Proc. at Art. 8. Subject to determinations of necessity, relevance and materiality, a panel "may order" document production of documents that "are not subject to attorney-client privilege, the work product doctrine or otherwise protected from disclosure by applicable law (including,

without limitation, disclosures to competitors of any competition-sensitive information of any kind).” *Id.*¹

- 2.12.3. **ICDR Rules.** Both the Interim Supplementary Procedures and ICDR Rules anticipate that an exchange of commercial or technical confidential information may be requested during an Independent Review Process or an arbitral proceeding. Consistent with conventional arbitration practice, the ICDR Rules do not limit production of relevant and material documents. The ICDR Rules expressly authorize the tribunal, where appropriate, to “condition any exchange of information subject to claims of commercial or technical confidentiality on appropriate measures to protect such confidentiality.” ICDR Rules at Art. 21(5). Commonly, production of business confidential information of one of the parties may be conditioned on adoption and compliance with a protective order.
- 2.13. **Conclusion.** The Interim Supplementary Procedures do not address the availability of protective orders, nor do they preclude their use to protect competition-sensitive information. The use of such protective measures is permitted under the ICDR Rules and would best achieve the twin goals of “accessibility” and “fairness,” while ensuring that trade secrets are not disclosed to competitors.
- 2.14. For these reasons, to the extent that documents ordered to be exchanged below contain trade secrets or commercial confidential information, they are ordered to be produced subject to an appropriate protective order. The parties are requested to consult and submit a joint request for a protective order by Friday, 14 December 2018.
- 2.15. **ICANN’s General Objection As To Burden and Costs.** ICANN summarily alleges that Afilias’ document requests are “unduly burdensome” and would “increase the cost” of the interim proceedings. ICANN’s Response at 1. ICANN does not explain why the production of Afilias’ restated and narrowed document requests would be unduly burdensome, nor does it object to any particular document request as being unreasonable or overly broad.
- 2.16. ICANN appears to claim that all of Afilias’ requests are unduly burdensome because “ICANN has not *yet* disputed any of Afilias’ factual assertions.” *Id.*(emphasis added). But this statement does not bind ICANN, nor does it serve as a stipulation as to the correctness of facts asserted by Afilias. Without such admissions or stipulations on the record, Afilias would have every reason to try to establish support for its factual assertions.
- 2.17. Given the Emergency Panelist’s mandate to provide each party a fair opportunity to present its case, considerations of “accessibility” and “fairness” outweigh any “increased” costs that may result from the limited document exchange ordered herein.
- 2.18. **ICANN’s Objection As To Inequitable, One-Way Discovery.** ICANN objects to Afilias’ document requests because Afilias purportedly “seeks to obtain one-way discovery from ICANN without permitting ICANN to obtain any discovery from Afilias.” ICANN’s Response at 1. ICANN claims this is inequitable and violates Article

¹ ICANN did not argue that “applicable law” prevents the production of documents subject to an appropriate protective order.

20(1) of the ICDR Rules requiring “that the parties are treated with equality.” ICANN’s Response at 1.

- 2.19. ICANN’s objection is hard to reconcile with the procedural record. ICANN has not requested any discovery, nor did it request the right to file document requests during the scheduling conference. It would be unfair to reject Afilias’ request solely because ICANN did not similarly invoke its right to request the production of documents during this emergency proceeding.
- 2.20. Moreover, this case presents an unusual circumstance where Afilias’ contentions relate in part to ICANN’s conduct in respect to third parties. It is undisputed that ICANN has possession of documents concerning these transactions that are not in Afilias’ possession, custody or control.

3. **Determinations as to Claimant’s Document Requests**

- 3.1. **Document Requests No. 1, 2 and 8.** Afilias’ Reply reorders its document requests. In basket 1, Afilias includes its prior Document Requests Nos. 1, 2 and 8. Afilias argues that these three requests are “vital to understanding the precise nature of NDC’s violations of the New gTLD Program Rules,” and in particular, “whether ICANN’s refusal to disqualify NDC’s bids ... is a violation of ICANN’s Bylaws.” Afilias’ Reply at 4. In Afilias’ view, the documents sought are “relevant and material” to meeting its burden of demonstrating that there is a “sufficiently serious question related to the merits.” *See* Int. Supp. Proc. at Art. 10(ii)(B).
- 3.2. ICANN’s objections to each of Requests Nos. 1, 2 and 8 are identical. They essentially repeat ICANN’s general objections which are reviewed and dismissed above.
- 3.3. In addition, ICANN contends that “Afilias fails to specifically identify how the requested documents are relevant to resolution of Afilias’ Emergency Request.” This objection is unsupported. Afilias alleges that its requests seek production of relevant and material information that will help establish its theories of recovery. Without substantiation, Afilias’ claims might be viewed as mere speculation and thus, not raising sufficiently serious questions related to the merits.
- 3.4. ICANN does not contend that these specific requests are overbroad, unreasonable or would impose an undue burden to produce. Accordingly, these requests are granted and must be complied with, subject to an appropriate protective order.
- 3.5. **Document Requests Nos. 3, 4 and 5.** These requests seek documents relating to negotiation of any registry agreement and pre-delegation testing. Afilias argues that these three requests are necessary for it to carry its burden of establishing “urgency” of the requested stay. ICANN disagrees because it has made a written undertaking that effectively stays any further actions by ICANN with respect to delegation of .WEB gTLD.
- 3.6. While “urgency” is not expressly stated in the Interim Supplementary Procedures as a prerequisite for interim relief, the ICDR Rules clarify that an emergency arbitrator has power to order conservancy measures deemed “necessary.” ICDR Rules at Art. 6(4). Urgency is just one of the factors that could establish the necessity of requested interim relief. Urgency could also be evaluated in the balance of hardships contemplated by

Interim Supplementary Procedures at Article 10(iii). Documents establishing urgency, therefore, are likely to be relevant and material to consideration of Afilias' Interim Request.

- 3.7. ICANN's unilateral decision to keep the delegation of .WEB "on hold" pending completion of this emergency proceeding does not eliminate Afilias' burden of establishing harm, necessity and balance of hardships. ICANN's voluntary "stay" shifts the relevant inquiry to whether the status quo existing as of the date of Afilias' Interim Request should be maintained. Afilias argues that ICANN has not been forthcoming as to the status of its activities to delegate the .WEB contention set. Afilias contends that it needs to know what was the "status quo" before the delegation of .WEB was unilaterally placed on hold. Otherwise, it would be foreclosed from addressing the urgency of maintaining the status quo and the harm that it could experience if the voluntary stay were lifted.
- 3.8. The Emergency Panelist is persuaded by Afilias' argument. On the one hand, assuming arguendo that the registry agreement and pre-delegation testing had advanced to the point that final delegation of .WEB were only days away from a decision on the Interim Request, establishment of the urgency of a stay (if other factors were satisfied) would be more likely. But, on the other hand, if delegation activities would take years to complete, then this lack of urgency might weigh in the balance of whether interim measures are necessary and whether the hardships would tip decidedly toward the party seeking relief.
- 3.9. ICANN does not contend that these specific Requests are overbroad or unreasonable or would create an undue burden to produce.
- 3.10. Accordingly, Document Requests Nos. 3, 4 and 5 are granted and must be complied with, subject to an appropriate protective order.
- 3.11. **Document Request No. 6.** In this Request, Afilias seeks production of correspondence between ICANN and VeriSign and/or NDC concerning the Cooperative Engagement Process ("CEP") that was held between Afilias and ICANN. Afilias argues that these documents are relevant to assessing whether ICANN was pressured and would be harmed if its Interim Request were granted.
- 3.12. ICANN responds with the general objections already reviewed. ICANN does not contend that this request is unreasonable or overly broad or explain why it would be create an undue burden to produce documents in response to this request.
- 3.13. Without clarification or detail, ICANN argues generally that Afilias failed to establish the "relevance" of these documents to its Interim Request. In its general objections, ICANN also argues that Afilias' claims to relevance are "unsupported because ICANN has not *yet* disputed any of Afilias' factual assertions." ICANN's Response at 1 (emphasis added). But the prospect that ICANN might challenge Afilias' factual allegations in this interim proceeding – including whether ICANN might suffer hardship if a stay were ordered – is precisely Afilias' rationale for seeking production of documents that are likely relevant to its Interim Request and might be material to the determination of whether interim measures are necessary and the balance of hardships tips decidedly toward the party seeking relief.

- 3.14. For these reasons, Document Request No. 6 is granted and must be complied with, subject to an appropriate protective order.
- 3.15. **Document Request No. 7.** Afilias seeks production of documents by which ICANN placed the .WEB contention set on hold previously. Afilias argues that these documents are “directly relevant” to its request for an award of costs for this emergency proceeding. Afilias’ Reply at 5.
- 3.16. ICANN challenges the relevance of these requested documents, but again, does not argue that the request is unreasonable, overly broad or would create a specific undue burden if the requested documents were ordered to be produced. ICANN’s Response at 7.
- 3.17. Without making any factual finding in this Decision, it would appear for purposes of this preliminary determination that ICANN’s prior decisions to put “on” and “off” “hold” the .WEB contention set might be relevant and material to Afilias’ request for costs. Accordingly, Document Request No. 7 is granted and must be complied with.

4. Conclusion

- 4.1. For the reasons stated above, the Parties are requested to confer and propose a mutually acceptable protective order. The deadline for submission of a joint proposal for a protective order is 14 December 2018.
- 4.2. ICANN is further ordered to produce documents in accordance with this Decision. In order to provide further time for this production to occur, ICANN’s deadline for producing the documents will be extended to 17 December 2018. The Procedural Timetable set forth in Scheduling Order No. 1 will be modified accordingly. All other deadlines set forth in Scheduling Order No. 1 are continuing.

It is so Ordered.

Dated: 12 December 2018

INTRODUCTION

The Internet Corporation for Assigned Names and Numbers (“ICANN”) hereby submits its Rejoinder to the Reply Memorial in Support of Amended Request by Afilias Domains No. 3 Limited (“Afilias”) for Independent Review (“Reply”) submitted by Afilias on 4 May 2020.

1. What makes this Independent Review Process (“IRP”) different from all the others is that ICANN has not fully addressed the ultimate, underlying dispute that Afilias raises in this IRP – namely, whether Nu Dot Co (“NDC”), by virtue of the Domain Acquisition Agreement (“DAA”) between NDC and Verisign Inc. (“Verisign”), violated the New gTLD Program (“Program”) Applicant Guidebook (“Guidebook”) or the Auction Rules and, if so, whether NDC’s application should be disqualified or its winning bid for .WEB rejected. This is because .WEB has been mired in legal proceedings from before the .WEB auction was even held, including repeated invocations of ICANN’s Accountability Mechanisms and a year-long United States Department of Justice (“DOJ”) investigation.

2. Since the inception of the Program, ICANN has followed a practice of placing applications and contention sets “on hold” when related Accountability Mechanisms are initiated. Once on hold, ICANN generally refrains from taking any action with respect to the application or contention set that could interfere with, or otherwise preempt, a pending Accountability Mechanism. ICANN follows this practice, in part, because ICANN considers its Accountability Mechanisms to be fundamental safeguards in ensuring its bottom-up, multistakeholder model remains effective and that ICANN remains accountable to its community.

3. The ICANN Board followed its processes and its obligations under the Articles of Incorporation (“Articles”) and Bylaws by specifically choosing in November 2016 not to address the issues surrounding .WEB while an Accountability Mechanism regarding .WEB was pending

(which might also be the subject of other soon-to-be filed Accountability Mechanisms). That decision made perfect sense given the expectation that the results of those proceedings could have an impact on whether ICANN might need to make any decision. And because that Board's decision arises "out of the Board's exercise of its fiduciary duties," and the decision was "within the realm of reasonable business judgment," ICANN's Bylaws state that this decision must be viewed by the Panel with deference.¹

4. Other than certain claims raised for the first time in Afilias' Reply, the Reply is mostly a reread of Afilias' Amended Request for IRP, which itself repackages the misplaced arguments Afilias has been making since 2016. In its Reply, Afilias continues to argue that ICANN's Articles and Bylaws required ICANN to automatically disqualify NDC in 2016 after ICANN received a copy of the DAA. But Afilias overlooks the fact that the violations of the Guidebook and Auction Rules that it alleges do not require the automatic disqualification of NDC's application or rejection of its winning bid for .WEB. Instead, the Guidebook and Auction Rules, together with ICANN's Bylaws, provide ICANN with substantial discretion to determine whether NDC committed a breach of the Guidebook or Auction Rules and, if so, the appropriate remedy or penalty, if any. Afilias' argument also overlooks the fact that, even prior to the Board's determination in 2016 not to make any decision regarding .WEB while an Accountability Mechanism was pending, ICANN would not have disqualified NDC's application upon its receipt of the DAA in August 2016 because the .WEB contention set was on hold at that time due to a pending Accountability Mechanism filed by the parent of another .WEB applicant. Consistent with its well-known practices, ICANN did not take action on .WEB while that Accountability Mechanism was pending.

¹ Bylaws, Art. 4, § 4.3(i)(iii), Claimant's Ex. C-23 ("C-23").

5. Likewise, Afilias continues to argue that ICANN was required to do a regulatory-like review of Verisign's possible operation of .WEB and block it on the ground that, in Afilias' view, this would diminish competition. Put another way, Afilias claims that ICANN should have rejected NDC's winning bid for .WEB in 2016 and declared Afilias the winner because, in Afilias' opinion, the operation of .WEB by Afilias rather than Verisign is more likely to enhance competition. Not only has this presumption never been established – nor could it with any economic certainty – but there is literally nothing in the Guidebook's detailed procedures for selecting qualified generic top-level domain (“gTLD”) applicants that requires ICANN to perform this type of competition analysis. Indeed, ICANN's Bylaws specifically prohibit ICANN from exercising regulatory authority or acting like a regulator. Likewise, ICANN's Core Value regarding competition does not require it to award gTLDs based on a determination of which applicant will most effectively promote competition, as two current ICANN Board members attest in their witness statements.

6. Rather, ICANN complies with its Core Value regarding competition by coordinating and implementing policies that facilitate market-driven competition – which is precisely what ICANN did by introducing over 1,200 new gTLDs into the market under the Program. ICANN also complies with its Core Value regarding competition by deferring to competition regulators' evaluation of potential competition concerns associated with the Internet's domain name system (“DNS”) – which is precisely what ICANN did when it cooperated with, and deferred to, the DOJ's investigation of competition issues associated with Verisign's possible operation of .WEB. The DOJ's decision not to take action to block Verisign's potential operation of .WEB is dispositive, in the same way it would have been had the DOJ determined to take regulatory action to prevent that from happening. Before this IRP, Afilias recognized ICANN's proper role with respect to competition issues by noting that

“[n]either ICANN nor [ICANN’s Generic Names Supporting Organization] have the authority or expertise to act as anti-trust regulators.”² Nothing has changed since Afilias first endorsed this view, other than Afilias assembling arguments for this IRP, of course.

7. In addition, two of the world’s most prominent economists, Dr. Dennis Carlton and Dr. Kevin Murphy, have each submitted expert reports in this IRP – Dr. Carlton on behalf of ICANN and Dr. Murphy on behalf of Verisign – concluding that there is no economic evidence that Verisign’s operation of .WEB (rather than Afilias’) would result in anticompetitive effects. Moreover, ICANN’s Bylaws preclude it from singling out any particular party, including Verisign, for disparate treatment except where justified by substantial and reasonable cause. Afilias has made no showing that Verisign’s operation of .WEB would inhibit competition, much less a substantial showing.

8. Afilias’ contention that ICANN violated its Articles, Bylaws and internal procedures due to the manner in which ICANN investigated Afilias’ allegations against NDC and Verisign is similarly meritless. Afilias’ Amended Request for IRP made no such claim, and Afilias cannot properly assert this new claim in its Reply. Further, the record clearly shows that, after receiving complaints from certain .WEB applicants, including Afilias’ letter dated 8 August 2016, ICANN promptly gathered the information relevant to the issues raised by the applicants. Indeed, Afilias asserts that, by the end of August 2016, ICANN had acquired all of the facts and information necessary to address Afilias’ allegations, which is an admission that is fundamentally inconsistent with Afilias’ argument that ICANN’s investigation was inadequate.

9. In addition, many of Afilias’ claims are time-barred. Specifically, Afilias’ assertions that the ICANN Board and ICANN staff violated the Articles and Bylaws in 2016 are

² 2006 Registry Operators Submission, at 8, R-21.

barred by Rule 4 of the Interim Supplementary Procedures, which states that a dispute may not be filed more than twelve months from the date of the action or inaction sought to be challenged. Afiliás' reliance on the doctrine of equitable estoppel in an attempt to evade that clear bar is without merit.

10. Afiliás is also seeking relief that is not available in these proceedings. While this Panel is certainly empowered to declare whether ICANN complied with its Articles and Bylaws – with the appropriate deference to the Board's reasonable business judgment – the Panel is not empowered to provide the affirmative relief Afiliás seeks. Nothing in ICANN's Articles, Bylaws or the relevant IRP procedures permits the Panel to require ICANN to “disqualify NDC's application and bid and [] offer Afiliás the rights to .WEB.”³ Afiliás' claims to the contrary are an irresponsible attempt to push the Panel beyond the marked boundaries of its authority. As Afiliás well knows, a decision in excess of the Panel's authority would be invalid.

11. Finally, with respect to Afiliás' claim regarding Rule 7 of the Interim Supplementary Procedures, Afiliás relies on its prior submissions.⁴ ICANN does the same.⁵ There is simply no support for the claim that ICANN was either duped by, or conspired with, Verisign to create IRP procedures benefitting Verisign.

I. BACKGROUND.

12. ICANN provided a summary of relevant facts at pages 4 through 16 of its Response to Afiliás' Amended Request for IRP (“IRP Response”), dated 31 May 2019. This section provides additional facts that are relevant to the arguments made by Afiliás in its Reply.⁶

³ Afiliás' Reply Memorial ¶ 155.

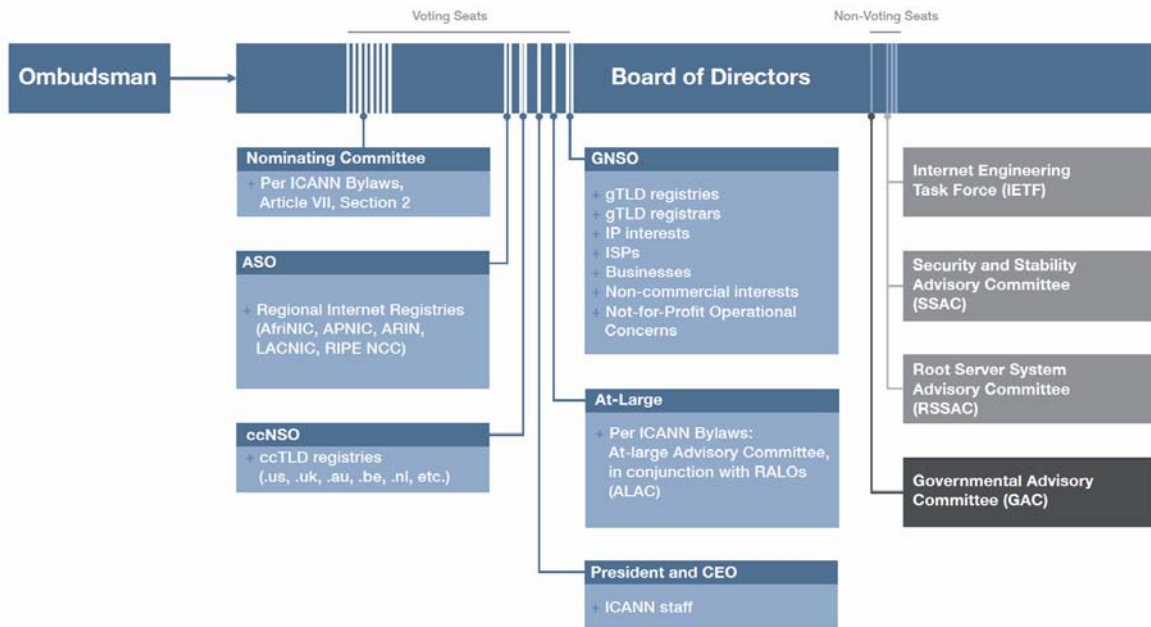

⁴ *Id.*, ¶ 11.

⁵ See ICANN's Response to Amended Request for IRP ¶¶ 77-82.

⁶ Pursuant to Paragraph 201 of the Panel's Decision on Phase I dated 12 February 2020, ICANN submits herewith the witness statements of *Amici* NDC and Verisign in order to help ensure that the factual record in this IRP is complete. ICANN does so without endorsing those statements or agreeing with them in full.

A. ICANN And Its Board.

13. ICANN is a complex organization with the critical Mission of ensuring “the stable and secure operation of the Internet’s unique identifier systems[.]”⁷ ICANN accomplishes its Mission through a multistakeholder model in which individuals, non-commercial stakeholder groups, industry, and governments play important roles in its community-based, consensus-driven, policy-making approach. In fact, ICANN in many ways operates more as a community of participants than a traditional corporation, as shown by the following organization chart:

14. In addition to its international Board of Directors and nearly 400 staff members, the ICANN community includes three Supporting Organizations that develop and recommend policies, within their distinct areas of expertise, concerning the Internet’s technical management. They are the Address Supporting Organization,⁸ the Country Code Names Supporting

⁷ Bylaws, Art. 1, § 1.1(a), C-23.

⁸ *Id.*, Art. 9.

Organization⁹ and the Generic Names Supporting Organization (“GNSO”).¹⁰

15. The community also includes four Advisory Committees that serve as formal advisory bodies to the ICANN Board. They are made up of representatives from the Internet community to advise on particular issues or policy areas and include the Governmental Advisory Committee,¹¹ the Security and Stability Advisory Committee,¹² the Root Server System Advisory Committee¹³ and the At-Large Advisory Committee.¹⁴

16. In addition, there is an ICANN Nominating Committee (“NomCom”). The NomCom is a committee made up of ICANN community members tasked with selecting, among other positions, some of ICANN’s Board members, as well as leaders of certain Supporting Organizations and Advisory Committees.¹⁵

17. The Ombudsman is another important part of the ICANN community.¹⁶ “The principal function of the Ombudsman shall be to provide an independent internal evaluation of complaints by members of the ICANN community who believe that the ICANN staff, Board or an ICANN constituent body has treated them unfairly.”¹⁷

18. The final component of the ICANN community is the large, globally diverse group of Internet stakeholders – national governments, international organizations, the business sector, civil society, the technical community, and individual Internet users. These entities and individuals participate in ICANN processes by, among other things, attending ICANN’s public meetings, responding to calls for public comment, and initiating ICANN’s Accountability

Mechanisms.

19. While the international community broadly participates in ICANN’s policy making process, ICANN’s Board of Directors has the sole responsibility and discretion for overseeing and enacting ICANN policies consistent with ICANN’s Mission, Articles and Bylaws.¹⁸ The Board is composed of sixteen voting Directors and four non-voting Liaisons.¹⁹ The ICANN Board is internationally represented, as required by ICANN’s Bylaws, which specify that at least one Director represent each of ICANN’s designated five geographic regions, and no region have more than five Directors on the Board.²⁰ Over time, the ICANN Board has included, among others, engineers, business executives, researchers, NGO leaders, consultants, directors of non-profit organizations, regulatory experts, technology experts, academics, and attorneys.²¹ The Board thus has a wide array of expertise that allows it to consider, assess and balance the diverse interests and perspectives of the global Internet community on the many issues that come before it.

20. ICANN’s Board members have a unique understanding of ICANN’s Mission “and the potential impact of ICANN decisions on the global Internet community.”²² They also have “personal familiarity” with the operation of gTLD registries and registrars, with Internet technical standards and protocols, with policy-development procedures, and with the broad range of business, individual, academic, and non-commercial users of the Internet.²³ And, significantly, Board members “have the duty to act in what they reasonably believe are the best interests of ICANN”²⁴ through its “bottom-up, consensus-driven, multistakeholder model.”

¹⁸ Bylaws, Art. 2, § 2.1, C-23.

¹⁹ *Id.*, Art. 7, § 7.1.

²⁰ *Id.*, Art. 7, § 7.2(b), (c), § 7.5.

²² Bylaws, Art. 7, § 7.3(b), C-23.

²³ *Id.*, Art. 7, § 7.3(d).

²⁴ *Id.*, Art. 7, § 7.7.

ICANN defines its unique model as follows:

- ***Bottom-up.*** Rather than the ICANN Board solely declaring what topics ICANN will address, members of sub-groups in ICANN can raise issues at the grassroots level. If the issue is worth addressing and falls within ICANN’s remit, it rises through various Advisory Committees and Supporting Organizations until eventually policy recommendations are passed to the Board for resolution.²⁵
- ***Consensus-driven.*** Through its Bylaws, processes, and international meetings, ICANN provides the arena where all advocates and interested parties can discuss Internet policy issues. Almost anyone can join most of ICANN’s volunteer working groups, assuring broad representation with a diverse array of perspectives. Hearing all points of view, searching for mutual interests, and working toward consensus takes time, but the process resists capture by any single interest – an important consideration when administering a resource vital to the global Internet.²⁶
- ***Multistakeholder model.*** ICANN’s inclusive approach treats the public sector, the private sector, and technical experts as peers.²⁷ The ICANN community includes registry operators, registrars, Internet service providers, intellectual property advocates, commercial and business interests, non-commercial and non-profit interests, representation from almost 180 governments,²⁸ and individual Internet users from around the world. All points of view receive consideration on their own merits. ICANN’s fundamental philosophy is that all users of the Internet deserve a say in how it is run.²⁹

B. The New gTLD Program.

21. Nowhere was the ICANN Board's unique expertise and decision-making process more on display than in the creation of the Program. In 2005, ICANN's GNSO began a policy development process to consider the introduction of new gTLDs, based on the results of trial rounds conducted in 2000 and 2003. The GNSO's two-year long policy development process included detailed and lengthy consultations with the many constituencies of ICANN's global Internet community, including governments, civil society, business and intellectual property holders, and resulted in 19 specific policy recommendations for the Program.³⁰ In June 2008, the ICANN Board adopted the GNSO's policy recommendations for introducing more gTLDs and directed ICANN staff to develop an implementation plan for the Program, with significant input from community members, to be provided to the Board for evaluation and approval.³¹

22. Accordingly, after approval of the GNSO policy recommendations, ICANN undertook an open, inclusive, and transparent implementation process to address a variety of stakeholder issues, including things such as the protection of intellectual property and community interests, consumer protection, and DNS stability. This work involved numerous public consultations, review, and input to and public comment on draft versions of the Guidebook, with the first draft being published in October 2008.³² This process continued and resulted in multiple versions of the Guidebook, until the ICANN Board adopted the operative, 338-page Guidebook four years later, in June 2012.³³

23. The Guidebook provides a step-by-step procedure for new gTLD applicants.

³⁰ GNSO Final Report on Introduction of New Generic Top-Level Domains (8 August 2007), C-20.

³¹ ICANN Adopted Board Resolutions (26 June 2008), C-21.

³² Guidebook (24 October 2008), *available at* <https://archive.icann.org/en/topics/new-gtlds/draft-rfp-24oct08-en.pdf>.

³³ Guidebook, Preamble, C-3; Witness Statement of Christine Willett (31 May 2019) (“Willett Stmt.”) ¶ 4.

Applicants that pass initial evaluations and successfully resolve any objections and/or contention set proceedings are presumed to proceed to contracting with ICANN, assuming no Accountability Mechanisms regarding the gTLD are pending.³⁴ The Guidebook, however, explicitly vests ICANN with significant discretion over the Program. For instance, because the Board has the “ultimate responsibility” for the Program, the Guidebook reserves to the Board “the right to individually consider an application for a new gTLD to determine whether approval would be in the best interest of the Internet community.”³⁵ Likewise, the Guidebook states that ICANN’s “decision to review, consider and approve an application to establish one or more gTLDs and to delegate new gTLDs after such approval is entirely at ICANN’s discretion.”³⁶ The Guidebook also makes clear that material misrepresentations by applicants “may cause” ICANN to disqualify an application.³⁷ And other materials related to the Guidebook, such as the Auction Rules and New gTLD Auction Bidders Agreement (“Bidders Agreement”), state that ICANN’s interpretation of the rules “shall be final and binding”³⁸ and that ICANN has the discretion to select an appropriate remedy, if any, for violation of the rules.³⁹

24. In 2012, ICANN received 1,930 new gTLD applications.⁴⁰ To date, approximately 1,235 new gTLDs have been introduced into the Internet.⁴¹ While many applications sailed through the process with little or no dispute, hundreds of applications were the subject of objection proceedings and over 200 contention sets were created, in which multiple, qualified applicants sought the same or similar gTLDs.⁴² In addition, more than 20

⁴² *Id.*

new gTLDs have been the subject of an IRP and some have been the subject of litigation in federal and state courts.⁴³

25. Not surprisingly, with so many disputes among applicants, ICANN has been bombarded with fierce lobbying from applicants and others throughout the life of the Program.⁴⁴ These efforts – many times requesting that an application be approved or denied, or claiming that certain applications are deficient – have included public comments, informal letters and emails sent to the ICANN Board and Staff, and ICANN Board members and Staff being cornered by interested parties at ICANN meetings.⁴⁵ Given the number and frequent stridency of these types of requests – as well as the Guidebook provisions that call for disputes and complaints to be resolved through ICANN’s Accountability Mechanisms – requests for ICANN to take action or not take action in response to a complaint regarding a particular application must be made through ICANN’s Accountability Mechanisms, rather than through private lobbying or letter-writing campaigns.⁴⁶

26. In addition, from the outset of the Program, ICANN has followed a practice of placing applications and contention sets on hold when Accountability Mechanisms regarding them have been filed, although with respect to IRPs, claimants typically are required to submit a request for interim measures in order for the hold to be instituted.⁴⁷ Once on hold, ICANN generally refrains from taking any material action with respect to the application or contention

⁴³ Independent Review Process Documents, R-27.

set while the Accountability Mechanism is pending.⁴⁸ ICANN does this, in part, because ICANN considers its Accountability Mechanisms – which include Reconsideration Requests, Ombudsman complaints, the Cooperative Engagement Process (“CEP”) (a pre-IRP proceeding that allows the parties to attempt to resolve or narrow the issues to be brought in an IRP), and the IRP – to be fundamental safeguards in ensuring its bottom-up, multistakeholder model remains effective.⁴⁹

C. Disputes Over .WEB And ICANN’s Responses.

27. As detailed in ICANN’s IRP Response, and discussed further herein, .WEB was one of the new gTLDs that has been engulfed in fierce battles amongst its applicants, resulting in litigation, Accountability Mechanisms, and even a DOJ investigation,⁵⁰ and ICANN has complied with its Articles and Bylaws in dealing with these disputes.⁵¹

28. There have been sustained disputes over .WEB – both before and after the .WEB auction – which have caused the .WEB applications to be “on hold” for long periods of time. In 2013, one of the .WEB applicants filed a “string confusion” objection against a .WEBS application arguing that .WEB and .WEBS were confusingly similar (and thus should be placed into the same contention set). This caused ICANN to place the .WEB applications on hold for the first time. The objection was ultimately upheld by an independent ICDR panelist, resulting in the .WEBS and .WEB applications being placed in the same contention set, which thereby became the “.WEB Contention Set.”⁵²

29. Shortly thereafter, in June 2014, a .WEBS applicant filed an IRP against ICANN

⁴⁸ Disspain Stmt. ¶ 11.

⁴⁹ *Id.* With respect to certain IRPs, however, claimants have been required to submit a request for interim measures in order for the hold to be instituted formally.

⁵⁰ ICANN’s Response to Amended Request for IRP ¶¶ 34-54.

⁵¹ *Id.* ¶¶ 56-72.

⁵² *Id.* ¶ 31.

challenging ICANN’s acceptance of the ICDR’s determination on the string confusion objection. This led to the .WEB Contention Set being placed back on hold. In October 2015, ICANN prevailed in that IRP, and the ICANN Board resolved that ICANN staff should “move forward with the processing of the [.WEB Contention Set].”⁵³

30. ICANN staff followed the Board’s directive by removing the hold on the .WEB Contention Set and scheduling the .WEB auction for 27 July 2016.⁵⁴ Pursuant to the Guidebook, an ICANN auction is a “mechanism of last resort” that takes place only if all members of the contention set do not agree to a private resolution, such as through a private auction in which the losing applicants would often split the proceeds from the auction.⁵⁵ As far as ICANN is aware, the members of the .WEB Contention Set discussed a possible private resolution, but NDC ultimately would not agree to private resolution,⁵⁶ meaning an ICANN auction was required by the Guidebook.⁵⁷ It now appears that during the “Blackout Period,” which is a seven-day period during which applicants are forbidden from communicating with one another immediately prior to an ICANN auction,⁵⁸ Afiliat again contacted NDC to pressure NDC into agreeing to a private resolution of the .WEB Contention Set.⁵⁹ But NDC did not respond and continued to insist on an ICANN auction.

31. Then, as detailed in ICANN’s IRP Response, shortly before the auction was set to commence, another .WEB applicant, Ruby Glen, LLC (“Ruby Glen”), took a number of actions in an attempt to halt the auction, including litigation in federal court in which it sought a

temporary restraining order to block the auction.⁶⁰ Ruby Glen’s claims were rejected by the court, and the auction went forward.

32. NDC prevailed at the auction, which was held on 27-28 July 2016.⁶¹ On 1 August 2016, Verisign announced that it had “entered into an agreement with [NDC] wherein [Verisign] provided funds for [NDC’s] bid” and that, if NDC entered into a Registry Agreement with ICANN to operate .WEB, NDC “will then seek to assign[] the Registry Agreement to VeriSign upon consent from ICANN.”⁶² Despite Afilias’ insinuations to the contrary, this was the first time that ICANN learned that Verisign had an agreement with NDC regarding .WEB.⁶³

33. A day later, on 2 August 2016, Ruby Glen’s parent organization, Donuts, Inc. (“Donuts”), invoked ICANN’s CEP regarding the .WEB auction and Verisign’s announcement.⁶⁴ Donuts’ invocation of the CEP caused ICANN staff to again place the .WEB Contention Set on hold.

34. On 8 August 2016, Afilias’ General Counsel wrote ICANN a letter demanding that ICANN “deny NDC’s application” based on three specific claims.⁶⁵ First, Afilias stated that the NDC/Verisign agreement constituted a transfer of NDC’s rights and obligations in connection with its application in violation of the Guidebook. Second, Afilias stated that NDC violated various disclosure requirements of the Guidebook by failing to inform ICANN of the

⁶⁰ Ruby Glen complained to ICANN that NDC had a change in ownership or control, and that NDC had failed to notify ICANN of this change, as required by the Guidebook. Ruby Glen made the same complaints to the ICANN Ombudsman. Both ICANN and the Ombudsman investigated and concluded that there had been no change in ownership or control that had to be reported to ICANN. Nonetheless, shortly before the auction, Ruby Glen filed a Reconsideration Request seeking to halt the auction. It also filed a complaint in federal court and an application for a temporary restraining order (TRO). The federal court denied the TRO, its decision was upheld on appeal, and the action was subsequently dismissed. ICANN’s Response to Amended Request for IRP ¶¶ 35-39.

agreement. Third, Afilias contended that the agreement “likely constitutes a change of control of the applicant.”⁶⁶ Nevertheless, Afilias did not initiate a Reconsideration Request, a CEP or an IRP at that time. Rather, Afilias waited more than two years to assert these same alleged Guidebook violations in this IRP, initiated in November 2018. And it was not because Afilias was unaware of the Accountability Mechanisms available. To the contrary, Afilias’ August 2016 letter stated that it planned on “filing a complaint with the ICANN Ombudsman with regard to this matter,”⁶⁷ demonstrating that Afilias was certainly aware of the redress it could seek through ICANN’s Accountability Mechanisms.⁶⁸ Indeed, Afilias’ parent organization, Afilias Limited, filed a Reconsideration Request in 2014⁶⁹ and initiated CEP and IRP proceedings in 2015 regarding one of its affiliates’ application for .RADIO.⁷⁰

35. After the filing of Donuts’ CEP and ICANN’s receipt of Afilias’ August 2016 letter, ICANN, through its counsel, contacted Verisign to request a copy of the DAA and other information relevant to the issues surrounding .WEB.⁷¹ In response, Verisign sent ICANN a letter on 23 August 2016 responding to the allegations and asserting that Afilias should be disqualified from the .WEB Contention Set for violating the auction Blackout Period.⁷² As attachments to its letter, Verisign provided a copy of the DAA, a related 26 July 2016 letter agreement between Verisign and NDC, documents supporting its contention that Afilias violated the auction Blackout Period, and documents relating to a private .WEB auction proposed by one

⁶⁶ *Id.*

⁶⁷ *Id.*

⁶⁸ ICANN is uncertain of when Afilias initiated this Ombudsman complaint, but, on 19 September 2016, the Ombudsman informed Afilias that he declined to initiate an investigation because ICANN Accountability Mechanisms over the same topics had already been filed. C-101.

of the .WEB applicants.⁷³

36. Still refusing to initiate its own CEP or IRP, Afilias sent ICANN another letter, dated 9 September 2016, again stating that “ICANN must disqualify NDC’s application for .WEB and proceed to contract for .WEB with Afilias” for the same reasons it raised in Afilias’ August 2016 letter.⁷⁴ In the September 2016 letter, on which Afilias’ outside counsel was copied, Afilias also “reserve[d] all of its rights to pursue any and all rights or remedies available to it in any forum against ICANN, NDC or VeriSign in connection with the delegation of the .WEB gTLD.”⁷⁵

37. On 16 September 2016, ICANN issued a set of questions to Afilias, Ruby Glen, NDC, and Verisign, seeking input regarding the .WEB auction, the NDC/Verisign agreement, and the alleged violations of the Guidebook.⁷⁶ This questionnaire was designed to assist ICANN in evaluating what action, if any, should be taken in response to the claims asserted regarding .WEB.

38. On 30 September 2016, ICANN’s President of the Global Domains Division, Akram Atallah, responded to Afilias’ letters. Mr. Atallah explained that the .WEB Contention Set was placed on hold “to reflect a pending ICANN Accountability Mechanism initiated by another member in the contention set.”⁷⁷ Mr. Atallah thereby informed Afilias that its letters – the first of which had preceded Donuts’ CEP – did *not* have the effect of causing the .WEB Contention Set to be placed on hold. Mr. Atallah also informed Afilias that it would be notified if changes were made to the status of the .WEB Contention Set.⁷⁸

⁷⁶ Letter from C. Willett (Vice President, ICANN’s gTLD Operations) to J. Kane (Vice President, Afilias’ Corporate Services) (16 September 2016), C-50.

⁷⁷ Letter from A. Atallah to S. Hemphill (30 September 2016), C-61.

⁷⁸ *Id.*

39. Afilias responded to ICANN’s questionnaire on 7 October 2016, reiterating its core objections to the purported NDC/Verisign agreement and describing it as a “failure to disclose material information relating to [NDC’s] bid for the .WEB rights” and as “clearly designed to preserve Verisign’s existing monopoly in gTLD services that results from its control of .COM and .NET.”⁷⁹ These are, again, the same claims Afilias is now belatedly pressing in this IRP. Importantly, Afilias’ response to the questionnaire also noted Mr. Atallah’s statement in his letter to Afilias that .WEB was placed on hold because of Donuts’ CEP.⁸⁰ Afilias thus recognized that its letters did not have the effect of causing a hold on the .WEB Contention Set.

40. In a November 2016 Board workshop session, ICANN Board members and ICANN’s in-house counsel discussed the issue of .WEB. Prior to this discussion, non-conflicted Board members received Board briefing materials directly from ICANN’s counsel that set forth relevant information about complaints received and formal disputes regarding .WEB, the legal and factual contentions asserted by those complaining, and a set of options the Board could consider. This session was attended by, among others, ICANN’s General Counsel (John Jeffrey) and Deputy General Counsel (Amy Stathos), who provided additional advice and answered questions posed by the Board.⁸¹

41. At this Board session, the Board chose to not take any action at that time regarding .WEB because an Accountability Mechanism was pending regarding .WEB.⁸² Given Donuts’ pending CEP (along with knowledge of the pending Ruby Glen lawsuit), the Board chose to see if the results of such proceedings might require the Board to take any action related

⁷⁹ Letter from J. Kane (Vice President, Afilias’ Corporate Services) to C. Willett (Vice President, ICANN’s gTLD Operations) (7 October 2016), C-51. NDC and Verisign also responded to ICANN’s questions in confidential responses.

⁸² *Id.* ¶ 11.

to the .WEB Contention Set.⁸³ ICANN’s Accountability Mechanisms are fundamental safeguards in ensuring that ICANN’s model remains effective, and it did not seem prudent for the Board to interfere with or preempt the issues that were the subject of an Accountability Mechanism regarding .WEB that was pending at that time (which might also be the subject of other soon-to-be filed Accountability Mechanisms).⁸⁴

42. Then, in January 2017, while the Donuts CEP was still pending, the Antitrust Division of the United States Department of Justice (“DOJ”) issued a civil investigative demand (“CID”) to ICANN and Verisign (and likely others involved in the .WEB auction), seeking documents and information “in connection with DOJ’s investigation of Verisign’s proposed acquisition of NDC’s contractual rights to operate the .WEB gTLD.”⁸⁵ The DOJ requested that ICANN take no action on .WEB during the pendency of the investigation, which ICANN agreed was appropriate given DOJ’s expertise in evaluating potential competition issues implicated by Verisign’s possible operation of .WEB.⁸⁶ Between February and June 2017, ICANN made document productions and provided information to the DOJ in connection with its investigation, and ICANN is informed and believes that Verisign produced documents to, and met with representatives of, the DOJ.⁸⁷

43. A year later, in January 2018, the DOJ formally closed its investigation without taking any action to block Verisign’s pursuit of .WEB.⁸⁸

44. On 30 January 2018, the Donuts CEP ended with no resolution, and ICANN gave Donuts an extension of time to file an IRP. After Donuts failed to pursue an IRP within the

⁸⁷ R-30, at p. 11.

⁸⁸ Excerpts from Verisign 10-K (for the fiscal year ended 31 December 2017), RE-13.

allotted time, NDC's Jose Rasco contacted ICANN demanding that ICANN send NDC a Registry Agreement for .WEB because the DOJ investigation had closed and no Accountability Mechanisms were pending at that time.⁸⁹

45. Despite NDC's demands, the .WEB Contention Set and NDC's application remained on hold. Afilias had submitted a request for documents regarding the .WEB Contention Set to ICANN under ICANN's Documentary Information Disclosure Policy ("DIDP"), and the expectation was that Afilias would file a Reconsideration Request after ICANN responded to the DIDP request.⁹⁰

46. While Afilias' DIDP request was pending, NDC's counsel wrote ICANN on 28 February 2018, complaining that its prevailing application for .WEB remained on hold due to the "pendency of baseless proceedings initiated by third parties."⁹¹ NDC's counsel also demanded that ICANN deliver a Registry Agreement to NDC by 7 March 2018 and reserved "[a]ll rights and remedies."⁹²

47. On 16 April 2018, Afilias sent ICANN's Board a letter warning that Afilias "intends to initiate a CEP and a subsequent IRP against ICANN" if ICANN takes the .WEB Contention Set off hold or otherwise "proceeds toward delegation of .WEB to NDC."⁹³

48. Consistent with its long-standing procedure, ICANN continued its work by responding to properly invoked Accountability Mechanisms, rather than the threats and demands in informal letters. Then, on 23 April 2018, after ICANN had responded to Afilias' DIDP request, Afilias filed a Reconsideration Request regarding ICANN's DIDP response, as

⁸⁹ Letter from S. Marenberg to ICANN (28 February 2018), R-20.

⁹⁰ Letter from A. Ali to ICANN (23 February 2018), C-78.

⁹¹ R-20, at 1.

⁹² *Id.* at 1, 2.

⁹³ Letter from A. Ali to ICANN (16 April 2018), at 5, C-113. Afilias' intentions were no secret. On April 24, 2018, the online magazine Domain Name Wire ran a story entitled "Afilias plans to file IRP to halt .Web." C-124.

expected.⁹⁴ On the same day, Afilias filed another DIDP request with ICANN.⁹⁵ Consistent with the DIDP and ICANN’s Bylaws, respectively, ICANN responded to Afilias’ second DIDP request and the Board considered and evaluated Afilias’ Request for Reconsideration.⁹⁶ On 5 June 2018, the Board denied Afilias’ Reconsideration Request.⁹⁷

49. With the Afilias’ Reconsideration Request resolved, and no other Accountability Mechanisms pending, ICANN staff followed the procedures called for in the Guidebook and took the .WEB Contention Set off hold.⁹⁸ At the same time, consistent with ICANN established practice and Mr. Atallah’s letter to Afilias, ICANN staff provided all of the members of the .WEB Contention Set, including Afilias, notice of the change of status.⁹⁹ ICANN took these steps with the understanding that Afilias was likely to make good on its threats to “initiate a CEP and a subsequent IRP against ICANN.”¹⁰⁰ On 13 June 2018, ICANN staff sent NDC a form Registry Agreement, in accordance with the Guidebook.¹⁰¹

50. As expected, on 18 June 2018, Afilias initiated a CEP as it had threatened to do, asserting the very same claims it had raised in its 2016 letters to ICANN.¹⁰² As a result of Afilias’ CEP, ICANN staff once again placed the .WEB Contention Set on hold.

D. ICANN’s Arms-Length Relationship With Verisign And Afilias.

51. In its Reply, Afilias claims that ICANN is somehow beholden to Verisign and, thus, was colluding with Verisign to ensure that Verisign obtains the rights to operate .WEB. In reality, however, as the administrator of the DNS, ICANN has an arms-length relationship with Verisign that is no different from ICANN’s relationship with other registry operators, including Afilias.

52. In fact, ICANN and Verisign have, at times, been at odds with, and formally adverse to, one another. For example, in the late-1990s, Verisign (as its corporate predecessor, Network Solutions, Inc.) was the exclusive provider of domain name registration services and ICANN’s very creation led to an erosion of its market power.¹⁰³ In 2002, ICANN implemented the government requirement that Verisign relinquish control of .ORG.¹⁰⁴ In 2004, Verisign sued ICANN alleging that ICANN had overstepped its contractual authority in blocking Verisign from offering certain registry services.¹⁰⁵ Eventually, ICANN countersued Verisign and the litigation persisted for years.¹⁰⁶ In 2013, Verisign and ICANN had a dispute over ICANN’s right to audit Verisign’s operations of the .NET gTLD.¹⁰⁷

53. While Verisign is certainly an important registry operator, all registry operators are important to ICANN, including Afilias. For example, in a separate IRP that is currently pending, ICANN is defending the process that lead to the awarding of .HOTEL to an Afilias-related company.¹⁰⁸ ICANN’s position in that IRP is the same as in this one – ICANN does not have an agenda by which it attempts to determine which gTLD applicants should win or lose.

¹⁰³ Witness Statement of J. Beckwith Burr (“Burr Stmt.”), at Ex. A.

¹⁰⁴ ICANN Board Selects New .org Registry Operator, R-34.

¹⁰⁶ *Verisign, Inc. v. ICANN*, Cross-Complaint, R-36.

¹⁰⁷ Letter from P. Kane to ICANN (8 January 2013), R-37.

¹⁰⁸ *See generally, Fegistry, LLC, et al. v. ICANN*, ICDR Case No. 01-19-0004-0808, ICANN’s Response to Request for Independent Review Process, R-38.

Instead, ICANN follows the policies and procedures set forth in the Guidebook and its Articles and Bylaws in administering the application process and awarding the rights to operate new gTLDs as required by that process.

II. THE CORRECT STANDARD OF REVIEW

54. The standard of review governing this IRP should not be controversial. It is set forth expressly in Article 4, section 4.3(i) of the Bylaws and Rule 11 of the Interim Supplementary Procedures, which are substantially identical. Section 4.3(i) states:

Each IRP PANEL shall conduct an objective, *de novo* examination of the Dispute.

- (i) With respect to Covered Actions the IRP Panel shall make findings of fact to determine whether the Covered Action constituted an action or inaction that violated the Articles of Incorporation or Bylaws.
- (ii) All Disputes shall be decided in compliance with the Articles of Incorporation and Bylaws, as understood in the context of the norms of applicable law and prior relevant IRP decisions.
- (iii) For Claims arising out of the Board's exercise of its fiduciary duties, the IRP Panel shall not replace the Board's reasonable judgment with its own so long as the Board's action or inaction is within the realm of reasonable business judgment.

...¹⁰⁹

55. Article 4, section 4.3(i) and Rule 11 establish a general *de novo* standard of review and require the Panel to make findings of fact to determine whether any Covered Action violated the Articles or Bylaws. Article 4, section 4.3(i)(iii) also creates a carve-out from that general standard for a particular subset of Covered Actions. “Covered Actions’ are defined as any actions or failure to act by or within ICANN committed by the Board, individual Directors, Officers, or Staff members that give rise to a Dispute.”¹¹⁰ Article 4, section 4.3(i)(iii) states that

¹⁰⁹ Subsections (iv) and (v) of Section 4.3(i) concern IRP’s involving claims that ICANN has not enforced its contractual rights with respect to the IANA Naming Function Contract, and therefore are not relevant here.

¹¹⁰ Bylaws, Art. 4, § 4.3(b)(ii), C-23.

for claims arising from the Board’s exercise of its fiduciary duties, the IRP Panel reviews the Board’s conduct only to determine whether it was “within the realm of reasonable business judgment.”¹¹¹ Thus, the Panel applies a *de novo* standard in making findings of fact and reviewing the actions or inactions of individual Directors, Officers or Staff members. However, the Panel reviews actions or inactions of the Board only to determine whether they were within the realm of reasonable business judgment.

56. Afilias seeks to discount or ignore the deference to the Board’s business judgment mandated by Article 4, section 4.3(i)(iii) on two grounds. First, Afilias asserts that prior IRP decisions have rejected any such deference.¹¹² Afilias relies primarily on the IRP Panel’s decision in *ICM v. ICANN* dated 19 February 2010, which declined to apply the business judgment rule after finding that the “Articles and Bylaws . . . do not specify or imply that the International Review Process [*sic*] provided for shall (or shall not) accord deference to the decisions of the ICANN Board.”¹¹³ That finding has absolutely no relevance here because it was made under a previous version of ICANN’s Bylaws, which have been amended more than a dozen times in the interim. The version of ICANN’s Bylaws that was operative at the time of the *ICM* decision did not have any provision analogous to the current Article 4.3(i)(iii), which expressly mandates that the Panel defer to the Board’s reasonable business judgment.

57. Afilias also relies on the decision in *Dot Sport Ltd. v. ICANN*¹¹⁴ and *Booking.com v. ICANN*.¹¹⁵ Neither decision assists Afilias. Both decisions quote the *ICM* Panel’s finding under the earlier, superseded Bylaws; and neither case purports to examine whether that finding

¹¹¹ Bylaws, Art. 4, § 4.3(i)(iii).

¹¹² Afilias’ Reply Memorial ¶ 6 & n.16.

¹¹³ *ICM Registry, LLC v. ICANN*, ICDR Case No. 50-177-T 000224 08, Final Declaration (19 February 2010) ¶ 136, CA-001.

¹¹⁴ *Dot Sport Ltd. v. ICANN*, ICDR Case No. 01-15-0002-9483, Final Declaration (31 January 2017), CA-018.

¹¹⁵ *Booking.com B.V. v. ICANN*, ICDR Case No. 50-20-1400-0247, Final Declaration (3 March 2015), CA-011.

remains valid under the current Bylaws (as both were decided before the more recent amendments). Moreover, the *Booking.com* Panel went on to state that “we also agree with ICANN to the extent that, in determining the consistency of Board action with the Articles, Bylaws and Guidebook, an ‘IRP Panel is neither asked to, nor allowed to, substitute its judgment for that of the Board.’ In other words, it is not for the Panel to opine on whether the Board could have acted differently than it did; rather, our role is to assess whether the Board’s action was consistent with applicable rules found in the Articles, Bylaws and Guidebook.”¹¹⁶ Similarly, the *Dot Sport* Panel ultimately recognized that it was required to apply a deferential standard of review to the Board’s actions or inactions: “The IRP Panel must apply a defined standard of review to the IRP request, focusing on: a. did the Board act without conflict of interest in taking its decision? b. did the Board exercise due diligence and care in having a reasonable amount of facts in front of them?; and c. did the Board members exercise independent judgment in taking the decision, believed to be in the best interests of the community?”¹¹⁷

58. Afilias’ second argument for discounting the deference owed to the Board’s business judgment is that, according to Afilias, its claim does not involve the Board’s exercise of its fiduciary duties.¹¹⁸ Afilias is wrong. As explained in ICANN’s IRP Response and set forth in more detail in the witness statement of Board member Chris Disspain, the ICANN Board was aware of Afilias’ complaints and decided not to make any decision regarding .WEB until analyzing whether the issues and results of the then-pending Accountability Mechanism about .WEB required the Board to do so.¹¹⁹ It cannot reasonably be disputed that the Board’s decision

¹¹⁶ *Booking.com*, Final Declaration ¶ 115, CA-011.

¹¹⁷ *Dot Sport Ltd.*, Final Declaration ¶ 7.17, CA-018.

¹¹⁸ Afilias’ Reply Memorial ¶ 16.

¹¹⁹ See, e.g., ICANN’s Response to Amended IRP Request ¶ 66 (“It was entirely reasonable for the ICANN Board to wait to analyze the issues surrounding .WEB until the DOJ investigation concluded and each of the related Accountability mechanisms was resolved, including this IRP, and then to undertake that analysis on the basis of the results of those proceedings.”).

not to address Afiliias' complaints asserted through letters was an exercise of its fiduciary duties. The Board has a fiduciary duty with respect to all actions that it takes as a Board on behalf of ICANN. "It is without dispute that in California, corporate directors owe a fiduciary duty to the corporation and its shareholders and now as set out by statute, must serve 'in good faith, in a manner such director believes to be in the interests of the corporation and its shareholders.'" *Berg & Berg Enters., LLC v. Boyle*, 178 Cal. App. 4th 1020, 1037 (2009) (citation omitted).¹²⁰

59. Although the Bylaws and Interim Supplementary Procedures do not define "reasonable business judgment," that term has a well-established legal meaning. Every United States jurisdiction, including California, recognizes the "business judgment rule," which provides a "judicial policy of deference to the business judgment of corporate directors in the exercise of their broad discretion in making corporate decisions." *Lee v. Interinsurance Exch.*, 50 Cal. App. 4th 694, 711 (1996) (quoting *Barnes v. State Farm Mut. Auto. Ins. Co.*, 16 Cal. App. 4th 365, 378 (1993)).¹²¹ Article 4.3(i)(iii) is expressed in terms strikingly similar to those used by the California Supreme Court to describe the business judgment rule.¹²²

60. The drafting history of the Bylaws confirms that they were intended to enshrine the common law business judgment rule. After the *ICM* Panel determined that the business judgment rule did not apply because the Bylaws did not specify a policy of deference to the Board, ICANN's Bylaws were amended to address this exact issue.¹²³ On 11 April 2013,

¹²⁰ RLA-5, *See also e.g.*, Cal. Corp. Code § 5231 ("A director shall perform the duties of a director, including duties as a member of any committee of the board upon which the director may serve, in good faith, in a manner that director believes to be in the best interests of the corporation and with such care, including reasonable inquiry, as an ordinarily prudent person in a like position would use under similar circumstances."), RLA-22.

¹²¹ RLA-15, The California Supreme Court has noted "that rule of judicial deference to corporate decision making 'exists in one form or another in every American jurisdiction.'" *Lamden v. La Jolla Shores Clubdominium Homeowners Ass'n*, 21 Cal. 4th 249, 257 (1999) (quoting *Frances T. v. Vill. Green Owners Ass'n*, 42 Cal. 3d 490, 507 n.14 (1986)), RLA-13.

¹²² *Compare* Bylaws, Art. 4, § 4.3(i)(iii), C-23 (stating that the Panel "shall not replace the Board's reasonable judgment with its own") *with, e.g., Lamden*, 21 Cal. 4th at 257 ("a court will not substitute its judgment for that of the corporation's board of directors."), RLA-13.

¹²³ *ICM Registry, LLC*, Final Declaration, ¶ 136, CA-001.

ICANN adopted new Bylaws, following community input and a public comment phase, to mandate a limited standard of review of Board decisions:

The IRP Panel must apply a defined standard of review to the IRP request, focusing on:

- a. did the Board act without conflict of interest in taking its decision?
- b. did the Board exercise due diligence and care in having a reasonable amount of facts in front of them; and
- c. did the Board members exercise independent judgment in taking the decision, believed to be in the best interests of the company?¹²⁴

61. The standard of review set out in the April 2013 Bylaws is an unmistakable restatement of the common law business judgment rule. *See, e.g. Everest Inv'rs & v. McNeil Partners*, 114 Cal. App. 4th 411, 430 (2003) (quoting *Lee*, 50 Cal. App. 4th at 715) (stating that deference to a Board's business judgment does not apply "in circumstances which inherently raise an inference of conflict of interest."¹²⁵ The business judgment rule does not shield actions taken without reasonable inquiry, with improper motives, or as a result of a conflict of interest."). The standard of review added in the April 2013 amendment persisted through several subsequent amendments to the Bylaws until it was abbreviated in the current iteration by simply using the term of art—"reasonable business judgment"—rather than setting forth the legal meaning of that term.

62. In sum, the Panel must apply the standard of review set out in Article 4, section 4.3(i) of the Bylaws and Rule 11 of the Interim Supplementary Procedures. Under those provisions, the Panel applies a *de novo* standard in making findings of fact and determining

¹²⁴ *See* ICANN's Bylaws (as amended 11 April 2013), Art. 4, § 3(4), R-39.

¹²⁵ RLA-9.

whether actions or inactions by ICANN’s officers or staff violated the Bylaws or Articles. The Panel must, however, apply a more limited review to actions or inactions of ICANN’s Board, which can be disturbed only if they are outside the realm of reasonable business judgment.

ARGUMENT

I. AFILIAS’ CLAIMS REGARDING ACTION OR INACTION IN LATE 2016 ARE TIME-BARRED.

63. In its Reply, Afilias asserts claims that ICANN’s staff violated the Bylaws and Articles in the course of its investigation of Afilias’ allegations *in August through October of 2016*, and that ICANN’s Board violated the Bylaws by failing to disqualify NDC *in August 2016* and instead opting in November 2016 to await the conclusion of Accountability Mechanisms before making a determination, if any was needed, on the merits of Afilias’ allegations.¹²⁶ Further, in its Amended IRP Request, Afilias asserts that ICANN violated its Bylaws by not investigating pre-auction rumors that were purportedly circulating *in July 2016* about Verisign’s relationship with NDC, although it is unclear whether Afilias continues to pursue this claim because it is not referenced anywhere in Afilias’ Reply.

64. Rule 4 of the Interim Supplementary Procedures states:

*The INDEPENDENT REVIEW is commenced when CLAIMANT files a written statement of DISPUTE. A CLAIMANT shall file a written statement of a DISPUTE with the ICDR no more than 120 days after a CLAIMANT becomes aware of the material effect of the action or inaction giving rise to the DISPUTE; provided, however, that a statement of a DISPUTE may not be filed more than twelve (12) months from the date of such action or inaction.*¹²⁷

¹²⁶ Afilias’ Reply Memorial ¶ 82 (“ICANN knew that NDC had committed these material breaches of the New gTLD Program Rules by (at the latest) August 2016, when Verisign provided ICANN with the DAA (and also the 26 July 2016 letter from Mr. Livesay to Mr. Rasco). Yet ICANN failed to act in accordance with the New gTLD Program Rules and its Articles and Bylaws.”); *id.* ¶ 86 (“ICANN violated its Articles and Bylaws when it failed to disqualify NDC’s bid and application upon receiving the DAA in August 2016.”); *id.* ¶¶ 102-118 (asserting complaints regarding ICANN’s investigation in August and September 2016).

¹²⁷ Interim Supplementary Procedures, Rule 4. The Bylaws that were in effect until October 2016 allowed IRPs challenging only actions of the Board—not ICANN’s staff, officers or individual directors—and provided that an

65. Afilias does not dispute that its IRP filing came more than two years after it sent letters complaining about the auction and NDC's relationship with Verisign. Instead, Afilias asserts that the time-bar does not expire until 120 days after Afilias became aware of the material effect of the action or inaction giving rise to the dispute. As shown below, Afilias unquestionably was aware of the actions and inactions in 2016 that it now seeks to challenge, along with the material effect of those actions. In any event, Afilias ignores the final clause of Rule 4, which states that a dispute may not be filed more than 12 months from the date of the challenged action or inaction, regardless of when the Claimant became aware of the material effect of that action or inaction. Afilias filed this IRP in November 2018, more than 24 months after the actions or inactions that it contends violated the Bylaws in July through November of 2016.

66. Even if it mattered (and it does not), Afilias undoubtedly was aware of the actions or inactions in 2016 that it now seeks to challenge and the material effect of those actions or inactions. Indeed, Afilias wrote letters to ICANN in August and September 2016 stating claims substantially identical to claims it asserts in this proceeding.¹²⁸ For example, in its 9 September 2016 letter, Afilias argued that ICANN was required to disqualify NDC immediately and execute a Registry Agreement with Afilias, and that ICANN would be in violation of its Bylaws by not doing so:

ICANN's Board and officers are obligated under the Articles of Incorporation, Bylaws and the Guidebook (as well as international law and California law) to disqualify

IRP must be filed within 30 days of the posting of the Board minutes relating to the challenged ICANN decision or action. Under those earlier provisions, Afilias' claims against the staff would be disallowed and its claims against the Board would be time-barred. Afilias knew from the publicly posted Board minutes and many other sources that ICANN did not disqualify NDC in late 2016.

¹²⁸ C-49; Letter from S. Hemphill (Afilias) to A. Atallah (ICANN) (9 September 2016), C-103.

NDC's bid immediately and proceed with the contracting of a registry agreement with Afiliias.¹²⁹

67. Afiliias' 9 September 2016 letter went on to set out the rationale for its claim that ICANN must disqualify NDC, employing the same rationale that Afiliias relies on here. In September 2016, Afiliias asserted that "NDC violated Paragraph 10 of the Terms and Conditions in Module 6 of the New gTLD Guidebook (the "Guidebook"), which expressly prohibits any applicant for a gTLD to 'resell, assign or transfer any of applicant's rights or obligations in connection with the application.'"¹³⁰ Afiliias makes this same argument in Section III.A.1 of its Reply.

68. Afiliias also asserted in its September 2016 letter that NDC violated the Guidebook provisions that require it to notify ICANN of material changes to its application or financial position: "NDC violated Section 1.2.7 of the Guidebook, which requires applicants to promptly notify ICANN via submission of the appropriate forms if at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, including changes in financial position and changes in ownership or control of the applicant."¹³¹ Afiliias makes this same argument in Section III.A.2 of its Reply.

69. Lastly, Afiliias asserted in its September 2016 letter that:

NDC violated the Auction Rules for New gTLDs ('Auction Rules'). Rule 12 provides that 'participation in an Auction is limited to Bidders,[?]' which is defined by the Auction Rules as a 'Qualified Applicant' or a 'party designated by a Qualified Applicant to bid on its behalf.' This rule prohibits bids placed on behalf of a third party that is not a 'Qualified Applicant,' defined by the Auction Rules as 'an entity that has submitted an Application for a new gTLD, has received all necessary approvals

¹²⁹ *Id.*, at p. 4.

¹³⁰ *Id.*, at p. 2.

¹³¹ *Id.* (internal quotation marks omitted).

from ICANN, and which is included within a Contention Set to be resolved by an Auction.’¹³²

This argument re-appears in Section III.A.3 of Afilius’ Reply.

70. In its Reply, Afilius makes much of the fact that it did not obtain a copy of the DAA until December 2018 (one month after it initiated this IRP). But Afilius did not have a copy of the DAA when it filed this IRP. Thus, it cannot credibly argue that it was unable to reasonably pursue an IRP until it obtained the DAA. Moreover, Afilius stated in September 2016 that its arguments were *not* dependent on knowing the precise terms of the DAA:

Although the specific terms of the agreement between VeriSign and NDC had not been disclosed, it is clear from Verisign’s own press release and its disclosure in its Form 10-Q filed with the US Securities and Exchange Commission for the quarter ended June 30, 2016, that both companies entered into an arrangement well in advance of the Auction to transfer NDC’s rights and obligations regarding its .WEB application to VeriSign.¹³³

71. Afilius also argues that the limitations period was tolled from 18 June 2018 to 13 November 2018, while its CEP was pending.¹³⁴ But the statute of limitations expired no later than August/September 2017 for Afilius’ claims arising from actions or inactions in August/September 2016. Any tolling incident to Afilius’ CEP is therefore irrelevant because the limitations period had already expired.

72. Finally, Afilius seeks to avoid the time-bar by asserting an equitable estoppel theory. Afilius bases this theory on two statements by ICANN. First, Afilius cites Ms. Willett’s statement in her 16 September 2016 letter that receiving Afilius’ response to ICANN’s questionnaire would “help facilitate informed resolution of these questions[.]”¹³⁵ Second, Afilius

¹³² C-103, at p.2.

¹³³ *Id.*

¹³⁴ Afilius’ Reply Memorial ¶¶ 143-44.

¹³⁵ *Id.* ¶ 147 (citing Ex. C-50).

cites Mr. Atallah’s statement in his 30 September 2016 letter that ICANN “will continue to take Afiliás’s comments, and other inputs that we have sought, into consideration as we consider this matter.”¹³⁶ Neither statement supports an equitable estoppel claim.

73. A party seeking to invoke equitable estoppel must establish four elements: “(1) the party to be estopped must be apprised of the facts; (2) he must intend that his conduct shall be acted upon, or must so act that the party asserting the estoppel had a right to believe it was so intended; (3) the other party must be ignorant of the true state of facts; and (4) he must rely upon the conduct to his injury.” *Krolkowski v. San Diego City Employees' Ret. Sys.*, 24 Cal. App. 5th 537, 564-65 (2018), *review denied* (Sept. 19, 2018).¹³⁷

74. Afiliás fails to satisfy these elements. Ms. Willett’s and Mr. Atallah’s letters did not discuss or refer to any potential IRP by Afiliás. There is nothing in those letters to suggest that they were intended to encourage Afiliás to delay in filing an IRP, nor is there any evidence that Ms. Willett or Mr. Atallah understood or intended them to have such effect. Moreover, Afiliás has not alleged—or submitted any evidence to prove—that it construed Ms. Willett’s or Mr. Atallah’s letters in such a manner or that it actually relied on those letters in deciding not to file an IRP. Yet “reliance is an essential element of equitable estoppel.” *Atkins, Kroll (Guam), Limited v. Cabrera*, 295 F.2d 21, 23 (9th Cir. 1961);¹³⁸ *Elmore v. Cone Mills Corp.*, 187 F.3d 442, 446 (1999) (“The Supreme Court has held that [‘a]n essential element of any estoppel is detrimental reliance on the adverse party’s misrepresentations.”) (Citation omitted).¹³⁹ Where, as here, a party submits no evidence of actual reliance, any claim of equitable estoppel must be

¹³⁶ *Id.* ¶ 147 (citing Ex. C-61).

¹³⁷ RLA-12.

¹³⁸ RLA-4.

¹³⁹ RLA-7.

rejected.¹⁴⁰

75. Afilias' equitable estoppel argument also suffers from two additional defects. First, Afilias' argument is based primarily on Ms. Willett's statement in her 16 September 2016 letter that the parties' responses to ICANN's questionnaire would assist it in reaching an informed determination. However, Afilias also relies on Ms. Willett's letter to support its substantive claim that ICANN's investigation was inadequate and biased.¹⁴¹ Under California law, a party cannot predicate an equitable estoppel argument on the same conduct on which it bases its cause of action. *Lukovsky v. City and Cty. of San Francisco*, 535 F.3d 1044, 1052 (9th Cir. 2008) ("The primary problem with plaintiffs' argument is that their alleged basis for equitable estoppel is the same as their cause of action. As we have previously explained, the plaintiff must point to some fraudulent concealment, some active conduct by the defendant 'above and beyond the wrongdoing upon which the plaintiff's claim is filed, to prevent the plaintiff from suing in time.'") (Citation omitted).¹⁴²

76. Second, Afilias was represented by experienced counsel throughout the entire period at issue. Its letters were signed by its General Counsel, Mr. Hemphill, and its 9 September 2016 letter copies Afilias' outside counsel, Mr. Arif Ali (who has been counsel for

¹⁴⁰ *In re Katz Interactive Call Processing Patent Litig.*, Nos. 07-NL-1816, 01-2196, RGK (FFMx) 2009 WL 1351043, at *15 (C.D. Cal. That analysis impermissibly eliminates an essential element of estoppel."), RLA-10; *Sood v. Grief*, No. H033875, 2010 WL 2595128, at *4-5 (Cal. Ct. App. June 29, 2010) (unpublished) (rejecting equitable estoppel where the evidentiary record was "devoid of any indication that [counsel's] conduct actually and reasonably induced [plaintiff] to forbear suing" within the statutory period) (citation omitted), RLA-19; *Yeager v. Bowlin*, No. CIV. 2:08-102 WBS JM, 2010 WL 95242, at *16 (E.D. Cal. Jan. 6, 2010) ("Plaintiffs have presented no evidence that indicates they reasonably relied on any representations by defendants that induced them to delay from filing this action until the statute of limitations had run . . . Accordingly, equitable tolling and estoppel are inappropriate."), RLA-20; *Estate of Amaro v. City of Oakland*, No. C09-01019 WHA, 2010 WL 669240, at *10 (N.D. Cal. Feb. 23, 2010) (finding that plaintiff "ignores equitable estoppel's requirement of reasonable reliance, since there is no evidence in the record that plaintiffs relied, or could have relied, on any actions taken by Poulson."), RLA-8.

¹⁴¹ Afilias' Reply Memorial ¶¶ 111-118.

¹⁴² RLA-16.

other claimants in previous IRPs, including the *ICM* IRP).¹⁴³ Under California law, “[w]here one has been represented by an attorney in connection with a claim the necessary elements of estoppel are not established as a matter of law.” *Romero v. Cty. of Santa Clara*, 3 Cal. App. 3d 700, 705 (1970); *Republic Ins. Co. v. Great Pac. Ins. Co.*, 261 Cal. Rptr. 863, 867 (Cal. Ct. App. Aug. 31, 1989) (unpublished);¹⁴⁴ *Lara v. Willows Joint Venture*, No. B145113, 2002 WL 705962, at *5 (Cal. Ct. App. Apr. 24, 2002) (unpublished).¹⁴⁵

77. Afilias knew how to utilize ICANN’s Accountability Mechanisms. It did so in August 2016 when it filed a complaint with ICANN’s Ombudsman regarding the matters that it raised in its August and September 2016 letters, and which it now raises in this IRP.¹⁴⁶ Moreover, Afilias’ parent company had experience initiating a Reconsideration Request, in 2014,¹⁴⁷ and a CEP and IRP, in 2015, regarding another gTLD application.¹⁴⁸ Further, Afilias’ counsel—Mr. Ali—has represented numerous claimants in prior IRP proceedings. Indeed, any time after 1 October 2016, when ICANN’s Bylaws were significantly amended to allow for CEPs and IRPs regarding ICANN staff actions and inactions, Afilias could have formally challenged the staff actions it is challenging in this IRP, but it was required to do so in a timely manner. Afilias chose not to. And if Afilias wished to toll the limitations period, it was required to seek an express agreement to that effect. As a matter of law, and particularly having been

¹⁴³ Dechert LLP – Arif H. Ali, R-40.

¹⁴⁴ RLA-18.

¹⁴⁵ RLA-14, California Rules of Court, rule 8.1105 states that opinions of the Courts of Appeal will be published only if certain criteria are met, such as that the opinion establishes a new rule of law, applies an existing rule to facts significantly different than prior published opinions, or advances a new interpretation, clarification, criticism or construction of the law, RLA-23. Unpublished opinions may not be cited in California state court. *See* Cal. Rules of Court, rule 8.1115, RLA-24. However, they may be cited in federal courts or fora other than California state court. *See, e.g., Inland Concrete Enters., Inc. v. Kraft*, 318 F.R.D. 383, 405-406 (C.D. Cal. 2016), RLA-11. Here, *Romero* (which is published) establishes the applicable rule of law. *Republic Ins. Co.* and *Lara* show that that rule has been consistently applied by the Courts of Appeal, RLA-17.

¹⁴⁶ C-49 (stating “[i]n addition to this letter, we are filing a complaint with the ICANN Ombudsman”).

¹⁴⁷ Afilias Limited, BRS Media Inc. and Tin Dale LLC, Reconsideration Request 14-41, R-43.

¹⁴⁸ Afilias Limited, BRS Media, Inc. & Tin Dale, LLC v. ICANN (.RADIO), R-28.

represented by experienced counsel, Afilias cannot now be heard to claim that it thought that the limitations period would not be enforced.

78. In sum, Afilias' equitable estoppel claim must be rejected. Afilias' claims are time-barred to the extent they are based on actions or inactions that occurred in 2016 or at any other time more than 12 months before Afilias filed its CEP in June 2018.

II. ICANN'S ARTICLES AND BYLAWS DID NOT REQUIRE ICANN TO AUTOMATICALLY DISQUALIFY NDC; ICANN ACTED CONSISTENTLY WITH ITS ARTICLES AND BYLAWS BY NOT MAKING ANY MATERIAL DECISIONS UNTIL ACCOUNTABILITY MECHANISMS WERE RESOLVED.

79. Afilias argues in its Reply that "ICANN was required to disqualify NDC's application and bid in August 2016 when ICANN first learned of NDC's violations, whether as a matter of automatic disqualification pursuant to the applicable standards, or as a matter of the reasonable exercise of ICANN's discretion pursuant to those same standards."¹⁴⁹ Afilias is wrong. None of NDC's alleged breaches of the Guidebook or the Auction Rules, even if true, requires automatic disqualification. Instead, the Guidebook and Auction Rules provide ICANN with significant discretion to determine what the penalty or remedy should be, if any, for a potential breach of their terms. Moreover, ICANN reasonably chose to not take any action in 2016 regarding .WEB because an Accountability Mechanism was pending regarding .WEB. ICANN's Accountability Mechanisms are fundamental safeguards in ensuring that ICANN's model remains effective, and it did not seem prudent for the Board or staff to interfere with or preempt the issues that were the subject of an Accountability Mechanism regarding .WEB that was pending at that time.

A. The Guidebook And Auction Rules Violations Alleged by Afilias Do Not Require the Automatic Disqualification of NDC.

80. As it has since 2016, Afilias continues to argue that NDC violated the Guidebook

¹⁴⁹ Afilias' Reply Memorial ¶ 20.

by failing to amend its application to reflect its new plans for .WEB and by allegedly transferring rights and obligations in connection with its .WEB application to Verisign.¹⁵⁰ Afilias also continues to argue that NDC violated the Auction Rules by submitting bids on Verisign’s behalf, rather than its own.¹⁵¹ Finally, Afilias continues to claim that ICANN violated its Articles and Bylaws by failing to automatically disqualify NDC in 2016 for these alleged breaches.¹⁵² Afilias is incorrect on several levels.

81. As an initial matter, ICANN has taken no position on whether NDC violated the Guidebook, but even if ICANN agreed with Afilias’ interpretation of the Guidebook and the effect of the DAA, ICANN still would not be under an obligation to automatically disqualify NDC. Instead, the Guidebook provides ICANN with substantial discretion in addressing and remedying breaches of its terms. For example, Section 1.2.7 of the Guidebook, which Afilias claims was violated by NDC failing to disclose its arrangement with Verisign, explicitly states that “[f]ailure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading *may result* in denial of the application.”¹⁵³ The Guidebook provides elsewhere that each applicant “acknowledges that any material misstatement or misrepresentation (or omission of material information) *may cause* ICANN and the evaluators to reject the application without a refund of any fees paid by Applicant.”¹⁵⁴ The Terms and Conditions of the Guidebook, which Afilias claims were violated by an alleged transfer of NDC’s rights and obligations, state that ICANN’s “decision to review, consider and approve an application to establish one or more gTLDs and to delegate new gTLDs

¹⁵⁰ *Id.* ¶ 28.

¹⁵¹ *Id.*

¹⁵² *Id.* ¶ 20.

¹⁵³ Guidebook, § 1.2.7, C-3 (emphasis added).

¹⁵⁴ *Id.*, § 6, Terms and Conditions 1 (emphasis added).

after such approval is entirely *at ICANN's discretion*.”¹⁵⁵

82. In what appears to be a concession that the Guidebook vests ICANN with this type of discretion, Afilias argues that ICANN's discretion can only be exercised consistent with ICANN's Articles and Bylaws by disqualifying NDC's application. This is not the case for a number of reasons. First, determining that NDC violated the Guidebook is not a simple analysis that is answered on the face of the Guidebook. There is no Guidebook provision that squarely addresses an arrangement like the DAA. A true determination of whether there was a breach of the Guidebook requires an in-depth analysis and interpretation of the Guidebook provisions at issue, their drafting history to the extent it exists, how ICANN has handled similar situations, and the terms of the DAA. This analysis must be done by those with the requisite knowledge, expertise, and experience, namely ICANN.

83. Likewise, ICANN has to approach any such analysis with an eye towards the potential impact a decision of these issues will have on the global Internet community.¹⁵⁶ And, as set forth in ICANN's IRP Response,¹⁵⁷ as well as the witness statements of Paul Livesay and Jose Rasco, there have been a number of arrangements that appear to be similar to the DAA in the secondary market for new gTLDs, including transactions involving Afilias, Donuts and other registry operators.¹⁵⁸ Indeed, the Auction Rules seem to foresee the possibility of such transactions. Rule 68(a) of the Auction Rules explicitly precludes discussion during the Blackout Period “of any post-Auction ownership transfer arrangements, with respect to any Contention Strings in the Auction.”¹⁵⁹ And Rule 68(b) confirms that the “prohibition against

¹⁵⁵ *Id.*, § 6, Terms and Conditions 3 (emphasis added).

¹⁵⁶ Bylaws, Art. 7, § 7.3(b), C-23.

¹⁵⁷ ICANN's Response to Afilias' Amended Request for IRP, at ¶¶ 25-29.

¹⁵⁸ *Id.* ¶¶ 25-29; Livesay Stmt. ¶¶ 8-10, 26; Rasco Stmt. ¶¶ 42-45.

¹⁵⁹ C-4, at Rule 68(a).

these activities applies only with respect to Contention Strings that are within Blackout Periods . . .”¹⁶⁰ Thus, the Auction Rules appear to contemplate the possibility of a “post-Auction ownership transfer arrangement” being in place prior to an auction. This only reinforces why the outcome here is not preordained, as Afilias tries to portray it.

84. Afilias’ additional argument that “nothing in the [Auction Rules] suggests that ICANN has any discretion in enforcing” the Auction Rules¹⁶¹ is simply incorrect. The Auction Rules grant ICANN significant discretion to interpret and enforce the rules and to determine the appropriate remedy for violation of the rules. Specifically, the Auction Rules make clear that “[i]f any dispute or disagreement arises in connection with these Auction Rules, including the interpretation or application of these Auction Rules, or the form, content, validity or time of receipt of any Bid, *ICANN’s decision shall be final and binding.*”¹⁶² And the New gTLD Auction Bidders Agreement (“Bidders Agreement”) expressly states that an applicant “acknowledges that it *may be subject to a penalty* of up to the full amount of the Deposit and forfeiture of its Applications or termination of its registry agreements for a serious violation of the Auction Rules or Bidder Agreement.”¹⁶³ Thus, there is no question that ICANN has the discretion of determining whether a “serious violation” has taken place and, if so, what the appropriate penalty or remedy should be, if any.

85. Moreover, the Auction Rules violations alleged by Afilias appear to be based on a strained interpretation of the text of the rules. For example, the propriety of an agreement like the DAA is not precisely addressed by the Auction Rules because the Auction Rules are concerned only with the mechanics of the Auction and each applicant’s participation in the

¹⁶⁰ *Id.*, at Rule 68(b).

¹⁶¹ Afilias’ Reply Memorial ¶ 101.

¹⁶² C-4, ¶ 72.

¹⁶³ C-5 § 2.10.

Auction, such as deposits that must be paid, notices that ICANN must release, the process for submitting bids, and the currency that must be used.¹⁶⁴ The Auction Rules do not appear to be designed to address the extent to which a non-applicant—including a financier, affiliated entity, or contractual counter-party—may be permitted to have an interest in a gTLD. The provisions of those rules that Afilias cites cannot bear the weight Afilias puts on them. For example, Afilias repeatedly cites the statement in Section 12 of the Auction Rules that a “Qualified Applicant may designate a party to bid on its behalf (‘Designated Bidder’).”¹⁶⁵ Afilias construes this section as barring an applicant from bidding on its own application where a third party has some type of interest in the gTLD. But Section 12 does not seem concerned with that issue and does not address it.

86. Likewise, Afilias’ argument that NDC’s bids were invalid because NDC did not fit within the Auction Rules’ definition of a “Bidder” or a “Qualified Applicant” are unpersuasive.¹⁶⁶ ICANN could certainly determine that, despite Afilias’ technical reading of the definitions in the Auction Rules, NDC was, in fact, bidding on *its* application, was submitting bids on *its* behalf, and was submitting bids *it* was willing and able to pay, despite the DAA.¹⁶⁷ And as set forth above, the Auction Rules, as well as the Bidders Agreement, both seem to suggest the possibility of a “post-Auction ownership transfer arrangement” being in place prior to an auction.¹⁶⁸

87. Finally, because it has the “ultimate responsibility” for the Program, the ICANN

¹⁶⁴ C-4, ¶ 23 (“All Deposits to the Auction Bank Account must be made by bank wire.”); *id.*, ¶ 8 (“Prior to the scheduling of an Auction, an Intent to Auction notice will be provided to all members of an eligible Contention Set via the ICANN Customer Portal.”) *id.*, ¶ 16 (“Bidding will take place online at the Auction Site.”); *id.*, ¶ 5 (“All prices in the Auction are expressed in whole numbers of United States dollars (\$US).”).

¹⁶⁵ Afilias’ Reply Memorial ¶¶ 49, 92-95.

¹⁶⁶ *Id.* ¶¶ 87-96.

¹⁶⁷ *Id.* ¶ 94; C-5.

¹⁶⁸ C-4 ¶ 68(a), (b); C-5 § 2.6.

Board has reserved the right to “individually consider” any application to “*determine whether* approval would be in the best interest of the Internet community.”¹⁶⁹ In other words, even if ICANN were to conclude that NDC violated the Guidebook or the Auction Rules, ICANN’s Board would still have the discretion to decide whether approval of NDC’s (or any other applicant’s) application is appropriate or not.

88. Thus, ICANN was never under an obligation to automatically disqualify NDC, as Afilias claims. If ICANN were to determine that NDC violated the Guidebook or the Auction Rules, it is for ICANN to decide whether any such violation warrants disqualification. There are a range of remedies or penalties – not involving an award of .WEB to Afilias – that ICANN could employ if it were to find that NDC did violate the Guidebook or the Auction Rules. As just one example, ICANN could order an unwinding of the .WEB auction and either bar NDC from participating, bar NDC from participating in accordance with the DAA, or permit NDC to participate in accordance with the DAA. It is not, as Afilias suggests, simply a choice between disqualification of NDC or condoning the DAA. Selecting the appropriate remedy involves the balancing of competing interests and policies as well as ICANN’s Core Values. Under the Bylaws, that balancing must be done by ICANN’s Board in the exercise of its reasonable business judgment.

B. The ICANN Board Appropriately Chose Not To Make Any Material Decisions Regarding .WEB in November 2016.

89. Since the inception of the Program, ICANN has followed a practice of placing applications and contention sets on hold when Accountability Mechanisms are pending, whether it be a Reconsideration Request, an Ombudsman complaint, a CEP or an IRP.¹⁷⁰ Once on hold,

¹⁶⁹ Guidebook, § 5.1, C-3.

¹⁷⁰ Disspain Stmt. ¶ 11. With respect to IRPs, however, claimants typically are required to submit a request for interim measures in order for the hold to be instituted.

ICANN generally refrains from taking action with respect to the application or contention set that could interfere with, or otherwise preempt, the pending Accountability Mechanism.¹⁷¹ ICANN follows this practice, in part, because ICANN considers its Accountability Mechanisms to be fundamental safeguards in ensuring its bottom-up, multistakeholder model remains effective and in ensuring that ICANN remains accountable to its community.¹⁷² Indeed, accountability is built into every level of ICANN’s organization and Mission, as well as its Articles and Bylaws.¹⁷³ Moreover, ICANN has a policy of referring potential competition issues to relevant government regulators, as set forth in detail below.

90. Thus, when the Board was faced with Donuts’ 2016 CEP (and subsequently the DOJ’s antitrust investigation) that raised issues about .WEB, the Board appropriately, and fully consistent with ICANN’s Articles and Bylaws, chose not to address any concerns about .WEB while these proceedings were pending as the results might have an impact on the Board’s need to make any such decisions.

91. Moreover, because the Board’s determination not to make any decisions regarding .WEB in November 2016 arises “out of the Board’s exercise of its fiduciary duties,” and the decision was “within the realm of reasonable business judgment,” the Panel must defer to the Board’s reasonable business judgment and cannot replace it with the Panel’s own judgment.¹⁷⁴ It was eminently reasonable for the Board to make this choice because the results of the Accountability Mechanism, and the subsequent DOJ investigation, could have had an impact on any eventual analysis ICANN might be called on to make. For example, the DOJ investigation alone, although not expected when the Board made its choice, had the potential to

¹⁷¹ *Id.*

¹⁷² *Id.*

¹⁷³ ICANN Articles of Incorporation, § 2(iii), C-2; Bylaws, Art. 4, §§ 4.2, 4.3, C-23.

¹⁷⁴ Bylaws, Art. 4, § 4.3(i)(iii), C-23.

moot or fundamentally alter the issues raised regarding the DAA. The Board made its reasonable business judgment after receiving materials setting forth the relevant information about the disputes over .WEB, the parties' legal and factual contentions, and a set of options the Board could consider. The Board also made this decision after a robust discussion among Board members and receiving information and advice from counsel.

92. Nor is there any plausible argument that the Board's decision violated ICANN's Bylaws. Afilias draws the conclusion that the Board violated its commitment to "apply[] documented policies consistently, neutrally, objectively, and fairly without singling out any particular party for discriminatory treatment."¹⁷⁵ But Afilias does not attempt to explain how the Board's determination not to make a decision regarding .WEB during the pendency of an Accountability Mechanism or other legal proceedings on the same issues could represent an inconsistent application of "documented policies"; indeed, Afilias does not even identify the documented policies purportedly at issue. Afilias also has not explained how that decision was biased, non-objective or unfair, or how it singled anyone out for discriminatory treatment. It clearly was not and did not.

93. In short, the Board has acted reasonably and prudently. Although this has involved some delay in the final resolution of .WEB, the delay results, in part, from Afilias' decision to sit on its claims for more than two years, rather than promptly initiating another Accountability Mechanism when its complaint to the Ombudsman was denied or even earlier when it first developed and began asserting its claims in August 2016. In any event, under the governing standard of review, the Panel cannot overturn or supplant the Board's reasonable business judgment to decide not to act during the pendency of Accountability Mechanisms that

¹⁷⁵ Afilias' Reply Memorial ¶¶ 16, 23, 86.

might impact whether it even needs act with regard to .WEB and, if so, the nature of the issues that it must address.

III. ICANN HAS COMPLIED WITH ITS CORE VALUE REGARDING COMPETITION.

94. In its Reply, Afilias continues to claim that ICANN has a “competition promotion mandate,”¹⁷⁶ that this mandate is broader than the DOJ’s regulatory powers and review,¹⁷⁷ and that “ICANN’s decision to exercise its discretion to benefit Verisign is a complete perversion of ICANN’s Bylaws.”¹⁷⁸ Afilias is wrong on all fronts and is now taking a litigation-driven position inconsistent with its previous view that “[n]either ICANN nor the GNSO have the authority or expertise to act as anti-trust regulators.”¹⁷⁹

95. As an initial matter, ICANN has not exercised its discretion to benefit Verisign. As set forth above, ICANN has not fully evaluated the DAA and NDC’s related conduct because the .WEB Contention Set has been on hold due to the invocation of ICANN’s Accountability Mechanisms and the DOJ investigation. And ICANN certainly has not evaluated whether a transfer of .WEB from NDC to Verisign is appropriate because NDC has not requested such a transfer (and could not unless and until ICANN signs a .WEB registry agreement with NDC). Accordingly, Afilias’ assertion that ICANN has violated its so-called “competition promotion mandate” is not even ripe for consideration.

96. In any event, ICANN does not “decide which companies obtain the exclusive gTLD registry rights” in the way that Afilias asserts.¹⁸⁰ ICANN does not evaluate, for each new gTLD application, whether competition might be enhanced if ICANN selects one registry

¹⁷⁶ *Id.*, ¶¶ 122-124.

¹⁷⁷ *Id.*, ¶¶ 131-136.

¹⁷⁸ *Id.*, ¶¶ 130.

¹⁷⁹ R-21, at 8 (emphasis added).

¹⁸⁰ Afilias’ Reply Memorial ¶ 3.

operator as opposed to another. Rather, ICANN administers the objective, non-discriminatory processes set forth in the Guidebook under which gTLDs are awarded to qualified entities. ICANN is not required or equipped to make judgments about which applicant for a particular gTLD would most effectively promote competition, or to award gTLDs on that basis. As Afilias notes, the Guidebook sets out comprehensive procedures for the gTLD application and review process.¹⁸¹ Nowhere in the Guidebook does it state that ICANN will choose among otherwise qualified applicants based on ICANN’s view of which applicant would most effectively contribute to competition.

97. Afilias also incorrectly asserts that “specifically restraining the market power of .COM” was the primary motivating policy underlying the New gTLD Program.¹⁸² While the community-driven policy underlying the Program was aimed at increasing competition, diversity and consumer choice in the DNS, the Program was not specifically designed to take market share from .COM, as Board members J. Beckwith Burr and Christopher Disspain confirm in their witness statements.¹⁸³ Had the ICANN community wished to prevent Verisign from being the registry operator for any particular new gTLD, the community (through the GNSO) could have included that prohibition as part of the policy recommendations, or the community could have mandated that such a prohibition be included in the Guidebook to which the community provided extensive input on multiple versions over a multi-year period. The community could even have requested that Verisign not be permitted to operate any gTLD registry other than the ones that it was already operating at the start of the Program. But the community did not take such action, nor was such action ever proposed.¹⁸⁴ Afilias’ claim that the Program specifically targeted

¹⁸¹ Afilias’ Reply Memorial ¶ 25.

¹⁸² *Id.*, ¶ 128.

¹⁸³ Burr Stmt. ¶ 27; Disspain Stmt. ¶ 14.

¹⁸⁴ Disspain Stmt. ¶ 14.

Verisign is a fabrication, which Afilias then uses to misrepresent ICANN’s Core Values.

98. Ms. Burr and Mr. Disspain provide a clear explanation of how ICANN complies with its Core Values and Bylaws as to competition. One of ICANN’s Core Values, as set forth in ICANN’s Bylaws, requires ICANN to promote competition in the registration of domain names “where practicable and beneficial to the public interest as identified through the bottom-up, multistakeholder policy development process.”¹⁸⁵ The Bylaws further require ICANN, “[w]here feasible and appropriate,” to “depend[] on market mechanisms to promote and sustain a competitive environment in the DNS market.”¹⁸⁶ As Ms. Burr explains, taken together, “these provisions obligate ICANN to coordinate the community’s development of, and implement, policy that facilitates market-driven competition.”¹⁸⁷ This is precisely what ICANN did in implementing the Program on behalf of the Internet community.

99. As Ms. Burr and Mr. Disspain further explain, ICANN is not a regulator responsible for taking affirmative actions to block potentially anticompetitive transactions or conduct the way a government regulator would.¹⁸⁸ In fact, ICANN’s Bylaws make clear that ICANN is prohibited from acting like a government regulator. Article 1, section 1.1(c) of the Bylaws states that “[f]or the avoidance of doubt, ICANN does not hold any governmentally authorized regulatory authority.”¹⁸⁹ Moreover, ICANN does not have the resources or expertise necessary to serve as a competition regulator for the DNS.¹⁹⁰ Rather, as Ms. Burr and Mr. Disspain confirm in their witness statements, ICANN complies with the Core Value and Bylaws provisions regarding competition by deferring to an appropriate government regulator – such as

¹⁸⁵ Bylaws, Art. 1, § 1.2(b)(iv), C-23.

¹⁸⁶ *Id.*, Art. 1, § 1.2(b)(iii).

¹⁸⁷ Burr Stmt. ¶ 19.

¹⁸⁸ Burr Stmt. ¶¶ 28-30; Disspain Stmt. ¶ 14.

¹⁸⁹ Bylaws, Art. 1, § 1.1(c), C-23.

¹⁹⁰ Burr Stmt. ¶ 30.

DOJ – for investigation of potential competition issues. Indeed, the Guidebook specifically states that “ICANN retains the right to refer an application to a competition authority prior to entry into the registry agreement” if ICANN determines that an application or applicant raises potential competition issues.¹⁹¹ ICANN’s deference to competition authorities in such cases is no different than its deference to the DOJ’s decision here, after a year-long investigation, not to take action to block Verisign’s possible operation of .WEB. If anything, denying NDC’s application on competition grounds in these circumstances would directly violate the Board’s commitment to “apply[] documented policies consistently, neutrally, objectively and fairly without singling out any particular party for discriminatory treatment.”¹⁹²

100. Thus, Afilias’ assertion that ICANN has a competition mandate that is broader than the DOJ’s regulatory powers and review, and which requires ICANN to award .WEB to Afilias, rather than NDC, because that action would most effectively promote competition, is simply wrong. ICANN is not a regulator and has no regulatory authority, and it lacks the institutional capability to make the competition determination that Afilias so blithely and self-servingly demands. ICANN has complied with its Core Value regarding competition by introducing more than a *thousand* new gTLDs into the market and allowing the ultimate competition regulator in the United States – the DOJ – to evaluate the competition issues associated with Verisign’s operation of .WEB.

101. The position that Afilias is espousing in this IRP is a lawyer-generated argument that is inconsistent with ICANN’s Mission, Articles, Bylaws, resources, and expertise. And it is directly contrary to Afilias’ view in 2006 (which, it should be noted, is the same view expressed by Ms. Burr and Mr. Disspain in this IRP), when Afilias commented on ICANN’s appropriate

¹⁹¹ Guidebook, § 5.1.4, C-3.

¹⁹² Bylaws, Art. 1, § 1.2(a)(v), C-23.

role as an administrator of the DNS:

“While ICANN’s mission includes the promotion of competition, this role is best fulfilled through the measured expansion of the name space and the facilitation of innovative approaches to the delivery of domain name registry services. *Neither ICANN nor the GNSO have the authority or expertise to act as anti-trust regulators.* Fortunately, many governments around the world do have this expertise and authority, and do not hesitate to exercise it in appropriate circumstances.¹⁹³

102. Also unsupported is Afiliat’s argument that no inference should be drawn from DOJ’s refusal to take action to block Verisign from operating .WEB. To the contrary, Dr. Dennis Carlton, who was the DOJ’s Deputy Assistant Attorney General for Economics, has concluded that, based on his experience, the closure of such an investigation suggests that Verisign’s operation of .WEB is not likely to harm competition.¹⁹⁴

103. Finally, Dr. Carlton and Dr. Kevin Murphy have concluded in their expert reports that there is no evidence that .WEB will be a unique competitive check on .COM. In other words, there is no economic evidence that .WEB will be a successful rival to .COM such that Verisign’s operation of .WEB is likely to restrain competition. Rather, the expert economists do not believe that .WEB will be more successful in taking market share from .COM than other new gTLDs, which is likely what the DOJ concluded as well. Thus, Afiliat’s competition claim is unsupported as an economic matter.

IV. ICANN COMPLIED WITH ITS ARTICLES, BYLAWS AND INTERNAL PROCEDURES IN INVESTIGATING ISSUES REGARDING THE .WEB AUCTION AND AFILIAT’S CLAIMS.

104. Afiliat’s contention in its Reply that the manner in which ICANN investigated Afiliat’s allegations against NDC and Verisign violated the Articles and Bylaws is procedurally

¹⁹³ R-21, 8 (emphasis added).

¹⁹⁴ Expert Report of Dennis W. Carlton ¶¶ 58-61.

improper, internally contradictory, and meritless.¹⁹⁵

105. First, Afilias' Amended IRP Request asserted no such claim. The Amended IRP Request asserts that ICANN did not adequately investigate *pre-auction* rumors that NDC had reached an agreement with Verisign, but makes no contention regarding the adequacy of ICANN's *post-auction* investigation of Afilias' specific allegations in its August and September 2016 letters.¹⁹⁶ Rule 6 of the Interim Supplementary Procedures states that "[a] CLAIMANT'S written statement of a DISPUTE shall include all claims that give rise to a particular DISPUTE."¹⁹⁷ Afilias' current claim that ICANN violated its Bylaws in its post-auction investigation of Afilias' complaints differs fundamentally from the claim in its Amended IRP Request that ICANN did not sufficiently investigate pre-auction rumors: it concerns a different investigation of different complaints that occurred at a different time in response to different information received by ICANN. Afilias cannot assert a new claim for the first time in its Reply.

106. Second, Afilias' contention that ICANN did not adequately investigate its allegations contradicts Afilias' assertion that "[b]y August 2016, ICANN had all the information it needed to determine that NDC's application and bid had to be disqualified."¹⁹⁸ Afilias cannot have it both ways: it cannot plausibly contend that ICANN did not gather sufficient facts to make a determination on the propriety of the DAA, while simultaneously arguing that ICANN had all the facts that it needed to make that determination.

107. Third, ICANN's investigation was prompt, thorough and fully consistent with its

¹⁹⁵ See Afilias' Reply Memorial ¶¶ 8, 102-118.

¹⁹⁶ Afilias Amended IRP Request ¶ 78, sub-bullet 4 ("ICANN failed to apply these policies 'neutrally, objectively, and fairly' here: . . . ICANN failed to fully investigate rumors that NDC had reached an agreement with VeriSign prior to the .WEB Auction. Although ICANN specifically asked NDC to confirm that 'there have not been changes to your application . . . that need to be reported to ICANN,' NDC declined to do so and ICANN failed to pursue a response.").

¹⁹⁷ Interim Supp. Proc., Rule 6.

¹⁹⁸ Afilias' Reply Memorial ¶ 16.

Bylaws and Articles. Donuts initiated its CEP on 2 August 2016, and Afilias first raised its allegations with ICANN in a letter dated 8 August 2016.¹⁹⁹ Through its counsel, ICANN promptly reached out to Verisign to request a copy of the DAA and other information relevant to .WEB.²⁰⁰ In response, Verisign sent ICANN counsel a letter on 23 August 2016 responding to Donuts' and Afilias' allegations and providing a copy of the DAA, the 26 July 2016 letter agreement between Verisign and NDC, and documents supporting Verisign's contention that Afilias violated the auction Blackout Period.²⁰¹ Three weeks later, and based on all of the concerns that had been expressed at that time, ICANN wrote to Afilias, Ruby Glen, NDC and Verisign inviting them each to answer questions designed to probe more deeply into their respective allegations and responses and to give them each an opportunity to fully set out their positions.²⁰² Afilias, NDC and Verisign each accepted ICANN's invitation (Ruby Glen did not), providing a total of 59 single-spaced pages of analysis.²⁰³ Although Afilias asserts that ICANN's investigation was "biased and inadequate,"²⁰⁴ it does not identify any additional information that ICANN purportedly should have gathered.

108. Afilias complains that ICANN did not act in accordance with its commitment to transparency because it did not keep Afilias informed on the status of its investigation and the Board's deliberations. However, ICANN's commitment to transparency does not require ICANN to conduct its inner workings or Board discussions publicly, or to give access to that information to a particular applicant upon request. ICANN acted in accordance with its policies and the Bylaws by providing all contention set members, including Afilias, prompt notice when

¹⁹⁹ Ex. C-49.

²⁰⁰ R-29, at 20:9-15.

²⁰¹ R-18.

²⁰³ C-51 (Afilias response); C-109 (Verisign response); C-110 (NDC response).

²⁰⁴ Afilias' Reply Memorial ¶ 8.

the status of the contention set changed.

109. Afilias baldly asserts that ICANN’s investigation was not neutral, objective, fair, non-discriminatory or in good faith. But Afilias never explains how *any* part of ICANN’s investigation was non-objective, unfair, discriminatory or in bad faith.²⁰⁵ Afilias quibbles with the phrasing of some of the questions in ICANN’s September 2016 questionnaire.²⁰⁶ But Afilias cannot seriously dispute that these questions were premised on the very allegations Afilias and Donuts were asserting and successfully accomplished their purpose of providing the parties an opportunity to state their positions in detail on the issues in dispute between them.

110. Afilias also contends that, when ICANN sent the September 2016 questionnaire, ICANN should have disclosed to Afilias that ICANN had received a copy of the DAA from Verisign.²⁰⁷ Afilias argues that ICANN’s failure to do so meant that “the deck was stacked” because Verisign and NDC purportedly knew “the substantive motivations behind the questions” and Afilias did not.²⁰⁸ Afilias further contends that this somehow amounted to “an attempted cover-up by ICANN of its own failings and of Verisign’s and NDC’s subterfuge.”²⁰⁹

111. These contentions make no sense and Afilias does not (and cannot) explain them. Afilias does not identify the purported “substantive motivations” to which it refers or cite any evidence of any such motivations. Afilias does not explain how NDC or Verisign would have known Ms. Willett’s alleged “substantive motivations.” Afilias does not explain why the fact that ICANN did not inform Afilias that it had obtained the DAA “stacked” the deck. And Afilias does not explain how sending the questions amounted to a “cover-up.” Afilias’ contentions are

²⁰⁵ *Id.*, ¶ 102.

²⁰⁶ *Id.*, ¶¶ 115-116.

²⁰⁷ *Id.*, ¶ 113.

²⁰⁸ *Id.*

²⁰⁹ *Id.*, ¶¶ 16, 102, 118.

simply a series of catch-phrases devoid of any meaning.

112. Moreover, Afilias fails to grapple with the fact that Verisign provided the DAA on the express proviso that it was confidential business information that could *not* be disclosed by ICANN.²¹⁰ When information is provided to ICANN on a confidential basis, ICANN respects and maintains the information's confidentiality.²¹¹ Any other approach would discourage individuals and companies from communicating freely and openly with ICANN.

113. Finally, Afilias' complaints about the adequacy of ICANN staff's investigation of Afilias' allegations against Verisign and NDC are ultimately irrelevant because Afilias requests no relief in relation to that conduct. Afilias does not contend that any further investigation is necessary or should be conducted. On the contrary, as noted, Afilias contends that ICANN has all the information necessary to resolve Afilias' complaints and that ICANN has had that information since August 2016.

V. AFILIAS REQUESTS RELIEF THAT IS BEYOND THE PANEL'S JURISDICTION.

114. Article 4, section 4.3(o) of the Bylaws expressly establishes and circumscribes the authority of an IRP Panel. It is remarkable that, although it devotes more than four pages of its Reply to addressing the Panel's authority,²¹² Afilias never once cites or references Article 4, section 4.3(o). Afilias' studied avoidance of this definitive provision is tantamount to an admission that it seeks to lead the Panel into error by asking it to grant remedies in excess of the Panel's authority.

115. Article 4, section 4.3(o) states:

Subject to the requirements of this Section 4.3, each IRP Panel shall have the authority to:

²¹⁰ C-102 (“**CONFIDENTIAL BUSINESS INFORMATION: DO NOT DISCLOSE**”).

²¹¹ ICANN Documentary Information Disclosure Policy, R-41.

²¹² Afilias' Reply Memorial pp. 57-60.

- (i) Summarily dismiss Disputes that are brought without standing, lack substance, or are frivolous or vexatious;
- (ii) Request additional written submissions from the Claimant or from other parties;
- (iii) Declare whether a Covered Action constituted an action or inaction that violated the Articles of Incorporation or Bylaws, declare whether ICANN failed to enforce ICANN's contractual rights with respect to the IANA Naming Function Contract or resolve PTI service complaints by direct customers of the IANA naming functions, as applicable;
- (iv) Recommend that ICANN stay any action or decision, or take necessary interim action, until such time as the opinion of the IRP Panel is considered;
- (v) Consolidate Disputes if the facts and circumstances are sufficiently similar, and take such other actions as are necessary for the efficient resolution of Disputes; and
- (vi) Determine the shifting of IRP costs and expenses consistent with Section 4.3(r).²¹³

116. The only provision of Article 4, section 4.3(o) relevant to this IRP is subsection (iii), which gives the Panel authority to declare whether a Covered Action constituted an action or inaction that violated the Articles or Bylaws.

117. Afilias seeks two types of relief.²¹⁴ First, it asks the Panel to declare that ICANN violated its Articles and Bylaws by: (a) failing to disqualify NDC's Application in August 2016; (b) failing to offer the rights to .WEB to Afilias after disqualifying NDC; and (c) proceeding to contract with NDC for a Registry Agreement.²¹⁵ While ICANN acknowledges that declarations finding that ICANN violated the Articles or Bylaws would be within the Panel's authority, each declaration requested by Afilias should be denied on the merits. As shown above, requests (a) and (b) are time-barred (*supra* Argument, Sec. I). And even if they were not time-barred,

²¹³ Bylaws, Art. 4, § 4.3(o).

²¹⁴ Afilias' Reply Memorial ¶ 155.

²¹⁵ *Id.*

ICANN and the Board acted within the realm of reasonable business judgment in deciding not to address the merits of claims made by Afilias and others while an Accountability Mechanism was pending (*supra* Argument Sec. II(b)); and, even if Afilias’ allegations against NDC were found by ICANN to have merit, nothing mandates automatic disqualification of NDC’s application or rejection of its auction bids (*supra* Argument Sec. II(a)). With respect to the request (c), ICANN did not violate its Articles or Bylaws by merely sending a draft Registry Agreement to NDC in furtherance of the processes set out in the Guidebook when no Accountability Mechanisms were pending challenging the .WEB application that prevailed in the Auction.

118. The second form of relief sought by Afilias is beyond the authority of the Panel to grant. Specifically, Afilias requests that the Panel “**require** ICANN to disqualify NDC’s application and bid and [] offer Afilias the rights to .WEB[.]”²¹⁶ Afilias euphemistically refers to this as a request for “affirmative declaratory relief,”²¹⁷ but it is a request for mandatory injunctive relief in substance and effect. Whether styled as a declaration that ICANN must “affirmatively” take certain actions or (more straightforwardly) as a mandatory injunction to take such actions, the relief that Afilias requests clearly exceeds the powers granted to the Panel by Article 4, section 4.3(o).

119. Article 4, section 4.3(o)(iii) allows the Panel to “[d]eclare whether a Covered Action **constituted** an action or inaction that violated the Articles of Incorporation or Bylaws[.]”²¹⁸ It is thus explicitly concerned only with past actions or inactions. The retrospective nature of this authority is also implicit in that it applies only to a “Covered Action,” which is defined as “actions or failures to act by or within ICANN **committed** by the Board,

²¹⁶ *Id.* ¶ 155.

²¹⁷ *Id.*

²¹⁸ Bylaws, Art. 4, § 4.3(o)(iii) (emphasis added), C-23.

individual Directors, Officers, or Staff members that give rise to a Dispute.”²¹⁹ Similarly, “Disputes” are defined as “Claims that Covered Actions *constituted* an action or inaction that *violated* the Articles of Incorporation or Bylaws[.]”²²⁰ The Panel has authority to issue a binding declaration regarding only whether past actions or inactions violated ICANN’s Articles or Bylaws. It does not have authority to “declare” that ICANN must take some specific action in the future.

120. Afilias misrepresents ICANN’s case—and then attacks a strawman—by asserting that ICANN’s position is that the Panel’s final declaration is “merely advisory.”²²¹ That is not ICANN’s position. A proper declaration from this Panel as to whether ICANN violated its Articles or Bylaws is a final decision that is binding on ICANN as well as Afilias.²²² The Panel, however, can properly decide matters and exercise its authority only insofar as they are within its jurisdiction as defined by the Bylaws. The Panel may declare whether a Covered Action constituted an action or inaction that violated ICANN’s Articles and Bylaws, and ICANN will be bound by that declaration. The Panel does not have authority to order or “declare” that ICANN must engage in particular future actions or inactions.

121. Afilias cites Article 4, section 4.3(a) of the Bylaws, which sets out the general purposes of an IRP, including to ensure that ICANN complies with its Bylaws and Articles, to empower the global Internet community to enforce compliance and to reduce disputes by creating precedent.²²³ Afilias also cites Article 4, section 4.3(x), which states that an IRP is “intended as a final, binding arbitration process.” However, Afilias does not explain how these provisions can plausibly be construed to expand the Panel’s authority beyond the limits set by

²¹⁹ *Id.*, Art. 4, § 4.3(b)(ii) (emphasis added).

²²⁰ *Id.*, Art. 4, § 4.3(b)(iii) (emphasis added).

²²¹ Afilias’ Reply Memorial ¶¶ 1, 5, 153.

²²² Bylaws, Art. 4, § 4.3(x)(i) & (iii), C-23.

²²³ Afilias’ Reply Memorial ¶ 151.

Article 4, section 4.3(o) and to authorize the Panel to issue a mandatory injunction.

122. There is no conflict between the purposes of IRPs set out in Article 4, sections 4.3(a) and (x) and the limits on the Panel’s authority imposed by Article 4, section 4.3(o). But if any conflict existed, the specific limits imposed by Article 4, section 4.3(o) would prevail over the general purposes set out in sections 4.3(a) and (x). *See, e.g., CAZA Drilling (California), Inc. v. TEG Oil & Gas U.S.A., Inc.*, 142 Cal. App. 4th 453, 466 (2006) (“when general and specific provisions are inconsistent, the latter control”);²²⁴ Cal. Civ. Proc. Code § 1859 (“when a general and particular provision are inconsistent, the latter is paramount to the former.”).²²⁵

123. Afiliás is also wrong in asserting that prior IRP Panels have found that they have power to issue injunctive relief (or, as Afiliás characterizes it, “affirmative declaratory relief”). The cases that Afiliás cites make no such findings. *DotConnectAfrica Trust* stated that “the Panel is of the view that it does have the power *to recommend* a course of action for the Board to follow as a consequence of any declaration that the Board acted or failed to act in a manner inconsistent with ICANN’s Articles of Incorporation, Bylaws or the Applicant Guidebook.”²²⁶ Similarly, *GCC* found that “the Panel may and should *recommend* affirmative steps to be taken by the Board[.]”²²⁷

124. Thus, neither the Bylaws nor any dictum in *DotConnectAfrica Trust* or *GCC* supports Afiliás’ contention that the Panel has authority to “*require* ICANN to disqualify NDC’s application and bid and to offer Afiliás the rights to .WEB,” which is what Afiliás seeks.²²⁸ Such

²²⁴ RLA-6

²²⁵ RLA-21

²²⁶ *DotConnectAfrica Trust v. ICANN*, ICDR Case No. 50 2013 001083, Final Declaration (9 July 2015) ¶ 126 (emphasis added), CA-0015.

²²⁷ *Gulf Cooperation Council (GCC) v. ICANN*, ICDR Case No. 01-14-0002-1065, Partial Final Declaration (19 October 2016) ¶ 147 (emphasis added), CA-0017.

²²⁸ Afiliás’ Reply Memorial ¶ 155 (bold added).

an order would exceed the Panel's authority as defined by the Bylaws and render the Panel's declaration invalid and subject to challenge under Article V(1)(c) of the New York Convention, which states that recognition and enforcement of an arbitral award may be refused where it "contains decisions on matters beyond the scope of the submission to arbitration."²²⁹ The Panel should decline Afilias' invitation to commit that clear error.

CONCLUSION

125. Afilias' claims lack merit and should be rejected. Afilias' contentions that ICANN violated its Articles and Bylaws in connection with its investigation in August and September 2016, and by not disqualifying NDC in late-2016, are time-barred and meritless. ICANN's investigation promptly and effectively gathered the information relevant to Donuts' and Afilias' claims regarding .WEB, and the Board exercised its reasonable business judgment in not making any decision while an Accountability Mechanism was pending regarding .WEB (which could have been the subject of other soon-to-be filed mechanisms) that could have had an impact on ICANN's need to make any such decision. Moreover, neither the Guidebook nor the Auction Rules mandate disqualification even if ICANN does ultimately determine that NDC violated either or both; each instead leaves the remedy to the discretion of ICANN to determine in the exercise of its business judgment. Furthermore, ICANN is not equipped or required to award .WEB or any other gTLD based on an evaluation of which applicant might most effectively contribute to competition. No party has sought ICANN's approval to assign .WEB to Verisign and, therefore, ICANN has made no decision with respect to such a request.

Re: Request for Update on ICANN's Investigation of .WEB Contention Set and Request for Documents under ICANN's Documentary Information Disclosure Policy

Dear ICANN:

We write on behalf of our client, Afilias Domains No. 3 Ltd. ("Afilias"), regarding the .WEB contention set. As stated in past correspondence, Afilias has several concerns with the 27-28 July 2016 auction for .WEB, including (1) Nu Dot Co LLC's ("NDC") apparent change in financial position, ownership, or control after submitting its application to ICANN but prior to the auction for .WEB; (2) NDC's assignment of rights in its application for .WEB to Verisign, Inc. ("Verisign") prior to the auction in breach of the gTLD Applicant Guidebook ("AGB"); and (3) the serious competition issues raised by Verisign's acquisition of .WEB in violation of ICANN's Bylaws and the AGB.¹ As discussed below, we are writing to: (1) request an update on ICANN's investigation of the .WEB contention set; and (2) request documents under ICANN's Documentary Information Disclosure Policy ("DIDP").

¹ See Letter from M. Scott Hemphill to Akram Atallah (8 Aug. 2016), <https://www.icann.org/en/system/files/correspondence/hemphill-to-atallah-08aug16-en.pdf>; Letter from M. Scott Hemphill to Akram Atallah (9 Sep. 2016), <https://www.icann.org/en/system/files/correspondence/hemphill-to-atallah-09sep16-en.pdf>; Letter from John Kane to Christine A. Willett (7 Oct. 2016).

I. Request for Update on ICANN's Investigation of .WEB Contention Set

Pursuant to Afilias' concerns in late 2016, ICANN requested "additional information"² regarding the .WEB auction from Afilias, Ruby Glen LLC ("Ruby Glen"), NDC, and Verisign on 16 September 2016.³ Afilias promptly responded to ICANN's request on 7 October 2016.⁴ Since Afilias submitted its response to ICANN over sixteen months ago, it has received no further communications from ICANN in regards to the .WEB contention set. ICANN has failed to update Afilias regarding its investigations relating to .WEB.

ICANN is obligated by its Bylaws to maintain "open and transparent processes."⁵ The principle of "[t]ransparency is one of the essential principles in ICANN's creation documents, and its name reverberates through its Articles [of Incorporation] and Bylaws."⁶ Pursuant to its Bylaws, ICANN is required to (1) "[e]mploy open, transparent and bottom-up, multistakeholder transparent public development processes"⁷ and (2) to "operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness."⁸

Therefore, pursuant to ICANN's transparency obligations,⁹ we respectfully request that ICANN provide an update on the status of ICANN's investigation of the .WEB contention set, including: (1) the steps (if any) taken by ICANN to disqualify NDC's bid on the basis that NDC violated the rules applicable to its application; and (2) the steps (if any) taken by ICANN to assess competition issues arising out of delegation of .WEB to Verisign.

We further request that ICANN take no action in regards to .WEB until Afilias can review and respond to the documents provided as a result of the below DIDP request; and that ICANN confirm that it has not, and will not, enter into a registry agreement for .WEB with

NDC until, to the extent Afilias seeks review of any decisions relating to .WEB through ICANN's accountability mechanisms, such mechanisms are completed. We nonetheless emphasize that Afilias reserves all of its rights to pursue any and all rights or remedies available to it in any forum against ICANN, NDC, or Verisign in connection with the delegation of the .WEB gTLD.

II. Request for Documents Pursuant to the DIDP

Afilias further submits this letter to request documents from ICANN, pursuant to ICANN's DIDP, related to (1) ICANN's 30 September 2016 request for additional information sent to Ruby Glen, Afilias, NDC, and Verisign; and (2) any investigation by ICANN of NDC and Verisign in relation to .WEB.¹⁰ The DIDP is "intended to ensure that information contained in documents concerning ICANN's operational activities, and within ICANN's possession, custody, or control, is made available to the public unless there is a compelling reason for confidentiality."¹¹ Pursuant to the DIDP, Afilias requests that ICANN provide the following documents:

1. All documents received from Ruby Glen, NDC, and Verisign in response to ICANN's 16 September 2016 request for additional information;¹²
2. Ruby Glen's Notice of Independent Review, filed on 22 July 2016;¹³
3. All documents filed in relation to the Independent Review Process between ICANN and Ruby Glen, initiated on 22 July 2016;¹⁴
4. All applications, and all documents submitted with the applications, for the rights to .WEB;

¹⁰ See Letter from Christine A. Willett to John Kane (16 Sep. 2016).

¹¹ See ICANN DIDP, <https://icann.org/resources/pages/didp-2012-02-25-en>. In responding to a request submitted pursuant to the DIDP, ICANN adheres to its *Process for Responding to ICANN's Documentary Information Disclosure Policy (DIDP) Requests*.

¹⁴ Complaint, *Ruby Glen, LLC v. ICANN*, 2:16-cv-05505, ¶ 53 (C.D. Ca. July 22, 2016).

5. All documents discussing the importance of .WEB to bringing competition to the provision of registry services;
6. All documents concerning any investigation or discussion related to
 - a. the .WEB contention set,
 - b. NDC's application for the .WEB gTLD,
 - c. Verisign's agreement with NDC to assign the rights to .WEB to Verisign, and
 - d. Verisign's involvement in the .WEB contention set, including all communications with NDC or Verisign;
7. Documents sufficient to show the current status of NDC's request to assign .WEB to Verisign;
8. Documents sufficient to show the current status of the delegation of .WEB;
9. All documents relating to the Department of Justice, Antitrust Division's ("DOJ") investigation into Verisign becoming the registry operator for .WEB ("DOJ Investigation"), including:
 - a. document productions to the DOJ;
 - b. communications with the DOJ;
 - c. submissions to DOJ, including letters, presentations, interrogatory responses, or other submissions;
 - d. communications with Verisign or NDC relating to the investigation; and
 - e. internal communications relating to the investigation, including all discussions by ICANN Staff and the ICANN Board; and

10. All joint defense or common interest agreements between ICANN and Verisign and/or NDC relating to the DOJ Investigation.

We reserve the right to request additional documents based on the provision of the above documents. Please promptly disclose the requested documents pursuant to the DIDP.

Sincerely,

Arif Hyder Ali

Re: Request for Updates on the .WEB Contention Set

Dear Members of the ICANN Board:

We write on behalf of our clients, Afilias Plc and Afilias Domains No. 3 Limited (together, “**Afilias**”), regarding the .WEB contention set. As we have explained in our prior correspondence, Afilias is deeply concerned by (1) the stated intention of Nu Dot Co LLC (“**NDC**”) to assign the .WEB gTLD to Verisign, Inc. (“**Verisign**”); (2) ICANN’s lack of transparency regarding its investigation of NDC, Verisign, and their agreement; (3) NDC and Verisign’s subterfuge in the context of the .WEB auction; and (4) the present status of the .WEB contention set.¹ We therefore write to request that ICANN update Afilias on the status of the issues that we have raised in prior correspondence.

We understand that the .WEB contention set is currently “On Hold.”² To the extent that this is not the case, we request that you inform us immediately and advise us of the actual status. In either case, we ask that ICANN provide Afilias with at least 60 days’ notice before taking any further steps to change the “On Hold” status that is currently stated on the ICANN website, so that, if necessary, Afilias can take appropriate legal action to protect its rights and preserve the status quo while those rights are decided.

¹ See DIDP Request 20180223-1 (23 Feb. 2018), <https://www.icann.org/resources/pages/didp-20180223-1-ali-request-2018-03-26-en>; see also Letter from S. Hemphill to A. Atallah (8 Aug. 2016), <https://www.icann.org/en/system/files/correspondence/hemphill-to-atallah-08aug16-en.pdf>; Letter from S. Hemphill to A. Atallah (9 Sep. 2016), <https://www.icann.org/en/system/files/correspondence/hemphill-to-atallah-09sep16-en.pdf>; Letter from J. Kane to C. Willett (7 Oct. 2016).

² See “Application Details,” ICANN (last visited 5 Apr. 2018), <https://gtdresult.icann.org/applicationstatus/applicationdetails/1053>.

01. Request for Update on the Current Status of the .WEB Contention Set

ICANN is not acting with transparency regarding the .WEB contention set. The principle of “[t]ransparency is one of the essential principles in ICANN’s creation documents, and its name reverberates through its Articles [of Incorporation] and Bylaws.”³ Pursuant to its Bylaws, ICANN must “operate to the maximum extent feasible in an open and transparent manner.”⁴ Despite this obligation, Afilias believes that ICANN has failed to update Afilias on changes to the .WEB contention set and the related accountability mechanisms.

ICANN pledged to notify Afilias of any changes to the .WEB contention set and the related accountability mechanisms. On 19 August 2016, Afilias was told that ICANN had “placed the .WEB contention set on-hold.”⁵ ICANN later explained that this status “was to reflect a pending ICANN Accountability Mechanism initiated by another member in the contention set”⁶—the cooperative engagement process (“CEP”) initiated by Donuts Inc. (“Donuts”) and Ruby Glen, LLC (“Ruby Glen”).⁷ ICANN also assured Afilias that its primary contact “*will be notified of future changes to the contention set status or updates regarding the status of relevant Accountability Mechanisms.*”⁸ Afilias has received no such notification from ICANN since ICANN made that assurance on 30 September 2016.

However, recent information from ICANN indicates that there may have been a change in the status of the accountability mechanisms relevant to the .WEB contention set. ICANN specifically changed the status of Donuts and Ruby Glen’s CEP to “recently closed” on 31 January 2018, and further indicated that their deadline to file an IRP was 14 February

⁶ *Id.*

⁷ The 30 September 2016 letter cites to the 22 August 2016 Cooperative Engagement and Independent Review Processes Status Update when describing the “pending ICANN Accountability Mechanism.” Letter from A. Atallah to S. Hemphill (30 Sep. 2016), <https://www.icann.org/en/system/files/correspondence/atallah-to-hemphill-30sep16-en.pdf>. The 22 August 2016 update states that Donuts and Ruby Glen initiated a CEP regarding .WEB on 2 August 2016. Cooperative Engagement and Independent Review Processes Status Update – 22 August 2016 (22 Aug. 2016), p. 1, <https://www.icann.org/en/system/files/files/irp-cep-status-22aug16-en.pdf>.

⁸ Letter from A. Atallah to S. Hemphill (30 Sep. 2016), <https://www.icann.org/en/system/files/correspondence/atallah-to-hemphill-30sep16-en.pdf> (emphasis added).

2018.⁹ Clearly, the status of the “relevant Accountability Mechanisms”¹⁰ changed, but Afilias still has not received any information from ICANN regarding these changes. Afilias therefore remains uncertain about the status of the accountability mechanisms related to .WEB.

These developments raise the possibility of changes to the status of the .WEB contention set as well as to the status of the accountability mechanisms. ICANN told Afilias that the .WEB contention set was placed “On Hold” because of Donuts and Ruby Glen’s CEP. However, ICANN recently published documents stating that Donuts and Ruby Glen’s CEP concluded and that there are no active Independent Review Processes.¹¹ As a result, Afilias has reason to believe that the status of the .WEB contention set has or will soon be changed.

Afilias’ belief is further supported by the recent response it received to DIDP Request No. 201802223-1.¹² In the response, ICANN informed Afilias that the “current status” for the .WEB gTLD is “in contracting.”¹³ While both the “Application Status” and the “Application Details” pages for NDC’s .WEB application state that the “Application Status” is “In Contracting,”¹⁴ the “Application Details” page still states that the “Contention Resolution Status” is “On Hold.”¹⁵ This inherent conflict remains unexplained. Furthermore, Afilias has received no communication from ICANN regarding any change to the contention set.

⁹ Cooperative Engagement and Independent Review Processes Status Update – 18 January 2018 (18 Jan. 2018), p. 2, <https://www.icann.org/en/system/files/files/irp-cep-status-31jan18-en.pdf>. The 29 March 2018 Cooperative Engagement and Independent Review Processes Status Update contains the same information, even though the 14 February 2018 deadline expired. *See* Cooperative Engagement and Independent Review Processes Status Update – 29 March 2018 (29 Mar. 2018), p. 2, <https://www.icann.org/en/system/files/files/irp-cep-status-29mar18-en.pdf>.

¹⁰ Letter from A. Atallah to S. Hemphill (30 Sep. 2016), <https://www.icann.org/en/system/files/correspondence/atallah-to-hemphill-30sep16-en.pdf>.

¹¹ Cooperative Engagement and Independent Review Processes Status Update – 29 March 2018 (29 Mar. 2018), pp. 2-3, <https://www.icann.org/en/system/files/files/irp-cep-status-29mar18-en.pdf> (stating that Donuts and Ruby Glen’s CEP concluded and that there are no active Independent Review Processes).

¹² *See* Response to DIDP Request 20180223-1 (24 Mar. 2018), <https://www.icann.org/resources/pages/didp-20180223-1-ali-request-2018-03-26-en>.

¹³ *Id.* at p. 11.

¹⁴ *See* “New gTLD Application Status” (last visited 6 Apr. 2018), <https://gtdresult.icann.org/applicationstatus/viewstatus> (stating that NDC’s application for .WEB is “In Contracting”); *see also* “Application Details,” ICANN (last visited 5 Apr. 2018), <https://gtdresult.icann.org/applicationstatus/applicationdetails/1053> (same).

¹⁵ *See* “Application Details,” ICANN (last visited 5 Apr. 2018), <https://gtdresult.icann.org/applicationstatus/applicationdetails/1053>. The “Application Status” page does not contain a field for the “Contention Resolution Status.” *See* “New gTLD Application Status” (last visited 6 Apr. 2018), <https://gtdresult.icann.org/applicationstatus/viewstatus>.

Given the above-described situation, Afilias requests that ICANN immediately inform Afilias of (1) the current status of the .WEB contention set, and, specifically, whether it remains “On Hold,” and (2) details regarding its current discussions or negotiations with NDC and/or Verisign related to the .WEB gTLD. And again, Afilias requests that ICANN provide Afilias with at least 60 days’ notice before taking any further steps to change the “On Hold” status that is currently stated on the ICANN website. Afilias further requests that ICANN take no steps regarding the delegation of the .WEB gTLD to NDC or Verisign unless and until Afilias’ rights to the domain are fully and finally determined by an independent decision-maker.

02. Request for Update on the Current Status of ICANN’s Investigation

In addition, Afilias further requests information on the current status of ICANN’s investigation of the .WEB contention set. In response to Afilias’ letters of 8 August 2016 and 9 September 2016, ICANN requested “additional information” regarding the .WEB auction from Afilias, Ruby Glen, NDC, and Verisign on 16 September 2016.¹⁶ Afilias promptly responded to ICANN’s request on 7 October 2016.¹⁷ Yet Afilias has received no information from ICANN regarding the investigation.

Indeed, ICANN has since refused to disclose information regarding its investigation. On 23 February 2018, Afilias asked ICANN to provide an “update on ICANN’s investigation of the .WEB contention set.”¹⁸ As indicated in the letter, Afilias made this request independent of the Documentary Information Disclosure Policy (“**DIDP**”) requests contained in the same correspondence.¹⁹ ICANN, however, mistakenly interpreted Afilias’ request as part of its DIDP request and refused to provide a status update.²⁰

Thus, Afilias renews its request for a status update on ICANN’s investigation of the .WEB contention set, and NDC’s agreement with Verisign, independent of ICANN’s DIDP.

¹⁶ See Letter from C. Willett to J. Kane (16 Sep. 2016), p.1.

¹⁷ See Letter from J. Kane to C. Willett (7 Oct. 2016).

¹⁸ DIDP Request 20180223-1 (23 Feb. 2018), p. 1, <https://www.icann.org/resources/pages/didp-20180223-1-ali-request-2018-03-26-en>

¹⁹ See *id.*

²⁰ Response to DIDP Request 20180223-1 (24 Mar. 2018), p. 1, <https://www.icann.org/resources/pages/didp-20180223-1-ali-request-2018-03-26-en> (“As such, your request for ‘an update on ICANN’s investigation of the .WEB contention set’ is beyond the scope of the DIDP and will not be addressed in this Response.”).

03. Afilias' Request for Prior Notification

Afilias requests the aforementioned updates because it intends to initiate a CEP and a subsequent IRP against ICANN, if ICANN proceeds toward delegation of .WEB to NDC. Afilias also reserves the right to pursue claims against ICANN in a court of law. As Afilias has previously informed ICANN, it has numerous objections to ICANN's conduct with respect to NDC's actions during the .WEB auction and its agreement to assign Verisign the .WEB gTLD, including but not limited to the antitrust and competition issues raised by Verisign's acquisition of the .WEB gTLD.²¹

Therefore, in the interests of transparency and to prevent unnecessary procedural disputes regarding a potential future IRP to be commenced by Afilias, Afilias reiterates its request that ICANN provide it with at least 60 days' notice of any change to the .WEB contention set's status.

Afilias reserves all of its rights and remedies in all available fora whether within or outside of the United States of America.

Sincerely,

Arif Hyder Ali
Partner

Re: .WEB

Dear Jeff:

Thank you for your letter dated 28 April 2018 on behalf of ICANN. However, we do not understand the basis for your assertion that “in this particular matter, ICANN has been quite transparent” about its conduct. To date, ICANN has provided *no* information about the investigation (if any) it has undertaken regarding the concerns raised by Afilias – viz., that the bid for .WEB that NDC supposedly made on its own behalf was in fact secretly funded by and made for the benefit of Verisign.

As you know, Afilias first raised its concerns that the conduct of NDC and Verisign had violated the rules set forth in the 2012 gTLD Applicant Guidebook in August 2016. In September 2016, ICANN sent Afilias a lengthy set of questions regarding Afilias’ concerns, which Afilias fully answered in October 2016. More than 18 months later, Afilias has received no further information from ICANN regarding this matter.

You refer in your letter to “papers publicly filed in the federal court action that Ruby Glen initiated,” but do not identify the particular submissions to which you are referring. We are of course aware of the questions that Ruby Glen raised in June and July 2016, concerning whether NDC had undergone a change in its ownership or control that caused its withdrawal from the private auction. You are perhaps referring to the exhibits reflecting the brief correspondence from July 2016, in which ICANN asked NDC if it had undergone any change in ownership or control, and NDC responded that it had not. But that correspondence pre-dates Verisign’s public acknowledgement in August 2016 that it had been the real party in interest behind NDC’s bid. We do not see anything in the public

record (whether in the *Ruby Glen* submissions or elsewhere) to indicate that ICANN has taken any steps to address the concerns that Afilias raised about the secret involvement of Verisign in NDC's bid, apart from issuing the written questions sent to Afilias and other members of the .WEB contention set in September 2016.

You also assert in your letter that "ICANN will continue to follow its processes." But ICANN has provided no information about what those "processes" are or when they will be completed. Indeed, the public information available to Afilias regarding the status of .WEB is contradictory. ICANN reports that the .WEB contention set is still "on hold" but that NDC's application status is "in contracting."¹ We do not understand how the contention set can be "on hold" if ICANN is currently "contracting" with NDC.

In the meantime, you assert that ICANN is rejecting Afilias' request for 60 days' notice of a change to the "on-hold" status of the .WEB contention set. Afilias' request is entirely reasonable. As we explained, Afilias has asked for this notice because – in the event that ICANN decides to delegate .WEB to NDC and/or Verisign – Afilias wishes to have adequate time to challenge that delegation *before* the delegation is made and a Registry Agreement is executed, which would otherwise result in irreparable injury to Afilias. It will not be to anyone's benefit if Afilias were to challenge the delegation successfully after ICANN has already entered into a Registry Agreement for .WEB with NDC and/or Verisign.

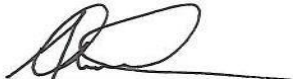

You also assert that providing Afilias with 60 days' notice to a change to the "on-hold" status would constitute a "special notice that is not available to others" But we are unable to find any provision in ICANN's "documented policies" stating the notice period to be given to applicants who plan to challenge a proposed delegation of contested TLD licensing rights. Afilias has no objection to ICANN's providing the same 60-day notice to any other member of the .WEB contention set or other parties who are similarly situated to Afilias. If ICANN believes that some other notice period is applicable, we would ask ICANN to state what the notice period is and to identify where in its policies such notice period is set forth.

¹ See <https://gtldresult.icann.org/applicationstatus/applicationdetails/1053>.

Finally, you assert that ICANN “vehemently disputes” our “characterizations.” At this point, we have no idea which of our “characterizations” ICANN is disputing, other than our assertion that ICANN has not acted transparently in this matter. (E.g., does ICANN dispute that Verisign secretly funded NDC’s bid or that Verisign was secretly the true party in interest behind NDC’s bid? If not, does ICANN actually believe that such conduct complied with the Guidebook, or that ICANN’s failure (so far) to address such conduct is consistent with its Core Values?) We can assure you that ICANN is not helping itself on the issue of transparency when it refuses to provide us with the basic information we have requested – including what (if anything) ICANN is doing to address Afilias’ concerns and how much notice Afilias might receive before ICANN makes a decision on the .WEB contention set and proceeds to enter a Registry Agreement.

We look forward to your prompt response on these matters.

Sincerely,

Arif Hyder Ali
Counsel for Afilias

INDEX OF EXAMINATION

---o0o---

CHRISTINE WILLETT	PAGE
CROSS-EXAMINATION (Cont'd) BY MR. De GRAMONT	601
REDIRECT EXAMINATION BY MR. LeVEE	766

1 CALIFORNIA, CALIFORNIA, AUGUST 6, 2020

2 ---o0o---

3 ARBITRATOR BIENVENU: Welcome, everyone,
4 to Day 4 of our hearing.

5 Before I ask our colleague JD to bring the
6 witness back into the hearing room, I would like to
7 convey to the parties the Panel's decision on the
8 request by the claimant to add three documents to
9 the record.

10 I begin by recalling that in Mr. De
11 Gramont's email dated 21st July 2020, counsel for
12 Afiliias wrote, and I quote, "Both parties have
13 agreed that only materials in the record may be
14 used to examine witnesses," end of quote.

15 This followed up on a letter dated 20 July
16 from Jones Day proposing 23rd July as a cut-off
17 date to supplement the record for the purpose of
18 the cross-examination of witnesses.

19 The document proposed to be added as
20 Exhibit C-186 is a letter authored by Meredith
21 Baker dating back to 2008, described as the cover
22 letter through which the NTIA transmitted to ICANN
23 the so-called Garza letter marked as Exhibit C-125.

24 The claimant avers in support of its
25 request to add this document to the record, and I

1 quote, "The Baker letter provides crucial
2 clarification regarding how the Garza letter came
3 to the attention of ICANN," close quote.

4 The claimant spent considerable time
5 cross-examining Ms. Burr about the Garza letter.
6 The claimant, therefore, knew of the use it
7 intended to make of the Garza letter. Had the
8 claimant felt it relevant to rely on the Baker
9 letter to provide context for the Garza letter, it
10 ought to have added this document to the record
11 before the agreed cut-off date of 23rd July.

12 The same reasoning applies in the opinion
13 of the Panel to proposed Exhibit C-185, which
14 consists of ICANN's answering brief in the Ruby
15 Glen litigation before the U.S. Federal Courts,
16 litigation to which reference is made in the
17 parties' pleadings.

18 The Panel takes a different view in regard
19 to proposed Exhibit C-184, which consists of Board
20 resolution relating to the CCWG-Accountability Work
21 Stream 1 report. These documents are directly
22 responsive to questions from the Panel and, indeed,
23 the Panel expected that ICANN would offer to
24 provide its position on the issue so raised by the
25 Panel by reference to documents even if those

1 documents were not already part of the record.

2 Accordingly, Afiliias's request is granted
3 in part. The addition of proposed Exhibits C-185
4 and C-186 is denied, but the addition of proposed
5 Exhibit C-184 to the record is allowed.

6 So thank you, all.

7 MR. ALI: Mr. Chairman, if I may.

8 ARBITRATOR CHERNICK: Oh, come on.

9 MR. ALI: Sorry, was that -- I think
10 somebody just said, "Oh, come on" to me. Should I
11 proceed?

12 ARBITRATOR BIENVENU: I don't know who
13 said that, but it wasn't a member of the Panel.

14 MR. ALI: Right. So, Mr. Bienvenu, just a
15 couple of points. We wish to thank the Panel for
16 accepting into the record the Board minutes
17 relating to the CCWG-Accountability. And with
18 respect to the two other documents which you have
19 denied, we will note our objection to the ruling on
20 the following. Just to make two points in
21 connection with that.

22 Number one is I thought that the Panel was
23 going to give us an opportunity to address ICANN's
24 submission in writing yesterday. I believe that
25 was something that had been indicated, which is why

1 we didn't simply go ahead and respond to what ICANN
2 had submitted.

3 And secondly, I accept that there was a
4 cut-off, but we are within the context of an
5 international arbitration, and within international
6 arbitration it is frequently the case that during
7 the course of hearings, as when issues are raised
8 by the questioning of witnesses by counsel and in
9 particular by questioning of a -- of a member of
10 the Tribunal or the Panel, that documents will be
11 admitted.

12 Now, a balancing act can be achieved by
13 instructing that a document not be put to a witness
14 because the issue here is of fairness.

15 We are not -- it would be entirely
16 appropriate for the Panel to say that such a
17 document cannot be put to a witness.

18 But insofar as the Ninth Circuit brief is
19 concerned, there is no surprise here to ICANN, I
20 mean, Mr. LeVee and Mr. Enson, counsel to ICANN in
21 the Ninth Circuit. They know exactly what they
22 said.

23 These are representations to a United
24 States Court that are inconsistent with
25 representations that they are making before you, or

1 potentially not, but we are happy to let them put
2 into the record anything else that they want to
3 give that document context.

4 But a very important issue here -- and you
5 could even admit this document as a legal
6 authority -- is the fact that it is in your
7 jurisdiction, and that jurisdiction is based on
8 what it is -- what the scope of the litigation
9 waiver is.

10 In fact, Mr. Chairman, you, yourself,
11 raised a question with Ms. Burr, and I note in your
12 rationales that you just gave us for denying the --
13 sorry, accepting the CCWG report was the fact that
14 questions had been raised by the Panel.

15 You, yourself, raised the question
16 regarding the issue of gap-filling role or the
17 gap-filling effect of the litigation waiver and the
18 IRP's jurisdiction, specifically you asked
19 Ms. Burr.

20 So if a claimant -- if an IRP doesn't have
21 jurisdiction to decide a claim, then you have to be
22 able to bring it to court, right, because it is not
23 arbitrable. If it is not arbitrable, you have to
24 be able to bring it to court.

25 You also went on, and you asked Ms. Burr,

1 "Ms. Burr, was there, so far as you can recollect,
2 a discussion of the effect of a gap between the
3 litigation waiver, the scope of the accountability
4 mechanisms, including any possible limitation on
5 the remedies that an IRP Panel could award?"

6 So a careful balancing here. In the
7 context of international arbitration, I would
8 instruct you cannot put these documents to any
9 witness because that would be unfair.

10 It is certainly a document that could be
11 added to the record together with any documents
12 from the litigation proceedings that we see fit so
13 that we can refer to these documents in our
14 discussions with you.

15 We can refer to these documents in
16 post-hearing briefing and potentially then oral
17 argument because it goes to the critical issue of
18 your jurisdiction in what is ultimately a
19 precedent-setting proceeding.

20 So with that, I will rest. Thank you.

21 ARBITRATOR CHERNICK: Mr. Chairman, I was
22 the person who made the comment, "Oh, come on." I
23 apologize to Mr. Ali, but my impression was that
24 the matter had been submitted and fully argued and
25 that we were going to proceed with the witness.

1 So my comment was simply directed to my
2 expectation that we were done with this issue and
3 that there would not be effectively a request to
4 reconsider.

5 MR. ALI: I don't think I was making a
6 request to reconsider. I was simply raising a
7 point based on our understanding of what the
8 Chairman had said yesterday. But I will say no
9 more, as it seems to be irritating you.

10 ARBITRATOR CHERNICK: So be it.

11 ARBITRATOR BIENVENU: Mr. Ali, thank you
12 for your comments. They are reflected in the
13 transcript.

14 And I will now ask you if either party has
15 any preliminary matter to raise before we bring the
16 witness back for the continuation of her
17 cross-examination?

18 MR. LeVEE: I do not, Mr. Chairman.

19 ARBITRATOR BIENVENU: Mr. Ali?

20 MR. ALI: Nothing other than to just
21 confirm that everything that we just discussed has
22 been on record.

23 Is that correct, Balinda?

24 THE REPORTER: Yes.

25 ARBITRATOR BIENVENU: Yes, of course.

1 MR. ALI: Yes. Thank you.

2 ARBITRATOR BIENVENU: Of course.

3 Very well. Can we then ask that
4 Ms. Willett be brought back into the hearing room,
5 please?

6 Good morning, Ms. Willett. This is Pierre
7 Bienvenu, Chair of the Panel.

8 THE WITNESS: Good morning, Mr. Chairman.

9 ARBITRATOR BIENVENU: So, Ms. Willett,
10 under the same solemn affirmation, we will continue
11 your cross-examination.

12 Mr. De Gramont, your witness.

13 MR. De GRAMONT: Thank you, Mr. Chairman.

14 CROSS-EXAMINATION (Cont'd)

15 BY MR. De GRAMONT

16 Q. And good morning, Ms. Willett. Thank you
17 again for being with us, particularly so early in
18 the morning. I have a few follow-up questions from
19 yesterday.

20 First of all, have you discussed your
21 testimony from yesterday with anyone?

22 A. No.

23 Q. Okay. Yesterday you testified that you
24 studied the guidebook upon assuming your position
25 at ICANN; is that correct?

1 A. That's correct.

2 Q. And did anyone tell you that you should
3 also study the bylaws and articles?

4 A. Not that I recall, no.

5 Q. Did anyone tell you that the guidebook had
6 to be applied consistently with the articles and
7 bylaws?

8 A. So in terms of any conversation with
9 counsel?

10 Q. No, just anyone. Did anyone at ICANN say
11 to you the articles and bylaws need to govern the
12 application of the guidebook?

13 MR. LeVEE: At what time?

14 Q. BY MR. De GRAMONT: Why don't we start
15 when you first arrived at ICANN.

16 MR. LeVEE: I am trying to interpose an
17 objection. I am concerned that the witness has now
18 identified that she may have had conversations with
19 counsel. So if it's okay, I'd like to warn her not
20 to disclose the contents of conversations with
21 counsel. Beyond that, I have no further objection.

22 MR. De GRAMONT: Thank you, Mr. LeVee.

23 Q. So let me ask it this way, and this is
24 just yes or no: Did anyone advise you when you
25 started at ICANN that the articles and bylaws

1 inform the application of the guidebook?

2 A. Not that I recall.

3 Q. Did anyone tell you at any point during
4 your time at ICANN that the articles and bylaws
5 should inform the interpretation and application of
6 the guidebook?

7 A. I don't recall anyone telling me that the
8 bylaws would inform the application of the
9 guidebook.

10 Q. Okay. Thank you. And if you don't
11 remember something when I ask you, just -- it is
12 perfectly fine to say you don't remember.

13 Okay. So let's pick up where we left off
14 yesterday. And -- I'm sorry, one more question
15 before we do that.

16 You said yesterday that there was no
17 separation agreement providing for you to give
18 testimony in this IRP.

19 Do I remember that correctly?

20 A. So the terms of that agreement are
21 confidential. So -- but it did not -- I will go so
22 far to say that it did not mention providing
23 testimony, no.

24 Q. So there was a separation agreement, but
25 it's confidential?

1 A. Correct.

2 Q. Okay. And do you have any other sort of
3 consulting agreement with ICANN that covers your
4 provision of testimony or assistance in this IRP?

5 A. No, nothing.

6 Q. Okay. So, again, going back to where we
7 left off yesterday, and we were looking at Exhibit
8 C-35, which is behind Tab 12 of your binder.

9 A. I am there.

10 Q. You are there?

11 A. Yes.

12 Q. And, again, this is the exchange of emails
13 between Mr. Nevett and Mr. Rasco in early June
14 2016. And, again, just to put this in context,
15 Mr. Nevett was an executive at Donuts, and Donuts
16 owned Ruby Glen and Ruby Glen was a member of the
17 .WEB contention set; is that correct?

18 A. That's correct.

19 Q. All right. So let me read Mr. Nevett's
20 email again. June 6, 2016. "Hi, guys. Jose and I
21 corresponded last week, but I wanted to take
22 another run at the three of you. Not sure if you
23 three are still the Board members of your
24 applicant, but I wanted to reach out to discuss a
25 couple of ideas. Until Monday, I believe that we

1 have a right to ask for a two-month delay of the
2 ICANN auction with the agreement of all applicants.
3 Would you be okay with an extension while we try to
4 work this out cooperatively?" End of quote.

5 Again, do you recall seeing Mr. Nevett's
6 email?

7 A. I may have seen it. I don't specifically
8 recall seeing this email until we discussed it
9 yesterday.

10 Q. Mr. Nevett is asking for a two-month delay
11 of the ICANN auction to see if the members of the
12 contention set could reach an agreement among
13 themselves to resolve the contention set; is that
14 your understanding?

15 A. Yes.

16 Q. And, again, the guidebook encourages
17 members of the contention set to resolve contention
18 among themselves, right?

19 A. Yes, it does.

20 Q. Okay. So there's nothing about
21 Mr. Nevett's request in that respect?

22 A. Correct. As long as it is prior to the
23 deadline of the request or prior to the blackout
24 period, the contention set members aren't supposed
25 to be discussing then, I would see nothing wrong

1 with that email.

2 Q. Okay. And you explain in your witness
3 statement that under the auction rules, applicants
4 can request a delay of the ICANN auction, but they
5 are all supposed to do that within 45 days of the
6 ICANN auction; do I have that right?

7 A. That's correct.

8 Q. So his reference to, quote, until Monday,
9 is probably a reference to that cut-off; is that
10 your understanding?

11 A. I would believe so.

12 Q. So on 7 June Mr. Rasco writes back to
13 Mr. Nevett, and this is what he says, quote, "John,
14 thanks for the message. Sorry for the delay. The
15 three of us are still technically the managers of
16 the LLC, but this decision goes beyond just us.
17 Nicolai is at NSR full-time and no longer involved
18 with our TLD applications. I'm still running our
19 program, and Juan sits on the Board with me and
20 several others. Based on your request, I went back
21 to check with all of the powers that be and there
22 was no change in the response, and we will not be
23 seeking an extension. It pains me personally to
24 stroke a check to ICANN like this, but that's what
25 we're going to have to do, just like others did on

1 .APP and .SHOP," end of quote?

2 Just to put this in context at the outset,
3 Nicolai is a reference to Mr. Bezsonoff; is that
4 your understanding?

5 A. I forget the names of the three
6 individuals on .WEB or NDC.

7 Q. Okay. You don't recall that it's -- you
8 recall that Mr. Rasco was one of them?

9 A. Yes.

10 Q. And that -- do you recall that Mr. Calle
11 was one of them?

12 A. I -- yeah, I recall that we looked at that
13 yesterday.

14 Q. Yes. And Mr. Bezsonoff was the third, we
15 looked at that yesterday?

16 A. I trust you, yeah.

17 Q. Okay. We can go back and take a look at
18 the document, but I'll represent to you that that's
19 what it says.

20 A. Very good.

21 Q. And do you know what NSR is a reference
22 to? It says, "Nicolai is at NSR full time."

23 A. I do not.

24 Q. And do you understand Juan to be a
25 reference to Juan Diego Calle?

1 A. I would believe so.

2 Q. Okay. Now, based on this email -- you saw
3 this email at the time in June, July 2016, I think
4 that's what you testified to yesterday?

5 A. At some point, it was four years ago, so
6 June, July, August, I would have to refer to my
7 testimony to determine the date when I --

8 Q. Sometime during that summer?

9 A. Yes.

10 Q. All right. And based on this email,
11 Mr. Nevett raised a concern that there might have
12 been a change of ownership or control over NDC.

13 Do you recall that?

14 A. Could you say that again?

15 Q. Yes. Based on the email, Mr. Nevett
16 raised a concern that there might have been a
17 change in ownership or control over NDC?

18 A. I don't see that in this email. Are you
19 referring to a different email?

20 Q. No. I am asking if you recall that based
21 on this email, after this email, Mr. Nevett raised
22 that concern?

23 A. Yes. I recall Mr. Nevett raising that
24 concern with me in June of 2016. I believe -- I
25 came to understand it was based on this email

1 exchange.

2 Q. And reading Mr. Rasco's email, you can see
3 why Mr. Nevett had that concern, would you agree?

4 MR. MARENBERG: Objection; calls for
5 speculation, no foundation.

6 MR. De GRAMONT: I am asking for the
7 witness' understanding, and I don't think it is
8 appropriate for Amici to object in any extent.

9 ARBITRATOR BIENVENU: I will allow --

10 MR. MARENBERG: May I briefly respond?
11 He's asking her to speculate on what Mr. Nevett was
12 thinking and what Mr. Rasco was thinking.

13 MR. De GRAMONT: I am asking -- first of
14 all, it is totally inappropriate for Amici to
15 object. This is not an Amici witness, and I will
16 ask the Chairman to instruct the Amici counsel not
17 to interject objections to witnesses that are not
18 being presented by the Amici. That's beyond the
19 scope of what the Panel ordered and what we agreed
20 to. So that's number one.

21 Number two, I am not asking the witness to
22 speculate. I'd also ask for objections to be made
23 in a form that doesn't suggest the answer to the
24 witness.

25 Number three, I am simply asking for the

1 witness' understanding of the text of the document
2 that we are showing to her.

3 ARBITRATOR BIENVENU: So as to Mr. De
4 Gramont's first point, we recalled yesterday the
5 parties' agreement on a one-counsel rule subject to
6 the possibility for the counsel cross-examining a
7 witness to consult with his team.

8 So the rule applies to all, and the
9 witness is -- has been introduced by Mr. LeVee. If
10 there are objections to be raised, he should raise
11 them himself. And my ruling stands, I will allow
12 the question.

13 Q. BY MR. De GRAMONT: So, Ms. Willett, just
14 reading Mr. Rasco's email, you can understand why
15 Mr. Nevett had raised a concern about the change of
16 ownership or control in NDC, can't you?

17 A. Well, I really -- I don't know what
18 Mr. Nevett was thinking, but this would not have
19 raised concerns to me about the ownership interest.
20 He says that the three of them are still
21 technically the managers of the LLC. That was what
22 was on their application. ICANN was concerned
23 about what was technically the case.

24 Q. Well, he says the decision as to whether
25 to participate in an ICANN auction or a private

1 auction, quote, "goes beyond just us," unquote. He
2 says that there are now additional Board members
3 beyond those identified in the application. He
4 says that in order to be able to answer whether he
5 can participate in a private auction or in an ICANN
6 auction, he has to check with all of the powers
7 that be.

8 In your view, that doesn't indicate that
9 someone else is -- now has an ownership or control
10 interest in NDC?

11 MR. LeVEE: Mr. Chairman, I do think that
12 this is starting to be very argumentative. The
13 witness has provided an answer.

14 MR. De GRAMONT: Again, I am asking for
15 the witness' understanding of the document and how
16 ICANN reacted to it at the time.

17 MR. LeVEE: She gave you an answer to the
18 question, and then what you did was you read more
19 of the paragraph and asked the same question.

20 MR. De GRAMONT: I am asking whether these
21 particular issues raised a concern that there had
22 been a change of ownership in the company. I am
23 simply pointing her to particular statements to
24 follow up on my earlier question.

25 ARBITRATOR BIENVENU: The question is

1 allowed.

2 THE WITNESS: So I can speak to my -- does
3 this raise an issue for me. Since it says that
4 Mr. Rasco was still managing, running the program,
5 managing the application, the fact that he had to
6 check with other individuals, that was sort of
7 common practice amongst applicants.

8 They often had dozens of people on a Board
9 of Directors, maybe a governing Board, an advisory
10 Board. They had all sorts of other executives they
11 would have to check with. So it wouldn't surprise
12 me that an individual like Mr. Rasco would have to
13 check with others.

14 Q. BY MR. De GRAMONT: So this communication
15 did not raise any concerns for you that there was a
16 change of ownership or control in NDC's ownership
17 or, for that matter, in NDC's application?

18 A. So, again, I didn't get this email until
19 some late date, but it did not drive me -- this
20 email alone would not have -- I guess I am sort of
21 talking about a hypothetical, but since I did
22 receive it, it didn't drive action in it. I am
23 just saying hypothetically it wouldn't have beyond,
24 you know, the action my team did take in June of
25 2016.

1 Q. Okay. Well, let's move on to that.

2 In Paragraph 19 of your witness statement,
3 again, that's behind Tab 1, the first sentence
4 reads, quote, "ICANN was first notified that Ruby
5 Glen had concerns that NDC had undergone a change
6 of control or ownership on 23 June 2016 by way of
7 an email from then Donuts Inc.'s cofounder and
8 executive vice president of corporate affairs, John
9 Nevett, sent to ICANN's customer portal."

10 And then you cite to Exhibit A of your
11 witness statement. So let's take a look at that
12 email, which is behind Tab 13 of your binder. It
13 is Willett Witness Statement Exhibit A, Page 2.

14 A. Yes.

15 Q. And it's the longer email in the middle of
16 the page, and it's very small. But Mr. Nevett
17 writes, "It has come to our attention that one of
18 the applicants for .WEB has failed to properly
19 update its application. Upon information and
20 belief, there have been changes to the Board of
21 Directors and potential control of NU DOT CO LLC
22 (NDC) that has materially changed its application.
23 To our knowledge, however, NDC has not filed the
24 required application change request," unquote.

25 He goes on to say, "We" -- this is the

1 second-to-last paragraph, quote, "We request that
2 ICANN investigate the change in NDC's Board and
3 potential control and that the ICANN auction
4 scheduled for July 27th be immediately postponed.
5 The auction should be scheduled after the final
6 investigation is complete and NDC's requisite
7 change request is resolved. We do not make this
8 request lightly and haven't done so in well over
9 100 other scheduled ICANN auctions," unquote.

10 In light of the email from Mr. Rasco that
11 we just looked at, this was a reasonable request,
12 don't you agree?

13 A. Based on subsequent conversations I had
14 with Mr. Nevett, I believe that this was a sincere
15 concern of his. I would be presuming what was the
16 basis of this email.

17 Q. And Mr. Nevett is correct when he writes
18 that if the ownership or control of NDC had
19 changed, NDC was required to report that and ICANN
20 needed to evaluate that change, he's citing to
21 Section 1.2.7 of the guidebook; is he correct in
22 that assertion?

23 A. Section 1.2.7 of the guidebook does govern
24 the changes that ICANN needs to be informed of,
25 yes.

1 Q. Going back to your witness statement,
2 Paragraph 20, Page 7. Tell me when you're there.

3 A. Yes.

4 Q. In reference to Exhibit A that we just
5 looked at, you write in Paragraph 20, quote, "The
6 only issue Mr. Nevett raised was his concern that
7 NDC may have undergone a change in ownership or
8 control. He did not mention that he thought
9 VeriSign might be involved with NDC's application
10 and, in fact, did not mention VeriSign at all."

11 Do you see that?

12 A. I do.

13 Q. My first question is: Do you have any
14 reason to believe that Mr. Nevett knew that
15 VeriSign might be involved in NDC's application?

16 A. I don't have any information on that.

17 Q. Are you suggesting that he was somehow at
18 fault for somehow not mentioning VeriSign in that
19 communication?

20 A. No, not at all.

21 Q. And you seem to draw a distinction between
22 the concern that NDC may have undergone a change of
23 ownership or control on the one hand and the
24 possibility that VeriSign might be involved with
25 NDC's application on the other.

1 Do I understand that correctly?

2 A. I'm sorry, I am not sure I understand the
3 question. Could you repeat that?

4 Q. Sure. So you say, "The only issue
5 Mr. Nevett raised was his concern that NDC may have
6 undergone a change in ownership or control. He did
7 not mention that he thought VeriSign might be
8 involved with NDC's application," end of quote.

9 So is there a distinction between the
10 concern that NDC may have gone -- undergone a
11 change in ownership or control from a concern that
12 VeriSign might be involved with NDC's application?

13 A. I wouldn't say that there was a concern or
14 a distinction. It was more -- it would have
15 been -- if VeriSign or any other entity had been
16 shared with me, it would have given my team another
17 direction to pursue and additional questions to ask
18 about, but insomuch it was about control and
19 ownership, we just followed up with NDC about those
20 matters.

21 Q. But if VeriSign had been involved with
22 NDC's application, that would suggest a resale or
23 transfer or assignment of NDC's rights and
24 obligations in the application.

25 Do you disagree?

1 A. Not necessarily.

2 Q. Okay. In paragraph -- let me back up.

3 So if -- you're saying that if Mr. Nevett
4 had mentioned VeriSign, it would have given you
5 another avenue to pursue and investigate?

6 A. We would have asked a question about that,
7 yes.

8 Q. Okay. In Paragraph 21, you write, quote,
9 "In view of Ruby Glen's concerns, ICANN immediately
10 investigated. Upon receipt of Mr. Nevett's 23 June
11 2016 email, I instructed my staff to investigate
12 the claims raised therein," unquote.

13 And you refer to an email dated 27 June
14 2016, which is Exhibit B. So let's take a look at
15 that, and that's at Tab 14 of your binder. Tell me
16 when you're there, Ms. Willett.

17 A. I am there.

18 Q. So the bottom -- the email at the bottom
19 is from Mr. Jared Erwin to Mr. Rasco. Who is
20 Mr. Erwin?

21 A. He was a member of the new gTLD Program
22 team.

23 Q. Do you recall what his title was?

24 A. I don't. I know that he was involved in
25 administering the auctions and contention set at

1 that time.

2 Q. How many investigations of this type had
3 he done before, do you know?

4 A. I don't know.

5 Q. How big was your staff at this time, do
6 you recall that?

7 A. June of 2016, approximately 35, perhaps
8 40.

9 Q. Okay. Were they all direct reports to
10 you?

11 A. They were not.

12 Q. Was Mr. Erwin a direct report to you?

13 A. He was not.

14 Q. Do you recall to whom he directly
15 reported?

16 A. As of that date, I was uncertain.

17 Q. So the first two sentences of Mr. Erwin's
18 email to Mr. Rasco read, quote, "We would like to
19 confirm that there have not been changes to your
20 application or the NU DOT CO LLC organization that
21 need to be reported to ICANN. This may include any
22 information that is no longer true and accurate in
23 the application, including changes that occur as
24 part of regular business operations (e.g., changes
25 to officers and directors, application contacts),"

1 period.

2 Do you recall that?

3 A. Yes.

4 Q. And did you see that email at the time
5 that Mr. Erwin sent it out?

6 A. It was four years ago. I don't recall.

7 Q. Now, Mr. Rasco appears to respond very
8 quickly, within about 48 minutes, but there are
9 different time zones. Do you know if all these
10 times are Pacific time?

11 A. I believe them to be Pacific time.

12 Q. In any event, Mr. Rasco responds, quote,
13 "I can confirm that there have been no changes to
14 the NU DOT CO LLC organization that would need to
15 be reported to ICANN."

16 Do you see that?

17 A. Yes.

18 Q. So he answers Mr. Erwin's questions about
19 whether any changes had been made to the NDC
20 organization, but he doesn't answer whether there
21 had been any changes to the application, correct?

22 A. Correct.

23 Q. And then Mr. Erwin responds very soon
24 thereafter, quote, "Thank you for confirming. No
25 further action is required of you at this time,"

1 unquote.

2 Just so I'm clear, when you write in your
3 witness statement that you asked your staff to
4 investigate the claims raised by Mr. Nevett, you're
5 referring to this exchange of emails here on
6 Willett Exhibit B; do I understand that correctly?

7 A. Yes, that was one of the steps. That was
8 the investigation as of June.

9 Q. Okay. Let's go back to this witness
10 statement. And at Paragraph 23 you state that on
11 29 June 2016, the next day, you met with
12 Mr. Nevett -- sorry. It is two days later. You
13 met with Mr. Nevett at the ICANN meeting in
14 Helsinki.

15 Do you recall that meeting?

16 A. I do.

17 Q. And Mr. Nevett again asked that the
18 auction be postponed based on his concerns about
19 NDC's ownership or management.

20 Do you recall that?

21 A. I do recall that.

22 Q. Okay. And according to your witness
23 statement -- I am looking at the middle sentence,
24 four lines down. It says, quote, "During this
25 meeting, I informed Mr. Nevett that my team had

1 already investigated the alleged management changes
2 with NDC's representative and that NDC asserted
3 that no such changes had occurred. I further
4 informed Mr. Nevett that, based on the fact that
5 ICANN had found no evidence of such a management
6 change, ICANN was continuing to proceed with the
7 auction as scheduled," unquote.

8 And, again, just so I'm clear, when you
9 told Mr. Nevett that the team had already
10 investigated and found no evidence of a management
11 change, you're referring to the exchange of emails
12 that we just looked at between Mr. Erwin and
13 Mr. Rasco; is that correct?

14 A. That's correct.

15 Q. And you again say, "At no time did
16 Mr. Nevett mention VeriSign."

17 Again, this is only a few days later, but
18 at this point you had no reason to believe that
19 Mr. Nevett should have been aware of VeriSign's
20 involvement in the application; is that correct?

21 A. I don't know what Mr. Nevett was aware of.

22 Q. But you have no reason to believe he
23 should have been aware of any involvement by
24 VeriSign?

25 A. That he should have been, no.

1 Q. Okay. Now, you go on to say in Paragraph
2 24 that you told Mr. Nevett in Helsinki that if he
3 was not satisfied with ICANN's course of action, he
4 had the option to invoke one of ICANN's
5 accountability mechanisms, and that's what
6 Mr. Nevett proceeded to do.

7 Do you recall that?

8 A. Yes. He contacted the ombudsman.

9 Q. And the ombudsman at that time was
10 Mr. Chris LaHatte. How do you pronounce that,
11 LaHatte?

12 A. I believe he says LaHatte.

13 Q. LaHatte. And you go on to say in
14 Paragraph 24, quote, "On 6 July 2016, the ombudsman
15 sent an email to NDC on which I was blind-copied
16 inquiring as to whether any changes in
17 ownership/control had taken place and noting that
18 he had," quote, "opened an ombudsman complaint file
19 about this matter," unquote. And that's at Exhibit
20 C of your witness statement.

21 So let's take a look at that. It is Tab
22 15 of your binder. Again, this is Willett Exhibit
23 C, Page 2, an email from Chris LaHatte dated July
24 6, 2016. Quote, "Dear, Mr. Rasco. I have received
25 a complaint from one of the applicants for .WEB as

1 follows: One or more applicants for .WEB made a
2 complaint to the ombudsman about changes to the
3 .WEB application by one of the applicants, being NU
4 DOT CO LLC. There is evidence from them (which I
5 have seen) which reveals that there have been
6 changes to the composition of NU DOT CO LLC's Board
7 that require it to go through an ICANN change
8 process," unquote.

9 Was the evidence that Mr. LaHatte was
10 referring to the exchange of emails between
11 Mr. Rasco and Mr. Nevett that we looked at earlier?

12 A. Mr. LaHatte didn't tell me specifically
13 what evidence he was basing that on.

14 Q. Were you aware of any evidence beyond that
15 exchange of emails?

16 A. No, I was not.

17 Q. Okay. Even though Mr. LaHatte decided to
18 open an ombudsman complaint, you decided that you
19 would speak to Mr. Rasco yourself; is that correct?

20 A. So I had a variety of conversations of
21 exchanges with Mr. LaHatte over the course of the
22 program, and all of which I believe were with
23 counsel and would have been privileged, but I could
24 speak to generally the nature of why I would have
25 sent an email -- contacted Mr. Rasco.

1 Q. In any event, two days after Mr. LaHatte's
2 letter to Mr. Rasco, you did send an email to
3 Mr. Rasco asking him to call you.

4 Do you remember that?

5 A. Yes. In essence, I was endeavoring to
6 gather additional information to inform
7 Mr. LaHatte's investigation that I could share with
8 him.

9 Q. And did you tell Mr. LaHatte that you were
10 reaching out to Mr. Rasco?

11 A. I may have. I don't recall specifically.

12 Q. Let's take a look at Tab 16, which is
13 Exhibit F to your witness statement. Tell me when
14 you're there.

15 A. Yes, I am.

16 Q. At the bottom we can see that you sent an
17 email to Mr. Rasco on 8 July 2020 asking him to
18 call you at his earliest convenience, right?

19 A. Yes.

20 Q. And you don't recall if you told the
21 ombudsman that you were going to send Mr. Rasco
22 this email?

23 A. I don't recall specifically telling him
24 one way or another.

25 Q. Do you recall telling anyone else at ICANN

1 that you were going to send this email to
2 Mr. Rasco?

3 A. In terms of conversations with counsel?

4 Q. For now let's leave it at yes or no. Did
5 you tell anyone at ICANN that you were going to
6 send this email to Mr. Rasco, that you recall?

7 A. Yeah, it's been four years. I don't
8 recollect.

9 Q. Do you recall if anyone at ICANN asked you
10 to send this email?

11 A. Not that I recall.

12 Q. In any event, Mr. Rasco called you later
13 that day; is that correct?

14 A. That's correct.

15 Q. And do you remember how long the
16 telephone -- he called you by telephone, I assume?

17 A. Yes.

18 Q. And do you remember how long the
19 conversation lasted?

20 A. I don't.

21 Q. Was anyone on the call besides you and
22 Mr. Rasco?

23 A. I believe I had one or two other staff
24 members from our team with me.

25 Q. Do you recall who they were?

1 A. I believe that it was Christopher Bare,
2 and I believe at the time it may have been
3 Ms. Christina Flores.

4 Q. Was anyone from ICANN listening to the
5 call?

6 A. Not that I recall, no.

7 Q. Okay. Did anyone take notes of the
8 conversation?

9 A. Ms. Flores did.

10 Q. Do you recall if she took them by hand or
11 were they typed?

12 A. Her practice was by hand. That's what I
13 recall.

14 Q. And what did she do with the notes, do you
15 recall?

16 A. I don't know.

17 Q. Do you know -- do you know if they still
18 exist?

19 A. I don't.

20 Q. Do you know if they were sent to the legal
21 department?

22 A. They may. I don't know.

23 Q. Okay. Your conversation with Mr. Rasco
24 took place on 8 July.

25 Do you remember that that was a Friday?

1 A. I don't recall what day of the week it
2 was, no.

3 Q. Well, the next day, Saturday, 9 July, you
4 wrote to the ombudsman to report on your
5 conversation with Mr. Rasco.

6 Do you remember that?

7 A. Yes.

8 Q. Okay. The email you sent to the ombudsman
9 is Exhibit D to your witness statement. It is
10 behind Tab 17 of your binder. So let's take a look
11 at it.

12 Again, it is Willett Witness Statement
13 Exhibit D, Saturday, July 9, 2016, and you copied
14 Amy Stathos and Herb Waye.

15 Can you tell us who Ms. Stathos is or what
16 her position was at the time?

17 A. She's deputy general counsel at ICANN.

18 Q. And when did Ms. Stathos get involved in
19 this process?

20 A. So Ms. Stathos is -- I believe she was
21 involved with the communications between the --
22 with the ombudsman from the beginning. That was
23 the standard practice, but I suppose maybe that's
24 privileged.

25 Q. I don't think it is.

1 A. Okay.

2 Q. Who was Herb Waye?

3 A. Mr. Waye was the -- don't know what his
4 formal title was. He was the assistant ombudsman,
5 secondary ombudsman.

6 Q. And when did he get involved?

7 A. I would have to review the emails, but I
8 believe it would have been part of the email
9 thread.

10 Q. Okay. So you write in the first paragraph
11 to Mr. LaHatte, quote, "I hope that this email
12 finds you well. I know that you have been in
13 communication with NU DOT CO LLC to inquire about
14 the recent complaint filed by Donuts regarding its
15 ownership and potential impact on the .WEB/.WEBS
16 auction," unquote.

17 Does this reflect your recollection as to
18 whether you had communicated with Mr. LaHatte
19 before contacting Mr. Rasco on Friday, July 8?

20 A. If I may review this.

21 Q. Yes.

22 A. Yes, I believe through this entire
23 exhibit, it goes back July 6, yes, I had been in
24 communication with Mr. LaHatte about this matter.

25 Q. Now, is it your understanding that the

1 ombudsman is supposed to be independent?

2 A. Yes.

3 Q. And so why are you gathering information
4 under the ombudsman under the oversight of the
5 deputy general counsel?

6 THE WITNESS: Should I be disclosing
7 conversations and direction?

8 MR. LeVEE: I will caution you not to
9 disclose communications with counsel, and I am
10 going to object to the statement in the question
11 that anything you were doing was under the
12 direction of the deputy general counsel.

13 Q. BY MR. De GRAMONT: Had someone asked you
14 to write this email to Mr. LaHatte?

15 A. Mr. LaHatte had -- in this matter, as in
16 many other matters, had asked me to provide
17 information -- the program team that I might have
18 to help inform his investigation so he could pursue
19 that independent investigation.

20 So he gathered information -- it is a
21 common practice. My understanding is he gathered
22 information from a variety of sources, including
23 asking me to provide information on certain
24 matters.

25 Q. Had you ever read the ombudsman charter

1 stated in ICANN's bylaws?

2 A. I don't specifically recall reading a
3 charter.

4 Q. Well, maybe we can put it up on the
5 screen. This is from the current bylaws, but it is
6 identical -- virtually identical to the bylaws in
7 place at the time. It is Exhibit C-1, Section 5.2.

8 MR. LeVEE: Is this in the binder?

9 MR. De GRAMONT: It is not in the binder.

10 Chuck, could you put that up and enlarge
11 Section 5.2?

12 It says, "The charter of the Ombudsman
13 shall be to act as a neutral dispute resolution
14 practitioner for those matters for which the
15 provisions of the Independent Review Process set
16 forth in Section 4.3 have not been invoked. The
17 principal function of the Ombudsman shall be to
18 provide an independent internal evaluation of
19 complaints by members of the ICANN community who
20 believe that the ICANN staff, Board or an ICANN
21 constituent body has treated them unfairly. The
22 Ombudsman shall serve as an objective advocate for
23 fairness, and shall seek to evaluate, and where
24 possible, resolve complaints about unfair or
25 inappropriate treatment by ICANN staff, the Board,

1 or ICANN constituent bodies, clarifying the issues
2 and using conflict resolution tools such as
3 negotiation, facilitation, and 'shuttle diplomacy'
4 to achieve those results," unquote.

5 Have you ever seen that before?

6 A. I may have. I don't specifically recall
7 an occasion.

8 Q. And here Mr. Nevett was asking the
9 ombudsman to look at a question which your staff
10 had already investigated and where Mr. Nevett was
11 unsatisfied with the results.

12 Do I understand that correctly?

13 A. Correct.

14 Q. Okay. So in the second sentence you
15 write, quote, "As you know, my team had reached out
16 to NU DOT CO LLC previously, and we received
17 confirmation that NU DOT's application materials
18 were still true and accurate."

19 Again, you're referring to that exchange
20 of emails between Mr. Erwin and Mr. Rasco that we
21 looked at earlier, right?

22 A. That's correct.

23 Q. You continue, quote, "In an effort to be
24 extremely cautious, I reached out to Mr. Jose
25 Ignacio Rasco (the application's primary contact

1 for NU DOT's .WEB application) again today to
2 ensure our understanding of his previous response
3 was accurate. During the call, he explained the
4 following:"

5 And then he goes through five different
6 points.

7 Do you see that?

8 A. Yeah, those were my points, yes.

9 Q. These were five points that Mr. Rasco had
10 conveyed to you and were summarized and notes taken
11 by your staff member?

12 A. Yes.

13 Q. Okay. And I think everyone can read the
14 first four points on his or her own.

15 I want to focus on Point 5, quote, "He,"
16 meaning Mr. Rasco, "was contacted by a competitor
17 who took some of his words out of context and is
18 using them as evidence regarding the alleged change
19 in ownership," period. "In communicating with that
20 competitor, he used language to give the impression
21 that the decision to not resolve contention
22 privately was not entirely his. However, this
23 decision was, in fact, his. He does not believe
24 that it is appropriate that this email conversation
25 is being used as evidence."

1 He goes on to say, quote, "Mr. Rasco
2 indicated that he provided you with similar
3 information, but I wanted to share the details of
4 our conversation in case they can provide you with
5 a more complete picture."

6 Do you recall that?

7 A. Yes.

8 Q. Now, did Mr. Rasco tell you during the
9 conversation that the decision to enter the ICANN
10 auction was, in fact, his decision; is that what he
11 told you?

12 A. Yes.

13 Q. And by this time, you had seen Mr. Rasco's
14 email to Mr. Nevett. Do I understand that
15 correctly?

16 A. I may have. Again, I don't -- I don't
17 recall when I specifically saw that email exchange.

18 Q. How could you possibly interview Mr. Rasco
19 without having that email in front of you,
20 Ms. Willett? Let's go back to Tab 12, which is
21 Exhibit C-35.

22 And Mr. Rasco has told you that the
23 decision to skip the private auction and go to the
24 ICANN auction was, in fact, his. But here in
25 Exhibit C-35, he is saying that the decision "goes

1 beyond just us."

2 Did you or anyone else at ICANN ask him
3 what he meant when he said the decision to go to
4 the ICANN auction, quote, "goes beyond just us,"
5 unquote?

6 A. Again, I don't recall having this email at
7 that time. You asked me the question how could I
8 have had the conversation with Mr. Rasco. But I
9 was having a conversation with Mr. Rasco based on
10 my conversation with Mr. Nevett in Helsinki and
11 based on Mr. LaHatte's general practice and request
12 that I provide him with information that I had.
13 That was the basis of my, again, reaching out to
14 Mr. Rasco.

15 Q. Ms. Willett, do you know if you or anyone
16 else at ICANN ever asked Mr. Rasco what he said --
17 what he meant when he said the decision to go to
18 the ICANN auction, quote, "goes beyond just us,"
19 unquote? Do you know if anyone ever asked that
20 question?

21 A. Again, I don't believe -- I don't recall
22 asking that question because I don't recall having
23 this email. The nature of the conversation with
24 Mr. Rasco, the way he described it, was like when
25 someone asks me if I'm available to go out to

1 dinner and I don't really want to go to dinner, but
2 I say, "Let me check with my husband. I need
3 my" --

4 Q. Ms. Willett, you are straying far from my
5 question, and I only have limited time.

6 MR. MARENBERG: Mr. Chairman, this is
7 Steve Marenberg. I believe that the witness is
8 entitled to finish her answer to the question.

9 MR. De GRAMONT: Mr. Chairman, we have had
10 an instruction that the Amici counsel not
11 intervene. The Amici counsel is only participating
12 in this hearing at the discretion of the Tribunal.
13 Are we going to have to ask for the Amici counsel
14 to be removed or will Amici counsel be able to
15 follow the Chairman's instructions?

16 ARBITRATOR BIENVENU: Mr. LeVee and
17 Mr. Marenberg, could you, one after the other,
18 respond to the objection that's just been made,
19 starting with you, Mr. LeVee?

20 MR. LeVEE: I did understand that there's
21 only one lawyer who is supposed to be raising
22 objections in this context, and that lawyer would
23 be me.

24 ARBITRATOR BIENVENU: Mr. Marenberg?

25 MR. MARENBERG: Mr. Chairman, I do believe

1 that we are different parties than Mr. LeVee
2 represents. In other words, he and I represent
3 different parties. So I don't believe that there
4 are two lawyers for one party objecting here.

5 Now, this is a matter in which Mr. De
6 Gramont is interrogating the witness about her
7 conversation with my client, and she is giving an
8 explanation of that conversation, and Mr. De
9 Gramont interrupted her in the middle of that
10 answer.

11 This answer bears on my client's rights,
12 and I believe that I appropriately have the right
13 to at least ask that her answer be heard in its
14 entirety before she's cut off, as is proper in
15 these types of proceedings.

16 Now, if you're going to tell me to be
17 quiet and I cannot represent my client even though
18 its interests are implicated in this question and
19 this line of inquiry, I will be quiet and not raise
20 any other objections, but that is why I interrupted
21 and interjected myself here.

22 I don't believe that I am representing the
23 same interest as Mr. LeVee and, therefore, we are
24 not subject to the one-counsel rule.

25 ARBITRATOR BIENVENU: Mr. Marenberg, you

1 are aware of the status granted to the Amici in
2 this proceeding under the Panel's decision in Phase
3 I. The status is that of an amicus curiae whose
4 contribution to the work of the Panel takes the
5 form of written submissions.

6 So I would indeed ask you to refrain from
7 making objections in the course of the
8 cross-examination of witnesses presented by the
9 respondent.

10 MR. MARENBERG: So noted, Mr. Chair, and I
11 will not make any more objections.

12 ARBITRATOR BIENVENU: Thank you,
13 Mr. Marenberg.

14 Q. BY MR. De GRAMONT: Now, Ms. Willett,
15 since Mr. Marenberg did intervene, you were going
16 to say that this was like being asked to a dinner
17 party and you wanted to make an excuse not to go to
18 have dinner with the person; is that what you were
19 going to say?

20 A. Yes, sort of using my husband as an excuse
21 as to being the decision maker about whether we go
22 to a dinner party or not when ultimately it's my
23 decision.

24 Q. And you know that's exactly the example
25 that Mr. Marenberg gave during his opening argument

1 to the Panel, did you know that?

2 A. No. No, I'm sorry, I didn't.

3 Q. Okay. So going back to Exhibit C-35 -- so
4 to your recollection, no one asked Mr. Rasco what
5 he meant when he said that the decision to go to
6 the ICANN auction, quote, "goes beyond just us,"
7 unquote?

8 A. I only know what I asked Mr. Rasco.

9 Q. Do you know if you or anyone else at ICANN
10 asked him who the several new Board members were?

11 A. Again, I don't recall having this email in
12 this time frame, so I don't believe that I would
13 have asked him about that.

14 Q. Okay. Did you or anyone else at ICANN ask
15 him whom he meant by, quote, "all the powers that
16 be," unquote?

17 MR. LeVEE: Can I just object? I don't
18 know how she has any way of knowing if anyone else
19 at ICANN --

20 Q. BY MR. De GRAMONT: To your knowledge. To
21 your knowledge, Ms. Willett.

22 A. Again, I can't speak to any other
23 conversations. I believe that in terms of program
24 interactions, it was my team and I that were the
25 channel for communicating with applicants, but I

1 don't know what anyone else might have conveyed.

2 Q. Even after an applicant had raised a
3 complaint to the ombudsman about your team's
4 investigation of the matter, you believe it was
5 your team's responsibility to continue
6 communicating with applicants about such matters?

7 A. Well, insomuch as the ombudsman, I don't
8 specifically recall in this situation, but my
9 general recollection is that the ombudsman asked me
10 to provide whatever information we had about the
11 matters he was investigating pertaining to new gTLD
12 applicant disputes.

13 So it was a matter of gathering that
14 information, fact-finding where we could to support
15 to provide that information in support of his
16 investigation.

17 Q. Did you coordinate your phone call to
18 Mr. Rasco with the ombudsman?

19 A. No.

20 Q. Let's go back to your witness statement.
21 And at Paragraph 29 on Page 9 you write, quote --
22 tell me when you're there.

23 A. I am there. Thank you.

24 Q. So you write, again, Paragraph 29, quote,
25 "On 12 July 2016, the ombudsman informed me that he

1 had determined that there was no reason to postpone
2 the auction because he found no evidence of a
3 change to the ownership or control of NU DOT CO,"
4 unquote.

5 Did you write this witness statement, by
6 the way?

7 A. I worked with ICANN's legal counsel to
8 draft this.

9 Q. Okay. And was "determined" your choice of
10 words, do you recall?

11 MR. LeVEE: Object; invades the privilege.

12 Q. BY MR. De GRAMONT: Let me ask it this
13 way: Do you recollect that the ombudsman informed
14 you that he had determined that there was no reason
15 to postpone the auction because he found no
16 evidence of a change to the ownership or control?

17 A. May I look at his email?

18 Q. Yeah, let's take a look at it. That's a
19 good idea.

20 Exhibit G is behind Tab 18 of your binder.
21 Tell me when you're there. Are you there,
22 Ms. Willett?

23 A. Yes. Thank you.

24 Q. So this is Mr. LaHatte's email to you,
25 Ms. Stathos is in copy. It's dated July 12th,

1 2016. He writes, quote, "I have not seen any
2 evidence which would satisfy me that there has been
3 a material change to the application, so my
4 tentative recommendation is that there is nothing
5 which would justify a postponement of the auction
6 based on unfairness to the other applicants,"
7 unquote.

8 So do you see a difference between the
9 terms "determination" and the term "tentative
10 recommendation"?

11 A. Certainly.

12 Q. He goes on to write, quote, "Is there any
13 particular reason why a postponement could not be
14 made anyway, or is the preparation for the auction
15 too far advanced? I make that suggestion not
16 because I agree with the complaint made by Donuts,
17 but because it would prevent them from perhaps
18 taking further accountability action based upon a
19 refusal to postpone, as, of course, this company
20 has demonstrated that they will be aggressive about
21 use of such accountability functions."

22 Do you recall that?

23 A. Yes.

24 Q. Did you sense any discomfort on the part
25 of Mr. LaHatte in having the public auction going

1 forward as scheduled based on this email?

2 A. I took this email to mean that he was
3 trying to help ICANN avoid having to deal with
4 further accountability mechanisms.

5 Q. And did you take this email to mean that
6 he had made a determination that resulted in
7 closing the ombudsman complaint on this matter?

8 A. I did. That's my recollection.

9 Q. Yeah, notwithstanding the words "tentative
10 recommendation"?

11 A. Well, I took that as being sort of
12 mitigated, suggesting that we delay the auction
13 anyway, which would have just been completely
14 inconsistent with program practices and all of the
15 rules of the auction that had been in place for
16 three years by that point.

17 Q. Did you speak to him in person or by
18 telephone or were all your communications in
19 writing?

20 A. Do you mean about this matter
21 specifically?

22 Q. Yes, about this matter specifically.

23 A. So at this juncture, I believe -- because
24 I was in LA, and I am not sure where he was, my
25 recollection is that any communication at this

1 juncture, July 12, 2016, would have been via email,
2 but given that we were at the public ICANN meeting
3 in Helsinki in late June, I don't recall
4 specifically meeting with him, but I expect I may
5 have had a conversation with Mr. LaHatte in
6 Helsinki about the .WEB matter in general.

7 Q. And that would have preceded this 12 July
8 email; is that correct?

9 A. Correct.

10 Q. Okay. So you don't recall any
11 conversation with Mr. LaHatte specifically about
12 this July 12 email?

13 A. I do not.

14 Q. Do you know if anyone responded to his
15 question, quote, "Is there any particular reason
16 why a postponement could not be made anyway, or is
17 the preparation for the auction too far advanced?"

18 A. I hope that respectfully I would have
19 responded, but I don't recall.

20 Q. And you don't recall whether anyone else
21 did either?

22 A. No, I don't know.

23 Q. In any event, the next day, 13 July, you
24 wrote to the contention set to advise them that the
25 ICANN auction would proceed as scheduled.

1 Do you recall that?

2 A. Is there another document I can look at?

3 Q. There is. It is not in your binder, but
4 VeriSign Exhibit 10. It is also Exhibit P to the
5 Rasco witness statement.

6 Chuck, could you put up VeriSign Exhibit
7 10. If you could go to the bottom, I think it is
8 the second-to-last paragraph on Page 1 -- on the
9 first page, sorry. If you could blow up the
10 second-to-last paragraph.

11 Quote, "The date to submit the
12 postponement form passed on 12 June 2016, and we
13 did not receive consensus from the contention set.
14 As such, no postponement was granted."

15 And then the next paragraph, "Secondly, in
16 regards to potential changes of control of NU DOT
17 CO LLC, we have investigated the matter, and to
18 date we have found no basis to initiate the
19 application change request process or postpone the
20 auction."

21 You can see at the top -- I think you can
22 see at the top it is dated July 13.

23 Do you recall writing that?

24 A. Let's see. I am just going to --

25 Q. Yeah, take your time. You can ask Chuck

1 to blow up any portions of the document that you
2 need to read.

3 A. It would be helpful if nothing was blown
4 up and I could just read through it.

5 Q. You can read that?

6 A. Yeah, thank you.

7 Could I ask to see the second page? Thank
8 you.

9 I have forgotten the question, sorry.

10 Q. It was simply do you recall that on July
11 13th -- is that the date of the letter -- July 13th
12 you wrote to the contention set to advise them that
13 the ICANN auction would go forward as scheduled?
14 That was simply my question.

15 A. Yes. Thank you.

16 Q. And that was the day after you had had
17 that exchange with the ombudsman where he wrote
18 about his tentative recommendation?

19 A. Correct.

20 Q. I take it you were under a lot of pressure
21 to make sure that the ICANN auction for .WEB went
22 forward on 27 July; is that true?

23 A. Oh, no, no, I wouldn't say we were under
24 pressure to conduct auctions at all. In fact,
25 ICANN would have preferred that we not have to

1 conduct any auctions of last resort.

2 Q. So you would have been -- ICANN would have
3 been pleased to postpone the auction, the ICANN
4 auction?

5 A. ICANN would have been pleased if the
6 applicants had found some way to resolve the
7 contention in the three-plus years until this
8 point, or we would have hoped that the applicants
9 could have agreed to submit a request for
10 postponement with -- in a timely manner.

11 But at the writing of this letter, I --
12 this letter saying we were proceeding could have
13 been a basis for any of the applicants to initiate
14 an accountability mechanism, to initiate a
15 reconsideration request saying that ICANN should
16 postpone the auction, and that would have put the
17 contention set on hold as of that date.

18 Q. So your testimony was once the ICANN
19 auction was scheduled for July 27, you were not
20 under any new pressure to make sure that it went
21 forward on that date?

22 A. Correct. I wouldn't say there was
23 pressure.

24 Q. Okay. Let's go back to your witness
25 statement and take a look at Paragraph 14, and it

1 says, quote, "The auction rules governing indirect
2 contention sets. Auction rules set forth a
3 prescribed and limited period of time within which
4 members of a contention set may request a
5 postponement of an auction," quote -- and you're
6 quoting from the rules -- "an applicant may request
7 an advancement/postponement request via submission
8 of the auction date advancement/postponement
9 request form. The form must be submitted at least
10 45 days prior to the scheduled auction date, and
11 ICANN must receive a request from each member of
12 the contention set," close quote.

13 And that's from Rule 10 of the auction
14 rules; is that correct?

15 A. I'd have to review the auction rules.

16 Q. Okay. Let's take a look at them. They
17 are behind Tab 20, which is Exhibit C-4.

18 ARBITRATOR BIENVENU: While the document
19 is being pulled up, Mr. De Gramont, at a convenient
20 time in the flow of your cross-examination, we
21 could take our first break.

22 MR. De GRAMONT: Mr. Chairman, may I
23 suggest I finish my questioning on this document
24 and then we can take our break then?

25 ARBITRATOR BIENVENU: Absolutely. If it

1 is convenient for you, we will take it then.

2 MR. De GRAMONT: Thank you, sir.

3 Q. Ms. Willett, we are at Tab 20 of your
4 binder, C-4, is this the auction rules that were in
5 effect in the summer of 2016?

6 A. I believe so.

7 Q. Now, if you turn to Page 4, bracketed Page
8 4, you'll see Rule 10 in about the upper half of
9 the page.

10 And maybe we can highlight the language
11 that starts, "The form must be submitted."

12 "The form must be submitted at least 45
13 days prior to the scheduled auction date and ICANN
14 must receive a request from each member of the
15 contention set," unquote.

16 So that's the language that you quoted in
17 your witness statement, right?

18 A. Correct.

19 Q. But then the sentence that you didn't
20 include in your witness statement says, quote,
21 "Without limiting the foregoing, ICANN reserves the
22 right at its sole discretion to postpone the
23 auction for any contention set due to a future date
24 regardless of whether each and every member of the
25 contention set has submitted a postponement

1 request," unquote.

2 Do you see that?

3 A. I do.

4 Q. So ICANN had within its discretion the
5 possibility of postponing the auction even though
6 not each and every member had submitted a
7 postponement request; is that correct?

8 A. That's correct.

9 Q. Was there any discussion of postponing the
10 auction beyond the discussion by the ombudsman that
11 we looked at in his email?

12 A. Again, I don't recollect a specific
13 conversation, but there may have been.

14 Q. But you don't recall?

15 A. Correct.

16 MR. De GRAMONT: Okay. This would be a
17 good time to take a break, Mr. Chairman.

18 MR. LeVEE: Mr. Chairman, very briefly,
19 could I ask that the witness be excused but that
20 the Panel and Mr. De Gramont remain for 30 seconds?

21 ARBITRATOR BIENVENU: Yes, of course.
22 This is Mr. LeVee speaking?

23 MR. LeVEE: Yes.

24 ARBITRATOR BIENVENU: Yes, very well.

25 So, Ms. Willett, under the same

1 restrictions as yesterday, that is, not to discuss
2 your testimony with anyone during the break. Thank
3 you very much, indeed.

4 Yes, Mr. LeVee -- sorry -- let's wait to
5 get confirmation from JD that the witness has been
6 removed.

7 MR. ENGLISH: Yes, the witness has been
8 removed.

9 ARBITRATOR BIENVENU: Thank you very much.
10 Please proceed.

11 MR. LeVEE: Yes. Yesterday, Mr. Chairman,
12 you said that we had a hard stop yesterday at a
13 particular time, and I wanted to let the Panel know
14 that the witness following Ms. Willett,
15 Mr. Disspain, is in the United Kingdom. And so he
16 said to me that he would not be terribly
17 comfortable -- if the Panel chose to stay late, he
18 would ask that he not be asked to testify.

19 He works during the day. So he will be
20 testifying later today, presumably, and it would be
21 until roughly 9:00 o'clock his time, and he would
22 not be comfortable testifying beyond that.

23 I raise it not because the Panel made any
24 decision whether it was going to extend this
25 particular day, but just to advise everyone. I am

1 not trying to influence the extent of the Willett
2 cross, not trying to have any other impact. I am
3 just alerting the Panel that today we would make a
4 request that we would not go late.

5 ARBITRATOR BIENVENU: Very well. It is a
6 comment that is made at an opportune time because
7 we had -- we had decided as a Panel that we would
8 offer the parties today to sit longer hours
9 precisely to -- well, to try to catch up on our
10 schedule.

11 So you're saying that if Mr. Disspain is
12 the witness being examined at this point, that
13 would be a problem for him?

14 MR. LeVEE: Yes. He is under the original
15 schedule. He was to be finished today, but it
16 looks quite unlikely because we are running a
17 little late. And I know that the estimate on
18 Ms. Willett is four hours, but we have already gone
19 two and a half and the binder is pretty thick. I
20 have no idea if we are stopping at four hours or
21 not.

22 Be that as it may, I have been looking at
23 the schedule and thinking that we would be in the
24 middle of Mr. Disspain's cross-examination if, in
25 fact, that's how it occurs.

1 ARBITRATOR BIENVENU: All right. Well,
2 thank you for advising us of this.

3 MR. MARENBERG: Mr. Chairman, this is
4 Steve Marenberg. I would suggest that all counsel
5 need to talk about scheduling. Because we had
6 mentioned a while ago last week that Mr. Rasco is
7 scheduled to testify on Friday, and he is not
8 available the following week because he's on
9 vacation.

10 I think before we dump this problem in the
11 laps of the Panel, maybe counsel ought to talk
12 about what we suggest the Panel does and we do that
13 either on this break or the next break.

14 ARBITRATOR BIENVENU: Well, that would
15 seem to me to be a sensible proposal. I know that
16 counsel have important things to do during our
17 short breaks, but perhaps they could find five
18 minutes to, as you suggest, have a chat about
19 scheduling and report back to the Panel.

20 MR. MARENBERG: Thank you, Mr. Chairman.

21 MR. De GRAMONT: I would suggest we do
22 that at the next break, if that's -- oh, there
23 isn't another break, is there?

24 MR. LeVEE: No, no, there's another break.

25 ARBITRATOR BIENVENU: There's another

1 break.

2 MR. De GRAMONT: Let's do that at the next
3 break.

4 ARBITRATOR BIENVENU: For our guidance,
5 Mr. De Gramont, and if you prefer to answer this
6 after the break, that's fine, but do you have a
7 sense of where you are in your game plan?

8 MR. De GRAMONT: Mr. Chairman, I would
9 prefer to answer that after the break so I can
10 confer with my colleagues.

11 ARBITRATOR BIENVENU: Perfect. So we will
12 take our first 15-minute break. Thank you all.

13 MR. De GRAMONT: Thank you.

14 (Whereupon a recess was taken.)

15 ARBITRATOR BIENVENU: So, Mr. De Gramont,
16 you are ready to continue your cross-examination?

17 MR. De GRAMONT: I am, Mr. Chairman.

18 ARBITRATOR BIENVENU: Is the witness back
19 with us?

20 MR. ENGLISH: Not yet. Should I call her
21 now?

22 ARBITRATOR BIENVENU: Please call her,
23 yes.

24 Mr. LeVee, you are there?

25 MR. LeVEE: I am here. I'm sorry if I'm

1 late. We didn't even get a signal to rejoin.

2 ARBITRATOR BIENVENU: Okay. Well, you're
3 forgiven.

4 MR. LeVEE: Thank you.

5 MR. De GRAMONT: I forgive you too,
6 Mr. LeVee.

7 MR. ENGLISH: The witness is in the room
8 with us now.

9 ARBITRATOR BIENVENU: Ms. Willett, we will
10 continue your cross-examination.

11 Mr. De Gramont.

12 MR. De GRAMONT: Thank you, Mr. Chairman.

13 And welcome back, Ms. Willett.

14 Q. I'd like to direct your attention back to
15 Tab 16 in your binder, which is Exhibit F to your
16 witness statement, and I believe we had looked at
17 the bottom portion of this document before, which
18 is the July 8, 2016, email where you asked
19 Mr. Rasco to call you.

20 Now I'd like to take a look at the upper
21 portion of that document, which is an email that
22 Mr. Rasco wrote to you. I can't tell -- there
23 doesn't seem to be a date. Am I missing it or do
24 you know what the date of this email is?

25 A. I don't see a date either. I don't

1 recall. It references last Friday. So I suppose
2 it was the week after -- 9, 10 -- week of the 11th.

3 Q. Okay. So in the first paragraph he
4 writes, quote, "Thank you for taking the time to
5 speak with me last Friday, July 8, concerning the
6 complaint that another applicant for the .WEB TLD
7 made to the ICANN ombudsman, Chris LaHatte,
8 relating to an alleged change in the composition of
9 NU DOT CO LLC's," quote, "Board," unquote. "I am
10 writing to reiterate the information I provided you
11 on our call so that the facts are clear," unquote.

12 The third paragraph, he writes, "My
13 understanding from our discussion is that ICANN is
14 satisfied with the information I provided and has
15 concluded there's no basis for any complaint,
16 reevaluation or other process relating to our
17 application, nor for any delay in the ICANN
18 auction. Please let me know if that is not the
19 case," unquote.

20 Did you tell Mr. Rasco during your
21 conversation on Friday, July 8th, that ICANN was
22 satisfied with the information that he had
23 provided?

24 A. I honestly don't recall all of the
25 specifics of the conversation.

1 Q. Okay. In the next paragraph he goes on to
2 cite Rule 10 of the auction rules, which we
3 discussed, and in the next sentence he writes,
4 quote, "As we discussed, I share your understanding
5 that the complaint was raised in order to get more
6 time to convince us to resolve the contention set
7 via a private auction even though we have made it
8 very clear to them (and all other applicants) that
9 we will not participate in a private auction and
10 that we are committed to participating in ICANN's
11 auction as scheduled," period, unquote.

12 Did you tell Mr. Rasco that you believed
13 the complaint had been raised simply to convince
14 NDC to resolve the contention set via a private
15 auction rather than going to the ICANN auction?

16 A. Again, I don't recall all of the specifics
17 of that phone conversation with Mr. Rasco.

18 Q. Do you recall if you told Mr. Rasco that
19 you thought the complaint had no merit?

20 A. I don't recall saying that.

21 Q. Had you concluded at that point that the
22 complaint had no merit?

23 A. Again, I am not certain of the date of
24 this communication and I know, as we just looked
25 at, I was still awaiting response from Mr. LaHatte.

1 My general recollection is that it was --
2 this understanding of mine that I seem to have
3 shared with Mr. Rasco, this understanding that the
4 other applicants wanted more time to resolve
5 contention, I took that based on the conversation
6 and communications from other applicants, including
7 Mr. Nevett.

8 Q. Ms. Willett, we have limited time. So I
9 am going to restate my question, which was: Do you
10 recall telling Mr. Rasco during that conversation
11 on Friday, July 8th, that your understanding was
12 that the complaint was raised to get more time to
13 convince NDC to resolve the contention set via
14 private auction rather than ICANN auction?

15 A. Again, I don't recall the specifics of the
16 conversation from over four years ago.

17 Q. Do you recall telling anyone else that
18 you -- at that time, Friday, July 8th, that you
19 believed that the complaint had been raised simply
20 as a ploy to get NDC to proceed with the private
21 auction rather than the ICANN auction?

22 A. I have that as a general recollection, but
23 I don't recall a specific conversation from four
24 years ago.

25 Q. Okay. You have a general recollection

1 that you told others at ICANN that you thought the
2 complaint was simply a ploy to get others to --
3 rather, to get NDC to participate in the ICANN
4 auction?

5 A. I apologize. I have a general
6 recollection that it was my understanding that
7 applicants were seeking a postponement to
8 independently resolve and avoid an ICANN auction.
9 That is my general recollection and understanding.

10 I don't recall having a specific
11 conversation with anyone about that from four years
12 ago.

13 Q. Do you have any reason to believe that you
14 did not tell Mr. Rasco that you thought the
15 complaint was raised in order to convince NDC to
16 resolve the contention set via private auction
17 rather than an ICANN auction?

18 A. No.

19 Q. Have you reviewed the Domain Acquisition
20 Agreement, Ms. Willett, that was entered into
21 between NDC and VeriSign?

22 A. I have not.

23 Q. You have never seen it?

24 A. I have seen -- in preparation for this I
25 may have seen portions of it, but I have never

1 reviewed it.

2 ARBITRATOR BIENVENU: Mr. De Gramont, can
3 you clarify whether you are asking the question by
4 referring to the time period just prior to
5 Ms. Willett's testimony or back when these events
6 were occurring?

7 MR. De GRAMONT: That's helpful,
8 Mr. Chairman. Thank you.

9 Q. Prior to your preparation for this
10 testimony, had you seen the Domain Acquisition
11 Agreement?

12 A. I had not.

13 Q. You never saw the Domain Acquisition
14 Agreement in 2016?

15 A. That's correct.

16 Q. Okay.

17 Redacted - Third-Party Designated Confidential Information

18

19

20 MR. LeVEE: Let me remind you of the
21 issues relating to privilege, Ms. Willett, and ask
22 you not to disclose information that you acquired
23 from counsel.

24 Q. BY MR. De GRAMONT: It is a yes-or-no
25 question.

1 MR. LeVEE: No, I don't think that's an
2 appropriate question, if anything that she knows
3 comes from counsel.

4 MR. De GRAMONT: Well, let's do this.

5 Q. Let's take a look at the DAA, which is Tab
6 19, Exhibit C-69 in your binder.

7 A. I am there.

8 Q. And I would direct you, please, to Page
9 17, Paragraph (i), and I am just going to read some
10 of the language to you, and you can tell me if it
11 rings any bells.

12 Redacted - Third-Party Designated Confidential Information

13

14

15

16

17

18

19

20

21

22

23

24

25

1 Do you have any recollection about hearing
2 about that provision in the DAA in 2016?

3 A. No.

4 Q. Looking at that provision, isn't it
5 obvious that Mr. Rasco was telling Mr. Nevett the
6 truth when he said that the decision went beyond
7 simply us and that he had to check with the powers
8 that be in order to answer the question?

9 MR. LeVEE: I object to the question.
10 Ms. Willett is not a lawyer. The question asks an
11 ultimate conclusion. And she's testified that she
12 did not see the documents during 2016, so I don't
13 see how her views today could possibly be relevant.

14 MR. De GRAMONT: I am not asking for a
15 legal opinion. I am just simply asking whether,
16 based on the plain language of this agreement,
17 isn't it obvious that Mr. Rasco was telling
18 Mr. Nevett the truth when he said that the decision
19 whether to participate in a private auction or an
20 ICANN auction went beyond the three individuals
21 identified in the NDC application.

22 MR. LeVEE: It's the same question.
23 "Isn't it obvious" asks her for a legal conclusion.
24 You're asking her to --

25 ARBITRATOR BIENVENU: Mr. LeVee.

1 yes-or-no question.

2 Redacted - Third-Party Designated Confidential Information

3

4

5

6

MR. LeVEE: That is an objectionable
7 question. There's another way of asking it. But
8 if what she knows comes from a lawyer, then you're
9 asking to invade the privilege by the fact that a
10 lawyer may have said something to her.

11

12

13

MR. De GRAMONT: For now I just want a
yes-or-no question. If I ask a follow-up, I think
Mr. LeVee can object then.

14

15

16

17

MR. LeVEE: No. Because you have asked,
"Yes or no, did somebody tell you that the
agreements mean something?" If someone told her
that, that's a privileged communication.

18

19

MR. De GRAMONT: Not if it came from a
nonlawyer.

20

MR. LeVEE: You didn't ask that question.

21

22

MR. De GRAMONT: I said "did anyone," "did
anyone."

23

MR. LeVEE: Ask a nonlawyer question.

24

25

ARBITRATOR BIENVENU: Gentlemen, could I
ask you both, rather than engage in a conversation,

1 to address the Panel?

2 MR. LeVEE: My apologies.

3 ARBITRATOR BIENVENU: Mr. De Gramont,
4 perhaps you could ask the witness if aside from
5 conversations that she may have had with counsel,
6 rather than, you know, the rest of the question.

7 MR. De GRAMONT: Okay. Thank you,
8 Mr. Chairman.

9 Q. Redacted - Third-Party Designated Confidential Information
10
11
12
13

14 A. No.

15 Q. Okay. Let's take a look at Paragraph 18
16 in your witness statement.

17 A. Yes.

18 Q. And you write, quote, "Even if NDC had
19 submitted a change request indicating that it had
20 undergone a change of control and/or ownership, NDC
21 would not have been disqualified from the auction
22 set to take place on 27 July 2016."

23 Do you recall that?

24 A. Yes.

25 Q. And we now know that VeriSign did not

1 acquire ownership control -- let me ask you this:
2 Is it your understanding -- do you have an
3 understanding as to whether VeriSign acquired
4 ownership or control over NDC the entity?

5 A. Well, that's not my understanding.

6 Q. Okay. Your understanding is that VeriSign
7 did not acquire ownership or control over NDC the
8 entity, correct?

9 A. Correct.

10 Q. So Paragraph 18 in your statement, that
11 even if NDC had submitted a change request
12 indicating that it had undergone a change of
13 control and/or ownership is simply a hypothetical,
14 right?

15 A. Yes, that's a -- yes.

16 Q. Under your understanding of the change
17 request process, could applicants submit a change
18 request that they were reselling, assigning or
19 transferring the rights and obligations in their
20 application?

21 A. So they couldn't transfer their
22 application to another entity, no. But applicants
23 all the time had engaged third parties to act on
24 their behalf.

25 Q. Right.

1 A. As part of the application processing.

2 Q. And have you formed a view -- well, you
3 haven't formed a view of whether that's what
4 happened here because you never reviewed the DAA;
5 is that right?

6 A. That's correct.

7 Q. Okay. Let's move on to another subject.

8 So the ICANN auction went forward as
9 scheduled on 27 July 2016; is that correct?

10 A. Yes.

11 Q. And did the auction continue into the next
12 day, 28 July; do I understand that correctly?

13 A. That's my recollection, yes.

14 Q. And NDC was declared the winning bidder
15 with a bid of 142 million.

16 Do you recall that?

17 A. I don't know what NDC's ultimate bid was.
18 I understand what the second bid was.

19 Q. And that's because under the auction
20 rules, the winning bidder paid the bid that the
21 second highest bidder had made?

22 A. Correct.

23 Q. And Afilias submitted the second highest
24 bid, which was 135 million, right?

25 A. That's come to be my understanding, yes.

1 Q. So NDC's bid was effectively 135 million;
2 is that right?

3 A. Correct.

4 Q. Okay. On 28 July 2016 VeriSign published
5 a 10-Q statement with the U.S. Securities and
6 Exchange Commission, or the SEC, and in the
7 footnote stated that, quote, "The company incurred
8 a commitment to pay approximately \$130 million for
9 the future assignment of contractual rights, which
10 are subject to third-party consent," unquote.

11 Do you recall that?

12 A. I recall seeing that at some point.

13 Q. And the media immediately picked up on
14 that footnote and speculated that VeriSign was
15 behind NDC's application for .WEB.

16 Do you recall that?

17 A. Not specifically.

18 Q. Look at what's behind Tab 21 of your
19 binder. It is Exhibit C-98, and it is an email
20 dated July 28, 2016, from Domain Name Wire to
21 ombudsman@ICANN.org, "Subject: It looks like
22 VeriSign bought .WEB domain for 135 million (SEC
23 filing)."

24 Do you recall if you ever saw this
25 particular report?

1 A. I don't ever recall seeing this.

2 Q. The fourth paragraph says, "VeriSign was
3 rumored to be backing NU DOT CO's bid for the
4 domain name."

5 Have you ever heard such rumors?

6 A. Prior to or during the auction, no.

7 Q. Prior to and during the auction you had
8 never heard rumors that VeriSign was financially
9 backing the NDC bid?

10 A. I had not, correct.

11 Q. Would you turn to Tab 22, which is Exhibit
12 C-99, and this is an email from Google Alerts sent
13 to you on Thursday, July 28, 2016. And if you turn
14 to Page 2, you will see at the bottom of the page a
15 title that reads, quote, "Someone (cough, cough
16 VeriSign) just gave ICANN 135 million for the
17 rights to .WEB."

18 It goes on to say, "Under the auction
19 rules, all 135 million will now go into ICANN's
20 coffers, to be added to the 105 million it has made
21 from the auction of 15 other top-level domains."

22 Did you ever see that article?

23 A. Not that I recall.

24 Q. Is it correct that the 15 prior auctions
25 had generated 105 million? And I should say -- let

1 me start over.

2 Is it your recollection that the 15 prior
3 ICANN auctions had yielded \$105 million in bids?

4 A. That sounds about right. I don't have a
5 specific recollection without looking at the web
6 page that reports that, but it sounds generally
7 correct.

8 Q. Do you recall that .WEB generated a bid
9 that was more than the bids in all of the 15 prior
10 auctions put together?

11 A. That sounds about right.

12 Q. And these moneys that are generated in the
13 ICANN auctions don't include the \$185,000
14 application fees that each applicant paid; is that
15 correct?

16 A. That's correct. The ICANN auction
17 proceeds are kept in a separate fund, separate
18 account, segregated from the new gTLD Program funds
19 as well as segregated from ICANN's operating funds.

20 Q. How many applications did you say were
21 filed during the new gTLD Program?

22 A. 1,930 applications.

23 Q. And we multiply that by 185 -- my math
24 isn't good enough to do that, but it is a lot of
25 money?

1 A. It is over \$360 million.

2 Q. Do you recall -- let's do this. Let's
3 take a look at Paragraph 33 of your witness
4 statement.

5 A. Okay.

6 Q. It says, quote, "I am informed and believe
7 that on 1 August 2016, VeriSign made a public
8 announcement that it had entered into an agreement
9 with NDC regarding .WEB," unquote.

10 Who informed you of that?

11 A. I don't specifically recall.

12 Q. Did you see the 1 August 2016 press
13 release on the day that it was issued?

14 A. I believe I did review that.

15 Q. Now, Paragraph 34 you write, quote, "At no
16 time before VeriSign's public announcement did any
17 applicant ever raise a concern to me that VeriSign
18 was involved with NDC's application, nor was I
19 aware of VeriSign's involvement until it publicly
20 announced its agreement with NDC," period, close
21 quote.

22 When you are speaking of the public
23 announcement, you mean the 1 August 2016 press
24 release issued by VeriSign?

25 A. That's correct.

1 Q. Now, do you recall that Mr. Rasco sent an
2 email to you the night before the 1 August 2016
3 press release Redacted - Third-Party Designated Confidential Information
4

5 A. Yes. I recall receiving an email from
6 Mr. Rasco.

7 ARBITRATOR KESSEDJIAN: Mr. De Gramont,
8 are you sure you are speaking of a press release of
9 August 16? I think it was August 1st.

10 MR. De GRAMONT: I had meant to say 1
11 August 2016. I may have misspoken.

12 ARBITRATOR KESSEDJIAN: No, no, it may be
13 my -- as you know, in France we speak of dates in a
14 very different way. I may have been mistaken.
15 Okay.

16 Q. BY MR. De GRAMONT: So let's take a look
17 at that email, which is behind Tab 23. It is
18 Exhibit C-100. And let's -- are you there,
19 Ms. Willett?

20 A. I am. Thank you.

21 Q. And looking at the very bottom of the
22 page, Mr. Rasco writes you on July 31st, 2016,

Q. Were you at all curious why someone from VeriSign would be contacting Mr. Atallah -- I'm sorry. Let me break it down.

Redacted - Third-Party Designated Confidential Information

1 Redacted - Third-Party Designated Confidential Information

2

3 A. I don't recall, but likely, yes, probably
4 piqued my curiosity.

5 Q. And similarly you were curious as to why
6 someone from VeriSign would be contacting
7 Mr. Atallah about the .WEB application?

8 A. Not that I recall.

9 Q. Okay. Did you forward Mr. Rasco's email
10 to anyone at ICANN?

11 A. Not that I recall.

12 Q. Did you discuss it with anyone at ICANN?

13 A. No, I'm sorry, I don't recall.

14 Q. Redacted - Third-Party Designated Confidential Information

15

16

17 A. I don't know.

18 Q. Are you aware that NDC's lawyers stated in
19 opening arguments that ICANN and specifically you,
20 Ms. Willett, knew that VeriSign was financially
21 backing NDC's bid prior to VeriSign's public
22 announcement?

23 A. I am not aware of anything in the opening
24 statements.

25 Q. I will read you what NDC's counsel said

1 and ask you to respond to it. Quote, "At this
2 point, there was a lot of speculation in this
3 close-knit community that VeriSign has been behind
4 NDC's bids. This is an open secret out there, so
5 this is not something that she's guessing about or
6 that is it."

7 And by "she," NDC's lawyer is referring
8 specifically to you.

9 Redacted - Third-Party Designated Confidential Information

10

11

12

13

14

15

16

17

18 ICANN has
19 not received the DAA and doesn't get it until later
20 in the month, but they do know that the financial
21 impetus for our winning the bid is from VeriSign.
22 That is something -- that is not something that's
23 hidden from her at all."

23

24

25

So let me ask you again, did you know
prior to 1 August 2016 that VeriSign was funding
NDC's bid or was financially behind NDC's bid.

1 A. No, I don't recall ever having that
2 information prior to 1 August.

3 Q. And as you sit here today, to your
4 knowledge, did anyone else at ICANN know that
5 VeriSign was funding NDC's bid prior to 1 August
6 2016?

7 A. No. I don't know what everyone at ICANN
8 knew, but to my knowledge --

9 Q. To your knowledge --

10 A. To my knowledge, no.

11 Q. Okay. Let's go back to your witness
12 statement, to Paragraph 9. And Paragraph 9 reads,
13 quote, "Prior to the filing of an IRP, potential
14 claimants are encouraged to enter into a
15 Cooperative Engagement Process, CEP, with ICANN in
16 order to allow the parties to discuss resolving or
17 narrowing the issues to be brought in an IRP
18 proceeding. In connection with the new gTLD
19 Program, ICANN employs a practice, depending on the
20 circumstances, of placing a contention set, as
21 described below, or a gTLD application on hold if
22 it is the subject of certain accountability
23 mechanisms, including the initiation of a CEP,"
24 unquote.

25 Do you see that?

1 A. Yes, I do.

2 Q. Is that practice set forth in writing
3 anywhere?

4 A. I am not sure.

5 Q. Do you recall ever seeing that practice
6 set forth in writing?

7 A. I recall explaining it. It might have
8 been written about in terms of the program. I
9 might have spoken about it. Honestly, I don't
10 recall the specifics.

11 Q. You say you recall explaining it --
12 explaining it to whom?

13 A. So as the head of the new gTLD Program, I
14 spoke on behalf of the program and provided public
15 updates on a regular basis through monthly
16 webinars. In 2012, 2013, I typically gave one or
17 more updates on the program at every public ICANN
18 meeting.

19 So I spoke about how the program
20 endeavored to respect the applicants, the
21 community's opportunity to invoke those
22 accountability mechanisms and to respect those by
23 putting contention sets on hold -- or putting
24 applications on hold or contention sets on hold to
25 allow those accountability mechanisms to transpire,

1 to allow that dispute to be handled through one of
2 those accountability mechanisms.

3 Q. And if the practice wasn't set forth in
4 writing anywhere, what was the basis for your
5 providing the information to certain applicants?

6 A. So when I took over the program, there
7 were a number of all -- all of the applications,
8 nearly all of the applications were still active
9 and the program processing was still in its early
10 days and there were many, many disputes about
11 applications.

12 And although the applicant guidebook had
13 described actually multiple objection mechanisms,
14 types of objections, whereby community members or
15 governments or interested parties could object to
16 an application, the guidebook didn't specify an
17 appeals process or any other mechanism by which
18 applications could complain or dispute how ICANN
19 was handling their applications.

20 So after internal discussions, it became
21 clear that we needed to -- these are described --
22 these mechanisms are described in the bylaws, that
23 we need to encourage applicants and the community
24 to utilize those mechanisms. So it became a very
25 familiar refrain of mine in public presentations to

1 guide those complaints using one of the
2 accountability mechanisms, as there was no other
3 mechanism described in the applicant guidebook.

4 Q. You say in your witness statement that the
5 practice applies to certain accountability
6 mechanisms. Which accountability mechanisms does
7 the practice apply to?

8 A. So as a general practice, we evaluate each
9 accountability mechanism on a case-by-case basis.
10 But in general, when a reconsideration request was
11 triggered about an application pertaining to an
12 application or contention set, that application was
13 put on hold.

14 Ombudsman inquiries, when the ombudsman
15 informed us of such, that drove us to put something
16 on hold. CEP being initiated put something on
17 hold. And the actual filing of an IRP, we had a
18 few different practices over time about that, but
19 the IRP, I believe, has another mechanism to --
20 component to request relief, which could be putting
21 the contention set on hold.

22 Q. You said that each accountability is
23 evaluated on a case-by-case basis to determine
24 whether to put it on hold. Are the criteria that
25 ICANN uses for that determination set forth

1 anywhere in writing?

2 A. Not that I am aware of.

3 Q. And you said that you made presentations
4 in which you referred to advising applicants that
5 accountability mechanisms would sometimes lead to
6 contention sets being put on hold. Are you aware
7 if any of those presentations are exhibits in this
8 IRP?

9 A. Oh, I am not -- I am not sure.

10 Q. Okay. Do you know whether those
11 presentations are posted anywhere on the ICANN
12 website?

13 A. I believe a number of my presentations are
14 available by video recordings. I am not sure how
15 far back that goes. But at one point, they were
16 available on the ICANN website.

17 Q. Specifically the presentations where you
18 said that accountability mechanisms would sometimes
19 lead to contention sets being put on hold?

20 A. Yes. I believe -- as a general practice,
21 ICANN records sessions from its public meetings and
22 posts those recordings, but I don't know how long
23 they retain them and where they might be available
24 at this juncture.

25 Q. Are you familiar with the provision in the

1 bylaws that requires ICANN to, quote, "Make
2 decisions by applying documented policies
3 consistently, neutrally, objectively and fairly,"
4 unquote?

5 A. Sorry, can you repeat that?

6 Q. Yeah. Are you familiar with the provision
7 in the bylaws that requires ICANN to, quote, "Make
8 decisions by applying documented policies
9 consistently, neutrally, objectively and fairly,"
10 unquote.

11 A. I think you may have showed that to me
12 yesterday.

13 MR. LeVEE: Alex, since you're quoting,
14 would you mind showing it to her?

15 MR. De GRAMONT: Sure, sure.

16 Q. This is Tab 39 in your bylaws. It's
17 Exhibit C-1, and I am going to point you to a
18 provision at bracketed Page 6. Now, these are not
19 the bylaws that were in effect as of 2016, but the
20 language that I am going to point you to is
21 identical to the language that was in the bylaws
22 that were in effect in 2016.

23 Let's actually start at Page 5 under
24 Section 1.2, "Commitments and Core Values." It
25 says, quote, "In performing its Mission, ICANN will

1 act in a manner that complies with and reflects
2 ICANN's Commitments and respects ICANN's Core
3 Values, each as described below," unquote.

4 And then if you turn the page,
5 Subparagraph Roman Numeral v, and this is the
6 language that's also in the bylaws that were in
7 effect in 2016, "Make decisions by applying
8 documented policies consistently, neutrally,
9 objectively, and fairly."

10 Were you familiar with that principle
11 contained in the bylaws?

12 A. I don't recall reading it from the bylaws.

13 Q. Were you familiar with the principle
14 otherwise?

15 A. Yes, I -- yes.

16 Q. And are you familiar with the requirement
17 of transparency in the bylaws?

18 A. Generally familiar, yes.

19 Q. So if you'll turn to Page 8, and this is
20 language that was also in the bylaws in effect in
21 2018, it says, quote, "ICANN and its constituent
22 bodies shall operate to the maximum extent feasible
23 in an open and transparent manner and consistent
24 with procedures designed to ensure fairness,"
25 unquote.

1 Were you familiar with those provisions of
2 the bylaws?

3 A. Generally familiar.

4 Q. And the purpose of those rules is to
5 ensure that everyone knows what the rules and
6 practices are so that everyone is treated as being
7 on the same playing field, do you agree?

8 A. Well, I believe that both of those
9 provisions are really -- you know, this is my
10 interpretation of bylaws, and I am not a lawyer,
11 but I believe that those are intended to describe
12 ICANN's approach to policy implementation and
13 applying Internet policy and in policy development,
14 as, you know, Section 3.1(a), (b) and (c) are all
15 talking about policy development work, but it was
16 my general understanding that operationally we
17 tried to be as transparent as possible.

18 Q. Let's assume for the sake of argument that
19 there was this practice. If it was not stated
20 anywhere in documentation, some applicants would
21 know about it and others would not, right?

22 MR. LeVEE: Calls for speculation.

23 Q. BY MR. De GRAMONT: Isn't the idea that
24 the policies and practices be documented to ensure
25 that everyone knows what the policies and practices

1 are so that insiders won't have benefit that
2 newcomers will not have; was that your
3 understanding?

4 A. We endeavor to document a whole lot about
5 our practices. The entire new gTLD website is
6 largely our effort to be transparent and to share
7 as much information publicly as possible.

8 Q. But as far as you know, the practice you
9 describe in your witness statement of sometimes
10 putting contention sets on hold depending on the
11 circumstances wasn't documented anywhere for the
12 public?

13 A. I am not certain.

14 Q. You don't recall any such documentation?

15 A. I don't.

16 Q. Okay. Are you aware that Donuts and Ruby
17 Glen filed for CEP on 2 August 2016?

18 A. I am aware they filed and initiated CEP.
19 The date sounds about right.

20 Q. Okay. And if you -- just to be sure, if
21 you look at Tab 25 in your binder, this is a
22 hyperlink in Mr. Atallah's 30 September 2016 letter
23 to Mr. Hemphill, which is Exhibit C-61.

24 For the record, the parties agreed that we
25 could use hyperlinked documents that we identified

1 to one another, and this is one of them.

2 Are you familiar with this Cooperative
3 Engagement and Independent Review Processes Status
4 Update?

5 A. Yes.

6 Q. You have seen these before?

7 A. Yes.

8 Q. You can see that Donuts and Ruby Glen
9 filed for CEP regarding .WEB in 2 August 2016?

10 A. I can see that, yes.

11 Q. On August 5th you wrote to Mr. Rasco to
12 say that NDC would receive an invitation to
13 contract being later that day.

14 Do you recall that?

15 A. What date?

16 Q. 5 August.

17 A. Is there a --

18 Q. It is Tab 23, C-100. Tell me when you're
19 there.

20 A. I am. Thank you.

21 Q. Okay. This is a continuation of the email
22 string in which Mr. Rasco advised you about the
23 press release that was coming from VeriSign, and in
24 the middle of the page first Mr. Rasco writes to
25 you on August 6th, and he writes, quote, "Hi,

1 Christine. I understand Power Auctions confirmed
2 to ICANN that it received the full winning bid
3 proceeds from us for the .WEB auction. With that
4 step complete, I was hoping to find out when ICANN
5 might provide us with the CIR," unquote.

6 Do you see that?

7 A. Yes.

8 Q. First of all, tell us what "CIR" means?

9 A. It stands for Contracting Information
10 Request.

11 Q. So that's what you send out to start the
12 process of delegating a string; do I understand
13 that correctly?

14 A. Not quite. May I explain?

15 Q. Please.

16 A. So a Contracting Information Request is
17 essentially a set of questions that the new gTLD
18 Program team extends to an applicant who is -- once
19 contention has been resolved -- who is moving
20 forward and is proceeding into contracting. So
21 once -- it is essentially sort of like an
22 invitation to begin contracting discussions. It is
23 one of the very first steps in a multiweek,
24 multimonh process.

25 Q. Okay. So the next day, August 5th, we can

1 see from the email above, you write to Mr. Rasco,
2 quote, "Hi, Jose. Yes, we have confirmed that the
3 full auction payment was received by Power
4 Auctions. Based on ICANN's standard registry
5 contracting process, NU DOT CO should expect to
6 receive an invitation to contracting (CIR) today.
7 In addition to engaging with the new gTLD Program
8 team via the GDD portal, feel free to contact me if
9 you have any other questions," close quote.

10 Do you recall sending that email?

11 A. Well, reading it here, yes, I recall that.

12 Q. And do you recall if ICANN sent the
13 invitation to contracting to NDC later that day?

14 A. I believe we did. Is there another
15 document I might look at?

16 Q. I don't have another document.

17 A. Okay.

18 Q. I'm sorry.

19 Now, if -- sorry, if Donuts and Ruby Glen
20 had filed for CEP on 2 August, why did that not put
21 the contention set on hold?

22 A. So there were a lot of things happening in
23 that week. So the CEPs are -- that notice goes to
24 someone in ICANN's legal department, not my team.
25 So it is a matter of when that -- the notice might

1 have come in for the CEP on the 2nd, and that
2 reflects the date that's published on that previous
3 document. But I didn't become aware of it until, I
4 believe, later on August 5th, or shortly
5 thereafter.

6 Q. Do you recall that on August 8, 2016, the
7 general counsel of Afiliias, Mr. Scott Hemphill,
8 wrote to Mr. Atallah about the .WEB application and
9 auction process?

10 A. I recall Mr. Hemphill wrote a couple of
11 letters. Is it possible to look at the --

12 Q. Yes, absolutely. So that's Tab 26. It is
13 Exhibit C-49.

14 Did you see that letter at the time it was
15 sent by Mr. Hemphill to Mr. Atallah?

16 A. I expect I would have seen it shortly
17 after Mr. Atallah received it.

18 Q. And did you read it?

19 A. I expect I did. I believe I did, yes.

20 Q. And do you remember that in the fourth
21 paragraph, second sentence, Mr. Hemphill wrote,
22 quote, "We have not been able to review a copy of
23 the agreement(s) between NDC and VeriSign with
24 respect to this arrangement, but it appears likely,
25 given the public statements of VeriSign, that NDC

1 and VeriSign entered into an agreement in the form
2 of an option or similar arrangement with respect to
3 the rights and obligations of NDC regarding its
4 .WEB application," unquote.

5 Do you remember that Mr. Hemphill made
6 that statement?

7 A. I recall that, yes.

8 Q. And if you look at Page 2, the second
9 paragraph from the bottom, quote, "We request that
10 ICANN promptly undertake an investigation of the
11 matters set forth in this letter and take
12 appropriate action against NDC and its .WEB
13 application for violations of the guidebook, as we
14 had requested," unquote.

15 Do you remember that Afiliias had asked for
16 an investigation?

17 A. Yes, in this letter.

18 Q. And did ICANN undertake an investigation
19 in response to this letter?

20 A. Not that I'm aware.

21 Q. Are you aware that at some point in August
22 2016, ICANN's outside counsel, Mr. Eric Enson at
23 Jones Day, called VeriSign's outside counsel,
24 Mr. Ronald Johnston at Arnold & Porter, about this
25 matter?

1 MR. LeVEE: Please do not answer if the
2 information you know is privileged. I will object
3 that the question invades privilege.

4 THE WITNESS: I have no knowledge about
5 that.

6 Q. BY MR. De GRAMONT: Okay. I am just going
7 to show you the letter and ask you if you've ever
8 seen it.

9 A. I apologize, I thought you said "called."

10 Q. Oh, I did. Okay. You're right.

11 Tell you what, let's take a look at the
12 letter, Tab 27, Exhibit C-102.

13 Have you seen this letter before?

14 A. No, I have not.

15 Q. Okay. And in this letter Mr. Johnston
16 forwarded the DAA and several other documents to
17 ICANN's outside counsel. Were you aware that that
18 had happened?

19 A. I'm sorry, who is Mr. Johnston? Oh,
20 counsel for VeriSign.

21 Q. Yes.

22 A. Okay.

23 Q. Were you aware that VeriSign's outside
24 counsel had written to ICANN's outside counsel
25 forwarding the DAA and other materials attached

1 hereto?

2 MR. LeVEE: Can you ask her if she's aware
3 from anyone other than a lawyer?

4 Q. BY MR. De GRAMONT: Are you aware from
5 anyone other than a lawyer?

6 A. No.

7 Q. Okay. And you never saw these materials?

8 A. No.

9 Q. Okay. Let me ask you a question about the
10 "Confidential Business Information. Do Not
11 Disclose" heading. Have you seen that before on
12 communications to ICANN?

13 A. On occasion parties would write to ICANN
14 and ask their communications to ICANN to be held
15 confidentially, meaning ICANN has a practice of
16 publishing correspondence. So in order to indicate
17 to ICANN that a party didn't want their
18 correspondence published, they would indicate that
19 it was confidential.

20 Q. And do you know if ICANN evaluates those
21 requests, or does it simply keep it confidential if
22 the sender has asked ICANN to do so?

23 A. Insofar as I administered and oversaw the
24 handling of correspondence for several years during
25 my tenure at ICANN, our practice was that we

1 respected those requests for confidentiality and we
2 did not post those -- such correspondences, with
3 one exception.

4 At some point if some other party asked
5 for something to be published or it became
6 desirable and relevant to something else, I recall,
7 again, it's been years, so I don't recall a
8 specific example, but as a general practice, I
9 recall that ICANN might ask the sender if it would
10 be possible to publish a letter, but we respected
11 their requests for confidential correspondence.

12 Q. So you didn't ask anyone to undertake an
13 analysis whether it was, in fact, sensitive
14 business information or anything like that?

15 A. No. Any further discussions of that would
16 have been with counsel.

17 Q. Are you aware that Mr. Atallah did not
18 respond to Mr. Hemphill's 8 August 2016 letter?
19 Let me withdraw the question.

20 Are you aware that he didn't respond to
21 Mr. Hemphill's 8 August 2016 letter prior to late
22 September?

23 MR. LeVEE: Alex, could you put that
24 letter on the screen?

25 MR. De GRAMONT: Yeah, yeah, let's start

1 with this.

2 Q. Do you recall that Mr. Hemphill sent a
3 second letter on 9 September 2016 to Mr. Atallah?

4 A. Yes, I do.

5 Q. Okay. And that's behind Tab 28, Exhibit
6 C-103. Did you read this letter?

7 A. Yes, I believe I did.

8 Q. And did you discuss it with Mr. Atallah?

9 A. I may have. I don't recall a specific
10 conversation.

11 Q. Do you recall discussing it with anyone
12 outside of ICANN's legal department?

13 A. I don't recall a specific conversation.

14 Q. Do you recall that both this letter and
15 Mr. Hemphill's 8 August 2016 letter were posted on
16 the ICANN website?

17 A. I believe so, yes.

18 Q. And do you recall that Mr. Hemphill on
19 Page 2 again said that Afiliias hadn't seen the
20 specific terms of the agreement because they had
21 not been disclosed? Do you recall that?

22 ARBITRATOR BIENVENU: Do you want to draw
23 the witness' attention?

24 MR. De GRAMONT: Yes, sure.

25 Q. First paragraph on the second page, first

1 full paragraph, he says, quote, "Although the
2 specific terms of the agreement between VeriSign
3 and NDC have not been disclosed, it is clear from
4 VeriSign's own press release and its disclosure in
5 its Form 10-Q filed with the U.S. Securities and
6 Exchange Commission for the quarter ended June 30,
7 2016, that both companies entered into an
8 arrangement well in advance of the auction to
9 transfer NDC's rights and obligations regarding its
10 .WEB application to VeriSign," unquote.

11 Do you remember that Mr. Hemphill said
12 that?

13 A. This has refreshed my memory, yes.

14 Q. But not having the terms of the agreement,
15 he was left to speculate as to which rights and
16 obligations may have been transferred; is that a
17 fair assessment, a fair interpretation?

18 A. I mean, I guess that's what the rest of
19 the letter is about.

20 Q. And then do you recall that on Page 4, and
21 this is the last paragraph before the conclusion,
22 Mr. Hemphill requested that ICANN provide Afilias
23 with an undertaking that it has not and will not
24 enter into a Registry Agreement for .WEB with NDC
25 until ICANN's Board has reviewed NDC's contact --

1 conduct and reached a considered decision on
2 whether or not to disqualify NDC's bid and reject
3 its application?

4 Did you recall that?

5 A. Yes.

6 Q. And do you recall that Afilias had
7 submitted an ombudsman complaint?

8 A. I don't recall that. In September I don't
9 recall.

10 Q. Do you recall if -- strike that.

11 Do you recall that Mr. Hemphill asked to
12 receive a response from ICANN by no later than 16
13 September 2016?

14 A. Yeah, I see that.

15 Q. Okay. Do you recall that that request was
16 made?

17 A. Yeah, I recall that was part of the
18 letter, yes.

19 Q. And did ICANN undertake an investigation
20 in response to Mr. Hemphill's 9 September 2016
21 letter?

22 A. Well, ICANN initiated -- sent a set of
23 questions to four of the parties in mid -- in
24 September or October, I forget the exact date, not
25 just about what Afilias was claiming, but also

1 because there was a CEP. So there was a set of
2 questions distributed to collect information.

3 Q. And if you turn to Tab 29 of your bundle,
4 this is Exhibit C-50, it is your letter dated 16
5 September 2016 to Mr. John Kane at Afilias. You
6 sent an identical letter to Ruby Glen, NDC and
7 VeriSign, albeit obviously personally addressed.

8 Do you recall that?

9 A. That's correct, yes.

10 Q. You say, "Dear, Mr. John Kane. In various
11 fora Ruby Glen LLC (Ruby Glen) and Afilias Domains
12 No. 3 Limited (Afilias) have raised questions
13 regarding, among other things, whether NU DOT CO
14 LLC (NDC) should have participated in the 27-28
15 July 2016 auction for the .WEB contention set and
16 whether NDC's application for the .WEB gTLD should
17 be rejected. To help facilitate informed
18 resolution of these questions, ICANN would find it
19 useful to have additional information."

20 Did you write this letter?

21 A. I worked with counsel to draft this
22 letter.

23 Q. And to be clear, the only forum,
24 quote/unquote, in which Afilias had raised the
25 questions were in the two letters sent by

1 Mr. Hemphill; is that correct?

2 A. Well, I suppose there was also the
3 ombudsman complaint.

4 Q. Oh, that's a good point. You're right.
5 That's a good point. Right. Good point.

6 By the way, do you recall how the
7 ombudsman complaint was resolved?

8 A. I'm sorry, I don't.

9 Q. Okay. You don't recall -- do you recall
10 that the ombudsman declined to consider it because
11 of the pending litigation and CEP that had been
12 brought by NDC -- sorry, Ruby Glen?

13 A. That rings a bell, yes, thank you.

14 Q. What did you mean by the words, quote,
15 "informed resolution," unquote?

16 A. So asking questions to gather information,
17 to resolve the questions raised. So there was the
18 Ruby Glen CEP. There was the Afilias request to
19 the ombudsman. So we were endeavoring to gather
20 information.

21 Q. Okay. This sounds like an investigation
22 at the end of which ICANN would resolve the
23 questions that had been raised, do you agree?

24 A. So I was not undertaking an investigation.
25 ICANN counsel handled and administered the CEP

1 process. So the responses which I received to
2 these letters I passed along to counsel.

3 Q. When you wrote to the recipients of this
4 letter that ICANN was seeking to facilitate
5 informed resolution of these questions, you were
6 being truthful, right?

7 A. Of course.

8 Q. And there's nothing in the letter to
9 indicate that ICANN was not going to seek, quote,
10 "informed resolution," unquote, of these questions;
11 is there?

12 A. No. I mean, ICANN resolves -- takes very
13 seriously its bylaws responsibilities for all of
14 its accountability mechanisms.

15 Q. Now, if ICANN's practice was to defer
16 decisions on contention sets while accountability
17 mechanisms are pending, why did ICANN undertake
18 this effort to facilitate informed resolution of
19 the questions?

20 A. Oh, okay. So there's the -- when we put
21 an application on hold or a contention set on hold,
22 it doesn't mean that all work ceases. In fact,
23 what it means is that it prevents that applicant or
24 that contention set -- we are committing that it
25 won't move to the next phase of work, meaning we --

1 while on hold, we wouldn't, for instance, send a
2 Registry Agreement to NU DOT CO for execution. We
3 wouldn't -- it was on hold and the contract had
4 been signed, we wouldn't delegate the top-level
5 domain until the issue of the matter was resolved
6 and the hold was taken off.

7 But, you know, in order to resolve a
8 variety of matters and to get information to assist
9 in the CEP, that's -- we were trying to gather
10 information. So communications continued.

11 Q. Let's turn to the questions themselves.
12 Who drafted the questions?

13 A. In terms of -- I am not sure I should be
14 commenting or responding because of counsel.

15 Q. Let me ask it this way: Did you draft the
16 questions?

17 A. I created an early draft of questions.

18 Q. And who assisted you in -- well, strike
19 that.

20 Who else was involved in the drafting of
21 the questions?

22 MR. LeVEE: Ms. Willett, you can say
23 counsel if that's the answer, or if it is not
24 counsel, whoever is the noncounsel.

25 THE WITNESS: I worked with counsel on

1 drafting the questions.

2 Q. BY MR. De GRAMONT: Did you work with
3 anyone besides counsel in drafting the questions?

4 A. Not that I recall.

5 Q. Now, at this point in time, ICANN,
6 VeriSign and NDC had the following materials in
7 their hands: They had the DAA and the other
8 materials forwarded by Mr. Johnston in his 23rd
9 August letter to Mr. Enson, right?

10 A. I -- yes. That was the letter you just
11 showed me.

12 Q. Yes.

13 A. From Mr. Johnston, and I didn't get a
14 chance to read all of that, but did that include --

15 Q. It did forward the DAA, yeah.

16 A. Okay. Okay.

17 Q. And ICANN and VeriSign and NDC had the two
18 letters that Mr. Hemphill had sent to Mr. Atallah
19 since they were publicly posted, right?

20 A. Yes.

21 Q. And VeriSign and NDC knew the whole
22 history underlying the DAA and how VeriSign and NDC
23 interacted after the DAA was signed, right?

24 MR. LeVEE: I'm sorry, I didn't understand
25 that question. Can you read it back?

1 MR. De GRAMONT: Yes.

2 THE WITNESS: I'm sorry.

3 MR. De GRAMONT: I'll just read it. I'll
4 restate it.

5 Q. So VeriSign and NDC, of course, knew the
6 whole history of the DAA and how they had acted
7 under its terms, right?

8 A. Well, since it's an agreement between
9 them, I would guess they are the only two who would
10 see it.

11 Q. And all Afiliias had was VeriSign's press
12 release and footnotes in VeriSign's SEC filings,
13 right?

14 A. I don't know what Afiliias had.

15 Q. When you created the early draft of the
16 questions, had you reviewed the -- you never
17 reviewed the DAA; is that correct?

18 A. Correct.

19 Q. And you never reviewed Mr. Johnston's
20 letter, correct?

21 A. Correct.

22 Q. And let me ask you this: Did you do the
23 very first draft of the questions?

24 A. I created a draft of questions, yes.

25 Q. And what did you use to create the

1 questions?

2 A. The information that had been made
3 available to me from the Donuts/Ruby Glen
4 complaints prior to the auction. I may have looked
5 at Mr. Hemphill's letters. I don't recall
6 specifically. It was more my personal knowledge.

7 Q. And were -- do you recall how many drafts
8 after your first draft were created?

9 A. I don't recall.

10 Q. Okay. And were you involved in any of the
11 subsequent drafts, or did you turn the first draft
12 over to counsel and they did the rest?

13 A. I worked with counsel on multiple drafts.

14 Q. And were you working both with in-house
15 counsel and outside counsel?

16 MR. LeVEE: Mr. Chairman, I don't think
17 that's an appropriate question. I object on the
18 basis of privilege.

19 MR. De GRAMONT: I don't see why it
20 matters which counsel she's interacting with. It
21 is just a yes-or-no question or one or the other,
22 and/or both question.

23 MR. LeVEE: I don't --

24 ARBITRATOR BIENVENU: Mr. LeVee.

25 MR. LeVEE: I don't see how identifying

1 who the lawyers are is appropriate under the
2 privilege. She has stated that she worked with
3 counsel, and -- well, yeah, that's my objection.

4 MR. De GRAMONT: The privilege log
5 identifies both inside counsel and outside counsel
6 corresponding with ICANN personnel at this time.
7 So, again, the question is simply did you work with
8 solely in-house counsel, or were outside counsel
9 also interacting with you in the preparation of
10 these questions?

11 MR. LeVEE: I'll let that -- I will
12 withdraw my objections. Ms. Willett can answer if
13 she recollects.

14 THE WITNESS: My recollection is I worked
15 exclusively with inside counsel, but it's been a
16 long time. That's my recollection.

17 Q. BY MR. De GRAMONT: And do you recall how
18 the questions you drafted differed from those that
19 went out finally?

20 A. I don't recall.

21 Q. Were they very different, only slightly
22 different?

23 A. I believe I drafted a handful, maybe six
24 questions, a handful of questions, and they were
25 less formal.

1 Q. Let's look at a few of the questions.

2 MR. LeVEE: Mr. Chairman, this is a good
3 time to break. I want to raise a matter that I
4 doubt you want Ms. Willett on the screen for.

5 MR. De GRAMONT: May I just get through
6 this document and then we can take a break?

7 MR. BIENVENU: Unless the matter relates
8 to this document. Does it?

9 MR. LeVEE: No, it does not.

10 ARBITRATOR BIENVENU: Okay. So yes,
11 proceed with your questions on this document,
12 Mr. De Gramont, and then choose when would be a
13 good time without breaking the flow of your cross
14 for our second break.

15 MR. De GRAMONT: Thank you, Mr. Chairman.

16 Q. So if we look at the first question, the
17 last sentence, it says, quote, "Please provide or
18 describe any evidence of which you are aware
19 regarding whether ownership or control of NDC
20 changed after NDC applied for the .WEB gTLD,"
21 period, close quote.

22 Do you see that?

23 A. Yes.

24 Q. Now, at this point ICANN, VeriSign and NDC
25 all knew that there had been no change of ownership

1 or control of NDC the company, right?

2 A. Yes, that was my understanding.

3 Q. But Afiliias, not having seen the DAA, had
4 no idea what had happened, right?

5 A. Again, I don't know what Afiliias knew or
6 didn't know.

7 Q. So if you knew that -- if you knew that
8 there had been no change of ownership or control of
9 NDC the company, why were you asking Afiliias to
10 present evidence of that?

11 MR. LeVEE: I do think that invades the
12 privilege. I object on that basis.

13 ARBITRATOR BIENVENU: Mr. De Gramont, do
14 you want to respond to the objection?

15 MR. De GRAMONT: I am not sure I
16 understand it well enough to respond to it.

17 MR. LeVEE: I am happy to say I am trying
18 to keep my objections short.

19 MR. De GRAMONT: Let me try to rephrase
20 it.

21 Q. Did you draft this particular question?

22 A. I did not.

23 Q. Okay. Question 2 states -- well, in
24 Question 2 ICANN asks for evidence that Mr. Rasco
25 and Mr. Bezsonoff gave false testimony when they

1 said there was no change of ownership or control of
2 NDC the entity, right?

3 A. I see that.

4 Q. And, again, at this point, NDC and
5 VeriSign and ICANN all knew that there had been no
6 change of ownership or control of NDC the company,
7 right?

8 A. So you asked me that earlier. Let me
9 clarify. I still had that informed perception. I
10 can't speak to all of ICANN. My belief is that
11 NDC -- and still is -- that there was no change of
12 control of NDC based on what Mr. Rasco had told me
13 in his responses because I had never seen the DAA.
14 So that is what informed my perspective.

15 Q. The questions are filled with references
16 to Mr. Hemphill's letters; is that right?

17 A. There are several, yes.

18 Q. Yeah. So, for example, Question 4 says,
19 "In his 8 August 2016 letter Scott Hemphill
20 stated," quote, "a change in control can be
21 effected by contract as well as by changes in
22 equity ownership. Do you think that an applicant's
23 making a contractual promise to conduct particular
24 activities in which it is engaged in a particular
25 manner constitutes a 'change in control' of the

1 applicant," unquote.

2 How could Afiliias possibly answer that
3 question without having the DAA?

4 A. Again, these questions as they stand were
5 work product from counsel, and the rationale about
6 responses was something that I discussed with
7 counsel.

8 Q. And while there are references to
9 Mr. Hemphill's letter, there are, of course, no
10 references to arguments attributed to
11 Mr. Johnston's letter, right, because that was
12 still confidential?

13 A. I hadn't seen it, and yes, it was
14 confidential. I don't know the rationale as to why
15 anything -- I just glanced at it here. I don't
16 know what was or wasn't included based on that
17 letter.

18 Q. Did you at any -- why didn't you ask to
19 see a copy of the DAA in preparing these questions?

20 A. Honestly, I don't even -- I don't recall
21 exactly when I became aware of a DAA or a side
22 agreement between NU DOT CO and VeriSign. It is
23 somewhere in August, September I generally became
24 aware of that based on the information from
25 counsel, but I hadn't read the agreement, and

1 personally, I viewed any agreement between those
2 parties would have been confidential amongst
3 themselves.

4 Q. You didn't think the agreement had any
5 relevance to ICANN or ICANN's determination of
6 whether the agreement violated the gTLD rules?

7 A. I don't -- I don't recall -- since I
8 hadn't read the agreement, I don't think I had an
9 opinion on its relevance.

10 Q. Well, isn't that a little bit circular,
11 Ms. Willett? How could you possibly determine
12 whether the agreement was relevant to whether NDC
13 had violated its rules without reviewing the
14 agreement?

15 A. So, okay, generally we talked about the
16 auction rules, and my general understanding based
17 on VeriSign's press release is that they had some
18 future intention, hopes, aspirations to operate the
19 TLD if ICANN approved of a TLD assignment. I also
20 understood from the press release that they had
21 committed funds that were put forward towards the
22 auction.

23 So to me that was akin to and consistent
24 with the auction rules and an applicant being able
25 to designate a bidder to apply -- to act on their

1 behalf in an action and to submit bids and to
2 submit the funds and do the bidding during an ICANN
3 auction.

4 Q. But, Ms. Willett, not having read the DAA,
5 you have no idea whether the press release and NDC
6 statements accurately reflected what the DAA
7 required?

8 MR. LeVEE: Chairman, this is becoming
9 very argumentative, and it is --

10 ARBITRATOR BIENVENU: Overruled. I'll
11 allow the question.

12 THE WITNESS: So applicants had agreements
13 with a variety of vendors and third parties
14 regarding all sorts of aspects of their application
15 and future gTLD operations.

16 There were applicants -- more than a
17 handful of applicants who signed a Registry
18 Agreement and then immediately transferred a TLD to
19 another registry operator, requested such an
20 assignment from ICANN.

21 So just having some sort of agreement, I
22 didn't -- you know, again, I wasn't a lawyer, but
23 they -- I was looking at the applicant's statements
24 that the applicant had made, the information they
25 had provided in the application and the subsequent

1 questions, and that's how I was reviewing and
2 considering the matter.

3 Q. BY MR. De GRAMONT: But not knowing the
4 DAA's terms, you had no way of knowing whether the
5 DAA was comparable to the other arrangements that
6 you just described; isn't that fair?

7 A. I had no way of knowing what was in the
8 DAA or any of those other third-party agreements.

9 Q. You could have asked for the DAA, right?

10 A. Perhaps.

11 Q. Did you ever ask for the DAA?

12 A. I did not.

13 Q. And since you never reviewed the DAA, you
14 don't know whether the questions and the
15 questionnaire reflected any of the terms of the
16 DAA; is that correct?

17 A. That's accurate.

18 Q. And who asked you to draft the
19 questionnaire in the first place?

20 A. It was based on a discussion with counsel.

21 Q. It wasn't Mr. Atallah or any other
22 nonlawyer at ICANN?

23 A. No.

24 Q. And was it your idea to send out the
25 questionnaire?

1 A. Not that I recall.

2 MR. De GRAMONT: Okay. This would be a
3 good time to break, Mr. Chairman.

4 ARBITRATOR BIENVENU: Very well, Mr. De
5 Gramont. Thank you very much.

6 So could we ask our friends to remove the
7 witness from the hearing room.

8 And then, Mr. LeVee, you wanted to raise a
9 point of order?

10 MR. LeVEE: Yes, and I'll wait for
11 Ms. Willett to be temporarily excused.

12 (Discussion off the record.)

13 MR. ENGLISH: She has left the room.

14 ARBITRATOR BIENVENU: Mr. LeVee.

15 MR. LeVEE: Thank you, Mr. Chairman. By
16 my watch, Mr. De Gramont has now cross-examined
17 Ms. Willett for over four hours. The Afiliias
18 estimate was four hours.

19 Again, I am not necessarily saying that
20 people have to stick within the estimate, but I do
21 believe Afiliias has gone over with respect to all
22 of the witnesses, and so we find ourselves faced
23 with a situation where Mr. Ali is emailing me and
24 my team -- it is very difficult for me to respond
25 to email when I am trying to defend a witness --

1 asking about Mr. Disspain's availability next week
2 when I told the Panel yesterday that he wasn't
3 available next week.

4 Candidly I didn't ask him originally if he
5 was available next week because the schedule made
6 it clear ICANN's witnesses were going first and
7 Mr. Disspain was going to be finished today.

8 At this point, it is not even clear we are
9 going to get to Mr. Disspain today, so we will do
10 it tomorrow, but that creates a problem for
11 Mr. Rasco.

12 My concern is you had asked for a
13 cross-examination estimate at the end -- at the
14 beginning of the next session, and you were not
15 provided that. I did not interrupt. But we still
16 don't have an estimate, and we are now past the
17 number of hours originally estimated for this
18 witness.

19 I am not saying we have to establish, but
20 I think you understand my point. We find ourselves
21 in a difficult position, and it is utterly unfair
22 that I am being asked about the availability of a
23 witness next week when I said yesterday that he was
24 not available.

25 MR. ALI: Mr. Chairman.

1 ARBITRATOR BIENVENU: Mr. Ali, just before
2 you respond, if I may.

3 Mr. LeVee, we hear you, and we are
4 conscious of the problem that you allude to, but
5 have you had a chance, you and your colleagues, to
6 speak with counsel for the claimant and counsel for
7 the Amici to try to, as Mr. Marenberg helpfully
8 suggested, to try to find a path forward, has that
9 taken place or not?

10 MR. LeVEE: We have not spoken, but I have
11 received email subsequent to the last time we had
12 this conversation asking me if Mr. Disspain could
13 go next week, and the answer was no. That seems to
14 be their proposed resolution.

15 ARBITRATOR BIENVENU: My suggestion at
16 this point in time, and I know that our breaks are
17 short, but I think counsel should have a
18 conversation and try to find a constructive
19 solution to the problem that we are facing.

20 MR. LeVEE: May I -- sorry.

21 ARBITRATOR BIENVENU: Yes.

22 MR. LeVEE: It is not me. I thought you
23 were done.

24 May I ask the members of the Panel if they
25 were -- if they had flexibility to go a little

1 later tomorrow?

2 ARBITRATOR BIENVENU: I haven't discussed
3 that with my colleagues, but we have discussed
4 possible solutions to the problem that we face, and
5 without in any way encouraging parties to revise
6 their estimates, we are able to offer the parties
7 an additional day on the 14th of August. We are
8 not available on the 13th, but we can make
9 ourselves available on the 14th.

10 ARBITRATOR KESSEDJIAN: In addition,
11 Pierre, are we flexible for tomorrow night?

12 ARBITRATOR BIENVENU: I wasn't going to
13 answer that question before I had consulted with my
14 co-panelists.

15 ARBITRATOR KESSEDJIAN: Because I am.

16 ARBITRATOR CHERNICK: I would be available
17 to start earlier but not to go later.

18 ARBITRATOR KESSEDJIAN: That's fine with
19 me.

20 ARBITRATOR BIENVENU: I am available at
21 both ends.

22 ARBITRATOR KESSEDJIAN: And by the way, I
23 am available on Saturday. I don't know if anybody
24 is working on Saturdays, but that could be also an
25 option. Mr. Rasco is not available next week, so

1 perhaps he's available Saturday.

2 ARBITRATOR CHERNICK: I am not.

3 ARBITRATOR KESSEDJIAN: You are not.

4 ARBITRATOR BIENVENU: So I hope that the
5 parties, with the additional availability of the
6 Panel, can work this out, but I am very reluctant
7 to direct these discussions before they have taken
8 place.

9 The parties are fortunately represented by
10 counsel who have experience, know each other and
11 are solution-oriented. So I would just invite them
12 to have a first crack at finding a path forward and
13 to report back to the Panel.

14 MR. LeVEE: We will do that, Mr. Chairman.
15 Is it possible for Mr. De Gramont to give us a time
16 estimate of his remaining time?

17 ARBITRATOR BIENVENU: He will do that in
18 the course of your discussions with him.

19 MR. LeVEE: Thank you.

20 ARBITRATOR BIENVENU: Thank you. So we
21 break for 15 minutes, and maybe our friend JD can
22 tell Ms. Willett that it will be 15 minutes more.

23 MR. De GRAMONT: Thank you, Mr. Chairman.

24 MR. ENGLISH: Will do.

25 (Whereupon a recess was taken.)

1 MR. LeVEE: Chairman, members of the
2 Panel --

3 ARBITRATOR BIENVENU: Please, Mr. LeVee, a
4 little bit louder.

5 MR. LeVEE: Sorry. The parties have
6 spoken, and I think we have an agreement. We will
7 accept the Panel's offer, generous offer to start
8 one hour earlier tomorrow. So we will start 8:00
9 a.m. -- sorry, 7:00 a.m. Pacific, 10:00 o'clock
10 Eastern and must be 4:00 o'clock or so in Paris.

11 And then Mr. Rasco will go first and
12 Mr. Disspain will go second.

13 But the agreement of counsel is that
14 Afilias will finish both witnesses tomorrow. So
15 they will agree they are going to try to cut their
16 examinations a little shorter and get an extra hour
17 tomorrow. I know that we need to finish tomorrow
18 at the normal time to accommodate the panelists.

19 Afilias has agreed that they will finish
20 both examinations tomorrow, giving a reasonable
21 amount of time for redirect examination of the
22 witnesses.

23 MR. ALI: If I may just add on that
24 particular point that I believe the agreement
25 necessarily contemplates that Mr. Marenberg will

1 also observe the commitment I made that ICANN will
2 have sufficient time for redirect of Mr. Disspain.

3 We can finish our crosses, but the
4 agreement could get busted if Mr. Marenberg's
5 redirect goes too long. So it necessarily means
6 that we are all working towards the goal that we
7 have -- that you just laid out, Jeff, correct?

8 MR. LeVEE: Yes. Our understanding is we
9 are starting early because we understand that
10 Mr. Chernick needs to leave at the normal 1:00
11 o'clock time, and that's good. He has a
12 commitment.

13 So our agreement is that we are going to
14 get those two witnesses done between -- I am going
15 to do it on Pacific time, which will be 7:00 a.m.
16 Pacific and 1:00 p.m. Pacific.

17 MR. ALI: My understanding is we would
18 have an extra hour tomorrow, right?

19 ARBITRATOR CHERNICK: Yes.

20 MR. LeVEE: 7:00 a.m. start time.

21 ARBITRATOR BIENVENU: Okay. All right.

22 We commend the parties for their cooperative
23 approach to solving this problem. That probably
24 will require Panel members to be restrained in
25 their own questions, but so be it.

1 So then do we bring any other points that
2 the parties wish to discuss? No, so we'll bring
3 Ms. Willett back.

4 ARBITRATOR CHERNICK: Could I ask if we
5 are to hold August 14th or not?

6 MR. LeVEE: I don't think that will be
7 necessary at all.

8 ARBITRATOR CHERNICK: Okay.

9 MR. ALI: I think that's right.

10 ARBITRATOR BIENVENU: Okay. I will
11 exercise my prerogative to say that we should all
12 pencil it in in case. Because I think on Monday no
13 one would have predicted where we find ourselves on
14 Thursday afternoon. So let's pencil it in in case.

15 Okay. Let's bring Ms. Willett back in.

16 Mr. De Gramont, are you ready to continue
17 your cross-examination? We cannot hear you, sir.

18 MR. De GRAMONT: I'm sorry, can you hear
19 me now?

20 ARBITRATOR BIENVENU: We can.

21 MR. De GRAMONT: Thank you, Mr. Chairman.

22 Q. Welcome back, Ms. Willett. I have a
23 couple more questions about the questionnaire. As
24 you saw counsel changing your questions, were you
25 curious about the basis on which they were changing

1 them?

2 MR. LeVEE: That invades the privilege
3 clearly.

4 Q. BY MR. De GRAMONT: Let me ask it this
5 way: Did you wonder why counsel was changing the
6 questions in the manner that they changed them?

7 MR. LeVEE: I don't understand how that
8 changes things. The witness sees something that
9 counsel gives her, and then you're asking for her
10 mental impressions following receipt of information
11 from counsel.

12 MR. De GRAMONT: Yes. It is not her
13 mental impressions that are privileged.

14 MR. LeVEE: That's exactly what it is.
15 Were you surprised?

16 MR. De GRAMONT: Well, the communications
17 are privileged and the work product is privileged,
18 but Ms. Willett's frame of mind is not privileged.

19 MR. LeVEE: Mr. Chairman, I object to the
20 question.

21 ARBITRATOR BIENVENU: Mr. De Gramont, can
22 you comment on the relevance of that question?

23 MR. De GRAMONT: In the interest of moving
24 forward, I will move forward and withdraw the
25 question.

1 ARBITRATOR BIENVENU: Thank you.

2 Q. BY MR. De GRAMONT: Ms. Willett, what did
3 you do with the -- well, let me ask you this: Did
4 you receive responses from all of the recipients of
5 the questionnaire?

6 A. I recall there was someone who did not
7 respond.

8 Q. It was Ruby Glen that did not respond,
9 right?

10 A. Donuts, that sounds right.

11 Q. So you received responses from Afilias and
12 VeriSign and NDC; is that correct?

13 A. That's my recollection.

14 Q. And what did you do with them upon
15 receiving them?

16 A. I passed those responses on to ICANN's
17 legal team.

18 Q. Did you read the responses?

19 A. I believe I did.

20 Q. And did you undertake any analysis of the
21 responses yourself?

22 A. I did not.

23 Q. Do you know if ICANN counsel did?

24 A. So any knowledge I have of what counsel
25 did is based on communication I had with counsel.

1 Q. So let me just ask, do you know if they
2 did any analysis, without telling me the substance
3 of that?

4 Did I just check out --

5 (Discussion off the record.)

6 THE WITNESS: I said I provided the
7 responses to counsel. I am not exactly sure what
8 counsel did with them.

9 Q. BY MR. De GRAMONT: Were you aware -- are
10 you aware that ICANN has asserted in these
11 proceedings that its Board held a workshop in early
12 November 2016 at which .WEB was discussed?

13 A. In preparation for this hearing, I had
14 discussions with counsel.

15 Q. Were you aware in 2016 that there was a
16 Board workshop at which .WEB was discussed?

17 A. I was not.

18 Q. Were you asked in 2016 to help prepare
19 materials for the Board to consider the .WEB issue?

20 A. Not that I recall, no.

21 Q. To your knowledge, did ICANN ever reach a
22 decision on what to do with the concerns that
23 Afiliias made regarding .WEB, either before or after
24 November 2016?

25 A. Could you repeat the question? I want to

1 make sure I am answering correctly.

2 Q. Yeah. Do you know if ICANN ever reached a
3 decision regarding the concerns that Afilias had
4 made regarding .WEB?

5 A. Well, I mean, ICANN's a whole bunch of
6 people, but I am not aware of a specific decision
7 regarding Afilias' letters.

8 Q. Were you ever told that once the
9 contention set comes off hold, you should proceed
10 to delegate to NDC?

11 A. No.

12 Q. Were you ever told that the contention set
13 should stay on hold until any pending and
14 anticipated accountability mechanisms were
15 completed?

16 A. That isn't something I would have been
17 told. That would have been our practice. If there
18 were any discussions, it would have been with
19 counsel about that, but I can speak to our general
20 practice within the GDD, Global Domains Division,
21 and the new gTLD Program, our practice was to keep
22 contention sets or applications on hold until
23 accountability mechanisms had been resolved.

24 Q. But you testified that that practice was
25 made on a case-by-case basis depending on the

1 particular circumstances. Do you know if, based on
2 the particular circumstances here, ICANN decided to
3 implement that practice?

4 A. So when I was discussing a case-by-case
5 basis, it was about looking at that particular
6 accountability mechanism, and it was about making
7 the decision to put the application on hold.

8 But once it was on hold, to my
9 recollection, we kept things on hold, and it was a
10 matter of program operations, operational practice
11 to keep them on hold until we became aware and
12 informed that those accountability mechanisms were
13 resolved.

14 Q. In late 2016 or early 2017 the U.S.
15 Department of Justice commenced an antitrust
16 investigation of the VeriSign-NDC arrangements.

17 Do you recall that?

18 A. I became aware of it, yes.

19 Q. And were you told that you should take no
20 action regarding .WEB pending that investigation?

21 A. The conversations I recall were with
22 counsel.

23 Q. Do you recall that there was a long hiatus
24 until the DOJ investigation concluded in January
25 2018?

1 A. Well, the program wasn't on hiatus. My
2 recollection -- if you mean the application and
3 contention set remained on hold in that whole
4 period, it did until 2018 June.

5 Q. Okay. Did you know that in January 2018
6 VeriSign contacted ICANN staff to inquire about the
7 process for NDC to assign its .WEB Registry
8 Agreement to VeriSign?

9 A. I was unaware of that prior to preparing
10 for this hearing.

11 Q. Let me just quickly show you -- let's
12 quickly take a look at what is behind Tab 31,
13 Exhibit C-115. It is an exchange of emails between
14 Jessica Hooper of VeriSign and ICANN staff members
15 and then several internal emails.

16 If you look at Page 2, this is the email
17 from Jessica Hooper at VeriSign. Do you know
18 Ms. Hooper or do you know who she is?

19 A. I do not.

20 Q. And it is to Karla Hakansson at ICANN. Do
21 you know Ms. Hakansson?

22 A. Yes, I do.

23 Q. Is she a member -- was she a member of
24 your team?

25 A. She did not report up to me. She was part

1 of the Global Domains Division under another
2 executive.

3 Q. And if you look at the second page, she
4 writes, "I am beginning to take a high-level look
5 at the documents we would need to fill out to
6 assist NU DOT CO with the assignment process for
7 .WEB when the time comes."

8 Then if you turn to Page 1, Ms. Hakansson
9 says, "Great timing on Jessica's part! VeriSign's
10 ears must have been burning," and there's a little
11 smiley face emoji. You were not aware of these
12 emails at the time?

13 A. No, I was not.

14 Q. You didn't hear anything about them?

15 A. Not that I recall.

16 Q. Were you aware that Mr. Rasco had had a
17 phone call with Mr. Atallah and Mr. John Jeffrey in
18 around this time frame?

19 A. Not that I recall.

20 Q. Can you turn to Tab 2 in your binder,
21 which is Exhibit C-182? And you'll see on December
22 12th, 2017, there's a reference to Peg Rettino.
23 Who was Ms. Rettino?

24 A. She's Mr. Jeffrey's executive assistant.

25 Q. And John Jeffrey is the general counsel of

1 ICANN; is that correct?

2 A. That's correct.

3 Q. And then there's an email from Mr. Rasco
4 dated December 12, 2017, "Thank you. I look
5 forward to speaking on Thursday."

6 Do you know anything about that telephone
7 conference?

8 A. I don't.

9 Q. Then Mr. Rasco writes again on February
10 15th, 2018, quote, "Dear John and Akram, I hope
11 this messages finds you well. In line with our
12 previous conversation, I am contacting you
13 regarding NU DOT CO signing the Registry Agreement
14 for .WEB. Now that the DOJ CID has concluded and
15 that there are no pending accountability mechanisms
16 associated with our successful bid at the auction
17 for this string in 2016, the next step in the
18 process is for us to execute the Registry
19 Agreement. Please let me know if you'll have
20 sufficient time to get that to me this week.
21 Thanks so much for all your help throughout this
22 process, and I look forward to wrapping this up,"
23 unquote.

24 You were unaware of that communication in
25 February 2018?

1 A. Yes, I was unaware of that.

2 Q. Did you have any communications with
3 anyone from NDC after NDC submitted the
4 questionnaire?

5 A. And by "questionnaire," you mean that
6 September 2016 twenty questions?

7 Q. Yes, ma'am.

8 A. I don't recall any conversation.

9 Q. Okay.

10 A. Sorry.

11 Q. Did you know that the Ruby Glen CEP
12 terminated on 30 January 2018?

13 A. That sounds about right. I would have
14 been informed of that.

15 Q. And Ruby Glen had until 14 February 2018
16 to file an IRP but failed to do so.

17 Do you remember that?

18 A. I do recall that.

19 Q. Okay. And were you aware that Afiliias had
20 filed a DIDP request on 23 February 2018?

21 For the court reporter, it is D-I-D-P. It
22 stands for Document Information Disclosure Policy.

23 A. Yes, I do recall that request.

24 Q. And did you see the DIDP request?

25 A. I don't believe I did.

1 Q. Okay. Were you involved in responding to
2 the DIDP request in any way?

3 A. I don't recall. My only involvement would
4 have been with counsel, but I don't recall
5 supporting that request.

6 Q. Does a DIDP request put a contention set
7 on hold under the practice you described?

8 A. Generally no. We considered a DIDP to
9 be -- it was not one of those other three
10 accountability mechanisms.

11 Q. And are you aware that ICANN denied most
12 or all of the DIDP requests?

13 A. Of that specific DIDP request?

14 Q. Yes, yes.

15 A. I don't recall the specifics of that
16 request or the response.

17 Q. Do you recall that Afilias submitted a
18 request for reconsideration of the Board's denial
19 of the DIDP request?

20 A. I do.

21 Q. And you're aware that in early June 2018
22 the Board denied the request for reconsideration?

23 A. Yes. I believe they dismissed that
24 reconsideration request.

25 Q. And that apparently caused the contention

1 set to come off hold; is that correct?

2 A. Yes. That was -- on that basis, after the
3 Board's consideration there, we did take the
4 contention set off hold.

5 Q. When you say we took the contention set
6 off hold, whom do you mean by "we," who is "we"?

7 A. The program team is responsible for
8 managing, administering the applications and the
9 contention sets.

10 Q. So someone notified you that the request
11 for reconsideration was denied, and your team took
12 the contention set off hold?

13 A. That's accurate.

14 Q. All right. So take a look at Tab 33,
15 which is Exhibit C-166.

16 ARBITRATOR KESSEDJIAN: Mr. De Gramont, I
17 am terribly sorry, but I don't see Pierre Bienvenu
18 on the screen.

19 ARBITRATOR BIENVENU: I am still here, and
20 you will see me in a second.

21 ARBITRATOR KESSEDJIAN: Okay. Good.
22 Sorry.

23 MR. De GRAMONT: Thank you, Professor, for
24 that. We don't want to lose the Chairman or any
25 other members of the Panel. Thank you.

1 ARBITRATOR BIENVENU: I was there.

2 Q. BY MR. De GRAMONT: So, Ms. Willett, we
3 are looking at Tab 33, Exhibit C-166. Do you have
4 that?

5 A. Yes, I see that.

6 Q. And it is an email from Russ Weinstein
7 dated June 6, 2018, to Lisa Carter, Linett Nardone
8 and Karla Hakansson. What department were they in?

9 A. They reported to Russ Weinstein in the
10 Global Domains Division. I believe it was
11 contracted party -- they were on the engagement
12 side of the division.

13 Q. When you say "the engagement side," that's
14 the side of ICANN that engages with parties to
15 enter into registry agreements?

16 A. Well, they engage with contracted parties
17 for the most part. They did have some applicant
18 engagement function, but they weren't involved in
19 administering the new gTLD Program functions.

20 Q. Okay. Then you are copied, as are Amy
21 Stathos, Christopher Bare and Cyrus Namazi. I
22 think we have identified the others. Who is Cyrus
23 Namazi?

24 A. In this period of 2018 he was a peer of
25 mine. He was overseeing that portion of the gTLD

1 division.

2 Q. Okay. So Mr. Weinstein writes, "Lisa,
3 Linett and Karla, wanted to give you an update re:
4 .WEB/.WEBS. The question for reconsideration from
5 Afiliias has been denied and the contention set has
6 been taken off hold."

7 It goes on to say, quote, "Please let me
8 know if any questions come from your accounts
9 regarding next steps. Those should continue to be
10 managed by the program team," unquote.

11 And the program team is your team?

12 A. That's correct.

13 Q. Now, the email below is from you, and it
14 refers to an updated scorecard for .WEBS.

15 Just very briefly, what is a scorecard?

16 A. In this context, I believe the scorecard
17 was a summarized chart of the current state, some
18 background information. We prepared those to
19 inform executives about various matters.

20 Q. Did the scorecard contain information
21 about the status of whether contention sets were on
22 hold or not?

23 A. Yes. It would provide an update as to the
24 current status of that application or contention
25 set.

1 Q. So Mr. Atallah and these other executives
2 would have seen that the .WEB contention set was
3 taken off hold in the scorecard?

4 A. Well, Ms. Stathos is copied on here. My
5 understanding is that that scorecard and the
6 communications around it were privileged, but I
7 don't know if that's been -- no longer the case.

8 MR. De GRAMONT: Mr. LeVee, are you
9 raising an objection to my question?

10 MR. LeVEE: Now that I understand what
11 your question is, I do raise a privilege objection
12 because the scorecards are maintained by the legal
13 department.

14 Q. BY MR. De GRAMONT: But your understanding
15 is that the scorecard reflects the on-hold status
16 of the contention sets and that it is sent to
17 executives, including Mr. Atallah?

18 A. Yes. It is shared with executives to make
19 sure that they are informed of the current state of
20 certain matters.

21 Q. Would you turn to Tab 34, which is Exhibit
22 C-167, and it's an email from Jared Erwin, and
23 Mr. Erwin, again, is the gentleman who corresponded
24 with Mr. Rasco in June of 2016; is that correct?

25 A. That's correct.

1 Q. So he's still part of your team in June
2 2018?

3 A. Yes.

4 Q. And he's writing to you and Mr. Bare and
5 he copies Grant Nakata. Who is Mr. Nakata?

6 A. He was another member of the program team.
7 Mr. Erwin and Mr. Nakata reported to Mr. Bare, who
8 reported to me.

9 Q. Mr. Erwin writes, "Hi, Christine and
10 Chris. We have made the contention set updates
11 (on-hold arrow resolved) and notified the
12 applicants. By the end of the day, Grant will be
13 conducting outreach to the prevailing applicants
14 (NU DO and Vistaprint) to confirm/provide updated
15 signatory contact information," unquote.

16 Now, Vistaprint is the winner of the .WEBS
17 contention set, right?

18 A. .WEB and .WEBS were put in one contention
19 set, but Vistaprint was the prevailing party for
20 the string .WEBS, W-E-B-S.

21 Q. So Mr. Erwin is informing you that the
22 delegation process is -- of .WEB to NU DOT CO is
23 proceeding?

24 A. So this -- no, this didn't pertain to
25 delegation. This was essentially saying that --

1 indicating that since the -- informing us that
2 since the status change had been made, which
3 Mr. Erwin was responsible for, that Mr. Nakata
4 would be proceeding to reengage with the applicants
5 to restart the contracting process from where it
6 left off when these applications were put on hold
7 back in 2016.

8 Q. I see. So NDC had been sent the CIS, is
9 that what it's called?

10 A. The Contracting Information Request, CIR.

11 Q. That's right. This was the next step for
12 providing signatory contract information; is that
13 right?

14 A. The next step -- since almost two years
15 had gone by, my team was confirming signatory
16 information at that time.

17 Q. And Mr. Erwin states that ICANN has
18 notified the other applicants?

19 A. Notified, yes.

20 Q. Okay. And if we look at Tab 35, Exhibit
21 C-62, it's from Global Support Center, dated June
22 7th, 2018. It is to Mr. Kane at Afilias. I
23 believe he was in Australia at the time, which is
24 why it is dated June 7. And it says, "Dear John,
25 thank you for contacting the ICANN team. Case

1 00892769 has been closed," and then there's case
2 information. And then it says, "Please contact us
3 if you have any additional questions."

4 Do you see that?

5 A. I do.

6 Q. So this was the notification to Afilias
7 that the contention set had been taken off hold, do
8 I understand that correctly?

9 A. I am not sure exactly what this case is
10 without looking at the whole case. I couldn't
11 speak to this.

12 Q. Is this the form of notice that ICANN
13 typically gives to members of the contention set
14 when the contention set is closed?

15 A. It is not what I would expect to see, but
16 I did not typically look at those communications
17 going out from this portal system.

18 Q. Are you aware of any other notification
19 that was sent to Afilias about the -- taking the
20 contention set off hold?

21 A. I am not aware.

22 Q. Are you aware that Afilias' counsel had
23 asked ICANN for advanced notice if the contention
24 set was going to be taken off hold?

25 A. I recall that.

1 Q. And you recall that ICANN declined to give
2 any advanced notice, right?

3 A. It was not our practice to have outside
4 exceptional communications with applicants. We
5 were treating Afilias like we would any other
6 applicant in the contention set and informing them
7 at the same time we informed everyone else.

8 Q. Well, that's interesting because in August
9 2016, after VeriSign had issued its press release,
10 VeriSign's outside counsel got a call from ICANN's
11 outside counsel asking them for information about
12 .WEB.

13 Do you recall that?

14 A. I have no idea what counsel did, outside
15 counsel.

16 Q. No one from Jones Day called Afilias'
17 counsel when the contention set was taken off hold,
18 right?

19 A. I have no idea.

20 Q. Let's take a look at Tab 36 of your
21 binder, which is Exhibit C-169, and we are going to
22 start at the end. And it is an email dated June
23 12th from Grant Nakata to you and various others,
24 and it says, quote, "Hello, everyone. We have the
25 following contracting request for your review and

1 approval. Attached please find the RA sending
2 list."

3 I think "RA" stands for "Registry
4 Agreement"?

5 A. It does.

6 Q. It goes on to say, quote, "If you recall,
7 the .WEB/.WEBS contention set had resolved via
8 indirect contention auction in July 2016. The
9 contention set was later placed on hold due to a
10 pending accountability mechanism. The
11 accountability mechanisms closed and the contention
12 set was reverted back to resolved. NU DOT CO LLC,
13 the prevailing applicant for .WEB, has completed
14 the CIR form, and we are now prepared to issue a
15 Registry Agreement," unquote.

16 Do you see that?

17 A. I do.

18 Q. I take it that various approvals for that
19 to happen were required?

20 A. That's correct.

21 Q. So we see an approval from Mr. Bare, from
22 you, from Mr. Weinstein, and then at the top
23 Mr. Nakata writes on June 14th, quote, "We have the
24 following contracting request for your review and
25 approval. Attached please find the RA execution

1 list. NU DOT CO has signed the Registry Agreement
2 for .WEB, and we are now able to proceed to
3 countersign."

4 So if I understand correctly, the Registry
5 Agreement has been sent to NU DOT CO., they have
6 returned it and Mr. Nakata says, quote, "We are now
7 able to proceed to countersign," unquote.

8 Am I understanding that correctly?

9 A. So essentially it is two separate requests
10 for approvals in this email chain.

11 Q. And so after the June 14th email there's a
12 request for additional approvals to proceed to
13 countersign?

14 A. So the first request for approval from
15 Mr. Nakata, initiated on 12 June, was for approval
16 to send the Registry Agreement. Then he evidently
17 received that. And then the email from Mr. Nakata
18 on 14 June indicates that NU DOT CO had signed the
19 Registry Agreement. So he was then seeking a
20 second approval from those individuals to -- prior
21 to ICANN's execution, countersigning of the
22 Registry Agreement.

23 Q. And so if we take a look at what's behind
24 Tab 37, Exhibit C-170 and looking at the bottom of
25 Page 2, we see the same -- I think this is the same

1 email that we just looked at from Mr. Nakata asking
2 for approvals -- maybe that's -- yes, asking for
3 approval to countersign, and above it we see
4 various approvals.

5 And then on June 20th, 2018, Mr. Nakata
6 writes to various recipients, "Hello," quote, "I
7 want to provide an update on the .WEB Registry
8 Agreement. Prior to the execution of the .WEB
9 Registry Agreement, we received notice that a
10 cooperative engagement process was initiated on
11 .WEB. The .WEB/.WEBS contention set has been
12 placed on hold. We will void the current Registry
13 Agreement via DocuSign. If or when we are able to
14 proceed, we will reinitiate this approval process,"
15 unquote.

16 Were you instructed that once there were
17 no accountability mechanisms pending, you should go
18 ahead to proceed to delegate or contract with NDC
19 for .WEB?

20 A. Well, as I said before, I wasn't
21 instructed. It would have been our common
22 practice. And if I had -- if there were questions,
23 it would have been a conversation with counsel.

24 Q. Was the ICANN Board informed that staff
25 was moving forward with contracting with NDC for

1 .WEB?

2 A. So there were communications with the
3 Board in which ICANN's legal team was copied.

4 THE WITNESS: Is that something I can
5 disclose in regards to ICANN -- the Board's
6 oversight of this process?

7 MR. LeVEE: Probably no, but I don't know
8 what the document is that you're referring to.

9 I am trying not to object, but the
10 question, Ms. Willett, is: Do you know of any
11 communications that don't involve counsel?

12 MR. De GRAMONT: Let me just start with a
13 yes-or-no question.

14 Q. Did anyone on your staff inform the Board
15 that the contention set had been taken off hold and
16 that you were proceeding to contract with NDC?

17 A. It wasn't a common practice for us to
18 inform the Board of contention set status changes,
19 no.

20 Q. But in this instance -- let me ask it this
21 way: Are you aware of any nonlawyer at ICANN
22 informing the ICANN Board in June 2018 that the
23 contention set was being taken off hold and you
24 were proceeding to contract with NDC for .WEB?

25 A. Communications between my team and the

1 Board typically copied one or more attorneys.

2 Q. Mr. LeVee will object if he thinks that's
3 appropriate.

4 Right now I just want to know if any
5 nonlawyer wrote to the Board to inform the Board
6 that ICANN was proceeding to contract with NDC for
7 .WEB?

8 A. Yes.

9 MR. LeVEE: Yes-or-no question. Okay.
10 Thank you.

11 Q. BY MR. De GRAMONT: Do you know who sent
12 that communication to the ICANN Board?

13 A. Without looking at an email, I can't be
14 certain in this specific instance.

15 Q. Is there someone who it typically would
16 have been?

17 A. It would have been someone on my team,
18 either Mr. Nakata or there was also a David Saxa,
19 who would have sent an email to the Board, and our
20 legal team would have been copied on those
21 communications.

22 Q. And do you recall if anyone on the Board
23 responded to the nonlawyer who had made the
24 communication advising the Board that you were
25 proceeding to contract with NDC for .WEB?

1 A. To my knowledge, no Board member
2 responded.

3 Q. So what had happened to the, quote,
4 "informed resolution," unquote, that ICANN said it
5 was seeking back in September 2016?

6 A. So I believe that was in relationship to
7 those previous accountability mechanisms, the CEP,
8 the ombudsman matter, and those had been resolved.

9 Q. So once Ruby Glen's CEP was resolved and
10 once the ombudsman said he wasn't going to consider
11 ICANN's -- sorry, Afilias' complaint, the
12 questionnaires were -- or the informed resolution
13 was rendered moot?

14 A. I don't know what the legal department was
15 undertaking.

16 Q. If Afilias had not filed for CEP, ICANN
17 would have proceeded to contract with NDC; is that
18 your understanding?

19 A. I don't really know what would have
20 happened.

21 Q. Is it ICANN's position that it only has to
22 consider whether the gTLD rules have been violated
23 if someone forces them to do so by filing an
24 accountability mechanism?

25 MR. LeVEE: Can I get that question back?

1 MR. De GRAMONT: Yes, yes.

2 (Reporter read back as requested.)

3 MR. LeVEE: I object on the grounds of
4 privilege. If you know on other grounds, then you
5 should answer.

6 THE WITNESS: So I -- well, first I'd like
7 to say I don't think -- because I am no longer an
8 employee for ICANN, I don't think I can represent
9 ICANN's position in this hearing.

10 I can only share with you my understanding
11 as to how we operated, how we functioned and what
12 we told applicants about this matter. So I would
13 have to say at ICANN -- I fully expected from 2016
14 August, I expected Afilias to file a -- a
15 reconsideration request at any day, and I fully
16 expected that as soon as we changed the status of
17 the contention set, taking the contention set off
18 hold, that was staff action, and Afilias would have
19 voiced their objection to that and made a formal --
20 the way to formally complain is not by writing a
21 letter. It is by initiating a reconsideration
22 request. That's what I had been telling applicants
23 publicly. That was commonly understood since 2013.

24 Q. BY MR. De GRAMONT: Ms. Willett, Afilias
25 had asked for an investigation. ICANN had

1 responded that it was going to seek informed
2 resolution of the concerns that Afiliias had raised.
3 You don't think that ICANN was required to actually
4 do what it had said it was going to do?

5 MR. LeVEE: I object the question's very
6 argumentative. Put it in a brief.

7 Q. BY MR. De GRAMONT: Having sent a letter
8 to Afiliias stating that ICANN was going to seek
9 informed resolution of ICANN's -- of Afiliias'
10 concerns, didn't you think it was incumbent on
11 ICANN to actually provide an informed resolution of
12 those concerns?

13 A. As we discussed before, I thought I told
14 you the informed resolution pertained to the
15 accountability mechanisms. It was not our practice
16 to respond and initiate investigations and take
17 action in the program based on letters.

18 We had hundreds, if not thousands of
19 letters written to us asking ICANN to eliminate one
20 applicant or give the TLD to another applicant in
21 correspondence, and ICANN did not take questions in
22 letters.

23 Q. Can I ask you to take a look at Tab 30 in
24 your binder, which is Exhibit C-61? It is a letter
25 dated 30 September 2016 from Mr. Atallah to

1 Mr. Hemphill, and at this point ICANN's ombudsman
2 had dismissed Afilias' complaint.

3 Do you recall that?

4 A. I am not sure when I became aware of
5 Afilias' ombudsman complaint.

6 Q. Okay. Just to save time, I will represent
7 that the ombudsman had rejected the complaint by
8 this time and the letter is on record.

9 Mr. Atallah acknowledges Mr. Hemphill's
10 letters of 8/2016 and 9 September 2016. He says,
11 quote, "We note your comments regarding the NU DOT
12 CO LLC application for .WEB and the ICANN auction
13 of 27 July 2016."

14 At the bottom, second-to-last paragraph,
15 he writes, quote, "As an applicant in the
16 contention set, the primary contact for Afilias'
17 application will be notified of future changes to
18 the contention set status or updates regarding the
19 status of relevant accountability mechanisms. We
20 will continue to take Afilias' comments and other
21 inputs that we have sought into consideration as we
22 consider this matter," unquote.

23 Do you see that?

24 A. I do.

25 Q. Had you seen this letter at the time?

1 A. I believe so.

2 Q. And at this point Afiliias doesn't have any
3 accountability mechanism pending, right?

4 A. That's my understanding.

5 Q. And Mr. Atallah is committing to continue
6 to take Afiliias' comments and other inputs that we
7 have sought into consideration as we consider this
8 matter, right?

9 A. I see that.

10 Q. In fact, if Afiliias had not filed for CEP,
11 ICANN would simply have proceeded to contract with
12 NDC without ever considering the issues that
13 Afiliias had raised, right?

14 A. I can't speak to what Mr. Atallah would
15 have done. He would have been the executive to
16 sign the agreement on ICANN's behalf.

17 Q. In fact, the Registry Agreement was sent
18 to NDC, NDC signed it, returned it to ICANN and
19 ICANN personnel approved ICANN's signature and only
20 stopped the process when Afiliias filed its CEP; is
21 that right?

22 A. Once they initiated, yes, that
23 accountability mechanism.

24 Q. So the only way that ICANN will
25 consider -- strike that.

1 Did you consider the concerns that Afilias
2 had raised to be serious concerns?

3 A. I considered them to be sour grapes.

4 Q. And did you express that view to anyone
5 else at ICANN?

6 A. I may have.

7 Q. You don't recall specifically?

8 A. I don't recall specifically.

9 Q. Did anyone at ICANN express that view to
10 you, that Afilias' concerns were simply, quote,
11 "sour grapes," unquote?

12 A. Not that I recall.

13 Q. And you reached that view that Afilias was
14 simply acting out of, quote, "sour grapes,"
15 unquote, without ever having seen the DAA; is that
16 right?

17 A. Correct.

18 MR. De GRAMONT: May I take a two-minute
19 break, Mr. Chairman, to consult with my counsel,
20 with my colleagues?

21 ARBITRATOR BIENVENU: Yes, you may, Mr. De
22 Gramont.

23 (Whereupon a recess was taken.)

24 MR. De GRAMONT: Mr. Chairman, I have no
25 further questions.

1 Ms. Willett, thank you very much for your
2 time. It is nice to meet you.

3 ARBITRATOR BIENVENU: Thank you, Mr. De
4 Gramont.

5 The Panel has a few questions for
6 Ms. Willett, and we agreed that I would begin. If
7 there are supplemental questions, my colleagues
8 would follow me.

9 Ms. Willett, just to clarify an answer
10 that you have just given to counsel for Afiliias, he
11 asked you, you said -- stated in an answer to one
12 of his questions that you consider Afiliias'
13 concerns to be sour grapes.

14 Do you remember saying that?

15 THE WITNESS: I do.

16 ARBITRATOR BIENVENU: Now, does that mean
17 in your opinion, Ms. Willett -- and I am asking
18 only for your opinion, not other people's opinion,
19 not your counsel's opinion.

20 But in your opinion, does that answer mean
21 in your opinion NDC's contract with VeriSign did
22 not violate the guidebook and the auction rules?

23 THE WITNESS: I haven't evaluated that
24 agreement, and I am not a lawyer or in a position
25 to do a legal assessment of it, but the mere fact

1 of an agreement to me and the fact that VeriSign
2 essentially acted as a bidder in the auction on
3 behalf of NDC would not disqualify them. That's
4 my --

5 ARBITRATOR BIENVENU: Sorry to cut you
6 off, but if you haven't seen the agreement, you
7 don't know if the agreement --

8 THE WITNESS: Correct. I haven't reviewed
9 the agreement. I don't know what it says. I am
10 simply saying the fact that an agreement exists to
11 me is not disqualifying.

12 ARBITRATOR BIENVENU: Are you aware,
13 Ms. Willett, as you sit here today, that the
14 position taken by the Respondent in this IRP, and I
15 am reading here from Paragraph 81 of ICANN's
16 rejoinder, is, and I quote, "ICANN has taken no
17 position on whether NDC violated the guidebook."
18 Are you aware that that is the position taken by
19 the respondent in this IRP?

20 THE WITNESS: Yes.

21 ARBITRATOR BIENVENU: And was that the
22 position throughout the period from the moment
23 concerns were first raised about NDC's bid -- NDC's
24 application and the moment of your departure? At
25 no point during that period did ICANN take a

1 position on whether NDC had violated the guidebook?

2 THE WITNESS: As far as I am aware, that's
3 correct, yes.

4 ARBITRATOR BIENVENU: And to pick up on
5 another question that was asked of you by counsel
6 for Afilias, the fact that ICANN sent a draft
7 Registry Agreement to VeriSign -- forgive me, to
8 NDC for execution, that does not imply compliance
9 of NDC's application with the guidebook?

10 THE WITNESS: Well, I suppose, in terms of
11 the fact that -- sorry. I am trying to replay the
12 question.

13 ARBITRATOR BIENVENU: Let me rephrase it
14 if it is helpful to you.

15 If you and your team had taken the view
16 that applicant -- let's move away from the facts in
17 this case, but that an applicant had failed to
18 respect the guidebook, but there had been no
19 accountability mechanism to complain about that
20 noncompliance, would you, by reason of the absence
21 of an accountability mechanism, have sent a draft
22 Registry Agreement for execution?

23 THE WITNESS: No, I don't believe we would
24 have. If we determined that an applicant had
25 violated the terms of the guidebook, I don't

1 believe that my team and I would have given our
2 approvals to proceed with contracting.

3 ARBITRATOR BIENVENU: So why is it, then,
4 that no one in your team raised a red flag before
5 the Registry Agreement was sent to VeriSign to say,
6 "Hey, we have not yet taken a position on whether
7 NDC violated the guidebook, and we have to take a
8 position on this before we send that Registry
9 Agreement out for signature"?

10 THE WITNESS: So my team was operating
11 within the rules of the applicant guidebook, and we
12 were administering the processes and functions
13 described in that applicant guidebook.

14 For us to have been reviewing something
15 else, there was no mechanism beyond those
16 evaluation criteria for the program team to
17 determine that an applicant had violated the
18 guidebook unless we were informed by an outcome of
19 an accountability mechanism, an ombudsman
20 determination, a reconsideration request that was
21 taken up by the Board, and we were informed somehow
22 by the Board to take something new into
23 consideration. We were evaluating their
24 application and the information that the applicant
25 provided us according to those processes.

1 ARBITRATOR BIENVENU: Can I ask you to
2 turn to your letter of 16 September 2016?

3 THE WITNESS: Yes, right there.

4 ARBITRATOR BIENVENU: And if we go to the
5 next page, we see at the top of --

6 ARBITRATOR CHERNICK: What tab is that?

7 ARBITRATOR BIENVENU: It is Tab 30.

8 Sorry, I had a separate copy apart from the witness
9 binder, but it is Tab 30.

10 ARBITRATOR CHERNICK: Thank you.

11 ARBITRATOR BIENVENU: Sorry. I am
12 mistaken. It is not Tab 30.

13 MR. De GRAMONT: I believe it is Tab 29,
14 Mr. Chairman.

15 ARBITRATOR BIENVENU: 29. That's right,
16 29.

17 By the way, your letter is dated 16
18 September 2010.

19 Do you see that?

20 THE WITNESS: My copy says 16 September
21 2016.

22 ARBITRATOR BIENVENU: Sorry, 16 September
23 2016, yeah, forgive me.

24 16 September 2016, that is the deadline
25 that had been -- I will say "set," but maybe it

1 would be more appropriate to say "proposed" -- in
2 Afiliast's letter of 9 September. Was that
3 coincidental?

4 THE WITNESS: Yes, I believe it was.

5 ARBITRATOR BIENVENU: Now, turning to Page
6 2, we see the title of the questionnaire, "Topics
7 on Which Ruby Glen, NU DOT CO, Afiliast and VeriSign
8 are Invited to Comment."

9 Do you see that?

10 THE WITNESS: Yes.

11 ARBITRATOR BIENVENU: Can you tell us why
12 the questionnaire was addressed only to those four
13 parties and not to all members of the contention
14 set?

15 THE WITNESS: Any information I have on
16 that would have been based on conversation with
17 counsel.

18 ARBITRATOR BIENVENU: You were aware when
19 you sent that questionnaire that, among its
20 addressees, two of them were obviously aware of the
21 DAA because they were signatories to it, and you
22 knew that at least one of the four was not aware of
23 the DAA, namely Afiliast; is that correct?

24 THE WITNESS: So I'm sorry, I don't recall
25 when I became aware of the DAA, if it was in -- if

1 it was prior to 16 September or not, and I don't
2 know what other parties were aware of the DAA or
3 had seen copies.

4 ARBITRATOR BIENVENU: Bear with me,
5 Ms. Willett.

6 THE WITNESS: Of course.

7 ARBITRATOR BIENVENU: Just looking through
8 my notes here.

9 You mentioned yesterday that you had not
10 reviewed Mr. Rasco's statement; is that correct?

11 THE WITNESS: Which statement is that?

12 ARBITRATOR BIENVENU: Excuse me?

13 THE WITNESS: Oh, his witness statement?

14 ARBITRATOR BIENVENU: Yes.

15 THE WITNESS: No, I have not.

16 ARBITRATOR BIENVENU: You have not seen
17 it?

18 THE WITNESS: Unless it's in this binder,
19 I have not.

20 ARBITRATOR BIENVENU: Okay. There are
21 statements in Mr. Rasco's statement about what
22 ICANN knew or might have known, and I'd like to
23 explore that with you, if I may.

24 THE WITNESS: Of course.

25 ARBITRATOR BIENVENU: If you go to

1 Paragraph 27, and can someone -- we are going to
2 have someone display it for you.

3 THE WITNESS: Okay.

4 MR. De GRAMONT: Chuck, are you able to
5 get Mr. Rasco's -- okay.

6 MR. BIENVENU: If we go to the bottom of
7 Page 9 and top of Page 10. So I'll read it for
8 you.

9 "It was not until April 2016, however,
10 that ICANN" -- sorry, I can't read on my screen
11 because we have the -- I'll follow here.

12 "It was not until April 2016, however,
13 that ICANN sent notice to the contention set that
14 ICANN would issue the .WEB gTLD and, therefore,
15 that ICANN had scheduled a public auction for .WEB
16 to take place on July 27, 2016. Until ICANN sent
17 that formal notice, there was no guarantee that
18 ICANN would hold an auction for .WEB. Rather, as
19 had occurred with other domain strings (such as
20 .CORP), ICANN had the right to decline to issue the
21 .WEB gTLD and thus not hold an auction."

22 Could you help us situate those cases? In
23 what circumstances might ICANN decide not to hold
24 an auction?

25 THE WITNESS: So it is true that ICANN and

1 the Board had ultimate discretion as to whether to
2 issue any TLD or not.

3 With .CORP, as I recall -- I am going to
4 forget the term for this. There was a technical
5 risk to the root, a root collision. There was a
6 risk of essentially resolution of domain names to
7 IP addresses and queries to the DNS being routed to
8 the incorrect location, essentially, pertaining to
9 the .CORP, C-O-R-P, top-level domain.

10 So I do believe that that was a Board
11 decision which directed that we would not be
12 delegating the top-level domain .CORP at all.

13 ARBITRATOR BIENVENU: Thank you.

14 Can you go to Paragraph 33, and I'll just
15 let you read it, Ms. Willett. Let me know when
16 you're done.

17 THE WITNESS: I am. Thank you.

18 ARBITRATOR BIENVENU: So there's reference
19 in the second sentence to means of resolving
20 contention sets, and I would like to focus on the
21 third one mentioned by Mr. Rasco, which is, "buying
22 various applicants out of their applications before
23 any auction was held."

24 Do you know whether that has happened in
25 practice?

1 THE WITNESS: I would have to think about
2 a specific example, but I do recall more than a few
3 applicants who the applying entity was acquired by
4 a different organization.

5 ARBITRATOR BIENVENU: I don't believe that
6 that's what he's referring to. He's not referring
7 to an acquisition of the applicant. He is
8 referring to an applicant being bought out of its
9 application, at least that's how I read it.

10 THE WITNESS: I don't know what that would
11 mean. Because it would be contrary and against the
12 rules and the AGB to buy or sell an application,
13 but the entity -- the applying entities changed
14 hands on multiple occasions.

15 ARBITRATOR BIENVENU: Right. So you have
16 anticipated my question.

17 If what he's referring to, and no doubt he
18 can clarify when he appears before us, but if what
19 he were referring to was the buyout of the
20 application from the applicant, your view is that
21 this would not be permissible under the guidebook;
22 is that right?

23 THE WITNESS: To me it is -- what ICANN
24 was looking at was that the applying entity
25 continued to retain responsibility for the

1 application. So as long as that was still the
2 case, I -- I am not a lawyer. I know there's all
3 sorts of creative arrangements that could be made,
4 but as long as the applying entity still was
5 managing the application, that would have been
6 consistent with the rules.

7 But if that -- if that changed and then
8 that applicant wasn't managing the application,
9 that might be an issue. But we would have
10 evaluated that on a case-by-case basis.

11 ARBITRATOR BIENVENU: Can you think of
12 examples where that happened?

13 THE WITNESS: I'd have to do a little
14 harder thinking about the specific strings, but I
15 recall that we had at least one applying entity
16 that ceased to exist, so some other, I don't know,
17 parent corporation or sister corporation acquired
18 the assets of that entity. I think there were --
19 over many years, you know, not just these four
20 years in the program and beyond, it was a lot of
21 time for all sorts of changes to corporate
22 structures to occur.

23 As the program progressed, we had to
24 continue to adapt our procedures to handle
25 situations we hadn't contemplated and beyond what

1 was expressly stated in the AGB.

2 ARBITRATOR BIENVENU: Thank you. Could we
3 go to Paragraph 37, and I'll let you read it, but
4 my question will concern the penultimate sentence
5 of the paragraph.

6 THE WITNESS: Yes.

7 ARBITRATOR BIENVENU: Based on your
8 experience, Ms. Willett, were you aware of these
9 practices?

10 THE WITNESS: I don't recall ever being
11 informed explicitly by applicants of these
12 practices, but I became aware through general
13 discussions in the community that various practices
14 of choosing which contention sets or which strings
15 to pursue versus others did occur.

16 ARBITRATOR BIENVENU: Can you go to
17 Paragraph 83 of the witness statement?

18 THE WITNESS: I'm sorry, before we go
19 there, Mr. Chairman, I want to make sure I'm clear.
20 If you're referring to the penultimate statement
21 that ICANN did not object to them -- is that what
22 you were asking me about specifically?

23 ARBITRATOR BIENVENU: I was mostly,
24 whether it did or not is something -- is easily
25 traceable, or more easily traceable. But what I

1 just wanted to know is whether a person in your
2 position, an important position in relation to that
3 program, whether you were aware of these practices?

4 THE WITNESS: So I was aware that a
5 variety of resolutions was taking place, and the
6 way we became aware of that is because applicants
7 would withdraw their applications from ICANN,
8 essentially leaving one remaining applicant, and it
9 would resolve contention.

10 That is how we in the program team came to
11 understand that a private resolution had occurred,
12 but I don't recall anyone specifically telling me
13 of their strategy about an arbitrage strategy.

14 But over many years observing it, I think
15 it is easy to form conclusions how certain
16 applicants were treating certain applications and
17 what was being resolved.

18 ARBITRATOR BIENVENU: Thank you.

19 I was going to ask you about the account
20 in Paragraphs 83 to 86 of your conversation with
21 Mr. Rasco, but I believe we have your evidence on
22 this. So I don't need to go there.

23 My last question concerns the litigation
24 waiver that is contained in Module 6. It is under
25 Tab 8 of your binder.

1 THE WITNESS: Yes.

2 ARBITRATOR BIENVENU: And it is at Page 4.
3 Do you have it in front of you?

4 THE WITNESS: Yes.

5 ARBITRATOR BIENVENU: So I'll let you read
6 the beginning of the paragraph. I don't want to
7 burden the transcript, but when the text becomes
8 capitalized, we read, quote, "Applicant agrees not
9 to challenge, in court or in any other judicial
10 fora, any final decision made by ICANN with respect
11 to the application," and you can read what follows.

12 And then at the bottom of the paragraph,
13 the last -- in the penultimate sentence we see,
14 "Provided, that applicant may utilize any
15 accountability mechanism set forth in ICANN's
16 bylaws for purposes of challenging any final
17 decision made by ICANN with respect to the
18 application."

19 Do you have a view, Ms. Willett, as to
20 what is meant by "final decision made by ICANN with
21 respect to the application"?

22 THE WITNESS: I have a personal opinion.

23 ARBITRATOR BIENVENU: Excuse me?

24 THE WITNESS: I have a personal opinion as
25 to that.

1 ARBITRATOR BIENVENU: Yes. Could you give
2 us your understanding of what is meant by this
3 language?

4 THE WITNESS: So the guidebook describes
5 multiple evaluations that an evaluation goes --
6 that an application goes through, and if an
7 applicant failed any of those evaluations, that
8 would be a final decision made by ICANN.

9 So evaluation -- I guess in general, there
10 are a number of actions that ICANN could take in
11 the processing of an -- sorry -- in the processing
12 of an application, which could be a final decision
13 by ICANN, which would be an evaluation outcome, an
14 objection determination to either perbado
15 [phonetic] or fail an objection process, resolving
16 contention, string similarity, all of those -- it
17 wasn't just contracting. It wasn't just delegation
18 which we deemed as a final decision.

19 This was the part of the guidebook that we
20 were relying on when we looked and guided
21 applicants to utilize those accountability
22 mechanisms to channel action by ICANN.

23 We were talking about .CORP and not
24 choosing to delegate .CORP. That would have been a
25 final decision. This would have been a variety of

1 actions by ICANN in the processing of the program.

2 ARBITRATOR BIENVENU: Thank you very much.

3 So I don't know if my colleagues have
4 questions, additional questions for Ms. Willett.

5 ARBITRATOR CHERNICK: I do not.

6 ARBITRATOR KESSEDJIAN: Well, I think I
7 do, and I want to apologize to both Ms. Willett and
8 Jeff LeVee because he's waiting for the redirect.
9 I was looking at the schedule, and you have
10 evaluated 40 minutes. So it is going to take us
11 pretty long, but I will try to cut short -- I have
12 four questions. We will see whether I go through
13 four questions or whether I cut them.

14 Ms. Willett, I am speaking to you in your
15 capacity as general manager of this new gTLD
16 Program. So I want you to answer my questions to
17 the best of your professional capacities at -- and
18 not really trying to imagine what a lawyer would
19 do, what another person would do. So I am really
20 talking to you in the capacity you occupied for so
21 many years, which I consider to be an essential
22 capacity in the managing of the program.

23 On Monday -- of course you don't know
24 about that, but I am going to tell you what
25 happened on Monday. On Monday we had the opening

1 statements by the parties and the Amici.

2 NDC, who is an Amici -- Amicus in this IRP
3 said, and I quote, "ICANN" -- and it's -- by the
4 way, anyone who is concerned about where I quote,
5 this is one of the slides of NDC's opening
6 statement, and it is in the second version that we
7 received. It is Slide 8. I don't know whether
8 anybody would want to -- it is very short, so I
9 don't think you need to see the document.

10 I quote, "ICANN" -- and it is a title of
11 the slide. "ICANN Never Inquired about the
12 Agreement," and I am adding for you, Ms. Willett,
13 that the agreement that he is concerned about is
14 the DAA. It is the agreement between NDC and
15 VeriSign. "ICANN Never Inquired About the
16 Agreement With VeriSign Prior to the .WEB Auction,"
17 unquote.

18 Now, when I read in my capacity as a Panel
19 member this very sentence, what I read is the
20 reverse position, which is basically what NDC's
21 telling us, is that ICANN should have asked -- if
22 they were interested, if ICANN was interested in
23 the DAA, they should have asked, ICANN should have
24 asked.

25 Now I am asking your opinion. Do you

1 think it was ICANN's duty to inquire about
2 something that would have happened, could have
3 happened? You said to us many times that you had
4 no idea, but if that were true, if something like
5 this was going on, do you think that was your duty
6 as ICANN to ask for it?

7 MR. LeVEE: Professor Kessedjian, can I
8 just clarify that you're asking about prior to the
9 .WEB auction?

10 ARBITRATOR KESSEDJIAN: Yes, prior to the
11 .WEB auction. Thank you, Mr. Levee.

12 THE WITNESS: So I don't believe we could
13 have had a duty to inquire about an agreement we
14 didn't know about. So I think we inquired the
15 questions in June and July that my team and I posed
16 to Mr. Rasco about who the directors or managers
17 were of NDC, who the ownership interests were. We
18 asked those same types of questions of many, many
19 applicants. We sincerely did not -- I had no
20 clue -- sorry, American --

21 ARBITRATOR KESSEDJIAN: That's okay. I
22 understand.

23 THE WITNESS: I had no suspicion, no hint
24 that there was this separate agreement. So I don't
25 think we had a duty beyond all of the inquiries

1 that we did make.

2 ARBITRATOR KESSEDJIAN: Okay. Thank you.

3 Now, you said yesterday, and I quote from
4 the transcript of your witness deposition
5 yesterday, and that's for everybody in the room, it
6 is Page 140, Lines 12 and 13 of the transcript.
7 You said that the applicants are prohibited, and
8 you were very strong on that statement, from
9 signing, reassigning, transferring their
10 application, and you made a difference between that
11 prohibition, which seemed to be very strong in the
12 way you expressed it, and the rights.

13 Now, when I read that -- and in your
14 witness statement you said many, many times, and
15 you were asked today about that, but I noted at
16 least three paragraphs, if not more, 20, 23, 34,
17 where you said, "At no time did NDC tell us that
18 they were doing anything with VeriSign."

19 Now, for the sake of argument and for the
20 sake of discussion, if you had known -- and it is
21 just supposition, if you had known that there was
22 something going on with VeriSign, that was my word,
23 behind the scenes. Now, in your capacity as
24 general manager, what would you have done?

25 You didn't know, so it is a completely

1 hypothetical question.

2 THE WITNESS: So hypothetically, if we had
3 been made aware that NDC had an agreement with any
4 other party, and as we now know about the auction
5 and perhaps a hopeful assignment, we might have
6 asked some questions about it, but not knowing
7 about that, we didn't.

8 So hypothetically, it might have -- it
9 might have driven us to ask some additional
10 questions about the nature of that.

11 ARBITRATOR KESSEDJIAN: Thank you.
12 Pierre, I had two other questions, but I think it
13 is very late in the day, so thank you very much.

14 ARBITRATOR BIENVENU: Thank you.

15 Mr. LeVee, any redirect for Ms. Willett?

16 MR. LeVEE: I do have some.

17 Are you good to keep going?

18 (Discussion off the record.)

19 REDIRECT EXAMINATION

20 BY MR. LeVEE

21 Q. Ms. Willett.

22 A. Mr. LeVee.

23 Q. Would you turn to Exhibit C-61, but in
24 your binder it is Tab 30.

25 I am going to ask Ms. Ozurovich to

1 highlight the second paragraph.

2 You see where it says -- this is the
3 letter that you said you recognize sent by
4 Mr. Atallah and Mr. Hemphill in September 2016,
5 correct?

6 A. Correct.

7 Q. Okay. And do you see where it says in the
8 second paragraph, "You were notified via the
9 Customer Portal we placed the .WEB/.WEBS contention
10 set on hold. This was to reflect a pending
11 accountability mechanism initiated by another
12 member of the contention set." And then there's a
13 citation to the cooperative engagement.

14 Do you know what that was referring to,
15 the other member of the contention set?

16 A. Yes. I believe that was Donuts/Ruby
17 Glen's CEP from 2016.

18 Q. And does this letter anywhere say that
19 ICANN was putting the contention set on hold
20 because of the letters that Afilias had sent?

21 A. No, it does not.

22 Q. Okay. Now, would you --
23 Ms. Ozurovich, would you pull up Exhibit
24 C-51.

25 I am going to -- you don't have this,

1 Ms. Willett. It is not in your binder.

2 Do you see that this is a letter from
3 Afiliias to you dated October 7, 2016?

4 A. I do.

5 Q. And I am going to ask Ms. Ozurovich -- so
6 this is a letter from Afiliias to you, and it says,
7 "We appreciate the opportunity to provide comments
8 on behalf of Afiliias to the question posed by ICANN
9 in its September 16 letter." I am going to skip
10 because we're short on time.

11 Last sentence. "We are concerned" -- go
12 up one sentence. It says, "Mr. Atallah states that
13 while the .WEB contention set was placed on hold by
14 ICANN on August 19," that's the letter we looked
15 at, "such action was taken because of the
16 initiation of an ICANN accountability mechanism by
17 another applicant."

18 Do you see that?

19 A. These are long sentences. Yes.

20 Q. The last sentence says, "We are concerned
21 that this statement appears to imply that ICANN is
22 not placing the contention set on hold in order to
23 address the issues raised by Afiliias."

24 Do you see that?

25 A. I do.

1 Q. Did ICANN place the contention set on hold
2 because of the letter sent by Afilias?

3 A. We did not.

4 Q. So the concern expressed by Afilias was
5 accurate, that ICANN was not placing the contention
6 set on hold because of the letters that it had
7 sent?

8 A. Correct.

9 Q. Now, you said before that you expected
10 Afilias to file a reconsideration request.

11 Tell the Panel, what does it mean to file
12 a reconsideration request and what could they have
13 reconsidered back in 2016?

14 A. So a reconsideration request is one of
15 those accountability mechanisms defined in ICANN
16 bylaws, both prior to 2016 and the most current
17 ones, and a reconsideration request asks the Board
18 to examine any action or inaction taken by staff,
19 Board, et cetera.

20 Q. And who decides a reconsideration request?

21 A. The Board does, or one of the -- either
22 the Board governance committee or the Board itself
23 depending on practice.

24 Q. So could Afilias have initiated a
25 reconsideration request after the .WEB auction when

1 it started complaining that it thought NDC and
2 VeriSign had done something wrong?

3 A. Absolutely, yes. That's what we expected.

4 Q. And by doing that, would the Board have
5 acted on the reconsideration request? That's a bad
6 question.

7 Would it have been the Board that had
8 acted on the -- would have acted on the
9 reconsideration request that Afilias would have
10 filed?

11 A. Yes, it would have been the Board.

12 Q. Okay. And so had that happened, the Board
13 would have taken up at that time whatever Afilias'
14 reconsideration requests addressed?

15 A. Correct.

16 Q. Okay.

17 ARBITRATOR BIENVENU: Mr. LeVee, I am
18 sorry, this is the Chair here. If you'll permit,
19 can I ask the witness what decision would the
20 reconsideration request have targeted?

21 MR. LeVEE: That's a good question. That
22 was my next one.

23 THE WITNESS: So hypothetically --

24 ARBITRATOR BIENVENU: Then maybe you
25 should wait for the question from Mr. LeVee.

1 MR. LeVEE: No, no, no, Mr. Chairman, you
2 asked a question. I couldn't help myself. I'm
3 getting tired. I'm sorry.

4 ARBITRATOR BIENVENU: Please proceed.

5 THE WITNESS: So Afilias made a number of
6 assertions in those two letters of August and
7 September 2016. I would have expected they would
8 have raised those same issues as part of the
9 reconsideration request and hypothetically would
10 have asked the Board to disqualify NDC or
11 invalidate the auction or any of the actions
12 Afilias was asking in letters. It would have been
13 a formal request through that proper channel to the
14 Board to drive them to look at it.

15 Q. BY MR. LeVEE: Was a reconsideration
16 request available to be filed with respect to the
17 action of ICANN staff as opposed to the ICANN Board
18 at that time?

19 A. Yes, it was.

20 Q. So in 2016, Afilias could have filed a
21 reconsideration request with respect to an action
22 of both the Board and the staff, whether it was
23 action or inaction; is that correct?

24 A. That's correct.

25 Q. I am going to jump ahead to 2018 just to

1 connect the points.

2 In June of 2018, when ICANN took the
3 contention set off hold, did you know that Afilias
4 had promised to file an accountability mechanism,
5 namely invoking the CEP?

6 A. I believe they sent a letter to that
7 effect.

8 Q. Yes. So when they did initiate a CEP,
9 that put the contention set back on hold before
10 ICANN could sign, if it was going to sign, a
11 Registry Agreement?

12 A. That's correct.

13 Q. Okay. You were asked a question this
14 morning about -- well, I have the copy of the daily
15 transcript. This is something that we receive.

16 And for the members of the Panel, I am
17 going to read from the transcript today at 8:00
18 a.m. -- 8:43, that would be Pacific time. There's
19 an answer I don't understand.

20 The question is: "But if VeriSign had
21 been involved with NDC's application, that would
22 suggest a resell, transfer or assignment of NDC's
23 rights and obligations in the application." And
24 then you were asked, "Do you disagree?"

25 And you said, "Not necessarily."

1 I did not understand what you meant by
2 "Not necessarily," because I was concerned that you
3 actually might not have heard the whole question.

4 A. Yeah. I think it was a long question, and
5 I might have misunderstood. So could you reread?

6 Q. Let me read the question.

7 A. Perfect.

8 Q. "But if VeriSign had been involved with
9 NDC's application, that would suggest a resell,
10 transfer or assignment of NDC's rights and
11 obligations in the application."

12 Let me ask you to comment on that without
13 asking you to either agree or disagree.

14 A. So, again, if VeriSign had been involved
15 with NDC's application, I don't know what that
16 meant. VeriSign -- VeriSign was acting as the back
17 end. They had been designated as the back-end
18 registry operator for several dozen applicants to
19 operate TLDs.

20 So that could have been an involvement,
21 and that wouldn't have indicated a resell of the
22 application. They could have been acting as a
23 consultant to the applicant.

24 Again, if I may, I have the experience of
25 having managed 1,930 applications and many

1 different scenarios between applicants and third
2 parties and consultants. So my answers are
3 informed not just based on these applicants for
4 .WEB, but I am informed by -- in regards to how
5 many applicants behaved and how ICANN interacted
6 with them and conducted the program as a result.

7 Q. Thank you.

8 ARBITRATOR KESSEDJIAN: Mr. Levee, can I
9 interject a follow-up question on this one?

10 MR. LeVEE: Please do.

11 ARBITRATOR KESSEDJIAN: Thank you.

12 Ms. Willett, would you say that because
13 you were asked "involved," if VeriSign had been
14 involved and then you explained to us that there
15 are many kinds of different involvements, are you
16 saying to us that basically each case is to be
17 looked at, evaluated?

18 I am not sure I know exactly the word
19 because I have not worked in this kind of position,
20 but would that be a case-by-case depending on what
21 are the facts, who is doing what and so on?

22 THE WITNESS: Thank you, Professor.
23 ICANN, through information provided by applicants,
24 both in their applications, subsequent conversation
25 and dialogue, we became aware of a variety of

1 plans, future plans for their operation, what they
2 wanted to do with the TLD. If it wasn't pertaining
3 to selling the application and taking it from, you
4 know, application -- Applying Entity A to Applying
5 Entity B, ICANN was simply -- we were trying to
6 administer the evaluations described in the
7 guidebook.

8 We couldn't and didn't undertake to
9 evaluate all of those other third-party
10 relationships, whether it was for marketing or
11 back-end registry operation or in some cases we
12 became aware of intention to assign a TLD to a
13 third party.

14 Applicants asked us to do that before
15 contracting with some frequency, and we reminded
16 them of the rule that that wasn't possible, that
17 they could request such an assignment after
18 contracting.

19 So to your question, Professor, I suppose
20 it would have required an evaluation of that, but
21 there were so many hundreds or thousands of those
22 potential relationships, we didn't deem it to fall
23 within the scope. It wasn't part of the evaluation
24 criteria that we applied within the guidebook.

25 ARBITRATOR KESSEDJIAN: You have been

1 repeating many times that you had so many
2 applications and, therefore, couldn't spend a lot
3 of time on each of them or whatever, you had a lot
4 of each of them, and it was a fairly difficult job.

5 Now, isn't there some kind of
6 contradiction with the fact that you have been in
7 contact very regularly -- and I could quote you the
8 number of emails and telephone conversations and
9 whatever with the representatives of NDC.

10 So, you know, if, indeed, you had so much
11 work with all those applications, how come this
12 particular application was concerning you
13 particularly?

14 In your witness statement at some stage
15 you say that there was an email to Mr. Rasco, and
16 then a few hours later he's calling you. So he had
17 apparently direct communication with you.

18 THE WITNESS: So I --

19 ARBITRATOR KESSEDJIAN: These are
20 questions in my mind. So if you could clarify
21 that, that would be helpful.

22 THE WITNESS: I would be happy to. You're
23 right, there were many applications, and I didn't
24 regularly email -- have email contact or phone
25 contact with the primary contacts, with the

1 applicants on a regular basis.

2 However, there were more than a handful of
3 several dozen applications that became highly
4 contentious, not just string contention, but I'm
5 thinking of the string for .AMAZON, the string for
6 .AFRICA, the string for .GAY. I could go on,
7 several dozen. Those issues, because we were
8 getting the string for dot -- it doesn't matter.

9 There were several of those situations
10 where there were many communications, there were
11 many accountability mechanisms triggered, and those
12 parties, it wasn't always satisfactory to them or
13 suitable simply to engage on somewhat sensitive and
14 very charged topics simply through emails from
15 low-level staff via that applicant portal.

16 It wasn't very friendly, if you will. So
17 on these handful of occasions, I would become
18 involved, my staff would bring it to my attention
19 or parties would contact me directly. So it was
20 those few dozen applications, contention sets that
21 I had direct conversation with applicants about.

22 ARBITRATOR KESSEDJIAN: And yet in the
23 case for which we are sitting here, that did not
24 trigger your curiosity about trying to find out
25 what was going on, really?

1 THE WITNESS: Well, it wasn't really a
2 matter of my curiosity. It was a matter of what
3 ICANN had a right to and trying to treat this
4 applicant and this contention set the same way we
5 had treated the other 1,900 applications before it.
6 So that's why we ask the same questions.

7 ARBITRATOR KESSEDJIAN: But you just said
8 it was not true for those two handful -- so there
9 was a differentiation?

10 THE WITNESS: So I was speaking of the
11 distinction in terms of the level of concern and
12 disagreement. The .AMAZON TLD had numerous
13 accountability mechanisms and perhaps even hundreds
14 of letters written about it.

15 So depending on sort of the nature,
16 certain issues get escalated to me. But that
17 didn't mean that we were treating the applications
18 and we were applying different standards to
19 different applicants, you know, based on whether I
20 knew them or -- no one got -- there was no
21 favoritism, whether I knew someone or didn't know
22 someone.

23 I believe when I first emailed Mr. Rasco
24 in June 2016, July 2016, I said, "Do you even
25 remember me?" Because I don't know that he and I

1 have ever met face to face, and I don't think I
2 recall talking to him prior -- except maybe on one
3 occasion prior to June 2016.

4 So it was more about --

5 ARBITRATOR KESSEDJIAN: I got the message.
6 I think we probably need to defer to Mr. LeVee. I
7 am sorry, Mr. LeVee, took more time than I thought.
8 Thank you.

9 MR. LeVEE: You are entitled to ask
10 whatever you want, you know that. Let me follow up
11 on those questions.

12 Q. When there was a top-level domain
13 application or there was kinds of disputes such as
14 .AMAZON, was .WEB one where there was a lot of
15 activity over the course of a few years?

16 A. Yes. A couple of accountability
17 mechanisms. Not as much as some, but it wasn't a
18 straightforward contention set.

19 Q. Was there a point on these -- I don't know
20 the right word, I don't want to put words in your
21 mouth, but a point where strings that had a lot of
22 attention where the law department would inevitably
23 become involved?

24 A. Absolutely.

25 Q. And would that affect the amount of

1 attention that you personally would give once the
2 law department became involved?

3 A. Yes.

4 Q. Let me ask you -- I just have two other
5 things.

6 You were asked about the ombudsman and
7 what kind of investigation an ombudsman can do.

8 I am going to ask to have the bylaws put
9 up. I think it is Exhibit C-1, and in particular,
10 let's start with Page 41. Actually go to the
11 previous page, Kelly.

12 Just to orient you, as you see, Article 5
13 is the ombudsman article, yes?

14 A. Yes.

15 Q. Okay. So, Kelly, if you would turn to
16 Page 42, I am going to ask you to look at Section
17 5.3, which is entitled "Operations." It says, "The
18 Ombudsman shall" -- and look at (d). We'll blow
19 that up.

20 It says, "The ombudsman shall have the
21 right to have access to (but not to publish if
22 otherwise confidential) all necessary information
23 and records from ICANN staff and constituent bodies
24 to enable an informed evaluation of the complaint
25 and to assist in dispute resolution where feasible

1 (subject only to such confidentiality obligations
2 as are imposed by the complainant or any generally
3 applicable confidentiality policies adopted by
4 ICANN)."

5 You see that?

6 A. I do.

7 Q. You understand that was part of the
8 bylaws?

9 A. Yes.

10 Q. Did you understand that the ombudsman
11 would ask ICANN's staff to assist him from time to
12 time in gathering information relating to his
13 investigations?

14 A. Yes. Based on his having done so with me
15 in regards to matters pertaining to the new gTLD
16 Program.

17 Q. Okay. Change of subject.

18 You were asked about some emails that you
19 could not recall, in particular, some media
20 reports.

21 Do you remember that?

22 A. Yes.

23 Q. Can you give some estimate of how many
24 emails you received in a given day and the priority
25 that you put on media reports?

1 A. So in 2016, I was probably down to
2 receiving 200 to 300 emails per day, and media
3 reports were definitely not my priority. I might
4 look at them when my calendar permitted, but I will
5 say I typically had in 2016 many hours of meetings
6 scheduled on my calendar.

7 I looked at those news feeds maybe once or
8 twice a week.

9 MR. LeVEE: Mr. Chairman, if I could have
10 one minute, and I'll just check with my colleagues.

11 ARBITRATOR BIENVENU: Yes, Mr. LeVee,
12 please do.

13 MR. LeVEE: I am just going to put this on
14 mute.

15 (Whereupon a recess was taken.)

16 MR. LeVEE: Ms. Willett, I would like to
17 thank you. You sat much longer than I told you you
18 would, and for that I apologize.

19 I very much appreciate that the Panel
20 stayed extra late this evening, in particular the
21 Panel in France, and I have no additional
22 questions. Thank you.

23 THE WITNESS: Thank you.

24 ARBITRATOR BIENVENU: Thank you very much,
25 Mr. LeVee.

1 Ms. Willett, I am sure that counsel for
2 the claimant join Mr. LeVee in thanking you for
3 your availability and for your evidence, and
4 certainly the members of the Panel appreciated the
5 time that you devoted to assisting us in our task,
6 and we are very grateful.

7 I must instruct you that the sequestration
8 of fact witness order requires me to instruct you
9 not to communicate with other witnesses whose
10 testimony has not yet been heard in the case. So
11 if you could avoid doing that, please.

12 So thanks again. It's been a long day for
13 all of us, but I am sure particularly for you, and
14 we are grateful for your availability.

15 THE WITNESS: I hope it's been helpful.
16 Thank you.

17 MR. De GRAMONT: Thank you again.

18 ARBITRATOR BIENVENU: So I don't think I
19 am going to ask if there are any other matters.
20 It's very late for at least one of us, but I do
21 thank everybody for remaining available until such
22 a late hour, particularly our court reporter.
23 Thank you very much.

24 So we resume tomorrow morning at 7:00 a.m.
25 Pacific, and until then, keep well. See you

REPORTER'S CERTIFICATE

---o0o---

STATE OF CALIFORNIA)
) ss.
COUNTY OF SAN FRANCISCO)

I, BALINDA DUNLAP, certify that I was the official court reporter and that I reported in shorthand writing the foregoing proceedings; that I thereafter caused my shorthand writing to be reduced to typewriting, and the pages included, constitute a full, true, and correct record of said proceedings:

IN WITNESS WHEREOF, I have subscribed this certificate at San Francisco, California, on this 17th day of August, 2020.

BALINDA DUNLAP, CSR NO. 10710, RPR, CRR, RMR

	accounts (1) 730:8	addition (4) 596:3,4;686:7; 713:10	12,24;696:18; 700:11,14;704:3,5,9; 706:2;710:17,21; 715:14,19;719:11; 720:23;721:3; 726:19;727:17; 730:5;733:22;734:6, 19;735:5;741:16; 742:14,18,24;743:2, 8;745:2,10,13,20; 746:1,13;747:10; 749:6;752:7,23; 767:20;768:3,6,8,23; 769:2,4,10,24;770:9; 771:5,12,20;772:3	609:19;646:9; 683:24;715:19; 747:6

I. INTRODUCTION

A. Overview

1. The Claimant is one of seven entities that submitted an application to the Respondent for the right to operate the registry of the .WEB generic Top-Level Domain (**gTLD**), pursuant to the rules and procedures set out in the Respondent's New gTLD Applicant Guidebook (**AGB**) and the Auction Rules for New gTLDs (**Auction Rules**). Under the AGB and Auction Rules, in the event of multiple applicants for the same gTLD, the applicants are placed in a "contention set" for resolution privately or, if this first option fails, through an auction administered by the Respondent.
2. On 27 and 28 July 2016, the Respondent conducted an auction among the seven applicants for the .WEB gTLD. Nu Dotco, LLC (**NDC**) won the auction while the Claimant was the second-highest bidder.
3. Shortly after the .WEB auction, it was revealed that NDC and VeriSign, Inc. (**VeriSign**) had entered into an agreement under which VeriSign undertook to provide funds for NDC's bid for the .WEB gTLD, while NDC undertook, if its application proved to be successful, to transfer and assign its registry operating rights in respect of the .WEB gTLD to VeriSign upon receipt from the Respondent of its actual or deemed consent to this assignment¹ (**Domain Acquisition Agreement**).
4. The Claimant initiated the present Independent Review Process (**IRP**) on 14 November 2018. On the merits, the Claimant is seeking, among others, binding declarations that the Respondent must disqualify NDC's bid for .WEB and, in exchange for a bid price to be specified by the Panel, proceed with contracting the Registry

¹ Third Party Designated Confidential Information Redacted

Agreement for .WEB with the Claimant. As a result of the agreement described in paragraphs 61-64 below, it has been agreed that the merits of the dispute would be the subject of Phase II of the IRP.

5. This decision of the Independent Review Panel (**Panel**) concludes Phase I of the IRP, and determines the requests respectively submitted by VeriSign and NDC (collectively, the **Applicant Amici**) to participate as *amici* in the present IRP. Those requests are based on Rule 7 of the *Interim Supplementary Procedures for Internet Corporation for Assigned Names and Numbers' Independent Review Process*, adopted by the Respondent's board (**Board**) on 25 October 2018 (**Interim Procedures**).
6. The Claimant opposes the Applicant *Amici*'s requests. The Claimant contends that the manner in which the *amicus* provisions were added to Rule 7 of the Interim Procedures violated the Respondent's *Bylaws For Internet Corporation for Assigned Names and Numbers*, as amended on 18 June 2018 (**Bylaws**). On that basis, the Claimant asks that the *amicus* provisions of Rule 7 be declared unenforceable and, consequently, that the Applicant *Amici* not be allowed to participate in this IRP. Alternatively, the Claimant asks that its Rule 7 claim be joined to the other claims to be decided in Phase II and that the Applicant *Amici* be allowed to participate in the IRP provisionally, within the limited terms of Rule 7.
7. After careful consideration of the facts, the applicable law and the submissions made by the Parties and Applicant *Amici*, the Panel unanimously decides to grant the Applicant *Amici*'s applications to participate in Phase II of this IRP, on the terms and upon the conditions set out in this decision. The Panel does so on the basis of the Claimant's alternative request for relief. Accordingly, and to the extent that the Claimant wishes to

maintain its Rule 7 claim, the Panel joins those aspects of this claim over which it has jurisdiction to the claims to be decided in Phase II.

B. The Parties

8. The Claimant in the IRP is Afilias Domains No. 3 Limited (**Afilias** or **Claimant**), a legal entity organized under the laws of the Republic of Ireland with its principal place of business in Dublin, Ireland. Afilias provides technical and management support to registry operators and operates several generic gTLD registries. gTLDs represent the portion of an Internet domain name to the right of the final dot, such as “.COM” or “.ORG”. The Claimant’s parent company, Afilias, Inc., is a United States corporation that is the world’s second-largest Internet domain name registry.
9. Afilias is represented in the IRP by Arif Hyder Ali, Alexandre de Gramont and Rose Marie Wong, of Dechert LLP, and by Ethan Litwin of Constantine Cannon LLP.
10. The Respondent is the Internet Corporation for Assigned Names and Numbers (**ICANN** or **Respondent**), a not-for-profit corporation organized under the laws of the State of California. ICANN oversees the technical coordination of the Internet’s domain name system (**DNS**) on behalf of the Internet community. The essential function of the DNS is to convert easily remembered Internet domain names such as “icann.org” into numeric IP addresses understood by computers.
11. ICANN’s core mission, as described in its Bylaws, is to ensure the stable and secure operation of the Internet’s unique identifier system. To that end, ICANN contracts with entities that operate gTLDs.
12. ICANN is represented in the IRP by Jeffrey A. LeVee, Steven L. Smith, David L. Wallach, Eric P. Enson and Kelly M. Ozurovich, of Jones Day LLP.

C. The IRP Panel

13. On 26 November 2018, Afiliat nominated Professor Catherine Kessedjian as a panelist for the IRP. On 13 December 2018, the International Centre for Dispute Resolution (**ICDR**) appointed Prof. Kessedjian on this IRP Panel and her appointment was reaffirmed by the ICDR on 4 January 2019.
14. On 18 January 2019, ICANN nominated Mr. Richard Chernick as a panelist for the IRP and he was appointed to that position by the ICDR on 19 February 2019.
15. On 17 July 2019, the Parties nominated Mr. Pierre Bienvenu, Ad. E., to serve as the IRP Panel Chair. Mr. Bienvenu accepted the nomination on 23 July 2019 and he was appointed by the ICDR on 9 August 2019.
16. In September 2019, with the consent of the Parties, Ms. Virginie Blanchette-Séguin was appointed as Administrative Secretary to the IRP Panel.

D. The Applicant *Amici*

17. VeriSign is a publicly traded company organized under the laws of the State of Delaware. VeriSign operates, among others, the registries for the .COM, .NET and .NAME gTLDs.
18. VeriSign is represented in this IRP by Ronald L. Johnston, James S. Blackburn and Maria Chedid, of Arnold & Porter Kaye Scholer LLP.
19. NDC is a limited liability company organised under the laws of the State of Delaware. The Claimant avers that NDC was established as a special purpose vehicle to acquire gTLDs in the new gTLD Program.
20. NDC is represented in this IRP by Charles Elder and Steven Marenberg, of Irell & Manella LLP.

E. Place (Legal Seat) of the IRP

21. The Claimant has proposed that the seat of the IRP be London, England, without prejudice to the location of where hearings are held. In its letter dated 30 August 2019, the Respondent has confirmed its agreement with this proposal.

F. Language of the Proceedings

22. In accordance with Section 4.3(l) of the Bylaws, the language of the proceedings of this IRP is English.

G. Jurisdiction of the Panel

23. The Claimant's Request for IRP is submitted pursuant to Article 4, Section 4.3 of the Bylaws, the International Arbitration Rules of the ICDR, and the Interim Procedures. Section 4.3 provides for an independent review process to hear and resolve, among others, claims that actions or failures to act by or within ICANN committed by the Board, individual Directors, Officers or Staff members constituted an action or inaction that violated the *Amended and Restated Articles of Incorporation of Internet Corporation for Assigned Names and Numbers* as approved by the ICANN Board on 9 August 2016, and filed on 3 October 2016 (**Articles of Incorporation**) or the Bylaws.
24. In the course of the preparatory hearing of 5 September 2019, each of the Parties and Applicant *Amici* confirmed its consent to the Applicant *Amici's* requests being determined by the Panel in Phase I of the IRP.

H. Applicable Law

25. The rules applicable to the present IRP are, in the main, those set out in the Bylaws and the Interim Procedures (subject to the Claimant's challenge of Rule 7 of the Interim Procedures).

26. Section 1.2(a) of the Bylaws provides that “[i]n performing its Mission, ICANN must operate in a manner consistent with these Bylaws for the benefit of the Internet community as a whole, carrying out its activities in conformity with relevant principles of international law and international conventions and applicable local law [...]”. The Panel notes that Article III of the Articles of Incorporation is to the same effect as Section 1.2(a) of the Bylaws.
27. At the hearing on Phase I, counsel for the Respondent, in response to a question from the Panel, submitted that in case of ambiguity the Interim Procedures, as well as the Articles of Incorporation and other “quasi-contractual” documents of ICANN, are to be interpreted in accordance with California law, since ICANN is a California not-for-profit corporation. The Claimant did not express disagreement with ICANN’s position in this respect.
28. As will be seen, the Panel’s conclusions in regard to Phase I issues give effect to the relevant provisions of Rule 7 of the Interim Procedures, properly interpreted, and do not engage any divergence of views between the Parties and the Applicant *Amici* as to the applicable law.

I. Burden and Standard of Proof

29. It is a well-known and accepted principle in international arbitration that the party advancing a claim or defence carries the burden of proving its case on that claim or defence.
30. As regards the standard (or degree) of proof to which a party will be held in determining whether it has successfully carried its burden, it is generally accepted in practice in international arbitration that it is normally that of the balance of probabilities, that is, “more likely than not”. That said, it is also generally accepted that allegations of

dishonesty or fraud will attract very close scrutiny of the evidence in order to ensure that the standard is met. To quote from a leading textbook, “[t]he more startling the proposition that a party seeks to prove, the more rigorous the arbitral tribunal will be in requiring that proposition to be fully established.”²

31. The authors of the same textbook observe that modern international arbitral tribunals tend to “accord greater weight to the contents of contemporary documents than to oral testimony given, possibly years after the event, by witnesses who have obviously been ‘prepared’ by lawyers representing the parties.” In the opinion of these authors, “[i]n international arbitrations, the best evidence that can be presented in relation to any issue of fact is almost invariably contained in the documents that came into existence at the time of the events giving rise to the dispute.”³

32. These principles were applied by the Panel in considering the issues in dispute in Phase I of this IRP.

II. HISTORY OF THE PROCEEDINGS

33. The Parties have provided the Panel with a history of the proceedings as of 23 August 2019, from which the Panel draws in this section of its decision to provide context for its decision on Phase I.

34. The IRP is comprised of the following three interrelated aspects:

² See, generally, Nigel Blackaby, Constantine Partasides QC, Alan Redfern and Martin Hunter, *Redfern and Hunter on International Arbitration*, 6th ed., Oxford, Oxford University Press, 2015, para. 6.87.

³ *Ibid*, para. 6.90.

- **First**, the overall IRP, in which Afilias argues that ICANN violated its Articles of Incorporation, Bylaws and other governance documents in its administration of the policies and processes to award the .WEB gTLD.
- **Second**, the Request for Emergency Panelist and Interim Measures of Protection (**Emergency Interim Relief Request**) before Mr. Kenneth B. Reisenfeld, the Emergency Panelist, concerning Afilias' emergency request for a stay of all ICANN actions that further the delegation of the .WEB gTLD during the pendency of the IRP.
- And, **third**, NDC's and VeriSign's requests to participate in the IRP, including the request for Emergency Interim Relief, as *amici*, which first proceeded before Mr. Scott Donahey, the Procedures Officer.

35. The Panel further describes each of the three aspects of the IRP in the paragraphs below.

A. The Overall IRP

36. On 18 June 2018, Afilias invoked ICANN's Cooperative Engagement Process (**CEP**) after learning that ICANN had removed the .WEB gTLD contention set's "on-hold" status. A CEP is intended to help parties to a potential IRP resolve or narrow the issues that might need to be addressed in an IRP. The Parties participated in the CEP process until 13 November 2018. It is of relevance to the issues in dispute in Phase I to note that the fact that Afilias had invoked a CEP in relation to the status of the .WEB gTLD was disclosed on ICANN's website on 20 June 2018.

37. As already mentioned, Afilias filed its request for IRP with the ICDR on 14 November 2018. From November 2018 to March 2019, the Parties principally focused on the requests for Emergency Interim Relief and the possible participation of

the Applicant *Amici* in the proceedings, both of which are described below. Following a request by ICANN and the Parties' failure to reach agreement, the ICDR extended ICANN's deadline for submitting its Answer to Afilias' Request for IRP to 25 January 2019.

38. Pursuant to an order from the Emergency Panelist dated 3 December 2018, ICANN produced documents to Afilias on 18 December 2018, subject to confidentiality restrictions ordered by the Emergency Panelist. Afilias then took the position that the documents produced to it by ICANN warranted the amendment of its Request for IRP. Accordingly, on 29 January 2019, the Parties agreed again to postpone the deadline for the submission of ICANN's Answer until after Afilias filed its Amended Request for IRP.
39. On 21 March 2019, Afilias filed its Amended Request for IRP with the ICDR. On 31 May 2019, ICANN submitted its Answer to the Amended Request for IRP to the ICDR. Since ICANN's Answer, the Parties have submitted no other significant filings to the ICDR in the IRP main proceeding.

B. The Emergency Interim Relief Request

40. On the same day that Afilias filed its Request for IRP, ICANN informed Afilias that it would only keep the .WEB gTLD contention set "on-hold" until 27 November 2018, so as to allow Afilias time to file a request for emergency interim relief, barring which ICANN would take the .WEB gTLD contention set off of its "on hold" status. Afilias filed its Emergency Interim Relief Request with the ICDR on 27 November 2018. The Emergency Interim Relief Request seeks to stay all ICANN actions that would further the delegation of the .WEB gTLD.
41. On 28 November 2018, the ICDR appointed Mr. Reisenfeld as the Emergency Panelist for the Emergency Interim Relief Request. Following a scheduling conference with the

Parties on 30 November 2018, Mr. Reisenfeld issued the Emergency Panelist's Scheduling Order No. 1 (**Order No. 1**) on 3 December 2018. The order, among other procedural issues: (1) acknowledged ICANN's commitment to "keep the .WEB registration process 'on hold' pending a decision on the Interim Request for Emergency Relief"; (2) sought guidance regarding the potential participation of *amicus curiae* and (3) stated that ICANN had agreed to produce documents responsive to a narrow list of requests for documents necessary for Afilias' Emergency Interim Relief Request.

42. On 3 December 2018, in response to Order No. 1, Afilias submitted a narrowed Request for the Production of Documents to which ICANN submitted objections. Mr. Reisenfeld granted Afilias' requests – subject to a protective order – in his 12 December 2018 Decision on Afilias' Request for the Production of Documents.
43. On 14 December 2018, following Mr. Reisenfeld's decision, ICANN submitted its own Request for Production of Documents in order to seek information regarding the merits of the dispute. Afilias objected to ICANN's requests on 18 December 2018. On the same day Afilias objected to ICANN's document requests, ICANN filed its Response to the Emergency Interim Relief Request and produced documents in response to Afilias' document requests. ICANN's production is covered by a protective order finalized by the Parties on the same day. As part of this document production process, ICANN produced the Domain Acquisition Agreement entered into between VeriSign and NDC in connection with the .WEB gTLD.
44. On 26 December 2018, Mr. Reisenfeld issued a decision on ICANN's Request for Production of Documents, denying some of ICANN's requests. Afilias later informed both ICANN and Mr. Reisenfeld that it possessed no documents responsive to ICANN's document requests, as modified by Mr. Reisenfeld's decision.

45. On 3 January 2019, Afilias challenged the Domain Acquisition Agreement's confidentiality designation under the Parties' protective order on the ground that it needed to discuss the document with its general counsel. On 8 January 2019, ICANN informed Mr. Reisenfeld that it objected to Afilias' confidentiality challenge. The Parties resolved the confidentiality designation issue on 15 January 2019, when ICANN informed Afilias and Mr. Reisenfeld that VeriSign and NDC agreed to let Afilias disclose the Domain Acquisition Agreement to its general counsel.
46. While the requests for participation of *amicus curiae* remained pending, Afilias' Emergency Interim Relief Request also remained pending before Mr. Reisenfeld. However, on 23 January 2019, the Parties requested that Mr. Reisenfeld postpone further activity until the requests for participation as *amici* are resolved. On 21 March 2019, ICANN confirmed that it would keep the .WEB contention set "on hold" until there is a decision on the Emergency Interim Relief Request.
47. This Panel having since been appointed to determine the IRP, the Parties have expressed their understanding that, absent party agreement, it will be for this Panel to resolve the Emergency Interim Relief Request. In the meantime, the .WEB gTLD contention set remains on hold.

C. Requests for Participation as *Amicus Curiae*

48. On 5 December 2018, VeriSign and NDC informed the ICDR that they intended to submit requests to participate as *amici* in the IRP, including the Emergency Interim Relief Request. On 8 December 2018, Afilias objected to their participation in the IRP as *amici*. On 11 December 2018, VeriSign and NDC each filed with the ICDR a Request to Participate as *amicus* in the IRP. ICANN indicated that it supported those applications.

49. Pursuant to Rule 7 of the Interim Procedures, a Procedures Officer must be appointed to consider any requests to participate in an IRP as *amicus curiae*. ICANN argued that Mr. Reisenfeld should serve as the Procedures Officer, but Afilias objected to his appointment to serve in this capacity. On 13 December 2018, the ICDR decided to appoint a separate Procedures Officer and, on 21 December 2018, Mr. Scott Donahey was appointed in this role. The Parties and the Applicant *Amici* did not object to Mr. Donahey's appointment.
50. On 5 January 2019, after participating in a conference call with the Parties and the Applicant *Amici*, Mr. Donahey issued a Memorandum of Conference Call No. 1 (**Memorandum No. 1**). That memorandum requested that the Parties and the Applicant *Amici* brief the legislative history of the *amicus* language in the Interim Procedures.
51. In response, Mr. Donahey received several submissions from the Parties and the Applicant *Amici*. ICANN filed its response to Memorandum No. 1 and to the Requests to Participate as *Amicus Curiae* on 17 January 2019. Afilias responded to the Requests to Participate as *Amicus Curiae* on 28 January 2019. ICANN, VeriSign, and NDC filed Replies on 5 February 2019, and Afilias filed a Sur-Reply on 12 February 2019.
52. Meanwhile, Mr. Donahey addressed procedural issues for the *amicus curiae* hearing to be held before him in late February 2019. On 31 January 2019, Mr. Donahey declared that VeriSign and NDC could participate in the hearing on their applications for *amicus curiae* status.
53. On 15 February 2019, Mr. Donahey declared that he had no power to grant Afilias' request to cross-examine two of the witnesses that had filed statements in support of ICANN's and VeriSign's submissions to Mr. Donahey, namely Ms. Samantha Eisner,

Deputy General Counsel of ICANN, and Mr. David McAuley, Senior International Policy & Business Development Manager at VeriSign.

54. On 21 February 2019, Mr. Donahey held a telephonic hearing, during which counsel for the Parties and Applicant *Amici* made oral presentations on the latter's applications for *amicus curiae* status. A transcript of that hearing was prepared.
55. Mr. Donahey issued a Declaration of the Procedures Officer (**PO Declaration**) one week later, on 28 February 2019. The PO Declaration found that "the issues raised in the present matter are of such importance to the global Internet community and Claimants (*sic*) that they should not be decided by a 'Procedures Officer,' and therefore the issues raised are hereby referred to [...] the IRP Panel for determination."⁴
56. On 8 March 2019, ICANN requested that the ICDR appoint a new Procedures Officer on the ground that Mr. Donahey had not resolved the *amicus curiae* issue. Afilias objected to ICANN's request on 14 March 2019. On 9 April 2019, after the Parties exchanged several letters on this issue, the ICDR denied ICANN's request for the appointment of a new procedures officer. Meanwhile, the Procedures Officer issued on 31 March 2019 an Order denying ICANN's request that the Procedures Officer make three corrections to his Declaration.
57. Mr. Donahey having taken the position that he had completed his service as Procedures Officer on the basis of his Declaration, when this Panel was finally constituted in August 2019, the Applicant *Amici*'s requests to participate in the IRP (including in the Emergency Interim Relief Request) were still pending, and the scope of their possible participation in the IRP remained to be decided.

⁴ PO Declaration, p. 38.

58. On 20 August 2019, the Panel issued its first communication to the Parties, confirming that a preparatory conference would be held on 5 September 2019. In this letter, the Panel listed a number of procedural issues to be discussed and determined at the preparatory conference. The Panel invited the Parties to consult each other and report any agreement reached in respect of these issues in advance of the preparatory conference, failing which the Parties were asked to provide the Panel with their respective proposals together with an explanation of any difference between them.
59. On 26 August 2019, the Applicant *Amici* wrote to the Panel to request the opportunity to participate in the preparatory conference of 5 September 2019, noting that one of the first issues needing to be resolved by the Panel was their requests to participate in the IRP as *amici*. By letter dated 30 August 2019, the Claimant informed the Panel that it opposed VeriSign's and NDC's requests to participate in the IRP, including the scheduled preparatory conference. In the submission of the Claimant, "[n]on-party should not be allowed to participate in the first procedural conference with the Panel absent agreement from both Parties". In this same letter, the Claimant recalled its opposition to the participation of NDC and VeriSign as *amici* in the IRP. The Claimant added, without prejudice to that position, that it had advised ICANN that it would be willing to negotiate an agreement by which VeriSign and NDC would be allowed to participate in the IRP with all the rights, obligations, and responsibilities of a Party, including their agreement to be bound by the Panel's determinations in the IRP. To the extent the proposed *amici* need to be consulted on any procedural issues that may affect them, such consultation can and should be held separately. The Claimant, in its 30 August 2019 letter, also informed the Panel of the Claimant's position on the various procedural issues listed in the Panel's 20 August letter.

60. Later on 30 August 2019, the Respondent responded to the Panel's letter of 20 August 2019 as well as to the Claimant's letter submitted earlier that day. With respect to the participation of the Applicants in the 5 September 2019 preparatory conference, ICANN advised that it believed the involvement of the Applicant *Amici* would be helpful in light of their pending requests to participate in the IRP. ICANN also set out its position in respect of the issues listed in the Panel's 20 August letter.
61. One of the points on which the Parties expressed agreement on 30 August 2019 was that there should be a bifurcated Phase I in these proceedings to address (1) the Claimant's claim that ICANN violated its Bylaws in adopting the *amicus curiae* provisions of the Interim Procedures, and that VeriSign and NDC should be prohibited from participating in the IRP on that basis; and (2) should that claim fail, the extent to which NDC and/or VeriSign should be permitted to participate in the IRP as *amici*.
62. On 4 September 2019, the Panel informed the Parties of its decision to allow counsel for the Applicant *Amici* to attend the preparatory conference for the limited purpose of giving them an opportunity to state their position on the procedural framework for Phase I of the proceedings. As proposed by the Parties in their respective letters of 30 August 2019, the Panel further advised that it would defer consideration of the procedural rules and timetable applicable to Phase II of the IRP until after the resolution of the Applicant *Amici's* requests to participate in the IRP.
63. A further point agreed between the Parties on 30 August 2019 was that the record for the determination of Phase I issues would be the record that was before the Procedures Officer, including the latter's Declaration (even though the Parties differ as to the relevance of the Declaration for the determination of Phase I issues). At the request of

the Panel, on 17 September 2019, the Parties provided the Panel with an agreed list of the constituent elements of the record for Phase I.⁵

64. The preparatory conference was held, as scheduled, on 5 September 2019. It was attended by counsel for the Parties and the Applicant *Amici*. By letter dated 9 September 2019, the Panel provided a summary of the procedure applicable to Phase I of the IRP, confirming that it would be devoted exclusively to the Panel's consideration of the Applicant *Amici*'s respective requests to participate as *amici* in the IRP, and of the Claimant's objections thereto.
65. Additional written submissions on Phase I issues were made by each of the Parties and Applicant *Amici* on 27 September 2019. On 2 October 2019, a telephonic hearing was held during which counsel for each of the Parties and the Applicant *Amici* presented additional oral submissions in relation to Phase I issues. At the request of the Panel, an agreed transcript of the hearing was subsequently prepared and provided to the Panel on 20 November 2019.
66. By letter dated 9 October 2019, the Panel invited the Parties and Applicant *Amici* to submit post-hearing submissions on the following three subject matters: 1) the status of the IRP Implementation Oversight Team (**IOT**) and its relationship with ICANN and its Board, including the recourses available to a party wishing to challenge the IOT's conduct or decisions; 2) the timeliness of Afilias' Rule 7 claim, in light of the arguments set out in paragraphs 31 and 32 of ICANN's Supplemental Brief; and 3) the relevance (if any) to the resolution of Phase I issues, of the authority given to IRP Panels under

⁵ The Claimant sought leave, on 30 September 2019, to add to the Phase I record an email dated 12 October 2018 from Ms. Eisner to Mr. McAuley. The Respondent objected to that request. The Panel was not convinced that the addition of a single document to the record would prejudice ICANN or the Applicant *Amici* and therefore allowed the Claimant's request in spite of the Respondent's objection. Accordingly, the email in question was added to the record for Phase I.

Section 4.3(o)(v) of the Bylaws, to "take such other actions as are necessary for the efficient resolution of Disputes". The Parties and Applicant *Amici* submitted post-hearing briefs on these issues on 15 November 2019.

67. On 18 November 2019, ICANN requested the permission to file additional submissions in reply to the arguments made by Afilias in its post-hearing brief in opposition to ICANN's request that the Panel dismiss as time-barred Afilias' Rule 7 claim. The Panel granted that request and ICANN submitted its additional submissions on 27 November 2019. As allowed by the Panel, Afilias filed a rebuttal to ICANN's additional submission on the issue of the alleged untimeliness of the Rule 7 claim on 3 December 2019. On 13 December 2019, the Panel declared that the filing of Afilias' rebuttal completed the round of post-hearing submissions in relation to Phase I, whereupon the Panel took Phase I under advisement.

III. SUMMARY OF SUBMISSIONS AND RELIEF SOUGHT

68. In connection with the IRP, the Parties and the Applicant *Amici* have each submitted to the Panel one supplemental brief and one post-hearing brief. As just mentioned, ICANN and Afilias also filed additional submissions on the issue of the alleged untimeliness of the Rule 7 claim.
69. The record before the Panel on Phase I issues also include the submissions made and the evidence adduced by the Parties and Applicant *Amici* before the Procedures Officer. The submissions are listed in the Parties' agreed list dated 17 September 2019 of the elements of the record for Phase I. As for the evidence, it consists of the documentary and witness evidence that was before the Procedures Officer, as set out in the 17 September 2019 agreed list. In addition to the declarations of Ms. Eisner and Mr. McAuley, already referred to above, a declaration of Mr. Rasco, Chief Financial

Officer and manager for NDC, was submitted to the Procedures Office in support of NDC's Request to Participate as *Amicus Curiae* in Independent Review Process, dated 5 February 2019.

70. The submissions made in relation to Phase I are voluminous. The Panel summarizes these submissions below, beginning with the Applicant *Amici*, followed first by ICANN (which supports the proposed *Amici*'s requests for participation) and then by Afilias. Where appropriate, the Panel refers in its analysis to those parts of the submissions and evidence found by the Panel to be most pertinent to its analysis of the Phase I issues. In reaching its conclusions, however, the Panel has considered all of the Parties' submissions and evidence in relation to Phase I.
71. In order to provide context for the submissions summarized below, the Panel reproduces the provisions of Rule 7 of the Interim Procedures, which are central to the Phase I issues (emphasis in the original):

7. Consolidation, Intervention and Participation as an *Amicus*

A PROCEDURES OFFICER shall be appointed from the STANDING PANEL to consider any request for consolidation, intervention, and/or participation as an *amicus*. Except as otherwise expressly stated herein, requests for consolidation, intervention, and/or participation as an *amicus* are committed to the reasonable discretion of the PROCEDURES OFFICER. In the event that no STANDING PANEL is in place when a PROCEDURES OFFICER must be selected, a panelist may be appointed by the ICDR pursuant to its INTERNATIONAL ARBITRATION RULES relating to appointment of panelists for consolidation.

In the event that requests for consolidation or intervention are granted, the restrictions on Written Statements set forth in Section 6 shall apply to all CLAIMANTS collectively (for a total of 25 pages exclusive of evidence) and not individually unless otherwise modified by the IRP PANEL in its discretion consistent with the PURPOSES OF THE IRP.

Consolidation

Consolidation of DISPUTES may be appropriate when the PROCEDURES OFFICER concludes that there is a sufficient common nucleus of operative fact among multiple IRPs such that the joint resolution of the DISPUTES would foster a more just and efficient resolution of the DISPUTES than addressing each DISPUTE individually. If DISPUTES are consolidated, each existing DISPUTE shall no longer be subject to further separate consideration. The PROCEDURES OFFICER may in its discretion order briefing to consider the propriety of consolidation of DISPUTES.

Intervention

Any person or entity qualified to be a CLAIMANT pursuant to the standing requirement set forth in the Bylaws may intervene in an IRP with the permission of the PROCEDURES OFFICER, as provided below. This applies whether or not the person, group or entity participated in an underlying proceeding (a process-specific expert panel per ICANN Bylaws, Article 4, Section 4.3(b)(iii)(A)(3)).

Intervention is appropriate to be sought when the prospective participant does not already have a pending related DISPUTE, and the potential claims of the prospective participant stem from a common nucleus of operative facts based on such briefing as the PROCEDURES OFFICER may order in its discretion.

In addition, the Supporting Organization(s) which developed a Consensus Policy involved when a DISPUTE challenges a material provision(s) of an existing Consensus Policy in whole or in part shall have a right to intervene as a CLAIMANT to the extent of such challenge. Supporting Organization rights in this respect shall be exercisable through the chair of the Supporting Organization.

Any person, group or entity who intervenes as a CLAIMANT pursuant to this section will become a CLAIMANT in the existing INDEPENDENT REVIEW PROCESS and have all of the rights and responsibilities of other CLAIMANTS in that matter and be bound by the outcome to the same extent as any other CLAIMANT. All motions to intervene or for consolidation shall be directed to the IRP PANEL within 15 days of the initiation of the INDEPENDENT REVIEW PROCESS. All requests to intervene or for consolidation must contain the same information as a written statement of a DISPUTE and must be accompanied by the appropriate filing fee. The IRP PANEL may accept for review by the PROCEDURES OFFICER any motion to intervene or for

consolidation after 15 days in cases where it deems that the PURPOSES OF THE IRP are furthered by accepting such a motion.

Excluding materials exempted from production under Rule 8 (Exchange of Information) below, the IRP PANEL shall direct that all materials related to the DISPUTE be made available to entities that have intervened or had their claim consolidated unless a CLAIMANT or ICANN objects that such disclosure will harm commercial confidentiality, personal data, or trade secrets; in which case the IRP PANEL shall rule on objection and provide such information as is consistent with the PURPOSES OF THE IRP and the appropriate preservation of confidentiality as recognized in Article 4 of the Bylaws.

Participation as an *Amicus Curiae*

Any person, group, or entity that has a material interest relevant to the DISPUTE but does not satisfy the standing requirements for a CLAIMANT set forth in the Bylaws may participate as an *amicus curiae* before an IRP PANEL, subject to the limitations set forth below. Without limitation to the persons, groups, or entities that may have such a material interest, the following persons, groups, or entities shall be deemed to have a material interest relevant to the DISPUTE and, upon request of person, group, or entity seeking to so participate, shall be permitted to participate as an *amicus* before the IRP PANEL:

- i. A person, group or entity that participated in an underlying proceeding (a process-specific expert panel per ICANN Bylaws, Article 4, Section 4.3(b)(iii)(A)(3));
- ii. If the IRP relates to an application arising out of ICANN's New gTLD Program, a person, group or entity that was part of a contention set for the string at issue in the IRP; and
- iii. If the briefings before the IRP PANEL significantly refer to actions taken by a person, group or entity that is external to the DISPUTE, such external person, group or entity.

All requests to participate as an *amicus* must contain the same information as the Written Statement (set out at Section 6), specify the interest of the *amicus curiae*, and must be accompanied by the appropriate filing fee.

If the PROCEDURES OFFICER determines, in his or her discretion, subject to the conditions set forth above, that the proposed *amicus curiae* has a material interest relevant to the DISPUTE, he or she shall allow participation by the *amicus curiae*. Any person participating as an *amicus curiae* may submit to the IRP Panel written briefing(s) on the DISPUTE or on such discrete questions as the IRP PANEL may request briefing, in the discretion of the IRP PANEL and subject to such deadlines, page limits, and other procedural rules as the IRP PANEL may specify in its discretion.⁴ The IRP PANEL shall determine in its discretion what materials related to the DISPUTE to make available to a person participating as an *amicus curiae*.

4 During the pendency of these Interim Supplementary Rules, in exercising its discretion in allowing the participation of *amicus curiae* and in then considering the scope of participation from *amicus curiae*, the IRP PANEL shall lean in favor of allowing broad participation of an *amicus curiae* as needed to further the purposes of the IRP set forth at Section 4.3 of the ICANN Bylaws.

72. The Procedures Officer questioned the Parties about the portions of the text of Rule 7 that are underlined. ICANN explained in response⁶:

ICANN's investigation of this issue, including its review of the IRP-IOT's meeting transcripts, meeting minutes, and email correspondence, does not indicate that any special meaning should be taken from the underlining beyond the fact that those words were added over the weeks leading up to the 21 October 2018 deadline for final IRP-IOT comment and approval. Indeed, the underlined text tracks directly to the edits that Ms. Eisner drafted between 16 and 19 October 2018, and, as such, it likely is nothing more than a remnant of the drafting process. These edits were not posted for public comment, so no public comments address them.⁷

A. VeriSign

⁶ Response to Procedures Officer's Questions Concerning the Drafting History of the Supplementary Procedures, dated 16 January 2019,

⁷ Afilias agrees that the underlining was not intended to convey any emphasis to the underscored language. See Dechert's letter of 28 January 2019, at p. 6, attached to Afilias' Response to VeriSign and NDC's Requests to participate as *amici*.

73. In its submissions in support of its request to participate as *amicus curiae* in the IRP, VeriSign first underscores that it is not contested that the two Applicant *Amici* meet the criteria to qualify as *amici* under Rule 7 of the Interim Procedures. Rather, Afilias' contention is that Rule 7 had been adopted in violation of the Bylaws.
74. VeriSign stresses that the relief sought by Afilias in the IRP would impact the Applicant *Amici*'s own rights and economic interests. Accordingly, they are "indispensable parties" to the IRP that are entitled to participate fully in the proceedings. VeriSign submits that Rule 7 gives the Panel the flexibility to permit the Applicant *Amici* to participate to the extent that the dispute places their conduct in issue or may affect their interests. VeriSign argues in this regard that the relief sought by Afilias in this IRP would impact VeriSign's interests far more than those of ICANN.
75. VeriSign submits that the only question for the Panel is the scope of the Applicant *Amici*'s participation in the IRP. According to VeriSign, nothing less than "full participation" – including the right to present arguments and evidence – is required to ensure fundamental fairness and due process. VeriSign rejects the position advanced in the alternative by Afilias that the Applicant *Amici*'s participation should be restricted to the traditional *amicus* role of submitting written briefs. VeriSign contends that the Bylaws and Rule 7 favour broad participation and do not limit the scope of *amicus* participation in such manner. VeriSign therefore invites the Panel to exercise its discretion to allow broad participation, taking into account that the Applicant *Amici* have a material interest in the dispute.
76. According to VeriSign, the drafting history of Rule 7 confirms that it is designed to accommodate broader third party involvement than the expression "*amicus curiae*" is traditionally understood to include. VeriSign argues that norms of international arbitration

do not dictate the scope of *amicus* participation, and that such norms do not restrict *amicus* participation to the filing of written submissions. In that respect, it states that an IRP – as ICANN’s accountability mechanism – is distinct from international arbitration, which generally is a confidential process.

77. VeriSign states that the PO Declaration inaccurately describes the positions of the Parties and of the Applicant *Amici*, does not decide the issue, and is therefore not relevant to the matters presently before the Panel.
78. In its post-hearing brief, VeriSign argues that, while the IOT was formed pursuant to a directive in the Bylaws, the IOT is part of the ICANN *community* rather than an arm of ICANN itself. VeriSign adds that the IOT is neither the Board nor a Board committee or Staff as defined in the Bylaws. VeriSign stresses that the IOT lacks authority to implement process changes without ICANN’s approval. On that basis, VeriSign submits that an IRP could not be brought directly based on the conduct of members of the IOT. According to VeriSign, the proper means to challenge IOT’s actions would have been the filing of a complaint to ICANN’s Office of Ombudsman or to its Complaints Office, or simply raising concerns with the IOT itself.
79. VeriSign contends that Afilias’ claim was time-barred under Rule 4 of the Interim Procedures as it is based on conduct that occurred “more than three years ago”. VeriSign argues that even if the limitation period started on the date of the adoption of the Interim Procedures by the Board, Afilias’ claim would still be time-barred.
80. Lastly, VeriSign submits that Section 4.3(o)(v) of the Bylaws gives broad discretion to the Panel to grant *amicus* status to the Applicant *Amici* and to tailor the scope of their participation. According to VeriSign, the Panel is not constrained by Rule 7 of the Interim Procedures and could accept *amici* submissions even if Rule 7 did not exist.

81. VeriSign also argues that Section 4.3(o)(v) undermines any claim that Afilias has standing as a “Claimant” to challenge the adoption of Rule 7. In that respect, VeriSign contends that the increased costs that Afilias claims it will incur as a result of the Applicant *Amici*’s participation is not an injury or harm directly or causally connected to the alleged violations.

82. For those reasons, VeriSign requests that the Applicant *Amici* be allowed to “participate fully” in the proceedings as *amici*.

B. NDC

83. NDC generally echoes the arguments put forward by VeriSign. NDC notes that Afilias does not dispute that Rule 7 allows NDC to participate in the IRP as *amicus*. The key question for the Panel is therefore the scope of its participation. Like VeriSign, NDC contends that due process requires that it be allowed to participate in the IRP in order to protect its interests. NDC adds that the Panel would benefit from its active participation in the IRP as NDC can offer first-hand evidence rebutting Afilias’ argument that NDC experienced a change of control. NDC also avers that it has knowledge of misconduct on the part of Afilias during the blackout period that preceded the auction that would disqualify Afilias from the right to operate the .WEB gTLD.

84. NDC also argues that if it is not entitled to fully participate as the real party in interest, any decision rendered by this Panel would be unenforceable, rendering the IRP a waste of time. NDC further argues that the IRP context calls for broader participation than is typically contemplated for an *amicus* in litigation or arbitration, as an *amicus* brief is traditionally filed by a non-party that does not have a direct legal or financial interest in the outcome of a proceeding. NDC disputes Afilias’ assertion that NDC’s interests are aligned to those of ICANN.

85. NDC avers that in view of the fact that one of Afiliias' officers seconded the resolution to adopt the Interim Procedures, Afiliias cannot now contend that the Board acted improperly in adopting them. According to NDC, the Interim Procedures have been properly adopted, are fair, and protect due process. In any event, NDC claims that it should not be prejudiced by any possible impropriety in the adoption of Rule 7. NDC notes that it is not itself accused of any wrongdoing in the adoption of the Interim Procedures, and it rejects as ill-founded the contention that NDC should be "vicariously estopped" from participating in the IRP as an *amicus*.
86. NDC submits that the scope of its participation must be sufficiently broad to protect the Applicant *Amici*'s rights and give the Panel the benefit of their perspective and evidence. In that respect, NDC relies on the call for "broad participation" in Rule 7. NDC submits that the Panel has discretion to give the Applicant *Amici* broader participation rights than are typically seen in international arbitration, all the while noting that the trend in international arbitration is to allow increased participation by non-parties.
87. NDC also contends that its participation in the IRP as an *amicus* should include the right to oppose Afiliias' petition for emergency relief since Rule 7 permits *amici* to participate in proceedings "before the IRP Panel", without any carve-out.
88. In lieu of filing a post-hearing brief of its own, NDC adopted the arguments put forward in VeriSign's post-hearing brief.
89. In sum, NDC asks, in respect of all phases of the IRP, to be permitted to participate in all briefing and argument in the IRP, including in connection with Afiliias' request for interim relief, and to submit evidence defending NDC's own conduct and proving Afiliias' disqualifying misconduct.

C. ICANN

90. ICANN submits that Afiliias' challenge to Rule 7 has no merit. ICANN observes that the arguments that Afiliias presents to the Panel in support of that challenge are based on technical defects in the rule-making process and, as such, are fundamentally different from the arguments grounded on equity that it presented to the Procedures Officer. ICANN asserts that Afiliias made that change to bring its claim within the Panel's jurisdiction.
91. ICANN submits that it did not violate its Bylaws by approving the Interim Procedures. First, ICANN notes that the Bylaws do not require a particular quorum for meetings of the IOT. Second, it argues that the Bylaws did not mandate that every provision of the rules of procedures be based on international arbitration norms and, in any event, that *amicus* participation is not foreign to international arbitration. Third, ICANN contends that its Bylaws do not mandate a second public comment period for Rule 7. Fourth, it argues that the Bylaws also did not impose a positive obligation on the Board to withhold approval of the Interim Procedures, even in the face of alleged defects in the rule-making process.
92. ICANN further argues that the Panel does not have jurisdiction to invalidate Rule 7 or to declare it unenforceable. According to ICANN, if the Panel finds that there is merit to Afiliias' claim that ICANN violated its Bylaws, the proper remedy is to issue a declaration to that effect. It would then be to the Board to decide what action to take.
93. On the timeliness issue, ICANN argues that Afiliias did not bring its Rule 7 claim within 120 days of it becoming aware of the material effect of the action giving rise to the dispute, as required by Rule 4 of the Interim Procedures. In ICANN's view, the material

effect of the Board's challenged action – *i.e.* that Rule 7 would apply to IRPs – was immediately within Afilias' knowledge.

94. ICANN also argues that Afilias' request for costs in relation to the requests for participation of the Applicant *Amici* is baseless as it does not contend that ICANN's defences are frivolous or abusive.
95. ICANN submits that the PO Declaration includes inaccuracies and should have no import because the Procedures Officer made no conclusions, other than the one to the effect that the matters raised by Afilias' challenge to Rule 7 were too important for him to decide.
96. In the submission of ICANN, the participation of the Applicant *Amici* in the IRP should be broad in scope and in nature. ICANN argues that, in addition to falling within categories of mandatory *amici* under Rule 7, the Applicant *Amici* have a material interest relevant to the dispute, especially in light of Afilias' contentions regarding their alleged wrongdoings. ICANN argues that the Applicant *Amici*'s rights of participation should reflect the fact that the relief sought by Afilias would deprive NDC of its right as the winning bidder in the .WEB contention set.
97. More specifically, ICANN urges that the Applicant *Amici* be given the right to (1) submit written briefs addressing the merits of Afilias' Amended Request; (2) submit evidence and written witness statements; (3) cross-examine Afilias' witnesses; (4) participate in the IRP hearing; and (5) participate in post-hearing briefs. In response to a question from the Panel at the hearing, counsel for ICANN reserved the latter's position as to whether it would be permissible for the Applicant *Amici* to assert a claim in the IRP, as they

propose to do by requesting that Afiliis be disqualified from the right to operate the .WEB gTLD.⁸

98. In ICANN's view, international arbitration practice provides little helpful guidance in the context of an IRP, as *amicus* participation is a relatively new and still evolving development in international arbitration. ICANN argues that an IRP is a unique accountability mechanism customized in light of ICANN's "quasi-public role" in the global Internet community.
99. ICANN contends that there are three reasons why the Panel does not have authority to nullify, invalidate or disregard Rule 7 of the Interim Procedures: (1) the conduct of the IOT is not a "Covered Action", (2) the Panel's only authority is to declare whether a Covered Action violated the Articles of Incorporation or the Bylaws, and (3) the Panel is not authorized to replace the Board's reasonable judgment if its action or inaction is within the realm of reasonable business judgment.
100. According to ICANN, the Panel's authority under section 4.3(o)(v) cannot be read to conflict with, or to supplant the specific provisions of Rule 7 governing *amicus* participation.
101. ICANN submits that the means available to a person wishing to challenge the IOT's decisions include active participation or the filing either of a complaint to ICANN's Ombudsman or a request to the Board to reconsider its approval of the recommendation made by the IOT.

⁸ See transcript of the hearing on Phase I, p. 22

102. For those reasons, ICANN states that the Panel should reject Afilias' challenge to Rule 7 and issue an order allowing participation by the Applicant *Amici* to the extent noted above.

D. Afilias

103. Afilias argues that the Procedures Officer's findings of fact demonstrate multiple violations of ICANN's Bylaws and rulemaking practices. First, there was no consultation between the IOT and a Standing Panel – none existed – to develop rules that conform to international arbitration norms in respect of Rule 7. Second, the IOT violated its own quorum rules. Third, the IOT violated its own protocols by adopting significant changes to Rule 7 without a second round of public comments. Fourth, the IOT violated its working rules by sending a draft set of rules to the Board for approval even though that draft contained new language that was never discussed within the IOT. According to Afilias, these violations were designed to provide disparate and preferable treatment to the Applicant *Amici*.

104. If the Panel is not prepared to rule on its Rule 7 claim, Afilias invites the Panel in the alternative to join that claim to the other claims to be decided in Phase II, and to allow the Applicant *Amici* to participate on a provisional and limited basis.

105. Afilias emphasizes the fact that, while the Applicant *Amici* demand rights of participation equivalent to those of a party, they refuse to accept the consequences of party participation, including to be bound by the Panel's determination. Afilias argues that the Applicant *Amici*'s demands are inconsistent with the scope of *amicus* participation as contemplated by the IOT or as reflected in norms of international arbitration. In that regard, Afilias first states that IOT members uniformly understood that *amicus* participation would be limited to the submission of "friend of the court" briefs. Second,

Afilias contends that no form of international arbitration endorses the scope of *amicus* participation sought by the Applicant *Amici*. Third, responding to a statement made by Mr. McAuley, Afilias states that, even in litigation before the United States federal courts, *amicus* participation does not rise to the level of a named party or real party in interest.

106. Regarding the status of the IOT, Afilias notes in its post-hearing brief that its claim is not limited to the conduct of the IOT. Afilias contends that Mr. McAuley instigated the “eleventh-hour” changes to Rule 7 with the knowledge and assistance of ICANN’s personnel, namely Ms. Eisner. Second, Afilias contends that the IOT is part of ICANN as it is a creation of its Bylaws. Third, Afilias submits that ICANN cannot avoid its accountability to the Internet community simply by outsourcing critical projects. In Afilias’ view, ICANN’s position that the IOT’s conduct is not subject to challenge through an IRP would leave a party wishing to challenge the IOT’s decisions with no recourse.
107. Turning to the timeliness issue, Afilias contends that the 120-day limitation period provided for in Rule 4 starts when a claimant becomes aware of the material effect of the action giving rise to the dispute. Afilias submits that when ICANN approved the *amicus* provisions, Afilias had no reason to know that its adoption process violated the Bylaws. Afilias further stresses that the documentation that ICANN made available was incomplete until April-May 2019, after the Procedures Officer issued his Declaration. In any event, Afilias’ claim would not be time-barred even if the starting point of the limitation period were held to be 5 December 2018, when the Applicant *Amici* announced their intention to the ICDR to submit applications to participate as *amici*. Finally, Afilias asserts that its claim includes the Board’s failure to address violations of its Bylaws, the material impact of which failure continues to this day. In any event, Afilias submits that ICANN consented to Afilias submitting its claim after 28 February 2018, and therefore that it is equitably estopped from contesting the timeliness of Afilias’ claims.

108. With respect to the Panel's authority, under Section 4.3(o)(v) of the Bylaws, to take such actions as are necessary for the efficient resolution of disputes, Afilias argues that these provisions must be read in the context of the entire document, including the provisions on the final resolution of disputes. In Afilias' submission, the Applicant *Amici's* position that they can participate fully in the IRP without being bound by the IRP's decision cannot be reconciled with those provisions. According to Afilias, footnote 4 that accompanies Rule 7 cannot be read to broaden *amicus* participation beyond the filing of written briefings. Finally, Afilias reiterates that it would not object to the full participation of the Applicant *Amici* on the condition that they agree to be bound by the Panel's conclusions.

109. All in all, Afilias requests that the Panel find that the *amicus* provisions of Rule 7 were adopted in violation of the Bylaws and are therefore unenforceable on that basis. Afilias submits that the Applicant *Amici's* applications must therefore be denied. In the alternative, Afilias asks that the Applicant *Amici's* participation be limited to "written briefing(s)", as specifically provided for in Rule 7, or that the Panel condition their fuller participation on their commitment to be bound by the Panel's resolution of this IRP.

IV. ANALYSIS

110. It is common ground between the Parties that, assuming Rule 7 to be valid, the Applicant *Amici* are entitled to participate in this IRP under the *amicus curiae* provisions of Rule 7, more particularly under Rule 7, para. (ii) insofar as NDC is concerned, and Rule 7, para. (iii) insofar as VeriSign is concerned. The dispute arises from Afilias' Rule 7 claim and the divergence between the Claimant and the other Phase I participants as to the extent of the participation rights sought by the Applicant *Amici*. The Panel therefore begins its analysis by addressing Afilias' Rule 7 claim.

A. Afilias' Rule 7 Claim

111. Before the Procedures Officer, Afilias submitted that the Applicant *Amici's* requests should be denied as an exercise of the Procedures Officer's inherent equitable authority by reason of VeriSign's misconduct in the rule-making process of Rule 7. Before this Panel, Afilias' Rule 7 claim is put forward on a different legal basis. Afilias contends that ICANN violated its Bylaws by approving Rule 7, and requests a declaration that Rule 7 is unenforceable, and, consequently, that the Applicant *Amici* cannot participate as *amicus* in this IRP.
112. In support of its claim that ICANN violated its Bylaws, Afilias invokes VeriSign's alleged interference, through Mr. McAuley, in the contents of Rule 7.⁹ In addition, Afilias relies on alleged defects in the rule-making process of Rule 7. The defects in question concern the lack of quorum at IOT meetings; the contention that the type of *amicus* participation provided for in Rule 7 departs from international arbitration norms; the failure to have put Rule 7 out for a second public comment round; and the (allegedly inaccurate) recital, in the IOT's representations to the Board, of the drafting principles that guided the IOT in the preparation of the draft Supplementary Procedures, the implication being that, had the position been described accurately, the Board would have withheld approval of the draft Interim Procedures.¹⁰
113. The nature of Afilias' contentions in support of its Rule 7 claim raises the question of whether the actions being challenged by this claim fall within the definition of "Covered Actions". ICANN and VeriSign submit that they do not and, on that basis, challenge the jurisdiction of the Panel to hear Afilias' Rule 7 claim. ICANN also submits that the Rule 7

⁹ Amended Request for IRP, para. 84; see also Afilias Phase I Post-Hearing Brief [PHB], paras. 3-4.

¹⁰ *Id.*, para. 86.

claim is time-barred and, in any event, that the Panel does not have the authority to declare Rule 7 “unenforceable”. The Panel begins by addressing the jurisdictional issue.

1. Jurisdiction of the Panel

114. The IRP is “intended to hear and resolve Disputes”, for a number of stated “Purposes of the IRP”. These purposes are listed in Section 4.3(a) and include “ensur[ing] that ICANN [...] complies with its Articles of Incorporation and Bylaws”.¹¹

115. The term Disputes is defined as including three types of claims. The only one relevant for present purposes is the following: “Claims that Covered Actions constituted an action or inaction that violated the Articles of Incorporation or Bylaws [...]”.¹²

116. The expression Covered Actions is defined as “any actions or failures to act by or within ICANN committed by the Board, individual Directors, Officers, or Staff members that give rise to a Dispute”.¹³

117. Since many of Afiliias’ submissions in support of its Rule 7 claim are directed at the actions of the IOT, the Panel considers first whether the IOT falls within the enumeration “Board, individual Directors, Officers or Staff members.” The Panel then turns to the alleged involvement of Ms. Eisner in the drafting of Rule 7 as a potential jurisdictional basis for Afiliias’ Rule 7 claim.

(a) Composition and Status of the IOT

118. In December 2014, a working group of ICANN members was formed to develop a set of proposed enhancements to ICANN’s accountability to the Internet community. The

¹¹ Bylaws, Section 4.3(a)(i).

¹² *Id.*, Section 4.3(b)(iii)(A).

¹³ *Id.*, Section 4.3(b)(ii).

working group was called the Cross Community Working Group on ICANN Accountability, or CCWG-Accountability. By the month of August 2015, the CCWG Accountability had already foreshadowed, in draft proposed recommendations, that detailed rules for the implementation of the IRP would need to be created by ICANN through a cross-community working group. Accordingly, in November 2015, the co-chairs of the CCWG-Accountability sought volunteers from the Internet community to serve on the IOT for that purpose. All volunteers who came forward were accepted as members of the IOT, and the team held its first meeting on 14 January 2016.¹⁴

119. The IOT consisted of approximately 25 members recruited, in the manner just described, from the Internet community. It also included Ms. Eisner, who served as ICANN staff liaison to the IOT, as well as representatives from ICANN's outside counsel, Jones Day. The firm Sidley Austin was hired as independent counsel to assist the IOT in drafting the Interim Supplementary Procedures.
120. The first chairperson of the IOT was J. Beckwith ("**Becky**") Burr. Upon her appointment to the ICANN Board in November 2016, Ms. Burr resigned as chairperson of the IOT and she was eventually succeeded in that position by Mr. McAuley, of VeriSign.
121. In February 2016, the CCWG-Accountability issued a set of recommendations, referred to as WorkStream 1, to enhance ICANN's existing IRP process. As did its draft recommendations of August 2015, these recommendations included the creation of updated rules of procedure governing IRPs.
122. Shortly thereafter, on 27 May 2016, ICANN's Board adopted new bylaws. These reflected the recommendations of the CCWG-Accountability in that they included, as part

¹⁴ ICANN PHB, paras. 3-6.

of Section 4.3 dealing with the Independent Review Process for Covered Actions, provisions for the creation of a Standing Panel¹⁵ and the establishment of an IRP Implementation Oversight Team.¹⁶

123. ICANN avers in its post-hearing brief that the Bylaws' reference to the establishment of an IOT "is a reference to the IRP-IOT that already existed [...]. There was never any intention to reconstitute the IRP-IOT following adoption of the Bylaws".¹⁷ Be that as it may, as explained later in this decision, the IOT as composed at the time proceeded with the drafting of Interim Procedures, and a first draft was circulated to IOT members in July 2016.
124. Turning to the ICANN Board, its general function is to exercise the powers, control the property and conduct the business and affairs of ICANN.¹⁸ The Board consists of sixteen voting directors – the Directors referred to in the definition of "Covered Actions" – and four non-voting liaisons.¹⁹
125. As can be seen, the IOT and the ICANN Board are separate and distinct entities. Under the Bylaws, the IOT exists in order to develop rules of procedure to be submitted for approval by the Board.²⁰

¹⁵ Bylaws, Section 4.3(j).

¹⁶ See *id.*, Section 4.3(n).

¹⁷ ICANN PHB, para. 6.

¹⁸ Bylaws, Section 2.1.

¹⁹ *Id.*, Section 7.1.

²⁰ *Id.*, Section 4.3(n)(i)-(ii).

126. Nor can the IOT be equated with ICANN's Staff. Staff is a defined term under the Bylaws, said to "include employees and individual long-term paid contractors".²¹ As just seen, the IOT is, for the most part, composed not of employees of ICANN but of Internet community volunteers. While Ms. Eisner serves on the IOT as ICANN staff liaison, this does not, in the opinion of the Panel, make the IOT a part of ICANN's Staff.
127. Since the IOT is not an individual Director or Officer either, the conclusion must be that actions of the IOT – as distinct from actions of the Board – are not Covered Actions. Accordingly, to the extent Afilias' Rule 7 claim challenges actions of the IOT, it does not fall within the jurisdiction of the Panel.
128. Afilias contends that the IOT can only be viewed "as part of ICANN".²² That may be so in a loose sense, and indeed there is no denying that the IOT is a creation of the Bylaws, which require it to draft rules of procedure for the IRP. However, the question that falls to be determined is whether the IRP is the appropriate accountability mechanism, under the Bylaws, to control the actions of the IOT. The Panel decides that it is not.
129. The Panel questioned the Parties and the Applicant *Amici* as to the recourse available to a party wishing to challenge the IOT's conduct or decisions. ICANN's submission in response was that the principal means to do so is through active participation and, as appropriate, the filing of a complaint with the ICANN Ombudsman, whose remit includes alleged unfair treatment by an "ICANN constituent body",²³ including the IOT. ICANN also says that the IOT can be challenged indirectly, by the filing of a Reconsideration

²¹ *Id.*, Section 4.2(a).

²² Afilias PHB, paras. 5-8. In its PHB, VeriSign submits that the IOT is part of the ICANN *community* rather than an arm of ICANN itself. VeriSign PHB, para. 5.

²³ Bylaws, Section 5.2.

Request under Section 4.2 of the Bylaws asking that the Board reconsider its approval of an IOT recommendation.²⁴

130. Having regard to the definition of Covered Actions, the Panel concludes that actions of the IOT do not fall within the definition of “Covered Actions” and, as such, cannot be challenged through an IRP.

(b) Alleged Involvement of ICANN Staff

131. Afilias argues that, contrary to ICANN’s submissions, its Rule 7 claim is not limited to the conduct of the IOT. Afilias avers that, while Mr. McAuley instigated the changes to Rule 7, he did so with the knowledge and assistance of ICANN’s personnel – namely Ms. Eisner – and that both she and Mr. Bernard Turcotte – an ICANN contractor supporting the IOT – were involved in crafting the procedure that allowed Mr. McAuley to deem the draft Rules approved by the IOT by 23:59 UTC on 21 October 2018.²⁵ Afilias thus contends: “Given that Ms. Eisner is an ICANN Deputy General Counsel and staff liaison to the IOT, Afilias’ claims expressly encompass the actions of ICANN staff.”²⁶
132. The Panel accepts this submission. Afilias made clear, in its Amended Request, that its Rule 7 claim included the contention that VeriSign, “with the knowledge and assistance of ICANN personnel”,²⁷ exploited its leadership position on the IOT to secure an absolute right to participate in this IRP. “Personnel” clearly encompasses employees of ICANN, such as Ms. Eisner. To the extent that Afilias’ Rule 7 claim impugns the actions of ICANN’s Staff and asserts that these actions violated the Articles of Incorporation or

²⁴ ICANN PHB, paras. 11-14.

²⁵ See below, para. 165.

²⁶ Afilias PHB, paras. 2-4.

²⁷ Amended Request for IRP, para. 84 [emphasis added].

Bylaws, it falls within both the definition of Covered Actions and the jurisdiction of the Panel in this IRP.

(c) Conclusions on Jurisdiction

133. In respect of Afiliás' Rule 7 claim, the Panel therefore concludes that it has jurisdiction over any actions or failures to act alleged to violate the Articles of Incorporation or Bylaws:

- (a) committed by the Board; or
- (b) committed by Staff members of ICANN;

but not over actions or failures to act committed by the IOT as such.

2. Timeliness of the Rule 7 Claim

134. Rule 4 of the Interim Procedures provides that a "CLAIMANT shall file a written statement of a DISPUTE [...] no more than 120 days after a CLAIMANT becomes aware of the material effect of the action or inaction giving rise to the DISPUTE [...]".

135. ICANN takes the position that "the 'material effect' of the asserted violation must be the Board's allegedly wrongful adoption of Rule 7 [...] on October 25, 2018."²⁸ According to ICANN, the "material effect of the Board's adoption of Rule 7 was that Rule 7 would apply to future IRPs, including this IRP."²⁹

136. Afiliás contends for its part that it had no reason to know about the drafting history of Rule 7 when ICANN approved the Interim Procedures on 25 October 2018. Nor did it

²⁸ ICANN's Supplemental Brief, para. 32.

²⁹ ICANN's Response to Afiliás' Post-Hearing Arguments Regarding Time-Bar Issues, dated 27 November 2019, para. 5.

have reason to know that that process violated the Bylaws, let alone have any awareness of the material effect of these violations.³⁰

137. In the opinion of the Panel, the earliest date on which Afiliias could have become aware of the material effect of the impugned actions of the Board or ICANN's Staff insofar as the *amicus* provisions of Rule 7 are concerned is 5 December 2018, when its counsel received copy of counsel's letter advising the ICDR that VeriSign and NDC intended to submit applications to participate in the IRP as *amici*, relying on the impugned provisions of Rule 7.³¹ Afiliias' Rule 7 claim having been filed on 21 March 2019, it was filed within the delay provided for in Rule 4 of the Interim Procedures. ICANN's contention that Afiliias' Rule 7 claim is time-barred is therefore rejected.

3. Merits of the Rule 7 Claim

138. The Panel turns to consider the merits of those aspects of the Rule 7 claim over which the Panel has determined it has jurisdiction. The first aspect concerns VeriSign's alleged interference – through Mr. McAuley and allegedly with the knowledge and assistance of ICANN's personnel – in the rule-making process of Rule 7, in order to secure an absolute right in favour of the Applicant *Amici* to participate in this IRP. Consideration of this aspect of the Rule 7 claim requires the Panel to review the drafting history of Rule 7, to which the Panel now turns.

³⁰ Afiliias PHB, para. 11.

³¹ Letter on behalf of NDC and VeriSign to ICDR, 5 December 2018, Ex. C-85.

(a) Drafting History of Rule 7

139. The first draft of the proposed Updated Supplementary Procedures was circulated to the IOT by Becky Burr on 19 July 2016.³² These had apparently been drafted by Sidley Austin.³³ Rule 7 in this initial draft did not contemplate *amicus curiae* participation in an IRP, although that possibility had been alluded to in the IOT meeting of 1 June 2016.³⁴ Rule 7, in this initial draft, read as follows:³⁵

7. Consolidation, Intervention, and Joinder

[At the request of a party, a PROCEDURES OFFICER may be appointed from the STANDING PANEL to consider requests for consolidation, intervention, and joinder. Requests for consolidation, intervention, and joinder are committed to the reasonable discretion of the PROCEDURES OFFICER. In the event that no STANDING PANEL is in place when a PROCEDURES OFFICER must be selected, a panelist may be appointed by the ICDR pursuant to its INTERNATIONAL ARBITRATION RULES relating to appointment of panelists for interim relief.

Consolidation of DISPUTES may be appropriate when the PROCEDURES OFFICER concludes that there is a sufficient common nucleus of operative fact such that the joint resolution of the DISPUTES would foster a more just and efficient resolution of the DISPUTES than addressing each DISPUTE individually. Any person or entity qualified to be a CLAIMANT may intervene in an IRP with the permission of the PROCEDURES OFFICER. A CLAIMANT may join in a single written statement of a DISPUTE, as independent or alternative claims, as many claims as it has that give rise to a DISPUTE.]

³² ICANN's Response to Procedures Officer's Questions dated 16 January 2019, para. 8.

³³ Draft as of 19 July 2016 – Updates to ICDR Supplementary Procedures, Ex. 226. See Declaration of David McAuley of 5 February 2019, para. 10 [**McAuley Declaration**].

³⁴ IOT Meeting #3 of 1 June 2016, Transcript, Ex. 225, p. 26.

³⁵ Draft as of 19 July 2016 – Updates to ICDR Supplementary Procedures, Ex. 226, pp. 6-7 [brackets in the original].

140. Between 20 July 2016 and early November 2016, while several drafts of the Supplementary Procedures were prepared and circulated, the text of Rule 7 remained largely unchanged save for the addition of a third paragraph setting page limits to the written briefings contemplated by its provisions.
141. On 2 November 2016, draft Updated Supplementary Procedures dated 31 October 2016 were reviewed and approved for publication by the CCWG-Accountability and, on 28 November 2016, these were published for public comment pursuant to Section 4.3(n)(ii) of the Bylaws. The version of Rule 7 published for public comment, reproduced below, was very similar to the version of the first draft.³⁶

7. Consolidation, Intervention, and Joinder

At the request of a party, a PROCEDURES OFFICER may be appointed from the STANDING PANEL to consider requests for consolidation, intervention, and joinder. Requests for consolidation, intervention, and joinder are committed to the reasonable discretion of the PROCEDURES OFFICER. In the event that no STANDING PANEL is in place when a PROCEDURES OFFICER must be selected, a panelist may be appointed by the ICDR pursuant to its INTERNATIONAL ARBITRATION RULES relating to appointment of panelists for interim relief.

Consolidation of DISPUTES may be appropriate when the PROCEDURES OFFICER concludes that there is a sufficient common nucleus of operative fact such that the joint resolution of the DISPUTES would foster a more just and efficient resolution of the DISPUTES than addressing each DISPUTE individually. Any person or entity qualified to be a CLAIMANT may intervene in an IRP with the permission of the PROCEDURES OFFICER. CLAIMANT'S written statement of a DISPUTE shall include all claims that give rise to a particular DISPUTE, but such claims may be asserted as independent or alternative claims.

In the event that requests for consolidation, intervention, and joinder are granted, the restrictions on Written Statements

³⁶ Draft as of 31 October 2016 – Updates to ICDR Supplementary Procedures, Ex. 235, p. 8 [reference omitted].

set forth in Section 6 shall apply to all CLAIMANTS collectively (for a total of 25 pages exclusive of evidence) and not individually unless otherwise modified by the IRP PANEL in its discretion.

142. In the notice published with the public comment version of the draft Updated Supplementary Procedures, it was stated that the IOT would consider making amendments to the draft in light of the comments received.
143. During the consultation period, which closed on 1 February 2017,³⁷ the IOT received a number of comments pertaining to Rule 7. Three of these urged that participation rights be granted to other entities than those contemplated in the public comment draft of Rule 7.³⁸
144. The public comments gave rise to further discussions at the IOT and consideration was given to allowing certain interested parties to participate in IRPs as *amici*. More specifically, between the months of May and October 2017, the IOT considered different iterations of Rule 7 designed to provide participation rights to entities involved in the underlying action that is the subject of the IRP.
145. On 8 May 2018, Ms. Eisner circulated to the IOT a new version of the draft Interim Supplementary Rules dated 1 May 2018 which redlined the modifications made to the version posted for public comments in November 2016.³⁹ Reproduced below is the text of the revised Intervention and Joinder section in the 1 May 2018 draft of Rule 7:

³⁷ ICANN, *Updated Supplementary Procedures for Independent Review Process (IRP)* (28 November 2016), Ex. 221.

³⁸ See Affiliations' Supplemental Brief, paras. 10-11.

³⁹ Ms. Eisner's email to the IOT dated 8 May 2018, Ex. 248; Draft set of interim procedures of 1 May 2018, Ex. 1.

7. Consolidation, Intervention and Joinder

[...]

Intervention and Joinder

If a person, group, or entity participated in an underlying proceeding (a process-specific expert panel as per Bylaw Section 4.3(b)(iii)(A)(3)) (s)he/it/they shall receive notice that the INDEPENDENT REVIEW has commenced. Such a person, group, or entity shall have a right to intervene in the IRP as a CLAIMANT or as an *amicus*, as per the following:

i. (S)he/it/they may only intervene as a party if they satisfy the standing requirement to be a CLAIMANT as set forth in the Bylaws.

ii. If the standing requirement is not satisfied, then (s)he/it/they may intervene as an *amicus*.

Any person, group, or entity that did not participate in the underlying proceeding may intervene as a CLAIMANT if they satisfy the standing requirement set forth in the Bylaws. If the standing requirement is not satisfied, such persons may intervene as an *amicus* if the PROCEDURES OFFICER determines, in her/his discretion, that the proposed *amicus* has a material interest at stake directly relating to the injury or harm that is claimed by the CLAIMANT to have been directly or causally connected to the alleged violation at issue in the DISPUTE.

[...]

146. In regard to this 1 May 2018 draft, Afiliias emphasizes that it only concerned participation rights in IRPs where the underlying proceeding is a “process-specific expert panel as per Bylaw Section 4.3(b)(iii)(A)(3)”, not an underlying proceeding like the one that gave rise to this IRP.⁴⁰

147. Between May 2018 and September 2018, the IOT continued to discuss the Interim Supplementary Procedures and draft revisions were prepared by both Sidley Austin and

⁴⁰ Afiliias’ Supplemental Brief, para. 14.

ICANN.⁴¹ In the course of the IOT meeting of 7 June 2018, a person who identified herself as “Liz from ICANN”⁴² addressed Rule 7 and said that, while “there [was] still some work that need[ed] development”, they “seem[ed] to have agreed upon” the version that had been circulated on 8 May 2018.⁴³

148. On 20 June 2018, ICANN disclosed on its website that Afilias had initiated a CEP with ICANN over .WEB. On 30 August 2018, counsel for the Applicant *Amici* wrote to Afilias noting that they had been advised that Afilias had invoked the CEP and, should the CEP prove unsuccessful, planned to initiate an IRP. Counsel added that VeriSign and NDC intended to take legal action against Afilias to protect their business interests.⁴⁴
149. On 5 October 2018, Mr. Turcotte wrote to IOT members on behalf of Mr. McAuley to circulate a revised draft dated 25 September 2018⁴⁵. The revised language of Rule 7 in that draft provided for *amicus* participation in an IRP by “[a]ny person, group, or entity that has a material interest relevant to the DISPUTE”.⁴⁶

⁴¹ Declaration of Samantha Eisner of 16 January 2019, para. 4 [**Eisner Declaration**]

⁴² This is most likely a reference to Elizabeth Le, copied on some of the email exchanges concerning Rule 7, including on Ms. Eisner’s email to Mr. McAuley dated 16 October 2018, Ex. 2 to the Eisner Declaration.

⁴³ IOT Meeting #41 of 7 June 2018, Transcript, Ex. 255, p. 12.

⁴⁴ Afilias’ Supplemental Brief, para. 16.

⁴⁵ Afilias’ Supplemental Brief, para. 17; Afilias’ Response dated 28 January 2019, para. 51; ICANN’s Response to Procedures Officer’s Questions, para. 34.

⁴⁶ Draft of ICDR Interim Procedures dated 25 September 2018, Ex. 256, p. 10 (redline of changes from the version of 1 May 2018).

Participation as an *Amicus Curiae*

Any person, group, or entity that has a material interest relevant to the DISPUTE but does not satisfy the standing requirements for a CLAIMANT set forth in the Bylaws may participate as an *amicus curiae* before an IRP PANEL, subject to the limitations set forth below. A person, group or entity that participated in an underlying proceeding (a process-specific expert panel per ICANN Bylaws, Article 4, Section 4.3(b)(iii)(A)(3)) shall be deemed to have a material interest relevant to the DISPUTE and may participate as an *amicus* before the IRP PANEL.

All requests to participate as an *amicus* must contain the same information as the Written Statement (set out at Section 6), specify the interest of the *amicus curiae*, and must be accompanied by the appropriate filing fee.

If the PROCEDURES OFFICER determines, in his or her discretion, that the proposed *amicus curiae* has a material interest relevant to the DISPUTE, he or she shall allow participation by the *amicus curiae*. Any person participating as an *amicus curiae* may submit to the IRP Panel written briefing(s) on the DISPUTE or on such discrete questions as the IRP PANEL may request briefing, in the discretion of the IRP PANEL and subject to such deadlines, page limits, and other procedural rules as the IRP PANEL may specify in its discretion. The IRP PANEL shall determine in its discretion what materials related to the DISPUTE to make available to a person participating as an *amicus curiae*.

150. During the IOT meeting held four days later, on 9 October 2018, Mr. McAuley – speaking not as chair but as a participant - expressed the view that it was “essential that a person or entity have a right to join an IRP if they feel that a significant – if they claim that a significant interest they have relates to the subject of the IRP. And that adjudicating the IRP in their absence would impair their ability to protect that.” He added that he “would be happy to provide specific language with respect to this concept.”⁴⁷

⁴⁷ IOT Meeting #42 of 9 October 2018, Transcript, Ex. 202, p. 15.

151. On 10 October 2018, in conjunction with its CEP, Afilias provided to ICANN's in-house counsel a draft of its IRP Request.⁴⁸ Afilias avers that, much like the IRP Request it ultimately filed on 14 November 2018, this draft contained multiple references to VeriSign.
152. On 11 October 2018, Mr. McAuley proposed modifications to the Intervention portion of Rule 7 to broaden opportunities to intervene in an IRP as a party, rather than as an *amicus*. Mr. McAuley also suggested language removing the Procedures Officer's discretion to grant (or not) requests for intervention by entities claiming a significant interest relating to the subject matter of the IRP. The modifications suggested by Mr. McAuley on 11 October 2018 are redlined in the excerpt below.⁴⁹

Rule (7): Consolidation, Intervention and Participation as an *Amicus*

A PROCEDURES OFFICER shall be appointed from the STANDING PANEL to consider any request for consolidation, intervention, and/or participation as an *amicus*. Except as otherwise expressly stated herein, requests for consolidation, intervention, and/or participation as an *amicus* are committed to the reasonable discretion of the PROCEDURES OFFICER. In the event that no STANDING PANEL is in place when a PROCEDURES OFFICER must be selected, a panelist may be appointed by the ICDR pursuant to its INTERNATIONAL ARBITRATION RULES relating to appointment of panelists for consolidation.
[...]

Intervention

[...]

⁴⁸ Letter dated 8 December 2018 from Arif Hyder Ali (Counsel for Claimant) to the ICDR, pp. 2-3; Eisner Declaration, para. 6.

⁴⁹ Mr. McAuley's email to the IOT dated 11 October 2018, Ex. 258; Draft for Rule 7 attached to Mr. McAuley's email to the IOT dated 11 October 2018, Ex. 258 [Mr. McAuley's modifications are redlined].

In addition, any person, group or entity shall have a right to intervene as a CLAIMANT where (1) that person, group or entity claims a significant interest relating to the subject(s) of the INDEPENDENT REVIEW PROCESS and adjudicating the INDEPENDENT REVIEW PROCESS in that person, group or entity's absence might impair or impede that person, group or entity's ability to protect such interest, and/or (2) where any question of law or fact that is common to all who are similarly situated as that person, group or entity is likely to arise in the INDEPENDENT REVIEW PROCESS.

[...]

153. During the IOT meeting held later on the same day, Mr. McAuley explained that, in his view, persons who have contracts with ICANN have to be able to protect their interest in competitive situations. In response, Ms. Eisner expressed concern about granting intervener status to persons claiming significant interest if they do not qualify as claimants under the Bylaws. She suggested granting them *amicus* status instead.⁵⁰ Mr. McAuley then indicated that he was willing to consider alternative language to be drafted by Ms. Eisner.
154. The following day, on 12 October 2018, Ms. Eisner sent an email to Mr. McAuley expressing concern about the removal of the Procedures Officer's discretion and the expansion of participation rights beyond the outcome of the public comments and of what was discussed by the IOT. This email is the one document that, upon application by the Claimant, the Panel agreed to add to the record even though it was not before the Procedures Officer.⁵¹ Since much reliance was placed on it by Afilias, the Panel reproduces it in full:

⁵⁰ IOT Meeting #43 of 11 October 2018, Transcript, Ex. 205, pp. 12-14.

⁵¹ Ms. Eisner's email to Mr. McAuley dated 12 October 2018. See above, para. 65, footnote 6.

Hi David -

I sat down with this and tried to develop some language, but realized that this is a really tricky definitional issue. Without being extremely careful, we'd be granting anyone that says that they have an interest in the case the right to participate, which then takes away the discretion from the panel on a much broader basis than is currently allowed, so we'd need to flag that change through ICDR.

As I was thinking through all of this, I realized that giving this participation as of right based on "significant interest" is also broader than what the IOT discussed in outcomes of the public comment. As I understand, we agreed as an IOT, and we have reflected in the rules, that those who participate in underlying panels should have the ability to participate as of right (either as claimant, where we've identified that they meet the material harm threshold) or as an amicus (also reflected in there). We did not have comments on, nor agree as an IOT (from what I can tell) that having an interest that might be impaired by, or is similar to that which is under discussion should give a right to participation.

I don't have an objection to continuing this conversation for the final set of rules, but I think that from the principles laid out for the interim set, this inclusion goes far beyond. Working on it to a short time frame also increases the possibility that we make it too broad, and make it very difficult to tailor in a final rule set. Finally, depending on the scope of the final rule we'd propose, we'd then have to see how significant a change it is from what was posted for comment previously.

In the interim, my thought is that the rules are broad enough that they give a very good opportunity for people to preserve their rights through the IRP. If a party could be a claimant, they can initiate an IRP and seek consolidation, even if joinder is denied under discretion of the panelist. The amicus rules are quite broad as well.

Please let me know your thoughts on this,

Thanks,

Sam

155. On 16 October 2018, Ms. Eisner sent an email to Mr. McAuley with further suggested changes to Rule 7. More specifically, Ms. Eisner introduced in this 16 October 2018 draft two categories of entities deemed to have a material interest in the Disputes. These are: (a) in an IRP arising out of an application for a new gTLD, persons who were part of a contention set for the new gTLD; and (b) persons whose actions are significantly referred to in the briefings before the IRP panel. The language underlined in the excerpt

quoted below of the 16 October 2018 draft indicates a modification from the *amicus curiae* provisions of the draft dated 25 September 2018:⁵²

Here is a proposed addition (in underline), including a footnote, for the *amicus* section:

Any person, group, or entity that has a material interest relevant to the DISPUTE but does not satisfy the standing requirements for a CLAIMANT set forth in the Bylaws may participate as an *amicus curiae* before an IRP PANEL, subject to the limitations set forth below. A person, group or entity that participated in an underlying proceeding (a process-specific expert panel per ICANN Bylaws, Article 4, Section 4.3(b)(iii)(A)(3)) shall be deemed to have a material interest relevant to the DISPUTE and may participate as an *amicus* before the IRP PANEL. Similarly, if the IRP relates to an application arising out of ICANN's New gTLD Program, a person, group or entity that was part of a contention set for the string at issue in the IRP shall be deemed to have a material interest relevant to the DISPUTE and may participate as an *amicus* before the IRP PANEL. If the briefings before the IRP PANEL significantly refer to actions taken by a person, group or entity that is external to the DISPUTE, such external person, group or entity shall be deemed to have a material interest relevant to the DISPUTE and may participate as an *amicus* before the IRP PANEL.

All requests to participate as an *amicus* must contain the same information as the Written Statement (set out at Section 6), specify the interest of the *amicus curiae*, and must be accompanied by the appropriate filing fee.

If the PROCEDURES OFFICER determines, in his or her discretion, that the proposed *amicus curiae* has a material interest relevant to the DISPUTE, he or she shall allow participation by the *amicus curiae*. Any person participating as an *amicus curiae* may submit to the IRP Panel written briefing(s) on the DISPUTE or on such discrete questions as the IRP PANEL may request briefing, in the discretion of the IRP PANEL and subject to such deadlines, page limits, and other procedural rules as the IRP PANEL may specify in its discretion.^[1] The IRP PANEL shall determine in its discretion what materials related to the DISPUTE to make available to a person participating as an *amicus curiae*.

[1] During the pendency of these Interim Supplementary Rules, in exercising its discretion in allowing the participation of *amicus curiae* and in considering the scope of briefing available from *amicus curiae*, the IRP PANEL shall also consider how the purposes of the IRP set forth at Section 4.3(a) of the ICANN Bylaws are furthered, including the need for coherent, consistent and just resolution of DISPUTES.

156. Neither Ms. Eisner nor Mr. McAuley describe in their respective declarations the discussions that took place between them between 12 and 16 October 2018, as

⁵² Ms. Eisner's email to Mr. McAuley dated 16 October 2018, Ex. 2 to the Eisner Declaration.

Ms. Eisner, to quote from her declaration, was seeking to “provide additional definition to the “material interest” requirement” through revisions to the *amicus* provisions of Rule 7.⁵³ However, the fact that such discussions took place is established by a draft email to the IOT that Mr. McAuley sent to Ms. Eisner and Mr. Turcotte on 17 October 2018, which included the following paragraphs:

I would like to note one particular area – that of Joinder etc. (Rule 7). You may recall that I, wearing my **participant** (not leader) hat, had suggested certain text and with Malcom’s help we seemed to have achieved compromise.

As Sam attempted to draft the compromise in this respect she encountered difficulty in capturing appropriate language that she felt would be consistent with bylaws. Sam reached out to me in my participant capacity and we discussed over the ensuing days and so the language you will see there is not exactly as discussed on the calls. The language is acceptable to me in my participant capacity. I felt these discussions were appropriate inasmuch as I had raised the issue as participant and knew I would forward the resulting language to the list – a way to try to take advantage of board action at next week’s meeting.

157. Afilias characterizes as “bespoke” the language added to Rule 7 by Ms. Eisner on 16 October 2018 to describe the two categories of parties deemed to have a material interest relevant to the Dispute. In this regard, the Claimant avers: “Unsurprisingly, these two 11th hour additions to Rule 7 provide the textual basis for VeriSign’s and NDC’s applications before this Panel.”⁵⁴
158. In her declaration, Ms. Eisner denies Afilias’ contention that these revisions to Rule 7 had been added by Mr. McAuley following Afilias’ CEP and threatened IRP. She states: “Those Rule 7 provisions were drafted by me; and I was not aware of Afilias’ draft IRP Request when I drafted them and proposed them to the IRP-IOT.”⁵⁵

⁵³ See Eisner Declaration, para. 5

⁵⁴ Afilias’ Supplemental Brief, para. 20

⁵⁵ Eisner Declaration, para. 6.

159. As for Mr. McAuley, he says of Ms. Eisner's revisions of 16 October 2018:⁵⁶

This language was developed by Ms. Eisner alone. I never suggested to Ms. Eisner that she should add these two categories of persons who would be deemed to have a material interest for purposes of *amicus* participation.

160. In the same declaration, Mr. McAuley states:⁵⁷

...to the best of my knowledge and belief, I was not aware that Afilias had filed a [CEP] [...] while any of the proceedings described in this declaration were ongoing. [...] None of my proposed edits or comments to the Interim Supplementary Procedures were made because of a CEP or IRP by Afilias with respect to .web.

161. Ms. Eisner and Mr. McAuley exchanged further emails in the course of the three days following her sending her 16 October 2018 draft, during which her proposed revisions were "refin[ed]".⁵⁸ Thus, on 17 October 2018, Mr. McAuley sent an email to Ms. Eisner with suggested language for Rule 7 reinforcing the Procedures Officer's lack of discretion to allow *amicus* participation by the two categories of persons, groups or entities deemed to have a material interest in the Dispute. Mr. McAuley's proposed modifications to the draft of 16 October 2018 appear in red in the excerpt below:⁵⁹

⁵⁶ McAuley Declaration, para. 26

⁵⁷ *Id.*, para. 32.

⁵⁸ Eisner Declaration, para. 5.

⁵⁹ Attachment to Mr. McAuley's email to Ms. Eisner and Mr. Turcotte dated 17 October 2018, Ex. 3 to the Eisner Declaration.

Any person, group, or entity that has a material interest relevant to the DISPUTE but does not satisfy the standing requirements for a CLAIMANT set forth in the Bylaws may participate as an *amicus curiae* before an IRP PANEL, subject to the limitations set forth below. A person, group or entity that participated in an underlying proceeding (a process-specific expert panel per ICANN Bylaws, Article 4, Section 4.3(b)(iii)(A)(3)) shall be deemed to have a material interest relevant to the DISPUTE and may participate as an *amicus* before the IRP PANEL. Similarly, if the IRP relates to an application arising out of ICANN's New gTLD Program, a person, group or entity that was part of a contention set for the string at issue in the IRP shall be deemed to have a material interest relevant to the DISPUTE and shall be permitted to ~~may~~ participate as an *amicus* before the IRP PANEL. If the briefings before the IRP PANEL significantly refer to actions taken by a person, group or entity that is external to the DISPUTE, such external person, group or entity shall be deemed to have a material interest relevant to the DISPUTE and ~~may~~ shall be permitted to participate as an *amicus* before the IRP PANEL.

All requests to participate as an *amicus* must contain the same information as the Written Statement (set out at Section 6), specify the interest of the *amicus curiae*, and must be accompanied by the appropriate filing fee.

If the PROCEDURES OFFICER determines, in his or her discretion subject to the conditions set forth above, that the proposed *amicus curiae* has a material interest relevant to the DISPUTE, he or she shall allow participation by the *amicus curiae*. Any person participating as an *amicus curiae* may submit to the IRP Panel written briefing(s) on the DISPUTE or on such discrete questions as the IRP PANEL may request briefing, in the discretion of the IRP PANEL and subject to such deadlines, page limits, and other procedural rules as the IRP PANEL may specify in its discretion.^[1] The *amicus curiae* shall be informed of the proceedings in the same manner as the parties thereto. The IRP PANEL shall determine in its discretion what materials related to the DISPUTE to make available to a person participating as an *amicus curiae*.

[1] During the pendency of these Interim Supplementary Rules, in exercising its discretion in allowing the participation of *amicus curiae* and in considering the scope of briefing available from *amicus curiae*, the IRP PANEL shall ~~also~~ consider how the purposes of the IRP set forth at Section 4.3(a) of the ICANN Bylaws are furthered, including the need for coherent, consistent and just resolution of DISPUTES. In addition, the IRP PANEL shall allow persons, groups or entities with a material interest relevant to the DISPUTE to participate broadly as an *amicus curiae* consistent with ICANN's pertinent bylaws, including, without limitation, Bylaw Sections 4.3(a) and 4.3(n)(iv)(B).

162. On 18 October 2018, Ms. Eisner replied to Mr. McAuley with a further redline. She explained that her modifications adopted his language removing discretion regarding *amicus* participation, restructured the provision and shortened the footnote.⁶⁰

Hi David -

Thanks for your language. Attached is a further redline. The first paragraph appears to have a lot of changes, but what it does is:

- 1) adopt your language of "shall participate";
- 2) makes that language applicable to all three types of situations; and
- 3) is reframed in a bulleted list so as to avoid repeating the same participation right 3 times.

You'll see my comment that I do not recommend accepting the line regarding how *amicus* are informed. It creates a lot of vagueness in the document, and the procedures don't have other discussion about how parties are "informed". Again, this is something that we can continue discussing for the final set.

Finally, I reorganized the footnote to return to one sentence, as there was some duplication and reference to Bylaws sections that do not appear to apply to *amicus*. In this reorganization, I incorporate that concept of "broad participation" that was not in my previous sentence.

Please let us know your thoughts. It would be good if we could get this out either later today or by tomorrow .

Thanks,

Sam

163. Attached to that email was a redline, where Ms. Eisner's modifications are in blue and Mr. McAuley's in red. This draft also shows how the language of the footnote to Rule 7 evolved.⁶¹

⁶⁰ Ms. Eisner's email to Mr. McAuley dated 18 October 2018, Ex. 4 to the Eisner Declaration.

⁶¹ Attachment to Ms. Eisner's email to Mr. McAuley dated 18 October 2018, Ex. 4 to the Eisner Declaration.

Any person, group, or entity that has a material interest relevant to the DISPUTE but does not satisfy the standing requirements for a CLAIMANT set forth in the Bylaws may participate as an *amicus curiae* before an IRP PANEL, subject to the limitations set forth below. The following persons, groups, or entities shall be deemed to have a material interest relevant to the DISPUTE and, if requested, shall be permitted to participate as an *amicus* before the IRP PANEL.:

- i. A person, group or entity that participated in an underlying proceeding (a process-specific expert panel per ICANN Bylaws, Article 4, Section 4.3(b)(iii)(A)(3));
- ii. ~~shall be deemed to have a material interest relevant to the DISPUTE and may participate as an *amicus* before the IRP PANEL. Similarly, if the IRP relates to an application arising out of ICANN's New gTLD Program, a person, group or entity that was part of a contention set for the string at issue in the IRP; and~~
- iii. ~~shall be deemed to have a material interest relevant to the DISPUTE and shall be permitted to~~ may participate as an *amicus* before the IRP PANEL. If the briefings before the IRP PANEL significantly refer to actions taken by a person, group or entity that is external to the DISPUTE, such external person, group or entity, ~~shall be deemed to have a material interest relevant to the DISPUTE and may shall be permitted to~~ participate as an *amicus* before the IRP PANEL.

All requests to participate as an *amicus* must contain the same information as the Written Statement (set out at Section 6), specify the interest of the *amicus curiae*, and must be accompanied by the appropriate filing fee.

If the PROCEDURES OFFICER determines, in his or her discretion subject to the conditions set forth above, that the proposed *amicus curiae* has a material interest relevant to the DISPUTE, he or she shall allow participation by the *amicus curiae*. Any person participating as an *amicus curiae* may submit to the IRP Panel written briefing(s) on the DISPUTE or on such discrete questions as the IRP PANEL may request briefing, in the discretion of the IRP PANEL and subject to such deadlines, page limits, and other procedural rules as the IRP PANEL may specify in its

discretion. [1] The *amicus curiae* shall be informed of the proceedings in the same manner as the parties thereto. The IRP PANEL shall determine in its discretion what materials related to the DISPUTE to make available to a person participating as an *amicus curiae*.

Formatted: Highlight

Commented [SE1]: The procedures do not discuss what it means to be "informed" of proceedings, so I recommend removal, as this could lead to vagueness. I'm also not sure what this means. ICANN will always maintain the online docket of filings and orders. If this is anticipating different notification requirements on ICDR, we'd have to obtain that authorization before we could put this into effect.

Formatted: Highlight

[1] During the pendency of these Interim Supplementary Rules, in exercising its discretion in allowing the participation of *amicus curiae* and in then considering the scope of briefing available participation from *amicus curiae*, the IRP PANEL shall also lean in favor of allowing broad participation of an *amicus curiae* as needed to further consider how the purposes of the IRP set forth at Section 4.3(a) of the ICANN Bylaws are furthered, including the need for coherent, consistent and just resolution of DISPUTES. In addition, the IRP PANEL shall allow persons, groups or entities with a material interest relevant to the DISPUTE to participate broadly as an *amicus curiae* consistent with ICANN's pertinent bylaws, including, without limitation, Bylaw Sections 4.3(a) and 4.3(m)(iv)(B).

Commented [SE2]: They have to have a material interest to be an *amicus*, so nothing is added by this phrase.

Commented [SE3]: Reference to 4.3(a) is captured above.

Commented [SE4]: This refers to setting of rules for joinder and consolidation, which is handled separately in these procedures and reference thereto would likely lead to confusion.

164. Mr. McAuley and Ms. Eisner continued to exchange emails with further minor suggestions on 18 October 2018.⁶² The following day, that exchange ended with Mr. McAuley's suggestion to add a phrase in order to avoid excluding non-listed persons from the *amicus* provision. His addition appears in red in the excerpt below:⁶³

Any person, group, or entity that has a material interest relevant to the DISPUTE but does not satisfy the standing requirements for a CLAIMANT set forth in the Bylaws may participate as an *amicus curiae* before an IRP PANEL, subject to the limitations set forth below. Without limitation to the persons, groups, or entities that may have such a material interest, the following persons, groups, or entities shall be deemed to have a material interest relevant to the DISPUTE and, if requested, shall be permitted to participate as an *amicus* before the IRP PANEL:

165. Later on 19 October 2018, Mr. Turcotte, on behalf of Mr. McAuley, sent the last version of the draft Interim Supplementary Procedures to the IOT members, and asked them to revert back to him by 23:59 UTC on 21 October 2018.⁶⁴ The revised language was deemed approved by the lack of comments from members of the IOT within the time allowed. Afilias points to the fact that 19 October 2018 being a Friday, IOT members were only given two days over a week-end to react to Mr. Turcotte's email.

166. On 22 October 2018, the draft Interim Supplementary Procedures as circulated by Mr. Turcotte were sent to the Board for consideration. The preamble to the Interim

⁶² Mr. McAuley's email to Ms. Eisner dated 18 October 2018, Ex. 5 to the Eisner Declaration; Ms. Eisner's email to Mr. McAuley dated 18 October 2018, Ex. 6 to the Eisner Declaration.

⁶³ Mr. McAuley's email to Ms. Eisner dated 19 October 2018, Ex. 7 to the Eisner Declaration.

⁶⁴ Mr. Turcotte email to the IOT dated 19 October 2018, Ex. 262.

Supplementary Procedures as presented to the Board for adoption contains the following representations of the IOT:⁶⁵

In drafting these Interim Supplementary Procedures, the IRP IOT applied the following principles: (1) remain as close as possible to the current Supplementary Procedures or the Updated Supplementary Procedures (USP) posted for public comment on 28 November 2016;; (2) to the extent public comments received in response to the Updated Supplementary Procedures reflected clear movement away from either the current Supplementary Procedures or the Updated Supplementary Procedures, to reflect that movement unless doing so would require significant drafting that should be properly deferred for broader consideration; (3) take no action that would materially expand any part of the Supplementary Procedures that the IRP IOT has not clearly agreed upon, or that represent a significant change from what was posted for comment and would therefore require further public consultation prior to changing the supplemental rules to reflect those expansions or changes.

167. Afiliias contends that, insofar as Rule 7 was concerned, each one of the three representations made in this communication to the Board was false.⁶⁶
168. Before completing this description of the evolution of Rule 7, it bears mentioning, as the Procedures Officer found and as admitted by ICANN, that the meetings of the IOT were sparsely attended and, on occasion, that the IOT was unable to muster a quorum.⁶⁷
169. By way of example, the Procedures Officer noted that at the IOT meeting of 11 October 2018, “[i]n addition to an ICANN consultant, an ICANN counsel, a partner of the Jones Day law firm [counsel to ICANN], an ICANN Research Analyst, and an ICANN

⁶⁵ ICANN, Adopted Board Resolutions, Regular Meeting of the ICANN Board (25 October 2018), Ex. 314, p. 62.

⁶⁶ Afiliias’ Supplemental Brief, para. 28.

⁶⁷ PO Declaration, paras. 83-85. See also ICANN PHB, para. 9.

Projects and Operations Assistant, only two other people spoke at the meeting: David McAuley and Malcolm Hutto.”⁶⁸

170. Mr. McAuley acknowledged in his declaration that IOT members did not regularly attend telephonic meetings. Nevertheless, he sought to situate this state of affairs in a broader context.⁶⁹

All IRP-IOT meetings are open to all members of the IRP-IOT committee, although it is not uncommon for members to skip some of the telephonic meetings. However, all committee members are included on all IRP-IOT correspondence, including any drafts of the Update Supplementary Procedures, and are able to and are encouraged by me to comment on the telephone and by email on issues being considered by the committee. The meetings themselves are transcribed by an automated transcription service and the meeting transcriptions, and correspondence among the IRP-IOT members, along with any documents considered during those meetings, are publicly posted on ICANN’s website at <https://community.icann.org/display/IRPIOT/Independent+Review+Process+-+Implementation+Oversight+Team+%28IRP-IOT%29+Home> and <https://mmm.icann.org/pipermail/iot>.

171. The Interim Supplementary Procedures were adopted by a resolution of the Board on 25 October 2018.⁷⁰

(b) Observations as to the Development of the *Amicus* Provisions of Rule 7

172. The parties and the Applicant *Amici* have made detailed submissions concerning virtually every step in the evolution of Rule 7. The Panel does not consider it necessary

⁶⁸ PO Declaration, para. 87.

⁶⁹ McAuley Declaration, para. 9.

⁷⁰ ICANN, Adopted Board Resolutions, Regular Meeting of the ICANN Board (25 October 2018), Ex. 0314.

to get into the *minutiae* of each of the drafts, as the following observations suffice to ground its reasons for decision.

173. Beginning with Mr. McAuley's draft of 25 September 2018, a series of changes were introduced to Rule 7 that had the effect of both broadening the circumstances in which interested parties could seek to participate in an IRP and narrowing down the discretion of the Procedures Officer presented with a request to participate by an interested party.
174. In the 16 October 2018 draft prepared by Ms. Eisner, it was proposed that two specific categories of entities be deemed to have a material interest relevant to the Dispute that would justify their participation as *amici*. The first – qualifying an entity that was part of a contention set for the string at issue in an IRP relating to an application arising out of ICANN's New gTLD Program – reflected the circumstances in which NDC found itself after Afilias' CEP was made public, and Afilias announced it might initiate an IRP; the second – qualifying a person external to the Dispute if the briefings before the IRP significantly refer to actions taken by that person – reflected the circumstances in which VeriSign would likely find itself after the initiation of Afilias' IRP, based on the text of Afilias' CEP of 18 June 2018 and the draft IRP shared with ICANN on 10 October 2018.
175. The two categories of interested parties added to Rule 7 on 16 October 2018 and deemed to have a material interest in the Dispute are quite specific. In the experience of the Panel, they are couched in language that is not typical of legal texts used to describe parties that may claim intervenor status or request *amicus* participation in legal proceedings. Although it is not inconceivable that it be so, it would be a surprising coincidence, in light of the documentary evidence just reviewed, if the articulation of these two categories of potential *amici*, at the time that it occurred, were wholly unrelated to Afilias' CEP, made public shortly before, and its impending IRP, a draft of

which had been shared with ICANN less than a week before these categories came to being. All the more so given that the documentary evidence establishes that Ms. Eisner and Mr. McAuley were in contact while Ms. Eisner was developing the language by which these new categories of entities were added to Rule 7.

176. The questions raised by the specificity of these two additional grounds for *amici* participation are all the more serious considering the persistence with which Mr. McAuley, in his last exchanges with Ms. Eisner, sought to constrain the discretion of the Procedures Officer when he or she would be presented with an application by entities meeting those conditions.
177. The full picture arising from the record before the Panel, however, is more complex. On the other side of the ledger, there are two witness declarations that directly contradict the inference that the Panel is asked to draw from the documentary evidence. First, there is the declaration of Ms. Eisner, who holds the position of Deputy General Counsel of ICANN and is an attorney in good standing licensed to practice in California; and second, the declaration of Mr. McAuley, Senior International Policy and Business Development Manager at VeriSign.
178. In her declaration, Ms. Eisner responds to Afiliias' contention that the portions of Rule 7 relied upon by the Applicant *Amici* were added by Mr. McAuley in response to Afiliias' CEP and in reaction to the draft IRP Request that Afiliias provided to ICANN's in-house counsel on 10 October 2018. She states, as already noted, that the relevant Rule 7 provisions "were drafted by me; and I was not aware of Afiliias' draft IRP Request when I drafted them and proposed them to the IRP-IOT."⁷¹

⁷¹ Eisner Declaration, para. 6.

179. Mr. McAuley, for his part, states in his declaration:⁷²

While I understand generally that ICANN identifies publicly matter subject to the Cooperative Engagement Process (“CEP”), to the best of my knowledge and belief, I was not aware that Afilias had filed a [CEP] on any subject, including with respect to the .web gTLD while any of the proceedings described in this declaration were ongoing. [...] I first learned that Afilias had filed an IRP regarding .web a couple of weeks after it had been filed. None of my proposed edits or comments to the Interim Supplementary Procedures were made because of a CEP or IRP by Afilias with respect to .web.

180. Afilias sought leave from the Procedures Officer to cross-examine Ms. Eisner and Mr. McAuley. That request was denied. No such request was presented to this Panel, which was asked to decide all Phase I issues on the basis of the record before the Procedures Officer. In the result, the Panel is therefore left with the invitation, based on submissions interpreting a trail of documents, to make findings of fact that are contradicted by two witness declarations, in circumstances where the witnesses in question did not appear before the Panel and were not cross-examined on their evidence.

181. The Panel has referred earlier in these reasons to the pre-eminence of documents as a means of evidence when international arbitral tribunals are called upon to reconstitute past events. However, where, as in the present case, documents raise serious questions without providing definitive answers, the Panel is not prepared to make findings of fact that are inconsistent with declarations affirmed by witnesses whose evidence has not been subject to cross-examination. Before making findings of fact that necessarily imply that the evidence of a witness is untruthful, the Panel considers it the duty of any adjudicator, save in the clearest of cases, to require that the party urging that these

⁷² McAuley Declaration, para. 32 [emphasis added].

findings be made first put its case and the documents on which it is based to the witness in cross-examination. All the more so, if the findings of fact in question relate to alleged misconduct by the witness.

(c) Conclusions as to the Involvement of ICANN Staff in the Drafting of Rule 7

182. For the reasons just given, the Panel declines in this decision to make a finding as to the propriety of the involvement of ICANN's Staff in the development of the *amicus* provisions of Rule 7, and Afilias' contention that its action violated the Articles of Incorporation or Bylaws.
183. In its Supplemental Brief in connection with the Applicant *Amici's* requests, Afilias has requested, as principal relief, that the Panel find that the *amicus* provisions of Rule 7 were adopted by ICANN in violation of its Bylaws and, consequently, that VeriSign's and NDC's applications be denied. Afilias has also presented the following, alternative requested relief:⁷³

Second, and in the alternative, if the Panel is not prepared to decide Afilias' claim that ICANN violated its Bylaws in adopting the *amicus* provisions in this Phase I, it should join that claim to the other claims to be decided in Phase II, and allow the Applicants to participate as *amici* on a provisional basis.

184. As reflected in the next section of this decision, the Panel's opinion as to the nature and breadth of the *amicus* participation that should be afforded to the Applicant *Amici* in this case – whether it be under the provisions of Rule 7, properly interpreted, as an exercise of the Panel's discretion under Section 4.3(o)(v) of the Bylaws, or under relevant principles of international law – broadly accords with the *amici* participation rights that Afilias is prepared to concede as part of its alternative relief. This being the case, the

⁷³ Afilias' Supplemental Brief, para. 3.

Panel has decided to grant Afilias' alternative request for relief, and to join those aspects of the Rule 7 claim over which the Panel has jurisdiction (to the extent Afilias chooses to maintain them) to the other claims to be decided in Phase II.

(d) Other Aspects of Afilias' Rule 7 Claim

185. To the extent that there remain aspects of Afilias' Rule 7 claim that fall within the jurisdiction of the Panel, as determined in this decision, these are also joined to Afilias' other claims to be determined in Phase II of this IRP.

B. Amicus Participation of the Applicant *Amici* in the IRP

186. As noted already, it is common ground, assuming Rule 7 to be valid, that that Applicant *Amici* are entitled to participate in the IRP as *amici*. The Panel turns now to considering the specific participation rights that are being sought by the Applicant *Amici*. As mentioned, these include submitting written briefs with respect to their alleged misconduct; submitting evidence in the form of witness statements and exhibits; responding to the Claimant's arguments and evidence; participating at the hearing; allowing their witnesses to be cross-examined and being entitled to cross-examine the other Parties' witnesses; making arguments at the hearing and submitting post-hearing submissions with respect to their alleged wrongdoing.⁷⁴

187. The Panel has also noted, above, that the Applicant *Amici* propose to adduce evidence of what they claim was unlawful conduct on the part of Afilias that would disqualify it from the right to operate the .WEB gTLD. To that extent, the Applicant *Amici* are seeking the right themselves to advance a claim in the IRP.

⁷⁴ Transcript of the hearing on Phase I, pp. 21-23.

188. ICANN's counsel also suggested, at the hearing, that if the Applicant *Amici* were permitted the type of broad participation they are seeking, then it would be appropriate that both of them be subject to the provisions of the Interim Procedures relating to Exchange of Information. This means that they would be subject to document requests, and that Afilias would in turn be subject to document requests by both ICANN and the Applicant *Amici*.⁷⁵
189. The Panel is unable to reconcile the type of participation rights being sought by the Applicant *Amici* with the terms of the Interim Procedures. Rule 7 contemplates the participation of a person, group or entity as *amicus curiae*. Its provisions make it clear that any person participating as an *amicus* “may submit to the IRP PANEL written briefing(s) on the DISPUTE or such other discrete questions as the IRP PANEL may request briefing, in the discretion of the IRP PANEL and subject to such deadlines, page limits, and other procedural rules as the IRP PANEL may specify in its discretion” (emphasis added).
190. With respect to footnote 4 of Rule 7, relied upon by the Applicant *Amici* and ICANN, the Panel is of the view that the exhortation to “lean in favour of allowing broad participation” must be read in context, in accordance with the well-accepted rule of construction calling for contextual interpretation. The footnote in question comes at the end of the above-quoted sentence, which contains two references to “briefing”, and the footnote itself refers to the participation of (or from) “*amicus curiae*”, an expression normally used to designate a friend of the court having, as a non-disputing party, a status different from that of a party. In reality, the participation rights being sought by the Applicant *Amici* are

⁷⁵ *Id.*, p. 23.

those of a disputing party, and they are not sought by entities claiming to be “friends of the court”.

191. A further obstacle to the broad interpretation of Rule 7 urged by the Applicant *Amici* and ICANN arises from a comparison of the *amicus* provisions with the provisions of Rule 7 dealing with interventions. The Intervention provisions include, as regards to the status of the intervener, the following sentence (emphasis added):

Any person, group or entity who intervenes as a CLAIMANT pursuant to this section will become a CLAIMANT in the existing INDEPENDENT REVIEW PROCESS and have all of the rights and responsibilities of other CLAIMANTS in that matter and be bound by the outcome to the same extent as any other CLAIMANT.

192. No such provisions exist in relation to an *amicus curiae*, consistent with the usual limited scope of the participation of such a non-disputing party.

193. The Intervention section of Rule 7 also includes provisions dealing with the materials to be made available to interveners and entities whose claims have been consolidated:

Excluding materials exempted from production under Rule 8 (Exchange of Information) below, the IRP PANEL shall direct that all materials related to the DISPUTE be made available to entities that have intervened or had their claim consolidated...

194. In sharp contrast, the *amicus* provisions of Rule 7 provide:

The IRP PANEL shall determine in its discretion what materials related to the DISPUTE to make available to a person participating as an *amicus curiae*.

195. The conclusions the Panel draws from its review of the provisions of Rule 7, read as a whole, are the following:

- *Amici* are not treated as parties, unlike interveners or parties whose cases are consolidated.

- *Amici* do not have a *right* to access the full record of the IRP, unlike interveners or parties whose cases are consolidated.
- *Amici* are permitted to submit “written briefings on the DISPUTE or on such discrete questions as the IRP PANEL may request briefing”.
- Unlike an intervener, who becomes a Claimant and is bound by the outcome of the IRP, Rule 7 does not provide that an *amicus* will be bound by the outcome of a case in which it participates, and the Applicant *Amici* have made clear that they did not accept to be bound by the result of this IRP.
- The provisions of the Interim Procedures relating to Exchange of Information (Rule 8) apply to *Parties*, and the Panel can find no basis in Rules 7 or 8 for the submission that *Afilias* may be subject to motions for exchange of documents by the Applicant *Amici*.
- Nowhere in the Interim Procedures can the Panel find support for the proposition that an *amicus* allowed to participate in an IRP may be afforded the right to assert claims of its own in the IRP.

196. Much reliance was placed by the Applicant *Amici* on *Micula v. Romania*, an ICSID arbitration in which the European Community (**EC**) was allowed to participate as a non-disputing party by the filing of written submissions.⁷⁶ The Panel observes that in its letter allowing the participation of the EC, the *Micula* Tribunal noted:

⁷⁶ *Ioan Micula v. Romania, Final Award*, ICSID Case No. ARB-05-20 (11 December 2013), para. 36.

... The European Community shall act as *amicus curiae* not as *amicus actoris vel rei*. In other words, the non-disputing party shall remain a friend of the court and not a friend to either party.⁷⁷

197. The participation rights accorded to the EC as a non-disputing party in *Micula* included the right to file a written submission of 40 pages in length, supported by exhibits, to be focussed on assisting the Tribunal in the determination of the factual and legal issues arising in the case. The EC was given access to the Parties' pleadings and the Tribunal reserved the possibility of requesting the EC to produce "any document or evidentiary material that the Tribunal deem[ed] useful for the resolution of [the] dispute, or which has been requested by either Party."⁷⁸ Provision was also made for any person who participated in the elaboration of the EC's written submission "to be called to provide clarifications on that submission at the hearing, as may be required by the Tribunal of its own initiative or at the request of the Parties."⁷⁹
198. In the opinion of the Panel, this precedent illustrates the distinction existing between cases in which *amicus* participation has been admitted, and the type of participation rights sought by the Applicant *Amici* in this case. At the Phase I hearing, the Panel asked all participating parties whether they had knowledge of any precedent where a person granted the status of *amicus* was afforded the broad participation rights that were being sought by the Applicant *Amici* in this case. None were cited, beyond the Applicant *Amici's* reference to *Micula*.
199. In *Methanex Corp. v. United States of America*, a NAFTA Chapter 11 arbitration governed by the UNICITRAL Arbitration Rules, the Tribunal was presented with petitions

⁷⁷ *Id.*, para. 27.

⁷⁸ *Id.*, para. 36(5).

⁷⁹ *Id.*, para. 36(7).

on behalf of non-governmental organizations requesting permissions to submit *amicus curiae* briefs to the Tribunal, to have observer status, and to make oral submissions at oral hearings. The petitions invoked the immense public importance of the case and the critical impact of the Tribunal's decision on environmental and other public welfare law-making in the NAFTA region. The Tribunal noted that the rules applicable in that case did not empower the Tribunal to add parties, nor to accord to persons who are not parties the substantive status, rights, or privileges of a disputing party. The Tribunal added that it was called upon to decide a substantive dispute between the claimant and the respondent, and that it had no mandate to decide any other substantive dispute or to determine the legal rights of third persons. The Tribunal further reasoned that if it could not, without the consent of the parties, directly add another person as a party, it was equally precluded from achieving this result *indirectly*, by exercising a power over the conduct of the arbitration.⁸⁰

200. In the opinion of the Panel, this reasoning applies to the type of broad participation rights that are being sought by the Applicant *Amici* in this case. To paraphrase the *Methanex* Tribunal, if the Panel cannot add VeriSign and NDC as parties to the IRP, by granting them intervener status or otherwise, the Panel cannot accept the invitation to achieve this result indirectly, by granting them the rights and privileges of parties while they would not, like parties or interveners, be bound by the Panel's decision.
201. It was urged that the Panel needs the assistance of the Applicant *Amici* to pronounce upon the allegations of wrongdoing levelled against them by the Claimant. In the Panel's

⁸⁰ (UNCITRAL NAFTA Ch. 11), Decision of the Tribunal on Petitions from Third Persons to Intervene as "*Amici Curiae*" (15 January 2001), para. 29. In the end, the *Methanex* Tribunal decided that it had the power to accept *amicus* written submissions from the petitioners, and deferred to a later stage of the proceedings the decision of whether or not to receive them.

view, this assistance can be provided by granting them the type of *amicus* participation contemplated by Rule 7. Moreover, there is no suggestion that ICANN is unwilling to adduce, in Phase II, evidence relevant to those allegations of wrongdoing from witnesses under the control of the Applicant *Amici*. Nor is it alleged that ICANN is unprepared to accept VeriSign and NDC's offer of support to marshal this evidence. All indications are rather to the contrary, as evidenced by the positions adopted by these three participants before the Procedures Officer and throughout Phase I of this IRP.

202. When all is said and done, it is a striking feature of the Applicant *Amici*'s requests that while they are seeking the broadest participation rights in respect of what would be the core issues of Phase II, they insist that they would not be bound by the Panel's decision. The Panel can find no basis in Rule 7 to accede to such requests.
203. Having considered all relevant circumstances, the Panel has decided that the Applicant *Amici* shall be allowed to participate in this IRP as *amici*. Except for commercially sensitive or privileged material, the *Amici* shall be given access to all briefings and materials related to the IRP and shall be allowed to attend procedural and merits hearings. The Panel will shortly hold an early preparatory conference to identify, in consultation with the Parties, the issues that fall to be determined in Phase II. Once those issues have been identified, the Panel will decide, in consultation with the Parties and the *Amici*, the questions as to which the *Amici* will be permitted to submit briefings to the Panel, as well as the deadlines, page limits and other modalities of the filing of those briefings and supporting exhibits related to the IRP. The extent to which the *Amici* will be allowed to supplement their written submissions with oral submissions at the merits hearing will be decided, in consultation with the Parties and the *Amici*, during the relevant pre-hearing conference(s). The *Amici* shall bear the full costs of their participation in the IRP.

V. COSTS

204. The costs in respect of Phase I of this IRP are deferred to the Panel's Decision in Phase II of the IRP.

VI. DISPOSITIF

205. For the reasons set out in this Decision, the Panel unanimously decides as follows:

(a) Afiliás' alternative request for relief is hereby granted, and those aspects of Afiliás' Rule 7 claim over which the Tribunal has determined it has jurisdiction are hereby joined to Afiliás' other claims in Phase II;

(b) Nu Dotco, LLC's and VeriSign, Inc.'s respective Requests to participate as *amici* in this IRP are granted, in part, as follows:

(i) NU DOTCO, LLC and VeriSign, Inc. (the ***Amici***) are hereby allowed to participate as *amici* in this IRP;

(ii) Except for commercially sensitive or privileged material, the *Amici* shall be given access to all briefings and materials related to the IRP, and shall be allowed to attend procedural and merits hearings;

(iii) The Panel will shortly hold a preparatory conference to identify, in consultation with the Parties, the issues that fall to be determined in Phase II. Once these issues have been identified, the Panel will decide, in consultation with the Parties and the *Amici*, the questions as to which the *Amici* will be permitted to submit briefings to the Panel, as well as the deadlines, page limits and other modalities of the filing of those briefings and supporting exhibits related to the IRP;

(iv) The extent to which the *Amici* will be allowed to supplement their written submissions with oral submissions at the merits hearing will be decided, in consultation with the Parties and the *Amici*, during the relevant pre-hearing conference(s);

(v) The *Amici* shall bear the full costs of their participation in the IRP.

(c) The costs in relation to Phase I of this IRP are deferred to the Panel's Decision in Phase II of the IRP.

206. This Decision may be executed in counterparts, each of which shall be deemed an original, and all of which shall constitute together one and the same instrument.

INTRODUCTION

The Internet Corporation for Assigned Names and Numbers (“ICANN”) hereby responds to the Amended Request for Independent Review Process (“Amended IRP”) submitted by Afilias Domains No. 3 Limited (“Afilias”), on 21 March 2019.

1. ICANN is a California not-for-profit public benefit corporation formed in 1998. ICANN oversees the technical coordination of the Internet’s domain name system (“DNS”) on behalf of the Internet community. The essential function of the DNS is to convert easily remembered Internet domain names such as “icann.org” into numeric IP addresses understood by computers. ICANN’s core Mission is to ensure the stability, security, and interoperability of the DNS.¹ To that end, ICANN contracts with entities that operate generic top-level domains (“gTLDs”), which represent the portion of an Internet domain name to the right of the final dot, such as “.COM” or “.ORG.”

2. This Independent Review Process (“IRP”) proceeding calls for a determination of whether ICANN complied with its Articles of Incorporation (“Articles”), Bylaws and internal policies and procedures relating to disputes over the .WEB gTLD. .WEB is one of the new gTLDs sought in ICANN’s New gTLD Program (the “Program”), through which entities submitted 1,930 applications to ICANN for the opportunity to operate new gTLDs. The Program was designed by ICANN to enhance diversity, creativity, and choice, and to provide the benefits of innovation to consumers via the availability of new gTLDs. The success of the Program is demonstrated by the fact that it has already resulted in the introduction of over 1,200 new gTLDs.

3. Because there were multiple, qualified applicants for .WEB, the .WEB applications were placed in a “contention set,” and ICANN ultimately facilitated an auction to resolve the contention, as is expressly called for in the Applicant Guidebook (“Guidebook”), which contains the procedures for implementation of the Program. The .WEB auction occurred

in July 2016, and Nu Dotco, LLC (“NDC”) was the prevailing bidder. Soon thereafter, Verisign, Inc. (“Verisign”), the operator of .COM and .NET, publicly disclosed that it financially supported NDC’s bid in exchange for NDC’s agreement that, after executing an agreement with ICANN to operate .WEB, NDC would seek ICANN’s permission to transfer that agreement to Verisign, making Verisign the .WEB operator.

4. After Verisign’s disclosure, certain .WEB applicants complained that Verisign’s agreement with NDC violated the Guidebook and raised competition concerns given Verisign’s operation of .COM. Since then, .WEB has been mired in federal court litigation, a Department of Justice Antitrust Division (“DOJ”) investigation and multiple invocations of ICANN’s internal Accountability Mechanisms, which caused ICANN to place .WEB “on hold” pending their resolution. And although ICANN has been caught in the middle of this dispute between powerful and well-funded businesses, ICANN has not taken sides. Rather, ICANN has followed its Articles, Bylaws and internal policies and procedures in overseeing these disputes and in discharging its responsibilities in connection with ICANN’s Accountability Mechanisms.

5. Although content to sit on the sidelines while other .WEB applicants formally pursued their claims in various fora for more than two years, Afilias only recently initiated an IRP. In it, Afilias claims that ICANN failed to apply its policies “neutrally, objectively and fairly” by not fully investigating complaints about NDC prior to the .WEB auction, and because ICANN has not disqualified NDC based on alleged Guidebook violations and competition concerns. Afilias also tacks on a claim that ICANN was either induced by, or colluded with, Verisign to create procedures designed to benefit Verisign in this IRP.

6. The claims that Afilias levels against ICANN are unsupported. ICANN complied with its Articles, Bylaws and internal policies and procedures in facilitating the .WEB auction and in handling the disputes regarding .WEB since the auction. And although Afilias fails to

mention it, Afilias' alleged competition concerns were addressed in DOJ's year-long investigation of the NDC/Verisign agreement. ICANN fully cooperated in that investigation, which the government ultimately closed without taking action to block Verisign from operating .WEB. Finally, there is no support for the incredible claim that ICANN was either duped by, or conspired with, Verisign to create IRP procedures benefitting Verisign.

7. Moreover, Afilias' claims against ICANN are, in one sense, premature and, in another sense, overdue. The claims are premature in that the ICANN Board has not fully evaluated Afilias' allegations that NDC violated the Guidebook – which are fiercely contested by NDC and Verisign and, even if established, would not call for an immediate disqualification of NDC – because .WEB has been on hold since 2016. And since that time, Afilias has not invoked any ICANN Accountability Mechanism that would elevate Afilias' allegations of Guidebook violations to the Board for its consideration and action. Now, with the Afilias IRP pending, the ICANN Board may once again defer any action on .WEB while it awaits this Panel's findings.

8. Conversely, Afilias' claims are overdue in that Afilias has been aware of the NDC/Verisign agreement, the alleged Guidebook violations, and Afilias' purported injury since August 2016, yet Afilias waited *over two years* to assert these claims in an IRP, far outside the applicable limitations period. Whether Afilias is therefore barred from even raising its claims at this late date is a threshold issue the Panel will need to decide.

9. The hypocrisy and inequity of Afilias' claims against ICANN are palpable. Having done nothing to prosecute its claims for over two years while ICANN worked to resolve the host of legal proceedings and Accountability Mechanisms surrounding .WEB, Afilias now shamelessly seeks to use this proceeding to acquire .WEB based on ICANN's supposed failure to take the action that Afilias only now requests. Afilias is in no position to make such claims, but appears tone-deaf to how fundamentally unfair and self-serving its accusations against ICANN

are. This Panel should not indulge such behavior.

10. To be clear, ICANN's interest in this matter is not in picking winners and losers, but in ultimately completing the rollout of .WEB pursuant to the terms of the Guidebook and consistent with ICANN's Articles and Bylaws. As the party that made a significant financial investment in .WEB over two years ago, Verisign is determined to proceed pursuant to its agreement with NDC so that it can operate .WEB. Afilias, on the other hand, is determined to use this proceeding to seize control of .WEB for itself – at a bid price set by this Panel – even though it did not prevail in the auction. NDC and Verisign have responses to Afilias' allegations of Guidebook violations and anticompetitive conduct, but they also have made claims that Afilias breached rules applicable to the .WEB auction and should itself be disqualified by ICANN. Thus, it is important that NDC and Verisign be permitted to participate in this IRP so that the Panel will have the benefit of their evidence and submissions, in addition to the views of Afilias and ICANN, before rendering any final decision. Although this IRP is yet another delay in the rollout of .WEB, ICANN's Board will respect the process and will seriously consider and evaluate this Panel's findings to determine what action, if any, is appropriate in order to make .WEB finally available to consumers.

SUMMARY OF RELEVANT FACTS

I. ICANN AND ITS ACCOUNTABILITY MECHANISMS.

11. To help ensure that ICANN is serving, and remains accountable to, the global Internet community, ICANN has established several Accountability Mechanisms that allow certain interested parties to challenge or seek review of ICANN actions and decisions. Through these mechanisms, aggrieved parties can seek to hold ICANN accountable for alleged violations of its Articles, Bylaws, and certain other internal policies and procedures.²

12. For instance, ICANN's Bylaws provide for a process by which “any person or

entity materially affected by an action or inaction” of ICANN may request review or reconsideration of that action or inaction (“Reconsideration Request”).³ A committee of the ICANN Board hears, considers and recommends to the Board whether it should accept or deny a Reconsideration Request.⁴

13. Similarly, ICANN’s Bylaws provide for an Office of the Ombudsman (“Ombudsman”).⁵ The principal function of the Ombudsman is “to provide an independent internal evaluation of complaints by members of the ICANN community who believe that the ICANN staff, Board or an ICANN constituent body has treated them unfairly.”⁶

14. While not a formal Accountability Mechanism, ICANN also has a Documentary Information Disclosure Policy (“DIDP”), which allows community members to seek public disclosure of documents concerning ICANN’s operational activities unless there is a compelling reason for non-disclosure, such as confidentiality.

15. In addition, the ICANN Bylaws create the IRP under which a party materially and adversely affected by an ICANN action or inaction may submit its claims to an “independent third-party” for review.⁷ IRP claims are submitted to the International Centre for Dispute Resolution (“ICDR”), which is responsible for administering IRP proceedings. IRPs are conducted in accordance with the ICDR’s International Arbitration Rules, as modified by ICANN’s Bylaws and IRP Interim Supplementary Procedures (“Interim Supplementary Procedures”).⁸ In consultation with the Internet community, ICANN’s IRP Implementation Oversight Team (“IRP-IOT”) crafted the Interim Supplementary Procedures in accordance with the Bylaws’ mandate that the IRP-IOT create procedures applicable to IRPs.⁹ On 25 October 2018, after years of discussion, drafting, community consultation and public comment, the Board approved the Interim Supplementary Procedures crafted by the IRP-IOT.

16. Two Interim Supplementary Procedures are particularly important to this IRP.

First, Section 7 provides that any person, group or entity that “has a material interest relevant to” an IRP, such as NDC and Verisign, “shall” be allowed to participate in that IRP as *amicus curiae*.¹⁰ Second, Section 4 dictates¹¹ that an IRP must be commenced within 120 days after a claimant becomes aware of the material effect of the alleged ICANN action or inaction giving rise to the dispute provided, however, that an IRP may not be filed more than twelve months from the date of such action or inaction.¹²

II. ICANN’S NEW GTLD PROGRAM.

A. ICANN’S Policy Development – 2000-2007.

17. In its early years, ICANN focused on increasing the number of companies (known as “registrars”) that could sell domain name registrations to entities and individuals within then existing gTLDs. ICANN also focused on expanding, although more slowly, the number of gTLDs in existence. In 2000, ICANN approved seven new gTLDs as a proof of concept test to confirm that the addition of new gTLDs would not adversely affect the stability and security of the Internet or the DNS. In 2004 and 2005, ICANN approved a handful of additional gTLDs.

18. The New gTLD Program has produced ICANN’S most ambitious expansion of the Internet’S naming system. Under the Program, any interested party could apply for the opportunity to operate new gTLDs that were not already in use in the DNS, meaning that there was no cap on the number of new gTLDs that could be added to the Internet.¹³ The Program was designed to enhance diversity, creativity and consumer choice in gTLDs, and to provide the benefits of innovation to consumers.¹⁴ The Program arose from policy recommendations by ICANN’S Generic Names Supporting Organization (“GNSO”), which were based on community input during the period 2005-2007.¹⁵ On 26 June 2008, the ICANN Board adopted the GNSO’S policy recommendations and directed the ICANN organization to develop an implementation plan for the Program, to be provided to the Board for approval.¹⁶

B. ICANN's Implementation of the Program – 2008-2012.

19. The Guidebook, which enabled the implementation of the Program, was developed with significant input from the ICANN community over several years. ICANN published a first draft of the Guidebook in October 2008¹⁷ and distributed it for public comment. Numerous revisions were made based on public comment, and additional comments were sought on the revisions. The process repeated many times, resulting in multiple versions of the Guidebook until ICANN adopted the operative, 338-page Guidebook in June 2012.¹⁸

20. The Guidebook provides a step-by-step procedure for new gTLD applicants. It specifies what documents and information are required, the financial and legal commitments of operating a gTLD, what applicants can expect during the application and evaluation periods, and the dispute resolution procedures that could be invoked to object to new gTLD applications.¹⁹

21. The Guidebook requires applicants to provide the names and positions of their “directors,” “officers and partners” and “shareholders holding at least 15% of shares,” as well as information about the applicants’ financial condition so that ICANN can assess the applicants and their technical and financial wherewithal to operate a gTLD.²⁰ The Guidebook also requires applicants to inform ICANN if “information previously submitted by an applicant becomes untrue or inaccurate,” including “applicant specific information such as changes in financial position and changes in ownership or control of the applicant.”²¹ Importantly, an applicant’s failure to inform ICANN that previously submitted information has become untrue or inaccurate does not require denial of an application. The Guidebook gives ICANN discretion to determine whether the changed circumstances are material and what consequences, if any, should follow from a failure to disclose those circumstances, which could include denial of the application.²²

22. Only one applicant can be awarded a particular gTLD. Where there is more than one qualified applicant for the same gTLD, the Guidebook mandates that the applications be

placed in a “contention set.”²³ When this occurs, the Guidebook encourages (but does not require) the applicants to agree among themselves on resolution of the contention set.²⁴ To resolve a contention set privately, all applicants within the contention set must agree to a private resolution.²⁵ If the contention set cannot be resolved through private resolution, the Guidebook requires ICANN to schedule a public auction for those contention set members wishing to proceed with their applications.²⁶ The proceeds of a public auction are provided to ICANN, but are earmarked for purposes consistent with ICANN’s Mission, Core Values and non-profit status, based on Internet community input.²⁷

23. After a successful gTLD applicant passes initial evaluation and resolves any formal objection and/or contention set proceeding, and assuming no ICANN Accountability Mechanisms are pending, the applicant is offered a Registry Agreement with ICANN to become a new gTLD registry operator. A Registry Agreement is a formal, written agreement between a gTLD operator and ICANN that sets forth the rights, duties and obligations of the operator. ICANN offers a model Registry Agreement for most gTLDs, but each Registry Agreement can be negotiated and modified.²⁸ After a Registry Agreement is fully executed, ICANN takes the technical steps necessary to delegate the new gTLD into the DNS. Once a gTLD has been fully delegated into the DNS it becomes accessible on the Internet.²⁹

C. Results of the Program – 2012-Present.

24. In 2012, ICANN received 1,930 applications for new gTLDs. Since then, approximately 1,200 new gTLDs have been delegated and are operational.³⁰ These new gTLDs have increased diversity, consumer choice and competition in the DNS.

25. As one would expect with an expanded marketplace, gTLD operators have chosen to utilize and monetize gTLDs in different ways. Many operators have followed their original business plans for marketing their gTLDs as envisioned in their applications.³¹ Hundreds of

others have assigned or transferred their gTLDs to other entities for financial gain or other reasons.³² Still others have entered the new gTLD marketplace by acquiring new gTLD operators. And some entities have chosen to use the gTLDs for their own benefit, such as for branding purposes.³³

26. Assignments and transfers of Registry Agreements to operate gTLDs must be approved by ICANN, and ICANN follows a known procedure in evaluating such requests.³⁴ ICANN also has published materials explaining how a Registry Agreement can be assigned from one registry operator to another.³⁵ Because ICANN administers, rather than regulates, the DNS,³⁶ ICANN's focus in evaluating a proposed gTLD transfer is whether the transferee organization has the requisite financial and technical ability to operate a gTLD.³⁷

27. Afilias is extremely familiar with the Registry Agreement transfer process due to its involvement in multiple transfers. For instance, Afilias Limited applied for .MEET in 2012, stating that it planned to make it “the most popular, accessible, and innovative destination on the Internet where people seeking online dating and companionship services can learn about dating, companionship services and registrars that offer .MEET domain names.”³⁸ On 16 January 2014, ICANN and Afilias Limited entered into a .MEET Registry Agreement.³⁹ But before launching .MEET – *i.e.*, before serving a single customer – Afilias Limited sought to transfer the .MEET Registry Agreement to Charleston Road Registry Inc. d/b/a Google Registry (“Google”) in October 2014.⁴⁰ Because ICANN determined that Google had the technical and financial ability to operate .MEET, ICANN approved the transfer.⁴¹

28. Likewise, in 2015, the entity that entered into a Registry Agreement with ICANN to operate .PROMO requested that ICANN approve a transfer of the .PROMO Registry Agreement to Afilias plc prior to delegation of .PROMO. Although Afilias did not originally apply to operate .PROMO, ICANN approved the transfer based on a demonstration that Afilias

was qualified to operate the gTLD.⁴²

29. Finally, as described on its own corporate website, “Afilias has an active program for acquiring new Top Level Domains.”⁴³ For instance, in 2016, Afilias plc announced its acquisition of StartingDot, which had become the registry operator for .ARCHI, .BIO and .SKI through the Program. In Afilias plc’s words, “[t]he acquisition agreement is part of Afilias’ ongoing program of acquiring new TLDs to add to its portfolio.”⁴⁴ ICANN approved the transfer of those TLDs to Afilias plc based on its technical and financial ability to operate them.⁴⁵

III. THE .WEB CONTENTION SET.

30. ICANN received seven applications for .WEB from sophisticated companies, including Afilias, NDC, Ruby Glen LLC (“Ruby Glen”), a subsidiary of Donuts Inc, Charleston Road Registry, Inc., a subsidiary of Google, Web.com Group, Inc., DotWeb Inc., and Schlund Technologies GmbH. ICANN also received two applications for .WEBS from another applicant, Vistaprint Limited, which later withdrew one of its applications in April 2016. The seven applications for .WEB passed all applicable evaluations and were placed in a contention set, pursuant to the procedures set forth in the Guidebook.⁴⁶

31. In 2013, one of the .WEB applicants filed a “string confusion” objection against the .WEBS applications with the ICDR, arguing that .WEB and .WEBS were confusingly similar. The objection was ultimately upheld by an independent ICDR panelist, resulting in the .WEBS and .WEB applications being placed in the same contention set, which thereby became the “.WEB Contention Set.”⁴⁷

32. In June 2014, the .WEBS applicant filed an IRP against ICANN challenging ICANN’s acceptance of the ICDR’s determination on the string confusion objection. In October 2015, ICANN prevailed in the .WEBS IRP. The ICANN Board considered the .WEBS IRP Final Declaration in October 2015, December 2015, and March 2016, and resolved that ICANN

should “move forward with the processing of the [.WEB Contention Set].”⁴⁸

33. On 27 April 2016, per the Guidebook, ICANN scheduled an auction for 27 July 2016 to resolve the .WEB Contention Set if it could not be privately resolved by the applicants before then.⁴⁹ As the date of the auction approached, the members of the .WEB Contention Set had not resolved the contention set privately, and the members as a whole did not request a postponement of the auction. Accordingly, ICANN proceeded with plans for the auction.⁵⁰

34. Just before the auction, Ruby Glen (a .WEB applicant) invoked several of ICANN’s Accountability Mechanisms, and eventually commenced litigation, in an attempt to halt the auction from going forward and instead force a private auction for .WEB where the proceeds would be divided and paid to the losing bidders.⁵¹ Ruby Glen complained to ICANN that NDC had a change in ownership or control, and that NDC had failed to notify ICANN of this change, as required by the Guidebook.⁵² According to Ruby Glen, this alleged failure constituted a “potentially disqualifying change[] to NDC’s application.”⁵³ Neither Ruby Glen, nor any other .WEB applicant, suggested to ICANN that NDC had some sort of arrangement with another entity regarding .WEB.

35. ICANN thoroughly investigated these claims. ICANN contacted NDC on 27 June 2016, asking it to confirm whether there were any changes to NDC’s organizational structure that required reporting to ICANN.⁵⁴ NDC’s Chief Financial Officer, Jose Ignacio Rasco III, responded the same day to confirm that NDC had not experienced any changes in its organizational structure.⁵⁵ In an abundance of caution, however, ICANN again contacted NDC to inquire further into potential changes to NDC’s organization.⁵⁶ ICANN staff also interviewed Mr. Rasco via telephone.⁵⁷ During the call, Mr. Rasco stated, and later confirmed via email on 11 July 2016, that: “Neither the ownership nor the control of [NDC] has changed since we filed our application.”⁵⁸ Thereafter, ICANN informed all the contention set members, including Ruby

Glen and Afilius, that ICANN had “investigated the matter, and to date [has] found no basis to initiate the application change request process or postpone the auction.”⁵⁹

36. Ruby Glen then brought the same allegations regarding changes to NDC’s organization or control to the ICANN Ombudsman, who also investigated the claim.⁶⁰ Like ICANN, the Ombudsman did not find “any evidence which would satisfy [him] that there has been a material change to the application.”⁶¹

37. On 17 July 2016, Ruby Glen submitted an emergency Reconsideration Request to ICANN to enjoin the auction, claiming that ICANN staff had failed to sufficiently investigate Ruby Glen’s claims regarding NDC.⁶² ICANN’s Board Governance Committee (“BGC”), which was then tasked with evaluating Reconsideration Requests, expeditiously reviewed the thoroughness of the investigation into the alleged changes in NDC’s management and control.⁶³ After finishing its review, the BGC denied the Reconsideration Request on 21 July 2016, concluding that ICANN staff had sufficiently investigated Ruby Glen’s claims.⁶⁴

38. Then, just days before the .WEB auction was set to begin, Ruby Glen escalated its actions by filing a complaint in Federal District Court in Los Angeles against ICANN and an *ex parte* application for a temporary restraining order (“TRO”) to block the auction.⁶⁵ ICANN opposed the TRO application arguing, among other things, that Ruby Glen was not likely to succeed on the merits of its claims because ICANN appropriately investigated Ruby Glen’s claims and detected no changes to NDC’s ownership or control, a finding corroborated by sworn declarations from NDC’s Chief Operating Officer and Chief Financial Officer.⁶⁶

39. The District Court denied Ruby Glen’s request for a TRO based, in part, on the “strength of ICANN’s evidence.”⁶⁷ Specifically, the District Court held:

ICANN has provided evidence that it has conducted investigations into Plaintiff’s allegations concerning potential changes in NDC’s management and ownership structure at each level of Plaintiff’s appeals to ICANN for an investigation and

postponement of the auction. During those investigations, NDC provided evidence to ICANN that it had made no material changes to its management and ownership structure. Additionally, ICANN's Opposition is supported by the Declarations of Nicolai Bezsonoff and Jose Ignacio Rasco, who declare under penalty of perjury that there have been no changes to NDC's management, membership, or ownership since NDC first filed its application with ICANN.⁶⁸

IV. THE .WEB AUCTION AND ENSUING LITIGATION, ACCOUNTABILITY MECHANISMS, AND GOVERNMENT INVESTIGATION.

40. After denial of the TRO application, the .WEB auction proceeded as scheduled on 27-28 July 2016. NDC prevailed at a bid price of \$135 million.⁶⁹ Days later, Verisign, the entity that operates .COM and .NET, publicly stated that it had "entered into an agreement with [NDC] wherein [Verisign] provided funds for [NDC's] bid" and that, if NDC entered into a Registry Agreement with ICANN to operate .WEB, NDC "will then seek to assign[] the Registry Agreement to VeriSign upon consent from ICANN."⁷⁰

41. On 8 August 2016, Afilias' General Counsel wrote ICANN a letter demanding an immediate disqualification of NDC based on three claims. First, Afilias stated that the NDC/Verisign agreement constituted a transfer of NDC's rights and obligations in its application in violation of the Guidebook. Second, Afilias stated that NDC violated the disclosure requirements of the Guidebook by failing to inform ICANN of the agreement. Third, Afilias contended that the agreement "likely constitutes a change of control of the applicant."⁷¹ These are precisely the same alleged Guidebook violations that Afilias is now pursuing in this IRP, more than two years after this letter.

42. Also on 8 August 2016, Ruby Glen filed its First Amended Complaint against ICANN in Federal District Court, making claims that NDC violated the Guidebook and should have been disqualified on the same grounds asserted in Afilias' letter to ICANN.⁷²

43. At this same time, Ruby Glen's parent organization, Donuts, Inc. ("Donuts"), invoked ICANN's Cooperative Engagement Process ("CEP"), a pre-IRP proceeding that allows

the parties to attempt to resolve or narrow the issues to be brought in an IRP proceeding.⁷³

44. In connection with the New gTLD Program, ICANN employs a practice, depending on the circumstances, of placing a contention set or a gTLD application on hold if it is the subject of certain ICANN Accountability Mechanisms, including the initiation of a CEP.⁷⁴ Thus, on 19 August 2016, ICANN placed the .WEB Contention Set “on hold” due to the pendency of the Donuts CEP.

45. Rather than invoking an ICANN Accountability Mechanism, Afilias sent ICANN another letter, dated 9 September 2016, demanding the immediate disqualification of NDC for the same reasons it had raised in its August 2016 letter. The 9 September 2016 letter also asserted competition concerns that are identical to those alleged in this IRP.⁷⁵

46. As part of ICANN’s due diligence into the issues raised by Afilias and Ruby Glen in 2016, ICANN issued a set of questions to Afilias, Ruby Glen, NDC, and Verisign, seeking input regarding the .WEB auction, the NDC/Verisign agreement, and the alleged violations of the Guidebook.⁷⁶ These questions were designed to assist ICANN in evaluating what action, if any, should be taken in response to the claims asserted by Afilias and Ruby Glen.

47. On 7 October 2016, Afilias responded to ICANN’s questions, reiterating its core objections to the purported NDC/Verisign agreement and describing it as a “failure to disclose material information relating to [NDC’s] bid for the .WEB rights” and as “clearly designed to preserve Verisign’s existing monopoly in gTLD services that results from its control of .COM and .NET.”⁷⁷ Again, these are the same claims Afilias is now belatedly pressing in this IRP.

48. Thereafter, on 28 November 2016, the Federal District Court dismissed with prejudice Ruby Glen’s First Amended Complaint regarding the .WEB auction based on the covenant not to sue in the Guidebook, which requires applicants to use ICANN’s Accountability Mechanisms instead of filing lawsuits against ICANN.⁷⁸ Ruby Glen appealed.

49. Then, in early 2017, the Antitrust Division of the United States Department of Justice (“DOJ”) issued a civil investigative demand (“CID”) to ICANN, Verisign and others involved in the .WEB auction, seeking documents and information “in connection with DOJ’s investigation of Verisign’s proposed acquisition of NDC’s contractual rights to operate the .WEB gTLD.”⁷⁹ DOJ requested that ICANN take no action on .WEB during the pendency of the investigation. Between February and June 2017, ICANN made several document productions and provided information to DOJ, and ICANN is informed and believes that Verisign produced documents to, and met with representatives of, DOJ.⁸⁰

50. A year later, in January 2018, DOJ formally closed its investigation without taking any action. Such a decision typically is interpreted as meaning the government did not find a threat to competition that warranted further action.⁸¹ Despite the fact that Afilias’ claims are rooted in the alleged anticompetitive effects of having Verisign operate .WEB, Afilias *does not even mention* DOJ’s investigation – much less DOJ’s decision to close its investigation – in its Amended IRP Request.

51. On 30 January 2018, ICANN closed the Donuts CEP, giving Donuts until 14 February 2018 to file an IRP, which Donuts chose not to do. Thereafter, Afilias submitted two successive DIDP requests to ICANN seeking documents regarding the .WEB Contention Set, but Afilias did not file a formal challenge to ICANN proceeding with contracting for or delegation of .WEB under any of ICANN’s Accountability Mechanisms. Afilias also filed Reconsideration Requests on ICANN’s DIDP responses that were ultimately resolved and denied as of 5 June 2018. With Afilias’ DIDP Reconsideration Requests resolved, and no other Accountability Mechanisms pending, ICANN took the .WEB Contention Set off hold in early June 2018. Then, on 18 June 2018, almost two years after the .WEB auction took place, Afilias initiated its own CEP asserting precisely the same claims it had raised in its 2016 letters to ICANN but did not

formally pursue.⁸² Despite Afilias' delay in bringing its claims, ICANN placed the .WEB Contention Set back on hold.

52. Thereafter, on 15 October 2018, the Ninth Circuit Court of Appeals issued an order affirming the dismissal of Ruby Glen's First Amended Complaint against ICANN.⁸³

53. With the DOJ Antitrust Division investigation closed, the Ruby Glen litigation over and, as of 13 November 2018, the Afilias CEP proceedings closed – ICANN provided Afilias with time to file an IRP and assured Afilias that the .WEB Contention Set would remain on hold until there was a resolution of Afilias' anticipated Request for Interim Measures of Protection seeking to stay action on .WEB.⁸⁴ On 14 November 2018, Afilias filed its IRP. On 27 November 2018, Afilias filed its Request for Interim Measures of Protection.

54. To this day, the .WEB Contention Set remains on hold.

STANDARD OF REVIEW

55. An IRP Panel is asked to evaluate whether an ICANN action or inaction was consistent with ICANN's Articles, Bylaws, and internal policies and procedures.⁸⁵ But with respect to IRPs challenging the ICANN Board's exercise of its fiduciary duties, an IRP Panel is not empowered to substitute its judgment for that of ICANN.⁸⁶ Rather, the core task of an IRP panel is to determine whether ICANN has exceeded the scope of its Mission or otherwise failed to comply with its foundational documents and procedures.⁸⁷

ARGUMENT

I. ICANN HAS COMPLIED WITH ITS ARTICLES, BYLAWS AND POLICIES IN OVERSEEING THE .WEB CONTENTION SET DISPUTES AND RESULTING ACCOUNTABILITY MECHANISMS.

56. Afilias argues that ICANN has failed to apply its policies "neutrally, objectively and fairly" because ICANN did not fully investigate NDC prior to the .WEB auction and because ICANN has not disqualified NDC based on Afilias' alleged Guidebook violations.⁸⁸ Afilias is

wrong: ICANN thoroughly investigated claims made about NDC prior to the .WEB auction, none of which included a suggestion that NDC had reached an agreement with Verisign regarding .WEB. Likewise, the ICANN Board has not yet had an opportunity to fully evaluate the alleged Guidebook violations – all of which are vigorously denied by NDC and Verisign, and none of which call for an automatic disqualification of NDC – due to the pendency of government investigations and Accountability Mechanisms, including this IRP.

A. Afilias’ Complaints About ICANN’s Pre-Auction Investigation Of NDC Are Unsupported.

57. In June 2016, ICANN completed an investigation of whether NDC had undergone a change in control prior to the .WEB auction based on complaints raised by Ruby Glen.⁸⁹ Ruby Glen’s accusation was that “[u]pon information and belief, there have been changes to the Board of Directors and potential control of” NDC, and Ruby Glen requested that “ICANN investigate the change in NDC’s Board and potential control.”⁹⁰ Ruby Glen asserted no claims about Verisign and did not suggest that NDC had an agreement with Verisign regarding .WEB.⁹¹

58. Pursuant to its authority to verify information provided by a gTLD applicant,⁹² ICANN investigated whether there had been a change in NDC’s Board or undisclosed owners or managers through several interviews of, and communications with, NDC’s representative. On each occasion, NDC’s representative certified to ICANN that there had been no changes to the NDC “organization that would need to be reported to ICANN.”⁹³ NDC confirmed the same to the Ombudsman in July 2016,⁹⁴ and later in sworn affidavits filed in connection with Ruby Glen’s TRO application seeking to halt the .WEB auction.⁹⁵

59. In its Amended IRP Request, Afilias asserts that “ICANN failed to fully investigate rumors that NDC had reached an agreement with Verisign prior to the .WEB auction.”⁹⁶ ICANN, however, was not asked to – and had no reason to – investigate whether NDC had an arrangement with Verisign regarding .WEB at that time. Rather, ICANN

investigated what it was asked to investigate – namely, if there had been a change in ownership, management or control of NDC, which had not occurred. Thus, ICANN properly exercised its authority in investigating Ruby Glen’s claims, and the Board, in denying Ruby Glen’s Reconsideration Request regarding ICANN’s investigation, properly relied on the due diligence performed by ICANN’s staff and Ombudsman as well as NDC’s representations (later confirmed by the sworn Declarations in the Ruby Glen litigation).

60. If Afilias was aware of rumors regarding an arrangement between NDC and Verisign, Afilias should have raised its concerns with ICANN by invoking an appropriate Accountability Mechanism at the time, just as Ruby Glen had done. The same recourse was available to Afilias if it felt that ICANN’s investigation of NDC prior to the auction was deficient in any meaningful way. But Afilias did not do so. Afilias’ current claim that ICANN’s pre-auction investigation was deficient is, at best, a *post hoc* invention that is time barred, as discussed below.

B. Due To Pending Accountability Mechanisms As Well As The DOJ Investigation, The Board Has Not Fully Evaluated the Guidebook Violations Alleged By Afilias, Which Are Hotly Contested And Do Not Call For Automatic Disqualification.

61. Afilias argues that NDC breached the Guidebook by failing to amend its application,⁹⁷ by transferring rights in connection with its application to Verisign,⁹⁸ and by submitting auction bids that were controlled by and made on behalf of Verisign.⁹⁹ Afilias also argues that ICANN violated its Bylaws by failing to automatically disqualify NDC for these alleged breaches.¹⁰⁰ Afilias is wrong on several levels.

62. First, the ICANN Board has not fully evaluated the Guidebook violations that Afilias alleges because .WEB has been predominantly on hold since 2016 and no other formal Accountability Mechanism has been invoked calling on the Board to take action. Specifically, the .WEB Contention Set has been on hold from August 2016 through today, with the exception

of approximately two weeks in June 2018 after Afiliias' DIDP-related Reconsideration Requests were resolved and before Afiliias initiated its CEP. During the entire period from July 2016 through June 2018, Afiliias took no action that would have placed the .WEB issues before the Board, although Afiliias easily could have. For instance, rather than writing letters, Afiliias could have filed a Reconsideration Request challenging the .WEB auction results or ICANN's decision to take .WEB off hold in June 2018. Afiliias also could have waited for a proposed transfer of .WEB to Verisign and then filed a Reconsideration Request challenging that transfer. These actions – and perhaps others – would have elevated the Guidebook violations that Afiliias alleges to the Board for consideration.

63. Second, the Guidebook breaches that Afiliias alleges are the subject of good faith dispute by NDC and Verisign, both of which are seeking to participate in this IRP pursuant to their *amicus* applications. For instance, Afiliias' overarching theme that the NDC/Verisign agreement is anticompetitive is flatly denied by Verisign, which is prepared to come forward with evidence of its intentions for .WEB, Verisign's competitors, and the fact that Afiliias' competition claims have already been thoroughly investigated by DOJ. Likewise, many of Afiliias' technical arguments regarding the Guidebook and Auction Rules have also been contested by Verisign and NDC in correspondence to ICANN. For their part, NDC and Verisign claim that Afiliias violated the .WEB auction rules and should itself be disqualified by ICANN. While Afiliias' Amended IRP Request is notionally directed at ICANN, it is focused exclusively on the conduct of NDC and Verisign, to which NDC and Verisign have responses. Again, this dispute resolution process and the quality of the Panel's consideration of the issues that Afiliias raises will benefit substantially from NDC's and Verisign's participation in this IRP.

64. Third, the alleged Guidebook violations identified by Afiliias do *not* call for the automatic disqualification of NDC, as Afiliias requests of this Panel. Instead, the Guidebook

grants ICANN discretion to determine whether information not disclosed to ICANN – or any other potential Guidebook violation – warrants disqualification.¹⁰¹ An immediate and less-than-fully-informed disqualification of NDC of the sort sought by Afilias is unprecedented, not mandated by the Guidebook, and could violate ICANN’s obligations to act fairly and transparently as to NDC.

65. Fourth, the demands made by Afilias, in substantial part, require the Panel to usurp the discretion that is more broadly reserved under ICANN’s Bylaws to the ICANN Board and thus exceed the Panel’s jurisdiction. Pursuant to the Bylaws, where, as here, IRP claims arise out of the Board’s exercise of its fiduciary duties, “the IRP Panel shall not replace the Board’s reasonable judgment with its own so long as the Board’s action *or inaction* is within the realm of reasonable business judgment.”¹⁰²

66. Due to the pendency of DOJ’s investigation and a series of Accountability Mechanisms, the Board has not yet had an opportunity to fully address most of the issues that Afilias now pursues in its Amended IRP Request. Deferring such consideration until this Panel renders its final decision is well within the realm of reasonable business judgment. It was entirely reasonable for the ICANN Board to wait to analyze the issues surrounding .WEB until the DOJ investigation concluded and each of the related Accountability Mechanisms was resolved, including this IRP, and then to undertake that analysis on the basis of the results of those proceedings. Should this Panel determine that Afilias’ claims regarding NDC’s conduct have any merit, the Panel should not substitute its own discretion for that of the ICANN Board in deciding what corrective action, if any, is appropriate. Those business judgments must instead be left to the discretion of the Board, after consideration of this Panel’s findings.

67. This conclusion is also mandated by well-settled case law applying a “judicial policy of deference to the business judgment of corporate directors in the exercise of their broad

discretion in making corporate decisions.”¹⁰³ This principle is applicable here, and the result is unequivocal: the demands that Afilias makes – disqualification of NDC and an order that ICANN enter a Registry Agreement for .WEB with Afilias at a bid price to be determined by the Panel – are remedies that the Panel is not empowered to grant.

II. ICANN HAS COMPLIED WITH ITS CORE VALUE REGARDING COMPETITION.

68. One of ICANN’s Core Values, as set forth in its Bylaws, is “[w]here feasible and appropriate, depending on market mechanisms to promote and sustain a competitive environment in the DNS market.”¹⁰⁴ Afilias’ argument that failing to disqualify NDC violates this Core Value is baseless for a number of reasons.

69. As an initial matter, Afilias and its witnesses, Mr. Zittrain and Mr. Sadowsky, are wrong to suggest that the sole purpose of the New gTLD Program was to create competition for Verisign. While the community-developed policy underlying the Program was aimed at increasing competition and consumer choice in the DNS, the Program was not specifically designed to take market share from .COM, nor was Verisign prohibited from participating in the Program.¹⁰⁵ Indeed, neither the community-developed policy, the Guidebook nor any other ICANN document or statement underlying the Program says as much or even suggests that Verisign should not be permitted to participate fully in the Program.¹⁰⁶

70. Likewise, Afilias and its witnesses are wrong to suggest that ICANN’s Core Value regarding competition requires ICANN to act like a government regulator responsible for blocking transactions or curbing conduct that may impinge on competition.¹⁰⁷ In fact, ICANN’s Bylaws make clear that “ICANN does not hold any governmentally authorized regulatory authority.”¹⁰⁸ Instead, as ICANN Board member, Ms. Burr, explains in her witness statement, ICANN, as an administrator of the DNS, fulfills its competition mandate by enacting policies that promote competition – such as the New gTLD Program – and by deferring to an appropriate

government regulator – such as DOJ – for investigation of potential competition issues.¹⁰⁹

71. Indeed, an investigation by DOJ of the potential competition issues associated with a Verisign-operated .WEB is precisely what occurred in this matter. DOJ conducted a year-long investigation into the potential competitive effects of the NDC/Verisign agreement and Verisign’s proposed operation of .WEB.¹¹⁰ ICANN fully cooperated with DOJ’s investigation, and DOJ concluded that intervention was not warranted.¹¹¹ The government’s decision not to act answers the question of whether ICANN is required to act to address Afilias’ allegations of anticompetitive conduct. It is not.¹¹²

72. Finally, as expert economist Dennis Carlton concludes in his report, there is no evidence that .WEB will be a unique competitive check on .COM, at least any more than all of the other TLDs that are already in existence.¹¹³ Likewise, the claim that Afilias will promote .WEB more aggressively than Verisign is not supported by any evidence.¹¹⁴

III. ALL OF AFILIAS’ CLAIMS ARE TIME BARRED.

73. According to the Bylaws in place in August 2016, an IRP had to be filed within 30 days of the posting of the Board minutes relating to the challenged ICANN decision or action.¹¹⁵ Under the current Interim Supplementary Procedures, an IRP must be filed within 120 days after the claimant becomes aware “of the material effect of the action or inaction” giving rise to the dispute, provided that an IRP may not be filed 12 months from the date of such action or inaction.¹¹⁶ Under either measure, Afilias’ claims are undoubtedly time barred.

74. For instance, Afilias’ claims regarding deficiencies in ICANN’s pre-auction investigation of NDC accrued on 12 September 2016 when ICANN posted minutes regarding the Board’s denial of Ruby Glen’s Reconsideration Request challenging the investigation, making an IRP on such claims due on 12 October 2016. Afilias missed this deadline by over two years.

75. Likewise, the facts and claims supporting Afilias’ allegations of NDC’s

Guidebook violations were known to Afilias and set forth in its August and September 2016 letters to ICANN. Specifically, Afilias' 9 September 2016 letter to ICANN claimed that: (1) "NDC violated Section 1.2.7 of the Guidebook" for failing to amend its application to reflect its arrangement with Verisign; (2) that "NDC violated Paragraph 10 of the Terms and Conditions of Module 6" of the Guidebook by "transfer[ring] NDC's rights and obligations regarding its .WEB application to Verisign;" (3) that "NDC violated the Auction Rules" by submitting bids that were not on its own behalf; and (4) that ICANN must disqualify NDC for these alleged breaches pursuant to ICANN's competition mandate.¹¹⁷ These are identical to the claims asserted by Afilias in its Amended IRP Request.¹¹⁸ Afilias sat on its hands for *over two years* before asserting these claims in an IRP. There is no doubt that these claims are time barred as well.

76. Afilias' assertion that it was not aware of its claims until it received a copy of the NDC/Verisign agreement in this IRP is belied by the specific claims Afilias made in its September 2016 letter. The argument is also undercut by the requirement in the Interim Supplementary Procedures that an IRP must be brought within 120 days after the claimant becomes aware "of the *material effect* of the action or inaction" giving rise to the dispute,¹¹⁹ which Afilias was certainly aware of in 2016. Moreover, it is settled law that statutes of limitations begin to run even though a plaintiff is not aware of all operative facts.¹²⁰ Even if Afilias were not aware of all the facts regarding the NDC/Verisign agreement, the Interim Supplementary Procedures bar IRPs filed 12 months after the date of alleged ICANN action or inaction.

IV. ICANN COMPLIED WITH ITS ARTICLES AND BYLAWS IN ADOPTING RULE 7 OF THE INTERIM SUPPLEMENTARY PROCEDURES.

77. As set forth fully in ICANN's briefing to the Procedures Officer, ICANN did not violate its Articles or Bylaws in adopting Rule 7 of the Interim Supplementary Procedures, nor

did Verisign exert any pressure on the IRP-IOT to do so. The single Verisign-affiliated member of the IRP-IOT did *not* prepare the October 2018 draft of the Interim Supplementary Procedures and was *not* aware of Afilias' dispute regarding .WEB at that time. Moreover, that draft did not significantly change or expand Rule 7 from the version publicly posted nearly eight months earlier, in February 2018, rebutting Afilias' claim that Rule 7 was surreptitiously amended "just days" before the Board adopted the Interim Supplementary Procedures.

78. Afilias' remaining arguments lack merit. First, Afilias challenges the IRP-IOT's inclusion of ICANN counsel towards a quorum. Yet, nothing in ICANN's Bylaws prohibits ICANN counsel from participating in the IRP-IOT's work or counting towards a quorum.

79. Second, Afilias' argument that Rule 7 violates the Bylaws because it is "foreign" to international arbitration is misleading. ICANN's Bylaws do not require that every rule in the Interim Supplementary Procedures be found explicitly or exactly in international arbitration procedures. Instead, the Bylaws require that the Interim Supplementary Procedures be "informed by international arbitration norms"¹²¹ and, more importantly, that they should be "consistent with the Purposes of the IRP." Rule 7 does not violate either of those provisions.

80. Third, Afilias' argument that the Bylaws required the Interim Supplementary Procedures to be published for public comment a second time is wrong. While the Bylaws require the IRP-IOT to post the Interim Supplementary Procedures for public comment prior to adoption by the ICANN Board, they do not require that every iteration or draft be posted for comment. Here, the IRP-IOT complied with the Bylaws when it posted the Interim Supplementary Procedures for public comment in November 2016. Notably, the IRP-IOT received comments regarding Rule 7 that supported granting broader participation rights to interested parties, which the IRP-IOT incorporated into subsequent drafts of the Interim Supplementary Procedures.

81. Fourth, Afilias' vague allegations that drafting "principles" were violated prior to the Board's adoption of the Interim Supplementary Procedures are unsupported. The committee acted in accordance with its purpose when it sought input from, and coordinated with, all relevant entities in drafting the Interim Supplementary Procedures and presenting them to the ICANN Board.

82. In any event, Afilias challenges conduct by the IRP-IOT only; it has not alleged any inappropriate conduct by ICANN in the adoption of the Interim Supplementary Procedures and thus does not even have standing to pursue these claims in an IRP against ICANN. For each of these reasons, Afilias' claims regarding Rule 7 fail.

CONCLUSION

83. ICANN complied with its Articles, Bylaws, and internal policies and procedures relating to disputes over the .WEB gTLD. Moreover, Afilias' claims were known to Afilias more than two years ago and are therefore time-barred. In addition, Afilias' requested relief from the IRP Panel goes far beyond what is permitted by ICANN's Bylaws and calls for the Panel to decide issues that are reserved to the discretion of the ICANN Board. Accordingly, Afilias' Amended IRP Request should be denied.

Respectfully submitted,
JONES DAY

¹¹⁹ Supp. Procedures, Rule 5, Ex. C-59.

¹²⁰ *See United States v. Kubrick*, 444 U.S. 111, 122 (1979) (cause of action accrues when a plaintiff learns of the critical facts of his claim: that he has been injured and who inflicted the injury); *Davel Communications, Inc. v. Qwest Corp.*, 460 F.3d 1075, 1092 (9th Cir. 2006) (“Accrual does not wait until the injured party has access to or constructive knowledge of all the facts required to support its claim. Nor is accrual deferred until the injured party has enough information to calculate its damages. Rather, once a plaintiff has inquiry notice of its claim, it bears the responsibility of making diligent inquiries to uncover the remaining facts needed to support the claim.”) (internal quotation marks and citations omitted); *Wolf v. Travolta*, 167 F. Supp. 3d 1077, 1102-03 (C.D. Cal. 2016) (“The discovery rule does not require absolute certainty for a cause of action to accrue. Rather, suspicion of one or more of the elements of a cause of action, coupled with knowledge of any remaining elements, will generally trigger the statute of limitations period.... Stated differently, once the plaintiff has a suspicion of wrongdoing, and therefore an incentive to sue, she must decide whether to file suit or sit on her rights.... A plaintiff need not be aware of the specific ‘facts’ necessary to establish the

claim in order for the claim to accrue; that is a process contemplated by pretrial discovery.”) (internal quotation marks and citations omitted).

¹²¹ Provisions on amicus participation in international arbitration can be found in various arbitral rules, including, most prominently, in Article 37(2) of the ICSID Arbitration Rules, which gives ICSID tribunals discretion to permit amicus briefing.

PROOF OF SERVICE BY E-MAIL

I am a citizen of the United States and employed in Los Angeles County, California. I am over the age of eighteen years and not a party to the within-entitled action. INTRODUCTION

The Internet Corporation for Assigned Names and Numbers (“ICANN”) hereby responds to and opposes the Request for Emergency Panelist and Interim Measures of Protection (“Emergency Request”) submitted by Afilias Domains No. 3 Limited (“Afilias”).

1. This Independent Review Process (“IRP”) proceeding relates to the .WEB generic top-level domain (“gTLD”). .WEB is one of the new gTLDs that applicants applied for as part of ICANN’s New gTLD Program (the “Program”), under which entities submitted 1,930 applications to ICANN to offer new gTLDs to Internet users. The Program was designed to enhance diversity, creativity, and consumer choice, and to provide the benefits of innovation to consumers via the introduction of new gTLDs. The success of the Program is demonstrated by the fact that it has resulted in the introduction of over 1,200 new gTLDs.

2. Because there were multiple, qualified applicants for .WEB, each of which passed the applicable evaluations, the .WEB applications were placed in a “contention set,” and ICANN ultimately implemented an applicant auction to resolve the contention set, as expressly required in the detailed Applicant Guidebook (“Guidebook”) that ICANN created to administer the Program. The auction occurred in July 2016, and Nu Dotco, LLC (“NDC”) was the prevailing bidder. NDC’s bid was financially supported by Verisign, Inc. (“Verisign”), the current registry operator of .COM and .NET. In exchange for this financial support, NDC agreed that, after executing an agreement with ICANN to operate .WEB, NDC would seek ICANN’s permission to transfer that agreement to Verisign so it would become the registry operator of .WEB.

3. After NDC prevailed in a public auction for .WEB, Afilias and other .WEB applicants cried foul, alleging that Verisign’s agreement with NDC violated the Guidebook and raised competition concerns. ICANN has evaluated these complaints, some of which also have been addressed in other fora, including federal court litigation, a Department of Justice Antitrust

Division investigation of Verisign, and multiple invocations of ICANN's own accountability mechanisms. The federal court litigation was resolved in ICANN's favor, and the Department of Justice investigation concluded without any action being taken by the federal government. The time has therefore come for the auction results to be finalized and for .WEB to be delegated so that it can be made available to consumers.

4. To be clear, ICANN's interest in this matter is not in the picking of winners and losers, but in completing the rollout of .WEB in order to make this new gTLD available to Internet users just like all the other TLDs that have been processed through the Program. The rollout already has been delayed for years based on the very same challenges raised in this IRP and other ICANN accountability mechanisms.

5. In its Emergency Request, Afilias argues that it will suffer irreparable harm if ICANN decides to contract with NDC during these IRP proceedings because an "IRP Panel would be unable to reverse that decision" and the value of .WEB could be destroyed if Verisign is permitted to launch the gTLD. Both contentions are incorrect.

6. As an initial matter, ICANN does in fact have the ability to change gTLD registry operators once the .WEB Registry Agreement has been executed. If the IRP Panel determines that ICANN violated its Bylaws or Articles of Incorporation, and the ICANN Board then determines (based upon the Board's review of the IRP Panel's conclusions and recommendations) that NDC should be disqualified and/or that .WEB should be awarded to Afilias, ICANN will have the power to cancel the registry agreement with NDC and enter into a registry agreement with Afilias. Third Party Designated Confidential Information Redacted

Emergency relief is therefore unnecessary because any harm to Afilias can be adequately remedied.

7. Likewise, Afilias' allegation that Verisign may sabotage .WEB if it is permitted to launch the gTLD is entirely speculative, lacks evidentiary support, and is contrary to public statements that Verisign has made regarding its plans for .WEB if ICANN approves the transfer from NDC to Verisign. Verisign has successfully operated .COM and .NET for twenty years, and there is no reason to believe that Verisign would not do the same with .WEB.

8. The absence of any true need for interim relief is underscored by Afilias' own delay in filing this IRP. Afilias alleges that it has known since June 2016 that Verisign was backing NDC's .WEB bid. Afilias could have initiated an IRP at any time, including prior to the auction, but it chose to wait nearly two years. If Afilias felt truly threatened with irreparable harm, it should have moved to prevent NDC from participating in the auction or, at the very least, sought emergency relief promptly thereafter. That Afilias chose to sit on its hands for two years belies its claim of urgency.

9. Further, Afilias' Emergency Request does not raise the type of "serious questions" that mandate interim relief. Afilias' claims about alleged Guidebook violations are either time-barred or complain of the type of transaction in which Afilias itself has previously engaged. Affiliates of Afilias have been involved in multiple agreements to transfer gTLDs, which Afilias fails to mention, and which Afilias makes no effort to distinguish from the NDC/Verisign agreement. Also, Afilias' claim that allowing Verisign to operate .WEB violates ICANN's goals of enhancing competition fails to recognize that ICANN is an administrator, not a regulator, and that the ultimate competition regulator – the Department of Justice Antitrust Division – did investigate the NDC/Verisign agreement and closed the investigation without

taking any action.

10. Finally, while Afilias notes that it must establish that the balance of hardships tips decidedly in its favor, Afilias fails even to place on the scale the harm that interim relief will cause to ICANN, Internet consumers, NDC, and Verisign. The fact is that interim relief would frustrate ICANN's goals and mission, deprive consumers of a gTLD that appears to be highly valued based on the prevailing bid price, and directly injure the interests of NDC and Verisign.

Third Party Designated Confidential Information Redacted

.¹ Absent the posting of an adequate bond, which Afilias will no doubt refuse to do – indeed, it objects to NDC and Verisign even participating in this emergency proceeding as *amici* – the financial harm to NDC and Verisign is not compensable and is thus irreparable.

11. ICANN urges the Emergency Panelist to deny the request.

SUMMARY OF RELEVANT FACTS

I. ICANN AND ITS ACCOUNTABILITY MECHANISMS.

12. ICANN is a California not-for-profit public benefit corporation formed in 1998. ICANN oversees the technical coordination of the Internet's domain name system ("DNS") on behalf of the Internet community. The essential function of the DNS is to convert easily remembered Internet domain names, such as "ebay.com" and "icann.org" into numeric IP addresses understood by computers. ICANN's core mission is to ensure the stability, security, and interoperability of the DNS.² To that end, ICANN contracts with entities that operate

¹ Declaration of Todd Strubbe ("Strubbe Decl.") ¶ 8.

² Declaration of Christine Willett ("Willett Decl.") ¶ 2.

generic top-level domains (“gTLDs”), which represent the portion of a domain name to the right of the final dot, such as “.COM” or “.GOV.”

13. To ensure that ICANN is serving and remains accountable to the global Internet community, ICANN has established accountability mechanisms for review of ICANN actions and decisions. Any aggrieved party can seek through these accountability mechanisms to hold ICANN accountable for alleged violations of ICANN’s Bylaws, Articles of Incorporation (“Articles”), or certain other internal policies and procedures.³

14. The ICANN Bylaws also provide for a process by which “any person or entity materially affected by an action or inaction” of ICANN may request review or reconsideration of that action or inaction.⁴ The Board Accountability Mechanisms Committee (“BAMC”), a special committee of the ICANN Board, has been empowered to hear and consider requests for reconsideration.⁵

15. The ICANN Bylaws also create the IRP under which a party materially affected by an action or inaction of the ICANN Board or staff may submit its claims to an “independent third-party.”⁶ IRP claims are submitted to the American Arbitration Association’s International Centre for Dispute Resolution (“ICDR”), which is responsible for administering IRP proceedings in accordance with the ICDR’s International Arbitration Rules, as modified by the ICANN Bylaws and IRP Interim Supplementary Procedures (“Supplementary Procedures”).⁷

16. An IRP Panel is not empowered to substitute its judgment for that of the ICANN

³ Bylaws, Art. 4 §§ 4.2, 4.3; Art. 5, § 5.2, Ex. C-1.

⁴ *Id.*, Art. 4, § 4.2.

⁵ *Id.*

⁶ *Id.*, Art. 4, § 4.3.

⁷ Interim Supplementary Procedures (25 Oct. 2018) (“Interim Supp. Procedures”), Ex. C-59.

Board or staff.⁸ Rather, the core task of an IRP panel is to determine whether ICANN has exceeded the scope of its mission or otherwise failed to comply with its Bylaws, Articles or other internal policies and procedures.⁹

17. Under the current Supplementary Procedures,¹⁰ an IRP must be commenced within 120 days after a claimant becomes aware of the material effect of the alleged ICANN action or inaction giving rise to the dispute, provided, however, that an IRP may not be filed more than twelve months from the date of such action or inaction.¹¹ Under the previous rules in effect until October 2016, an IRP had to be filed within thirty days after notice (as defined below) of the alleged action or inaction, meaning that many of Afiliias' claims in this IRP, despite Afiliias' current claims of urgency, were time-barred nearly two years ago, as ICANN discusses below.¹²

II. ICANN'S NEW GTLD PROGRAM.

A. ICANN's Policy Development – 2000-2007.

18. In its early years, ICANN focused on increasing the number of companies (known as Internet registrars) that could sell domain name registrations to entities and individuals within the existing gTLDs. ICANN also focused on expanding, although more slowly, the number of gTLDs in existence. In 2000, ICANN approved seven new gTLDs as a proof of concept test to confirm that the addition of new gTLDs would not adversely affect the stability and security of the Internet or the DNS. In 2004 and 2005, ICANN approved a handful of additional gTLDs.

⁸ *Id.*; see also Final Declaration, *Booking.com v. ICANN*, ICDR Case No. 50-20-1400-0247 (“Booking.com Final Declaration”) ¶ 115 (3 March 2015), Ex. RE-1.

⁹ Bylaws, Art. 4, § 4.3, Ex. C-1.

¹⁰ The deadlines in the Interim Supplementary Procedures are subject to change because, as the procedures recognize, “[i]n the event that the final Time for Filing procedure allows additional time to file than this interim Supplementary Procedure allows, ICANN committed to the IOT that the final Supplementary Procedures will include transition language that provides potential claimants the benefit of that additional time, so as not to prejudice those potential claimants.” Interim Supp. Procedures § 4, fn.3, Ex. C-59.

¹¹ Interim Supp. Procedures § 4, Ex. C-59.

¹² Bylaws (as amended 11 February 2016) Art. IV, § 3, Ex. C-23.

19. The New gTLD Program has produced ICANN’s most ambitious expansion of the Internet’s naming system. Under the Program, any interested party could apply for the opportunity to operate new gTLDs that were not already in use in the DNS, meaning that there was no cap on the number of new gTLDs that could be added to the Internet.¹³ The Program was designed to enhance diversity, creativity and consumer choice in gTLDs, and to provide the benefits of innovation to consumers.¹⁴ The Program arose from policy recommendations by ICANN’s Generic Names Supporting Organization (“GNSO”), which were based on community input during the period 2005-2007.¹⁵ On 26 June 2008, the ICANN Board adopted the GNSO’s policy recommendations and directed the ICANN organization to develop an implementation plan for the Program, to be provided to the Board for approval.¹⁶

B. ICANN’s Implementation of the Program – 2008-2012.

20. Implementation of the Program was developed with input from the ICANN community over several years. ICANN published a first draft of the Applicant Guidebook in October 2008¹⁷ and distributed it for public comment. Revisions were made based on public comment, and additional comments were sought on the revisions. The process repeated many times, resulting in numerous versions of the Guidebook until, in June 2012, ICANN adopted the operative, 338-page Guidebook.¹⁸

21. The Guidebook provides a step-by-step procedure for new gTLD applicants. It specifies what documents and information are required to apply, the financial and legal

¹⁵ GNSO Final Report on Introduction of New Generic Top-Level Domains (8 Aug. 2007), Ex. C-20.

¹⁶ ICANN Adopted Board Resolutions (26 June 2008), Ex. C-21.

¹⁷ Guidebook (24 October 2008 version), *available at* <https://archive.icann.org/en/topics/new-gtlds/draft-rfp-24oct08-en.pdf>.

¹⁸ Guidebook, Preamble, Ex. C-3; Willett Decl. ¶ 4.

commitments of operating a new gTLD, what applicants can expect during the application and evaluation periods, and the dispute resolution procedures that people and organizations could invoke to object to new gTLD applications.¹⁹

22. The Guidebook requires applicants, which must be entities and not individuals, to provide the names and positions of their “directors,” “officers and partners” and “shareholders holding at least 15% of shares,” as well as information about applicants’ financial condition so that ICANN could assess the applicants and their technical and financial wherewithal to operate a gTLD.²⁰ The Guidebook also requires applicants to inform ICANN if “information previously submitted by an applicant becomes untrue or inaccurate,” including “applicant specific information such as changes in financial position and changes in ownership or control of the applicant.”²¹ But an applicant’s failure to inform ICANN that previously submitted information has become untrue or inaccurate does not require denial of an application. Instead, the Guidebook gives ICANN the discretion to determine whether the changed circumstances are material and the consequences, if any, that should follow from a failure to disclose them.²²

23. Only one applicant can be awarded a particular gTLD. Where there is more than one qualified applicant for the same gTLD, the Guidebook mandates that the applications be placed in a “contention set” for selection of a single successful applicant.²³ When applicants are placed in a contention set, the Guidebook encourages (but does not require) the applicants to agree among themselves on resolution of the contention set.²⁴ To resolve a contention set privately, all

¹⁹ See generally, Guidebook, Ex. C-3.

²⁰ Willett Decl. ¶ 12.

²¹ Guidebook § 1.2.7, Ex. C-3.

²² *Id.*

²³ *Id.* § 4.1.1.

²⁴ Guidebook § 4.1.3, Ex. C-3.

applicants within the contention set must agree to a private resolution.²⁵ Private resolutions frequently are achieved through a private auction in which the proceeds paid by the prevailing bidder are divided among the losing bidders. If the contention set cannot be resolved through private resolution, the Guidebook requires ICANN to schedule a public auction for those contention set members wishing to proceed with their applications.²⁶ The proceeds of a public auction are provided to ICANN and are to be used to support its Mission and Core Values.²⁷

24. Once a successful gTLD applicant passes initial evaluation and resolves any objections and/or a contention set, it moves to contracting, where it enters a Registry Agreement with ICANN to become a new gTLD registry operator. A Registry Agreement is the formal, written agreement between a gTLD registry operator and ICANN that sets forth the rights, duties and liabilities of the registry operator. ICANN offers a model Registry Agreement for most gTLDs, but each Registry Agreement can be negotiated and modified.²⁸ After a Registry Agreement is fully executed, ICANN takes the technical steps necessary to delegate the new gTLD into the DNS. Only after a gTLD has been fully delegated by ICANN does it become operable and accessible on the Internet.²⁹

C. Results of the Program – 2012-Present.

25. In 2012, ICANN received 1,930 applications for new gTLDs. Since then, approximately 1,200 new gTLDs have been delegated and are operational.³⁰ These new gTLDs have greatly increased diversity, consumer choice and competition in the DNS.

²⁵ *See id.*

²⁶ *Id.* § 4.3.

²⁸ Willet Decl. ¶ 31.

²⁹ *Id.* ¶ 32.

³⁰ <https://newgtlds.icann.org/en/program-status/statistics>.

26. As one would expect with a vastly expanded marketplace, registry operators (entities that have entered into Registry Agreements with ICANN) have chosen to use and monetize gTLDs in different ways. Many registry operators have followed their original business plans of marketing their gTLDs as envisioned in their applications.³¹ Hundreds of others have assigned or transferred their gTLDs to other entities for financial gain or other reasons.³² Other companies have entered the new gTLD marketplace by acquiring new gTLD registry operators. Some have also chosen to use the gTLDs for their own benefit, such as for branding purposes.³³

27. These kinds of assignments and transfers must be approved by ICANN, and ICANN has a procedure in place for evaluating such requests.³⁴ In addition, ICANN has published materials explaining how, as a technical matter, a gTLD can be assigned from one registry operator to another.³⁵ Because ICANN administers, rather than regulates, the DNS,³⁶ ICANN's focus in evaluating a proposed gTLD transfer is whether the transferee organization has the requisite financial and technical ability to operate a gTLD.³⁷

28. Indeed, Afilias is very familiar with the transfer process due to its involvement in multiple gTLD transfers. For instance, Afilias Limited applied for .MEET in 2012, stating that it planned to make it “the most popular, accessible, and innovative destination on the Internet where people seeking online dating and companionship services can learn about dating,

³⁶ Bylaws, Art. 1, § 1.1(c), Ex. C-1 (“ICANN shall not regulate (i.e., impose rules and restrictions on) services that use the Internet’s unique identifiers or the content that such services carry or provide, outside the express scope of Section 1.1(a). For the avoidance of doubt, ICANN does not hold any governmentally authorized regulatory authority.”).

³⁷ Willet Decl. ¶ 34.

companionship services and registrars that offer .MEET domain names.”³⁸ On 16 January 2014, ICANN and Afilias Limited entered into a .MEET Registry Agreement.³⁹ But before launching .MEET – *i.e.*, before serving a single customer – Afilias Limited sought to transfer the .MEET Registry Agreement to Charleston Road Registry Inc. d/b/a Google Registry (“Google”) in October 2014.⁴⁰ According to the transfer application, Google planned on converting .MEET from a dating platform to a gTLD that provided “web-based business meetings.”⁴¹ Because ICANN determined that Google had the technical and financial ability to operate .MEET, ICANN approved the transfer even though the new objective for the gTLD was radically different than that expressed in the Afilias application.⁴²

29. Likewise, in 2015, the entity that entered into a Registry Agreement with ICANN to operate .PROMO requested that ICANN approve a transfer of .PROMO to Afilias plc prior to delegation of .PROMO. Although Afilias did not originally apply to operate .PROMO, ICANN approved the transfer based on a demonstration that Afilias was qualified to operate the gTLD.⁴³

30. Finally, as described on its own corporate website, “Afilias has an active program for acquiring new Top Level Domains.”⁴⁴ For instance, in 2016, Afilias plc announced its acquisition of StartingDot, which had become the registry operator for .ARCHI, .BIO and .SKI through the Program. In Afilias plc’s words, “[t]he acquisition agreement is part of Afilias’ ongoing program of acquiring new TLDs to add to its portfolio.”⁴⁵ ICANN approved the transfer

of those TLDs to Afilias plc based on its technical and financial ability to operate them.⁴⁶

III. THE .WEB CONTENTION SET.

31. ICANN received seven applications for .WEB, including applications from Afilias, NDC and Ruby Glen LLC (“Ruby Glen”). ICANN also received two applications for .WEBS from another applicant, which later withdrew one of its applications in April 2016. The seven applications for .WEB passed all applicable evaluations and were placed in a contention set, pursuant to the procedures set forth in the Guidebook.⁴⁷

32. In 2013, one of the .WEB applicants filed string confusion objections against the .WEBS applications with the ICDR, which is the independent, third-party dispute resolution service provider designated to handle string confusion objections. The objection was ultimately successful and .WEBS was added to the .WEB contention set, thereby creating the .WEB/.WEBS contention set (“Contention Set”).⁴⁸

33. Following the Guidebook’s procedures, on 27 April 2016, ICANN scheduled an auction for 27 July 2016 to resolve the .WEB/.WEBS Contention Set if it could not be privately resolved by the applicants before then.⁴⁹ As the date of the auction approached, it became apparent that the members of the .WEB/.WEBS Contention Set that had applied for .WEB had not resolved the contention set privately, and the members (as a whole) did not request a postponement of the auction. Accordingly, ICANN proceeded with plans for the auction.⁵⁰

⁴⁶ <https://www.icann.org/resources/agreement/ski-2015-04-09-en>; <https://www.icann.org/resources/agreement/bio-2014-03-06-en>; <https://www.icann.org/resources/agreement/archi-2014-02-06-en>.

⁴⁷ Willett Decl. ¶ 6.

⁴⁸ *Id.* ¶ 7. In June 2014, the .WEBS applicant (Vistaprint) filed an IRP against ICANN for accepting the ICDR’s determination following the string confusion objection proceedings. In October 2015, ICANN prevailed in the .WEBS IRP. The ICANN Board considered the .WEBS IRP Final Declaration in October 2015, December 2015, and March 2016, and resolved to “move forward with the processing of the .WEB/.WEBS contention set.” *Id.* ¶ 8.

⁴⁹ Willett Decl. ¶ 9.

⁵⁰ Willett Decl. ¶ 10.

34. Just before the auction, another .WEB applicant (Ruby Glen) invoked several of ICANN’s accountability mechanisms, and eventually commenced litigation, in an attempt to prevent the public auction from going forward and instead force a private auction where the proceeds would be divided and paid to the losing bidders.⁵¹ Ruby Glen complained to ICANN that NDC had a change in ownership or control, and that NDC had failed to notify ICANN of this change, as required by the Guidebook.⁵² According to Ruby Glen, this alleged failure constituted a “potentially disqualifying change[] to NDC’s application.”⁵³

35. ICANN thoroughly investigated these claims. ICANN contacted NDC on 27 June 2016, asking it to confirm whether there were any changes to NDC’s organizational structure that required reporting to ICANN.⁵⁴ NDC’s Chief Financial Officer, Jose Ignacio Rasco III, responded the same day to confirm that NDC had not experienced any changes in its organizational structure.⁵⁵ Nonetheless, in an abundance of caution, ICANN contacted NDC eleven days later to inquire further into potential changes to NDC’s organization.⁵⁶ ICANN staff also interviewed Mr. Rasco via telephone.⁵⁷ During the call, Mr. Rasco stated and later confirmed via email on 11 July 2016: “Neither the ownership nor the control of [NDC] has changed since we filed our application.”⁵⁸ Thereafter, ICANN informed all the contention set members, including Ruby Glen, that ICANN had “investigated the matter, and to date [has] found no basis to initiate the application change request process or postpone the auction.”⁵⁹

⁵¹ See generally, *Ruby Glen v. ICANN*, First Amended Complaint, Ex. RE-4.

⁵² *Id.*; Willett Decl. ¶¶ 11, 15-16.

⁵⁶ *Id.* ¶ 22.

⁵⁷ *Id.*

⁵⁸ Willett Decl. ¶ 22, 24, Ex. F.

⁵⁹ *Id.* ¶ 26; see also Ex. C-44.

36. Ruby Glen then brought its allegations to the ICANN Ombudsman, who also investigated the claim.⁶⁰ Like the ICANN staff, the Ombudsman did not find “any evidence which would satisfy [him] that there has been a material change to the application.”⁶¹

37. On 17 July 2016, Ruby Glen submitted an emergency Reconsideration Request to ICANN to enjoin the auction, claiming that ICANN staff had failed to sufficiently investigate Ruby Glen’s claims regarding NDC.⁶² ICANN’s Board Governance Committee (“BGC”), which was then tasked with evaluating Reconsideration Requests, expeditiously reviewed the thoroughness of the investigation into the alleged changes in NDC’s management and control.⁶³ After finishing its review, the BGC denied the Reconsideration Request on 21 July 2016, concluding that ICANN staff had sufficiently investigated Ruby Glen’s claims.⁶⁴

38. Just days before the .WEB auction was set to begin, Ruby Glen escalated its actions by filing a complaint in Federal District Court against ICANN and an *ex parte* application for a temporary restraining order (“TRO”) to block the auction.⁶⁵ ICANN opposed the TRO application, arguing that Ruby Glen was not likely to succeed on the merits of its claims because ICANN’s Board and staff appropriately investigated Ruby Glen’s claims and detected no changes to NDC’s ownership or control, a finding corroborated by sworn declarations from NDC’s Chief Operating Officer and Chief Financial Officer.⁶⁶

39. The District Court denied Ruby Glen’s request for a TRO based, in part, on the

⁶⁰ *Id.* ¶¶ 20-21.

⁶⁵ *Ruby Glen v. ICANN*, Docket, Ex. RE-7.

⁶⁶ *Ruby Glen v. ICANN*, Opp’n to *Ex Parte* Appl. for TRO, Ex. RE-8.

“strength of ICANN’s evidence.”⁶⁷ Specifically, the District Court held:

ICANN has provided evidence that it has conducted investigations into Plaintiff’s allegations concerning potential changes in NDC’s management and ownership structure at each level of Plaintiff’s appeals to ICANN for an investigation and postponement of the auction. During those investigations, NDC provided evidence to ICANN that it had made no material changes to its management and ownership structure. Additionally, ICANN’s Opposition is supported by the Declarations of Nicolai Bezsonoff and Jose Ignacio Rasco, who declare under penalty of perjury that there have been no changes to NDC’s management, membership, or ownership since NDC first filed its application with ICANN.⁶⁸

40. The District Court also found that “because the results of the auction could be unwound, [Ruby Glen] has not met its burden to establish that it will suffer irreparable harm in the absence of the preliminary injunctive relief it seeks. Significantly, the Court further concluded that the public interest did not favor the postponement of the auction.”⁶⁹

IV. THE .WEB AUCTION AND ENSUING LITIGATION, ACCOUNTABILITY MECHANISMS AND GOVERNMENT INVESTIGATION.

41. After denial of the TRO application, the .WEB/.WEBS auction proceeded as scheduled. NDC prevailed at the auction for .WEB at a bid price of \$135 million on 28 July 2016.⁷⁰ Days later, Verisign, the entity that operates the .COM and .NET gTLDs, among others, publicly stated that it “provided funds for [NDC’s] bid” in exchange for an agreement that, if NDC entered into a Registry Agreement with ICANN to operate .WEB, NDC would then seek to “assign[] the Registry Agreement to VeriSign upon consent from ICANN.”⁷¹

42. On 8 August 2016, Afilias wrote ICANN demanding disqualification of NDC’s .WEB application based on two claims. First, Afilias stated that NDC violated the disclosure requirements of the Guidebook by failing to inform ICANN of its agreement with

⁶⁷ *Ruby Glen v. ICANN*, Order on *Ex Parte* Appl. for TRO, Ex. RE-9.

⁶⁸ *Id.* at 4.

⁶⁹ *Id.*

⁷⁰ ICANN New gTLD Contention Set Resolution Auction: Final Results for WEB / WEBS, Ex. RE-10.

⁷¹ Verisign Statement Regarding .Web Auction Results (1 August 2016), Ex. C-46.

Verisign. Second, Afilias stated that NDC had assigned its application to Verisign in violation of the Guidebook.⁷² These are precisely the same claims that Afilias is now pursuing in this IRP.

43. That same day, Ruby Glen filed its First Amended Complaint against ICANN in Federal District Court, making claims that NDC violated the Guidebook and should have been disqualified on the same grounds asserted in Afilias' letter to ICANN.⁷³

44. On 2 August 2016, Ruby Glen's parent organization, Donuts, Inc. ("Donuts"), invoked ICANN's Cooperative Engagement Process ("CEP"), a pre-IRP proceeding that allows the parties to attempt to resolve or narrow the issues to be brought in an IRP proceeding.⁷⁴ Donuts' claims in the CEP were identical to those asserted in Ruby Glen's First Amended Complaint and Afilias' 8 August 2016 letter.

45. Afilias sent ICANN a subsequent letter, dated 9 September 2016, again asking ICANN to disqualify NDC for the same alleged Guidebook violations. Afilias' 9 September 2016 letter also included claims regarding competition concerns, which are again the same as those alleged in this IRP.⁷⁵

46. As part of ICANN's due diligence into the issues raised by Afilias and Ruby Glen in 2016, ICANN issued a set of questions to Afilias, Ruby Glen, NDC and Verisign, seeking input regarding the .WEB auction, the purported NDC/Verisign agreement, and the alleged violations of the Guidebook.⁷⁶ These questions were designed to assist ICANN in evaluating what action, if any, should be taken in response to the claims asserted by Afilias and Ruby Glen.

⁷² Letter from S. Hemphill (General Counsel, Afilias) to A. Atallah (President, ICANN's Global Domains Division) (8 August 2016), Ex. C-49.

⁷³ *Ruby Glen v. ICANN*, First Amended Complaint, Ex. RE-4.

⁷⁴ Cooperative Engagement and Independent Review Processes Status Update – 20 June 2018, Ex. RE-11.

⁷⁵ Letter from S. Hemphill (General Counsel, Afilias) to A. Atallah (President, ICANN's Global Domains Division) (9 September 2016), Ex. RE-12.

⁷⁶ Letter from C. Willett (Vice President, ICANN's gTLD Operations) to J. Kane (Vice President, Afilias' Corporate Services) (16 September 2016), Ex. C-50.

47. On 7 October 2016, Afilias responded to ICANN’s questions reiterating its core objections to the purported NDC/Verisign agreement, describing it as a “failure to disclose material information relating to [NDC’s] bid for the .WEB rights” and as “clearly designed to preserve Verisign’s existing monopoly in gTLD services that results from its control of .COM and .NET,” which are the claims Afilias is now pressing in this IRP, over two years later.⁷⁷

48. Thereafter, on 28 November 2016, the Federal District Court dismissed with prejudice Ruby Glen’s First Amended Complaint regarding the .WEB auction based on the covenant not to sue in Module 6 of the Guidebook, which requires applicants to use ICANN’s accountability mechanisms instead of filing lawsuits against ICANN.⁷⁸ Ruby Glen appealed.

49. On 1 February 2017, the Antitrust Division of the United States Department of Justice (“DOJ Antitrust Division”) issued a civil investigative demand (“CID”) to ICANN, Verisign and presumably others that participated in the auction for .WEB, seeking documents and information “in connection with DOJ’s investigation of Verisign’s proposed acquisition of NDC’s contractual rights to operate the .WEB gTLD.”⁷⁹ Between February and June 2017, ICANN made several productions of documents and provided information to the DOJ Antitrust Division in connection with its investigation.⁸⁰

50. In January 2018, the DOJ Antitrust Division closed its investigation, presumably meaning the government did not find a threat to competition that warranted further action.⁸¹ Despite the fact that Afilias’ IRP claims focus on the alleged anticompetitive effects of having

⁷⁷ Letter from J. Kane (Vice President, Afilias’ Corporate Services) to C. Willett (Vice President, ICANN’s gTLD Operations) (7 October 2016), Ex. C-51.

⁸⁰ *Id.*

⁸¹ Excerpts from Verisign 10-K (for the fiscal year ended 31 December 2017), Ex. RE-13.

Verisign operate .WEB, Afilias does not even mention the Antitrust Division’s investigation – much less the Antitrust Division’s decision to close its investigation – in any of its papers.

51. On 18 June 2018, almost two years after the .WEB auction took place, Afilias initiated its own CEP to assert the exact same claims it had raised in 2016.⁸²

52. Thereafter, on 15 October 2018, the Ninth Circuit Court of Appeals issued an order affirming the dismissal of Ruby Glen’s First Amended Complaint against ICANN.⁸³

53. With the DOJ Antitrust Division investigation closed, the Ruby Glen litigation over, and little progress in the Afilias CEP, ICANN closed the Afilias CEP proceedings but assured Afilias that ICANN would not take further action on .WEB until there was a resolution to Afilias’ Emergency Request in this IRP.⁸⁴ On 14 November 2018, Afilias filed its IRP. On 27 November 2018, Afilias filed its Emergency Request.

STANDARD OF REVIEW

54. ICANN’s Bylaws and Supplementary Procedures allow for interim relief in the form of a stay to maintain the *status quo*.⁸⁵ A claimant must establish the following:

“(i) A harm for which there will be no adequate remedy in the absence of such relief;

(ii) Either: (A) likelihood of success on the merits; or (B) sufficiently serious questions related to the merits; and

(iii) A balance of hardships tipping decidedly toward the party seeking relief.”⁸⁶

ARGUMENT

I. AFILIAS WILL NOT SUFFER IMMEDIATE, IRREPARABLE HARM IN THE ABSENCE OF INTERIM RELIEF.

⁸² Cooperative Engagement and Independent Review Processes Status Update – 20 June 2018, Ex. RE-11.

⁸³ *Ruby Glen v. ICANN*, Memorandum, Ex. RE-14.

⁸⁴ Letter from J. LeVee to K. Reisenfeld (3 December 2018), Ex. RE-15.

⁸⁵ Bylaws Art. 4, § 4.3(p), Ex. C-1; Interim Supp. Procedures § 10, Ex. C-59.

⁸⁶ Bylaws Art. 4, § 4.3(p), Ex. C-1; Interim Supp. Procedures § 10, Ex. C-59.

55. A critical aspect of an application for interim relief is the applicant’s demonstration that it will suffer immediate, irreparable harm absent a stay.⁸⁷ Afilias argues that it will suffer irreparable harm if ICANN negotiates a Registry Agreement with NDC because an “IRP Panel would be unable to reverse that decision,” and the value of .WEB could be destroyed if Verisign launches the gTLD. Afilias provides no evidence to support either of these claims.

56. Afilias’ first assertion of irreparable injury – that ICANN is unable to transfer a .WEB Registry Agreement after the conclusion of this IRP – is simply wrong. There is no technological, legal, or other barrier preventing the transfer of a Registry Agreement from one registry operator to another after a Registry Agreement is in place or even after a gTLD has been delegated.

Third Party Designated Confidential Information Redacted

88

57. Federal and California state courts have found that, where, as here, ICANN can transfer the Registry Agreement, the type of harm alleged by Afilias is not irreparable and does not warrant interim relief. In denying Ruby Glen’s TRO application seeking to halt the .WEB auction, the District Court ruled that “because the results of the auction could be unwound, Plaintiff has not met its burden to establish that it will suffer irreparable harm in the absence of the preliminary injunctive relief it seeks.”⁸⁹ Likewise, in *DotConnectAfrica Trust v. ICANN*, an applicant for .AFRICA (DCA) filed a motion for preliminary injunction to block ICANN from

⁸⁷ See Interim Supp. Procedures § 10, Ex. C-59.

⁸⁸ Strubbe Decl. ¶ 11; Declaration of Jose Ignacio Rasco III, ¶ 3.

⁸⁹ <https://www.icann.org/en/system/files/files/litigation-ruby-glen-court-order-denying-plaintiff-ex-parte-application-tro-26jul16-en.pdf>.

entering into a .AFRICA Registry Agreement with a competing applicant. The California Superior Court denied the motion because “there is no potential for irreparable harm to DCA” because the “.Africa gTLD can be [transferred] to DCA in the event DCA prevails in this litigation.” The court further noted that “the evidence reflects that [transfer] is not uncommon and has occurred many times. Indeed, ICANN has an established procedure for re-[transferring] a gTLD, which is set forth in a public manual.”⁹⁰

58. The same is true here. If the IRP Panel ultimately determines that ICANN acted inconsistently with its Bylaws or Articles, and the ICANN Board determines (based upon the Board’s review of the IRP Panel’s conclusions and recommendations, if any) that NDC should be disqualified and/or that .WEB should be awarded to Afilias, ICANN has the power to effect a transfer of .WEB to Afilias.

59. Afilias’ second assertion of irreparable injury – that Verisign will destroy .WEB, either intentionally or through mismanagement – is entirely speculative. Claims of irreparable injury must be buttressed with evidence,⁹¹ yet Afilias offers literally no evidence that Verisign will intentionally or otherwise harm the value of .WEB.

60. Contrary to Afilias’ speculation, Verisign has publicly represented to its shareholders that, if ICANN were to approve a transfer of .WEB from NDC to Verisign, Verisign plans to market .WEB aggressively.⁹² Moreover, in light of Verisign’s successful

⁹⁰ <https://www.icann.org/en/system/files/files/litigation-dca-icann-order-denying-plaintiff-motion-prelim-injunction-03feb17-en.pdf>.

⁹¹ *Caribbean Marine Services Co., Inc. v. Baldrige*, 844 F.2d 668, 674 (9th Cir. 1988) (“Speculative injury does not constitute irreparable injury sufficient to warrant granting a preliminary injunction. A plaintiff must do more than merely allege imminent harm sufficient to establish standing; a plaintiff must *demonstrate* immediate threatened injury as a prerequisite to preliminary injunctive relief.”) (emphasis in original) (internal citation omitted), Ex. RELA-3; *iFreedom Direct Corp. v. McCormick*, 662 F. App’x. 550, 551 (9th Cir. 2016) (upholding district court decision denying motion for preliminary injunction in part because plaintiff’s evidence of a likelihood of irreparable harm “was too speculative”), Ex. RELA-5.

⁹² Strubbe Decl. ¶ 7.

stewardship over .COM and .NET for almost two decades, Verisign is clearly qualified to operate a gTLD, making Afiliás' claims that Verisign will irretrievably blunder a .WEB launch implausible at best. In the .AFRICA case, the Superior Court rejected similar claims that an entity would botch the launch of .AFRICA, finding that "[t]his harm is highly speculative and fails to account for the possibility of re-delegation."⁹³

II. INTERIM RELIEF IS NOT WARRANTED BECAUSE AFILIAS UNREASONABLY DELAYED SEEKING SUCH RELIEF.

61. A hallmark of a proper request for interim relief is diligence in seeking that relief. A long delay in seeking interim relief implies that there is no urgency, nor any irreparable harm, and a request for interim relief can be denied on this basis alone.⁹⁴

62. Afiliás did not initiate its CEP until June 2018, almost two years after the .WEB auction and Verisign's announcement on 1 August 2016 that it had entered into an agreement with NDC regarding .WEB. Afiliás concedes that, by August 2016, it was aware of the essential facts and arguments it is now raising in its Emergency Request. Indeed, the Emergency Request includes all of the allegations Afiliás made in its August and September 2016 letters to ICANN.

63. Further, in a letter dated 7 October 2016 from Afiliás' Vice President for Corporate Services, responding to a letter from Mr. Akram Atallah of ICANN, Afiliás stated:

Mr. Atallah states that, while the .WEB/.WEBS contention set was placed on hold by ICANN on 19 August 2016, such action was taken because of the initiation of an ICANN Accountability Mechanism by another applicant. **We are concerned that this statement appears to imply that ICANN is not placing the**

⁹³ <https://www.icann.org/en/system/files/files/litigation-dca-icann-order-denying-plaintiff-motion-prelim-injunction-03feb17-en.pdf>.

⁹⁴ See *Oakland Tribune, Inc. v. Chronicle Pub. Co., Inc.*, 762 F.2d 1374, 1377 (9th Cir. 1985) ("Plaintiff's long delay before seeking a preliminary injunction implies a lack of urgency and irreparable harm."), Ex. RELA-6; *iFreedom Direct Corp.*, 662 F. App'x. at 550 (upholding district court decision denying motion for preliminary injunction in part because the plaintiff's "ten-month delay in seeking a preliminary injunction undermined its claim of irreparable harm"), Ex. RELA-5.

contention set on hold in order to address the issues raised by Afilias.⁹⁵

Plainly, Afilias knew more than two years ago that ICANN was not placing the contention set on hold in response to Afilias' allegations and arguments, yet it did nothing.

III. AFILIAS' REQUEST FOR IRP DOES NOT RAISE "SUFFICIENTLY SERIOUS QUESTIONS" THAT JUSTIFY INTERIM RELIEF.

64. Afilias must also show either a likelihood of success on the merits or that it has raised "sufficiently serious questions related to the merits" of its IRP. Afilias bases its request on the lesser showing – that its request raises serious questions going to the merits of its claims. But Afilias has not raised the type of serious questions that justify interim relief.

65. For instance, much of the claims Afilias raises in its Emergency Request relate to ICANN's investigation of NDC and the ICANN Board's decision to proceed with the .WEB auction.⁹⁶ But ICANN's investigation of NDC took place in June 2016, and the ICANN Board decided to proceed with the .WEB auction on 21 July 2016.⁹⁷ According to the Bylaws in place at that time, an IRP had to be filed within 30 days of the posting of the minutes of the meeting when the decision was made. Those minutes were posted on 12 September 2016, making an IRP filing on these issues due no later than 12 October 2016.⁹⁸

66. Similarly, Afilias' claim that allowing Verisign to operate .WEB will violate ICANN's "Core Value to introduce and promote competition," is without merit. While ICANN's Bylaws and Core Values call for ICANN to enact policies that promote competition in the DNS, they do not instruct ICANN to act as a government regulator. In fact, ICANN's

⁹⁵ Letter from J. Kane to C. Willett (7 October 2016), Ex. C-51 (emphasis added).

⁹⁶ Emergency Request at 15, Question 1-5.

⁹⁷ <https://www.icann.org/en/system/files/files/reconsideration-16-9-ruby-glen-radix-bgc-determination-21jul16-en.pdf>.

⁹⁸ Bylaws (as amended 11 February 2016), Art. IV, § 3.3, Ex. C-23.

Bylaws make clear that “ICANN does not hold any governmentally authorized regulatory authority.”⁹⁹ Instead, the regulator authorized to promote and regulate competition, the U.S. Department of Justice Antitrust Division, already evaluated the potential competitive effects of the NDC/Verisign agreement and concluded that government intervention was not warranted.

67. Afiliás claims to be “the world’s second largest Internet domain name registry, with more than 20 million names under management.”¹⁰⁰ Given its size and technical abilities, Afiliás is more than capable of competing with Verisign, whether in .WEB or elsewhere.

68. Finally, ICANN has never been under a duty to disqualify NDC based on its agreement with Verisign. Rather, the Guidebook gives ICANN discretion to determine whether information not disclosed to ICANN either (a) was required to be disclosed in the first instance and/or (b) whether any such non-disclosure is material enough to warrant disqualification.¹⁰¹

IV. THE BALANCE OF HARDSHIPS DOES NOT TIP IN AFILIAS’ FAVOR.

69. The final requirement for interim relief is that the claimant demonstrate a “balance of the hardships tipping decidedly towards the party seeking the relief.”¹⁰² Where, as here, the party requesting interim relief declines to show a likelihood of success on the merits, the burden to demonstrate that the balance of hardships tips in its favor is higher. The party must

¹⁰¹ Guidebook § 1.2.7, Ex. C-3.

¹⁰² Bylaws Art. 4 § 4.3(p), Ex. C-1; Interim Supp. Procedures § 10, Ex. C-59. *Winter v. Natural Res. Def. Council, Inc.*, 555 U.S. 7, 24 (2008) (courts “must balance the competing claims of injury and must consider the effect on each party of the granting or withholding of the requested relief.”) (citation and internal quotation marks omitted), Ex. RELA-8; *Burlington Resources Inc. v. Republic of Ecuador & Empresa Estatal Petroleos del Ecuador*, ICSID Case No. ARB/08/5, Procedural Order No. 1 on Burlington Oriente’s Request for Provisional Measures (29 June 2009) ¶ 81 (quoting *City Oriente Ltd. v. Republic of Ecuador*, ICSID Case No. ARB/06/21, Decision on revocation of provisional measures of 13 May 2008, ¶ 72), Ex. RELA-2; see also UNCITRAL’s Model Law on Commercial Arbitration Art. 17(A)(1)(a) (requiring that a party requesting relief demonstrate that “[h]arm not adequately reparable by an award of damages is likely to result if the measure is not ordered, and such harm substantially outweighs the harm that is likely to result to the party against whom the measure is directed if the measure is granted”), Ex. RE-17; *Paushok v. Mongolia*, Order on Interim Measures (2 September 2008) ¶¶ 68-69, Ex. RELA-7.

establish that the balance of hardships “tips sharply” in its favor under the “sliding scale” approach to preliminary injunctions that federal courts employ.¹⁰³ Afilias has not established that the balance of hardships tips in its favor, let alone “sharply tips” in its favor.

70. Separately, Afilias wrongly suggests that the balance of hardships inquiry requires only an analysis of the hardships to Afilias and ICANN, but the standard is not so limited.¹⁰⁴ The Emergency Panelist must not only balance the hardships on the parties, but on all other interested parties, including consumers.

71. As discussed above, Afilias will not “suffer severe and irreparable harm” if its Emergency Request is denied. The harm Afilias claims is fully capable of being remedied in due course through transfer of the .WEB gTLD.

72. On the other hand, significant hardships will be imposed on ICANN, the .WEB auction winner, and consumers if interim relief is granted. There is real harm to ICANN, its processes, and its mission by yet another dispute delaying .WEB, particularly one that could have been resolved by now. In fulfilling ICANN’s mission of ensuring the “stable and secure operation” of the Internet’s DNS, ICANN is committed to respecting the “creativity, innovation, and flow of information made possible by the Internet”; making “decisions by applying documented policies consistently, neutrally, objectively, and fairly, without singling out any particular party for discriminatory treatment”; and “depending on market mechanisms to promote and sustain a competitive environment in the DNS market.”¹⁰⁵ Additional delay in bringing .WEB to fruition would frustrate these ICANN core values and commitments.

73. Likewise, would-be users of .WEB would be harmed by further delays in its

¹⁰³ See *Alliance for the Wild Rockies v. Cottrell*, 632 F.3d 1127, 1131, 1135 (9th Cir. 2011), Ex. RELA-1; see also *Disney Enterprises, Inc. v. VidAngel, Inc.*, 869 F. 3d 848, 856 (9th Cir. 2017), Ex. RELA-4.

¹⁰⁴ See Interim Supp. Procedures § 10, Ex. C-59.

¹⁰⁵ Bylaws Art. 1, §§ 1.1, 1.2, Ex. C-1.

launch. If .WEB is truly one of the “crown jewels” of the new gTLDs, as Afilias claims, consumers are harmed every day its launch is delayed. Afilias’ Emergency Request places Afilias’ commercial interests ahead of the consumer benefits the New gTLD Program affords.

74. Further, NDC and Verisign would be harmed by additional delays, which is compounded by the delay-related harm they have already suffered. More than two years ago, NDC and Verisign paid \$135 million for .WEB, but have yet to enjoy any of the benefits of that large investment. Third Party Designated Confidential Information Redacted

¹⁰⁷ Realistically, that substantial injury cannot be compensated, unless Afilias were to allow NDC and Verisign to participate in this emergency proceeding and post a bond at Verisign’s request.¹⁰⁸

75. Given the harm to ICANN, consumers, NDC, and Verisign, there is no conceivable way that the balance of the hardships tips decidedly in Afilias’ favor.

CONCLUSION

76. ICANN respectfully requests that Afilias’ Emergency Request be denied.

Respectfully submitted,

JONES DAY

1. Consent Agenda:

- a. **IT Outsource Contract Renewal**

Whereas, ICANN organization has a need for continued third-party development, quality assurance and content management support to augment its IT capacity.

Whereas, *[Redacted –Confidential Negotiation Information]* has provided services in software engineering, quality assurance, and content management over the last several years.

Whereas, ICANN org conducted a full request for proposal when renewing the contract in 2017, the results of which lead ICANN org to determine that *[Redacted –Confidential Negotiation Information]* was still the preferred vendor.

Whereas, ICANN org considered the cost and efficiency of either issuing another request for proposal for outsourced IT capacity or further renewing the contract with *[Redacted –Confidential Negotiation Information]* and determined that it was more efficient and cost effective to renew the contract with *[Redacted –Confidential Negotiation Information]*.

Resolved (2022.01.16.01), the Board authorizes the President and CEO, or his designee(s), to enter into, and make disbursement in furtherance of, a further renewed contract with *[Redacted –Confidential Negotiation Information]* for a term of *[Redacted –Confidential Negotiation Information]*.

Resolved (2022.01.16.02), specific items within this resolution shall remain confidential for negotiation purposes pursuant to Article 3, section 3.5(b) of the ICANN Bylaws until the President and CEO determines that the confidential information may be released.

Rationale for Resolution 2022.01.16.01 – 2022.01.16.02

In November 2014, following ICANN Board approval, ICANN organization engaged an expert third-party outsourcing firm, *[Redacted –Confidential Negotiation Information]*, to augment ICANN org's Engineering and IT capacity. That led to a *[Redacted –Confidential Negotiation Information]* with an annual value not to exceed *[Redacted –Confidential Negotiation Information]*. In April 2018, the contract was renewed through March 2020 with Board approval following a request for proposal (RFP) process. The value of the renewed contract was *[Redacted –Confidential Negotiation Information]* for a period of *[Redacted –Confidential Negotiation Information]*. The contract was renewed for a third time in May 2020 through March 2022 with Board approval. The value of the renewal contract was *[Redacted –Confidential Negotiation Information]*. To date, ICANN org has contracted with *[Redacted –Confidential Negotiation Information]* for a total of *[Redacted –Confidential Negotiation Information]*. The relationship with *[Redacted –Confidential Negotiation Information]* has been beneficial to ICANN org and overall has been successful.

Both the initial and first renewed contracts included RFP processes. After consulting with its procurement department, ICANN org determined not to pursue a RFP process for the second and third (current) renewals due to cost of doing a RFP process and limited responses received from the first renewal RFP. The RFP for the first renewed contract concluded that *[Redacted –Confidential Negotiation Information]* is still the preferred vendor and ICANN org determined it was most efficient and cost effective to renew the contract with *[Redacted –Confidential Negotiation Information]*.

Accordingly, both ICANN org and the Board Finance Committee (BFC) recommended that the Board authorize the org to enter into, and make disbursement in furtherance of, a renewed contract with *[Redacted –Confidential Negotiation Information]*, covering the period of *[Redacted –Confidential Negotiation Information]*, with a total cost not to exceed *[Redacted –Confidential Negotiation Information]*.

This decision is in the furtherance of ICANN org's mission and the support of public interest to support the security, stability and resiliency of the domain name system by ensuring that there is a fully resourced engineering and IT team able to support the org in a fiscally responsible and accountable manner.

This decision will have a fiscal impact, but the impact has already been accounted for in the FY23 budget and will be for future budgets as well.

As noted above, this action is intended to have a positive impact on the security, stability and resiliency of the domain name system.

This is an Organizational Administrative Function that does not require public comment.

b. IT Outsource Contract

Whereas, ICANN organization has a need for continued third-party ad hoc development and quality assurance support to augment its Engineering and IT capacity.

Whereas, *[Redacted –Confidential Negotiation Information]* has provided services in software engineering and quality assurance over the last several years.

Resolved (2022.01.16.03), the Board authorizes the President and CEO, or his designee(s), to enter into, and make disbursement in furtherance of, a further renewed contract with *[Redacted –Confidential Negotiation Information]* for continued third-party ad hoc IT support for a term of *[Redacted –Confidential Negotiation Information]*.

Resolved (2022.01.16.04), specific items within this resolution shall remain confidential for negotiation purposes pursuant to Article 3, section 3.5(b) of the ICANN Bylaws until the President and CEO determines that the confidential information may be released.

Rationale for Resolutions 2022.01.16.03 – 2022.01.16.04

In order to provide supplemental support and maintain vendor competition, ICANN organization has previously contracted with *[Redacted –Confidential Negotiation Information]* on a smaller scale to provide ad hoc support for Engineering and IT projects. ICANN org will receive a *[Redacted –Confidential Negotiation Information]* discounted rate on procured engineering resources assuming ICANN signs a *[Redacted –Confidential Negotiation Information]* contract. The value of the contract is *[Redacted –Confidential Negotiation Information]* for a period of *[Redacted –Confidential Negotiation Information]*. The relationship with *[Redacted –Confidential Negotiation Information]* has been beneficial to ICANN org and has been a success overall.

With its procurement department, ICANN org considered the cost and efficiency of either issuing a request for proposal (RFP) for ad hoc outsourced IT capacity or further renewing *[Redacted –Confidential Negotiation Information]* contract and determined that it was more efficient and cost effective to renew *[Redacted –Confidential Negotiation Information]* contract. For example, the cost of switching vendors entails drafting a new RFP, vetting potential candidates, and vendor onboarding – all of which would add cost and extend project durations on an already burdened production line.

Accordingly, both ICANN org and the Board Finance Committee recommended that the Board authorize the org to enter into, and make disbursement in furtherance of, a renewed contract with *[Redacted –Confidential Negotiation Information]* for continued third-party ad hoc IT support covering the period of *[Redacted –Confidential Negotiation Information]*, with a total cost not to exceed *[Redacted –Confidential Negotiation Information]*.

This decision is in the furtherance of ICANN org's Mission and the support of public interest to support the security, stability and resiliency of the domain name system by ensuring that there is a fully resourced engineering and IT team able to support the organization in a fiscally responsible and accountable manner.

As noted above, this action is intended to have a positive impact on the security, stability and resiliency of the domain name system.

This is an Organizational Administrative Function that does not require public comment.

2. Main Agenda:

a. Rights Protection Mechanisms Policy Development Process Final Report

Whereas, on 18 February 2016, the GNSO Council resolved (<https://gnso.icann.org/en/council/resolutions#20160218-3>) to initiate a two-phased policy development process (PDP) to review all existing trademark-related rights protection mechanisms (RPMs) in all generic top-level domains (gTLDs).

Whereas, on 9 March 2016, the GNSO Council approved (<https://gnso.icann.org/en/council/resolutions#20160309-2>) the PDP Charter (https://gnso.icann.org/sites/default/files/filefield_48755/rpm-charter-15mar16-en.pdf), thereby initiating Phase 1 of the PDP that focused on the RPMs developed for the 2012 New gTLD Program.

Whereas, the PDP Working Group has followed all the necessary steps and processes required by the ICANN Bylaws, the GNSO PDP Manual and the GNSO Working Group Guidelines, including the publication of an Initial Report (<https://gnso.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-initial-18mar20-en.pdf>) for public comment ([/public-comments/rpm-initial-report-2020-03-18-en](https://public-comments/rpm-initial-report-2020-03-18-en)) (on 18 March 2020) and consideration of the public comments received thereto.

Whereas, on 24 November 2020, the PDP Working Group submitted its Phase 1 Final Report (<https://gnso.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf>) to the GNSO Council for its review and action.

Whereas, the PDP Working Group has reached Full Consensus for 34 out of the 35 final recommendations documented in the Phase 1 Final Report, and Consensus for the remaining one final recommendation (concerning Final Recommendation #1 for the Trademark Clearinghouse (TMCH)).

Whereas, 16 of the 35 recommendations in the Phase 1 Final Report recommend modifying existing operational practices as well as updating documentation and related materials concerning RPMs and the Board does not anticipate that substantial resources will be needed for implementation (TMCH Final Recommendation 4, Trademark Claims Final Recommendations 2, 5, and 6, URS Final Recommendations

1, 2, 3, 4, 5, 6, 7, 11, 12, 14, and 15, and one Trademark Post Delegation Dispute Resolution Procedure (TM-PDDRP) Final Recommendation).

Whereas, nine of the 35 recommendations in the Phase 1 Final Report recommend that the status quo be maintained for future gTLD expansion rounds (e.g., no change to the current rules as applied to the gTLDs delegated under the 2012 New gTLD Program round) and, as such, the Board anticipates that implementation of these recommendations will be integrated into any implementation work related to the next gTLD expansion round (TMCH Final Recommendation 2, Sunrise Final Recommendations 2, 3, 4, 5, 6, and 7, and Trademark Claims Final Recommendations 3 and 4).

Whereas, six of the 35 recommendations in the Phase 1 Final Report require substantial resources for implementation (including considerations relating to timing and staffing) due to their complexity and the need to involve multiple stakeholders. Successful implementation will also depend on the willingness and availability of stakeholders to participate in the implementation work. Specifically, these recommendations call for:

- collection of data concerning the RPMs,
- developing educational materials to assist users of the RPMs, and
- creating a new complaints mechanism for URS participants.

ICANN org estimates that fully implementing these recommendations will require a minimum of one year once implementation work begins on this set of recommendations and would require substantial internal resources from multiple ICANN org functions in order to identify and work with relevant stakeholders to implement the recommendations, as well as to support and maintain ongoing operations and data collection. ICANN org plans to include these recommendations as part of its ongoing work with the community on prioritization efforts relating to anticipated implementation work arising from community-developed recommendations that require ICANN org resourcing and support (TMCH Final Recommendation 3, URS Final Recommendations 8, 9, 10, and 13, and one Overarching Data Collection Final Recommendation).

Whereas, four of the 35 recommendations in the Phase 1 Final Report call for specific changes to the Applicant Guidebook and/or the Base Registry Agreement for subsequent rounds of new gTLDs (TMCH Final Recommendation 1, Sunrise Final Recommendations 1 and 8, and Trademark Claims Final Recommendation 1).

Whereas, on 21 January 2021, the GNSO Council unanimously approved (<https://gns0.icann.org/en/council/resolutions/2021#202101-3>) all 35 final PDP recommendations as documented in the PDP Working Group's Phase 1 Final Report (<https://gns0.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf>).

Whereas, on 19 March 2021, the GNSO Council transmitted its Bylaws-mandated Recommendations Report (<https://gns0.icann.org/sites/default/files/file/field-file-attach/council-recommendations-rpm-pdp-phase-1-report-10feb21-en.pdf>) to the ICANN Board of Directors, recommending that the Board adopt all the final Phase 1 recommendations. The GNSO Council also requested that ICANN org convene an Implementation Review Team (IRT) to work on the implementation of these recommendations, as is the regular practice and in accordance with the IRT Principles & Guidelines (<https://gns0.icann.org/sites/default/files/file/field-file-attach/2016-12/irt-principles-guidelines-23aug16-en.pdf>) approved in 2016.

Whereas, on 7 April 2021, the Phase 1 Final Report (<https://gns0.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf>) was published for public comment ([/public-comments/gns0-rpm-pdp-phase-1-final-recommendations-2021-04-07-en](https://public-comments/gns0-rpm-pdp-phase-1-final-recommendations-2021-04-07-en)) to inform Board action on the report, in accordance with the Bylaws.

Whereas, on 7 April 2021, the ICANN Board also notified ([/en/system/files/correspondence/botterman-to-ismail-2-07apr21-en.pdf](https://en/system/files/correspondence/botterman-to-ismail-2-07apr21-en.pdf)) the Governmental Advisory Committee (GAC) of the GNSO Council's approval of the Phase 1 Final Report, in accordance with the Bylaws.

Whereas, the GAC has not provided advice as to whether it believes there are any public policy issues raised by these recommendations.

Resolved (2022.01.16.05), the Board thanks the members of the PDP Working Group for their dedication and over four years of work on Phase 1 of the PDP, including its development of 35 recommendations to enhance the RPMs that were originally developed for the 2012 New gTLD Program and to facilitate future reviews of all RPMs.

Resolved (2022.01.16.06), the ICANN Board adopts all 35 final Phase 1 PDP recommendations as documented in the PDP Working Group's Phase 1 Final Report.

Resolved (2022.01.16.07), for the 16 recommendations that call for updates to existing operational practices or documentation concerning the RPMs where no substantial resources are required for implementation, the ICANN Board directs ICANN's President and CEO, or his designee(s), to proceed with the implementation of these recommendations as soon as feasible, and to develop an implementation plan, including resources and timelines, for the recommendations that is consistent with Annex A, Section 10 of the ICANN [Bylaws \(/resources/pages/governance/bylaws-en\)](#), and to continue communication with the community on implementation.

Resolved (2022.01.16.08), for the nine recommendations affirming the status quo (i.e. maintaining the Phase 1 RPMs as implemented for the 2012 New gTLD Program), the ICANN Board directs ICANN's President and CEO, or his designee(s), to document and include these recommendations for future expansions of new gTLDs and to inform the community about the ICANN org's plans for how these will be implemented.

Resolved (2022.01.16.09), for the six recommendations that require substantial resourcing, and involvement of multiple stakeholders to implement, the ICANN Board directs ICANN's President and CEO, or his designee(s), to develop and to submit to the ICANN Board a plan for implementation of these recommendations containing information on estimated timing, staffing, and other resources required, and information about how implementation of these recommendations fit into its operational planning and prioritization of the anticipated implementation efforts that will require ICANN org resourcing and support. The Board recognizes that these six recommendations will consequently not be implemented immediately, and that implementation will proceed when resources become available as a result of the ICANN org's prioritization work.

Resolved (2022.01.16.10), for the four recommendations that call for specific changes to the Applicant Guidebook and/or the Base Registry Agreement and coordination with the expected Subsequent Procedures IRT, the ICANN Board directs ICANN's President and CEO, or his designee(s), to incorporate the implementation of these recommendations into the work on updates to the Applicant Guidebook for subsequent new gTLD rounds.

Resolved (2022.01.16.11), the Board directs ICANN org to provide it with an implementation timeline, to be established in agreement with the Implementation Review Team, and to report regularly on the status of work throughout the implementation period. In the event that implementation progress may be impeded or the timeline cannot be met due to unforeseen circumstances or policy questions that cannot

be resolved, or any other cause of impasse, the Board may consider appropriate ways to facilitate next steps with the GNSO and community.

Rationale for Resolutions 2022.01.16.05 – 2022.01.16.11

Why is the Board addressing the issue?

The 2012 New gTLD Program rights protection mechanisms (RPMs) are mechanisms that have now been in use for several years. Community feedback on the RPMs developed for the 2012 New gTLD Program indicated a need to review their application and scope, especially if there is to be further expansion of the gTLD space. As this PDP is the first time that the RPMs have been subject to a policy review by the ICANN community, there were no comprehensive studies or data collected that measured their effectiveness.

As such, on 15 March 2016, the GNSO Council chartered the PDP Working Group to conduct a review of all the RPMs in two phases. Phase 1, which recently concluded, focused on reviewing the effectiveness of all the RPMs and associated structures and procedures applicable to gTLDs that were launched under the 2012 New gTLD Program. Phase 2 will focus on reviewing the Uniform Domain-Name Dispute-Resolution Policy ([UDRP \(/resources/pages/help/dndr/udrp-en\)](https://www.icann.org/resources/pages/help/dndr/udrp-en)), which has been an ICANN Consensus Policy since 1999.

In November 2020, the PDP Working Group completed its review of the RPMs that were developed for the 2012 New gTLD Program and submitted its Phase 1 [Final Report](https://gns0.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf) (<https://gns0.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf>) to the GNSO Council for review and approval. The Phase 1 Final Report represents the culmination of over four years of work by the PDP Working Group.

On 21 January 2021, the GNSO Council voted to [approve](https://gns0.icann.org/en/council/resolutions/2021#202101-3) (<https://gns0.icann.org/en/council/resolutions/2021#202101-3>) by a GNSO Supermajority all the 35 recommendations contained in the Phase 1 Final Report. On 19 March 2021, the GNSO Council transmitted its Bylaws-mandated Recommendations [Report](https://gns0.icann.org/sites/default/files/file/field-file-attach/council-recommendations-rpm-pdp-phase-1-report-10feb21-en.pdf) (<https://gns0.icann.org/sites/default/files/file/field-file-attach/council-recommendations-rpm-pdp-phase-1-report-10feb21-en.pdf>) to the ICANN Board of Directors, recommending adoption of all the final recommendations by the ICANN Board.

As required by Article 3, Section 6.(a)(iii) of the ICANN Bylaws, the approved recommendations were posted for [public comment](https://www.icann.org/public-comments/gns0-rpm-pdp-phase-1-final-recommendations-2021-04-07-en) ([/public-comments/gns0-rpm-pdp-phase-1-final-recommendations-2021-04-07-en](https://www.icann.org/public-comments/gns0-rpm-pdp-phase-1-final-recommendations-2021-04-07-en)) to inform Board action on the final recommendations. Furthermore, under Section

11.3(i)(x) of the ICANN Bylaws, the GNSO Council's Supermajority support for these recommendations obligates the Board to adopt the recommendations unless, by a vote of more than two-thirds, the Board determines that the policy is not in the best interests of the ICANN community or ICANN.

What is the proposal being considered?

In 2016, the PDP Working Group was chartered to assess the effectiveness of the existing RPMs, including those established as safeguards in the New gTLD Program, and to study whether or not all the RPMs collectively fulfill the purposes for which they were created. The Board today considers the 35 Phase 1 final recommendations from the PDP Working Group.

The Final Report

(<https://gns0.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf>) contains 35 recommendations, which were classified into three categories by the PDP Working Group: nine recommendations which recommend that the status quo (e.g., the current rules as applied to the gTLDs delegated under the 2012 New gTLD Program round) be maintained, 15 recommendations for new policies or procedures to improve the RPMs launched under the 2012 New gTLD Program, such as to enable fulfillment of the objectives for their creation and enhance their effectiveness in the next new gTLD expansion round, as well as 10 recommendations to modify existing operational practices to improve the effectiveness of the RPMs. As the Working Group experienced difficulties in obtaining quantitative data concerning the effectiveness of the Phase 1 RPMs, it also put forward an Overarching Data Collection Final Recommendation aimed at addressing this data-related gap.

Among the 35 Phase 1 final recommendations, the PDP Working Group reached full consensus on 34 recommendations and consensus on one recommendation, which was the TMCH Final Recommendation #1. A Minority Statement was jointly filed by seven members of the PDP Working Group with regard to this recommendation, although the Minority Statement did not oppose the primary thrust of the recommendation but instead noted the submitters' concerns over the scope of "word marks" that can be accepted into the TMCH. The Minority Statement was included in the Phase 1 Final Report as "Annex D – Working Group Members' Minority Statement on TMCH Final Recommendation #1".

As required by Article 3, Section 6.(a)(iii) of the ICANN Bylaws, the recommendations were posted for public comment (</public-comments/gns0-rpm-pdp-phase-1-final-recommendations-2021-04-07-en>) to inform Board action on

the final recommendations. In considering the [Final Report](https://gnso.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf) (<https://gnso.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf>), the Board reviewed public comments on the Phase 1 Final Report and briefings by ICANN org on the feasibility and impact of implementation of all the recommendations, including considerations regarding the timing and resourcing needs in the context of the overall prioritization of work on implementation of other community-developed recommendations and other existing activities by the ICANN org and community.

In its review of all the recommendations contained in the Phase 1 Final Report, the Board noted that implementation of the recommendations could be divided into several categories. These implementation categories are:

1) Recommendations where no substantial resources are needed for implementation as they can be integrated into existing work efforts – a total number of 16 recommendations:

- Implementation of 15 of the 16 recommendations in this category involves updating existing documentation and related materials concerning the relevant RPMs, such as the URS [Rules](https://newgtlds.icann.org/en/applicants/urs/rules-04mar13-en.pdf) (<https://newgtlds.icann.org/en/applicants/urs/rules-04mar13-en.pdf>), URS [Procedure](https://newgtlds.icann.org/en/applicants/urs/procedure-01mar13-en.pdf) (<https://newgtlds.icann.org/en/applicants/urs/procedure-01mar13-en.pdf>) and URS High Level [Technical Requirements](https://newgtlds.icann.org/en/applicants/urs/tech-requirements-17oct13-en.pdf) (<https://newgtlds.icann.org/en/applicants/urs/tech-requirements-17oct13-en.pdf>) for Registries and Registrar, as well as the RPM [Requirements](https://newgtlds.icann.org/en/about/trademark-clearinghouse/rpm-requirements-14may14-en.pdf) (<https://newgtlds.icann.org/en/about/trademark-clearinghouse/rpm-requirements-14may14-en.pdf>), [TM-PDDRP](https://newgtlds.icann.org/en/about/trademark-clearinghouse/database-framework-02jul13-en.pdf) ([/resources/pages/tm-pddrp-2013-10-31-en](https://newgtlds.icann.org/en/about/trademark-clearinghouse/database-framework-02jul13-en.pdf)), and the TMCH Database Framework [Agreement](https://newgtlds.icann.org/en/about/trademark-clearinghouse/database-framework-02jul13-en.pdf) (<https://newgtlds.icann.org/en/about/trademark-clearinghouse/database-framework-02jul13-en.pdf>) (TMCH Final Recommendation 4, Trademark Claims Final Recommendations 2, 5, and 6, URS Final Recommendations 1, 2, 3, 4, 5, 6, 7, 11, 14, and 15, and one TM-PDDRP Final Recommendation).
- With regard to modifying existing operational practices, one of the 16 recommendations in this category involves working with registries, registrars, and URS Providers to ensure that one another's contact details are up to date in order to ensure the efficacy of the URS process (URS Final Recommendation 12).

2) Recommendations to maintain the status quo – a total number of nine recommendations:

- The recommendations in this category involve documenting and informing the community as to how the status quo (i.e. the current rules as applied to the gTLDs delegated under the 2012 New gTLD Program application round) will be maintained in the next new gTLD expansion (TMCH Final Recommendation 2, Sunrise Final Recommendations 2, 3, 4, 5, 6, and 7, and Trademark Claims Final Recommendations 3 and 4).

3) Recommendations requiring substantial time and resources to implement – a total number of six recommendations:

- Implementation of four of the six recommendations in this category involves working with RPM-related service providers to develop educational materials to assist users of the RPMs (TMCH Final Recommendation 3 and URS Final Recommendations 9, 10, and 13).
- Implementation of one recommendation in this category involves developing a new and separate complaints mechanism or mechanisms to ensure that URS providers, registries, and registrars operate in accordance with the URS Rules and fulfill their role and obligations in the URS process (URS Final Recommendation 8).
- Implementation of one recommendation in this category involves working with RPM-related service providers and ICANN-accredited registrars to collect data concerning the TMCH (one (1) Overarching Data Collection Final Recommendation).

4) Recommendations affecting subsequent round(s) of new gTLDs – a total number of four (4) recommendations:

- Implementation of these recommendations involves making specific changes to the Applicant Guidebook and/or the Base Registry Agreement for the next expansion round of new gTLDs (TMCH Final Recommendation 1, Sunrise Final Recommendations 1 and 8, and Trademark Claims Final Recommendation 1).

Annex A contains additional details on each recommendation and the scope of effort required for implementation.

Which stakeholders or others were consulted?

In accordance with the requirements of the GNSO PDP Manual, the Working Group solicited early input (<https://community.icann.org/pages/viewpage.action?pageId=59643854>) from ICANN's Supporting Organizations and Advisory Committees as well as the GNSO's Stakeholder Groups and Constituencies. The Working Group also sought input from registry operators, URS providers and

practitioners, and other stakeholders, and conducted a data-gathering exercise to obtain specific data points for the Phase 1 RPMs.

As mandated by the GNSO's PDP Manual, the PDP Working Group published its Phase 1 [Initial Report](https://gns0.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-initial-18mar20-en.pdf) (<https://gns0.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-initial-18mar20-en.pdf>) on 18 March 2020 for [public comment](https://public-comments.gns0.icann.org/public-comments/rpm-initial-report-2020-03-18-en) ([/public-comments/rpm-initial-report-2020-03-18-en](https://public-comments.gns0.icann.org/public-comments/rpm-initial-report-2020-03-18-en)), which closed on 4 May 2020. Following a careful review of all public comments received from 55 contributors as well as extensive discussions over a number of additional recommendations developed as a result of the public comment review, the Working Group finalized its recommendations and delivered its Phase 1 [Final Report](https://gns0.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf) (<https://gns0.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf>) to the GNSO Council in November 2020. Several Working Group members submitted a Minority Statement pertaining to the TMCH Final Recommendation #1. The Minority Statement was included in the Phase 1 Final Report as Annex D.

As required by the ICANN Bylaws, a [public comment](https://public-comments.gns0.icann.org/public-comments/gns0-rpm-pdp-phase-1-final-recommendations-2021-04-07-en) ([/public-comments/gns0-rpm-pdp-phase-1-final-recommendations-2021-04-07-en](https://public-comments.gns0.icann.org/public-comments/gns0-rpm-pdp-phase-1-final-recommendations-2021-04-07-en)) proceeding for the final recommendations in the Phase 1 Final Report was conducted between 7 April 2021 and 21 May 2021, which allowed stakeholders to comment on the proposed recommendations prior to Board action. As further required by the Bylaws, on 7 April 2021 the ICANN Board [notified](https://www.icann.org/en/system/files/correspondence/botterman-to-ismail-2-07apr21-en.pdf) ([/en/system/files/correspondence/botterman-to-ismail-2-07apr21-en.pdf](https://www.icann.org/en/system/files/correspondence/botterman-to-ismail-2-07apr21-en.pdf)) the GAC of the GNSO Council's approval of the Phase 1 Final Report, to allow the GAC to provide timely advice on any public policy concerns that it may have with the recommendations.

What concerns or issues were raised by the community?

The community provided feedback through Public Comments on the Initial and Final Phase 1 Reports and correspondence. A few Working Group members also submitted a Minority Statement to the Phase 1 [Final Report](https://gns0.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf) (<https://gns0.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf>), which raised concerns regarding the continuing confidentiality of the TMCH database and the possibility that the scope of marks accepted by the TMCH is broader than the scope of rights conferred by trademark registration. The Phase 1 Working Group considered all Public Comments filed to its Initial Report in coming to consensus on its final recommendations. The [Report of Public Comments](https://itp.cdn.icann.org/en/files/generic-names-supporting-organization-council-gns0-council/report-comments-gns0) (<https://itp.cdn.icann.org/en/files/generic-names-supporting-organization-council-gns0-council/report-comments-gns0>

[rpm-pdp-phase-1-final-recommendations-04jun21-en.pdf](#)) on the Phase 1 Final Report summarizes the concerns raised by commenters for the Board's consideration.

What significant materials did the Board review?

The Board reviewed the following materials:

- The 18 March 2020 Phase 1 [Initial Report](#) (<https://gnso.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-initial-18mar20-en.pdf>) of the GNSO PDP on the review of all RPMs in All gTLDs.
- The 24 November 2020 Phase 1 [Final Report](#) (<https://gnso.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf>) of the GNSO PDP on the review of all RPMs in All gTLDs.
- The 10 February 2021 GNSO Council [Recommendations Report](#) (<https://gnso.icann.org/sites/default/files/file/field-file-attach/council-recommendations-rpm-pdp-phase-1-report-10feb21-en.pdf>) regarding the adoption of the Phase 1 Final recommendations.
- The 21 January 2021 GNSO Council [resolution](#) (<https://gnso.icann.org/en/council/resolutions/2021#202101-3>) of the RPM PDP Phase 1 [Final Report](#) (<https://gnso.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf>) recommendations.
- The 4 June 2021 Staff [Report](#) (</en/system/files/files/report-comments-gnso-rpm-pdp-phase-1-final-recommendations-04jun21-en.pdf>) of Public Comment Proceeding on the Phase 1 final recommendations from the GNSO Review of all RPMs in all gTLDs PDP.

What factors did the Board find to be significant?

As noted in the GNSO Council [Recommendations Report](#) (<https://gnso.icann.org/sites/default/files/file/field-file-attach/council-recommendations-rpm-pdp-phase-1-report-10feb21-en.pdf>), the PDP Working Group's 15 recommendations for new policies or procedures, 10 recommendations to modify existing operational practice, and one recommendation for overarching data collection are expected to have operational, financial, and/or other impact on registries and registrars who have to implement new requirements and improvements to existing processes; RPM-related service providers, including the TMCH Validation Provider, TMCH Database Provider, URS Providers, and TM-PDDRP Provider; and ICANN org, which will have to, among other things, update its documentation and related materials concerning the TMCH and the Applicant Guidebook for future

expansions of new gTLDs, and collaborate with the RPM-related service providers and Contracted Parties to implement the new policies and procedures.

In addition to the 35 Phase 1 final recommendations, the Phase 1 [Final Report](https://gns0.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf) (<https://gns0.icann.org/sites/default/files/file/field-file-attach/rpm-phase-1-proposed-24nov20-en.pdf>) included a substantial amount of implementation guidance, which are intended to provide supplemental and/or clarifying information to assist with implementation of the recommendations. The Board understands from the GNSO Council Recommendations [Report](https://gns0.icann.org/sites/default/files/file/field-file-attach/council-recommendations-rpm-pdp-phase-1-report-10feb21-en.pdf) (<https://gns0.icann.org/sites/default/files/file/field-file-attach/council-recommendations-rpm-pdp-phase-1-report-10feb21-en.pdf>) that substantial time and effort will be needed to translate the recommendations into policy language and operational requirements, as well as the complexity of implementing these recommendations with the involvement of various stakeholders.

The Board also understands that some of the PDP Working Group's Phase 1 recommendations will affect future expansion round(s) of new gTLDs. In particular, the PDP Working Group proposed specific changes to the Applicant Guidebook and/or the Base Registry Agreement. As such, the Board's adoption of these recommendations means that they will need to be factored into preparations for future expansion of the gTLD space, including coordination with the SubPro IRT should the Board decide to adopt the recent PDP recommendations from the GNSO's New gTLD SubPro PDP.

The ICANN org has preliminarily estimated that implementing the Phase 1 final recommendations could take a minimum of two years from Board adoption. However, a significant factor that is likely to impact the final implementation timeline is the Board's decision regarding the SubPro PDP recommendations, including implementation considerations based on the outcomes of the Operational Design Phase currently underway for SubPro.

Are there positive or negative community impacts?

Adopting the final recommendations will have a positive impact on ICANN in that it will contribute to ensuring that ICANN addresses policy questions and operational issues identified through experience with the RPMs developed for the 2012 New gTLD Program. Board adoption of the recommendations will facilitate a coherent and uniform mechanism for future reviews of all RPMs and allow for opportunities for continuous improvement of these policies and processes. However, community bandwidth and resources will be required to ensure that implementation of

the recommendations are consistent with what the PDP Working Group intended, in addition to other ongoing work in the community.

Are there fiscal impacts or ramifications on ICANN (strategic plan, operating plan, budget); the community; and/or the public?

Implementing the Phase 1 recommendations is expected to have operational, financial, and/or other impact on registries and registrars who will implement new requirements and improvements to existing processes; RPM-related service providers, including the TMCH Validation Provider, TMCH Database Provider, URS Providers, and TM-PDDRP Provider; and ICANN org, which will have to, among other things, update its documentation and related materials concerning the TMCH and the Applicant Guidebook for future expansions of new gTLDs, and collaborate with the RPM-related service providers and Contracted Parties to implement the new policies and procedures, update existing documentation and develop or enhance educational materials to assist users of the RPMs.

Are there any security, stability or resiliency issues relating to the DNS?

None at this time.

Is this decision in the public interest and within ICANN's mission?

This action is within ICANN's Mission and mandate and in the public interest as set forth in the ICANN Bylaws. The multistakeholder policy development process of bottom-up, consensus policies and guidelines helps advance the stable and secure operation of the Internet's unique identifier systems.

Is this either a defined policy process within ICANN's Supporting Organizations or ICANN's Organizational Administrative Function decision requiring public comment or not requiring public comment?

As required by the ICANN Bylaws and the GNSO's policy procedures, the recommendations were the subject of [public comment \(/public-comments/gnso-rpm-pdp-phase-1-final-recommendations-2021-04-07-en\)](#) as discussed above.

- b. **Consideration of Final Declaration in the Afilias Domains No. 3 Limited (Afilias) v. ICANN Independent Review Process (.WEB)**

Whereas, the Final Declaration in the *Afilias Domains No. 3 Ltd. (Afilias)*¹[1./en/board-activities-and-meetings/materials/approved-board-resolutions-special-meeting-of-the-icann-board-16-01-2022-en#foot1](https://www.icann.org/en/board-activities-and-meetings/materials/approved-board-resolutions-special-meeting-of-the-icann-board-16-01-2022-en#foot1). v. ICANN

Independent Review Process regarding .WEB (.WEB IRP) was issued on 20 May 2021, a corrected version was issued on 15 July 2021, and that version was deemed "final" as of 21 December 2021 when the Panel denied Afilias' subsequent challenge.

Whereas, among other things, the IRP Panel designated Afilias as the prevailing party, declared that ICANN violated its Articles of Incorporation and Bylaws in the manner set forth in the Final Declaration, and declared that ICANN shall reimburse Afilias the sum of US\$450,000 for its legal costs relating to the Emergency Interim Relief proceedings and the sum of US\$479,458.27 for its share of the IRP costs. (Final Declaration at ¶¶ 410(6), (10), (12).)

Whereas, the IRP Panel recommended that ICANN "stay any and all action or decision that would further the delegation of the .WEB gTLD until such time as the [ICANN] Board has considered the opinion of the Panel in this Final Decision, and, in particular (a) considered and pronounced upon the question of whether the [Domain Acquisition Agreement] complied with the New gTLD Program Rules following [Afilias'] complaints that it violated the Guidebook and Auction Rules and, as the case may be, (b) determined whether by reason of any violation of the Guidebook and Auction Rules, NDC's application for .WEB should be rejected and its bids at the auction disqualified." (Final Declaration at ¶ 410(5).)

Whereas, in accordance with Article 4, Section 4.3(x) of the applicable version of the Bylaws, the Board has considered the Final Declaration.

Resolved (2022.01.16.12), the Board acknowledges that the Panel declared the following: (i) Afilias is the prevailing party in the *Afilias Domains No. 3 Ltd. v. ICANN Independent Review Process*; (ii) ICANN violated its Articles of Incorporation and Bylaws in the manner set forth in the Final Declaration; (iii) ICANN shall reimburse Afilias the sum of US\$450,000 for its legal costs relating to the Emergency Interim Relief proceedings; and (iv) ICANN shall reimburse Afilias the sum of US\$479,458.27 for its share of the IRP costs.²[2./en/board-activities-and-meetings/materials/approved-board-resolutions-special-meeting-of-the-icann-board-16-01-2022-en#foot2](https://www.icann.org/en/board-activities-and-meetings/materials/approved-board-resolutions-special-meeting-of-the-icann-board-16-01-2022-en#foot2)

Resolved (2022.01.16.13), the Board directs the President and CEO, or his designee(s), to take all steps necessary to reimburse Afilias in the amount of US\$450,000 in legal fees and US\$479,458.27 for its share of the IRP costs in furtherance of the Panel's Final Declaration.

Resolved (2022.01.16.14), further consideration is needed regarding the IRP Panel's non-binding recommendation that ICANN "stay any and all action or decision that would further the delegation of the .WEB gTLD until such time as the [ICANN] Board has considered the opinion of the Panel in this Final Decision, and, in particular (a) considered and pronounced upon the question of whether the DAA complied with the New gTLD Program Rules following [Afilias'] complaints that it violated the Guidebook and Auction Rules and, as the case may be, (b) determined whether by reason of any violation of the Guidebook and Auction Rules, NDC's application for .WEB should be rejected and its bids at the auction disqualified."

Resolved (2022.01.16.15), the Board asks the Board Accountability Mechanisms Committee (BAMC) to review, consider, and evaluate the IRP Panel's Final Declaration and recommendation, and to provide the Board with its findings to consider and act upon before the organization takes any further action toward the processing of the .WEB application(s).

Rationale for Resolutions 2022.01.16.12 – 2022.01.16.15

Seven applicants submitted applications for the right to operate .WEB, including Afilias Domains No. 3 Ltd. (Afilias),³ (</en/board-activities-and-meetings/materials/approved-board-resolutions-special-meeting-of-the-icann-board-16-01-2022-en#foot3>) Nu Dotco LLC (NDC), and Ruby Glen LLC, a Donuts subsidiary (Ruby Glen), and, as they did not privately resolve contention, the applicants went to an ICANN auction of last resort. An auction was held on 27-28 July 2016, which concluded with NDC prevailing with a bid of US\$135 million. Shortly thereafter, Verisign Inc. (Verisign) publicly disclosed that, pursuant to an agreement it had entered with NDC, Verisign provided the funds for NDC's bid in exchange for, among other things, NDC's future assignment of the .WEB registry agreement to Verisign, subject to ICANN's consent.

Prior to and since the auction, Ruby Glen and Afilias made numerous allegations regarding NDC and Verisign (including alleging an undisclosed change of ownership or control of NDC and alleging a violation of the Guidebook's prohibition of assignment of an application to a third party), and requested that ICANN disqualify NDC's application, reject its winning bid, and then recognize Afilias as the winning bidder (which had the second highest bid in the auction).⁴ (</en/board-activities-and-meetings/materials/approved-board-resolutions-special-meeting-of-the-icann-board-16-01-2022-en#foot4>) Further background information is available in the accompanying Reference Materials.

Afilias initiated an Independent Review Process regarding .WEB (.WEB IRP) in November 2018, alleging that NDC had violated the Guidebook as a result of its arrangement with Verisign and that ICANN had violated the Bylaws by failing to disqualify NDC. In particular, Afilias alleged that NDC violated the Guidebook by: (a) "omitting material information from and failing to correct material misleading information in its .WEB application"; (b) "assigning [NDC's] rights and obligations in its .WEB application to VeriSign"; and (c) "agreeing to submit bids on VeriSign's behalf at the .WEB Auction." With regard to ICANN, Afilias alleged that: (a) "ICANN's failure to disqualify [NDC] breaches ICANN's obligation to apply documented ICANN policies neutrally, objectively and fairly"; (b) "ICANN's decision to finalize a registry agreement while knowing of [NDC's] arrangement with VeriSign violates ICANN's mandate to promote competition"; and (c) "ICANN violated its Bylaws in Adopting Rule 7 of the Interim [Supplementary] Procedures," which allows participation in an IRP by a party with a material interest in the proceedings.

NDC and Verisign asked to participate as *amici curiae* in the IRP, which Afilias opposed. The Panel granted *amici* participation allowing them to attend hearings, submit written briefings on the dispute or on questions the Panel might ask, and have access to all materials related to the IRP except for commercially sensitive or privileged material. The merits hearing took place on 3-11 August 2020, and the IRP Panel issued its Final Declaration on 20 May 2021, which the Panel later corrected for certain typographical errors, effective 15 July 2021.

In the Final Declaration, the IRP Panel designated Afilias "as the prevailing party in relation to the above declarations, decisions, findings and recommendations [noted in the Final Declaration]" and dismissed Afilias' "other requests for relief in connection with its core claims." In particular, the Panel denied Afilias' requests for: (a) a binding declaration that ICANN must disqualify NDC's bid for .WEB for violating the Guidebook and Auction Rules; and (b) an order directing ICANN to proceed with contracting for .WEB with Afilias. The Panel noted that: "it is for [ICANN], that has the requisite knowledge, expertise, and experience, to pronounce in the first instance on the propriety of the [Domain Acquisition Agreement] under the New gTLD Program Rules, and on the question of whether NDC's application should be rejected and its bids at the auction disqualified by reason of its alleged violations of the Guidebook and Auction Rules."

The Panel declared that ICANN had violated its Articles of Incorporation (Articles) and Bylaws by not applying documented policies objectively and fairly in that: (a) ICANN staff failed to decide whether the Domain Acquisition Agreement (DAA) between NDC and Verisign (pursuant to

which Verisign financially supported NDC's bidding in the .WEB auction) violated the Guidebook and Auction Rules, and moved forward toward contracting with NDC in June 2018 without first having made that decision; and (b) the ICANN Board did not prevent staff from moving forward toward contracting in June 2018 or decide whether the DAA violated the Guidebook and Auction Rules, once pending accountability mechanisms had been resolved.

The Panel also declared that ICANN violated its Articles and Bylaws by not operating in an open and transparent manner and consistent with procedures to ensure fairness when it failed to communicate to Afilias in November 2016 that the ICANN Board would not be evaluating Afilias' complaints while accountability mechanisms were pending.

In addition, while finding Afilias' claim that ICANN failed to enable and promote competition in the DNS was premature, the Panel stated that it "accepts the submission that ICANN does not have the power, authority, or expertise to act as a competition regulator by challenging or policing anticompetitive transactions or conduct."

The Panel further declared that Afilias' challenge to the validity of IRP Interim Supplementary Procedures Rule 7 about *amici* participation is moot since the Panel previously ruled that NDC and Verisign could participate, and "no useful purpose would be served by the Rule 7 Claim being addressed beyond the findings and observations contained in the Panel's Decision of Phase I."

The Panel denied the majority of Afilias' request for cost shifting of legal fees, but did grant legal fees in connection with the Request for Emergency Interim Relief (related to whether the contention set would remain on hold during the pendency of the IRP) in a reduced amount of US\$450,000. The Panel further indicated that ICANN "shall reimburse [Afilias] the full amount of its share of [the IRP costs] that Afilias has advanced, in the amount of USD 479,458.27," the vast majority of which ICANN had already agreed to pay.⁵
[\(/en/board-activities-and-meetings/materials/approved-board-resolutions-special-meeting-of-the-icann-board-16-01-2022-en#foot5\)](https://www.icann.org/en/board-activities-and-meetings/materials/approved-board-resolutions-special-meeting-of-the-icann-board-16-01-2022-en#foot5)

The Panel recommended that ICANN "stay any and all action or decision that would further the delegation of the .WEB gTLD until such time as the [ICANN] Board has considered the opinion of the Panel in this Final Decision, and, in particular (a) considered and pronounced upon the question of whether the DAA complied with the New gTLD Program Rules following [Afilias'] complaints that it violated the Guidebook and Auction Rules and, as the case may be, (b) determined whether by reason of any violation of the Guidebook and Auction Rules, NDC's application for .WEB should be rejected and its bids at the auction disqualified."

Subsequently, on 21 June 2021, Afiliias submitted a request to the Panel for "interpretation and correction" of the Final Declaration under Article 33 of the ICDR Arbitration Rules (Request). On 21 December 2021, the Panel unanimously denied Afiliias' Request in its entirety, finding the Request to be "frivolous" and awarding ICANN the legal fees it incurred in responding to the Request (in the amount of US\$236,884.39). With the Panel's denial of Afiliias' Request, the Final Declaration in the .WEB IRP remains intact and is deemed "final" as of 21 December 2021. In accordance with [Article 4 \(/resources/pages/bylaws-2018-06-22-en#article4\)](#), Section 4.3(x) of the operative Bylaws, [6 \(/en/board-activities-and-meetings/materials/approved-board-resolutions-special-meeting-of-the-icann-board-16-01-2022-en#foot6\)](#), the Board is now considering the Panel's Final Declaration in the .WEB IRP.

The Board appreciates that both the parties and the *amici* participated in good faith in the IRP, and acknowledges that a neutral third-party Panel designated Afiliias as the prevailing party, declared that ICANN violated its Articles of Incorporation and Bylaws in the manner set forth in the Final Declaration, and declared that ICANN should reimburse Afiliias for its legal costs relating to the Request for Emergency Interim Relief and for its share of the IRP costs as set forth in the Final Declaration. The Board is therefore adopting this resolution so as to not delay the reimbursement of Afiliias for these costs, while the Board continues to consider the Panel's recommendation and/or next steps relating to the .WEB application(s).

The Board recognizes the importance of this decision and wants to make clear that it takes the results of all ICANN accountability mechanisms very seriously, which is why the Panel's recommendation is being referred to the Board Accountability Mechanisms Committee (BAMC) for thorough consideration and formulating a recommendation to the Board on next steps.

This action is within ICANN's Mission and is in the public interest as it is important to ensure that, in carrying out its Mission, ICANN is accountable to the community for operating within the Articles of Incorporation, Bylaws, and other established procedures. This accountability includes having a process in place by which a person or entity materially and adversely affected by a Board or organization action or inaction may challenge that action or inaction.

Taking this decision is expected to have a direct financial impact on ICANN in the amount the Panel declared ICANN should reimburse the prevailing party, which can be absorbed under the current budget. Further review and analysis of the Panel's recommendation will not have any direct impact on the security, stability or resiliency of the domain name system.

This is an Organizational Administrative function that does not require public comment.

c. **GAC Advice: ICANN72 Virtual Annual General Meeting Communiqué (October 2021)**

Whereas, the Governmental Advisory Committee (GAC) met during the ICANN72 Virtual Annual General Meeting and issued advice to the ICANN Board in a [communiqué \(/en/system/files/correspondence/gac-to-icann-01nov21-en.pdf\)](/en/system/files/correspondence/gac-to-icann-01nov21-en.pdf) on 01 November 2021 ("ICANN72 Virtual Annual General Meeting Communiqué").

Whereas, the ICANN72 Virtual Annual General Meeting Communiqué was the subject of an exchange between the Board and the GAC on 21 December 2021.

Whereas, in a 18 November 2021 [letter \(/en/system/files/correspondence/fouquart-to-botterman-18nov21-en.pdf\)](/en/system/files/correspondence/fouquart-to-botterman-18nov21-en.pdf), the GNSO Council provided its feedback to the Board concerning advice in the ICANN72 Virtual Annual General Meeting Communiqué relevant to the Board Scorecard on SSR2 Review Final Report, Domain Name Registration Directory Service and Data Protection, and EPDP Phase 1 Policy Implementation.

Whereas, the Board developed a scorecard to respond to the GAC's advice in the ICANN72 Virtual Annual General Meeting Communiqué, taking into account the dialogue between the Board and the GAC and the information provided by the GNSO Council.

Resolved (2022.01.16.16), the Board adopts the scorecard titled "[GAC Advice – ICANN72 Virtual Annual General Meeting Communiqué: Actions and Updates \(16 January 2022\) \(/en/system/files/resolutions-icann72-gac-advice-scorecard-16jan22-en.pdf\)](/en/system/files/resolutions-icann72-gac-advice-scorecard-16jan22-en.pdf)" in response to items of GAC advice in the ICANN72 Virtual Annual General Meeting Communiqué.

Rationale for Resolutions 2022.01.16.16

Article 12, Section 12.2(a)(ix) of the ICANN Bylaws permits the GAC to "put issues to the Board directly, either by way of comment or prior advice, or by way of specifically recommending action or new policy development or revision to existing policies." In [its ICANN72 Virtual Annual General Meeting Communiqué \(01 November 2021\) \(/en/system/files/correspondence/gac-to-icann-01nov21-en.pdf\)](/en/system/files/correspondence/gac-to-icann-01nov21-en.pdf), the GAC issued advice to the Board on the Board Scorecard on SSR2 Review Final Report. The GAC also provided a follow-up to previous advice regarding Domain Name Registration Directory Service and Data Protection and EPDP Phase 1 Policy Implementation. The ICANN Bylaws

require the Board to take into account the GAC's advice on public policy matters in the formulation and adoption of the polices. If the Board decides to take an action that is not consistent with the GAC advice, it must inform the GAC and state the reasons why it decided not to follow the advice. Any GAC advice approved by a full consensus of the GAC (as defined in the Bylaws) may only be rejected by a vote of no less than 60% of the Board, and the GAC and the Board will then try, in good faith and in a timely and efficient manner, to find a mutually acceptable solution.

The Board is taking action today on the GAC Consensus Advice to the ICANN Board in the [ICANN72 Virtual Annual General Meeting Communiqué](#) ([/en/system/files/correspondence/gac-to-icann-01nov21-en.pdf](#)), including the item related to the Board Scorecard on SSR2 Review Final Report. This decision is in the public interest and within ICANN's mission, as it is fully consistent with ICANN's bylaws for considering and acting on advice issued by the GAC.

The Board's actions are described in the scorecard dated 16 January 2022.

In adopting its response to the GAC advice in the [ICANN72 Virtual Annual General Meeting Communiqué](#) ([/en/system/files/correspondence/gac-to-icann-01nov21-en.pdf](#)), the Board reviewed various materials, including, but not limited to, the following materials and documents:

- ICANN72 Virtual Annual General Meeting Communiqué (01 November 2021):
<https://www.icann.org/en/system/files/correspondence/gac-to-icann-01nov21-en.pdf>
([/en/system/files/correspondence/gac-to-icann-01nov21-en.pdf](#)).
- The GNSO Council's review of the advice in the ICANN72 Virtual Annual General Meeting Communiqué as presented in the 18 November 2021 letter to the Board:
<https://www.icann.org/en/system/files/correspondence/fouquart-to-botterman-18nov21-en.pdf>
([/en/system/files/correspondence/fouquart-to-botterman-18nov21-en.pdf](#)).

The adoption of the GAC advice as provided in the scorecard will have a positive impact on the community because it will assist with resolving the advice from the GAC concerning gTLDs and other matters. There are no foreseen fiscal impacts associated with the adoption of this resolution.

Approval of the resolution will not impact security, stability or resiliency issues relating to the DNS. This is an Organizational Administrative function that does not require public comment.

INTRODUCTION	1
ARGUMENT	6
I. The Bylaws Limit the Panel’s Jurisdiction.	6
A. The Panel Has Jurisdiction Only Over the “Disputes” Set Out in Afilias’ Amended IRP Request.....	7
B. The Panel’s Remedial Authority Is Limited to Issuing a Declaration as to Whether Covered Actions Violated the Articles or Bylaws.	11
C. The Panel Is Required to Apply a Prescribed Standard of Review.	23
II. Afilias’ Claims Regarding Alleged Actions and Inactions in 2016 Are Time-Barred.....	27
A. The Panel Has Jurisdiction Only Over Claims Brought Within the Time Limits Established by the Interim Supplementary Procedures.....	27
B. Afilias’ Claim that ICANN Had an Unqualified Obligation to Disqualify NDC Is Time-Barred.....	29
C. Afilias’ Claim that ICANN Staff Violated the Articles and Bylaws in Their Investigation of Pre-Auction Rumors or Post-Auction Complaints Is Also Time-Barred.	32
D. Afilias’ Equitable Estoppel Defense Has No Merit.....	33
E. The Repose and Limitations Periods Apply Retroactively.....	37
III. ICANN Was Not Required to Disqualify NDC Based on ICANN’s Core Values Regarding Competition or NDC’s Alleged Violations of the Guidebook and Auction Rules.....	39
A. The Unrebutted Evidence Confirms That ICANN’s Core Values Regarding Competition Did Not Require ICANN to Disqualify NDC.	41
B. ICANN’s Articles And Bylaws Did Not Require ICANN To Automatically Disqualify NDC For The Alleged Guidebook And Auction Rules Violations.....	62
IV. The ICANN Board Complied with ICANN’s Articles and Bylaws by Deciding Not to Take Any Action Regarding the .WEB Contention Set While Accountability Mechanisms Were Pending, and the Panel Should Defer to this Reasonable Business Judgment.	72

TABLE OF CONTENTS
(continued)

	Page
A. ICANN Has A Longstanding Practice Of Keeping Contention Sets “On Hold” While Accountability Mechanisms Are Pending.	73
B. The Board’s Decision To Adhere To Its Normal Practice of Not Taking Action While a Related Accountability Mechanism Is Pending Was Well Within The Board’s Reasonable Business Judgment And Is Entitled To Deference.....	74
C. Afilias’ Arguments That The Board’s Decision Is Not Protected By The Business Judgment Rule Lack Merit.	79
D. ICANN’s Obligations To Act Transparently Did Not Require The Board To Inform Afilias Of Its 3 November 2016 Decision.	83
V. Afilias Has Not Properly Challenged ICANN’s Transmittal of a Form Registry Agreement to NDC in June 2018 and, in Any Event, ICANN Acted in Accordance with Guidebook Procedures and the Articles and Bylaws.....	87
VI. Afilias’ Claims that ICANN’s Pre- and Post-Auction Investigations Violated the Articles and Bylaws Have No Merit and Are Not Properly Before the Panel.	90
A. Afilias’ Pre-Auction Investigation Claim Lacks Merit.....	91
B. Afilias’ Post-Auction Investigation Claim Also Lacks Merit.	96
VII. Afilias’ Rule 7 Claim Must Be Rejected.	100
VIII. Costs.....	106
CONCLUSION.....	110

GLOSSARY OF DEFINED TERMS

Term	Definition
Afilias	Claimant Afilias Domains No. 3 Limited
Amended IRP Request	Amended Request by Afilias Domains No. 3 Limited for Independent Review, submitted on 21 March 2019
Articles	ICANN's Articles of Incorporation, Ex. C-2
Auction Rules	Power Auctions LLC's Auction Rules for New gTLDs: Indirect Contentions Edition, Ex. C-4
Bidders Agreement	New gTLD Auction Bidders Agreement, Ex. C-5
Bylaws	ICANN's Bylaws, as amended 18 June 2018, Ex. C-1
ccTLD	Country code top-level domain
CCWG-Accountability	A cross-community working group created by ICANN's supporting organizations and advisory committees to review and advise on ICANN's accountability mechanisms
CEP	ICANN's Cooperative Engagement Process, as described in Article 4, Section 4.3(e) of ICANN's Bylaws
CIR	Contracting Information Request
Core Values regarding competition	ICANN's Commitment and Core Values regarding competition, as set forth in Article 1, Section 1.2(a) and Section 1.2(b)(iii), (iv) of ICANN's Bylaws
DAA	Domain Acquisition Agreement between Verisign and NDC, executed on 25 August 2015, Ex. C-69
DIDP	ICANN's Documentary Information Disclosure Policy
DNS	Domain Name System
DOJ	United States Department of Justice
Donuts	Donuts, Inc., the parent company of .WEB applicant Ruby Glen
GNSO	Generic Names Supporting Organization
gTLD	Generic top-level domain
Guidebook	ICANN's New gTLD Applicant Guidebook, Ex. C-3.
Hearing	The Phase II Hearing
ICANN	Respondent Internet Corporation for Assigned Names and Numbers
Interim Supplementary Procedures	Interim Supplementary Procedures for ICANN Independent Review Process, Ex. C-59
IOT	Independent Review Process Implementation Oversight Team
IRP	Independent Review Process
NDC	<i>Amicus Curiae</i> Nu DotCo LLC
NPV	Net present value
Program	New gTLD Program
Reply Memorial	Reply Memorial in Support of Amended Request by Afilias Domains No. 3 Limited for Independent Review, submitted on 4 May 2020 and revised on 6 May 2020
Response to the <i>Amici</i> Briefs	Afilias Domains No. 3 Limited's Response to the <i>Amicus Curiae</i> Briefs, submitted on 24 July 2020
Ruby Glen	Ruby Glen, LLC

Term	Definition
Supplemental Proposal	CCWG-Accountability Supplemental Final Proposal on Work Stream 1 Recommendations, Ex. C-122
Verisign	<i>Amicus Curiae</i> Verisign, Inc.

PANEL QUESTIONS

ICANN thanks the Panel for its preparation of the set of questions it posed to the Parties. ICANN has endeavored to answer each of them where appropriate throughout this brief and has noted where it has done so. For ease of reference, ICANN’s responses to the Panel’s questions can be found as follows:

Question Number	Panel Question	Location
Question 1	The Parties have cited a number of prior IRP decisions. What is the precedential value of these decisions on questions such as time limitation, the applicable standard of review, the remedial powers of IRP Panels, and other questions of principle in light of changes that may have been made to ICANN’s Bylaws after the date of the decisions?	Paragraph 35, footnote 38
Question 2	What is the legal effect of the Board’s adoption of the CCWG Report (C-122) insofar as the later-adopted (amended) Bylaws (C-1) contain provisions contrary to or inconsistent with the Report? Is the CCWG Report relevant to the interpretation of the provisions of the Bylaws relating to the accountability mechanisms of ICANN?	Paragraphs 37-45
Question 3	What is the effect on the claims in issue in this case of the timing of the adoption of Rule 4 of the Interim Supplementary procedures (25 October 2018), as it affects the timing of bringing the claims that have been advanced in this proceeding (4 months and 12 months repose period)?	Paragraphs 81-85
Question 4	What is the scope of the litigation waiver (Terms and Conditions of Module 6 in the Guidebook): “Applicant agrees not to challenge in court . . . any final decision made by ICANN with respect to the Application . . . or any other legal claim . . . with respect to the application”? What link, if any, exists between the litigation waiver and the scope of the jurisdiction of IRP panels under the Bylaws, in light of ICANN accountability obligations? Does the litigation waiver have any relationship to the specific claims advanced in the Claimant’s Amended Request?	Paragraphs 46-48

Question Number	Panel Question	Location
Question 5	Please comment on VeriSign’s stated concern that the private resolution of contention sets may involve collusion, in light of ICANN’s stated preference for the private resolution of contention sets.	Paragraphs 130-135
Question 6	Please comment on the fact that NDC and Verisign deliberately sought to keep the DAA confidential until after the auction, and that VeriSign’s support was essential to NDC winning the auction, in light of ICANN’s commitment to transparency and accountability.	Paragraphs 157-158
Question 7	Is there an inconsistency between the contention that Afilias' claims are time barred and ICANN’s position that it has not yet addressed the fundamental issue that Afilias complains of in this IRP? Please comment on the Respondent’s observation that the Claimant’s claims are in one sense premature and in another sense overdue (Respondent’s Response, para. 7).	Paragraphs 62-72; Paragraphs 163-171
Question 8	The Claimant is invited to comment on article 4.3(o) of the Bylaws as it relates to the remedies it is seeking in this IRP.	This question is addressed to the Claimant. However, ICANN also addresses this question in paragraphs 23-48
Question 9	The Claimant is asked to clarify what is left to be decided in connection with the Claimant’s Rule 7 claim given the disposition of those issues in the Decision on Phase I and the conduct of the IRP in accordance with that ruling. The Claimant is also asked to identify the source of its alleged entitlement to a cost award for the expenditure of effort because of VeriSign and NDC’s participation in the IRP, on account of the alleged “wrongful” adoption of Rule 7.	This question is addressed to Claimant. However, ICANN also addresses this question in paragraphs 218-231.
Question 10	Please comment, in light of the relevant provisions of the Bylaws, on ICANN’s decision not to disclose to Afilias, the Amici and the general public its Board’s November 2016 decision regarding .WEB.	Paragraphs 179, 180, 182-189

Question Number	Panel Question	Location
	The Respondent is asked to explain the reason why this Board decision was disclosed allegedly for the first time in the Respondent's Rejoinder?	

INTRODUCTION

1. Afilias' case has been a moving target throughout this IRP, and it continued to evolve during the Hearing, where Afilias essentially abandoned its competition claim and associated narrative, which, though contrived, were clearly designed to give its case a greater sense of urgency and significance. Afilias' original and Amended IRP Request are both rooted in the contention that ICANN's founding purpose was to affirmatively promote competition and that this "competition mandate" left it no choice but to block Verisign's potential operation of .WEB as "the last, best hope of creating a competitive environment at the wholesale registry level of the DNS and ending VeriSign's market power."¹

2. But in its effort to endow its case with a higher and more pressing purpose, Afilias ignored the following key facts: that ICANN has already authorized the addition of over 1,200 new gTLDs to the Internet, thereby increasing competition and consumer choice; that Afilias is on record as confirming that ICANN is not a competition regulator; that the Guidebook does not authorize ICANN to assess which applicant, among those vying for a particular gTLD, might do a better job "creating competition;" that the community, in developing the Program, could have recommended that Verisign be prohibited from applying for new gTLDs, but did not do so; and that the DOJ rejected the opportunity to block Verisign's plans. In addition, ICANN's and Verisign's multiple fact and expert witnesses issued witness statements and expert reports convincingly nailing the coffin shut on Afilias' competition claim through careful analysis of the factual record, ICANN's Bylaws and founding documents, as well as the available economic evidence.

3. Rather than attempt to rehabilitate its competition claim in response, Afilias ran

¹ Amended IRP Request ¶ 83.

away from that claim at the Hearing, thus reducing its case to a collection of alleged Guidebook and Auction Rules violations. Although ICANN does not minimize the importance of following the Guidebook and Auction Rules, this Panel is charged with determining whether ICANN failed to comply with its Articles and Bylaws, not deciding whether Afilias should be awarded .WEB on the basis of NDC's alleged violations of the Guidebook and Auctions Rules. Having effectively abandoned its competition claim, Afilias is left with no compelling argument that the Articles and Bylaws required ICANN to find NDC in violation of the Guidebook and Auction Rules and disqualify NDC for those alleged violations.

4. Afilias' flight from its competition claim was no oversight. Despite presenting the so-called competition mandate as the original lynchpin of its Amended IRP Request, Afilias chose not to cross-examine John Kneuer, whose expert report explained that ICANN does not have the type of competition mandate Afilias suggests, nor the authority or expertise to select which applicants for any given gTLD are most likely to achieve pro-competitive results. Likewise, Afilias failed to cross-examine Becky Burr on the portions of her witness statement that made clear that ICANN is not permitted to act as a competition regulator and does not have the authority to block potentially anticompetitive transactions like a government regulator. Afilias also failed to address at the Hearing the Bylaws provisions and ICANN foundational documents that explain that ICANN has no authority to act as a competition regulator, and Afilias never addressed (or even acknowledged) its previous, public statement that "***Neither ICANN nor the GNSO have the authority or expertise to act as anti-trust regulators.***"² All of this evidence stands un rebutted.

5. With respect to Afilias' assertion that .WEB is "the most promising new gTLD,"

² Amended IRP Request at ¶ 8 & R-21 at 8 (emphasis added).

rather than submitting valid economic evidence to support this theory, Afilias relied upon the subjective opinions of Mr. Zittrain, who is not an economist, and Dr. Sadowsky, who is a technologist, not an expert economist. Moreover, these conclusions were exposed as wholly-unreliable and were contradicted by two of the world’s most renowned competition economists, Dr. Dennis Carlton and Dr. Kevin Murphy. Afilias made no attempt even to address, much less rebut, Dr. Murphy’s or Dr. Carlton’s conclusions, either via cross-examination at the Hearing or via rebuttal expert reports, which Afilias had plenty of opportunity to submit. Afilias has thus effectively abandoned what was previously so central to its case – that ICANN’s Core Values regarding competition “required” ICANN to disqualify NDC due to the potential assignment of the .WEB registry agreement to Verisign.

6. Without Afilias’ narrative that the DAA threatened to vanquish competition in the DNS and subvert the rationale for ICANN’s very existence—which Afilias wrongly describes as being to encourage competition with Verisign³—Afilias’ case boils down to whether ICANN was “required” to disqualify NDC for a series of alleged violations, some highly technical, of the Guidebook and the Auction Rules. Afilias also makes ancillary complaints regarding ICANN’s investigation of NDC’s alleged violations. As discussed herein, these contentions are meritless and should be rejected. Indeed, most of Afilias’ causes of action are not even within the Panel’s jurisdiction, either because they are not properly pled in Afilias’ Amended IRP Request, as required, or they are outside the repose and limitations periods established by Rule 4 of the Interim Supplementary Procedures. To assist the Panel, ICANN has created an index identifying Afilias’ causes of action and requests for relief, together with ICANN’s defenses to each, which is attached as Appendix A.

³ Amended IRP Request ¶ 9.

7. Nearly all of Afilias' requests for relief are also outside the Panel's jurisdiction, which is expressly limited by Section 4.3(o) of the Bylaws. In fact, all of the affirmative relief Afilias seeks – such as an order that ICANN disqualify NDC and proceed to contracting with Afilias at a bid price set by the Panel – is manifestly in excess of the Panel's jurisdiction. Both the express terms of the Bylaws and the testimony given during the Hearing confirm that an IRP Panel's jurisdiction and authority is limited to issuing a binding declaration on whether a properly-alleged ICANN action or inaction violated ICANN's Articles or Bylaws.

8. Afilias will undoubtedly attempt to demonize ICANN for invoking these jurisdictional limits as an effort to evade accountability. But from the outset ICANN has emphasized the boundaries of the Panel's authority to ensure that its decision is compliant with applicable standards and is thus enforceable. All courts and tribunals have limits to their jurisdiction, and it is Afilias' demand that this Panel exceed its jurisdiction that should be firmly rejected.

9. As the testimony at the Hearing confirmed, ICANN has not decided whether the DAA violates the Guidebook or Auction Rules or the appropriate remedy for any violation that may be found. Ms. Burr and Chris Disspain, two current Board members, explained that, in addition to the fact that the Bylaws do not allow the Panel to decide the propriety of the DAA, ICANN would be best suited to decide such issues because of its unique familiarity with the Guidebook and the Program, and its deep appreciation of the various competing interests at play. Ms. Burr testified that the Panel should not evaluate the propriety of the DAA because “there are so many moving parts and parties here, imagine if this Panel said ‘ICANN violated the bylaws, and you must award this to, you know, X, Y or Z.’ There are going to be two or three parties

who then have a cause of action.”⁴ Likewise, Mr. Disspain explained that the propriety of the DAA “is a matter for the Board,” rather than this Panel.⁵ Mr. Disspain also made clear that any thoughts or recommendations the Panel may have for ICANN following its evaluation of the facts will be taken “very seriously by the Board.”⁶

10. The .WEB contention set has been “on hold” for almost the entire period of time since the .WEB auction due to pending Accountability Mechanisms and the DOJ’s antitrust investigation. Every ICANN witness questioned on the topic confirmed that ICANN has a longstanding practice of placing applications and contention sets on hold while related Accountability Mechanisms are pending, and that it does so out of deference to, and so as to not interfere with, those procedures and their outcomes. ICANN publicizes this practice and, in response to Afilias’ letter-writing campaign in 2016, ICANN informed Afilias not only of the existence of the practice (if Afilias did not already know), but the fact that the .WEB contention set was placed on hold because of it.

11. Thus, it should have come as no surprise that, in November 2016, after the ICANN Board was updated by counsel regarding the issues swirling around .WEB – from the pending federal court litigation, to Afilias’ informal complaints and the pending Accountability Mechanism – the Board elected to continue to follow ICANN’s practice by not making any decisions regarding the .WEB contention set during the pendency of related Accountability Mechanisms and, later, the DOJ investigation. The Board’s decision was reasonable, not only because taking precipitous action could have interfered with ongoing and future Accountability Mechanisms, but also because the outcome of such Accountability Mechanisms, and the DOJ

⁴ Hearing Tr. at 334:5-20.

⁵ *Id.* at 984:9-987:24.

⁶ *Id.* at 985:22-988:19.

investigation, could have had an impact on any eventual analysis ICANN might be called upon to make. Because this decision was well within the Board's reasonable business judgment, the Panel should respect it.

12. Likewise, the Hearing testimony explained that ICANN's removal of the hold on the .WEB contention set and transmission of a form registry agreement to NDC did not reflect a decision that the DAA was compliant with the Guidebook and Auction Rules, but was instead a ministerial act taken pursuant to ICANN's normal processes because all Accountability Mechanisms had concluded. As Mr. Disspain explained, "ICANN was taking the next step in its process . . . without wishing to place any weight on either side in this matter, there are two sides . . . both sides need to be treated fairly by ICANN. The best way for ICANN to do that is to follow its process."⁷ At the same time, consistent with ICANN's established practice and its transparency obligations, ICANN staff provided all of the members of the .WEB contention set, including Afilias, with notice of the change of status, which is what finally caused Afilias to make good on its repeated threats to invoke an Accountability Mechanism – a move that ICANN had been expecting from Afilias for nearly two years.

13. For these reasons, and as set forth more fully below, Afilias' claims should each be rejected and its requests for relief denied.

ARGUMENT

I. THE BYLAWS LIMIT THE PANEL'S JURISDICTION.

14. This Panel's jurisdiction is created and defined by ICANN's Bylaws and the Interim Supplementary Procedures applicable to this IRP. The Bylaws and Interim Supplementary Procedures narrowly circumscribe: (a) the types of disputes that may be

⁷*Id.* at 980:17-981:16.

addressed, and the claims that can be raised, in this IRP – *i.e.*, “Disputes” and the “Claim” as defined by the Bylaws; (b) the remedies available, as set forth in Section 4.3(o) of the Bylaws; (c) the time within which a Dispute may be brought – *i.e.*, the limitations and repose periods established by Rule 6 of the Interim Supplementary Procedures; and (d) the standard of review as set forth in Section 4.3(i) of the Bylaws. Despite Afilias’ attempts to argue that the Panel has the discretion to ignore the plain language of the Bylaws, the Bylaws control and they could not be more clear on these subjects.

A. The Panel Has Jurisdiction Only Over the “Disputes” Set Out in Afilias’ Amended IRP Request.

15. An IRP is a narrow, bespoke form of arbitration designed to resolve “Claims” that past actions or inactions by ICANN’s Board, individual directors, officers or staff violated the Articles or Bylaws. This IRP Panel does not have jurisdiction to resolve disputes other than whether ICANN violated its Articles or Bylaws. Nor does it have jurisdiction over disputes other than the Claims asserted in Afilias’ Amended IRP Request.

16. Section 4.3(a) of the Bylaws states that “[t]he IRP is intended to hear and resolve *Disputes*[.]”⁸ Similarly, Section 4.3(g) states that “the IRP Panel shall be charged with hearing and resolving the *Dispute*, considering the *Claim* and ICANN’s written response[.]”⁹

17. “Dispute” and “Claim” are defined terms. As relevant here, “Disputes” are “*Claims* that Covered Actions constituted an action or inaction that violated the Articles of Incorporation or Bylaws[.]”¹⁰ “Covered Actions” are defined as “any actions or failures to act

⁸ Bylaws, Art. 4, § 4.3(a) (emphasis added), C-1.

⁹ *Id.* Art. 4, § 4.3(g) (“*the IRP Panel shall be charged with hearing and resolving the Dispute*, considering the Claim and ICANN’s written response (“**Response**”) in compliance with the Articles of Incorporation and Bylaws, as understood in light of prior IRP Panel decisions decided under the same (or an equivalent prior) version of the provision of the Articles of Incorporation and Bylaws at issue, and norms of applicable law.”) (emphasis added).

¹⁰ *Id.*, Art. 4, § 4.3(b)(iii) (emphasis Added). The full definition of “Dispute” is as follows:

(iii) “*Disputes*” are defined as:

by or within ICANN committed by the Board, individual Directors, Officers, or Staff members that give rise to a Dispute.”¹¹

18. “Claim” is defined as the written statement filed by a Claimant to initiate an IRP: “An IRP shall commence with the Claimant’s filing of a written statement of a Dispute (‘a **Claim**’) with the IRP Provider[.]”¹² The “written statement of a Dispute” that “commence[s]” the IRP is a Request for IRP. Read together, these definitions limit the Panel’s jurisdiction to resolving the allegations set out in a Request for Independent Review Process (here, Afilias’ Amended IRP Request) that actions or inactions of the Board, individual directors, officers or staff members violated the Articles or Bylaws. The Panel does not have jurisdiction to resolve disputes other than whether Covered Actions violated the Articles or Bylaws. These limitations were confirmed on cross-examination by Ms. Burr, a former member of the CCWG-Accountability and current ICANN Board member, who was involved in drafting Section 4.3 of ICANN’s Bylaws:

-
- (A) *Claims that Covered Actions constituted an action or inaction that violated the Articles of Incorporation or Bylaws, including but not limited to any action or inaction that:*
 - (1) *exceeded the scope of the Mission;*
 - (2) *resulted from action taken in response to advice or input from any Advisory Committee or Supporting Organization that are claimed to be inconsistent with the Articles of Incorporation or Bylaws;*
 - (3) *resulted from decisions of process-specific expert panels that are claimed to be inconsistent with the Articles of Incorporation or Bylaws;*
 - (4) *resulted from a response to a DIDP (as defined in Section 22.7(d)) request that is claimed to be inconsistent with the Articles of Incorporation or Bylaws; or*
 - (5) *arose from claims involving rights of the EC as set forth in the Articles of Incorporation or Bylaws.*
 - (B) *Claims that ICANN, the Board, individual Directors, Officers or Staff members have not enforced ICANN’s contractual rights with respect to the IANA Naming Function Contract, and*
 - (C) *Claims regarding PTI service complaints by direct customers of the IANA naming functions that are not resolved through mediation.*

¹¹ *Id.*, Art. 4, § 4.3(b)(ii). The Panel recognized the jurisdictional boundaries established by these interlocking definitions in its Decision on Phase I at paragraphs 114-116.

¹² *Id.*, Art. 4, § 4.3(d). Throughout this brief, the capitalized term “Claim” is used as defined by Section 4.3(d) of the Bylaws, while the lower-case “claim” is used, when referring to Afilias’ claims, in its colloquial sense as synonymous with “cause of action.”

The purpose of the IRP is to determine whether or not, in taking some action or inaction or failing to act, ICANN has violated its Bylaws, and that would be including in its application of the rules of the Applicant Guidebook if it's violated the Bylaws somehow.

19. Nor does the Panel have jurisdiction to resolve alleged violations not asserted in the Amended IRP Request. This limitation is consistent with Rule 6 of the Interim Supplementary Procedures, which states that “[t]he Claimant’s written statement of a Dispute shall include all claims that give rise to a particular Dispute, but such claims may be asserted as independent or alternative claims.” As the Panel in the .MERCCK IRP stated, the Bylaws require the Claimant to “identify exactly” the actions it contests, and “also identify exactly how such action is not consistent with the Articles of Incorporation and Bylaws.”¹³ Indeed, a Claimant’s request for IRP may be its *only* pleading in the matter. An IRP Panel “may request additional written submissions,”¹⁴ but a Claimant has no right to make further submissions absent such a request, and such further submissions (if permitted) cannot change the nature of the claims being asserted.

20. It is axiomatic that an arbitral tribunal’s jurisdiction is confined by the submission to arbitration. “An arbitral tribunal has no authority to decide a dispute that the parties have not agreed to arbitrate, and submitted to it, and its awards on such matters are subject to non-recognition.”¹⁵ Under Article V(1)(c) of the New York Convention, recognition and enforcement may be refused for an arbitral award that “deals with a difference not contemplated by or not falling within the terms of the submission to arbitration, or [that] contains decisions on

¹³ *Merck KGaA v. ICANN*, ICDR Case No. 01-14-0000-9604, Final Declaration (Reichert, Matz, Dinwoodie) (“Merck, Final Declaration”) (2015), ¶ 22, AA 55.

¹⁵ G. Born, *INTERNATIONAL COMMERCIAL ARBITRATION* §26.05 at 3542 (2nd Ed. 2014), RLA-74

matters beyond the scope of the submission to arbitration.”¹⁶ This principle is memorialized in the UK Arbitration Act of 1996 (the law of the arbitral seat) as well as federal and California law (the law governing the Bylaws).¹⁷

21. Accordingly, the Panel does not have jurisdiction to make determinations regarding NDC’s and Verisign’s alleged conduct except to the extent necessary to resolve whether Covered Actions violated the Articles or Bylaws.¹⁸ Afilias’ claims, however, focus almost exclusively on NDC’s alleged violations of the Guidebook and Auction Rules, and fail to establish a crucial link to the only issue within the Panel’s jurisdiction: whether or not ICANN violated its Articles or Bylaws. Afilias’ attempt to create this linkage by asserting that ICANN had an absolute and unqualified obligation under its Articles and Bylaws to disqualify NDC’s application (and award .WEB to Afilias) as a result of NDC’s alleged violations is overreaching and untenable. Afilias can point to no provision of the Articles or Bylaws that required ICANN to automatically disqualify NDC and award .WEB to Afilias, because there is none.

22. The Panel also does not have jurisdiction to resolve purported violations of the Articles or Bylaws that are not alleged in the Amended IRP Request, such as the belated assertions regarding ICANN’s post-auction investigation and ICANN’s transmittal of a form registry agreement to NDC. This limitation is further discussed in Sections V and VI below.

B. The Panel’s Remedial Authority Is Limited to Issuing a Declaration as to Whether Covered Actions Violated the Articles or Bylaws.

23. The Panel’s remedial authority is strictly limited by Section 4.3(o) of the Bylaws.

These limitations are extremely important because all but one of Afiliias’ requests for relief exceed the Panel’s jurisdiction.

24. Section 4.3(o) states:

Subject to the requirements of this Section 4.3, each IRP Panel shall have the authority to:

- (i) Summarily dismiss Disputes that are brought without standing, lack substance, or are frivolous or vexatious;
- (ii) Request additional written submissions from the Claimant or from other parties;
- (iii) ***Declare whether a Covered Action constituted an action or inaction that violated the Articles of Incorporation or Bylaws***, declare whether ICANN failed to enforce ICANN’s contractual rights with respect to the IANA Naming Function Contract or resolve PTI service complaints by direct customers of the IANA naming functions, as applicable;
- (iv) ***Recommend that ICANN stay any action or decision, or take necessary interim action, until such time as the opinion of the IRP Panel is considered;***
- (v) Consolidate Disputes if the facts and circumstances are sufficiently similar, and take such other actions as are necessary for the efficient resolution of Disputes;
- (vi) Determine the timing for each IRP proceeding; and
- (vii) Determine the shifting of IRP costs and expenses consistent with Section 4.3(r).¹⁹

25. The only binding remedy authorized by Section 4.3(o) is a Declaration under Article 4.3(o)(iii). The only affirmative relief authorized under Section 4.3(o) is to

“[r]ecommend that ICANN stay any action or decision, or take necessary interim action, until such time as the opinion of the IRP Panel is considered[.]” as set out in subsection (iv).²⁰

¹⁹ Bylaws, Art. 4, § 4.3(o) (emphasis added).

²⁰ *Id.*, Art. 4, § 4.3(o)(iv).

Section 4.3(o) is an exhaustive enumeration of the Panel’s authority. This is self-evident from the terms of Section 4.3(o), and it was confirmed by Ms. Burr, who was involved in the drafting of this provision.²¹

26. Indeed, as Ms. Burr explained, “the IRP’s authority is limited to finding -- making a determination about whether an action or inaction violated the articles of incorporation and bylaws, and that’s what’s binding on ICANN.”²² Ms. Burr also explained during the Hearing that if there is a determination that ICANN breached its Articles or Bylaws, “ICANN must take – then take appropriate action to remedy the breach.”²³

27. Afilias’ requests for relief clearly exceed the Panel’s limited remedial authority. Afilias sets out these requests at paragraph 89 of its Amended IRP Request, and it reiterated them during its opening presentation at the hearing.²⁴ It asks for seven “Declaration[s]”:

- (1) that ICANN has acted inconsistently with its Articles and Bylaws, breached the binding commitments contained in the AGB, and violated international law;
- (2) that, in compliance with its Articles and Bylaws, ICANN must disqualify NDC’s bid for .WEB for violating the AGB and Auction Rules;
- (3) ordering ICANN to proceed with contracting the Registry Agreement for .WEB with Afilias in accordance with the New gTLD Program Rules;
- (4) specifying the bid price to be paid by Afilias;

²¹ Hearing Tr. at 394:1-395:1 (“**Q.** BY MR. ENSON: Ms. Burr, were you involved in the drafting of this particular provision? **A.** Yes, I was. **Q.** Sorry, go ahead. **A.** I was involved in Section 4, Article 4. **Q.** Would you describe for us what is set forth here in Section 4.3(o)? **A.** 4.3(o) is a statement of the authority of the IRP Panel, and it includes the three provisions that had been in the bylaws for some time, which is to dismiss -- actually, that may have been a new one, declare whether covered actions constituted an action or inaction that violated the articles. There was also an existing authority to stay actions or decisions, and we then added a few additional provisions relating to, for example, the PTI, determining the shift of IRP costs and expenses was actually moved from a different part of the section. So this was an attempt to gather the authority of the Panel and articulate the full authority of the Panel. **Q.** Is Section 4.3(o) an exhaustive listing of the IRP Panel’s authority? **A.** Of the authority which is binding on ICANN, yes.”).

²² *Id.* at 323:25-324:22 (Burr).

²³ *Id.* at 333:23-334:29.

²⁴ *See* Afilias’ Opening Presentation, at Slide 60, which reproduces paragraph 89 of Afilias’ Amended IRP Request in its entirety, thus confirming Afilias’ quest for remedies the Panel has no authority to grant.

- (5) that Rule 7 of the Interim Procedures is unenforceable and awarding Afilias all costs associated with the additional work needed to, among other things, address arguments and filings made by VeriSign and/or NDC;
- (6) declaring Afilias the prevailing party in this IRP and awarding it the costs of these proceedings;
- (7) and granting such other relief as the Panel may consider appropriate in the circumstances.²⁵

28. The first form of relief requested by Afilias is within the Panel’s jurisdiction insofar as it seeks a declaration regarding whether ICANN acted consistently with its Bylaws and Articles, although it should be denied for the reasons set out in Sections II through VII below. Requests (2) through (7) clearly exceed the Panel’s authority. The Panel does not have authority to order ICANN to disqualify NDC’s bid (Request No. 2), proceed to contracting with Afilias (Request No. 3), specify the price to be paid by Afilias (Request No. 4), invalidate Rule 7 (Request No. 5) or order any other relief that it “may consider appropriate in the circumstances” (Request No. 7). The Panel should reject these requests as outside its jurisdiction, and the disputed factual or legal issues that form the basis for these requests should be disregarded as moot and unnecessary to the resolution of this dispute.

29. With regard to Afilias’ requests for an award of costs (Request No. 5 and 6), the Panel’s authority to shift costs is governed by Section 4.3(r) of the Bylaws, which provides that “each party to an IRP proceeding shall bear its own legal expenses[.]” The IRP Panel is authorized to shift costs only on a finding that “the losing party’s Claim or defense [is] frivolous or abusive.”²⁶ Afilias has not previously argued that this standard is satisfied, and it clearly is not, as discussed in Section VIII.

30. Afilias has not even attempted to explain how its requests for relief possibly could

²⁵ Amended IRP Request ¶ 98.

²⁶ Bylaws, Art. 4, § 4.3(r).

fall within the Panel’s remedial authority as defined by Section 4.3(o). Instead, Afilias has mounted a series of shifting arguments in an attempt to sidestep Section 4.3(o). None has merit.

1. The “Purposes of the IRP” Do Not Expand the Panel’s Remedial Authority.

31. Afilias’ first tactic was to ignore Section 4.3(o) completely and to argue that its sought-for remedies are somehow mandated by the “purposes of the IRP.” ICANN argued in its Response to the Amended IRP Request that “Afilias’ requested relief from the Panel goes far beyond what is permitted by ICANN’s Bylaws[.]”²⁷ Remarkably, Afilias’ Reply Memorial fails even to *mention* Section 4.3(o), the Bylaws provision governing the Panel’s remedial authority. Instead, Afilias argued that the Panel’s purported authority to grant the remedies that Afilias requests somehow derives from statements in Section 4.3(a) that IRP Panels are to:

- “[R]esolve Disputes”²⁸;
- “Ensure that ICANN . . . otherwise complies with its Articles of Incorporation and Bylaws”²⁹;
- “Empower the global Internet community and claimants to enforce compliance with the Articles of Incorporation and Bylaws”³⁰;
- “Ensure that ICANN is accountable to the global Internet community and Claimants”³¹;
- “Lead to binding, final resolutions consistent with international arbitration norms that are enforceable in any court with proper jurisdiction.”³²

32. None of these purposes conflicts with or overrides the limits on the Panel’s

²⁷ ICANN’s Response to Amended IRP Request ¶ 83.

³² Afilias’ Reply Memorial ¶ 151 (citing Bylaws, Art. 4, § 4.3(a)(viii)); Afilias Response to *Amici* Briefs ¶ 230.

remedial authority under Section 4.3(o). Recall that “Dispute” is defined as “Claims that Covered Actions constituted an action or inaction that violated the Articles of Incorporation or Bylaws[.]”³³ Disputes thus concern past actions or inactions. The Panel resolves Disputes by issuing a Declaration as to whether a Covered Action violated the Articles or Bylaws. The purposes of the IRP as set out in Section 4.3(a) are entirely consistent with the Panel’s limited remedial authority as defined by Section 4.3(o). Moreover, even if the general purposes of an IRP as stated in Section 4.3(a) somehow conflicted with the specific remedies available as set out in Section 4.3(o) (and they clearly do not), the latter would control under the rule that “when a general and particular provision are inconsistent, the latter is paramount to the former.”³⁴

2. Prior IRP Decisions Do Not Authorize Afilias’ Requested Relief.

33. Afilias incorrectly asserted in its Reply Memorial that prior IRP decisions establish that the Panel has authority to issue “affirmative declaratory relief,” a euphemism that Afilias uses to describe the mandatory injunctions sought by items (2) through (5) of its requests for relief. Afilias bases this assertion principally on the IRP Panel’s decision in *GCC v. ICANN*.³⁵ But the *GCC* Panel found only that IRP Panels “may and should *recommend* affirmative steps to be taken by the Board.”³⁶ The *GCC* Panel did not order the Board to take any such steps or suggest that it had authority to issue that type of order.³⁷

³³ Bylaws, Art. 4, § 4.3(b)(iii)(A).

³⁴ Cal. Civ. Proc. Code § 1859, RLA-21; *see also CAZA Drilling (California), Inc. v. TEG Oil & Gas U.S.A., Inc.*, 142 Cal. App. 4th 453, 466 (2006) (“when general and specific provisions are inconsistent, the latter control), RLA-6.

³⁵ Afilias’ Reply Memorial ¶ 153 & n.279, (citing *GCC v. ICANN*, ICDR Case No. 01-14-0002-1065, Partial Final Declaration ¶ 146 (19 Oct. 2019), CA-17).

³⁶ *GCC v. ICANN*, ¶ 146, CA-17.

³⁷ The *GCC* case arose under the December 8, 2011 Bylaws. Sections 4.3(8)(b) and (c) of the December 8, 2011, Bylaws are substantially similar to Section 4.3(o)(iii) and (iv) of the current Bylaws in the respects relevant to this IRP.

34. Other IRP Panels have similarly found that their remedial authority is limited by the Bylaws. In *Booking.com v. ICANN*, the Panel found that the “authority of an IRP panel is expressly prescribed – and expressly limited – by the ICANN Bylaws[,]” including Sections 4.3(11)(c) and (d) of the then-operative Bylaws, which are substantially similar to Article 4.3(o)(iii) and (iv) of the currently-operative Bylaws.³⁸

3. The Bylaws Need Not Use the Word “Only” to Limit the Panel’s Authority.

35. Apparently realizing that the arguments based on the purposes of the IRP and purported precedent were untenable, Afilias changed tack in its Response to the *Amici* Briefs filed one week before the Hearing and asserted for the first time that Section 4.3(o) should be construed as non-exhaustive because it does not state that the Panel has authority to issue “only” the remedies prescribed.³⁹ Afilias cites no authority to support this argument, which conflicts with fundamental and non-controversial principles of contract construction as well as Ms. Burr’s testimony that Section 4.3(o) *is* an exhaustive list of a Panel’s authority.⁴⁰

³⁸ *Booking.com B.V. v. ICANN*, ICDR Case No.: 50-20-1400-0247, Final Declaration, ¶ 104 (3 March 2015), (Drymer, Matz, Bernstein), CA-11. The Panel’s Question No. 1 asked for the parties’ views on the precedential value of prior IRP decisions. Under Section 4.3(a)(vi) of the Bylaws, the purposes of the IRP include to “[r]educ[e] Disputes by creating precedent to guide and inform the Board, Officers (as defined in Section 15.1), Staff members, Supporting Organizations, Advisory Committees, and the global Internet community in connection with policy development and implementation.” Similarly, under Section 4.3(g), the IRP Panel is charged with considering the Claim and ICANN’s Response “in compliance with the Articles of Incorporation and Bylaws, as understood in light of prior IRP Panel decisions decided under the same (or an equivalent prior) version of the provision of the Articles of Incorporation and Bylaws at issue, and norms of applicable law.” Accordingly, prior IRP decisions are precedential in that they should be considered to the extent relevant, but they are not binding in subsequent Disputes or other ICANN processes. Moreover, prior IRP decisions are relevant only to the extent that the provisions of the Bylaws, Articles, Supplementary Procedures or other instruments that they construe are the same as, or “equivalent” to, the corresponding provisions of the instruments governing this IRP. The *Booking.com* decision was governed by ICANN’s Bylaws dated 11 April 2013. Section 4.3(11)(c) and (d) of those Bylaws are similar to Section 4.3(o)(iii) and (iv) of the Bylaws that govern this IRP. Accordingly, the *Booking.com* Panel’s interpretation of those provisions is relevant precedent.

³⁹ Afilias’ Response to *Amici* Briefs ¶ 223.

⁴⁰ Hearing Tr. at 394:23-395:1 (Burr) (“Q. Is Section 4.3(o) an exhaustive listing of the IRP Panel’s authority? A. Of the authority which is binding on ICANN, yes.”).

36. The rule of *expressio unius est exclusio alterius* “creates a presumption that when a statute designates certain persons, things, or manners of operation, all omissions should be understood as exclusions[.]”⁴¹ Under this oft-applied rule, the list of available remedies set out in Section 4.3(o) is clearly exclusive. Indeed, if it were non-exclusive, it would be meaningless. A contract should be construed “to give effect to all of a contract’s terms, and to avoid interpretations that render any portion superfluous, void or inexplicable.”⁴² There would be no reason for the Bylaws to state that an IRP Panel may issue *declaratory relief* determining whether a Covered Action violated the Articles or Bylaws if the Bylaws also intended to allow the Panel to issue *any relief* that a Panel may deem appropriate. Likewise, there would be no reason for the Bylaws to state that a Panel could *recommend* that ICANN take *interim action* during a period before it was able to fully consider the Panel’s opinion if the Bylaws had intended to authorize a Panel to issue injunctive relief *requiring* ICANN to take interim or non-interim action.

4. The CCWG-Accountability’s Supplemental Proposal Prior to the Adoption of the Final Bylaws Does Not Expand the Panel’s Remedial Authority.

37. Another new argument that Afilias raised for the first time in its Response to the *Amici* Briefs and then repeated in its opening presentation at the Hearing is that the CCWG-Accountability’s Supplemental Proposal, dated 23 February 2016, somehow modifies or takes precedence over the limitations on the Panel’s authority imposed by the Bylaws. Because Afilias raised this argument for the first time just a week before the Hearing, the record is devoid of *any* examination of the Supplemental Proposal’s drafting history or the role played by the

⁴¹ *Crawford-Hall v. United States*, 394 F. Supp. 3d 1122, 1143 (C.D. Cal. 2019), AA-46.

Supplemental Proposal in the development of the Bylaws, which were made effective eight months *later* in October 2016.

38. Afilias relies on the Supplemental Proposal’s statement that Claimants should be able to “seek redress,” and IRP Panels should be authorized to “direct[] [ICANN] to take appropriate action to remedy the breach.”⁴³ Based on a definition from Dictionary.com, Afilias argues that “[t]he most common definitions of the word ‘redress’ include: ‘the setting right of what is wrong,’ ‘relief from wrong or injury,’ and ‘compensation or satisfaction for a wrong or injury.’”⁴⁴ Afilias reasons that a declaration permitted by the Bylaws is not a form of “redress” because it purportedly does not “provide[] relief or satisfaction that would eliminate the effects of the breach.”⁴⁵

39. Afilias is wrong. The statement that a Claimant should be able to seek redress cannot plausibly be construed to imply that a Claimant is entitled to any form of remedy that it may request, even where that remedy is not authorized by the Bylaws that create the IRP. A declaration that the challenged Covered Action constitutes an action or inaction in violation of the Articles or Bylaws – as authorized by Section 4.3(o)(iii) of the Bylaws – *is* redress.

40. The CCWG-Accountability’s Supplemental Proposal is thus entirely consistent with the remedial limitations imposed by Section 4.3(o) of the Bylaws. The Supplemental Proposal is clear in stating that the result of an IRP would be “a declaration,” not any other form of relief: “An IRP would result in a declaration that an action/failure to act *complied* or *did not*

⁴⁵ *Id.* ¶ 220.

comply with ICANN’s Articles of Incorporation and/or Bylaws.”⁴⁶

41. The Supplemental Proposal explained that “the limitation to the type of decision made is intended to mitigate the potential effect that one key decision of the panel might have on several third parties, and to avoid an outcome that would force the Board to violate its fiduciary duties.”⁴⁷ This was confirmed by Ms. Burr, who was a member of the CCWG-Accountability and the Rapporteur for Work Stream 1, which produced the Supplemental Proposal.⁴⁸

42. The Panel’s Question No. 2 asked the parties to address “the legal effect of the Board’s adoption of the CCWG Report (C-122) insofar as the later-adopted Amended Bylaws (C-1) contain provisions contrary to or inconsistent with the Report” and whether the CCWG Report is “relevant to the interpretation of the provisions of the Bylaws relating to the accountability mechanisms of ICANN.” As shown above, the CCWG’s Supplemental Proposal is not contrary to or inconsistent with the Amended Bylaws. As part of the Bylaws drafting

⁴⁶ CCWG-Accountability Supplemental Final Proposal on Work Stream 1 Recommendations, Annex 07 – Recommendation #7: Strengthening ICANN’s Independent Review Process (23 Feb. 2016), ¶ 16, C-122.

⁴⁷ *Id.*

⁴⁸ Hearing Tr. at 323:25-324:22 (Burr) (“The bylaws are clear, and this was always the intention. I was the rapporteur for this, and I was the person who wrote the -- was fundamentally charged with a relevant bylaws provision. This means -- and it is very clear in the bylaws, and that is what the CCWG meant – that they had a right to get a decision about whether an action or an inaction violated the bylaws. This does not say to me, it was never the intention of the CCWG, in my hearing, that the Panel could prescribe a remedy. And that totally makes sense in the context of ICANN IRPs, because often there are many, many parties who are affected by this. There are a lot of moving parts. So I do not see that as a statement, and I participated in both the CCWG discussions and the bylaws’ drafting, which was not intended to, you know, damages, recovery, remedy, that kind of stuff, but the -- the IRP’s authority is limited to finding -- making a determination about whether an action or inaction violated the articles of incorporation and bylaws, and that’s what’s binding on ICANN.”); *id.* at 333:25-334:20 (“Well, so, first of all, I can read that construction, which is passive and which was put up as we were working this out. I do not read it to say that the Panel is going to direct ICANN to take a specific action to remedy the breach. The Panel, by making a finding that ICANN has violated its articles, ICANN must take – then take appropriate action to remedy the breach. That is not the same as saying that the Panel has the authority to say what the appropriate action is to remedy the breach. And the reason is there are so many moving parts and parties here, imagine if this Panel said ‘ICANN violated the bylaws, and you must award this to, you know, X, Y or Z.’ There are going to be two or three other parties who then have a cause of action. So ICANN must -- ICANN has an obligation to take appropriate action, but the CCWG did not contemplate that the Panel, the IRP Panel would decide what that appropriate action was.”); *id.* at 303:5-10 (“The CCWG was split up into two work streams. One was the accountability mechanisms and the mission, commitment for value statement of the bylaws, and then there were other issues that another work stream took. I was the rapporteur for the accountability work stream.”).

history, the Supplemental Proposal potentially could be relevant to interpreting aspects of the Bylaws; however, determining whether and the extent to which the Supplemental Proposal is relevant in any given instance would require a thorough examination of the drafting history of the Bylaws provisions at issue to ascertain their relationship to the Supplemental Proposal and the reasons for any differences. No such examination has been done because Afiliias did not assert arguments based on the Supplemental Proposal until the Hearing.

43. If any relevant inconsistency existed between the Bylaws and the Supplemental Proposal, the Bylaws clearly would control. The Bylaws, not the CCWG-Accountability’s Supplemental Proposal, establish the Panel’s jurisdiction, as explained by Ms. Burr: “the language in the bylaws is the final implementation of the CCWG’s recommendations . . . to the extent there’s any discrepancy between [the Supplemental Proposal] and the bylaws, the bylaws is the relevant document.”⁴⁹ The primacy of the Bylaws was also confirmed by the IRP Panel in *Booking.com*: “The jurisdiction and authority of an IRP panel is expressly prescribed – and expressly limited – by the ICANN Bylaws.”⁵⁰

44. This is undeniably correct. The IRP Panel exists solely as a function of the Bylaws. The Panel’s jurisdiction and remedial authority is therefore defined and circumscribed by the Bylaws. The Panel is charged with declaring whether a Covered Action violates the Articles or Bylaws, not whether it violates the CCWG-Accountability’s Supplemental Proposal. The Panel has no jurisdiction to deviate from the Bylaws based on any alleged discrepancy between the Bylaws and the Supplemental Proposal.⁵¹

⁴⁹ Hearing Tr. at 319:5-13 (Burr).

45. The Board did not adopt the Supplemental Proposal as a governing ICANN document akin to the Articles or Bylaws, and it certainly did not suggest that the Supplemental Proposal supersedes or takes precedence over the Bylaws, which would not become effective until eight months later. Indeed, the Supplemental Proposal itself explains that “[t]he language proposed in recommendations for the ICANN Bylaw revisions are conceptual at this stage” and that further work was required to develop language that could be incorporated into the Bylaws.⁵² On 10 March 2016, the Board passed three resolutions relating to the CCWG’s work: Resolutions 2016.03.10.16, 2016.03.10.17, and 2016.03.10.18.⁵³ The resolutions formally accept receipt of the Report (2016.03.10.16), approve transmittal of the report to the NTIA (2016.03.10.17) and direct the President and CEO of ICANN to plan for the implementation of the Report (2016.03.10.18).⁵⁴ The Supplemental Proposal was considered in preparing a draft of the revised Bylaws, which was then put out for public comment and further revised accordingly.⁵⁵ To the extent the Bylaws did not adopt a particular suggestion in the Supplemental Proposal, such suggestion was expressly or implicitly rejected.

5. There Is No “Gap” Created by the Litigation Waiver, and ICANN Takes the Same Position Here as It Did in the Ruby Glen Litigation, Where It Sought to Enforce the Litigation Waiver.

46. Afilias raised another new argument at the Hearing by suggesting that there is some type of a “gap” created by the litigation waiver to which applicants must agree as a

in a form that cannot be rationally derived from the parties’ agreement”), *aff’d*, 133 S.Ct. 2064 (U.S. S.Ct. 2013), RLA-68; *Rain CII Carbon, LLC v. ⁵⁵ Hearing Tr. at 389.22-390:14 (Burr).

condition to participating in the Program.⁵⁶ Afilias has never clearly articulated its argument, but it appears to be that because applicants agree to participate in ICANN Accountability Mechanisms in lieu of litigation, the remedies available in such Accountability Mechanisms must be co-extensive with remedies available in litigation or else there is a gap.⁵⁷

47. This argument defies commercial reality and, not surprisingly, Afilias has cited no authority to support it. Parties frequently waive any entitlement to particular remedies as part of their agreed-upon means of dispute resolution. For example, waivers of consequential and punitive damages are virtually ubiquitous in international commercial contracts. No valid authority holds that such waivers are invalid or somehow undermine the enforceability of the parties' agreement to arbitrate disputes. Likewise, there is no authority holding that an arbitral tribunal can expand its own authority by granting expressly prohibited remedies on the basis that their prohibition creates a gap between the remedies available in arbitration versus those that would have been available had the parties left themselves free, without restriction, to proceed to court. Here, the parties agreed to a carefully circumscribed form of arbitration as one of their means of dispute resolution (along with the other Accountability Mechanisms). The fact that they could have additional claims or remedies available to them in some other contractually-excluded forum is irrelevant.⁵⁸

⁵⁶ *Id.* at 61:20-62:20; 326:10-327:25; 329:15-19.

⁵⁷ *Id.* at 329:24-330:6 (“[MR. LITWIN]: So in light of the litigation waiver, an IRP Panel’s jurisdiction must cover all matters that could not be addressed by a court of competition – competent jurisdiction, otherwise a new gTLD applicant who was required to agree to the waiver would have no effective means of redress; is that fair?”); *id.* at 598:4-9 (Mr. Ali stating that the Panel’s jurisdiction “is based on what is – what the scope of the litigation waiver is.”).

⁵⁸ ICANN’s Accountability Mechanisms are narrower than litigation in some respects, including with regard to the types of remedies potentially available. However, ICANN’s Accountability Mechanisms are also broader in some respects than the rights an applicant might otherwise have in litigation. For example, ICANN’s Accountability Mechanisms entitle applicants to seek a binding declaration with respect to whether ICANN has acted consistently with its Articles and Bylaws, as Afilias does here. Normally, however, a person who does not own an interest in a corporation would have no standing to assert a claim that the entity acted contrary to its Bylaws or Articles of Incorporation. *See* Cal. Corp. Code § 208, RLA-72.

48. ICANN understands that Afiliias intends to argue in its Post-Hearing Brief that ICANN’s position in this IRP somehow conflicts with its position before the Ninth Circuit Court of Appeals in the *Ruby Glen* litigation. This argument—which has never been raised before—is simply wrong. In its brief to the Ninth Circuit, ICANN stated that the Guidebook’s Covenant Not to Sue does not leave applicants “without any form of redress” because they can challenge ICANN’s implementation of the New gTLD Program through various ICANN accountability mechanisms, including an IRP.⁵⁹ ICANN further made clear that the redress available to an applicant through an IRP is a final and binding declaration: “[A]n Independent Review Process panel’s declarations are ‘final and have precedential value.’”⁶⁰ That is entirely consistent with ICANN’s position in this IRP: the Panel properly provides redress by issuing a final and binding decision declaring whether the Covered Actions at issue violated ICANN’s Articles or Bylaws, but the Panel does not have authority to grant other remedies not permitted by the Bylaws.

C. The Panel Is Required to Apply a Prescribed Standard of Review.

49. The Panel’s jurisdiction is also limited by the standard of review prescribed by Section 4.3(i) of the Bylaws and Rule 11 of the Interim Supplementary Procedures, which are substantially identical. Section 4.3(i) states:

Each IRP Panel shall conduct an objective, de novo examination of the Dispute.

- (i) With respect to Covered Actions, the IRP Panel shall make findings of fact to determine whether the Covered Action constituted an action or inaction that violated the Articles of Incorporation or Bylaws.
- (ii) All Disputes shall be decided in compliance with the Articles of Incorporation and Bylaws, as understood in the context of the norms of applicable law and prior relevant IRP decisions.

⁵⁹ *Ruby Glen, LLC v. ICANN*, No. 16-56890, Appellee’s Answer Brief at 3, 6 (9th Cir. Oct. 30, 2017), C-187.

⁶⁰ *Id.* at 11(citation omitted).

- (iii) For Claims arising out of the Board’s exercise of its fiduciary duties, the IRP Panel shall not replace the Board’s reasonable judgment with its own so long as the Board’s action or inaction is within the realm of reasonable business judgment.⁶¹

50. The first sentence of Section 4.3(i) establishes a general *de novo* standard of review. Subsection (iii) then creates a carve-out, providing that actions of the Board in the exercise of its fiduciary duty are entitled to deference provided that they are within the realm of “reasonable judgment.” This standard effectively incorporates the “business judgment rule,” which is recognized in California and all other U.S. jurisdictions.⁶²

51. Contrary to the plain language of subsection (iii), Afilias has advanced three different arguments as to why decisions of the Board are not entitled to any deference. First, Afilias asserts that prior IRP decisions have rejected any such deference.⁶³ But Afilias relies primarily on the IRP Panel’s decision in *ICM v. ICANN*, dated 19 February 2010, which declined to apply the business judgment rule under a then-operative version of the Bylaws that had no provision analogous to the current Section 4.3(i)(iii). Indeed, the *ICM* Panel expressly based its decision on the absence of such a provision: “Articles and Bylaws . . . do not specify or imply that the International Review Process [*sic*] provided for shall (or shall not) accord deference to the decisions of the ICANN Board.”⁶⁴ Accordingly, the *ICM* decision provides no guidance as to the proper interpretation and application of Section 4.3(i)(iii).

⁶¹ Bylaws, Art. 4, § 4.3(i).

⁶² *Landen v. La Jolla Shores Clubdominium Homeowners Ass’n*, 21 Cal. 4th 249, 257 (1999) (The California Supreme Court notes “that the rule of judicial deference to corporate decision making ‘exists in one form or another in every American jurisdiction.’”) (quoting *Frances T. v. Vill. Green Owners Ass’n*, 42 Cal. 3d 490, 507 n.14 (1986), RLA-13; see also *Lee v. Interinsurance Exch.*, 50 Cal. App. 4th 694, 711 (1996) (quoting *Barnes v. State Farm Mut. Auto. Ins. Co.*, 16 Cal. App. 4th 365, 378 (1993), RLA-15.

⁶³ Afilias’ Reply Memorial ¶ 6 & n.16.

⁶⁴ *ICM Registry, LLC v. ICANN*, ICDR Case. No. 50-177-T 000224 08, Final Declaration ¶ 136 (19 February 2010) (citation omitted), CA-1.

52. In a footnote, Afilias cites the decisions in *Dot Sport Ltd.* and *Booking.com*. Again, both IRPs were decided under earlier versions of the Bylaws that did not include the current Section 4.3(i)(iii).⁶⁵ And while *Dot Sport Ltd.* and *Booking.com* both cited to *ICM*, they also both agreed that an IRP Panel must apply a deferential standard of review to Board action or inaction. The *Booking.com* Panel stated: “[W]e also agree with ICANN to the extent that, in determining the consistency of Board action with the Articles, Bylaws and Guidebook, an ‘IRP Panel is neither asked to, nor allowed to, substitute its judgment for that of the Board.’”⁶⁶ Similarly, the *Dot Sport* Panel found that the Bylaws required the Panel to apply a “defined standard of review” drawn from the Bylaws, which accorded deference to the Board’s reasonable business judgment by “focusing on: a. did the Board act without conflict of interest in taking its decision? b. did the Board exercise due diligence and care in having a reasonable amount of facts in front of them?; and c. did the Board members exercise independent judgment in taking the decision, believed to be in the best interests of the community?”⁶⁷

53. Afilias’ second argument for discounting the deference owed to the Board’s business judgment is that, according to Afilias, its claims do not involve the Board’s exercise of its fiduciary duties.⁶⁸ However, under California law, *all* actions by the Board on behalf of ICANN are subject to a fiduciary duty to act in good faith in the interests of ICANN. The California Corporations Code makes clear that, whenever a director is performing duties as a director, he or she does so subject to a fiduciary duty to the corporation:

A director shall perform the duties of a director, including duties as a member of any committee of the board upon which the director may serve,

⁶⁵ Afilias’ Reply Memorial ¶ 6 & n.16.

⁶⁶ *Booking.com v. ICANN*, ¶ 115, CA-11.

⁶⁷ *Dot Sport Ltd. v. ICANN*, ICDR Case No. 01-15-0002-9483, Final Declaration ¶ 7.17 (31 Jan. 2017), CA-18.

⁶⁸ Afilias’ Reply Memorial ¶ 16.

in good faith, in a manner that the director believes to be in the best interests of the corporation and with such care, including reasonable inquiry, as an ordinarily prudent person in a like position would use under similar circumstances.⁶⁹

54. This was confirmed at the Hearing by Ms. Burr, who testified that she has “an obligation to exercise my fiduciary – respect my fiduciary obligations to ICANN in everything I do related to ICANN,” and that she had trouble imagining any circumstance where the Board could act on behalf of ICANN without exercising its fiduciary duty.⁷⁰

55. Afilias conceded in its opening presentation that “Afilias does not claim that the ICANN Board failed to comply with its fiduciary duties to ICANN.”⁷¹ Accordingly, the Board’s judgment is entitled to deference as long as it is objectively reasonable.

56. Finally, Afilias argues that the business judgment rule in Section 4.3(i)(iii) applies only to official Board action taken by a resolution at a duly held Board meeting. Afilias bases this argument on Sections 2.1 and 7.19 of the Bylaws.⁷² Section 2.1 states that “the Board may act by majority vote of the Directors present at any annual, regular, or special meeting of the Board,”⁷³ and Section 7.19 states that “[a]ny action required or permitted to be taken by the Board or a Committee of the Board may be taken without a meeting if all of the Directors entitled to vote thereat shall individually or collectively consent in writing to such action.”⁷⁴ Afilias made this argument for the first time in its Response to the *Amici* Briefs.

57. The argument is simply wrong. Section 4.3(i)(iii) does not, on its face, impose

⁶⁹ Cal. Corp. Code § 5231, RLA-22.

⁷⁰ Hearing Tr. (Burr) at 336:17-25, 392:25-393:3.

⁷¹ Afilias Opening Presentation at Slide 63.

⁷² Afilias’ Response to *Amici* Briefs ¶¶ 170-171. Afilias erroneously cites to Section 2.19. However, the Bylaws contain no Section 2.19. The correct reference is to Article 2, Section 2.1.

⁷³ Bylaws, Art. 2, § 2.1.

⁷⁴ *Id.*, Art. 7, § 7.19.

any such requirement. Nor does the language of that provision permit such an inference. The deference to Board judgment created by Section 4.3(i)(iii) encompasses more than the types of official Board actions governed by Sections 2.1 and 7.19. While Sections 2.1 and 7.19 govern official Board “action,” Section 4.3(i)(iii) expressly applies to both “the Board’s action *or* inaction.”⁷⁵ Section 4.3(i)(iii) therefore is not limited to official actions adopted by resolution at an “annual, regular or special” meeting under Section 2.1 and 7.19; it applies to any exercise of “business judgment” by the Board, including where, as here, it results in the Board taking no action.

II. AFILIAS’ CLAIMS REGARDING ALLEGED ACTIONS AND INACTIONS IN 2016 ARE TIME-BARRED.

A. The Panel Has Jurisdiction Only Over Claims Brought Within the Time Limits Established by the Interim Supplementary Procedures.

58. In addition to the jurisdictional limits imposed by the Bylaws discussed above, the Interim Supplementary Procedures also impose a jurisdictional limit on the time period in which a claim may be brought. Rule 4 of the Interim Supplementary Procedures states:

An INDEPENDENT REVIEW is commenced when CLAIMANT files a written statement of a DISPUTE. A CLAIMANT shall file a written statement of a DISPUTE with the ICDR no more than 120 days after a CLAIMANT becomes aware of the material effect of the action or inactions giving rise to the DISPUTE; provided, however, that a statement of a DISPUTE may not be filed more than twelve (12) months from the date of such action or inaction.

59. Rule 4 thus establishes a limitations period and a repose period. The limitations period provides that an IRP must be filed within 120 days after the Claimant becomes aware of the material effect of the action or inaction giving rise to the Dispute. However, the repose period stipulates that no IRP may be filed more than 12 months after the date of the action or

⁷⁵ *Id.*, Art. 4, § 4.3(i)(iii) (emphasis added).

inaction giving rise to the Dispute, regardless of the Claimant’s state of mind.

60. These time limitations are jurisdictional. A claim that is brought outside the time periods established by Rule 4 is not properly filed and may not be properly decided by an IRP Panel. In *Glamis Gold Ltd. v. United States*, a NAFTA arbitration under the UNCITRAL Rules (1976), the Tribunal held that “an objection based on a limitation period for the raising of a claim is a plea as to jurisdiction for the purposes of Article 21(4).”⁷⁶ Similarly, in *Resolute Forest Products Inc. v. Canada*, another NAFTA arbitration, the Tribunal found that “although the time limit specified in Article 1116(2) and 1117(2) [of NAFTA] is not itself a procedure, compliance with it is required for the bringing of a claim, which is certainly a procedure. This is enough to justify the conclusion that compliance with the time limit goes to jurisdiction.”⁷⁷

61. Here, Rule 4 of the Interim Supplementary Procedures *is* a procedure. Article V(1)(c) of the New York Convention provides that an arbitral decision may not be recognized or enforced if “the arbitral procedure was not in accordance with the agreement of the parties.” Relevant national arbitration law is in accord. Article 68(2)(c) of the UK Arbitration Act of 1996 states that an award may be set aside for “failure by the tribunal to conduct the proceedings in accordance with the procedure agreed by the parties.” Likewise, U.S. courts applying the Federal Arbitration Act “may decline enforcement of an arbitral award on the basis that ‘the arbitral procedure was not in accordance with the agreement of the parties.’”⁷⁸ Prior IRP decisions also have recognized time limitations as jurisdictional in nature.⁷⁹

⁷⁶ *Glamis Gold Ltd. v. United States*, Arbitration Under Chapter 11 of NAFTA, Procedural Order No. 2, ¶ 18 (Revised) (May 31, 2005), RLA-75.

⁷⁸ *Polimaster Ltd. v. RAE Sys., Inc.*, 623 F.3d 832, 836 (9th Cir. 2010), RLA-63.

⁷⁹ *GCC v. ICANN*, Partial Final Declaration at § VII (Oct. 19, 2016) (“JURISDICTION: TIMELINESS OF THE REQUEST FOR IRP”), CA-17.

B. Afilias' Claim that ICANN Had an Unqualified Obligation to Disqualify NDC Is Time-Barred.

62. Afilias asserts that “ICANN violated its Articles and Bylaws when it failed to disqualify NDC’s bid and application upon receiving the DAA *in August 2016*.”⁸⁰

Fundamentally, Afilias’ position is that ICANN’s Articles and Bylaws created an immediate, absolute and unqualified obligation on ICANN to disqualify NDC’s bid once ICANN became aware of the DAA, and that ICANN had no discretion with regard to the interpretation and application of the Guidebook, the consequences of any potential violation, or the timing of ICANN’s consideration of those issues. This claim is clearly barred by the repose period because it challenges actions or inactions that occurred in 2016, more than two years before Afilias filed this IRP in November 2018.

63. Because the repose period is dispositive, the Panel need not consider whether Afilias’ claim also is barred by the limitations period. If the Panel reaches that issue, however, the Panel should find that the limitations period also bars Afilias’ claims. Afilias unquestionably was aware of the material effect of the alleged actions or inactions of ICANN by August and September 2016, when it was writing letters to ICANN demanding that it disqualify NDC. The claims asserted in those letters are the same as the claims asserted by Afilias in this IRP, which is self-evident from a comparison of Afilias’ August and September 2016 letters and its submissions in this IRP.

64. For example, in its September 2016 letter, Afilias asserted that NDC violated the Guidebook by reselling, assigning or transferring rights or obligations in connection with the

⁸⁰ Afilias’ Reply Memorial ¶ 86 (emphasis added); *see also id.* ¶ 20 (“This IRP, however, claims that ICANN was required to disqualify NDC’s application and bid in August 2016 when ICANN first learned of NDC’s violations[.]”).

.WEB application to Verisign:

NDC violated Paragraph 10 of the Terms and Conditions in Module 6 of the New gTLD Applicant Guidebook (the “Guidebook”), which expressly prohibits any applicant for a gTLD to “*resell, assign or transfer any of the applicant’s rights or obligations in connection with the application.*”⁸¹

That contention is not materially distinguishable from Afilias’ claim in this IRP that:

NDC secretly sold, transferred and assigned its rights and obligations in the application to a non-applicant (*i.e.*, Verisign), in plain violation of the Terms and Conditions of the AGB, including that “Applicant may not resell, assign, or transfer any of the applicant’s rights or obligations in connection with the application.”⁸²

65. Likewise, in its September 2016 letter, Afilias asserted that NDC violated the Guidebook by failing to notify ICANN that information in NDC’s application had allegedly become untrue or inaccurate:

NDC violated Section 1.2.7 of the Guidebook, which requires applicants to “*promptly notify ICANN via submission of the appropriate forms*” “*if at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate,*” including “*changes in financial position and changes in ownership or control of the applicant.*”⁸³

That contention is not materially distinguishable from Afilias’ claim in this IRP:

As soon as NDC entered into the DAA with ICANN [*sic*], almost *none* of the information in NDC’s .WEB Application—and certainly, almost none of the information that had been posted for public comment—was true, accurate, or complete. Nor were the statements made by NDC’s representatives, in phone calls and in writing, to ICANN. There can be little argument that NDC’s failure to update its application constituted an “omission of material information” that rendered its application to be false and certainly misleading.⁸⁴

66. In its September 2016 letter, Afilias asserted that NDC violated the Auction Rules by purportedly placing bids on behalf of Verisign:

⁸¹ C-103 at 2.

⁸² Afilias’ Reply Memorial ¶ 42 (citation omitted).

⁸³ C-103 at 2.

⁸⁴ Afilias’ Reply Memorial ¶ 65.

NDC violated the Auction Rules for New gTLDs (“Auction Rules”). Rule 12 provides that “participation in an Auction is limited to Bidders,” which is defined by the Auction Rules as a “*Qualified Applicant*” or a “*party designated by a Qualified Applicant to bid on its behalf*”. This rule prohibits bids placed on behalf of a third-party that is not a “Qualified Applicant”, defined by the Auction Rules as “*an entity that has submitted an Application for a new gTLD, has received all necessary approvals from ICANN, and which is included within a Contention set to be resolved by an Auction.*”⁸⁵

Again, this contention is not materially distinguishable from the claim Afilias makes in this IRP with regard to the Auction Rules:

[T]he prohibition against bids being made on behalf of any entity other than a Qualified Applicant was stated plainly and repeatedly throughout the Auction Rules. A simple review of the DAA’s terms demonstrate that they *required* NDC to violate and subvert the Auction Rules—which is precisely what NDC did. NDC—the “Qualified Applicant”—was *not* making bids “on its own behalf”.⁸⁶

67. The remedy demanded by Afilias in its August and September 2016 letters is also the same as the one it demands in this IRP, *i.e.*, the immediate disqualification of NDC and awarding of .WEB to Afilias:

ICANN must disqualify NDC’s application for .WEB and proceed to contract for .WEB with Afilias, the next highest bidder in the Auction, in compliance with its obligations under ICANN’s Articles of Incorporation and Bylaws (as well as principles of international law and California law)[.]⁸⁷

68. Afilias has argued that it could not assert its claims in 2016 because it did not have a copy of the DAA at that time.⁸⁸ But that argument directly contradicts the position Afilias took in its 2016 letters to ICANN, in which Afilias stated that *it did not need the DAA to prove its claims*, much less to raise its claims in an IRP:

⁸⁵ C-103 at 2.

⁸⁶ Afilias’ Reply Memorial ¶ 95.

⁸⁷ C-103 at 1.

⁸⁸ Afilias’ Reply Memorial ¶¶ 140-141; Afilias’ Response to *Amici* Briefs ¶ 43.

Although the specific terms of the agreement between VeriSign and NDC have not been disclosed, it is clear from Verisign's own press release and its disclosure in its Form 10-Q filed with the U.S. Securities and Exchange Commission for the quarter ended June 30, 2016, that both companies entered into an arrangement well in advance of the Auction to transfer NDC's rights and obligations regarding its .WEB application to VeriSign.⁸⁹

Indeed, Afilias drafted its IRP Request without a copy of the DAA.

69. In sum, Afilias' claim that ICANN, upon learning in August 2016 of NDC's arrangement with Verisign, had an immediate, absolute and unqualified obligation under its Articles and Bylaws to disqualify NDC and award .WEB to Afilias, is barred by both the repose period and the limitations period. Accordingly, that claim is outside the jurisdiction of this Panel and must be rejected.⁹⁰

C. Afilias' Claim that ICANN Staff Violated the Articles and Bylaws in Their Investigation of Pre-Auction Rumors or Post-Auction Complaints Is Also Time-Barred.

70. Afilias asserted in its Amended IRP Request that ICANN violated the Bylaws in July 2016 when it allegedly "failed to fully investigate *rumors* that NDC had reached an agreement with VeriSign *prior to the .WEB Auction.*"⁹¹ In fact, prior to the auction, ICANN was not aware of any rumors that Verisign was involved in NDC's .WEB application. ICANN's

⁸⁹ C-103 at 2.

⁹⁰ It has been suggested that application of the time bar may be unfair because, until receiving ICANN's Rejoinder, Afilias was not aware of the Board's November 2016 decision to follow its policy of not taking action on applications and contention sets that are the subject of Accountability Mechanisms. But Afilias' claim is not that ICANN's Board violated the Articles and Bylaws in making this decision. Afilias confirmed this in its opening statement. *See* Hearing Tr. at 81:13-22 ("In fact, we couldn't have made a claim that would implicate the business judgment rule because we didn't know about the November 2016 meeting. So when we made – when we filed our amended request for IRP, how could we be making a claim regarding Board conduct when we didn't even know that there had been any Board conduct?"). On the contrary, Afilias asserts that ICANN had violated its Articles and Bylaws three months before the Board's November 2016 meeting when ICANN failed to disqualify NDC immediately upon receipt of Afilias' complaints. Thus, the Board's November 2016 decision is irrelevant to the application of the time-bar. It is also irrelevant that the Board's decision was made during a privileged discussion at a closed workshop and not published on ICANN's website.

⁹¹ Amended IRP Request ¶ 78, bullet 4 (emphasis added).

pre-auction investigation related to Ruby Glen’s contention that there had been a change of ownership or control of NDC, not to any allegations or rumors regarding Verisign. In any event, however, Afilias appears to have abandoned this claim, having failed even to mention it in Afilias’ Reply Memorial or Response to the *Amici* Briefs. Instead, Afilias used those briefs to attempt to introduce a wholly new claim, *i.e.*, that ICANN purportedly violated the Bylaws in its August and September 2016 *post-auction investigation of Afilias’ allegations against NDC*.⁹² ICANN shows below (*infra* at Section VI) that this new claim is not properly pled and is therefore outside the Panel’s jurisdiction and that, in any event, the claim is meritless.

71. But Afilias’ claims concerning ICANN’s 2016 investigations – whether pre- or post-auction – also fail because they are time-barred. These claims are outside the period of repose because they concern alleged actions and inactions in July through September 2016. The claims are also outside the limitations period because Afilias unquestionably was aware, at the time, of the material effect of the alleged violations – *i.e.*, ICANN’s failure to disqualify NDC either before the .WEB auction or immediately thereafter.

72. Accordingly, Afilias’ claims concerning ICANN’s investigations of Ruby’s Glen’s pre-auction allegations regarding a change in control of NDC and Afilias’ post-auction allegations regarding Verisign’s arrangement with NDC are time-barred and therefore outside the jurisdiction of the Panel.

D. Afilias’ Equitable Estoppel Defense Has No Merit.

73. Apart from contending that its current claims are somehow different from those asserted in its August and September 2016 letters (an argument that is flatly refuted by its own letters), and that it was not aware of the status of ICANN’s post-auction investigation (an

⁹² Afilias’ Reply Memorial ¶ 110.

unsupported assertion that is irrelevant to the period of repose, which begins on the date of the challenged ICANN actions or inactions), Afilias' only response to the application of the limitations and repose periods has been to argue that ICANN is equitably estopped from relying on them.

74. Afilias bases its equitable estoppel argument on two statements that ICANN made in 2016. First, Afilias cites Ms. Willett's 16 September 2016 letter to Afilias posing a series of questions regarding the allegations against NDC and Verisign. Afilias relies on Ms. Willett's statement that: "To help facilitate informed resolution of these questions, ICANN would find it useful to have additional information."⁹³ Second, Afilias cites Mr. Atallah's 30 September 2016 response to Afilias' letter demanding to know the status of ICANN's investigation. Afilias relies on Mr. Atallah's statements that: "As an applicant in the contention set, the primary contact for Afilias's application will be notified of future changes to the contention set status or updates regarding the status of relevant Accountability Mechanisms. We will continue to take Afilias's comments, and other inputs that we have sought, into consideration as we consider this matter."⁹⁴

75. Afilias' positions fail because California law imposes strict requirements for the application of equitable estoppel that Afilias does not meet.

The doctrine of equitable estoppel is founded on notions of equity and fair dealing and provides that a person may not deny the existence of a state of facts if that person has intentionally led others to believe a particular circumstance to be true and to rely upon such belief to their detriment.... Generally speaking, four elements must be present in order to apply the doctrine of equitable estoppel: (1) the party to be estopped must be apprised of the facts; (2) he must intend that his conduct shall be acted upon, or must so act that the party asserting the estoppel had a right to

⁹³ Afilias' Reply Memorial ¶ 145 (quoting from C-50).

⁹⁴ *Id.*, C-61.

believe it was so intended; (3) the other party must be ignorant of the true state of facts; and (4) he must rely upon the conduct to his injury.⁹⁵

76. Afilias satisfies *none* of the doctrine’s four elements. In particular: ICANN’s statements do not misrepresent any facts; Afilias does not contend that any relevant facts existed of which ICANN was aware and about which it misled Afilias; and Afilias was notified of changes to the contention set status and the status of relevant Accountability Mechanisms, as were other .WEB applicants, just as Mr. Atallah said that they would be.

77. Afilias also does not contend—and has not even attempted to prove—that ICANN’s statements were intended to dissuade Afilias from filing an IRP or otherwise pursuing its claims. Afilias subjected Ms. Willett to several hours of cross-examination but decided not to question her on this subject. Afilias cannot properly ask the Panel to make findings based on inference and surmise when it had the opportunity to obtain evidence on this issue and elected not to do so.

78. In addition, Afilias has submitted no evidence that it relied on Ms. Willett’s or Mr. Atallah’s letters in failing to assert its claims in 2016. “[R]eliance is an essential element of equitable estoppel.”⁹⁶ If Afilias actually had decided not to file an IRP based on these statements, it could have submitted witness statements to that effect. Where, as here, a party submits no evidence of reliance, any claim of equitable estoppel must be rejected.⁹⁷

⁹⁵ *Krolkowski v. San Diego City Employees’ Retirement Sys.*, 24 Cal. App. 5th 537, 564-65 (2018) *review denied* (Sept. 19, 2018) (quotations marks and citation omitted), RLA-12.

⁹⁶ *Atkins, Kroll (Guam), Limited v. Cabrera*, 295 F.2d 21, 23 (9th Cir. 1961), RLA-4; *see also Elmore v. Cone Mills Corp.*, 187 F.3d 442, 446 (1999) (“The Supreme Court has held that ‘[an] essential element of any estoppel is detrimental reliance on the adverse party’s misrepresentations.’”) (citation omitted), RLA-7.

⁹⁷ *In re Katz Interactive Call Processing Patent Litig.*, Nos. 07-NL-1816, 01-2196, RGK (FFMx) 2009 WL 1351043, at *15 (C.D. Cal. May 1, 2009) (“Essentially, FedEx is attempting to argue that reliance can be inferred from evidence of misleading conduct. That analysis impermissibly eliminates an essential element of estoppel.”), RLA-10; *Sood v. Grief*, No. H033875, 2010 WL 2595128, at *4-5 (Cal. Ct. App. June 29, 2010) (unpublished) (rejecting equitable estoppel where the evidentiary record was “devoid of any indication that [counsel’s] conduct

79. Further, as a matter of law, equitable estoppel cannot apply where, as here, a party was represented by counsel. Afilias was represented by experienced counsel throughout the entire period at issue. Its letters were signed by its General Counsel, Mr. Hemphill, and its 9 September 2016 letter copies Afilias' outside counsel, Mr. Arif Ali (who has been counsel for other claimants in previous IRPs, including the *ICM* IRP).⁹⁸ Under California law, “[w]here one has been represented by an attorney in connection with a claim the necessary elements of estoppel are not established as a matter of law.”⁹⁹

80. Finally, it is doubtful that equitable estoppel ever can apply to extend a claim beyond the period of repose. California courts have not addressed this issue,¹⁰⁰ but federal courts have held that equitable estoppel has no application to statutes of repose because the purpose of such a period “is to set an outer limit unaffected by what the plaintiff knows.”¹⁰¹

While limitations periods operate to prevent unfairness to a defendant caused by having to

actually and reasonably induced [plaintiff] to forbear suing” within the statutory period) (citation omitted), RLA-19; *Yeager v. Bowlin*, No. CIV. 2:08-102 WBS JFM, 2010 WL 95242, at *16 (E.D. Cal. Jan. 6, 2010) (“Plaintiffs have presented no evidence that indicates they reasonably relied on any representations by defendants that induced them to delay from filing this action until the statute of limitations had run . . . Accordingly, equitable tolling and estoppel are inappropriate.”), RLA-20.

U.S. Gypsum Co.*, 882 F.2d 862, 865–66 (4th Cir. 1989), RLA-50; Restatement (Second) of Torts § 899, cmt. g (1979) (statutes of repose “set a designated event for the statutory period to start running and then provide that at the expiration of the period any cause of action is barred regardless of usual reasons for ‘tolling’ the statute.”), RLA-73. United States courts applying state law are divided on whether equitable estoppel can ever apply to the statute of repose. Compare *Oldenburg Group Inc. v. Sherwin Williams Co.*, No. 07-C-0596, 2009 WL 10711834, at *2 (E.D. Wis. Aug. 31, 2009) (“equitable estoppel is generally considered inconsistent with periods of repose[.]”), RLA-62; *Rosenberg v. Falling Water, Inc.*, 709 S.E.2d 227, 230 (Ga. 2011) (same), RLA-65; *Beals v. Breeden Bros., Inc.*, 833 P.2d 348, 350 (Or. Ct. App. 1992) (same), RLA-42; with *Wood v. BD&A Construction, L.L.C.*, 601 S.E.2d 311, 314 (N. Car. Ct. App. 2004) (“Equitable estoppel may also defeat a defendant’s statute of repose defense.”), RLA-70.

defend stale claims, periods of repose serve the interests of the public as a whole by providing that rights and liabilities in respect of particular events are certain and cannot be disturbed beyond a given date. Accordingly, “a statute of repose is typically an absolute time limit beyond which liability no longer exists and is not tolled for any reason[.]”¹⁰²

E. The Repose and Limitations Periods Apply Retroactively.

81. The Panel’s Question No. 3 asks the parties to state their views on “the effect on the claims in issue in this case of the timing of the adoption of Rule 4 of the Interim Supplementary [P]rocedures (25 October 2018), as it affects the timing of bringing the claims that have been advanced in this proceeding (4 months and 12 months repose period)”.

82. The timing of the adoption of Rule 4 is relevant only in that it occurred before Afilias commenced this IRP. As a consequence, Rule 4 applies to all of Afilias’ claims, regardless of whether they arose before or after 25 October 2018.

83. Once the Interim Supplementary Procedures came into effect, they expressly applied to all subsequently filed IRPs regardless of when the claims at issue arose. Rule 2 states that the Interim Supplementary Procedures “will apply . . . in all cases submitted to the ICDR in connection with Article 4, Section 4.3 of the ICANN Bylaws after the date these Interim Supplementary Procedures go into effect.”¹⁰³ No exception is made to the compulsory application of Rule 4. Accordingly, the limitations and repose periods established by Rule 4 must be applied in all IRPs initiated after the Interim Supplementary Procedures came into force, without regard to when the claims arose.

84. But even if Afilias’ claims concerning conduct in 2016—*i.e.*, ICANN’s failure to satisfy its alleged obligation to disqualify NDC in August 2016 and its investigations, first in

¹⁰² *First United Methodist Church of Hyattsville*, 882 F.2d at 866, RLA-50.

¹⁰³ Interim Supplementary Procedures at 2, C-59.

July and then in August-September 2016—were evaluated under the limits in force at the time those claims arose, they would still be barred. At that time, an IRP could not be brought to challenge action or inaction of the ICANN staff. The method of challenging such action or inaction was to bring a Reconsideration Request, which would have been considered by the Board Governance Committee.¹⁰⁴ If the Board had denied the Reconsideration Request, then the Board’s denial could have been challenged in an IRP. A Reconsideration Request was required to be brought within 15 days after the Claimant “concluded, or reasonably should have concluded, that the action would not be taken in a timely manner,”¹⁰⁵ and an IRP was required to be filed within 30 days of the publication of the denial of the Reconsideration Request.¹⁰⁶ This is precisely how the applicants in the *Dot Registry* IRP – represented by Mr. Ali – brought an IRP.¹⁰⁷ However, Afilias never filed a Reconsideration Request in September 2016 (or anytime thereafter) asserting that ICANN violated its Articles or Bylaws or any other established policy or process by not disqualifying NDC’s .WEB application.

85. Finally, if Afilias wished to challenge Rule 4 of the Interim Supplementary Procedures, it could have brought such a claim in this IRP, as it has done with Rule 7. Afilias chose not to do so. Indeed, Afilias did not raise any complaint regarding Rule 4 in its Amended IRP Request or at any time prior to the Hearing. Accordingly, Afilias has waived any challenge to the validity and application of Rule 4.¹⁰⁸

¹⁰⁴ Hearing Tr. at 742:10-23; 769:9-770:16 (Willett).

¹⁰⁵ ICANN Bylaws (as amended 11 February 2016), Art. IV, § 2.5(c).

¹⁰⁶ *Id.*, Art. IV, § 3.3 .

¹⁰⁷ *See generally*, CA-4.

¹⁰⁸ Footnote 3 of the Interim Supplementary Procedures states that, if the time for filing adopted in the final Supplementary Procedures is more permissive than the Interim Supplementary Procedures, then ICANN “will include transition language that provides potential claimants the benefit of that additional time[.]” Interim Supplementary Procedures at 5 n.3, C-59. This footnote is not relevant in this IRP because final Supplementary

III. ICANN WAS NOT REQUIRED TO DISQUALIFY NDC BASED ON ICANN'S CORE VALUES REGARDING COMPETITION OR NDC'S ALLEGED VIOLATIONS OF THE GUIDEBOOK AND AUCTION RULES.

86. A central tenet of Afilias' claims leading up to the Hearing was that ICANN's Core Values regarding competition mandated that ICANN block Verisign's potential operation of .WEB, allegedly "the most promising new gTLD."¹⁰⁹ This claim formed the cornerstone of Afilias' narrative, which asserted not just that NDC and Verisign engaged in a series of highly technical violations of the Guidebook and Auction Rules, but that these alleged violations were done for the nefarious purpose of preserving Verisign's alleged monopoly and thus threatened the purported *raison d'etre* of ICANN's existence. Afilias, however, has essentially abandoned its competition claim.

87. Afilias' opening presentation made no mention of its competition claim or the evidence Afilias would present regarding that claim. Likewise, Afilias chose not to cross-examine Mr. Kneuer, whose expert report demonstrated that ICANN does not have the mandate, authority, expertise or resources to act as a competition regulator. While Afilias did cross-examine Ms. Burr, that examination focused on Ms. Burr's experiences as a Board member, ICANN's Accountability Mechanisms, and ICANN's Bylaws; Afilias asked virtually no

Procedures have not been completed or adopted, and no determination has been made as to whether the final Supplementary Procedures will provide potential claimants with additional time.

¹⁰⁹ Afilias' Reply Memorial ¶ 130 ("Worse still, ICANN's decision to ignore NDC's willful process violations would allow .WEB, the most promising new gTLD, to fall under the control of the entity that controls .COM. ICANN's decision to exercise its discretion to benefit Verisign is a complete perversion of ICANN's Bylaws, the Board's stated intention for adopting the New gTLD Program, and the entire purpose of the Program itself."), *id.* ¶ 11 ("ICANN's exercise of any discretion it has to remedy NDC's breaches must be consistent with ICANN's mandate to promote competition."), *id.* ¶ 124 ("Any exercise of ICANN's discretion that would result in Verisign controlling the .WEB registry is wholly inconsistent with ICANN's affirmative mandate to promote competition."); Amended IRP Request ¶ 5 ("Furthermore, by failing to implement faithfully the New gTLD Program Rules and thereby enabling VeriSign eventually to acquire the .WEB gTLD, ICANN has eviscerated one of the central pillars of the New gTLD Program and one of ICANN's founding principles: to introduce and promote competition in the Internet namespace in order to break VeriSign's monopoly."), *id.* ¶ 83 ("By violating its Commitments and Core Values in its Bylaws, thereby enabling VeriSign to gain control over .WEB, ICANN has all but destroyed the last best chance to create a truly competitive environment within the DNS—*i.e.*, one of the principal purposes of the New gTLD Program, and indeed, of ICANN's existence.").

questions about the conclusions in her witness statement that ICANN is not permitted to act as competition regulator and does not have the authority or expertise to block potentially anticompetitive transactions the way a government regulator would. And, finally, Afilias also chose not to cross-examine Dr. Carlton, ICANN's economic expert, or Dr. Murphy, Verisign's economic expert, both of whom issued unrebutted expert reports that included empirical analyses concluding that .WEB is not the competitive juggernaut Afilias made it out to be. In other words, Afilias did not pursue its competition claim at the Hearing and failed to address, much less rebut, the testimony and the evidence establishing that ICANN is not empowered or equipped to act as a competition regulator or that Verisign's potential operation of .WEB is not a competitive threat.

88. The Panel is thus left with the uncontroverted conclusion that ICANN was never under any mandated duty to disqualify NDC because of competitive issues associated with the possibility that Verisign might one day operate .WEB. And to the extent any such competition concern lingered, it was allayed by DOJ's year-long investigation and ultimate decision not to take action to block Verisign from operating .WEB.

89. Also left unrebutted by Afilias at the Hearing is the principle that the unambiguous provisions of the Guidebook and Auction Rules vest in ICANN substantial discretion to determine whether an applicant has violated the terms of either and, if so, what action to take. Indeed, Afilias did not examine a single ICANN witness regarding the Guidebook and Auction Rules provisions that bestow this discretion on ICANN, the scope of ICANN's discretion, the manner in which ICANN exercised this discretion or the policy reasons behind this discretion.

90. Moreover, the testimony at the hearing established that there is a good-faith and

fundamental dispute between *Amici* and Afilias about whether the DAA violates the Guidebook or Auction Rules, meaning that reasonable minds could differ on whether NDC is in breach of either and, if so, whether disqualification is the appropriate remedy. Accordingly, Afilias' additional argument that ICANN can only exercise its discretion reasonably by disqualifying NDC must be rejected.

91. ICANN was never under a duty – let alone an immediate, absolute duty – to disqualify NDC because of NDC's alleged Guidebook and Auction Rules violations.

A. The Unrebutted Evidence Confirms That ICANN's Core Values Regarding Competition Did Not Require ICANN to Disqualify NDC.

92. To succeed on its competition claim, Afilias needed to establish two fundamental elements. First, Afilias had to prove that ICANN's Core Values regarding competition require ICANN to regulate the DNS to halt any anticompetitive conduct or transaction. Second, Afilias had to prove that .WEB is so competitively unique that Verisign's potential operation of .WEB would somehow be anticompetitive and thereby require ICANN to block any transfer of .WEB to Verisign.¹¹⁰ Afilias failed on both fronts.

1. ICANN does not have the mandate, authority, expertise or resources to act as a competition regulator of the DNS.

93. Afilias' assertion that ICANN's Core Values regarding competition require ICANN to block Verisign's possible operation of .WEB has been upended by testimony from witnesses involved in ICANN's creation and operation, ICANN's foundational documents and Bylaws, and Afilias' own statements. As Ms. Burr and Mr. Kneuer both explained, ICANN

¹¹⁰ As ICANN pointed out in its Rejoinder, another fundamental flaw in Afilias' competition claim is that it is not ripe for evaluation by this Panel. To the extent that Afilias is correct and ICANN has a duty to act like a competition regulator, that duty has not yet been triggered because NDC has not yet sought approval from ICANN to transfer .WEB to Verisign.

obtained all of its authority through an express transfer of power from the United States government.¹¹¹ That transfer did not give ICANN the power to act as a competition regulator, for good reason.¹¹² According to Ms. Burr, who was involved in ICANN’s creation when she was with the U.S. government,¹¹³ “[w]hile this express transfer included the powers and authority necessary to oversee the secure and stable operation of the Internet’s DNS, the transfer did not include the power, authority, or expertise to act as a competition regulator by challenging or policing transactions and conduct that could be deemed anticompetitive. That power and authority remains with the relevant government authorities.”¹¹⁴ Mr. Disspain agreed with this explanation in his Witness Statement.¹¹⁵ Ms. Burr confirmed these points in her testimony during the hearing: “ICANN is not a regulator, and ICANN does not have the competition law competence, whether it is the U.S. or otherwise.”¹¹⁶

94. According to Mr. Kneuer, who was responsible for overseeing the agreements between the U.S. government, ICANN and Verisign when he was with the Department of Commerce,¹¹⁷ the U.S. government “did not delegate to ICANN responsibility for policing or regulating competition in the domain name marketplace. That was not ICANN’s mission and it

¹¹¹ Burr Witness Stmt. ¶ 18 (“When it was first created, ICANN obtained its authority through a series of agreements with NTIA, under which NTIA empowered ICANN to exercise certain authority over the DNS.”), *id.* ¶ 25 (“Finally, ICANN was created through an express transfer of powers and authority from the United States government.”); Kneuer Expert Report ¶ 29 (“ICANN is not, and was never intended to be, an economic or competition regulator and has neither the expertise or resources to perform such functions.”), *id.* ¶ 34 (“ICANN was not intended, and has never served, as an economic regulator, as Afilias claims. ICANN lacks the necessary congressional authorization, expertise or resources for such a role.”)

¹¹² *Id.*

¹¹⁶ Hearing Tr. at 350:6-8.

¹¹⁷ Kneuer Expert Report ¶ 2.

lacked the expertise and resources necessary to fulfill such a regulatory function.”¹¹⁸

95. This testimony is fully consistent with the text of ICANN’s Bylaws. For instance, the Bylaws mandate that ICANN “shall not regulate (i.e., impose rules and restrictions on) services that use the Internet’s unique identifiers or the content that such services carry or provide. . . . For the avoidance of doubt, **ICANN does not hold any governmentally authorized regulatory authority.**”¹¹⁹ Likewise, ICANN’s Bylaws are clear that ICANN “shall not act outside its Mission,”¹²⁰ which is limited to ensuring “the stable and secure operation of the Internet’s unique identifier systems.”¹²¹ Moreover, the text of the Core Values regarding competition confirms that ICANN’s mandate with respect to competition is narrow in that ICANN should “depend[] on market mechanisms,” “[w]here feasible and appropriate” and “where practicable.”¹²² ICANN’s Commitment regarding competition is similarly narrow: It states that ICANN will carry out its activities “through open and transparent processes that enable competition and open entry into Internet-related markets,”¹²³ not that ICANN will act as a competition regulator.

96. On this point, Ms. Burr explained in her testimony that:

ICANN’s mission is enumerated, not exemplary. So if ICANN doesn’t have the authority, it is not articulated in here, ICANN doesn’t have the authority to do it. And ICANN shall not regulate in certain circumstances, and it specifically says [in the Bylaws] that for the avoidance of doubt, ICANN does not hold any governmentally-authorized regulatory authority. ICANN’s role is policy -- coordination of policy development and implementation.¹²⁴

¹¹⁸ *Id.* ¶ 18.

¹¹⁹ Bylaws, Art 1, §§ 1.1(a), (b), (c); 1.2(b)(iii) (emphasis added); Burr Witness Stmt. ¶ 25.

¹²⁰ *Id.*, Art 1, § 1.1(b).

¹²¹ *Id.*, Art 1, § 1.1(a).

¹²² *Id.*, Art 1, §§ 1.2(b)(iii), (iv).

¹²³ *Id.*, Art 1, § 1.2(a).

¹²⁴ Hearing Tr. at 386:16-25.

97. The Bylaws are fully consistent with ICANN’s foundational documents, such as the White Paper, created in 1997. The White Paper was the U.S. Government’s “policy statement with respect to the process to transition coordination management of the Domain Name System out of the government into the global private sector.”¹²⁵ The White Paper emphasized that, with respect to competition in the DNS, ICANN should rely on market mechanisms and leave regulation to the regulators. The White Paper is the source for the Bylaws’ direction that ICANN should rely on market mechanisms to promote competition, stating “[w]here possible, market mechanisms that support competition and consumer choice should drive the management of the Internet because they will lower costs, promote innovation, encourage diversity, and enhance user choice and satisfaction.”¹²⁶ At the same time, the White Paper emphasized that private management of the DNS would not supplant existing legal regimes applicable to the Internet, including antitrust regulation: “[T]his policy is not intended to displace other legal regimes (international law, *competition law*, tax law and principles of international taxation, intellectual property law, etc.) that may already apply.”¹²⁷ Notably, because the White Paper envisioned ICANN acting in the technical role of coordinating the DNS, rather than a regulatory role, the White Paper affirmatively rejected the suggestion that ICANN should be granted the type of antitrust immunity that governments may enjoy.¹²⁸

98. Prior to this IRP, Afilias took the exact same view that ICANN lacked the authority and expertise to act as a competition regulator. In 2006, Afilias and several other registry operators posted a public statement to an ICANN forum regarding community objections

¹²⁷ Burr Witness Stmt., Ex. A, at 7; Burr Witness Stmt. ¶ 29; Kneuer Expert Report ¶ 16.

¹²⁸ Burr Witness Stmt., Ex. A, at 14; Burr Witness Stmt. ¶ 29; Kneuer Expert Report ¶ 16.

to the amended .COM registry agreement.¹²⁹ On ICANN’s general mission, Afilias stated that:

ICANN was conceived from the beginning as an organization with a limited charter. This understanding is reflected in ICANN’s by-laws, which contemplate policy development only on issues within ICANN’s mission statement. As specifically set forth in the ICANN by-laws, for example, only mission-related issues are properly the subject of a [policy development process].¹³⁰

With respect to ICANN’s role in promoting competition, Afilias asserted the view that:

While ICANN’s mission includes the promotion of competition, this role is best fulfilled through the measured expansion of the name space and the facilitation of innovative approaches to the delivery of domain name registry services. ***Neither ICANN nor the GNSO have the authority or expertise to act as anti-trust regulators.*** Fortunately, many governments around the world do have this expertise and authority, and do not hesitate to exercise it in appropriate circumstances.¹³¹

99. At the Hearing and in its briefs, Afilias completely ignored its previous statements regarding ICANN’s limited mandate and its role as an administrator, rather than a regulator, of the DNS. But there is no question that Afilias’ views on these issues – before this IRP – are fully consistent with the testimony of Ms. Burr, Mr. Disspain and Mr. Kneuer, the text of the Bylaws and ICANN’s foundational documents.

100. Afilias may argue that the 2008 letter from the DOJ’s Deborah Garza to NTIA regarding the Program is somehow relevant to whether ICANN has a competition regulation role. It is not, the letter is a red herring. Ms. Garza’s letter was written as she was leaving government service “in 2008, at the very beginning of the new gTLD process, based on the very first applicant guidebook.”¹³² Moreover, as Ms. Burr explained, the letter was “largely about trademark concerns and the implications for consumers and trademark holders through the

¹²⁹ R-21 at 1.

¹³¹ *Id.* at 8 (emphasis added).

¹³² Hearing Tr. at 376:20-377:25 (Burr), 361:20-362:12 (Burr) (the letter contained “the Justice Department’s observations regarding the very earliest version of the policy.”).

introduction of new top-level domains.”¹³³ And as Ms. Burr testified “before the new gTLD Program launched, there were any number of steps taken to address” the trademark issue, “such as the Trademark Clearinghouse,” and “ICANN went through eight more versions of the Applicant Guidebook, a lot of policy development and practice around protecting consumers and trademark holders.”¹³⁴ Ms. Burr also confirmed that ICANN commissioned a number of economic studies before launching the Program to evaluate some of the issues set forth in Ms. Garza’s 2008 letter.¹³⁵ The letter says nothing about how ICANN complies with its Core Values regarding competition.

101. In fact, ICANN complies with its Core Values regarding competition, as Ms. Burr explained in her witness statement and at the Hearing, not by taking affirmative actions to block potentially anticompetitive conduct and transactions,¹³⁶ but by “carrying out its DNS security mission . . . in a way that creates opportunities for competition and innovation,” a prime example of which is the New gTLD Program.¹³⁷ Or, as further described by Ms. Burr at the Hearing:

¹³³ *Id.* at 366:11-367:14 (Burr), 371:12-372:23 (“To me this letter is really about pressures on trademark owners who will feel compelled to register in new gTLDs and that ICANN should analyze that issue, the trademark issue, and proceed cautiously in authorizing new gTLDs, attempting to assess both the likely costs and benefits of any new gTLD. To me this letter is about is -- it’s possible that new top-level domain operators will be able to impose costs on trademark owners who feel compelled to protect their marks, and you need to do this analysis before you proceed with new gTLDs.”).

¹³⁴ *Id.* at 367:8-11 (Burr), 381:3-25 (Burr).

¹³⁵ *Id.* at 395:10-23 (Burr).

¹³⁶ *Id.* at 397:16-398:9 (“ICANN’s obligation with respect to competition is to create a table in which -- and to coordinate the development of policy under which competition can emerge. But I am not aware of ICANN blocking something . . . There’s a lot we don’t know about these markets, and the view always was that competition law and competition authorities would provide a check on the behavior of the organization and the players that were valuable.”); Burr Witness Stmt. ¶ 30 (“Additionally, ICANN’s Core Value regarding competition does not require, or even suggest, that ICANN take affirmative actions to block potentially anticompetitive transactions or conduct the way a government regulator would.”), *id.* ¶ 32 (“No policy, precedent, or authority permits ICANN, based on competition concerns, to block Verisign from acquiring the rights to operate .WEB or to second-guess the judgment of the DOJ – the ultimate competition regulator in the United States – in determining not to act following its own expert and thorough investigation.”).

¹³⁷ *Id.* at 347:1-12, 374:6-25 (“I would read this also in the context of other provisions of ICANN’s bylaws that require [ICANN] to rely on market mechanisms in the same -- you just can’t take this out of -- I mean, yes, foster competition. Does that mean that ICANN should act like a regulator? No. But it should make a choice to allow

“ICANN’s role is setting a table where competition can take place.”¹³⁸ Mr. Disspain agreed with this explanation.¹³⁹ Ms. Burr also explained that, when faced with potential competition issues in the DNS, ICANN “reserve[s] the right to refer things to appropriate antitrust competition authority.”¹⁴⁰ Mr. Kneuer’s un rebutted testimony on these same points similarly confirms that ICANN is an administrator whose mandate “is to allow an environment in which competition can take place,”¹⁴¹ not a competition regulator.

2. The un rebutted economic evidence establishes that .WEB will not be competitively unique such that Verisign’s operation of .WEB would be anticompetitive.

102. A separate and independent flaw in Afilias’ competition claim is that – even if ICANN had a mandate to block potentially anticompetitive activity – Afilias failed to establish that .WEB is so competitively unique that it would be anticompetitive for Verisign to operate it.

103. The only support Afilias has offered for its claim that .WEB is competitively unique are the reports of Mr. Zittrain and Dr. Sadowsky.¹⁴² The conclusions they reach,

competitive forces to go out and battle it out and introduce innovation.”), *id.* at 375:1-16 (“But basically this is consistent with my view that in all cases, the point is to allow an environment in which competition can take place.”); Burr Witness Stmt. ¶ 31 (“Taken together, the provisions in ICANN’s Bylaws that address competition require ICANN to use the bottom-up, multistakeholder processes to enact policies – such as the community-developed New gTLD Program – that enable market-driven competition “[w]here feasible and appropriate.”).

¹³⁸ Hearing Tr. at 349:6-350:8.

¹³⁹ Disspain Witness Stmt. ¶ 14.

¹⁴⁰ Hearing Tr. at 357:11-359:2; Burr Witness Stmt. ¶ 23 (“A final example of how ICANN has addressed potential competition concerns is ICANN’s occasional referral of competition issues to relevant competition regulators, such as the United States Department of Justice, Antitrust Division (“DOJ”).”), *id.* ¶ 24 (“While these types of referrals to competition regulators have been relatively rare, this is how ICANN has dealt with potentially anticompetitive situations involving the DNS.”), *id.* ¶ 31 (“Furthermore, ICANN appropriately defers to the authority and expertise of relevant government regulators on questions about alleged anticompetitive conduct in the DNS, as I note above.”); Burr Witness Stmt., Ex. B, at 3.

¹⁴¹ Hearing Tr. at 375:1-16.

¹⁴² Amended IRP Request ¶ 26 (“As set out in greater detail in Dr. George Sadowsky’s Expert Report, .WEB is a unique gTLD because of properties inherent in its name, and it is widely viewed as the one potential new gTLD with a sufficiently broad and global appeal to compete with VeriSign’s .COM.”); Response to *Amici Curiae Briefs* ¶ 200 (“the *Amici* (and ICANN) dismiss .WEB as “just another gTLD,” suggesting that adding .WEB to Verisign’s stable would not impact competition. As explained by Drs. George Sadowsky and Jonathan Zittrain, there are compelling

however, are not based on any empirical analysis of competition among TLDs, domain name registrations, domain name pricing or any other scientifically valid method. Instead, their conclusions are based on their own subjective views and cherry-picked anecdotes. For example, Mr. Zittrain – who is not an economist – claims that “.WEB is the strongest potential competitor of all new gTLDs” because “.WEB has a unique association with the Internet.”¹⁴³ Likewise, Dr. Sadowsky – who has an economics degree, but is not a practicing economist – claims that “the only new domain that is likely to compete strongly with .com is .web, due to the properties inherent in its name.”¹⁴⁴ Mr. Zittrain and Dr. Sadowsky also base their conclusions on speculative statements made by various .WEB applicants and others about the success they envisioned for .WEB.¹⁴⁵ And Dr. Sadowsky draws the conclusion that the “magnitude of the winning bid for .web provides strong evidence that Verisign regarded it as a significant competitive threat if [it] were controlled by another registry operator.”¹⁴⁶

104. These conclusions were exposed as wholly unreliable in the unchallenged expert reports of Dr. Carlton and Dr. Murphy, which provided independent and scientifically valid analyses that contradict Messrs. Zittrain’s and Sadowsky’s opinions. Both Dr. Carlton and Dr. Murphy performed their assignments as economists should – by evaluating empirical data to address the question of whether .WEB will be a unique, competitive force against .COM. And both answered this economic question with a resounding “no” – the economic evidence establishes that .WEB, even if successful, will not create meaningful competition for .COM

reasons to believe why this is not true.”). Afiliat’s Reply made no argument and provided no evidence as to why .WEB is competitively unique.

¹⁴³ Zittrain Expert Report ¶ 46.

¹⁴⁴ Sadowsky Expert Report ¶ 39.

¹⁴⁵ Zittrain Expert Report ¶¶ 47, 49; Sadowsky Expert Report ¶¶ 43-44.

¹⁴⁶ Sadowsky Expert Report ¶ 46.

beyond the competition it already faces from more than a thousand existing TLDs, as well as other competitors, such as social media and search-based navigation.¹⁴⁷

(i) The economic evidence establishes that .WEB will not exert a unique competitive constraint on .COM based on its name.

105. As to the claim that .WEB will be successful because of an apparent association with the Internet, both Dr. Carlton and Dr. Murphy explain that “the available economic evidence demonstrates that the word ‘web’ is unlikely to convey any particular competitive advantage.”¹⁴⁸ To reach this conclusion, Dr. Carlton and Dr. Murphy evaluated data on domain name registrations in various TLDs and observed that other new gTLDs that are generic and evocative of the Internet, such as .SITE, .ONLINE and .WEBSITE “have not had a meaningful competitive impact on .COM’s pricing or share of domain registrations.”¹⁴⁹ In fact, according to the data, “[w]hile .ONLINE, .SITE and .WEBSITE are among the new gTLDs with the most registered domain names, they collectively account for just 2.5 million registrations,” which is *less than 2%* of the domain names registered in .COM.¹⁵⁰

106. In addition, Dr. Murphy observed in the registration data that “[m]any of the most successful new gTLDs – including .top, .xyz, .loan, .club, .vip, .shop, .work, and .ltd – have no obvious association with the Internet.”¹⁵¹ In fact, Dr. Murphy observed in the data that “of the largest ten new gTLDs as of the end of 2018, only two – .online and .site – were ‘Internet sounding,’ and they ranked only number five and six in terms of domain base. Thus, eight of the top ten new gTLDs were NOT ‘Internet sounding.’”¹⁵²

¹⁴⁷ Murphy Expert Report ¶¶ 31-34.

¹⁴⁹ Carlton Expert Report ¶¶ 36-37; Murphy Expert Report ¶¶ 40-41.

¹⁵⁰ Carlton Expert Report ¶ 37; Murphy Expert Report ¶ 41.

¹⁵¹ Murphy Expert Report ¶ 41.

¹⁵² *Id.*

Table 4: Domain Base in the Largest New gTLDs (Dec. 31, 2018)¹⁵³

TLD	Domain Base	Launch Date (General Availability)
.top	3,857,410	Nov. 2014
.xyz	2,268,847	June 2014
.loan	2,087,415	Aug. 2015
.club	1,613,435	May 2015
.online	1,114,252	Aug. 2015
.site	944,419	July 2015
.vip	856,302	May 2016
.shop	637,941	Sept. 2016
.ltd	622,587	June 2016
.work	520,229	Feb. 2015

107. Dr. Murphy confirmed that the data bore out the same trends in 2020. “As of April 2020, .site and .online were still only two of the top ten new gTLDs with ‘internet sounding’ names. The other new gTLDs in the top ten are .icu, .xyz, .vip, .wang, .club, .shop, and .live.”¹⁵⁴ If the most-popular new gTLDs are *.ICU*, *.XYZ* and *.VIP*, which have no association with the Internet, there is no basis to conclude that a new gTLD that has an association with the Internet will have some competitive advantage.

108. Accordingly, Drs. Carlton and Murphy have demonstrated, through empirical analysis, that Messrs. Zittrain and Sadowsky’s hunch that .WEB will be the crown jewel of new gTLDs because of its connection to the Internet is unsupported by the data. Thus, “[t]here is no economic basis for the claim that the potential association of the term ‘web’ with the Internet places the .web TLD in a unique position to compete for registrations or that this potential association provides any significant competitive advantage to .web whatsoever.”¹⁵⁵

¹⁵³ *Id.* at Table 4.

¹⁵⁴ *Id.* ¶ 41 n.33.

¹⁵⁵ Murphy Expert Report ¶ 3(c). Dr. Murphy further concludes that the economic evidence demonstrates that “web” is not uniquely associated with the Internet. *Id.* ¶¶ 45-48.

(ii) Speculative statements by .WEB applicants and others regarding .WEB are not reliable and are contradicted by the economic evidence.

109. As to Messrs. Zittrain and Sadowsky's reliance on statements made by .WEB applicants and others regarding .WEB's competitive potential, these statements amount to nothing more than hopeful speculation and are contradicted by existing economic evidence.¹⁵⁶ Dr. Carlton points out in his expert report that a number of applicants for other new gTLDs also made statements in their applications characterizing them as strong competitors to .COM. With respect to .ONLINE, for example, an applicant claimed that ".online is essentially a better alternative to existing generics such as .com or .net."¹⁵⁷ Likewise, an applicant for .SITE asserted that ".SITE is a perfect fit among today's top TLDs and is a viable alternative to current generic TLDs."¹⁵⁸ And an applicant for .WEBSITE claimed that "[t]he .Website registry will be a new direct and formidable competitor to the current group of global generic TLDs." But according to Dr. Carlton's analysis, these new gTLDs "have not had a major competitive impact on .COM."¹⁵⁹ Puffery from applicants for new gTLDs is not valid economic evidence.

110. The stock Mr. Zittrain and Dr. Sadowsky put in news articles and other industry statements about the .WEB's potential is similarly misplaced. Neither Mr. Zittrain nor Dr. Sadowsky even attempt to show that these types of statements come from reliable or competent sources. Nor do they account for the fact that there have been similar, mistaken claims about

¹⁵⁶ Mr. Zittrain also claims that .WEB is unique because "[i]n 2012, .WEB again attracted the most applications ..." (Zittrain Expert Report ¶ 49). This is incorrect. There were seven applications for .WEB, which is tied for the 12th most. The TLDs that attracted the most applications were .APP (with 13 applications), .HOME (with 11 applications), .INC (with 11 applications) and .ART (with 10 applications). Carlton Expert Report ¶ 36.

¹⁵⁷ Carlton Expert Report ¶ 36.

¹⁵⁸ *Id.*

¹⁵⁹ *Id.* ¶ 37.

other new gTLDs.¹⁶⁰ They also ignore the fact that subjective views expressed in news articles and industry sources on the likely success of .WEB vary significantly, as many have stated the belief that .WEB will not be competitively significant.¹⁶¹

(iii) Dr. Sadowsky misinterprets the .WEB auction results.

111. Dr. Sadowsky's final assertion is that the .WEB winning bid of \$135 million is indicative of the "competitive significance of .WEB."¹⁶² Dr. Sadowsky, however, did not conduct any economic analysis about what this auction value actually implies about .WEB's likely competitive impact. But Dr. Carlton and Dr. Murphy did this economic analysis, and each independently concluded that the \$135 million auction price actually suggests that .WEB will *not* be a particularly significant competitor.¹⁶³

112. As Dr. Carlton and Dr. Murphy both point out in their expert reports, there have been other transactions in which similar amounts of money were spent to operate TLDs that had not established that they could reduce .COM's share. For example, Neustar acquired the company that operated the .CO ccTLD for \$118.1 million in April 2014. At the time, .CO had roughly 1.6 million domain name registrations, or just a 0.6% share of all domain name registrations.¹⁶⁴ Neustar also acquired the operator of the .AU ccTLD for approximately \$110.6 million in July 2015. At the time, .AU had approximately three million domain name registrations, or only a 1% share of all domain name registrations.¹⁶⁵ And Afilias purchased

¹⁶⁰ *Id.* ¶ 40.

¹⁶¹ Murphy Expert Report ¶ 38 n.32; KM-26 ("Web is a good extension but the future of New gTLDs does not depend on .web and .web is not going to be a game changer.... The New gTLD program is about more options and better left.right combinations. I would prefer credit.cards over creditcards.web any day of the year."); Carlton Expert Report ¶ 41.

¹⁶² Sadowsky Expert Report ¶¶ 42, 45-47.

¹⁶³ Carlton Expert Report ¶¶ 42-45; Murphy Expert Report ¶¶ 39-64.

¹⁶⁴ Murphy Expert Report ¶ 60; Carlton Expert Report ¶ 43.

¹⁶⁵ Murphy Expert Report ¶ 61.

.IO's operator for \$70 million in 2017. At the time, .IO had approximately 270,000 domain name registrations, or less than .2 % of all domain name registrations.¹⁶⁶

113. If acquisition cost is indicative of a TLD's competitive importance – as Dr. Sadowsky claims in his report – then the higher combined value of .CO, .AU and .IO (approximately \$298.7 million) would imply that they are collectively more than twice as important as .WEB despite accounting for less than 1% of all registered domain names.¹⁶⁷ Accordingly, if the .WEB winning bid suggests anything it is that .WEB is likely to garner less than 1% market share when it is launched, hardly a strong competitive presence.

114. The .WEB bid price is also lower than the cumulative purchase price of other new gTLDs. As described by Dr. Carlton, ICANN reported that new gTLD applicants spent a total of \$294.6 million in new gTLD application fees and paid another \$240.6 million for winning public auctions (including the .WEB auction).¹⁶⁸ Many more millions were spent in privately-resolved contention sets with one publicly-traded registry operator alone receiving over \$50 million from losing private auctions.¹⁶⁹ The cumulative purchase price of other new gTLDs is thus much larger than the individual price paid for .WEB. Hence, if auction money and fees paid are indicators of competitive might, as Dr. Sadowsky suggests, then .WEB is much less competitively important than all of the other gTLDs combined, which certainly have increased

¹⁶⁶ Carlton Expert Report ¶ 43; Murphy Expert Report ¶ 63. To the extent that Afilias' \$70 million valuation of .IO was based on the assumption that .IO would grow its share, that further undermines Afilias' claim that .WEB is a uniquely significant competitor to .COM. As Dr. Murphy has explained, .IO is a ccTLD for the British Indian Ocean Territory that Afilias has marketed globally based on "I/O" being an abbreviation in technology circles for "input/output." Murphy Expert Report ¶ 64. "If such an insignificant TLD is worth \$70 million, then that suggests there are many other TLDs likely worth as much or more than \$70 million. That further undermines Afilias's argument that .web being worth \$135 million means .web is a uniquely significant competitor to .com." *Id.*

¹⁶⁷ Carlton Expert Report ¶ 43.

¹⁶⁸ *Id.* ¶ 44.

¹⁶⁹ *Id.*

competition, but in fact have not had a major impact on .COM's share of total registrations.¹⁷⁰

115. Finally, Dr. Murphy performed an NPV analysis to evaluate the implications of the \$135 million winning bid for the likely competitive significance of .WEB. NPV is a standard tool used to discount the value of a series of future profits to a net present value using a discount rate.¹⁷¹ NPV analysis is a form of intrinsic valuation and is used extensively across economics, finance and accounting for determining the value of a business, investment or new venture.

116. Redacted - Third Party Designated Confidential Information

174

117. This is yet another indicator – based on data and empirical analysis, rather than subjective speculation – that if the \$135 million winning bid is indicative of competitive significance, it indicates that .WEB is not likely to be a unique competitive presence in the DNS.

¹⁷⁰ *Id.*; Murphy Expert Report ¶ 63; Sadowsky Expert Report ¶ 17 (concluding that the introduction of approximately 1,500 new gTLDs have failed to “[show] the degree of popularity needed to compete with .com or .net in a meaningful way.”).

¹⁷¹ Murphy Expert Report ¶ 52.

¹⁷² *Id.* ¶ 53.

¹⁷³ *Id.* ¶ 54.

¹⁷⁴ *Id.* ¶ 57 n.53 (“[A]s of December 2018, the largest two new gTLDs, .top and .xyz, have domain bases of 3.9 million and 2.3 million respectively, or about 1.1% and 0.6% of the overall market.”).

(iv) The independent economic analyses of Dr. Carlton and Dr. Murphy confirm that .WEB will not be a unique competitive check on .COM.

118. In addition to evaluating the conclusions of Mr. Zittrain and Dr. Sadwosky, Dr. Carlton and Dr. Murphy performed their own, independent economic analyses and both concluded that .WEB's entry into the DNS will not create meaningful competition for .COM. They also each independently concluded that there is evidence that Verisign may be the most efficient operator of .WEB. Neither Afilias nor its experts addressed (much less rebutted) these core conclusions from two of the world's most-renowned economists. Moreover, Afilias chose not to challenge these conclusions when it opted not to submit responsive expert reports or cross examine Dr. Carlton or Dr. Murphy.¹⁷⁵

119. As explained by Dr. Carlton, in order to assess the claim that .WEB is competitively unique, "one needs to determine whether competitive pressure from an Afilias-operated .WEB would cause Verisign to reduce its .COM prices or otherwise improve the quality of the .COM offering."¹⁷⁶ Both Dr. Carlton and Dr. Murphy concluded that Verisign is not likely to reduce its prices in response to an Afilias-operated .WEB because the .COM price is already lower than it otherwise would be due to government-mandated price caps, and because the .COM price is far lower than prices charged for other TLDs, including those run by Afilias.

120. Since 2000, the Department of Commerce has imposed a cap on the price Verisign can charge for .COM domain names.¹⁷⁷ Amendment 35 to the Verisign Cooperative

¹⁷⁵ Afilias' counsel claimed in his opening statement that Afilias would not cross examine Dr. Murphy because his conclusions were duplicative of Dr. Carlton, Hearing Tr. at 28:5-9, but Afilias subsequently decided to not cross examine Dr. Carlton either, despite having plenty of time to do so.

¹⁷⁶ Carlton Expert Report ¶ 28; Murphy Expert Report ¶ 35 ("Afilias's core assertion is that if Verisign had not acquired .web, .com's prices would be lower because of the competitive constraint provided by .web.")

¹⁷⁷ Murphy Expert Report ¶ 37.

Agreement with the Department of Commerce sets a maximum price of \$7.85 through 2020.¹⁷⁸ After 2020, the maximum allowable rate increases by 7% per year until 2024 when the current term of the Cooperative Agreement ends.¹⁷⁹ After 2024, the Cooperative Agreement – with the existing price caps – will automatically renew for another six-year term unless the Department of Commerce chooses not to renew the agreement with Verisign.¹⁸⁰

121. The empirical evidence that Dr. Carlton and Dr. Murphy examined “indicates that Verisign has consistently set .COM prices equal to the maximum level allowed under existing price caps.”¹⁸¹ “The fact that Verisign has consistently charged the maximum-allowable price for .COM domain name registrations indicates that regulation is a binding constraint and that Verisign would set a higher price for .COM absent the regulation.”¹⁸² In addition, Dr. Murphy observed that .COM’s “wholesale prices are generally lower than the wholesale prices of both other legacy TLDs and many new gTLDs, again suggesting .com’s price is artificially constrained below competitive levels.”¹⁸³ Dr. Carlton reached the same conclusion.¹⁸⁴

122. These points – that price caps constrain .COM pricing and that the regulated .COM price is low compared to prices charged in other TLDs – both “indicate that Verisign is not likely to reduce its already low, regulated .COM prices in response to an Afilias-operated .WEB.”¹⁸⁵ On this “key economic question,” neither Afilias nor its experts “offer any contrary

¹⁷⁸ Carlton Expert Report ¶ 29 n.41.

¹⁷⁹ *Id.*

¹⁸⁰ *Id.*

¹⁸¹ Carlton Expert Report ¶ 30; Murphy Expert Report ¶ 35.

¹⁸² Carlton Expert Report ¶ 30; Murphy Expert Report ¶ 35 (“Verisign has consistently set the wholesale price for .com at the price cap, suggesting that .com’s price is artificially constrained below the competitive levels.”).

¹⁸³ Murphy Expert Report ¶¶ 35-36.

¹⁸⁴ Carlton Expert Report ¶ 31 (“Also of relevance is the fact that the maximum-allowable .COM price is lower than the price typically charged to registrars for domain name registrations in other TLDs.”).

¹⁸⁵ Carlton Expert Report ¶ 32; Murphy Expert Report ¶¶ 35-36.

evidence suggesting that an Afilias-operated .WEB would in fact force .COM's pricing below the regulated rates, even if one accepts their assumption that .WEB is special."¹⁸⁶

123. Likewise, Afilias and its experts ignore the economic evidence identified by Dr. Murphy suggesting that Verisign may be more aggressive and efficient than Afilias in promoting .WEB, an advantage that inures to the benefit of consumers.

124. First, the higher prices Afilias charges in its existing TLDs is evidence of its likely approach with .WEB pricing. "As of April 2020, Afilias charges wholesale prices of \$11.92 for .info, \$12.09 for .pro, \$14.25 for .mobi, and \$10.99 to \$50 for its new gTLDs."¹⁸⁷ If .WEB is as valuable as Afilias has claimed, "it is unlikely that Afilias would charge less for .web than it charges for these other supposedly less valuable TLDs."¹⁸⁸ Second, Verisign has every incentive to aggressively grow .WEB given the name congestion in .COM. "There is a widespread perception that the most attractive names in .com and .net are already taken, and competing TLDs promote their superior name availability," leading to declining growth in .COM and .NET.¹⁸⁹ Thus, Verisign is incentivized to grow .WEB in order "to participate in this new gTLD growth, and to counteract the declining growth that it is experiencing in .com and .net."¹⁹⁰ Indeed, Mr. Livesay confirmed that this was Verisign's intent in entering into the DAA, stating – "And this was an opportunity to grow and sell more domains."¹⁹¹ Third, "Verisign is also an efficient, low-cost operator of TLDs," according to Dr. Murphy.¹⁹² "These advantages will

¹⁸⁶ Carlton Expert Report ¶ 32.

¹⁸⁷ Murphy Expert Report ¶ 69.

¹⁹⁰ *Id.* ¶ 75.

¹⁹¹ Hearing Tr. at 1263:20-1264:11.

¹⁹² Murphy Expert Report ¶ 78.

allow Verisign to procompetitively grow .web more rapidly than another operator could.”¹⁹³

125. In short, the economic evidence analyzed by Dr. Carlton and Dr. Murphy does not show that .WEB is uniquely positioned to become a significant competitor. To the contrary, it shows that .WEB is merely one of many competitors and is highly unlikely to capture a significant portion of domain name registrations or compete meaningfully with .COM.¹⁹⁴

(v) DOJ’s closure of its investigation of Verisign is dispositive of Afilias’ competition claim.

126. To the extent there remains any question about whether Verisign’s possible operation of .WEB may be anticompetitive, and whether ICANN should have taken steps to prevent it, this was answered by the DOJ’s decision not to take any action to block Verisign’s potential operation of .WEB. As explained by Dr. Carlton, who served as Deputy Assistant Attorney General for Economic Analysis for the DOJ’s Antitrust Division, the “Antitrust Division, which has a large staff of Ph.D. economists in addition to attorneys, is one of the world’s leading venues for applying economics to real world questions of competition. The economic issues most often analyzed by the Antitrust Division include the competitive effect of mergers, acquisitions and various alleged restraints of trade.”¹⁹⁵

127. In January 2017, the DOJ launched an investigation of “VeriSign, Inc.’s proposed acquisition of Nu Dot Co LLC’s contractual rights to the .web generic top-level domain.”¹⁹⁶ Verisign, ICANN, and others involved in the DNS, including presumably Afilias, provided the

¹⁹³ *Id.*

¹⁹⁴ Murphy Expert Report ¶ 39; Carlton Expert Report ¶¶ 62-63.

¹⁹⁵ Carlton Expert Report ¶ 59.

¹⁹⁶ AC-31.

DOJ with information and evidence in response to the DOJ's requests.¹⁹⁷ "[T]he focus of the investigation was whether Verisign's operation of .WEB was likely to significantly harm competition through increased prices or reduced quality given Verisign's operation of .COM."¹⁹⁸ The DOJ "has the authority to investigate and challenge mergers, acquisitions and other types of transactions and conduct that significantly harm competition,"¹⁹⁹ and the DOJ "could have taken steps or filed litigation to block Verisign from operating .WEB."²⁰⁰ Yet in January 2018, the DOJ closed its investigation and decided not to take any action to block or otherwise challenge Verisign's possible operation of .WEB.²⁰¹

128. Thus, any competition concerns regarding .WEB were answered by the fact that the preeminent antitrust regulator in the U.S. evaluated the claims, evidence and economics on this issue and determined not to seek to block Verisign from operating .WEB. Not only is this a matter of common sense, but as Dr. Carlton concluded, based on his personal involvement in DOJ investigations, the DOJ's "decision to allow the transaction to proceed indicates to me that the Antitrust Division concluded—likely based on much more information than is available to me, Professor Zittrain or Dr. Sadowsky—that Verisign's operation of .WEB is not likely to harm competition."²⁰²

129. As the evidence at the Hearing confirmed, had ICANN been concerned about competition issues with Verisign operating .WEB, ICANN would have referred the issue to the

¹⁹⁷ Hearing Tr. at 269:22-270:2 (Neustar received a CID); AC-31; Carlton Expert Report ¶ 60 ("I expect that Afilias, and others, would have had the opportunity to raise their competitive concerns about a Verisign-operated .WEB with the Antitrust Division.").

¹⁹⁸ Carlton Expert Report ¶ 60.

¹⁹⁹ *Id.* ¶ 58.

²⁰² Carlton Expert Report ¶ 61.

DOJ.²⁰³ Inasmuch as the DOJ declined to block Verisign's operation of .WEB, there is nothing further for ICANN to do to prevent Verisign from operating .WEB on competition grounds.

3. ICANN does not share Verisign's stated concern that private resolutions of contention sets involve collusion.

130. The Panel's Question No. 5 asked the parties to "comment on VeriSign's stated concern that private resolution of contention sets may involve collusion, in light of ICANN's stated preference for the private resolution of contention sets." Notwithstanding Verisign's purported concern, ICANN's view is that the type of private resolutions that ICANN envisioned and is aware of (*i.e.*, private auctions) are not collusive.

131. As a general matter, unlawful collusion occurs when competitors agree with one another on the prices they will charge customers, the bids they will submit to customers or the customers they will or will not pursue, all to the detriment of consumers.²⁰⁴ These types of collusive arrangements are unlawful because they always increase prices, reduce output or diminish choice to consumers, who the antitrust laws are primarily aimed at protecting.²⁰⁵

132. While a private resolution of a contention set may be an agreement among competitors, it is not the type of collusive agreement that the antitrust laws prohibit, for several reasons. First, a private resolution does not fit into the type of agreements that courts have said are "inherently anticompetitive" because prices and output to consumers are not contemplated or

²⁰³ Hearing Tr. at 358:1-10.

²⁰⁴ *Leegin Creative Leather Prods. v. PSKS, Inc.*, 551 U.S. 877, 886 (2007) ("Restraints that are *per se* unlawful include horizontal agreements among competitors to fix prices, . . . or to divide markets."), RLA-53; *Copperweld Corp. v. Indep. Tube Corp.*, 467 U.S. 752, 768 (1984) ("Certain agreements, such as horizontal price fixing and market allocation, are thought so inherently anticompetitive that each is illegal *per se* without inquiry into the harm it has actually caused."), RLA-49; *Cont'l Airlines, Inc. v. United Airlines, Inc.*, 277 F.3d 499, 509 (4th Cir. 2002) ("price fixing, horizontal output restraints, and market-allocation agreements, are illegal *per se*."), RLA-47.

²⁰⁵ *Brunswick Corp. v. Pueblo Bowl-O-Mat, Inc.*, 429 U.S. 477, 486, n.10 (1977), RLA-45.

affected by a private resolution.²⁰⁶ Instead, consumers may benefit from private resolution because all disputes among contention set members, which can delay entry of new gTLDs and increase costs to gTLD operators and therefore to consumers, are fully and finally resolved.²⁰⁷

133. Second, given that only one entity can operate a particular gTLD, a contention set must be resolved in order for the gTLD to become available to consumers. As the United States Supreme Court has explained, agreements among competitors do not violate the antitrust laws when they “are essential if the product is to be available at all” or “the integrity of the ‘product’ cannot be preserved except by mutual agreement” among competitors.²⁰⁸ Thus, resolution of a contention set is far different from a scenario in which there is some sort of collusive agreement among entities that are all able to offer a product to consumers in competition with one another.

134. Third, antitrust regulators and private parties have been aware of private resolutions of contention sets since the beginning of the Program, yet they have never moved to block or challenge them under the antitrust, competition or consumer protection laws. Indeed, to the extent DOJ was not previously aware of the concept of private resolutions of contention sets, which is highly unlikely, DOJ was certainly made aware of them in connection with its

²⁰⁶ *Broad. Music, Inc. v. CBS Inc.*, 441 U.S. 1, 19-20 (1979) (only when a “practice facially appears to be one that would always or almost always tend to restrict competition and decrease output” rather than “one designed to ‘increase economic efficiency and render markets more, rather than less, competitive,’” is it considered “per se illegal.”) (Citation omitted), RLA-44; *N. Pac. Ry. Co. v. United States*, 356 U.S. 1, 5 (1958) (“[T]here are certain agreements or practices which because of their pernicious effect on competition and lack of any redeeming virtue are conclusively presumed to be unreasonable and therefore illegal without elaborate inquiry as to the precise harm they have caused or the business excuse for their use.”), RLA-61; *SCFC ILC, Inc. v. Visa USA, Inc.*, 36 F.3d 958, 965 (10th Cir. 1994) (“To be judged anticompetitive, the agreement must actually or potentially harm consumers.”), RLA-67.

²⁰⁷ Even Mr. Livesay, who claimed to have concerns with private resolutions, noted in his testimony that this is the premise behind ICANN’s preference for private resolutions of contention sets. Hearing Tr. at 1276:14-20 (“I appreciated why ICANN would want the contention set to resolve itself, because at that point in theory all the potential antagonists have agreed, great solution.”).

²⁰⁸ *Nat’l Collegiate Athletic Ass’n v. Board of Regents*, 468 U.S. 85, 101-102 (1984), RLA-59; see also *Nat’l Bancard Corp. v. Visa U.S.A., Inc.*, 779 F.2d 592, 601 (11th Cir. 1986) (interchange fee agreement among competitors was “a necessary element in the creation of efficiency creating integration” and therefore not unlawful), RLA-58.

investigation of the DAA and the .WEB auction.

135. Finally, there is no claim in this IRP that private resolutions of contention sets are collusive, and there is no record evidence about the terms, participants or scope of any particular private resolution. Yet, except for the narrow categories of agreements among direct competitors that are automatically deemed collusive, such as price fixing and output restrictions, any antitrust analysis of whether a particular transaction is collusive requires an in-depth evaluation of “the facts peculiar to the business to which the restraint is applied; its condition before and after the restraint was imposed; the nature of the restraint and its effect, actual or probable.”²⁰⁹ This type of critical analysis cannot be performed on this record or in this IRP, and therefore should not be attempted.

B. ICANN’s Articles And Bylaws Did Not Require ICANN To Automatically Disqualify NDC For The Alleged Guidebook And Auction Rules Violations

136. Afiliás’ remaining claim is that ICANN was required to disqualify NDC based on a series of highly technical alleged violations of the Guidebook and the Auction Rules. In its Amended IRP Request and other pre-hearing briefings, Afiliás contended that Verisign and NDC committed these alleged violations for the purpose of preserving Verisign’s alleged monopoly. Having effectively abandoned its competition claim during the Hearing, Afiliás’ case now boils down to the contention that the letter of the Guidebook and Auction Rules – as Afiliás contends those documents should be read – must be strictly enforced to “require” ICANN to disqualify NDC’s application.

²⁰⁹ *Board of Trade v. United States*, 246 U.S. 231, 238 (1918), RLA-43; *Cont’l T.V., Inc. v. GTE Sylvania Inc.*, 433 U.S. 36, 49 (1977) (“the [fact-finding] weighs all of the circumstances of a case in deciding whether a restrictive practice should be prohibited as imposing an unreasonable restraint on competition.”), RLA-48; *Nat’l Soc. of Professional Engineers v. United States*, 435 U.S. 679, 688 (1978) (an analysis of whether a restraint is collusive “focuses directly on the challenged restraint’s impact on competitive conditions.”), RLA-60.

137. Specifically, Afilias alleges in its Amended IRP Request that ICANN violated its Bylaws by failing to apply ICANN policies “neutrally, objectively, and fairly” in not automatically disqualifying NDC for its alleged violations of the Guidebook and Auction Rules.²¹⁰ However, other than this conclusory assertion, Afilias has never explained how not disqualifying NDC results in the application of ICANN policies in a way that is non-neutral, non-objective or unfair. In its Reply, Afilias tweaked this claim to argue that “ICANN was required to disqualify NDC’s application and bid in August 2016 when ICANN first learned of NDC’s violations, whether as a matter of automatic disqualification pursuant to the applicable standards or as a matter of the reasonable exercise of ICANN’s discretion pursuant to those same standards.”²¹¹ Once again, however, Afilias does not identify the “applicable standards” or explain how they require ICANN to disqualify NDC, or why ICANN purportedly could reasonably exercise its discretion only by doing so.

138. In any event, Afilias is wrong. The Guidebook and Auction Rules grant ICANN significant discretion to determine whether a breach of their terms has occurred, and if so, the appropriate remedy, and Afilias presented no evidence or argument at the Hearing contesting ICANN’s discretion or the fact that it is limited only by the requirement that it must be exercised “consistently, neutrally, objectively, and fairly[.]”²¹² The testimony at the hearing confirmed that there is a good-faith dispute between the *Amici* and Afilias about whether the DAA violates the Guidebook or Auction Rules. Thus, it is not a foregone conclusion that NDC is or is not in breach. And ICANN’s witnesses confirmed that ICANN has not determined whether the DAA violates the Guidebook or Auction Rules due to the enduring hold on .WEB.

²¹⁰ Amended IRP Request ¶ 78.

²¹¹ Afilias’ Reply Memorial ¶ 20.

²¹² Bylaws, Art. 1, § 1.2(a)(v).

1. ICANN has discretion to determine whether a violation of the Guidebook or Auction Rules has occurred and the appropriate remedy for any such violation.

139. At the Hearing, Afilias made no effort to challenge the fact that the Guidebook and Auction Rules do not require ICANN to automatically disqualify an applicant that breaches their terms. In fact, the very sections of the Guidebook and Auction Rules that Afilias claims to have been breached are explicit in giving ICANN discretion to determine whether their terms have been violated and to determine the appropriate remedy for any violations.

140. For example, Afilias alleges that the Guidebook required ICANN to disqualify NDC for failing to provide ICANN with “identifying information necessary to confirm the identity” of the true applicant – which Afilias contends was Verisign, not NDC – and for failing to notify ICANN of NDC’s “change in circumstances.”²¹³ But the “applicant” for .WEB was NDC—not Verisign—both before and after the DAA, and no testimony suggested otherwise.²¹⁴ And, in any event, Section 1.2 of the Guidebook, which sets forth the information applicants are required to provide ICANN and which Afilias claims NDC violated, states that a “[f]ailure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading *may result* in denial of the application.”²¹⁵

141. Likewise, Afilias alleges that ICANN was required to reject NDC’s application because NDC violated the Guidebook Terms and Conditions by omitting “material information . . . namely that it was obligated to assign .WEB to VeriSign.”²¹⁶ But the term “material information” is not defined anywhere. And, in any event, the Terms and Conditions state that

²¹³ Amended IRP Request ¶ 78 (first and third bullet points).

²¹⁴ Indeed, Afilias’ argument to the contrary is internally inconsistent. Afilias’ contention that NDC violated its obligation to update its application presupposes that NDC remained the applicant for .WEB.

²¹⁵ Guidebook, § 1.2.7 (emphasis added), C-3.

²¹⁶ Amended IRP Request ¶ 78 (second bullet point).

“any material misstatement or misrepresentation (or omission of material information) *may cause* ICANN and the evaluators to reject the application without a refund of any fees paid by Applicant.”²¹⁷ The Terms and Conditions also state elsewhere that ICANN’s “decision to review, consider and approve an application to establish one or more gTLDs and to delegate new gTLDs after such approval is entirely *at ICANN’s discretion*.”²¹⁸

142. Finally, Afiliat alleges that ICANN was required to disqualify NDC because NDC’s bids did not comply with “all aspects of the auction rules.”²¹⁹ The Auction Rules, however, also grant ICANN significant discretion to interpret and enforce the rules and to determine the appropriate remedy in the event of their violation. Specifically, the Auction Rules make clear that “[i]f any dispute or disagreement arises in connection with these Auction Rules, including the interpretation or application of these Auction Rules, or the form, content, validity or time of receipt of any Bid, *ICANN’s decision shall be final and binding*.”²²⁰ And the Bidders Agreement expressly states that an applicant “acknowledges that it *may be subject to a penalty* of up to the full amount of the Deposit and forfeiture of its Applications or termination of its registry agreements for a *serious violation* of the Auction Rules or Bidder Agreement.”²²¹ Thus, there is no question that ICANN has the discretion of determining whether a “serious violation”—or any violation—of the Auction Rules has taken place and, if so, what the appropriate penalty or remedy should be.

143. In sum, the alleged Guidebook and Auction Rules violations that Afiliat levels at NDC do not “require” ICANN to disqualify NDC’s application or reject NDC’s bids, even if

²¹⁷ Guidebook, § 6, Terms and Conditions 1 (emphasis added), C-3.

²¹⁸ *Id.* § 6, Terms and Conditions 3 (emphasis added), C-3.

²¹⁹ Amended IRP Request ¶ 78 (seventh bullet point) (citation omitted).

²²⁰ C-4 ¶ 72.

²²¹ C-5 § 2.10.

ICANN agreed with Afiliás' interpretation of the Guidebook and Auction Rules. Rather, the Guidebook and Auction Rules provide ICANN with the discretion whether to determine if a breach occurred and, if ICANN makes such a determination, to determine the appropriate remedy. There is no basis for the Panel to interfere with this discretion.

2. The reasonable exercise of ICANN's discretion does not require ICANN to disqualify NDC.

144. In what can only be seen as a concession that the Guidebook and Auction Rules vest ICANN with significant discretion to address alleged violations of their terms, Afiliás now argues that ICANN's discretion can only be "reasonably exercised" consistent with ICANN's Articles and Bylaws by disqualifying NDC's application.²²² But Afiliás never explains how any specific provision of the Articles or Bylaws plausibly could compel this result. The Articles and Bylaws do not mandate any particular interpretation or application of the Guidebook and Auction Rules. The Bylaws merely require that ICANN apply its "documented policies" – including the Guidebook and Auction Rules – "consistently, neutrally, objectively and fairly." Yet Afiliás has never even attempted to explain why reading the Auction Rules in the manner advocated for by the *Amici*, or determining that any potential violation may not warrant disqualification, would be inconsistent, non-neutral, non-objective or unfair. Reasonable minds can differ on whether there was a violation of the Guidebook or Auction Rules and, if so, what the penalty should be.

145. The Hearing made clear that Afiliás and the *Amici* have diametrically different interpretations of the Guidebook, Auction Rules and the DAA, and ICANN expects that the closing briefs of the *Amici* and Afiliás will amplify on those differing interpretations. For

²²² Amended IRP Request ¶ 78.

example, Mr. Rasco testified that, despite the DAA, NDC “always maintained the ability to make sure that our application was in compliance with ICANN rules.”²²³ Mr. Livesay agreed with this notion,²²⁴ but Afilias has claimed the opposite.²²⁵ Mr. Rasco testified that “[n]othing in [NDC’s] application changed that would require any kind of disclosure to ICANN” under the Guidebook,²²⁶ and Mr. Livesay expressed the same view,²²⁷ but Afilias disagrees.²²⁸ Mr. Rasco testified to his belief that “NDC remained the bidder and in control” during the .WEB auction in compliance with the Auction Rules,²²⁹ but Afilias has claimed that Verisign was the bidder and was in control.²³⁰ Mr. Rasco testified that the DAA did not transfer NDC’s right in its application to participate in a private auction because NDC had decided unilaterally that it would not,²³¹ but Afilias claims that NDC did give up such a right.²³² In fact, Mr. Rasco testified that NDC “maintained all our rights in the application in .WEB and obviously NDC throughout”²³³ ICANN’s evaluation process, but Afilias takes the opposite position.²³⁴

146. In addition, Mr. Rasco’s witness statement provides specific responses to Afilias’ allegations and describes why he believes the DAA complies with the Guidebook and Auction Rules. For instance, Mr. Rasco claims that the “mission/purpose” portion of NDC’s application merely calls for NDC’s “general vision of new gTLDs in the marketplace and its general strategy

at the time as to how .WEB might be successfully and productively introduced and used to benefit consumers,”²³⁵ “not binding commitments of future actions.”²³⁶ Mr. Rasco also states that NDC’s mission/purpose statement did not need to be updated in light of the DAA because of the Guidebook’s statement that the mission/purpose statement is not part of the evaluation process,²³⁷ because NDC’s view of how .WEB might benefit consumers did not change “irrespective of who operates .WEB” and because NDC’s stated marketing and other business plans “were not final and were subject to market conditions.”²³⁸ Mr. Rasco further states that the terms of the DAA make clear that “NDC remained the applicant and did not agree to assign anything related to its Application, let alone the Application itself.”²³⁹ Mr. Rasco also contends that the DAA “did not substitute Verisign as the applicant for .WEB and did not change the owners or managers of NDC.”²⁴⁰

147. Mr. Livesay also responds to Afiliat’s allegations in his witness statement. For example, Mr. Livesay states that Redacted - Third Party Designated Confidential Information

241

Mr. Livesay concludes that Redacted - Third Party Designated Confidential Information

²⁴² Moreover, Mr. Livesay states that the “Guidebook does not require an applicant to reveal the existence of, sources or amounts of any

²⁴² *Id.* ¶ 23.

funding for a public or private auction for a new gTLD or other resolution of a contention set.”²⁴³

148. Thus, this is not a situation in which all reasonable minds would agree that the DAA violates the Guidebook and/or the Auction Rules. Accordingly, it is not a foregone conclusion that any reasonable exercise of ICANN’s discretion would lead to the conclusion that the DAA violates the Guidebook and Auction Rules.

149. Nor is it a foregone conclusion that, if NDC is found to be in breach of the Guidebook or Auction Rules, NDC must be disqualified. As set forth above, ICANN has discretion to determine an appropriate remedy for a violation of its rules. There are a range of remedies or penalties – including but not limited to disqualification – that ICANN could employ if it were to find that NDC did violate the Guidebook or the Auction Rules. It is not, as Afilias suggests, simply a choice between disqualifying NDC or condoning the DAA. Selecting the appropriate remedy would involve the balancing of competing interests and policies as well as ICANN’s Commitments and Core Values.²⁴⁴

150. Further, because it has the “ultimate responsibility” for the Program, the ICANN Board has reserved the right to “individually consider” any application to “*determine whether* approval would be in the best interest of the Internet community.”²⁴⁵ In other words, even if ICANN were to conclude that NDC violated the Guidebook or the Auction Rules, ICANN’s Board would still have the discretion to decide whether approval of NDC’s (or any other applicant’s) application is appropriate or not.

²⁴³ *Id.* ¶ 25.

²⁴⁴ See Hearing Tr. at 981:1-7 (Disspain) (“You know, there are two -- without wishing to place any weight on either side in this matter, there are two sides. There are the Afilias side, who are bringing this IRP; and then there are others on the other side who believe that they are entitled to the TLD. So both sides need to be treated fairly by ICANN.”).

²⁴⁵ Guidebook, § 5.1, C-3.

3. ICANN has not determined whether the DAA violated the Guidebook or Auction Rules, but ICANN would be in the best position to do so.

151. Testimony during the Hearing confirmed that ICANN has not taken a position on whether NDC violated the Guidebook or the Auction Rules due to pending Accountability Mechanisms and the DOJ’s investigation.²⁴⁶ Ms. Burr’s and Mr. Disspain’s testimony also explained that ICANN would be best suited to decide this issue because of its far-ranging implications, but also because a unique familiarity with ICANN, the Guidebook and the Program are critically important to making any such decision.

152. For example, Ms. Burr explained: “it was never the intention of the CCWG, in my hearing, that the Panel could prescribe a remedy. And that totally makes sense in the context of ICANN IRPs, because often there are many, many parties who are affected by this. There are a lot of moving parts.”²⁴⁷ Ms. Burr reiterated this point later in her testimony:

[the] Panel, by making a finding that ICANN has violated its articles, ICANN must take -- then take appropriate action to remedy the breach. That is not the same as saying that the Panel has the authority to say what the appropriate action is to remedy the breach. And the reason is there are so many moving parts and parties here, imagine if this Panel said “ICANN violated the bylaws, and you must award this to, you know, X, Y or Z.” There are going to be two or three parties who then have a cause of action. So ICANN must -- ICANN has an obligation to take appropriate action, but the CCWG did not contemplate that the Panel, the IRP Panel would decide what that appropriate action was.²⁴⁸

153. Even if the Panel were to consider the CCWG’s Supplemental Final Proposal in construing the scope of its authority as Afilias has suggested (*see supra* ¶¶ 37-45), the Supplemental Final Proposal is fully consistent with Ms. Burr’s testimony. It states that “the

²⁴⁶ Hearing Tr. 748:12-749:3, 720:21-723:4; *id.* at 938:8-939:11, 950:3-11 (“The Board has, to my recollection, not considered the merits of Afilias’ complaint.”); *id.* at 976:9-977:3, 980:17-981:16; 984:3-8.

²⁴⁷ *Id.* at 324:8-13.

²⁴⁸ *Id.* at 334:5-20.

limitation to the type of decision made [by an IRP Panel] is intended to mitigate the potential effect that one key decision of the panel might have on several third parties, and to avoid an outcome that would force the Board to violate its fiduciary duties.”²⁴⁹

154. In his testimony, Mr. Disspain explained his view that the propriety of the DAA “is a matter for the Board,” rather than this Panel.²⁵⁰ And although Mr. Disspain could not bind the Board to a particular action, Mr. Disspain testified that “[a]ll I can tell you is that pursuant to the decision of this Panel, the Board will meet and the Board will consider what this Panel has to say.”²⁵¹ Mr. Disspain also made clear that any thoughts or recommendations the Panel may have for ICANN will be taken “very seriously by the Board.”²⁵²

155. ICANN has the unique knowledge, expertise, and experience required to interpret the Guidebook and Auction Rules. Importantly, ICANN would approach this type of analysis with an eye towards the potential impact a decision on these issues might have on the global Internet community, as required by the Bylaws.²⁵³ As set forth in ICANN’s Response as well as the witness statements of Mr. Livesay and Mr. Rasco, there have been other arrangements in the secondary market for new gTLDs that appear to be similar to the DAA, including transactions involving Afilias, Donuts and other registry operators.²⁵⁴ Any analysis of the DAA must take into account these previous arrangements and their impact.²⁵⁵

²⁴⁹ C-122 ¶ 16.

²⁵⁰ Hearing Tr. at 984:9-987:24.

²⁵¹ *Id.* at 991:4-16; *see also id.* at 989:4-990:23 (testifying that the Board will take any recommendations from the Panel very seriously).

²⁵² *Id.* at 985:22-988:19.

²⁵³ Bylaws, Art. 7, § 7.3(b).

²⁵⁴ ICANN’s Response to Amended IRP Request ¶¶ 25-29; Livesay Witness Stmt. ¶¶ 8-10, 26; Rasco Witness Stmt. ¶¶ 42-45.

²⁵⁵ Likewise, the Auction Rules seem to foresee the possibility of “post-Auction ownership transfer arrangements” being in place prior to an auction. (C-4, at Rule 68(a), (b).) ICANN is best suited to interpret this provision of the Auction Rules and determine whether it is relevant to the DAA.

156. In short, any ultimate decision regarding whether the DAA is compliant with the Guidebook and Auction Rules could be properly made only by ICANN.

4. ICANN’s commitment to transparency and accountability is not relevant to Afilias’ contention that NDC violated the Guidebook and Auction Rules.

157. In its Question No. 6, the Panel asked the parties to “comment on the fact that NDC and Verisign deliberately sought to keep the DAA confidential until after the auction, and that Verisign’s support was essential to NDC winning the auction, in light of ICANN’s commitment to transparency and accountability.”

158. Afilias has repeatedly referenced the concepts of transparency and accountability, but these concepts as set forth in ICANN’s Bylaws apply to ICANN, not new gTLD applicants. New gTLD applicants are bound to act in accordance with the terms of the Guidebook and the Auction Rules, which do not have similar transparency and accountability requirements beyond what applicants were required to disclose – and update – in their applications. Thus, the fact that ICANN has undertaken commitments to transparency and accountability is irrelevant to Afilias’ contention that NDC and Verisign violated the Guidebook and Auction Rules.

IV. THE ICANN BOARD COMPLIED WITH ICANN’S ARTICLES AND BYLAWS BY DECIDING NOT TO TAKE ANY ACTION REGARDING THE .WEB CONTENTION SET WHILE ACCOUNTABILITY MECHANISMS WERE PENDING, AND THE PANEL SHOULD DEFER TO THIS REASONABLE BUSINESS JUDGMENT.

159. Afilias’ claim that ICANN violated its Articles and Bylaws by failing to disqualify NDC, in 2016, after ICANN learned of the DAA is without merit. At the time ICANN received Afilias’ 8 August 2016 letter complaining about the .WEB auction, ICANN, pursuant to its longstanding practice, had already placed the .WEB contention set “on hold” as a result of a pending Accountability Mechanism instituted by another .WEB applicant, and all applicants had been so informed. Therefore, in November 2016, when the ICANN Board

received a briefing from ICANN’s counsel as to the status of .WEB, the Board chose to continue to follow its longstanding practice and not take any action regarding the .WEB contention set while an Accountability Mechanism – and, later, the one-year DOJ investigation – was pending. Not only was that decision consistent with ICANN’s Articles and Bylaws, it was also consistent with ICANN’s notice to Afilias that the contention set was on hold due to a pending Accountability Mechanism. Moreover, the Board’s decision to refrain from taking action while Accountability Mechanisms were pending was within the Board’s reasonable business judgment, and the Panel should not supplant that judgment.

A. ICANN Has A Longstanding Practice Of Keeping Contention Sets “On Hold” While Accountability Mechanisms Are Pending.

160. Every ICANN witness questioned on the topic confirmed that ICANN has a longstanding practice of placing applications and contention sets on hold while related Accountability Mechanisms are pending.²⁵⁶ This practice applies to Requests for Reconsideration under Article 4, Section 4.2 of the Bylaws, complaints made to ICANN’s Ombudsman under Article 5 (if ICANN was aware of such complaints), and CEPs under Article 4, Section 4.3.²⁵⁷ This practice does not necessarily apply to IRP Requests because, unlike other Accountability Mechanisms, the IRP rules specifically afford Claimants the ability to seek emergency relief, or interim measures of protection to stay the processing of a gTLD application.²⁵⁸ ICANN urges IRP Claimants to make use of these interim measures and thus

²⁵⁶ Hearing Tr. at 296:4-11 (Burr) (describing ICANN’s “usual practice of not intervening once an accountability mechanism has been invoked so as to respect the accountability mechanisms themselves”); *id.* at 721:12-722:13 (Willett) (the general practice within the New gTLD Program “was to keep contention sets or applications on hold until accountability mechanisms had been resolved”); *id.* at 938:14-18 (Disspain) (ICANN has a longstanding practice of not interfering with an application or contention set “when there is an outstanding Accountability Mechanism”).

²⁵⁷ *Id.* at 678:4-21, 982:10-983:5.

²⁵⁸ *Id.* at 678:4-21, 982:10-983:5; Interim Supp. Proc. Rule 10, C-59; Bylaws, Art. 4, § 4.3(p).

does not automatically place an application or contention set on hold when an IRP is instituted.²⁵⁹

161. ICANN adopted this practice because it considers its Accountability Mechanisms to be fundamental to ensuring that its bottom-up, consensus-driven, multistakeholder model remains effective.²⁶⁰ ICANN's practice of placing applications and contention sets on hold respects the integrity of the Accountability Mechanisms and Claimants' rights under those Accountability Mechanisms.

162. This practice is published on ICANN's website, which explains that an application or a contention set is placed on hold:

if there are pending activities (e.g., *ICANN accountability mechanisms*, ICANN public comment periods on proposed implementation plans for Program-related activities, Board decisions, or other outstanding unresolved issues) that may impact the status of the application. The application is active but cannot complete certain Program processes such as Auction, Contracting, and Transition to Delegation until the On-Hold status is cleared.²⁶¹

ICANN also advised applicants of this practice during the monthly updates regarding the New gTLD Program, as Ms. Willett testified.²⁶² And here, Afilias was informed by ICANN, in September 2016, that the .WEB contention set was placed on hold due to an Accountability Mechanism filed by another .WEB applicant (and not because of Afilias' letters).²⁶³

B. The Board's Decision To Adhere To Its Normal Practice of Not Taking Action While a Related Accountability Mechanism Is Pending Was Well Within The Board's Reasonable Business Judgment And Is Entitled To Deference.

163. The .WEB contention set became mired in legal proceedings as the date for the

²⁵⁹ For this reason, ICANN encouraged Afilias to apply for emergency relief in this IRP to halt the processing of NDC's .WEB application, as provided for in the Bylaws and the Interim Supplementary Procedures. *See* Bylaws, Art. 4, § 4.3(p), C-1; Interim Supp. Proc., Rule 10, C-59.

²⁶⁰ Burr Witness Stmt. ¶ 12; Disspain Witness Stmt. ¶ 5.

²⁶³ C-61.

auction approached. Ruby Glen, a .WEB applicant, submitted a Request for Reconsideration to ICANN, seeking to halt the .WEB auction, which was denied. Ruby Glen then filed a complaint against ICANN in Los Angeles federal court days before the auction and immediately sought a temporary restraining order enjoining the auction, which the court denied. Ruby Glen's lawsuit was ultimately dismissed as a result of the covenant not to sue undertaken by all applicants as a condition of their participation in the Program,²⁶⁴ and that decision was subsequently upheld on appeal to the Ninth Circuit.²⁶⁵

164. Within days of concluding the .WEB auction and before ICANN received Afilias' 8 August 2016 letter complaining about NDC's arrangement with Verisign, Donuts, the parent company of Ruby Glen, initiated a CEP, which was pending at the time of the 3 November 2016 Board workshop.²⁶⁶

165. At the 3 November 2016 Board workshop, the ICANN Board acted consistently with ICANN's practice of not taking action with respect to a matter that was the subject of an ongoing Accountability Mechanism. The Board was briefed by ICANN's in-house counsel regarding the issues being raised by members of the .WEB contention set, including Afilias, and received materials provided by, and asked questions of, ICANN's in-house counsel. The Board, however, made no decision regarding the various challenges to NDC's application and winning bid for .WEB based on its arrangement with Verisign. As Ms. Burr, who attended the workshop, explained at the hearing:

The Board in November . . . continued to follow its usual practice of not intervening once an accountability mechanism has been invoked so as to respect

²⁶⁴ As described above, the covenant not to sue is a provision in the Guidebook that requires new gTLD applicants to forego pursuing any claims related to their applications in court, and instead pursue any such claims through one of the Accountability Mechanisms provided for in ICANN's Bylaws. *See* Guidebook, § 6.6, C-3.

²⁶⁵ C-106; R-14.

²⁶⁶ RE-11.

the accountability mechanisms themselves. That is what the Board typically does. That is what org typically does.²⁶⁷

166. Mr. Disspain testified similarly:

It was a decision to – a choice, if you will, to do what we would usually do, normally do with a longstanding practice of not interfering when there was an outstanding accountability mechanism.²⁶⁸

167. Weeks later, in January 2017, the DOJ’s Antitrust Division initiated an investigation of Verisign’s potential operation of .WEB, during which it asked ICANN not to take any action regarding .WEB. That investigation continued until January 2018, when DOJ closed the investigation without taking further action. The Donuts CEP also closed in January 2018, and Donuts elected not to initiate an IRP. However, in February and April 2018, Afilias submitted two DIDP Requests and a Request for Reconsideration. Throughout the course of these various proceedings, the ICANN Board made no material decisions regarding .WEB.

168. Conceding that this longstanding ICANN practice actually exists, Afilias suggested at the Hearing that ICANN violated its “no action” practice because ICANN took certain actions after Donuts initiated its CEP on 2 August 2016. Specifically, Afilias questioned Ms. Willett as to why ICANN sent NDC a CIR on 5 August 2016.²⁶⁹ As Ms. Willett explained, however, a notice of CEP is not directed to Ms. Willett or her team; it is directed to ICANN’s in-house counsel, and it typically takes a few days for Ms. Willett’s team to receive notice of a

²⁶⁷ Hearing Tr. at 296:4-11.

²⁶⁸ *Id.* at 935:16-20. In its response to Afilias’ request for interim measures of protection, ICANN stated that it had already evaluated Afilias’ complaints. This was inartfully drafted to the extent that it could be construed to suggest that ICANN had made a determination on whether NDC violated the Guidebook and Auction Rules, which ICANN did not do. ICANN’s next submission—and each submission since then—stated unequivocally that ICANN had made no such determination. Further, ICANN ultimately agreed to keep .WEB on hold, which mooted Afilias’ request for interim measures of protection.

²⁶⁹ *Id.* at 683:16-687:5. A CIR is a set of questions that the New gTLD Program team sends to an applicant once the contention set has been resolved. It is essentially an invitation to begin contracting discussions, and is “one of the very first steps in a multi-week, multi-month process.” *Id.*

CEP.²⁷⁰ Ms. Willett recalls that she received notice of Donuts' CEP later on 5 August or shortly thereafter,²⁷¹ and that her team halted the contracting process for .WEB at that time.

169. Afilias has also suggested that ICANN deviated from its practice of not taking action while a contention set was on hold when it sent a letter to NDC, Verisign, Afilias, and Ruby Glen in September 2016, asking them to provide their views on a series of questions relevant to the issues raised by Donuts and by Afilias.²⁷² Afilias is wrong. Putting a contention set on hold does not mean that all work ceases, as Ms. Willett testified; what it means is that a contention set will not “move to the next phase of work,” such as “send[ing] a Registry Agreement to [NDC] for execution,” “[b]ut, you know, in order to resolve a variety of matters and to get information to assist in the CEP, [ICANN was trying] to gather information.”²⁷³ Ms. Willett's explanation is logical: ICANN's decision to gather information does not mean that ICANN deviated from its practice of refraining from deciding matters that were subject to a pending Accountability Mechanism. Moreover, the collected information could assist ICANN if it was called on to address the matters in the future.

170. The Board's decision not to make any material decisions regarding .WEB while an Accountability Mechanism was pending was undoubtedly a reasonable business judgment made in the exercise of the Board's fiduciary duties. Accordingly, that decision is entitled to deference.²⁷⁴ The Bylaws are clear that where, as here, “Claims aris[e] out of the Board's exercise of its fiduciary duties, the IRP Panel shall not replace the Board's reasonable [business]

²⁷⁰ *Id.*

²⁷¹ *Id.*

²⁷⁴ Bylaws, Art. 4, § 4.3(i)(iii).

judgment with its own.”²⁷⁵ Ms. Burr, who was one of the individuals responsible for drafting the new Bylaws, confirmed as much during the IRP Hearing.²⁷⁶

171. At the 3 November 2016 workshop, the Board committed to follow “its usual practice of not intervening once an Accountability Mechanism had been invoked,” as Ms. Burr and Mr. Disspain testified.²⁷⁷ The Board maintained that position throughout subsequent Accountability Mechanisms regarding .WEB and the related DOJ investigation. The Board’s decision respects the purpose and integrity of the Accountability Mechanisms, which is fundamental to ensuring that ICANN’s unique model remains effective.²⁷⁸

172. Indeed, had the Board taken action, that action could have interfered with ongoing Accountability Mechanisms. Further, the outcome of pending Accountability Mechanisms and the DOJ investigation could have had a material impact on any eventual analysis ICANN might be called to make. For instance, if the DOJ had decided to block Verisign’s potential acquisition of .WEB, the DOJ’s action likely would have rendered Afilias’ concerns moot. Similarly, this IRP could have an impact on the scope of any remaining issues to be resolved (as would an IRP brought by Donuts, had Donuts chosen to file an IRP in early 2018, as ICANN had expected). Therefore, taking action on Afilias’ claims would not have been prudent, as Mr. Disspain testified, because it would have interfered with the pending accountability mechanisms and DOJ investigation, and the Board would have acted without the benefit of input from an IRP Panel or

²⁷⁵ *Id.*, Art. 4, § 4.3(i)(iii).

²⁷⁶ Hearing Tr. at 338:19-340:1 (testifying that the Panel cannot substitute its judgment for the Board’s reasonable judgment, and it does not have the authority to say that the Board should have pursued an alternate course of action, if “failing to do it a different way does not amount to a violation of the Bylaws”).

²⁷⁷ *Id.* at 296:4-11 (Burr); *see also id.* at 388:8-12 (Burr) (The ICANN Board “did not deviate from the standard practice, which was once there is an Accountability Mechanism . . . the process goes on hold, pending resolution.”); *id.* at 935:16-20 (Disspain) (The Board decided to adhere to its “longstanding practice of not interfering when there was an outstanding Accountability Mechanism.”).

²⁷⁸ Burr Witness Stmt. ¶ 12; Disspain Witness Stmt. ¶ 5.

the DOJ, respectively.²⁷⁹

C. Afilias’ Arguments That The Board’s Decision Is Not Protected By The Business Judgment Rule Lack Merit.

173. Afilias made a number of arguments at the Hearing and in its Response to the *Amici* Briefs that the Board’s decision was not a reasonable business judgment entitled to deference under Section 4.3(i)(iii) of the Bylaws. First, Afilias argues that its claims do not relate to the Board’s exercise of its fiduciary duties.²⁸⁰ However, as shown above (*supra* ¶¶ 53-55), the Board has a fiduciary duty with respect to all activities that it conducts on behalf of ICANN, which Ms. Burr confirmed during the Hearing and is a matter of law.²⁸¹

174. Second, Afilias argues that the Board’s decision is not entitled to deference because it was made at a “workshop” rather than a formal meeting or by a formal resolution, and because the decision was not publicly posted. But there was no reason for the Board to call a formal meeting or pass a formal resolution to decide to follow its normal practice of refraining from taking action while an Accountability Mechanism was pending, and the Board certainly had no obligation to publish a decision that it was not taking any action.

175. As shown above (*supra* ¶¶ 56-57) the business judgment rule set forth in Section 4.3(i)(iii) is not limited to resolutions adopted and duly published by the Board after formal meetings. Indeed, under Section 4.3(i)(iii), the business judgment rule applies not only to Board “action” but also to the Board’s decision not to take action.²⁸²

²⁷⁹ Hearing Tr. at 942:13-18; Disspain Witness Stmt. ¶ 11.

²⁸⁰ Afilias’ Response to *Amici* Briefs ¶ 167.

²⁸¹ Hearing Tr. at 336:17-25 (testifying that she cannot imagine a circumstance where the Board acts without respect to its fiduciary duties); *id.* at 392:5-393:3 (The Board’s fiduciary obligations to ICANN extend to everything Board members do related to ICANN).

²⁸² Bylaws, Art. 4, § 4.3(i)(iii) (“[T]he IRP Panel shall not replace the Board’s reasonable judgment with its own so long as the Board’s *action or inaction* is within the realm of reasonable business judgment.”) (emphasis added).

176. Additionally, the Bylaws do not require the Board to call a formal meeting to decide to follow its normal practice of not taking action while an Accountability Mechanism is pending. The Board can and regularly does conduct various types of business at informal meetings, including Board workshops, as Ms. Burr testified.²⁸³ Board workshops “are essentially working sessions for the Board.”²⁸⁴ They are a way for the Board “to work together, exchange information, get up to speed on what’s going on in the community, take care of various housekeeping matters and the like.”²⁸⁵ But because these are not formal meetings, and because the Board is not taking or passing formal resolutions, there are no formal meeting requirements, such as quorum requirements.²⁸⁶ Even so, the majority of the Board typically attends Board workshops.²⁸⁷ Ms. Burr explained that, outside of a formal meeting, including at Board workshops, the Board “can decide to follow procedures that it typically follows,”²⁸⁸ which is exactly what occurred at the November 2016 Board workshop. And in doing so, the Board was exercising its fiduciary duties to ICANN, and its resulting “action or inaction” is entitled to deference under the business judgment rule.

177. Nor was the ICANN Board required to conduct a formal written vote under Article 7, Section 7.19 of the Bylaws. This provision reflects the procedure by which the Board can take formal action *outside* of a formal meeting.²⁸⁹ But Ms. Burr and Mr. Disspain both testified that the November 2016 decision was not a formal action, thereby rendering Section

²⁸³ Hearing Tr. at 281:22-285:23.

²⁸⁵ *Id.* at 284:17-285:12.

²⁸⁶ *Id.* at 282:24-283:6.

²⁸⁷ *Id.* at 282:24-283:6.

²⁸⁸ *Id.* at 285:19-286:10.

²⁸⁹ Bylaws, Art. 7, § 7.19.

7.19 inapplicable. Instead, it was a commitment to adhere to ICANN’s usual practice of not taking action that could interfere with a pending Accountability Mechanism. As Ms. Burr testified, “it is complicated because we are referring to this as a decision, where what I observed was a confirmation to continue to follow the standard practice, which was that the contention set was on hold.”²⁹⁰ Mr. Disspain testified similarly:

The Board made a choice to follow its longstanding practice of not doing anything when there is an outstanding Accountability Mechanism. I cannot say that the Board proactively decided, proactively agreed, proactively chose . . . to not pursue Afilias’ complaints. We just decided that it was our standard practice not to do anything because there were outstanding Accountability Mechanisms.²⁹¹

178. Ms. Burr further explained that it would be impractical to require the Board to take a formal vote in this context: “If you’re suggesting that every time the Board decides to follow a practice that it has always followed, it has to take a formal vote, then we would be voting constantly. . . . [I]t is just not practical to insist that every time the Board makes a decision, including a decision to follow its standard practice, that it has to have a formal vote. I don’t understand that to be typical of any organization of any Board of Directors.”²⁹² This is especially true for ICANN, which has a “very active Board.”²⁹³

179. ICANN was also not required to publicly post its decision after the 3 November 2016 workshop. To be clear, ICANN *did inform Afilias* (and all other contention set members) that .WEB had been placed on hold and that it would be notified when that status changed, as discussed in Section IV.D below. Thus, Afilias knew that .WEB was on hold before and after the November 2016 meeting. No purpose would have been served by announcing on ICANN’s

²⁹⁰ Hearing Tr. at 388:13-389:19; *id.* (The Board simply “agreed to continue to abide by the standard practice.”).

²⁹¹ *Id.* at 938:8-25; *see also id.* at 939:1-11 (the issue was not before the Board “for a formal decision”).

²⁹² *Id.* at 287:1-288:4.

²⁹³ *Id.* at 291:2-19.

website that the Board had decided at its workshop not to lift the hold, nor was the Board required to make such an announcement.²⁹⁴

180. Article 3, Section 3.5(c) of the Bylaws requires actions taken by the Board at a formal meeting to be published in a preliminary report on ICANN’s website.²⁹⁵ Section 3.5(c) applies only to “the formal decisions that the Board makes by resolution during Board meetings,” which Ms. Burr explained is “the way this has always been interpreted from the beginning of time.”²⁹⁶ It does not apply to informal decisions taken at Board workshops.²⁹⁷ Any contrary interpretation would paralyze the Board’s ability to operate, as Ms. Burr explained: “If you read this to say anything the Board thinks about, [or] decides to move on” must be contained on ICANN’s website, or in a “preliminary report seven days later, the Board would spend all of its time approving these preliminary reports.”²⁹⁸

181. Third, Afilias argues that the Panel cannot defer to the Board’s reasonable business judgment because it does not have access to the transcript of the Board’s privileged discussion with counsel, or the written briefings provided to the Board by counsel.²⁹⁹ But Afilias has not offered any authority or logic to support its argument that the Panel must have access to such privileged information in order to conclude that the decision was within the realm of reasonable business judgment. To the contrary, case law confirms: “it is the existence of legal advice that is material to the question of whether the board acted with due care, not the substance

²⁹⁴ In ICANN’s 30 September 2016 letter to Afilias (C-61), Mr. Atallah advised that “the primary contact for Afilias’s application will be notified of future changes to the contention set status or updates regarding the status of relevant Accountability Mechanisms,” which is exactly what occurred, as explained in more detail below.

²⁹⁵ Bylaws, Art. 3, § 3.5(c).

²⁹⁶ Hearing Tr. at 289:7-291:1.

²⁹⁷ *Id.* at 289:7-291:1, 993:1-4.

²⁹⁸ *Id.* at 291:11-19.

²⁹⁹ Afilias Response to *Amici* Briefs ¶¶ 176–178.

of that advice.”³⁰⁰ In order to apply the deferential standard contemplated by the Bylaws, it is sufficient that the Panel understands that the ICANN Board was briefed by in-house counsel, received materials on the subject, had a discussion that included counsel, and then elected to adhere to ICANN’s usual practice of awaiting the conclusion of a pending Accountability Mechanism.

D. ICANN’s Obligations To Act Transparently Did Not Require The Board To Inform Afilias Of Its 3 November 2016 Decision.

182. ICANN’s commitments in its Articles and Bylaws to operate through “open and transparent processes”³⁰¹ and “to operate to the maximum extent feasible in an open and transparent manner”³⁰² do not require ICANN to publish every decision it makes or every informal meeting it conducts. Ms. Burr confirmed that:

[The] ICANN Board has to have the opportunity to meet in workshops, for example, to get its work done. From time to time we’ll provide information to the community before or after about the general topics that we are looking at during our workshop, but I have never understood the requirement to act in an open and transparent way to mandate that every single interaction of the Board and every Board discussion be public.³⁰³

183. This is yet another point with which Afilias agreed before this IRP. In its 2006 public statement regarding the .COM registry agreement, Afilias took the view that:

The job of the ICANN Board is to serve the community by exercising its informed judgment based on the best available information. Some of that important information may be proprietary, and not on the public record. ***Some of that information may relate to the fiduciary obligations of the ICANN Board and properly not on the public record.***³⁰⁴

³⁰⁰ See *Wynn Resort, Ltd. v. Eighth Judicial Dist. Ct. in & for Cty. of Clark*, 133 Nev. 369, 379 (2017) (citation omitted), RLA-38.

³⁰¹ Articles of Incorporation, § III, C-2.

³⁰² Bylaws, Art. 3, § 3.1.

³⁰³ Hearing Tr. at 275:4-276:23; see also *id.* at 293:22-294:4 (ICANN is required to operate openly and transparently to the maximum extent feasible, which “does not mean it has to do everything in public.”).

³⁰⁴ R-21 at 7 (emphasis added).

184. This is especially true with respect to ICANN’s decision to abide by its practice of placing contention sets on hold, and not acting, pending resolution of Accountability Mechanisms.³⁰⁵ Indeed, that ICANN was adhering to this practice was evident from the fact that .WEB remained on hold throughout the entire time related Accountability Mechanisms were pending, and the fact that the hold was published on ICANN’s website and separately disclosed to Afilias.

185. Specifically, Afilias (and all other contention set members) received notice from ICANN that the .WEB contention set was on hold at least as early as 19 August 2016, a fact that was also published on ICANN’s website.³⁰⁶ ICANN then sent Afilias a letter on 30 September 2016 in which ICANN reiterated that the .WEB contention set was on hold.³⁰⁷ In that letter, ICANN explained that the on hold status “reflect[s] a pending ICANN Accountability Mechanism initiated by another member of the contention set,” referring to the Donuts CEP.³⁰⁸ ICANN assured Afilias that it would “be notified of future changes to the contention set status or updates regarding the status of relevant Accountability Mechanisms.”³⁰⁹ ICANN also directed Afilias to the link to ICANN’s website that explains ICANN’s practice of placing applications and contention sets on hold while Accountability Mechanisms are pending.³¹⁰ Inconsistent with Afilias’ current contention that ICANN kept it in the dark regarding the status of the contention

³⁰⁵ Afilias’ Amended IRP Request does not contain any claims that ICANN violated its obligations to act transparently by failing to inform Afilias of the Board’s 3 November 2016 decision, and Afilias confirmed in its opening statement that its claims do not relate to ICANN Board conduct. Hearing Tr. at 81:13-22. These claims, therefore, are not properly before the Panel, but ICANN nonetheless addresses them to the extent the Panel decides to consider them.

³⁰⁶ C-61.

³⁰⁷ *Id.*

³⁰⁸ *Id.*

³⁰⁹ *Id.*

³¹⁰ *Id.*

set, Afiliias acknowledged the on-hold status of the .WEB contention set in its 7 October 2016 letter to ICANN, and even recognized that .WEB had been put on hold as a result of the Donuts CEP, and not in response Afiliias' letters.³¹¹

186. The ICANN Board's decision at the 3 November 2016 workshop simply confirmed that the *status quo* would be maintained while the .WEB contention set was on hold in accordance with normal practice. As Ms. Burr testified, the 30 September 2016 letter from ICANN to Afiliias "reflects what ICANN org typically does when an Accountability Mechanism has been invoked, and the practice of the Board is to respect and follow that. And that would be the Board deciding in November that it was going to continue to follow this practice."³¹² The Board's decision was not some "new action" by ICANN that required an additional notice – the contention set was placed on hold when Donuts initiated the CEP, and the contention set remained on hold until June 2018, after which Afiliias was notified of the change in status, as promised in ICANN's 30 September 2016 letter.³¹³

187. Importantly, Afiliias has not put forward a single piece of evidence suggesting that it would have acted any differently had it known that the Board decided in November 2016 to take no action while the contention set remained on hold. To the contrary, Afiliias withdrew all of its witness statements and, thus, there is no evidence whatsoever of what Afiliias was thinking

³¹¹ C-51 at 1 ("Mr. Atallah states that, while the .WEB/.WEBS contention set was placed on hold by ICANN on 19 August 2016, such action was taken because of the initiation of an ICANN Accountability Mechanism by another applicant. We are concerned that this statement appears to imply that ICANN is not placing the contention set on hold in order to address the issues raised by Afiliias.").

³¹² Hearing Tr. at 295:21-297:21.

³¹³ C-61. Afiliias' argument that ICANN should have disclosed the Board's 3 November 2016 decision in response to Afiliias' DIDP Requests is meritless for the same reasons. Additionally, the only document that would have been potentially responsive to Afiliias' DIDP Requests on this topic is the privileged transcript of the 3 November 2016 Board workshop, which ICANN is not obligated to disclose in response to a DIDP Request (or to any request for that matter). Indeed, one of the enumerated "Conditions for Nondisclosure" of documents is "[i]nformation subject to the attorney-client, attorney work product privilege, or any other applicable privilege, or disclosure of which might prejudice any internal, governmental, or legal investigation." C-92.

throughout the entire time period (or why it never filed a Reconsideration Request to force Board action in 2016). Instead, the documentary evidence demonstrates that Afilias knew as early as August 2016 that the .WEB contention set was on hold as a result of the Donuts CEP – which Afilias confirmed in its 7 October 2016 letter to ICANN – but that Afilias waited on the sidelines for nearly two years hoping that Donuts (or the DOJ) would take the laboring oar in challenging the results of the .WEB auction. In sum, Afilias’ argument that the Board was required to disclose its decision to adhere to normal practice is a lawyer’s invention designed to distract from Afilias’ decision to sit on its hands.

188. For these reasons, Afilias’ complaint that it did not learn of the Board’s decision in November 2016 to maintain the status quo until ICANN submitted its Rejoinder in 2020 is inapposite.³¹⁴ It is also wrong, as ICANN has repeatedly stated the position throughout this IRP that the Board took no action on .WEB, including in its Response to Afilias’ Amended IRP Request:

- “.WEB has been mired in federal court litigation, a [DOJ] investigation and multiple invocations of ICANN’s internal Accountability Mechanisms, which caused ICANN to place .WEB ‘on hold’ pending their resolution.”³¹⁵
- “In connection with the New gTLD Program, ICANN employs a practice, depending on the circumstances, of placing a contention set or a gTLD application on hold if it is the subject of certain ICANN Accountability Mechanisms, including the initiation of a CEP. Thus, on 19 August 2016, ICANN placed the .WEB Contention Set ‘on hold’ due to the pendency of the Donuts CEP.”³¹⁶
- “After a successful gTLD applicant passes initial evaluation and resolves any formal objection and/or contention set proceeding, **and assuming no ICANN**

³¹⁴ This responds to the Panel’s Question No. 10, “Please comment, in light of the relevant provisions of the Bylaws, on ICANN’s decision not to disclose to Afilias, the *Amici* and the general public its Board’s November 2016 decision regarding .WEB. The Respondent is asked to explain the reason why this Board decision was disclosed allegedly for the first time in the Respondent’s Rejoinder?”

³¹⁵ ICANN’s Response to Amended IRP Request ¶ 4.

³¹⁶ *Id.* ¶ 44.

Accountability Mechanisms are pending, the applicant is offered a Registry Agreement with ICANN to become a new gTLD registry operator.”³¹⁷

189. The only new fact ICANN disclosed in its Rejoinder is the date of the ICANN Board’s workshop and the fact that the Board had a (privileged) discussion regarding the .WEB contention set, but took no further action.

V. AFILIAS HAS NOT PROPERLY CHALLENGED ICANN’S TRANSMITTAL OF A FORM REGISTRY AGREEMENT TO NDC IN JUNE 2018 AND, IN ANY EVENT, ICANN ACTED IN ACCORDANCE WITH GUIDEBOOK PROCEDURES AND THE ARTICLES AND BYLAWS.

190. Afiliias asserts at Heading 5 of its Amended IRP Request that ICANN violated its “mandate to promote competition” by sending a draft Registry Agreement to NDC in June 2018 when .WEB was taken off hold. Afiliias’ Amended IRP Request does not allege that ICANN violated any other Article or Bylaws provision by taking the contention set off hold and sending NDC a form registry agreement in June 2018.³¹⁸ As shown above (*supra* Sec. III.A), Afiliias’ competition claim has been thoroughly refuted, thereby also refuting Afiliias’ entire claim relating to the June 2018 draft Registry Agreement, as alleged in the Amended IRP Request.

191. In its Reply, Afiliias makes a two-sentence reference to transmission of a registry agreement, but Afiliias does not argue that this was a violation of the Articles or Bylaws.³¹⁹ Then, in its Response to the *Amici* Briefs, Afiliias again refers to ICANN sending NDC the form registry agreement, but refers to it as an indication that ICANN “already decided” that the DAA was appropriate.³²⁰ Nowhere in *any* of Afiliias’ briefing has Afiliias asserted a claim that, by sending a draft Registry Agreement to NDC, ICANN violated provisions of its Bylaws or

³¹⁷ *Id.* ¶ 23.

³¹⁸ Amended IRP Request ¶ 78 (listing alleged breaches of ICANN’s Articles and Bylaws).

³¹⁹ Afiliias’ Reply Memorial ¶ 121 (“Instead, on 6 June 2018, ICANN notified Afiliias that it had decided to remove the .WEB contention set from its on-hold status—signaling that it intended to proceed with the delegation of .WEB to NDC, and therefore to Verisign. And on 14 June 2018, ICANN in fact sent NDC the .WEB registry agreement—which NDC signed and returned to ICANN.”).

³²⁰ Afiliias’ Response to *Amici* Briefs ¶ 230.

Articles other than its alleged competition mandate. And Afilias elicited no testimony at the Hearing supporting such a claim.

192. The evidence adduced at the Hearing established that taking the contention set off hold and sending NDC a form registry agreement were not indicative of a decision that the DAA was compliant with the Guidebook and Auction Rules. They were ministerial acts taken as part of ICANN's normal processes under the Guidebook once all Accountability Mechanisms had concluded. Moreover, these actions were done with full notice to Afilias and other contention set members, which finally caused Afilias to invoke an Accountability Mechanism (as Afilias had promised in writing only weeks earlier).

193. Ms. Willett testified that, once the Board denied Afilias' Reconsideration Request regarding its DIDP Requests, and no other Accountability Mechanisms were pending, ICANN followed its established practice and Guidebook procedures by taking the .WEB contention set off hold and sending a draft Registry Agreement to the winning bidder.³²¹ As Mr. Disspain explained, "ICANN was taking the next step in its process . . . without wishing to place any weight on either side in this matter, there are two sides . . . both sides need to be treated fairly by ICANN. The best way for ICANN to do that is to follow its process."³²² At the same time, consistent with its transparency obligations, ICANN staff provided all of the members of the .WEB contention set, including Afilias, with notice of the change of status.³²³

³²¹ Hearing Tr. at 721:8-11, 727:21-728:13, 750:3-25 ("So my team was operating within the rules of the applicant guidebook, and we were administering the processes and functions described in the guidebook."); Disspain Witness Stmt. ¶ 13; Guidebook, § 4.1.4, C-3 ("An applicant that prevails in a contention resolution procedure, either community priority evaluation or auction, may proceed to the next stage."); *see also id.* §§ 1.1.2.10, 4.4, 5.1; New Generic Top-Level Domains – Update on Application Status and Contention Sets, R-33 (once on-hold status is cleared, application can proceed to contracting).

³²² Hearing Tr. at 980:17-981:16.

³²³ Disspain Witness Stmt. ¶ 13; R-22 at 7 ("Application status updates are part of the New gTLD Program process 'to provide a more complete picture of the current status of applications...[a]s applications complete evaluation and

194. ICANN took these steps knowing full well that Afilias was likely to make good on its written threats to “initiate a CEP and a subsequent IRP against ICANN.”³²⁴ As

Mr. Disspain explained:

Prior to the lifting of the hold on the contention set, the matter was discussed in the Board Accountability Mechanisms Committee, I believe as part of its general litigation update, but I am not certain. In that discussion we were told that the next step in the process was for -- should all of the accountability mechanisms be dealt with, was for it to come off hold, but that Afilias had made it abundantly clear that in the event that it did come off hold, that they would file an IRP. And we were also clear as a Board committee that Afilias would be aware that it had come off hold because all of the contention set members would be informed that it had come off hold. So that occurred. And then secondly, a couple of days -- again, I don't know exactly, I can't remember exactly when -- after it had actually come off hold, there was another discussion at which we were told that it had come off hold and that an IRP claim from Afilias was expected -- I am going to paraphrase here -- at any minute, so to speak, because that is what they said they would do . . . We were very clear that our understanding was that Afilias had said categorically that they would launch an IRP in the event that the contention set was taken off hold.”³²⁵

195. According to Ms. Willett:

I fully expected from 2016 August, I expected Afilias to file a -- a reconsideration request at any day, and I fully expected that as soon as we changed the status of the contention set, taking the contention set off hold, that was staff action, and Afilias would have voiced their objection to that and made a formal -- the way to formally complain is not by writing a letter. It is by initiating a reconsideration request. That's what I had been telling applicants publicly. That was commonly understood since 2013.³²⁶

196. But as both Mr. Disspain and Ms. Willett explained, taking the contention set off

proceed to the next phases of the New gTLD Program.”). This notice also is posted on ICANN's new gTLD Program web page, which is available to the general public.

³²⁴ C-113 at 5.

³²⁵ Hearing Tr. at 978:5-980:16, 947:16-948:22 (“And [the BAMC] was also briefed that Afilias had written letters, maybe a letter, I can't remember, one or more than one, to say that if that happened, if it came off hold, Afilias was going to launch an accountability mechanism. I can't remember if it says an IRP or not, but launch an accountability mechanism. The BAMC was aware of that.”); *id.* at 738:24-740:21 (Willett) (testifying that the Board was informed that the contention set was being taken off hold in June 2018).

³²⁶ *Id.* at 741:21-742:23. Ms. Willett also testified that Afilias could have filed a Reconsideration Request in 2016 challenging the results of the .WEB auction and seeking disqualification of NDC. That would have placed the issues Afilias raises in this IRP squarely before the board for decision in 2016. *See id.* at 769:9-771:24.

hold was in no way a determination by ICANN that the DAA was compliant with the Guidebook or Auction Rules.³²⁷ It was, instead, ICANN remaining true to its normal practices and the Guidebook procedures in order to treat all applicants fairly, and it was done by ICANN in full expectation that the next step would be an Afilias Accountability Mechanism,³²⁸ which is precisely what happened. Mr. Disspain was clear in his testimony that, had Afilias not invoked an Accountability Mechanism, the Board would have been made aware of that fact and may have taken action at that point, although he could not speculate on what might have happened.³²⁹

197. Afilias has not explained to the Panel how ICANN’s actions in June 2018 violated ICANN’s Articles or Bylaws. Afilias has also failed to explain how it was harmed in any way by these actions because Afilias was given prompt notice, which resulted in Afilias finally filing the Accountability Mechanism (a CEP) that it had been promising.

VI. AFILIAS’ CLAIMS THAT ICANN’S PRE- AND POST-AUCTION INVESTIGATIONS VIOLATED THE ARTICLES AND BYLAWS HAVE NO MERIT AND ARE NOT PROPERLY BEFORE THE PANEL.

198. Afilias asserts at paragraph 78 of its Amended IRP Request that “ICANN failed to fully investigate rumors that NDC had reached an agreement with VeriSign prior to the .WEB Auction” because “[a]lthough ICANN specifically asked NDC to confirm that ‘there have not been changes to your application . . . that need to be reported to ICANN,’ NDC declined to do so and ICANN failed to pursue a response”³³⁰ (the “Pre-Auction Investigation Claim”). In its later-filed briefs, Afilias shifted focus to a new claim – that ICANN violated its Articles and Bylaws

³²⁷ *Id.* at 980:17-981:16 (Disspain); *id.* at 749:15-750:25 (Willett).

³²⁸ *Id.* at 980:17-981:16 (Disspain).

³²⁹ *Id.* at 981:17-982:9; (Disspain); *see also id.* at 741:16-20 (Willett) (“Q: If Afilias had not filed for CEP, ICANN would have proceeded to contract with NDC; is that your understanding? A: I don’t really know what would have happened.”).

³³⁰ Amended IRP Request ¶ 78.

in its *post-auction* investigation of Afilias’ complaints about NDC’s relationship with Verisign (the “Post-Auction Investigation Claim”).³³¹

199. Afilias’ Pre-Auction and Post-Auction Investigation Claims are both time-barred pursuant to Rule 4 of the Interim Supplementary Procedures, as shown above at Section II.B. Each claim also fails on several additional grounds.

A. Afilias’ Pre-Auction Investigation Claim Lacks Merit.

200. On 27 April 2016, ICANN scheduled an auction of last resort for the .WEB gTLD to be held on 27 July 2016.³³² The Auction Rules allow applicants to request a postponement up to 45 days before an auction.³³³ For the scheduled .WEB auction, that deadline expired on 12 June 2016.³³⁴ After that, on Thursday, 23 June 2016, Jon Nevett, the CEO of Donuts, emailed Ms. Willett of ICANN alleging “[u]pon information and belief, there have been changes to the Board of Directors and potential control of Nu Dot Co LLC (“NDC”) that has materially changed its application,” and that NDC had not updated its Application to reflect these alleged changes.³³⁵ Mr. Nevett requested a postponement to the .WEB auction.³³⁶

201. On Monday, 27 June 2016, Jared Erwin, a member of ICANN’s New gTLD Program team,³³⁷ wrote to Mr. Rasco of NDC to investigate Mr. Nevett’s allegations:

We would like to confirm that there have not been changes to your application or the [NDC] organization that need to be reported to ICANN. This may include any information that is no longer true and accurate in the application, including

changes that occur as part of regular business operations (e.g., changes to officers or directors, application contacts).³³⁸

Mr. Rasco promptly replied that “there have been no changes to the NU DOTCO LLC organization that would need to be reported to ICANN.”³³⁹

202. Afilias argues that Mr. Rasco intentionally answered only ICANN’s question regarding changes to NDC’s ownership but did not address whether there were any other changes to NDC’s application, and that ICANN should have pressed him on that issue.³⁴⁰ But because ICANN was investigating claims that NDC had undergone a change in ownership or control (as alleged by Donuts’ Mr. Nevett),³⁴¹ ICANN’s query regarding changes to NDC’s application was necessarily focused on whether it would need to be updated to reflect any changes in NDC’s ownership or control. This makes perfect sense, as no concerns had been raised about any other aspect of NDC’s application, much less the possible involvement of Verisign.³⁴² As Ms. Willett explained: “[I]f Verisign or any other entity had been shared with me, it would have given my team another direction to pursue and additional questions to ask about, but insomuch [as] it was about control and ownership, we just followed up with NDC about those matters.”³⁴³ Thus, after Mr. Rasco indicated that there was no change in the control

³³⁸ Willett Witness Stmt., Ex. B, C-38.

³⁴¹ Hearing Tr. at 616:2-616:20.

³⁴² *Id.*; Willett Witness Stmt. ¶ 20 (“The only issue Mr. Nevett raised was his concern that NDC may have undergone a change in ownership or control. He did not mention that he thought Verisign might be involved with NDC’s application and, in fact, did not mention Verisign at all.”).

³⁴³ Hearing Tr. at 616:2-616:20 (The full question and answer are as follows: “Q. Sure. So you say, ‘The only issue Mr. Nevett raised was his concern that NDC may have undergone a change in ownership or control. He did not mention that he thought VeriSign might be involved with NDC’s application,’ end of quote. So is there a distinction between the concern that NDC may have gone - - undergone a change of ownership or control from a concern that VeriSign might be involved with NDC’s Application? A. I wouldn’t say that there was a concern or a distinction. It was more - - it would have been - - if Verisign or any other entity had been shared with me, it would have given my team another direction to pursue and additional questions to ask about, but insomuch it was about control and ownership, we just followed up with NDC about those matters.”).

or ownership of NDC, ICANN staff felt comfortable moving forward.³⁴⁴ Afilias does not argue that Mr. Erwin or Ms. Willett violated the Articles or Bylaws by not pressing Mr. Rasco on matters beyond the scope of the complaints they were investigating. Indeed, Afilias has not even identified any provisions of the Articles or Bylaws that are implicated.

203. Afilias suggested through its questioning at the Hearing that Mr. Rasco's statement in an email to Mr. Nevett that he had "check[ed] with all the powers that be" and confirmed that NDC would not agree to postpone the .WEB auction³⁴⁵ should have been some type of red flag to ICANN that NDC had undergone a change in ownership or control.³⁴⁶ But Ms. Willett was not a recipient of this email and did not "recall having this email at that time."³⁴⁷ Moreover, Ms. Willett explained that, even if she had seen the email during the investigation, she would not have necessarily concluded that it suggested a change in ownership or control of NDC because applicants frequently have advisory boards or other bodies that participate in decisions

³⁴⁴ Willett Witness Stmt. ¶ 23 ("I informed Mr. Nevett that my team had already investigated the alleged management changes with NDC's representative, and that NDC asserted that no such changes had occurred. I further informed Mr. Nevett that, based on the fact that ICANN had found no evidence of such a management change, ICANN was continuing to proceed with the Auction as scheduled. At no time did Mr. Nevett mention Verisign."); ICANN's Opposition to *Ex Parte* Application for Temporary Restraining Order, Declaration of Christine Willett ¶¶ 15, 19, C-40; ICANN's Response to Amended IRP Request ¶ 35.

³⁴⁵ Rasco Witness Stmt., Ex. I.

³⁴⁶ See Hearing Tr. at 610:13-16 ("Mr. De Gramont: So, Ms. Willett, just reading Mr. Rasco's email, you can understand why Mr. Nevett had raised a concern about the change of ownership or control in NDC, can't you?"); see also *id.* at 610:24-611:24 (Mr. De Gramont asked: "Well, [Mr. Rasco] says the decision as to whether to participate in an ICANN auction or a private auction, quote, 'goes beyond just us,' unquote. He says that there are now additional Board members beyond those identified in the application. He says that in order to be able to answer whether he can participate in a private auction or in an ICANN auction, he has to check with all of the powers that be. In your view, that doesn't indicate that someone else is – now has an ownership or control interest in NDC?").

³⁴⁷ *Id.* at 633:18-634:14 ("Again, I don't recall having this email at that time. You asked me the question how could I have had the conversation with Mr. Rasco. But I was having a conversation with Mr. Rasco based on my conversation with Mr. Nevett in Helsinki and based on Mr. LaHatte's general practice and request that I provide him with information that I had. That was the basis of my, again, reaching out to Mr. Rasco."). See also *id.* at 633:13-17 ("Q. And by this time, you had seen Mr. Rasco's email to Mr. Nevett. Do I understand that correctly? A. I may have. Again, I don't - - I don't recall when I specifically saw that email exchange."); *id.* at 638:9-13 (Q. Do you know if you or anyone else at ICANN asked [Mr. Rasco] who the several new Board members were? A. Again, I don't recall having this email in this time frame, so I don't believe that I would have asked him about that.").

without having ownership or control of the entity.³⁴⁸

204. After ICANN staff concluded its investigation, Ms. Willett met with Mr. Nevett at an ICANN meeting in Helsinki and informed him that ICANN’s investigation had found no evidence of a change in ownership or control of NDC and that ICANN therefore would not be postponing the auction.³⁴⁹ She also told him that, if he was not satisfied with this conclusion, he could use one of ICANN’s Accountability Mechanisms to challenge it.³⁵⁰ Mr. Nevett did just that and filed a complaint with ICANN’s Ombudsman.³⁵¹

205. Resort to the Ombudsman is another important means for members of the ICANN community to have their complaints investigated and resolved.³⁵² As part of his investigation of Mr. Nevett’s complaint, the Ombudsman reached out to Mr. Rasco to ask whether there had been any changes to the ownership or control of NDC or to NDC’s Application.³⁵³ Mr. Rasco again confirmed that there had been no changes, writing: “There have been no changes to the [NDC] application. Neither the governance, management nor the ownership in [NDC] has changed.”³⁵⁴ As Ms. Willett testified, the Ombudsman had also reached out to ICANN staff to request any

³⁴⁸ *Id.* at 612:2-13 (“A. So I can speak to my – does this raise an issue for me. Since it says that Mr. Rasco was still managing, running the program, managing the application, the fact that he had to check with other individuals, that was sort of common practice amongst applicants. They often had dozens of people on a Board of Directors, maybe a governing Board, an advisory Board. They had all sorts of other executives they would have to check with. So it wouldn’t surprise me that an individual like Mr. Rasco would have to check with others.”).

³⁴⁹ *Id.* at 620:9-622:8; Willett Witness Stmt. ¶ 23.

³⁵⁰ Hearing Tr. at 620:9-622:8; Willett Witness Stmt. ¶ 24 (“During my meeting with Mr. Nevett at the ICANN56 Public Meeting in Helsinki, I suggested to Mr. Nevett that if he was not satisfied with ICANN’s course of action he had the option to invoke one of ICANN’s accountability mechanisms. Mr. Nevett indicated that he intended to contact ICANN’s then Ombudsman, Mr. Chris LaHatte (“Ombudsman”) while in Helsinki. He did so. . .”).

³⁵¹ *Id.*

³⁵² Bylaws, Art. 5, § 5.2(a) (“The principal function of the Ombudsman shall be to provide an independent internal evaluation of complaints by members of the ICANN community who believe that ICANN staff, Board or an ICANN constituent body has treated them unfairly.” The Ombudsman is to collect all relevant facts, independently investigate the complaint, and resolve the complaint. To do this, among other things, the Ombudsman considered information from Mr. Nevett, Mr. Rasco, and the ICANN staff.).

³⁵³ Willett Witness Stmt., Ex. E.

³⁵⁴ *Id.*

additional evidence that might inform his investigation.³⁵⁵ To assist the Ombudsman, Ms. Willett spoke to Mr. Rasco by telephone, and he once again confirmed that there had been no change of control and that the decision to proceed with an ICANN-administered auction had been made by him alone.³⁵⁶ Ms. Willett emailed the Ombudsman on 9 July 2016 summarizing her conversation with Mr. Rasco.³⁵⁷

206. As Ms. Willett testified, it is consistent with the Bylaws and ICANN’s common practice for the Ombudsman to gather information from a variety of sources to inform his investigation.³⁵⁸ The Ombudsman followed this practice in response to the Donuts complaint: he independently and objectively considered the evidence and reached the same conclusion as ICANN’s staff, *i.e.*, that there was no credible evidence of a change of ownership or control of NDC and thus no reason to delay the auction.³⁵⁹ Once the Ombudsman concluded his investigation, ICANN informed the members of the .WEB contention set that the auction would proceed as scheduled in accordance with the Guidebook.³⁶⁰

207. Then, prior to the .WEB auction, ICANN’s Board Governance Committee

³⁵⁵ Hearing Tr. at 629:15-631:7 (“A. Mr. LaHatte had - - in this matter, as in many other matters, had asked me to provide information - - the program team that I might have to help inform his investigation so he could pursue that independent investigation. So he gathered information - - it is a common practice. My understanding is he gathered information from a variety of sources, including asking me to provide information on certain matters.”); *id.* at 639:2-19, 780:6-781:16.

³⁵⁶ *Id.* at 876:4-877:16; *see also id.* at 634:6-14 (“... You asked me the question how could I have had the conversation with Mr. Rasco. But I was having a conversation with Mr. Rasco based on my conversation with Mr. Nevelt in Helsinki and based on Mr. LaHatte’s general practice and request that I provide him with information that I had. That was the basis of my, again, reaching out to Mr. Rasco.”).

³⁵⁷ Willett Witness Stmt., Ex. D, C-75; Hearing Tr. at 628:25-631:7.

³⁵⁸ Hearing Tr. at 628:25-631:7, 634:6-14; *see also id.* at 639:7-16 (“... [M]y general recollection is that the ombudsman asked me to provide whatever information we had about the matters he was investigating pertaining to new gTLD applicant disputes. So it was a matter of gathering that information, fact-finding where we could to support to provide that information in support of his investigation.”).

³⁵⁹ ICANN’s Response to Amended IRP Request ¶ 36; Willett Witness Stmt. ¶ 29 (“On 12 July 2016, the Ombudsman informed me that he had determined there was no reason to postpone the Auction because he found to evidence of a change to the ownership or control of Nu Dotco.”).

³⁶⁰ VRSN-10.

evaluated whether ICANN staff conducted a proper investigation of Donuts' claims in connection with the emergency Reconsideration Request filed by Donuts and another .WEB applicant.³⁶¹ The Board Governance Committee found that "ICANN *did* diligently investigate the claims regarding potential changes to [NDC's] leadership and/or ownership."³⁶²

208. In sum, ICANN properly investigated Donuts' pre-auction allegation that there had been a change to the ownership and control of NDC that required an update to NDC's application and postponement of the .WEB auction. ICANN found no evidence of any change to NDC's ownership and control, the Ombudsman reached the same conclusion through his own independent investigation, and the Board Governance Committee came to the same conclusion, as did the Federal District Court, which denied Ruby Glen's application to enjoin the auction.³⁶³ ICANN's investigation was prompt, thorough and complied in every respect with its Articles and Bylaws.

B. Afilias' Post-Auction Investigation Claim Also Lacks Merit.

209. Afilias' separate claim that ICANN violated its Articles and Bylaws in its *post-auction* investigation of Afilias' complaints must also be rejected.³⁶⁴

210. First, in addition to being time barred, Afilias' Post-Auction Investigation Claim was not properly pled and is therefore outside the Panel's jurisdiction. As explained above in

³⁶¹ R-6.

³⁶² *Id.* at 9 (emphasis in original).

³⁶³ In Ruby Glen's lawsuit to enjoin the auction, the court found, based on ICANN's evidence, including primarily Ms. Willett's declaration, that Ruby Glen was not likely to prevail on the merits of its case. Specifically, the court wrote that: "Based on the strength of ICANN's evidence submitted in opposition to the Application for TRO, and the weakness of Plaintiff's efforts to enforce vague terms contained in the ICANN bylaws and Applicant Guidebook, the Court concludes that Plaintiff has failed to establish that it is likely to succeed on the merits, raise serious issues, or show that the balance of hardships tips sharply in its favor on its breach of contract, breach of the implied covenant of good faith and fair dealing, and negligence claims." *Ruby Glen, LLC v. Internet Corp. for Assigned Names & Numbers*, No. CV 16-5505 PA (ASX), 2016 WL 10834083, at *3 (C.D. Cal. July 26, 2016), RLA-66.

³⁶⁴ Afilias' Reply Memorial ¶¶ 8, 102.

paragraphs 18-22, the Panel has jurisdiction only over the claims pled in the Amended IRP Request, *i.e.*, the “Claim” as defined by Section 4.3(d) of the Bylaws. The Amended IRP Request asserted a claim that ICANN violated its Bylaws in connection with its pre-auction investigation of allegations concerning changes to NDC’s ownership and control. The contention in Afilias’ later submissions that ICANN violated its Bylaws in its post-auction investigation is a fundamentally different claim arising from a different investigation of different allegations occurring at a different time. That claim is not fairly encompassed by, or presented in, the Amended IRP Request and therefore is outside the Panel’s jurisdiction.

211. Second, Afilias’ belated contention – raised for the first time in its Reply Memorial – that ICANN’s post-auction investigation was “biased and inadequate”³⁶⁵ lacks merit and is internally contradictory. As an initial matter, the Hearing testimony confirmed that ICANN was not aware of Verisign’s involvement in the .WEB auction until Verisign issued a press release, on 1 August 2016.³⁶⁶ Afilias’ suggestion that Ms. Willett knew of Verisign’s involvement a day earlier when Mr. Rasco informed her that Verisign was going to issue a press release regarding .WEB was undermined by Ms. Willett’s testimony that she did not know what the press release was going to say and that she thought the release could have related to a post-delegation transaction.³⁶⁷ And Ms. Willett’s testimony dispelled the unsupported claim made by NDC’s counsel that when Ms. Willett congratulated Mr. Rasco on winning the auction she was somehow indicating that she knew and approved of Verisign’s funding of NDC’s bids.³⁶⁸ Ms. Willett, like all others at ICANN, learned of Verisign’s involvement only when Verisign issued

³⁶⁵ *Id.* ¶ 8.

³⁶⁸ *Id.* at 673:18-675:10 (Willett).

its press release, on 1 August 2016.³⁶⁹

212. Once that happened, Donuts initiated a CEP on 2 August 2016, and Afilias contacted ICANN on 8 August 2016 to allege for the first time that NDC violated the Guidebook through its arrangement with Verisign.³⁷⁰ ICANN, through its counsel, promptly reached out to Verisign to request a copy of the DAA and other information relevant to Ruby Glen's and Afilias' complaints.³⁷¹ In response, Verisign sent ICANN's counsel a letter dated 23 August 2016 responding to Ruby Glen's and Afilias' allegations, as well as providing a copy of the DAA, the 26 July 2016 letter agreement between Verisign and NDC, and documents supporting Verisign's contention that Afilias violated the auction Blackout Period.³⁷² Despite Afilias' arguments to the contrary, nothing about this communication from ICANN's counsel to Verisign's counsel was "sinister."³⁷³ Instead, ICANN was, through its counsel, collecting evidence it knew was in Verisign's control that was relevant to complaints that had been raised.

213. ICANN then wrote to Afilias, Ruby Glen, NDC, and Verisign inviting them to answer a questionnaire designed to give each an opportunity to fully set out their allegations and positions.³⁷⁴ The questionnaire was used as a tool to gather information to assist ICANN in evaluating the parties' respective positions.³⁷⁵ Afilias, NDC, and Verisign each accepted ICANN's invitation (Ruby Glen did not), providing a total of 59 single-spaced pages of

³⁶⁹ *Id.* (Willett).

³⁷⁰ C-49.

³⁷¹ R-29, at 20:9-15.

³⁷² R-18.

³⁷³ Hearing Tr. at 53:10 (Afilias' Opening Statement).

³⁷⁴ C-50.

³⁷⁵ Hearing Tr. at 695:10-696:20 (Willett) (Responding to a question about what it meant that the responses to the questionnaire would facilitate an "informed resolution" of the questions raised, Willett testified: "So asking questions to gather information, to resolve the questions raised. So there was the Ruby Glen CEP. There was the Afilias request to the ombudsman. So we were endeavoring to gather information.").

analysis.³⁷⁶ Although Afilias asserts that ICANN’s investigation was “biased and inadequate,”³⁷⁷ Afilias does not identify any additional information that ICANN should have gathered.

214. Afilias also claims that the questionnaire itself was biased because ICANN had a copy of the DAA and used it to draft questions designed to elicit answers that would not only help Verisign’s cause, but also protect ICANN from the type of concerns raised by Afilias in its letters.³⁷⁸ Afilias alleges that Verisign and NDC purportedly knew “the substantive motivations behind the questions” and, Afilias did not, when they responded to the questionnaire.³⁷⁹ Afilias argues that ICANN should have informed Afilias that it had the DAA and, because it did not, somehow “the deck was stacked” against Afilias.³⁸⁰

215. The problem with Afilias’ rhetoric is that Afilias did not present a shred of evidence to demonstrate that ICANN was “favoring” Verisign or had somehow drafted a set of questions that were designed to “protect” Verisign (in some fashion that is completely unclear). Thus, Afilias does not explain why the fact that ICANN did not advise Afilias that it had obtained the DAA “stacked” the deck or how giving Afilias this information would have changed Afilias’ responses. Nor does Afilias explain how sending the questions – some of which reflected the exact allegations Afilias and Ruby Glen had been making – amounted to a “cover-up.” Significantly, Afilias ignores the fact that Verisign provided the DAA to ICANN on the express condition that it was confidential business information that could *not* be disclosed by

³⁷⁶ C-51 (Afilias response); C-109 (Verisign response); C-110 (NDC response).

³⁷⁹ *Id.* ¶ 113.

³⁸⁰ *Id.*

ICANN.³⁸¹ ICANN properly respected this condition while considering the substance of the DAA in crafting the questions that it put to Afilias, Ruby Glen, NDC and Verisign.

216. Afilias' contention in its Reply Memorial that the manner in which ICANN investigated Afilias' allegations violated the Articles and Bylaws is also internally contradictory. On the one hand, Afilias claims that ICANN did not adequately investigate its claims.³⁸² On the other hand, Afilias asserts that "[b]y August 2016, ICANN had all the information it needed to determine that NDC's application and bid had to be disqualified."³⁸³ Afilias cannot plausibly contend that ICANN did not gather sufficient facts to make a determination on the DAA, while simultaneously arguing that ICANN had all the facts that it needed to make that determination.

217. Finally, Afilias requests no relief in connection with this issue. No further investigation is possible, and Afilias' own allegations establish that none is warranted. And, as mentioned, Afilias has not identified any Article or Bylaws provision that was allegedly violated by the manner in which ICANN conducted its post-auction investigation.

VII. AFILIAS' RULE 7 CLAIM MUST BE REJECTED.

218. The Panel's Question No. 9 asked Afilias "to clarify what is left to be decided in connection with the Claimant's Rule 7 claim given the disposition of those issues in the Decision on Phase I and the conduct of the IRP in accordance with that ruling." The Panel also asked Afilias "to identify the source of its alleged entitlement to a cost award for the expenditure of effort because of VeriSign and NDC's participation in the IRP, on account of the alleged 'wrongful' adoption of Rule 7."

³⁸¹ C-102 ("CONFIDENTIAL BUSINESS INFORMATION: DO NOT DISCLOSE"). When information is provided to ICANN on a confidential basis, it is crucial that ICANN respect and maintain its confidentiality. ICANN Documentary Information Disclosure Policy, R-41. Any other approach would discourage individuals and companies from communicating openly with ICANN.

³⁸² Afilias' Reply Memorial ¶ 8.

³⁸³ *Id.* ¶ 16

219. With regard to the latter issue, as shown above (*supra* Sec. I.B) and below (*infra* Sec. VIII), the Panel’s remedial authority is defined by Section 4.3(o) of the Bylaws and its authority to shift costs is defined by Section 4.3(r). Under those provisions, the Panel has no power to grant a monetary award, and it can shift costs only on finding that the Claim or defense is frivolous or abusive. Accordingly, there is no valid basis for Afilias’ request for an order shifting costs on the grounds of Rule 7’s alleged wrongful adoption.

220. With regard to the former issue, the only part of Afilias’ Rule 7 claim that survived the Panel’s Decision on Phase I consists of the contention that ICANN staff (specifically ICANN’s Samantha Eisner) knowingly assisted Verisign in “exploit[ing] its leadership position on the IOT to secure an absolute right to participate in this IRP.”³⁸⁴ The Panel concluded in its Phase I Decision that the remainder of Afilias’ claim, which impugned the actions of the IOT, fell outside the Panel’s jurisdiction.³⁸⁵

221. It is not clear whether Afilias continues to press its Rule 7 claim. Afilias stated at the 4 March 2020 Case Management Conference that it was continuing to maintain its Rule 7 claim as “a vehicle for us to present evidence on the relationship between ICANN and VeriSign.”³⁸⁶ The testimony at the Hearing certainly did not provide evidence of any inappropriate relationship between ICANN and Verisign.

222. In any event, Afilias’ Rule 7 claim is meritless. There is no evidence supporting Afilias’ contentions that anyone within ICANN knowingly assisted Verisign in exploiting its leadership position on the IOT to secure a right to participate as *amicus* (or otherwise) in this IRP. On the contrary, the evidence contradicts Afilias’ claim.

³⁸⁴ Decision on Phase I ¶ 132 (citing Amended IRP Request ¶ 84).

³⁸⁵ *Id.* ¶¶ 111-133.

³⁸⁶ Case Management Conference Tr. (4 March 2020) at 11.

223. The fundamental predicate of Afiliias’ claim is that revisions made in October 2018 to the draft Rule 7 were engineered by Verisign to give itself the right to participate in this IRP. However, Verisign already would have had a right to participate as an *amicus* under the draft Interim Supplementary Procedures regardless of any of the changes at issue.

224. The draft Interim Supplementary Procedures circulated at the end of September 2018 stated that “[a]ny person, group, or entity that has a material interest relevant to the DISPUTE but does not satisfy the standing requirements for a CLAIMANT set forth in the Bylaws may participate as an *amicus curiae* before an IRP PANEL[.]”³⁸⁷ The Procedures Officer had discretion to determine whether a proposed *amicus* had a material interest relevant to the dispute.³⁸⁸ If the Procedures Officer found that a proposed *amicus* had such an interest, the Procedures Officer had no discretion to disallow participation.³⁸⁹ Verisign clearly has a material interest relevant to this IRP, and therefore would have had a right to participate as an *amicus* pursuant to the September 2018 version of Rule 7.

225. On 11 October 2018, David McAuley – the Chair of the IOT and a Senior International Policy & Business Development Manager for Verisign – proposed amending the *intervention* section of Rule 7 to allow any person that “claims a significant interest” in the IRP to intervene as a Claimant.³⁹⁰ ICANN *rejected* those proposed changes: at a meeting of the IOT later that day, Ms. Eisner opposed Mr. McAuley’s amendments on the basis that they conflicted with standing requirements imposed by the Bylaws that require a Claimant to have suffered an

³⁸⁸ *Id.* (“If the PROCEDURES OFFICER determines, in his or her discretion, that the proposed *amicus curiae* has a material interest relevant to the DISPUTE, he or she *shall* allow participation by the *amicus curiae*.”) (Emphasis added).

³⁸⁹ *Id.*

³⁹⁰ C-258; C-259.

injury as a result of the alleged violation at issue in an IRP.³⁹¹ Ms. Eisner also objected that the standard proposed by Mr. McAuley was unduly vague and would allow a party to confer standing on itself simply by claiming a significant interest, regardless of whether it actually had any such interest.³⁹²

226. At that same IOT meeting, Malcolm Hutty – a member of the IOT not associated with any party or the *Amici* in this IRP – suggested that the Interim Supplementary Procedures should specify categories of persons, groups, or entities entitled as a matter of right to participate as *amicus curiae*.³⁹³ Following that meeting, Ms. Eisner drafted proposed revisions to Rule 7 to implement Mr. Hutty’s proposal. Ms. Eisner circulated her revisions on 16 October 2018. Those revisions added two categories of persons who would be deemed to have a material interest entitling them to participate as *amici*: (a) in an IRP relating to an application arising out of ICANN’s New gTLD Program, a person that was part of the contention set for the string at issue; and (b) a person external to the Dispute whose actions are “significantly refer[red] to in the briefings before the IRP Panel.”³⁹⁴

227. These revisions did not expand the scope of *amicus* participation. Entities that participated in a contention set at issue in an IRP or whose actions were significantly at issue invariably would have a material interest related to the IRP entitling them to participate under the September 2018 version of Rule 7. By deeming such entities to have a material interest, the 16 October 2018 revisions sought merely to eliminate the unnecessary procedural step of requiring

³⁹¹ Transcript of 11 October 2018 IRP-IOT meeting, at 12-13, https://community.icann.org/display/IRPIOT/IOT+Meeting+%2343+%7C+11+October+2018+@+19%3A00+UTC?preview=/95094963/96210667/ICANN-10112018-FINAL-en_IOT.pdf; see also Bylaws, Art. 4, Sec. 4.3(b)(i).

³⁹² E-mail from S. Eisner to D. McAuley, B. Turcotte and L. Le dated 12 October 2018.

³⁹³ Eisner Decl. ¶ 5.

³⁹⁴ *Id.*, Ex. 2.

the Procedures Officer to grant an application for leave to participate in circumstances where a proposed *amici* clearly satisfied the material interest requirement.³⁹⁵ Thus, the October 2018 revisions to Rule 7 did not create a right for Verisign to participate as *amicus curiae* in this IRP.

228. The evidence also shows that neither Ms. Eisner nor Mr. McAuley were aware at the time of the October 2018 revisions that Afilias intended to initiate an IRP, much less that the changes were made for the purpose of securing Verisign's right to participate in such an IRP. Ms. Eisner testified in her witness statement that she was not aware of Afilias' draft IRP Request when she proposed revisions to Rule 7.³⁹⁶ Ms. Eisner confirmed this at the Hearing.³⁹⁷ Ms. Eisner further testified that she does not recall being aware that Afilias had initiated a CEP³⁹⁸ and had no information regarding the progress or status of the CEP.³⁹⁹ Ms. Eisner was working to finalize a set of Interim Supplementary Procedures for approval by the Board so that a coherent process would be in place in case any IRP was filed.⁴⁰⁰ Her sense of urgency had to do with completing her work and had nothing to do with Afilias' planned IRP.⁴⁰¹ The IRP procedures that were in place prior to that time had been developed under a version of the Bylaws that had been significantly revised and superseded two years earlier.⁴⁰² As a result, the operative IRP procedures did not harmonize with the new Bylaws, which could have caused problems if an IRP were to be filed before revised procedures were in place.

³⁹⁵ Hearing Tr. at 460:9-13 (Eisner) (“And we had already started using that tool of identifying if there was anyone who might come in as of right – as a matter of reducing the level of briefing and streamlining the IRP proceedings.”); *id.* at 473:10-14 (“I was thinking about how this could present and what would make sense in terms of allowing an IRP to move forward and not get bogged down in briefing . . .”).

229. Mr. McAuley states in his declaration that in October 2018 he “was not aware that Afilias had filed a Cooperative Engagement Process (“CEP”) on any subject, including with respect to the .web gTLD.”⁴⁰³ Mr. McAuley confirmed this in response to cross-examination at the Hearing.⁴⁰⁴ Mr. McAuley also testified that he was not aware that NDC had applied for .WEB or that Verisign had an interest in NDC’s application through the DAA.⁴⁰⁵ He further testified that “[n]one of my proposed edits or comments in the Interim Supplementary Procedures were made because of a CEP or IRP by Afilias with respect to .web.”⁴⁰⁶

230. Ms. Eisner and Mr. McAuley testified that the two categories of entities deemed to have a material interest that were added in October 2018 were drafted by Ms. Eisner alone, with no input from Mr. McAuley.⁴⁰⁷ Ms. Eisner and Mr. McAuley were both forthcoming and credible witnesses, and Afilias did not attempt to challenge their testimony on this issue. Afilias suggested at the Hearing that Ms. Eisner and Mr. McAuley may have had a telephone conversation on 15 October 2018, before Ms. Eisner circulated her draft revisions to Rule 7 the next day. Neither Ms. Eisner nor Mr. McAuley recalled such a conversation.⁴⁰⁸ But even if

⁴⁰³ McAuley Decl. ¶ 32.

⁴⁰⁴ Hearing Tr. at 1093:17-25 (“Q. Were you aware in October 2018 that Afilias had filed a CEP with ICANN? A. I believe that I was not. I don’t – I don’t pay attention to CEP. I don’t pay attention to IRP, really. Q. And in October of 2018, were you aware that Afilias had threatened to file an IRP against ICANN with respect to .WEB? A. I was not.”).

⁴⁰⁵ *Id.* at 1067:23-1068:13.

⁴⁰⁶ McAuley Decl. ¶ 32.

⁴⁰⁷ Eisner Decl. ¶ 6 (“I understand that Afilias Domains No. 3 Ltd. (“Afilias”) has suggested in letters to the ICDR and the ICANN Board dated 8 December 2018 and 21 December 2018 (respectively) that the provisions of Rule 7 stating that a member of the contention set for a new gTLD that is the subject of an IRP and/or a person, group, or entity whose actions are significantly referred to in the IRP briefing have material interests sufficient to participate as amici were added by David McAuley in response to a draft IRP Request that Afilias provided to ICANN’s in-house counsel on 10 October 2018 in conjunction with the confidential Cooperative Engagement Process. That is incorrect. Those Rule 7 provisions were drafted by me; and I was not aware of Afilias’ draft IRP Request when I drafted them and proposed them to the IRP-IOT.”); McAuley Decl. ¶ 26 (“This language was developed by Ms. Eisner alone. I never suggested to Ms. Eisner that she should add these two categories of persons who would be deemed to have a material interest for purposes of *amicus* participation.”).

⁴⁰⁸ Neither Ms. Eisner nor Mr. McAuley had any recollection of such a conversation. *See* Hearing Tr. at 511:4-512:16 (Eisner), *id.* at 1080:8-19 (McAuley).

some sort of conversation had occurred, that would not belie Ms. Eisner's and Mr. McAuley's testimony that the two categories deemed to have a material interest were drafted by Ms. Eisner alone, without input from Mr. McAuley.

231. In sum, the evidence unequivocally contradicts Afilias' claim that Mr. McAuley exploited his position as chair of the IOT to ensure Verisign's right to participate in this IRP, or that Ms. Eisner somehow knowingly assisted such conduct. Therefore, what little remains of Afilias' Rule 7 claim must be rejected.

VIII. COSTS.

232. The Bylaws and Interim Supplementary Procedures authorize the Panel to shift costs only on a finding that, when viewed in its entirety, a Party's case is frivolous or abusive. While this is an uncommonly high standard for international arbitration, it is more permissive than the "American Rule" under which legal fees ordinarily cannot be shifted to the non-prevailing party. Although ICANN contends that Afilias has deployed certain tactics and arguments that may well be frivolous or abusive, ICANN does not view the whole of Afilias' case as frivolous or abusive. Nor can Afilias plausibly argue that ICANN's case has been frivolous or abusive. Even if Afilias prevails on parts of its Claim (and it should not, for the reasons stated above), many of Afilias' individual causes of action, and nearly all of its requests for relief, must be rejected as clearly beyond the Panel's authority. Accordingly, the Panel's cost shifting power is not triggered.

233. Specifically, Section 4.3(r) of the Bylaws provides that (1) "ICANN shall bear all the administrative costs of maintaining the IRP mechanisms, including compensation of Standing Panel members" and (2) "each party to an IRP proceeding shall bear its own legal expenses;" but (3) the "IRP Panel may shift and provide for the losing party to pay administrative costs and/or fees of the prevailing party in the event it identifies the losing Party's Claim or defense as

frivolous or abusive.”⁴⁰⁹ Rule 15 of the Interim Supplementary Procedures contains substantially identical provisions.⁴¹⁰

234. Pursuant to Section 4.3(r) of the Bylaws and Rule 15 of the Interim Supplementary Procedures, ICANN agreed to bear all administrative costs of maintaining this IRP, including the fees and expenses of the Panelists and the ICDR (with the exception of the initial filing fee), and the parties have borne their own legal expenses.

235. Section 4.3(r) allows the Panel to re-allocate fees and costs only if it “identifies the losing party’s Claim or defense as frivolous or abusive.” “Claim” is a defined term: it means the “written statement of a Dispute” that initiates the IRP.⁴¹¹ Thus, administrative costs and legal expenses may be shifted onto the Claimant only when the Request for IRP as a whole is frivolous and abusive; they cannot be shifted where only particular aspects of the Request for IRP are frivolous and abusive. It follows that the same standard applies to the Panel’s authority to shift legal expenses onto ICANN, the Respondent. This is reinforced by the fact that Section 4.3(r) requires a finding that “*the* . . . Claim or defense [is] frivolous or abusive.” (Emphasis added.) It is not sufficient to find that a particular cause of action or defense is frivolous or

⁴⁰⁹ Bylaws, Art. 4, § 4.3(r).

⁴¹⁰ Article 34 of the ICDR Rules states that “the Tribunal may allocate costs among the parties if it determines that allocation is reasonable.” This provision of Article 34 directly conflicts with Section 4.3(r) of the Bylaws and Rule 15 of the Interim Supplementary Procedures and is therefore superseded pursuant to Rule 2 of the Interim Supplementary Procedures and Article 1(1) of the ICDR Rules.

⁴¹⁰ Rule 15 states:

“The IRP Panel shall fix costs in its IRP PANEL DECISION. Except as otherwise provided in Article 4, Section 4.3(e)(ii) of ICANN’s Bylaws, each party to an IRP proceeding shall bear its own legal expenses, except that ICANN shall bear all costs associated with a Community IRP, as defined in Article 4, Section 4.3(d) of ICANN’s Bylaws, including the costs of all legal counsel and technical experts.

Except with respect to a Community IRP, the IRP Panel may shift and provide for the losing party to pay administrative costs and/or fees of the prevailing party in the event it identifies the losing party’s Claim or defense as frivolous or abusive.”

⁴¹¹ Bylaws, Art. 4, § 4.3(d).

abusive. That the Panel may shift costs only where the Claim or defense as a whole is frivolous or abusive is also consistent with the overall structure of Rule 4.3(r), which establishes a default rule that each party “shall bear” its own legal expenses and then a narrow carve-out permitting fee-shifting in only the most exceptional cases.

236. The Bylaws do not define “frivolous or abusive,” but those terms have a well-established meaning under California law. Section 128.5 of the California Code of Civil Procedure, which deals with fee shifting for improper litigation tactics, defines “frivolous” as “totally and completely without merit or for the sole purpose of harassing an opposing party.”⁴¹² This is an objective standard that is met only when “[a]ny reasonable attorney would agree” that the Claim or defense “is totally and completely without merit.”⁴¹³ Although Section 128.5 does not use the term “abusive,” it imposes the analogous requirement that litigation tactics must be found to have been “in bad faith” before fees can be shifted. This standard requires “a showing of an improper purpose, *i.e.*, subjective bad faith on the part of the attorney or party to be sanctioned.”⁴¹⁴

237. Afiliás has employed abusive tactics in this IRP from time to time and has taken positions that clearly have no merit. For example, Afiliás sought to have Rule 7 invalidated in a baseless and staggeringly inequitable attempt to preclude NDC and Verisign from being heard even though their conduct and rights are directly at issue. That effort led directly to the bifurcation of these proceedings, which substantially increased this IRP’s length and cost. After the Panel rejected the principal basis for Afiliás’ Rule 7 cause of action in Phase I—finding that it improperly sought to challenge conduct of the IOT, which is outside the Panel’s jurisdiction—

⁴¹² Cal. Civ. Proc. Code § 128.5(b)(2), RLA-71.

⁴¹³ *In re Marriage of Reese & Guy*, 73 Cal. App. 4th 1214, 1220-21 (1999), RLA-52.

⁴¹⁴ *Id.* at 1221.

Afilias continued to press the remainder of its Rule 7 cause of action for an abusive and improper purpose. Indeed, Afilias admitted as much at the 4 March 2020 Case Management Conference, stating that it was persisting in litigating the remaining rump of that cause of action for the purpose of digging for prejudicial and otherwise inadmissible evidence to be used to support its other contentions. (*Supra* at ¶ 221). Afilias has also asserted certain allegations and requests for relief that would be understood by any reasonable attorney to be without merit, such as Requests for Relief Nos. 2, 3, 4, 5 and 7, which are unquestionably beyond the authority of the Panel to grant. And Afilias' competition cause of action directly contradicts not only the outcome of a year-long DOJ investigation, but also its own prior statement that "[n]either ICANN nor the GNSO have the authority or expertise to act as anti-trust regulators."⁴¹⁵

238. Nevertheless, ICANN does not view Afilias' Claim as a whole to be frivolous or abusive. Accordingly, in recognition of the standard established by Section 4.3(r) of the Bylaws, ICANN does not contend that Afilias' Claim triggers the Panel's authority to allocate administrative costs and legal expenses in ICANN's favor, and ICANN therefore does not seek an award of such costs.

239. Nor can Afilias plausibly argue that ICANN's defense triggers the Panel's authority to allocate legal expenses in Afilias' favor.⁴¹⁶ ICANN prevailed in Phase I on the lion's share of Afilias' Rule 7 cause of action and, as shown above (Sec. VII), ICANN must prevail in Phase II on the remainder of that cause of action. ICANN also must prevail in its defense to Afilias' Requests for Relief Nos. 2, 3, 4, 5 and 7, which are clearly outside the Panel's jurisdiction; its defense to the competition cause of action, which Afilias has essentially

⁴¹⁵ Amended IRP Request ¶ 8.

⁴¹⁶ As noted above, ICANN has borne all administrative costs of maintaining the IRP mechanisms. Therefore, any possible re-allocation of such costs could only be in ICANN's favor, not Afilias' favor.

abandoned; and its defenses to Afilias' Pre- and Post-Auction Investigation Claims and Afilias' contention that ICANN violated the Bylaws by not disqualifying NDC's .WEB application in August 2016, which are unequivocally barred by the repose and limitations periods established by Rule 4 of the Interim Supplementary Procedure. In short, even if Afilias prevails on some narrow aspect of its case, the great bulk of Afilias' allegations, causes of action and requests for relief can be readily rejected.

240. For these reasons, the Panel's cost-shifting authority under Section 4.3(r) of the Bylaws and Rule 15 of the Interim Supplementary Procedures has not been triggered, and the parties therefore must bear their own legal expenses. Likewise, ICANN will continue to honor its responsibility to bear the administrative costs of maintaining the IRP mechanism, including the Panel's fees.

CONCLUSION

241. In sum, ICANN has acted consistent with its Articles and Bylaws in overseeing and dealing with the numerous disputes over .WEB and the .WEB auction. ICANN, therefore, respectfully requests that the Panel deny each of Afilias' causes of action and all of its requested relief.

Respectfully submitted,
JONES DAY

Dated: October 12, 2020

		ICANN was not under a duty block Verisign’s possible operation of the TLD. (ICANN’s Post-Hearing Brief, Section III.B.)
ICANN violated its “policy of transparency,” or its Bylaws provision stating that ICANN should “[m]ake decisions by applying its documented policies consistently, neutrally, objectively, and fairly, without singling out any particular party for discriminatory treatment,” by allegedly “conceal[ing] the terms of the DAA and its [purported] decision to delegate .WEB to NDC.”	Afilias’ Amended IRP Request for IRP, ¶ 78, (bullet 6)	<ul style="list-style-type: none"> • <u>ICANN Complied With Its Transparency Obligations.</u> ICANN’s obligations to act transparently did not require ICANN to disclose to Afilias the terms of the DAA. (ICANN’s Post-Hearing Brief, Section IV.) • <u>No Decision Was Made.</u> ICANN never made a decision to grant operation of .WEB to NDC. (ICANN’s Post-Hearing Brief, Sections V, IV.)
Verisign “exploited its leadership position on the IOT to ensure that the Interim Supplementary Procedures gave Verisign an absolute right to participate in this IRP,” and ICANN staff violated the Articles and Bylaws by allegedly knowingly assisting Verisign in doing so.	Amended IRP Request ¶ 84	<ul style="list-style-type: none"> • <u>Mr. McAuley Did Not Exploit His Leadership of IOT.</u> Afilias bases its claim on changes to Rule 7 that were made in October 2018. However, before any such changes, the draft Rule 7 already allowed <i>amicus curiae</i> participation by interested parties, such as Verisign and NDC. Further, Mr. McAuley testified that he was not aware of Afilias’ CEP or planned IRP, and his proposed changes were not motivated by those proceedings. (ICANN’s Post-Hearing Brief, Section VII.) • <u>Ms. Eisner Did Not Knowingly Assist Mr. McAuley.</u> Ms. Eisner was not aware of

I. INTRODUCTION

1. Throughout this IRP process, the *Amici* have sought to enjoy all the benefits of participation as parties while bearing none of the responsibilities. The *Amici's* recent submissions confirm that this approach is reflective of their general view of due process: as a right to which they alone—and no one else—are entitled. Having refused to join this IRP as parties, the *Amici* now bemoan what they view as the curtailment of their due process rights as *amici curiae*. The *Amici's* position in this regard is curious, as their conception of due process for Affiliates—and any other prospective IRP claimants—apparently entails eliminating any meaningful independent review of conduct by ICANN's Board and Staff, even when such conduct plainly violates the letter and spirit of ICANN's governing documents.

2. It is common ground that in keeping with ICANN's core function to promote competition, the New gTLD Program was designed to challenge Verisign's monopoly over the DNS. As such, Verisign's failure to pursue the most promising strings emerging from the New gTLD Program, including .WEB, was perhaps unsurprising. Years later, however, Verisign sought to eliminate the sole remaining threat to its monopoly—.WEB—circumventing the New gTLD Program Rules. Verisign acted surreptitiously, selecting an ideal puppet in *Amicus* NDC—an entity that had no chance of success in the .WEB contention set—and purchasing the relevant control rights in NDC's application, something that is without precedent. ICANN has been all too happy to enable Verisign's efforts to preserve its monopoly, abdicating its mandate to promote competition on the DNS in the hopes of retaining the \$135 million that Verisign paid for what was supposedly NDC's auction bid. ICANN violated numerous other requirements of its Articles and Bylaws to assist Verisign acquire .WEB—including its decision to take the .WEB contention set “off-hold” in June 2018 and proceed to contract for .WEB with NDC (and hence Verisign).

3. In their attempts to subvert the very purpose of the New gTLD Program by eliminating the one viable competitor to Verisign's monopoly that could emerge therefrom, the *Amici* now attempt to eviscerate the Bylaws' requirement of “meaningful” independent review and to deprive ICANN of any

accountability. The *Amici* submit that the Panel is powerless to redress Afilias' claim; instead, they would require the Panel to remand the matter to the very ICANN Board that sought to rubber-stamp Verisign's acquisition of .WEB, in violation of the New gTLD Program Rules and ICANN's Bylaws and Articles of Incorporation. The *Amici's* dim view of this Panel's powers would cripple the IRP process, rendering panels incapable of providing redress to aggrieved parties and ensuring adequate remedies for ICANN's breach of its constitutive documents. To endorse this view would bring no finality to the dispute over who is entitled to .WEB, and it would undermine the global Internet community's policy and procedural intentions as reflected in the New gTLD Program Rules, Articles, and Bylaws. To the contrary, it would permit ICANN to delegate a string after the applicant sold control rights in its application in a secret agreement, and allegedly addressed by ICANN for secret reasons at an undocumented meeting. Further, it would leave prospective registrars in the dark and at the mercy of ICANN's unfettered discretion.

4. Accordingly, for the reasons described below, this Panel must reject the arguments of ICANN and the *Amici* and order the relief requested in Afilias' Amended Request.

II. THE OMISSIONS AND MISREPRESENTATIONS OF KEY FACTS IN THE *AMICI* SUBMISSIONS

5. In seeking to participate as *Amici* in this case, Verisign and NDC have represented, including in their most recent letter, that they have important information and evidence that is "critical to the proper evaluation of Afilias' claims."¹ Unfortunately, the *Amici* submissions are most notable for their omissions and misrepresentations of key facts, as well as blind endorsement of ICANN's submissions.²

6. As we have explained elsewhere,³ the Panel's task in deciding Afilias' claims is straightforward. By reviewing the terms of the DAA against the New gTLD Program Rules⁴—applied, as they

¹ See, e.g., VeriSign's Supplemental Brief in Support of Its Request to Participate as *Amicus Curiae* in Independent Review Process (27 Sep. 2019), ¶ 31.

² Nor has ICANN made any effort to fill these obvious lacunae in its submissions.

³ See Section IX below.

⁴ The "New gTLD Program Rules" refer to the gTLD Applicant Guidebook, the Auction Rules for New gTLDs: Indirect Contention Edition, the New gTLD Auctions Bidder Agreement, "and other rules related to the New gTLD Program." Amended Request

must be, in accordance with ICANN's Articles and Bylaws—there is no question that ICANN violated its Articles and Bylaws by failing to disqualify NDC's application and bid, and by failing to award .WEB to Afilias as the next highest bidder.⁵ The *Amici* and their two fact witnesses—Mr. Paul Livesay of Verisign and Mr. Jose Ignacio Rasco III of NDC—do not dispute that they adhered to the terms of the DAA. The terms of the DAA are clear—as are the requirements of the ICANN's New gTLD Program Rules, Articles, and Bylaws. Given the terms of the DAA and the requirements of the New gTLD Program Rules, Articles, and Bylaws, no proper exercise of ICANN's discretion could have yielded any other result than the disqualification of NDC's application and/or auction bids and the award of .WEB to the next highest bidder, which was indisputably Afilias.⁶

7. However, to clear up the confusion that the *Amici* have tried to create, we will address the most significant of the *Amici's* omissions and misrepresentations in this section of our Response, proceeding in chronological order from the commencement of the .WEB application process in 2012 through ICANN's decision to take the .WEB contention set off-hold in June 2018 and to proceed to contract with NDC (and hence with Verisign). The *Amici's* omissions and misrepresentations serve only to advance Afilias' claims and undermine ICANN's defenses.

A. Verisign's Failure to Apply for .WEB in 2012

8. ICANN's New gTLD Program, as fully implemented in 2012, promised to expand the Domain Name System ("DNS") in a manner that was unprecedented in size and scope. As ICANN itself has stated in this IRP, the New gTLD Program is by far its "most ambitious expansion of the Internet's naming system."⁷ ICANN's New gTLD Program Rules arose from many years of work, with broad input from across the ICANN

by Afilias for Independent Review Process (21 Mar. 2019) ("**Afilias' Amended IRP Request**"), p. i; Reply Memorial in Support of Amended Request by Afilias Domains No. 3 Limited for Independent Review (4 May 2020) (Revised, 6 May 2020) ("**Afilias' Reply Memorial**"), ¶ 8, fn. 22.

⁵ See, e.g., Afilias' Amended IRP Request, ¶¶ 76-78.

⁶ See Afilias' Amended IRP Request, ¶¶ 76-78; Afilias' Reply Memorial, ¶ 101; see also Sections III, IX below.

⁷ ICANN's Response to Amended IRP Request, ¶ 18.

community, designed to further the principles set forth in ICANN's Articles and Bylaws.⁸ Put simply, for TLD registry companies, there has been no event more significant in ICANN's history than the launch of the New gTLD Program.

9. As set forth in our prior submissions, .WEB has long been seen as representing the last best hope to provide meaningful competition against .COM, the TLD that has historically dominated the DNS, and that Verisign and its predecessors have controlled (along with .NET, the #2 gTLD) since the 1990s.⁹ Seven applicants—including major players in the Internet space (such as Google, Donuts, and Afilias)—submitted applications for the .WEB gTLD by the 13 June 2012 deadline. Verisign was not among them. Nor did any of the seven applicants have any known affiliation with Verisign.¹⁰

10. Both of the *Amicus* fact witnesses acknowledge the commercial significance of .WEB in their testimony. Mr. Rasco of NDC states that his company applied for .WEB because NDC was “focused on those potential gTLDs that could occupy a corporate space similar to .CO and ***had the greatest potential for commercial success.***”¹¹

11. Mr. Livesay of Verisign testifies that in 2014—*i.e.*, ***two years after the deadline for submitting new gTLD applications had passed***—Verisign put him “in charge of identifying potential business opportunities for Verisign in ICANN's New gTLD Program.”¹² Mr. Livesay does not mention any involvement in Verisign's strategy regarding the New gTLD Program prior to 2014, and Verisign provides no information on that topic. According to Mr. Livesay, out of the thousands of gTLDs that *bona fide* applicants had applied for in 2012, Verisign decided to pursue .WEB and, apparently, ***only .WEB.***

⁸ See ICANN's Response to Amended IRP Request, ¶ 19; Afilias' Reply Memorial, ¶¶ 22, 24.

⁹ See Afilias' Amended IRP Request, ¶¶ 82-83; Afilias' Reply Memorial, ¶¶ 124, 130.

¹⁰ As previously identified, the seven applicants, in alphabetical order, are: (1) Afilias; (2) Donuts, Inc. (through Ruby Glen LLC); (3) Google, Inc. (through Charleston Road Registry Inc.); (4) InterNetX GmbH (through Schlund Technologies GmbH); (5) NDC; (6) Radix FZC (through DotWeb Inc.); and (7) Web.com Group, Inc. See Afilias' Amended IRP Request, ¶ 27; ICANN's Response to Amended IRP Request, ¶ 30.

¹¹ Witness Statement of Jose Ignacio Rasco III (1 June 2020) (“**Rasco Decl.**”), ¶ 4 (emphasis added).

¹² Witness Statement of Paul Livesay (1 June 2020) (“**Livesay WS**”), ¶ 4.

12. *Verisign offers no explanation as to why Verisign chose not to apply for .WEB itself by 13 June 2012*—which, under the New gTLD Program Rules, was a threshold requirement for participating in the .WEB contention set, and which was met by all of the seven actual applicants for .WEB.¹⁴ Mr. Livesay acknowledges that Verisign had timely applied for *other* TLDs “that were variants of its company name (*i.e.*, ‘.Verisign’) or internationalized versions of Verisign’s existing TLDs”¹⁵ Verisign was therefore certainly aware of the deadline and was able to meet it in applying for variants of Verisign’s existing TLDs.

13. However, Mr. Livesay states without further explanation that in 2012, “*Verisign had not sought to acquire the rights to a new gTLD not already associated with Verisign.*”¹⁶

Redacted - Third Party Designated Confidential Information

[t]he period for filing new applications as part of the New gTLD Program had ended.”¹⁷ Verisign provides no explanation of what had changed between 2012 and 2014 that led it to decide pursue .WEB—let alone to pursue it *secretly*.¹⁸ The only hint is found in

¹³ Livesay WS, ¶11. Mr. Livesay is incorrect in this statement. He made no efforts to contact Afilias.

¹⁴ The AGB provides that “[a]n application will not be considered, in the absence of exceptional circumstances, if ... [i]t is received after close of the application submission period.” ICANN, gTLD Applicant Guidebook (4 June 2012) (“AGB”), [Ex. C-3], p. 1-3; *see also* Afilias’ Reply Memorial, ¶ 43.

¹⁵ Livesay WS, ¶ 4.

¹⁶ Livesay WS, ¶ 4 (emphasis added).

¹⁷ Livesay WS, ¶ 4 (emphasis added).

¹⁸ Mr. Livesay asserts in his witness statement that Redacted - Third Party Designated Confidential Information

Verisign provides no evidence of any “decrease” in the inventory for domain names that would justify Verisign’s failure to apply for the .WEB gTLD in 2012 but suddenly decide to seek it in 2014. Nor does this assertion explain why Verisign decided to pursue .WEB *in secret*. Redacted - Third Party Designated Confidential Information

Mr. Livesay's Witness Statement, where he attempts to explain why Verisign did not want anyone to know of Verisign's plan to pursue the rights to .WEB:

Redacted - Third Party Designated Confidential Information

19

14. Of course, if Verisign had applied for .WEB in 2012, its status as an applicant for .WEB would have been known to the public and governments. Among other things, the public portions of its .WEB application would have been available to the public and governments and would have been posted as part of the same notice and comment process to which all of the actual .WEB applicants were subject. Indeed, as ICANN states in its 18 July 2020 letter to the Panel—setting forth the portions of Livesay and Rasco testimony that it does not endorse (even though it submitted the statements with its Rejoinder)—the public portion of a gTLD application (including the Mission/Purpose Section) is “relevant to the Program” because:

[I]t allows the [Internet] community to comment on the application (during the public comment period) based on the applicant's statement of how the mission and purpose and how the gTLD is intended to be operated.²⁰

The public notice and comment are of course key components of ICANN's governing principles of transparency and accountability.²¹

15. If—as Verisign contends—there is nothing about its efforts to obtain the rights to .WEB that run afoul of the New gTLD Program Rules, or of ICANN's Articles and Bylaws, the Panel should ask why Verisign simply did not submit an application for .WEB in its own name. The Panel might also wonder why—

¹⁹ Livesay WS, ¶ 5 (emphasis added).

²⁰ Letter from ICANN to Panel (18 July 2020) (revised), p. 3. It is possible that Verisign sought to keep ICANN's Government Advisory Committee (“GAC”) in the dark about its intentions regarding .WEB, since the GAC had filed dozens of “early warning notices” regarding competition-related concerns raised by certain applications.

²¹ As stated in the AGB, ICANN's “[p]ublic comment mechanisms are part of ICANN's policy development, implementation, and operational processes.” AGB, [Ex. C-3], p. 1-5. They are critical to ICANN's mission, including in “promoting competition, achieving broad representation of global Internet communities, and developing policy appropriate to its mission through bottom-up, consensus based processes.” *Id.*

after deciding after the application deadline passed to pursue .WEB—Verisign went to such lengths to conceal that Verisign was (in Verisign's own words) **Redacted - Third Party Designated Confidential Information**

"²³ Surely, the mere prospect of "criticism by its competitors" was not what led Verisign to undertake its efforts to acquire the rights to .WEB and to do so in total secrecy.

16. There is, therefore, no explanation for why Verisign did not apply for .WEB itself in 2012—other than that it did not want anyone to know that Verisign was seeking the .WEB registry. Verisign was either worried about the reaction that its pursuit of .WEB would cause throughout the Internet community (and beyond) and/or wanted to act as a stealth bidder—acting under the cloak of a much smaller special purpose TLD acquisition company—so that bidders would not know that the industry behemoth was seeking .WEB and develop their bidding strategy to account for that fact.

B. The Circumstances Surrounding the Negotiation and Execution of the DAA

17. The testimony of Messrs. Livesay and Rasco is also remarkably vague about the circumstances under which Verisign and NDC negotiated and executed the DAA. **Redacted - Third Party Designated Confidential Information**

²⁴ **Redacted - Third Party Designated Confidential Information**

"²⁵

²² Domain Acquisition Agreement between VeriSign, Inc. and Nu Dotco LLC (25 Aug. 2015) ("DAA"), [Ex. C-69], Sec. 10(a) (emphasis added).

²³ DAA, [Ex. C-69], Ex. A, Sec. 1 (emphasis added).

²⁴ Livesay WS, ¶ 12.

²⁵ Livesay WS, ¶ 12.

18. We know from Mr. Rasco's testimony that NDC "received confirmation from ICANN that [NDC's] .WEB Application had been accepted—meaning that the Application had satisfied all applicable ICANN criteria and evaluations—in June 2013."²⁶ Thus, by June 2013, the notice and comment period had closed and NDC's application had passed all of the evaluation criteria set forth in the AGB. According to Mr. Rasco, after the identity of other applicants became publicly known, NDC realized that it was competing against larger and better-financed companies. Redacted - Third Party Designated Confidential Information

.²⁷

19. Redacted - Third Party Designated Confidential Information

²⁸ Accordingly, NDC decided to explore other ways to "monetize" its .WEB application, and to make a profit over the \$185,000 application fee and the costs involved in preparing the application.

Mr. Rasco states in his witness statement:

In or around May 2015, I received a phone call from Verisign expressing interest in working with NDC to acquire the rights to .WEB. As noted above, by that date ICANN had formed the Contention Set for .WEB (*meaning no new applicants could join*) and Redacted - Third Party Designated Confidential Information

In addition, as also noted above, by that date ICANN had yet to schedule a public auction for .WEB., and thus the domain was still on hold, so there was no clarity as to a resolution by either a public *or* private auction. Consequently, Redacted - Third Party Designated Confidential Information

29

²⁶ Rasco Decl., ¶ 24.

²⁷ Rasco Decl., ¶ 40.

²⁸ Rasco Decl., ¶ 41.

²⁹ Rasco Decl., ¶ 41 (emphasis added). It should be noted that in ICANN's letter to the Panel dated 18 July 2020, ICANN states that Mr. Rasco's use of the term "public auction" is a misnomer; the correct term is an "ICANN auction." Letter from ICANN to Panel (18 July 2020) (revised), pp. 5, 10.

20. From Verisign’s perspective, therefore, NDC was the ideal candidate to serve as cover for Verisign’s efforts to secretly obtain the rights to .WEB for itself. *First*, NDC was not only willing but eager to sell its rights in its .WEB Application, given that^{Redacted - Third Party Designated Confidential Information} *Second*, because NDC was a small company with limited funding, the other .WEB applicants would not base their bidding strategies on the assumption that NDC would be able to make a substantial bid. NDC was thus the perfect vehicle to allow Verisign to fly “under the radar.” NDC not only allowed Verisign to conceal its “indirect” participation in the contention set; it also allowed Verisign to blindside the *bona fide* applicants with a high bid that none of the other applicants could have seen coming—not knowing that Verisign was hiding behind NDC.

21. Neither Mr. Livesay nor Mr. Rasco provide any details of how the DAA was drafted or negotiated. We know from Mr. Rasco’s witness statement that someone at Verisign contacted him “[i]n or around May 2015.”³⁰ We have virtually no information as to what transpired between Verisign and NDC between that time and the execution of the DAA on 25 August 2015. The *Amici* provide no information concerning who drafted the DAA, how many drafts (if any) were exchanged, or if there was any negotiation of its terms. ^{Redacted - Third Party Designated Confidential Information}

which are attached as Exhibits B and C to his witness statement. We address the terms of the DAA—and the various transactions to which the *Amici* try to compare the DAA—in detail in Section IV below. ^{Redacted - Third Party Designated Confidential Information}

³¹ Indeed,

³⁰ Rasco Decl., ¶ 41.

³¹ ^{Redacted - Third Party Designated Confidential Information}

Mr. Livesay does not even claim that the terms of the DAA are based on the templates; nor does he identify any actual model for those terms.

22. Both the *Amici* and their witnesses attempt at length to explain why the provisions of the DAA were consistent with the New gTLD Program Rules and what they call “industry practice” (which, given that ICANN had never undertaken anything like the New gTLD Program, was in fact non-existent).³² As we explain in detail in Section IV.D. below, their legal arguments and factual assertions do not withstand scrutiny. Indeed, many of the arguments are frivolous and many of the assertions are demonstrably false. And again, as discussed further below, if Verisign and NDC believed that their arrangement did not violate the New gTLD Program Rules, one must wonder why they went to such lengths to conceal it—including not only from Verisign’s competitors, but from ICANN itself.

C. Verisign’s Post-DAA Inquiry to ICANN

23. Redacted - Third Party Designated Confidential Information

. As detailed in Section IV.D. below, the involvement of Donuts in these applications was not only announced to the public prior to the application deadline; Donuts was specifically identified in the applications at issue.³⁴ Again, none of the other transactions identified by the *Amici* are roughly analogous to the DAA. Nor do the *Amici* attempt

Redacted - Third Party Designated Confidential Information

³² As ICANN states in its 18 July 2018 letter to the Panel, ICANN has “not formally endorsed” any of the particular arrangements that Messrs. Livesay and Rasco identify as analogous to the DAA. *See, e.g.*, Letter from ICANN to Panel (18 July 2020) (revised), p. 6.

³³ Livesay WS, ¶ 8.

³⁴ *See* Section IV below.

to explain how other transactions entered into by other entities during the New gTLD Program would constitute any sort of precedent to establish that such transactions did not violate the New gTLD Program Rules, or why they would not have required disclosure to ICANN and the Internet community.³⁵

24. Notably, the *Amici* never approached ICANN about their arrangement prior to executing the DAA on 25 August 2015. Instead, in early September 2015, Verisign contacted ICANN asking about the assignment of a hypothetical gTLD registry agreement *after* a contention set has been resolved, a qualified applicant has been designated to enter into a registry agreement with ICANN, and ICANN and the qualified applicant have executed the registry agreement. Verisign did not pose *any* questions about the DAA or even about the New gTLD Program Rules. Again, Verisign's inquiry asked solely about *post-registry agreement assignments*—which, as ICANN has stated, are governed by an entirely different set of rules that are not at issue in this IRP.³⁶

25. The only information in the record about Verisign's communications with ICANN in September 2015 appears in two emails, which were submitted by Verisign's outside counsel (Mr. Ronald Johnston of Arnold & Porter) in his 23 August 2016 letter to ICANN's outside counsel (which also enclosed the DAA).³⁷ Redacted - Third Party Designated Confidential Information

³⁵ See Section IV below. As stated in its 18 July 2018 letter to the Panel, ICANN has “not formally endorsed” any of the particular arrangements that Messrs. Livesay and Rasco identify as analogous to the DAA. See, e.g., Letter from ICANN to Panel (18 July 2020) (revised), p. 6.

³⁶ See ICANN's Response to Amended IRP Request, ¶ 26 (“Assignments and transfers of Registry Agreements to operate gTLDs must be approved by ICANN, and ICANN follows a known procedure in evaluating such requests.”)

³⁷ Neither Mr. Livesay in his witness statement nor Verisign in its *Amicus* submission mentions this exchange of emails. Although Afilias requested ICANN to produce documents “concerning or discussing” these two emails—and although the Panel ordered ICANN to produce them (see Procedural Order No. 2 (27 Mar. 2020), Attachment A, Request No. 5, p. 20)—ICANN claimed it was unable to locate any responsive documents.

?³⁸

26. This is a remarkable communication. Written barely a week after Verisign executed the DAA, it does not mention .WEB. Nor did Verisign ask any of the numerous other obvious questions that arise from the DAA, such as whether a non-applicant (like Verisign) could enter a confidential agreement with an Applicant (like NDC), under which the non-applicant would pay the Applicant millions of dollars to enable the non-applicant, *inter alia*, to:

- Redacted - Third Party Designated Confidential Information

44

27. Nor did Verisign ask ICANN any questions about obviously applicable provisions of the New gTLD Program Rules, such as the rule that an “[a]pplicant may not resell, assign, or transfer any of applicant’s rights or obligations in connection with the application;”⁴⁵ the requirement that an Applicant “warrants that the statements and representations contained in the application (including any documents submitted and oral statements made and confirmed in writing with the application) are true and accurate and complete in all material respects;⁴⁶ or the rules that only an Applicant can participate in an ICANN auction and that it can place bids only on its own behalf, unless it designates and specifies an agent to enter bids on its behalf.

28. Redacted - Third Party Designated Confidential Information

⁴⁵ AGB, [Ex. C-3], p. 6-6.

⁴⁶ AGB, [Ex. C-3], p. 6-2.

29. Verisign plainly did not want ICANN to know about the terms of the DAA—which is why Verisign’s September 2015 communications with ICANN contained no reference to them. Verisign sought only to confirm that—if NDC (under the complete control of Verisign and acting only for Verisign’s behalf) prevailed in the .WEB contention set and executed a registry agreement with ICANN—Verisign could then direct NDC to ask ICANN to assign the registry agreement to Verisign, with no obstacles posed and no questions asked.

D. Verisign/NDC’s Pre-Auction Conduct

30. As explained in Afilias’ Amended Request for IRP, most contention sets are resolved through private auctions.⁴⁸ The *Amici* do not dispute that assertion.⁴⁹ The reason is simple. In a private auction, the winning bid is distributed among the losing bidders. To apply for a gTLD is an expensive proposition. It requires an application fee of \$185,000. The preparation of an application can be a labor-intensive, expensive exercise. Private auctions and other private resolutions of contention sets—which ICANN says it favors⁵⁰—provided a means for applicants to recoup their initial investments and sometimes make a significant profit.⁵¹

31. As also explained in Afilias’ Amended Request, by mid-May 2016, it appeared that all of the .WEB contention set members had agreed to participate in a private auction.⁵² As Mr. Rasco acknowledges, NDC was a relatively small company, without any apparent means of funding a significant bid. It therefore

⁴⁷ Letter and attachments from Ronald Johnston (Counsel for Verisign) and Brian Leventhal (Counsel for NDC) to Eric Enson (Counsel for ICANN) (23 Aug. 2016) [ICANN-WEB_000001 - ICANN-WEB_000073], [Ex. R-18], p. 44.

⁵² See Afilias’ Amended IRP Request, ¶ 29 (and evidence cited therein).

caught the attention of other applicants when NDC failed to meet the deadline to submit an application to participate in the private auction—and led to speculation that a non-applicant (including, possibly Verisign)—was somehow involved in NDC’s application.⁵³ Of course, as we now know, Redacted - Third Party Designated Confidential Information

32. The *Amici* are evasive at best in describing when, how, and why Verisign determined that NDC would not participate in a private auction. Redacted - Third Party Designated Confidential Information

54

33. Redacted - Third Party Designated Confidential Information

⁵⁵ But he fails to provide even an approximate time frame for when he gave Mr. Rasco this instruction. Nor does Mr. Rasco indicate when Verisign provided NDC with such instructions.

34. We have set forth in detail in our Amended IRP Request and Reply the misleading and evasive responses that Mr. Rasco provided to executives from other applicants when they asked him if he

⁵³ See *Afilias’ Amended IRP Request*, ¶¶ 29-32.

⁵⁴ DAA, [Ex. C-69], Ex. A, Sec. 1(i).

⁵⁵ *Livesay WS*, ¶ 16.

and the other listed “managers” of NDC (Messrs. Calle and Bezsonoff) were still “the Board members” of NDC—in other words, whether they still had decision-making authority for NDC’s .WEB application.⁵⁶ In response, Mr. Rasco says only that he “was under no obligation to be completely forthcoming about our internal operations or plans with parties who were competing for the same gTLD.”⁵⁷ Of course, Verisign was not a “party” who was legitimately “competing for the same gTLD.” It was a non-applicant who had taken over complete and secret control of NDC’s Redacted - Third Party Designated Confidential Information

35. Regardless of whether Mr. Rasco had an obligation to be “completely forthcoming” with other applicants, there is no question that he had such obligation with respect to ICANN. As set forth in our Reply, on 27 June 2016, Mr. Jared Erwin wrote to Mr. Rasco:

We would like to confirm that there have not been *changes to your application or the [NDC] organization that need to be reported to ICANN. This may include any information that is no longer true and accurate in the application*, including changes that occur as part of regular business operations (e.g., changes to officers or directors, application contacts).⁵⁸

Mr. Rasco wrote in response:

I can confirm that there have been no changes to the [NDC] organization that would need to be reported to ICANN.⁵⁹

36. In attempting to explain the partial (and misleading) answer that Mr. Rasco provided to Mr. Erwin, Mr. Rasco testifies in his witness statement that he thought Mr. Erwin’s inquiry—notwithstanding its broad language (*i.e.*, changes to the “application or the [NDC organization]” or “any information that is no longer true and accurate in the application”)—was strictly limited to “whether the identifying information set

forth in NDC's application (*e.g.*, management, ownership, and contacts) had changed."⁶⁰ According to Mr. Rasco, "it never occurred to me that ICANN's routine inquiry might require disclosure of" the terms of the DAA.⁶¹ We leave it to the Panel to assess the credibility of Mr. Rasco's testimony under these circumstances.

37. Similarly, in a conversation with Ms. Christine Willett of ICANN, Mr. Rasco told her that although he had suggested to a competitor (*i.e.*, Mr. Jon Nevett of Donuts Inc.) that the "decision to not resolve contention privately was not entirely his ..., this decision was in fact his."⁶² That representation by Mr. Rasco to Ms. Willett simply cannot be reconciled with the terms of the DAA or with the testimony he has provided in his witness statement, where Mr. Rasco acknowledges that Redacted - Third Party Designated Confidential Information

38. As for Mr. Livesay, he asserts in his witness statement that shortly before the ICANN auction for .WEB took place on July 27-28, 2016, Redacted - Third Party Designated Confidential Information

relevance of this document in Section IV.E. below.

39. Redacted - Third Party Designated Confidential Information

Again, we leave it to the Panel to assess the credibility of Mr. Livesay's testimony.

E. Verisign/NDC's Post-Auction Communications with ICANN

40. ICANN declared NDC to be the winner of the .WEB auction on 28 July 2016, based on the \$142 million bid that Verisign directed NDC to make on Verisign's behalf. Verisign then arranged for NDC to pay to ICANN the USD 135 million "final price" on Verisign's behalf on or around 1 August 2016.⁶⁸ Verisign kept its arrangement with NDC secret, stating in a purposefully vague footnote in its 10-Q statement with the U.S. Securities and Exchange Commission that "[s]ubsequent to June 30, 2016, [Verisign] incurred a commitment to pay approximately \$130.0 million for the future assignment of contractual rights, which are subject to third party consent."⁶⁹ However, after the disclosure in the 10-Q footnote caught the attention of the press—which speculated that Verisign was behind NDC's winning bid⁷⁰—Verisign had no choice but to issue its 1 August 2016 press release (which even then was incomplete and misleading).⁷¹

41. Verisign and NDC are remarkably silent in their *Amici* submissions about their activities in the wake of the 1 August 2016 press release. We know from documents produced by ICANN that on the night prior to the press release, Redacted - Third Party Designated Confidential Information

⁶⁶ Livesay WS, ¶¶ 27-28 (quoting Letter from Paul Livesay (Verisign) to Jose Rasco (NDC) (6 July 2016) (Confirmation of Understandings) [Livesay WS (1 June 2020), Ex. H]).

⁶⁹ VeriSign, Inc., *Form 10-Q (Quarterly Report)* (28 July 2016), [Ex. C-45], p. 13; Afiliias' Amended IRP Request, ¶ 37; Afiliias' Reply Memorial, ¶ 103.

⁷⁰ See Afiliias' Reply Memorial, ¶¶ 103-104.

⁷¹ See Afiliias' Reply Memorial, ¶ 106.

42. Mr. Livesay is similarly evasive about Verisign's communications with ICANN following the auction:

I was responsible for this transaction. I did not have any communications with ICANN before or following the auction process.

Redacted - Third Party Designated Confidential Information

43. Mr. Livesay does not refer to any further communications between representatives of Verisign and ICANN following the auction. On 8 August 2016, Mr. Scott Hemphill (Afilias' Vice President and General Counsel) wrote his first letter to Mr. Atallah to state Afilias' concerns in light of Verisign's press release and public reports concerning Verisign's involvement in NDC's application. Like ICANN, the *Amici* misrepresent Mr. Hemphill's 8 August 2016 and 9 September 2016 letters as asserting the same claims as in this IRP, apparently in an effort to help ICANN invoke its "limitations period" defense.⁷⁴ In fact, Mr. Hemphill specifically stated:

We have not been able to review a copy of the agreement(s) between NDC and VeriSign with respect to [their reported] arrangement, but it appears likely, given the public statements of VeriSign, that [NDC] and VeriSign entered into an agreement in the form of an option or similar arrangement with respect to the rights and obligations of NDC regarding its .WEB application.⁷⁵

⁷² Emails from Jose Ignacio Rasco (NDC) to Christine Willett (ICANN) (*various dates*), [Ex. C-100], pp. 1-2.

⁷³ Livesay WS, ¶ 38.

⁷⁴ See Amicus Curiae Brief of Nu Dotco, LLC (26 June 2020) ("**NDC Br.**"), ¶¶ 58-59, 64. See also ICANN's Response to Amended IRP Request, ¶¶ 75-76; ICANN's Rejoinder Memorial, ¶¶ 63-69.

⁷⁵ Letter from S. Hemphill (Afilias) to A. Atallah (ICANN) (8 Aug. 2016), [Ex. C-49], p. 1.

Mr. Hemphill requested that ICANN “undertake an investigation of the matters set forth in this letter”⁷⁶— which, as discussed below, ICANN specifically committed to do. Afilias did not request Mr. Hemphill’s letter to be given confidential treatment, and accordingly, ICANN posted it on its website.

44. Like ICANN, the *Amici* fail to disclose any information as to how and why ICANN’s outside litigation counsel at Jones Day, Mr. Eric Enson, subsequently contacted Verisign’s outside litigation counsel, Mr. Johnston, by phone, to request (in Mr. Johnston’s words) **Redacted - Third Party Designated Confidential Information**

On 23 August 2016, Mr. Johnston responded by not just submitting the DAA, but various other documents, along with detailed legal argumentation, specifically responding to Mr. Hemphill’s 8 August 2016 letter. The only explanation as to what prompted Mr. Enson’s request for this submission comes from Mr. Enson himself. At the hearing on Afilias’ application to compel documents, Mr. Enson attempted to explain why ICANN apparently had no documents reflecting Mr. Enson’s request to Mr. Johnston or what had prompted it:

And I want to quickly respond to Mr. de Gramont’s argument regarding the “request for information to Verisign” which is referred to at Slide 11 of his presentation. The request was made by me and it was done over the phone. The lawyers ... – ICANN and Verisign had been adverse to one another on a number of occasions. The lawyers know each other well and there is nothing extraordinary or sinister about me picking up the phone to call Mr. Johnston about an issue like this.⁷⁸

45. To the contrary, the complete lack of information about what led Mr. Enson to make this request orally to Mr. Johnson—and the complete secrecy in which the exchange took place—is indeed extraordinary, even sinister. Afilias had just raised serious concerns with ICANN about the manner in which NDC had just bid \$142 million (by far the largest bid ever made for a TLD) to acquire .WEB—widely viewed as the last best hope to provide meaningful competition against Verisign’s .COM—and had apparently done

⁷⁶ Letter from S. Hemphill (Afilias) to A. Atallah (ICANN) (8 Aug. 2016), [Ex. C-49], p. 2.

⁷⁷ Letter and attachments from Ronald Johnston (Counsel for Verisign) and Brian Leventhal (Counsel for NDC) to Eric Enson (Counsel for ICANN) (23 Aug. 2016) [ICANN-WEB_000001 - ICANN-WEB_000073], [Ex. R-18], p. 1.

⁷⁸ Hearing on Afilias Application (11 May 2020), Tr., 20:9-15 (Enson).

so surreptitiously on behalf of Verisign, the industry monopolist who had not even applied for any TLDs other than foreign language equivalents of .COM, .NET, and .VERISIGN. We can only assume that as a result of Mr. Hemphill's letter, someone at ICANN contacted Mr. Enson at Jones Day, and in turn asked him to contact Mr. Johnston, and not to put anything in writing. Why was ICANN contacting Verisign rather than NDC for this information? Why was this suddenly being handled by outside litigation counsel? Why was Mr. Enson's request to Mr. Johnston made by phone rather than in writing, given ICANN's obligation to act transparently to the global Internet community? What was said in the call that led to such a detailed and defensive response from Verisign? And why were these communications kept completely secret from Afilias and the global Internet community?

46. Unlike Mr. Hemphill's 8 August 2016 letter (and his subsequent 9 September 2016 letter), Mr. Johnston's letter and its accompanying exhibits were never disclosed until the Emergency Arbitrator ordered them to be produced to Afilias in this IRP.⁷⁹ Even now, the Internet community knows almost nothing about the terms of NDC's and Verisign's deal.

47. Indeed, although Mr. Johnston's letter purports to be submitted Redacted - Third Party
Designated Confidential
Information Mr. Rasco appears not to have known that ICANN had requested any information from Verisign (in the form of Mr. Enson's call to Mr. Johnston or otherwise). Mr. Rasco testifies in his witness statement that he was surprised to receive Ms. Willett's 16 September 2016 letter and questionnaire, because he had not heard anything about .WEB since communicating with ICANN in early August 2016:

On September 16, 2016, I received an email from Ms. Willett at ICANN stating that Ruby Glen and Afilias had continued to complain that NDC should not have participated in the .WEB public auction and that NDC's Application should be rejected. *That letter was a surprise to me, as prior*

⁷⁹ While Verisign demanded that the DAA and Mr. Johnston's cover email be treated as "highly confidential," ICANN fails to explain what about either document is so "highly confidential" as to warrant extreme confidentiality or, otherwise, why ICANN did not demand that Verisign redact whatever confidential terms prevented ICANN from publicly disclosing the balance of the DAA to the public.

*to receiving it I had not heard from or communicated with Ms. Willett or anyone else at ICANN about .WEB since confirming our payment for .WEB in August 2016.*⁸⁰

It is inexplicable that Mr. Rasco would not have known about Mr. Enson's request for information to Mr. Johnston, and Mr. Johnston's response on behalf of both NDC and Verisign.

48. Mr. Hemphill's and Mr. Johnston's letters appear to have precipitated ICANN's 16 September 2016 letter and questionnaire to NDC, Verisign, Afilias, and Ruby Glen. Although the *Amici* claim in their submissions not to have coordinated with ICANN in the preparation of the questionnaire, it is evident that Ms. Christine Willett's (ICANN's Vice President of gTLD Operations) questions were based on arguments made in Mr. Johnston's 23 August 2016 letter rather than on ICANN's independent review of the DAA. Moreover, it must be recalled that in responding to the questionnaire, Verisign's and NDC's counsel had in their possession—and knew that ICANN had in its possession—Mr. Hemphill's 8 August and 9 September letters; Mr. Johnston's 23 August 2016 letter (specifically responding to Mr. Hemphill's 8 August letter); and the DAA and other documents that accompanied Mr. Johnston's letter. By comparison, Afilias was only aware of its own letters to ICANN—which were prepared without the benefit of having the DAA or other relevant documentation. No reasonable person could think that this was a remotely fair process given the complete imbalance of information. As Afilias stated in its Reply Memorial: "ICANN already knew in the main what Verisign's and NDC's responses would be. The questionnaire was thus a pure artifice intended to create the impression that ICANN was engaging in a fair and balanced process."⁸¹ Neither of the *Amici* respond to this point in their submissions.

⁸⁰ Rasco Decl., ¶ 104 (emphasis added). On 5 August 2016, Ms. Willett had written to Mr. Rasco that

. Emails from Jose

F. The *Amici's* Reliance on ICANN's Decision Not To Decide

49. Both of the *Amici* have put heavy reliance on ICANN's alleged "decision not to decide," about which ICANN has always been exceptionally vague—failing to identify even when the alleged decision had been made prior to its Rejoinder. The *Amici*, again following ICANN's lead, have seized upon the "decision not to decide" in an effort to recast Afilias' principal claim as a claim for breach of fiduciary duty—which, they argue, would place the Panel's review of the alleged decision into the realm of the business judgment rule.⁸² As discussed below in Section VI, the *Amici's* (and ICANN's) legal arguments on this point are grossly misplaced. Afilias does not allege any breach of fiduciary duty in this IRP. Moreover, the business judgment rule does not even come into play where, as here, a Board has failed to act within the requirements of its constitutive documents. Nor could the business judgment rule apply where, as here, Afilias' claims are directed at ICANN's staff and officers as well as ICANN's Board.⁸³

50. The arguments are not only misplaced as a matter of law; they are also misplaced as a matter of *fact*. The *Amici's* reliance on the alleged "decision not to decide" rests on ICANN's assertion in its Rejoinder that:

ICANN would not have disqualified NDC's application upon its receipt of the DAA in August 2016 because the .WEB contention set was on hold at that time due to a pending Accountability Mechanism filed by the parent of another .WEB applicant. Consistent with its well-known practices, ICANN did not take action on .WEB while that Accountability Mechanism was pending.⁸⁴

ICANN further asserted in its Rejoinder that at a "November 2016 Board workshop session," the ICANN Board "chose to see if the results of such proceedings [*i.e.*, an Accountability Mechanism commenced by

⁸² See Verisign, Inc.'s Pre-Hearing Brief (Phase II) (26 June 2020) ("**Verisign Br.**"), p. 1 ("the only question properly before the Panel here is whether ICANN violated its Bylaws when it decided to defer a decision on Afilias' objections"); NDC Br., ¶ 2 ("the Panel's jurisdiction is limited to determining whether ICANN violated [its] Bylaws when it decided to defer a decision on Afilias' objections to the .WEB auction award in 2016").

⁸³ See Section VI below.

⁸⁴ ICANN's Rejoinder Memorial, ¶ 4.

Ruby Glen] might require the Board to take any action related to the .WEB Contention Set.”⁸⁵ According to the Witness Statement submitted by ICANN Board Member Christopher Disspain:

At the November 2016 session, the Board chose not to take any action *at that time* regarding the claims arising from the .WEB auction, including the claim that, by virtue of the Agreement between Verisign and NDC, NDC had committed violations of the Applicant Guidebook which merited the disqualification of its application for .WEB and the rejection of its winning bid. Given the Accountability Mechanisms that had already been initiated over .WEB, and given the prospect of further Accountability Mechanisms and legal proceedings, the Board decided to await the results of such proceedings *before considering and determining what action, if any, to take at that time*.⁸⁶

51. None of these assertions is consistent with the factual record in this case. Nor are they consistent with ICANN's and the *Amic's* conduct at the time.

52. First of all, contrary to ICANN's assertion that it has a “well-known practice” of not taking any action on a contention set while an Accountability Mechanism is pending, there is no such practice. Certainly, the practice is not among ICANN's “documented policies.” Nor did ICANN's officers or staff seem to be aware of any such practice in August 2016, when Afilias first raised its concerns about .WEB and ICANN opened an investigation despite the pendency of Donut's triggering of an ICANN Accountability Mechanism.

53. According to ICANN's CEP and IRP Update Status, Ruby Glen and its parent Donuts Inc. had commenced a Cooperative Engagement Proceeding on .WEB on 2 August 2016.⁸⁷ Thus, as of 2 August 2016, there was an Accountability Mechanism with respect to .WEB. Redacted - Third Party Designated Confidential Information

⁸⁵ ICANN's Rejoinder Memorial, ¶¶ 40-41. Ruby Glen eventually never pursued an IRP.

⁸⁶ Witness Statement of Christopher Disspain (1 June 2020) (“*Disspain WS*”), ¶ 11 (emphasis added). Ruby Glen had also commenced U.S. federal court litigation against ICANN in July 2016. ICANN successfully defended this litigation on the basis that Ruby Glen had waived its right to pursue remedies against ICANN in any court of competent jurisdiction and that the only fora available to Ruby Glen were those provided under ICANN's accountability framework.

⁸⁷ ICANN, Cooperative Engagement and Independent Review Processes, Status Update (8 Aug. 2016), [Ex. C-108], p. 1.

54. In her 16 September 2016 letter forwarding the questionnaire, Ms. Willett asserted that “[i]n various fora, [Ruby Glen] and [Afilias] have raised questions regarding, among other things, whether [NDC] should have participated in the 27-28 July 2016 auction for the .WEB contention set and whether NDC’s application for the .WEB gTLD should be rejected.”⁸⁹ Ms. Willett stated further that the “additional information” sought by ICANN would “help facilitate *informed resolution of these questions*”⁹⁰ Thus, Ms. Willett was also apparently unfamiliar with ICANN’s “well-known practice” that required ICANN to take no action on .WEB while the Ruby Glen CEP was pending.

55. Similarly, on 30 September, Mr. Atallah (the President of ICANN’s Global Domains Division), finally responded to the 8 August and 9 September 2016 letters sent by Mr. Hemphill on behalf of Afilias. Mr. Atallah wrote to Mr. Hemphill on behalf of ICANN: “We will continue to take Afilias’s comments, and other inputs that we have sought, into consideration as we consider this matter.”⁹¹ Like Ms. Willett, Mr. Atallah was also unaware of ICANN’s well-known practice” to defer making decisions on contention sets while Accountability Mechanisms were pending.

56. Although the *Amici* are aware of Ms. Willett’s letter (having received and responded to it), and presumably were aware of Mr. Atallah’s letter (since it was posted on the ICANN website), they make no effort to reconcile ICANN’s assertions concerning its “well-known practice” of not taking any action on contention sets while Accountability Mechanisms are pending. Nor is it clear when and how much ICANN told Verisign and NDC about its alleged decision to decide or defer deciding. It is, however, undisputed that

⁸⁹ Letter and attachment from Christine A. Willett (ICANN) to John Kane (Afilias) (16 Sep. 2016), [Ex. C-50], p. 1.

⁹⁰ Letter and attachment from Christine A. Willett (ICANN) to John Kane (Afilias) (16 Sep. 2016), [Ex. C-50], p. 1 (emphasis added).

⁹¹ Letter from Akram Atallah (ICANN) to Scott Hemphill (Afilias) (30 Sep. 2016), [Ex. C-61], p. 1.

ICANN *never* informed Afilias of the alleged decision until during this IRP. Verisign, in its 21 July 2020 letter to the Panel, indicates that it also was unaware of ICANN's "well-known practice"—or even of ICANN's position that it had not considered Afilias' objections *at any level*:

Prior to its receipt of ICANN's Rejoinder, *Amici* were not aware that ICANN had not, *at any level*, considered Afilias' objections. Although ICANN stated in its Response to the Request for IRP that its Board had not made a decision on Afilias' objections, action by the Board itself is not required in all circumstances.⁹²

57. As for NDC, Mr. Rasco in his Witness Statement states:

Since submitting [NDC's] responses [to Ms. Willett's questionnaire] in October 2016, NDC has periodically made inquiries to ICANN through the ICANN customer service portal regarding the status of .WEB. ICANN has never responded beyond a statement that the resolution of .WEB is on hold due to the pendency of accountability mechanisms or similar processes.⁹³

58. Although ICANN's Bylaws provided for broad disclosure of Board activities and decision—including the publication of "[a]ll minutes of meetings of the Board" to be "approved promptly ... for posting on the [ICANN] Website"⁹⁴—there is no indication in any public ICANN document (or for that matter, any document that ICANN has produced in this IRP) concerning ICANN's alleged decision not to decide.⁹⁵ The *Amici* do not address that fact in their submissions.

59. It is undisputed that in late 2016 or early 2017, the U.S. Department of Justice ("DOJ") commenced an antitrust investigation into the DAA and requested that ICANN take no action on .WEB during the pendency of the investigation.⁹⁶ The DOJ's investigation closed in January 2018.⁹⁷ Afilias believed that with the DOJ investigation closed, ICANN would resume the "informed resolution" of Afilias' concerns that it

⁹⁵ See Section VI below; see *also* note 314 below.

⁹⁶ See, e.g., ICANN's Response to Amended IRP Request, ¶ 49.

⁹⁷ ICANN's Response to Amended IRP Request, ¶ 50.

had promised in September 2016.⁹⁸ Afilias wrote to ICANN on 23 February 2018 to “request an update on ICANN’s investigation of the .WEB contention set” and also to request documents on the investigation under ICANN’s Documentary Disclosure Policy (“DIDP”).⁹⁹ As detailed in Afilias’ Reply, ICANN never provided Afilias with any substantive response.¹⁰⁰ But it is now clear that ICANN was communicating with NDC and Verisign.

60. While ICANN maintains that Afilias’ DIDP Request and Request for Reconsideration of the Board’s denial constituted Accountability Mechanisms—leading ICANN to take no action on .WEB while these mechanisms were pending (pursuant to the alleged decision not to decide)—the record, and, in particular, the actions of the *Amici*, indicate otherwise. Thus, according to an email included in ICANN’s document production, on 17 January 2018, Ms. Jessica Hooper, the Senior Manager of New gTLD Strategic Accounts at Verisign, wrote to Ms. Karla Hakansson at ICANN: Redacted - Third Party Designated Confidential Information

61. On 8 February 2018, Mr. James Bidzos, Verisign’s President and CEO, announced at an earnings conference that Verisign was “now engaged in ICANN’s process to move the delegation of .web

⁹⁸ In addition, according to ICANN’s Response to Afilias’ Amended Request for IRP, ICANN closed the Donuts/Ruby Glen CEP on 30 January 2018, giving Donuts until 14 February 2018 to file an IRP, which Donuts/Ruby Glen chose not to do. See ICANN’s Response to Amended IRP Request, ¶ 51.

forward.”¹⁰³ Roughly one week later, on 15 February 2018, Mr. Rasco wrote to Mr. Atallah and Mr. John Jeffrey (ICANN’s General Counsel), indicating that Redacted - Third Party Designated Confidential Information

62. ICANN apparently did not move forward immediately on Mr. Rasco’s request because Afilias submitted its DIDP request shortly afterwards. However, contrary to ICANN’s suggestion that it would defer making any decision on Afilias’ objections while Accountability Mechanisms were pending, ICANN staff moved toward contracting with NDC as soon as the ICANN Board rejected Afilias’ request to reconsider the denial of its DIDP request. It is not at all clear what was discussed or disclosed to the Board in this regard, or what assessment ICANN staff had undertaken of the compatibility of the DAA with the New gTLD Program Rules to allow ICANN to proceed to contracting with NDC.

63. According to another email produced by ICANN in its document production, Mr. Russ Weinstein of ICANN sent his colleagues an email on 6 June 2018 that stated:

Wanted to give you an update re; WEB/WEBS. The Request for Reconsideration from Afilias has been denied and the contention set has been taken off of “hold.”¹⁰⁵

On 6 June 2018, ICANN staff notified Afilias, without any explanation or in any way addressing Afilias’ concerns, that the contention set had been taken off-hold; and on 14 June 2018, ICANN staff sent NDC the

¹⁰³ VeriSign, Inc., Edited Transcript of Earnings Conference Call or Presentation (8 Feb. 2018), [Ex. C-47], p. 4.

¹⁰⁴ Email from Jose Ignacio Rasco (NDC) to Peg Rettino (ICANN) (copy to John Jeffrey and Akram Atallah (ICANN)) (15 Dec. 2018) [ICANN-WEB_001061], [Ex. C-182], p. 1 (emphasis added).

¹⁰⁵ Email from Russ Weinstein (ICANN) to Lisa Carter *et al.* (6 June 2018) [ICANN-WEB_000458], [Ex. C-166], p. 1.

.WEB registry agreement—which NDC signed and returned to ICANN.¹⁰⁶ With Afilias having commenced the CEP process on 18 June 2018, ICANN staff put the contention set back on-hold.¹⁰⁷

64. And yet—as soon as Afilias filed its IRP request on 14 November 2018—ICANN threatened to take the contention set off-hold unless Afilias sought interim emergency relief. Thus, while ICANN now asserts that its “well-known” practice is to take no action regarding a contention while Accountability Mechanisms are pending, in November 2018, ICANN’s lead counsel in this IRP, Mr. Jeffrey LeVee, wrote to Afilias’ lead counsel, Mr. Arif Ali, rejecting Afilias’ request that ICANN keep the contention set on-hold pending the IRP. According to Mr. LeVee:

ICANN does not agree that Afilias’ commencement of the Independent Review Process (“IRP”) regarding the .WEB gTLD automatically requires ICANN to place the .WEB contention set “on hold,” as your letters claim. Rather, as you well know, *it has not been ICANN’s historical practice upon the filing of an IRP to automatically place, or continue, a hold on a contention set or application*, and a number of IRP claimants have sought emergency relief from the ICDR requiring ICANN to place an application or a contention set on hold.¹⁰⁸

65. Accordingly, on 27 November 2018, Afilias had no choice but to file a Request for Emergency Panelist and Interim Measures of Protection (the “Emergency Request”). In opposing Afilias’ Emergency Request, ICANN took *precisely* the opposite position from that asserted in its Rejoinder. Rather than asserting that its Board had made a decision not to decide—pursuant to a “well-known practice” not to take decisions on contention sets that are the subject of Accountability Mechanisms—ICANN argued to the Emergency Arbitrator:

After NDC prevailed in a public auction for .WEB, Afilias and other .WEB applicants cried foul, alleging that Verisign’s agreement with NDC violated the Guidebook and raised competition concerns. *ICANN has evaluated these complaints*, some of which also have been addressed in other fora,

¹⁰⁶ NDC’s Supplemental Brief in Support of Its Request to Participate as *Amicus Curiae* (27 Sep. 2019), ¶ 18.

¹⁰⁷ See Letter from Arif Ali (Counsel for Afilias) to ICANN (18 June 2018), [Ex. C-52]; Email from ICANN to Arif Ali (Counsel for Afilias) (20 June 2018), [Ex. C-53], p. 2.

¹⁰⁸ Letter from Jeffrey LeVee (Counsel for ICANN) to Arif Ali (Counsel for Afilias) (26 Nov. 2018), [Ex. C-66], p. 1 (emphasis added).

including federal court litigation, a Department of Justice Antitrust Division investigation of Verisign, and *multiple invocations of ICANN's own accountability mechanisms*. The federal court litigation was resolved in ICANN's favor, and the Department of Justice investigation concluded without any action being taken by the federal government. The time has therefore come for the auction results to be finalized and for .WEB to be delegated so that it can be made available to consumers.¹⁰⁹

Of course, ICANN's advocacy to the Emergency Arbitrator was every bit as dishonest as it is to this Panel. The federal court litigation and DOJ investigation involved entirely different issues; there were not multiple invocations of ICANN's Accountability Mechanisms (there was only the CEP amicable resolution process involving Donuts/Ruby Glen, which either ICANN or the claimant could terminate at any time); and—at least according to the sworn testimony of ICANN's Board Member, Mr. Disspain—ICANN had not “evaluated” Afilias' complaints. Rather, according to Mr. Disspain, the Board “decided to await the results” of pending and anticipated Accountability Mechanisms “before considering and determining what action, if any, to take at that time.”¹¹⁰ The *Amici* fail to address any of these matters in embracing ICANN's new allegations about its “deferral” decision, and in joining ICANN's argument that the only issue before the Panel is whether ICANN's supposed “decision not to decide” violated its Articles and Bylaws.¹¹¹ The schizophrenia and duplicity of ICANN's positions is truly head-reeling.

66. In sum, as stated at the outset, the Panel's task with respect to Afilias' principal claim is straightforward: by reviewing the terms of the DAA against the New gTLD Program Rules, applied in accordance with ICANN's Articles and Bylaws, the Panel should conclude that ICANN violated its Articles and Bylaws by failing to disqualify NDC's application and bid, and by failing to award .WEB to Afilias as the

¹⁰⁹ ICANN's Opposition to Afilias' Request for Emergency Panelist and Interim Measures of Protection (17 Dec. 2018), ¶ 3 (emphasis added).

¹¹⁰ Disspain WS, ¶ 11.

¹¹¹ With respect to the resolution of Afilias' Emergency Request, ICANN was unwilling to pursue those proceedings until the Procedures Officer decided the question of whether the *Amici* could participate in them. By the time the Procedures Officer issued his declaration, and the matter of the *Amici*'s participation came before this Panel, ICANN apparently decided simply to leave the contention set on-hold for the duration of the IRP.

next highest bidder. The misleading and contradictory assertions by ICANN and the *Amici* as to whether ICANN “evaluated” Afiliias’ complaints or decided to “defer” any decision on them are irrelevant to that task, though not to assessing the trustworthiness of the factual and legal assertions made by ICANN and the *Amici*. The available evidence raises serious questions regarding the veracity of ICANN’s representations to the Panel about what took place or came out of the Board workshop meetings in November 2016. The available evidence also shows that, in spite of ICANN’s supposed policy, discussions were taking place between ICANN, NDC and Verisign in early 2018 regarding the delegation of .WEB, and that in June 2018, ICANN Staff proceeded with the contracting process for .WEB, even though there is nothing to suggest that any sort of evaluation was conducted as to whether the DAA is compatible with the New gTLD Program Rules, or whether NDC’s failure to disclose the DAA violated the AGB, or whether its bids violated the Auction Rules, or any of the other concerns that Afiliias has raised—that is, other than ICANN’s representation to the Emergency Arbitrator that it had evaluated all complaints.

III. THE *AMICI* MISREPRESENT THE NATURE OF THE DAA

67. The Panel should not allow itself to be misled by the *Amici* regarding the nature and effect of the DAA.

68. *First*, the *Amici* attempt to characterize the DAA as an “executory agreement,” arguing that
Redacted - Third Party Designated Confidential Information

This is a gross misstatement.

The key provisions of the DAA relevant to this IRP are not “executory” at all.¹¹³ This IRP does not concern

¹¹² NDC Br., ¶ 28.

¹¹³ Executory terms are those that are to be performed contingent upon some future event. The question of whether a contract is “executory” or “executed” holds little relevance outside of bankruptcy law, as the act of filing for bankruptcy has obvious consequences where debtors and counterparties have outstanding mutually underperformed contractual obligations to each other. Under U.S. law, remedies for breaches of “executory contracts” are limited to damages, rather than specific performance, *see In re Cho*, 581 B.R. 452, 467 (Bankr. D. Md. 2018), [Ex. CA-45] (noting that, any nonbankruptcy rights that the plaintiffs may retain do not include the right to request specific performance); *In re Spoverlook, LLC*, 560 B.R. 358, 363 (Bankr. D. N.M. 2016), [Ex. CA-46] (noting that the strong majority of courts have held that parties can be forced to accept claims for money damages in bankruptcy); *In re Aslan*, 65 B.R. 826, 830-31 (Bankr. C.D. Cal. 1986), *rev’d in part on other*

NDC's unfulfilled commitment to assign the .WEB registry agreement to Verisign. Rather, it concerns NDC's transfer of rights and obligations it held as an applicant for .WEB to Verisign upon execution of the DAA. We have detailed these transfers in our prior submissions. **Redacted - Third Party Designated Confidential Information**

grounds, 909 F.2d 367 (9th Cir. 1990), [Ex. CA-47]. While NDC and Verisign have mutually unperformed obligations under the DAA, Afiliias' complaints against ICANN do not implicate those sections of the DAA in this IRP.

114 **Redacted - Third Party Designated Confidential Information**

69. *Second*, the *Amici* attempt to characterize the DAA as a “loan”¹²³ from Verisign to NDC or otherwise as some form of “financing agreement.”¹²⁴ Again, this is a gross mischaracterization of the DAA. This was no “financing agreement.” Redacted - Third Party Designated Confidential Information

No financing agreement requires the lender to pay for the privilege of loaning money to a borrower. Verisign was not “funding NDC’s bid”—NDC was being paid a flat fee to buy .WEB for Verisign.

70. Indeed, the normal indicia of a creditor-debtor relationship are entirely missing from the DAA altogether. The DAA does not contain the words “lend” or “loan” or anything remotely similar. The DAA does not specify the principal of the loan, does not provide for any accrual of interest, does not set a fixed maturity date, and does not contain any demand for repayment by NDC of any monies expended by Verisign. NDC did not execute a promissory note attesting to a debt owed to Verisign.

71. *Third*, Redacted - Third Party Designated Confidential Information

that is, for example, in the event that ICANN were to reject the assignment

¹²³ The *Amici* repeatedly state that Verisign provided a “loan” to NDC. NDC Br., ¶ 106; Verisign Br., ¶¶ 29, 52, 56, 57, 59, 74.

¹²⁴ The *Amici* also repeatedly characterize the DAA as a financing agreement. Rasco Decl., ¶ 66, 78, 99; Verisign Br., ¶¶ 8, 32, 45, 53, 58.

¹²⁵ DAA, [Ex. C-69], Schedule 1, Preamble.

IV. IT IS SELF-EVIDENT THAT THE DAA VIOLATES THE NEW GTLD PROGRAM RULES

72. Far from being an ordinary financing agreement that provided for Verisign's "loan of funds" to NDC, the DAA is self-evidently an attempt to circumvent the New gTLD Program's application procedures and rules. This should have been patently obvious to ICANN Staff and the Board based upon even a cursory review of the DAA, as demonstrated by the DAA provisions that we have reproduced in **Annex A** hereto. The DAA violates the New gTLD Program Rules in multiple ways, which we have previously discussed.¹²⁸ For present purposes, and in light of the *Amic's* submissions, we focus on three:

- **First**, as we set out in **Section IV.A**, contrary to NDC's commitment not to "resell, assign, or transfer *any of applicant's rights or obligations* in connection with the application," by concluding the DAA, NDC transferred *numerous rights and obligations* to Verisign in exchange for several million dollars.¹²⁹
- **Second**, contrary to NDC's obligation to "notify ICANN in writing of any change in circumstances that would render *any information* provided in the application false or misleading," NDC did not disclose to ICANN the existence or terms of the DAA for over a year and, then, only after Afilias had complained to ICANN about how the .WEB contention set had been resolved.¹³⁰ As discussed in **Section IV.B** below, the DAA rendered significant

¹²⁶ Verisign Br., ¶ 29 Redacted - Third Party Designated Confidential Information

¹²⁷ DAA, [Ex. C-69], Exhibit A, Sec. 9.

¹²⁸ See Afilias' Amended IRP Request, Sec. 3; Afilias' Reply Memorial, Sec. III(A).

¹²⁹ The Guidebook provides: "Applicant *may not resell, assign, or transfer* any of *applicant's rights or obligations in connection with the application.*" AGB, [Ex. C-3], Module 6.10 (Terms and Conditions) (emphasis added).

¹³⁰ The Guidebook provides: "Applicant warrants that the statements and representations contained in the application (including any documents submitted and oral statements made and confirmed in writing in connection with the application) are *true and*

parts of NDC's .WEB application misleading at best and outright false at worst, which should have been immediately evident to ICANN upon receipt of the DAA, especially taking in to consideration statements made by NDC to ICANN only several weeks earlier.

- **Third**, contrary to NDC's obligation to submit bids at the .WEB Auction on its own behalf, and in an amount that NDC itself was willing to pay for .WEB, the DAA Redacted - Third Party Designated Confidential Information

As discussed at **Section IV.C**, each of NDC's bids *were clearly invalid under* the plain and unambiguous language of the New gTLD Program Rules.

73. The New gTLD Program Rules are based on a self-evident assumption that the applicant will act on its own behalf; that the decisions it is making regarding its application are being made to advance its own interests; that it is submitting bids in a contention set resolution auction based on its own financial capabilities; in short, that it is seeking to win the registry rights for itself. Instead, the DAA permitted Verisign to secretly pursue the acquisition of .WEB, avoiding scrutiny by governments, the public, and the global internet community. It could have submitted its own .WEB application, but chose not to do so. If NDC's and Verisign's conduct is allowed to stand, it will not only gut the very purposes for which the New gTLD Program was established, it will also eviscerate the multi-year, multi-stakeholder, bottom-up policy-making process that resulted in the New gTLD Program Rules.¹³¹

A. NDC Assigned Multiple Rights and Obligations in its .WEB Application to Verisign

1. The New gTLD Program Rules Prohibiting the Resale, Transfer, or Assignment of Applications

74. The Terms and Conditions agreed to by NDC when it filed its application provide that NDC "may not resell, assign, or transfer any of applicant's *rights or obligations in connection with*" its .WEB

accurate and complete in all material respects, and that ICANN may rely on those statements and representations fully in evaluating this application. Applicant acknowledges that *any material misstatement or misrepresentation (or omission of material information)* may cause ICANN and the evaluators to reject the application without a refund of any fees paid by Applicant. *Applicant agrees to notify ICANN in writing of any change in circumstances that would render any information provided in the application false or misleading.*" AGB, [Ex. C-3], Module 6.1 (Terms and Conditions) (emphasis added).

¹³¹ Afiliias' Amended IRP Request, ¶ 12, Sec. 5; Afiliias' Reply Memorial, Sec. IV; Report of Jonathan Zittrain (26 Sep. 2018) ("**Zittrain Report**"), Secs. 6-7; Report of George Sadowsky (20 Mar. 2019) ("**Sadowsky Report**"), Sec. VII.

application.¹³² While the Guidebook sets forth the various rights and obligations of applicants across its three-hundred plus pages, the Terms and Conditions further provide that NDC would not “acquire *rights in connection with [WEB]* [until] it enters into a registry agreement with ICANN.”¹³³ The obvious and only legitimate interpretation of the anti-assignment provision of Section 10 is that:

- Applicants may not “resell, transfer, or assign” their rights acquired or obligations assumed as applicants.
- This provision is violated when an applicant “resells, transfer, or assigns” *any* such right or obligation; accordingly, the provision is violated even if the applicant does not “resell, transfer, or assign” *all* of its rights or obligations in its application.¹³⁴
- The rights and obligations that are the subject of this anti-assignment clause are separate and distinct from any rights the applicant may eventually acquire in the gTLD that is the subject of the application, since the latter rights do not vest in the applicant until a registry agreement for that gTLD is concluded with ICANN.
- Accordingly, the rights and obligations that are the subject of the anti-assignment clause are those rights and obligations that are set forth elsewhere in the Guidebook, and which vest or are assumed by the applicant upon the submission of its application.

75. The *Amici* attempt to obfuscate this clear and obvious reading of Section 10’s anti-assignment clause by changing the relevant standard, arguing alternatively that Afilias must show that Verisign “hold[s] *all* rights and obligations under the Application,”¹³⁵ that the DAA transferred “ownership, management or *control of NDC* to Verisign,”¹³⁶ or that NDC agreed to “assign or otherwise *transfer its*

¹³² AGB, [Ex. C-3], Module 6.10 (emphasis added); see also note 129 above.

¹³³ AGB, [Ex. C-3], Module 6.10 (emphasis added).

¹³⁴ Contrary to the *Amici*’s arguments, U.S. law clearly recognizes partial assignments of “rights or obligations under [a] contract.” See *Vir2us, Inc. v. Sophos Inc.*, No. 2:19CV18, 2019 WL 8886440, at *9 (E.D. Va. Aug. 14, 2019), [Ex. CA-48]; see also *In re Hat*, 310 B.R. 752, 756, 759 (Bankr. E.D. Cal. 2004), [Ex. CA-49] (finding that debtor’s ex-spouse had improperly transferred her right of first refusal and that, under the agreement, her “sole function was to exercise her [rights] for a fee”). A partial acquisition of rights may constitute the acquisition of beneficial ownership under U.S. law. See *U.S. v. Smithfield Foods, Inc.*, Case 1:10-cv-00120 (D.D.C.), Complaint (21 Jan. 2010), [Ex. CA-50]; U.S. Department of Justice, *Smithfield Foods and Premium Standards Farms Charged with Illegal Premerger Coordination: Company Required to Pay \$900,000 Civil Penalty* (21 Jan. 2010), available at <https://www.justice.gov/opa/pr/smithfield-foods-and-premium-standard-farms-charged-illegal-premerger-coordination> (last accessed 23 July 2020), [Ex. CA-51]. The U.S. Department of Justice found that the partial assignment of the rights to approve hog procurement contracts had improperly granted Smithfield “operational control over a significant segment” of Premium Standard Farm’s business. *Id.*, ¶ 20.

¹³⁵ Verisign Br., ¶ 3 (emphasis added).

¹³⁶ Livesay WS, ¶ 19 (emphasis added).

.WEB Application to Verisign.”¹³⁷ The plain language of the Guidebook is to the contrary: *any* transfer of *any* individual right or obligation that NDC held as an applicant for .WEB violates the Terms and Conditions that govern NDC’s application: “Applicant may not resell, assign or transfer *any* of applicants rights or obligations in connection with the application.”

76. As yet a further alternative, Verisign argues that NDC could not have violated the anti-assignment clause, because the first part of Section 10 provides that NDC will not acquire any rights until such time as it executes a registry agreement. Verisign’s interpretation is wrong because Section 10 clearly discusses *two distinct sets of rights*.

- Specifically, Section 10 provides that an applicant will not “*acquire rights in connection with a gTLD*” until it enters into a registry agreement for that gTLD.
- That language does not have any relevance to the subsequent provision, which sets out an independent obligation that “[a]pplicant may not resell, assign, or transfer any of applicant’s rights or obligations in connection with the application.”

These are, quite plainly, two separate sets of rights and obligations: one in the application (which the applicant possesses but may not assign) and one in the applied-for gTLD (which the applicant will not acquire until it signs a registry agreement).

77. Finally, Verisign argues that the Guidebook does not specify which of the several rights and obligations assumed by applicants upon submission of an application “could possibly be subject to a resale, assignment or transfer, at least prior to the execution of a registry agreement.”¹³⁸ Verisign’s argument is without merit because it simply ignores the plain language of Section 10 or otherwise suggests that it is meaningless.¹³⁹ ICANN’s recent letter to the Panel refused to endorse this argument. In that letter, ICANN

¹³⁷ Rasco Decl., ¶ 47 (emphasis added); Livesay WS, ¶ 20.

¹³⁸ Verisign Br., ¶¶ 12-13. This argument is based on Verisign’s failure to distinguish between “rights in a gTLD” and “rights and obligations in an application.”

¹³⁹ The canons of contractual construction prohibit interpretations that render terms meaningless. *Principal Mut. Life Ins. Co. v. Vars, Pave, McCord & Freedman*, 65 Cal. App. 4th 1469, 1483 (1998), [Ex. CA-52].

categorically states: “it is clear under the Guidebook that *applications* cannot be transferred to any other party.”¹⁴⁰

2. **NDC Violated the New gTLD Program Rules by “Selling, Transferring, or Assigning” Several Right and Obligations to Verisign**

78. By agreeing to the DAA, NDC improperly “resold, transferred, or assigned” several of its rights and obligations it had acquired and assumed when it applied for .WEB, thereby violating the Terms and Conditions of its .WEB application. There is no question that these rights and obligations were resold, transferred and assigned to Verisign: Redacted - Third Party Designated Confidential Information

demonstrate that the DAA was not a financing arrangement. Verisign was not “funding NDC’s bid”—NDC was being *paid to buy .WEB for Verisign*.

79. For an assignment to be effective, it “must include manifestation to another person by the owner of his intention to transfer the right, without further action, to such other person or to a third person.”¹⁴¹ Courts look at the “substance and not the form of a transaction” to determine whether an “assignment was intended,”¹⁴² and so also must this Panel. The DAA makes plain that NDC “resold, assigned or transferred” several rights and obligations in its application to Verisign. *Each right or obligation so “resold, assigned or transferred” constitutes an independent violation of the Guidebook*. These rights and obligations include:

¹⁴⁰ Letter from ICANN to Panel (18 July 2020) (revised), p. 6 (emphasis added). While ICANN confirms the distinction between two sets of rights set forth in Section 10, ICANN’s shorthand that “applications cannot be transferred” misstates the actual language of Section 10, which provides that applicants may not resell, transfer or assign “*any*” rights or obligations in the application.

¹⁴¹ *Mountain of Fire & Miracles Ministries v. Oyeyemi*, No. B218591, 2012 WL 2373003, at *6 (Cal. Ct. App. June 25, 2012), [Ex. CA-53].

¹⁴² *Mountain of Fire & Miracles Ministries v. Oyeyemi*, No. B218591, 2012 WL 2373003, at *6 (Cal. Ct. App. June 25, 2012), [Ex. CA-53].

- **Obligation to Timely Amend Application:**

80. Section 1.2.7 of the Guidebook required NDC to “promptly notify ICANN” if any information in its application “becomes untrue or inaccurate.” While this obligation “*includes*” situations where an applicant experiences “changes in financial position and changes in ownership or control” the obligation to amend is *not limited* to only those changes. The broad scope of this obligation to amend is underscored by the Terms and Conditions to which NDC agreed. These Terms and Conditions required NDC to “notify ICANN in writing of *any change in circumstances that would render any information* provided in the application false or misleading.”

81. NDC transferred control over compliance with this obligation to Verisign in the DAA.

Redacted - Third Party Designated Confidential Information

82. Verisign’s total control over NDC’s ability to disclose *the very “change in circumstance”* that “render[ed] any information [NDC] provided in [its .WEB] application false or misleading” transferred NDC’s obligations assumed pursuant to Section 1.2.7 of the Guidebook to promptly notify ICANN of such “untrue or inaccurate” statements now contained in its application. Indeed, Verisign’s control over disclosure of the existence or terms of the DAA were made an *express exception* to the general rule that

¹⁴³ DAA, [Ex. C-69], Sec. 4(f).

¹⁴⁴ DAA, [Ex. C-69], Sec. 10(a).

¹⁴⁵ DAA, [Ex. C-69], Sec. 10(a).

Redacted - Third Party Designated Confidential Information

83. To ensure that NDC kept the existence and terms of the DAA secret from ICANN, the DAA provides that Redacted - Third Party Designated Confidential Information

84. Mr. Rasco's statement that Redacted - Third Party Designated Confidential Information is wrong. Indeed, Mr. Rasco's observation that NDC did not need to obtain Verisign's consent to communicate with ICANN, if necessary to preserve its rights as an applicant, is entirely misleading, as it does not reveal the express exemption to this rule regarding disclosures of the existence or terms of the DAA.

85. Mr. Rasco's misleading declaration is merely the latest effort by the *Amici* to rewrite what they perceive to be troublesome terms in the DAA. In their 2016 Confirmation of Understandings ("**Confirmations**"), which the *Amici* drafted and signed *after* ICANN had initiated its investigation of NDC, Verisign and NDC specifically and misleadingly cite to Section 1(k) of the DAA. They do so in an effort to support the proposition that NDC did not require Verisign's consent to take actions or communicate with ICANN as necessary to preserve its rights in its Application.¹⁴⁹ But, even here, Verisign and NDC misrepresent the truth, by quoting Section 1(k), *except for the prefatory* clause that Redacted - Third Party Designated Confidential Information

This prefatory clause required

¹⁴⁶ DAA, [Ex. C-69], Exhibit A, Sec. 1(k).

¹⁴⁷ DAA, [Ex. C-69], Secs. 14-15.

¹⁴⁸ Rasco Decl., ¶ 48.

¹⁴⁹ Letter from Paul Livesay (Verisign) to Jose Rasco (NDC) (26 July 2016) [ICANN-WEB_000041 - ICANN-WEB_000042] (Confirmation of Understandings), [Ex. C-97], ¶ D.

- **Right to Resolve String Contention.**

86. Contention set members have the right to “reach a settlement or agreement among themselves that resolves the contention.”¹⁵⁰ For example, contention set members have the right to withdraw their application, establish joint ventures among multiple contention set members, or otherwise agree to a private auction to determine which applicant would acquire the contested gTLD. Mr. Livesay’s observation that the Guidebook and Auction Rules encourage and expressly permit contention set members to resolve string contention¹⁵¹ ignores the salient fact that the Guidebook restricts this right to contention set members who are applicants for the gTLD. Verisign, contrary to how it acted, was not a member of the .WEB contention set.

87. NDC transferred control over its right to resolve the contention set to Verisign by transferring to Verisign the right to choose whether to participate in a private auction, as well as its right to withdraw its application. Redacted - Third Party Designated Confidential Information

88. The *Amic’s* argument that Verisign instructed NDC not to participate in the proposed private auction because Verisign had concerns that such auctions may constitute criminal bid rigging are belied by

¹⁵⁰ AGB, [Ex. C-3], Module 4.1.3 (String Contention Procedures).

¹⁵¹ Livesay WS, ¶¶ 6-7.

¹⁵² DAA, [Ex. C-69], Sec. 4(j).

¹⁵³ DAA, [Ex. C-69], Exhibit A, Sec. 1(i) (emphasis added).

the plain and unambiguous language of the DAA. If Verisign truly believed that a private auction was illegal, let alone criminal, the DAA would have included a blanket prohibition on resolving the contention set by private auction under any circumstances. Redacted - Third Party Designated Confidential Information

Accordingly, the plain language of the DAA contradicts Mr. Rasco's statement that the parties agreed that NDC would *only* use Verisign's funds in a public auction administered by ICANN.

89. NDC also gave up its right to decide to withdraw its application, expressly transferring it to Verisign. Redacted - Third Party Designated Confidential Information

Underscoring

NDC's new role as Verisign's agent in the acquisition of .WEB, if NDC were instructed to withdraw its application, NDC would still be entitled to Redacted - Third Party Designated Confidential Information

- **Right to Participate in the ICANN Auction.**

90. If the contention set cannot be resolved voluntarily by its members, ICANN conducts, as it did here, an "auction of last resort." Only applicants belonging to the contention set have a right to participate in that auction. There is no exception allowing for "indirect" third-party participation.

91. NDC transferred several of its rights regarding its participation in the ICANN auction of last resort to Verisign. Redacted - Third Party Designated Confidential Information

¹⁵⁴ DAA, [Ex. C-69], Exhibit A, Sec. 1(i) and Schedule 1, Sec. 2(a)(ii)(b)(3).

¹⁵⁵ DAA, [Ex. C-69], Ex. A, Sec. 8.

¹⁵⁶ DAA, [Ex. C-69], Schedule 1, Sec. 2(a)(iv).

¹⁵⁷ DAA, [Ex. C-69], Exhibit A, Secs. 1(a), 1(e), 1(i), 3(g), 13.

Redacted -
Third Party
Designated
Confidential
Information

Again, this is inconsistent with any financing agreement we are aware of, but entirely consistent with agency or vendor agreements. Redacted - Third Party Designated Confidential Information

- **Right and Obligation to Negotiate and Enter Into the .WEB Registry Agreement.**

92. Winning applicants have the right and obligation to negotiate and “enter into the prescribed registry agreement with ICANN” for the applied-for gTLD. NDC transferred several of its rights regarding the registry agreement for .WEB. Redacted - Third Party Designated Confidential Information

¹⁵⁸ DAA, [Ex. C-69], Exhibit A, Sec. 1(b).

¹⁵⁹ DAA, [Ex. C-69], Exhibit A, Sec. 1(c).

¹⁶⁰ DAA, [Ex. C-69], Exhibit A, Sec. 1(h).

¹⁶¹ DAA, [Ex. C-69], Exhibit A, Sec. 2(e).

¹⁶² DAA, [Ex. C-69], Exhibit A, Sec. 3(b).

¹⁶³ DAA, [Ex. C-69], Exhibit A, Sec. 3(b).

¹⁶⁴ DAA, [Ex. C-69], Exhibit A, Sec. 3(b).

- Right to Operate the .WEB Registry.

93. As the applicant, NDC was applying for the right to operate the .WEB Registry. NDC transferred this fundamental right to Verisign. Contrary to the *Amic's* protestations, there is no set of facts under the DAA that would have permitted NDC to operate .WEB, short of the DAA being terminated prior to the .WEB Auction.¹⁶⁵

94. Redacted - Third Party Designated Confidential Information

¹⁶⁵ While NDC argues that it was not required to update its .WEB Application because Redacted - Third Party Designated Confidential Information (NDC Br., ¶¶ 104-107; Rasco Decl., ¶ 59), NDC concedes that the only set of facts under which an amendment to its application would not be required was if the DAA ceased to exist. This is a ludicrous position and Mr. Rasco's argument that "NDC was under no obligation to update its .WEB application upon execution of the DAA" because "ICANN had yet to even conclude whether or how the .WEB Contention Set would be resolved" (Rasco Decl., ¶ 59.), does not explain why NDC did not disclose the DAA to ICANN once ICANN had set the date for the .WEB Auction in April 2016. Mr. Rasco's further admission that "complete transparency with ICANN" was appropriate, Redacted - Third Party Designated Confidential Information is telling. *Id.*

¹⁶⁶ DAA, [Ex. C-69], Exhibit A, Sec. 3(h) (emphasis added).

¹⁶⁷ DAA, [Ex. C-69], Exhibit A, Sec. 9 (emphasis added).

¹⁶⁸ DAA, [Ex. C-69], Exhibit A, Sec. 10 (emphasis added).

95. Contrary to the *Amic's* further misrepresentations of the plain terms of the DAA, NDC did not have a right, under the DAA, to obtain funding and repay "Verisign's loan."¹⁶⁹ This is because *Verisign also acquired, in the DAA, all economic rights in .WEB, which controlled even if ICANN prohibited NDC from transferring .WEB to Verisign.* Redacted - Third Party Designated Confidential Information

96. Ignoring the plain language of the DAA, Mr. Livesay states that Verisign's rights were no different than a lender who takes a "security interest" in the borrower's property.¹⁷¹ But lenders who force a sale of a secured asset are only entitled to recover the outstanding principal on the loan, plus any accrued interest—that is, "security" for the loan itself.¹⁷² To the extent a surplus remains after a lender's security interest is discharged, the excess reverts to the debtor.

¹⁶⁹ NDC Br., ¶ 106 Redacted - Third Party Designated Confidential Information

¹⁷⁰ DAA, [Ex. C-69], Schedule 1, Sec. 3(b).

¹⁷¹ Livesay WS, ¶ 33.

¹⁷² Under Virginia law, which governs the DAA, a lender discharges its security interest in real property when proceeds from a foreclosure sale of the asset exceeds the loan's value. *See, e.g., In re O'Neill Enterprises, Inc.*, 547 F.2d 812, 814 (4th Cir. 1977), [Ex. CA-54] ("The[] security interest in the insurance policies was discharged when the real estate was sold, by virtue of [the parties'] agreement, at foreclosure for a price in excess of the first lien debt.").

97. The DAA, in contrast, provided Verisign with considerably more than just a “security interest” in .WEB. Redacted - Third Party Designated Confidential Information

98. In sum, Verisign’s right to all of the upside from any forced sale of .WEB, combined with the lack of any obligation by NDC to repay Verisign for even the Auction Deposit, puts the lie to the *Amict’s* argument that the DAA represented nothing more than a “financing deal” and the monies expended by Verisign nothing more than a “loan” to NDC.

B. NDC Violated the AGB by Failing to “Promptly Notify” ICANN About the Terms of the DAA.

99. Regardless of whether NDC improperly “resold, transferred or assigned” its obligation to update its application to reflect changed circumstances that rendered any information in its application “untrue or misleading,” NDC, as the applicant, remained under an obligation to do so.

1. The New gTLD Program Rules Regarding Updating Applications

100. The rules regarding the obligation to update an application are clear on their face. *First*, Section 1.2.7 required NDC to “promptly notify ICANN” if “*information previously submitted by [NDC] becomes untrue or inaccurate.*”¹⁷⁴ *Second*, the Terms and Conditions required NDC “to notify ICANN in writing of *any change in circumstances* that would render *any information provided in the application* false or misleading.”¹⁷⁵ There are *no exceptions* to these rules, and a violation of these rules specifically gave ICANN the right to reject an application.¹⁷⁶

¹⁷³ Given that a private equity investor recently offered \$1 billion to acquire .ORG, a \$500 million valuation for .WEB is conservative. See Andrew Allemann, “Ethos paid \$1.135 billion for .Org,” *Domain Name Wire* (29 Nov. 2019), available at <https://domainnamewire.com/2019/11/29/ethos-paid-1-135-billion-for-org/> (last accessed 23 July 2020).

¹⁷⁴ AGB, [Ex. C-3], Sec. 1.2.7 (emphasis added).

¹⁷⁵ AGB, [Ex. C-3], Sec. 6.1 (emphasis added).

¹⁷⁶ As discussed in Afilias’ Reply, ICANN does not have unfettered discretion in exercising this right. Afilias’ Reply Memorial, ¶ 83. ICANN’s right to reject an application must be exercised consistently with its Bylaws. See Section V below.

2. NDC Violated the AGB by Failing to Update its Application to Account for the “Changed Circumstances” Created by the DAA

101. Following its execution of the DAA, several provisions of NDC’s .WEB application were indisputably “inaccurate”¹⁷⁷ or “misleading,”¹⁷⁸ if not outright “untrue”¹⁷⁹ or “false.”¹⁸⁰

102. For example, Section 18, which describes NDC’s business plan for .WEB, contains numerous false and misleading statements. Specifically, NDC wrote that “[p]rospective users benefit from the long-term commitment of a proven executive team that has a track-record of building and successfully marketing affinity TLD’s (e.g., .CO targeting innovative businesses and entrepreneurs).”¹⁸¹ Section 18 contains multiple references to this “proven executive team” and .CO’s track record, including the representation that “[w]e plan to implement a very similar strategy for .WEB in its launch, operation, promotion and growth.”¹⁸² This “proven executive team” would have no role, under any circumstances, for the operation of the .WEB registry. Accordingly, this statement is at best “misleading” if not outright “false.”

¹⁷⁷ A statement is inaccurate if it is “not accurate”; “faulty.” *Merriam-Webster Dictionary* (on-line version): inaccurate, available at <https://www.merriam-webster.com/dictionary/inaccurate> (last accessed 21 July 2020), [Ex. CA-55].

¹⁷⁸ A statement is “misleading” if it is deceptive, or tending to mislead or create a false impression. “Misleading” means “leading or tending to lead into error; causing to err; deceiving.” *Merriam-Webster Dictionary* (on-line version): false & misleading, [Ex. C-95].

¹⁷⁹ A statement is “untrue” if it is not according with the facts. “Untrue” means “not faithful; disloyal; not according with a standard of correctness; not level or exact; not according with the facts; false.” *Merriam-Webster Dictionary* (on-line version): untrue, available at <https://www.merriam-webster.com/dictionary/untrue> (last accessed 21 July 2020), [Ex. CA-56].

¹⁸⁰ A statement is “false” if it is untrue, not factual or factually incorrect. “False” means “not true; not conformable to truth; expressing what is contrary to fact or truth; incorrect; wrong; mistaken; as a false report.” *Merriam-Webster Dictionary* (on-line version): false & misleading, [Ex. C-95].

¹⁸¹ NDC .WEB Application, [Ex. C-24], Sec. 18(2).

¹⁸² NDC .WEB Application, [Ex. C-24], Sec. 18(2). Mr. Rasco states that in completing Section 18, NDC described how it envisioned that “.WEB might be successfully and productively introduced and used to the benefit of consumers.” Rasco Decl., ¶ 14. At Section 18, NDC wrote: “The mission of .WEB is to provide the internet community at-large with *an alternative “home domain”* for their online presence.” NDC .WEB Application, [Ex. C-24], Sec. 18(1) (emphasis added). Further, NDC wrote: “The basic product (a domain) has not changed much, and until now, there have been *few feasible alternatives to the commercial TLDs.*” *Id.*, Sec. 18(2) (emphasis added). The dominant, and only generic commercial TLD, of course, has always been .COM, which was shorthand for “COMMERCIAL”. Zittrain Report, ¶ 18. Mr. Rasco’s further statement—that “NDC’s subjective views as to the ‘mission/purpose’ of gTLDs, including .WEB, and how .WEB might benefit consumers and others have not changed, irrespective of who operates .WEB”—rings hollow if that operator is Verisign. Rasco Decl., ¶ 16. Indeed, Verisign admits that its interest in .WEB was the result of “the inventory of available domain names for new registrations in .COM” decreasing, while demand for domain names has continued to increase. Livesay WS, ¶ 4. This suggests that contrary to Mr. Rasco’s vision of .WEB as a competitor to .COM, Verisign views .WEB as a complement, which is consistent with how Verisign has marketed .NET. Sadowsky Report, n. 23.

103. Moreover, part of .CO's "strategy" had been to compete with Verisign's .COM. .CO's marketing materials state:

.COM is the legacy domain extension with more than 100 million registrations. Stick with .com if you're OK with the status-quo. .CO on the other hand is fresh, shorter, social, and... it's available! With an increasing number of people web browsing on mobile devices, the need for short and memorable web addresses has never been so important. In essence, if you want something innovative and cutting edge, go with .CO.¹⁸³

104. Any reasonable person reviewing Section 18 would necessarily conclude that the team that had been behind the launch and development of .CO would also be behind the launch and development of .WEB, and that .WEB would be positioned to compete with .COM. Following NDC's execution of the DAA, this was no longer true and, by the plain and unambiguous terms of the Guidebook, required NDC to "promptly notify ICANN" of the "changed circumstances" caused by the its agreement with Verisign.

105. In addition to Section 18, NDC represented in Section 23 that it had "partnered" with Neustar "to provide back-end services for the .WEB registry."¹⁸⁴ Indeed, much of the information provided in NDC's application was based on technical information provided by Neustar. Any reasonable person reviewing NDC's .WEB application would necessarily conclude that Neustar was going to provide the back end registry services for .WEB if NDC was awarded the gTLD. Following execution of the DAA, however, this was "untrue." If NDC prevailed at the .WEB auction, it was obligated to assign the registry agreement to Verisign or, in the event that it was unable to do so, sell it to a third party. As demonstrated above,¹⁸⁵ these options were mandatory and no exception was made for the possibility that NDC could simply repay Verisign the amounts expended on acquiring .WEB to keep the registry for itself. Accordingly, there were no circumstances under which Neustar would be providing back end registry services for .WEB and significant

¹⁸³ *.Co is Marketed as a "Fresh, Shorter, Social" and "Available" Alternative to .com, .Co* (Sep. 22, 2013), <http://www.go.co/about/faq/> (last accessed May 6, 2020), [Ex. KM-10], p. 1.

¹⁸⁴ NDC .WEB Application, [Ex. C-24], Secs. 18(3), 23(1), 25(1).

¹⁸⁵ See Section IV(A) above.

portions of Sections 23 through 30, which are all admittedly based on information provided by Neustar, were thus rendered “inaccurate” or “misleading,” if not outright “untrue” or “false.” NDC was therefore obligated to “promptly notify ICANN” of the “changed circumstances” caused by its agreement with Verisign.

106. NDC, however, failed to do that. The DAA was executed on August 25, 2015. But the DAA was first provided to ICANN by Verisign only because ICANN asked for it in light of Afilias’ complaints, *a year later* on August 23, 2016. Consequentially, the global internet community, including Afilias, was left to believe, going into the .WEB auction, that NDC intended to acquire .WEB for itself, to compete with .COM, with Neustar providing back-end registry services, when, in fact, that was no longer true.

107. NDC’s defense of its conduct is premised on three false readings of the Guidebook. *First*, NDC is wrong that the Guidebook required applicants to update their applications only if there are changes to the applicants’ management or ownership.¹⁸⁶ The plain language of the Guidebook imposes an obligation to notify ICANN if “*any information*” contained in the application becomes “false or misleading.”

108. *Second*, NDC is wrong that ICANN does not require applicants to update Section 18 of the application that details the applicant’s business plan for the gTLD.¹⁸⁷ The Guidebook does not exempt Section 18 from the obligations imposed on applicants to “promptly notify ICANN” of any changes needed to correct information in their applications that had become “untrue,” “inaccurate,” “false,” or “misleading.” Nor does the Guidebook restrict that obligation to the updating of only the information that is relevant to the formal evaluation criteria for applicants. Indeed, ICANN admits that the information provided in Section 18 is “relevant to the Program as *it allows the community to comment on the application* (during the public comment period) based on the applicant’s statement of the mission and purpose and how the gTLD is intended to be operated.”¹⁸⁸ For example, ICANN notes that “advice from ICANN’s Government Advisory

¹⁸⁶ NDC Br., ¶ 25.

¹⁸⁷ NDC Br., ¶¶ 17, 107; Rasco Decl., ¶¶ 18-20.

¹⁸⁸ Letter from ICANN to Panel (18 July 2020) (revised), pp. 3-4 (emphasis added).

Committee [GAC] ... may change the eligibility of an application.”¹⁸⁹ The GAC has, in fact, issued several “early warning notices” regarding the New gTLD Program based on competition concerns.¹⁹⁰

109. Despite the clarity of the Guidebook, as confirmed by ICANN, Mr. Rasco improperly reads an exemption into the Guidebook. Mr. Rasco testifies: “Section 18 responses are not a material part of evaluating a particular application and, moreover, are not subject to subsequent enforcement by ICANN in the event those responses differ from how or by whom a domain is ultimately operated.”¹⁹¹ Accordingly, *NDC admits that its response to Section 18 was no longer true or misleading*. But even if NDC were correct, and Section 18 was in fact exempt from the obligations imposed by Section 1.2.7 of the Guidebook and the Terms and Conditions, NDC also failed to update Sections 23-30 of its application, which provided detailed responses regarding the technical aspects of how NDC would operate the .WEB registry. *There is no dispute that the technical disclosures in an application were one of the primary evaluation criteria and NDC offers no explanation for its uncontested failure to update this technical information* once the DAA was signed and Verisign, not Neustar, would be providing the back end registry services for .WEB if NDC prevailed at the auction.

110. *Third*, NDC is wrong that prior applicants have failed to update their applications in analogous situations. As discussed in Section IV.D below, there are no analogous prior applications and each of the examples cited by the *Amici* demonstrate how keeping the DAA secret from ICANN and the public fundamentally undermined the New gTLD Program Rules.

¹⁸⁹ Letter from ICANN to Panel (18 July 2020) (revised), p. 6.

¹⁹⁰ See ICANN/GAC, *Activities: GAC Early Warnings* (last updated 19 Feb. 2019), available at <https://gac.icann.org/activity/gac-early-warnings> (last accessed 23 July 2020). In particular, the Government of Australia submitted several early warning notices based on competition concerns.

¹⁹¹ Rasco Decl., ¶ 20.

3. NDC Intentionally Failed to Disclose the DAA Prior to the Auction.

111. Compounding its failure to voluntarily disclose the terms of the DAA to ICANN as required by the Guidebook, NDC further intentionally misled ICANN as to the existence of any agreement with Verisign prior to the .WEB Auction. Mr. Rasco's attempts to finesse how he responded to ICANN's inquiries is telling.

112. On June 27, 2016, Mr. Erwin of ICANN's New gTLD Operations group emailed Mr. Rasco of NDC regarding complaints received from a member of the contention set,¹⁹² requesting confirmation that there had not been any changed circumstances that needed to be reported to ICANN. Mr. Erwin's request was broadly stated, demanding NDC to confirm whether it needed to report to ICANN *any changes* to its application, expressly paraphrasing the language of Section 1.2.7 when he stated that NDC was obligated to report to ICANN "*any information that is no longer true and accurate*" in its .WEB application.

113. Mr. Erwin's request clearly required NDC to disclose the existence and terms of the DAA. We do not know what communications took place between NDC and Verisign regarding this inquiry from ICANN, but this is something that NDC could not do without Verisign's consent without breaching the DAA and incurring a potential liability of significant liquidated damages. Accordingly, Mr. Rasco chose (or was directed by Verisign) to reply only to the part of Mr. Erwin's request that did not require him to disclose the existence of the DAA:

I can confirm that there have been no changes to the NU DOT CO LLC organization that would need to be reported to ICANN.¹⁹³

¹⁹² NDC states, without evidence, that Afilias joined in or otherwise furthered Donut's efforts to delay the ICANN .WEB Auction. NDC Br., ¶¶ 43, 49. This is untrue. While Donuts solicited Afilias' support in lobbying ICANN to delay the auction, Afilias, relying on the truthfulness of information in NDC's application, refused to do so. Thereafter, while Donuts sought to litigate its dispute with ICANN's handling of the .WEB Auction, Afilias sought to work with ICANN. Only when it became clear that ICANN had refused to even consider the merits of Afilias' complaints—which ICANN now admits is true—that Afilias began the process of commencing this IRP.

¹⁹³ Emails from Jared Erwin (ICANN) to Jose Ignacio Rasco (NDC) (27 June 2016), [Ex. C-96].

114. Notably, Mr. Rasco declined to confirm whether or not there were any other changes to its .WEB application that were required to be notified to ICANN, as Mr. Erwin had requested.¹⁹⁴ Given the extreme lengths to which NDC and Verisign had gone to keep the terms of the DAA secret from ICANN, Afilias, the global internet community, and the public, Mr. Rasco's intentionally evasive answer is hardly surprising. Even after receiving a specific request from ICANN to disclose whether "*any information*" in its .WEB application had become "untrue or inaccurate," NDC intentionally declined to do so.

C. NDC Violated the AGB by Submitting Invalid Bids at the .WEB Auction

115. The Guidebook provides that "[o]nly bids that comply with *all aspects of the auction rules* will be considered valid."¹⁹⁵ Where an applicant fails to submit a valid bid, "the bid is taken to be an exit bid at the start-of-round price for the current auction round."¹⁹⁶ Accordingly, if an applicant submits an invalid bid, the bid is treated like an "exit bid" and the applicant may not proceed to the next round of bidding.¹⁹⁷

116. The bids submitted by NDC at the .WEB auction violated Rules 12, 13 and 32 of the Auction Rules. Rule 12 provides: "Participation in an Auction is limited to Bidders." Rule 12 further provides that Bidders are either the Applicant or an entity designated to bid on behalf of the Applicant (a "Designated Bidder").¹⁹⁸ Rule 13 provides that "each Bidder shall nominate up to two people ... to bid on *its behalf* in the Auction."¹⁹⁹ There are no provisions that allow a Bidder to bid on behalf of a third party, as third parties are not permitted to participate in an auction under Rule 12. Finally, Rule 32 provides that "[a] bid represents a price, which a Bidder is willing to pay to resolve string contention within a Contention Set in favor of its

¹⁹⁴ Mr. Rasco's statement that **Redacted - Third Party Designated Confidential Information** strains credibility, especially in light of Mr. Rasco's statement that he was aware that Dot Tech had submitted a change request and had amended its application immediately upon announcement of its deal to sell .TECH to Radix. Rasco Decl., ¶¶ 44, 78.

¹⁹⁵ AGB, [Ex. C-3], Sec. 4.3.1(5) (emphasis added).

¹⁹⁶ AGB, [Ex. C-3], Sec. 4.3.1(7).

¹⁹⁷ AGB, [Ex. C-3], Sec. 4.3.1(7).

¹⁹⁸ Power Auctions LLC, *Auction Rules for New gTLDs: Indirect Contentions Edition* (24 Feb. 2015) ("**Auction Rules**"), [Ex. C-4], Rule 12.

¹⁹⁹ Auction Rules, [Ex. C-4], Rule 13 (emphasis added).

Application.”²⁰⁰ Since third parties are not permitted to participate in an auction under Rule 12, there are no provisions that permit a Bidder to submit a bid that reflects what a third party is willing to pay to resolve the string contention.

1. Each of NDC’s Bids Were Invalid Because NDC Did Not Comply With “All Aspects of the Auction Rules”

117. The DAA provided for Verisign to exercise total and complete control over NDC’s conduct during the .WEB Auction. Redacted - Third Party Designated Confidential Information

Mr. Livesay thereby

concedes that the bids represented what Verisign, not the Bidder NDC, was willing to pay—a clear violation of the Auction Rules. Mr. Livesay further concedes that Redacted - Third Party Designated Confidential Information

²⁰⁰ Auction Rules, [Ex. C-4], Rule 32.

²⁰¹ DAA, [Ex. C-69], Sec. 10.

²⁰² DAA, [Ex. C-69], Exhibit A, Sec. 2(d).

²⁰³ DAA, [Ex. C-69], Exhibit A, Sec. 2(e).

²⁰⁴ DAA, [Ex. C-69], Exhibit A, Sec. 1(h).

²⁰⁵ Rasco Decl., ¶¶ 98-100; Livesay WS, ¶ 37.

²⁰⁶ Livesay WS, ¶ 37 (emphasis added).

²⁰⁷ Livesay WS, ¶ 37 (emphasis added).

118. The *Amici* claim that these control rights were of the sort that were “reasonably required to protect any lender in such a bidding process.”²⁰⁸ But, as discussed above, Verisign was not a “lender” any more than NDC was a “borrower.”

119. The DAA fundamentally changed the nature of the bids NDC submitted at the .WEB Auction. Had NDC received a true loan, and was therefore obligated to repay it, NDC would still be in control of deciding when to bid and how much to bid, until it reached the limits of what it could afford to do. At the end of the day, NDC would have been obligated to repay the bank or whatever lender it was dealing with the principal and any accrued interest, regardless of whether NDC had prevailed or not at the auction. But at the .WEB Auction, NDC was not making any of those decisions, because it was not obligated to repay any of the amounts it was bidding. Verisign was making all these decisions, because Verisign was spending its money to acquire .WEB and had no recourse against anyone else to force repayment.

120. Redacted - Third Party Designated Confidential Information

²⁰⁸ Verisign Br., ¶ 60.

²⁰⁹ Mr. Rasco’s statement that he did not intend by this statement Redacted - Third Party Designated Confidential Information

Mr. Rasco’s further explanation that he understood that by Redacted - Third Party Designated Confidential Information is not credible. See Rasco Decl., ¶ 62; see also Livesay WS, ¶ 34. Redacted - Third Party Designated Confidential Information

D. *Amici's* Examples of Market Practice Are Inapposite

121. The various “example of market practices” cited by the *Amici* do nothing to excuse the *Amici's* conduct in entering into the DAA and keeping it secret from the global Internet community. To the contrary, the examples they cite confirm that disclosure to ICANN was required. Further, not a single one of the examples reflects the level of control that the DAA gave Verisign over NDC’s application. Notably, ICANN has taken no position on the legitimacy of the examples cited by the *Amici* or whether they support the *Amici's* contention of long-standing market practices that ICANN has found acceptable.

1. Donuts and Demand Media

122. As the *Amici* note, Demand Media entered into a partnership with Donuts with respect to 107 of the 307 gTLDs applied for by Donuts. But the *Amici* are wrong that this fact was not disclosed to ICANN or to the general public.

123. Donuts was founded by two former senior executives of Demand Media, so the relationship between Donuts and Demand Media was clear from the outset. Indeed, questions were raised in major media outlets *in 2012* as to whether Donuts had been established to secure gTLDs for Demand Media, which may have had trouble passing ICANN’s evaluation as a result of its history of enforcing cybersquatting rules.²¹⁰

124. Moreover, Donuts’ various New gTLD applications—unlike NDC’s .WEB application—*expressly disclosed its partnership with Demand Media*. For example, Donuts applied for .CITY through its subsidiary Snow Sky LLC. There was no question that Donuts was behind the application, since the contact persons listed in the application identified themselves as Donuts executives with Donuts email addresses. Moreover, in Section 23 of its .CITY application, Donuts stated:

The following response describes our registry services, as implemented by Donuts and our partners. *Such partners include Demand Media Europe*

²¹⁰ See Craig Timberg and James Ball, “Donuts Inc.’s major play for new Web domain names raises eyebrows,” *Washington Post* (24 Sep. 2012), available at https://www.washingtonpost.com/business/technology/donuts-incs-major-play-for-new-web-domain-names-raises-eyebrows/2012/09/24/c8745362-f782-11e1-8398-0327ab83ab91_story.html (last accessed 21 July 2020).

Limited (DMEL) for back-end registry services ... For simplicity, the term “company” and the use of the possessive pronouns “we”, “us”, “our”, “ours”, etc., all refer collectively to Donuts and our subcontracted service providers.

DMEL is a wholly-owned subsidiary of DMIH Limited, a well-capitalized Irish corporation whose ultimate parent company is Demand Media, Inc., a leading content and social media company listed on the New York Stock Exchange (ticker: DMD).²¹¹

Accordingly, any reasonable person reading Donuts’ .CITY application would have understood that Donuts had a partnership with Demand Media.²¹² This disclosure allowed members of the global internet community to raise timely objections to Donuts’ various applications. For example, one objector wrote to ICANN’s Board, Staff and Government Advisory Committee (“GAC”) in *July 2012* and petitioned ICANN to reject Donuts’ applications because there was, in 2012:

[S]trong evidence that Donuts is merely an alter ego of, and working in concert with, Demand Media; evidence should lead to the conclusion that Donuts should fail ICANN’s Background Screening for the same reason Demand Media should fail.²¹³

125. The Donuts/Demand Media example is therefore instructive. Donuts timely disclosed its partnership with Demand Media, a partnership that raised serious questions regarding whether Donuts’ applications should have been allowed. That timely disclosure allowed interested parties to raise objections to ICANN so that they could be vetted before the gTLDs were awarded to Donuts.

²¹¹ See New gTLD Application Submitted to ICANN by Snow Sky, LLC, Application ID 1-1389-12139 (13 June 2012) (emphasis added), available at <https://gtldresult.icann.org/applicationstatus/applicationdetails:downloadapplication/842?t:ac=842> (last accessed 22 July 2020). Counsel has confirmed that at least several dozen Donuts New gTLD applications contain the same or substantially the same language as quoted from the .CITY application. The *Amici* therefore misrepresent to the Panel that Donuts did not disclose its partnership with Demand Media. That partnership was disclosed, as it should have been, right in the application itself.

²¹² Mr. Livesay’s representation that he researched the details of the Donuts/Demand Media deal does not square with his belief that Verisign could permissibly conceal its partnership with NDC from ICANN and the public. Livesay WS, ¶ 8. Similarly, Mr. Livesay’s representations notwithstanding, Donuts’ ownership of its special purpose vehicles were expressly disclosed on each of its applications. Mr. Livesay identifies no applications where the acquiring party *concealed* its identity behind a special purpose vehicle, which would have violated the Guidebook by preventing ICANN from conducting an evaluation of the prospective registry operator.

²¹³ See Letter from Jeffrey Stoler to Stephen Crocker *et al.* (ICANN) (28 July 2012), available at <https://www.icann.org/en/system/files/correspondence/stoler-to-crocker-et-al-28jul12-en.pdf> (last accessed 22 July 2020), p. 2.

126. In contrast, very likely at Verisign's behest, NDC kept its partnership with Verisign secret, depriving the public and the other members of the .WEB contention²¹⁴ set of the information necessary to raise timely and detailed objections regarding Verisign's proposed acquisition of .WEB.²¹⁵ NDC kept this information secret for a very good reason—if ICANN invalidated NDC's application prior to the .WEB Auction, **Redacted - Third Party Designated Confidential Information**

127. Verisign also had good reasons to keep the DAA secret until after the registry agreement had been signed. As the *Amici* allude to in their papers, ICANN, at the time the DAA was consummated, had never rejected an assignment of a registry agreement. There is a good reason for that: ICANN's authority to block a proposed assignment is extremely limited.²¹⁶ Verisign rightly believed that it would face greater scrutiny if its agreement with NDC became known prior to the .WEB Auction than at any time afterwards.

2. .BLOG

128. Tellingly, the *Amici* do not provide *any* details regarding the agreement between Primer Nivel and Automattic regarding .BLOG. In particular, we do not know the structure of Automattic's funding arrangement with Primer Nivel, whether Primer Nivel incurred any debt obligations, whether Premier Nivel transferred any of its rights or obligations in its application to Automattic, or whether Premier Nivel retained

²¹⁴ **Redacted - Third Party Designated Confidential Information**

DAA, [Ex. C-69], Schedule 1, Sec. 2(ii)(b)(3). It is very unlikely that this arrangement would not have been highly relevant to the other .WEB contention set members in terms of deciding whether and how to participate in a private auction. When various contention set members sought to press NDC to participate in a private auction, it is likely that none of them knew that NDC no longer had the liberty to make its own decision whether or not to participate. Nor would they have known that some of the money they would have bid would potentially be on-paid to Verisign.

²¹⁵ Two members of the .WEB contention set (not Afilias) complained to ICANN in advance of the .WEB auction, demanding that the auction be postponed to allow ICANN to conduct a thorough investigation: "To do otherwise would be unfair as we do not have transparency into who leads and controls that applicant as the auction approaches." NDC Br., ¶ 46.

²¹⁶ In considering a request for assignment, ICANN focuses simply on "whether the transferee organization has the requisite financial and technical ability to operate a gTLD." Declaration of Christine A. Willett (17 Dec. 2018), ¶ 34; *see also* ICANN, Assignment: Change of Control of Registry Operator (29 Jan. 2016), available at <https://www.icann.org/resources/change-of-control> (last accessed 13 July 2020), [Ex. C-129].

full discretion to resolve the contention set and bid as it chose at the .BLOG auction. Absent those facts, it is impossible to determine whether Premier Nivel similarly violated the Guidebook.²¹⁷

129. Moreover, even assuming, *arguendo*, that the Automattic-Primer Nivel agreement was identical to the DAA, Primer Nivel's conduct does not excuse NDC's violations. ICANN's failure to investigate and reveal the facts regarding .BLOG are further evidence of ICANN's dereliction of duty, not a free pass to violate the Guidebook: one possible example out of 1,200 does not constitute industry practice. Moreover, while Afilias was a member of the .BLOG contention set, Afilias was not the runner-up at the .BLOG auction. It therefore had no incentive to initiate an IRP, and incur substantial legal fees, simply to secure .BLOG for Google, the runner-up.

130. The facts regarding .BLOG demonstrate why Verisign chose to conceal its agreement with NDC until after NDC had secured the right to execute a registry agreement and why Google may not have sought to challenge the result of the .BLOG auction. Like Verisign, Google is a prominent entity in the Internet sector and, for this reason, its pursuit of a large number of gTLDs raised serious concerns about the competitive implications of its various applications, despite the fact that Google was not yet a major player in the registry business. The Australian Government, through the GAC, issued an Early Warning Notice regarding Google's .BLOG application. In relevant part, that notice provided:

Charleston Road Registry Inc. is proposing to exclude any other entities, including potential competitors, from using the TLD. Restricting common generic strings for the exclusive use of a single entity could have unintended consequences, including a *negative impact on competition*.

Like Verisign, Google could have "hidden in the weeds" and disguised its pursuit of .BLOG in any number of ways. But Google, unlike Verisign, was transparent about its intent and, perhaps due to the GAC's input,

²¹⁷ We note that Primer Nivel first sought to assign .BLOG to Automattic nearly a year after the .BLOG auction had concluded. This suggests that the facts regarding .BLOG are substantially different from those concerning .WEB. Kevin Murphy, "WordPress reveals IT bought .blog for \$19 million," *Domain Incite* (13 May 2016), available at <http://domainincite.com/20440-wordpress-reveals-it-bought-blog-for-19-million> (last accessed 22 July 2020); see also MATT MUELLENWEG, UNLUCKY IN CARDS: .BLOG (12 May 2016), <https://ma.tt/2016/05/blog/>.

ultimately abandoned its pursuit of many gTLDs. Verisign, however, avoided confronting any competitive concerns about its pursuit of .WEB by “hiding in the weeds” until such time as it could avoid scrutiny by the GAC.²¹⁸

3. Radix and .TECH

131. The draft Radix/Dot Tech. agreement²¹⁹ reveals that Radix’s deal with Dot Tech differed significantly and materially from the DAA, something that was known to Verisign at the time the DAA was drafted.²²⁰ Radix contracted to acquire the applicant Dot Tech, in the event that the latter was successful at the .TECH auction. Dot Tech, however, was completely unrestrained in its dealings with the other members of the .TECH contention set: Dot Tech was free to enter into a private auction, could determine whether, when and how much to bid during any given round of any auction, could decide to withdraw its application, and could agree to enter into any form of settlement with any other contention set member.²²¹ More importantly, if Dot Tech succeeded in securing .TECH (the gTLD) for less than the sale price of Dot Tech (the company), Dot Tech’s owners kept the balance, not Radix. Accordingly, Radix was not a lender to Dot Tech and did not fund Dot Tech’s bids. Dot Tech’s bids, unlike NDC’s, properly reflected what Dot Tech was willing to bid for .TECH and were submitted solely on Dot Tech’s behalf.

132. Moreover, as soon as the Radix/Dot Tech deal closed, and Radix acquired its interest in Dot Tech, Dot Tech filed a change request form with ICANN, allowing ICANN to conduct a reexamination of Dot

²¹⁸ We note that Automattic’s acquisition of .BLOG did not raise any competitive concerns, since Automattic did not and does not control any other gTLD registries.

²¹⁹ Dot Tech, Sale and Purchase Agreement (*undated*), [Livesay WS (1 June 2020), Ex. C].

²²⁰ Livesay WS, ¶ 14.

²²¹ See Dot Tech, Sale and Purchase Agreement (*undated*), [Livesay WS (1 June 2020), Ex. C]. The Radix/Dot Tech agreement was a true “executory agreement” in all respects. In the event that Dot Tech acquired the rights to .TECH, Radix agreed that it would immediately close on its agreement to purchase Dot Tech. *Id.*, p. 4. Until that time, the parties owed no obligations to each other. And in the event that the deal did close, Dot Tech’s former owners would be paid the purchase price for their company, regardless of how much it had cost to acquire .TECH. As discussed above, NDC sold several rights and obligations in its application to Verisign the moment that the DAA was signed. **Redacted - Third Party Designated Confidential Information** while Dot Tech was not paid any fees under its agreement.

Tech's revised .TECH application, which was amended a second time in November 2014.²²² That change request was approved and Dot Tech's revised application passed ICANN's reexamination in January 2015. Accordingly, Dot Tech afforded ICANN a full opportunity to reconsider its application in full, after it had "promptly notified ICANN" of its sale to Radix, and prior to entry into any registry agreement. As required by the Guidebook, Radix filed a change request with ICANN and submitted two amended applications in October and November 2014.

133. NDC, in contrast, did not follow these rules. In sum, despite Mr. Livesay's admission that he had received and reviewed the .TECH agreement prior to drafting the DAA, Mr. Livesay chose to include terms that were materially different from the .TECH agreement and which clearly violated the Guidebook.²²³

4. Other Examples

134. The *Amici* note that the secondary market for gTLDs is robust, and that registry agreements are frequently assigned to third parties. This is not strictly true. Discounting the back and forth assignments that occurred between Donuts and Demand Media, there have been relatively few other assignments. That said, it is true that there have been other assignments of registry agreements and the *Amici* identify several that involved Afilias.²²⁴ However, in each of these cases, the agreement to assign the registry agreement

²²² The two amendments to Dot Tech's .TECH application suggest that the first had been submitted in some haste, which suggests that the deal between Radix and Dot Tech had been concluded post-auction. This second revised application contained all of the technical information needed for ICANN's reexamination. *See* New gTLD Application Submitted to ICANN by Dot Tech LLC, Application ID 1-1670-76346 (13 June 2012), [Rasco Decl. (1 June 2020), Ex. D]; New gTLD Application Submitted to ICANN by Dot Tech LLC, Application ID 1-1670-76346 (13 June 2012) (revised), [Rasco Decl. (1 June 2020), Ex. E]; *see also* New gTLD Application Submitted to ICANN by Dot Tech LLC, Application ID 1-1670-76346 (revised version 3, posted on 13 Nov. 2014), available at <https://gtldresult.icann.org/applicationstatus/applicationchangehistory/548> (last accessed 23 July 2020).

²²³ Mr. Livesay also attached to his Declaration a draft agreement from Google regarding .WEB. The terms of this agreement are also starkly different from the DAA. Importantly, the Google agreement provided that Google, *in its sole discretion*, could provide ICANN and/or the other contention set members notice of its deal with Verisign. Google, Agreement to Withdraw a .TLD Application (*undated*), [Livesay WS (1 June 2020), Ex. B], Sec. 1. Redacted - Third Party Designated Confidential Information . DAA, [Ex. C-69], Sec. 10. Redacted - Third Party Designated Confidential Information

²²⁴ The *Amici* cite the transactions that concern .MEET, .PROMO, .ARCHI, and .SKI. The *Amici* also cite Afilias' "Buy Any Car" campaign, which specifically targeted existing registries, not applicants for gTLDs. There is no dispute in this IRP that Section 7.5 of ICANN's standard Registry Agreement provides that those agreements may be assigned to third parties.

was negotiated and concluded *after* the registry (with Afiliis or the target) had executed the registry agreement with ICANN.²²⁵

135. Accordingly, in each example cited by the *Amici*, including those that did not include Afiliis, the assignments were negotiated and concluded pursuant to the express authorization provided by Section 7.5 of the Registry Agreement. As the *Amici* themselves note, the Terms and Conditions of the Guidebook provide that applicants do not acquire the assignment rights provided in the Registry Agreement until the applicant “enters into a registry agreement with ICANN.”²²⁶ For this reason, while Afiliis (and the other post-delegation assignors identified by the *Amici*) were exercising rights they enjoyed under the Registry Agreement, the DAA enjoys no such immunity. Indeed, while neither Afiliis nor any of the other post-delegation assignors were not assigning any rights or obligations in connection with their applications (which were now, after signing the registry agreements, moot), NDC, as shown above, did assign several such rights and obligations, thereby violating the Guidebook.

136. Finally, the *Amici* do not explain their argument that bankers and other financiers might also

Redacted - Third Party
Designated Confidential
Information

in the resolution of a contention set.²²⁷ Bankers and other financiers extend loans

Tellingly, the *Amici* focus exclusively on these permitted transactions, and do not (because they cannot) cite a single example where Afiliis paid an applicant to acquire a gTLD for it, or otherwise was paid a fee in exchange for acquiring a gTLD for a third party.

²²⁵ Mr. Rasco declares that “based on my experience and discussions with others in the industry, it was common industry knowledge” that applicants sought to monetize their applications by “assigning interests in domain strings *after securing the rights from ICANN.*” Rasco Decl., ¶ 42 (emphasis added). While Mr. Rasco declares that he was aware “that Donuts and Rightside Media had entered into an agreement whereby certain gTLD applications were potentially financed by the other party in exchange for an interest in the domains in question,” (*id.*, ¶ 43.) Mr. Rasco does not explain why NDC did not publicly disclose its partnership with Verisign as Donuts did with Demand Media (Rightside’s then-parent company) in its various gTLD applications. Mr. Rasco also fails to note that Dot Tech filed a change request with ICANN, permitting reexamination of its application as soon as its deal with Radix was announced. NDC, of course, has not done so.

It is notable that despite this “common knowledge,” the *Amici* could only cite *one possible example*, .BLOG, where the applicant received financial support from the eventual assignee. And, as demonstrated above, the lengthy delay between the auction and the announcement of the assignment to Automattic suggests that the Primer Nivel/Automattic relationship did not go as far as the DAA and may not have constituted a Guidebook violation. NDC has offered *no evidence* of the terms of the Primer Nivel/Automattic agreement to suggest otherwise.

²²⁶ See Verisign Br., ¶ 12 (*citing* AGB, [Ex. C-3], Module 6.10).

²²⁷ Rasco Decl., ¶ 61.

based on the borrower's credit, subject to the borrower's obligation to repay the loan. Other than setting restrictions on the use of the funds extended under the loan, bankers and other financiers do not

Redacted - Third Party Designated Confidential Information

By comparison, investors instruct their agents in this way. For example, investors instruct their brokers on what stocks to buy, how much to pay for them, and, most importantly, those brokers are required to follow their principal's instructions ^{Redacted - Third Party Designated Confidential I} The DAA, as admitted by the *Amici* and their witnesses, transformed NDC from a principal in the .WEB contention set to Verisign's secret agent.

E. The 2016 Verisign-NDC Confirmation of Understandings is Self-Serving and Untrustworthy

137. In June 2016, several members of the .WEB contention set (but not including Afilias) petitioned ICANN to investigate allegations that there had been a change of control over NDC. ICANN investigated and closed its investigation on July 13, 2016 and ordered the .WEB Auction to proceed, as scheduled, on July 28, 2016. ICANN at the time was unaware of the existence or terms of the DAA, or even of Verisign's "indirect participation" in the .WEB contention set, and certainly had no reason to suspect that this might be the case in light of Mr. Rasco's multiple representations to ICANN.²²⁸ Notwithstanding ICANN's decision to close its investigation (ignorant, as it was, of the DAA's terms or existence), Verisign caused NDC to execute a self-serving set of declarations, called the Confirmation of Understandings (the "Confirmation"), that purport to recast the plain terms of the DAA in a more favorable light. The Confirmation was drafted entirely by Verisign and dutifully countersigned by Mr. Rasco.

²²⁸ See Sections II(D)-(E) above.

138. Disingenuously described by the *Amici* as a “Supplement” to the DAA,²²⁹ the Confirmation was drafted nearly a year after the DAA had been executed and by its plain language does not amend the DAA. Far from being drafted in the “ordinary course of business,” the Confirmation was drafted *specifically in response to complaints* made to ICANN and for the purpose of creating a self-serving document to defend the *Amici’s* conduct in any future legal proceedings.²³⁰ The Confirmation was made, days after Verisign had become aware of the allegations concerning its relationship with NDC, after Verisign had had an opportunity to reflect on these allegations, create a set of so-called understandings, share them with NDC, and arrange for Mr. Rasco to sign his name to them.²³¹ Statements offered to establish a party’s own state of mind are intrinsically self-serving, they also inherently untrustworthy. For this reason, U.S. courts have routinely excluded statements introduced to provide intent based on concerns over the declarant’s candor. This is especially true where, as here, the statements concern intentions regarding past acts, here the *Amici’s* intent when executing the DAA a year earlier.²³²

²²⁹ Verisign Br., ¶ 2, ns. 4 & 6. The Confirmation is not a “supplemental agreement” because it does not, by its express terms, modify or amend the DAA. **Redacted - Third Party Designated Confidential Information**

²³⁰ “Proof that an interpretation of a contract is reasonable must come from *objective facts*, and [e]vidence is not objective when it is the self-serving testimony,” *ex post facto*, statement NDC and Verisign, made in the face of an ICANN investigation, as to what the DAA, “clear on its face, ‘really’ means, contrary to what it seems to mean.” *Boeing Co. v. March*, 656 F. Supp. 2d 837, 863 (N.D. Ill. 2009), [Ex. CA-58] (quoting *Rossetto v. Pabst Brewing Co.*, 217 F.3d 539, 547 (7th Cir. 2000)) (emphasis added).

²³¹ Indeed, several of the “confirmations” amply demonstrate that they are simply *ex post facto* self-serving declarations, rather than evidence of the parties’ intent. For example, Verisign compelled NDC to confirm that ^{Redacted - Third Party Designated Confidential Information}

Letter from Paul Livesay (Verisign) to Jose Rasco (NDC) (26 July 2016) [ICANN-WEB_000041 - ICANN-WEB_000042], [Ex. C-97], ¶ A. Certainly, Verisign did not require NDC to represent to Verisign that Verisign had not acquired NDC: this representation was obviously created solely for use in future legal proceedings.

²³² See *U.S. v. Cianci*, 378 F.3d 71, 106 (1st Cir. 2004), [Ex. CA-59] (affirming trial court’s decision to exclude defendant’s statements because they were “to a large extent ‘self-serving’ attempts to cover tracks already made”).

Redacted - Third Party Designated Confidential Information

Letter from Paul Livesay (Verisign) to Jose Rasco (NDC) (26 July 2016) [ICANN-WEB_000041 - ICANN-WEB_000042], [Ex. C-97], ¶ D. This language clearly refers to actions taken a year earlier and, as such, is simply rank hearsay.

139. Far from establishing that NDC's agreement to the terms of the DAA did not violate the Guidebook, the Confirmation proves the converse. Betraying their proverbial guilty mind, Verisign sought to create a self-serving document to rebut the obvious violations of the New gTLD Program Rules created by the DAA. As of July 2016, no one had complained to ICANN that NDC had agreed to transfer or assign individual rights or obligations it held as an applicant for .WEB—yet the Confirmation devotes two paragraphs to this point. Moreover, as of July 2016, no one had complained to ICANN that the bidding procedures set forth in the still-secret DAA would cause NDC to submit invalid bids at the .WEB Auction. Nonetheless, the Confirmation reflects the *Amic's* concern about the bidding procedures as well, characterizing them as necessary to aid Verisign's financing, provide security for Verisign funds, and provide for Redacted - Third Party Designated Confidential Information during the auction.

V. ICANN'S DISCRETION IS CIRCUMSCRIBED BY ITS ARTICLES OF INCORPORATION AND BYLAWS AS WELL AS PRINCIPLES OF INTERNATIONAL LAW

140. The *Amic's*²³³ echo ICANN's position²³⁴ that ICANN has "significant discretion" in terms of its administration of the New gTLD Program. This is a "significant" exaggeration. Afilias does not dispute that the ICANN Board and Staff²³⁵ have discretion in administering the New gTLD Program. Rather, our position

²³³ NDC Br., ¶ 15; Verisign Br., ¶ 13, n. 19; *id.*, ¶ 67, n. 125.

²³⁴ ICANN's Response to Amended IRP Request, ¶¶ 21, 64; *id.*, ¶ 64, fn. 101.

²³⁵ ICANN Staff's accountability is the same as that of the organization:

As part of Work Stream 2, the CCWG-Accountability proposes that further enhancements be made to a number of designated mechanisms:

- Staff Accountability

Annex 12, which details Recommendation 12, also included the following recommendations with regards to Staff Accountability:

In general, management and staff work for the benefit of the community and in line with [ICANN's] purpose and Mission. While it is obvious that they report to and are held accountable by the Board and the President & CEO, ***the purpose of their accountability is the same as that of the organization.***

- Complying with [ICANN's] rules and processes.
- Complying with applicable Bylaws.
- Achieving certain levels of performance, as well as security.
- Making their decisions for the benefit of the community and not in the interest of a particular stakeholder or set of stakeholders or [ICANN] the organization alone.

ICANN, Recommendations to Improve ICANN Staff Accountability (13 Nov. 2017), [Ex. C-84], pp. 2-3 (emphasis added).

is that their discretion is circumscribed—indeed, significantly circumscribed—by the requirements set out in ICANN's Articles and Bylaws,²³⁶ a matter which the *Amici* fail to address in any manner in their hundred plus pages of briefing. ICANN's Articles and Bylaws are replete with obligations with which ICANN's Board and Staff are required to comply insofar as their activities—including administration of the New gTLD Program²³⁷—are concerned. These are found in the Commitments and the Core Values,²³⁸ in other provisions of the Bylaws, in applicable local law, and in the principles of international law that govern ICANN's conduct per its Articles and Bylaws.

141. The Commitments and Core Values are of particular importance insofar as ICANN's discretion is concerned, requiring that, in administering the New gTLD Program, ICANN's Board and Staff must “act in a manner that complies with” and that “reflects” ICANN's Commitments and respects ICANN's Core Values.²³⁹ The Panel will also recall the clear instruction stated in the Bylaws that the “[t]he Commitments and Core Values are intended to apply in the broadest possible range of circumstances.”²⁴⁰ This is so because the “Commitments reflect ICANN's *fundamental compact* with the global Internet community and are intended to apply consistently and comprehensively to ICANN's activities.”²⁴¹ Whenever it is impossible for ICANN to simultaneously satisfy all core values, it must nevertheless balance them to serve “a policy developed through the bottom-up multistakeholder process or otherwise best serve ICANN's

²³⁶ As this Panel is aware, this is the first IRP brought under the revised Bylaws that concerns the actions of ICANN's staff and officers as well as ICANN's Board. As other IRP Panels have recognized with respect to ICANN's Board, its “discretion is limited by the Articles and Bylaws, and it is against the provisions of these instruments that the Board's conduct must be measured.” *Vistaprint Ltd. v. ICANN*, ICDR Case No. 01-14-0000-6505, Final Declaration of the Independent Review Panel (9 Oct. 2015), [Ex. CA-2], ¶ 123.

²³⁷ There is no dispute between the Parties, and nor is it questioned by the *Amici*, that the implementation and administration of the New gTLD Program fall squarely within ICANN's Mission.

²³⁸ Bylaws, [Ex. C-1], Sec. 1.2.

²³⁹ Bylaws, [Ex. C-1], Sec. 1.2 (“In performing its Mission, ICANN will act in a manner that complies with and reflects ICANN's Commitments and respects ICANN's Core Values....”).

²⁴⁰ Bylaws, [Ex. C-1], Sec. 1.2(c).

²⁴¹ Bylaws, [Ex. C-1], Sec. 1.2(c) (emphasis added).

Mission.”²⁴² In the present context, this fundamental compact reflects ICANN’s formal and “fundamental” agreement with the global Internet community that developed the New gTLD Program Rules that it will consistently, neutrally, objectively, fairly, and in good faith implement the principles, procedures and rules set out therein.

142. ICANN’s Articles of Incorporation also require ICANN to carry out its activities “*in conformity with relevant principles of international law and applicable international conventions and local law.*”²⁴³ ICANN’s Bylaws, as recently revised, restate the requirement that ICANN carry out “*its activities in conformity with relevant principles of international law and international conventions and applicable local law.*...”²⁴⁴

143. The substantive and procedural requirements set forth in ICANN’s Articles and Bylaws and the New gTLD Program Rules cannot be understood and given proper effect without reference to relevant legal standards. The requirement that ICANN comply with relevant principles of international law not only guides the interpretation of these terms, it provides independent (and generally overlapping) substantive and procedural safeguards appropriate for an entity that has oversight authority of a key global resource.²⁴⁵ Despite incorporating this requirement into its Articles of Incorporation and Bylaws, ICANN has long-taken the position that there are essentially no “relevant principles of international law” that regulate its activities.²⁴⁶ This is incorrect. It is contrary to the manifest intention behind its Articles of Incorporation—these would not

²⁴² Bylaws, [Ex. C-1], Sec. 1.2(c).

²⁴³ ICANN, Articles of Incorporation (approved on 9 Aug. 2016, filed on 3 Oct. 2016) (“Articles”), [Ex. C-2], Art. 2(III) (emphasis added).

²⁴⁴ Bylaws, [Ex. C-1], Sec. 1.2(a) (emphasis added).

²⁴⁵ See *ICM Registry, LLC v. ICANN*, ICDR Case No. 50-117-T-00224-08, Expert Report of Jack Goldsmith (22 Jan. 2009), [Ex. CA-60], ¶¶ 7-8, 16.

²⁴⁶ *ICM Registry, LLC v. ICANN*, ICDR Case No. 50-117-T-00224-08, ICANN’s Response to ICM’s Memorial on the Merits (8 May 2009), [Ex. CA-61], ¶ 167.

have vacuously referenced principles of international law—and to the decision of past IRP panels that ICANN must, at a minimum, “carry out its activities” in good faith.²⁴⁷

144. The guiding substantive and procedural rules in ICANN’s Articles and Bylaws—including the rules involving procedural fairness, transparency, and non-discrimination—are so fundamental that they appear in some form in virtually every legal system in the world, and, as discussed below, are given definition by numerous sources of international law. They arise from the general principle of good faith, which is considered to be “the foundation of all law and all conventions.”²⁴⁸ As the International Court of Justice has stated, the principle of good faith is “[o]ne of the basic principles governing the creation and performance of

²⁴⁷ In *ICM Registry v. ICANN*, a Panel comprised of Judge Stephen Schwebel, Professor Jan Paulsson, and Judge Dickran Tevrizian received expert testimony on the relevant principles of international law from Professor Jack Goldsmith and the late Professor David Caron. The Panel concluded that:

ICANN, *in carrying out its activities “in conformity with the relevant principles of international law,” is charged with acting consistently with relevant principles of international law, including the general principles of law recognized as a source of international law.* That follows from the terms of Article 4 of its Articles of Incorporation and from the intentions that animated their inclusion in the Articles, an intention that the Panel understands to have been to subject ICANN to relevant international legal principles because of its governance of an intrinsically international resource of immense importance to global communications and economies. Those intentions might not be realized were Article 4 interpreted to exclude the applicability of general principles of law.

[T]he provision of Article 4 of ICANN’s Articles of Incorporation prescribing that ICANN “shall operate for the benefit of the Internet community as a whole, carrying out its activities *in conformity with relevant principles of international law and applicable international conventions and local law,*” *requires ICANN to operate in conformity with relevant general principles of law (such as good faith) as well as relevant principles of international law, applicable international conventions,* and the law of the State of California.

ICM Registry, LLC v. ICANN, ICDR Case No. 50 117 T 00224 08, Declaration of the Independent Review Panel (19 Feb. 2010), [Ex. CA-1], ¶¶ 140, 152 (emphasis added). The obligation for ICANN to operate in good faith—and, indeed, to go beyond mere good faith in adhering to its Articles and Bylaws—is also reflected in the CCWG-Accountability’s recommendations regarding the strengthening of ICANN’s Independent Review Process: “A consultation process undertaken by ICANN produced numerous comments calling for overhaul and reform of ICANN’s existing IRP. Commenters called for ICANN to be held to a substantive standard of behavior rather than just an evaluation of whether or not its action was taken in good faith.” CCWG-Accountability Supplemental Final Proposal on Work Stream 1 Recommendations (23 Feb. 2016), [Ex. C-91], ¶ 175 (at p. 33).

²⁴⁸ Bin Cheng, *General Principles of Law as applied by International Courts and Tribunals* (1953), [Ex. CA-3(bis)], p. 105 (quoting *Megalidis Case*, 8 T.A.M. 386, 395 (1928)). Similarly, Schwarzenberger and Brown list good faith as one of the seven fundamental principles of international law. Georg Schwarzenberger and Edward Brown, *A Manual of International Law* (6th ed. 1976), [Ex. CA-62], p. 7.

legal obligations.”²⁴⁹ As the Panel in *ICM v. ICANN* observed, the principle of “good faith ... is found in international law, in the general principles that are a source of international law, and in the corporate law of California.”²⁵⁰ At its most general level, it requires all actors to exercise their rights honestly, fairly, and loyally.²⁵¹ However, the principle of good faith also takes specific forms as recognized in ICANN’s Articles and Bylaws as well as in international law. In other words, ICANN’s exercise of good faith must be exercised in accordance with—and as circumscribed by—the additional principles stated in the Articles and the Bylaws. Given their omission from Amici’s briefs, we lay out below the most relevant provisions of the Bylaws and Articles to the present dispute, as well as the supporting principles of international law, that limit ICANN’s discretion in applying its documented policies—here the New gTLD Program Rules.

A. ICANN Must Provide Procedural Fairness and Due Process

145. ICANN’s Bylaws require that “ICANN and its constituent bodies shall operate to the maximum extent feasible in an open and transparent manner and *consistent with procedures designed to ensure fairness*.”²⁵² Its “Commitments” accordingly include that ICANN will “[m]ake decisions by applying documented policies *consistently, neutrally, objectively, and fairly*...”²⁵³

146. The principle of procedural fairness and due process reflected in ICANN’s Bylaws is multifaceted. It requires, *inter alia*, that ICANN adhere to established substantive and procedural rules, provide those affected by its decision with the opportunity to be heard, base its decisions and actions on

²⁴⁹ *Nuclear Tests (Australia v. France)*, Judgment (20 Dec.), 1974 I.C.J. 253, [Ex. CA-63], ¶ 46; see also *Land and Maritime Boundary between Cameroon and Nigeria (Cameroon v. Nigeria)*, Judgment (11 June), 1998 I.C.J. 275, [Ex. CA-64], ¶ 38 (good faith is a “well-established principle of international law”).

²⁵⁰ *ICM Registry, LLC v. ICANN*, ICDR Case No. 50 117 T 00224 08, Declaration of the Independent Review Panel (19 Feb. 2010), [Ex. CA-1], ¶ 141.

²⁵¹ *ICM Registry, LLC v. ICANN*, ICDR Case No. 50-117-T-00224-08, Expert Report of Jack Goldsmith (22 Jan. 2009), [Ex. CA-60], ¶ 33 (citing Bin Cheng, *General Principles of Law as Applied by International Courts and Tribunals* (2002), p. 119); Anthony D’Amato, “Good Faith” in *Encyclopedia of Public International Law* Vol. 2 (1995), [Ex. CA-65], p. 599.

²⁵² Bylaws, [Ex. C-1], Sec. 3.1 (emphasis added).

²⁵³ Bylaws, [Ex. C-1], Sec. 1.2(a)(v) (emphasis added).

adequate information, and make decisions that are neither arbitrary nor unreasonable.²⁵⁴ Accordingly, due process and procedural fairness require, among other procedural protections, that decisions be based on evidence and on appropriate further inquiry into the facts.²⁵⁵ In other words, procedural fairness requires, *inter alia*, performing diligent investigation when making decisions, in accordance with the principle of due diligence.²⁵⁶ Arbitrary or unreasonable decisions are also contrary to procedural fairness.²⁵⁷ Decisions are arbitrary when they lack support from a rational policy, when they are not reasonably related to that policy, or when they are based on “caprice, prejudice or personal preference.”²⁵⁸

147. ICANN repeatedly failed to comply with the principle of procedural fairness and due process in regards to Afiliás’ claims. Afiliás first raised its concerns with ICANN in August 2016.²⁵⁹ Even in this IRP, ICANN has taken diametrically opposed positions as to whether or not it evaluated those concerns. In opposing Afiliás’ Request for Emergency Relief and Interim Measures of Protection, ICANN claims that it “evaluated [Afiliás’] complaints” and that it was therefore “time ... for the auction results to be finalized and for .WEB to be delegated” to NDC (and hence Verisign).²⁶⁰ In ICANN’s Rejoinder, by contrast, ICANN asserts that its Board determined in November 2016 to await the results of pending and anticipated accountability mechanisms “before considering and determining what action, if any, to take at that time” concerning Afiliás’

²⁵⁴ Tribunals for the Court of Arbitration for Sport (“CAS”) consider that private regulatory institutions like ICANN must observe the general principle of procedural fairness and due process. See *The Gibraltar Football Association (GFA) v. Union des Associations Européennes de Football (UEFA)*, CAS Case No. 2002/O/410, Award (7 Oct. 2003), [Ex. CA-66], ¶ 4.

CA-72], ¶ 221 (quoting *Black’s Law Dictionary* (7th ed. 1999), p. 100); *Filippo Volandri v. International Tennis Federation (ITF)*, CAS Case No. 2009/A/1782, Award (12 May 2009), [Ex. CA-73], ¶ 26.

²⁵⁹ See Letter from S. Hemphill (Afiliás) to A. Atallah (ICANN) (8 Aug. 2016), [Ex. C-49].

²⁶⁰ ICANN’s Opposition to Afiliás’ Request for Emergency Panelist and Interim Measures of Protection (17 Dec. 2018), ¶ 3.

complaints.²⁶¹ And yet, in June 2018, ICANN nonetheless proceeded to take .WEB off-hold and to contract with NDC (and hence Verisign) for .WEB, without providing Afilias any advance notice or explanation for why it was doing so. ICANN had determined that it was going to delegate .WEB to NDC/Verisign as long as there was no accountability mechanism to stop it from doing so. There is simply no way to resolve ICANN's conduct with basic notions of procedural fairness and due process.

B. ICANN Must Afford Impartial and Non-Discriminatory Treatment

148. Article 2.3 of the Bylaws require ICANN to act in a non-discriminatory manner. This provision of its Bylaws, entitled "Non-Discriminatory Treatment," states:

ICANN shall not apply its standards, policies, procedures, or practices inequitably or single out any particular party for disparate treatment unless justified by substantial and reasonable cause, such as the promotion of effective competition.

The above obligation is underscored by ICANN's "Commitments," which include the principle that ICANN must make decisions "without singling out any particular party for discriminatory treatment (i.e., making an unjustified prejudicial distinction between or among different parties)...."²⁶²

149. The obligation enshrined in ICANN's governing documents is consistent with the principles of impartiality and non-discrimination under international law. The principle has broad application,²⁶³ particularly where, as here, a party has affirmatively assumed duties of impartiality and non-discrimination. Prohibited conduct may take the form of that committed with discriminatory or prejudicial intent (such conduct

²⁶¹ Disspain WS, ¶ 11.

²⁶² Bylaws, [Ex. C-1], Sec. 1.2(a)(v).

²⁶³ The principle of non-discrimination is found in numerous legal systems. For the Court of Justice of the European Union, see *Albert Ruckdeschel & Co. and Hansa-Lagerhaus Ströh & Co. v. Hauptzollamt Hamburg-St. Annen and Diamalt AG v. Hauptzollamt Itzenhoe*, Joined Cases 117/76 and 16/77, Judgment (19 Oct. 1977), 1977 E.C.R. 1753, [Ex. CA-74], p. 1762; see also *Peter Überschär v. Bundesversicherungsanstalt für Angestellte*, Case 810/79, Judgment (8 Oct.), 1980 E.C.R. 2747, [Ex. CA-75], ¶ 16; *Bilka-Kaufhaus GmbH v. Karin Weber von Hartz*, Case 170/84, Judgment (13 May), 1986 E.C.R. 1620, [Ex. CA-76], ¶¶ 31, 37-43. For investment tribunals, see *Nykomb Synergetics Technology Holding AB v. Republic of Latvia*, SCC Arbitration, Award (16 Dec. 2003), [Ex. CA-77], p. 34; *Saluka Inves. BV v. Czech Republic*, UNCITRAL Arbitration, Partial Award (17 Mar. 2006), [Ex. CA-78], ¶ 347. For human rights courts, see *Kelly and Others v. United Kingdom*, ECHR, Case No. 30054/96, Final Judgment (4 Aug. 2001), [Ex. CA-79], ¶ 148; Advisory Opinion OC-18/03 of September 17, 2003, Inter-Am. Ct. H.R., *Juridical Condition and Rights of the Undocumented Migrants*, [Ex. CA-80], p. 103.

is also arbitrary and unreasonable);²⁶⁴ international procurement standards require impartiality and equal treatment of all participants.²⁶⁵ Prohibited conduct may also take the form of that which is discriminatory or prejudicial merely in effect, even when superficially neutral treatment.²⁶⁶

150. ICANN accepted the *Amici's* position—as reflected, at a minimum, in their responses to the September 2016 questionnaire—at face value in a clearly biased and discriminatory manner. The ICANN Bylaws require that ICANN act in an objective, neutral, and fair manner.²⁶⁷ ICANN, however, blatantly decided *not* to comply with these standards in regards to .WEB. Upon receipt of the *Amici's* position on the DAA in August and October 2016,²⁶⁸ and without conducting any investigation on the matter,²⁶⁹ ICANN accepted the *Amici's* positions at face value —incorporating their positions into a questionnaire that was designed to elicit answers to advance the *Amici's* arguments. Moreover, ICANN based its questionnaire on information that ICANN and the *Amici* all had in their possession—but which they knew was unavailable to Afilias. It was apparently on the basis of this information that ICANN initially took the position in this IRP that it had “evaluated” and rejected Afilias’ concerns about NDC’s compliance with the New gTLD Program Rules, and, therefore proceeded to delegate the .WEB gTLD to NDC in June 2018. ICANN’s clear bias in favor of the

²⁶⁹ ICANN's Response to Amended IRP Request, ¶ 62.

Amici is further evident throughout its submissions in this IRP. Given ICANN's obvious favoritism of Verisign/NDC dating back to 2016, there can be no serious doubt that if this Panel were merely to issue a declaration that that the Board should now consider Afilias' complaints—as ICANN and the *Amici* urge the Panel to do—ICANN would once again proceed to delegate .WEB to NDC (and hence Verisign), which is why this Panel must exercise the jurisdiction it has been granted to finally resolve the Dispute that is before it. We address the Panel's jurisdiction in Section IX below.

C. ICANN Must Act Openly and Transparently

151. Article 2(III) of the Articles of Incorporation provides in relevant part that ICANN—

[S]hall operate in a manner consistent with these Articles and its Bylaws for the benefit of the Internet community as a whole, carrying out its activities *in conformity with relevant principles of international law and international conventions* and applicable local law and *through open and transparent processes* that enable competition and open entry in Internet-related markets.²⁷⁰

152. These provisions are supplemented by “Commitments and Core Values” set forth in ICANN's Bylaws, which are to “guide the decisions and actions of ICANN” in the performance of its Mission.²⁷¹ The Commitments require that:

ICANN must operate in a manner consistent with these Bylaws for the benefit of the Internet community as a whole, carrying out its activities *in conformity with relevant principles of international law and international conventions* and applicable local law, *through open and transparent processes* that enable competition and open entry in Internet-related markets.²⁷²

153. The Commitments also require ICANN to:

Employ *open, transparent* and bottom-up, multistakeholder policy development processes that are led by the private sector (including business stakeholders, civil society, the technical community, academia,

²⁷⁰ Articles, [Ex. C-2], Art. 2(III) (emphasis added).

²⁷¹ Bylaws, [Ex. C-1], Sec. 1.2(b).

²⁷² Bylaws, [Ex. C-1], Sec. 1.2(a) (emphasis added).

and end users), while duly taking into account the public policy advice of governments and public authorities.²⁷³

154. Similarly, ICANN's Bylaws state that:

ICANN and its constituent bodies *shall operate to the maximum extent feasible* in an *open and transparent manner* and consistent with procedures designed to ensure fairness....²⁷⁴

155. The principle of transparency has “the position of a fundamental principle in the international economic field,” especially in the regulatory and standard-setting space that ICANN occupies.²⁷⁵ The core elements of transparency include clarity of procedures, the publication and notification of guidelines and applicable rules, and providing reasons for actions taken.²⁷⁶ Investor-state arbitral tribunals have, for example, determined that it requires all applicable rules and regulations to be well established and knowable to those regulated by them.²⁷⁷ The principle of transparency also requires active communication regarding the status of a decision and the reasons for the outcome of a decision-making process.²⁷⁸

156. Far from acting transparently, ICANN permitted NDC to enable Verisign to secretly participate in the .WEB Auction in flagrant disregard of the New gTLD Program Rules. ICANN, when faced

²⁷³ Bylaws, [Ex. C-1], Sec. 1.2(a)(iv) (emphasis added).

²⁷⁴ Bylaws, [Ex. C-1], Sec. 3.1 (emphasis added).

²⁷⁵ Akira Kotera, “Regulatory Transparency” in *The Oxford Handbook of International Investment Law* 617 (Peter Muchlinski *et al.* eds., 2008), [Ex. CA-92], p. 619. The obligation of “transparency” exists in virtually every well-developed procurement system. See United Nations Procurement Manual (30 June 2020), [Ex. CA-85], Sec. 1.4.2; UNCITRAL Model Law on Public Procurement (2011), [Ex. CA-86], Preamble; World Trade Organization, *Revised Agreement on Government Procurement and WTO related Legal Instruments* (in force 6 Apr. 2014), [Ex. CA-87], Arts. IV(4), XVI; World Bank, *Bank Policy: Procurement in IPF and Other Operational Procurement Matters* (Nov. 2017), [Ex. CA-88], p. 3; OECD, *Methodology for Assessing Procurement Systems (MAPS)* (2018), [Ex. CA-89], p. 2. The transparency principle has been applied in courts in both Europe and the United States. See Case C-532/06, *Emm G. Lianakis AE et al. v. Dimos Alexandroupolis et al.*, Judgment (24 Jan. 2008), [Ex. CA-93], p. 1.

²⁷⁶ Sacha Prechal and Madeleine de Leeuw, “Dimensions of Transparency: The Building Blocks for a New Legal Principle?”, *Rev. Eur. Admin. L.* Vol. O, No. 1 (2007), [Ex. CA-94], p. 51.

²⁷⁷ See, e.g., *Bosh Int'l, Inc. and B & P Ltd. Foreign Inves. Enter. v. Ukraine*, ICSID Case No. ARB/08/11, Award (25 Oct. 2012), [Ex. CA-95], ¶ 212; *Spyridon Roussalis v. Romania*, ICSID Case No. ARB/06/1, Award (7 Dec. 2011), [Ex. CA-96], ¶¶ 314-316.

²⁷⁸ See, e.g., *Ioan Micula et al. v. Romania*, ICSID Case No. ARB/05/20, Award (11 Dec. 2013), [Ex. CA-97], ¶ 870. CAS tribunals have explained that private sports organizations—which share with ICANN private regulatory responsibility—must similarly establish transparent rules for those whom they regulate. *United States Olympic Committee (USOC) v. International Olympic Committee (IOC) and International Association of Athletics Federations (IAAF)*, CAS Case No. 2004/A/725, Award (20 July 2005), [Ex. CA-98], ¶ 20.

with such underhanded tactics, did *nothing*. It did not investigate NDC's conduct; it did not investigate the DAA; and it did not investigate claims related to the *Amic's* secrecy.²⁷⁹ Instead, ICANN simply proceeded to delegate .WEB to NDC in an implicit acceptance of its conduct at the .WEB Auction. A good faith application of the New gTLD Program Rules to NDC's conduct—carried out consistent with ICANN's Articles and Bylaws—required ICANN to disqualify NDC's application and bid.²⁸⁰

157. At the same time, ICANN purposefully left Afilias in the dark about the status of its investigation regarding the .WEB gTLD for nearly two years, despite Afilias' frequent attempts to obtain any information on ICANN's actions regarding .WEB.²⁸¹ When, in June 2018, ICANN proceeded to delegate the .WEB gTLD to NDC, ICANN began this process *without providing Afilias with any update regarding the pending investigation of NDC*—which Afilias requested in 2016²⁸² and which ICANN told Afilias that it would perform.²⁸³ Assuming *arguendo* that ICANN's Board in fact made a decision to defer consideration of Afilias' complaints in November 2016, ICANN not only failed to disclose that decision to Afilias prior to this IRP. ICANN kept the alleged “decision not to decide” in November 2016 secret from Afilias *and this Panel* until its Rejoinder—disclosing the existence of a secret, apparently significant ICANN Board meeting on the .WEB matter in its *Rejoinder Memorial, over 19 months after Afilias initiated this IRP*. Nor has ICANN provided any serious explanation of why—despite its Board's alleged decision not to take any action on .WEB until accountability mechanisms were concluded—ICANN nonetheless took the contention set off-hold and proceeded to delegate .WEB to NDC in June 2018.

158. It is difficult to imagine conduct less transparent than what ICANN has engaged in here.

²⁷⁹ ICANN's Response to Amended IRP Request, ¶¶ 61-62.

²⁸⁰ See Section IV above.

²⁸¹ See Letter from Arif H. Ali (Counsel for Afilias) to ICANN Board (23 Feb. 2018), [Ex. C-78]; Letter from A. Ali (Counsel for Afilias) to ICANN Board (16 Apr. 2018), [Ex. C-113]; Letter from A. Ali (Counsel for Afilias) to J. LeVee (Counsel for ICANN) (1 May 20018), [Ex. C-114].

²⁸² Letter from S. Hemphill (Afilias) to A. Atallah (ICANN) (8 Aug. 2016), [Ex. C-49].

²⁸³ Letter from Akram Atallah (ICANN) to Scott Hemphill (Afilias) (30 Sep. 2016), [Ex. C-61], p. 1.

D. ICANN Must Respect Legitimate Expectations

159. ICANN's Bylaws specify that one of its Commitments is to "[m]ake decisions by applying *documented policies* consistently, neutrally, objectively, and fairly...."²⁸⁴ The Bylaws further require that "ICANN and its constituent bodies shall operate to the maximum extent feasible in an open and transparent manner and *consistent with procedures designed to ensure fairness*,"²⁸⁵ as well as "ICANN's Mission, Commitments, Core Values and/or *established ICANN policy(ies)*...."²⁸⁶

160. The commitment to decision-making consistent with documented policies reflects the need to respect the legitimate expectations those policies create. It is uncontroversial that the conduct of one party in any legal relationship may establish reasonable and justifiable expectations on the part of the other party.²⁸⁷ Legitimate expectation has been recognized as an important general principle—often considered a component of good faith—guiding the interpretation of obligations which may arise in any legal relationship. For example, World Bank administrative tribunals rely on the principle of legitimate expectations to ascertain the World Bank's obligations to individuals,²⁸⁸ while CAS tribunals apply the principle of legitimate expectations to the actions of private regulatory organizations.²⁸⁹ The starting point for determining whether legitimate expectations have been violated is the set of rules and regulations in place.²⁹⁰

²⁸⁴ Bylaws, [Ex. C-1], Sec. 1.2(a)(v) (emphasis added).

CA-103], ¶ 611.

161. Afilias, as a participant in ICANN's New gTLD Program, legitimately expected ICANN to comply with its own rules, policies, and procedures in its Bylaws, the Guidebook and the New gTLD Program Rules. ICANN did not. The plain text of the DAA is in violation of the New gTLD Program Rules when interpreted honestly, fairly, and loyally—*i.e.*, in good faith.²⁹¹ Had ICANN actually followed the New gTLD Program Rules, it would have disqualified NDC from the application and bidding process.²⁹² By allowing Verisign to use NDC as a stalking horse to obtain .WEB for itself, ICANN frustrated Afilias' legitimate expectations.

E. ICANN Must Act to Promote Competition

162. ICANN's Commitments in the Bylaws establish that the organization must enable competition through its actions and decisions:

ICANN must operate in a manner consistent with these Bylaws for the benefit of the Internet community as a whole . . . through open and transparent *processes that enable competition and open entry in Internet-related markets*.²⁹³

163. ICANN's Core Values further reflect its obligation to promote competition through its policy development, in multiple domains:

Where feasible and appropriate, depending on market mechanisms to promote and sustain a competitive environment in the DNS market; ...

Introducing and promoting competition in the registration of domain names where practicable and beneficial to the public interest as identified through the bottom-up, multistakeholder policy development process....²⁹⁴

164. As discussed in Section VIII below, and in Afilias' prior submissions,²⁹⁵ ICANN has entirely failed to comply with its mandate to promote competition in the domain name system. The .WEB gTLD is

²⁹⁵ See Afilias' Amended IRP Request, Sec. 5; Afilias' Reply Memorial, Sec. IV.

widely acknowledged as the only new gTLD capable of competing with .COM.²⁹⁶ ICANN nonetheless is permitting Verisign, the registry operator for .COM and the resident monopolist of the DNS, to acquire the .WEB gTLD in a program specifically designed to challenge .COM's dominance through new gTLDs.²⁹⁷ ICANN's own Bylaws preclude it from exercising its discretion in this way.

VI. THE *AMICI* CANNOT RELY ON THE BUSINESS JUDGMENT RULE TO EXCUSE THE ICANN BOARD'S CONDUCT REGARDING THE .WEB MATTER

165. The *Amici* support ICANN's reliance on the business judgment rule, which does not excuse whatever ICANN did or did not do regarding the .WEB matter in November 2016.²⁹⁸ In their haste to assert that "the only issue properly before this Panel is whether ICANN's determination to defer the ultimate decision on Afilias' claims was within the Board's business judgment,"²⁹⁹ the *Amici* erroneously rely on three assumptions—the same incorrect assumptions made by ICANN.

166. The *Amici* first assume that the ICANN Bylaws require this Panel to apply the business judgment rule in this IRP and therefore defer to the ICANN Board's "determination." They then assume that the ICANN Board's November 2016 conduct constitutes a decision protected by the business judgment rule. And they finally assume that ICANN provided the Panel with sufficient evidence to justify a determination on whether that conduct was a reasonable business judgment. All of these assumptions are incorrect. The business judgment rule, therefore, is wholly inapplicable to whatever it is the ICANN Board did in November 2016. Neither the *Amici* nor ICANN assert that the business judgment rule applies to the decision taken by ICANN in June 2018 to proceed with delegating .WEB to NDC.

²⁹⁶ Afilias' Amended IRP Request, ¶ 82.

²⁹⁷ Afilias' Amended IRP Request, ¶ 80.

²⁹⁸ Verisign Br., p. 1.

²⁹⁹ NDC Br., ¶ 78; Verisign Br., p. 1 ("Thus, the only question properly before the Panel here is whether ICANN violated its Bylaws when it decided to defer a decision on Afilias' objections."). As discussed in Section V above, this IRP concerns far more issues than whether the ICANN Board violated its Bylaws in November 2016.

167. *First*, the ICANN Bylaws require that this IRP Panel perform an objective, *de novo* analysis of the ICANN Board's actions and inactions. Pursuant to Section 4.3(i) of the ICANN Bylaws, "[e]ach IRP Panel *should conduct an objective, de novo examination* of the Dispute."³⁰⁰ The *only* time an IRP Panel should "not replace the Board's reasonable judgment with its own" is "*[f]or Claims arising out of the Board's exercise of its fiduciary duties...*"³⁰¹ Afilias' claims, however, do not concern the ICANN Board's exercise of its fiduciary duties. How could they? When Afilias filed its Request for Independent Review and even when it subsequently filed its Amended Request for Independent Review, ICANN had never claimed that it had made its "decision not to decide"—*i.e.*, the decision that ICANN and the *Amici* now argue fall within the Board's exercise of its fiduciary duties (and should be assessed under the business judgment rule).

168. The *Amici* nonetheless attempt to transform this IRP into an arbitration solely about the ICANN Board's "fiduciary duties." In doing so, the *Amici* deliberately mischaracterize or ignore Afilias' actual claims. This IRP concerns the ICANN Staff's (1) failure to disqualify NDC for breaching the New gTLD Program Rules; (2) failure to offer Afilias the rights to the .WEB gTLD; and (3) decision to proceed with the delegation process for .WEB after a superficial investigation.³⁰² As expressly stated in ICANN's Bylaws, the business judgment rule only applies to the ICANN Board—*not* to ICANN Staff.³⁰³

169. As part of this IRP, Afilias further alleges that the ICANN Board completely abdicated "its responsibility to ensure implementation of the New gTLD Program Rules in accordance with ICANN's Articles and Bylaws."³⁰⁴ Afilias at no point claims that the ICANN Board failed to comply with its fiduciary duties to ICANN, which would require that Afilias allege (1) the existence of a fiduciary duty; (2) the breach of that

³⁰⁰ Bylaws, [Ex. C-1], Sec. 4.3(i) (emphasis added).

³⁰¹ Bylaws, [Ex. C-1], Sec. 4.3(i)(iii) (emphasis added).

³⁰² Afilias' Reply Memorial, ¶¶ 8, 155.

³⁰³ Bylaws, [Ex. C-1], Sec. 4.3(i)(iii) (applying business judgment rule to "Claims arising out of *the Board's* exercise of its fiduciary duties" (emphasis added)).

³⁰⁴ Afilias' Reply Memorial, ¶ 8 (emphasis added).

fiduciary duty; and (3) damages proximately caused by the breach.³⁰⁵ Although neither the *Amici* nor ICANN can point to any instance where Afilias makes such explicit allegations, both persist in attempting to convince this Panel to ignore Afilias' actual claims in order justify the application of the business judgment rule in this IRP. ICANN and the *Amic*'s misrepresentation of Afilias' claims should not be endorsed by the Panel.

170. **Second**, the ICANN Board's November 2016 conduct (even assuming *arguendo* that ICANN has accurately described what the Board purported to do) does not constitute a board decision that is protected by the business judgment rule. As ICANN admits in its Reply Memorial, the business judgment rule "provides a 'judicial policy of deference to the business judgment of corporate directors in the exercise of their broad discretion in making corporate decisions.'"³⁰⁶ But the ICANN Board did not and could not make any decisions during this alleged November 2016 Board workshop. It is simply not possible for the ICANN Board to take any "decision" during an informal Board workshop session. Pursuant to the ICANN Bylaws,

Except as otherwise provided in the Articles of Incorporation or these Bylaws, the powers of ICANN shall be exercised by, and its property controlled and its business and affairs conducted by or under the direction of, the Board ***[E]xcept as otherwise provided in these Bylaws or by law, the Board may act by majority vote of the Directors present at any annual, regular, or special meeting of the Board.***³⁰⁷

171. The ICANN Board can only act outside of an annual, regular or special meeting "***if all of the Directors entitled to a vote thereat shall individually or collectively consent in writing to such action.***"³⁰⁸ Further, ICANN must publically disclose all resolutions and "any actions" taken by the ICANN

³⁰⁵ *AlterG, Inc. v. Boost Treadmills LLC*, 388 F.Supp.3d 1133, 1148 (N.D. Cal. 2019), [Ex. CA-104]; *Coley v. Eskaton*, 2020 WL 3833018 (Cal. Ct. App. 2020), [Ex. CA-105] (applied to a nonprofit mutual benefit corporation).

³⁰⁶ ICANN's Rejoinder Memorial in Response to Amended Request by Afilias Domains No. 3 Limited for Independent Review (1 June 2020), ¶ 59 (quoting *Lee v. Interinsurance Exch.*, 50 Cal. App. 4th 694, 711 (1996), [Ex. RLA-15] (quoting *Barnes v. State Farm Mut. Auto. Ins. Co.*, 16 Cal. App. 4th 365, 378 (1993)).

³⁰⁷ Bylaws, [Ex. C-1], Secs. 2.19 (emphasis added).

³⁰⁸ Bylaws, [Ex. C-1], Sec. 7.19 (emphasis added).

Board.³⁰⁹ ICANN's disclosure must provide "the rationale or any resolution adopted by ICANN"³¹⁰ and the "vote of each Director voting on the resolution...."³¹¹ And, significantly, the agenda and meeting minutes for the ICANN Board meetings that involve such decision-making must be publically posted by ICANN—meaning that the ICANN Board cannot generally make a decision in secret.³¹²

172. ICANN did not comply with any of these Bylaws-mandated requirements in regards to the November 2016 informal ICANN Board workshop.³¹³ There is no mention of any ICANN Board discussion of or any action taken by the Board in regards to the .WEB matter in any of the ICANN Board materials posted for November or December 2016.³¹⁴ ICANN did not even disclose the existence of the ICANN Board

³⁰⁹ Bylaws, [Ex. C-1], Sec. 3.5(b) ("No later than 11:59 p.m. on the second business day after the conclusion of each meeting (as calculated by local time at the location of ICANN's principal office), any resolutions passed by the Board at that meeting shall be made publicly available on the Website[.]"); *id.*, Sec. 3.5(c) ("No later than 11:59 p.m. on the seventh business days after the conclusion of each meeting (as calculated by local time at the location of ICANN's principal office), any actions taken by the Board shall be made publicly available in a preliminary report on the Website...."). The exceptions to this requirement do not apply in this case. *Id.* ("[P]rovided, however, that any actions relating to personnel or employment matters, legal matters (to the extent the Board determines it is necessary or appropriate to protect the interests of ICANN), matters that ICANN is prohibited by law or contract from disclosing publicly, and other matters that the Board determines, by a three-quarters (3/4) vote of Directors present at the meeting and voting, are not appropriate for public distribution, shall not be included in the resolutions made publicly available."). The legal matters at issue in regards to .WEB (*i.e.*, the Accountability Mechanisms and the litigation) were a matter of public record. ICANN has further not alleged that the ICANN Board decided not to publish information about its choice by a 3/4 vote.

³¹⁰ Bylaws, [Ex. C-1], Sec. 3.1 ("ICANN shall also implement procedures for the documentation and *public disclosure of the rationale for decisions made by the Board and ICANN's constituent bodies* (including the detailed explanations discussed above).") (emphasis added); *id.*, Sec. 3.6(c) ("After taking action on any policy subject to this Section 3.6, *the Board shall publish in the meeting minutes the rationale for any resolution adopted by the Board* (including the possible material effects, if any, of its decision on the global public interest, including a discussion of the material impacts to the security, stability and resiliency of the DNS, financial impacts or other issues that were considered by the Board in approving such resolutions)[.]") (emphasis added).

³¹¹ Bylaws, [Ex. C-1], Sec. 3.6(c) ("After taking action on any policy subject to this Section 3.6, the Board shall publish in the meeting minutes ... the vote of each Director voting on the resolution....").

³¹² Bylaws, [Ex. C-1], Sec. 3.4 (stating that ICANN must provide "[a]t least seven days in advance of the Board meeting ... a notice of such meeting and, to the extent known, an agenda for the meeting shall be posted"); *id.*, Sec. 3.5(a) ("All minutes of meetings of the Board, the Advisory Committees and Supporting Organizations (and any councils thereof) shall be approved promptly by the originating body and provided to the ICANN Secretary ('Secretary') for posting on the Website."); *id.*, Sec. 3.5(d) ("No later than the day after the date on which they are formally approved by the Board ... the minutes of the Board shall be made publicly available on the Website[.]"). As stated in note 309 above, the exceptions to ICANN's public disclosure requirements do not apply in regards to the ICANN Board's November 2016 choice.

³¹³ Bylaws, [Ex. C-1], Sec. 3.1.

³¹⁴ See ICANN, Board of Governance Committee, Agenda (2 Nov. 2016), available at <https://www.icann.org/resources/board-material/agenda-bgc-2016-11-02-en> (last accessed 17 July 2020), [Ex. C-133] through ICANN, Board of Governance Committee, Meeting Minutes (16 Dec. 2016), available at <https://www.icann.org/resources/board-material/minutes-bgc-2016-12-16-en> (last accessed 17 July 2020), [Ex. C-162] (as listed in the List of Exhibits accompanying this submission).

workshop that the *Amici* allege serves as “the only issue”³¹⁵ before this Panel until its Rejoinder Memorial on 1 June 2020—nearly 19 months after *Afilias* initiated this IRP. And, yet, the *Amici* and ICANN contend that the Board’s conduct at this workshop meeting—where a vote of the ICANN Board could not by definition have occurred—constitutes a proper decision worthy of protection by the business judgment rule.

173. The *Amici*’s support of ICANN’s opaqueness regarding the November 2016 workshop further violates the very spirit of the Accountability Mechanisms provided for in ICANN’s Bylaws. ICANN’s Accountability Mechanisms are designed to hold ICANN “accountable to the community”³¹⁶ by permitting members of the Internet community to contest improper ICANN Board decisions.³¹⁷ However, in order to initiate such Accountability Mechanisms, ***Afilias (or any other Internet community member) must know about the ICANN Board action or inaction*** (or, under the new Bylaws, the actions or inactions of staff). That is certainly not the case in regards to whatever ICANN Staff and the ICANN Board claim to have done in November 2016. The *Amici* and ICANN nonetheless expect *Afilias* to have somehow learned about a secret informal ICANN Board workshop meeting in November 2016 and contested the ICANN Board’s conduct in 2016. Such a position is inherently illogical.

174. Simply put, even if the ICANN Board had purported to take a decision at the November 2016 informal Board workshop to defer any consideration of *Afilias*’ complaints during pending and anticipated accountability mechanisms, that decision does not comply with the ICANN Bylaws and thus does not constitute a decision or actions that can be protected by the business judgment rule. Given the terms of the DAA and the New gTLD Program Rules, no proper exercise of the Board’s discretion consistent with its

³¹⁵ NDC Br., ¶ 78; Verisign Br., p. 1 (“Thus, the only question properly before the Panel here is whether ICANN violated its Bylaws when it decided to defer a decision on *Afilias*’ objections.”). As discussed in Section V above, this IRP concerns far more issues than whether the ICANN Board violated its Bylaws in November 2016.

³¹⁶ Bylaws, [Ex. C-1], Sec. 4.1.

³¹⁷ Bylaws, [Ex. C-1], Sec. 4.1. These Accountability Mechanisms are especially important in regards to the New gTLD Program, since the Applicant Guidebook contains a litigation waiver that makes the Accountability Mechanisms the only non-contested means to contest ICANN decision-making. ICANN, gTLD Applicant Guidebook (4 June 2012) (“AGB”), [Ex. C-3], Module 6.

Articles and Bylaws could have yielded any other result other than disqualification of NDC's application and bid. The failure by ICANN's Board (as well as ICANN's staff) to act on Afilias' complaints and to disqualify NDC—and then to proceed to contract with NDC for .WEB in June 2018—violated ICANN's Articles and Bylaws.

175. California “case law is clear that conduct contrary to governing documents [(i.e., corporate bylaws)] may fall outside the business judgment rule.”³¹⁸ California courts do not assume, and neither should this IRP Panel, that “the business judgment rule would apply to [an] action that violated the governing documents.”³¹⁹ As ICANN's Board has failed to comply with its Bylaws in regards to its alleged decision not to decide in November 2016, the business judgment rule does not protect its actions.³²⁰

176. *Last*, even assuming *arguendo* that the business judgment rule has any application to this case, ICANN's secrecy regarding the ICANN Board's November 2016 conduct renders it impossible for this Panel to evaluate the reasonableness of that conduct under the business judgment rule. NDC relies on Section 4.3(o) of the ICANN Bylaws to argue that this Panel should not “second-guess the reasonable business judgment of the ICANN Board.”³²¹ But what, exactly, was the ICANN Board's judgment? As the Board is prevented by its Bylaws from taking any action or decision in an informal Board workshop, it is impossible to know given ICANN's scant disclosures in document production. The *Amici*, however, entreat this Panel to blindly rely on ICANN's vague descriptions of the ICANN Board's November 2016 workshop

³¹⁸ *Palm Springs Villas II Homeowners Assn., Inc. v. Parth*, 248 Cal.App.4th 268, 283 (Cal. Ct. App. 2016), [Ex. CA-106] (emphasis added) (considering causes of action against a nonprofit's President (and board members) for breach of fiduciary duty and violation of the nonprofit's governing documents); *Ekstrom v. Marquesa at Monarch Beach Homeowners Assn.*, 168 Cal.App.4th 1111, 1124 (Cal. Ct. App. 2008), [Ex. CA-107] (“Even if the Board was acting in good faith and in the best interests of the community as a whole, its policy of excepting all palm trees from the application of section 7.18 was not in accord with the CC & Rs, which require all trees be trimmed so as to not obscure views. The Board's interpretation of the CC & Rs was inconsistent with the plain meaning of the document and thus not entitled to judicial deference.”).

³¹⁹ *Palm Springs Villas II Homeowners Assn., Inc. v. Parth*, 248 Cal.App.4th 268, 283 (Cal. Ct. App. 2016), [Ex. CA-106].

³²⁰ Bylaws, [Ex. C-1], Sec. 1.2(a)(v).

³²¹ NDC Br., ¶ 70.

session to establish that the ICANN Board's actions are reasonable and deserving of protection under the business judgment rule.

177. This Panel should not accept and adopt ICANN's conclusory statements as incontrovertible fact. ICANN does not provide support for the reasonableness of the ICANN Board's choice "not to address the issues surrounding .WEB while an Accountability Mechanism regarding .WEB was pending..."³²² The *only evidence* about ICANN's November 2016 workshop meeting is Mr. Disspain's Witness Statement, and his account of the workshop is frustratingly vague. Specifically, Mr. Disspain does not provide any specific information on:

- the "issues being raised regarding .WEB;"
- the "relevant information about the dispute" considered by the Board;
- the "parties" whose "legal and factual contentions" were discussed, or information about those contentions;
- the "set of options" that the ICANN Board considered;
- the ICANN "Board members" that attended the meeting, and whether they voted on this choice not address the .WEB issue;
- the "questions" that members of the ICANN Board had about the .WEB matter;
- the "claims arising from the .WEB auction" that the ICANN Board chose not to act upon;
- the specific "Accountability Mechanisms that had already been initiated over .WEB;"
- the prospective "further Accountability Mechanisms and legal proceedings" considered by the ICANN Board; and
- any justification for the ICANN Board's choice "to await the results of such proceedings before considering and determining what action, if any, to take at that time."³²³

178. In so doing, ICANN (through Mr. Disspain) fails to provide the Panel with sufficient evidence to determine whether the ICANN Board acted reasonably in November 2016—even if the business judgment

³²² ICANN's Rejoinder Memorial, ¶ 3.

³²³ Disspain WS, ¶¶ 10-11.

rule were applicable here. Given this significant deficiency in ICANN's defense, and for the reasons stated above, ICANN cannot—and should not—be granted protection under the business judgment rule.

VII. AFILIAS DID NOT VIOLATE THE BLACKOUT PERIOD

179. In an auction context, a “blackout period” is designed to prevent bid rigging by prohibiting bidders from coordinating in advance of the auction. Here, the relevant “Blackout Period” prohibited members of the .WEB contention set from collaborating, discussing bids or bidding strategies, or otherwise discussing or negotiating settlement agreements related to the upcoming ICANN-administered .WEB Auction “from the Deposit Deadline for the Auction until full payment had been received in the Auction Bank Account from the Winner of the Contention Set.”³²⁴ These “Blackout Period” rules do not prohibit any and all contact among the members of the contention set.

180. The weeks leading up to the ICANN .WEB Auction were not usual. Members of the contention set had complained to ICANN about the status of NDC's application and had petitioned ICANN to postpone the auction until a thorough investigation could be completed. Although Afilias had not joined the request to delay the auction, the pendency of that request introduced some uncertainty as to whether the ICANN auction would, in fact, go forward. In that context, Mr. John Kane of Afilias texted Mr. Jose Ignacio Rasco III of NDC to see whether NDC would be interested in pursuing a private auction if, in fact, the ICANN auction was delayed. Mr. Kane specifically requested only a “Y/N” answer to his question.³²⁵ Of course, none of the contention set members had any idea that Mr. Rasco was unable to respond freely to any inquiries in light of NDC's commitments to Verisign.

³²⁴ The Blackout Period rules prohibit applicants “from cooperating or collaborating with respect to, discussing with each other, or disclosing to each other in any manner the substance of their own, or each other's, or any other competing applicants' bids or bidding strategies, or discussing or negotiating settlement agreements or post-Auction ownership transfer arrangements....” Auction Rules, [Ex. C-4], Sec. 2.6; Auction Rules, [Ex. C-4], ¶ 68(a).

³²⁵ The full text of Mr. Kane's communication reads: “If ICANN delays the auction next week would you again consider a private auction? Y/N.” NDC Br., ¶ 49.

181. If Mr. Rasco had replied in the affirmative, and if ICANN had delayed the auction, Mr. Kane was prepared to open discussions with NDC about the terms of a private auction. However, Mr. Rasco did not reply and ICANN did not delay the auction, so Mr. Kane's brief text was the only communication that was made between the parties.

182. The *Amic's* argument that this single text constituted a violation of the Blackout Period is entirely without merit and is simply intended to serve as a distraction. *First*, it is clear that the plain language of Mr. Kane's text (a) did not discuss a bid for .WEB, (b) did not discuss bidding strategies for .WEB, and (c) did not discuss or negotiate a settlement agreement concerning .WEB. For this reason alone, Afilias did not violate the Blackout Period.

183. *Second*, the *Amic's* argument that Mr. Kane's text referenced or otherwise incorporated a proposal that Afilias had made and that NDC had rejected in the context of discussions about a private auction *prior* to the Blackout Period is not only false, it is irrelevant. There is nothing in Mr. Kane's text that remotely suggests a renewal of any offer made in the context of the private auction discussions prior to the Blackout Period. Mr. Rasco's witness statement asserts that he "understood Afilias' text message to refer back to a proposal Afilias made to Mr. Calle in June 2016"³²⁶ Mr. Rasco provides no basis for his "understanding" and there is no basis for it in Mr. Kane's text. Moreover, the offer that Afilias has previously made (and that NDC had rejected) was made in the context of the private auction; it could have no application to an ICANN Auction. Accordingly, even if Mr. Rasco had, in fact, misinterpreted Mr. Kane's brief text as a restatement of Afilias' prior offer,³²⁷ those terms were not relevant to and, in fact, not applicable to an auction where ICANN would retain 100% of the auction proceeds.

³²⁶ Rasco Decl., ¶ 97.

³²⁷ NDC Br., ¶ 118. NDC's statement that "Afilias sent these text messages after the commencement of the Blackout Period" is misleading and false. *Id.* (emphasis omitted). As NDC admits, the only communication between Afilias and NDC during the Blackout Period consisted of a single, innocuous 14-word text that hardly constitutes an attempt to rig the ICANN .WEB Auction.

184. In short, Mr. Kane's text—requesting nothing more than a Yes or No answer to the question on whether NDC would again consider a private auction if ICANN were to delay the ICANN Auction scheduled for the following week—did not discuss a bid for .WEB; did not discuss bidding strategies for .WEB; and did not discuss or negotiate a settlement agreement concerning .WEB. The allegation by the *Amici* that the text violated the prohibitions of the Blackout Period is entirely without merit.

VIII. THE *AMICI* MISREPRESENT THE SCOPE AND EFFECT OF ICANN'S COMPETITION MANDATE

185. Contrary to the *Amici's* arguments that ICANN is *prohibited* from taking actions and making decisions to promote competition,³²⁸ this is exactly what ICANN's Articles and Bylaws specifically authorize ICANN to do. *First*, the *Amici* ignore the express commands of ICANN's Articles of Incorporation:

The Corporation ***shall operate*** in a manner consistent with these Articles and its Bylaws for the benefit of the Internet community as a whole, carrying out its activities in conformity with relevant principles of international law and international conventions and applicable local law and through open and transparent processes that ***enable competition*** and open entry in Internet-related markets.³²⁹

186. *Second*, the *Amici* ignore ICANN's Bylaws, which specifically authorize ICANN to take disparate and discriminatory actions and decisions, where justified by ICANN's mandate to promote competition:

ICANN shall not apply its standards, policies, procedures, or practices inequitably or single out any particular party for disparate treatment ***unless justified by substantial and reasonable cause, such as the promotion of effective competition.***³³⁰

³²⁸ NDC Br., ¶¶ 8-11 (arguing that ICANN lacks “legal or regulatory authority to police competition”); Verisign Br., ¶¶ 95-97.

³²⁹ Articles, [Ex. C-2], Sec. III.

³³⁰ Bylaws, [Ex. C-1], Sec. 2.3. Given the testimony of ICANN's first chairwoman that ICANN's “primary purpose” was to “break” the .COM monopoly it is reasonable to infer that Section 2.3 of the Bylaws was specifically drafted to enable ICANN to treat Verisign differently. Indeed, as of today, Verisign is treated differently from every other registry operator, since .COM and .NET are the only two registries subject to price regulation. It is also reasonable to infer, based on the fact that .NET is subject to price controls, despite being a fraction of the size of .COM and similar in size to other registries such as .ORG, that Verisign is being treated differently based on its market power, rather than simply as the registry operator of .COM.

187. For these reasons, the *Amici* misconstrue Afilias' arguments concerning ICANN's core value to promote competition.

188. ICANN contends in response to Afilias' claims that it retained "discretion to determine whether NDC committed a breach of the Guidebook or Auction Rules and, if so, the appropriate remedy or penalty, if any."³³¹ But the plain terms of its Bylaws restrain ICANN's exercise of its discretion by providing that "ICANN *will act* in a manner that complies with and reflects ICANN's Commitments and respects ICANN's Core Values."³³² To that end, ICANN's "Core Value" to "introduc[e] and promot[e] competition in the registration of domain names"³³³ must "guide the decisions and actions of ICANN."³³⁴ As discussed below in Section IX, it is Afilias' position that this Panel is authorized to make findings of fact as to whether ICANN's failure to act violated its Articles or Bylaws and, further, to render a decision that is binding and that "directs" ICANN's Board and Staff on the "appropriate action to remedy" for that violation.³³⁵ That "appropriate action" must reflect, and in determining such action this Panel should be guided by, ICANN's Core Value to "introduce[e] and promot[e] competition."

A. The New gTLD Program Was Designed to Promote Competition

189. Neither the *Amici* nor their experts dispute the fact that the Guidebook makes clear that the New gTLD Program was intended to promote competition, fulfilling one of ICANN's key mandates:

Since ICANN was founded in 1998³³⁶ as a not-for-profit, multi-stakeholder organization, *one of its key mandates has been to promote competition in the domain name market*. ICANN's mission specifically calls for the

³³¹ ICANN's Rejoinder Memorial, ¶ 4. This argument was adopted by the *Amici*. See NDC Br., ¶ 15.

³³² Bylaws, [Ex. C-1], Sec. 1.2.

³³³ Bylaws, [Ex. C-1], Sec. 1.2(b)(iv).

³³⁴ Bylaws, [Ex. C-1], Sec. 1.2(b).

³³⁵ CCWG-Accountability Supplemental Final Proposal on Work Stream 1 Recommendations, Annex 07 – Recommendation #7: Strengthening ICANN's Independent Review Process (23 Feb. 2016), [Ex. C-122], ¶ 57.

³³⁶ In November 1998, ICANN signed a Memorandum of Understanding ("MOU") with the U.S. Commerce Department, which mandated that ICANN "*support competition and consumer choice* in the technical management of the DNS ... [to] lower costs, promote innovation, and enhance user choice and satisfaction." ICANN, Memorandum of Understanding between the U.S. Department of Commerce and Internet Corporation for Assigned Names and Numbers (25 Nov. 1999), [Ex. C-57], Sec. II(c)(2) (emphasis added).

corporation to maintain and build on processes that will ensure competition and consumer interests.... New gTLDs are viewed by ICANN as important to fostering choice, innovation and competition in domain registration services[.]³³⁷

190. Indeed, in its resolution that approved the Guidebook, ICANN's Board wrote:

The launch of the new gTLD program is in fulfillment of a core part of ICANN's Bylaws: the *introduction of competition and consumer choice in the DNS*. ... This decision represents ICANN's continued adherence to its *mandate to introduce competition* in the DNS, and also represents the culmination of an ICANN community policy recommendation of how this can be achieved.³³⁸

191. Contrary to ICANN's position that it fulfills its competition mandate exclusively through the policy development,³³⁹ the new gTLD application form itself requires applicants to detail what the applied-for gTLD "will add to the current space, in terms of *competition*, differentiation, or innovation."³⁴⁰ If ICANN had already satisfied its competition mandate by developing the New gTLD Program, there would not have been any reason to enquire how applicants would promote competition in the DNS.³⁴¹

192. In connection with its development of the New gTLD Program, ICANN retained Dr. Dennis Carlton to opine on the competitive benefits of introducing new gTLDs. Dr. Carlton opined in that context that:

ICANN's plan to introduce new gTLDs is likely to benefit consumers by facilitating entry which *would be expected to mitigate market power associated with .com* and other major TLDs and increase innovation.³⁴²

³³⁷ AGB, [Ex. C-3], Attachment to Module 2, p. A-1.

³³⁸ ICANN Board Rationales for the Approval of the Launch of the New gTLD Program (20 June 2011), [Ex. C-9], p. 7.

³³⁹ Witness Statement of J. Beckwith Burr (31 May. 2019), ¶¶ 19, 22.

³⁴⁰ AGB, [Ex. C-3], Attachment to Module 2, Sec. 18(b) (Mission Purpose).

³⁴¹ Further, Ms. J. Beckwith Burr's contention that the New gTLD Program was not intended to create competition for .COM is flatly contradicted by the sworn Congressional testimony of Ms. Esther Dyson, ICANN's first chairwoman. Ms. Dyson, appearing to support the introduction of the New gTLD Program, testified that ICANN's "primary mission" was to "break" the .COM "monopoly." S. Hrg. 112-394, ICANN's Expansion of Top Level Domains, Hearing before the Committee on Commerce, Science, and Transportation, U.S. Senate, 112th Congress, First Session, December 8, 2011, [Ex. JZ-2], p.46.

³⁴² Preliminary Report of Dennis Carlton Regarding Impact of New GTLDS on Consumer Welfare (March 2009), available at <https://archive.icann.org/en/topics/new-gtlds/prelim-report-consumer-welfare-04mar09-en.pdf>, [Ex. GS-33], ¶ 20.

193. Dr. Carlton specifically disagreed with critics who opined that the competition would *only* be furthered if new gTLDs were able to erode .COM's market power:

Even if *.com* (or, for that matter, any other TLD) today exercises market power, new gTLDs could enhance consumer welfare by creating new products and fostering innovation, and promoting future competition with *.com* and other TLDs. That is, ***entry of a new gTLD can be desirable even if the gTLD does not erode any of the market power that .com may possess.***³⁴³

194. Dr. Carlton further opined that the introduction of a new gTLD would promote competition, ***even if its introduction did not result in a price effect on .COM.***

Even if the new gTLDs authorized under the ICANN proposal would not compete with *.com* for *existing* registrants and ***did not result in the reduction of the fee for .com registration below the price cap level,*** entry would still be likely to benefit consumers by increasing the likelihood of the successful introduction of ***new and innovative registration services*** which generate benefits to consumers.³⁴⁴

195. Regarding .COM specifically, Dr. Carlton opined:

The DOJ, for example, speculates that the network effects that make *.com* registrations so valuable to consumers will be difficult for other TLDs to overcome. However, any market power associated with *.com* will attract entrants with strategies built around bringing new registrants to the new gTLDs. ***Restricting the opportunity for entrants to compete for such profits necessarily has the effect of preserving profits associated with .com.***³⁴⁵

196. Dr. Carlton also rejected any criticisms that he had not quantified consumer benefit on a cost/benefit basis:

³⁴³ Dennis Carlton (Compass Lexecon), Comments on Michael Kende's Assessment of Preliminary Reports on Competition and Pricing (5 June 2009), [Ex. C-126], ¶ 5.

³⁴⁴ Dennis Carlton (Compass Lexecon), Comments on Michael Kende's Assessment of Preliminary Reports on Competition and Pricing (5 June 2009), [Ex. C-126], ¶ 8; *see also* Michael Katz *et al.*, An Economic Framework for the Analysis of the Expansion of Generic Top-Level Domain Names: A Report Prepared for ICANN (June 2010), available at <https://archive.icann.org/en/topics/new-gtlds/economic-analysis-of-new-gtlds-16jun10-en.pdf> (last accessed on 23 July 2020), ¶ 28 (noting a "broad consensus among economists" that competition is preferable to regulation, specifically because competition is better at promoting innovation).

³⁴⁵ Preliminary Report of Dennis Carlton Regarding Impact of New GTLDS on Consumer Welfare (March 2009), available at <https://archive.icann.org/en/topics/new-gtlds/prelim-report-consumer-welfare-04mar09-en.pdf>, [Ex. GS-33], ¶ 22.

Requiring entrants to justify entry on [a] cost/benefit basis, however, is likely to result in significant consumer harm because the competitive benefit of new business methods or technologies facilitated by entry can be very hard to predict *a priori*.³⁴⁶

197. For this reason, Dr. Carlton concluded that the introduction of new gTLDs was “likely to *improve consumer welfare by facilitating entry and creating new competition* to the major gTLDs such as *.com, .net, and .org*.”³⁴⁷

198. In this IRP, Dr. Carlton inexplicably takes a contrary view:³⁴⁸

- First, despite opining in 2009 that even if the entry of a gTLD “*did not result in the reduction of the fee for .com registrations below the price cap level, entry would still be likely to benefit consumers*,”³⁴⁹ Dr. Carlton opines here that Afilias must show that “an Afilias-operated .WEB would cause Verisign to reduce its .COM prices” to demonstrate that the acquisition of .WEB by Verisign would not “promote competition.”³⁵⁰ Indeed, Dr. Carlton had opined to the contrary in 2009, when he advised that “[r]equiring entrants to justify entry on [a] cost/benefit basis is likely to result in significant consumer harm.”³⁵¹
- Second, despite opining in 2009 that “*entry of a new gTLD can be desirable even if the gTLD does not erode any of the market power that .com may possess*,”³⁵² Dr. Carlton opines here that Afilias must establish that an Afilias-operated .WEB would restrain Verisign’s .COM pricing above and beyond those restraints imposed by the U.S. government-imposed price caps on .COM.³⁵³
- Third, despite recognizing in 2009 the procompetitive benefits of introducing new gTLDs “*holds even if .com pricing continues to be regulated through price caps* because competition has the potential for inducing registries of regulated TLDs to reduce prices below

³⁴⁶ Preliminary Report of Dennis Carlton Regarding Impact of New GTLDS on Consumer Welfare (March 2009), available at <https://archive.icann.org/en/topics/new-gtlds/prelim-report-consumer-welfare-04mar09-en.pdf>, [Ex. GS-33], ¶ 41.

³⁴⁷ Preliminary Report of Dennis Carlton Regarding Impact of New GTLDS on Consumer Welfare (March 2009), available at <https://archive.icann.org/en/topics/new-gtlds/prelim-report-consumer-welfare-04mar09-en.pdf>, [Ex. GS-33], ¶ 5.

³⁴⁸ Each of Dr. Carlton’s new opinions are joined by the *Amic/s* expert, Dr. Murphy.

³⁴⁹ Dennis Carlton (Compass Lexecon), Comments on Michael Kende’s Assessment of Preliminary Reports on Competition and Pricing (5 June 2009), [Ex. C-126], ¶ 8.

³⁵⁰ Expert Report of Dennis Carlton (30 May 2019), ¶ 6. *See also* Expert Report of Kevin M. Murphy (Verisign) (30 May 2020), ¶ 4 (criticizing Dr. Sadowsky for not conducting an “analysis of how the acquisition of .web by Verisign would alter the pricing incentives for .com”).

³⁵¹ Preliminary Report of Dennis Carlton Regarding Impact of New GTLDS on Consumer Welfare (March 2009), available at <https://archive.icann.org/en/topics/new-gtlds/prelim-report-consumer-welfare-04mar09-en.pdf>, [Ex. GS-33], ¶ 41.

³⁵² Dennis Carlton (Compass Lexecon), Comments on Michael Kende’s Assessment of Preliminary Reports on Competition and Pricing (5 June 2009), [Ex. C-126], ¶ 5.

³⁵³ Expert Report of Dennis Carlton (30 May 2019), ¶¶ 29-30. *See also* Expert Report of Kevin M. Murphy (Verisign) (30 May 2020), ¶ 3(d) (arguing that there is “no economic basis to believe that Verisign would lower the price of .COM if .WEB were owned by someone else” because .com is subject to price regulation).

these caps,”³⁵⁴ Dr. Carlton opines here that, to demonstrate that allowing Verisign to control .WEB would violate ICANN’s mandate to promote competition, Afilias must demonstrate that “competitive pressure from an Afilias-operated .WEB would cause Verisign to reduce its .COM prices or otherwise improve the quality of the .COM offering.”³⁵⁵

Neither the *Amici* nor ICANN offer any explanation for Dr. Carlton’s *volte face*.

B. Any Decision Furthering Verisign’s Acquisition of .WEB Is Inconsistent With ICANN’s Competition Mandate

199. There is no legitimate argument against the obvious conclusion that Verisign possesses market power. The *Amici*’s arguments to the contrary are meritless.

- First, in 2008, the *DOJ specifically determined that Verisign possesses significant market power because many registrants do not perceive .COM and other gTLDs and ccTLDs to be substitutes*.³⁵⁶ Specifically, as there is no genuinely adequate substitute TLD for .COM at present, Verisign remains the only source for new registrants wishing to enjoy the distinct benefits of branding on a .COM domain name. The DOJ has never opined otherwise.
- Second, the U.S. government continues to regulate the price of .COM, as it has done consistently over the last 20 years.³⁵⁷ The U.S. government may only regulate the pricing of private companies where they are deemed to have a monopoly or near monopoly.³⁵⁸ In 2018, the U.S. Department of Commerce determined that price regulation of .COM continues to be necessary.³⁵⁹ Contrary to the *Amici*’s representations to this Panel, Amendment 35 of Verisign’s Cooperative Agreement with the U.S. government does not eliminate pricing regulation, but rather permits Verisign to pursue with ICANN an up to 7

³⁵⁴ Preliminary Report of Dennis Carlton Regarding Impact of New GTLDS on Consumer Welfare (March 2009), available at <https://archive.icann.org/en/topics/new-gtlds/prelim-report-consumer-welfare-04mar09-en.pdf>, [Ex. GS-33], ¶ 24.

³⁵⁵ Expert Report of Dennis Carlton (30 May 2019), ¶ 6. *See also* Expert Report of Kevin M. Murphy (Verisign) (30 May 2020), ¶ 35 (restricting competitive analysis to whether the introduction of .WEB will reduce .COM pricing).

³⁵⁶ Expert Report of Dennis Carlton (30 May 2019), ¶¶ 51-52 (citing the December 2008 letter from Deborah A. Garza of DOJ to Meredith Baxter of NTIA, [Ex. C-125]).

³⁵⁷ It should be noted that both .COM and .NET are uniquely subject to price regulation by the U.S. government, which removed all price regulation from the other so-called legacy gTLDs earlier this year. The U.S. government’s decision to retain price control over Verisign alone is an implicit recognition of Verisign’s continued market power. *See* Amendment to Financial Assistance Award between the U.S. Department of Commerce and VeriSign, Inc., Award No. NCR-92-18742, Amendment Thirty-Five (35) (26 Oct. 2018), [Ex. KM-25], Sec. 2; *see also* .Net Registry Agreement between ICANN and Verisign (1 July 2017), available at <https://www.icann.org/sites/default/files/tlds/net/net-agmt-html-01jul17-en.htm> (last accessed 23 July 2020).

³⁵⁸ Price controls imposed by the U.S. government are generally deemed to be unconstitutional if they are arbitrary, discriminatory, or otherwise irrelevant to a legitimate government purpose. *See Pennell v. City of San Jose*, 485 U.S. 1, 11 (1988), [Ex. CA-44]. The exception to this rule is that the U.S. government may intervene in markets to regulate pricing where “prices ... are artificially inflated as a result of the existence of a monopoly or near monopoly.” *Id.* That is exactly why the U.S. government intervened 20 years ago and imposed price caps on .COM. Sadowsky Report, ¶¶ 17, 50.

³⁵⁹ Amendment to Financial Assistance Award between the U.S. Department of Commerce and VeriSign, Inc., Award No. NCR-92-18742, Amendment Thirty-Five (35) (26 Oct. 2018), [Ex. KM-25], Sec. 2.

percent increase in the prices of .COM domain names in each of the last four years of the new six-year contract.³⁶⁰ Thus, the U.S. government has effectively ceded to ICANN the authority to determine whether the price cap on .COM annual registrations should be raised from \$7.85 to \$10.29.³⁶¹ *Thus, in 2018, the U.S. government again determined that Verisign possesses a monopoly or near-monopoly.*³⁶²

- Third, as Dr. Carlton observes, Verisign has always priced .COM registrations at the maximum price allowable under government price caps.³⁶³ Indeed, Dr. Carlton opines that “[t]he fact that Verisign has consistently charged the maximum-allowable price for .COM domain name registrations indicates that regulation is a binding constraint and that Verisign would set a higher price for .COM absent the regulation.”³⁶⁴ Dr. Carlton’s concession that an unregulated Verisign would raise prices is telling, since Verisign’s internal costs have remained constant and the current \$7.85 annual price for a .COM registration remains considerably above the annual cost of operating a registry, estimated at only approximately \$1.00 per registration.³⁶⁵ Indeed, Afilias offered to charge only \$1.65 per registration if it were granted approval to operate the .IN registry on behalf of the Government of India.

³⁶⁰ Amendment to Financial Assistance Award between the U.S. Department of Commerce and VeriSign, Inc., Award No. NCR-92-18742, Amendment Thirty-Five (35) (26 Oct. 2018), [Ex. KM-25], Sec. 2.

³⁶¹ Over widespread objections, ICANN, in exchange for a \$20 million payment from Verisign, approved the increase in the .COM cap earlier this year. See Zak Muscovitch, “Report and Analysis of Public Comments Submitted to ICANN on the .COM Pricing Provisions (Part II),” *CircleID* (6 Mar. 2020), available at http://www.circleid.com/posts/20200306_report_and_analysis_of_public_comments_submitted_to_icann_part_ii/ (last accessed 23 July 2020).

³⁶² Dr. Murphy is incorrect on two grounds in this respect. First, contrary to his assertions at ¶ 37 of his report, the recent action by the U.S. government to *continue to regulate the price of* .COM registrations means that the U.S. government continues to believe that Verisign wields monopoly or near monopoly power as a result of its control of the .COM registry. Second, Dr. Murphy’s reliance on the U.S. government’s characterization of Amendment 35 as providing for “pricing flexibility” at ¶ 37 of this report ignores the fact that this “flexibility” amounts to raising the price cap by only 7% over 6 years.

³⁶³ Expert Report of Dennis Carlton (30 May 2019), ¶ 30.

³⁶⁴ Expert Report of Dennis Carlton (30 May 2019), ¶ 30. Drs. Carlton and Murphy opine in their reports that government price regulation of Verisign is the best means of constraining Verisign’s market power. Expert Report of Dennis Carlton (30 May 2019), ¶ 32; Expert Report of Kevin M. Murphy (Verisign) (30 May 2020), ¶ 35. The U.S. government takes a decidedly different view. See Stuart Chemtob, U.S. Department of Justice, *The Role of Competition Agencies in Regulated Sectors* (5th International Symposium on Competition Policy and Law, Institute of Law, Chinese Academy of Social Science, Beijing, China, 11 May 2007), available at <https://www.justice.gov/atr/speech/role-competition-agencies-regulated-sectors> (last accessed 23 July 2020), [Ex. CA-108] (agreeing with the “general principle that the invisible hand of the market results in a more optimal distribution of resources and a higher level of economic welfare than does regulation of economic activity by the heavy, visible hand of the government.”). Dr. Murphy’s opinion thus conflicts with the generally held principle that competition is preferably to regulation. See also Michael Katz *et al.*, *An Economic Framework for the Analysis of the Expansion of Generic Top-Level Domain Names: A Report Prepared for ICANN* (June 2010), available at <https://archive.icann.org/en/topics/new-gtlds/economic-analysis-of-new-gtlds-16jun10-en.pdf> (last accessed on 23 July 2020), ¶ 28 (noting a “broad consensus” among economists that competition is preferable to regulation of prices).

³⁶⁵ Registries often price their domain names at or around \$1.00, suggesting that this is a reasonable approximation of costs. Indeed, the .SITE registry reduced the cost of registration to \$0.48 in May 2019. See Kieren McCarthy, “Dot-com web addresses prices to swell, thanks to sweetheart deal between Uncle Sam, Verisign: Freeze on renewal, base costs lifted so we all pay a bit more,” *Register* (2 Nov. 2018), available at https://www.theregister.com/2018/11/02/dotcom_domains_pricing/ (last accessed 23 July 2020).

- Fourth, there is scant evidence to suggest that the New gTLD Program has, to date, constrained Verisign's market power. Since the introduction of new gTLDs in the third quarter of 2013, Verisign has gained more new registrations (35.3 million) than all new gTLDs *combined* (26.1 million). Furthermore, while Verisign secured at least 9.2 million new *unique* registrations since 2013, neither ICANN nor the *Amici* have demonstrated how many of the registrations in new gTLD registries were made in addition to registrations taken in the .COM registry. Moreover, while Dr. Kevin M. Murphy contends that gTLDs compete with ccTLDs,³⁶⁶ he cites no evidence to support this sweeping conclusion. If this was in fact true, the decision by the U.S. government to continue to impose price regulations on the .COM registry would be unconstitutional.³⁶⁷

200. Perhaps in light of the obviousness of Verisign's market power, the *Amici* (and ICANN) dismiss .WEB as "just another gTLD," suggesting that adding .WEB to Verisign's stable would not impact competition.³⁶⁸ As explained by Drs. George Sadowsky and Jonathan Zittrain, there are compelling reasons to believe why this is not true.³⁶⁹ Of all potential gTLD domains, only .WEB is (1) three-letters long,³⁷⁰ (2) completely generic, (3) closely identified with the Internet, and (4) memorable.³⁷¹ None of the alternatives proposed by the *Amici* satisfy this standard. As the table set forth in **Annex B** demonstrates, the *Amici's* complete failure to identify even a single alternative for .WEB from the entirety of the English language is telling.

³⁶⁶ Expert Report of Kevin M. Murphy (Verisign) (30 May 2020), ¶ 21.

³⁶⁷ For the reasons set forth in the Sadowsky Report, n. 12, it is obvious that ccTLDs do not compete with .COM. *First*, it is highly unlikely that a U.S. company would choose to have a ".uk, .fr, or .de" web address, which would imply that the company is British, French, or German, respectively. *Second*, companies that wish to reach consumers globally are unlikely to choose to brand themselves by adopting a web address that ties them to a particular geography. This is why, as Verisign concedes, its .COM registry is just as popular outside of the United States as within it. Expert Report of Kevin M. Murphy (Verisign) (30 May 2020), ¶ 23. Moreover, while some ccTLDs have marketed themselves as de facto gTLDs (e.g., .co and .tv), none of these ccTLDs have amassed a sufficient number of registrations to restrain Verisign's pricing of .COM, which Dr. Murphy concedes must be restrained by government regulation. *Id.*, ¶ 3(d).

³⁶⁸ Verisign Br., Sec. III(C); Expert Report of Dennis Carlton (30 May 2019), Sec. V(A); Expert Report of Kevin M. Murphy (Verisign) (30 May 2020), Sec. V. *See also* ICANN's Rejoinder Memorial, ¶ 103.

³⁶⁹ Zittrain Report, Sec. 8; Sadowsky Report, Sec. VII.

³⁷⁰ Three-letter domains are uniquely attractive. Sadowsky Report, ¶ 35.

³⁷¹ Sadowsky Report, ¶ 41. There are two other domains that satisfy this three-part test: .COM and .NET, both of which are controlled by Verisign. Verisign's protestations to the contrary, .COM is perhaps the most obvious manifestation of the concept of the Internet in a domain name, as evidence by the event known as "the .COM boom" and the identification of leading internet companies as ".COMs."

201. For this reason, .WEB has been uniquely identified by members of the Internet community as the next best competitor for .COM:

- "Is it likely that .web will be a standout among new TLDs? Here are a few points that may indicate *.web is poised to gain traction relative to other recently introduced TLDs*. ... We're already used to using the term 'web' for internet-related activities. We refer to online properties as 'websites' or 'web pages' and the talent who create them are 'web designers' and 'web developers.' We use 'web servers' and 'web browsers' and even 'web apps'. The common references make a transition to a .web domain a natural activity for a mass online and mobile audience."³⁷²
- "*.WEB is a different animal*.WEB is what we call a '*super generic*' and arguably the *best new TLD alternative to .COM*. It is a word that is commonly used with intuitive meaning. *.WEB could make a serious dent to .COM* over the long run."³⁷³
- "[.WEB] is both most sufficiently generic, sufficiently catchy, sufficiently short and of sufficient semantic value to provide *a real challenge to .com*."³⁷⁴
- ".web is widely considered [to be] *the gTLD with the most potential* out of 1,930 applications for new domain extensions ICANN received to battle .com and .net for widespread adoption."³⁷⁵
- "*.web is the one domain that could unseat .com*."³⁷⁶

202. Verisign's own conduct marks .WEB as unique among all new gTLDs. As Mr. Livesay states, in 2014, he was "put in charge of identifying potential business opportunities for Verisign in ICANN's New gTLD Program."³⁷⁷ As Verisign notes, ICANN received applications to run over 1,200 unique new gTLD registries.³⁷⁸ Yet Verisign chose to pursue just one of these, .WEB. Verisign's focus on acquiring .WEB has been singular, focused and relentless. Industry commentators have identified why:

³⁷² Derek Vaughn, "Inside the High Stakes Auction for .WEB," *InetServices* (25 July 2016), available at <https://www.inetservices.com/blog/inside-the-high-stakes-auction-for-web/> (last accessed 19 July 2020), [Ex. C-130], p. 2.

³⁷³ Peter Lamantia, ".WEB Acquired for \$135 Million. Too much? How does it compare?," *Authentic Web* (undated), [Ex. C-29], p. 2.

³⁷⁴ Kevin Murphy, "Verisign likely \$135 million winner of .web gTLD," *Domain Incite* (1 Aug. 2016), [Ex. C-30], p. 2.

³⁷⁵ Cybele Negris, "How a \$135 million auction affects the domain name industry and your business," *BIV* (10 Aug. 2016), [Ex. C-31], p. 2.

³⁷⁶ "The Next Big Domain Extension," *Supremacy SEO* (undated), [Ex. C-32], p. 2.

³⁷⁷ Livesay WS, ¶ 4.

³⁷⁸ Verisign Br., ¶ 36.

- “.web is expected to pose significant competition to .com and .net domain systems in the future. As a result, VeriSign was keen to secure the management of this domain name when it was put to auction by ICANN.”³⁷⁹
- “With correct positioning, marketing, and rollout, [.WEB] could become a \$500M recurring business over the next decade.”³⁸⁰
- “Recall VeriSign is paying \$135M for the ownership rights to be the registry operator of .web. This could offer a new growth opportunity for the company into the future, but just as important, we think it is *a very good defensive strategic move keeping .web out of the hands of the potential competitor as we believe .web could be the closest thing to .com in the minds of customers looking for domain names.*”³⁸¹

203. The *Amic's* arguments that attempt to explain away Verisign's efforts to stymie competition are unavailing. For example, despite the record price paid at auction for .WEB, Dr. Carlton speculates that Verisign's valuation of .WEB “may have been based on its desire to sell registrations, not necessarily to prevent competition.”³⁸² However, economic theory accepts that incumbent firms like Verisign will, at least in part, base their valuation on the benefits derived from keeping competitive assets out of the hands of competitors. Indeed, “in a highly concentrated industry with large margins between the price and incremental cost ... the value of keeping [competing assets] out of competitors' hands could be very high” and warning

³⁷⁹ Dilantha de Silva, “VeriSign: An Overvalued Company With A Strong Moat,” *Seeking Alpha* (23 Sep. 2019), available at <https://seekingalpha.com/article/4293005-verisign-overvalued-company-strong-moat> (last accessed 19 July 2020), [Ex. C-175], p. 2.

³⁸⁰ Ash Anderson, “VeriSign Is Immune From Coronavirus,” *Seeking Alpha* (16 Mar. 2020), available at <https://seekingalpha.com/article/4332180-verisign-is-immune-from-coronavirus> (last accessed 19 July 2020), [Ex. C-176], p. 4. Industry projections for .WEB are in stark contrast to Dr. Murphy's flawed net present value (“NPV”) analysis, which purports to estimate the number of registrations .WEB can be expected to achieve based on the results of the .WEB auction. Expert Report of Kevin M. Murphy (Verisign) (30 May 2020), ¶¶ 50-57. The limits of this flawed analysis are obvious. Dr. Murphy's conclusion that .WEB would achieve registrations of only 0.5 million in year one and only 3.1 million registrations after 5 years, based on his NPV analysis, are belied by the new gTLD .ICU, which amassed 1 million registrations in its first year after being delegated and over 6 million registrations in its first two years. No one would suggest that .ICU is a better domain name than .WEB. See NTLDSTATS, STATISTICS: NEW GTLDS, <https://ntldstats.com/tld/icu> (last accessed 23 July 2020).

³⁸¹ J.P.Morgan, *VeriSign (VRSN US): DoJ Clears Way for VRSN to Close .web Purchase* (10 Jan. 2018), [Ex. JZ-3].

³⁸² Expert Report of Dennis Carlton (30 May 2019), ¶ 45.

that acquisitions may “foreclose or raise the costs of competitors”.³⁸³ Indeed, Verisign structured the DAA to avoid setting a cap on how much it could bid for .WEB³⁸⁴

204. In particular, Dr. Murphy’s analysis of the future competitiveness of .WEB, based on inferences drawn from the \$135 million price Verisign paid at auction for .WEB, is fundamentally flawed for two reasons.³⁸⁵

205. *First*, while most auctions are open to the public generally, the .WEB auction was limited to just the seven applicants for .WEB that comprised the contention set. Indeed, these applicants were required to express their interest in .WEB in 2012, two years before the first gTLDs were introduced and four years before the .WEB Auction was conducted. In 2012, no one knew what any new gTLD was worth, let alone .WEB specifically. Indeed, it is unlikely that many of the .WEB contention set members would have applied for .WEB if they knew in 2012 what they knew about .WEB’s valuation by 2016, since few contention set members had the financial resources to compete at the .WEB Auction and there would have been little incentive to pay the \$185,000 application fee simply to lose at auction. It is equally probable that had the .WEB Auction been open to the public, rather than limited to contention set members, better financed bidders would have participated in the auction and the auction price would have been substantially higher.³⁸⁶

³⁸³ *In the Matter of Policies Regarding Mobile Spectrum Holdings*, FCC, WT Docket No. 12-269, Ex Parte Submission of the United States Department of Justice (11 Apr. 2013), [Ex. CA-109]. This description perfectly mirrors Verisign’s position as the dominant incumbent in a highly concentrated market where it enjoys a profit margin that bests the rest of the Fortune 100 companies.

³⁸⁴ Verisign has tried to characterize the DAA as merely a “financing arrangement.” But in a typical financing arrangement, a lender would specify a funding limit based on its assessment of either (a) the applicant’s ability to repay the loan, or (b) the value of the target acquisition. Here, the DAA’s structure confirms that Verisign’s bids for .WEB were not based on its valuation of .WEB itself—that valuation could have been completed in advance and NDC provided with a bidding cap. Verisign specifically structured the DAA to ensure that it would be in the room to respond to competing bids in real time. The only reason to structure the DAA this way—to gain total control of how much was bid during each round—was because the real value to Verisign was in keeping .WEB out of the hands of competitors.

³⁸⁵ Dr. Murphy’s analysis is set forth at paragraphs 50-57 of his Report.

³⁸⁶ In 2019, a private equity firm valued .ORG at \$1.135 billion despite the fact that the .ORG registry is less than 10% of the size of the .COM registry. Dr. Sadowsky opines that “a .web TLD would have a degree of attraction similar to .com and would attract a very large number of registrations.” Sadowsky Report, ¶ 54. The auction price therefore bore little resemblance to the true value of .WEB.

Dr. Murphy's analysis fails for this reason alone: the value .WEB realized at auction was largely based on the fact that eligibility to participate in the auction was determined four years earlier.

206. *Second*, even though some very well-financed companies such as Google participated in the .WEB auction,³⁸⁷ press reports suggest that by 2015 (one year prior to the .WEB Auction), Google's strategy had shifted and it was now pursuing only those gTLDs where it was the only applicant.³⁸⁸ Accordingly, Google's bids (if any) at the .WEB auction bore no resemblance to what Google would have bid in 2012. The inherent fatal flaw in Dr. Murphy's analysis can be simply explained thusly: if NDC had not violated the New gTLD Program Rules and Verisign had not participated in the .WEB Auction, .WEB would have sold for \$70.9 million instead of \$135 million.³⁸⁹ By Dr. Murphy's analysis, that would mean that .WEB would be nearly 50% less successful simply because Verisign had not participated in the bidding.

207. Moreover, both Drs. Murphy and Carlton speculate that Verisign would be a more efficient supplier of .WEB domain names given its experience and leading position in the market.³⁹⁰ Neither of these opinions, however, are based on anything more than rank speculation and, as such, should be ignored.³⁹¹

208. In making decisions about the disposition of .WEB, therefore, ICANN must, consistent with its Bylaws, be guided by the potential for .WEB to compete with .COM. To simplify, there are essentially two

³⁸⁷ It is unclear how much Donuts and Radix, the other two larger companies in the .WEB contention set, were able to bid in 2016, having spent so much already on acquiring other new gTLDs. Dr. Murphy does not even attempt to estimate whether the other contention set members were able to submit bids in line with their valuation of .WEB.

³⁸⁸ See Kieren McCarthy, "Larry Page was held back by Google execs from flooding world with new dot-word domains: Moneybags CEO wanted to own rights to scores of gTLDs," *Register* (13 Aug. 2015), available at https://www.theregister.com/2015/08/13/larry_google_domain_names/ (last accessed 23 July 2020) (reporting that Google's plan to acquire 101 gTLDs was "boiled down to the company's brand names and those it has already applied for but was the only applicant.").

³⁸⁹ Indeed, if Afilias had not be constrained by the terms of its bank financing arrangements, Afilias would have bid more for .WEB.

³⁹⁰ Expert Report of Kevin M. Murphy (Verisign) (30 May 2020), ¶¶ 77-81; Expert Report of Dennis Carlton (30 May 2019), ¶ 55.

³⁹¹ The DOJ's view is that efficiency claims, such as those offered by Drs. Murphy and Carlton, cannot be taken at face value. The DOJ will not consider efficiency claims if they are vague, speculative, or otherwise cannot be verified by reasonable means. See U.S. Department of Justice and the Federal Trade Commission, *Horizontal Merger Guidelines* (19 Aug. 2010), [Ex. CA-110], p. 30 (requiring that efficiency claims be verify by reasonable means, i.e., "the likelihood and magnitude of each asserted efficiency, how and when each would be achieved (and any costs of doing so), how each would enhance the merged firm's ability and incentive to compete, and why each would be merger-specific").

possible actions that will resolve the current conflict: .WEB will be awarded to either Afilias or Verisign. Concentrating on outcomes near the extremes, .WEB will be either relatively unsuccessful or it will succeed and become a significant competitive force. The decision facing ICANN therefore has only a few possible effects:

ICANN Decision	.WEB succeeds	.WEB fails
Delegate .WEB to Verisign	Verisign's market dominance is enhanced. Price regulation required.	No competitive effects
Award .WEB to Afilias	Verisign's market dominance is challenged. Price may be set by market competition.	No competitive effects

209. Even accepting that the effects of new entry are always uncertain, under the worst case scenario, if .WEB fails to attract significant registrations, the state of competition will remain unchanged, regardless of which action is taken. The only opportunity to enhance competition is the possibility that .WEB will be successful and it is awarded to an operator other than Verisign: if .WEB proves to be a success, market competition may be sufficient to stop regulating Verisign's pricing power. Indeed, "there is a broad consensus among economists that regulation is an imperfect substitute for competition, particularly with respect to its ability to promote innovation."³⁹²

C. The DOJ's Decision to Close its Investigation Is Irrelevant to the Panel's Analysis

210. The *Amici* argue that the DOJ's decision to close its investigation without taking any action is dispositive of any competitive questions concerning Verisign's potential acquisition of .WEB. *First*, because ICANN did not refer this matter to the DOJ for investigation, the DOJ's investigation focused on whether it should file a lawsuit to enjoin Verisign from acquiring .WEB because its doing so would tend "*substantially*

³⁹² Michael Katz *et al.*, An Economic Framework for the Analysis of the Expansion of Generic Top-Level Domain Names: A Report Prepared for ICANN (June 2010), available at <https://archive.icann.org/en/topics/new-gtlds/economic-analysis-of-new-gtlds-16jun10-en.pdf> (last accessed on 23 July 2020), at ¶ 28.

*to lessen competition.*³⁹³ This is a significantly higher standard than ICANN's competition mandate to "*introduce and promote competition,*" which must, by ICANN's Bylaws, "guide the decisions and actions of ICANN."³⁹⁴

211. *Second*, the fact that the DOJ investigation lasted for more than a year demonstrates that the DOJ believed that Verisign's proposed acquisition of .WEB raised significant competition concerns. As a DOJ official recently testified before Congress, of all potential transactions notified each year to the agency, the DOJ conducts lengthy investigations of transactions in only 1-2% of the thousands of transactions filed each year – in "ordinarily, only the most concerning deals."³⁹⁵

212. *Third*, the DOJ's decision to close its investigation does not suggest that the DOJ "concluded ... that Verisign's operation of .WEB is not likely to harm competition."³⁹⁶ To the contrary, there are many reasons that the DOJ, a federal agency that has limited resources, may elect to close an investigation without taking any actions that are completely unrelated to the competition concerns raised by the deal. In a recent brief filed by the DOJ, the agency completely refuted the *Amici's* and ICANN's argument that this Panel should view the DOJ's decision to close its .WEB investigation as dispositive of any competition issues. Rejecting exactly that argument, the DOJ stated:

Contrary to [appellant]'s suggestion, *no inference should be drawn from the Division's closure of its investigations* into [appellant]'s proposed and consummated acquisition of [the target]. As the United States has stated twice previously in this case in response to [appellant]'s assertions,

³⁹³ Clayton Act, § 7, 15 U.S.C. § 18 (1996), [Ex. CA-111] (emphasis added). ICANN's mandate to take decisions consistent with its core value of promoting competition is necessarily considerably broader than Section 7 of the Clayton Act. DOJ's discretionary authority to enforce Section 7 requires, at a minimum, the agency to conclude that it can prove that a proposed transaction will, in fact, substantially lessen competition. ICANN's mandate requires ICANN to exercise its discretionary authority in a manner that will best promote competition. Thus, DOJ may decline to enforce the antitrust laws even in cases where it has substantial concerns about future competition, but ICANN may not exercise its discretion to foreclose the only opportunity to enhance competition.

³⁹⁴ The Bylaws' command that its Core Values must guide ICANN's decisions and actions is significantly broader than Ms. Burr's statement that ICANN fulfills its competition mandate through policy development alone. See notes 339-340 above.

³⁹⁵ Written Testimony of John W. Elias before the U.S. House Committee on the Judiciary (24 June 2020), available at https://judiciary.house.gov/uploadedfiles/elias_written_testimony_hjc.pdf?utm_campaign=4024-519 (last accessed 19 July 2020), [Ex. C-177], p. 2.

³⁹⁶ Expert Report of Dennis Carlton (30 May 2019), ¶ 61. Notably, Dr. Carlton cites no authority for his assertion.

there are many reasons why the Antitrust Division might close an investigation or choose not to take an enforcement action. *The Division's decision not to challenge a particular transaction is not confirmation that the transaction is competitively neutral or procompetitive.*³⁹⁷

213. As the DOJ itself, recently and repeatedly, instructed U.S. courts to do, this Panel should not infer anything from the DOJ's decision to close its .WEB investigation.

IX. SCOPE OF THE PANEL'S REMEDIAL AUTHORITY

214. The *Amici* support ICANN's erroneous—and indeed surprisingly misguided—position that the scope of the Panel's remedial authority is limited and that the Panel may only issue a declaration as to whether ICANN acted in conformity with its Articles and Bylaws when ICANN claims that its Board deferred taking any action on the merits of Afiliias' .WEB complaints in November 2016.³⁹⁸

215. In the first instance, and as discussed *supra*, Afiliias disputes that any such “decision to defer” took place. It appears that, at an informal Board workshop session, some members of the Board were briefed on the dispute concerning .WEB. But ICANN's Board is not permitted to take decisions in secret and Board practice is that any decisions or actions coming out of a Board workshop session would subsequently be adopted publicly by resolution.³⁹⁹ The Bylaws require that “any actions” taken by the Board be publicly reported. Here, no resolutions were adopted with respect to .WEB; nor were any actions reported. And if a

³⁹⁷ *Steves & Sons, Inc. v. JELD-WEN, Inc.*, No. 19-1397 (4th Cir. 2019), Brief for the United States of America as *Amicus Curiae* in Support of Appellee Steves and Sons, Inc. (23 Aug. 2019), [Ex. C-118], p. 15 (internal citations omitted; emphasis added). In this case, Jeld-Wen had acquired CMI, the only other manufacturer of doorskins for molded interior doors. DOJ investigated the acquisition twice, closing both investigations without taking any action. Plaintiff Steves & Sons, which purchased doorskins from Jeld-Wen and which competed with Jeld-Wen in the sale of molded interior doors, sued Jeld-Wen, claiming that its acquisition of CMI was anticompetitive. Despite the fact that the deal had been investigated by DOJ twice and that those investigations were closed without DOJ taking any action, the jury returned verdict in favor of Steves, awarding treble antitrust damages in amount of \$175,879,362. Steves moved for equitable relief, under Clayton Act, seeking order, inter alia, to restore competition in doorskin market. The District Court granted Steves' motion to require Jeld-Wen divest itself of the acquired facility. *Steves and Sons, Inc. v. JELD-WEN, Inc.*, 345 F.Supp.3d 614, 682 (E.D. Va. 2018), [Ex. CA-112].

³⁹⁸ NDC Br., ¶ 78; Verisign Br., p. 1.

³⁹⁹ ICANN in its Rejoinder states that at its November 2016 Board meeting, “the Board chose to see if the results of such [Accountability Mechanism] proceedings might require the Board to take any action related to the .WEB Contention Set.” ICANN's Rejoinder Memorial, ¶ 41. That assertion seems to suggest that the Board anticipated that an IRP Panel might order ICANN to take specific action. Surely, ICANN cannot be arguing that the Board could fail to take any action—wait for years while proceedings play out—so that the Panel can order ICANN to make the decision that it failed to make in the first place (without weighing in on how the decision should be made).

decision of some sort was made in November 2016, there is no evidence that ICANN Staff respected that decision when they commenced the process to delegate .WEB to NDC in June 2018, or that they reverted to the ICANN Board to take direction regarding their plans. Nor is there any evidence that any sort of informed, transparent and neutral analysis was undertaken by the Staff or Board of Afilias' complaints—or the legitimacy of the DAA with reference to the AGB, irrespective of Afilias' complaints, even though ICANN has represented in these proceedings that it did evaluate something—prior to Staff's decision to move forward with NDC.

216. Whichever of ICANN's various angles or attempted rationalizations regarding its conduct the Panel considers, there is no escaping the conclusion that ICANN failed to "[*make*] *decisions*" by applying documented policies consistently, neutrally, objectively, and fairly....⁴⁰⁰ Given ICANN's conduct that led to these proceedings, and the positions that ICANN has adopted in these proceedings—to say nothing of its conduct—the only fair and final way for Afilias' claims to be considered is for the Panel to resolve this Dispute. As envisioned by the Bylaws, the Panel should resolve this Dispute not simply by deciding whether ICANN violated its Articles and Bylaws—in the manner that we have demonstrated—but also by directing ICANN to take sufficient actions to give effect to the relief Afilias has requested.

217. The following points suffice to demonstrate that (i) the *Amic's* assessment of what this Panel may or may not order is simply incorrect, and (ii) the Panel has the necessary authority to direct ICANN to adopt the relief that Afilias has requested.⁴⁰¹

⁴⁰⁰ Bylaws, [Ex. C-1], Sec. 1.2(a)(v) (emphasis added).

⁴⁰¹ We note that this is the first IRP under the new Bylaws. Accordingly, what the Panel decides regarding the scope of an IRP panel's remedial authority will be of the *utmost precedent-setting importance*.

A. Meaningful and Effective Accountability Requires Review and Redress of ICANN's Conduct

218. Corporate bylaws are interpreted according to the general rules governing construction of statutes and contracts.⁴⁰² As such, bylaws “are construed according to their plain meaning within the context of the document as a whole”⁴⁰³ and in light of the “usual, ordinary, and commonly accepted meaning” of the language.⁴⁰⁴ “Any ambiguity in the bylaws will be construed against the corporation and its officers.”⁴⁰⁵

219. “Accountability” is commonly understood as “the quality or state of being accountable[;] *especially*: an obligation or willingness to accept responsibility or to account for one's actions.”⁴⁰⁶ In other contexts, ICANN has endorsed a definition of the term “accountability” that is instructive for this Panel's consideration of its remedial authority. That definition confirms that the Panel's authority to hold ICANN accountable is broader than issuing a simple declaratory statement of the type urged by the *Amici* and ICANN. Thus, accountability entails both “mechanisms for independent checks and balances,” as well as “review” and “redress.”⁴⁰⁷

The group adopted the definition of ‘accountability’ used by the board and organization in its development of the board resolution on delegated authorities, passed in November 2016. Accountability in this context is defined, according to the NETmundial multistakeholder statement, as “*the existence of mechanisms for independent checks and balances as well as for review and redress.*”⁴⁰⁸

⁴⁰² *Singh v. Singh*, 114 Cal. App. 4th 1264, 1294 (2004), [Ex. CA-113].

⁴⁰³ 18A Am. Jur. 2d *Corporations* § 262 (2020), [Ex. CA-114] (citations omitted).

⁴⁰⁴ 18A Am. Jur. 2d *Corporations* § 262 (2020), [Ex. CA-114].

⁴⁰⁵ 18A Am. Jur. 2d *Corporations* § 262 (2020), [Ex. CA-114].

⁴⁰⁶ *Merriam-Webster Dictionary* (on-line version): accountability, available at <https://www.merriam-webster.com/dictionary/accountability> (last accessed 23 July 2020), [Ex. CA-115]; see also *Oxford English Dictionary* (on-line version): accountability, available at <https://www.oed.com.nyli.idm.oclc.org/view/Entry/1197?redirectedFrom=accountability&&print> (last accessed 24 July 2020), [Ex. CA-116] (“The quality of being accountable; liability to account for and answer for one's conduct, performance of duties, etc. (in modern use often with regard to parliamentary, corporate, or financial liability to the public, shareholders, etc.); responsibility.”).

⁴⁰⁷ ICANN, Recommendations to Improve ICANN Staff Accountability (13 Nov. 2017), [Ex. C-84], p. 4.

⁴⁰⁸ ICANN, Recommendations to Improve ICANN Staff Accountability (13 Nov. 2017), [Ex. C-84], p. 4.

220. The most common definitions of the word “redress” include: “the setting right of what is wrong,” “relief from wrong or injury,” and “compensation or satisfaction for a wrong or injury.”⁴⁰⁹ Thus, if the Panel is to properly hold ICANN accountable for breaching its Articles and Bylaws, it must issue a decision that provides relief or satisfaction that would eliminate the effects of the breach. This is also required under international law: “it is a principle of international law, and even a general conception of law, that any breach of an engagement involves an obligation to make reparation.”⁴¹⁰

B. The Internet Community Broadened the Scope of ICANN’s Accountability under the Current Bylaws

221. One of the conditions and consequences of ICANN’s long-sought-after independence from the U.S. Government’s oversight was the requirement that ICANN’s accountability mechanisms be strengthened through “[a]n enhanced Independent Review Process and redress process with broader scope and the power to ensure ICANN stays within its Mission.”⁴¹¹ This did not just simply entail coming up with more didactic rules for IRPs, but also, following a detailed review process by CCWG-Accountability, an expansion of the mandate given to panels in their review of ICANN’s actions and inactions. Thus, for example, the scope of an IRP panel’s accountability review was extended to encompass the conduct of ICANN Staff and not just that of the Board.

222. CCWG-Accountability’s other recommendations are also instructive regarding the scope of the remedial authority the ICANN community intended for an IRP panel, requiring that claimants be given the right to “seek redress” through an IRP of ICANN’s conduct and authorizing an IRP panel to ‘direct[] [ICANN] to take appropriate action to remedy the breach.’”

⁴⁰⁹ Dictionary.com: redress, available at <http://dictionary.reference.com/browse/redress> (last accessed 23 July 2020), [Ex. CA-117]; see also *Black’s Law Dictionary* (11th ed. 2019): redress, [Ex. CA-118] (“[r]elief; remedy”).

⁴¹⁰ *Factory at Chorzów (Claim for Indemnity) (Merits)*, Judgment (Sep. 13), 1928 P.C.I.J. (Ser. A) No. 17, [Ex. CA-119], p. 29; see also *id.* (“[R]eparation is the indispensable complement of a failure to apply a convention, and there is no necessity for this to be stated in the convention itself.”).

⁴¹¹ CCWG-Accountability Supplemental Final Proposal on Work Stream 1 Recommendations (23 Feb. 2016), [Ex. C-91], p. 5.

- “Standing: Any person/group/entity ‘materially affected’ by an ICANN action or inaction in violation of ICANN’s Articles of Incorporation and/or Bylaws shall have the right to *file a complaint under the IRP and seek redress*.”⁴¹²
- “Decisions[:] ... The CCWG-Accountability intends that if the panel determines that an action or inaction by the Board or staff is in violation of ICANN’s Articles of Incorporation or Bylaws, then that decision is binding and the ICANN Board and staff *shall be directed to take appropriate action to remedy the breach*. However, the Panel shall not replace the Board’s fiduciary judgment with its own judgment.”⁴¹³

C. The Panel Must Assess its Authority Based on the Text, Context, Object and Purposes of the IRP

223. ICANN and the *Amici* rely upon Section 4.3(o) of the Bylaws to argue that the Panel’s authority is circumscribed to the items listed in that Section.⁴¹⁴ But Section 4.3(o) does not say that the Panel’s authority is limited to the listed items.⁴¹⁵ The drafters of the Bylaws could certainly have inserted the word “only” if they had intended to restrict an IRP panel’s remedial authority to just those items. They did not, but instead specified that the scope of an IRP panel’s authority is “[s]ubject to” the other provisions of Section 4.3. Section 4.3(o), therefore, must be read, *inter alia*, with reference to Section 4.3(a).

224. Section 4.3(a) mandates that “[t]his Section 4.3 [i.e., the Bylaws section addressing IRPs] shall be construed, implemented, and administered in a manner consistent with these Purposes of the IRP.”⁴¹⁶ Thus, the Panel’s authority must be determined with reference to the entirety of Section 4.3, with the scope and effect of each individual article interpreted through the lens of the enumerated “Purposes of the IRP.” Read within a proper context of the objectives that the ICANN community intended to achieve through an “enhanced” accountability process for Board and Staff conduct, the requirement of a declaration by an IRP panel is thus a formalistic one. The Panel must, in issuing its decision, make a formal “declaration” that

⁴¹² CCWG-Accountability Supplemental Final Proposal on Work Stream 1 Recommendations (23 Feb. 2016), [Ex. C-91], ¶ 178 (at p. 35).

⁴¹³ CCWG-Accountability Supplemental Final Proposal on Work Stream 1 Recommendations, Annex 07 – Recommendation #7: Strengthening ICANN’s Independent Review Process (23 Feb. 2016), [Ex. C-122], ¶¶ 54, 57.

⁴¹⁴ ICANN’s Rejoinder Memorial, Sec. V; Verisign Br., p. 1; NDC Br., Sec. III.A.

⁴¹⁵ Bylaws, [Ex. C-1], Sec. 4.3(o) (at p. 28).

⁴¹⁶ Bylaws, [Ex. C-1], Sec. 4.3(a) (at p. 21).

“an action/failure to act complied or did not comply” with the Articles and/or Bylaws. This does not, however, preclude the Panel from declaring that ICANN must take certain steps to remedy the breaches of its Articles and Bylaws to “resolve” the Dispute and provide an aggrieved claimant with “redress.”

225. As relevant to the issues in dispute in these proceedings, the Bylaws provisions supporting the foregoing are as follows:

226. **Section 4.3(a), Preamble:** The Preamble to Section 4.3 of the Bylaws provides that an IRP panel’s decision must “resolve Disputes,”⁴¹⁷ meaning that the remedy or remedies granted must “settle or find a solution to” the Disputes that have been put before that Panel.⁴¹⁸ This requirement is also stated in Section 4.3(g) of the Bylaws.⁴¹⁹ As we have discussed elsewhere, for present purposes, “Disputes” are defined as or consist of “Claims that Covered Actions constituted an action or inaction that violated the Articles of Incorporation or Bylaws....”⁴²⁰ The Bylaws define a “Covered Action” as “any action[] or failure[] to act by or within ICANN committed by the Board ... or Staff members that give[s] rise to a Dispute.”⁴²¹ Hence, the Panel’s mandate is to “resolve” (i.e., “settle or find a solution to”) Afiliás’ claims regarding “any actions or failures to act”—here, ICANN’s failure to disqualify NDC’s application and award .WEB to Afiliás—by the Board or Staff that the action or failure to act violates the Articles and Bylaws.

⁴¹⁷ Bylaws, [Ex. C-1], Sec. 4.3(a) (at p. 20).

⁴¹⁸ Lexico.com: resolve, available at <https://www.lexico.com/en/definition/resolve> (last accessed 23 July 2020), [Ex. CA-120]; see also *Oxford English Dictionary* (on-line version): resolve, available at <https://www-oed-com.nyli.idm.oclc.org/view/Entry/163733?rskey=u3QyP2&result=2&isAdvanced=false&print> (last accessed 24 July 2020), [Ex. CA-121] (“To answer (a question); to solve (a problem of any kind); to determine, settle, or decide upon (a point or matter regarding which there is doubt or dispute).”).

⁴¹⁹ Section 4.3(g) states that “[the] IRP Panel shall be charged with *hearing and resolving the Dispute*, considering the Claim and ICANN’s written response (“Response”) in compliance with the Articles of Incorporation and Bylaws, as understood in light of prior IRP Panel decisions decided under the same (or an equivalent prior) version of the provision of the Articles of Incorporation and Bylaws at issue, and norms of applicable law. Bylaws, [Ex. C-1], Sec. 4.3(g).

⁴²⁰ The definition is all-inclusive (“including but not limited to any action or inaction that: (1) exceeded the scope of the Mission....”). Bylaws, [Ex. C-1], Sec. 4.3(b)(iii). To adopt ICANN’s and *Amici’s* view of the Panel’s authority would make this meaningless, as opposed to “meaningful.” See *id.*, Sec. 4.3(a)(ii).

⁴²¹ Bylaws, [Ex. C-1], Sec. 4.3(b)(ii).

227. **Section 4.3(a)(i):** In resolving the Disputes, the Panel's mandate is to determine not only whether ICANN "exceed[ed] the scope of its Mission," but more broadly also to ensure that ICANN has "otherwise complie[d] with its Articles of Incorporation and Bylaws."⁴²² This is a broad mandate, and one that cannot simply be satisfied through the issuance of the type limited declaration advocated by ICANN and the *Amici*.

228. **Section 4.3(a)(ii):** In resolving the Disputes, an IRP panel is required to issue a remedy that would allow a "Claimant[] to *enforce compliance* with the Articles of Incorporation and Bylaws...."⁴²³ A simple thumbs-up or thumbs-down declaration, as ICANN and the *Amici* suggest is all that an IRP panel can do, would not be sufficient to allow a Claimant to "enforce" ICANN's compliance in respect of the Dispute that has been put before the Panel.

229. **Section 4.3(a)(iii):** In resolving the Disputes, the Panel must "ensure" that its decision reflects ICANN's accountability to the global Internet community and the claimant.⁴²⁴ As mentioned above, accountability requires that the Panel's decision serve as a check and balance on ICANN, and also provides for review and redress.

230. **Section 4.3(a)(viii):** In resolving the Disputes, the Panel is directed to issue a decision that "[l]ead[s] to binding, final resolutions consistent with international arbitration norms that are enforceable in any court with proper jurisdiction."⁴²⁵ This instruction would hardly be achieved if the Panel were to simply issue a declaration instructing ICANN to assess whether NDC's .WEB application should be disqualified—an outcome that ICANN appears to have already decided should not happen, given its June 2018 decision to enter in to a registry agreement with NDC.

⁴²² Bylaws, [Ex. C-1], Sec. 4.3(a)(i).

⁴²³ Bylaws, [Ex. C-1], Sec. 4.3(a)(ii).

⁴²⁴ Bylaws, [Ex. C-1], Sec. 4.3(a)(iii).

⁴²⁵ Bylaws, [Ex. C-1], Sec. 4.3(a)(viii).

231. **Section 4.3(g):** "Following the selection of an IRP Panel, that IRP Panel shall be charged with hearing and resolving the Dispute, considering the Claim and ICANN's written response ... in compliance with the Articles of Incorporation and Bylaws, as understood in light of prior IRP Panel decisions decided under the same (or an equivalent prior) version of the provision of the Articles of Incorporation and Bylaws at issue, and norms of applicable law."⁴²⁶

232. **Section 4.3(i):** In resolving the Disputes, an IRP panel is directed to "conduct an objective, de novo examination of the Dispute."⁴²⁷ Insofar as this requirement is concerned, CCWG-Accountability provided guidance:

Standard of Review:[] The IRP Panel, with respect to a particular IRP, shall decide the issue(s) presented based on its own independent interpretation of ICANN's Articles of Incorporation and Bylaws in the context of applicable governing law and prior IRP decisions. The standard of review shall be an objective examination as to whether the complained-of action exceeds the scope of ICANN's Mission and/or violates ICANN's Articles of Incorporation and/or Bylaws and prior IRP decisions. Decisions will be based on each IRP panelist's assessment of the merits of the claimant's case. The panel may undertake a de novo review of the case, make findings of fact, and issue decisions based on those facts.⁴²⁸

233. **Section 4.3(i)(i):** Where the claim is based on actions or failures to act by or within the Board or Staff (*i.e.*, a Covered Action), the IRP panel is directed ("shall") to "make findings of fact to determine whether the Covered Action constituted an action or inaction that violated the Articles of Incorporation or Bylaws." It is firmly established in international law that such findings of fact and conclusions of law, embodied in the form of a declaratory judgment by an international court or tribunal, are legally binding on the parties.

As stated by the Permanent Court of International Justice in the *Chorzów Factory* case:

the intention of [a declaratory judgment] is to ensure recognition of a situation at law, once and for all, and with *binding force as between the*

⁴²⁶ Bylaws, [Ex. C-1], Sec. 4.3(g).

⁴²⁷ Bylaws, [Ex. C-1], Sec. 4.3(i).

⁴²⁸ CCWG-Accountability Supplemental Final Proposal on Work Stream 1 Recommendations, Annex 07 – Recommendation #7: Strengthening ICANN's Independent Review Process (23 Feb. 2016), [Ex. C-122], ¶¶ 33-34.

parties; so that the legal position thus established cannot again be called in question in so far as the legal facts ensuring therefrom are concerned.⁴²⁹

234. **Section 4.3(v):** The Bylaws also provide, again taking in to account all of the requirements and directions set out in Section 4.3 as a whole (“Subject to this Section 4.3”), that an IRP panel’s decision “reflect a well-reasoned application of how the Dispute was resolved in compliance with the Articles of Incorporation and Bylaws, as understood in light of prior IRP decisions decided under the same (or an equivalent prior) version of the provision of the Articles of Incorporation and Bylaws at issue, and norms of applicable law.”

235. **Section 4.3(x):** Finally, the Bylaws provide that “[t]he IRP is intended as a final, binding arbitration process,” including in that “IRP Panel decisions are binding final decisions to the extent allowed by law” and in that “ICANN intends, agrees, and consents to be bound by all IRP Panel decisions of Disputes of Covered Actions as a final, binding arbitration.” As Gary Born reports in his leading treatise on international arbitration, “under most national arbitration regimes, it is well-settled that arbitrators have broad discretion in fashioning relief,” and indeed may have broader discretion than do the domestic courts.⁴³⁰ This is true, in particular, under the English Arbitration Act, which provide the *lex arbitri* for this arbitration seated in London.⁴³¹ Thus, the Bylaws’ commitment to IRPs as a binding arbitration process carries with it the consequence that IRP panels have broad remedial authority.

236. In sum, in order to comply with its accountability mandate under the Articles and Bylaws, the Panel must:

⁴²⁹ *Interpretation of Judgments Nos. 7 and 8 (The Chorzów Factory)*, Judgment (Dec. 16), 1927 P.C.I.J. (Ser. A) No. 13, [Ex. CA-122], p. 20 (emphasis added).

⁴³⁰ Gary Born, *International Commercial Arbitration* (2d ed. 2014), [Ex. CA-123], pp. 3069-3070.

⁴³¹ Gary Born, *International Commercial Arbitration* (2d ed. 2014), [Ex. CA-123], p. 3069, n. 363. It is also worth noting that uniquely, the English Arbitration Act 1996 explicitly empowers an arbitral tribunal to provide remedies in the form of declarations, monetary payment, and several types of specific performance absent party agreement to the contrary. Arbitration Act 1996 (Eng.), [Ex. CA-124], c. 23, § 48. Although it is Afilias’ position that ICANN’s Bylaws provide agreement that the Panel is empowered to issue any appropriate remedy, the Arbitration Act 1996 would so empower the Panel if it were to decide that the Bylaws themselves are silent on this issue.

- Base its decision on an objective and de novo review of ICANN's actions and inactions;
- Include in its decision findings of fact as to whether the Covered Actions complained of constituted an action or inaction that violated the Articles of Incorporation or Bylaws
- Issue a decision that actually resolves the Disputes that have been put before it;
- Issue a decision that reflects a well-reasoned application of the how the Disputes submitted to it were resolved;
- Declare that ICANN must take certain steps to remedy the breaches by ICANN of its Articles and Bylaws;
- Direct ICANN Staff to take appropriate action to remedy the breaches determined by the Panel; and
- Include in its decision a declaration as to whether a Covered Action constituted an action or inaction that violated the Articles of Incorporation or Bylaws.

X. CONCLUSION

237. For the foregoing reasons, and those stated in Afilias' other submissions, the Tribunal should grant Afilias the relief requested in its Amended Request.

Jamie Dimon was best-paid bank CEO last year — wait till you see who came in fourth

MarketWatch

Presentation

Operator [1]

Good day, everyone, welcome to VeriSign's Fourth Quarter and Full Year 2017 Earnings Call. Today's conference is being recorded, and unauthorized recording of this call is not permitted.

After Facebook Stock Plunge, Mark Zuckerberg Worth Less Than Warren Buffett

Fortune

At this time, I would like to turn the conference over to Mr. David Atchley, Vice President of Investor Relations and Corporate Treasurer. Please go head, sir.

David Atchley, VeriSign, Inc. - VP & Corporate Treasurer [2]

Thank you, operator, and good afternoon, everyone. Welcome to VeriSign's Fourth Quarter and Full Year 2017 Earnings Call. With me are: Jim Bidzos, Executive Chairman, President and CEO; Todd Strubbe, Executive Vice President and COO; and George Kilguss, Executive Vice President and CFO.

A California DMV employee who napped at work every day for 3 hours cost the state at least \$40,000

Business Insider

This call and our presentation are being webcast from our Investor Relations website, which is available under About VeriSign on verisign.com. There, you will also find our fourth quarter and full year 2017 earnings release. At the end of this call, the presentation will be available on that site. And within a few hours, the replay of the call will be posted.

Financial results in our earnings release are unaudited, and our remarks include forward-looking statements that are subject to the risks and uncertainties that we discuss in detail in our documents filed with the SEC, specifically the most recent reports on Forms 10-K and 10-Q, which identify risk factors that could cause actual results to differ materially from those contained in the forward-looking statements. VeriSign retains its long-standing policy not to comment on financial performance or guidance during the quarter, unless it is done through a public disclosure.

What Wall Street analysts are saying about Facebook's disastrous quarter

Yahoo Finance

The financial results in today's call and the matters we will be discussing today include GAAP and non-GAAP measures used by VeriSign. GAAP to non-GAAP reconciliation information is appended

to our earnings release and slide presentation, as applicable, each of which can be found on the Investor Relations section of our website.

In a moment, Jim and George will provide some prepared remarks. And afterward, we will open the call for your questions. With that, I would like to turn the call over to Jim.

Nokia CEO Refutes Claims It's Losing Market Share to Arch Rival
Bloomberg

D. James Bidzos, VeriSign, Inc. - Founder, President, CEO & Executive Chairman [3]

Thanks, David, and good afternoon, everyone. I'm pleased to report another solid quarter, which capped a strong 2017 for VeriSign. Fourth quarter and full year results were in line with our objectives of offering security and stability to our customers while generating profitable growth and providing long-term value to our shareholders.

EARNINGS: Comcast shares jump on surprise subscriber growth
Yahoo Finance Video

For 2017, VeriSign delivered strong financial performance, reporting \$1,165,000,000 in revenues, resulting in \$653 million in free cash flow and generating full year 2017 non-GAAP operating margins of 65.3%.

2017 was a strong year for the .com and .net domain name base in which the company processed 36.7 million registrations and finished the year with 146.4 million names. During the year, we marked more than 20 years of uninterrupted availability of the VeriSign DNS for .com and .net. Also last year, we renewed the .net registry agreement for another 6 years until 2023.

Arnold Schwarzenegger Makes Manliest Move Ever
Describedigest Sponsored

During the fourth quarter, we continued our share repurchase program by repurchasing 1.3 million shares for \$145 million. During the full year 2017, we repurchased 6.3 million shares for \$593 million. Effective today, the Board of Directors increased the amount of VeriSign common stock authorized for share repurchase by approximately \$586 million to a total of \$1 billion authorized and available under the share repurchase program, which has no expiration.

Buy now, pay later options are increasing
Yahoo Finance

Our financial position is strong with \$2.4 billion in cash, cash equivalents and marketable securities at the end of the quarter. We continually evaluate the overall cash and investing needs of the business and consider the best uses for our cash, including potential share repurchases.

At the end of December, the domain name base in .com and .net totaled 146.4 million, consisting of 131.9 million names for .com and 14.5 million names for .net. During the fourth quarter, we processed 9 million new registrations and the domain name base increased by 0.57 million names. During the quarter, we continued to see strength from domestic registrars, which was offset by a lower second-time renewal rate associated with the remaining China surge names from late 2015.

What happened on Facebook's nightmare conference call that wiped out nearly \$150B in market value in 90 minutes (FB)
Business Insider

Although renewal rates are not fully measurable until 45 days after the end of the quarter, we believe that the renewal rate for the fourth quarter of 2017 will be 72.2%. We expect full year 2018 domain name base growth of between 2% and 3%. For the first quarter, we expect

Twitter 'shadow banning' is Trump's latest

an increase to the domain name base of between 1.5 million to 2 million registrations.

social media cause
TechCrunch

I'd like to comment now on a recent positive development in our efforts to become the registry operator for .web. You may have seen the 8-K we filed in January. In it, we disclosed that the U.S. Department of Justice's Antitrust Division notified us that it had disclosed its investigation regarding the .web top level domain. We are now engaged in ICANN's process to move the delegation of .web forward. However, as this is ICANN's process, we cannot say when it will conclude. And while it's possible that our operation of .web will commence this year, the 2018 revenue guidance we will provide does not include any revenue from .web. Of course, we'll provide you with updates as appropriate.

News Anchor Stuns Viewers With An Off Air Photo

Worldatation Sponsored

And now I'd like to turn the call over to George.

George E. Kilguss, VeriSign, Inc. - Executive VP & CFO [4]

Thank you, Jim, and good afternoon, everyone. For the year ended December 31, 2017, the company generated revenue of \$1,165,000,000, up 2% from fiscal 2016, and delivered GAAP operating income of \$708 million, up 3% from \$687 million for the full year 2016.

Trump hotel ruling could open door to his financial records

Associated Press

Revenue for the fourth quarter totaled \$296 million, up 3.2% year-over-year and up by 1.1% sequentially. During the quarter, 60% of our revenue was from customers in the U.S. and 40% was from customers abroad.

Qualcomm ends \$44 billion NXP bid after fail to win China approval

Reuters

As it relates to fourth quarter GAAP results, operating income totaled \$176 million compared with \$169 million in the fourth quarter of 2016. The operating margin in the quarter came to 59.7% compared to 59% in the same quarter a year ago. Net income totaled \$103 million compared to \$106 million a year earlier, which produced diluted earnings per share of \$0.83 in the fourth quarter this year compared to \$0.84 for the fourth quarter last year.

As of December 31, 2017, the company maintained total assets of \$2.9 billion and total liabilities of \$4.2 billion. Assets included \$2.4 billion of cash, cash equivalents and marketable securities, of which \$729 million were held domestically with the remainder held abroad.

I'll now review some additional fourth quarter financial metrics, which include non-GAAP operating margin, non-GAAP earnings per share, operating cash flow and free cash flow. I then will discuss our 2018 full-year guidance.

As it relates to non-GAAP metrics, fourth quarter operating expense, which excludes \$13 million of stock-based compensation, totaled \$106 million compared to \$97 million last quarter and \$103 million in the same quarter a year ago. Non-GAAP operating expenses were higher in the fourth quarter as we had indicated on our last call, primarily due to an increase in sales and marketing spending in the fourth quarter.

Non-GAAP operating margin for the fourth quarter was 64.1% compared to 63.9% in the same quarter of 2016. Non-GAAP net income for the fourth quarter was \$119 million, resulting in a non-GAAP diluted earnings per share of \$0.96 based on a weighted average diluted share count of 124.3 million shares. This compares to \$0.92 in the fourth quarter of 2016 and \$1 last quarter based on 125.5 million and 124.1 million weighted average diluted shares, respectively.

Dilution related to the convertible debentures was 25.2 million shares based on the average share price during the fourth quarter compared with 20.6 million for the same quarter in 2016 and 24 million shares last quarter. The share count was reduced by the full effect of third quarter 2017 repurchase activity and the weighted effect of the 1.3 million shares repurchased during the fourth quarter. Operating cash flow for the fourth quarter was \$199 million and free cash flow was \$190 million compared with \$205 million and \$198 million, respectively, for the fourth quarter last year.

Now I'd like to provide an update on implications to the company of the Tax Cuts and Jobs Act enacted in December 2017, which I will refer to as the Tax Act. As stated in today's earnings release, fourth quarter and full year 2017 GAAP financial results include a net \$9 million tax expense increase resulting from the Tax Act. This increase is comprised of a provisional income tax expense of \$196 million, consisting of onetime U.S. taxes on accumulated foreign earnings triggered by the Tax Act and related foreign withholding taxes, both net of applying previously unrecognized foreign tax credits. This expense is offset by an income tax benefit of \$187 million resulting from the revaluation of our net deferred tax liabilities from 35% to the 21% U.S. federal income tax rate in the Tax Act.

As a result of the onetime U.S. taxes on accumulated foreign earnings, we also intend to repatriate by early in the second quarter of 2018 approximately \$1.1 billion of cash held by foreign subsidiaries, net of foreign withholding taxes and based on current exchange rates. Additionally, on a go-forward basis, due to the Tax Act, annual earnings of our foreign subsidiaries will be taxed by the U.S. This allows for annual repatriation without further U.S. taxation of distributable capital reserves from foreign entities. The taxation of foreign earnings and withholding taxes associated with ongoing repatriations will increase cash taxes over the amount the company has historically paid.

Also the lower corporate tax rates and limitations under deductibility of interest implemented by the Tax Act decreases the value of future interest expense deductions. In light of the Tax Act, we are presently evaluating our capital structure, including a possible redemption of our convertible debentures.

Finally, since mid-2017, we have used a tax rate of 25% to calculate our non-GAAP net income and non-GAAP earnings per share. Looking ahead, we believe a more reasonable estimate of the tax rate to calculate our non-GAAP net income and non-GAAP earnings per share is 22%. As a result, we will begin to use 22% non-GAAP tax rate when reporting first quarter 2018 non-GAAP results.

With respect to full year 2018 guidance, revenue is expected to be in the range of \$1,195,000,000 to \$1,215,000,000. Non-GAAP operating margin is expected to be between 65.5% and 66.5%. Our non-GAAP interest expense and non-GAAP nonoperating income net is expected to be an expense of between \$115 million and \$122 million. Capital expenditures are expected to be between \$45 million and \$55 million. And finally, cash taxes are expected to be between \$70 million and \$90 million. This 2018 cash tax guidance reflects our best estimate of the various impacts of the Tax Act, including the impacts of our intended repatriation.

In summary, the company continued to demonstrate sound financial performance during the fourth quarter and the full year 2017. Now I'll turn the call back to Jim for his closing remarks.

D. James Bidzos, VeriSign, Inc. - Founder, President, CEO & Executive Chairman [5]

Thank you, George. 2017 was another solid year for VeriSign. There was further expansion of the domain name base and revenues. We generated an efficiently returned value to shareholders. We renewed the .net registry agreement for another 6 years until 2023. And we marked more than 20 years of uninterrupted availability of the VeriSign DNS for .com and .net.

Finally, earlier this year, we disclosed that the U.S. Department of Justice notified us that it closed its investigation regarding the .web top level domain. We continued our work to protect, grow and manage the business while continuing our focus on providing long-term value to our shareholders. We think our focus on profitable growth and disciplined execution will extend the long trend lines of growth in our top and bottom line and allow us to continue our consistent track record of generating and returning value to our shareholders in the most efficient manner.

We will now take your questions. Operator, we're ready for the first question.

=====
=====
Questions and Answers

Operator [1]

(Operator Instructions) We'll take our first question from Gregg Moskowitz with Cowen and Company.

Gregg Steven Moskowitz, Cowen and Company, LLC, Research Division - MD and Senior Research Analyst [2]

Jim, in the third quarter, the top 5 keyword searches for .com involved some form of cryptocurrency and/or blockchain. How instrumental do you think crypto has been in driving .com gross adds over the past several months or so?

D. James Bidzos, VeriSign, Inc. - Founder, President, CEO & Executive Chairman [3]

I don't think I have at the tip of my fingers the precise numbers. But I don't believe that they're material. I have seen a lot of activity in the secondary markets of trading in .com registrations that have crypto in them. But I don't think that there any meaningful direct contributions to new .net registrations in the numbers that we reported. And there's just a huge amount of interest in cryptocurrencies and Bitcoin, as you know, now that it's hit the exchanges. And what we've seen, I would say specifically, is a spike in value in the secondary market of .com names with any multiple keyword names with crypto in them.

Gregg Steven Moskowitz, Cowen and Company, LLC, Research Division - MD and Senior Research Analyst [4]

Okay. And then George, you had told us that you would spend more on marketing in Q4 and you did. And I know I'm dating myself here, but I would have go all the way back to 2007 to find another quarter where sales and marketing expense grew this much in absolute dollars on a sequential basis. So can you maybe just sort of give a little bit more color on the activities that you undertook in Q4 as well as what the sales and marketing strategy is for 2018?

George E. Kilguss, VeriSign, Inc. - Executive VP & CFO [5]

Sure. I mean, keep in mind though on an annual basis, our total marketing expense is pretty flat year-over-year. As I talked about a few quarters ago, we clearly look to execute our marketing programs that we think drive the best return for the company. And sometimes those programs we have to pivot during the year. And we had lighter marketing expenses, as we talked about, in the middle of 2017. And we finally got some programs coming out. We did make a little bit of a shift away from some registrar marketing programs to more direct marketing programs. We did do some of our advertising for our brands, both .com and .net, both domestically and abroad. And so we've been doing a little bit more direct marketing as a result of that. And those programs came out in the fourth quarter and will continue to run in the first half of 2018 here.

Gregg Steven Moskowitz, Cowen and Company, LLC, Research
Division - MD and Senior Research Analyst [6]

Okay, great. And then just one last question for me. Can you expand on why your cash taxes are so much higher in 2018? And as part of that, is the (inaudible) tax shield associated with the convert, is that less valuable going forward under the tax reform?

George E. Kilguss, VeriSign, Inc. - Executive VP & CFO [7]

Yes. So as mentioned in my prepared remarks, from a GAAP perspective, we made an accrual for the onetime transition tax. And that was partially offset by the reevaluation of our DTLs. So from a GAAP perspective, that was about \$9 million. From a cash tax perspective, as you mentioned, we're guiding to \$70 million to \$90 million in 2018. And that's up from about \$28 million this year. As mentioned, this reflects a variety of the impacts from the Tax Act, including the impacts of our intended repatriation. And while I don't think it makes sense to go through all the puts and takes of the tax calculation, I think the big items impacting the company from a cash tax perspective going forward are really the tax on foreign earnings, the U.S. tax on foreign earnings, and then the U.S. limitations on interest deductions, partially offset by the U.S. tax rate. But that amount does include impacts as well from our repatriation. As far as interest limitations, yes, tax reform clearly has diminished benefits for interest expense. There are some limitations there. And as a result, as I've mentioned, we are looking at our entire capital structure. We're looking at it. We'll be evaluating it. And as our converts are part of that capital structure, we look at them as well.

Operator [8]

We'll go next to Rob Oliver with Baird.

Matthew Steven Lemenager, Robert W. Baird & Co. Incorporated,
Research Division - Junior Analyst [9]

This is Matt Lemenager on for Rob. I realize it might be early, but just looking to see if there's any plan around .web, maybe things around go-to-market, how that might look any different than .com. And would you be doing extra marketing just to get that brand up and going? Any early thoughts? I realize no expectation on the guidance or anything. But any early thoughts?

D. James Bidzos, VeriSign, Inc. - Founder, President, CEO & Executive Chairman [10]

Yes, I think it's just too early at this point to discuss any details about go-to-market or launch plans for .web. There's an ICANN process that we're now engaged in with the Department of Justice having closed their investigation of .web. And when that process completes, I'm sure we'll have a lot more to say. But at this point, it would just be premature.

Matthew Steven Lemenager, Robert W. Baird & Co. Incorporated, Research Division - Junior Analyst [11]

Got it. And on the expectations for domain growth 2% to 3% for this year, any difference in the expectations for U.S. versus international? I know you've talked about strength in the economy in the United States and that the China phenomenon has kind of rolled off. I didn't know if any of the international markets were starting to come back.

George E. Kilguss, VeriSign, Inc. - Executive VP & CFO [12]

So in 2017, we absolutely have seen a good U.S. market. But having said that, European markets have also done well for us. Our expectation is that we'll see good growth in both U.S. and international markets next year. But we don't guide to the specific markets or their performances.

Matthew Steven Lemenager, Robert W. Baird & Co. Incorporated, Research Division - Junior Analyst [13]

Got it. And the last question I had on the repatriation. Would it be fair to assume that the primary use case would be for share repurchases? Or do you think there would be other avenues that you would look to deploy the repatriated cash?

George E. Kilguss, VeriSign, Inc. - Executive VP & CFO [14]

Well, I think in general, I don't think there will be a change in how we approach capital allocation. As always, we look at the needs of the business using our strategic framework of protect, grow and manage. And we do what we think is best for the business. As you may recall, our strategic framework includes making sure we maintain an adequate amount of liquidity for the business, both today and for tomorrow, what we think the needs are to continue to invest in our

protect mission for the network and our business for today and tomorrow, to invest in technology and innovation that we think will drive profitable growth of the business. And then once we accomplish those goals, we then evaluate how much excess capital we think is appropriate to return to shareholders and in what form. So we think that framework, which we've been using for the past 6 years, has served us well. And we'll continue to use that framework as it relates to the capital of the corporation.

Operator [15]

And we'll go next to Sterling Auty with JPMorgan.

Ugam Kamat, JP Morgan Chase & Co, Research Division - Analyst [16]

This is Ugam Kamat on for Sterling Auty. So Jim, you mentioned that the renewal rate out of China was disappointing, especially the second-time renewal rate. So just wondering what was the renewal rate especially in China? Like you gave the blended renewal rate, but just wondering, what was the renewal rate in China? And how many names are left? And what would be the future renewal rates that you expect to come out from this region?

D. James Bidzos, VeriSign, Inc. - Founder, President, CEO & Executive Chairman [17]

Yes. So we don't guide renewal rates by country. As mentioned, the cohort that was originally from the 2015 China surge, that cohort was about 1.4 million names coming into the year. And that renewal rate was probably, on a blended basis, maybe about 40% for that cohort. So we did have a portion of those names come out. However, we were anticipating that. We did comment on that last quarter. And that was in the guidance that we gave and we fell within the range of the guidance. But most of that cohort now is, I would say, through the system for many material names. And I would expect renewal rates to go back to more normalized rates.

Ugam Kamat, JP Morgan Chase & Co, Research Division - Analyst [18]

All right, perfect. That's helpful. And secondly, since we are coming closer to the Cooperative Agreement date in October, any particular update that you can give us on the process that you're having with the Department of Commerce? Or any particular survey that they

might have done to allow the renewal of Cooperative Agreement or just allow it to expire?

D. James Bidzos, VeriSign, Inc. - Founder, President, CEO & Executive Chairman [19]

Well, so first of all, I guess just to remind everybody on the call, in late September 2016, NTIA approved the .com Registry Agreement to be extended to November 30, 2024. At that time, NTIA chose not to extend the Cooperative Agreement. So it is currently scheduled to terminate on November 30 in 2018. Whether to extend that Cooperative Agreement or not is NTIA's decision and their process, and so can't comment on that. They do have the right to conduct a public interest review for the sole purpose of determining whether or not they'll exercise their right to extend the term of the Cooperative Agreement. Now one update that is new since the last time we talked is that David Redl was confirmed as the Assistant Secretary and Administrator of the NTIA in November of 2017. Unfortunately, that's all the update I can give you there. We can't comment on Mr. Redl's appointment or the NTIA in regard to their process related to the Cooperative Agreement. That's theirs, not ours. As soon as we can, we'll share whatever information we do have though.

Operator [20]

And we'll take our last question from Walter Pritchard with Citi.

Walter H Pritchard, Citigroup Inc, Research Division - MD and U.S. Software Analyst [21]

I think all my questions have been answered. Just one I wanted to make sure I clarified. On the tax scenario that you've outlined, the \$70 million to \$90 million and the tax rate going down to 22%, does that contemplate redeeming the convert? And if not, does the redeeming of the convert potentially have additional tax impact beyond what you talked about?

George E. Kilguss, VeriSign, Inc. - Executive VP & CFO [22]

So Walter, as I mentioned, we're just evaluating our convertible debentures in conjunction with evaluating our capital structure. So we're still looking at that. So our guidance is really based on where we see it today of what we're doing. It doesn't involve looking at any changes from that fact. We're still evaluating it.

Walter H Pritchard, Citigroup Inc, Research Division - MD and U.S.
Software Analyst [23]

And then does that \$70 million to \$90 million cash tax rate, it sounds like that doesn't mean most companies are talking about having an 8-year (inaudible)

George E. Kilguss, VeriSign, Inc. - Executive VP & CFO [24]

Yes. So if you're referring to -- so I think you're referring to the transition tax. The Tax Act allows you to look at your taxes, what they would have been with the Tax Act or without. So it's a with-or-without calculation. And for us, when we do that calculation, we expect to actually defer that amount of tax over the 8 years allowed by the Tax Act.

Walter H Pritchard, Citigroup Inc, Research Division - MD and U.S.
Software Analyst [25]

Okay. So the \$70 million to \$90 million, would that be a pretty good number for the next, say, several years that would include that 8-year period, too?

George E. Kilguss, VeriSign, Inc. - Executive VP & CFO [26]

So as we mentioned previously, we don't guide to a long-term cash tax rate. However, I would say in the short term, we expect that, that rate to still be below our GAAP tax rate as we use up foreign tax credits. At the end of 2017, we had about \$122 million of foreign tax credits. And we now expect to utilize those over the next 2 to 3 years.

Walter H Pritchard, Citigroup Inc, Research Division - MD and U.S.
Software Analyst [27]

Okay. So sorry to be -- just to keep going on this. But the \$70 million to \$90 million does include still the benefits of some of those foreign tax credits. And then those would expire at some point here?

George E. Kilguss, VeriSign, Inc. - Executive VP & CFO [28]

That's correct.

Walter H Pritchard, Citigroup Inc, Research Division - MD and U.S.
Software Analyst [29]

Okay. Any just detail on how much per year you can use up that \$122 million?

George E. Kilguss, VeriSign, Inc. - Executive VP & CFO [30]

Like I said, they'll be probably fully utilized over the next 3 years. So obviously, you'll use them up -- use more of them up in year 1 and 2 and probably less in year 3. But the utilization of FTCs, to be perfectly candid, is somewhat complex and is dependent on a variety of factors. So it's a little bit -- clearly, I have an idea of what they'd be. But it's probably premature to give that number because they can change over time depending on how foreign income is recognized overseas.

Operator [31]

And at this time, I would like to turn the call back over to David Atchley for any additional or closing remarks.

David Atchley, VeriSign, Inc. - VP & Corporate Treasurer [32]

Thank you, operator. Please call the Investor Relations department with any follow-up questions from this call. Thank you for your participation. This concludes our call. Have a good evening.

Operator [33]

And again, this does conclude today's call. You may now disconnect.

EXHIBIT C-52

PART ONE -- POLICY DEVELOPMENT PROCESS

Last Updated:31 August 2009

Date:

01 August 2007

GNSO new TLDs Committee

Part B: Final Report**Introduction of New Generic Top-Level Domains****Table of Contents**

PART ONE -- POLICY DEVELOPMENT PROCESS

PART TWO -- PARTICIPATION TABLE

PART THREE – INTERNATIONALISED DOMAIN NAMES WORKING GROUP REPORT (IDN-WG)

PART FOUR – RESERVED NAMES WORKING GROUP FINAL REPORT

PART FIVE – PROTECTING THE RIGHTS OF OTHERS WORKING GROUP FINAL REPORT

PART SIX – GOVERNMENTAL ADVISORY COMMITTEE PUBLIC POLICY PRINCIPLES

PART SEVEN – CONSTITUENCY IMPACT STATEMENTS

PART EIGHT -- REFERENCE MATERIALS

Return to Final Report: Part A

1. This section provides detailed information about the progress of the policy development process and the documentation produced throughout the series of teleconferences and face-to-face consultations that have taken place since December 2005, through 2006 and 2007. All of the meetings were open to observers and many different stakeholders attended the meetings taking an active part in the discussion. In addition, all

meetings were open to remote participation by teleconference and file-sharing technology for some meetings. Participation data is provided in Part Two below.

2. The first step of the policy development process was the release of the *Issues Report* on 5 December 2005. The *Report* sets out an early collation of issues that the GNSO wished to take into account in developing the Terms of Reference for future rounds. For example, the selection criteria used in previous application rounds for new top-level domains were used to guide the development of Term of Reference Two in this PDP. An evaluation of the selection criteria and methods used in the re-bidding of the .org and .net registry contracts was also conducted. The *Issues Report* contained Staff Recommendations about potential terms of reference and, in the main, those Recommendations were adopted by the GNSO Council. The *Report* is found at <http://gns0.icann.org/issues/new-gtlds/gns0-issues-rpt-gtlds-05dec05.pdf>.

3. A Public Comment Period was launched on 6 December 2005 to solicit input from the ICANN community about the proposed Terms of Reference (found at <http://www.icann.org/announcements/announcement-06dec05.htm>). The Public Comment Period ran until 31 January 2006. For this PDP public comment periods have been used in different ways than in the past. In general, public comment calls have been far more targeted and highly structured to get responses on particular areas of concern to the Committee. This was a successful initiative enabling information to be collected in a consistent way that improved the quality of subsequent *Reports*. The archive of comments can be found at <http://forum.icann.org/lists/new-gtlds-pdp-comments/>).

4. In addition to a Public Comment Period, a *Call for Expert Papers* was announced on 3 January 2006 (found at <http://icann.org/announcements/announcement-03jan06.htm>). The request for input was advertised widely in the international press and yielded eleven responses from a diverse range of stakeholders. The authors of the papers were invited to present their papers and participate in a question and answer session at the 23 - 25 February 2006 Washington meeting. A full listing of all the inputs, including the *Expert Papers*, can be found at <http://gns0.icann.org/issues/new-gtlds/new-gtld-pdp-input.htm>.

5. The ICANN Board has been regularly updated on the progress of and taken a keen interest in the work of the new TLDs Committee. For example, the Board meeting of 10 January 2006 shows discussion within the Board about its involvement in new TLDs policy development process (found at <http://www.icann.org/minutes/minutes-10jan06.htm>). The Board passed a resolution at the March 2006 Wellington meeting urging the Committee to work as quickly and efficiently as possible.

6. A draft *Initial Report* was released on 19 February 2006 (found at <http://icann.org/topics/gns0-initial-rpt-new-gtlds-19feb06.pdf>) and a request for public comments was announced at the same time that was open between 20 February 2006 and 13 March 2006. The archives for those comments are found at <http://forum.icann.org/lists/new-gtlds-pdp-initial-report/>. The draft *Initial Report* was used to facilitate discussion at subsequent Committee meetings and to give some guide to the broader community about the Committee's progress in its early stages.

7. The GNSO's new TLDs Committee held a three day meeting in Washington DC between 23 and 25 February 2006. The meeting notes can be found on the GNSO's Committee archive at (<http://forum.icann.org/lists/gtld-council/msg00030.html>). A central element of the discussion focused on re-visiting ICANN's Mission and Core Values to ensure that the deliberations on the Terms of Reference were tightly constrained. The substantive discussion over the three-day meeting also included discussion on whether to introduce new top-level domains (<http://forum.icann.org/lists/gtld-council/msg00027.html>) and potential selection criteria which could be used in a new round of top-level domain applications (<http://forum.icann.org/lists/gtld-council/msg00026.html>).

8. Analysis of the lessons learned from previous TLD rounds was included in the broader discussions held in Washington DC (<http://forum.icann.org/lists/gtld-council/msg00030.html>). In addition to discussing general selection criteria, detailed discussion of technical requirements also took place (<http://forum.icann.org/lists/gtld-council/msg00028.html>). Following the Washington meetings, it was clear that further information about technical criteria was necessary to inform the Committee's work. On 15 March 2006 a formal call was made for additional information on technical criteria (found at <http://gnso.icann.org/issues/new-gtlds/tech-criteria-15mar06.htm>). No responses were received to that specific call but, in the resulting recommendations, particular attention has been paid to addressing relevant technical standards across the full range of registry operations, including those that relate to Internationalised Domain Names.

9. In response to the Committee's work and to discussions at the March 2006 Wellington meeting, the Board indicated its intention to facilitate the implementation of new top-level domains (found at <http://www.icann.org/minutes/minutes-31mar06.htm>.)

10. The new TLDs Committee met in Brussels between 11 and 13 May 2006 to discuss, in further detail, the work that had been undertaken on refining the selection criteria and allocation methods. In addition, a full day was spent on discussing policies for contractual conditions with a special presentation from ICANN's Deputy General Counsel. The Committee has archived, on 18 May 2006, records of the Brussels discussion and output from the meeting can be found at <http://forum.icann.org/lists/gtld-council/msg00133.html>

11. At the Brussels meeting, a revised work plan was devised (found at <http://forum.icann.org/lists/gtld-council/msg00130.html>) which include a high level commitment to producing an *Initial Report* in time for discussion at ICANN's June 2006 Marrakech meeting.

12. A draft *Initial Report* was released on 15 June 2006 (found at <http://gnso.icann.org/issues/new-gtlds/issues-report-15jun06.pdf>) and further discussion took place on the Committee's mailing list prior to the Marrakech meeting.

13. The ICANN Board meeting of 30 June 2006 showed, again, the Board's interest in facilitating the policy development process on new top-level domains, particularly in encouraging ongoing discussions with the GAC. (found at <http://www.icann.org/minutes/resolutions-30jun06.htm>). After inputs from the Marrakech

meeting a final version of the *Initial Report* was released on 28 July 2006 (found at <http://gnso.icann.org/drafts/newgtlds-issues-report-01-28jul06.htm>).

14. The Committee conducted another set of face-to-face consultations in Amsterdam between 29 and 31 August 2006 to further refine the Committee's findings and to develop a set of draft *Recommendations*. Prior to the Amsterdam meeting, a comprehensive public comment period was conducted. These public comments (found at <http://forum.icann.org/lists/gtld-council/msg00189.html>) were used as working materials for the Committee to consider, in addition to Constituency Statements, the previous set of Expert Papers and comprehensive commentary for a wide variety of observers to the meetings.

15. The Committee met with the GAC on four occasions during the course of the consultations – in Wellington, Marrakech, Sao Paulo and San Juan – where progress on the Committee's work was shared with GAC members. In addition, at the San Juan meeting, GAC members were given a presentation about how the GAC's Public Policy Principles had been incorporated directly into the Committee's principles, recommendations and implementation guidelines.

16. Considering all the materials derived from the face-to-face meetings, discussions on email lists, expert materials and expert papers, on 14 September 2006 a set of draft *Recommendations* was released by the Committee for broader consideration (found at <http://gnso.icann.org/issues/new-gtlds/recom-summary-14sep06.htm>).

17. Between 14 September and 5 October 2006 email discussion took place that improved and clarified the language of the *Recommendations* and ensured that Constituencies had sufficient time to rework their recommendations where necessary.

18. On 5 October 2006, the Committee conducted a two-hour teleconference to discuss the draft *Recommendations* (the MP3 recording can be found at <http://forum.icann.org/lists/gtld-council/msg00224.html>). The purpose of the meeting was to confirm that the *Recommendations* reflected the intentions of the Committee and to conduct further work on refining elements of the *Recommendations*, particularly with respect to the selection criteria and allocation methods to resolve contention between string applications.

19. On 11 October 2006, the GNSO Committee Chairman and GNSO Chair, Dr Bruce Tonkin, sent formal correspondence to the Chair of the Governmental Advisory Committee and the Chair of GAC Working Group I, requesting the GAC's assistance with the public policy impacts of the introduction of new TLDs (found at <http://gnso.icann.org/mailing-lists/archives/council/msg02891.html>).

20. Based on the substantive nature of the Committee's email traffic on the draft *Recommendations*, a further update was released to the Committee on 18 October 2006 (found at <http://forum.icann.org/lists/gtld-council/msg00234.html>) for consideration whilst the drafting of the *Final Report* takes place.

21. The Committee met again at ICANN's Sao Paulo meeting in December 2006 and continued their work with the release of an updated version of the *Final Report* (found at <http://gnso.icann.org/drafts/GNSO-PDP-Dec05-FR13-FEB07.htm>).

22. From February 2007 until May 2007 a series of working groups continued with separate streams of work. The Internationalised Domain Names Working Group (IDN-WG) released its *Final Report* on 22 March 2007

(found online here <http://gnso.icann.org/drafts/idn-wg-fr-22mar07.htm>). The Reserved Names Working Group (RN-WG) released its first report on 16 March 2007 (found online here <http://gnso.icann.org/drafts/rn-wg-fr19mar07.pdf>) and its *Final Report* on 23 May 2007 (found online here <http://gnso.icann.org/issues/new-gtlds/final-report-rn-wg-23may07.htm>). The Protecting the Rights of Others Working Group (PRO-WG) completed its *Final Report* on 1 June 2007 (found online here <http://gnso.icann.org/drafts/GNSO-PRO-WG-final-01Jun07.pdf>).

23. After the June 2007 San Juan meeting, the Committee continued to meet on a weekly basis with small sub-groups working on, in particular, Recommendation 6 and 20 and more detailed implementation guideline

24. The updated version of the draft *Final Report: Part A* was released on 30 July for a Committee "last call" on the package of recommendations.

25. The following timetable was released in conjunction with the updated draft to enable the completion of the Committee's work prior to the ICANN Board meeting on 2 November 2007.

- i. Committee comment 30 July to 6 August
- ii. Committee meeting 6 August
- iii. Public comment period begins 9 August
- iv. Public comment period ends 29 August
- v. Synopsis of public comments released to Committee for consideration
- vi. GNSO Council vote on recommendations

26. After the GNSO Council's vote, the Board Report can be prepared.

GAC PRINCIPLES REGARDING NEW gTLDs

Presented by the Governmental Advisory Committee

March 28, 2007

1.1 The purpose of this document is to identify a set of general public policy principles related to the introduction, delegation and operation of new generic top level domains (gTLDs). They are intended to inform the ICANN Board of the views of the GAC regarding public policy issues concerning new gTLDs and to respond to the provisions of the World Summit on the Information Society (WSIS) process, in particular *"the need for further development of, and strengthened cooperation among, stakeholders for public policies for generic top-level domains (gTLDs)"*[2] and those related to the management of Internet resources and enunciated in the Geneva and Tunis phases of the WSIS.

1.2 These principles shall not prejudice the application of the principle of national sovereignty. The GAC has previously adopted the general principle that the Internet naming system is a public resource in the sense that its functions must be administered in the public or common interest. The WSIS Declaration of December 2003 also states that *"policy authority for Internet-related public policy issues is the sovereign right of States. They have rights and responsibilities for international Internet-related public policy issues."*[3]

1.3 A gTLD is a top level domain which is not based on the ISO 3166 two-letter country code list[4]. For the purposes and scope of this document, new gTLDs are defined as any gTLDs added to the Top Level Domain name space after the date of the adoption of these principles by the GAC.

1.4 In setting out the following principles, the GAC recalls ICANN's stated core values as set out in its by-laws:

- a. Preserving and enhancing the operational stability, reliability, security, and global interoperability of the Internet.
- b. *Respecting the creativity, innovation, and flow of information made possible by the Internet by limiting ICANN's activities to those matters within ICANN's mission requiring or significantly benefiting from global coordination.*
- c. *To the extent feasible and appropriate, delegating coordination functions to or recognizing the policy role of other responsible entities that reflect the interests of affected parties.*
- d. *Seeking and supporting broad, informed participation reflecting the functional, geographic, and cultural diversity of the Internet at all levels of policy development and decision-making.*
- e. *Where feasible and appropriate, depending on market mechanisms to promote and sustain a competitive environment.*
- f. *Introducing and promoting competition in the registration of domain names where practicable and beneficial in the public interest.*
- g. *Employing open and transparent policy development mechanisms that (i) promote well-informed decisions based on expert advice, and (ii) ensure that those entities most affected can assist in the policy development*

process.

h. Making decisions by applying documented policies neutrally and objectively, with integrity and fairness.

i. Acting with a speed that is responsive to the needs of the Internet while, as part of the decision-making process, obtaining informed input from those entities most affected.

j. Remaining accountable to the Internet community through mechanisms that enhance ICANN's effectiveness.

k. While remaining rooted in the private sector, recognizing that governments and public authorities are responsible for public policy and duly taking into account governments' or public authorities' recommendations.

2. Public Policy Aspects related to new gTLDs

When considering the introduction, delegation and operation of new gTLDs, the following public policy principles need to be respected:

Introduction of new gTLDs

2.1 New gTLDs should respect:

a) The provisions of the Universal Declaration of Human Rights^[5] which seek to affirm "*fundamental human rights, in the dignity and worth of the human person and in the equal rights of men and women*".

b) The sensitivities regarding terms with national, cultural, geographic and religious significance.

-

2.2 ICANN should avoid country, territory or place names, and country, territory or regional language or people descriptions, unless in agreement with the relevant governments or public authorities.

2.3 The process for introducing new gTLDs must make proper allowance for prior third party rights, in particular trademark rights as well as rights in the names and acronyms of inter-governmental organizations (IGOs).

2.4 In the interests of consumer confidence and security, new gTLDs should not be confusingly similar to existing TLDs. To avoid confusion with country-code Top Level Domains no two letter gTLDs should be introduced.

Delegation of new gTLDs

2.5 The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.

2.6 It is important that the selection process for new gTLDs ensures the security, reliability, global interoperability and stability of the Domain Name System (DNS) and promotes competition, consumer choice, geographical and service-provider diversity.

2.7 Applicant registries for new gTLDs should pledge to:

a) Adopt, before the new gTLD is introduced, appropriate procedures for blocking, at no cost and upon demand of governments, public authorities or IGOs, names with national or geographic significance at the second level of any new gTLD.

b) Ensure procedures to allow governments, public authorities or IGOs to challenge abuses of names with national or geographic significance at the second level of any new gTLD.

2.8 Applicants should publicly document any support they claim to enjoy from specific communities.

2.9 Applicants should identify how they will limit the need for defensive registrations and minimise cyber-squatting that can result from bad-faith registrations and other abuses of the registration system

Operation of new gTLDs

2.10 A new gTLD operator/registry should undertake to implement practices that ensure an appropriate level of security and stability both for the TLD itself and for the DNS as a whole, including the development of best practices to ensure the accuracy, integrity and validity of registry information.

2.11 ICANN and a new gTLD operator/registry should establish clear continuity plans for maintaining the resolution of names in the DNS in the event of registry failure. These plans should be established in coordination with any contingency measures adopted for ICANN as a whole.

2.12 ICANN should continue to ensure that registrants and registrars in new gTLDs have access to an independent appeals process in relation to registry decisions related to pricing changes, renewal procedures,

service levels, or the unilateral and significant change of contract conditions.

2.13 ICANN should ensure that any material changes to the new gTLD operations, policies or contract obligations be made in an open and transparent manner allowing for adequate public comment.

2.14 The GAC WHOIS principles are relevant to new gTLDs.

3. Implementation of these Public Policy Principles

3.1 The GAC recalls Article XI, section 2, no. 1 h) of the ICANN Bylaws, which state that the ICANN Board shall notify the Chair of the Governmental Advisory Committee in a timely manner of any proposal raising public policy issues. Insofar, therefore, as these principles provide guidance on GAC views on the implementation of new gTLDs, they are not intended to substitute for the normal requirement for the ICANN Board to notify the GAC of any proposals for new gTLDs which raise public policy issues.

3.2 ICANN should consult the GAC, as appropriate, regarding any questions pertaining to the interpretation of these principles.

3.3 If individual GAC members or other governments express formal concerns about any issues related to new gTLDs, the ICANN Board should fully consider those concerns and clearly explain how it will address them.

3.4 The evaluation procedures and criteria for introduction, delegation and operation of new TLDs should be developed and implemented with the participation of all stakeholders.

N.B. The public policy priorities for GAC members in relation to the introduction of Internationalised Domain Name TLDs (IDN TLDs) will be addressed separately by the GAC.

ICANN GNSO new TLDS report 2007 – impact statement on behalf of the Commercial and Business Users Constituency (BC)

Background

Under ICANN existing guidelines within the Policy Development Process constituencies are asked under section 11c to provide: "an analysis of how the issue would affect each constituency, including any financial impact on the constituency".

There are innumerable uncertainties to the outcome of the PDP for TLDs including:

- the number of TLDs
- the nature of the TLDs
- the ability of ICANN to implement the safeguards discussed by the GNSO
- the number of those safeguards that reach consensus support within the GNSO
- the weight given by the Board to those safeguards.

For this reason the BC impact statement is necessarily written in terms of what the impact may look like given certain implementation scenarios.

A world of healthy competition and good faith

If the outcome is the best possible there will be a beneficial impact on business users from:

- a reduction in the competitive concentration in the Registry sector
- increased choice of domain names
- lower fees for registration and ownership
- increased opportunities for innovative on-line business models.

A world of increased opportunity for abusive competitive practises and fraud

There are a number of recommendations that seek to control abusive competitive practices as well as opportunities for consumer and business fraud such as cyber-squatting, typo-squatting, phishing and other forms of bad faith activity:

- graduated sanctions for contract compliance by Registries and Registrars
- avoiding confusingly similar domain names
- avoiding infringement of third party prior rights especially trade mark rights
- clear, quick and low-cost procedures for dispute resolution and the removal of bad faith registrations
- measures to prevent abuse of personal data or other commercially-valuable data.

If ICANN fails to implement the above recommendations there will be a negative impact on business users from:

- user confusion about site ownership and subsequent reputational damage to well-known businesses
- costs from diminished user confidence in e-commerce
- wasted costs of defensive registrations and online brand monitoring and enforcement

- wasted costs in legal and other actions to prevent avoidable criminal and cyber-squatting activity
- wasted costs and fraudulent losses to businesses and their customers from phishing and malware sites.

In the worst case scenario the negative impact on business users globally both directly and indirectly from reputation and confidence-related loss could be billions of dollars.

END

The Intellectual Property Constituency Impact Statement Regarding the Introduction of New gTLDs

	PRINCIPLE	IPC IMPACT
A	New generic top-level domains (gTLDs) must be introduced in an orderly, timely and predictable way.	To the extent that new gTLDs are introduced, the IPC strongly agrees with this principle, especially with respect to the need for an orderly introduction. However, the IPC still takes issue with the notion that new gTLDs must be introduced. Based on past experience, the addition of new gTLDs will likely result in numerous defensive registrations of otherwise unnecessary domain names by IP owners (which we note include all trademark owners such as Registrars, Registries, ISPs, etc.). Such an introduction not only places a significant burden and cost to IP owners, it results in absolutely no value whatsoever to IP owners, not to mention Internet users in general. In fact, while arguments are made that the introduction of new gTLDs will increase competition and thus lower registration costs for domain name owners, this is not the case. In October of 2007, Verisign will increase the registry fee for registering domain names for .com, .org and .net domain names. To the extent that there has been any rise in the registration of domain names, the IPC submits that this is not as a result of increased demand, but rather represents in large part the practice of defensive registrations or the abusive practices of domain name tasting, parking, kiting and the like. Finally, it is critical that appropriate mechanisms be in place to address conflicts that may arise between any proposed new gTLD and the IP rights of others.

The IPC believes that many of these concerns may be minimized by limiting any new gTLDs to those that offer a clearly differentiated domain name space with mechanisms in place to ensure compliance with the purposes of a chartered or sponsored TLD. Market differentiation will create a taxonomic or directory-style domain name structure, ensuring that certainty and confidence are part of the user experience and that registrants will find a unique name space where they want to be and in which they can easily be located.

<p>B Some new generic top-level domains should be internationalised domain names (IDNs) subject to the approval of IDNs being available in the root.</p>	<p>As mentioned above, appropriate mechanisms must be in place to address conflicts that may arise between any proposed new gTLD and the IP rights of others.</p>
<p>C The reasons for introducing new top-level domains include that there is demand from potential applicants for new top-level domains in both ASCII and IDN formats. In addition the introduction of new top-level domain application process has the potential to promote competition in the provision of registry services, to add to consumer choice, market differentiation and geographical and service-provider diversity. [Consistent with GAC Principle 2.6]</p>	<p>To begin with, there has been little empirical evidence that the introduction of new gTLDs has, in fact, promoted competition, or added to consumer choice or market differentiation, even though it might have the potential to do so. Any proposed new gTLD must be clearly targeted at a particular industry, economic sector, or cultural or language community, with a requirement that there is sufficient support or demand the relevant industry, economic, cultural or language sector to minimize the concerns set forth with respect to Principal A above. The mere introduction of competition for registry services must be outweighed by the burdens and costs to IP owners and Internet users et forth with respect t Principal A above. ICANN does not need to and should not encourage registry competition in the absence of a clear need for a new gTLD, without which will only create a gTLD replete with defensive registrations and no added value to consumers.</p>
<p>D A set of technical criteria must be used for assessing a new gTLD registry applicant to minimise the risk of harming the operational stability, security and global interoperability of the Internet.</p>	<p>IPC agrees that technical and operational stability are imperative to any new gTLD introduction.</p>

E	A set of capability criteria for a new gTLD registry applicant must be used to provide an assurance that an applicant has the capability to meet its obligations under the terms of ICANN's registry agreement.	ICANN should be in a position to inquire whether a registry applicant will depend for its financial viability on defensive registrations, and if so to withhold approval of such applicant.
F	A set of operational criteria must be set out in contractual conditions in the registry agreement to ensure compliance with ICANN policies.	To be feasible, the terms of registry agreements should be aligned with policies adopted by ICANN and allow enforcement by ICANN of any non-compliance. The impact of the absence of such criteria or the lack of enforcement thereof on the IPC and Internet users in general is evidenced in ICANN's 2006 Consumer Complaint Analysis (see, http://www.icann.org/compliance/pie-problem-reports-2006.html) In particular, the lack of access to Whois data, or the false or inaccurate submission thereof, significantly impacts the time and resources of and costs to IP owners vis-à-vis the handling of infringements on the Internet.

NUMBER	RECOMMENDATION	IPC Comment
1	<p>ICANN must implement a process that allows the introduction of new top-level domains.</p> <p>The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process. [GAC2.5]</p>	<p>See comments with respect to Principle A.</p>
2	<p>Strings must not be confusingly similar to an existing top-level domain.</p> <p>In the interests of consumer confidence and security, new gTLDs should not be confusingly similar to existing TLDs. To avoid confusion with country-code Top Level Domains no two letter gTLDs should be introduced. [GAC2.4]</p>	<p>Agreed.</p>
3	<p>Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law.</p> <p>The process for introducing new gTLDs must make proper allowance for prior third party rights, in particular trademark rights as well as rights in the names and acronyms of inter-governmental organizations (IGOs). [GAC2.3]</p>	<p>Agreed, and as stated before, appropriate mechanisms must be in place to address conflicts that may arise between any proposed new string and the IP rights of others.</p> <p>While the IPC notes that GAC has made a specific reference to trademark rights, the IPC agrees with NCUC that such rights could include "freedom of expression" rights to the extent they are recognized and enforceable under generally accepted and internationally recognized principles of law provided that such rights do not infringe the existing legal rights of others as set forth in the first paragraph.</p>
4	<p>Strings must not cause any technical instability.</p>	<p>IPC agrees that technical and operational stability are imperative to any</p>

		new gTLD introduction.
5	<p>Strings must not be a Reserved Word.</p> <p>ICANN should avoid country, territory or place names, and country, territory or regional language or people descriptions, unless in agreement with the relevant governments or public authorities. [GAC2.2]</p>	<p>Agreed, to the extent that a Reserved Word is such that its use could cause technical or operational instability to the DNS.</p>
6	<p>Strings must not be contrary to generally accepted legal norms relating to morality and public order.</p> <p>New gTLDs should respect:</p> <p>a) The provisions of the Universal Declaration of Human Rights which seek to affirm "fundamental human rights, in the dignity and worth of the human person and in the equal rights of men and women".</p> <p>b) The sensitivities regarding terms with national, cultural, geographic and religious significance. [GAC2.1]</p>	<p>The IPC simply concurs with NCUC regarding the implementation issues raised by such a recommendation.</p>
7	<p>Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.</p>	<p>IPC supports this recommendation.</p>
8	<p>Applicants must be able to demonstrate their financial and organisational operational capability.</p> <p>An application will be rejected or otherwise deferred if it is determined, based on public comments or otherwise, that there is substantial opposition to it from among significant established institutions of the economic sector, or cultural or language community, to which it is targeted or which it is intended to support.</p>	<p>ICANN should be in a position, through various mechanisms, to determine that adequate resources exist to ensure that the applicant will not be dependent on defensive registrations for financial viability.</p> <p>Moreover, the IPC believes that the ability to reject an application as set forth in the second provision of this recommendation is an important feature for many members of the IPC (if there is substantial opposition, this raises the concerns set forth in our comments with respect to Principle A) and thus specifically and wholeheartedly endorses it.</p>

9	There must be a clear and pre-published application process using objective and measurable criteria.	IPC supports this recommendation.
10	There must be a base contract provided to applicants at the beginning of the application process.	IPC supports this recommendation.
11	Staff Evaluators will be used to make preliminary determinations about applications as part of a process which includes the use of expert panels to make decisions.	IPC supports this recommendation, and in doing so stresses the need for ICANN to continue to increase its staffing resources to maintain the security and stability of the DNS.
12	Dispute resolution and challenge processes must be established prior to the start of the process.	IPC supports this recommendation.
13	Applications must initially be assessed in rounds until the scale of demand is clear.	IPC supports this recommendation
14	The initial registry agreement term must be of a commercially reasonable length.	IPC supports this recommendation.
15	There must be renewal expectancy.	IPC supports this recommendation.
16	Registries must apply existing Consensus Policies and adopt new Consensus Polices as they are approved.	IPC supports this recommendation.
17	A clear compliance and sanctions process must be set out in the base contract which could lead to contract termination.	IPC supports this recommendation assuming the process will have "teeth" and assuming ICANN's continued monitoring and enforcement of registry contractual obligations.
18	If an applicant offers an IDN service, then ICANN's IDN guidelines must be followed.	IPC supports this recommendation.
19	Registries must use ICANN accredited registrars.	IPC supports this recommendation, assuming accreditation of registrars is held to high standards to avoid a "Register Fly" situation.

Implementation Guideline

IPC Comments

IG A	The application process will provide a pre-defined roadmap for applicants that encourages the submission of applications for new top-level domains.	To the extent that the submission of applications is encouraged, it should be because of the clear need for a new TLD.
IG B	Application fees will be designed to ensure that adequate resources exist to cover the total cost to administer the new gTLD process. Application fees may differ for applicants.	ICANN should be a position, through various mechanisms, to determine that adequate resources exist at an applicant to ensure that the applicant will not be dependent on defensive registrations for financial viability.
IG C	ICANN will provide frequent communications with applicants and the public including comment forums which will be used to inform evaluation panels.	IPC supports a requirement for public posting of string applications in internationally recognized publications and comment forums on applicants.
IG D	A first come first served processing schedule within the application round will be implemented and will continue for an ongoing process, if necessary. Applications will be time and date stamped on receipt.	Based on experience with the 'land rush' effect in domain name registration, it is apparent that first-come, first-serve simply does not work when many valid applications are received at the same time. IPC endorses the use of comparative evaluation methods to allocate new gTLDs. IPC strongly advises against the use of auctions or lotteries (that have nothing to do with the competence and financial viability of an applicant) to resolve competition between applicants.
IG E	The application submission date will be at least four months after the issue of the Request for Proposal and ICANN will promote the opening of the application round.	Given the potential impact any new gTLD will have on the IPC, ICANN must ensure that there will also be an adequate time period for public comment once applications are submitted.
IG F	If there is contention for strings, applicants may: i) resolve contention between them within a pre-established timeframe ii) if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application	i) Yes. ii) Yes. IPC prefers the market driven approach and encourages the sponsorship by a well defined community. However, the "priority" for a claimed community support

iii) **If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and;**

should be subject to Recommendation 8, second paragraph).

iii) Yes.

iv) **the ICANN Board may be used to make a final decision, using advice from staff and expert panels.**

iv) Yes.

IPC urges ICANN to ensure that its review of applications continues to be vigorous to keep a high standard to meet the selection criteria.

IPC urges caution in presenting any proposal that would eliminate those aspects of the gTLD application process providing for the security and stability of the DNS. This concerns not only technical matters, but those aspects of the Internet DNS and registry operation designed to safeguard users and the general public, including, e.g. the examination of proposals to protect intellectual property.

IG G

Where an applicant lays any claim that the TLD is intended to support a particular community such as a sponsored TLD, or any other TLD intended for a specified community, that claim will be taken on trust with the following exception:

Yes, again subject to Recommendation 8, second paragraph. IPC again strongly advises against the use of auctions or lotteries to resolve competition between applicants.

i) **the claim relates to a string that is also subject to another application and the claim to support a community is being used to gain priority for the application**

A comparative evaluation process will best meet ICANN's goals of fostering competition in registration services and encouraging a diverse range of registry service providers.

Under this exception, Staff Evaluators will devise criteria and procedures to investigate the claim.

IG I

External dispute providers will give decisions on complaints.

IPC supports the use of external dispute providers in the same manner as existing UDRP mechanisms, but simply notes that this should not be necessarily to the exclusion of the ICANN Board. There may be decisions that only the ICANN Board can resolve and such issues should not be overlooked or not dealt with

		simply because there is no external dispute provider available to resolve it.
IG J	An applicant granted a TLD string must use it within a fixed timeframe which will be specified in the application process.	IPC does not support the warehousing of TLD strings and supports a timeframe after applicant grant by which the TLD string must be operational.
IG K	The base contract should balance market certainty and flexibility for ICANN to accommodate a rapidly changing market place.	No comment
IG L	ICANN should take a consistent approach to the establishment of registry fees.	No comment
IG M	The use of personal data must be limited to the purpose for which it is collected.	Personal data collected by the registry should be used in ways that are not incompatible with the purposes for which it was collected, taking into account the full range of public policy considerations.
IG N	ICANN may establish a capacity building and support mechanism aiming at facilitating effective communication on important and technical Internet governance functions in a way which no longer requires all participants in the conversation to be able to read and write English.	IPC support multilingual effective communication on important Internet governance functions.
IG O	ICANN may put in place a fee reduction scheme for gTLD applicants from economies classified by the UN as least developed.	The IPC does not object <i>per se</i> to the use of a reduced fee scheme, but is skeptical that the positive effect of such a scheme will outweigh the negative impact of an underfunded applicant's inability to meet the selection criteria set by ICANN. We strongly recommend that any graduated fee structure be viable and significant enough to ensure compliance with appropriate registry selection criteria, as well as eliminate bad-faith actors who might seek to pay a minimal entry fee and then conduct unscrupulous activities.

IG P	ICANN may put in place systems that could provide information about the gTLD process in major languages other than English, for example, in the six working languages of the United Nations.	IPC supports the dissemination of information about the process in multiple languages.

ISPCP Constituency Statement on Impacts – New TLDs Page 1

Internet Service Provider and Connectivity Provider Constituency

Statement on Impacts – Introductions of New Top Level Domains

Overview

This is the ISPCP's statement on Impacts relating to the GNSO PDP Dec 05 – Introduction of New Top Level Domains – Consolidated Recommendations.

Section 1 – Principles

The ISPCP is highly supportive of the principles defined in this section of the PDP, especially with regards to the statement in (A):

"New generic top-level domains (gTLDs) must be introduced in an orderly, timely and predictable way."

Network operators and ISPs must ensure their customers do not encounter problems in addressing their e-mails, and in their web searching and access activities, since this can cause customer dissatisfaction and overload help-desk complaints. Hence this principle is a vital component of any addition sequence to the gTLD namespace.

The various criteria as defined in D,E and F, are also of great importance in contributing to minimize the risk of moving forward with any new gTLDs, and our constituency urges ICANN to ensure they are scrupulously observed during the applications evaluation process.

Section 2 – Proposed Recommendations

Here the ISPCP would like to make the following observations:

With regards to recommendation 2:

"Strings must not be confusingly similar to an existing top-level domain."

This is especially important in the avoidance of any negative impact on network activities.

The same applies to recommendation 4:

"Strings must not cause any technical instability."

The ISPCP considers recommendations 7 and 8 to be fundamental. The technical, financial, organizational and operational capability of the applicant are the evaluators' instruments for preventing potential negative

impact of a new string on the activities of our sector (and indeed of many other sectors). ISPCP Constituency Statement on Impacts – New TLDs Page 2

With regards to recommendation 13:

"Applications must initially be assessed in rounds until the scale of demand is clear."

This is an essential element in the deployment of new gTLDs, as it enables any technical difficulties to be quickly identified and sorted out, working with reduced numbers of new strings at a time, rather than many all at once. Recommendation 18 on the use of IDNs is also important in preventing any negative impact on network operators and ISPs.

Section 3 – Implementations Guidelines

We consider that guideline B, which states:

"Application fees may differ for applicants." ,

has some potential for negative impact on our sector. Our recollection is that this caveat was proposed with a view to reducing the application fee for certain categories of applicants, as a mechanism for avoiding exclusion based on application cost. Recent discussions in the GNSO have exposed some opinions that question the 'fairness' of the application fee (as it has been applied heretofore), on the grounds that it constitutes an entry barrier and disenfranchises legitimate potential applicants. The risk in proceeding with such a policy, is that it paves the way for hasty, last minute me-too applications, that have not really developed a solid project, and are simply trying their luck in getting a string...Perhaps when such arguments on exclusion are expounded, then the '.cat' sTLD can be pointed at as a prime example of a well-planned 'grass-roots' community TLD, which successfully applied for a string without any 'special' cost considerations. A potential profusion of hasty, ill-conceived new gTLDs is not something the ISPCP would view as beneficial to our sector.

Section 4 – IDN Working Group Areas of Agreement

The ISP community believes that areas of agreement 5, 6, and 9 are essential to the careful implementation of IDN TLDs. Without careful adherence to these recommendations, the implementation of IDNs may be successful on a technical level but will result in support and user confusion problems amongst the customers of ISPs. The ISPCP believes that these "Areas of Agreement" are essential to implement **prior** to any pursuit or proposal for IDN TLDs.

The ISP community also believes that the third "Area of Agreement" will be particularly difficult to implement in practice. The ISP community would be significantly impacted if the mechanism for gathering language community input on new IDN gTLD strings included a process that reached out to general, public Internet users through the community that provides access and connectivity. The ISPCP believes that a process for **"Language Community Input for Evaluation of new IDN gTLD Strings"** must be clearly established and vetted prior to allowing introduction of new IDN gTLD string. Failure to do so will impact many sectors, including the ISP and connectivity community. ISPCP Constituency Statement on Impacts – New TLDs Page 3

Section 5 – Reserved Name Working Group Recommendations

The ISP community accepts and agrees with the ICANN and IANA recommendations of Section 5 and finds no negative impact on ISP operations or support. The ISPCP is also support of, and finds no negative impacts for, the recommendation on symbols in new gTLDs.

The ISPCP community notes that recommendation 6 – reservation of single letters at the top level – is an important and critical recommendation to the ISP community. We believe that there are old resolvers in

operation in developing countries that would be severely impacted (e.g. not work correctly) in the presence of single letters at the top level. Specifically we believe that very old versions of BIND – potentially in use in very small, underfunded ISPs in economically challenged areas – may not process incoming resolution requests properly. The ISP community strongly supports recommendation 6 and believes that further research, at a later date, would be necessary before all impacts on ISPs and connectivity providers could be identified.

The ISPCP notes that an unavoidable impact of these recommendations is problems resulting from poorly written application layer software. The ISP community was severely impacted during the introduction of TLDs that had more than 3 ASCII characters. Many pieces of software incorrectly filtered these TLDs – most likely because software designers thought that there could not be TLDs whose length was greater than three characters. During the first 18 months of introduction of those TLDs there were many calls to ISPs to "fix" the problem with the new TLDs – despite the fact that the ISP and connectivity community were not responsible for issues at the application layer. We fully expect that some software and application designers have also made assumptions about TLDs that will be contradicted by the new recommendations in section 5. The unavoidable impact on ISPs and connectivity providers will mirror the problems that occurred during the introduction of TLDs such as .areo, .travel, or .coop. The ISP community suggests that the existence of so-called "Controversial Names" will also lead to potential regulatory or community pressure impacts on those who provide connectivity.

Section 6 – PRO Areas of Agreement

The ISPCP believes that the six "Areas of Agreement" in the area related to PRO will have no significant impact on ISPs or connectivity providers.

Section 7 – Areas of Broad Agreement

The ISPCP sees the Principles and Recommendations in this section, as reasonable safeguards to a measured and controlled expansion of the generic domain namespace, subject to the comments expressed above.

COMMENTS FROM ICANN'S NON-COMMERCIAL USERS CONSTITUENCY (NCUC)

The GNSO New TLD Committee's Draft Final Report On The Introduction Of New Generic Top Level Domains

GNSO Policy Development Process (GNSO PDP- Dec05)

12 June 2007

Overview

ICANN's Non-Commercial Users' Constituency (NCUC) appreciates this opportunity to comment on the GNSO Draft Recommendations for New GTLD Policy. While much progress has been made in recent weeks to resolve differences, much work remains before a consensus policy can be reached. The NCUC refers to its earlier constituency statements on the introduction of new gTlds, in particular, its statement of December 2006.^[1]

Our overall concern remains that despite platitudes to certain, transparent and predictable criteria—the GNSO's draft recommendations create arbitrary vetoes and excessive challenges to applications. There are some for incumbents; for trademark rights holders; for the easily offended, for repressive governments and worst of all, for "the public". It's a wolf in sheep's clothing. A recipe for irregularity, discretion and uncertainty in the new domain name space.^[2]

Among the more troubling proposals is the introduction of criteria in which strings must be 'morally' acceptable and not contrary to 'public order' (Recommendation #6). A concept borrowed from trademark law without precedent in the regulation of non-commercial speech.^[3] NCUC opposes any string criteria related to 'morality' or 'public order' as beyond ICANN's technical mandate.

Following recent discussions and revisions, the draft now refers^[4], in passing, to 'freedom of speech' rights, but concerns remain that a restriction on certain expression in part of the world will be extended outside that nation, possibly even to the entire world, through ICANN policy. If the GNSO disagrees with NCUC and ultimately include string criteria on morality and public order in its final report, then the recommendations should make clear that ICANN policy on this matter will not be more restrictive than the national law in which an applicant operates.

NCUC remains particularly troubled with Recommendation #20 that would allow the showing of a "substantial opposition" to entirely reject an application. It swallows up any attempt to limit string criteria to technical, operational, and financial evaluations. Recommendation #20 violates internationally recognized freedom of expression guarantees and insures that no controversial string application will ever be granted.

NCUC continues to reject Recommendation 11 and an expanded role of ICANN staff and outside expert panels to evaluate string criteria that is not technical, financial, nor operational.

Recommendation 1.

This is a laudable Recommendation and we support it. We support the broad introduction of many new gTLDs.^[5] We welcome the recognition that there are no technical constraints to introducing new gtlds and we hope to see consumer choice and demand served by a more robust approach in the future. ICANN's role is not to second guess the market place and decide which ideas are likely to succeed, but rather, to facilitate the process for the consumer's decision.

We refer to our concerns above as to the relationship between transparent, predictable criteria and vetoes over applications from unlimited sources.^[6] By the many grounds for challenge introduced, criteria will be created and applied *ex post facto* by those responsible for determining challenges. We are also concerned that "normally" in this context be defined more precisely. These issues must be addressed if the objectives of this Recommendation are to be achieved. In particular, a public opposition period is in direct contraction with Recommendation 1 and Implementation Principle A: "New generic top-level domains (gTLDs) must be introduced in an orderly, timely and predictable way."

Recommendation 2

It is beyond dispute that the DNS does not mirror trade mark regulation. Rather it grants plenary rights in words,^[7] without any of the compromises in the requirements for recognition, the limits to infringement and the defenses.^[8] This is best reflected in the serious issue in the DNS, whereby— *all* rights-holders now seek protection from dilutive use —when only truly famous marks are entitled to that protection in trade mark law.

The Recommendation is vague and thus a general veto for incumbents at the top level. We refer to Professor Christine Haight Farley's legal briefing paper (Attachment A) as to the meaning of confusingly similar. ^[9] We also refer to Professor Jacqueline Lipton's legal briefing paper (Attachment B) and its discussion regarding the limitations within trademark law on the rights of trademark holders to regulate speech.

The GNSO's draft recommendations cherry pick from trade mark law to create a pastiche of 'values' — divorced from context and structure.^[10] No account is taken of the legal requirement of use in commerce^[11] — yet trade mark law requires this. What about fair use, comment, nominative use, criticism, parody and tribute? All protected at law. Under the US Anti-Cybersquatting Consumer Protection Act (ACPA) for example, unless inherently distinctive (i.e. made up words), marks comprised of descriptive (ordinary dictionary) words

must acquire secondary meanings in order to become distinctive, otherwise famousness must be made out.^[12] Even then there is the safe harbor for fair and lawful use of another's trademark in a domain name.^[13] These balancing requirements are not reflected in the Recommendation—although lip service is paid to them.^[14] Defined criteria are absent and the promised balance and protection—a blank page open to numerous interpretations.

This Recommendation fails to adequately accommodate non-commercial speech and fair use of trademarks. Presumably what this all really means is that no "sucks" gTLDs (cyber-gripes) will ever be granted, nor indeed notdotcom, or anything that refers to or discusses an association with an existing trademark. Real competition often requires overlapping services that offer consumers choice.^[15]

Recommendation 3.

This ground for challenge is for rights holders. The language is vague and overbroad— *"existing legal rights of others."*^[16]

There is no recognition that trade marks (and other legal rights) have legal limits^[17]and — *defenses.*^[18] This Recommendation should also state that *such legal rights are subject to their legal limits* under their own national law. Without this—only half of trade mark law is adopted—the claimed rights, *but none of the defenses.*

After recent discussion and forthcoming revisions, the draft now refers to 'Freedom of Speech'.^[19] We welcome the amendment to the Recommendation, although believe it should use the term "Freedom of Expression" since that is the term used in international treaties and agreements. We remain concerned however that general references to Conventions and Treaties must be translated into real protection for the right of the public to make use of their legal rights to language and free speech.

Bizarrely, the level of support for the rights-holder seems to be thought to be determining—rather than the validity or extent of his claimed rights and the existence of defences:

"ii. An application may be rejected or deferred if it is determined, based on public comments or otherwise, that there is **substantial opposition** to it from significant established institutions of the economic sector, or cultural or language community, to which it is targeted or which it is intended to support. **ICANN staff will develop criteria and procedures for making this determination**, which may be based upon ICANN's procedures which were used to examine the 2003 round of sponsored TLD applications."

What is provided for here is discretion.^[20] This (now recommendation #20) cannot be meaningfully considered absent the criteria. We also oppose the *"substantial opposition"* formula—used again elsewhere. This is not predictable criteria and nor in this case is it of any relevance whatsoever to the nature and quality of the rights claimed and the existence of limits and defences. We refer to the objectives of Recommendation 1 and their contradiction with a public opposition period.

Recommendation 5

We oppose any attempts to create lists of reserved names. Even examples are to be avoided as they can only become prescriptive.

We are concerned that geographic names should not be fenced off from the commons of language and rather should be free for the use of all. This has been the traditional approach of trade mark law and remains the case in many nations.^[21] Moreover the proposed recommendation does not make allowances for the duplication of geographic names outside the ccTLDs—where the real issues arise and the means of resolving competing concurrent use and fair and nominative use.

Recommendation 6

Again, we welcome the amendment to include recognition of rights to Freedom of Expression.^[22] It is quite clear that this applies to single words and to strings, see *Taubman v. Webfeats* 319 F.3d 770 (6th Circuit 2003) ("*The rooftops of our past have evolved into the Internet domain names of our present. We find that the domain name is a type of public expression, no different in scope than a billboard or a pulpit, and [defendant] has a First Amendment right to express his opinion about [plaintiff], as long as his speech is not commercially misleading, the Lanham Act cannot be summoned to prevent it*).

We welcome the deletion of GAC Public Policy principle 2.1 from the GNSO's recommendations. We objected in the strongest possible terms to the vague standard of "*sensitivities*," which would subject all to the most restrictive views and had no place in the international legal order. GAC quoted selectively from the preamble to the 1948 Universal Declaration of Human Rights (UDHR) without reference to the enumerated specific right to Freedom of Expression in Article 19.^[23] The UDHR Art. 29(2) provides the only permitted limits.^[24] Similarly, the European Convention on Human Rights (ECHR) mandates Freedom of Expression should only be subject to limits prescribed by law^[25] and necessary in a democratic society for one of the enumerated purposes, see Article 10^[26] which also applies to commercial expression.^[27] Strict scrutiny is applied to any attempt to limit the free expression of an idea.^[28]

This Recommendation is borrowed from trade mark law^[29] and the French concept of '*ordre public*.'^[30] This is now subject to Article 10 ECHR^[31] and Freedom of Expression and the modern standard is high.^[32] While a few nations limit Free Expression by laws preventing hate speech, and incitement to violence, lowering the threshold to '*sensitivities*' is tantamount to mandating political correctness,^[33] forced hegemony, and is dangerous and to be resisted in every context. It does not matter how laudable the public policy objective, ICANN should remain content neutral.^[34]

We oppose any string criteria based on morality and public order. The context is not exclusively commercial speech so trade mark law is not an analogy as registration of marks on government Registers involves an element of state sanction^[35] that is not true of the DNS (though many seek it).^[36] There is no consensus on the regulation of morality in non-commercial speech in international law. We refer to the quote from *Taubman* (above)—the TLDs are billboards. *Democracies do not have laws requiring people to speak or behave morally*. Some nations do have such rules – undemocratic theocracies mainly.

ICANN should stick to its technical remit, which it risks grossly exceeding here. It should defer to applicable national laws on matters of public order and morality. Applicants should comply with the content laws in the countries in which they operate.^[37] The only real issue is, in any event, public order which is already served by nations' own laws on obscenity, fighting words, hate speech and incitement.

Please be aware that criticism, satire, parody of others and their beliefs are a fundamental tenant of Freedom of Expression^[38] which includes the right to offend. ICANN must ensure this *in practice* and mere references to Treaties and Conventions do not go far enough.

Recommendation 7

We record that this must be limited to transparent, predictable and minimum technical requirements only. These must be published. They must then be adhered to neutrally, fairly and without discrimination.

Recommendation 8

We support this recommendation to the extent that the criteria is truly limited to minimum financial and organizational operational capability. We remain concerned that in implementation of this recommendation, burdensome, expensive, and unnecessary criteria could be applied. All criteria must be transparent, predictable and minimum. They must be published. They must then be adhered to neutrally, fairly and without discrimination.

Recommendation 9

We strongly support this recommendation and again stress the need for all criteria to be limited to minimum operational, financial, and technical considerations. We also stress the need that all evaluation criteria be objective and measurable. We note that a 'public opposition process' as contemplated by Recommendation 20 and the use of ICANN staff and expert panels (Rec. #11) to evaluate any additional criteria will significantly detract from the goals of Recommendation 9.

Recommendation 11

The use of ICANN staff to evaluate applicant criteria should be limited to the function of determining whether objective operational, technical, and financial criteria are met only. ICANN staff should not be making evaluations about morality or other public policy objectives. We furthermore strongly oppose any use of "Expert" panels to adjudicate someone's right to use a domain name. Neither ICANN staff nor expert panels can provide any level of public accountability or legitimacy to adjudicate fundamental rights. This will only invite insider lobbying and gaming. Getting this issue right in the policy gives meaning to the rest of the recommendations. Without objectivity, neutrality, impartiality and accountability here –all of the other Recommendations are meaningless platitudes. This function should be tendered out – just as the validation process in the Sunrise Rights Protection Mechanism has been in some cases. Arms length contractors should perform this task.

Recommendation 12

Our position in relation to Recommendation 11 applies mutandis mutandi. This should be tendered to qualified professionals, selected by rota, at arms-length who apply certain criteria.

Recommendation 20

As discussed above, we strongly oppose the '*substantial opposition*' criteria for rejecting a domain. A public opposition period grants a veto on the creation of a domain for any vocal (or well-financed) minority, or for any competitor in the marketplace of ideas or services.

Recommendation #20 is *totally* incompatible with internationally recognized Freedom of Expression guarantees. Not even trade mark applicants must have everyone agree –they can still succeed in the face of an opposition. This Recommendation will insure that no controversial gtlds will exist and provides the means for killing the following types of applications for new gtlds:

- The Catholic Church objects to the Church of England's application for ".christian";
- China objects to an application of ".humanrights" in Chinese characters;
- A competing bank applies for a ".bank";
- Competing factions within the same community each claim to be the rightful owner;
- The Moral Majority objects to Planned Parenthood's application for ".abortion".

Recommendation 20 swallows up any attempt to narrow the string criteria to technical, operational and financial evaluations. It asks for objections based on entirely subjective and unknowable criteria and for unlimited reasons and by unlimited parties. ICANN should endeavor to keep the core neutral of these types of policy conflicts, both because they invite disaster for ICANN to become entwined in such issues, but also because such a policy is incompatible with freedom of expression rights. In short, Recommendation #20 is bad policy for the public and it is bad policy for ICANN.

ATTACHMENT A TO NCUC STATEMENT**LEGAL BRIEFING FROM LAW PROFESSOR CHRISTINE HAIGHT FARLEY****Professor of Law and Associate Dean for Faculty and Academic Affairs****American University Washington College of Law****RESPONSE TO THE DRAFT FINAL REPORT OF THE GNSO NEW GTLDS COMMITTEE ON THE INTRODUCTION OF NEW GENERIC TOP-LEVEL DOMAINS****June 6, 2007****Statement by Christine Haight Farley****Professor of law****American University Washington College of Law**

I want to begin by commending the GNSO New TLDs Committee on their policy recommendations and implementation guidelines for the introduction of new top-level domains. Through the Draft Final Report ICANN has explicitly stated its intention to make the GTLD application process open and transparent. The Draft Final Report has focused the issues and prompted a useful discussion. However, because I believe that the Draft Final Report includes a number of misstatements of domestic and international trademark law, I offer my legal analysis of these provisions.

I will address my remarks only to Recommendations 2, 3 and 6 as these recommendations rely heavily on trademark law concepts.

Before I make observations specific to these recommendations, I would like to offer some general remarks about the overall incongruence between trademarks and domain names. It is important to note at the outset this general lack of equivalence between trademark law and domain name policy. For instance, trademark law the world over is fundamentally based on the concept of territoriality. Thus trademark law seeks to protect regionally and market-based marks without implication for the protection or availability of that mark in another region. In contrast, domain names have global reach, are accessible everywhere and have implications for speech around the world.

Likewise, trademark protections hinge on what the relevant consumer thinks. Again, the law considers the viewpoints of consumers of a particular country, region or market, and acknowledges the variability of these viewpoints across regions. Domain names are not directed to a certain class or geographical region of consumers—they are accessible to all. Therefore in order to take account of consumers' viewpoints, it would be necessary to consider a global public. The resulting one-size-fits-all approach would be anathema to trademark law in that it would leave consumers confused in one place while unjustifiably denying speech rights in another.

Finally, trademarks rights are not applied abstractly of in theory, but are always considered in context. Thus, in order to determine whether the use of a mark by another would likely cause confusion, it is necessary to analyze how mark is used in commerce. Consideration will be given to what goods or services it is applied to, what design or color scheme accompanies the use, what the level of consumer sophistication is, what marketing channels are used, etc. Generic top-level domains are necessarily abstract. We can not know in advance what the content of a website hosted at a certain address will be. It is therefore impossible to make fine-tuned conclusions about the appropriateness of certain domains. For these reasons, I strongly urge domain name policy makers to consider carefully the appropriateness of importing trademark law concepts into domain name policy.

Recommendation 2: "Strings must not be confusingly similar to an existing top-level domain."

In this recommendation, the Committee seems to be collapsing two distinctly different concepts: confusing similarity and likelihood of confusion. The Draft Final Report states that "'confusingly similar' is used to mean that there is a likelihood of confusion."^[39] However, confusingly similar is a different legal standard than likelihood of confusion. The Committee appears to base this recommendation on Section 3.7.7.9 of the ICANN Registrar Accreditation Agreement, which it cites, implying that the legal standard is consistent. But that section of the ICANN Agreement explicitly employs the standard of infringement, which is likelihood of confusion.

A determination about whether use of a mark by another is "confusingly similar" is simply a first step in the analysis of infringement. As the committee correctly notes, account will be taken of visual, phonetic and conceptual similarity. But this determination does not end the analysis. Delta Dental and Delta Airlines are confusingly similar, but are not likely to cause confusion, and therefore do not infringe. As U.S. trademark law clearly sets out, the standard for infringement is where the use of a mark is such "as to be likely, when used on or in connection with the goods of such other person, to cause confusion, or to cause mistake, or to deceive..."^[40] While it may be that most cases of confusing similarity are likely to cause confusion, because the infringement standard takes account of how the mark is used, some cases of confusing similarity will not likely cause confusion.

In trademark law, where there is confusing similarity and the mark is used on similar goods or services, a likelihood of confusion will usually be found. European trademark law recognizes this point perhaps more readily than U.S. trademark law. As a result, sometimes "confusingly similar" is used as shorthand for "likelihood of confusion." However, these concepts must remain distinct in domain name policy where there is no opportunity to consider how the mark is being used. As applied to domain names, the only level of analysis is the first level of analysis: confusing similarity.

A related problem with this recommendation is that it equates domain names with trademarks as legally protectable properties. They are not. Trademarks are legally protected intellectual property because it is believed that the commercial use of a mark by another that is likely to cause confusion would injure consumers. Trademarks are legally protectable intellectual property also because their owners have developed valuable goodwill in the marks. Neither of these conditions of legal protection apply in the case of domain names.

Moreover, it is not clear what consumers would be confused about when encountering a string that is confusingly similar to an existing top-level domain. Because, unlike trademarks, strings are not inherently commercial communication means, it does not follow that consumers would incorrectly assume that the string would indicate source of origin. For example, <http://nmhm.washingtondc.museum/> does not suggest to consumers a connection with www.museum.com.

Beyond top-level domains, the Draft Final Report states that "strings should not be confusingly similar either to existing top-level domains like .com and .net or to existing trademark and *famous names*."^[41] The

Draft Final Report notes that the Committee relied on "a wide variety of existing law" to reach this standard. [42] And yet, "famous names" is not a legal category under any trademark law. International trademark law grants rights to "well-known marks"[43] and to "trade names,"[44] and U.S. law grants rights to "famous marks,"[45] but "famous names" seems to be a construct created by the Committee. Clearly, the domain name policy should protect only recognized intellectual property.

Recommendation 3: "Strings must not infringe the existing legal rights of others that are recognized or enforced under generally accepted and internationally recognized principles of law."

There are simply too many legally recognized trademarks in the world to make this recommendation workable. The United States alone registers well over 100,000 trademarks each year[46] and there were 1,322,155 active certificates of registration last year. In the United States, state registered trademarks and common law trademarks are also legally recognized. Protected trademarks include generic terms, geographical terms, names, and fanciful words.

Recommendation 6: "Strings must not be contrary to generally accepted legal norms relating to morality and public order."

The Committee is correct that a variety of trademark legislation restrict registrations based on some notion of offense or immorality. Unfortunately, the Committee seeks to extend this trademark law concept to domain name policy. This extension is not a natural one and presents many problems in its application.

Where these content restrictions exist in trademark law they are understood as merely restricting the registration of trademarks, not the use of such trademarks. That is, under certain legislation a trademark may be deemed unregistrable but the trademark owner may still use the trademark in commerce and may even have the benefit of legal protection over the trademark. The only restriction is that the trademark owner is denied certain benefits of registration.

The United States has such a content restriction in its trademark law.[47] What saves this legislation from violating the First Amendment is that it is not a restriction on use; it is merely a restriction on certain legal benefits deriving from federal registration. Any restriction of the use of the trademark would need to comply with the First Amendment. For instance, a mark may be restricted from use where it has been found to be obscene. Obscenity is a legal category whose threshold is well above the category of immoral or offensive speech.

The restriction of a generic top-level domain is more akin to the restriction on use than to the restriction on federal trademark registration. Because restricting offensive words in Generic top-level Domains would concomitantly restrict the ability of all speakers, commercial and non-commercial, ICANN should consider legal models outside of trademark law that better address the balance of speech rights.

This recommendation also illustrates the lack of fit between trademark law and domain name policy. Because trademark law is territorial in nature, legal standards reflect the consumer perspectives of the particular state. These standards are thus expected to vary from state to state as the way consumers respond to marks in one state may differ from the way consumers would respond to the same mark in another state. Trademark content restrictions are similar in approach. For instance, under U.S. trademark law, a mark will be refused registration if it is deemed to be scandalous or immoral when considered from the perspective of "a substantial composite of the general public." [48] The "public" is understood to mean the U.S. public. In order to extend this legal standard to domain names it would be necessary to consider a substantial composite of the general public of the entire world. This is obviously an unworkable standard.

Moreover, trademark law standards are always applied in the context of how a consumer would encounter the mark. Thus, the USPTO and the courts consider the entire label, what products or services are sold under the mark and what channels of commerce and marketing will be used. As a result, marks

challenged as being scandalous may in fact be found to have a double entendre.[49] The extension of this trademark law standard to domain name policy thus risks prohibiting words as generic top-level domains that could well be used in inoffensive ways.

A few other observations are in order. First, under U.S. trademark law, in cases of doubt or ambiguity, both the USPTO and the Federal Circuit will pass the mark to publication to give others the opportunity to object. [50] If ICANN finally decides to employ any content restrictions, erring on the side of permitting the speech should be the rule.

Second, the Paris Convention permits rather than requires content restrictions. Article 6*quinquies* of the Paris Convention merely allows a Member state to deny registration to a mark duly registered in another Member state on the grounds of morality or public order.[51] This article makes clear the expectation that a mark may be acceptable in one state, while it is offensive in another. The WTO TRIPS Agreement is silent on content restrictions.[52]

Finally, although some trademarks have been denied registration under U.S. trademark law, this remains a little known or utilized provision of U.S. trademark law. Furthermore, the majority of challenges brought under this provision are brought by third parties and not the USPTO.

Thank you for your consideration.

New Top Level Domain Name Introduction Proposals

Briefing Paper: Some Legal Issues

Professor Jacqueline Lipton

June 6, 2007

Background

I have been asked to prepare a brief legal issues paper for IP Justice, by its Executive Director, Robin Gross. The paper is in respect of ICANN's recent Proposed Recommendations for the introduction of new generic Top Level Domain Names (gTLDs) and the Noncommercial Users' Constituency's (NCUC) suggested amendments to those recommendations.[53]

Issues Raised by IP Justice and NCUC (ICANN Recommendations 3, 6, 8, and 11)

The current ICANN recommendations contemplate that ICANN should implement a process that would accommodate the introduction of new gTLDs that are not currently available to Internet domain name registrants or registries. In its recommendation paper,[54] it contemplates several principles for deciding on strings of characters that may be utilized in a new gTLD. These principles include:

- New strings should not infringe the existing legal rights of others (*Recommendation 3*).
- New strings should not be contrary to generally accepted legal norms relating to morality/public order (*Recommendation 6*).
- Applications for new strings should be rejected or deferred if there is substantial opposition to a relevant string from 'among significant established institutions of the economic sector, or cultural or language community, to which it is targeted or which it is intended to support' (*Recommendation 8*).
- ICANN staff evaluators will make preliminary determinations about applications for new gTLD strings (*Recommendation 11*).

The NCUC and IP Justice have raised particular concerns about aspects of these recommendations.[55] Specifically, they are concerned that some of ICANN's proposals give too much weight to trademark holders' interests without giving sufficient weight to other competing legal interests in words and phrases, such as those arising from legal concepts of free speech.[56] They have also voiced concerns that under Recommendation 6, ICANN may by default be trying to legislate internationally for morality and public order and that this may not be an appropriate burden for ICANN, as opposed to national lawmakers. They raise related concerns with respect to ICANN Recommendations 8 and 11 in the sense that these recommendations focus more on international legal and cultural norms than on the technical capacities and functions of ICANN. Recommendation 8 also raises the specter of censorship in the introduction/use of new gTLDs by bodies that have not been clearly defined in the ICANN proposals. It is also unclear how decisions would be made as to the rejection or deferral of new strings on this basis. Which organizations would be consulted? Whose policies would be applied? What experts, if any, would ICANN consult?

ICANN Recommendations 5, 9 and 12

I would add some similar concerns about the following ICANN recommendations:

- New strings should not include country, territory or place names or words describing countries, territories, languages or peoples in the absence of agreement with relevant governments or public authorities (*Recommendation 5*).
- Applications for new gTLDs must entail a clear and pre-published application process using 'objective' and 'measurable' criteria (*Recommendation 9*).

- Dispute resolution processes must be established prior to the start of the relevant process (*Recommendation 12*).

Recommendation 5. This recommendation raises the specter of government censorship or control of particular gTLDs. This may or may not prove to be a problem in practice given the existence of two character country-code top level domains (ccTLDs) within the current system. These ccTLDs have apparently not, to date, created major problems, at least as compared with some of the issues arising under currently available gTLDs. However, it is possible that a new gTLD string pertaining to a country would prove to be more desirable than a corresponding ccTLD and this recommendation may give imbalances of power or control over particular new gTLDs to certain governments or public authorities. In some ways this concern mirrors the concerns of IP Justice and the NCUC about Recommendation 8 to the extent that it is unclear under that recommendation whose policies should be protected in the decision to defer or reject registration of a particular gTLD string. An associated concern with recommendation 5 is that it may not always be clear who is the relevant government or public authority who would need to agree to the use of a particular new gTLD: for example, would all Asian countries have to agree to the use of a '.asia' gTLD and, if so, how should 'Asian country' be defined in this context and who should define it?[57] Moreover, who should decide which 'public authorities' should be consulted about use of particular new gTLDs? How should 'public authority' be defined here?

Recommendation 9. This recommendation calls for the use of pre-published 'objective' and 'measurable' criteria in the application process for new gTLDs. It is not clear how ICANN *per se* would establish such criteria. If it is contemplated that ICANN would consult relevant national and international bodies or individuals in discharging this problem, then perhaps this recommendation is not so problematic. However, such a consultation process would likely take a long time and may slow down the introduction of new gTLDs for a considerable period. Such a process would entail: (a) identifying relevant expert bodies; (b) consulting with them on relevant issues: and, (c) translating relevant issues into a set of pre-published objective and measurable criteria for the new gTLD application process. This further assumes that such issues are indeed transferable to objective and measurable criteria.

Recommendation 12. Dispute resolution processes may be much more problematic in practice than contemplated by ICANN's recommendation 12. My assumption is that Recommendation 12 refers to simple dispute resolution processes for new gTLDs such as those currently in effect under the Uniform Domain Name Dispute Resolution Policy (UDRP)[58] for some existing gTLDs. The problem here is that dispute resolution processes that take account of multiple legal interests outside commercial trademark interests are not easy in practice. Different jurisdictions, and different bodies within the same jurisdiction, may diverge widely in attitudes and even in laws on free speech, public order etc. Arbitrators under simple UDRP-style dispute resolution processes may not be equipped to handle these kinds of disputes. Dispute resolution procedures may therefore have to be somewhat more complex than is currently contemplated by ICANN if they are to take account of a variety of competing legal interests, rather than merely trademark interests. For example, while there are some things a simple arbitration process can handle well, there are other things that are much more complex and difficult and may need to be turned over to national courts or experts.[59]

General Discussion

It is important to start re-focusing the regulation of the Internet domain name system generally on interests outside of pure trademark interests. The introduction of new gTLDs and the development of processes for introducing them may provide a good opportunity for achieving this goal. However, any attempt to regulate broad policy issues relating to social and cultural norms on speech, public order and morality in domain names will be very difficult for any national or international body or group. ICANN also faces the practical

difficulty that its major area of expertise is technical and functional. It is therefore important for ICANN to clarify what groups, bodies or individuals it might utilize in carrying out future legal and social developments within development of its domain name processes. In particular, ICANN should consider more specifically who to consult in formalizing specific processes for: (a) the introduction of new gTLD strings; (b) establishing dispute resolution procedures for those strings; and, (c) deciding whether the introduction of particular new strings should be deferred or rejected.

It should also be noted at the outset that many of the key problems identified by ICANN, IP Justice and the NCUC reflect legal issues that have arisen in the past with respect to existing gTLDs, although perhaps in slightly different contexts. In other words, the balance between trademark interests and other legitimate interests in Internet domain names, for example, has already proved problematic in situations involving disputes about registration and use of domain names under existing gTLDs (notably .com, .org and .net). Thus, in many ways, the 'balance of interests' questions in the new gTLD debates could be regarded as an extension of unresolved issues under current domain name laws and policies. The addition of new gTLD processes will likely exacerbate existing legal problems. The upside of this is that it may, and hopefully will, provide a new forum for addressing some of these problems.

In my view, it is important to put the debate about new gTLD processes into its historical context in order to properly address the concerns that have been raised here. So please bear with me for a couple of paragraphs while I describe this context and why it is important now. The current framework for regulating disputes relating to '.com', '.net' and '.org' domain names has been focused largely on the protection of commercial trademark holders against cybersquatters.[60] There is little harmonized attention paid to the protection of other legitimate interests in relevant Internet domain names within this framework. This is evidenced in the drafting of the UDRP and the American Anti-Cybersquatting Consumer Protection Act (ACPA).[61] While these regulations do make allowances for 'legitimate interests' in domain names where relevant domain names have not been registered or used in bad faith,[62] they do not set out rules to affirmatively protect non-trademark-based registrations and uses of .com, .org or .net domain names.[63] This is not particularly surprising because it was not the intention behind these rules to do so.

The historical focus on the protection of trademarks against bad faith cybersquatters is understandable within its context. These were key concerns of relevant regulators in the mid to late 1990s when e-commerce was in its infancy, and governments wanted to encourage this new medium of commerce. It was widely thought – although not universally agreed – that bad faith cybersquatting *per se* was a socially wasteful activity that potentially harmed the development of electronic commerce without producing any associated social benefits.[64] There is probably nothing inherently wrong with the UDRP and ACPA in this respect. They did deal with a real world problem and, in many respects, they are now old news. Presumably, this is why debates today about the introduction of new gTLD processes do not dwell on the rules and regulations implemented in 1999. However, those rules and regulations have raised new post-1999 problems that have not yet been addressed in a systematic way.[65]

Issues under the existing domain name system that relate to the balance of trademark interests with other legitimate interests in domain names do include the need to balance trademark interests with interests such as: interests in personal names, cultural and geographic indicators, free speech (including the right to parody, comment on and criticize a trademark holder), other basic human rights, and rights to free and democratic government.[66] ICANN has identified some of these issues in its recommendations. IP Justice and the NCUC have raised concerns about clarification of, as well as appropriate implementation of, ICANN's stated goals here.

The main problem for ICANN in identifying and implementing these kinds of 'interest balancing ideals' is that, as with its administration of existing gTLDs, ICANN's expertise is largely technical and functional. It is not a body staffed with people whose main expertise is to deal with these difficult balances of competing legal and

social interests in multiple societies around the world. Effectively bringing debates about international public order and morality, as well as free speech and human rights generally, into a predominantly technical process comes at a high cost. However, failing to address these issues in a relevant forum also comes at a high cost, as previous and current experiences have shown us.

What is needed at this point is a combination of the following: (1) ensuring that the technical aspects of this process do not somehow become a default proxy to legislate for important and complex national and international social, cultural and legal norms; (2) more clearly identifying bodies or individuals who can appropriately identify and make recommendations on relevant issues within the development of the more technical aspects of the process; and, (3) ensuring that these bodies are brought into the relevant process in time to prevent damage to important legal and social interests. To some extent, that may be what is happening at the moment, but this process may need to be more formalized to avoid exacerbating some of the problems that have arisen in the past under the current domain name system.

Conclusions

The aim of this briefing paper has been to raise awareness of ideas that may be pertinent in the ongoing process to develop new gTLDs. My hope is that this paper generates, or at least facilitates, useful debate in this context. There are, as yet, no clear solutions to many of the problems addressed. We seem to be at a point in the development of the new gTLD processes where it would be useful to more fully identify and discuss relevant legal and social issues, as well as bodies and individuals that may be best suited to advise on them, and ultimately help draft and implement regulations about them where possible. This is an important time in the development of the domain name system and this kind of debate and development would prove extremely useful, particularly in order to avoid some of the practical problems with respect to new gTLDs that are already evident in the administration of domain names registered under existing gTLDs.

[1] Available online at: http://www.ipjustice.org/ICANN/NCUC_Comments_on_New_gTLDs.pdf

[2] Indeed— one of its refrains is a '*substantial opposition*' formula. This is not rule based predictable criteria.

[3] ICANN should defer to nations' laws on obscenity and not attempt to gold-plate them with unrelated concepts from trade mark law.

[4] This was added to the draft on 7 June 2007 to Recommendation 6.

[5] We note the defensive and cautious approach employed in the discussion on this recommendation is symptomatic of the suspicion with which the creation of new a gTLD has historically been approached— as the grant of an indulgence. This has led to the artificial scarcity of today.

[6] We also welcome standard contracts albeit that we believe that everyone would be also served by stronger analysis and recommendations on standardization in Rights Protection Mechanisms.

[7] G. Dinwoodie, *(National) Trademark Laws and the (Non National) Domain Name System*, 21 U. PA. J. Int'l Econ. L. 495 (2000) p. 520.

[8] Those include the requirements that marks be well-known or famous before dilution can be claimed; the limits to dilution, the requirement that the speech must be commercial and the infringing use— use as a trade mark, the prohibition on generic and descriptive marks; honest concurrent use; geographic and territorial limits and others.

[9] It says in (iii)"In addition, the concept of "confusingly similar" is used to mean that there is a likelihood of confusion on the part of the relevant public. In international trade mark law, confusion may be visual, phonetic or conceptual. The Committee used a wide variety of existing law to come to some agreement that strings should not be confusingly similar either to existing top-level domains like .com and .net or to existing trademark and famous names"

[10] The pre 7 June draft, referred to consumer confidence and security. These have now gone. No criteria replace them to provide any qualifications.

[11] See §10(6) of the UK 1994 Trade Marks Act 1994 which requires use in the course of trade for infringement. See also Art. 5 of the Trade Marks Directive (89/104). In *Arsenal Football Club v Matthew Reed* [2003] R.P.C. 9 the ECJ affirmed the proprietor cannot prohibit the use of a sign identical to the trade mark for goods also identical, if that use cannot affect his interests as proprietor having regard to its functions—so that certain uses for purely descriptive purposes are excluded from the scope of Art. 5(1). This includes use creating the impression of a link in trade, so that the use must be in the course of trade and in relation to goods within Art. 5(1). If there is identity of sign and goods or services, the protection under Art.5(1) (a) is absolute, whereas Art.5(1) (b) also requires a likelihood of confusion, see *Anheuser-Busch v Budejovicky Budvar NP* Case C -245/02 [2005] E.T.M.R 27. See also §10(6) which enables comparative advertising —also permitted by Directive (97/55/EC)—but also reference to and identification of genuine goods and services of the proprietor provided honest. See Lanham Act, 15 U.S.C. §1114(1)(a) which defines infringement as use of "a registered mark in connection with the sale, offering for sale, distribution, or advertising of any goods or services or in connection with which such use is likely to cause confusion, or to cause mistake, or to deceive...". Further under the Federal Trademark Dilution Act (FTDA) a claimant alleging a violation must prove inter alia: " the defendant is making a commercial use of the mark in commerce." The Anticybersquatting Consumer Protection Act 1999 (ACPA) requires bad faith *intent to profit*. See *Taubman v. Webfeats* 319 F.3d 770 (6th Circuit 2003) ("The Lanham Act is constitutional because it only regulates commercial speech, which is entitled to reduced protections under the First Amendment" many expressions of a mark were not a 'trademark use' and not likely to cause confusion and therefore "outside the jurisdiction of the Lanham Act and necessarily protected by the First Amendment."). See *Bosley Med. Inst. v. Kremer*, 403 F.3d 672 (9th Cir. 2005)(non-commercial expression of opinion was not a "trademark use" subject to regulation by the mark holder). See also *1-800 Contacts v. WhenU.com* 414 F3d 400 (2d Cir. 2005), (the vast majority of uses were outside the scope of trademark law and only those specific uses visually associated with the sale of goods/services could be regulated by trademark).

[12] The following factors are to be considered in relation to distinctiveness and famousness under 15 U.S.C. §1125(c)(1): (A) the degree of inherent or acquired distinctiveness of the mark; (B)the duration and extend of use of the mark in connection with the goods or services with which the mark is used; (C)the duration and

extent of advertising and publicity of the mark; (D)the geographical extent of the trading area in which the mark is used; (E)the channels of trade for the goods and services with which the mark is used; (F) the degree of recognition of the mark in the trading areas and the channels of trade used by the marks' owner and the person against whom the injunction is sought; (G)the nature and extent of use of the same or similar marks by third parties; and (H) the Act by which it was registered.

[13]15 U.S.C. §1125(B)(ii).

[14] See (ix) *"The proposed implementation plan deals with a comprehensive range of potentially controversial (for whatever reason) string applications which balances the need for reasonable protection of existing legal rights and the capacity to innovate with new uses for top level domains that may be attractive to a wide range of users"* In fact –this claimed balance is entirely absent. We can only assume it refers to implementation guideline 6 *"ICANN will provide for the ability to settle conflicts between applicants (such as string contention) at any time. A defined mechanism and a certain period for resolution of identified conflicts will be provided."*

[15] Muller & McKnight, *The Post .com Internet*, (2003) at p. 11, www.digital-convergence.info.

[16] Prior to 7 June, it also employed *"prior third party rights"* and gave the examples of trade marks and rights in names and acronyms of inter-governmental organizations.

[17] E.g.—commercial use; geographic and territorial limits; the Nice Classification system for classes; requirements of true fame for dilution.

[18] E.g. fair use; genericness/descriptiveness; honest concurrent use; own name; invalidity; deceptiveness, geography, etc.

[19] We would also like to see recognition of the rights of all to the commons of language. These include but are not limited to the rights of the public to free speech and to use descriptive and generic words, including where permitted by the law of the nation state where they reside, to use words which may be subject to Legal Rights in particular classes of the Nice Classification System—outside those classes. In relation to unregistered Legal Rights, they include the right to use words that are not subject to protection in their nation state or where no goodwill or reputation arises in their nation state in relation to such a word. They include the right to make fair and legitimate use of words in which others may claim Legal Rights. Trade mark law does this—via the limits, and the highly sophisticated compromises in the defenses.

[20] Further, it continues: iii. There are a number of ways in which ICANN could approach the resolution of this type of problem which includes the full range of "ICANN saying nothing; ICANN identifies a possible issuing and ICANN files a complaint; ICANN identifies a possible issue but relies on a complainant to file it formally; ICANN identifies an issue, makes a decision and the applicant can appeal." iv. The final approach to this set of potentially controversial problems will be resolved through ongoing discussions with members of the Committee and ICANN's implementation team. This is Byzantine and esoteric. To the uninitiated it is also meaningless. To the initiated it represents the ability to lobby against a particular application. We refer the Council to the admirable aims expressed in Recommendation 1.

[21] The UK 1994 Trade Marks Act provides at §3(1)(c) that trade marks which consist exclusively of signs or designations which serve to indicate geographical origin should not be registered and the ECJ has interpreted this as requiring that geographical names which are liable to be used as undertakings must remain available to such undertakings as indications of the geographical origin of the category of goods concerned, see *Windsurfing Chiemsee* [1999] ETMR 585. See however the European Regulation 2081/92 on the Protection of Geographical Indications and Designations of Origin for Agricultural Products and Foodstuffs, as amended by Regulation 535/97, which allows protections for these products.

[22] This change was made on 7 June 2007.

[23] "Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers."

[24] " (2) *In the exercise of his rights and freedoms, everyone shall be subject only to such limitations **as are determined by law solely for the purpose** of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society.*"

[25] This binds all in the UK because it binds the courts who must interpret all law in accordance with it, §6 Human Rights Act 1998.

[26] "(1) Everyone has the right to freedom of expression. This right shall include freedom to hold opinions and to receive and impart information and ideas without interference by public authority and regardless of frontiers...(2) The exercise of these freedoms, since it carries with it duties and responsibilities, *may be subject to such formalities, conditions, restrictions or penalties as are prescribed by law and are necessary in a democratic society*, in the interests of national security, territorial integrity or public safety, for the prevention of disorder or crime, for the protection of health or morals, for the protection of the reputation or rights of others, for preventing the disclosure of information received in confidence, or for maintaining the authority and impartiality of the judiciary."

[27] See *Casado Coca v Spain* (1994) 18 EHRR 1 §§33-37

[28] Art 10's limitations must be justified by objectives in the public interest, in so far as those derogations are in accordance with the law, motivated by one or more of the legitimate aims under those provisions and necessary in a democratic society, that is to say justified by a pressing social need and, in particular, proportionate to the legitimate aim pursued, see Case C-112/00 *Schmidberger Internationale Transporte und Planzuge v Austria* [2003] 2 CMLR 34, p.1043.

[29] Art. 6 quinquies, paragraph B3 of the Paris Convention of 20 March 1883 (as last revised at Stockholm on 14 July 1967) provides for refusal and invalidity of registration in relation to trade marks that are 'contrary to morality or public order'. See Art. 7(1)(f) of the Community Trade Mark Regulation and Art. 3(1)(f) of the Trade Marks Directive. In the UK §3(3)(a) of the Trade Marks Act 1994, trade marks shall not be registered if they are 'contrary to public policy or accepted principles of morality'.

[30] *Philips Electronics NV v Remington Consumer Products* [1998] RPC 283 at 310 per Jacob J. See also the use of the words 'contrary to ... public order' in the English text of Article 6 quinquies of the Paris Convention and the words 'qui sont contraires à l'ordre public' in the French language versions of Article 7(1) (f) of the Community Trade Mark Regulation and Article 3(1)(f) of the Trade Marks Directive.

[31] This is treated as falling within prevention of disorder as the relevant enumerated purpose. That is, by accommodating the concept of '*ordre public*' within the '*prevention of disorder*' (in the French text of the Convention '*à la défense de l'ordre*') under Article 10. However, the right to freedom of expression predominates and any real doubt as to the applicability of the objection must be resolved by upholding the right to freedom of expression, hence acceptability for registration.

[32] See Case R 111/2002-4 *Dick Lexic Limited's Application* (25 March 2003) the Fourth Board of Appeal of the Community Trade Marks Office at §9 "these words merely designate things but they do not transmit any message; secondly, the association of the two words does not necessarily reinforce the connotation of the mark.... In principle, the mark does not proclaim an opinion, **it contains no incitement, and conveys no**

insult. In the Board's opinion, in these circumstances, the mark should not be regarded as contrary to either public policy or accepted principles of morality." See also IN THE MATTER OF Application No. 2376955, to register a trade mark in classes 25 & 26 by Sporting Kicks Ltd, Decision by C Hamilton 11 November 2005 where the level was a badge of antagonism and likely to cause alarm or distress.

[33] The only measure we are aware of is the Additional Protocol (to the European Convention on Cybercrime) concerning the Criminalization of Acts of a Racist and Xenophobic Nature Committed Through Computer Systems in force in 2006. The US did not sign or ratify due to its conflict with First Amendment Free Speech and nor did the UK.

[34] In *Reno v. American Civil Liberties Union*, 117 St. Ct. 2329 not even the legitimate and important congressional goal of protecting children from harmful materials, was to abridge the freedom of speech protected by the First Amendment.

[35] For the US position see, *Moral Intervention in the Trademark Arena: Barring the Registration of Scandalous and Immoral Trademarks* (1993) 83 TMR 661 by Stephen R. Baird

[36] Further, trade mark laws are territorially limited and ccTLDs are premised on the assumption that a nation is monocultural with a unitary legal system and a generally accepted standard of morality and taste often with only one or two dominant religions. No such standards can be extrapolated globally in a multicultural context.

[37] If the proposed name would infringe **a law** in a nation state which objects to the application—the application could be granted with conditions restricting or preventing its use in the objecting state(s) which we understand is technically possible. This would prevent one State imposing its laws on others.

[38] We refer to the Parliamentary Assembly of the Council of Europe Resolution 1510 (2006) on Freedom of Expression and Respect for Religious Beliefs: "10. *Human rights and fundamental freedoms are universally recognized, in particular under the Universal Declaration of Human Rights and international covenants of the United Nations. The application of these rights is not, however, universally coherent. **The Assembly should fight against any lowering of these standards**.....* 11.. *What is likely to cause substantial offence to persons of a particular religious persuasion will vary significantly from time to time and from place to place.* 12. *The Assembly is of the opinion that freedom of expression as protected under Article 10 of the European Convention on Human Rights **should not be further restricted to meet increasing sensitivities of certain religious groups**. At the same time, the Assembly emphasises that hate speech against any religious group is not compatible with the fundamental rights and freedoms guaranteed by the European Convention on Human Rights and the case law of the European Court of Human Rights."*

[42] *Id.*

[43] See Paris Convention, at Article 6*bis* (1979), available at http://www.wipo.int/treaties/en/ip/paris/trtdocs_wo020.html (as of June 6, 2007).

[44] See Paris Convention, at Article 1 (stating "[t]he protection of industrial property has as its object patents, utility models, industrial designs, trademarks, service marks, trade names, indications of source or appellations of origin, and the repression of unfair competition."), available at http://www.wipo.int/treaties/en/ip/paris/trtdocs_wo020.html (as of June 6, 2007).

[45] 15 U.S.C. § 1127 (c).

[46] In 2006, the USPTO reported that 147,118 trademarks were registered. See http://www.uspto.gov/web/offices/com/annual/2006/50315_table15.html (as of June 6, 2007).

[47] Under U.S. law, marks can be refused registration if they are regarded as "immoral or scandalous." 15 U.S.C. § 2 (a). However, even if a mark is found to be immoral and therefore unregistrable, a mark owner may still use the mark to market its goods in commerce and may still avail itself of federal trademark protections including bringing suit in U.S. courts.

[48] See e.g., *In re Mavety Media Group*, 33 F.3d 1367 (Fed. Cir. 1994).

[49] See e.g., *In re Hershey*, 6 U.S.P.Q.2d 1470 (T.T.A.B. 1988) (where the mark was considered in the context of the design that accompanied it and found not to be scandalous).

[50] *McCarthy on Trademarks and Unfair Competition*, § 19.77.

[51] See Paris Convention, at Article 6*quinquies* (stating that marks duly registered in another Member state *may* be refused registration "when they are contrary to morality or public order and, in particular, of such a nature as to deceive the public. "), available at http://www.wipo.int/treaties/en/ip/paris/trtdocs_wo020.html (as of June 6, 2007).

[52] See TRIPS:Agreement on Trade Related Aspects of Intellectual Property Rights §2, available at http://www.wto.org/english/tratop_e/trips_e/t_agm3_e.htm#2 (as of June 6, 2007).

[53] Available at <http://www.ipjustice.org/ICANN/062007.html>, last viewed on June 5, 2007.

[54] Available at <http://www.ipjustice.org/ICANN/GNSORecomOverview11May2007.htm>, last viewed on June 5, 2007.

[55] These concerns are voiced at on IP Justice's website in NCUC's Recommended Amendments to the ICANN proposals: <http://www.ipjustice.org/ICANN/062007.html>, last viewed on June 5, 2007.

[56] See for example recommendation 3 which specifically mentions 'trademark' rights under the original ICANN proposal, but would additionally include free expression rights under the suggested NCUC amendments.

[57] In Australia, for example, 'Asia' colloquially tends to refer to Asia-Pacific countries such as Malaysia, Thailand, Indonesia etc, while in the United Kingdom, the term is more likely to be used to refer to countries such as India and Pakistan, with the term 'oriental' often reserved for Asia-Pacific countries.

[58] Full text available at: <http://www.icann.org/udrp/udrp-policy-24oct99.htm>, last viewed on June 6, 2007.

[59] For example, an arbitrator can generally quite easily tell if a domain name has been registered for a socially wasteful purpose (eg registering a domain name and offering it up for sale without using the relevant website for any other purpose). This can be established by simply looking at the website and probably comes under a heading like 'socially wasteful bad faith cybersquatting'. However, if the relevant website contains some content and is being used in some way to communicate a message – whether complimentary or not - about an associated trademark holder or other entity, it is much more difficult for an

arbitrator to establish respective rights and interests in the relevant domain name. This kind of situation (eg unauthorized fan website, unauthorized political commentary, unauthorized gripe site or parody site about a trademark holder) will entail balancing free speech interests against the legal rights of the complainant. Those legal rights themselves may be based in a variety of laws such as trademark, privacy, unfair competition etc. Any dispute resolution mechanism that truly attempts to balance these interests effectively, either in an existing domain space or with respect to an application to register a new gTLD, is going to have to be a lot more complex than existing systems like the UDRP. The question is how to establish such a system and who should administer it. ICANN may not be best charged with this function at the end of the day. See also discussion in Conclusion section of: Jacqueline Lipton, *Who Owns 'Hillary.com'? Political Speech and the First Amendment in Cyberspace*, Boston College Law Review, (forthcoming, spring 2008), draft available at: http://papers.ssrn.com/sol3/papers.cfm?abstract_id=982430.

[60] "Cybersquatting, according to the United States federal law known as the Anti-Cybersquatting Consumer Protection Act, is registering, trafficking in, or using a domain name with bad-faith intent to profit from the goodwill of a trademark belonging to someone else. The cybersquatter then offers to sell the domain to the person or company who owns a trademark contained within the name at an inflated price." (definition from Wikipedia, available at: <http://en.wikipedia.org/wiki/Cybersquatting>, last viewed on June 6, 2007).

[61] 15 U.S.C. § 1125(d).

[62] 15 U.S.C. § 1125(d)(1)(B)(ii); UDRP, para. 4(c).

[63] With the exception of 15 U.S.C. § 1129 from the ACPA which does protect personal names against bad faith cybersquatters regardless of trademark status.

[64] See, for example, discussion in Jacqueline Lipton, *Beyond Cybersquatting: Taking Domain Name Disputes Past Trademark Policy*, 40 Wake Forest Law Review 1361, 1369-1371 (2005) (full text available at: <http://www.law.wfu.edu/prebuilt/w08-lipton.pdf>, last viewed on June 5, 2007). The most cited example of traditional cybersquatting is probably the case of Dennis Toeppen who registered reportedly around 100 domain names corresponding with well known marks in the hope of making significant amounts of money for transfer of the names to relevant trademark holders. Today, Toeppen chronicles his own story at: <http://www.toeppen.com/>, last viewed on June 5, 2007. Many have written about conduct such as Toeppen's and about its place in the development of the current gTLD regulation system. For a summary of these legal developments in the late 1990s and more detail on the concerns I raise here, see: Jacqueline Lipton, *Beyond Cybersquatting: Taking Domain Name Disputes Past Trademark Policy*, 40 Wake Forest Law Review 1361 (2005) (full text available at: <http://www.law.wfu.edu/prebuilt/w08-lipton.pdf>, last viewed on June 5, 2007).

[65] Despite some attempts to refer certain issues to the World Intellectual Property Organization ('WIPO'): for example, the need to balance trademark interests against interests in personal names and geographic and cultural indicators. These issues are discussed in the Second WIPO Internet Domain Name Process, Chapters 5-6, available in full text at: <http://www.wipo.int/amc/en/processes/process2/report/html/report.html>, last viewed on June 5, 2007.

[66] I have written previously, and in detail, about many of these issues in the following articles: Jacqueline Lipton, *Beyond Cybersquatting: Taking Domain Name Disputes Past Trademark Policy*, 40 Wake Forest Law Review 1361 (2005) (full text available at: <http://www.law.wfu.edu/prebuilt/w08-lipton.pdf>); Jacqueline Lipton, *Commerce vs Commentary: Gripe Sites, Parody and the First Amendment in Cyberspace*, Washington University Law Review (forthcoming, summer 2007), draft available at: http://papers.ssrn.com/sol3/papers.cfm?abstract_id=925691; Jacqueline Lipton, *Who Owns 'Hillary.com'? Political Speech and the First Amendment in Cyberspace*, Boston College Law Review, (forthcoming, spring 2008), draft available at: http://papers.ssrn.com/sol3/papers.cfm?abstract_id=982430.

Impact Statement of the Registrars Constituency

Regarding the Draft Final Report on the

Introduction of New Generic Top-Level Domains

July 4, 2007

Recommendation 1	ICANN must implement a process that allows the introduction of new top-level domains.	IMPACT: New gTLDs present an opportunity to Registrars in the form of additional products and associated services to offer to its customers. However, that opportunity comes with the costs of implementing the new gTLDs as well as the efforts required to do the appropriate business analysis to determine which of the new gTLDs are appropriate for its particular business model.
Recommendation 2	Strings must not be confusingly similar[15] to an existing top-level domain.	IMPACT: Registrars would likely be hesitant to offer confusingly similar gTLDs due to customer service and support concerns. On the other hand, applying the concept too broadly would inhibit gTLD applicants and ultimately limit choice to Registrars and their customers.
Recommendation 3	Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law.	IMPACT: Very little direct impact.
Recommendation 4	Strings must not cause any technical instability.	IMPACT: This is important to Registrars in that unstable registry and/or zone operations would have

a serious and costly impact on its operations and customer service and support.

Recommendation 5	Strings must not be a Reserved Word.	IMPACT: Depends on what Words are reserved and what, if any, the process is for adding Words to the reserved list. If applied too broadly it would inhibit gTLD applicants and ultimately limit choice to Registrars and their customers.
Recommendation 6	Strings must not be contrary to generally accepted legal norms relating to morality and public order.	IMPACT: If applied too broadly it would inhibit gTLD applicants and ultimately limit choice to Registrars and their customers.
Recommendation 7	Applicants must be able to demonstrate their technical capability to run a registry operation.	IMPACT: This is very important to Registrars in that inefficient registry operations would have a serious and costly impact on its operations and customer service and support. Minimum technical requirements should be applied, but not to the extent that it inhibits new entrants.
Recommendation 8	Applicants must be able to demonstrate their financial and organisational operational capability.	IMPACT: This is important to Registrars insofar as it might impact stable operations of the registry and/or zone. However, only minimal requirements should be applied so as not to inhibit new entrants or an open market.
Recommendation 9	There must be a clear and pre-published application process using objective and measurable criteria.	IMPACT: Important in that clear, objective, and measurable criteria will encourage applicants resulting

in more choice for Registrars and their customers.

Recommendation 10	There must be a base contract provided to applicants at the beginning of the application process.	IMPACT: This would benefit Registrars in that they would have a clear understanding of the policies and operational rules that will impact their and their customers' relationships with Registry Operators.
Recommendation 11	Staff Evaluators will be used to make preliminary determinations about applications as part of a process which includes the use of expert panels to make decisions.	IMPACT: Very little direct impact assuming that costs are recouped from application fees and not increases in Registrar fees.[AK1]
Recommendation 12	Dispute resolution and challenge processes must be established prior to the start of the process.	IMPACT: Very little direct impact assuming that costs are recouped from application fees and not increases in Registrar fees.
Recommendation 13	Applications must initially be assessed in rounds until the scale of demand is clear and there is a reduction to zero of applications for the same string.	IMPACT: Very little direct impact assuming that costs are recouped from application fees and not increases in Registrar fees.
Recommendation 14	The initial registry agreement term must be of a commercially reasonable length.	IMPACT: Same as for Recommendation 10.
Recommendation 15	There must be renewal expectancy.	IMPACT: Same as for Recommendation 10, except that this must also be qualified with clear

and reasonable termination provisions.

Recommendation 16	Registries must apply existing Consensus Policies[16] and adopt new Consensus Polices as they are approved.	IMPACT: Same as for Recommendation 10.
Recommendation 17	A clear compliance and sanctions process must be set out in the base contract which could lead to contract termination.	IMPACT: Same as for Recommendation 10.
Recommendation 18	If an applicant offers an IDN service, then ICANN's IDN guidelines[17] must be followed.	IMPACT: Creates a stable and consistent experience for Registrars and their customers, reducing the cost of implementation, operations, and customer service and support.
Recommendation 19	Registries must use ICANN accredited registrars.[AK2]	IMPACT: Registrars support this requirement that registries provide domain names only through ICANN-accredited registrars. Registrars have invested considerable resources to establish themselves under the Accreditation paradigm and are governed by ICANN's contract and policies. Permitting the use of non-ICANN accredited registrars would threaten the security and stability of the DNS, as ICANN would have no contract with – and therefore no control over – the providers or their activities. Allowing the use on non-accredited registrars or allowing Registries to offer registration services direct to consumers also would place accredited registrars at a competitive disadvantage as they

are required to follow certain ICANN-imposed requirements. Similarly, permitting registries to sell directly to consumers would place registrars at an unfair advantage and create certain antitrust concerns. Recent events have made it clear that some improvements to the Accreditation process may be warranted, but overall it has worked well in creating competition, reducing costs to consumers, and improving the quality of services offered.

Recommendation 20	<p>An application will be rejected if it is determined, based on public comments or otherwise, that</p> <p>there is substantial opposition to it from among significant established institutions of the economic sector, or cultural or language community, to which it is targeted or which it is intended to support.</p>	Very little direct impact
-------------------	---	---------------------------

Impact Statement from the gTLD Registry Constituency regarding the Introduction of New gTLDs 6 June 2007

With regard to the GNSO Dec05 PDP (Introduction of New gTLDs) and in response to the requirement in the ICANN Bylaws Annex A (GNSO Policy-Development Process) for the GNSO Council to provide to the ICANN Board "(a)n analysis of how the issue would affect each constituency, including any financial impact on the constituency", the gTLD Registry Constituency (RyC) hereby provides the following information.

1. General Impact on the RyC

The introduction of new gTLDs directly impacts members of the RyC and the constituency as a whole by:

1. Increasing competition for existing gTLD registries
2. Enlarging the potential members of the RyC
3. Expanding the diversity of the RyC.

Regarding increased competition, the RyC has consistently supported the introduction of new gTLDs because we believe that:

- There is clear demand for new gTLDs
- Competition creates more choices for potential registrants
- Introducing TLDs with different purposes increases the public benefit
- New gTLDs will result in creativity and differentiation in the domain name industry
- The total market for all TLDs, new and old, will be expanded.

In the RyC consensus statement submitted at the beginning of the New gTLD PDP, we listed the following specific benefits of new gTLDs:

- Added choices for Internet users, not only in terms of the ability to obtain a domain name registration in a given new TLD, but also in terms of security options, trust features, use policies, and other innovative factors that vary by registry operator or sponsor
- Expansion of Internet usage through the market development efforts of new and existing providers of registry services
- Opportunity to test user demand for specific TLDs
- Particularly in case of TLDs with a focused and defined community, opportunity to develop a resource that best serves the needs of that community while providing intrinsic value to all internet users.

With regard to potentially enlarging the potential member base of the RyC and expanding the diversity of the RyC, we believe that this could have both negative and positive consequences. The RyC started out with one member, later expanded to eight members, then nine, and now has 15 members plus one pending member. Doing business as a constituency in some ways is much easier with a smaller number of members, so as the constituency continues to grow it can be expected that participating in the GNSO will become more complicated for the RyC. Attempting to reach consensus positions as part of the policy development process will sometimes be more difficult. On the other hand, as the RyC membership has increased, the diversity of ideas and varied experiences of constituency members have expanded and thereby broadened the perspective of the entire membership. We believe that the challenges that come with a larger membership are manageable and are worth the benefits that come from new ideas and different points of view.

2. Financial Impact on the RyC

The financial impact on the RyC may best be divided into two categories: impact on RyC members and impact on the Constituency as a whole.

The financial impact on individual gTLD registry operators and sponsors will vary depending on many factors such as, but not limited to, the following: 1) whether or not they are involved in any new gTLDs; 2) what effects increased competition has on their current business; 3) the extent to which they may be able to

leverage the investments they have made in their existing business model into new opportunities; 4) their ability to market their offerings in an expanded market; and 5) any changes in RyC fees as a consequence of increased membership and/or changes in expenses.

The financial impacts on the Constituency as a whole will be dependent on how many new members join the RyC and whether or not Constituency expenses grow in proportion to membership size or possibly can be used more effectively. At this point in time, the RyC believes that the financial impact on the RyC may be neutral. Some expenses may increase as the membership grows (e.g., Secretariat costs, luncheon meetings with the Board during ICANN meetings); other expenses may remain constant or rise at a rate that is lower than the membership growth. Regardless, the Constituency will have the ability to adjust RyC member fees up or down as needed to accommodate actual expenses approved by the membership.

3. Impact of Selected New gTLD Recommendations on the RyC

Recommendations included in the Draft Final New gTLD PDP Report that may have impact on the RyC and/or its members are listed below in italic font followed by discussion of possible impacts.

Recommendation 2

Strings must not be confusingly similar to an existing top-level domain.

This recommendation is especially important to the RyC. At least one gTLD registry has already received a customer service call that demonstrates user confusion with regard to an IDN version of an existing gTLD using an alternate root. It is of prime concern for the RyC that the introduction of new gTLDs results in a ubiquitous experience for Internet users that minimizes user confusion. gTLD registries will be impacted operationally and financially if new gTLDs are introduced that create confusion with currently existing gTLD strings or with strings that are introduced in the future.

There is strong possibility of significant impact on gTLD registries if IDN versions of existing ASCII gTLDs are introduced by registries different than the ASCII gTLD registries. Not only could there be user confusion in both email and web applications, but dispute resolution processes could be greatly complicated.

It is also critical to remember that there are several hundred thousand domain name registrants who have registered IDN domain names at the second level in existing gTLDs who would likely desire in most cases to expand their IDN registration at the top level. If confusingly similar versions of existing gTLDs are introduced, would those registrants have to defensively register their names in the new gTLDs? If so, that could have large impact on those gTLD registries that have in good faith introduced IDN second-level domain names in response to user demand from the non-English speaking Internet community.

Recommendation 9

There must be a clear and pre-published application process using objective and measurable criteria.

This recommendation is of major importance to the RyC because the majority of constituency members incurred unnecessarily high costs in previous rounds of new gTLD introductions as a result of excessively long time periods from application submittal until they were able to start their business. We believe that a significant part of the delays were related to selection criteria and processes that were too subjective and not very measurable. It is critical in our opinion that the process for the introduction of new gTLDs be predictable in terms of evaluation requirements and timeframes so that new applicants can properly scope their costs and develop reliable implementation plans.

There is nothing that can be done now to correct the flaws in previous new gTLD rounds, but on behalf of new organizations that may consider applying and potentially become members of the RyC, we strongly support this recommendation and firmly believe that it has the chance of reducing the impact on them.

Recommendation 10

There must be a base contract provided to applicants at the beginning of the application process.

Like the comments for Recommendation 9, we believe that this recommendation will facilitate a more cost-effective and timely application process and thereby minimize the negative impacts of a process that is less well-defined and objective. Having a clear understanding of base contractual requirements is essential for a new gTLD applicant in developing a complete business plan.

Recommendations 14 and 15

The initial registry agreement term must be of a commercially reasonable length.

There must be renewal expectancy.

The members of the RyC have learned first hand that operating a registry in a secure and stable manner is a capital intensive venture. Extensive infrastructure is needed both for redundant registrations systems and global domain name constellations. Even the most successful registries have taken many years to recoup their initial investment costs. The RyC is convinced that these two recommendations will make it easier for new applicants to raise the initial capital necessary and to continue to make investments needed to ensure the level of service expected by registrants and users of their TLDs.

These two recommendations will have a very positive impact on new gTLD registries and in turn on the quality of the service they will be able to provide to the Internet community.

Recommendation 19

Registries must use ICANN accredited registrars.

The RyC has no problem with this recommendation for larger gTLDs; the requirement to use accredited registrars has worked well for them. But it has not always worked as well for very small, specialized gTLDs. The possible impact on the latter is that they can be at the mercy of registrars for whom there is not good business reason to devote resources.

In the New gTLD PDP, it was noted that this requirement would be less of a problem if the impacted registry would become a registrar for its own TLD, with appropriate controls in place. The RyC agrees with this line of reasoning but current registry agreements forbid registries from doing this. Dialog with the Registrars Constituency on this topic was initiated and is ongoing, the goal being to mutually agree on terms that could be presented for consideration and might provide a workable solution.

Return to Final Report: Part A

[1] The Participation Table will be completed after the GNSO Council meeting on 6 September 2007.

[2] See paragraph 64 of the WSIS Tunis Agenda, at <http://www.itu.int/wsis/docs2/tunis/off/6rev1.html>

[3] See paragraph 49.a) of the WSIS Geneva declaration at <http://www.itu.int/wsis/docs/geneva/official/dop.html>

[4] See: <http://www.icann.org/general/glossary.htm#G>

[5] See <http://www.un.org/Overview/rights.html>

[AK1]Note – this has been deleted on the most recent version.

[AK2]Registrars have suggested the following wording – "Registries must use only ICANN accredited registrars in registering domain names and may not discriminate between such accredited registrars."
