countries.¹³ This means that if a Music Community member's copyright rights are violated in any other signatory country's jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community's rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community's *Establishment* and definition is "cohesive" and hence cannot be construed since the Community is a logical alliance of music communities that establish a clearly delineated and organized Community structure that is "closely united" and functions as a "whole"

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The "music" string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain's registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN "to provide accurate WHOIS contact data" or else their domain "registration may be suspended or even cancelled".¹⁸

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

iii) *International Federations and Organizations mainly Dedicated to the Community:*

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: “*With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.*” (AGB, 4-12). The community as defined in the DotMusic application has at least one entity *mainly*²⁰ dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ Per the Oxford and Merriam Webster dictionaries, the word “mainly” is defined as “*more than anything else*” (See <http://www.oxforddictionaries.com/definition/english/mainly> and <http://www.merriam-webster.com/dictionary/mainly> respectively). According to DotMusic, the string .MUSIC relates to the Community “by representing all constituents involved in music creation, production and distribution” (Application Answer to Question 20d). Supporting organizations related to that string that are “mainly” dedicated to the Community and its activities, include the International Federation of Arts Councils and Culture Agencies (IFACCA) representing government culture ministries and arts councils, the International Federation of Musicians (FIM) representing musicians globally, the International Federation of Phonographic Industry (IFPI) representing the recording industry worldwide, the International Confederation of Music Publishers (ICPM) representing the voice of global music publishing, the International Association of Music Information Centres (IAMIC), the American Association of Independent Music (A2IM), whose associate members represent a majority of music consumed, the Independent Music Worldwide Independent Network (WIN) representing independent music worldwide, the International Society for Music Education (ISME) the premiere international organization representing music education, and many others (See support at <http://music.us/supporters> and <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails:downloadattachment/142588?t:ac=1392>).

role with respect to music.²¹ IFACCA's members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The "Size" covered reaches over a hundred million music entities i.e. "considerable size with millions of constituents" per Application Answer to Question 20a.

The string "music" falls under the jurisdiction of each country's Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²² The UNESCO strategic partnership²³ is relevant, especially since UNESCO founded the International Music Council (the "IMC") in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁴

Government activities in the clearly delineated and organized "Music Community" include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a "statutory rate" set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁵

Ministries of culture and arts councils (that comprise IFACCA's membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA's membership support the "performing arts" and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁶ Other small government Ministries of Culture, such as Albania,²⁷ or government

²⁶ 2011 Annual Report for Cyprus Ministry of Culture, Section 1.2 "Music"

(http://www.moec.gov.cy/en/annual_reports/annual_report_2011_en.pdf). Activities include Music Performances in Cyprus (1.2.1) and Abroad (1.2.2), Subsidization of Paphos Aphrodite Festival (1.2.3), Music Publications (1.2.4), Subsidization and Purchases of Digital Records (1.2.5), Promotion for Cypriot musical creativity abroad (1.2.6),

Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁸ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world's largest music conference.²⁹

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³⁰
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³¹
- Canada Council for the Arts is Canada's national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³² The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³³
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁴

Cyprus Symphony Orchestra Foundation (1.2.7), Music Information Centre (1.2.8), Developing Music Education (1.2.9), Organising of the 1st Musicological Symposium (1.2.10) and Musical Festivities for the European Volunteerism Year (1.2.11)

³⁴ Department for Culture, The Importance of Music, A National Plan for Music Education,

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/180973/DFE-00086-2011.pdf, Page 4, 2011

- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁵ and has a strong focus on music as outlined in its Strategic Plan³⁶ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁷
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁸
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁹
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴⁰

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

The IFPI is another entity *mainly* dedicated to the Community. The IFPI is the only organization that represents the interests of the recording industry worldwide. It is the “voice of the recording industry worldwide”⁴¹ whose members⁴² – major and independent companies -- represent a majority of all commercial music consumed globally. For example, the RIAA, an IFPI national group member,⁴³ represents “approximately 85% of all legitimate recorded music produced and sold in the United States,”⁴⁴ the world’s largest music market with 30% global market share.⁴⁵ Formed in 1933, the IFPI’s mission was to “represent the interests of the recording industry worldwide in all fora.”

Another clear example of an “entity *mainly* dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁶

The reach of A2IM Associate⁴⁷ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴⁸ – iTunes accounts for 63% of global digital music market⁴⁹ - a majority – with a registered community of 800 million registered members⁵⁰ available in 119 countries who abide to strict terms of service and boundaries⁵¹ and have downloaded over 25 billion songs⁵² from iTunes’ catalog of over 43 million songs⁵³ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁵⁴
- **Pandora**⁵⁵ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁶
- **Spotify**⁵⁷ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵⁸
- **Vevo**⁵⁹ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁶⁰

⁵⁷ <http://a2im.org/groups/spotify>

⁵⁸ <https://press.spotify.com/us/information/>

⁵⁹ <http://a2im.org/groups/vevo/>

- **Youtube**⁶¹ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁶² of which 38.4% is music-related.⁶³
- **ReverbNation**⁶⁴ – ReverbNation⁶⁵ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The ReverbNation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁶ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶⁷

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶⁸), China (China Audio Video Association⁶⁹) and Germany (Initiative Musik).⁷⁰ A2IM also has Affiliate⁷¹ associations within the global music community. These include Affiliates such as MusicFirst,⁷² the Copyright Alliance,⁷³ the Worldwide Independent Network (WIN)⁷⁴ and Merlin.⁷⁵

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁶ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA “on behalf of over 15 national and international trade associations” also expressed its support for .MUSIC to be under a “community” application model, including encouraging statements in support of DotMusic’s policies that stated that the coalition “was encouraged to see” that DotMusic “included several measures to deter and address copyright infringement within that TLD.” The “coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world’s music”⁷⁷ – a majority of global music.⁷⁸

Another letter⁷⁹ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed “support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest.”

The International Music Products Association, NAMM, is another globally-recognized and relevant group of non-negligible size that has supported DotMusic.⁸⁰ NAMM, formed in 1901, is *mainly* dedicated to the global music community by representing the international music products industry and community, with globally-recognized members and exhibitors that include Yamaha, Roland, Sennheiser, Sony, Fender, Harman, Kawai, Shure, Steinway, Audio-Technica, AKAI, Gibson, Peavey, Korg, AKG, Selmer, JBL, Alesis, Ibanez, AVID, Casio, DW, Sabian, Pearl, Zildjian, Martin, Ludwig, Marshall and others.^{81 82} Every amateur and professional musician worldwide uses music products manufactured and distributed by NAMM’s members. Without these musical instruments and products, music as we know it today would not be created or produced. NAMM and its trade shows power the \$17 billion global music products industry serving as a hub for the global music community wanting to seek out the newest innovations in musical products, recording technology, sound and lighting. NAMM’s mission is “to strengthen

⁸¹ https://www.namm.org/files/showdir/ExhibitorList_WN15.xls

⁸² <http://www.musictrades.com/global.html>

the music products industry and promote the pleasures and benefits of making music.”⁸³ NAMM also hosts the NAMM Show, the world's largest event for the music products industry.

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause representing over 95% of music consumed globally.⁸⁴ Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁸⁵ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁸⁶

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community. Community members may register a .MUSIC by either:

⁸³ <https://www.namm.org/about>

⁸⁴ See <http://music.us/supporters>, <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>, Bloomberg BNA at http://music.us/RIAA_Backs_DotMusic.pdf Pg.1, and <http://diffuser.fm/will-dot-music-domains-make-the-internet-better/>

⁸⁵ <http://music.us/supporters>

⁸⁶ See <http://music.us/nexus>

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework⁸⁷ given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

⁸⁷ ICANN has disclosed that the string .MUSIC is a sensitive string operating in a regulated sector. ICANN also accepted Government Advisory Committee (GAC) advice for safeguards to protect the Music Community and the public interest (See <https://icann.org/en/system/files/correspondence/crocker-to-dryden-3-29oct13-en.pdf> Pg.7)

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic’s definition of the “Music Community” as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application, 20a) is factually accurate and representative of the “Music Community.” Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The “Music Community” definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. “Music Community” members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each “organized community of similar nature that relates to music” that comprises the “Music Community.” Without such cohesiveness and interdependency, the defined “Music” Community matching the applied-for string (“Music”) would not be able to function in its regulated sector, a “Music” regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.⁵

As a result, the Music Community as defined is “closely united” (As per the definition of “cohesion” according to Merriam-Webster dictionary⁶) or “united or form a whole” (As per the definition of the word “cohesion” according to Oxford Dictionaries⁷).

The “Music Community” as defined (a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

ii) *An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:*

DotMusic’s definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en,Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved March 23, 2015, from https://en.wikipedia.org/wiki/Music_community

According to DotMusic, the Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string “music” and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the “music” string).

DotMusic’s Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the “Music Community” as defined implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members’ rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world’s population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

iii) International Federations and Organizations Dedicated to Community Functions:

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: *“With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.”* (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²⁰ IFACCA’s members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The “Size” covered reaches over a hundred million music entities i.e. “considerable size with millions of constituents” per Application Answer to Question 20a.

The string “music” falls under the jurisdiction of each country’s Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²¹ The UNESCO strategic partnership²² is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²³

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ http://www.ifacca.org/membership/current_members/

²¹ http://www.ifacca.org/strategic_partners/

²² http://www.ifacca.org/strategic_partners/

²³ <http://www.imc-cim.org/about-imc-separator/who-we-are.html>

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a “statutory rate” set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁴

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁵ Other small government Ministries of Culture, such as Albania,²⁶ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁷ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world’s largest music conference.²⁸

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries’ and arts councils’ substantial connection to and support of “music” is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA’s membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).²⁹
- The Australian Government/Council For The Arts invested \$51.2 million for the nation’s orchestras; \$21.6 million for opera; \$10.8 million for other music artists and

[http://www.mch.govt.nz/files/Annual%20report%202011%202012%20pdf%20version%20\(D-0448383\).PDF](http://www.mch.govt.nz/files/Annual%20report%202011%202012%20pdf%20version%20(D-0448383).PDF)

organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³⁰

- Canada Council for the Arts is Canada’s national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³¹ The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³²
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³³
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁴ and has a strong focus on music as outlined in its Strategic Plan³⁵ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁶
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁷
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁸
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.³⁹

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Another clear example of an “entity dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁰

The reach of A2IM Associate⁴¹ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴² – iTunes accounts for 63% of global digital music market⁴³ - a majority – with a registered community of 800 million registered members⁴⁴ available in 119 countries who abide to strict terms of service and boundaries⁴⁵ and have downloaded over 25 billion songs⁴⁶ from iTunes’ catalog of over 43 million songs⁴⁷ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁴⁸
- **Pandora**⁴⁹ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁰
- **Spotify**⁵¹ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵²
- **Vevo**⁵³ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁴

⁵³ <http://a2im.org/groups/vevo/>

- **Youtube**⁵⁵ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁵⁶ of which 38.4% is music-related.⁵⁷
- **Reverbnation**⁵⁸ – Reverbnation⁵⁹ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The Reverbnation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁰ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶¹

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶²), China (China Audio Video Association⁶³) and Germany (Initiative Musik).⁶⁴ A2IM also has Affiliate⁶⁵ associations within the global music community. These include Affiliates such as MusicFirst,⁶⁶ the Copyright Alliance,⁶⁷ the Worldwide Independent Network (WIN)⁶⁸ and Merlin.⁶⁹

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁰ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

⁶⁸ <http://www.winformusic.org>

⁶⁹ <http://www.merlinnetwork.org>

⁷⁰ <https://www.icann.org/en/system/files/correspondence/bengloff-to-chehade-et-al-20aug14-en.pdf> and <https://www.icann.org/en/system/files/correspondence/bengloff-to-crocker-et-al-07mar15-en.pdf>

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷¹ – a majority of global music.⁷²

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁷³ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁷⁴

According to the Applicant Guidebook ("AGB"), to receive the maximum score for Nexus, the applied-for string -- "music" -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the "Music Community" entirely matches the applied-for "music" string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community

⁷¹ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.1

⁷² <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.3, Appendix A

⁷³ <http://music.us/supporters>

⁷⁴ See <http://music.us/nexus>

defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community.

Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility criteria and content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential

relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration.

The inclusion of every music constituent type is paramount to the purpose of the string. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter to verify the following facts: (i) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to music.

SUMMARY

Based upon my knowledge of music, the music community and DotMusic’s public statements concerning their .MUSIC community application, DotMusic has established the following facts:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the defined and recognized Community.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

² <http://music.us/supporters>

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic’s definition of the “Music Community” as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application, 20a) is factually accurate and representative of the “Music Community.” Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The “Music Community” definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. “Music Community” members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each “organized community of similar nature that relates to music” that comprises the “Music Community.” Without such cohesiveness and interdependency, the defined “Music” Community matching the applied-for string (“Music”) would not be able to function in its regulated sector, a “Music” regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.⁵

As a result, the Music Community as defined is “closely united” (As per the definition of “cohesion” according to Merriam-Webster dictionary⁶) or “united or form a whole” (As per the definition of the word “cohesion” according to Oxford Dictionaries⁷).

The “Music Community” as defined (a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

ii) *An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:*

DotMusic’s definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en,Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved March 23, 2015, from https://en.wikipedia.org/wiki/Music_community

According to DotMusic, the Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string “music” and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the “music” string).

DotMusic’s Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the “Music Community” as defined implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members’ rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world’s population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

iii) International Federations and Organizations Dedicated to Community Functions:

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: *“With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.”* (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²⁰ IFACCA’s members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The “Size” covered reaches over a hundred million music entities i.e. “considerable size with millions of constituents” per Application Answer to Question 20a.

The string “music” falls under the jurisdiction of each country’s Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²¹ The UNESCO strategic partnership²² is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²³

²⁰ http://www.ifacca.org/membership/current_members/

²¹ http://www.ifacca.org/strategic_partners/

²² http://www.ifacca.org/strategic_partners/

²³ <http://www.imc-cim.org/about-imc-separator/who-we-are.html>

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a “statutory rate” set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁴

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁵ Other small government Ministries of Culture, such as Albania,²⁶ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁷ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world’s largest music conference.²⁸

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries’ and arts councils’ substantial connection to and support of “music” is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA’s membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).²⁹
- The Australian Government/Council For The Arts invested \$51.2 million for the nation’s orchestras; \$21.6 million for opera; \$10.8 million for other music artists and

²⁹ 2011 Annual Report from New Zealand Ministry of Culture:

[http://www.mch.govt.nz/files/Annual%20report%202011%202012%20pdf%20version%20\(D-0448383\).PDF](http://www.mch.govt.nz/files/Annual%20report%202011%202012%20pdf%20version%20(D-0448383).PDF)

organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³⁰

- Canada Council for the Arts is Canada’s national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³¹ The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³²
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³³
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁴ and has a strong focus on music as outlined in its Strategic Plan³⁵ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁶
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁷
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁸
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.³⁹

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Another clear example of an “entity dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁰

The reach of A2IM Associate⁴¹ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴² – iTunes accounts for 63% of global digital music market⁴³ - a majority – with a registered community of 800 million registered members⁴⁴ available in 119 countries who abide to strict terms of service and boundaries⁴⁵ and have downloaded over 25 billion songs⁴⁶ from iTunes’ catalog of over 43 million songs⁴⁷ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁴⁸
- **Pandora**⁴⁹ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁰
- **Spotify**⁵¹ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵²
- **Vevo**⁵³ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁴

⁵¹ <http://a2im.org/groups/spotify>

⁵² <https://press.spotify.com/us/information/>

⁵³ <http://a2im.org/groups/vevo/>

- **Youtube**⁵⁵ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁵⁶ of which 38.4% is music-related.⁵⁷
- **ReverbNation**⁵⁸ – ReverbNation⁵⁹ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The ReverbNation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁰ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶¹

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶²), China (China Audio Video Association⁶³) and Germany (Initiative Musik).⁶⁴ A2IM also has Affiliate⁶⁵ associations within the global music community. These include Affiliates such as MusicFirst,⁶⁶ the Copyright Alliance,⁶⁷ the Worldwide Independent Network (WIN)⁶⁸ and Merlin.⁶⁹

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁰ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

⁶⁹ <http://www.merlinnetwork.org>

⁷⁰ <https://www.icann.org/en/system/files/correspondence/bengloff-to-chehade-et-al-20aug14-en.pdf> and <https://www.icann.org/en/system/files/correspondence/bengloff-to-crocker-et-al-07mar15-en.pdf>

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷¹ – a majority of global music.⁷²

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community. Cumulatively, DotMusic possesses documented support⁷³ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁷⁴

According to the Applicant Guidebook ("AGB"), to receive the maximum score for Nexus, the applied-for string -- "music" -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the "Music Community" entirely matches the applied-for "music" string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community

⁷¹ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.1

⁷² <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.3, Appendix A

⁷³ <http://music.us/supporters>

⁷⁴ See <http://music.us/nexus>

defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community.

Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” string and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility criteria and content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential

relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration.

The inclusion of every music constituent type is paramount to the purpose of the string. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Name: Mike Alleyne

Title: Professor

Organization: Middle Tennessee State University

Date: 7th April, 2015

About Dr. Mike Alleyne

Professor in the Department of Recording Industry

Middle Tennessee State University

Mike Alleyne is a tenured full Professor in the Department of Recording Industry at Middle Tennessee State University (MTSU). He is the author of *The Encyclopedia of Reggae: The Golden Age of Roots Reggae* (Sterling Publishing, 2012) and contributing editor of *Rhythm Revolution* (Cognella Academic Publishing, 2013 & 2014). His popular music writings have been published in peer-reviewed journals such as *Popular Music History*, the *Canadian Journal of Latin American and Caribbean Studies*, *Rock Music Studies*, *Popular Music & Society*, and the *Journal on the Art of Record Production*.

Professor Alleyne was also a consultant for the Estate of Marvin Gaye in the 2015 copyright infringement trial involving the 2013 hit song “Blurred Lines.” His report was admitted into evidence in the case. His book chapter contributions appear in *Rihanna: Barbados World-Girl in Global Popular Culture* (2015), *Sound and Music in Film and Visual Media: An Overview* (2009), *Globalization, Diaspora & Caribbean Popular Culture* (2005), *Bob Marley: The Man & His Music* (2003), and *Culture and Mass Communication in the Caribbean* (2001). Prof. Alleyne has also contributed several entries to the award-winning *Grove Dictionary of American Music* (2013), and has also been published in *Billboard*, the internationally-recognized weekly magazine on the music industry.

Dr. Alleyne’s work has led to guest lectures in Jamaica, Barbados, England, Sweden and Germany, and the presentation of conference papers across the globe. In 2012, he was the guest speaker at the annual Bob Marley Lecture in Kingston, Jamaica, presenting “For The Record: Bob Marley’s Island Albums and the 40th Anniversary of Catch a Fire.” Professor Alleyne has served as the Distinguished Cultural Studies Lecturer & Scholar-in-Residence at the University of the West Indies, Trinidad, and has been a doctoral thesis examiner for that institution’s other campuses.. Prof. Alleyne has also been a guest lecturer in the Music Management program at Linnaeus University in Sweden in 2004 & 2007 (formerly the University of Kalmar) and at the Pop Akademie in Germany (2010-2015).

He has presented numerous conference papers on popular music across Europe, Latin America and Africa. Beyond Caribbean popular music, his academic work also encompasses from the history of album cover art. Professor Alleyne’s involvement with popular music also includes his roles as a writer member of ASCAP (American Society of Composers, Authors & Publishers) and PRS (Performing Right Society).

Professor Alleyne is also an Editorial Board member for the journal *Popular Music & Society*, and a member of the International Association for the Study of Popular Music (IASPM) and the Caribbean Studies Association (CSA).

Portfolio

Rhythm Revolution:

The essay collection *Rhythm Revolution* provides a compact but detailed analysis of significant genres, artists, and trends characterizing popular music's evolution after World War II. It addresses the creative, economic, social, and political contexts of key developments in the music itself, and the recording industry.

The book's chronological structure shows interconnections between different developments. Beginning with British rock and pop from the 1950s through the 1970s, the text then pairs the 1960s with soul music, and the 1970s with the rise of fusion and funk. There is a chapter devoted to the roots of reggae, and coverage of the 1980s addresses the expanding role of televised music. In addition, the material provides a wealth of detail on topics not typically covered, including the history of the album cover, and the formation and impact of specific record labels.

Rhythm Revolution is ideal for teachers who want to engage their students in a detailed examination of pivotal eras and turning points. It can be used as a stand-alone text, or as a supplemental reader to standard textbooks on popular music history.

The Encyclopedia of Reggae: The Golden Age of Roots Reggae:

This heavily illustrated guide to reggae is a colorful, herbally endowed, and sunsplashed history of one of the world's most popular musical styles. Reggae was born in 1960s Jamaica, a potent mix of such indigenous genres as ska and rocksteady plus R&B, jazz, and traditional African rhythms. Before long, it had conquered the globe, influencing musicians from Britain to Brazil. *The Encyclopedia of Reggae* focuses on the music's golden age, from the late 1960s to the mid-1980s heyday of dancehall, and features more than 500 images, including rare album art and ephemera. Written by one of the foremost experts on the subject, this amazing resource profiles more than 200 key performers, impresarios, and producers from reggae's history.

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic’s definition of the “Music Community” as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application, 20a) is factually accurate and representative of the “Music Community.” Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The “Music Community” definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. “Music Community” members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each “organized community of similar nature that relates to music” that comprises the “Music Community.” Without such cohesiveness and interdependency, the defined “Music” Community matching the applied-for string (“Music”) would not be able to function in its regulated sector, a “Music” regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.⁵

As a result, the Music Community as defined is “closely united” (As per the definition of “cohesion” according to Merriam-Webster dictionary⁶) or “united or form a whole” (As per the definition of the word “cohesion” according to Oxford Dictionaries⁷).

The “Music Community” as defined (a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

ii) *An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:*

DotMusic’s definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en,Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved March 23, 2015, from https://en.wikipedia.org/wiki/Music_community

According to DotMusic, the Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string “music” and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the “music” string).

DotMusic’s Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the “Music Community” as defined implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members’ rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world’s population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

iii) International Federations and Organizations Dedicated to Community Functions:

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: *“With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.”* (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²⁰ IFACCA’s members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The “Size” covered reaches over a hundred million music entities i.e. “considerable size with millions of constituents” per Application Answer to Question 20a.

The string “music” falls under the jurisdiction of each country’s Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²¹ The UNESCO strategic partnership²² is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²³

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ http://www.ifacca.org/membership/current_members/

²¹ http://www.ifacca.org/strategic_partners/

²² http://www.ifacca.org/strategic_partners/

²³ <http://www.imc-cim.org/about-imc-separator/who-we-are.html>

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a “statutory rate” set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁴

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁵ Other small government Ministries of Culture, such as Albania,²⁶ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁷ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world’s largest music conference.²⁸

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries’ and arts councils’ substantial connection to and support of “music” is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA’s membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).²⁹
- The Australian Government/Council For The Arts invested \$51.2 million for the nation’s orchestras; \$21.6 million for opera; \$10.8 million for other music artists and

organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³⁰

- Canada Council for the Arts is Canada’s national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³¹ The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³²
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³³
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁴ and has a strong focus on music as outlined in its Strategic Plan³⁵ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁶
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁷
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁸
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.³⁹

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Also Mmino, the South African – Norwegian Education Music Programme, solely funds music projects funding a total of 294 projects. Thirteen projects were allocated funding for a total of R1,680,600 of which R1,381,000 went towards music educational and R299,600 to exchange projects (Page 10)

Another clear example of an “entity dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁰

The reach of A2IM Associate⁴¹ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴² – iTunes accounts for 63% of global digital music market⁴³ - a majority – with a registered community of 800 million registered members⁴⁴ available in 119 countries who abide to strict terms of service and boundaries⁴⁵ and have downloaded over 25 billion songs⁴⁶ from iTunes’ catalog of over 43 million songs⁴⁷ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁴⁸
- **Pandora**⁴⁹ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁰
- **Spotify**⁵¹ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵²
- **Vevo**⁵³ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁴

⁵¹ <http://a2im.org/groups/spotify>

⁵² <https://press.spotify.com/us/information/>

⁵³ <http://a2im.org/groups/vevo/>

- **Youtube**⁵⁵ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁵⁶ of which 38.4% is music-related.⁵⁷
- **Reverbnation**⁵⁸ – Reverbnation⁵⁹ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The Reverbnation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁰ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶¹

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶²), China (China Audio Video Association⁶³) and Germany (Initiative Musik).⁶⁴ A2IM also has Affiliate⁶⁵ associations within the global music community. These include Affiliates such as MusicFirst,⁶⁶ the Copyright Alliance,⁶⁷ the Worldwide Independent Network (WIN)⁶⁸ and Merlin.⁶⁹

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁰ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

⁷⁰ <https://www.icann.org/en/system/files/correspondence/bengloff-to-chehade-et-al-20aug14-en.pdf> and <https://www.icann.org/en/system/files/correspondence/bengloff-to-crocker-et-al-07mar15-en.pdf>

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷¹ – a majority of global music.⁷²

Another letter⁷³ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed "support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest."

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁷⁴ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

⁷⁴ <http://music.us/supporters>

B) Nexus⁷⁵

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community.

Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries

⁷⁵ See <http://music.us/nexus>

and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic's community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic's application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined "music" Community and applied-for "music" string would not constitute a qualifying Community membership and would be ineligible for registration.

The inclusion of every music constituent type is paramount to the purpose of the string. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

Nathan Hesselink

Name: Nathan Hesselink

Title: Professor of Music

Organization: University of British Columbia

About Dr. Nathan Hesselink

*Professor, Ethnomusicology
University of British Columbia*

*PhD in Ethnomusicology (University of London)
MA (Mich.),
BMus (Northwestern),*

Biography

Nathan Hesselink's research broadly encompasses the topic of rhythmic play and social meaning, firstly in South Korean traditional percussion genres and more recently in British rock music. He received his Ph.D. in ethnomusicology from the University of London, SOAS, and was a postdoctoral research fellow in Korean studies at the University of California, Berkeley. In addition to visiting posts at the University of Chicago and the Academy of Korean Studies, in 2012 he was Trinity Term Visiting Research Associate, St John's College, University of Oxford.

Select publications include *P'ungmul: South Korean Drumming and Dance* (University of Chicago, 2006, winner of the 2008 Lee Hye-Gu Award by the Korean Musicological Society), *SamulNori: Contemporary Korean Drumming and the Rebirth of Itinerant Performance Culture* (University of Chicago, 2012), and "Radiohead's 'Pyramid Song': Ambiguity, Rhythm, and Participation," *Music Theory Online* (19.1.3, 2013). He is currently Professor of Ethnomusicology at the University of British Columbia and a Research Associate of the Centre for Korean Research.

Education

Interlochen Arts Academy, high school diploma cello performance, 1984

Northwestern University, BM cello performance, 1988

University of Michigan-Ann Arbor, MA ethnomusicology, 1992

University of London-School of Oriental and African Studies, PhD ethnomusicology, 1998

Posts

Instructor of Performance Studies (Korean Percussion), University of London-SOAS, 1996-97

Postdoctoral Research Fellow in Korean Studies, University of California-Berkeley, 1998-99

Assistant Professor of Ethnomusicology, Illinois State University, 1999-2005

Visiting Assistant Professor of Ethnomusicology, University of Chicago, 2003

Professor of Ethnomusicology, University of British Columbia, 2005-present

[2005-2007: Assistant Professor, 2007-2013: Associate Professor]

Advanced Research Fellow in Korean Studies, Academy of Korean Studies (South Korea), 2006

Trinity Term Visiting Research Associate, St John's College, University of Oxford, 2012

[2011-12: Visiting Scholar, Faculty of Music, University of Oxford]

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

² <http://music.us/supporters>

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic's definition of the "Music Community" as a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music" (See Application, 20a) is factually accurate and representative of the "Music Community." Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The "Music Community" definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. "Music Community" members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each "organized community of similar nature that relates to music" that comprises the "Music Community." Without such cohesiveness and interdependency, the defined "Music" Community matching the applied-for string ("Music") would not be able to function in its regulated sector, a "Music" regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.⁵

As a result, the Music Community as defined is "closely united" (As per the definition of "cohesion" according to Merriam-Webster dictionary⁶) or "united or form a whole" (As per the definition of the word "cohesion" according to Oxford Dictionaries⁷).

The "Music Community" as defined (a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music") establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is "closely united" and "interdependent" (i.e. Each "organized community of similar nature that relates to music" which is part of the "logical alliance of communities that relate to music" is not mutually exclusive).

In short, the applied-for string ("Music") matches the name of the "Music" Community as defined by DotMusic's application. DotMusic's "Music Community" definition accurately represents the common definition of the "Music Community," which is confirmed by Wikipedia.

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

ii) *An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:*

DotMusic’s definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en,Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved March 23, 2015, from https://en.wikipedia.org/wiki/Music_community

According to DotMusic, the Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string “music” and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the “music” string).

DotMusic’s Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the “Music Community” as defined implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members’ rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world’s population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

iii) International Federations and Organizations Dedicated to Community Functions:

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: *“With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.”* (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²⁰ IFACCA’s members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The “Size” covered reaches over a hundred million music entities i.e. “considerable size with millions of constituents” per Application Answer to Question 20a.

The string “music” falls under the jurisdiction of each country’s Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²¹ The UNESCO strategic partnership²² is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²³

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ http://www.ifacca.org/membership/current_members/

²¹ http://www.ifacca.org/strategic_partners/

²² http://www.ifacca.org/strategic_partners/

²³ <http://www.imc-cim.org/about-imc-separator/who-we-are.html>

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a “statutory rate” set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁴

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁵ Other small government Ministries of Culture, such as Albania,²⁶ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁷ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world’s largest music conference.²⁸

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries’ and arts councils’ substantial connection to and support of “music” is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA’s membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).²⁹
- The Australian Government/Council For The Arts invested \$51.2 million for the nation’s orchestras; \$21.6 million for opera; \$10.8 million for other music artists and

²⁹ 2011 Annual Report from New Zealand Ministry of Culture:

[http://www.mch.govt.nz/files/Annual%20report%202011%202012%20pdf%20version%20\(D-0448383\).PDF](http://www.mch.govt.nz/files/Annual%20report%202011%202012%20pdf%20version%20(D-0448383).PDF)

organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³⁰

- Canada Council for the Arts is Canada’s national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³¹ The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³²
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³³
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁴ and has a strong focus on music as outlined in its Strategic Plan³⁵ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁶
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁷
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁸
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.³⁹

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Another clear example of an “entity dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁰

The reach of A2IM Associate⁴¹ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴² – iTunes accounts for 63% of global digital music market⁴³ - a majority – with a registered community of 800 million registered members⁴⁴ available in 119 countries who abide to strict terms of service and boundaries⁴⁵ and have downloaded over 25 billion songs⁴⁶ from iTunes’ catalog of over 43 million songs⁴⁷ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁴⁸
- **Pandora**⁴⁹ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁰
- **Spotify**⁵¹ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵²
- **Vevo**⁵³ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁴

⁵¹ <http://a2im.org/groups/spotify>

⁵² <https://press.spotify.com/us/information/>

⁵³ <http://a2im.org/groups/vevo/>

- **Youtube**⁵⁵ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁵⁶ of which 38.4% is music-related.⁵⁷
- **ReverbNation**⁵⁸ – ReverbNation⁵⁹ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The ReverbNation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁰ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶¹

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶²), China (China Audio Video Association⁶³) and Germany (Initiative Musik).⁶⁴ A2IM also has Affiliate⁶⁵ associations within the global music community. These include Affiliates such as MusicFirst,⁶⁶ the Copyright Alliance,⁶⁷ the Worldwide Independent Network (WIN)⁶⁸ and Merlin.⁶⁹

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁰ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷¹ – a majority of global music.⁷²

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁷³ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁷⁴

According to the Applicant Guidebook ("AGB"), to receive the maximum score for Nexus, the applied-for string -- "music" -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the "Music Community" entirely matches the applied-for "music" string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community

⁷¹ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.1

⁷² <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.3, Appendix A

⁷³ <http://music.us/supporters>

⁷⁴ See <http://music.us/nexus>

defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community.

Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility criteria and content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential

relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration.

The inclusion of every music constituent type is paramount to the purpose of the string. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

PhD (Queensland Conservatorium Griffith University)

Research interests

- Historical performance practice
- Vocal performance and the pedagogy of singing
- Music performance research

Biography

Performing regularly as a soloist with symphony orchestras, chamber music groups & choirs throughout Australia, New Zealand & Asia, tenor Paul McMahon is one of Australia's leading exponents of Baroque repertoire, particularly the Evangelist role in the *Passions* of J. S. Bach. Career highlights include Bach's *Matthäus-Passion* under Roy Goodman; Haydn's *Die Schöpfung* under the late Richard Hickox, and Mozart's *Great Mass in C Minor* under Masaaki Suzuki. Paul's recent collaborations include recitals with the renowned pianists Bengt Forsberg and Kathryn Stott & the Australia Ensemble.

He has appeared as soloist in the festivals of Sydney, Melbourne & Brisbane & has broadcast extensively on ABC Classic FM. He was a member of The Song Company from 1997 to 2001, touring regularly throughout Australia, Asia & Europe. Paul's discography includes the solo album of lute songs entitled *A Painted Tale*; a CD & DVD recording of Handel's *Messiah*; Monteverdi's *L'Orfeo*; Mozart's *Requiem & Idomeneo*. He is featured on the *Swoon* series; various Christmas cds & the soundtrack to feature film *The Bank*. This season, Paul appears as soloist in Handel's *Messiah* (MSO, QSO & the Consort of St George's Cathedral, Perth).

Other solo appearances include Handel's *Theodora* (Canberra Choral Society), Haydn's *Theresienmesse* (MSO), Mozart's *Requiem* (Auckland Philharmonia), Orff's *Carmina Burana* (Sydney Symphony), & Beethoven's *Symphony 9* (Adelaide Symphony Orchestra). Paul holds a PhD & Graduate Diploma of Music (Queensland Conservatorium Griffith University), Master of Music (Performance) (Sydney Conservatorium of Music), & Bachelor of Creative Arts (University of Southern Queensland). In 2002, he was awarded a Churchill Fellowship for intensive study of Baroque repertoire under Marius van Altena at the Royal Conservatoire in The Hague.

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (ii) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (iii) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity mainly dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) Music Community Definition, Establishment & Community Endorsement⁴

DotMusic’s definition of the “Music Community” as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application Answer to Question 20a) is factually accurate and representative of the “Music Community.” Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The “Music Community” definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. “Music Community” members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each “organized community of similar nature that relates to music” that comprises the “Music Community.” Without such cohesiveness and interdependency, the defined “Music” Community matching the applied-for string (“Music”) would not be able to function in its regulated sector. “Music” is a regulated sector comprised of a logical alliance of interdependent communities relating to music with organized practices and institutions that enable and regulate the production, distribution and consumption of music that was publicly recognized by both ICANN and the Government Advisory Committee⁵

As a result, the Music Community as defined is “closely united” (As per the definition of “cohesion” according to Merriam-Webster dictionary⁶) or “united or form a whole” (As per the definition of the word “cohesion” according to Oxford Dictionaries⁷).

DotMusic’s application follows unified principles that the entire Community subscribes to, such as: creating a trusted identifier and safe haven for music consumption, protecting musicians’ rights and intellectual property, fighting copyright infringement/piracy, supporting fair compensation and music education, and following a multi-stakeholder approach of representation of all types of global music constituents without discrimination (See Application Answers to 18).

The “Music Community” as defined (a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) establishes that:

- (1) There is an awareness and recognition among its members;

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexa.com/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en, Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved July 6, 2015, from https://en.wikipedia.org/wiki/Music_community

ii) An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:

DotMusic's definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

According to DotMusic, the Music Community's geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, "registrants will be verified using Community-organized, unified "criteria taken from holistic perspective with due regard of Community particularities" that "invoke a formal membership (Application Answer to Question 20a)." The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string "music" and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the "music" string).

DotMusic's Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the "Music Community" as defined implies "more of cohesion than a mere commonality of interest" with an "awareness and recognition of a community among its members." Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members' rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world's population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

iii) *International Federations and Organizations mainly Dedicated to the Community:*

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: “*With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.*” (AGB, 4-12). The community as defined in the DotMusic application has at least one entity *mainly*²⁰ dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ Per the Oxford and Merriam Webster dictionaries, the word “mainly” is defined as “*more than anything else*” (See <http://www.oxforddictionaries.com/definition/english/mainly> and <http://www.merriam-webster.com/dictionary/mainly> respectively). According to DotMusic, the string .MUSIC relates to the Community “by representing all constituents involved in music creation, production and distribution” (Application Answer to Question 20d). Supporting organizations related to that string that are “mainly” dedicated to the Community and its activities, include the International Federation of Arts Councils and Culture Agencies (IFACCA) representing government culture ministries and arts councils, the International Federation of Musicians (FIM) representing musicians globally, the International Federation of Phonographic Industry (IFPI) representing the recording industry worldwide, the International Confederation of Music Publishers (ICPM) representing the voice of global music publishing, the International Association of Music Information Centres (IAMIC), the American Association of Independent Music (A2IM), whose associate members represent a majority of music consumed, the Independent Music Worldwide Independent Network (WIN) representing independent music worldwide, the International Society for Music Education (ISME) the premiere international organization representing music education, and many others (See support at <http://music.us/supporters> and <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails:downloadattachment/142588?t:ac=1392>).

role with respect to music.²¹ IFACCA's members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The "Size" covered reaches over a hundred million music entities i.e. "considerable size with millions of constituents" per Application Answer to Question 20a.

The string "music" falls under the jurisdiction of each country's Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²² The UNESCO strategic partnership²³ is relevant, especially since UNESCO founded the International Music Council (the "IMC") in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁴

Government activities in the clearly delineated and organized "Music Community" include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a "statutory rate" set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁵

Ministries of culture and arts councils (that comprise IFACCA's membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA's membership support the "performing arts" and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁶ Other small government Ministries of Culture, such as Albania,²⁷ or government

²⁶ 2011 Annual Report for Cyprus Ministry of Culture, Section 1.2 "Music"

(http://www.moec.gov.cy/en/annual_reports/annual_report_2011_en.pdf). Activities include Music Performances in Cyprus (1.2.1) and Abroad (1.2.2), Subsidization of Paphos Aphrodite Festival (1.2.3), Music Publications (1.2.4), Subsidization and Purchases of Digital Records (1.2.5), Promotion for Cypriot musical creativity abroad (1.2.6),

Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁸ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world's largest music conference.²⁹

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³⁰
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³¹
- Canada Council for the Arts is Canada's national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³² The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³³
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁴

Cyprus Symphony Orchestra Foundation (1.2.7), Music Information Centre (1.2.8), Developing Music Education (1.2.9), Organising of the 1st Musicological Symposium (1.2.10) and Musical Festivities for the European Volunteerism Year (1.2.11)

³⁴ Department for Culture, The Importance of Music, A National Plan for Music Education,

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/180973/DFE-00086-2011.pdf, Page 4, 2011

- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁵ and has a strong focus on music as outlined in its Strategic Plan³⁶ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁷
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁸
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁹
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴⁰

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

The IFPI is another entity *mainly* dedicated to the Community. The IFPI is the only organization that represents the interests of the recording industry worldwide. It is the “voice of the recording industry worldwide”⁴¹ whose members⁴² – major and independent companies -- represent a majority of all commercial music consumed globally. For example, the RIAA, an IFPI national group member,⁴³ represents “approximately 85% of all legitimate recorded music produced and sold in the United States,”⁴⁴ the world’s largest music market with 30% global market share.⁴⁵ Formed in 1933, the IFPI’s mission was to “represent the interests of the recording industry worldwide in all fora.”

Another clear example of an “entity *mainly* dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁶

The reach of A2IM Associate⁴⁷ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴⁸ – iTunes accounts for 63% of global digital music market⁴⁹ - a majority – with a registered community of 800 million registered members⁵⁰ available in 119 countries who abide to strict terms of service and boundaries⁵¹ and have downloaded over 25 billion songs⁵² from iTunes’ catalog of over 43 million songs⁵³ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁵⁴
- **Pandora**⁵⁵ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁶
- **Spotify**⁵⁷ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵⁸
- **Vevo**⁵⁹ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁶⁰

⁵⁷ <http://a2im.org/groups/spotify>

⁵⁸ <https://press.spotify.com/us/information/>

⁵⁹ <http://a2im.org/groups/vevo/>

- **Youtube**⁶¹ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁶² of which 38.4% is music-related.⁶³
- **ReverbNation**⁶⁴ – ReverbNation⁶⁵ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The ReverbNation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁶ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶⁷

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶⁸), China (China Audio Video Association⁶⁹) and Germany (Initiative Musik).⁷⁰ A2IM also has Affiliate⁷¹ associations within the global music community. These include Affiliates such as MusicFirst,⁷² the Copyright Alliance,⁷³ the Worldwide Independent Network (WIN)⁷⁴ and Merlin.⁷⁵

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁶ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises).

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA “on behalf of over 15 national and international trade associations” also expressed its support for .MUSIC to be under a “community” application model, including encouraging statements in support of DotMusic’s policies that stated that the coalition “was encouraged to see” that DotMusic “included several measures to deter and address copyright infringement within that TLD.” The “coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world’s music”⁷⁷ – a majority of global music.⁷⁸

Another letter⁷⁹ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed “support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest.”

The International Music Products Association, NAMM, is another globally-recognized and relevant group of non-negligible size that has supported DotMusic.⁸⁰ NAMM, formed in 1901, is *mainly* dedicated to the global music community by representing the international music products industry and community, with globally-recognized members and exhibitors that include Yamaha, Roland, Sennheiser, Sony, Fender, Harman, Kawai, Shure, Steinway, Audio-Technica, AKAI, Gibson, Peavey, Korg, AKG, Selmer, JBL, Alesis, Ibanez, AVID, Casio, DW, Sabian, Pearl, Zildjian, Martin, Ludwig, Marshall and others.^{81 82} Every amateur and professional musician worldwide uses music products manufactured and distributed by NAMM’s members. Without these musical instruments and products, music as we know it today would not be created or produced. NAMM and its trade shows power the \$17 billion global music products industry serving as a hub for the global music community wanting to seek out the newest innovations in musical products, recording technology, sound and lighting. NAMM’s mission is “to strengthen

⁷⁷ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.1

⁸¹ https://www.namm.org/files/showdir/ExhibitorList_WN15.xls

⁸² <http://www.musictrades.com/global.html>

the music products industry and promote the pleasures and benefits of making music.”⁸³ NAMM also hosts the NAMM Show, the world's largest event for the music products industry.

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause representing over 95% of music consumed globally.⁸⁴ Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁸⁵ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁸⁶

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community. Community members may register a .MUSIC by either:

⁸³ <https://www.namm.org/about>

⁸⁴ See <http://music.us/supporters>, <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>, Bloomberg BNA at http://music.us/RIAA_Backs_DotMusic.pdf Pg.1, and <http://diffuser.fm/will-dot-music-domains-make-the-internet-better/>

⁸⁵ <http://music.us/supporters>

⁸⁶ See <http://music.us/nexus>

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework⁸⁷ given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

⁸⁷ ICANN has disclosed that the string .MUSIC is a sensitive string operating in a regulated sector. ICANN also accepted Government Advisory Committee (GAC) advice for safeguards to protect the Music Community and the public interest (See <https://icann.org/en/system/files/correspondence/crocker-to-dryden-3-29oct13-en.pdf> Pg.7)

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic's definition of the "Music Community" as a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music" (See Application, 20a) is factually accurate and representative of the "Music Community." Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The "Music Community" definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. "Music Community" members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each "organized community of similar nature that relates to music" that comprises the "Music Community." Without such cohesiveness and interdependency, the defined "Music" Community matching the applied-for string ("Music") would not be able to function in its regulated sector, a "Music" regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.⁵

As a result, the Music Community as defined is "closely united" (As per the definition of "cohesion" according to Merriam-Webster dictionary⁶) or "united or form a whole" (As per the definition of the word "cohesion" according to Oxford Dictionaries⁷).

The "Music Community" as defined (a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music") establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is "closely united" and "interdependent" (i.e. Each "organized community of similar nature that relates to music" which is part of the "logical alliance of communities that relate to music" is not mutually exclusive).

In short, the applied-for string ("Music") matches the name of the "Music" Community as defined by DotMusic's application. DotMusic's "Music Community" definition accurately represents the common definition of the "Music Community," which is confirmed by Wikipedia.

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

ii) *An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:*

DotMusic’s definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en,Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved March 23, 2015, from https://en.wikipedia.org/wiki/Music_community

According to DotMusic, the Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string “music” and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the “music” string).

DotMusic’s Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the “Music Community” as defined implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members’ rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world’s population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

iii) International Federations and Organizations Dedicated to Community Functions:

According to ICANN's Applicant Guidebook ("AGB")¹⁹: *"With respect to "Delineation" and "Extension," it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members."* (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly dedicated to the community which has supported DotMusic, which include several "international federation of national communities of a similar nature" relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²⁰ IFACCA's members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The "Size" covered reaches over a hundred million music entities i.e. "considerable size with millions of constituents" per Application Answer to Question 20a.

The string "music" falls under the jurisdiction of each country's Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²¹ The UNESCO strategic partnership²² is relevant, especially since UNESCO founded the International Music Council (the "IMC") in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²³

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ http://www.ifacca.org/membership/current_members/

²¹ http://www.ifacca.org/strategic_partners/

²² http://www.ifacca.org/strategic_partners/

²³ <http://www.imc-cim.org/about-imc-separator/who-we-are.html>

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a “statutory rate” set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁴

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁵ Other small government Ministries of Culture, such as Albania,²⁶ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁷ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world’s largest music conference.²⁸

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries’ and arts councils’ substantial connection to and support of “music” is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA’s membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).²⁹
- The Australian Government/Council For The Arts invested \$51.2 million for the nation’s orchestras; \$21.6 million for opera; \$10.8 million for other music artists and

organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³⁰

- Canada Council for the Arts is Canada’s national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³¹ The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³²
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³³
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁴ and has a strong focus on music as outlined in its Strategic Plan³⁵ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁶
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁷
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁸
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.³⁹

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Another clear example of an “entity dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁰

The reach of A2IM Associate⁴¹ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴² – iTunes accounts for 63% of global digital music market⁴³ - a majority – with a registered community of 800 million registered members⁴⁴ available in 119 countries who abide to strict terms of service and boundaries⁴⁵ and have downloaded over 25 billion songs⁴⁶ from iTunes’ catalog of over 43 million songs⁴⁷ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁴⁸
- **Pandora**⁴⁹ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁰
- **Spotify**⁵¹ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵²
- **Vevo**⁵³ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁴

⁵¹ <http://a2im.org/groups/spotify>

⁵² <https://press.spotify.com/us/information/>

⁵³ <http://a2im.org/groups/vevo/>

- **Youtube**⁵⁵ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁵⁶ of which 38.4% is music-related.⁵⁷
- **Reverbnation**⁵⁸ – Reverbnation⁵⁹ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The Reverbnation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁰ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶¹

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶²), China (China Audio Video Association⁶³) and Germany (Initiative Musik).⁶⁴ A2IM also has Affiliate⁶⁵ associations within the global music community. These include Affiliates such as MusicFirst,⁶⁶ the Copyright Alliance,⁶⁷ the Worldwide Independent Network (WIN)⁶⁸ and Merlin.⁶⁹

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁰ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

⁷⁰ <https://www.icann.org/en/system/files/correspondence/bengloff-to-chehade-et-al-20aug14-en.pdf> and <https://www.icann.org/en/system/files/correspondence/bengloff-to-crocker-et-al-07mar15-en.pdf>

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷¹ – a majority of global music.⁷²

Another letter⁷³ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed "support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest."

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁷⁴ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

⁷⁴ <http://music.us/supporters>

B) Nexus⁷⁵

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community.

Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries

⁷⁵ See <http://music.us/nexus>

and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration.

The inclusion of every music constituent type is paramount to the purpose of the string. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity mainly dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic’s definition of the “Music Community” as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application, 20a) is factually accurate and representative of the “Music Community.” Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The “Music Community” definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. “Music Community” members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each “organized community of similar nature that relates to music” that comprises the “Music Community.” Without such cohesiveness and interdependency, the defined “Music” Community matching the applied-for string (“Music”) would not be able to function in its regulated sector, a “Music” regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.⁵

As a result, the Music Community as defined is “closely united” (As per the definition of “cohesion” according to Merriam-Webster dictionary⁶) or “united or form a whole” (As per the definition of the word “cohesion” according to Oxford Dictionaries⁷).

The “Music Community” as defined (a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

ii) *An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:*

DotMusic’s definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en, Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved July 6, 2015, from https://en.wikipedia.org/wiki/Music_community

According to DotMusic, the Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string “music” and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the “music” string).

DotMusic’s Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the “Music Community” as defined implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members’ rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world’s population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

iii) *International Federations and Organizations mainly Dedicated to the Community:*

According to ICANN's Applicant Guidebook ("AGB")¹⁹: *"With respect to "Delineation" and "Extension," it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members."* (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly²⁰ dedicated to the community which has supported DotMusic, which include several "international federation of national communities of a similar nature" relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²¹ IFACCA's members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The "Size" covered reaches over a hundred million music entities i.e. "considerable size with millions of constituents" per Application Answer to Question 20a.

The string "music" falls under the jurisdiction of each country's Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ Per the Oxford and Merriam Webster dictionaries, the word "mainly" is defined as "*more than anything else*" (See <http://www.oxforddictionaries.com/definition/english/mainly> and <http://www.merriam-webster.com/dictionary/mainly> respectively). According to DotMusic, the string .MUSIC relates to the Community "by representing all constituents involved in music creation, production and distribution" (Application Answer to Question 20d). Supporting organizations related to that string that are "mainly" dedicated to the Community and its activities, include the International Federation of Arts Councils and Culture Agencies (IFACCA) representing government culture ministries and arts councils, the International Federation of Musicians (FIM) representing musicians globally, the International Federation of Phonographic Industry (IFPI) representing the recording industry worldwide, the International Confederation of Music Publishers (ICPM) representing the voice of global music publishing, the International Association of Music Information Centres (IAMIC), the American Association of Independent Music (A2IM), whose associate members represent a majority of music consumed, the Independent Music Worldwide Independent Network (WIN) representing independent music worldwide, the International Society for Music Education (ISME) the premiere international organization representing music education, and many others (See support at <http://music.us/supporters> and <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>).

²¹ http://www.ifacca.org/membership/current_members/

influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²² The UNESCO strategic partnership²³ is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁴

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a "statutory rate" set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁵

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁶ Other small government Ministries of Culture, such as Albania,²⁷ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁸ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world’s largest music conference.²⁹

²⁹ <http://my.midem.com/en/contact-us/pavilion-representatives/>

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³⁰
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³¹
- Canada Council for the Arts is Canada's national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³² The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³³
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁴
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁵ and has a strong focus on music as outlined in its Strategic Plan³⁶ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁷
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the "Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa"³⁸

³⁸ 2010-2011 Annual Report for the National Arts Council South Africa, National Arts Council South Africa, <http://www.nac.org.za/media/publications/AR%2010-11%20NAC.PDF/download>, Page 11. Also Mmino, the South African – Norwegian Education Music Programme, solely funds music projects funding a total of 294 projects. Thirteen projects were allocated funding for a total of R1,680,600 of which R1,381,000 went towards music educational and R299,600 to exchange projects (Page 10)

- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁹
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴⁰

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Another clear example of an “entity *mainly* dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴¹

The reach of A2IM Associate⁴² membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴³ – iTunes accounts for 63% of global digital music market⁴⁴ - a majority – with a registered community of 800 million registered members⁴⁵ available in 119 countries who abide to strict terms of service and boundaries⁴⁶ and have downloaded over 25 billion songs⁴⁷ from iTunes’ catalog of over 43 million songs⁴⁸ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁴⁹

⁴⁹ <https://www.apple.com/itunes/working-itunes/sell-content/music-faq.html>

- **Pandora**⁵⁰ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵¹
- **Spotify**⁵² – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵³
- **Vevo**⁵⁴ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁵
- **Youtube**⁵⁶ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁵⁷ of which 38.4% is music-related.⁵⁸
- **Reverbnation**⁵⁹ – Reverbnation⁶⁰ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The Reverbnation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶¹ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶²

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶³), China (China Audio Video Association⁶⁴) and Germany (Initiative Musik).⁶⁵ A2IM also has Affiliate⁶⁶ associations within the global music community. These include Affiliates such as MusicFirst,⁶⁷ the Copyright Alliance,⁶⁸ the Worldwide Independent Network (WIN)⁶⁹ and Merlin.⁷⁰

⁶⁶ <http://a2im.org/groups/tag/associate+members/>

⁶⁷ <http://musicfirstcoalition.org/coalition>, The musicFIRST Coalition, with founding members A2IM, RIAA, and Recording Academy represents musicians, artists, managers, music businesses, and performance right advocates.

⁶⁸ <http://www.copyrightalliance.org/members>

⁶⁹ <http://www.winformusic.org>

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷¹ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises).

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

The IFPI is another entity *mainly* dedicated to the Community. The IFPI is the only organization that represents the interests of the recording industry worldwide. It is the "voice of the recording industry worldwide"⁷² whose members⁷³ – major and independent companies -- represent a majority of all commercial music consumed globally. For example, the RIAA, an IFPI national group member,⁷⁴ represents "approximately 85% of all legitimate recorded music produced and sold in the United States,"⁷⁵ the world's largest music market with 30% global market share.⁷⁶ Formed in 1933, the IFPI's mission was to "represent the interests of the recording industry worldwide in all fora."

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷⁷ – a majority of global music.⁷⁸

⁷⁸ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.3, Appendix A

Another letter⁷⁹ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed “support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest.”

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause representing over 95% of music consumed globally.⁸⁰ Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁸¹ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁸²

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music

⁷⁹ <https://www.icann.org/en/system/files/correspondence/aguirre-to-icann-board-ciu-14apr15-en.pdf>

⁸⁰ See <http://music.us/supporters>, <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>, Bloomberg BNA at http://music.us/RIAA_Backs_DotMusic.pdf Pg.1, and <http://diffuser.fm/will-dot-music-domains-make-the-internet-better/>

⁸¹ <http://music.us/supporters>

⁸² See <http://music.us/nexus>

entities to be included as part of the Community. Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework⁸³ given the symbiotic overlapping nature of the Community as

⁸³ ICANN has disclosed that the string .MUSIC is a sensitive string operating in a regulated sector. ICANN also accepted Government Advisory Committee (GAC) advice for safeguards to protect the Music Community and the public interest (See <https://icann.org/en/system/files/correspondence/crocker-to-dryden-3-29oct13-en.pdf> Pg.7)

defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

EDUCATION

Ph.D., Public Administration

Arizona State University, School of Public Affairs. Tempe, AZ. December 2001. Dissertation "Domestic Violence, Welfare, and Welfare Reform: The Family Violence Option in Arizona."

Master of Public Administration

Arizona State University, School of Public Affairs, Tempe, AZ. August, 1996.

Southwest Texas State University, Political Science Department; Master of Public Administration program with concentration in Legal and Judicial Administration. 15 hours completed.

Bachelor of Liberal Studies

St. Edward's University, New College, Austin, Texas. May 1981. Concentration: Management of Non-Profit Organizations. Graduated Summa Cum Laude.

Austin Community College, Austin, Texas, Fall 1973 – Summer 1980 and University of Texas, Austin, Texas, Summer 1973

ACADEMIC POSITIONS

AZ State University

College of Letters and Sciences, Interdisciplinary and Liberal Studies
Faculty Associate
Spring 2015 – Current

Developing and teaching undergraduate online courses in Liberal Studies.

Upper Iowa University

Online
Master of Public Administration and Online Undergraduate Programs
Online Instructor, Assessment Consultant, and Member, MPA Faculty Advisory Committee
Summer 2008 – Current

Developing and teaching graduate and undergraduate online courses in the area of public policy and in the MPA program core including in the nonprofit management emphasis area, and for program's capstone course. Developing and analyzing program assessment materials including student writing and critical thinking assessments, NASPPA Accreditation Self-Study materials, faculty development information.

Active member of the MPA Faculty Advisory Committee providing guidance to the MPA Program Coordinator on program policies and other governance issues.

Consultant to assist MPA Program Coordinator in development of materials for NASPPA accreditation and program assessment tools and analyses.

Thomas Edison State College

Online Mentor
Summer 2009 - Current

Teaching undergraduate online course in career exploration and personal development.

South University

Master of Public Administration program
Subject Matter Expert
Online Faculty
Summer 2008 – 2013

Provided consultation services to director of online and blended programs regarding curriculum for master in public administration program. Online course developer for *grant writing and contract administration* and *foundations to public administration*.

Teaching in the online MPA program including courses in the public administration core and in the nonprofit concentration.

Western Illinois University

Macomb IL
Political Science Department
Visiting Instructor
Fall 2008 – May 15, 2009

Taught undergraduate courses in the area of public policy and political science including Introduction to Public Policy, State Government and Politics, and Environmental Politics.

Norwich University

Northfield VT
Master of Public Administration & Justice Administration programs
Senior Instructor and Online Course Developer
Fall 2007 – Fall 2008

Taught the online Capstone course and seminars in Justice Policy for the Masters in Justice Administration program and to begin teaching seminars in the Masters in Public Administration program. Developed online course in nonprofit management and designed the curriculum for the public works administration concentration for graduate students.

Bucknell University

Lewisburg PA
Women's and Gender Studies Visiting Assistant Professor
Teaching Fellow Social Justice College

January – December 2006

Taught undergraduate core courses including Introduction in Feminist Thought and Introduction to Women's and Gender Studies as well as special topics, Women and Public Policy. In addition, taught first year residential student Foundation Seminar for students in the Social Justice College.

University Of Illinois At Springfield

Springfield IL

Liberal Studies/Individual Option Programs

Assistant Professor

2000 – 2005

Taught core courses at the undergraduate and graduate levels including introductory courses in which students design their degree programs and closure courses. Teach undergraduate and graduate courses in my discipline. Advise students on course selection and other issues. Serve as committee chair for Individual Option committees. Serve as member of Master's thesis committees from other program. Conduct scholarly activities including publications in peer-reviewed journals. Participate in governance activities at program, college, and university levels.

Credit For Prior Learning Program

Director

2001 – 2005

Taught core course related to experiential learning and to assist students develop portfolio-based requests for credit. Promote Credit for Prior Learning throughout university. Administer the program including planning, policy, and budget.

Arizona State University

Tempe AZ

Women's Studies Program

Instructor

1998 - 2000

Taught first year, sophomore, and junior levels of women's studies core and elective courses. Coordinated the women's studies senior internship program and taught related course.

OTHER INSTITUTIONS

As my schedule has allowed, I have taught and developed courses, on-contract, for other institutions including: Mississippi University for Women (2011), Ashford University (2010-2011), New England College (2009), and Empire State College (2007). Courses included undergraduate and graduate courses in state and local government, public budgeting, budgeting and finance, economic analysis, poverty and race policy, American public policy, and American government.

MANAGEMENT & ADMINISTRATIVE PROFESSIONAL EXPERIENCE

ARIZONA COALITION AGAINST DOMESTIC VIOLENCE

Phoenix, AZ

Executive Director

1993-1995

Consulting Finance Officer

1997

Chief Executive Officer for statewide non-profit organization with annual budget of \$125,000, fifteen member Board of Directors and 3 full-time employees.

Fund Raising and Community Affairs: Increased annual agency budget by \$35,000. Doubled membership including increased participation to 90% of state shelter programs. Increased agency community visibility and impact through membership on other statewide organizations addressing issues of domestic violence. Reestablished positive working relationships with regional domestic violence task forces and other key community groups. Established first battered women's and first women of color advisory committees. Established legislative alert network and conducted lobbying activities at the state and national level related to domestic violence laws and funding of related programs and services. Significantly increased agency and issue visibility through speaking engagements and statewide media interviews.

Program Management: Established first program for the Coalition to address technical assistance needs of shelter programs. Coordinated first statewide conference, held in three cities, on domestic violence. Doubled referrals provided to victims of domestic violence. Established resource library on domestic violence issues.

Administration and Management: Redesigned organization structure from general membership organization to one that operates primarily through standing and advisory committees with a Board of Directors to provide more internal oversight of agency activities and to ensure representation of diverse groups and organizations including battered women and women of color. Renegotiated improved contracts with AZ Department of Health Services and AZ Department of Economic Security. Redesigned agency budgeting and financial reporting systems.

Consulting Finance Officer: Responsible for entry and reconciliation of accounting data and information for 14 month period covering portions of two previous fiscal years. Preparation of financial reports for Board of Directors, funding sources and other regulatory agencies and for independent audit. Assisted new Executive Director with the development of funding applications and budgets during transition period from the previous interim director.

ARIZONA FAMILY PLANNING COUNCIL

Phoenix, AZ

Grants Administrator

1990-1993

Grants Administrator responsible for administration of \$2 million Title X statewide family planning grant and contracts with delegate agencies including program and fiscal evaluations, contract development and review of compliance with federal, state and Council regulations and policies.

Service Management: Provided direct consultation to delegate agencies and other family planning providers regarding service delivery and program management. Maintained and developed systematic procedures for distribution of up-to-date information regarding family planning and related services, unmet need, policies, programs and developments in the field. Revised format and prepared for publication an annual statistical report on family planning services provided throughout Arizona.

Financial and Administration: Revised delegate agency peer review process and evaluation document. Revised grant application format and delegate reporting requirements and system. Responsible for increasing funding to Council during 1992 by \$10,710 through contracts from the U.S. Department of Health & Human Services Region IX Office of Family Planning and the Arizona Department of Health Services, Division of Maternal and Child Health.

LAPIS CONSULTING SERVICE

Austin, TX

Owner/Consultant

1980-1990

Consultant and trainer for non-profit organizations in fund raising, personnel management, program evaluation, planning, budgeting, and Board development. Consultant under contract with U.S. Department of Health and Human Services in program, service and grant management evaluations.

Consultant to private businesses in office organization, record-keeping systems, personnel management, and design/implementation of accounting and financial management systems.

Training of personnel in computer applications including word processing, database, accounting, and spread sheet programs.

Direct fund raising for non-profit organizations, political candidates, and individuals including paid fundraiser for successful Austin City Council campaign for George Humphrey and for child custody legal case for lesbian friend being challenged for custody based on her sexual preference.

AUSTIN WOMEN'S CENTER

Austin, TX

Executive Director

1985-1987

Chief Executive Officer for non-profit organization with annual budget of \$450,000, 15 member Board of Directors, 15 paid employees and 45 volunteers.

Service Management: Implemented program expansion including a demonstration project for employment services to AFDC mothers (Project Self Sufficiency). Reorganized service delivery model and personnel/management structure. Increased client recruitment activities, expanded existing programs to include broader scope of services, and increased access for clients, particularly minority group men and women.

Financial & Administration: Developed and revised administrative systems; budget and financial management procedures; and, personnel and Board policies.

PLANNED PARENTHOOD OF AUSTIN

Austin, TX

Executive Director

1980-1985

Acting Executive Director

1980

Director of Support Services

1976-1980)

Chief Executive Officer of non-profit organization with annual budget of \$1,000,000; 35 member Board of Directors; 28 paid employees; and, 65 volunteers.

Service Management: Expanded government subsidized family planning services. Secured funding for and opened two additional self-supporting centers. Doubled client medical services. Established tubal ligation service program coordinating government funding, private foundation support, and low-cost physician and hospital services.

Fund Raising & Community Affairs: Developed fund raising program that increased private funding from \$12,000 in 1980 to, in 1984, \$110,000 for operations, \$16,000 for special programs, and \$100,000 for a building fund. Public speaking before community groups, media interviews, news conferences and presented testimony before funding sources and Texas Legislative sub-committees.

Financial & Administration: Increased annual operating budget from its 1980 level of \$400,000 to its 1984/85 total of just over \$1,000,000. Designed planning process including documents and monitoring and reporting systems utilized as models by the Planned Parenthood Federation of America--Southern Regional office and the Travis County Department of Human Services.

GRANTS

Welfare reform and battered women in Arizona. Center for Urban Studies, College of Public Programs, Arizona State University, 1998.

A variety of public and private grants and contracts awarded to organizations for which I worked including programs for family planning, domestic violence, and job training (1975-1995).

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic's definition of the "Music Community" as a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music" (See Application, 20a) is factually accurate and representative of the "Music Community." Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The "Music Community" definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. "Music Community" members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each "organized community of similar nature that relates to music" that comprises the "Music Community." Without such cohesiveness and interdependency, the defined "Music" Community matching the applied-for string ("Music") would not be able to function in its regulated sector, a "Music" regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.⁵

As a result, the Music Community as defined is "closely united" (As per the definition of "cohesion" according to Merriam-Webster dictionary⁶) or "united or form a whole" (As per the definition of the word "cohesion" according to Oxford Dictionaries⁷).

The "Music Community" as defined (a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music") establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is "closely united" and "interdependent" (i.e. Each "organized community of similar nature that relates to music" which is part of the "logical alliance of communities that relate to music" is not mutually exclusive).

In short, the applied-for string ("Music") matches the name of the "Music" Community as defined by DotMusic's application. DotMusic's "Music Community" definition accurately represents the common definition of the "Music Community," which is confirmed by Wikipedia.

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

ii) *An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:*

DotMusic’s definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en,Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved March 23, 2015, from https://en.wikipedia.org/wiki/Music_community

According to DotMusic, the Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string “music” and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the “music” string).

DotMusic’s Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the “Music Community” as defined implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members’ rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world’s population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

iii) International Federations and Organizations Dedicated to Community Functions:

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: *“With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.”* (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²⁰ IFACCA’s members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The “Size” covered reaches over a hundred million music entities i.e. “considerable size with millions of constituents” per Application Answer to Question 20a.

The string “music” falls under the jurisdiction of each country’s Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²¹ The UNESCO strategic partnership²² is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²³

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ http://www.ifacca.org/membership/current_members/

²¹ http://www.ifacca.org/strategic_partners/

²² http://www.ifacca.org/strategic_partners/

²³ <http://www.imc-cim.org/about-imc-separator/who-we-are.html>

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a “statutory rate” set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁴

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁵ Other small government Ministries of Culture, such as Albania,²⁶ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁷ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world’s largest music conference.²⁸

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries’ and arts councils’ substantial connection to and support of “music” is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA’s membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).²⁹
- The Australian Government/Council For The Arts invested \$51.2 million for the nation’s orchestras; \$21.6 million for opera; \$10.8 million for other music artists and

organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³⁰

- Canada Council for the Arts is Canada’s national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³¹ The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³²
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³³
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁴ and has a strong focus on music as outlined in its Strategic Plan³⁵ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁶
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁷
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁸
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.³⁹

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Another clear example of an “entity dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁰

The reach of A2IM Associate⁴¹ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴² – iTunes accounts for 63% of global digital music market⁴³ - a majority – with a registered community of 800 million registered members⁴⁴ available in 119 countries who abide to strict terms of service and boundaries⁴⁵ and have downloaded over 25 billion songs⁴⁶ from iTunes’ catalog of over 43 million songs⁴⁷ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁴⁸
- **Pandora**⁴⁹ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁰
- **Spotify**⁵¹ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵²
- **Vevo**⁵³ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁴

⁵³ <http://a2im.org/groups/vevo/>

- **Youtube**⁵⁵ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁵⁶ of which 38.4% is music-related.⁵⁷
- **ReverbNation**⁵⁸ – ReverbNation⁵⁹ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The ReverbNation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁰ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶¹

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶²), China (China Audio Video Association⁶³) and Germany (Initiative Musik).⁶⁴ A2IM also has Affiliate⁶⁵ associations within the global music community. These include Affiliates such as MusicFirst,⁶⁶ the Copyright Alliance,⁶⁷ the Worldwide Independent Network (WIN)⁶⁸ and Merlin.⁶⁹

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁰ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷¹ – a majority of global music.⁷²

Another letter⁷³ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed "support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest."

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁷⁴ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁷⁵

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community.

Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries

⁷⁵ See <http://music.us/nexus>

and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic's community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic's application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined "music" Community and applied-for "music" string would not constitute a qualifying Community membership and would be ineligible for registration.

The inclusion of every music constituent type is paramount to the purpose of the string. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

About Professor Dr. Tom ter Bogt

Chair

Popular Music and Youth Culture

Professor in Social Sciences

Professor in Cultural Diversity & Youth

Social and Behavioral Sciences

Utrecht University

Profile

Tom ter Bogt (1956), cultural psychologist; professor Popular Music and Youth Culture, first at the University of Amsterdam, and since September 2006 at Utrecht University.

He obtained his PhD with a thesis on the history of protestant work ethic in the Netherlands and work ethic among present-day adolescents. He is author of two books on youth and youth culture, and has written a television series on youth culture and pop music. Research interests: pop music, youth culture, adolescent problem behavior and substance use.

Ter Bogt's research interests relate to pop music's artists and audiences, and adolescent risk behavior. His research focuses on (1) the role of music in the development of children and adolescents, (2) music as an agent of consolation, (3) adolescent risk behavior, and (4) the role of media in the development of adolescent sexual identity.

He is part of the Dutch Health Behaviour in School-aged Children (HBSC) research team. The HBSC-project runs in more than 40 European and North-American countries and aims at assessing physical and mental health, and wellbeing in school children.

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter to verify the following facts: (i) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to music.

SUMMARY

Based upon my knowledge of music, the music community and DotMusic’s public statements concerning their .MUSIC community application, DotMusic has established the following facts:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the defined and recognized Community.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic’s definition of the “Music Community” as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application, 20a) is factually accurate and representative of the “Music Community.” Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The “Music Community” definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. “Music Community” members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each “organized community of similar nature that relates to music” that comprises the “Music Community.” Without such cohesiveness and interdependency, the defined “Music” Community matching the applied-for string (“Music”) would not be able to function in its regulated sector, a “Music” regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.⁵

As a result, the Music Community as defined is “closely united” (As per the definition of “cohesion” according to Merriam-Webster dictionary⁶) or “united or form a whole” (As per the definition of the word “cohesion” according to Oxford Dictionaries⁷).

The “Music Community” as defined (a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

ii) *An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:*

DotMusic’s definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en,Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved March 23, 2015, from https://en.wikipedia.org/wiki/Music_community

According to DotMusic, the Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string “music” and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the “music” string).

DotMusic’s Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the “Music Community” as defined implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members’ rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world’s population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

iii) International Federations and Organizations Dedicated to Community Functions:

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: *“With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.”* (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²⁰ IFACCA’s members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The “Size” covered reaches over a hundred million music entities i.e. “considerable size with millions of constituents” per Application Answer to Question 20a.

The string “music” falls under the jurisdiction of each country’s Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²¹ The UNESCO strategic partnership²² is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²³

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ http://www.ifacca.org/membership/current_members/

²¹ http://www.ifacca.org/strategic_partners/

²² http://www.ifacca.org/strategic_partners/

²³ <http://www.imc-cim.org/about-imc-separator/who-we-are.html>

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a “statutory rate” set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁴

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁵ Other small government Ministries of Culture, such as Albania,²⁶ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁷ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world’s largest music conference.²⁸

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries’ and arts councils’ substantial connection to and support of “music” is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA’s membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).²⁹
- The Australian Government/Council For The Arts invested \$51.2 million for the nation’s orchestras; \$21.6 million for opera; \$10.8 million for other music artists and

²⁹ 2011 Annual Report from New Zealand Ministry of Culture:

[http://www.mch.govt.nz/files/Annual%20report%202011%202012%20pdf%20version%20\(D-0448383\).PDF](http://www.mch.govt.nz/files/Annual%20report%202011%202012%20pdf%20version%20(D-0448383).PDF)

organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³⁰

- Canada Council for the Arts is Canada’s national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³¹ The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³²
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³³
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁴ and has a strong focus on music as outlined in its Strategic Plan³⁵ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁶
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁷
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁸
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.³⁹

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Another clear example of an “entity dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁰

The reach of A2IM Associate⁴¹ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴² – iTunes accounts for 63% of global digital music market⁴³ - a majority – with a registered community of 800 million registered members⁴⁴ available in 119 countries who abide to strict terms of service and boundaries⁴⁵ and have downloaded over 25 billion songs⁴⁶ from iTunes’ catalog of over 43 million songs⁴⁷ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁴⁸
- **Pandora**⁴⁹ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁰
- **Spotify**⁵¹ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵²
- **Vevo**⁵³ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁴

⁵¹ <http://a2im.org/groups/spotify>

⁵² <https://press.spotify.com/us/information/>

⁵³ <http://a2im.org/groups/vevo/>

- **Youtube**⁵⁵ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁵⁶ of which 38.4% is music-related.⁵⁷
- **ReverbNation**⁵⁸ – ReverbNation⁵⁹ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The ReverbNation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁰ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶¹

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶²), China (China Audio Video Association⁶³) and Germany (Initiative Musik).⁶⁴ A2IM also has Affiliate⁶⁵ associations within the global music community. These include Affiliates such as MusicFirst,⁶⁶ the Copyright Alliance,⁶⁷ the Worldwide Independent Network (WIN)⁶⁸ and Merlin.⁶⁹

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁰ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

⁶⁹ <http://www.merlinnetwork.org>

⁷⁰ <https://www.icann.org/en/system/files/correspondence/bengloff-to-chehade-et-al-20aug14-en.pdf> and <https://www.icann.org/en/system/files/correspondence/bengloff-to-crocker-et-al-07mar15-en.pdf>

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷¹ – a majority of global music.⁷²

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community. Cumulatively, DotMusic possesses documented support⁷³ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁷⁴

According to the Applicant Guidebook ("AGB"), to receive the maximum score for Nexus, the applied-for string -- "music" -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the "Music Community" entirely matches the applied-for "music" string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community

⁷¹ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.1

⁷² <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.3, Appendix A

⁷³ <http://music.us/supporters>

⁷⁴ See <http://music.us/nexus>

defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community.

Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” string and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility criteria and content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential

relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration.

The inclusion of every music constituent type is paramount to the purpose of the string. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

Name: Dr. Vassilis Varvaresos

Title: Pianist

Expertise: Doctorate in Piano Performance

Date: 6/4/2015

About Dr. Vassilis Varvaresos

*Doctorate in Piano Performance
Juilliard School*

Born in Thessaloniki, Greece in 1983, Dr. Varvaresos started studying music at the age of five, and received a scholarship to the Conservatory of Northern Greece. He continued his studies at the Conservatory with Milena Mollova. He won First Prize in the 1995 Petar Konjovic International Competition in Belgrade, the 1996 Pan-Hellenic Young Artist Competition in Athens, and was chosen as one of eleven young musicians from around the world to perform in Monte Carlo in a special “little Mozarts” concert organized by Italy’s RAI TV. Dr. Varvaresos holds a bachelor of music degree and a master of music degree from the Juilliard School, where he studied with Jerome Lowenthal. His paper on Claude Debussy, which won the Scholastic Distinction Award from the The Juilliard School, was published in Greece by Kodikas Publications. In May 2011 Dr. Varvaresos received his Doctorate in Piano Performance from the Juilliard School.¹ He was a student of Jerome Lowenthal, Yoheved Kaplinsky, and Robert MacDonald.

Dr. Varvaresos made his sensational New York orchestra debut in 2007 at Lincoln Center performing Lowell Liebermann’s Piano Concerto No. 2 with the Juilliard Orchestra under the baton of Andreas Delfs. In October 2010, as a special guest of the Archbishop of the Greek-Orthodox Church of America, Dr. Varvaresos appeared with the Manhattan Symphony Orchestra in Chopin’s Piano Concerto in e minor at Alice Tully Hall, while in the winter of 2008 he was asked to be the soloist with the Athens State Symphony Orchestra, representing Greece on a two-week tour of China, on the occasion of the 2008 Beijing Olympic Games. Dr. Varvaresos, on this occasion, performed in front of a total of 6000 people. Dr. Varvaresos’ made his recital debut in Athens, Greece appearing at the 2010 Athens Festival. During the same summer he has appeared in recital and chamber music concerts in Mykonos, Greece and in Constantinople and Cyprus.

Dr. Varvaresos previous seasons included concerts in Vienna’s legendary Musikverein, performances of Chopin’s Piano Concerto No. 1 with the Cyprus Symphony Orchestra in Leukosia and Lemesos under the baton of Spiros Pisinis, recitals in Mykonos, Greece and a featured concert at the International Piano Festival of Gijón, Spain.

Since then, he has performed in numerous occasions both in the U. S. and abroad. Highlight performances include an appearance with the Westmoreland Symphony Orchestra, where Dr. Varvaresos performed Rachmaninov’s Rhapsody on a Theme by Paganini and Gerswhin’s Rhapsody in Blue in a double-bill special event as well as concerto and recital appearances in the U.S. and his native Greece.

As a soloist with orchestra in the United States, Dr. Varvaresos has performed Grieg’s Piano Concerto with the Victoria Symphony in Texas, Tchaikovsky’s Concerto No. 1 with the Westmoreland Symphony (PA), Chopin’s Concerto No. 2 with the Dearborn (MI) Orchestra Society, Haydn’s Concerto in D Major

¹ The Juilliard School is globally recognized as the top music school in the world (See <http://www.hollywoodreporter.com/news/hollywood-reporter-unveils-top-25-745732> and <http://www.world-top-10.com/list/World-Top-Music-School/19>).

with the Hartford Symphony, Mozart's Concerto No. 5 with the Modesto (CA) Symphony, Mozart's Concerto no. 20 with the Altoona (PA) Symphony, Rachmaninov 's Concerto no. 1 with the JCC of Greater Washington, and Beethoven' s Concerto no.3 with the Sacramento Youth Symphony.

Dr. Varvaresos ' performances in his native Greece include the Tchaikovsky Piano Concerto at the Megaron Hall with the Athens State Symphony Orchestra, Solon Michailides's Piano Concerto and the Grieg Piano Concerto in the Megaron Hall of Athens, Rachmaninov's Concerto no. 2, Mozart 's Concerto no. 20 and Beethoven' s Concerto No. 3, with the Orchestra of Thessaloniki. He has performed numerous times on Greek State Television, as well as on television in Italy, Yugoslavia and Bulgaria. Dr. Varvaresos has represented Greece in a special "EuroConcert" at the Museum of Modern Art in Helsinki, at the Greek Embassy in Milan, and for the U.S. Ambassador to Greece. He has also performed as a recitalist in Austria, Germany, France, Italy, The Czech Republic, Bulgaria, and Yugoslavia.

Dr. Varvaresos is a founding member of Fourtissimo!, a group of four award-winning pianists whose goal is to reinvent the concert going experience through tasteful and uncompromising experimentation: unorthodox choice of repertoire, questions and choices concerning the form of the piano recital, and original compositions/transcriptions that test the limitations of the instrument and point the way towards a new type of instrumental virtuosity and inventiveness . The group's debut at Carnegie's Zankel Hall in October 2010 received immediate audience and critical acclaim.

Dr. Varvaresos is also active as a composer. His dance composition Three Etudes was chosen to represent the Juilliard School in a Dance Forum hosted by the Pallucca Schüle in Dresden, Germany in October of 2007. He has written ten film scores, including "Ellsworth Kelly: Fragments" and "Sir John Soane: An English Architect, an American Legacy" produced by the Checkerboard Film Foundation. He has also composed the score for the short film "Hardwood".

Dr. Varvaresos is currently pursuing the prestigious Diplôme d' Artiste-Interpète degree at the Conservatoire Nationale et Supérieur de Musique et de Danse in Paris, France. He studies with Michel Dalberto.

Dr. Varvaresos is recipient of Musical Studies Grants from the Bagby Foundation and the George and Marie Vergottis Foundation. Since 2008, he has also been the recipient of the Gina Bachauer Foundation Grant for Outstanding Talent in Music and Onassis Foundation Grant.

"...Varvaresos engaged his audience for a performance that sizzled from start to finish. I felt as though I was hearing this piece for the first time and now I 'm a believer. Vassilis Varvaresos not only has a natural yet finely honed technique, it springs as one with the wide scope of profound musicianship. The Liszt was delivered in an astonishingly powerful and poetic trajectory. The audience was stunned. I remembered to stand up and shout – if ever there was a reason to yell Bravo, this was it."

New York Concert Review

"...Dr. Varvaresos first offered No. 9, "Vertige," in a rendition so dizzying that one needed to clutch one's seat..."

[New York Concert Review](#)

Varvaresos managed to control perfectly the robust Steinway – he was able to create a clean, tight sound that served perfectly the aesthetics of the time. His phrasing was elegant, flexible, [...] with well-crafted commas and periods. He delivered an outstanding “Allegretto e innocente...”

Eletherotypia (Greece)

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (ii) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (iii) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity mainly dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic's definition of the "Music Community" as a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music" (See Application Answer to Question 20a) is factually accurate and representative of the "Music Community." Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The "Music Community" definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. "Music Community" members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each "organized community of similar nature that relates to music" that comprises the "Music Community." Without such cohesiveness and interdependency, the defined "Music" Community matching the applied-for string ("Music") would not be able to function in its regulated sector. "Music" is a regulated sector comprised of a logical alliance of interdependent communities relating to music with organized practices and institutions that enable and regulate the production, distribution and consumption of music that was publicly recognized by both ICANN and the Government Advisory Committee⁵

As a result, the Music Community as defined is "closely united" (As per the definition of "cohesion" according to Merriam-Webster dictionary⁶) or "united or form a whole" (As per the definition of the word "cohesion" according to Oxford Dictionaries⁷).

DotMusic's application follows unified principles that the entire Community subscribes to, such as: creating a trusted identifier and safe haven for music consumption, protecting musicians' rights and intellectual property, fighting copyright infringement/piracy, supporting fair compensation and music education, and following a multi-stakeholder approach of representation of all types of global music constituents without discrimination (See Application Answers to 18).

The "Music Community" as defined (a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music") establishes that:

- (1) There is an awareness and recognition among its members;

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en, Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved July 6, 2015, from https://en.wikipedia.org/wiki/Music_community

ii) An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:

DotMusic's definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

According to DotMusic, the Music Community's geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, "registrants will be verified using Community-organized, unified "criteria taken from holistic perspective with due regard of Community particularities" that "invoke a formal membership (Application Answer to Question 20a)." The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string "music" and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the "music" string).

DotMusic's Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the "Music Community" as defined implies "more of cohesion than a mere commonality of interest" with an "awareness and recognition of a community among its members." Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members' rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world's population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

countries.¹³ This means that if a Music Community member's copyright rights are violated in any other signatory country's jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community's rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community's *Establishment* and definition is "cohesive" and hence cannot be construed since the Community is a logical alliance of music communities that establish a clearly delineated and organized Community structure that is "closely united" and functions as a "whole"

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The "music" string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain's registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN "to provide accurate WHOIS contact data" or else their domain "registration may be suspended or even cancelled".¹⁸

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

iii) *International Federations and Organizations mainly Dedicated to the Community:*

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: *“With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.”* (AGB, 4-12). The community as defined in the DotMusic application has at least one entity *mainly*²⁰ dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ Per the Oxford and Merriam Webster dictionaries, the word “mainly” is defined as “*more than anything else*” (See <http://www.oxforddictionaries.com/definition/english/mainly> and <http://www.merriam-webster.com/dictionary/mainly> respectively). According to DotMusic, the string .MUSIC relates to the Community “by representing all constituents involved in music creation, production and distribution” (Application Answer to Question 20d). Supporting organizations related to that string that are “mainly” dedicated to the Community and its activities, include the International Federation of Arts Councils and Culture Agencies (IFACCA) representing government culture ministries and arts councils, the International Federation of Musicians (FIM) representing musicians globally, the International Federation of Phonographic Industry (IFPI) representing the recording industry worldwide, the International Confederation of Music Publishers (ICPM) representing the voice of global music publishing, the International Association of Music Information Centres (IAMIC), the American Association of Independent Music (A2IM), whose associate members represent a majority of music consumed, the Independent Music Worldwide Independent Network (WIN) representing independent music worldwide, the International Society for Music Education (ISME) the premiere international organization representing music education, and many others (See support at <http://music.us/supporters> and <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails:downloadattachment/142588?t:ac=1392>).

role with respect to music.²¹ IFACCA's members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The "Size" covered reaches over a hundred million music entities i.e. "considerable size with millions of constituents" per Application Answer to Question 20a.

The string "music" falls under the jurisdiction of each country's Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²² The UNESCO strategic partnership²³ is relevant, especially since UNESCO founded the International Music Council (the "IMC") in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁴

Government activities in the clearly delineated and organized "Music Community" include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a "statutory rate" set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁵

Ministries of culture and arts councils (that comprise IFACCA's membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA's membership support the "performing arts" and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁶ Other small government Ministries of Culture, such as Albania,²⁷ or government

²⁶ 2011 Annual Report for Cyprus Ministry of Culture, Section 1.2 "Music"

(http://www.moec.gov.cy/en/annual_reports/annual_report_2011_en.pdf). Activities include Music Performances in Cyprus (1.2.1) and Abroad (1.2.2), Subsidization of Paphos Aphrodite Festival (1.2.3), Music Publications (1.2.4), Subsidization and Purchases of Digital Records (1.2.5), Promotion for Cypriot musical creativity abroad (1.2.6),

Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁸ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world's largest music conference.²⁹

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³⁰
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³¹
- Canada Council for the Arts is Canada's national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³² The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³³
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁴

Cyprus Symphony Orchestra Foundation (1.2.7), Music Information Centre (1.2.8), Developing Music Education (1.2.9), Organising of the 1st Musicological Symposium (1.2.10) and Musical Festivities for the European Volunteerism Year (1.2.11)

³⁴ Department for Culture, The Importance of Music, A National Plan for Music Education,

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/180973/DFE-00086-2011.pdf, Page 4, 2011

- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁵ and has a strong focus on music as outlined in its Strategic Plan³⁶ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁷
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁸
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁹
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴⁰

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

The IFPI is another entity *mainly* dedicated to the Community. The IFPI is the only organization that represents the interests of the recording industry worldwide. It is the “voice of the recording industry worldwide”⁴¹ whose members⁴² – major and independent companies -- represent a majority of all commercial music consumed globally. For example, the RIAA, an IFPI national group member,⁴³ represents “approximately 85% of all legitimate recorded music produced and sold in the United States,”⁴⁴ the world’s largest music market with 30% global market share.⁴⁵ Formed in 1933, the IFPI’s mission was to “represent the interests of the recording industry worldwide in all fora.”

Another clear example of an “entity *mainly* dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁶

The reach of A2IM Associate⁴⁷ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴⁸ – iTunes accounts for 63% of global digital music market⁴⁹ - a majority – with a registered community of 800 million registered members⁵⁰ available in 119 countries who abide to strict terms of service and boundaries⁵¹ and have downloaded over 25 billion songs⁵² from iTunes’ catalog of over 43 million songs⁵³ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁵⁴
- **Pandora**⁵⁵ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁶
- **Spotify**⁵⁷ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵⁸
- **Vevo**⁵⁹ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁶⁰

⁵⁷ <http://a2im.org/groups/spotify>

⁵⁸ <https://press.spotify.com/us/information/>

⁵⁹ <http://a2im.org/groups/vevo/>

- **Youtube**⁶¹ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁶² of which 38.4% is music-related.⁶³
- **ReverbNation**⁶⁴ – ReverbNation⁶⁵ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The ReverbNation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁶ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶⁷

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶⁸), China (China Audio Video Association⁶⁹) and Germany (Initiative Musik).⁷⁰ A2IM also has Affiliate⁷¹ associations within the global music community. These include Affiliates such as MusicFirst,⁷² the Copyright Alliance,⁷³ the Worldwide Independent Network (WIN)⁷⁴ and Merlin.⁷⁵

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁶ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises).

⁷⁵ <http://www.merlinnetwork.org>

⁷⁶ <https://www.icann.org/en/system/files/correspondence/bengloff-to-chehade-et-al-20aug14-en.pdf> and <https://www.icann.org/en/system/files/correspondence/bengloff-to-crocker-et-al-07mar15-en.pdf>

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA “on behalf of over 15 national and international trade associations” also expressed its support for .MUSIC to be under a “community” application model, including encouraging statements in support of DotMusic’s policies that stated that the coalition “was encouraged to see” that DotMusic “included several measures to deter and address copyright infringement within that TLD.” The “coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world’s music”⁷⁷ – a majority of global music.⁷⁸

Another letter⁷⁹ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed “support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest.”

The International Music Products Association, NAMM, is another globally-recognized and relevant group of non-negligible size that has supported DotMusic.⁸⁰ NAMM, formed in 1901, is *mainly* dedicated to the global music community by representing the international music products industry and community, with globally-recognized members and exhibitors that include Yamaha, Roland, Sennheiser, Sony, Fender, Harman, Kawai, Shure, Steinway, Audio-Technica, AKAI, Gibson, Peavey, Korg, AKG, Selmer, JBL, Alesis, Ibanez, AVID, Casio, DW, Sabian, Pearl, Zildjian, Martin, Ludwig, Marshall and others.^{81 82} Every amateur and professional musician worldwide uses music products manufactured and distributed by NAMM’s members. Without these musical instruments and products, music as we know it today would not be created or produced. NAMM and its trade shows power the \$17 billion global music products industry serving as a hub for the global music community wanting to seek out the newest innovations in musical products, recording technology, sound and lighting. NAMM’s mission is “to strengthen

⁷⁷ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.1

⁸⁰ http://music.us/letters/NAMM_International_Music_Products_Association.pdf

⁸¹ https://www.namm.org/files/showdir/ExhibitorList_WN15.xls

⁸² <http://www.musictrades.com/global.html>

the music products industry and promote the pleasures and benefits of making music.”⁸³ NAMM also hosts the NAMM Show, the world's largest event for the music products industry.

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause representing over 95% of music consumed globally.⁸⁴ Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁸⁵ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁸⁶

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community. Community members may register a .MUSIC by either:

⁸³ <https://www.namm.org/about>

⁸⁴ See <http://music.us/supporters>, <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>, Bloomberg BNA at http://music.us/RIAA_Backs_DotMusic.pdf Pg.1, and <http://diffuser.fm/will-dot-music-domains-make-the-internet-better/>

⁸⁵ <http://music.us/supporters>

⁸⁶ See <http://music.us/nexus>

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework⁸⁷ given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

⁸⁷ ICANN has disclosed that the string .MUSIC is a sensitive string operating in a regulated sector. ICANN also accepted Government Advisory Committee (GAC) advice for safeguards to protect the Music Community and the public interest (See <https://icann.org/en/system/files/correspondence/crocker-to-dryden-3-29oct13-en.pdf> Pg.7)

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

² <http://music.us/supporters>

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic’s definition of the “Music Community” as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application, 20a) is factually accurate and representative of the “Music Community.” Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The “Music Community” definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. “Music Community” members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each “organized community of similar nature that relates to music” that comprises the “Music Community.” Without such cohesiveness and interdependency, the defined “Music” Community matching the applied-for string (“Music”) would not be able to function in its regulated sector, a “Music” regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.⁵

As a result, the Music Community as defined is “closely united” (As per the definition of “cohesion” according to Merriam-Webster dictionary⁶) or “united or form a whole” (As per the definition of the word “cohesion” according to Oxford Dictionaries⁷).

The “Music Community” as defined (a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

ii) *An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:*

DotMusic’s definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en,Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved March 23, 2015, from https://en.wikipedia.org/wiki/Music_community

According to DotMusic, the Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string “music” and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the “music” string).

DotMusic’s Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the “Music Community” as defined implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members’ rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world’s population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

iii) International Federations and Organizations Dedicated to Community Functions:

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: *“With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.”* (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²⁰ IFACCA’s members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The “Size” covered reaches over a hundred million music entities i.e. “considerable size with millions of constituents” per Application Answer to Question 20a.

The string “music” falls under the jurisdiction of each country’s Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²¹ The UNESCO strategic partnership²² is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²³

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ http://www.ifacca.org/membership/current_members/

²¹ http://www.ifacca.org/strategic_partners/

²² http://www.ifacca.org/strategic_partners/

²³ <http://www.imc-cim.org/about-imc-separator/who-we-are.html>

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a “statutory rate” set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁴

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁵ Other small government Ministries of Culture, such as Albania,²⁶ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁷ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world’s largest music conference.²⁸

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries’ and arts councils’ substantial connection to and support of “music” is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA’s membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).²⁹
- The Australian Government/Council For The Arts invested \$51.2 million for the nation’s orchestras; \$21.6 million for opera; \$10.8 million for other music artists and

organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³⁰

- Canada Council for the Arts is Canada’s national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³¹ The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³²
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³³
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁴ and has a strong focus on music as outlined in its Strategic Plan³⁵ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁶
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁷
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁸
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.³⁹

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Another clear example of an “entity dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁰

The reach of A2IM Associate⁴¹ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴² – iTunes accounts for 63% of global digital music market⁴³ - a majority – with a registered community of 800 million registered members⁴⁴ available in 119 countries who abide to strict terms of service and boundaries⁴⁵ and have downloaded over 25 billion songs⁴⁶ from iTunes’ catalog of over 43 million songs⁴⁷ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁴⁸
- **Pandora**⁴⁹ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁰
- **Spotify**⁵¹ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵²
- **Vevo**⁵³ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁴

⁵¹ <http://a2im.org/groups/spotify>

⁵² <https://press.spotify.com/us/information/>

⁵³ <http://a2im.org/groups/vevo/>

- **Youtube**⁵⁵ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁵⁶ of which 38.4% is music-related.⁵⁷
- **ReverbNation**⁵⁸ – ReverbNation⁵⁹ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The ReverbNation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁰ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶¹

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶²), China (China Audio Video Association⁶³) and Germany (Initiative Musik).⁶⁴ A2IM also has Affiliate⁶⁵ associations within the global music community. These include Affiliates such as MusicFirst,⁶⁶ the Copyright Alliance,⁶⁷ the Worldwide Independent Network (WIN)⁶⁸ and Merlin.⁶⁹

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁰ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

⁶⁹ <http://www.merlinnetwork.org>

⁷⁰ <https://www.icann.org/en/system/files/correspondence/bengloff-to-chehade-et-al-20aug14-en.pdf> and <https://www.icann.org/en/system/files/correspondence/bengloff-to-crocker-et-al-07mar15-en.pdf>

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷¹ – a majority of global music.⁷²

Another letter⁷³ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed "support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest."

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁷⁴ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁷⁵

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community.

Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries

⁷⁵ See <http://music.us/nexus>

and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic's community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic's application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined "music" Community and applied-for "music" string would not constitute a qualifying Community membership and would be ineligible for registration.

The inclusion of every music constituent type is paramount to the purpose of the string. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

Name: Wilfred Dolfsma

Title: Professor of Business Administration

Organization: University of Groningen, Netherlands

About Professor Dr. Wilfred Dolfsma

*Professor of Innovation
School of Economics and Business
University of Groningen*

*Founding Director
SOM research programme Innovation & Organization
University of Groningen*

*Professorial Fellow
United Nations University – MERIT*

*Editor in Chief
Review of Social Economy*

*Associate Editor
Innovation: Management, Policy, Practice*

*PH.D in Economics
Erasmus University Rotterdam*

Biography

Trained as both an economist and philosopher, Wilfred Dolfsma (1970) holds a PhD in the former from [Erasmus University](#). He is professor of innovation at the [University of Groningen School of Economics and Business](#), and is corresponding editor for the [Review of Social Economy](#). Dolfsma's main research focus is the different aspects of cooperation in processes of innovation.

During previous affiliations he has been imbued with Economics of Innovation ([Delft University of Technology](#)), Innovation Management ([RSM Erasmus University](#)), Economic Geography ([Rheinischen Friedrich-Wilhelms-Universität Bonn](#)), Philosophy of Science and Technology ([Twente University of Technology](#)), Economics of Organisation ([Utrecht School of Economics](#)), and innovation and development at [UNU MERIT](#).

He has authored Institutional Economics and the Formation of Preferences (2004), Knowledge Economies (2008), and Institutions, Communication and Values (forthcoming). The former monograph won him [EAEPE's Gunnar Myrdal Prize](#) in 2006. He co-edited Understanding the Dynamics of the Knowledge Economy (with [Luc Soete](#), 2006), Globalization, Social Capital and Inequality (with [Charlie Dannreuther](#), 2003), Ethics and the Market (with [Deb Figart](#) and [Jane Clary](#), 2006) and Media & Economic: Markten in Beweging en een Overheid die stuurt zonder Kompas. Preadviezen van de Koninklijke Vereniging voor de Staatshuishoudkunde (with [Richard Nahuis](#), 2005). Articles have featured in, a.o., the Journal of Economic Issues, American Journal of Economics and Sociology, Journal of Evolutionary Economics, Journal of Economic and Social Geography, Journal of Business Ethics, The Information Society, International Journal of Innovation Management, and Research Policy.

Teaching in following courses:

- Organisation and Environment
- Cooperation for Innovation (SIM MScBA)
- Capturing Value from Innovation (SIM MScBA)
- Inter-firm Collaboration for Innovation (Research Master, Innovation & Organization profile)
- Strategy and Organisation Practice (Accountancy master, Univ of Curacao)
- Master theses

Job title

Professor of Innovation; director SOM research programme Innovation and Organization

Other positions

Editor-in-Chief, Review of Social Economy

Associate Editor, Innovation: Management, Policy, Practice

Additional activities: member of the executive board, Association for Social Economics.

Field/Discipline

Innovation & Technology Management

Business

Management

Strategic Management

Expertise:

Innovation

Cooperation

Appropriability issues

Profile

Wilfred Dolfsma is based at the School of Economics and Business of the University of Groningen, The Netherlands, in addition to UNU-MERIT. He is also Visiting Scholar at the University of Aberdeen Business School. His main interests are the issues of innovation and industry dynamics, and mainly at micro and meso levels. How is existing knowledge exchanged within and between firms, how does new knowledge emerge, and how does this contribute to innovation?

He is also interested in: Consumption, consumption theory; Law & Economics (IPR); Evolutionary, Institutional & Social Economics; Economic History & Methodology; Media / Entertainment Industries.

He is corresponding editor ('editor-in-chief') of the Review of Social Economy, and recently received the Myrdal prize for best monograph, awarded by EAEPE (2006).

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity mainly dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic’s definition of the “Music Community” as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application, 20a) is factually accurate and representative of the “Music Community.” Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The “Music Community” definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. “Music Community” members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each “organized community of similar nature that relates to music” that comprises the “Music Community.” Without such cohesiveness and interdependency, the defined “Music” Community matching the applied-for string (“Music”) would not be able to function in its regulated sector, a “Music” regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.⁵

As a result, the Music Community as defined is “closely united” (As per the definition of “cohesion” according to Merriam-Webster dictionary⁶) or “united or form a whole” (As per the definition of the word “cohesion” according to Oxford Dictionaries⁷).

The “Music Community” as defined (a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

ii) *An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:*

DotMusic’s definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en, Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved July 6, 2015, from https://en.wikipedia.org/wiki/Music_community

According to DotMusic, the Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string “music” and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the “music” string).

DotMusic’s Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the “Music Community” as defined implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members’ rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world’s population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

iii) *International Federations and Organizations mainly Dedicated to the Community:*

According to ICANN's Applicant Guidebook ("AGB")¹⁹: *"With respect to "Delineation" and "Extension," it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members."* (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly²⁰ dedicated to the community which has supported DotMusic, which include several "international federation of national communities of a similar nature" relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²¹ IFACCA's members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The "Size" covered reaches over a hundred million music entities i.e. "considerable size with millions of constituents" per Application Answer to Question 20a.

The string "music" falls under the jurisdiction of each country's Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ Per the Oxford and Merriam Webster dictionaries, the word "mainly" is defined as "*more than anything else*" (See <http://www.oxforddictionaries.com/definition/english/mainly> and <http://www.merriam-webster.com/dictionary/mainly> respectively). According to DotMusic, the string .MUSIC relates to the Community "by representing all constituents involved in music creation, production and distribution" (Application Answer to Question 20d). Supporting organizations related to that string that are "mainly" dedicated to the Community and its activities, include the International Federation of Arts Councils and Culture Agencies (IFACCA) representing government culture ministries and arts councils, the International Federation of Musicians (FIM) representing musicians globally, the International Federation of Phonographic Industry (IFPI) representing the recording industry worldwide, the International Confederation of Music Publishers (ICPM) representing the voice of global music publishing, the International Association of Music Information Centres (IAMIC), the American Association of Independent Music (A2IM), whose associate members represent a majority of music consumed, the Independent Music Worldwide Independent Network (WIN) representing independent music worldwide, the International Society for Music Education (ISME) the premiere international organization representing music education, and many others (See support at <http://music.us/supporters> and <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>).

²¹ http://www.ifacca.org/membership/current_members/

influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²² The UNESCO strategic partnership²³ is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁴

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a “statutory rate” set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁵

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁶ Other small government Ministries of Culture, such as Albania,²⁷ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁸ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world’s largest music conference.²⁹

²⁹ <http://my.midem.com/en/contact-us/pavilion-representatives/>

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³⁰
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³¹
- Canada Council for the Arts is Canada's national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³² The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³³
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁴
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁵ and has a strong focus on music as outlined in its Strategic Plan³⁶ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁷
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the "Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa"³⁸

³⁷ http://www.ifacca.org/national_agency_news/2013/04/10/us-president-requests-154465000-neh-2014/

³⁸ 2010-2011 Annual Report for the National Arts Council South Africa, National Arts Council South Africa, <http://www.nac.org.za/media/publications/AR%2010-11%20NAC.PDF/download>, Page 11. Also Mmino, the South African – Norwegian Education Music Programme, solely funds music projects funding a total of 294 projects. Thirteen projects were allocated funding for a total of R1,680,600 of which R1,381,000 went towards music educational and R299,600 to exchange projects (Page 10)

- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁹
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴⁰

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Another clear example of an “entity *mainly* dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴¹

The reach of A2IM Associate⁴² membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴³ – iTunes accounts for 63% of global digital music market⁴⁴ - a majority – with a registered community of 800 million registered members⁴⁵ available in 119 countries who abide to strict terms of service and boundaries⁴⁶ and have downloaded over 25 billion songs⁴⁷ from iTunes’ catalog of over 43 million songs⁴⁸ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁴⁹

- **Pandora**⁵⁰ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵¹
- **Spotify**⁵² – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵³
- **Vevo**⁵⁴ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁵
- **Youtube**⁵⁶ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁵⁷ of which 38.4% is music-related.⁵⁸
- **Reverbnation**⁵⁹ – Reverbnation⁶⁰ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The Reverbnation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶¹ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶²

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶³), China (China Audio Video Association⁶⁴) and Germany (Initiative Musik).⁶⁵ A2IM also has Affiliate⁶⁶ associations within the global music community. These include Affiliates such as MusicFirst,⁶⁷ the Copyright Alliance,⁶⁸ the Worldwide Independent Network (WIN)⁶⁹ and Merlin.⁷⁰

⁶⁷ <http://musicfirstcoalition.org/coalition>, The musicFIRST Coalition, with founding members A2IM, RIAA, and Recording Academy represents musicians, artists, managers, music businesses, and performance right advocates.

⁶⁸ <http://www.copyrightalliance.org/members>

⁶⁹ <http://www.winformusic.org>

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷¹ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises).

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

The IFPI is another entity *mainly* dedicated to the Community. The IFPI is the only organization that represents the interests of the recording industry worldwide. It is the "voice of the recording industry worldwide"⁷² whose members⁷³ – major and independent companies -- represent a majority of all commercial music consumed globally. For example, the RIAA, an IFPI national group member,⁷⁴ represents "approximately 85% of all legitimate recorded music produced and sold in the United States,"⁷⁵ the world's largest music market with 30% global market share.⁷⁶ Formed in 1933, the IFPI's mission was to "represent the interests of the recording industry worldwide in all fora."

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷⁷ – a majority of global music.⁷⁸

⁷⁸ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.3, Appendix A

Another letter⁷⁹ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed “support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest.”

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause representing over 95% of music consumed globally.⁸⁰ Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁸¹ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁸²

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music

⁷⁹ <https://www.icann.org/en/system/files/correspondence/aguirre-to-icann-board-ciu-14apr15-en.pdf>

⁸⁰ See <http://music.us/supporters>, <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>, Bloomberg BNA at http://music.us/RIAA_Backs_DotMusic.pdf Pg.1, and <http://diffuser.fm/will-dot-music-domains-make-the-internet-better/>

⁸¹ <http://music.us/supporters>

⁸² See <http://music.us/nexus>

entities to be included as part of the Community. Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

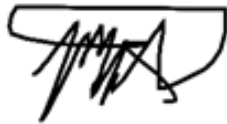

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework⁸³ given the symbiotic overlapping nature of the Community as

⁸³ ICANN has disclosed that the string .MUSIC is a sensitive string operating in a regulated sector. ICANN also accepted Government Advisory Committee (GAC) advice for safeguards to protect the Music Community and the public interest (See <https://icann.org/en/system/files/correspondence/crocker-to-dryden-3-29oct13-en.pdf> Pg.7)

defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (ii) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (iii) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity mainly dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic's definition of the "Music Community" as a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music" (See Application Answer to Question 20a) is factually accurate and representative of the "Music Community." Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The "Music Community" definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. "Music Community" members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each "organized community of similar nature that relates to music" that comprises the "Music Community." Without such cohesiveness and interdependency, the defined "Music" Community matching the applied-for string ("Music") would not be able to function in its regulated sector. "Music" is a regulated sector comprised of a logical alliance of interdependent communities relating to music with organized practices and institutions that enable and regulate the production, distribution and consumption of music that was publicly recognized by both ICANN and the Government Advisory Committee⁵

As a result, the Music Community as defined is "closely united" (As per the definition of "cohesion" according to Merriam-Webster dictionary⁶) or "united or form a whole" (As per the definition of the word "cohesion" according to Oxford Dictionaries⁷).

DotMusic's application follows unified principles that the entire Community subscribes to, such as: creating a trusted identifier and safe haven for music consumption, protecting musicians' rights and intellectual property, fighting copyright infringement/piracy, supporting fair compensation and music education, and following a multi-stakeholder approach of representation of all types of global music constituents without discrimination (See Application Answers to 18).

The "Music Community" as defined (a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music") establishes that:

- (1) There is an awareness and recognition among its members;

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en, Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved July 6, 2015, from https://en.wikipedia.org/wiki/Music_community

ii) An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:

DotMusic's definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

According to DotMusic, the Music Community's geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, "registrants will be verified using Community-organized, unified "criteria taken from holistic perspective with due regard of Community particularities" that "invoke a formal membership (Application Answer to Question 20a)." The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string "music" and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the "music" string).

DotMusic's Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the "Music Community" as defined implies "more of cohesion than a mere commonality of interest" with an "awareness and recognition of a community among its members." Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members' rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world's population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

countries.¹³ This means that if a Music Community member's copyright rights are violated in any other signatory country's jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community's rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community's *Establishment* and definition is "cohesive" and hence cannot be construed since the Community is a logical alliance of music communities that establish a clearly delineated and organized Community structure that is "closely united" and functions as a "whole"

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The "music" string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain's registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN "to provide accurate WHOIS contact data" or else their domain "registration may be suspended or even cancelled".¹⁸

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

iii) *International Federations and Organizations mainly Dedicated to the Community:*

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: “*With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.*” (AGB, 4-12). The community as defined in the DotMusic application has at least one entity *mainly*²⁰ dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ Per the Oxford and Merriam Webster dictionaries, the word “mainly” is defined as “*more than anything else*” (See <http://www.oxforddictionaries.com/definition/english/mainly> and <http://www.merriam-webster.com/dictionary/mainly> respectively). According to DotMusic, the string .MUSIC relates to the Community “by representing all constituents involved in music creation, production and distribution” (Application Answer to Question 20d). Supporting organizations related to that string that are “mainly” dedicated to the Community and its activities, include the International Federation of Arts Councils and Culture Agencies (IFACCA) representing government culture ministries and arts councils, the International Federation of Musicians (FIM) representing musicians globally, the International Federation of Phonographic Industry (IFPI) representing the recording industry worldwide, the International Confederation of Music Publishers (ICPM) representing the voice of global music publishing, the International Association of Music Information Centres (IAMIC), the American Association of Independent Music (A2IM), whose associate members represent a majority of music consumed, the Independent Music Worldwide Independent Network (WIN) representing independent music worldwide, the International Society for Music Education (ISME) the premiere international organization representing music education, and many others (See support at <http://music.us/supporters> and <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails:downloadattachment/142588?t:ac=1392>).

role with respect to music.²¹ IFACCA's members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The "Size" covered reaches over a hundred million music entities i.e. "considerable size with millions of constituents" per Application Answer to Question 20a.

The string "music" falls under the jurisdiction of each country's Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²² The UNESCO strategic partnership²³ is relevant, especially since UNESCO founded the International Music Council (the "IMC") in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁴

Government activities in the clearly delineated and organized "Music Community" include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a "statutory rate" set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁵

Ministries of culture and arts councils (that comprise IFACCA's membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA's membership support the "performing arts" and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁶ Other small government Ministries of Culture, such as Albania,²⁷ or government

²⁶ 2011 Annual Report for Cyprus Ministry of Culture, Section 1.2 "Music"

(http://www.moec.gov.cy/en/annual_reports/annual_report_2011_en.pdf). Activities include Music Performances in Cyprus (1.2.1) and Abroad (1.2.2), Subsidization of Paphos Aphrodite Festival (1.2.3), Music Publications (1.2.4), Subsidization and Purchases of Digital Records (1.2.5), Promotion for Cypriot musical creativity abroad (1.2.6),

Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁸ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world's largest music conference.²⁹

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³⁰
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³¹
- Canada Council for the Arts is Canada's national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³² The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³³
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁴

Cyprus Symphony Orchestra Foundation (1.2.7), Music Information Centre (1.2.8), Developing Music Education (1.2.9), Organising of the 1st Musicological Symposium (1.2.10) and Musical Festivities for the European Volunteerism Year (1.2.11)

³⁴ Department for Culture, The Importance of Music, A National Plan for Music Education,

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/180973/DFE-00086-2011.pdf, Page 4, 2011

- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁵ and has a strong focus on music as outlined in its Strategic Plan³⁶ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁷
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁸
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁹
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴⁰

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

The IFPI is another entity *mainly* dedicated to the Community. The IFPI is the only organization that represents the interests of the recording industry worldwide. It is the “voice of the recording industry worldwide”⁴¹ whose members⁴² – major and independent companies -- represent a majority of all commercial music consumed globally. For example, the RIAA, an IFPI national group member,⁴³ represents “approximately 85% of all legitimate recorded music produced and sold in the United States,”⁴⁴ the world’s largest music market with 30% global market share.⁴⁵ Formed in 1933, the IFPI’s mission was to “represent the interests of the recording industry worldwide in all fora.”

Another clear example of an “entity *mainly* dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁶

The reach of A2IM Associate⁴⁷ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴⁸ – iTunes accounts for 63% of global digital music market⁴⁹ - a majority – with a registered community of 800 million registered members⁵⁰ available in 119 countries who abide to strict terms of service and boundaries⁵¹ and have downloaded over 25 billion songs⁵² from iTunes’ catalog of over 43 million songs⁵³ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁵⁴
- **Pandora**⁵⁵ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁶
- **Spotify**⁵⁷ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵⁸
- **Vevo**⁵⁹ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁶⁰

⁵⁷ <http://a2im.org/groups/spotify>

⁵⁸ <https://press.spotify.com/us/information/>

⁵⁹ <http://a2im.org/groups/vevo/>

- **Youtube**⁶¹ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁶² of which 38.4% is music-related.⁶³
- **ReverbNation**⁶⁴ – ReverbNation⁶⁵ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The ReverbNation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁶ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶⁷

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶⁸), China (China Audio Video Association⁶⁹) and Germany (Initiative Musik).⁷⁰ A2IM also has Affiliate⁷¹ associations within the global music community. These include Affiliates such as MusicFirst,⁷² the Copyright Alliance,⁷³ the Worldwide Independent Network (WIN)⁷⁴ and Merlin.⁷⁵

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁶ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA “on behalf of over 15 national and international trade associations” also expressed its support for .MUSIC to be under a “community” application model, including encouraging statements in support of DotMusic’s policies that stated that the coalition “was encouraged to see” that DotMusic “included several measures to deter and address copyright infringement within that TLD.” The “coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world’s music”⁷⁷ – a majority of global music.⁷⁸

Another letter⁷⁹ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed “support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest.”

The International Music Products Association, NAMM, is another globally-recognized and relevant group of non-negligible size that has supported DotMusic.⁸⁰ NAMM, formed in 1901, is *mainly* dedicated to the global music community by representing the international music products industry and community, with globally-recognized members and exhibitors that include Yamaha, Roland, Sennheiser, Sony, Fender, Harman, Kawai, Shure, Steinway, Audio-Technica, AKAI, Gibson, Peavey, Korg, AKG, Selmer, JBL, Alesis, Ibanez, AVID, Casio, DW, Sabian, Pearl, Zildjian, Martin, Ludwig, Marshall and others.^{81 82} Every amateur and professional musician worldwide uses music products manufactured and distributed by NAMM’s members. Without these musical instruments and products, music as we know it today would not be created or produced. NAMM and its trade shows power the \$17 billion global music products industry serving as a hub for the global music community wanting to seek out the newest innovations in musical products, recording technology, sound and lighting. NAMM’s mission is “to strengthen

⁷⁷ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.1

⁸¹ https://www.namm.org/files/showdir/ExhibitorList_WN15.xls

⁸² <http://www.musictrades.com/global.html>

the music products industry and promote the pleasures and benefits of making music.”⁸³ NAMM also hosts the NAMM Show, the world's largest event for the music products industry.

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause representing over 95% of music consumed globally.⁸⁴ Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁸⁵ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁸⁶

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community. Community members may register a .MUSIC by either:

⁸³ <https://www.namm.org/about>

⁸⁴ See <http://music.us/supporters>, <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>, Bloomberg BNA at http://music.us/RIAA_Backs_DotMusic.pdf Pg.1, and <http://diffuser.fm/will-dot-music-domains-make-the-internet-better/>

⁸⁵ <http://music.us/supporters>

⁸⁶ See <http://music.us/nexus>

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

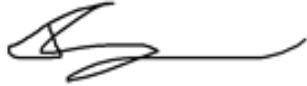

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework⁸⁷ given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

⁸⁷ ICANN has disclosed that the string .MUSIC is a sensitive string operating in a regulated sector. ICANN also accepted Government Advisory Committee (GAC) advice for safeguards to protect the Music Community and the public interest (See <https://icann.org/en/system/files/correspondence/crocker-to-dryden-3-29oct13-en.pdf> Pg.7)

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (ii) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (iii) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity mainly dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus*, *Community Establishment* and *Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic's definition of the "Music Community" as a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music" (See Application Answer to Question 20a) is factually accurate and representative of the "Music Community." Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The "Music Community" definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. "Music Community" members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each "organized community of similar nature that relates to music" that comprises the "Music Community." Without such cohesiveness and interdependency, the defined "Music" Community matching the applied-for string ("Music") would not be able to function in its regulated sector. "Music" is a regulated sector comprised of a logical alliance of interdependent communities relating to music with organized practices and institutions that enable and regulate the production, distribution and consumption of music that was publicly recognized by both ICANN and the Government Advisory Committee⁵

As a result, the Music Community as defined is "closely united" (As per the definition of "cohesion" according to Merriam-Webster dictionary⁶) or "united or form a whole" (As per the definition of the word "cohesion" according to Oxford Dictionaries⁷).

DotMusic's application follows unified principles that the entire Community subscribes to, such as: creating a trusted identifier and safe haven for music consumption, protecting musicians' rights and intellectual property, fighting copyright infringement/piracy, supporting fair compensation and music education, and following a multi-stakeholder approach of representation of all types of global music constituents without discrimination (See Application Answers to 18).

The "Music Community" as defined (a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music") establishes that:

- (1) There is an awareness and recognition among its members;

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexa.com/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en, Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved July 6, 2015, from https://en.wikipedia.org/wiki/Music_community

ii) An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:

DotMusic's definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

According to DotMusic, the Music Community's geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, "registrants will be verified using Community-organized, unified "criteria taken from holistic perspective with due regard of Community particularities" that "invoke a formal membership (Application Answer to Question 20a)." The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string "music" and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the "music" string).

DotMusic's Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the "Music Community" as defined implies "more of cohesion than a mere commonality of interest" with an "awareness and recognition of a community among its members." Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members' rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world's population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

countries.¹³ This means that if a Music Community member's copyright rights are violated in any other signatory country's jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community's rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community's *Establishment* and definition is "cohesive" and hence cannot be construed since the Community is a logical alliance of music communities that establish a clearly delineated and organized Community structure that is "closely united" and functions as a "whole"

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The "music" string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain's registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN "to provide accurate WHOIS contact data" or else their domain "registration may be suspended or even cancelled".¹⁸

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

iii) *International Federations and Organizations mainly Dedicated to the Community:*

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: “*With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.*” (AGB, 4-12). The community as defined in the DotMusic application has at least one entity *mainly*²⁰ dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ Per the Oxford and Merriam Webster dictionaries, the word “mainly” is defined as “*more than anything else*” (See <http://www.oxforddictionaries.com/definition/english/mainly> and <http://www.merriam-webster.com/dictionary/mainly> respectively). According to DotMusic, the string .MUSIC relates to the Community “by representing all constituents involved in music creation, production and distribution” (Application Answer to Question 20d). Supporting organizations related to that string that are “mainly” dedicated to the Community and its activities, include the International Federation of Arts Councils and Culture Agencies (IFACCA) representing government culture ministries and arts councils, the International Federation of Musicians (FIM) representing musicians globally, the International Federation of Phonographic Industry (IFPI) representing the recording industry worldwide, the International Confederation of Music Publishers (ICPM) representing the voice of global music publishing, the International Association of Music Information Centres (IAMIC), the American Association of Independent Music (A2IM), whose associate members represent a majority of music consumed, the Independent Music Worldwide Independent Network (WIN) representing independent music worldwide, the International Society for Music Education (ISME) the premiere international organization representing music education, and many others (See support at <http://music.us/supporters> and <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails:downloadattachment/142588?t:ac=1392>).

role with respect to music.²¹ IFACCA's members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The "Size" covered reaches over a hundred million music entities i.e. "considerable size with millions of constituents" per Application Answer to Question 20a.

The string "music" falls under the jurisdiction of each country's Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²² The UNESCO strategic partnership²³ is relevant, especially since UNESCO founded the International Music Council (the "IMC") in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁴

Government activities in the clearly delineated and organized "Music Community" include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a "statutory rate" set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁵

Ministries of culture and arts councils (that comprise IFACCA's membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA's membership support the "performing arts" and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁶ Other small government Ministries of Culture, such as Albania,²⁷ or government

²⁶ 2011 Annual Report for Cyprus Ministry of Culture, Section 1.2 "Music"

(http://www.moec.gov.cy/en/annual_reports/annual_report_2011_en.pdf). Activities include Music Performances in Cyprus (1.2.1) and Abroad (1.2.2), Subsidization of Paphos Aphrodite Festival (1.2.3), Music Publications (1.2.4), Subsidization and Purchases of Digital Records (1.2.5), Promotion for Cypriot musical creativity abroad (1.2.6),

Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁸ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world's largest music conference.²⁹

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³⁰
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³¹
- Canada Council for the Arts is Canada's national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³² The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³³
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁴

Cyprus Symphony Orchestra Foundation (1.2.7), Music Information Centre (1.2.8), Developing Music Education (1.2.9), Organising of the 1st Musicological Symposium (1.2.10) and Musical Festivities for the European Volunteerism Year (1.2.11)

³⁴ Department for Culture, The Importance of Music, A National Plan for Music Education,

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/180973/DFE-00086-2011.pdf, Page 4, 2011

- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁵ and has a strong focus on music as outlined in its Strategic Plan³⁶ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁷
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁸
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁹
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴⁰

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

The IFPI is another entity *mainly* dedicated to the Community. The IFPI is the only organization that represents the interests of the recording industry worldwide. It is the “voice of the recording industry worldwide”⁴¹ whose members⁴² – major and independent companies -- represent a majority of all commercial music consumed globally. For example, the RIAA, an IFPI national group member,⁴³ represents “approximately 85% of all legitimate recorded music produced and sold in the United States,”⁴⁴ the world’s largest music market with 30% global market share.⁴⁵ Formed in 1933, the IFPI’s mission was to “represent the interests of the recording industry worldwide in all fora.”

Another clear example of an “entity *mainly* dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁶

The reach of A2IM Associate⁴⁷ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴⁸ – iTunes accounts for 63% of global digital music market⁴⁹ - a majority – with a registered community of 800 million registered members⁵⁰ available in 119 countries who abide to strict terms of service and boundaries⁵¹ and have downloaded over 25 billion songs⁵² from iTunes’ catalog of over 43 million songs⁵³ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁵⁴
- **Pandora**⁵⁵ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁶
- **Spotify**⁵⁷ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵⁸
- **Vevo**⁵⁹ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁶⁰

⁵⁷ <http://a2im.org/groups/spotify>

⁵⁸ <https://press.spotify.com/us/information/>

⁵⁹ <http://a2im.org/groups/vevo/>

- **Youtube**⁶¹ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁶² of which 38.4% is music-related.⁶³
- **Reverbnation**⁶⁴ – Reverbnation⁶⁵ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The Reverbnation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁶ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶⁷

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶⁸), China (China Audio Video Association⁶⁹) and Germany (Initiative Musik).⁷⁰ A2IM also has Affiliate⁷¹ associations within the global music community. These include Affiliates such as MusicFirst,⁷² the Copyright Alliance,⁷³ the Worldwide Independent Network (WIN)⁷⁴ and Merlin.⁷⁵

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁶ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises).

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA “on behalf of over 15 national and international trade associations” also expressed its support for .MUSIC to be under a “community” application model, including encouraging statements in support of DotMusic’s policies that stated that the coalition “was encouraged to see” that DotMusic “included several measures to deter and address copyright infringement within that TLD.” The “coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world’s music”⁷⁷ – a majority of global music.⁷⁸

Another letter⁷⁹ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed “support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest.”

The International Music Products Association, NAMM, is another globally-recognized and relevant group of non-negligible size that has supported DotMusic.⁸⁰ NAMM, formed in 1901, is *mainly* dedicated to the global music community by representing the international music products industry and community, with globally-recognized members and exhibitors that include Yamaha, Roland, Sennheiser, Sony, Fender, Harman, Kawai, Shure, Steinway, Audio-Technica, AKAI, Gibson, Peavey, Korg, AKG, Selmer, JBL, Alesis, Ibanez, AVID, Casio, DW, Sabian, Pearl, Zildjian, Martin, Ludwig, Marshall and others.^{81 82} Every amateur and professional musician worldwide uses music products manufactured and distributed by NAMM’s members. Without these musical instruments and products, music as we know it today would not be created or produced. NAMM and its trade shows power the \$17 billion global music products industry serving as a hub for the global music community wanting to seek out the newest innovations in musical products, recording technology, sound and lighting. NAMM’s mission is “to strengthen

⁸¹ https://www.namm.org/files/showdir/ExhibitorList_WN15.xls

⁸² <http://www.musictrades.com/global.html>

the music products industry and promote the pleasures and benefits of making music.”⁸³ NAMM also hosts the NAMM Show, the world's largest event for the music products industry.

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause representing over 95% of music consumed globally.⁸⁴ Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁸⁵ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁸⁶

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community. Community members may register a .MUSIC by either:

⁸³ <https://www.namm.org/about>

⁸⁴ See <http://music.us/supporters>, <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>, Bloomberg BNA at http://music.us/RIAA_Backs_DotMusic.pdf Pg.1, and <http://diffuser.fm/will-dot-music-domains-make-the-internet-better/>

⁸⁵ <http://music.us/supporters>

⁸⁶ See <http://music.us/nexus>

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework⁸⁷ given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

⁸⁷ ICANN has disclosed that the string .MUSIC is a sensitive string operating in a regulated sector. ICANN also accepted Government Advisory Committee (GAC) advice for safeguards to protect the Music Community and the public interest (See <https://icann.org/en/system/files/correspondence/crocker-to-dryden-3-29oct13-en.pdf> Pg.7)

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

Signature:

A handwritten signature in black ink, appearing to be 'David Loscos', written over a horizontal line.

Name: David Loscos

Title: Director of the Postgraduate Degree in Global Music
Business & Lecturer

Organization: University Pompeu Fabra

David Loscos

Highlights:

- Produced the strategic internationalization plan for Uruguayan music; endorsed by the Creative Industries Department of the Ministry of Culture of the Government of Uruguay.
- Produced the strategic internationalization plan for Chilean music; endorsed by the National Music Council of the Ministry of Culture of the Government of Chile.
- As CEO and founder of Tenzing Media produced and worked on the White Book 2013 for music in Spain (endorsed by Promusicae, the Spanish music recording association); and the Legal and Financial Guide for Music in Spain (endorsed by Instituto Autor).
- Former International and local product manager for BMG Music Spain.
- Former Label and Division manager for PRISA media group.
- MBA in Music Industries, Institute of Popular Music at the University of Liverpool.
- Executive director of the postgraduate degree in music industry management at Pompeu Fabra University in Barcelona.
- Lecturer, Global Entertainment and Music Business (<http://valencia.berklee.edu/faculty/david-loscos/>)

David's professional background and vision has always had music at its core.

He started at BMG Music Spain at the end of 1997 where he worked as international and local Product manager. In 2000 he joined Eresmas Interactiva - Wanadoo as World Music Channel Manager. From 2001 until 2003 he worked at MUXXIC Records within the PRISA Media Group, first as Label Manager and then as Director of the Roots and World Music Division. In 2003 he founded and managed Fireyellow, his own music company.

His experience in the educational field has focused on the several sides of the music business. Since 2003, he is the Director of the Music Industry Management Course at the University Pompeu Fabra Institute of Continuing Education in Barcelona. In 2006 he joined ESMUC (Escola Superior de Música de Catalunya) as Professor of Music Publishing and Record Production. One year later, he co-founded Seminarios de la Música, a company specialised on providing intense and continuing training to music industry professionals.

As a consultant he was the co-founder and CEO of Tenzing Media, a business advisory and consulting firm for the music and creative industries that provided internationalization services to music projects and organizations in Spain and Latin America

David has a degree in Business Management from the University of Barcelona and an MBA in Music Industries from the Institute of Popular Music at the University of Liverpool.

Specialities: Global Music Business, Internationalization, Latin Markets, Global Audiences

Education

University of Liverpool
MBA, Music Industries
1999 – 2000

University of Gothenburg
Economics
1995 – 1996

Universitat de Barcelona
Graduate, Business Management
1990 – 1995

Universitat Pompeu Fabra
Executive Programme, Consultant

Experience

Director of the Postgraduate Degree in Global Music Business
idEC / UPF
2004 – Present (11 years), Barcelona

The first music business postgraduate degree in Spanish worldwide currently reaches its 11th edition. The programme proposes the integrated learning of the music business. Starting from the creation, the contents are structured horizontally so that, besides the format, the areas of management, production and marketing of any music project are perfectly defined.

Faculty Member
Berklee College of Music
January 2012 – Present (3 years 8 months)Valencia Campus

Courses taught:

Principles of Marketing - Study Abroad
International Marketing and Branding - Master in Global Entertainment and Music Business
Online and Social Media Management - Master in Global Entertainment and Music Business

Founder and CEO
Fireyellow
2003 – Present (12 years)
Barcelona

"Devoted to music related projects and organizations"
Fireyellow provides four different kind of services:

- a) Training
- b) Consulting

- c) Joint ventures and partnerships

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity mainly dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic’s definition of the “Music Community” as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application, 20a) is factually accurate and representative of the “Music Community.” Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The “Music Community” definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. “Music Community” members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each “organized community of similar nature that relates to music” that comprises the “Music Community.” Without such cohesiveness and interdependency, the defined “Music” Community matching the applied-for string (“Music”) would not be able to function in its regulated sector, a “Music” regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.⁵

As a result, the Music Community as defined is “closely united” (As per the definition of “cohesion” according to Merriam-Webster dictionary⁶) or “united or form a whole” (As per the definition of the word “cohesion” according to Oxford Dictionaries⁷).

The “Music Community” as defined (a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

ii) *An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:*

DotMusic’s definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexa.com/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en, Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved July 6, 2015, from https://en.wikipedia.org/wiki/Music_community

According to DotMusic, the Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string “music” and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the “music” string).

DotMusic’s Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the “Music Community” as defined implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members’ rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world’s population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

iii) *International Federations and Organizations mainly Dedicated to the Community:*

According to ICANN's Applicant Guidebook ("AGB")¹⁹: *"With respect to "Delineation" and "Extension," it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members." (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly²⁰ dedicated to the community which has supported DotMusic, which include several "international federation of national communities of a similar nature" relating to music, music coalitions and other relevant and non-negligible music organizations.*

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²¹ IFACCA's members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The "Size" covered reaches over a hundred million music entities i.e. "considerable size with millions of constituents" per Application Answer to Question 20a.

The string "music" falls under the jurisdiction of each country's Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ Per the Oxford and Merriam Webster dictionaries, the word "mainly" is defined as "*more than anything else*" (See <http://www.oxforddictionaries.com/definition/english/mainly> and <http://www.merriam-webster.com/dictionary/mainly> respectively). According to DotMusic, the string .MUSIC relates to the Community "by representing all constituents involved in music creation, production and distribution" (Application Answer to Question 20d). Supporting organizations related to that string that are "mainly" dedicated to the Community and its activities, include the International Federation of Arts Councils and Culture Agencies (IFACCA) representing government culture ministries and arts councils, the International Federation of Musicians (FIM) representing musicians globally, the International Federation of Phonographic Industry (IFPI) representing the recording industry worldwide, the International Confederation of Music Publishers (ICPM) representing the voice of global music publishing, the International Association of Music Information Centres (IAMIC), the American Association of Independent Music (A2IM), whose associate members represent a majority of music consumed, the Independent Music Worldwide Independent Network (WIN) representing independent music worldwide, the International Society for Music Education (ISME) the premiere international organization representing music education, and many others (See support at <http://music.us/supporters> and <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>).

²¹ http://www.ifacca.org/membership/current_members/

influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²² The UNESCO strategic partnership²³ is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁴

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a “statutory rate” set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁵

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁶ Other small government Ministries of Culture, such as Albania,²⁷ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁸ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world’s largest music conference.²⁹

²⁹ <http://my.midem.com/en/contact-us/pavilion-representatives/>

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³⁰
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³¹
- Canada Council for the Arts is Canada's national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³² The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³³
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁴
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁵ and has a strong focus on music as outlined in its Strategic Plan³⁶ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁷
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the "Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa"³⁸

³⁶ NEA Strategic Plan 2012-2016, www.arts.gov/about/Budget/NEAStrategicPlan2012-2016.pdf

³⁷ http://www.ifacca.org/national_agency_news/2013/04/10/us-president-requests-154465000-neh-2014/

³⁸ 2010-2011 Annual Report for the National Arts Council South Africa, National Arts Council South Africa, <http://www.nac.org.za/media/publications/AR%2010-11%20NAC.PDF/download>, Page 11. Also Mmino, the South African – Norwegian Education Music Programme, solely funds music projects funding a total of 294 projects. Thirteen projects were allocated funding for a total of R1,680,600 of which R1,381,000 went towards music educational and R299,600 to exchange projects (Page 10)

- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁹
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴⁰

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Another clear example of an “entity *mainly* dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴¹

The reach of A2IM Associate⁴² membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴³ – iTunes accounts for 63% of global digital music market⁴⁴ - a majority – with a registered community of 800 million registered members⁴⁵ available in 119 countries who abide to strict terms of service and boundaries⁴⁶ and have downloaded over 25 billion songs⁴⁷ from iTunes’ catalog of over 43 million songs⁴⁸ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁴⁹

- **Spotify**⁵² – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵³
- **Vevo**⁵⁴ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁵
- **Youtube**⁵⁶ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁵⁷ of which 38.4% is music-related.⁵⁸
- **Reverbnation**⁵⁹ – Reverbnation⁶⁰ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The Reverbnation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶¹ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶²

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶³), China (China Audio Video Association⁶⁴) and Germany (Initiative Musik).⁶⁵ A2IM also has Affiliate⁶⁶ associations within the global music community. These include Affiliates such as MusicFirst,⁶⁷ the Copyright Alliance,⁶⁸ the Worldwide Independent Network (WIN)⁶⁹ and Merlin.⁷⁰

⁶⁷ <http://musicfirstcoalition.org/coalition>, The musicFIRST Coalition, with founding members A2IM, RIAA, and Recording Academy represents musicians, artists, managers, music businesses, and performance right advocates.

⁶⁸ <http://www.copyrightalliance.org/members>

⁶⁹ <http://www.winformusic.org>

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷¹ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises).

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

The IFPI is another entity *mainly* dedicated to the Community. The IFPI is the only organization that represents the interests of the recording industry worldwide. It is the "voice of the recording industry worldwide"⁷² whose members⁷³ – major and independent companies -- represent a majority of all commercial music consumed globally. For example, the RIAA, an IFPI national group member,⁷⁴ represents "approximately 85% of all legitimate recorded music produced and sold in the United States,"⁷⁵ the world's largest music market with 30% global market share.⁷⁶ Formed in 1933, the IFPI's mission was to "represent the interests of the recording industry worldwide in all fora."

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷⁷ – a majority of global music.⁷⁸

Another letter⁷⁹ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed “support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest.”

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause representing over 95% of music consumed globally.⁸⁰ Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁸¹ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁸²

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music

⁷⁹ <https://www.icann.org/en/system/files/correspondence/aguirre-to-icann-board-ciu-14apr15-en.pdf>

⁸⁰ See <http://music.us/supporters>, <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>, Bloomberg BNA at http://music.us/RIAA_Backs_DotMusic.pdf Pg.1, and <http://diffuser.fm/will-dot-music-domains-make-the-internet-better/>

⁸¹ <http://music.us/supporters>

⁸² See <http://music.us/nexus>

entities to be included as part of the Community. Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

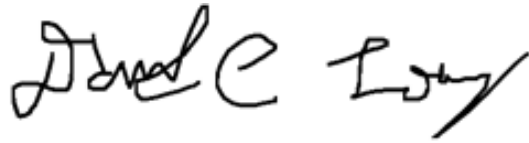

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework⁸³ given the symbiotic overlapping nature of the Community as

⁸³ ICANN has disclosed that the string .MUSIC is a sensitive string operating in a regulated sector. ICANN also accepted Government Advisory Committee (GAC) advice for safeguards to protect the Music Community and the public interest (See <https://icann.org/en/system/files/correspondence/crocker-to-dryden-3-29oct13-en.pdf> Pg.7)

defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

To ICANN and the Economist Intelligence Unit (“EIU”):

Please accept this letter as an indication of my professional opinion that there is compelling evidence for DotMusic’s application to convincingly meet the full criteria under Community Priority Evaluation on the following points: (1) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing the global Music Community addressed and defined.

Please also find below the analysis of the DotMusic application pertaining to the Community Priority Evaluation criteria, and on which my assessment is based. The analysis is consistent with key findings in my research field of organization studies where the focus is specifically on matters relating to community (see for example: Glynn, 2008;² Marquis, Glynn & Davis, 2007;³ Marquis, Lounsbury & Greenwood, 2011;⁴ Schneiberg & Lounsbury, 2008;⁵ Thornton, Ocasio & Lounsbury, 2012).⁶ My credentials are attached below this analysis to identify my level of expertise and specialized knowledge with respect to the expert opinion expressed above.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These

⁴ Marquis, C., Lounsbury, M., & Greenwood, R. (2011). Introduction: Community as an Institutional Order and a Type of Organizing. *Research in the Sociology of Organizations*, 33, ix-xxvii.

⁵ Schneiberg, M., & Lounsbury, M. (2008). Social movements and institutional analysis. In R. Greenwood, C. Oliver, R. Suddaby & K. Sahlin (Eds.), *The SAGE handbook of organizational institutionalism* (pp. 650-672). Los Angeles: SAGE.

⁶ Thornton, P. H., Ocasio, W., & Lounsbury, M. (2012). *The institutional logics perspective: A new approach to culture, structure and process*. Oxford: Oxford University Press.

organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;

3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.⁷

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined.

⁷ <http://music.us/supporters>

Cumulatively, DotMusic possesses documented support⁸ from institutions/organizations representing this Community.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) Music Community Definition, Establishment & Community Endorsement⁹

DotMusic’s definition of the “Music Community” as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application, 20a) is factually accurate and representative of the “Music Community.” Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The “Music Community” definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. “Music Community” members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each “organized community of similar nature that relates to music” that comprises the “Music Community.” Without such cohesiveness and interdependency, the defined “Music” Community matching the applied-for string (“Music”) would not be able to function in its regulated sector, a “Music” regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.¹⁰

As a result, the Music Community as defined is “closely united” (As per the definition of “cohesion” according to Merriam-Webster dictionary¹¹) or “united or form a whole” (As per the definition of the word “cohesion” according to Oxford Dictionaries¹²).

⁸ <http://music.us/supporters>

⁹ See <http://music.us/establishment>

¹⁰ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

¹¹ <http://www.merriam-webster.com/dictionary/cohesion>

¹² http://www.oxforddictionaries.com/us/definition/american_english/cohesion

The “Music Community” as defined (a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

According to Wikipedia:¹³

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such

¹³ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en,Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

*structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.*¹⁴

ii) An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:

DotMusic's definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

According to DotMusic, the Music Community's geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, "registrants will be verified using Community-organized, unified "criteria taken from holistic perspective with due regard of Community particularities" that "invoke a formal membership (Application Answer to Question 20a)." The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string "music" and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the "music" string).

DotMusic's Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the "Music Community" as defined implies "more of cohesion than a mere commonality of interest" with an "awareness and recognition of a community among its members." Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members' rights with relation to their copyrighted music works around the world.¹⁵

¹⁴ Music Community. In *Wikipedia*. Retrieved March 23, 2015, from https://en.wikipedia.org/wiki/Music_community

¹⁵ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

The Berne Convention for the Protection of Literary and Artistic Works¹⁶ provides that each of the 168 contracting parties¹⁷ (representing an overwhelming majority of the world's population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹⁸ This means that if a Music Community member's copyright rights are violated in any other signatory country's jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community's rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community's *Establishment* and definition is "cohesive" and hence cannot be construed since the Community is a logical alliance of music communities that establish a clearly delineated and organized Community structure that is "closely united" and functions as a "whole"

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The "music" string is commonly used in classification systems such as ISMN,¹⁹ ISRC,²⁰ ISWC,²¹ ISNI.²² (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to

¹⁷ http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹⁸ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

¹⁹ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

²⁰ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

²¹ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

²² The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.²³

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

iii) International Federations and Organizations Dedicated to Community Functions:

According to ICANN’s Applicant Guidebook (“AGB”)²⁴: “*With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.*” (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²⁵ IFACCA’s members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The “Size” covered reaches over a hundred million music entities i.e. “considerable size with millions of constituents” per Application Answer to Question 20a.

²³ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

²⁴ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁵ http://www.ifacca.org/membership/current_members/

The string “music” falls under the jurisdiction of each country’s Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²⁶ The UNESCO strategic partnership²⁷ is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁸

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a “statutory rate” set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁹

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.³⁰ Other small government Ministries of Culture, such as Albania,³¹ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,³² all provide critical support and substantial advocacy for music. Other examples include

³² 2010-11 Annual Report from India Ministry of Culture, [http://www.indiaculture.nic.in/hindi/pdf/Culture-AnRe-2010-2011\(Eng\).pdf](http://www.indiaculture.nic.in/hindi/pdf/Culture-AnRe-2010-2011(Eng).pdf)

government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world's largest music conference.³³

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³⁴
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³⁵
- Canada Council for the Arts is Canada's national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³⁶ The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³⁷
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁸
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁹ and has a strong focus on music as outlined in its Strategic Plan⁴⁰ with Congress requested to provide \$154,465,000 for fiscal year 2014.⁴¹
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the "Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa"⁴²

³⁹ 2011 Annual report for the National Endowment of the Arts, <http://www.nea.gov/about/11Annual/2011-NEA-Annual-Report.pdf>, Page 2

⁴⁰ NEA Strategic Plan 2012-2016, www.arts.gov/about/Budget/NEAStrategicPlan2012-2016.pdf

⁴¹ http://www.ifacca.org/national_agency_news/2013/04/10/us-president-requests-154465000-neh-2014/

- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.⁴³
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴⁴

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Another clear example of an “entity dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁵

The reach of A2IM Associate⁴⁶ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

⁴² 2010-2011 Annual Report for the National Arts Council South Africa, National Arts Council South Africa, <http://www.nac.org.za/media/publications/AR%2010-11%20NAC.PDF/download>, Page 11. Also Mmino, the South African – Norwegian Education Music Programme, solely funds music projects funding a total of 294 projects. Thirteen projects were allocated funding for a total of R1,680,600 of which R1,381,000 went towards music educational and R299,600 to exchange projects (Page 10)

⁴⁵ <http://a2im.org/about-joining/>

⁴⁶ <http://a2im.org/groups/tag/associate+members/>

- **Apple iTunes**⁴⁷ – iTunes accounts for 63% of global digital music market⁴⁸ - a majority – with a registered community of 800 million registered members⁴⁹ available in 119 countries who abide to strict terms of service and boundaries⁵⁰ and have downloaded over 25 billion songs⁵¹ from iTunes’ catalog of over 43 million songs⁵² covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁵³
- **Pandora**⁵⁴ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁵
- **Spotify**⁵⁶ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵⁷
- **Vevo**⁵⁸ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁹
- **Youtube**⁶⁰ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁶¹ of which 38.4% is music-related.⁶²
- **Reverbnation**⁶³ – Reverbnation⁶⁴ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The Reverbnation community grows by over 50,000 artists, bands, labels and industry professionals monthly.

⁶⁴ <http://www.reverbnation.com/about>

- **BMG**⁶⁵ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶⁶

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶⁷), China (China Audio Video Association⁶⁸) and Germany (Initiative Musik).⁶⁹ A2IM also has Affiliate⁷⁰ associations within the global music community. These include Affiliates such as MusicFirst,⁷¹ the Copyright Alliance,⁷² the Worldwide Independent Network (WIN)⁷³ and Merlin.⁷⁴

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁵ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

⁷¹ <http://musicfirstcoalition.org/coalition>, The musicFIRST Coalition, with founding members A2IM, RIAA, and Recording Academy represents musicians, artists, managers, music businesses, and performance right advocates.

⁷² <http://www.copyrightalliance.org/members>

⁷³ <http://www.winformusic.org>

⁷⁴ <http://www.merlinnetwork.org>

⁷⁵ <https://www.icann.org/en/system/files/correspondence/bengloff-to-chehade-et-al-20aug14-en.pdf> and <https://www.icann.org/en/system/files/correspondence/bengloff-to-crocker-et-al-07mar15-en.pdf>

Another global Music Community Coalition led by the RIAA “on behalf of over 15 national and international trade associations” also expressed its support for .MUSIC to be under a “community” application model, including encouraging statements in support of DotMusic’s policies that stated that the coalition “was encouraged to see” that DotMusic “included several measures to deter and address copyright infringement within that TLD.” The “coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world’s music”⁷⁶ – a majority of global music.⁷⁷

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community. Cumulatively, DotMusic possesses documented support⁷⁸ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁷⁹

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community.

⁷⁶ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.1

⁷⁷ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.3, Appendix A

⁷⁸ <http://music.us/supporters>

⁷⁹ See <http://music.us/nexus>

Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” string and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration.

The inclusion of every music constituent type is paramount to the purpose of the string. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (ii) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (iii) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity mainly dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic’s definition of the “Music Community” as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application Answer to Question 20a) is factually accurate and representative of the “Music Community.” Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The “Music Community” definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. “Music Community” members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each “organized community of similar nature that relates to music” that comprises the “Music Community.” Without such cohesiveness and interdependency, the defined “Music” Community matching the applied-for string (“Music”) would not be able to function in its regulated sector. “Music” is a regulated sector comprised of a logical alliance of interdependent communities relating to music with organized practices and institutions that enable and regulate the production, distribution and consumption of music that was publicly recognized by both ICANN and the Government Advisory Committee⁵

As a result, the Music Community as defined is “closely united” (As per the definition of “cohesion” according to Merriam-Webster dictionary⁶) or “united or form a whole” (As per the definition of the word “cohesion” according to Oxford Dictionaries⁷).

DotMusic’s application follows unified principles that the entire Community subscribes to, such as: creating a trusted identifier and safe haven for music consumption, protecting musicians’ rights and intellectual property, fighting copyright infringement/piracy, supporting fair compensation and music education, and following a multi-stakeholder approach of representation of all types of global music constituents without discrimination (See Application Answers to 18).

The “Music Community” as defined (a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) establishes that:

- (1) There is an awareness and recognition among its members;

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en, Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved July 6, 2015, from https://en.wikipedia.org/wiki/Music_community

ii) An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:

DotMusic's definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

According to DotMusic, the Music Community's geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, "registrants will be verified using Community-organized, unified "criteria taken from holistic perspective with due regard of Community particularities" that "invoke a formal membership (Application Answer to Question 20a)." The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string "music" and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the "music" string).

DotMusic's Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the "Music Community" as defined implies "more of cohesion than a mere commonality of interest" with an "awareness and recognition of a community among its members." Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members' rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world's population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

iii) *International Federations and Organizations mainly Dedicated to the Community:*

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: “*With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.*” (AGB, 4-12). The community as defined in the DotMusic application has at least one entity *mainly*²⁰ dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ Per the Oxford and Merriam Webster dictionaries, the word “mainly” is defined as “*more than anything else*” (See <http://www.oxforddictionaries.com/definition/english/mainly> and <http://www.merriam-webster.com/dictionary/mainly> respectively). According to DotMusic, the string .MUSIC relates to the Community “by representing all constituents involved in music creation, production and distribution” (Application Answer to Question 20d). Supporting organizations related to that string that are “mainly” dedicated to the Community and its activities, include the International Federation of Arts Councils and Culture Agencies (IFACCA) representing government culture ministries and arts councils, the International Federation of Musicians (FIM) representing musicians globally, the International Federation of Phonographic Industry (IFPI) representing the recording industry worldwide, the International Confederation of Music Publishers (ICPM) representing the voice of global music publishing, the International Association of Music Information Centres (IAMIC), the American Association of Independent Music (A2IM), whose associate members represent a majority of music consumed, the Independent Music Worldwide Independent Network (WIN) representing independent music worldwide, the International Society for Music Education (ISME) the premiere international organization representing music education, and many others (See support at <http://music.us/supporters> and <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails:downloadattachment/142588?t:ac=1392>).

role with respect to music.²¹ IFACCA's members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The "Size" covered reaches over a hundred million music entities i.e. "considerable size with millions of constituents" per Application Answer to Question 20a.

The string "music" falls under the jurisdiction of each country's Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²² The UNESCO strategic partnership²³ is relevant, especially since UNESCO founded the International Music Council (the "IMC") in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁴

Government activities in the clearly delineated and organized "Music Community" include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a "statutory rate" set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁵

Ministries of culture and arts councils (that comprise IFACCA's membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA's membership support the "performing arts" and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁶ Other small government Ministries of Culture, such as Albania,²⁷ or government

²⁶ 2011 Annual Report for Cyprus Ministry of Culture, Section 1.2 "Music"

(http://www.moec.gov.cy/en/annual_reports/annual_report_2011_en.pdf). Activities include Music Performances in Cyprus (1.2.1) and Abroad (1.2.2), Subsidization of Paphos Aphrodite Festival (1.2.3), Music Publications (1.2.4), Subsidization and Purchases of Digital Records (1.2.5), Promotion for Cypriot musical creativity abroad (1.2.6),

Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁸ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world's largest music conference.²⁹

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³⁰
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³¹
- Canada Council for the Arts is Canada's national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³² The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³³
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁴

Cyprus Symphony Orchestra Foundation (1.2.7), Music Information Centre (1.2.8), Developing Music Education (1.2.9), Organising of the 1st Musicological Symposium (1.2.10) and Musical Festivities for the European Volunteerism Year (1.2.11)

³⁴ Department for Culture, The Importance of Music, A National Plan for Music Education,

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/180973/DFE-00086-2011.pdf, Page 4, 2011

- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁵ and has a strong focus on music as outlined in its Strategic Plan³⁶ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁷
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁸
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁹
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴⁰

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

The IFPI is another entity *mainly* dedicated to the Community. The IFPI is the only organization that represents the interests of the recording industry worldwide. It is the “voice of the recording industry worldwide”⁴¹ whose members⁴² – major and independent companies -- represent a majority of all commercial music consumed globally. For example, the RIAA, an IFPI national group member,⁴³ represents “approximately 85% of all legitimate recorded music produced and sold in the United States,”⁴⁴ the world’s largest music market with 30% global market share.⁴⁵ Formed in 1933, the IFPI’s mission was to “represent the interests of the recording industry worldwide in all fora.”

Another clear example of an “entity *mainly* dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁶

The reach of A2IM Associate⁴⁷ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴⁸ – iTunes accounts for 63% of global digital music market⁴⁹ - a majority – with a registered community of 800 million registered members⁵⁰ available in 119 countries who abide to strict terms of service and boundaries⁵¹ and have downloaded over 25 billion songs⁵² from iTunes’ catalog of over 43 million songs⁵³ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁵⁴
- **Pandora**⁵⁵ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁶
- **Spotify**⁵⁷ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵⁸
- **Vevo**⁵⁹ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁶⁰

⁵⁷ <http://a2im.org/groups/spotify>

⁵⁸ <https://press.spotify.com/us/information/>

⁵⁹ <http://a2im.org/groups/vevo/>

- **Youtube**⁶¹ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁶² of which 38.4% is music-related.⁶³
- **ReverbNation**⁶⁴ – ReverbNation⁶⁵ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The ReverbNation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁶ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶⁷

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶⁸), China (China Audio Video Association⁶⁹) and Germany (Initiative Musik).⁷⁰ A2IM also has Affiliate⁷¹ associations within the global music community. These include Affiliates such as MusicFirst,⁷² the Copyright Alliance,⁷³ the Worldwide Independent Network (WIN)⁷⁴ and Merlin.⁷⁵

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁶ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises).

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA “on behalf of over 15 national and international trade associations” also expressed its support for .MUSIC to be under a “community” application model, including encouraging statements in support of DotMusic’s policies that stated that the coalition “was encouraged to see” that DotMusic “included several measures to deter and address copyright infringement within that TLD.” The “coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world’s music”⁷⁷ – a majority of global music.⁷⁸

Another letter⁷⁹ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed “support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest.”

The International Music Products Association, NAMM, is another globally-recognized and relevant group of non-negligible size that has supported DotMusic.⁸⁰ NAMM, formed in 1901, is *mainly* dedicated to the global music community by representing the international music products industry and community, with globally-recognized members and exhibitors that include Yamaha, Roland, Sennheiser, Sony, Fender, Harman, Kawai, Shure, Steinway, Audio-Technica, AKAI, Gibson, Peavey, Korg, AKG, Selmer, JBL, Alesis, Ibanez, AVID, Casio, DW, Sabian, Pearl, Zildjian, Martin, Ludwig, Marshall and others.^{81 82} Every amateur and professional musician worldwide uses music products manufactured and distributed by NAMM’s members. Without these musical instruments and products, music as we know it today would not be created or produced. NAMM and its trade shows power the \$17 billion global music products industry serving as a hub for the global music community wanting to seek out the newest innovations in musical products, recording technology, sound and lighting. NAMM’s mission is “to strengthen

⁸¹ https://www.namm.org/files/showdir/ExhibitorList_WN15.xls

⁸² <http://www.musictrades.com/global.html>

the music products industry and promote the pleasures and benefits of making music.”⁸³ NAMM also hosts the NAMM Show, the world's largest event for the music products industry.

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause representing over 95% of music consumed globally.⁸⁴ Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁸⁵ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁸⁶

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community. Community members may register a .MUSIC by either:

⁸³ <https://www.namm.org/about>

⁸⁴ See <http://music.us/supporters>, <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>, Bloomberg BNA at http://music.us/RIAA_Backs_DotMusic.pdf Pg.1, and <http://diffuser.fm/will-dot-music-domains-make-the-internet-better/>

⁸⁵ <http://music.us/supporters>

⁸⁶ See <http://music.us/nexus>

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework⁸⁷ given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

⁸⁷ ICANN has disclosed that the string .MUSIC is a sensitive string operating in a regulated sector. ICANN also accepted Government Advisory Committee (GAC) advice for safeguards to protect the Music Community and the public interest (See <https://icann.org/en/system/files/correspondence/crocker-to-dryden-3-29oct13-en.pdf> Pg.7)

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

Signature:  Contact Information Redacted Aug 6 '15 ip: 31.208.7.24

Name: Andrew Dubber

Title: Professor of Music Industry Innovation

Organization: Birmingham City University

Professor Andrew Dubber

Andrew Dubber (or just "Dubber" as he is more usually known) is Professor of Music Industries Innovation, and the Award Leader for the [MA in Music Industries](#) and the [MA in Music Radio](#) at the Birmingham School of Media. He is a researcher on the Humanities in the European Research Area (HERA)-funded [Rhythm Changes](#) project.

Dubber moved to the UK from New Zealand in 2004 where, amongst many other things, he was the Degree Leader in Radio at [Auckland University of Technology](#) and the host of a jazz radio programme on [George FM](#). He is internationally recognised as a leading consultant and academic in new strategies and technologies for the radio and the music industries.

Dubber is the author of [Music in the Digital Age](#); editor of 'The 360 Deal: a collection of genuinely helpful advice for people starting out in the music industry'; co-author of *Understanding the Music Industries* (Sage, 2012); and has recently completed his new book, *Radio in the Digital Age* (Polity Books, forthcoming 2013). He also is the co-author of a book about new technologies for broadcasters in developing nations, commissioned by UNESCO, and has been a member of the steering committee for the Radio Studies Network and the board of [Un-Convention](#).

He has also written for *Computer Music Magazine*, authored sections on blogging and podcasting for the *Alternative Media Handbook* (Routledge, 2008), and travels extensively to present to academic and industry conferences in this field.

Andrew Dubber is the director of [Music Tech Fest](#), an advisor to [Bandcamp](#), [Stromatolite](#) and [Sonaris](#) and is the founder of [New Music Strategies](#), a pan-European digital music strategy think tank and consultancy group. He is the author of [Music In The Digital Age](#) (2012), [Radio in the Digital Age](#) (2013), [Understanding the Music Industries](#) (2012), [The 20 Things You Must Know About Music Online](#) (2007), and is the editor of [The 360 Deal](#) (2013), which features the advice of 360 top music business professionals for young people just starting out in the music industries.

He is a frequent keynote speaker at music industry events worldwide; his blogs and podcasts reach audiences numbering in the hundreds of thousands; and is followed by over 11,000 people on [Twitter](#), where he posts about music industry innovation, popular music culture and digital media.

Dubber is Professor of Music Industry Innovation at [Birmingham City University](#) where he runs an MA in Music Industries, supervises PhD projects in music, media and culture and leads research projects within the Interactive Cultures unit at the Birmingham Centre for Media and Cultural Research ([BCMCR](#)). His research interests include digital media cultures, media and music innovation, online music enterprise, [radio in the digital age](#), music as a tool for social change, and music as culture. He teaches about radio broadcasting, the music industries, music hacking and the online environment.

As an academic, Dubber is extensively published and frequently cited. However, his background is primarily as a practitioner in the media industries as a radio producer and presenter, label owner and record producer.

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity mainly dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

² <http://music.us/supporters>

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic’s definition of the “Music Community” as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application, 20a) is factually accurate and representative of the “Music Community.” Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The “Music Community” definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. “Music Community” members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each “organized community of similar nature that relates to music” that comprises the “Music Community.” Without such cohesiveness and interdependency, the defined “Music” Community matching the applied-for string (“Music”) would not be able to function in its regulated sector, a “Music” regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.⁵

As a result, the Music Community as defined is “closely united” (As per the definition of “cohesion” according to Merriam-Webster dictionary⁶) or “united or form a whole” (As per the definition of the word “cohesion” according to Oxford Dictionaries⁷).

The “Music Community” as defined (a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

ii) *An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:*

DotMusic’s definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en, Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved July 6, 2015, from https://en.wikipedia.org/wiki/Music_community

According to DotMusic, the Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string “music” and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the “music” string).

DotMusic’s Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the “Music Community” as defined implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members’ rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world’s population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

iii) *International Federations and Organizations mainly Dedicated to the Community:*

According to ICANN's Applicant Guidebook ("AGB")¹⁹: *"With respect to "Delineation" and "Extension," it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members." (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly²⁰ dedicated to the community which has supported DotMusic, which include several "international federation of national communities of a similar nature" relating to music, music coalitions and other relevant and non-negligible music organizations.*

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²¹ IFACCA's members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The "Size" covered reaches over a hundred million music entities i.e. "considerable size with millions of constituents" per Application Answer to Question 20a.

The string "music" falls under the jurisdiction of each country's Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ Per the Oxford and Merriam Webster dictionaries, the word "mainly" is defined as "*more than anything else*" (See <http://www.oxforddictionaries.com/definition/english/mainly> and <http://www.merriam-webster.com/dictionary/mainly> respectively). According to DotMusic, the string .MUSIC relates to the Community "by representing all constituents involved in music creation, production and distribution" (Application Answer to Question 20d). Supporting organizations related to that string that are "mainly" dedicated to the Community and its activities, include the International Federation of Arts Councils and Culture Agencies (IFACCA) representing government culture ministries and arts councils, the International Federation of Musicians (FIM) representing musicians globally, the International Federation of Phonographic Industry (IFPI) representing the recording industry worldwide, the International Confederation of Music Publishers (ICPM) representing the voice of global music publishing, the International Association of Music Information Centres (IAMIC), the American Association of Independent Music (A2IM), whose associate members represent a majority of music consumed, the Independent Music Worldwide Independent Network (WIN) representing independent music worldwide, the International Society for Music Education (ISME) the premiere international organization representing music education, and many others (See support at <http://music.us/supporters> and <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>).

²¹ http://www.ifacca.org/membership/current_members/

influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²² The UNESCO strategic partnership²³ is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁴

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a "statutory rate" set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁵

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁶ Other small government Ministries of Culture, such as Albania,²⁷ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁸ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world’s largest music conference.²⁹

²⁹ <http://my.midem.com/en/contact-us/pavilion-representatives/>

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³⁰
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³¹
- Canada Council for the Arts is Canada's national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³² The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³³
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁴
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁵ and has a strong focus on music as outlined in its Strategic Plan³⁶ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁷
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the "Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa"³⁸

³⁷ http://www.ifacca.org/national_agency_news/2013/04/10/us-president-requests-154465000-neh-2014/

³⁸ 2010-2011 Annual Report for the National Arts Council South Africa, National Arts Council South Africa, <http://www.nac.org.za/media/publications/AR%2010-11%20NAC.PDF/download>, Page 11. Also Mmino, the South African – Norwegian Education Music Programme, solely funds music projects funding a total of 294 projects. Thirteen projects were allocated funding for a total of R1,680,600 of which R1,381,000 went towards music educational and R299,600 to exchange projects (Page 10)

- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁹
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴⁰

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Another clear example of an “entity *mainly* dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴¹

The reach of A2IM Associate⁴² membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴³ – iTunes accounts for 63% of global digital music market⁴⁴ - a majority – with a registered community of 800 million registered members⁴⁵ available in 119 countries who abide to strict terms of service and boundaries⁴⁶ and have downloaded over 25 billion songs⁴⁷ from iTunes’ catalog of over 43 million songs⁴⁸ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁴⁹

⁴⁹ <https://www.apple.com/itunes/working-itunes/sell-content/music-faq.html>

- **Pandora**⁵⁰ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵¹
- **Spotify**⁵² – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵³
- **Vevo**⁵⁴ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁵
- **Youtube**⁵⁶ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁵⁷ of which 38.4% is music-related.⁵⁸
- **Reverbnation**⁵⁹ – Reverbnation⁶⁰ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The Reverbnation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶¹ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶²

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶³), China (China Audio Video Association⁶⁴) and Germany (Initiative Musik).⁶⁵ A2IM also has Affiliate⁶⁶ associations within the global music community. These include Affiliates such as MusicFirst,⁶⁷ the Copyright Alliance,⁶⁸ the Worldwide Independent Network (WIN)⁶⁹ and Merlin.⁷⁰

⁶⁷ <http://musicfirstcoalition.org/coalition>, The musicFIRST Coalition, with founding members A2IM, RIAA, and Recording Academy represents musicians, artists, managers, music businesses, and performance right advocates.

⁶⁸ <http://www.copyrightalliance.org/members>

⁶⁹ <http://www.winformusic.org>

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷¹ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises).

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

The IFPI is another entity *mainly* dedicated to the Community. The IFPI is the only organization that represents the interests of the recording industry worldwide. It is the "voice of the recording industry worldwide"⁷² whose members⁷³ – major and independent companies -- represent a majority of all commercial music consumed globally. For example, the RIAA, an IFPI national group member,⁷⁴ represents "approximately 85% of all legitimate recorded music produced and sold in the United States,"⁷⁵ the world's largest music market with 30% global market share.⁷⁶ Formed in 1933, the IFPI's mission was to "represent the interests of the recording industry worldwide in all fora."

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷⁷ – a majority of global music.⁷⁸

⁷² <http://www.ifpi.org/about.php>

⁷³ <http://www.ifpi.org/our-members.php>

⁷⁴ <http://www.ifpi.org/national-groups.php>

⁷⁵ <http://www.riaa.com/faq.php>

⁷⁶ <http://www.statista.com/topics/1639/music/>

⁷⁷ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.1

⁷⁸ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.3, Appendix A

Another letter⁷⁹ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed “support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest.”

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause representing over 95% of music consumed globally.⁸⁰ Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁸¹ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁸²

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music

⁷⁹ <https://www.icann.org/en/system/files/correspondence/aguirre-to-icann-board-ciu-14apr15-en.pdf>

⁸⁰ See <http://music.us/supporters>, <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>, Bloomberg BNA at http://music.us/RIAA_Backs_DotMusic.pdf Pg.1, and <http://diffuser.fm/will-dot-music-domains-make-the-internet-better/>

⁸¹ <http://music.us/supporters>

⁸² See <http://music.us/nexus>

entities to be included as part of the Community. Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

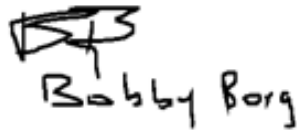

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework⁸³ given the symbiotic overlapping nature of the Community as

⁸³ ICANN has disclosed that the string .MUSIC is a sensitive string operating in a regulated sector. ICANN also accepted Government Advisory Committee (GAC) advice for safeguards to protect the Music Community and the public interest (See <https://icann.org/en/system/files/correspondence/crocker-to-dryden-3-29oct13-en.pdf> Pg.7)

defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

A handwritten signature in black ink. The signature consists of a stylized monogram 'BB' above the name 'Bobby Borg' written in a cursive, handwritten style.

Signature: Contact Information Redacted, Jul 16 '15 ip: 162.195.62.104

Name: Bobby Borg

Title: Adjunct Professor of Music Business and Marketing, Author, Musician

Organization: Bobby Borg Consulting Group

About Bobby Borg

Bobby Borg is a former Major label, independent, and DIY recording/touring artist with over 25 years experience. A graduate of Berklee College of Music with a BA in Professional Music, and UCLA Extension with a certificate in Marketing Management and Project Management, he serves as a music business educator at Musician's Institute in Hollywood and at the University of Los Angeles in California, and he also arranges educational programs with institutions overseas. As a music business and A&R consultant to managers, labels, and supervisors, Borg is also a prominent guest speaker at music industry events and a regular contributor to international music business publications. He is the author of Billboard Books best-seller [*The Musician's Handbook: A Practical Guide To Understanding The Music Business*](#) and [*Music Marketing For The DIY Musician*](#). Borg was elected Vice President of Special Events For The American Marketing Association in Los Angeles and was awarded the Volunteer of the Year.

Academic

Borg earned a B.A in Professional Music at Berklee College of Music in Boston—special awards and honors include: Outstanding Participation in The Berklee Concert Series. Borg also received a certificate in Instructor Development at UCLA Extension (focusing on curriculum development, leadership, and management), Music Marketing (focusing on research, planning, and strategizing), and Project Management (focusing on schedules, budgets, and quality).

Author

Borg's book [*The Musician's Handbook: A Practical Approach To Understand The Music Business*](#) (Billboard Books) has been used in educational institutions and songwriters' groups globally. He is also the author of [*Music Marketing For The DIY Musician: Creating and Executing A Plan of Attack on a Low Budget*](#). Attorney Peter Peterno (representing Dr. Dre), Don Gorder (Chairman of music business at Berklee College of Music), and Steve Vai (noted guitarist) endorse Borg's works. He is the author of seven other music instructional books including [*Rudimental Combinations*](#).

Educator

Borg is currently an instructor at Musician's Institute and UCLA Extension where he teaches music business classes including: *Intro To Music Publishing, Independent Music Marketing, The Business of Working Musicians, From the Streets To Success, Doing Business as a Band, and Music Business for Degree Students*. He arranges educational opportunities for institutions around the world, such as Russia and Japan, and travels overseas to lecture on the U.S industry. Borg also teaches drum and percussion classes.

Recording Artist

Borg was part of the multi-platinum rock group [Warrant](#) where he helped write and record two albums, *Belly To Belly* and *Warrant Live* (released by CMC/BMG). The band toured extensively throughout the United States, Japan, Canada, and Mexico playing large clubs and amphitheatres—both as a headliner and a supporting act to artists like Alice Cooper and Vince Neil.

Borg was also part of the rock group [Beggars & Thieves](#) where he recorded *Beggars & Thieves* on Atlantic Records. The band was managed by Q-Prime Management (managers of Metallica and Smashing Pumpkins), produced by Steve Thompson and Michael Barbiero, and assisted by Desmond Childs (songwriter for Aerosmith, KISS, and many others).

Borg formed the alternative rock band [Left for Dead](#) where he released *Beatings from Orlando* (licensed by Alfa Music Japan). LFD embraced the independent and DIY work ethic and toured the United States in small vans. Pearl, Rhythm-Tech, Sabian, and other major equipment manufacturers sponsored him, and still do today.

Moderator/Panelist/Key Note Speaker

As a moderator, panelist, and key note speaker, Borg contributes to major industry panels for The California Lawyers For The Arts, SXSW, Taxi Road Rally, Berklee College of Music, and the University of Miami, and he sits beside noted guests like Todd Brabeck (ASCAP), Joe DiMona (BMI), and Dina LaPolt (LaPolt Law). He also speaks to a series of songwriter groups like Songsalive, Songnet, and Just Plain Folks. Borg is noted for his energy, clarity, organization, and real-world experiences.

Journalist

Borg writes for a number of international publications such as Modern Drummer, Music Connection, Berklee Today, Performer, and Singer Magazine. Additionally, he is a contributor to a number of websites including Get Signed.com, Music Dish, and Indie-Music.com.

Consultant

As a music business consultant, Borg meets privately with managers, producers, production companies, independent and DIY artists, songwriters, and anyone else needing advice in business, presentation, and career strategy. Both one-on-one (nation-wide, seasonally) and phone consultations are available.

Bobby Borg's Website: <http://www.bobbyborg.com/about/bio>

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (ii) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (iii) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity mainly dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

² <http://music.us/supporters>

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic's definition of the "Music Community" as a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music" (See Application Answer to Question 20a) is factually accurate and representative of the "Music Community." Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The "Music Community" definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. "Music Community" members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each "organized community of similar nature that relates to music" that comprises the "Music Community." Without such cohesiveness and interdependency, the defined "Music" Community matching the applied-for string ("Music") would not be able to function in its regulated sector. "Music" is a regulated sector comprised of a logical alliance of interdependent communities relating to music with organized practices and institutions that enable and regulate the production, distribution and consumption of music that was publicly recognized by both ICANN and the Government Advisory Committee⁵

As a result, the Music Community as defined is "closely united" (As per the definition of "cohesion" according to Merriam-Webster dictionary⁶) or "united or form a whole" (As per the definition of the word "cohesion" according to Oxford Dictionaries⁷).

DotMusic's application follows unified principles that the entire Community subscribes to, such as: creating a trusted identifier and safe haven for music consumption, protecting musicians' rights and intellectual property, fighting copyright infringement/piracy, supporting fair compensation and music education, and following a multi-stakeholder approach of representation of all types of global music constituents without discrimination (See Application Answers to 18).

The "Music Community" as defined (a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music") establishes that:

- (1) There is an awareness and recognition among its members;

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexa.com/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en, Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved July 6, 2015, from https://en.wikipedia.org/wiki/Music_community

ii) An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:

DotMusic's definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

According to DotMusic, the Music Community's geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, "registrants will be verified using Community-organized, unified "criteria taken from holistic perspective with due regard of Community particularities" that "invoke a formal membership (Application Answer to Question 20a)." The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string "music" and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the "music" string).

DotMusic's Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the "Music Community" as defined implies "more of cohesion than a mere commonality of interest" with an "awareness and recognition of a community among its members." Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members' rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world's population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

countries.¹³ This means that if a Music Community member's copyright rights are violated in any other signatory country's jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community's rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community's *Establishment* and definition is "cohesive" and hence cannot be construed since the Community is a logical alliance of music communities that establish a clearly delineated and organized Community structure that is "closely united" and functions as a "whole"

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The "music" string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain's registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN "to provide accurate WHOIS contact data" or else their domain "registration may be suspended or even cancelled".¹⁸

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

iii) *International Federations and Organizations mainly Dedicated to the Community:*

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: “*With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.*” (AGB, 4-12). The community as defined in the DotMusic application has at least one entity *mainly*²⁰ dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ Per the Oxford and Merriam Webster dictionaries, the word “mainly” is defined as “*more than anything else*” (See <http://www.oxforddictionaries.com/definition/english/mainly> and <http://www.merriam-webster.com/dictionary/mainly> respectively). According to DotMusic, the string .MUSIC relates to the Community “by representing all constituents involved in music creation, production and distribution” (Application Answer to Question 20d). Supporting organizations related to that string that are “mainly” dedicated to the Community and its activities, include the International Federation of Arts Councils and Culture Agencies (IFACCA) representing government culture ministries and arts councils, the International Federation of Musicians (FIM) representing musicians globally, the International Federation of Phonographic Industry (IFPI) representing the recording industry worldwide, the International Confederation of Music Publishers (ICPM) representing the voice of global music publishing, the International Association of Music Information Centres (IAMIC), the American Association of Independent Music (A2IM), whose associate members represent a majority of music consumed, the Independent Music Worldwide Independent Network (WIN) representing independent music worldwide, the International Society for Music Education (ISME) the premiere international organization representing music education, and many others (See support at <http://music.us/supporters> and <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails:downloadattachment/142588?t:ac=1392>).

role with respect to music.²¹ IFACCA's members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The "Size" covered reaches over a hundred million music entities i.e. "considerable size with millions of constituents" per Application Answer to Question 20a.

The string "music" falls under the jurisdiction of each country's Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²² The UNESCO strategic partnership²³ is relevant, especially since UNESCO founded the International Music Council (the "IMC") in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁴

Government activities in the clearly delineated and organized "Music Community" include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a "statutory rate" set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁵

Ministries of culture and arts councils (that comprise IFACCA's membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA's membership support the "performing arts" and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁶ Other small government Ministries of Culture, such as Albania,²⁷ or government

²³ http://www.ifacca.org/strategic_partners/

²⁴ <http://www.imc-cim.org/about-imc-separator/who-we-are.html>

²⁵ U.S Copyright Office, <http://www.copyright.gov/carp/m200a.html>

²⁶ 2011 Annual Report for Cyprus Ministry of Culture, Section 1.2 "Music"

(http://www.moec.gov.cy/en/annual_reports/annual_report_2011_en.pdf). Activities include Music Performances in Cyprus (1.2.1) and Abroad (1.2.2), Subsidization of Paphos Aphrodite Festival (1.2.3), Music Publications (1.2.4), Subsidization and Purchases of Digital Records (1.2.5), Promotion for Cypriot musical creativity abroad (1.2.6),

Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁸ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world's largest music conference.²⁹

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³⁰
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³¹
- Canada Council for the Arts is Canada's national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³² The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³³
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁴

Cyprus Symphony Orchestra Foundation (1.2.7), Music Information Centre (1.2.8), Developing Music Education (1.2.9), Organising of the 1st Musicological Symposium (1.2.10) and Musical Festivities for the European Volunteerism Year (1.2.11)

³³ <http://www.pch.gc.ca/eng/1294862453819/1294862453821>

³⁴ Department for Culture, The Importance of Music, A National Plan for Music Education,

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/180973/DFE-00086-2011.pdf, Page 4, 2011

- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁵ and has a strong focus on music as outlined in its Strategic Plan³⁶ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁷
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁸
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁹
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴⁰

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

The IFPI is another entity *mainly* dedicated to the Community. The IFPI is the only organization that represents the interests of the recording industry worldwide. It is the “voice of the recording industry worldwide”⁴¹ whose members⁴² – major and independent companies -- represent a majority of all commercial music consumed globally. For example, the RIAA, an IFPI national group member,⁴³ represents “approximately 85% of all legitimate recorded music produced and sold in the United States,”⁴⁴ the world’s largest music market with 30% global market share.⁴⁵ Formed in 1933, the IFPI’s mission was to “represent the interests of the recording industry worldwide in all fora.”

Another clear example of an “entity *mainly* dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁶

The reach of A2IM Associate⁴⁷ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴⁸ – iTunes accounts for 63% of global digital music market⁴⁹ - a majority – with a registered community of 800 million registered members⁵⁰ available in 119 countries who abide to strict terms of service and boundaries⁵¹ and have downloaded over 25 billion songs⁵² from iTunes’ catalog of over 43 million songs⁵³ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁵⁴
- **Pandora**⁵⁵ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁶
- **Spotify**⁵⁷ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵⁸
- **Vevo**⁵⁹ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁶⁰

⁵⁹ <http://a2im.org/groups/vevo/>

- **Youtube**⁶¹ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁶² of which 38.4% is music-related.⁶³
- **ReverbNation**⁶⁴ – ReverbNation⁶⁵ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The ReverbNation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁶ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶⁷

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶⁸), China (China Audio Video Association⁶⁹) and Germany (Initiative Musik).⁷⁰ A2IM also has Affiliate⁷¹ associations within the global music community. These include Affiliates such as MusicFirst,⁷² the Copyright Alliance,⁷³ the Worldwide Independent Network (WIN)⁷⁴ and Merlin.⁷⁵

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁶ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA “on behalf of over 15 national and international trade associations” also expressed its support for .MUSIC to be under a “community” application model, including encouraging statements in support of DotMusic’s policies that stated that the coalition “was encouraged to see” that DotMusic “included several measures to deter and address copyright infringement within that TLD.” The “coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world’s music”⁷⁷ – a majority of global music.⁷⁸

Another letter⁷⁹ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed “support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest.”

The International Music Products Association, NAMM, is another globally-recognized and relevant group of non-negligible size that has supported DotMusic.⁸⁰ NAMM, formed in 1901, is *mainly* dedicated to the global music community by representing the international music products industry and community, with globally-recognized members and exhibitors that include Yamaha, Roland, Sennheiser, Sony, Fender, Harman, Kawai, Shure, Steinway, Audio-Technica, AKAI, Gibson, Peavey, Korg, AKG, Selmer, JBL, Alesis, Ibanez, AVID, Casio, DW, Sabian, Pearl, Zildjian, Martin, Ludwig, Marshall and others.^{81 82} Every amateur and professional musician worldwide uses music products manufactured and distributed by NAMM’s members. Without these musical instruments and products, music as we know it today would not be created or produced. NAMM and its trade shows power the \$17 billion global music products industry serving as a hub for the global music community wanting to seek out the newest innovations in musical products, recording technology, sound and lighting. NAMM’s mission is “to strengthen

⁸⁰ http://music.us/letters/NAMM_International_Music_Products_Association.pdf

⁸¹ https://www.namm.org/files/showdir/ExhibitorList_WN15.xls

⁸² <http://www.musictrades.com/global.html>

the music products industry and promote the pleasures and benefits of making music.”⁸³ NAMM also hosts the NAMM Show, the world's largest event for the music products industry.

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause representing over 95% of music consumed globally.⁸⁴ Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁸⁵ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁸⁶

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community. Community members may register a .MUSIC by either:

⁸³ <https://www.namm.org/about>

⁸⁴ See <http://music.us/supporters>, <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>, Bloomberg BNA at http://music.us/RIAA_Backs_DotMusic.pdf Pg.1, and <http://diffuser.fm/will-dot-music-domains-make-the-internet-better/>

⁸⁵ <http://music.us/supporters>

⁸⁶ See <http://music.us/nexus>

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework⁸⁷ given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

⁸⁷ ICANN has disclosed that the string .MUSIC is a sensitive string operating in a regulated sector. ICANN also accepted Government Advisory Committee (GAC) advice for safeguards to protect the Music Community and the public interest (See <https://icann.org/en/system/files/correspondence/crocker-to-dryden-3-29oct13-en.pdf> Pg.7)

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter that indicates that there is substantive and compelling evidence that the DotMusic application convincingly meets the full criteria under Community Priority Evaluation on the following points: (i) the Music Community’s *Establishment* as defined by DotMusic; (ii) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (iii) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to the music community’s organization and delineation.

SUMMARY

DotMusic has established the following:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity mainly dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the Community as defined and recognized in the DotMusic application.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

² <http://music.us/supporters>

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic's definition of the "Music Community" as a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music" (See Application Answer to Question 20a) is factually accurate and representative of the "Music Community." Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The "Music Community" definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. "Music Community" members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each "organized community of similar nature that relates to music" that comprises the "Music Community." Without such cohesiveness and interdependency, the defined "Music" Community matching the applied-for string ("Music") would not be able to function in its regulated sector. "Music" is a regulated sector comprised of a logical alliance of interdependent communities relating to music with organized practices and institutions that enable and regulate the production, distribution and consumption of music that was publicly recognized by both ICANN and the Government Advisory Committee⁵

As a result, the Music Community as defined is "closely united" (As per the definition of "cohesion" according to Merriam-Webster dictionary⁶) or "united or form a whole" (As per the definition of the word "cohesion" according to Oxford Dictionaries⁷).

DotMusic's application follows unified principles that the entire Community subscribes to, such as: creating a trusted identifier and safe haven for music consumption, protecting musicians' rights and intellectual property, fighting copyright infringement/piracy, supporting fair compensation and music education, and following a multi-stakeholder approach of representation of all types of global music constituents without discrimination (See Application Answers to 18).

The "Music Community" as defined (a "strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music") establishes that:

- (1) There is an awareness and recognition among its members;

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en, Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved July 6, 2015, from https://en.wikipedia.org/wiki/Music_community

ii) An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:

DotMusic's definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

According to DotMusic, the Music Community's geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, "registrants will be verified using Community-organized, unified "criteria taken from holistic perspective with due regard of Community particularities" that "invoke a formal membership (Application Answer to Question 20a)." The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string "music" and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the "music" string).

DotMusic's Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the "Music Community" as defined implies "more of cohesion than a mere commonality of interest" with an "awareness and recognition of a community among its members." Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members' rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world's population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

countries.¹³ This means that if a Music Community member's copyright rights are violated in any other signatory country's jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community's rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community's *Establishment* and definition is "cohesive" and hence cannot be construed since the Community is a logical alliance of music communities that establish a clearly delineated and organized Community structure that is "closely united" and functions as a "whole"

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The "music" string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain's registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN "to provide accurate WHOIS contact data" or else their domain "registration may be suspended or even cancelled".¹⁸

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

iii) *International Federations and Organizations mainly Dedicated to the Community:*

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: “*With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.*” (AGB, 4-12). The community as defined in the DotMusic application has at least one entity *mainly*²⁰ dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ Per the Oxford and Merriam Webster dictionaries, the word “mainly” is defined as “*more than anything else*” (See <http://www.oxforddictionaries.com/definition/english/mainly> and <http://www.merriam-webster.com/dictionary/mainly> respectively). According to DotMusic, the string .MUSIC relates to the Community “by representing all constituents involved in music creation, production and distribution” (Application Answer to Question 20d). Supporting organizations related to that string that are “mainly” dedicated to the Community and its activities, include the International Federation of Arts Councils and Culture Agencies (IFACCA) representing government culture ministries and arts councils, the International Federation of Musicians (FIM) representing musicians globally, the International Federation of Phonographic Industry (IFPI) representing the recording industry worldwide, the International Confederation of Music Publishers (ICPM) representing the voice of global music publishing, the International Association of Music Information Centres (IAMIC), the American Association of Independent Music (A2IM), whose associate members represent a majority of music consumed, the Independent Music Worldwide Independent Network (WIN) representing independent music worldwide, the International Society for Music Education (ISME) the premiere international organization representing music education, and many others (See support at <http://music.us/supporters> and <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails:downloadattachment/142588?t:ac=1392>).

role with respect to music.²¹ IFACCA's members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The "Size" covered reaches over a hundred million music entities i.e. "considerable size with millions of constituents" per Application Answer to Question 20a.

The string "music" falls under the jurisdiction of each country's Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²² The UNESCO strategic partnership²³ is relevant, especially since UNESCO founded the International Music Council (the "IMC") in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁴

Government activities in the clearly delineated and organized "Music Community" include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a "statutory rate" set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁵

Ministries of culture and arts councils (that comprise IFACCA's membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA's membership support the "performing arts" and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁶ Other small government Ministries of Culture, such as Albania,²⁷ or government

²⁶ 2011 Annual Report for Cyprus Ministry of Culture, Section 1.2 "Music"

(http://www.moec.gov.cy/en/annual_reports/annual_report_2011_en.pdf). Activities include Music Performances in Cyprus (1.2.1) and Abroad (1.2.2), Subsidization of Paphos Aphrodite Festival (1.2.3), Music Publications (1.2.4), Subsidization and Purchases of Digital Records (1.2.5), Promotion for Cypriot musical creativity abroad (1.2.6),

Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁸ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world's largest music conference.²⁹

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³⁰
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³¹
- Canada Council for the Arts is Canada's national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³² The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³³
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁴

Cyprus Symphony Orchestra Foundation (1.2.7), Music Information Centre (1.2.8), Developing Music Education (1.2.9), Organising of the 1st Musicological Symposium (1.2.10) and Musical Festivities for the European Volunteerism Year (1.2.11)

³⁴ Department for Culture, The Importance of Music, A National Plan for Music Education,

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/180973/DFE-00086-2011.pdf, Page 4, 2011

- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁵ and has a strong focus on music as outlined in its Strategic Plan³⁶ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁷
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁸
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁹
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴⁰

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

The IFPI is another entity *mainly* dedicated to the Community. The IFPI is the only organization that represents the interests of the recording industry worldwide. It is the “voice of the recording industry worldwide”⁴¹ whose members⁴² – major and independent companies -- represent a majority of all commercial music consumed globally. For example, the RIAA, an IFPI national group member,⁴³ represents “approximately 85% of all legitimate recorded music produced and sold in the United States,”⁴⁴ the world’s largest music market with 30% global market share.⁴⁵ Formed in 1933, the IFPI’s mission was to “represent the interests of the recording industry worldwide in all fora.”

Another clear example of an “entity *mainly* dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁶

The reach of A2IM Associate⁴⁷ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴⁸ – iTunes accounts for 63% of global digital music market⁴⁹ - a majority – with a registered community of 800 million registered members⁵⁰ available in 119 countries who abide to strict terms of service and boundaries⁵¹ and have downloaded over 25 billion songs⁵² from iTunes’ catalog of over 43 million songs⁵³ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁵⁴
- **Pandora**⁵⁵ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁶
- **Spotify**⁵⁷ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵⁸
- **Vevo**⁵⁹ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁶⁰

⁵⁷ <http://a2im.org/groups/spotify>

⁵⁸ <https://press.spotify.com/us/information/>

⁵⁹ <http://a2im.org/groups/vevo/>

- **Youtube**⁶¹ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁶² of which 38.4% is music-related.⁶³
- **ReverbNation**⁶⁴ – ReverbNation⁶⁵ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The ReverbNation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁶ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶⁷

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶⁸), China (China Audio Video Association⁶⁹) and Germany (Initiative Musik).⁷⁰ A2IM also has Affiliate⁷¹ associations within the global music community. These include Affiliates such as MusicFirst,⁷² the Copyright Alliance,⁷³ the Worldwide Independent Network (WIN)⁷⁴ and Merlin.⁷⁵

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁶ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

⁷⁵ <http://www.merlinnetwork.org>

⁷⁶ <https://www.icann.org/en/system/files/correspondence/bengloff-to-chehade-et-al-20aug14-en.pdf> and <https://www.icann.org/en/system/files/correspondence/bengloff-to-crocker-et-al-07mar15-en.pdf>

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷⁷ – a majority of global music.⁷⁸

Another letter⁷⁹ sent to ICANN (on April 14th, 2015) by Danielle Aguirre from the NMPA and on behalf of a music publisher and songwriter community coalition representing a majority of the global music publishing community, also expressed "support [for] the .MUSIC community applications because respecting and protecting music rights serves the global music community and the public interest."

The International Music Products Association, NAMM, is another globally-recognized and relevant group of non-negligible size that has supported DotMusic.⁸⁰ NAMM, formed in 1901, is *mainly* dedicated to the global music community by representing the international music products industry and community, with globally-recognized members and exhibitors that include Yamaha, Roland, Sennheiser, Sony, Fender, Harman, Kawai, Shure, Steinway, Audio-Technica, AKAI, Gibson, Peavey, Korg, AKG, Selmer, JBL, Alesis, Ibanez, AVID, Casio, DW, Sabian, Pearl, Zildjian, Martin, Ludwig, Marshall and others.^{81 82} Every amateur and professional musician worldwide uses music products manufactured and distributed by NAMM's members. Without these musical instruments and products, music as we know it today would not be created or produced. NAMM and its trade shows power the \$17 billion global music products industry serving as a hub for the global music community wanting to seek out the newest innovations in musical products, recording technology, sound and lighting. NAMM's mission is "to strengthen

⁸¹ https://www.namm.org/files/showdir/ExhibitorList_WN15.xls

⁸² <http://www.musictrades.com/global.html>

the music products industry and promote the pleasures and benefits of making music.”⁸³ NAMM also hosts the NAMM Show, the world's largest event for the music products industry.

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause representing over 95% of music consumed globally.⁸⁴ Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community as defined. Cumulatively, DotMusic possesses documented support⁸⁵ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁸⁶

According to the Applicant Guidebook (“AGB”), to receive the maximum score for Nexus, the applied-for string -- “music” -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the “Music Community” entirely matches the applied-for “music” string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community. Community members may register a .MUSIC by either:

⁸³ <https://www.namm.org/about>

⁸⁴ See <http://music.us/supporters>, <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/142588?t:ac=1392>, Bloomberg BNA at http://music.us/RIAA_Backs_DotMusic.pdf Pg.1, and <http://diffuser.fm/will-dot-music-domains-make-the-internet-better/>

⁸⁵ <http://music.us/supporters>

⁸⁶ See <http://music.us/nexus>

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” sting and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility* criteria and *content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework⁸⁷ given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

⁸⁷ ICANN has disclosed that the string .MUSIC is a sensitive string operating in a regulated sector. ICANN also accepted Government Advisory Committee (GAC) advice for safeguards to protect the Music Community and the public interest (See <https://icann.org/en/system/files/correspondence/crocker-to-dryden-3-29oct13-en.pdf> Pg.7)

In conclusion, there is substantive and compelling evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

Name: Jeffrey Weber

Title: CEO

Organization: Stark Raving Records

Professor Jeffrey Weber Esq.

Jeffrey Weber has been a widely recognized music industry professional for over thirty years. He has produced over 180 CDs with releases on just about every major label as well as a host of independent labels. Along the way, his projects have yielded two Grammys, seven Grammy nominations, at least seventeen top ten albums, two number one albums and an assortment of other honors.

His book, "You've Got A Deal! The Biggest Lies of the Music Business" will be published by Headline Books in January of 2012. "Over 100 people turned up, and I was truly shocked and gratified. Took me over two hours to sign all the books for everyone. One guy drove down from Oregon and another flew in from North Carolina for this signing in Los Angeles. The publisher flew in from West Virginia. When does a publisher attend a book signing!!? Wild... The publisher who flew from West Virginia said that I had more people and sold more books at one signing than any of her other writers in her twenty-five year history. I wonder if that's a good thing or a bad thing....," says Weber.

During his thirty plus year career, he has founded, ran or participated in various label capacities from A&R, Music Supervision for film and TV, Production, Interactive Programming, Marketing, Sales, International Relations, Business Affairs and Art Director for independent labels such as Penny's Gang, 44-4 Records, Discwasher Records, Prima Records, Beach Jazz, Agenda Records, Denon Records, Handshake Records, Audio Source Records, Voss Records, Video Arts, Clear Audio, Pony Canyon, P.C.H. Records, En Pointe Records, Cameron Records as well as his own labels, Weberworks and Stark Raving Records.

His productions have also appeared on every major label including MCA, Warner Bros., Atlantic, BMG, Columbia, A&M, Elektra as well as such labels as GRP, Hip-O, Sheffield, Concord, Bainbridge, Silver Eagle, Zebra, among countless others.

Among the many artists that have fallen under the banner of "Produced by..." include: Nancy Wilson, David Benoit, Steve Lukather, the Utah Symphony, Jackson Browne, Marcus Miller, Michael McDonald, Bill Champlin, Gerald Albright, Tom Scott, Chick Corea, Stanley Clark, Etta James, Linda Hopkins, Kenny Burrell, McCoy Tyner, Jackie McLean, Billy Sheehan (Mr. Big), Cozzy Powell, the Count Basie Orchestra, John Sebastian, Ronnie Dio, Ritchie Blackmore, Pat Boone, Buddy Miles, Billy Preston, MC Lyte, Kenny Rankin, Diane Reeves, Diane Schuur, Rita Coolidge, Luther Vandross, David Crosby, Simon Phillips, Jeff Porcaro, Patrice Rushen, Toni Tennille, among many others.

Jeff has been a concert and event producer for over ten years with extensive experience in concert management and production, staging, lighting, and sound from the smallest of venues to large stadium shows. He has produced shows for the Atlantis Resort, NASCAR, the Breeder's Cup, Chicago White Sox, Cystic Fibrosis, Fallsview Casino and Resort, Ford, Harry Caray's, KTLA, Loehmann's Department Store, Lupus L.A., NAMM, National Cable

and Telecommunications Association, Netflix, Orange County Flyers, Pebble Beach Pro-Am, AT&T, Dockers, Shore Club-South Beach, Taste Of Chicago, USAA, American Idol, The Tonight Show, among many others.

In 2009, Weber finalized his, from the ground up, re-definition of the business model for a record label that he firmly believes will be the architecture for all labels in the future. Weber's model has embraced a complete slate of innovative concepts and procedures, ranging from the manner in which artist contracts are conceived and implemented to recording procedures, to innovations in sales, marketing and promotion. Designed to re-invent and re-energize the relationships between the artist and the label and the artist and the consumer, the model establishes format-breaking levels of transparency and unique partnerships in all label/artist/fan relationships.

His innovative concepts were the operational foundations for two independent labels distributed by Fontana (Universal). At the time, he was named President of both labels. In addition, Weber's dynamic business model innovations for record labels are now being taught at UCLA and the University of Texas, Austin. He has also been an educator at both UCLA (for about 22 years) and the University of Texas, Austin (for about 6 years).

Jeff is well known for his involvement in high technology recording techniques, especially live two track recording, live multi-track and digital recording. Because of their sonic excellence, his recordings have been repeatedly selected by major hardware manufacturers to demonstrate their product lines.

Jeff is very active as a music supervisor for film, television and cable. He specializes in cost effective synchronization and master use license acquisition strategies as well as production based music options.

Jeff co-founded and programmed Studio M, a nationwide broadcast television network that utilized their growing 28,000 music video library to broadcast multiple genre based music video shows. It was on the air seven days a week, for five hours a day to an estimated audience of thirty million homes.

In addition to music production, Jeff has spent over twenty years behind the microphone as a voice-over talent for commercials, cartoons, industrial films, infomercials, live web broadcasting, and television. He has done voice work for Interscope (Guns & Roses), Toyota, Nissan, Ford, VR Troopers, the Ventura County Star newspaper chain, Play It Again Sports, Sony, Boston Acoustics, Audio Source, the BBC, the Jazz Network, Dejaun Jewelers, the Los Angeles Zoo, CBS and Warner Bros., among countless others. He continues to be extremely active in this field.

Well versed in video production, Jeff has written, produced and directed over two-dozen music based concerts and videos. Recently, he produced a 12 camera, High Definition, robotic, five-channel surround sound DVD/CD for Band From TV, a rock and roll cover band comprised of famous television actors who travel the country raising money for their selected charities. He continues to travel with the band producing all their live concerts.

He has been a music journalist with articles in major industry publications nationwide. He

has received numerous awards as an art director and many of his album cover designs have been published in "Best of..." annual publications. As an educator, he has taught courses on the music industry at universities and law schools (he has a law degree as well) across the country.

Jeff is a former member of the Board of Governors of the National Academy of Recording Arts and Sciences (NARAS) as well as a former National Trustee and Chapter Vice President.

Re: Expert Testimony on (i) Community Establishment; (ii) Nexus; and (iii) Support for DotMusic’s Community-Based Application¹ for .MUSIC (Application ID 1-1115-14110)

Dear ICANN and Economist Intelligence Unit (“EIU”):

Please accept this letter to verify the following facts: (i) the Music Community’s *Establishment* as defined by DotMusic; (2) the matching *Nexus* between the “music” Community and the “music” string (or top-level domain); and (3) that DotMusic possesses documented *Support* from organizations representing a majority of the global Music Community addressed and defined.

Please see my credentials attached hereto that identify my level of expertise and specialized knowledge with respect to music.

SUMMARY

Based upon my knowledge of music, the music community and DotMusic’s public statements concerning their .MUSIC community application, DotMusic has established the following facts:

- 1) Its Community definition recognizes the cohesive, symbiotic and overlapping nature of the global Music Community. The definition includes those associated with commercial and non-commercial creation, performance, marketing and distribution of music;
- 2) “Music Community” members have the requisite awareness and recognition of the interdependency, overlapping and cohesive nature of each “organized community of similar nature that relates to music.” These organized and aligned communities are closely united and make “music” as we know it today. It is this self-awareness and interdependence that gives the “Music Community” its strength. With exponential growth of the Internet, mobile and the Domain Name System (DNS), the “Music Community’s” use and reliance on the Internet to create, market and disseminate music-related content, products, services and activities will continue to grow;
- 3) The “Music Community” functions in a regulated sector with global copyright protections – it is clear that the “community,” as defined, implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate a globally-recognized set of standards for

¹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/1392>

the protection of the “Music Community” member rights with relation to their copyrighted music works around the world;

4) The “Music” Community -- as defined by DotMusic -- has at least one entity dedicated to the community supporting DotMusic’s application. Such documented *Support* includes several “international federation of national communities of a similar nature,” music coalitions and others that are strongly associated with “music,” which represent a majority of the Community with considerable millions of members worldwide.²

5) The *Nexus* of the “music” Community matches the “music” applied-for string because it represents the entire global Music Community – a community that pre-existed 2007 with a size in the considerable millions of constituents. The “Music Community” definition -- which incorporates the strict fundamental attributes of a closely united Community definition that is “organized” and “delineated” -- ensures that all of its constituent members have a requisite awareness of the community as defined, including both commercial and non-commercial stakeholders, to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination.

6) DotMusic has received support from the largest coalition of Music Community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community. Cumulatively, DotMusic possesses documented support³ from institutions/organizations representing a majority of the defined and recognized Community.

There is substantive evidence that DotMusic fulfills the *Nexus, Community Establishment and Support* criteria for the “Music” string. The inclusion and representation of every music constituent type is paramount to the articulated purpose of the string. DotMusic and its application’s global Music Community supporters substantiate that every type of music constituent contributes to the function and operation of the music sector within a regulated framework. The symbiotic nature of the Community as defined and structured means that “Music” would not function as it does today without the participation of all music constituent types that interconnect to match the “music” string with the “music” Community definition.

³ <http://music.us/supporters>

ASSESSMENT OF COMMUNITY DEFINITION, ESTABLISHMENT AND NEXUS

A) *Music Community Definition, Establishment & Community Endorsement*⁴

DotMusic’s definition of the “Music Community” as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application, 20a) is factually accurate and representative of the “Music Community.” Community characteristics include:

i) An Organized, Cohesive, Interdependent Logically-Allied Community:

The “Music Community” definition covers the regulated, interdependent and cohesive nature of the music sector that exists today. “Music Community” members have the requisite awareness and recognition of the interdependent, overlapping and cohesive nature of each “organized community of similar nature that relates to music” that comprises the “Music Community.” Without such cohesiveness and interdependency, the defined “Music” Community matching the applied-for string (“Music”) would not be able to function in its regulated sector, a “Music” regulated sector that was publicly recognized by both ICANN and the Government Advisory Committee.⁵

As a result, the Music Community as defined is “closely united” (As per the definition of “cohesion” according to Merriam-Webster dictionary⁶) or “united or form a whole” (As per the definition of the word “cohesion” according to Oxford Dictionaries⁷).

The “Music Community” as defined (a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) establishes that:

- (1) There is an awareness and recognition among its members;
- (2) The organized and delineated logical alliance of communities exists; and
- (3) The Community is “closely united” and “interdependent” (i.e. Each “organized community of similar nature that relates to music” which is part of the “logical alliance of communities that relate to music” is not mutually exclusive).

In short, the applied-for string (“Music”) matches the name of the “Music” Community as defined by DotMusic’s application. DotMusic’s “Music Community” definition accurately represents the common definition of the “Music Community,” which is confirmed by Wikipedia.

⁴ See <http://music.us/establishment>

⁵ <https://www.icann.org/en/system/files/bm/briefing-materials-2-05feb14-en.pdf>, Pg.3

⁶ <http://www.merriam-webster.com/dictionary/cohesion>

⁷ http://www.oxforddictionaries.com/us/definition/american_english/cohesion

According to Wikipedia:⁸

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants...and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music”...UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music...The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organisations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices. The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions...subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.⁹

ii) *An Aware, Pre-Existing and Recognized Community of Considerable Millions Worldwide:*

DotMusic’s definition of the Community covers all Community members associated with the string, each with a requisite awareness of the Community that can be validated through their natural association with a particular music-related community that they clearly identify with. According to DotMusic, all Music Community members must identify their music-related community in order to demonstrate their requisite awareness of the defined Community as part of the .MUSIC registration and validation process.

⁸ Wikipedia is ranked 6th among the ten most popular websites (Alexa, Retrieved March 23, 2015 from <http://www.alexacom/siteinfo/wikipedia.org>) and constitutes the Internet's largest, most frequently updated and popular general reference work (See OECD, OECD Internet Economy Outlook 2012, OECD Publishing, http://www.oecd-ilibrary.org/science-and-technology/oecd-internet-economy-outlook-2012_9789264086463-en,Pg.172) that compares favorably to the accuracy of other encyclopedias (such as the Britannica) according to a 2012 study conducted in partnership with Oxford University (See <http://blog.wikimedia.org/2012/08/02/seven-years-after-nature-pilot-study-compares-wikipedia-favorably-to-other-encyclopedias-in-three-languages>).

⁹ Music Community. In *Wikipedia*. Retrieved March 23, 2015, from https://en.wikipedia.org/wiki/Music_community

According to DotMusic, the Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

According to DotMusic, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, performance, promotion, and distribution of music worldwide. According to DotMusic, the Music Community members must have an active, non-tangential relationship with the applied-for string “music” and also have the requisite awareness of the music-related community that they are a part of by specifically identifying it as part of the registration and validation process (i.e. upon successful registration and validation, each community member will be given a unique community identification number that will automatically associate them with their identified community and the “music” string).

DotMusic’s Community definition matches the applied-for string because it allows both commercial and non-commercial stakeholders to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination/exclusion. Given the regulated sector of the community, it is clear that the “Music Community” as defined implies “more of cohesion than a mere commonality of interest” with an “awareness and recognition of a community among its members.” Several international treaties mandate cohesive and globally-recognized set of standards for the protection of the music community members’ rights with relation to their copyrighted music works around the world.¹⁰

The Berne Convention for the Protection of Literary and Artistic Works¹¹ provides that each of the 168 contracting parties¹² (representing an overwhelming majority of the world’s population) provides automatic protection for music works first published in other countries of the Berne union and for unpublished music works whose authors are citizens of or resident in such other countries.¹³ This means that if a Music Community member’s copyright rights are violated in any other signatory country’s jurisdiction, then the music community member will have the music copyright rights given by that country. Music Community members are clearly aware of the collective Community’s rights, which could not be made possible without these cohesive and globally-recognized set of standards. If such standards were not coherent or enforced then music would not be able to exist in its current form and the industry component of the Music Community sector would not exist. As such, the Community’s *Establishment* and definition is “cohesive” and hence cannot be construed since the Community is a logical alliance of music

¹⁰ http://www.rightsdirect.com/content/rd/en/toolbar/copyright_education/International_Copyright_Basics.html

¹¹ http://www.wipo.int/treaties/en/text.jsp?file_id=283698

¹² http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

¹³ <http://www.britannica.com/EBchecked/topic/62482/Berne-Convention>

communities that establish a clearly delineated and organized Community structure that is “closely united” and functions as a “whole”

Further evidence to substantiate the cohesive, symbiotic and overlapping nature of the Community, includes other globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless of whether the constituent is a commercial, non-commercial or amateur entity. The “music” string is commonly used in classification systems such as ISMN,¹⁴ ISRC,¹⁵ ISWC,¹⁶ ISNI.¹⁷ (Application Answer to Question 20a). For example, if a music entity would like to distribute their music, either commercially or for free, then an ISRC can be assigned to globally identify any specific music work. An ISRC, which facilitates efficient music discovery and community member payment, is constructed from 12 characters representing country, registrant, year of registration and designation (i.e. the serial number assigned by the registrant). With respect to domains, an equivalent system that relates to identifying a specific domain’s registrant and other relevant information pertaining to the domain is WHOIS. Domain registrants are required by ICANN “to provide accurate WHOIS contact data” or else their domain “registration may be suspended or even cancelled”.¹⁸

Without such Music Community “cohesion” and standardized systems functioning in its regulated sector, the Music Community would not be able to create, market and distribute their music. By the same token, fans would not be able to identify the music they are listening to with a specific music artist, regardless of whether the listening activity or behavior is commercial or non-commercial in nature. The socio-economic structure that characterizes “music” as commonly-known today would be non-existent without these organized and delineated elements that commonly define the Community.

¹⁴ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁵ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁶ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁷ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

¹⁸ <https://whois.icann.org/en/about-whois> and <https://www.icann.org/resources/pages/faqs-f0-2012-02-25-en>

iii) International Federations and Organizations Dedicated to Community Functions:

According to ICANN’s Applicant Guidebook (“AGB”)¹⁹: *“With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.”* (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature” relating to music, music coalitions and other relevant and non-negligible music organizations.

One of these entities include the only international federation of national communities relating to government culture agencies and arts councils, which has an integral association with music globally: the International Federation of Arts Councils and Culture Agencies (IFACCA).

IFACCA is the only international federation that represents government culture agencies and arts councils globally. These national communities are governmental institutions that play a pivotal role with respect to music.²⁰ IFACCA’s members cover the majority of music entities globally, regardless of whether they are commercial, non-commercial or amateurs. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The “Size” covered reaches over a hundred million music entities i.e. “considerable size with millions of constituents” per Application Answer to Question 20a.

The string “music” falls under the jurisdiction of each country’s Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²¹ The UNESCO strategic partnership²² is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²³

¹⁹ <https://newgtlds.icann.org/en/applicants/agb/guidebook-full-11jan12-en.pdf>

²⁰ http://www.ifacca.org/membership/current_members/

²¹ http://www.ifacca.org/strategic_partners/

²² http://www.ifacca.org/strategic_partners/

²³ <http://www.imc-cim.org/about-imc-separator/who-we-are.html>

Government activities in the clearly delineated and organized “Music Community” include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a “statutory rate” set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁴

Ministries of culture and arts councils (that comprise IFACCA’s membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture, arts councils and affiliates that comprise IFACCA’s membership support the “performing arts” and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁵ Other small government Ministries of Culture, such as Albania,²⁶ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,²⁷ all provide critical support and substantial advocacy for music. Other examples include government institutions collaborating and advocating music through their funded country-based pavilion initiatives at Midem, the world’s largest music conference.²⁸

Government ministries and arts councils provide critical support for the Music Community, including commercial music organizations. By way of example, government ministries’ and arts councils’ substantial connection to and support of “music” is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA’s membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).²⁹
- The Australian Government/Council For The Arts invested \$51.2 million for the nation’s orchestras; \$21.6 million for opera; \$10.8 million for other music artists and

[http://www.mch.govt.nz/files/Annual%20report%202011%202012%20pdf%20version%20\(D-0448383\).PDF](http://www.mch.govt.nz/files/Annual%20report%202011%202012%20pdf%20version%20(D-0448383).PDF)

organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³⁰

- Canada Council for the Arts is Canada’s national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³¹ The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³²
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³³
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁴ and has a strong focus on music as outlined in its Strategic Plan³⁵ with Congress requested to provide \$154,465,000 for fiscal year 2014.³⁶
- The National Arts Council of South Africa invested 2,536,131 ZAR in Music and 9,995,000 ZAR in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”³⁷
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.³⁸
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.³⁹

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries. In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Another clear example of an “entity dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁰

The reach of A2IM Associate⁴¹ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are A2IM members include:

- **Apple iTunes**⁴² – iTunes accounts for 63% of global digital music market⁴³ - a majority – with a registered community of 800 million registered members⁴⁴ available in 119 countries who abide to strict terms of service and boundaries⁴⁵ and have downloaded over 25 billion songs⁴⁶ from iTunes’ catalog of over 43 million songs⁴⁷ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁴⁸
- **Pandora**⁴⁹ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁰
- **Spotify**⁵¹ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵²
- **Vevo**⁵³ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁵⁴

⁵¹ <http://a2im.org/groups/spotify>

⁵² <https://press.spotify.com/us/information/>

⁵³ <http://a2im.org/groups/vevo/>

- **Youtube**⁵⁵ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁵⁶ of which 38.4% is music-related.⁵⁷
- **Reverbnation**⁵⁸ – Reverbnation⁵⁹ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The Reverbnation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁰ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶¹

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶²), China (China Audio Video Association⁶³) and Germany (Initiative Musik).⁶⁴ A2IM also has Affiliate⁶⁵ associations within the global music community. These include Affiliates such as MusicFirst,⁶⁶ the Copyright Alliance,⁶⁷ the Worldwide Independent Network (WIN)⁶⁸ and Merlin.⁶⁹

A2IM also represents a recognized Music Coalition representing the interests of the Global Independent Music Community.⁷⁰ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises.

⁶⁹ <http://www.merlinnetwork.org>

⁷⁰ <https://www.icann.org/en/system/files/correspondence/bengloff-to-chehade-et-al-20aug14-en.pdf> and <https://www.icann.org/en/system/files/correspondence/bengloff-to-crocker-et-al-07mar15-en.pdf>

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

Another global Music Community Coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷¹ – a majority of global music.⁷²

Collectively, the DotMusic application received support from the largest coalition of music community member organizations ever assembled to support a cause. Such unparalleled global Music Community support represents an overwhelming majority of the global Music Community. Cumulatively, DotMusic possesses documented support⁷³ from institutions/organizations representing a majority of the Community addressed. Music -- as commonly-known by the general public and experienced today -- would not be possible without these supporting, non-negligible and relevant organizations that have endorsed DotMusic.

In conclusion, there is substantive evidence that DotMusic entirely fulfills the criteria for *Community Establishment* and *Community Endorsement* from the majority of the global Music Community as defined.

B) Nexus⁷⁴

According to the Applicant Guidebook ("AGB"), to receive the maximum score for Nexus, the applied-for string -- "music" -- must match the name of the community or be a well-known short-form or abbreviation of the community name.

The *Nexus* of the "Music Community" entirely matches the applied-for "music" string because it represents the entire global Music Community as commonly-known and perceived by the general public. This definition allows for all constituents with a requisite awareness of the Community

⁷¹ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.1

⁷² <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf>, Pg.3, Appendix A

⁷³ <http://music.us/supporters>

⁷⁴ See <http://music.us/nexus>

defined to register a .MUSIC domain without any conflicts of interests, over-reaching or discrimination. The definition of the Community requires that members have an active, non-tangential relationship with the applied-for string and the requisite awareness of the music community they identify with as part of the registration process. It is clear that the general public will directly associate and equate the string with the Community as defined by DotMusic. There is no possibility of overreaching beyond the definition or allowing unrelated non-music entities to be included as part of the Community.

Community members may register a .MUSIC by either:

- 1) Identifying that they belong to a Music Community Member Organization (“MCMO”); or
- 2) Identifying the community they belong to, which is consistent with the definition of the Community: “the strictly delineated and organized logical alliance of communities of similar nature related to music.”

All Community members are aware of and recognize their inclusion in the defined Community by identifying which clearly defined community they belong to and have an active participation in. The *nexus* of the applied-for string ensures inclusion of the entire global community that the string represents while excluding unrelated-entities not associated with the string. This way there is a clear match and alignment between the “music” string and the Community defined.

While the exact size of the global Music Community as defined is unknown (there is no empirical evidence providing an exact, finite number because amateur entities are also included in the Community’s definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic’s definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .MUSIC domains to the string and entirely matches the *nexus* between the string and Community defined. According to DotMusic, the Community *definition, eligibility criteria and content and use* requirements ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner consistent with DotMusic’s community-based purpose i.e. only entities with music-related activities are able to register .MUSIC domains.

Membership aligns with the *nexus* of the Community and the string, which is explicitly relevant to music. The string as defined in the application demonstrates uniqueness because it has no other significant meaning beyond identifying the community described in the application. According to DotMusic’s application, any tangential or implicit association with the *nexus* of the Community and the string is not regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential

relationships with the defined “music” Community and applied-for “music” string would not constitute a qualifying Community membership and would be ineligible for registration.

The inclusion of every music constituent type is paramount to the purpose of the string. Every type of music constituent critically contributes to the function and operation of the music sector within a regulated framework given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types which cumulatively match the string with the Community definition.

In conclusion, there is substantive evidence that DotMusic entirely fulfills the criteria for *Nexus*.

Respectfully Submitted,

PREPARING EVALUATORS FOR THE NEW GTLD APPLICATION PROCESS

by Michael Salazar 22 November 2011

The names of the global firms that will serve as the evaluation panels for new generic Top Level Domain (gTLD) applications were recently announced during the CANN 42 Dakar meeting.

As Program Director for the [New gTLD Program](#) responsible for the design and deployment of the New gTLD Application Processing Program and managing the process as it takes flight, I am extremely proud of the selections we have made. All of the organizations chosen are highly qualified, global, and are respected experts in the areas for which they have been selected.

Whom did we select?

We followed a thorough, fair, data-led process to select the evaluation panels. The process, which is described on our website under "[Call for Applicant Evaluation Panel Expressions of Interest](#)", began in February of 2009. When came on board in July 2009, quickly understood the heightened level of interest in providing services for this relatively new Program. In all, twelve global firms formally submitted responses. Out of that pool, we selected [The Economist Intelligence Unit](#), [Ernst & Young](#), [InterConnect Communications](#) (partnering with the [University College London](#)), [InterSle Consulting Group](#), [JAS Global Advisors](#), and [KPMG](#).

These firms will work together in various combinations to evaluate applications during the process as follows:

String Reviews

- **String Similarity** [InterConnect Communications/University College London](#)
- **DNS Stability** [InterSle Consulting Group](#)
- **Geographic Names** [The Economist Intelligence Unit](#) and [InterConnect Communications/University College London](#)

Applicant Reviews

- **Technical and Operational** [Ernst & Young](#), [JAS Global Advisors](#), and [KPMG](#)
- **Financial Capability** [Ernst & Young](#), [JAS Global Advisors](#), and [KPMG](#)
- **Registry Services** [InterSle Consulting Group](#)
- **Community Priority** [The Economist Intelligence Unit](#) and [InterConnect Communications](#)

Why is there more than one firm for each of the evaluation types? Three reasons:

- To provide sufficient bandwidth to conduct the number of necessary evaluations
- To provide an alternate channel to avoid conflicts of interest
- To provide for continued competition among service providers to ensure quality and value going forward

All of the firms exhibit characteristics that are important to the integrity of this process. For example, KPMG and Ernst & Young both have large global footprints and can effectively scale to ensure timely and culturally sensitive processing of applications. Their strong and long history in providing audit, tax, and advisory services makes them well suited to serve as the panels for financial and technical/operational evaluations. JAS Global Advisors has a decade of experience in due diligence, internet security, and global operations, as well as an intimate knowledge of CANN. The Economist Intelligence Unit, the sister organization of *The Economist*, incorporates a solid understanding of global corporate and government processes. InterConnect Communications, in conjunction with the University College London brings an internationally recognized and diverse linguistic resources offering an abundance of subject matter expertise. And finally, InterSle Consulting Group has a very specific, excellent subject matter expertise in the DNS.

How are we ensuring an effective and efficient evaluation effort?

Ensuring that we have an effective and efficient evaluation effort is one of the most important aspects of building this program, and this starts with how we are preparing the evaluation panels.

The first step begins with simulation exercises. Currently, my team is conducting simulation exercises using mock applications. The simulation exercises have been instrumental in testing the evaluation process, understanding the level of effort to review an application, and equally as important, to calibrate the analysis across the firms.

The next steps include designing and implementing a robust training program. We are finalizing a training program that all evaluators are required to complete before performing an evaluation. Any individual serving on a panel will need to complete the training program prior to starting. The training program seeks to ensure consistency across all processes and scoring methods so that all applications are evaluated equally.

Finally we are implementing a Quality Control program to ensure that applications have followed the same evaluation process and have been evaluated consistently. I strongly believe that the Quality Control function is a paramount component of the Program. In addition to performing the critical task of ensuring consistency, Quality Control will enable us to identify areas for improvement. These will in turn create initiatives that will bring enhanced effectiveness to the overall program as well as improvements in costs as we consider future rounds.

How will ICANN address any conflicts of interest?

Conflict of interest is an area that ICANN takes very seriously as it impacts the integrity of the Program. In fact, our processes are built to avoid and adequately deal with potential conflicts of interest. For example, where feasible we have multiple firms providing services, making sure that no evaluators have a conflict with a particular application.

I helped craft applicable language in the Applicant Guidebook and have made the topic the subject of contract negotiations with each firm, reinforcing the importance of avoiding conflict of interest (inherent or perceived). There is also a code of conduct that we have asked each firm to abide by. Some of the guidelines under the code of conduct restrict the evaluators from speaking at meetings or conferences on the topic of New gTLDs and interacting with entities or individuals that have identified themselves as potential applicants of the New gTLD Program. See [Module 2 of the Applicant Guidebook](#) (Section 2.4.3 Code of Conduct Guidelines for Panelists) for more information on the Code of Conduct and Conflict of Interest guidelines.

The New gTLD Application Program is a major undertaking for ICANN and the global Internet community. We are very excited to get this program underway. Stay tuned for additional announcements as we continue to prepare for launch on 12 January 2012.

If you have any questions about the gTLD Program, the evaluation process, or the evaluation firms selected, please send your questions to:

newgtld@icann.org

May the IRS discuss this return with the preparer shown above? (see instructions) Yes No

For Paperwork Reduction Act Notice, see the separate instructions. Form 990 (2013)

Part III Statement of Program Service Accomplishments

Check if Schedule O contains a response or note to any line in this Part III Yes No

1 Briefly describe the organization's mission:

SEE SCHEDULE O.

2 Did the organization undertake any significant program services during the year which were not listed on the prior Form 990 or 990-EZ? Yes No

If "Yes," describe these new services on Schedule O.

3 Did the organization cease conducting, or make significant changes in how it conducts, any program services? Yes No

If "Yes," describe these changes on Schedule O.

4 Describe the organization's program service accomplishments for each of its three largest program services, as measured by expenses. Section 501(c)(3) and 501(c)(4) organizations are required to report the amount of grants and allocations to others, the total expenses, and revenue, if any, for each program service reported.

4a (Code:) (Expenses \$ 89,375,394. including grants of \$ 1,864,400.) (Revenue \$ 121,311,659.)

SEE SCHEDULE O.

4b (Code:) (Expenses \$ including grants of \$) (Revenue \$)

4c (Code:) (Expenses \$ including grants of \$) (Revenue \$)

4d Other program services (Describe in Schedule O.)

(Expenses \$ including grants of \$) (Revenue \$)

4e Total program service expenses ▶ 89,375,394.

Part IV Checklist of Required Schedules

	Yes	No
1 Is the organization described in section 501(c)(3) or 4947(a)(1) (other than a private foundation)? If "Yes," complete Schedule A	X	
2 Is the organization required to complete Schedule B, Schedule of Contributors (see instructions)?	X	
3 Did the organization engage in direct or indirect political campaign activities on behalf of or in opposition to candidates for public office? If "Yes," complete Schedule C, Part I		X
4 Section 501(c)(3) organizations. Did the organization engage in lobbying activities, or have a section 501(h) election in effect during the tax year? If "Yes," complete Schedule C, Part II	X	
5 Is the organization a section 501(c)(4), 501(c)(5), or 501(c)(6) organization that receives membership dues, assessments, or similar amounts as defined in Revenue Procedure 98-19? If "Yes," complete Schedule C, Part III		X
6 Did the organization maintain any donor advised funds or any similar funds or accounts for which donors have the right to provide advice on the distribution or investment of amounts in such funds or accounts? If "Yes," complete Schedule D, Part I		X
7 Did the organization receive or hold a conservation easement, including easements to preserve open space, the environment, historic land areas, or historic structures? If "Yes," complete Schedule D, Part II		X
8 Did the organization maintain collections of works of art, historical treasures, or other similar assets? If "Yes," complete Schedule D, Part III		X
9 Did the organization report an amount in Part X, line 21, for escrow or custodial account liability; serve as a custodian for amounts not listed in Part X; or provide credit counseling, debt management, credit repair, or debt negotiation services? If "Yes," complete Schedule D, Part IV		X
10 Did the organization, directly or through a related organization, hold assets in temporarily restricted endowments, permanent endowments, or quasi-endowments? If "Yes," complete Schedule D, Part V		X
11 If the organization's answer to any of the following questions is "Yes," then complete Schedule D, Parts VI, VII, VIII, IX, or X as applicable.		
a Did the organization report an amount for land, buildings, and equipment in Part X, line 10? If "Yes," complete Schedule D, Part VI	X	
b Did the organization report an amount for investments-other securities in Part X, line 12 that is 5% or more of its total assets reported in Part X, line 16? If "Yes," complete Schedule D, Part VII		X
c Did the organization report an amount for investments-program related in Part X, line 13 that is 5% or more of its total assets reported in Part X, line 16? If "Yes," complete Schedule D, Part VIII		X
d Did the organization report an amount for other assets in Part X, line 15 that is 5% or more of its total assets reported in Part X, line 16? If "Yes," complete Schedule D, Part IX		X
e Did the organization report an amount for other liabilities in Part X, line 25? If "Yes," complete Schedule D, Part X		X
f Did the organization's separate or consolidated financial statements for the tax year include a footnote that addresses the organization's liability for uncertain tax positions under FIN 48 (ASC 740)? If "Yes," complete Schedule D, Part X	X	
12 a Did the organization obtain separate, independent audited financial statements for the tax year? If "Yes," complete Schedule D, Parts XI and XII	X	
b Was the organization included in consolidated, independent audited financial statements for the tax year? If "Yes," and if the organization answered "No" to line 12a, then completing Schedule D, Parts XI and XII is optional		X
13 Is the organization a school described in section 170(b)(1)(A)(ii)? If "Yes," complete Schedule E		X
14 a Did the organization maintain an office, employees, or agents outside of the United States?	X	
b Did the organization have aggregate revenues or expenses of more than \$10,000 from grantmaking, fundraising, business, investment, and program service activities outside the United States, or aggregate foreign investments valued at \$100,000 or more? If "Yes," complete Schedule F, Parts I and IV	X	
15 Did the organization report on Part IX, column (A), line 3, more than \$5,000 of grants or other assistance to or for any foreign organization? If "Yes," complete Schedule F, Parts II and IV	X	
16 Did the organization report on Part IX, column (A), line 3, more than \$5,000 of aggregate grants or other assistance to or for foreign individuals? If "Yes," complete Schedule F, Parts III and IV	X	
17 Did the organization report a total of more than \$15,000 of expenses for professional fundraising services on Part IX, column (A), lines 6 and 11e? If "Yes," complete Schedule G, Part I (see instructions)		X
18 Did the organization report more than \$15,000 total of fundraising event gross income and contributions on Part VIII, lines 1c and 8a? If "Yes," complete Schedule G, Part II		X
19 Did the organization report more than \$15,000 of gross income from gaming activities on Part VIII, line 9a? If "Yes," complete Schedule G, Part III		X
20 a Did the organization operate one or more hospital facilities? If "Yes," complete Schedule H		X
b If "Yes" to line 20a, did the organization attach a copy of its audited financial statements to this return?		X

Part IV Checklist of Required Schedules (continued)

	Yes	No
21 Did the organization report more than \$5,000 of grants or other assistance to any domestic organization or government on Part IX, column (A), line 1? <i>If "Yes," complete Schedule I, Parts I and II</i>	X	
22 Did the organization report more than \$5,000 of grants or other assistance to individuals in the United States on Part IX, column (A), line 2? <i>If "Yes," complete Schedule I, Parts I and III</i>		X
23 Did the organization answer "Yes" to Part VII, Section A, line 3, 4, or 5 about compensation of the organization's current and former officers, directors, trustees, key employees, and highest compensated employees? <i>If "Yes," complete Schedule J</i>	X	
24 a Did the organization have a tax-exempt bond issue with an outstanding principal amount of more than \$100,000 as of the last day of the year, that was issued after December 31, 2002? <i>If "Yes," answer lines 24b through 24d and complete Schedule K. If "No," go to line 25a</i>		X
24 b Did the organization invest any proceeds of tax-exempt bonds beyond a temporary period exception?		
24 c Did the organization maintain an escrow account other than a refunding escrow at any time during the year to defease any tax-exempt bonds?		
24 d Did the organization act as an "on behalf of" issuer for bonds outstanding at any time during the year?		
25 a Section 501(c)(3) and 501(c)(4) organizations. Did the organization engage in an excess benefit transaction with a disqualified person during the year? <i>If "Yes," complete Schedule L, Part I</i>		X
25 b Is the organization aware that it engaged in an excess benefit transaction with a disqualified person in a prior year, and that the transaction has not been reported on any of the organization's prior Forms 990 or 990-EZ? <i>If "Yes," complete Schedule L, Part I</i>		X
26 Did the organization report any amount on Part X, line 5, 6, or 22 for receivables from or payable to any current or former officers, directors, trustees, key employees, highest compensated employees, or disqualified persons? If so, complete Schedule L, Part II.		X
27 Did the organization provide a grant or other assistance to an officer, director, trustee, key employee, substantial contributor or employee thereof, a grant selection committee member, or to a 35% controlled entity or family member of any of these persons? <i>If "Yes," complete Schedule L, Part III.</i>		X
28 Was the organization a party to a business transaction with one of the following parties (see Schedule L, Part IV instructions for applicable filing thresholds, conditions, and exceptions):		
28 a A current or former officer, director, trustee, or key employee? <i>If "Yes," complete Schedule L, Part IV.</i>		X
28 b A family member of a current or former officer, director, trustee, or key employee? <i>If "Yes," complete Schedule L, Part IV.</i>		X
28 c An entity of which a current or former officer, director, trustee, or key employee (or a family member thereof) was an officer, director, trustee, or direct or indirect owner? <i>If "Yes," complete Schedule L, Part IV.</i>	X	
29 Did the organization receive more than \$25,000 in non-cash contributions? <i>If "Yes," complete Schedule M</i>		X
30 Did the organization receive contributions of art, historical treasures, or other similar assets, or qualified conservation contributions? <i>If "Yes," complete Schedule M</i>		X
31 Did the organization liquidate, terminate, or dissolve and cease operations? <i>If "Yes," complete Schedule N, Part I.</i>		X
32 Did the organization sell, exchange, dispose of, or transfer more than 25% of its net assets? <i>If "Yes," complete Schedule N, Part II</i>		X
33 Did the organization own 100% of an entity disregarded as separate from the organization under Regulations sections 301.7701-2 and 301.7701-3? <i>If "Yes," complete Schedule R, Part I</i>		X
34 Was the organization related to any tax-exempt or taxable entity? <i>If "Yes," complete Schedule R, Part II, III, or IV, and Part V, line 1</i>		X
35 a Did the organization have a controlled entity within the meaning of section 512(b)(13)?		X
35 b If "Yes" to line 35a, did the organization receive any payment from or engage in any transaction with a controlled entity within the meaning of section 512(b)(13)? <i>If "Yes," complete Schedule R, Part V, line 2.</i>		
36 Section 501(c)(3) organizations. Did the organization make any transfers to an exempt non-charitable related organization? <i>If "Yes," complete Schedule R, Part V, line 2</i>		X
37 Did the organization conduct more than 5% of its activities through an entity that is not a related organization and that is treated as a partnership for federal income tax purposes? <i>If "Yes," complete Schedule R, Part VI.</i>		X
38 Did the organization complete Schedule O and provide explanations in Schedule O for Part VI, lines 11b and 19? Note. All Form 990 filers are required to complete Schedule O.	X	

Part V Statements Regarding Other IRS Filings and Tax Compliance

Check if Schedule O contains a response or note to any line in this Part V

Table with columns for line number, description, and Yes/No checkboxes. Includes sections for backup withholding, employee reporting, foreign accounts, prohibited transactions, and charitable contributions.

Part VI Governance, Management, and Disclosure For each "Yes" response to lines 2 through 7b below, and for a "No" response to line 8a, 8b, or 10b below, describe the circumstances, processes, or changes in Schedule O. See instructions.

Check if Schedule O contains a response or note to any line in this Part VI [X]

Section A. Governing Body and Management

Table with 3 columns: Question, Yes, No. Rows include: 1a Enter the number of voting members of the governing body at the end of the tax year; 1b Enter the number of voting members included in line 1a, above, who are independent; 2 Did any officer, director, trustee, or key employee have a family relationship or a business relationship with any other officer, director, trustee, or key employee?; 3 Did the organization delegate control over management duties customarily performed by or under the direct supervision of officers, directors, or trustees, or key employees to a management company or other person?; 4 Did the organization make any significant changes to its governing documents since the prior Form 990 was filed?; 5 Did the organization become aware during the year of a significant diversion of the organization's assets?; 6 Did the organization have members or stockholders?; 7a Did the organization have members, stockholders, or other persons who had the power to elect or appoint one or more members of the governing body?; 7b Are any governance decisions of the organization reserved to (or subject to approval by) members, stockholders, or persons other than the governing body?; 8 Did the organization contemporaneously document the meetings held or written actions undertaken during the year by the following: a The governing body? b Each committee with authority to act on behalf of the governing body?; 9 Is there any officer, director, trustee, or key employee listed in Part VII, Section A, who cannot be reached at the organization's mailing address? If "Yes," provide the names and addresses in Schedule O.

Section B. Policies (This Section B requests information about policies not required by the Internal Revenue Code.)

Table with 3 columns: Question, Yes, No. Rows include: 10a Did the organization have local chapters, branches, or affiliates?; 10b If "Yes," did the organization have written policies and procedures governing the activities of such chapters, affiliates, and branches to ensure their operations are consistent with the organization's exempt purposes?; 11a Has the organization provided a complete copy of this Form 990 to all members of its governing body before filing the form?; 11b Describe in Schedule O the process, if any, used by the organization to review this Form 990.; 12a Did the organization have a written conflict of interest policy? If "No," go to line 13; 12b Were officers, directors, or trustees, and key employees required to disclose annually interests that could give rise to conflicts?; 12c Did the organization regularly and consistently monitor and enforce compliance with the policy? If "Yes," describe in Schedule O how this was done; 13 Did the organization have a written whistleblower policy?; 14 Did the organization have a written document retention and destruction policy?; 15 Did the process for determining compensation of the following persons include a review and approval by independent persons, comparability data, and contemporaneous substantiation of the deliberation and decision?; 15a The organization's CEO, Executive Director, or top management official; 15b Other officers or key employees of the organization; 16a Did the organization invest in, contribute assets to, or participate in a joint venture or similar arrangement with a taxable entity during the year?; 16b If "Yes," did the organization follow a written policy or procedure requiring the organization to evaluate its participation in joint venture arrangements under applicable federal tax law, and take steps to safeguard the organization's exempt status with respect to such arrangements?

Section C. Disclosure

- 17 List the states with which a copy of this Form 990 is required to be filed CA,
18 Section 6104 requires an organization to make its Forms 1023 (or 1024 if applicable), 990, and 990-T (Section 501(c)(3)s only) available for public inspection. Indicate how you made these available. Check all that apply.
[X] Own website [] Another's website [X] Upon request [] Other (explain in Schedule O)
19 Describe in Schedule O whether (and if so, how) the organization made its governing documents, conflict of interest policy, and financial statements available to the public during the tax year.
20 State the name, physical address, and telephone number of the person who possesses the books and records of the organization: XAVIER CALVEZ 12025 WATERFRONT DRIVE, SUITE 300 LOS ANGELES, CA 90094-2536 310-301-5838

Part VII Compensation of Officers, Directors, Trustees, Key Employees, Highest Compensated Employees, and Independent Contractors

Check if Schedule O contains a response or note to any line in this Part VII. X

Section A. Officers, Directors, Trustees, Key Employees, and Highest Compensated Employees

1a Complete this table for all persons required to be listed. Report compensation for the calendar year ending with or within the organization's tax year.

- List all of the organization's **current** officers, directors, trustees (whether individuals or organizations), regardless of amount of compensation. Enter -0- in columns (D), (E), and (F) if no compensation was paid.
- List all of the organization's **current** key employees, if any. See instructions for definition of "key employee."
- List the organization's five **current** highest compensated employees (other than an officer, director, trustee, or key employee) who received reportable compensation (Box 5 of Form W-2 and/or Box 7 of Form 1099-MISC) of more than \$100,000 from the organization and any related organizations.
- List all of the organization's **former** officers, key employees, and highest compensated employees who received more than \$100,000 of reportable compensation from the organization and any related organizations.
- List all of the organization's **former directors or trustees** that received, in the capacity as a former director or trustee of the organization, more than \$10,000 of reportable compensation from the organization and any related organizations.

List persons in the following order: individual trustees or directors; institutional trustees; officers; key employees; highest compensated employees; and former such persons.

Check this box if neither the organization nor any related organization compensated any current officer, director, or trustee.

(A) Name and Title	(B) Average hours per week (list any hours for related organizations below dotted line)	(C) Position (do not check more than one box, unless person is both an officer and a director/trustee)						(D) Reportable compensation from the organization (W-2/1099-MISC)	(E) Reportable compensation from related organizations (W-2/1099-MISC)	(F) Estimated amount of other compensation from the organization and related organizations
		Individual trustee or director	Institutional trustee	Officer	Key employee	Highest compensated employee	Former

9	Other changes in net assets or fund balances (explain in Schedule O)	9	-132,085.
10	Net assets or fund balances at end of year. Combine lines 3 through 9 (must equal Part X, line 33, column (B))	10	193,104,340.

Part XII Financial Statements and Reporting

Check if Schedule O contains a response or note to any line in this Part XII

	Yes	No
1 Accounting method used to prepare the Form 990: <input type="checkbox"/> Cash <input checked="" type="checkbox"/> Accrual <input type="checkbox"/> Other _____ If the organization changed its method of accounting from a prior year or checked "Other," explain in Schedule O.		
2a Were the organization's financial statements compiled or reviewed by an independent accountant? If "Yes," check a box below to indicate whether the financial statements for the year were compiled or reviewed on a separate basis, consolidated basis, or both: <input type="checkbox"/> Separate basis <input type="checkbox"/> Consolidated basis <input type="checkbox"/> Both consolidated and separate basis		X
b Were the organization's financial statements audited by an independent accountant? If "Yes," check a box below to indicate whether the financial statements for the year were audited on a separate basis, consolidated basis, or both: <input checked="" type="checkbox"/> Separate basis <input type="checkbox"/> Consolidated basis <input type="checkbox"/> Both consolidated and separate basis	X	
c If "Yes" to line 2a or 2b, does the organization have a committee that assumes responsibility for oversight of the audit, review, or compilation of its financial statements and selection of an independent accountant? If the organization changed either its oversight process or selection process during the tax year, explain in Schedule O.	X	
3a As a result of a federal award, was the organization required to undergo an audit or audits as set forth in the Single Audit Act and OMB Circular A-133?		X
b If "Yes," did the organization undergo the required audit or audits? If the organization did not undergo the required audit or audits, explain why in Schedule O and describe any steps taken to undergo such audits.		

SCHEDULE A
(Form 990 or 990-EZ)

Public Charity Status and Public Support
Complete if the organization is a section 501(c)(3) organization or a section 4947(a)(1) nonexempt charitable trust.

OMB No. 1545-0047

2013

Open to Public Inspection

Department of the Treasury
Internal Revenue Service

▶ Attach to Form 990 or Form 990-EZ.
▶ Information about Schedule A (Form 990 or 990-EZ) and its instructions is at www.irs.gov/form990.

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
---	---

Part I Reason for Public Charity Status (All organizations must complete this part.) See instructions.

The organization is not a private foundation because it is: (For lines 1 through 11, check only one box.)

- 1 A church, convention of churches, or association of churches described in **section 170(b)(1)(A)(i)**.
- 2 A school described in **section 170(b)(1)(A)(ii)**. (Attach Schedule E.)
- 3 A hospital or a cooperative hospital service organization described in **section 170(b)(1)(A)(iii)**.
- 4 A medical research organization operated in conjunction with a hospital described in **section 170(b)(1)(A)(iii)**. Enter the hospital's name, city, and state: _____
- 5 An organization operated for the benefit of a college or university owned or operated by a governmental unit described in **section 170(b)(1)(A)(iv)**. (Complete Part II.)
- 6 A federal, state, or local government or governmental unit described in **section 170(b)(1)(A)(v)**.
- 7 An organization that normally receives a substantial part of its support from a governmental unit or from the general public described in **section 170(b)(1)(A)(vi)**. (Complete Part II.)
- 8 A community trust described in **section 170(b)(1)(A)(vi)**. (Complete Part II.)
- 9 An organization that normally receives: (1) more than 33 1/3 % of its support from contributions, membership fees, and gross receipts from activities related to its exempt functions - subject to certain exceptions, and (2) no more than 33 1/3 % of its support from gross investment income and unrelated business taxable income (less section 511 tax) from businesses acquired by the organization after June 30, 1975. See **section 509(a)(2)**. (Complete Part III.)
- 10 An organization organized and operated exclusively to test for public safety. See **section 509(a)(4)**.
- 11 An organization organized and operated exclusively for the benefit of, to perform the functions of, or to carry out the purposes of one or more publicly supported organizations described in section 509(a)(1) or section 509(a)(2). See **section 509(a)(3)**. Check the box that describes the type of supporting organization and complete lines 11e through 11h.
 - a Type I b Type II c Type III-Functionally integrated d Type III-Non-functionally integrated
- e By checking this box, I certify that the organization is not controlled directly or indirectly by one or more disqualified persons other than foundation managers and other than one or more publicly supported organizations described in section 509(a)(1) or section 509(a)(2).
- f If the organization received a written determination from the IRS that it is a Type I, Type II, or Type III supporting organization, check this box
- g Since August 17, 2006, has the organization accepted any gift or contribution from any of the following persons?
 - (i) A person who directly or indirectly controls, either alone or together with persons described in (ii) and (iii) below, the governing body of the supported organization?
 - (ii) A family member of a person described in (i) above?

12 Other income. Do not include gain or loss from the sale of capital assets (Explain in Part IV.)						
13 Total support. (Add lines 9, 10c, 11, and 12.)	68,217,881.	71,554,328.	72,964,551.	236,182,149.	126,167,603.	575,086,512.
14 First five years. If the Form 990 is for the organization's first, second, third, fourth, or fifth tax year as a section 501(c)(3) organization, check this box and stop here <input type="checkbox"/>						

Section C. Computation of Public Support Percentage

15 Public support percentage for 2013 (line 8, column (f) divided by line 13, column (f))	15	64.01 %
16 Public support percentage from 2012 Schedule A, Part III, line 15	16	60.88 %

Section D. Computation of Investment Income Percentage

17 Investment income percentage for 2013 (line 10c, column (f) divided by line 13, column (f))	17	1.82 %
18 Investment income percentage from 2012 Schedule A, Part III, line 17	18	1.89 %

19a 33 1/3% support tests - 2013. If the organization did not check the box on line 14, and line 15 is more than 33 1/3%, and line 17 is not more than 33 1/3%, check this box and **stop here**. The organization qualifies as a publicly supported organization

b 33 1/3% support tests - 2012. If the organization did not check a box on line 14 or line 19a, and line 16 is more than 33 1/3%, and line 18 is not more than 33 1/3%, check this box and **stop here**. The organization qualifies as a publicly supported organization

20 Private foundation. If the organization did not check a box on line 14, 19a, or 19b, check this box and see instructions

Part IV **Supplemental Information.** Provide the explanations required by Part II, line 10; Part II, line 17a or 17b; and Part III, line 12. Also complete this part for any additional information. (See instructions).

Schedule of Contributors

2013

▶ **Attach to Form 990, Form 990-EZ, or Form 990-PF.**

▶ Information about Schedule B (Form 990, 990-EZ, or 990-PF) and its instructions is at www.irs.gov/form990.

Name of the organization

INTERNET CORP FOR ASSIGNED NAMES & NUMBERS

Employer identification number

95-4712218

Organization type (check one):

Filers of:

Section:

Form 990 or 990-EZ

501(c)(3) () (enter number) organization

4947(a)(1) nonexempt charitable trust **not** treated as a private foundation

527 political organization

Form 990-PF

501(c)(3) exempt private foundation

4947(a)(1) nonexempt charitable trust treated as a private foundation

501(c)(3) taxable private foundation

Check if your organization is covered by the **General Rule** or a **Special Rule**.

Note. Only a section 501(c)(7), (8), or (10) organization can check boxes for both the General Rule and a Special Rule. See instructions.

General Rule

For an organization filing Form 990, 990-EZ, or 990-PF that received, during the year, \$5,000 or more (in money or property) from any one contributor. Complete Parts I and II.

Special Rules

For a section 501(c)(3) organization filing Form 990 or 990-EZ that met the 33 1/3 % support test of the regulations under sections 509(a)(1) and 170(b)(1)(A)(vi) and received from any one contributor, during the year, a contribution of the greater of (1) \$5,000 or (2) 2% of the amount on (i) Form 990, Part VIII, line 1h, or (ii) Form 990-EZ, line 1. Complete Parts I and II.

For a section 501(c)(7), (8), or (10) organization filing Form 990 or 990-EZ that received from any one contributor, during the year, total contributions of more than \$1,000 for use *exclusively* for religious, charitable, scientific, literary, or educational purposes, or the prevention of cruelty to children or animals. Complete Parts I, II, and III.

For a section 501(c)(7), (8), or (10) organization filing Form 990 or 990-EZ that received from any one contributor, during the year, contributions for use *exclusively* for religious, charitable, etc., purposes, but these contributions did not total to more than \$1,000. If this box is checked, enter here the total contributions that were received during the year for an *exclusively* religious, charitable, etc., purpose. Do not complete any of the parts unless the **General Rule** applies to this organization because it received *nonexclusively* religious, charitable, etc., contributions of \$5,000 or more during the year ▶ \$ _____

Caution. An organization that is not covered by the General Rule and/or the Special Rules does not file Schedule B (Form 990, 990-EZ, or 990-PF), but it **must** answer "No" on Part IV, line 2, of its Form 990; or check the box on line H of its Form 990-EZ or on its Form 990-PF, Part I, line 2, to certify that it does not meet the filing requirements of Schedule B (Form 990, 990-EZ, or 990-PF).

SCHEDULE C
(Form 990 or 990-EZ)

Political Campaign and Lobbying Activities

OMB No. 1545-0047

2013

Open to Public Inspection

For Organizations Exempt From Income Tax Under section 501(c) and section 527
 ▶ **Complete if the organization is described below.** ▶ **Attach to Form 990 or Form 990-EZ.**
 ▶ **See separate instructions.** ▶ **Information about Schedule C (Form 990 or 990-EZ) and its instructions is at www.irs.gov/form990.**

Department of the Treasury
Internal Revenue Service

If the organization answered "Yes," to Form 990, Part IV, line 3, or Form 990-EZ, Part V, line 46 (Political Campaign Activities), then

- Section 501(c)(3) organizations: Complete Parts I-A and B. Do not complete Part I-C.
- Section 501(c) (other than section 501(c)(3)) organizations: Complete Parts I-A and C below. Do not complete Part I-B.
- Section 527 organizations: Complete Part I-A only.

If the organization answered "Yes," to Form 990, Part IV, line 4, or Form 990-EZ, Part VI, line 47 (Lobbying Activities), then

- Section 501(c)(3) organizations that have filed Form 5768 (election under section 501(h)): Complete Part II-A. Do not complete Part II-B.
- Section 501(c)(3) organizations that have NOT filed Form 5768 (election under section 501(h)): Complete Part II-B. Do not complete Part II-A.

If the organization answered "Yes," to Form 990, Part IV, line 5 (Proxy Tax) or Form 990-EZ, Part V, line 35c (Proxy Tax), then

- Section 501(c)(4), (5), or (6) organizations: Complete Part III.

Name of organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
---	---

Part I-A Complete if the organization is exempt under section 501(c) or is a section 527 organization.

- 1 Provide a description of the organization's direct and indirect political campaign activities in Part IV.
- 2 Political expenditures ▶ \$ _____
- 3 Volunteer hours _____

Part I-B Complete if the organization is exempt under section 501(c)(3).

- 1 Enter the amount of any excise tax incurred by the organization under section 4955 ▶ \$ _____
- 2 Enter the amount of any excise tax incurred by organization managers under section 4955 ▶ \$ _____
- 3 If the organization incurred a section 4955 tax, did it file Form 4720 for this year? Yes No
- 4a Was a correction made? Yes No
- b If "Yes," describe in Part IV.

Part I-C Complete if the organization is exempt under section 501(c), except section 501(c)(3).

- 1 Enter the amount directly expended by the filing organization for section 527 exempt function activities ▶ \$ _____
- 2 Enter the amount of the filing organization's funds contributed to other organizations for section 527 exempt function activities ▶ \$ _____
- 3 Total exempt function expenditures. Add lines 1 and 2. Enter here and on Form 1120-POL, line 17b ▶ \$ _____
- 4 Did the filing organization file **Form 1120-POL** for this year? Yes No
- 5 Enter the names, addresses and employer identification number (EIN) of all section 527 political organizations to which the filing organization made payments. For each organization listed, enter the amount paid from the filing organization's funds. Also enter the amount of political contributions received that were promptly and directly delivered to a separate political organization, such as a separate segregated fund or a political action committee (PAC). If additional space is needed, provide information in Part IV.

(a) Name	(b) Address	(c) EIN	(d) Amount paid from filing organization's funds. If none, enter -0-.	(e) Amount of political contributions received and promptly and directly delivered to a separate political organization. If none, enter -0-.

Schedule C (Form 990 or 990-EZ) 2013

Part II-A Complete if the organization is exempt under section 501(c)(3) and filed Form 5768 (election under section 501(h)).

A Check if the filing organization belongs to an affiliated group (and list in Part IV each affiliated group member's name, address, EIN, expenses, and share of excess lobbying expenditures).

B Check if the filing organization checked box A and "limited control" provisions apply.

Limits on Lobbying Expenditures (The term "expenditures" means amounts paid or incurred.)		(a) Filing organization's totals	(b) Affiliated group totals												
1a	Total lobbying expenditures to influence public opinion (grass roots lobbying)														
b	Total lobbying expenditures to influence a legislative body (direct lobbying)														
c	Total lobbying expenditures (add lines 1a and 1b)														
d	Other exempt purpose expenditures														
e	Total exempt purpose expenditures (add lines 1c and 1d)														
f	Lobbying nontaxable amount. Enter the amount from the following table in both columns.														
<table border="1" style="width: 100%;"> <thead> <tr> <th style="text-align: left;">If the amount on line 1e, column (a) or (b) is:</th> <th style="text-align: left;">The lobbying nontaxable amount is:</th> </tr> </thead> <tbody> <tr> <td>Not over \$500,000</td> <td>20% of the amount on line 1e.</td> </tr> <tr> <td>Over \$500,000 but not over \$1,000,000</td> <td>\$100,000 plus 15% of the excess over \$500,000.</td> </tr> <tr> <td>Over \$1,000,000 but not over \$1,500,000</td> <td>\$175,000 plus 10% of the excess over \$1,000,000.</td> </tr> <tr> <td>Over \$1,500,000 but not over \$17,000,000</td> <td>\$225,000 plus 5% of the excess over \$1,500,000.</td> </tr> <tr> <td>Over \$17,000,000</td> <td>\$1,000,000.</td> </tr> </tbody> </table>		If the amount on line 1e, column (a) or (b) is:	The lobbying nontaxable amount is:	Not over \$500,000	20% of the amount on line 1e.	Over \$500,000 but not over \$1,000,000	\$100,000 plus 15% of the excess over \$500,000.	Over \$1,000,000 but not over \$1,500,000	\$175,000 plus 10% of the excess over \$1,000,000.	Over \$1,500,000 but not over \$17,000,000	\$225,000 plus 5% of the excess over \$1,500,000.	Over \$17,000,000	\$1,000,000.		
If the amount on line 1e, column (a) or (b) is:	The lobbying nontaxable amount is:														
Not over \$500,000	20% of the amount on line 1e.														
Over \$500,000 but not over \$1,000,000	\$100,000 plus 15% of the excess over \$500,000.														
Over \$1,000,000 but not over \$1,500,000	\$175,000 plus 10% of the excess over \$1,000,000.														
Over \$1,500,000 but not over \$17,000,000	\$225,000 plus 5% of the excess over \$1,500,000.														
Over \$17,000,000	\$1,000,000.														
g	Grassroots nontaxable amount (enter 25% of line 1f)														
h	Subtract line 1g from line 1a. If zero or less, enter -0-														
i	Subtract line 1f from line 1c. If zero or less, enter -0-														
j	If there is an amount other than zero on either line 1h or line 1i, did the organization file Form 4720 reporting section 4911 tax for this year?		<input type="checkbox"/> Yes <input type="checkbox"/> No												

4-Year Averaging Period Under Section 501(h)

(Some organizations that made a section 501(h) election do not have to complete all of the five columns below. See the instructions for lines 2a through 2f on page 4.)

Lobbying Expenditures During 4-Year Averaging Period					
Calendar year (or fiscal year beginning in)	(a) 2010	(b) 2011	(c) 2012	(d) 2013	(e) Total
2a Lobbying nontaxable amount					
b Lobbying ceiling amount (150% of line 2a, column (e))					
c Total lobbying expenditures					
d Grassroots nontaxable amount					
e Grassroots ceiling amount (150% of line 2d, column (e))					
f Grassroots lobbying expenditures					

Part II-B Complete if the organization is exempt under section 501(c)(3) and has NOT filed Form 5768 (election under section 501(h)).

For each "Yes," response to lines 1a through 1i below, provide in Part IV a detailed description of the lobbying activity.	(a)		(b)
	Yes	No	Amount
1 During the year, did the filing organization attempt to influence foreign, national, state or local legislation, including any attempt to influence public opinion on a legislative matter or referendum, through the use of:			
a Volunteers?		X	
b Paid staff or management (include compensation in expenses reported on lines 1c through 1i)?	X		
c Media advertisements?		X	
d Mailings to members, legislators, or the public?		X	
e Publications, or published or broadcast statements?		X	
f Grants to other organizations for lobbying purposes?		X	
g Direct contact with legislators, their staffs, government officials, or a legislative body?	X		576,138.
h Rallies, demonstrations, seminars, conventions, speeches, lectures, or any similar means?		X	
i Other activities?		X	
j Total. Add lines 1c through 1i			576,138.
2 a Did the activities in line 1 cause the organization to be not described in section 501(c)(3)?		X	
b If "Yes," enter the amount of any tax incurred under section 4912			
c If "Yes," enter the amount of any tax incurred by organization managers under section 4912			
d If the filing organization incurred a section 4912 tax, did it file Form 4720 for this year?		X	

Part III-A Complete if the organization is exempt under section 501(c)(4), section 501(c)(5), or section 501(c)(6).

	Yes	No
1 Were substantially all (90% or more) dues received nondeductible by members?	1	
2 Did the organization make only in-house lobbying expenditures of \$2,000 or less?	2	
3 Did the organization agree to carry over lobbying and political expenditures from the prior year?	3	

Part III-B Complete if the organization is exempt under section 501(c)(4), section 501(c)(5), or section 501(c)(6) and if either (a) BOTH Part III-A, lines 1 and 2, are answered "No," OR (b) Part III-A, line 3, is answered "Yes."

1 Dues, assessments and similar amounts from members	1	
2 Section 162(e) nondeductible lobbying and political expenditures (do not include amounts of political expenses for which the section 527(f) tax was paid).		
a Current year	2a	
b Carryover from last year	2b	
c Total	2c	
3 Aggregate amount reported in section 6033(e)(1)(A) notices of nondeductible section 162(e) dues	3	
4 If notices were sent and the amount on line 2c exceeds the amount on line 3, what portion of the excess does the organization agree to carryover to the reasonable estimate of nondeductible lobbying and political expenditure next year?	4	
5 Taxable amount of lobbying and political expenditures (see instructions)	5	

Part IV Supplemental Information

Provide the descriptions required for Part I-A, line 1; Part I-B, line 4; Part I-C, line 5; Part II-A (affiliated group list); Part II-A, line 2; and Part II-B, line 1. Also, complete this part for any additional information.

LOBBYING EXPENDITURES

SCHEDULE C PART II-B

THE ORGANIZATION UTILIZED THE SERVICES OF A STAFF REGISTERED LOBBYIST AND

TWO GOVERNMENT AFFAIRS FIRMS DURING THE YEAR ENDED JUNE 30, 2014, FOR A

COST OF \$576,138.

Part IV Supplemental Information *(continued)*

SCHEDULE D (Form 990)

Supplemental Financial Statements

OMB No. 1545-0047

Complete if the organization answered "Yes," to Form 990, Part IV, line 6, 7, 8, 9, 10, 11a, 11b, 11c, 11d, 11e, 11f, 12a, or 12b.

2013

Attach to Form 990.

Open to Public Inspection

Department of the Treasury Internal Revenue Service

Information about Schedule D (Form 990) and its instructions is at www.irs.gov/form990.

Name of the organization

Employer identification number

INTERNET CORP FOR ASSIGNED NAMES & NUMBERS

95-4712218

Part I Organizations Maintaining Donor Advised Funds or Other Similar Funds or Accounts. Complete if the organization answered "Yes" to Form 990, Part IV, line 6.

Table with 2 columns: (a) Donor advised funds, (b) Funds and other accounts. Rows include Total number at end of year, Aggregate contributions, Aggregate grants, Aggregate value, and questions about donor advisement.

Part II Conservation Easements. Complete if the organization answered "Yes" to Form 990, Part IV, line 7.

Table with 2 columns: Held at the End of the Tax Year. Rows include Purpose(s) of conservation easements, Total number of easements, Total acreage, Number of easements on historic structures, and monitoring expenses.

Part III Organizations Maintaining Collections of Art, Historical Treasures, or Other Similar Assets. Complete if the organization answered "Yes" to Form 990, Part IV, line 8.

Table with 2 columns: Amounts. Rows include Revenues and Assets for collections, and Revenues and Assets for financial gain.

For Paperwork Reduction Act Notice, see the Instructions for Form 990.

Schedule D (Form 990) 2013

Part III Organizations Maintaining Collections of Art, Historical Treasures, or Other Similar Assets (continued)

3 Using the organization's acquisition, accession, and other records, check any of the following that are a significant use of its collection items (check all that apply):

- a Public exhibition, b Scholarly research, c Preservation for future generations, d Loan or exchange programs, e Other

4 Provide a description of the organization's collections and explain how they further the organization's exempt purpose in Part XIII.

5 During the year, did the organization solicit or receive donations of art, historical treasures, or other similar assets to be sold to raise funds rather than to be maintained as part of the organization's collection?

Part IV Escrow and Custodial Arrangements. Complete if the organization answered "Yes" to Form 990, Part IV, line 9, or reported an amount on Form 990, Part X, line 21.

1a Is the organization an agent, trustee, custodian or other intermediary for contributions or other assets not included on Form 990, Part X?

b If "Yes," explain the arrangement in Part XIII and complete the following table:

Table with 2 columns: Description, Amount. Rows: 1c Beginning balance, 1d Additions during the year, 1e Distributions during the year, 1f Ending balance.

2a Did the organization include an amount on Form 990, Part X, line 21?

b If "Yes," explain the arrangement in Part XIII. Check here if the explanation has been provided in Part XIII.

Part V Endowment Funds. Complete if the organization answered "Yes" to Form 990, Part IV, line 10.

Table with 6 columns: (a) Current year, (b) Prior year, (c) Two years back, (d) Three years back, (e) Four years back. Rows: 1a-1g (Beginning of year balance, Contributions, Net investment earnings, gains, and losses, Grants or scholarships, Other expenditures for facilities and programs, Administrative expenses, End of year balance).

2 Provide the estimated percentage of the current year end balance (line 1g, column (a)) held as:

- a Board designated or quasi-endowment %
b Permanent endowment %
c Temporarily restricted endowment %

The percentages in lines 2a, 2b, and 2c should equal 100%.

3a Are there endowment funds not in the possession of the organization that are held and administered for the organization by:

- (i) unrelated organizations
(ii) related organizations

Table with 2 columns: Yes, No. Rows: 3a(i), 3a(ii), 3b.

b If "Yes" to 3a(ii), are the related organizations listed as required on Schedule R?

4 Describe in Part XIII the intended uses of the organization's endowment funds.

Part VI Land, Buildings, and Equipment.

Complete if the organization answered "Yes" to Form 990, Part IV, line 11a. See Form 990, Part X, line 10.

Table with 5 columns: (a) Cost or other basis (investment), (b) Cost or other basis (other), (c) Accumulated depreciation, (d) Book value. Rows: 1a Land, 1b Buildings, 1c Leasehold improvements, 1d Equipment, 1e Other, Total.

Part VII Investments - Other Securities.

Complete if the organization answered "Yes" to Form 990, Part IV, line 11b. See Form 990, Part X, line 12.

(a) Description of security or category (including name of security)	(b) Book value	(c) Method of valuation: Cost or end-of-year market value
(1) Financial derivatives		
(2) Closely-held equity interests

Part IX Other Assets.

Complete if the organization answered "Yes" to Form 990, Part IV, line 11d. See Form 990, Part X, line 15.

(a) Description	(b) Book value
(1) _____	
(2) _____	
(3) _____	
(4) _____	
(5) _____	
(6) _____	
(7) _____	
(8) _____	
(9) _____	
Total. (Column (b) must equal Form 990, Part X, col. (B) line 15.) ▶	

Part X Other Liabilities.

Complete if the organization answered "Yes" to Form 990, Part IV, line 11e or 11f. See Form 990, Part X, line 25.

1. (a) Description of liability	(b) Book value
(1) Federal income taxes	
(2) _____	
(3) _____	
(4) _____	
(5) _____	
(6) _____	
(7) _____	
(8) _____	
(9) _____	
Total. (Column (b) must equal Form 990, Part X, col. (B) line 25.) ▶	

2. Liability for uncertain tax positions. In Part XIII, provide the text of the footnote to the organization's financial statements that reports the organization's liability for uncertain tax positions under FIN 48 (ASC 740). Check here if the text of the footnote has been provided in Part XIII

Part XI Reconciliation of Revenue per Audited Financial Statements With Revenue per Return. Complete if the organization answered "Yes" to Form 990, Part IV, line 12a.

Table with 5 main rows and sub-rows (a-e) for adjustments. Total revenue reported as 127,814,320.

Part XII Reconciliation of Expenses per Audited Financial Statements With Expenses per Return. Complete if the organization answered "Yes" to Form 990, Part IV, line 12a.

Table with 5 main rows and sub-rows (a-e) for adjustments. Total expenses reported as 124,267,391.

Part XIII Supplemental Information.

Provide the descriptions required for Part II, lines 3, 5, and 9; Part III, lines 1a and 4; Part IV, lines 1b and 2b; Part V, line 4; Part X, line 2; Part XI, lines 2d and 4b; and Part XII, lines 2d and 4b. Also complete this part to provide any additional information.

SEE PAGE 5

Part XIII Supplemental Information (continued)

FORM 990, SCHEDULE D, PART X, LINE 2

ASC 740-10 FOOTNOTE

ICANN IS EXEMPT FROM FEDERAL AND STATE INCOME TAXES UNDER SECTION 501(C)(3) OF THE INTERNAL REVENUE CODE AND SECTION 23071(D) OF THE CALIFORNIA REVENUE AND TAXATION CODE. ACCORDINGLY, NO PROVISION FOR INCOME TAXES HAS BEEN MADE IN THE ACCOMPANYING FINANCIAL STATEMENTS. HOWEVER, ICANN IS SUBJECT TO INCOME TAXES ON ANY NET INCOME THAT IS DERIVED FROM A TRADE OR BUSINESS, REGULARLY CARRIED ON, AND NOT IN FURTHERANCE OF THE PURPOSES FOR WHICH IT WAS GRANTED EXEMPTION. NO INCOME TAX PROVISION HAS BEEN RECORDED AS THE NET INCOME, IF ANY, FROM ANY UNRELATED TRADE OR BUSINESS, IN THE OPINION OF MANAGEMENT, IS NOT MATERIAL TO THE BASIC FINANCIAL STATEMENTS TAKEN AS A WHOLE.

ICANN BELIEVES IT IS IN COMPLIANCE WITH ALL APPLICABLE LAWS, HOWEVER, UPON AUDIT BY A TAXING AUTHORITY, IF AMOUNTS ARE FOUND DUE, ICANN MAY BE LIABLE FOR SUCH TAXES. MANAGEMENT HAS ANALYZED ICANN'S TAX POSITIONS TAKEN ON FEDERAL AND STATE INCOME TAX RETURNS FOR ALL OPEN TAX YEARS AND HAS CONCLUDED THAT, AS OF JUNE 30, 2014 AND 2013, NO LIABILITIES ARE REQUIRED TO BE RECORDED IN CONNECTION WITH SUCH TAX POSITIONS IN ICANN'S FINANCIAL STATEMENTS. THE FISCAL 2009 THROUGH 2013 TAX YEARS REMAIN OPEN FOR EXAMINATION BY THE TAXING AUTHORITIES. NO INTEREST OR PENALTIES ARE RECOGNIZED DURING THE YEAR AS ICANN HAS NOT RECORDED INCOME TAX CONTINGENCIES. ICANN IS NOT UNDER EXAMINATION BY THE INTERNAL REVENUE SERVICE FOR ANY OPEN TAX YEARS.

Part IV Foreign Forms

- 1 Was the organization a U.S. transferor of property to a foreign corporation during the tax year? *If "Yes," the organization may be required to file Form 926, Return by a U.S. Transferor of Property to a Foreign Corporation (see Instructions for Form 926)* Yes No
- 2 Did the organization have an interest in a foreign trust during the tax year? *If "Yes," the organization may be required to file Form 3520, Annual Return to Report Transactions with Foreign Trusts and Receipt of Certain Foreign Gifts, and/or Form 3520-A, Annual Information Return of Foreign Trust With a U.S. Owner (see Instructions for Forms 3520 and 3520-A)* Yes No
- 3 Did the organization have an ownership interest in a foreign corporation during the tax year? *If "Yes," the organization may be required to file Form 5471, Information Return of U.S. Persons With Respect To Certain Foreign Corporations. (see Instructions for Form 5471)* Yes No
- 4 Was the organization a direct or indirect shareholder of a passive foreign investment company or a qualified electing fund during the tax year? *If "Yes," the organization may be required to file Form 8621, Information Return by a Shareholder of a Passive Foreign Investment Company or Qualified Electing Fund. (see Instructions for Form 8621)* Yes No
- 5 Did the organization have an ownership interest in a foreign partnership during the tax year? *If "Yes," the organization may be required to file Form 8865, Return of U.S. Persons With Respect To Certain Foreign Partnerships. (see Instructions for Form 8865)* Yes No
- 6 Did the organization have any operations in or related to any boycotting countries during the tax year? *If "Yes," the organization may be required to file Form 5713, International Boycott Report (see Instructions for Form 5713)* Yes No

Part V Supplemental Information

Complete this part to provide the information required by Part I, line 2 (monitoring of funds); Part I, line 3, column (f) (accounting method; amounts of investments vs. expenditures per region); Part II, line 1 (accounting method); Part III (accounting method); and Part III, column (c) (estimated number of recipients), as applicable. Also complete this part to provide any additional information (see instructions).

SCHEDULE F, PART I, LINE 2

ORGANIZATION'S PROCEDURES FOR MONITORING USE OF GRANTS

AN ICANN FELLOWSHIP IS A GRANT OF SUPPORT THAT IS AWARDED TO ENABLE INDIVIDUALS FROM STAKEHOLDER GROUPS AROUND THE WORLD TO ATTEND ICANN PUBLIC MEETINGS. THIS IS A MEANS-TESTED PROGRAM. APPLICANTS MUST BE CITIZENS OF ECONOMICALLY ELIGIBLE COUNTRIES. ICANN USES THE WORLD BANK CLASSIFICATION OF LOW, LOWER-MIDDLE, AND UPPER-MIDDLE ECONOMIES. THE FELLOWSHIP COVERS THE COST OF ECONOMY CLASS AIRFARE AND HOTEL, AS WELL AS PROVIDING A STIPEND AFTER SUCCESSFUL COMPLETION OF THE PROGRAM, IN ORDER TO ASSIST IN COVERING SOME BASIC EXPENSES INCURRED BY THE FELLOW. RECIPIENTS ARE EXPECTED TO ACTIVELY CONTRIBUTE TO ICANN PROCESSES AND BE A PART OF THE NEXT GENERATION OF ICANN LEADERSHIP.

FELLOWSHIPS ARE AWARDED BY AN INDEPENDENT SELECTION COMMITTEE BASED ON A MIX OF CRITERIA INCLUDING APPLICANT EXPERIENCE AND REFERENCES, GEOGRAPHIC PROXIMITY TO MEETING, RECEIPT OF PAST FELLOWSHIPS, ETC. INDIVIDUALS MAY NOT RECEIVE THIS GRANT OF SUPPORT MORE THAN THREE TIMES. FOR EACH PUBLIC MEETING THAT INCORPORATES THE FELLOWSHIP PROGRAM, A LIST OF SELECTED FELLOWS TO ATTEND THE UPCOMING MEETING IS POSTED ON THE ICANN WEBSITE PRIOR TO THE MEETING. SUBSEQUENT TO THE PUBLIC MEETING, A LIST OF FELLOWS WHO ATTENDED THE MEETING IS POSTED ON THE ICANN WEBSITE.

TRAVEL AND HOTEL COSTS ASSOCIATED WITH FELLOWS PRE-SELECTED TO ATTEND THE PUBLIC MEETING ARE BOOKED AND PAID FOR DIRECTLY BY ICANN. ALL FELLOWS ARE ELIGIBLE TO RECEIVE A FLAT STIPEND NOT TO EXCEED U.S. \$500.00. STIPENDS

Part V Supplemental Information

Complete this part to provide the information required by Part I, line 2 (monitoring of funds); Part I, line 3, column (f) (accounting method; amounts of investments vs. expenditures per region); Part II, line 1 (accounting method); Part III (accounting method); and Part III, column (c) (estimated number of recipients), as applicable. Also complete this part to provide any additional information (see instructions).

ARE GENERALLY PROVIDED TO FELLOWS BY WIRE TRANSFER AND ARE PAID TO EACH FELLOW SUBSEQUENT TO THE MEETING AND AFTER THE FELLOW HAS DEMONSTRATED COMPLETION OF THE FELLOWSHIP PROGRAM. DURING THE TWELVE MONTHS ENDED JUNE 30, 2014, ICANN PAID \$576,991 TO ALLOW ONE HUNDRED AND SIXTY-ONE (161) FELLOWSHIP PARTICIPANTS TO ATTEND FOUR(4) ICANN PUBLIC MEETINGS.

ICANN ALSO PROVIDES TRAVEL SUPPORT TO OTHER MEMBERS OF THE VOLUNTEER COMMUNITY TO FACILITATE POLICY DEVELOPMENT EFFORTS AND OUTREACH IMPORTANT TO ICANN'S MISSION. THE PROCESS FOR SELECTION IS LARGELY BASED ON SPECIFIC CRITERIA ESTABLISHED BY EACH STAKEHOLDER/CONSTITUENCY GROUP. TRAVEL SUPPORT EXTENDED TO THESE GROUPS IS REPORTED AS PART OF TRAVEL EXPENSES IN PART IX, STATEMENT OF FUNCTIONAL EXPENSES. FOR OTHER CONTRIBUTIONS, STAKEHOLDER ENGAGEMENT STAFF DEVELOP REQUESTS BASED UPON ICANN'S STRATEGIC PLAN AND ICANN'S OPERATING PLAN. SPECIFIC NEEDS WITHIN SPECIFIC REGIONS OF THE WORLD ARE CONSIDERED. ICANN EXECUTIVES REVIEW THE LIST OF SUGGESTED CONTRIBUTIONS AND DECIDE ON WHICH CONTRIBUTIONS TO PURSUE. THE ICANN BOARD AND COMMUNITY CONSIDER THE CONTRIBUTIONS WITHIN THE OVERALL FISCAL YEAR OPERATING PLAN AND BUDGET PROCESS.

SCHEDULE F, PART I, LINE 3

AT JUNE 30, 2014, ICANN HAD INTERNATIONAL OFFICES LOCATED IN BRUSSELS, BELGIUM; ISTANBUL, TURKEY; SINGAPORE, SINGAPORE; AND GENEVA, SWITZERLAND.

THE NUMBER OF PEOPLE IN EACH REGION SHOWN IN PART I LINE 3 COL (C) OF

Part V Supplemental Information

Complete this part to provide the information required by Part I, line 2 (monitoring of funds); Part I, line 3, column (f) (accounting method; amounts of investments vs. expenditures per region); Part II, line 1 (accounting method); Part III (accounting method); and Part III, column (c) (estimated number of recipients), as applicable. Part I Questions Regarding Compensation

1a Check the appropriate box(es) if the organization provided any of the following to or for a person listed in Form 990, Part VII, Section A, line 1a. Complete Part III to provide any relevant information regarding these items.

- | | |
|--|--|
| <input checked="" type="checkbox"/> First-class or charter travel | <input type="checkbox"/> Housing allowance or residence for personal use |
| <input type="checkbox"/> Travel for companions | <input type="checkbox"/> Payments for business use of personal residence |
| <input type="checkbox"/> Tax indemnification and gross-up payments | <input type="checkbox"/> Health or social club dues or initiation fees |
| <input type="checkbox"/> Discretionary spending account | <input type="checkbox"/> Personal services (e.g., maid, chauffeur, chef) |

b If any of the boxes on line 1a are checked, did the organization follow a written policy regarding payment or reimbursement or provision of all of the expenses described above? If "No," complete Part III to explain

2 Did the organization require substantiation prior to reimbursing or allowing expenses incurred by all directors, trustees, and officers, including the CEO/Executive Director, regarding the items checked in line 1a?

3 Indicate which, if any, of the following the filing organization used to establish the compensation of the organization's CEO/Executive Director. Check all that apply. Do not check any boxes for methods used by a related organization to establish compensation of the CEO/Executive Director, but explain in Part III.

- | | |
|---|---|
| <input checked="" type="checkbox"/> Compensation committee | <input checked="" type="checkbox"/> Written employment contract |
| <input checked="" type="checkbox"/> Independent compensation consultant | <input checked="" type="checkbox"/> Compensation survey or study |
| <input checked="" type="checkbox"/> Form 990 of other organizations | <input checked="" type="checkbox"/> Approval by the board or compensation committee |

4 During the year, did any person listed in Form 990, Part VII, Section A, line 1a, with respect to the filing organization or a related organization:

- a** Receive a severance payment or change-of-control payment?
 - b** Participate in, or receive payment from, a supplemental nonqualified retirement plan?
 - c** Participate in, or receive payment from, an equity-based compensation arrangement?
- If "Yes" to any of lines 4a-c, list the persons and provide the applicable amounts for each item in Part III.

Only section 501(c)(3) and 501(c)(4) organizations must complete lines 5-9.

5 For persons listed in Form 990, Part VII, Section A, line 1a, did the organization pay or accrue any compensation contingent on the revenues of:

- a** The organization?
 - b** Any related organization?
- If "Yes" to line 5a or 5b, describe in Part III.

6 For persons listed in Form 990, Part VII, Section A, line 1a, did the organization pay or accrue any compensation contingent on the net earnings of:

- a** The organization?
 - b** Any related organization?
- If "Yes" to line 6a or 6b, describe in Part III.

7 For persons listed in Form 990, Part VII, Section A, line 1a, did the organization provide any non-fixed payments not described in lines 5 and 6? If "Yes," describe in Part III

8 Were any amounts reported in Form 990, Part VII, paid or accrued pursuant to a contract that was subject to the initial contract exception described in Regulations section 53.4958-4(a)(3)? If "Yes," describe in Part III

9 If "Yes" to line 8, did the organization also follow the rebuttable presumption procedure described in Regulations section 53.4958-6(c)?

NOV14-EN.PDF

SCHEDULE J, PART II

ICANN'S OVERALL COMPENSATION PHILOSOPHY IS TO TARGET COMPENSATION BETWEEN

THE 50TH AND 75TH PERCENTILE OF THE RELEVANT MARKET, TO ATTRACT AND

RETAIN THE RIGHT STAFF. THE DRIVING ELEMENT OF THIS PHILOSOPHY IS THAT

Part III Supplemental Information

Complete this part to provide the information, explanation, or descriptions required for Part I, lines 1a, 1b, 3, 4a, 4b, 4c, 5a, 5b, 6a, 6b, 7, and 8, and for Part II. Also complete this part for any additional information.

ICANN'S COMPENSATION IS MARKET-BASED. ICANN HAS STAFF IN MANY DIFFERENT PARTS OF THE WORLD, AND STRIVES TO APPLY THIS PHILOSOPHY LOCALLY. EMPLOYMENT MARKETS AROUND THE WORLD ARE QUITE DIFFERENT, AND ALSO BRING DIFFERENT TAX, BENEFIT, AND OTHER LOCAL CONDITIONS TO BEAR. IN ADDITION, EXCHANGE RATE FLUCTUATIONS ALSO AFFECT THE U.S. DOLLAR EQUIVALENCE OF THE INTERNATIONAL STAFF.

Part V Supplemental Information

Provide additional information for responses to questions on Schedule L (see instructions).

IN ADDITION TO THE SPECIFIC DISCLOSURES ABOVE, ICANN MAY ENTER INTO OR CONSIDER PARTICIPATION IN SMALL ARM'S LENGTH TRANSACTIONS BETWEEN ICANN AND CERTAIN TAXABLE ORGANIZATIONS WITH WHICH CERTAIN ICANN DIRECTORS OR OFFICERS (OR MEMBERS OF THEIR FAMILIES) MAY HAVE AN AFFILIATION. UNDER ICANN'S CONFLICTS OF INTEREST POLICY, ALL OFFICERS AND DIRECTORS ARE REQUIRED TO DISCLOSE ANY POTENTIAL CONFLICTS OF INTEREST BEFORE ENTERING INTO DISCUSSION ON SUCH MATTERS. IN ADDITION, THE BOARD COMMITTEE RESPONSIBLE FOR CONFLICTS OF INTEREST REVIEWS ALL BOARD MEMBER CONFLICTS OF INTEREST STATEMENTS. SEE:

[HTTP://WWW.ICANN.ORG/EN/GROUPS/BOARD/DOCUMENTS/SOIS.](http://www.icann.org/en/groups/board/documents/sois)

OMB No. 1545-0047

2013

**Open to Public
Inspection**

Name of the organization

INTERNET CORP FOR ASSIGNED NAMES & NUMBERS

Employer identification number

95-4712218

FORM 990, PART I, LINE 1 AND PART III, LINE I

ORGANIZATION'S MISSION

THE MISSION OF THE INTERNET CORPORATION FOR ASSIGNED NAMES AND NUMBERS ("ICANN") IS TO PROMOTE THE GLOBAL PUBLIC INTEREST IN THE OPERATIONAL STABILITY OF THE INTERNET BY: (I) COORDINATING THE ASSIGNMENT OF INTERNET TECHNICAL PARAMETERS AS NEEDED TO MAINTAIN UNIVERSAL CONNECTIVITY ON THE INTERNET; (II) PERFORMING AND OVERSEEING FUNCTIONS RELATED TO THE COORDINATION OF THE INTERNET PROTOCOL ("IP") ADDRESS SPACE; (III) PERFORMING AND OVERSEEING FUNCTIONS RELATED TO THE COORDINATION OF THE INTERNET DOMAIN NAME SYSTEM ("DNS"), INCLUDING, SUPPORTING THE DEVELOPMENT OF, AND IMPLEMENTING POLICIES FOR DETERMINING THE CIRCUMSTANCES UNDER WHICH NEW TOP-LEVEL DOMAINS ARE ADDED TO THE DNS ROOT SYSTEM; (IV) OVERSEEING OPERATION OF THE AUTHORITATIVE INTERNET DNS ROOT SERVER SYSTEM; AND (V) ENGAGING IN ANY OTHER RELATED LAWFUL ACTIVITY IN FURTHERANCE OF ITEMS (I) THROUGH (IV).

SEE ADDITIONAL INFORMATION ABOUT ICANN'S PROGRAMS AND ACTIVITIES ON THE ICANN WEBSITE AND IN THE ICANN ANNUAL REPORT POSTED AT WWW.ICANN.ORG.

FORM 990, PART I, LINE 3 AND PART VI, LINE 1A

GOVERNING BODY

IN ADDITION TO THE VOTING MEMBERS OF THE BOARD OF DIRECTORS, ICANN'S BYLAWS AS OF JUNE 30, 2014 ALLOWED FOR FOUR (4) NON-VOTING LIAISONS. THE NON-VOTING LIAISONS ARE ENTITLED TO ATTEND BOARD MEETINGS, PARTICIPATE IN

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

BOARD DISCUSSIONS AND DELIBERATIONS, AND HAVE ACCESS (UNDER CONDITIONS ESTABLISHED BY THE BOARD) TO MATERIALS PROVIDED TO DIRECTORS FOR USE IN BOARD DISCUSSIONS, DELIBERATIONS AND MEETINGS.

THE FOLLOWING INDIVIDUALS SERVED AS NON-VOTING LIAISONS DURING THE FISCAL YEAR ENDING JUNE 30, 2014:

- 1) HEATHER DRYDEN (GOVERNMENTAL ADVISORY COMMITTEE, 2010 - OCTOBER 2014)
- 2) RAM MOHAN (SECURITY AND STABILITY ADVISORY COMMITTEE, 2009 - PRESENT)
- 3) THOMAS NARTEN (IETF, 2005 - JULY 2013)
- 4) FRANCISCO DA SILVA (TECHNICAL LIAISON GROUP, 2012 - NOVEMBER 2013)
- 5) JONNE SOININEN (IETF, 2013 - PRESENT)
- 6) SUZANNE WOOLF (ROOT SERVER SYSTEM ADVISORY COMMITTEE, 2004 - PRESENT)

NEW GTLD PROGRAM COMMITTEE

IN ORDER TO HAVE EFFICIENT MEETINGS AND TAKE APPROPRIATE ACTIONS WITH RESPECT TO THE NEW GTLD PROGRAM FOR THE CURRENT ROUND OF THE PROGRAM AND AS RELATED TO THE APPLICANT GUIDEBOOK, THE BOARD CREATED THE NEW GTLD PROGRAM COMMITTEE ("NGPC") IN ACCORDANCE WITH ARTICLE XII OF THE BYLAWS. THE NGPC CONSISTS OF ALL BOARD MEMBERS NOT CONFLICTED WITH RESPECT TO THE NEW GTLD PROGRAM. THE BOARD HAS DELEGATED FULL DECISION MAKING AUTHORITY TO THE NGPC AS IT RELATES TO THE CURRENT ROUND OF THE NEW GTLD PROGRAM, WHICH COMMENCED IN JANUARY 2012. ESTABLISHING THIS NEW COMMITTEE WITHOUT CONFLICTED MEMBERS, AND DELEGATING TO IT DECISION MAKING AUTHORITY, PROVIDES SOME DISTINCT ADVANTAGES. FIRST, IT HELPS ELIMINATE ANY UNCERTAINTY FOR CONFLICTED BOARD MEMBERS WITH RESPECT TO ATTENDANCE AT

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

BOARD MEETINGS AND WORKSHOPS SINCE THE NEW GTLD PROGRAM TOPICS CAN BE DEALT WITH AT THE COMMITTEE LEVEL. SECOND, IT ALLOWS FOR ACTIONS TO BE TAKEN WITHOUT A MEETING BY THE COMMITTEE. ACTIONS WITHOUT A MEETING CANNOT BE TAKEN UNLESS DONE VIA ELECTRONIC SUBMISSION BY UNANIMOUS CONSENT; SUCH UNANIMOUS CONSENT CANNOT BE ACHIEVED IF EVEN JUST ONE BOARD MEMBER IS CONFLICTED, AND THEREFORE NOT ALLOWED TO VOTE. THIRD, IT PROVIDES THE COMMUNITY WITH A TRANSPARENT VIEW INTO THE BOARD'S COMMITMENT TO DEALING WITH ACTUAL, POTENTIAL OR PERCEIVED CONFLICTS.

THE NGPC MEMBERS AS OF JUNE 30, 2014 INCLUDED:

CHERINE CHALABY (CHAIR)

FADI CHEHADÉ (MEMBER)

STEPHEN CROCKER (MEMBER)

CHRIS DISSPAIN (MEMBER)

HEATHER DRYDEN (NON-VOTING LIAISON)

BILL GRAHAM (MEMBER)

BRUNO LANVIN (MEMBER)

OLGA MADRUGA-FORTI (MEMBER)

ERIKA MANN (MEMBER)

GONZALO NAVARRO (MEMBER)

RAYMOND PLZAK (MEMBER)

GEORGE SADOWSKY (MEMBER)

MIKE SILBER (MEMBER)

KUO-WEI WU (MEMBER)

FORM 990, PART III, LINE 4A

PROGRAM SERVICE ACCOMPLISHMENTS

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

AS OF JUNE 30, 2014, THE INTERNET NAMESPACE CONSISTED OF 22 LEGACY, 322 NEW GENERIC TOP LEVEL DOMAINS (GTLDs) AND OVER 250 COUNTRY CODE TOP LEVEL DOMAINS (CCTLDs). EACH GTLD HAS A DESIGNATED "REGISTRY OPERATOR" AND, IN MOST CASES, A REGISTRY AGREEMENT BETWEEN THE OPERATOR (OR SPONSOR) AND ICANN. THE REGISTRY OPERATOR IS RESPONSIBLE FOR THE TECHNICAL OPERATION OF THE GTLD, INCLUDING ALL OF THE NAMES REGISTERED IN THAT TLD. OVER 1,000 ICANN ACCREDITED REGISTRARS INTERACT WITH REGISTRANTS (AND OTHERS) TO PERFORM DOMAIN NAME REGISTRATION AND OTHER RELATED SERVICES FOR NEW GTLDs. THE NEW GTLD PROGRAM HAS PROVIDED A MEANS FOR PROSPECTIVE REGISTRY OPERATORS TO APPLY FOR NEW GTLDs, AND CREATE NEW OPTIONS FOR CONSUMERS. THE PROGRAM OPENED ITS FIRST APPLICATION ROUND IN JANUARY 2012 AND ICANN RECEIVED 1930 APPLICATIONS.

ALL APPLICATIONS FOR NEW GTLDs THAT HAVE NOT BEEN WITHDRAWN HAVE COMPLETED INITIAL EVALUATION (IE) PHASE AND, WHERE APPLICABLE, EXTENDED EVALUATION (EE). DURING IE AND EE, ALL APPLICATIONS WERE EVALUATED FOR, AMONG OTHER THINGS, FINANCIAL, TECHNICAL/OPERATIONAL, GEOGRAPHIC NAMES, AND REGISTRY SERVICES. FOLLOWING COMPLETION AND PASSING OF IE, AND EE IF APPLICABLE, FOR EACH APPLICATION, THE REGISTRY AGREEMENT CONTRACTING PHASE OF THE NEW GTLD PROGRAM COMMENCED. CONTRACTING IS A PROCESS THAT RESULTS IN EACH ELIGIBLE APPLICANT ENTERING INTO A REGISTRY AGREEMENT WITH ICANN TO OPERATE A GTLD. NOTE THAT THERE ARE SOME CIRCUMSTANCES THAT EXIST THAT MAY DELAY THE START OF THE CONTRACTING PROCESS INCLUDING, BUT NOT LIMITED TO, PENDING OBJECTION PROCEEDINGS, PENDING ICANN ACCOUNTABILITY MECHANISMS, UNRESOLVED CONTENTION, OR DIRECTION FROM THE

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

ICANN BOARD'S NEW GTLD PROGRAM COMMITTEE.

AFTER COMPLETION OF THE CONTRACTING PHASE, THE APPLICANT CAN ELECT TO ENTER INTO PRE-DELEGATION TESTING. PRE-DELEGATION TESTING (PDT) ENSURES THAT AN APPLICANT HAS THE CAPACITY TO OPERATE A NEW GTLD IN A STABLE, SECURE MANNER. EVERY NEW REGISTRY MUST DEMONSTRATE THAT IT HAS ESTABLISHED OPERATIONS IN ACCORDANCE WITH THE TECHNICAL AND OPERATIONAL CRITERIA DESCRIBED IN THE APPLICANT GUIDEBOOK. AFTER PASSING PDT, A REGISTRY'S GTLD CAN BE INTRODUCED INTO THE ROOT ZONE OF THE INTERNET.

AS OF JUNE 30, 2014, 322 NEW GTLDS WERE DELEGATED IN THE ROOT ZONE.

ICANN IS A MULTISTAKEHOLDER ORGANIZATION THAT COORDINATES THE INTERNET DOMAIN NAME SYSTEM (DNS) AND ADDRESSING FOR THE BENEFIT OF INTERNET USERS WORLDWIDE, ENABLING A SINGLE, INTEROPERABLE INTERNET. ICANN IS RESPONSIBLE FOR THE GLOBAL TECHNICAL COORDINATION OF THE DNS. AS OF JUNE 30, 2014, THERE WERE OVER 240 MILLION INTERNET DOMAIN NAMES, INCLUDING APPROXIMATELY 133 MILLION INTERNET DOMAIN NAMES FOUND IN GENERIC TOP-LEVEL DOMAINS, MOST OF WHICH ARE GOVERNED BY ICANN'S COMMUNITY-DEVELOPED POLICIES. SEE ADDITIONAL INFORMATION ABOUT ICANN'S PROGRAMS AND ACTIVITIES ON THE ICANN WEBSITE AND IN THE ICANN ANNUAL REPORT POSTED AT WWW.ICANN.ORG.

NEW GTLD AUCTION

ON 4 JUNE 2014, ICANN, THROUGH ITS AUTHORIZED AUCTION SERVICES PROVIDER,

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

COMPLETED THE FIRST ICANN AUCTION TO RESOLVE A CONTENTION SET FOR A NEW GENERIC TOP-LEVEL DOMAIN (GTLD) STRING. CONTENTION SETS ARE GROUPS OF APPLICATIONS FOR IDENTICAL OR CONFUSINGLY SIMILAR STRINGS. IF TWO OR MORE APPLICANTS ARE UNABLE TO RESOLVE THEIR CONTENTION THROUGH OTHER MEANS, THEY PROCEED TO AN ICANN AUCTION, WHICH IS THE METHOD OF LAST RESORT TO RESOLVE STRING CONTENTIONS AS PRESCRIBED IN MODULE 4 OF THE APPLICANT GUIDEBOOK. THE FIRST ICANN AUCTION RESULTED IN A WINNING BID OF \$600,000. SUBSEQUENT AUCTIONS HAVE BEEN SCHEDULED TO OCCUR ON A MONTHLY BASIS THROUGHOUT 2014 AND INTO EARLY 2015.

FOR MORE INFORMATION ON AUCTIONS VISIT
[HTTP://NEWGTLDS.ICANN.ORG/EN/APPLICANTS/AUCTIONS](http://newgtlds.icann.org/en/applicants/auctions)

FORM 990, PART VI, LINE 4

SIGNIFICANT CHANGES TO GOVERNING DOCUMENTS

ON 7 FEBRUARY 2014, THE BOARD ADOPTED BYLAWS REVISIONS THAT ELIMINATED THE BOARD LIAISON SEAT THAT WAS HISTORICALLY APPOINTED ON A ROTATIONAL BASIS BY THE TECHNICAL LIAISON GROUP.

FORM 990, PART VI, LINE 7A

BODIES THAT APPOINT MEMBERS OF ICANN'S GOVERNING BODY

THE NOMINATING COMMITTEE (NOMCOM) IS RESPONSIBLE FOR THE SELECTION OF EIGHT ICANN VOTING BOARD MEMBERS AND FOR OTHER SELECTIONS AS ARE SET FORTH IN THE BYLAWS. (SEE BYLAWS ARTICLE VII, SECTION 1.) THE NOMCOM IS CHARGED WITH POPULATING A PORTION OF THE ICANN BOARD AS NOTED ABOVE, AS WELL AS THE AT-LARGE ADVISORY COMMITTEE ("ALAC"), THE COUNTRY CODE NAMES

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

SUPPORTING ORGANIZATION ("CCNSO") COUNCIL AND THE GENERIC NAMES SUPPORTING ORGANIZATION ("GNSO") COUNCIL. THE NOMCOM COMPLEMENTS THE OTHER MEANS FOR FILLING A PORTION OF KEY ICANN LEADERSHIP POSITIONS ACHIEVED WITHIN THE SUPPORTING ORGANIZATIONS AND ADVISORY COMMITTEES.

THE BYLAWS ALSO STATE THAT THE NOMCOM SHALL ADOPT SUCH OPERATING PROCEDURES AS IT DEEMS NECESSARY, WHICH SHALL BE PUBLISHED ON THE ICANN WEBSITE. THE NOMCOM IS DESIGNED TO FUNCTION INDEPENDENTLY FROM THE BOARD, THE SUPPORTING ORGANIZATIONS, AND ADVISORY COMMITTEES.

MEMBERS OF THE NOMCOM CONTRIBUTE BOTH THEIR UNDERSTANDING OF THE BROAD INTERESTS OF THE INTERNET AS A WHOLE AND THEIR KNOWLEDGE AND EXPERIENCE OF THE CONCERNS AND INTERESTS OF THE INTERNET STAKEHOLDERS THAT HAVE APPOINTED THEM. THE CHALLENGE FOR THE NOMCOM IS TO INTEGRATE THESE PERSPECTIVES AND DERIVE CONSENSUS IN ITS SELECTIONS. ALTHOUGH APPOINTED BY SUPPORTING ORGANIZATIONS AND OTHER ICANN BODIES, INDIVIDUAL NOMCOM MEMBERS ARE NOT ACCOUNTABLE TO THEIR APPOINTING CONSTITUENCIES BUT RATHER TO ICANN AS A WHOLE. NOMCOM MEMBERS ARE ACCOUNTABLE FOR ADHERENCE TO THE BYLAWS AND FOR COMPLIANCE WITH THE RULES AND PROCEDURES ESTABLISHED BY THE NOMCOM.

IN ADDITION, AND ALSO IN ACCORDANCE WITH ICANN'S BYLAWS, EACH OF THE FOLLOWING SUPPORTING ORGANIZATIONS NAME TWO VOTING BOARD MEMBERS TO THE ICANN BOARD, EACH FOR A THREE-YEAR TERM: THE ADDRESS SUPPORTING ORGANIZATION, THE CCNSO AND THE GNSO. FURTHER, THE AT-LARGE COMMUNITY

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

ALSO NAMES ONE VOTING BOARD MEMBER TO THE ICANN BOARD EVERY THREE YEARS.

FORM 990, PART VI, LINE 10A AND 10B

LOCAL CHAPTERS, BRANCHES AND AFFILIATES

DURING FISCAL 2014, ICANN HAD OFFICES OUTSIDE OF THE UNITED STATES IN BRUSSELS, BELGIUM; ISTANBUL, TURKEY; SINGAPORE, SINGAPORE; AND GENEVA, SWITZERLAND; ALL OF WHICH PROVIDED OPERATIONAL SUPPORT TO THEIR RESPECTIVE GEOGRAPHICAL REGIONS.

FORM 990, PART VI, LINE 11B

FORM 990 REVIEW PROCESS

A COPY OF THE FORM 990 IS PROVIDED TO ICANN'S BOARD MEMBERS BEFORE IT IS FILED. THE PROCESS BY WHICH THE FORM 990 IS PREPARED, REVIEWED AND RECEIVED IS AS FOLLOWS:

1. ICANN ENGAGES AN OUTSIDE TAX PREPARER TO ASSIST IN THE PREPARATION OF ITS FORM 990.
2. ICANN'S CHIEF FINANCIAL OFFICER (CFO), AND OFFICE OF THE GENERAL COUNSEL REVIEW THE FORM 990, AND THE CFO SIGNS OFF FOR APPROVAL.
3. THE FORM 990 IS PROVIDED TO THE ICANN BOARD MEMBERS.

FORM 990, PART VI, LINE 12C

CONFLICTS OF INTEREST POLICY

ICANN HAS WRITTEN CONFLICTS OF INTEREST POLICIES, WHICH ARE APPLICABLE TO ALL BOARD MEMBERS AND STAFF MEMBERS. THE OFFICE OF THE GENERAL COUNSEL MONITORS THE POLICIES WITH OVERSIGHT BY THE BOARD GOVERNANCE COMMITTEE AS

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

THEY RELATE TO THE BOARD. A CONFLICTS OF INTEREST DISCLOSURE STATEMENT IS COMPLETED ANNUALLY AND SIGNED BY EACH BOARD MEMBER, OFFICER AND KEY EMPLOYEE. THE STAFF MEMBER AND CONTRACTOR DISCLOSURE STATEMENTS ARE REVIEWED BY THE HEAD OF HUMAN RESOURCES AND DISCUSSED WITH GENERAL COUNSEL'S OFFICE IF ANY ISSUES ARISE; THE BOARD LEVEL DISCLOSURE STATEMENTS ARE REVIEWED BY THE OFFICE OF GENERAL COUNSEL AND THE BOARD GOVERNANCE COMMITTEE. THE BOARD MEMBER, OFFICER AND KEY EMPLOYEE CONFLICTS OF INTEREST POLICY CAN BE FOUND AT:
[HTTP://WWW.ICANN.ORG/EN/GROUPS/BOARD/GOVERNANCE/COI.](http://www.icann.org/en/groups/board/governance/coi)

THIS POLICY DESCRIBES THE DUTY TO DISCLOSE, THE PROCEDURES FOR ADDRESSING CONFLICTS OF INTEREST, THE DUTY TO ABSTAIN, HOW VIOLATIONS OF THE CONFLICTS OF INTEREST POLICY WILL BE HANDLED, THE PROCESS BY WHICH ALL COVERED PERSONS SIGN ANNUALLY THEIR AFFIRMATION OF THE POLICY AND DISCLOSE THEIR ACTUAL OR POTENTIAL CONFLICTS, AND THE REQUIREMENT AND NATURE OF PERIODIC REVIEWS.

A SUMMARY OF BOARD MEMBER AND OFFICER DISCLOSURE STATEMENTS ARE POSTED ON THE WEBSITE AT: [HTTP://WWW.ICANN.ORG/EN/GROUPS/BOARD/DOCUMENTS/SOIS](http://www.icann.org/en/groups/board/documents/sois)

FORM 990, PART VI, LINE 13 & 14

WHISTLEBLOWER POLICY AND DOCUMENT RETENTION AND DESTRUCTION POLICY ICANN MAINTAINS AN INTERNAL DOCUMENT RETENTION AND DESTRUCTION POLICY AND HISTORICALLY HAS FOLLOWED BEST INDUSTRY PRACTICES FOR RETENTION AND DESTRUCTION. ICANN ALSO MAINTAINS AN INTERNAL WHISTLEBLOWER (OR "ANONYMOUS HOTLINE") POLICY, THAT ALSO FOLLOWS INDUSTRY BEST PRACTICES.

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

FORM 990, PART VI, LINES 15A AND 15B

PROCESS FOR DETERMINING COMPENSATION

ICANN FOLLOWS PRINCIPLES OF ACCOUNTABILITY AND TRANSPARENCY AND DESCRIBES ITS REMUNERATION PLANS AND PRACTICES, WHICH ARE CONTINUALLY UPDATED. THE MOST CURRENT VERSION OF ICANN'S REMUNERATION PRACTICES REPORT IS POSTED AT:

[HTTPS://WWW.ICANN.ORG/EN/SYSTEM/FILES/FILES/REMUNERATION-PRACTICES-FY15-01
NOV14-EN.PDF](https://www.icann.org/en/system/files/files/remuneration-practices-fy15-01-nov14-en.pdf)

THE PROCESS FOR DETERMINING COMPENSATION, INCLUDING SURVEYS OF COMPARABLE POSITIONS AND OTHER MARKET STUDIES IS DESCRIBED IN THIS REMUNERATION PRACTICES REPORT. EXECUTIVE COMPENSATION IS DISCLOSED AS WELL. SALARIES OF ALL OFFICERS ARE REVIEWED AND APPROVED BY THE BOARD OF DIRECTORS FOLLOWING RECOMMENDATIONS BY THE BOARD COMPENSATION COMMITTEE, WHICH ARE INFORMED BY RECOMMENDATIONS AND COMPARABLE DATA PROVIDED BY INDEPENDENT COMPENSATION EXPERTS. CONFIDENTIAL MINUTES OF THESE MEETINGS ARE MAINTAINED BY THE BOARD SECRETARY AS PART OF THE CORPORATE SECRETARIAT FUNCTION. EACH YEAR THE APPOINTMENT FOR EACH OFFICER IS CONFIRMED BY THE BOARD OF DIRECTORS AT THE ANNUAL GENERAL MEETING.

FORM 990, PART VI, LINE 18

AVAILABILITY OF 990

ICANN POSTS ITS FORM 990 ON ITS WEBSITE. THE PRIOR YEAR POSTING IS LOCATED AT:

[HTTPS://WWW.ICANN.ORG/EN/SYSTEM/FILES/FILES/FY-2013-FORM-990-EN.PDF](https://www.icann.org/en/system/files/files/fy-2013-form-990-en.pdf)

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

IN ADDITION, THE FORM 990 IS POSTED ON THE WWW.GUIDESTAR.ORG WEBSITE.

FINALLY, HARD COPIES OF THE FORM 990 ARE AVAILABLE UPON REQUEST. REQUESTS SHOULD BE SUBMITTED TO ICANN'S CFO BY EMAIL TO XAVIER.CALVEZ@ICANN.ORG, OR BY PHONE AT +1.310.301.5838.

ICANN POSTS THE ORIGINAL FORM 1023 (APPLICATION FOR TAX-EXEMPT STATUS) ON ITS WEBSITE.

THE ORIGINAL FORM 1023 POST IS LOCATED AT:

RISK COSTS ARE EXPENSES THAT RELATE TO ANY CONTINGENCIES THAT MAY BE INCURRED BY ICANN AT ANY TIME THROUGHOUT OR AFTER THE NEW GTLD APPLICATION PROCESS. APPROXIMATELY ONE THIRD OF TOTAL FEES CHARGED TO APPLICANTS IN RELATION TO THE NEW GTLD PROGRAM ARE IN ANTICIPATION OF THESE COSTS.

FORM 990, PART XI, LINE 8

FISCAL JUNE 30, 2013 RESTATEMENT OF REVENUE - CHANGE IN TRANSACTION-BASED FEE REVENUE RECOGNITION

THROUGH THE YEAR ENDED JUNE 30, 2013, ICANN RECOGNIZED NONREFUNDABLE TRANSACTION-BASED FEES COLLECTED FROM REGISTRIES AND REGISTRARS AS EARNED IN THE YEAR THE BILLED FEE APPLIES (FOR EXAMPLE, 1/10TH OF A REGISTRATION TRANSACTION-BASED FEE WAS RECOGNIZED IN EACH YEAR OF A TEN YEAR DOMAIN NAME REGISTRATION). THIS RECOGNITION METHOD WAS BASED ON A PREVIOUS

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

INTERPRETATION OF THE CONTRACTS THAT ICANN HAS OBLIGATIONS UNDER THOSE CONTRACTS THAT MUST BE FULFILLED OVER THE DURATION OF A SPECIFIC DOMAIN NAME REGISTRATION.

GIVEN THE NEW GTLD PROGRAM, AND THE PROSPECTIVE DELEGATION OF HUNDREDS OF NEW REGISTRIES UNDER A NEW BASE REGISTRY AGREEMENT, ICANN HAS CONDUCTED FURTHER ANALYSIS OF ITS REVENUE RECOGNITION METHOD THROUGH REVIEW OF THE EXISTING AND NEW AGREEMENTS WITH REGISTRIES AND REGISTRARS AND THE SPECIFIC ACCOUNTING TREATMENT OF THE TRANSACTION-BASED FEES. UPON THIS FURTHER REVIEW AND ANALYSIS, ICANN HAS DETERMINED THAT THE REGISTRY AND REGISTRAR AGREEMENTS DO NOT INCLUDE ANY OBLIGATIONS FOR ICANN THAT PERTAIN TO EACH SPECIFIC REGISTRATION OF A DOMAIN NAME. ICANN CONSIDERS THAT ITS CONTRACTUAL OBLIGATIONS ARE UNRELATED TO A SPECIFIC DOMAIN NAME REGISTRATION, WHICH THEREFORE DOES NOT CREATE SPECIFIC PERFORMANCE OBLIGATIONS WHICH WOULD REQUIRE A DEFERRAL OF REVENUE OVER THE DURATION OF THE REGISTRATION. AS A RESULT, ICANN HAS CHANGED ITS REVENUE RECOGNITION METHOD SO THAT THE TRANSACTION-BASED FEES ARE RECOGNIZED AS REVENUE WHEN EACH TRANSACTION OCCURS. ACCORDINGLY, ICANN HAS RESTATED THE OPENING BALANCE OF UNRESTRICTED NET ASSETS AS OF JULY 1, 2012 AND FINANCIAL STATEMENTS FOR THE YEAR ENDED JUNE 30, 2013.

Form **990** (2014)

Part III Statement of Program Service Accomplishments

Check if Schedule O contains a response or note to any line in this Part III X

1 Briefly describe the organization's mission:
SEE SCHEDULE O.

2 Did the organization undertake any significant program services during the year which were not listed on the prior Form 990 or 990-EZ? Yes No
If "Yes," describe these new services on Schedule O.

3 Did the organization cease conducting, or make significant changes in how it conducts, any program services? Yes No
If "Yes," describe these changes on Schedule O.

4 Describe the organization's program service accomplishments for each of its three largest program services, as measured by expenses. Section 501(c)(3) and 501(c)(4) organizations are required to report the amount of grants and allocations to others, the total expenses, and revenue, if any, for each program service reported.

4a (Code:) (Expenses \$ 94,799,576. including grants of \$ 1,640,175.) (Revenue \$ 319,799,352.)
SEE SCHEDULE O.

4b (Code:) (Expenses \$ including grants of \$) (Revenue \$)

4c (Code:) (Expenses \$ including grants of \$) (Revenue \$)

4d Other program services (Describe in Schedule O.)
(Expenses \$ including grants of \$) (Revenue \$)

4e Total program service expenses 94,799,576.

Part IV Checklist of Required Schedules

Table with 3 columns: Question number, Yes, No. Rows include questions 1 through 20b regarding organizational requirements and financial reporting.

Part IV Checklist of Required Schedules (continued)

		Yes	No
21	Did the organization report more than \$5,000 of grants or other assistance to any domestic organization or domestic government on Part IX, column (A), line 1? <i>If "Yes," complete Schedule I, Parts I and II.</i>	X	
22	Did the organization report more than \$5,000 of grants or other assistance to or for domestic individuals on Part IX, column (A), line 2? <i>If "Yes," complete Schedule I, Parts I and III.</i>		X
23	Did the organization answer "Yes" to Part VII, Section A, line 3, 4, or 5 about compensation of the organization's current and former officers, directors, trustees, key employees, and highest compensated employees? <i>If "Yes," complete Schedule J.</i>	X	
24a	Did the organization have a tax-exempt bond issue with an outstanding principal amount of more than \$100,000 as of the last day of the year, that was issued after December 31, 2002? <i>If "Yes," answer lines 24b through 24d and complete Schedule K. If "No," go to line 25a.</i>		X
b	Did the organization invest any proceeds of tax-exempt bonds beyond a temporary period exception?		
c	Did the organization maintain an escrow account other than a refunding escrow at any time during the year to defease any tax-exempt bonds?		
d	Did the organization act as an "on behalf of" issuer for bonds outstanding at any time during the year?		
25a	Section 501(c)(3), 501(c)(4), and 501(c)(29) organizations. Did the organization engage in an excess benefit transaction with a disqualified person during the year? <i>If "Yes," complete Schedule L, Part I.</i>		X
b	Is the organization aware that it engaged in an excess benefit transaction with a disqualified person in a prior year, and that the transaction has not been reported on any of the organization's prior Forms 990 or 990-EZ? <i>If "Yes," complete Schedule L, Part I.</i>		X
26	Did the organization report any amount on Part X, line 5, 6, or 22 for receivables from or payables to any current or former officers, directors, trustees, key employees, highest compensated employees, or disqualified persons? <i>If "Yes," complete Schedule L, Part II.</i>		X
27	Did the organization provide a grant or other assistance to an officer, director, trustee, key employee, substantial contributor or employee thereof, a grant selection committee member, or to a 35% controlled entity or family member of any of these persons? <i>If "Yes," complete Schedule L, Part III.</i>		X
28	Was the organization a party to a business transaction with one of the following parties (see Schedule L, Part IV instructions for applicable filing thresholds, conditions, and exceptions):		
a	A current or former officer, director, trustee, or key employee? <i>If "Yes," complete Schedule L, Part IV.</i>		X
b	A family member of a current or former officer, director, trustee, or key employee? <i>If "Yes," complete Schedule L, Part IV.</i>		X
c	An entity of which a current or former officer, director, trustee, or key employee (or a family member thereof) was an officer, director, trustee, or direct or indirect owner? <i>If "Yes," complete Schedule L, Part IV.</i>		X
29	Did the organization receive more than \$25,000 in non-cash contributions? <i>If "Yes," complete Schedule M.</i>		X
30	Did the organization receive contributions of art, historical treasures, or other similar assets, or qualified conservation contributions? <i>If "Yes," complete Schedule M.</i>		X
31	Did the organization liquidate, terminate, or dissolve and cease operations? <i>If "Yes," complete Schedule N, Part I.</i>		X
32	Did the organization sell, exchange, dispose of, or transfer more than 25% of its net assets? <i>If "Yes," complete Schedule N, Part II.</i>		X
33	Did the organization own 100% of an entity disregarded as separate from the organization under Regulations sections 301.7701-2 and 301.7701-3? <i>If "Yes," complete Schedule R, Part I.</i>		X
34	Was the organization related to any tax-exempt or taxable entity? <i>If "Yes," complete Schedule R, Part II, III, or IV, and Part V, line 1.</i>		X
35a	Did the organization have a controlled entity within the meaning of section 512(b)(13)?		X
b	If "Yes" to line 35a, did the organization receive any payment from or engage in any transaction with a controlled entity within the meaning of section 512(b)(13)? <i>If "Yes," complete Schedule R, Part V, line 2.</i>		
36	Section 501(c)(3) organizations. Did the organization make any transfers to an exempt non-charitable related organization? <i>If "Yes," complete Schedule R, Part V, line 2.</i>		X
37	Did the organization conduct more than 5% of its activities through an entity that is not a related organization and that is treated as a partnership for federal income tax purposes? <i>If "Yes," complete Schedule R, Part VI.</i>		X
38	Did the organization complete Schedule O and provide explanations in Schedule O for Part VI, lines 11b and 19? Note. All Form 990 filers are required to complete Schedule O.	X	

Part V Statements Regarding Other IRS Filings and Tax Compliance

Check if Schedule O contains a response or note to any line in this Part V

Table with columns for question number, description, sub-part, and Yes/No columns. Includes questions 1a through 14b regarding IRS filings and tax compliance.

Part VI Governance, Management, and Disclosure For each "Yes" response to lines 2 through 7b below, and for a "No" response to line 8a, 8b, or 10b below, describe the circumstances, processes, or changes in Schedule O. See instructions. Check if Schedule O contains a response or note to any line in this Part VI

Section A. Governing Body and Management

	Yes	No
1a Enter the number of voting members of the governing body at the end of the tax year 1a 16 If there are material differences in voting rights among members of the governing body, or if the governing body delegated broad authority to an executive committee or similar committee, explain in Schedule O.		
b Enter the number of voting members included in line 1a, above, who are independent 1b 15		
2 Did any officer, director, trustee, or key employee have a family relationship or a business relationship with any other officer, director, trustee, or key employee?		X
3 Did the organization delegate control over management duties customarily performed by or under the direct supervision of officers, directors, or trustees, or key employees to a management company or other person? . .		X
4 Did the organization make any significant changes to its governing documents since the prior Form 990 was filed?		X
5 Did the organization become aware during the year of a significant diversion of the organization's assets?		X
6 Did the organization have members or stockholders?		X
7a Did the organization have members, stockholders, or other persons who had the power to elect or appoint one or more members of the governing body?	X	
b Are any governance decisions of the organization reserved to (or subject to approval by) members, stockholders, or persons other than the governing body?		X
8 Did the organization contemporaneously document the meetings held or written actions undertaken during the year by the following:		
a The governing body?	X	
b Each committee with authority to act on behalf of the governing body?	X	
9 Is there any officer, director, trustee, or key employee listed in Part VII, Section A, who cannot be reached at the organization's mailing address? If "Yes," provide the names and addresses in Schedule O		X

Section B. Policies (This Section B requests information about policies not required by the Internal Revenue Code.)

	Yes	No
10a Did the organization have local chapters, branches, or affiliates?	X	
b If "Yes," did the organization have written policies and procedures governing the activities of such chapters, affiliates, and branches to ensure their operations are consistent with the organization's exempt purposes? . . .	X	
11a Has the organization provided a complete copy of this Form 990 to all members of its governing body before filing the form? .	X	
b Describe in Schedule O the process, if any, used by the organization to review this Form 990.		
12a Did the organization have a written conflict of interest policy? If "No," go to line 13	X	
b Were officers, directors, or trustees, and key employees required to disclose annually interests that could give rise to conflicts?	X	
c Did the organization regularly and consistently monitor and enforce compliance with the policy? If "Yes," describe in Schedule O how this was done	X	
13 Did the organization have a written whistleblower policy?	X	
14 Did the organization have a written document retention and destruction policy?	X	
15 Did the process for determining compensation of the following persons include a review and approval by independent persons, comparability data, and contemporaneous substantiation of the deliberation and decision?		
a The organization's CEO, Executive Director, or top management official	X	
b Other officers or key employees of the organization	X	
If "Yes" to line 15a or 15b, describe the process in Schedule O (see instructions).		
16a Did the organization invest in, contribute assets to, or participate in a joint venture or similar arrangement with a taxable entity during the year?		X
b If "Yes," did the organization follow a written policy or procedure requiring the organization to evaluate its participation in joint venture arrangements under applicable federal tax law, and take steps to safeguard the organization's exempt status with respect to such arrangements?		

Section C. Disclosure

- 17** List the states with which a copy of this Form 990 is required to be filed ► CA, ---
- 18** Section 6104 requires an organization to make its Forms 1023 (or 1024 if applicable), 990, and 990-T (Section 501(c)(3)s only) available for public inspection. Indicate how you made these available. Check all that apply.
 Own website Another's website Upon request Other (explain in Schedule O)
- 19** Describe in Schedule O whether (and if so, how) the organization made its governing documents, conflict of interest policy, and financial statements available to the public during the tax year.
- 20** State the name, address, and telephone number of the person who possesses the organization's books and records: ►

KAVISH CALVEZ 12025 WATERFRONT DRIVE, SUITE 300 LOS ANGELES, CA 90094-2236 310-301-5838

Part VII Compensation of Officers, Directors, Trustees, Key Employees, Highest Compensated Employees, and Independent Contractors

Check if Schedule O contains a response or note to any line in this Part VII. X

Section A. Officers, Directors, Trustees, Key Employees, and Highest Compensated Employees

1a Complete this table for all persons required to be listed. Report compensation for the calendar year ending with or within the organization's tax year.

- List all of the organization's **current** officers, directors, trustees (whether individuals or organizations), regardless of amount of compensation. Enter -0- in columns (D), (E), and (F) if no compensation was paid.
- List all of the organization's **current** key employees, if any. See instructions for definition of "key employee."
- List the organization's five **current** highest compensated employees (other than an officer, director, trustee, or key employee) who received reportable compensation (Box 5 of Form W-2 and/or Box 7 of Form 1099-MISC) of more than \$100,000 from the organization and any related organizations.
- List all of the organization's **former** officers, key employees, and highest compensated employees who received more than \$100,000 of reportable compensation from the organization and any related organizations.
- List all of the organization's **former** directors or trustees that received, in the capacity as a former director or trustee of the organization, more than \$10,000 of reportable compensation from the organization and any related organizations.

List persons in the following order: individual trustees or directors; institutional trustees; officers; key employees; highest compensated employees; and former such persons.

Check this box if neither the organization nor any related organization compensated any current officer, director, or trustee.

(A) Name and Title	(B) Average hours per week (list any hours for related organizations below dotted line)	(C) Position (do not check more than one box, unless person is both an officer and a director/trustee)						(D) Reportable compensation from the organization (W-2/1099 MISC)	(E) Reportable compensation from related organizations (W-2/1099 MISC)	(F) Estimated amount of other compensation from the organization and related organizations

Part XII Financial Statements and Reporting

Check if Schedule O contains a response or note to any line in this Part XII

		Yes	No
1	Accounting method used to prepare the Form 990: <input type="checkbox"/> Cash <input checked="" type="checkbox"/> Accrual <input type="checkbox"/> Other _____ If the organization changed its method of accounting from a prior year or checked "Other," explain in Schedule O.		
2a	Were the organization's financial statements compiled or reviewed by an independent accountant? If "Yes," check a box below to indicate whether the financial statements for the year were compiled or reviewed on a separate basis, consolidated basis, or both: <input type="checkbox"/> Separate basis <input type="checkbox"/> Consolidated basis <input type="checkbox"/> Both consolidated and separate basis		X
2b	Were the organization's financial statements audited by an independent accountant? If "Yes," check a box below to indicate whether the financial statements for the year were audited on a separate basis, consolidated basis, or both: <input checked="" type="checkbox"/> Separate basis <input type="checkbox"/> Consolidated basis <input type="checkbox"/> Both consolidated and separate basis	X	
2c	If "Yes" to line 2a or 2b, does the organization have a committee that assumes responsibility for oversight of the audit, review, or compilation of its financial statements and selection of an independent accountant? If the organization changed either its oversight process or selection process during the tax year, explain in Schedule O.	X	
3a	As a result of a federal award, was the organization required to undergo an audit or audits as set forth in the Single Audit Act and OMB Circular A-133?		X
3b	If "Yes," did the organization undergo the required audit or audits? If the organization did not undergo the required audit or audits, explain why in Schedule O and describe any steps taken to undergo such audits.		

SCHEDULE A
(Form 990 or 990-EZ)

Public Charity Status and Public Support

OMB No 1545-0047

2014

Open to Public Inspection

Department of the Treasury
Internal Revenue Service

Complete if the organization is a section 501(c)(3) organization or a section 4947(a)(1) nonexempt charitable trust.

▶ Attach to Form 990 or Form 990-EZ.

▶ Information about Schedule A (Form 990 or 990-EZ) and its instructions is at www.irs.gov/form990.

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
---	---

Part I Reason for Public Charity Status (All organizations must complete this part.) See instructions.

The organization is not a private foundation because it is: (For lines 1 through 11, check only one box.)

- 1 A church, convention of churches, or association of churches described in **section 170(b)(1)(A)(i)**.
- 2 A school described in **section 170(b)(1)(A)(ii)**. (Attach Schedule E.)
- 3 A hospital or a cooperative hospital service organization described in **section 170(b)(1)(A)(iii)**.
- 4 A medical research organization operated in conjunction with a hospital described in **section 170(b)(1)(A)(iii)**. Enter the hospital's name, city, and state: _____
- 5 An organization operated for the benefit of a college or university owned or operated by a governmental unit described in **section 170(b)(1)(A)(iv)**. (Complete Part II.)
- 6 A federal, state, or local government or governmental unit described in **section 170(b)(1)(A)(v)**.
- 7 An organization that normally receives a substantial part of its support from a governmental unit or from the general public described in **section 170(b)(1)(A)(vi)**. (Complete Part II.)
- 8 A community trust described in **section 170(b)(1)(A)(vi)**. (Complete Part II.)
- 9 An organization that normally receives: (1) more than 33 1/3 % of its support from contributions, membership fees, and gross receipts from activities related to its exempt functions - subject to certain exceptions, and (2) no more than 33 1/3 % of its support from gross investment income and unrelated business taxable income (less section 511 tax) from businesses acquired by the organization after June 30, 1975. See **section 509(a)(2)**. (Complete Part III.)
- 10 An organization organized and operated exclusively to test for public safety. See **section 509(a)(4)**.
- 11 An organization organized and operated exclusively for the benefit of, to perform the functions of, or to carry out the purposes of one or more publicly supported organizations described in **section 509(a)(1)** or **section 509(a)(2)**. See **section 509(a)(3)**. Check the box in lines 11a through 11d that describes the type of supporting organization and complete lines 11e, 11f, and 11g.
 - a **Type I.** A supporting organization operated, supervised, or controlled by its supported organization(s), typically by giving the supported organization(s) the power to regularly appoint or elect a majority of the directors or trustees of the supporting organization. **You must complete Part IV, Sections A and B.**
 - b **Type II.** A supporting organization supervised or controlled in connection with its supported organization(s), by having control or management of the supporting organization vested in the same persons that control or manage the supported organization(s). **You must complete Part IV, Sections A and C.**
 - c **Type III functionally integrated.** A supporting organization operated in connection with, and functionally integrated with, its supported organization(s) (see instructions). **You must complete Part IV, Sections A, D, and E.**
 - d **Type III non-functionally integrated.** A supporting organization operated in connection with its supported organization(s) that is not functionally integrated. The organization generally must satisfy a distribution requirement and an attentiveness requirement (see instructions). **You must complete Part IV, Sections A and D, and Part V.**
 - e Check this box if the organization received a written determination from the IRS that it is a Type I, Type II, Type III functionally integrated, or Type III non-functionally integrated supporting organization.
 - f Enter the number of supported organizations: _____
 - g Provide the following information about the supported organization(s).

	(i) Name of supported organization	(ii) EIN	(iii) Type of organization (described on lines 1-9 above or IRC section (see instructions))	(iv) Is the organization listed in your governing document?		(v) Amount of monetary support (see instructions)	(vi) Amount of other support (see instructions)

For Paperwork Reduction Act Notice, see the Instructions for Form 990 or 990-EZ. Schedule A (Form 990 or 990-EZ) 2014

Part II Support Schedule for Organizations Described in Sections 170(b)(1)(A)(iv) and 170(b)(1)(A)(vi) (Complete only if you checked the box on line 5, 7, or 8 of Part I or if the organization failed to qualify under Part III. If the organization fails to qualify under the tests listed below, please complete Part III.)

Section A. Public Support

Table with 7 columns: (a) 2010, (b) 2011, (c) 2012, (d) 2013, (e) 2014, (f) Total. Rows include: 1 Gifts, grants, contributions, and membership fees received; 2 Tax revenues levied for the organization's benefit; 3 The value of services or facilities furnished by a governmental unit; 4 Total. Add lines 1 through 3; 5 The portion of total contributions by each person; 6 Public support. Subtract line 5 from line 4.

Section B. Total Support

Table with 7 columns: (a) 2010, (b) 2011, (c) 2012, (d) 2013, (e) 2014, (f) Total. Rows include: 7 Amounts from line 4; 8 Gross income from interest, dividends, payments received on securities loans, rents, royalties and income from similar sources; 9 Net income from unrelated business activities; 10 Other income Do not include gain or loss from the sale of capital assets; 11 Total support. Add lines 7 through 10.

12 Gross receipts from related activities, etc. (see instructions) 12
13 First five years. If the Form 990 is for the organization's first, second, third, fourth, or fifth tax year as a section 501(c)(3) organization, check this box and stop here

Section C. Computation of Public Support Percentage

14 Public support percentage for 2014 (line 6, column (f) divided by line 11, column (f)) 14 %
15 Public support percentage from 2013 Schedule A, Part II, line 14 15 %
16a 33 1/3% support test - 2014. If the organization did not check the box on line 13, and line 14 is 33 1/3% or more, check this box and stop here. The organization qualifies as a publicly supported organization
b 33 1/3% support test - 2013. If the organization did not check a box on line 13 or 16a, and line 15 is 33 1/3% or more, check this box and stop here. The organization qualifies as a publicly supported organization
17a 10%-facts-and-circumstances test - 2014. If the organization did not check a box on line 13, 16a, or 16b, and line 14 is 10% or more, and if the organization meets the "facts-and-circumstances" test, check this box and stop here. Explain in Part VI how the organization meets the "facts-and-circumstances" test. The organization qualifies as a publicly supported organization.
b 10%-facts-and-circumstances test - 2013. If the organization did not check a box on line 13, 16a, 16b, or 17a, and line 15 is 10% or more, and if the organization meets the "facts-and-circumstances" test, check this box and stop here. Explain in Part VI how the organization meets the "facts-and-circumstances" test. The organization qualifies as a publicly supported organization.
18 Private foundation. If the organization did not check a box on line 13, 16a, 16b, 17a, or 17b, check this box and see instructions

Part III Support Schedule for Organizations Described in Section 509(a)(2)
 (Complete only if you checked the box on line 9 of Part I or if the organization failed to qualify under Part II.
 If the organization fails to qualify under the tests listed below, please complete Part II.)

Section A. Public Support

Calendar year (or fiscal year beginning in) ▶	(a) 2010	(b) 2011	(c) 2012	(d) 2013	(e) 2014	(f) Total
1 Gifts, grants, contributions, and membership fees received (Do not include any "unusual grants.")	1,990,805.	2,621,270.	656,512.	2,072,140.	2,014,358.	9,384,985.
2 Gross receipts from admissions, merchandise sold or services performed, or facilities furnished in any activity that is related to the organization's tax-exempt purpose	67,302,790.	69,791,646.	233,114,259.	121,311,659.	214,799,352.	706,319,706.
3 Gross receipts from activities that are not an unrelated trade or business under section 513						0
4 Tax revenues levied for the organization's benefit and either paid to or expended on its behalf						0
5 The value of services or facilities furnished by a governmental unit to the organization without charge						0
6 Total. Add lines 1 through 5	69,293,595.	72,412,916.	233,770,771.	123,383,799.	216,843,610.	715,704,691.
7a Amounts included on lines 1, 2, and 3 received from disqualified persons						0
b Amounts included on lines 2 and 3 received from other than disqualified persons that exceed the greater of \$5,000 or 1% of the amount on line 13 for the year	40,172,642.	43,321,965.	37,871,606.	37,543,078.	84,215,410.	243,124,701.
c Add lines 7a and 7b.	40,172,642.	43,321,965.	37,871,606.	37,543,078.	84,215,410.	243,124,701.
8 Public support (Subtract line 7c from line 6.)						472,579,990.

Section B. Total Support

Calendar year (or fiscal year beginning in) ▶	(a) 2010	(b) 2011	(c) 2012	(d) 2013	(e) 2014	(f) Total
9 Amounts from line 6.	69,293,595.	72,412,916.	233,770,771.	123,383,799.	216,843,610.	715,704,691.
10a Gross income from interest, dividends, payments received on securities loans, rents, royalties and income from similar sources	2,260,733.	551,635.	2,411,378.	2,783,804.	1,483,793.	9,491,343.
b Unrelated business taxable income (less section 511 taxes) from businesses acquired after June 30, 1975						0
c Add lines 10a and 10b	2,260,733.	551,635.	2,411,378.	2,783,804.	1,483,793.	9,491,343.
11 Net income from unrelated business activities not included in line 10b, whether or not the business is regularly carried on						0
12 Other income. Do not include gain or loss from the sale of capital assets (Explain in Part VI.)						
13 Total support. (Add lines 9, 10c, 11, and 12.)	71,554,328.	72,964,551.	236,182,149.	126,167,603.	218,327,403.	725,196,034.

14 First five years. If the Form 990 is for the organization's first, second, third, fourth, or fifth tax year as a section 501(c)(3) organization, check this box and **stop here.**

Section C. Computation of Public Support Percentage

15 Public support percentage for 2014 (line 8, column (f) divided by line 13, column (f)).	15	65.17%
16 Public support percentage from 2013 Schedule A, Part III, line 15.	16	63.94%

Section D. Computation of Investment Income Percentage

17 Investment income percentage for 2014 (line 10c, column (f) divided by line 13, column (f)).	17	1.31%
18 Investment income percentage from 2013 Schedule A, Part III, line 17	18	1.81%

19a 33 1/3% support tests - 2014. If the organization did not check the box on line 14, and line 15 is more than 33 1/3%, and line 17 is not more than 33 1/3%, check this box and **stop here.** The organization qualifies as a publicly supported organization

b 33 1/3% support tests - 2013. If the organization did not check a box on line 14 or line 19a, and line 16 is more than 33 1/3%, and line 18 is not more than 33 1/3%, check this box and **stop here.** The organization qualifies as a publicly supported organization

20 Private foundation. If the organization did not check a box on line 14, 19a, or 19b, check this box and see instructions

Part IV Supporting Organizations

(Complete only if you checked a box on line 11 of Part I. If you checked 11a of Part I, complete Sections A and B. If you checked 11b of Part I, complete Sections A and C. If you checked 11c of Part I, complete Sections A, D, and E. If you checked 11d of Part I, complete Sections A and D, and complete Part V.)

Section A. All Supporting Organizations

	Yes	No
1 Are all of the organization's supported organizations listed by name in the organization's governing documents? If "No," describe in Part VI how the supported organizations are designated. If designated by class or purpose, describe the designation. If historic and continuing relationship, explain.		
2 Did the organization have any supported organization that does not have an IRS determination of status under section 509(a)(1) or (2)? If "Yes," explain in Part VI how the organization determined that the supported organization was described in section 509(a)(1) or (2).		
3a Did the organization have a supported organization described in section 501(c)(4), (5), or (6)? If "Yes," answer (b) and (c) below.		
b Did the organization confirm that each supported organization qualified under section 501(c)(4), (5), or (6) and satisfied the public support tests under section 509(a)(2)? If "Yes," describe in Part VI when and how the organization made the determination.		
c Did the organization ensure that all support to such organizations was used exclusively for section 170(c)(2)(B) purposes? If "Yes," explain in Part VI what controls the organization put in place to ensure such use.		
4a Was any supported organization not organized in the United States ("foreign supported organization")? If "Yes" and if you checked 11a or 11b in Part I, answer (b) and (c) below.		
b Did the organization have ultimate control and discretion in deciding whether to make grants to the foreign supported organization? If "Yes," describe in Part VI how the organization had such control and discretion despite being controlled or supervised by or in connection with its supported organizations.		
c Did the organization support any foreign supported organization that does not have an IRS determination under sections 501(c)(3) and 509(a)(1) or (2)? If "Yes," explain in Part VI what controls the organization used to ensure that all support to the foreign supported organization was used exclusively for section 170(c)(2)(B) purposes.		
5a Did the organization add, substitute, or remove any supported organizations during the tax year? If "Yes," answer (b) and (c) below (if applicable). Also, provide detail in Part VI , including (i) the names and EIN numbers of the supported organizations added, substituted, or removed, (ii) the reasons for each such action, (iii) the authority under the organization's organizing document authorizing such action, and (iv) how the action was accomplished (such as by amendment to the organizing document).		
b Type I or Type II only. Was any added or substituted supported organization part of a class already designated in the organization's organizing document?		
c Substitutions only. Was the substitution the result of an event beyond the organization's control?		
6 Did the organization provide support (whether in the form of grants or the provision of services or facilities) to anyone other than (a) its supported organizations; (b) individuals that are part of the charitable class benefited by one or more of its supported organizations; or (c) other supporting organizations that also support or benefit one or more of the filing organization's supported organizations? If "Yes," provide detail in Part VI .		
7 Did the organization provide a grant, loan, compensation, or other similar payment to a substantial contributor (defined in IRC 4958(c)(3)(C)), a family member of a substantial contributor, or a 35-percent controlled entity with regard to a substantial contributor? If "Yes," complete Part I of Schedule L (Form 990).		
8 Did the organization make a loan to a disqualified person (as defined in section 4958) not described in line 7? If "Yes," complete Part I of Schedule L (Form 990).		
9a Was the organization controlled directly or indirectly at any time during the tax year by one or more disqualified persons as defined in section 4946 (other than foundation managers and organizations described in section 509(a)(1) or (2))? If "Yes," provide detail in Part VI .		
b Did one or more disqualified persons (as defined in line 9(a)) hold a controlling interest in any entity in which the supporting organization had an interest? If "Yes," provide detail in Part VI .		
c Did a disqualified person (as defined in line 9(a)) have an ownership interest in, or derive any personal benefit from, assets in which the supporting organization also had an interest? If "Yes," provide detail in Part VI .		
10a Was the organization subject to the excess business holdings rules of IRC 4943 because of IRC 4943(f) (regarding certain Type II supporting organizations, and all Type III non-functionally integrated supporting organizations)? If "Yes," answer (b) below.		
b Did the organization have any excess business holdings in the tax year? (Use Schedule C, Form 4720, to determine whether the organization had excess business holdings.)		

Part IV Supporting Organizations (continued)

	Yes	No
11 Has the organization accepted a gift or contribution from any of the following persons?		
a A person who directly or indirectly controls, either alone or together with persons described in (b) and (c) below, the governing body of a supported organization?	11a	
b A family member of a person described in (a) above?	11b	
c A 35% controlled entity of a person described in (a) or (b) above? If "Yes" to a, b, or c, provide detail in Part VI.	11c	

Section B. Type I Supporting Organizations

	Yes	No
1 Did the directors, trustees, or membership of one or more supported organizations have the power to regularly appoint or elect at least a majority of the organization's directors or trustees at all times during the tax year? If "No," describe in Part VI how the supported organization(s) effectively operated, supervised, or controlled the organization's activities. If the organization had more than one supported organization, describe how the powers to appoint and/or remove directors or trustees were allocated among the supported organizations and what conditions or restrictions, if any, applied to such powers during the tax year.	1	
2 Did the organization operate for the benefit of any supported organization other than the supported organization(s) that operated, supervised, or controlled the supporting organization? If "Yes," explain in Part VI how providing such benefit carried out the purposes of the supported organization(s) that operated, supervised, or controlled the supporting organization.	2	

Section C. Type II Supporting Organizations

	Yes	No
1 Were a majority of the organization's directors or trustees during the tax year also a majority of the directors or trustees of each of the organization's supported organization(s)? If "No," describe in Part VI how control or management of the supporting organization was vested in the same persons that controlled or managed the supported organization(s).	1	

Section D. All Type III Supporting Organizations

	Yes	No
1 Did the organization provide to each of its supported organizations, by the last day of the fifth month of the organization's tax year, (1) a written notice describing the type and amount of support provided during the prior tax year, (2) a copy of the Form 990 that was most recently filed as of the date of notification, and (3) copies of the organization's governing documents in effect on the date of notification, to the extent not previously provided?	1	
2 Were any of the organization's officers, directors, or trustees either (i) appointed or elected by the supported organization(s) or (ii) serving on the governing body of a supported organization? If "No," explain in Part VI how the organization maintained a close and continuous working relationship with the supported organization(s).	2	
3 By reason of the relationship described in (2), did the organization's supported organizations have a significant voice in the organization's investment policies and in directing the use of the organization's income or assets at all times during the tax year? If "Yes," describe in Part VI the role the organization's supported organizations played in this regard.	3	

Section E. Type III Functionally-Integrated Supporting Organizations

1 Check the box next to the method that the organization used to satisfy the Integral Part Test during the year (see instructions):			
a <input type="checkbox"/> The organization satisfied the Activities Test. Complete line 2 below.			
b <input type="checkbox"/> The organization is the parent of each of its supported organizations. Complete line 3 below.			
c <input type="checkbox"/> The organization supported a governmental entity. Describe in Part VI how you supported a government entity (see instructions).			
2 Activities Test. Answer (a) and (b) below.		Yes	No
a Did substantially all of the organization's activities during the tax year directly further the exempt purposes of the supported organization(s) to which the organization was responsive? If "Yes," then in Part VI identify those supported organizations and explain how these activities directly furthered their exempt purposes, how the organization was responsive to those supported organizations, and how the organization determined that these activities constituted substantially all of its activities.	2a		
b Did the activities described in (a) constitute activities that, but for the organization's involvement, one or more of the organization's supported organization(s) would have been engaged in? If "Yes," explain in Part VI the reasons for the organization's position that its supported organization(s) would have engaged in these activities but for the organization's involvement.	2b		
3 Parent of Supported Organizations. Answer (a) and (b) below.			
a Did the organization have the power to regularly appoint or elect a majority of the officers, directors, or trustees of each of the supported organizations? Provide details in Part VI.	3a		
b Did the organization exercise a substantial degree of direction over the policies, programs, and activities of each of its supported organizations? If "Yes," describe in Part VI the role played by the organization in this regard.	3b		

Part V Type III Non-Functionally Integrated 509(a)(3) Supporting Organizations

1 Check here if the organization satisfied the Integral Part Test as a qualifying trust on Nov. 20, 1970. See instructions. All other Type III non-functionally integrated supporting organizations must complete Sections A through E.

Section A - Adjusted Net Income		(A) Prior Year	(B) Current Year (optional)
1 Net short-term capital gain	1		
2 Recoveries of prior-year distributions	2		
3 Other gross income (see instructions)	3		
4 Add lines 1 through 3	4		
5 Depreciation and depletion	5		
6 Portion of operating expenses paid or incurred for production or collection of gross income or for management, conservation, or maintenance of property held for production of income (see instructions)	6		
7 Other expenses (see instructions)	7		
8 Adjusted Net Income (subtract lines 5, 6 and 7 from line 4)	8		
Section B - Minimum Asset Amount		(A) Prior Year	(B) Current Year (optional)
1 Aggregate fair market value of all non-exempt-use assets (see instructions for short tax year or assets held for part of year):			
a Average monthly value of securities	1a		
b Average monthly cash balances	1b		
c Fair market value of other non-exempt-use assets	1c		
d Total (add lines 1a, 1b, and 1c)	1d		
e Discount claimed for blockage or other factors (explain in detail in Part VI):			
2 Acquisition indebtedness applicable to non-exempt-use assets	2		
3 Subtract line 2 from line 1d	3		
4 Cash deemed held for exempt use. Enter 1-1/2% of line 3 (for greater amount, see instructions).	4		
5 Net value of non-exempt-use assets (subtract line 4 from line 3)	5		
6 Multiply line 5 by .035	6		
7 Recoveries of prior-year distributions	7		
8 Minimum Asset Amount (add line 7 to line 6)	8		
Section C - Distributable Amount			Current Year
1 Adjusted net income for prior year (from Section A, line 8, Column A)	1		
2 Enter 85% of line 1	2		
3 Minimum asset amount for prior year (from Section B, line 8, Column A)	3		
4 Enter greater of line 2 or line 3	4		
5 Income tax imposed in prior year	5		
6 Distributable Amount. Subtract line 5 from line 4, unless subject to emergency temporary reduction (see instructions)	6		
7 <input type="checkbox"/> Check here if the current year is the organization's first as a non-functionally-integrated Type III supporting organization (see instructions).			

Schedule A (Form 990 or 990-EZ) 2014

Part V Type III Non-Functionally Integrated 509(a)(3) Supporting Organizations (continued)

Section D - Distributions		Current Year
1	Amounts paid to supported organizations to accomplish exempt purposes	
2	Amounts paid to perform activity that directly furthers exempt purposes of supported organizations, in excess of income from activity	
3	Administrative expenses paid to accomplish exempt purposes of supported organizations	
4	Amounts paid to acquire exempt-use assets	
5	Qualified set-aside amounts (prior IRS approval required)	
6	Other distributions (describe in Part VI). See instructions.	
7	Total annual distributions. Add lines 1 through 6.	
8	Distributions to attentive supported organizations to which the organization is responsive (provide details in Part VI). See instructions.	
9	Distributable amount for 2014 from Section C, line 6	
10	Line 8 amount divided by Line 9 amount	

Section E - Distribution Allocations (see instructions)		(i) Excess Distributions	(ii) Underdistributions Pre-2014	(iii) Distributable Amount for 2014
1	Distributable amount for 2014 from Section C, line 6			
2	Underdistributions, if any, for years prior to 2014 (reasonable cause required-see instructions)			
3	Excess distributions carryover, if any, to 2014:			
a				
b				
c				
d				
e	From 2013			
f	Total of lines 3a through e			
g	Applied to underdistributions of prior years			
h	Applied to 2014 distributable amount			
i	Carryover from 2009 not applied (see instructions)			
j	Remainder. Subtract lines 3g, 3h, and 3i from 3f.			
4	Distributions for 2014 from Section D, line 7: \$			
a	Applied to underdistributions of prior years			
b	Applied to 2014 distributable amount			
c	Remainder. Subtract lines 4a and 4b from 4.			
5	Remaining underdistributions for years prior to 2014, if any. Subtract lines 3g and 4a from line 2 (if amount greater than zero, see instructions).			
6	Remaining underdistributions for 2014. Subtract lines 3h and 4b from line 1 (if amount greater than zero, see instructions).			
7	Excess distributions carryover to 2015. Add lines 3j and 4c.			
8	Breakdown of line 7:			
a				
b				
c				
d	Excess from 2013			
e	Excess from 2014			

Schedule A (Form 990 or 990-EZ) 2014

Part VI **Supplemental Information.** Provide the explanations required by Part II, line 10; Part II, line 17a or 17b; and Part III, line 12. Also complete this part for any additional information. (See instructions).

Schedule of Contributors

2014

▶ **Attach to Form 990, Form 990-EZ, or Form 990-PF.**

▶ Information about Schedule B (Form 990, 990-EZ, or 990-PF) and its instructions is at www.irs.gov/form990.

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
---	---

Organization type (check one):

Filers of:

Section:

- Form 990 or 990-EZ
 - 501(c)(3) (enter number) organization
 - 4947(a)(1) nonexempt charitable trust **not** treated as a private foundation
 - 527 political organization
- Form 990-PF
 - 501(c)(3) exempt private foundation
 - 4947(a)(1) nonexempt charitable trust treated as a private foundation
 - 501(c)(3) taxable private foundation

Check if your organization is covered by the **General Rule** or a **Special Rule**.

Note. Only a section 501(c)(7), (8), or (10) organization can check boxes for both the General Rule and a Special Rule. See instructions.

General Rule

- For an organization filing Form 990, 990-EZ, or 990-PF that received, during the year, contributions totaling \$5,000 or more (in money or property) from any one contributor. Complete Parts I and II. See instructions for determining a contributor's total contributions.

Special Rules

- For an organization described in section 501(c)(3) filing Form 990 or 990-EZ that met the 33 1/3 % support test of the regulations under sections 509(a)(1) and 170(b)(1)(A)(vi), that checked Schedule A (Form 990 or 990-EZ), Part II, line 13, 16a, or 16b, and that received from any one contributor, during the year, total contributions of the greater of (1) \$5,000 or (2) 2% of the amount on (i) Form 990, Part VIII, line 1h, or (ii) Form 990-EZ, line 1. Complete Parts I and II.
- For an organization described in section 501(c)(7), (8), or (10) filing Form 990 or 990-EZ that received from any one contributor, during the year, total contributions of more than \$1,000 *exclusively* for religious, charitable, scientific, literary, or educational purposes, or the prevention of cruelty to children or animals. Complete Parts I, II, and III.
- For an organization described in section 501(c)(7), (8), or (10) filing Form 990 or 990-EZ that received from any one contributor, during the year, contributions *exclusively* for religious, charitable, etc., purposes, but no such contributions totaled more than \$1,000. If this box is checked, enter here the total contributions that were received during the year for an *exclusively* religious, charitable, etc., purpose. Do not complete any of the parts unless the **General Rule** applies to this organization because it received *nonexclusively* religious, charitable, etc., contributions totaling \$5,000 or more during the year ▶ \$ _____

Caution. An organization that is not covered by the General Rule and/or the Special Rules does not file Schedule B (Form 990, 990-EZ, or 990-PF), but it **must** answer "No" on Part IV, line 2, of its Form 990; or check the box on line H of its Form 990-EZ or on its Form 990-PF, Part I, line 2, to certify that it does not meet the filing requirements of Schedule B (Form 990, 990-EZ, or 990-PF).

SCHEDULE C
(Form 990 or 990-EZ)

Political Campaign and Lobbying Activities

OMB No. 1545-0047

2014

For Organizations Exempt From Income Tax Under section 501(c) and section 527

Department of the Treasury
Internal Revenue Service

▶ **Complete if the organization is described below.** ▶ **Attach to Form 990 or Form 990-EZ.**
▶ **Information about Schedule C (Form 990 or 990-EZ) and its instructions is at www.irs.gov/form990.**

Open to Public Inspection

If the organization answered "Yes," to Form 990, Part IV, line 3, or Form 990-EZ, Part V, line 46 (Political Campaign Activities), then

- Section 501(c)(3) organizations: Complete Parts I A and B. Do not complete Part I C.
- Section 501(c) (other than section 501(c)(3)) organizations: Complete Parts I-A and C below. Do not complete Part I B.
- Section 527 organizations: Complete Part I A only.

If the organization answered "Yes," to Form 990, Part IV, line 4, or Form 990-EZ, Part VI, line 47 (Lobbying Activities), then

- Section 501(c)(3) organizations that have filed Form 5768 (election under section 501(h)): Complete Part II A. Do not complete Part II-B.
- Section 501(c)(3) organizations that have NOT filed Form 5768 (election under section 501(h)): Complete Part II B. Do not complete Part II-A.

If the organization answered "Yes," to Form 990, Part IV, line 5 (Proxy Tax) (see separate instructions) or Form 990-EZ, Part V, line 35c (Proxy Tax) (see separate instructions), then

- Section 501(c)(4), (5), or (6) organizations: Complete Part III.

Name of organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

Part I-A Complete if the organization is exempt under section 501(c) or is a section 527 organization.

- 1 Provide a description of the organization's direct and indirect political campaign activities in Part IV.
- 2 Political expenditures ▶ \$ _____
- 3 Volunteer hours _____

Part I-B Complete if the organization is exempt under section 501(c)(3).

- 1 Enter the amount of any excise tax incurred by the organization under section 4955. ▶ \$ _____
- 2 Enter the amount of any excise tax incurred by organization managers under section 4955 ▶ \$ _____
- 3 If the organization incurred a section 4955 tax, did it file Form 4720 for this year? Yes No
- 4a Was a correction made? Yes No
- b If "Yes," describe in Part IV.

Part I-C Complete if the organization is exempt under section 501(c), except section 501(c)(3).

- 1 Enter the amount directly expended by the filing organization for section 527 exempt function activities. ▶ \$ _____
- 2 Enter the amount of the filing organization's funds contributed to other organizations for section 527 exempt function activities. ▶ \$ _____
- 3 Total exempt function expenditures. Add lines 1 and 2. Enter here and on Form 1120-POL, line 17b ▶ \$ _____
- 4 Did the filing organization file Form 1120-POL for this year? Yes No
- 5 Enter the names, addresses and employer identification number (EIN) of all section 527 political organizations to which the filing organization made payments. For each organization listed, enter the amount paid from the filing organization's funds. Also enter the amount of political contributions received that were promptly and directly delivered to a separate political organization, such as a separate segregated fund or a political action committee (PAC). If additional space is needed, provide information in Part IV.

(a) Name	(b) Address	(c) EIN	(d) Amount paid from filing organization's funds. If none, enter 0 .	(e) Amount of political contributions received and promptly and directly delivered to a separate political organization. If none, enter 0 .
(1)

(3)				
(4)				
(5)				
(6)				

Part I A Complete if the organization is exempt under section 501(c)(3) and filed Form 5768 (election under section 501(h)).

A Check if the filing organization belongs to an affiliated group (and list in Part IV each affiliated group member's name, address, EIN, expenses, and share of excess lobbying expenditures).

B Check if the filing organization checked box A and "limited control" provisions apply.

Limits on Lobbying Expenditures (The term "expenditures" means amounts paid or incurred.)		(a) Filing organization's totals	(b) Affiliated group totals												
1 a	Total lobbying expenditures to influence public opinion (grass roots lobbying)														
b	Total lobbying expenditures to influence a legislative body (direct lobbying)														
c	Total lobbying expenditures (add lines 1a and 1b)														
d	Other exempt purpose expenditures														
e	Total exempt purpose expenditures (add lines 1c and 1d)														
f	Lobbying nontaxable amount. Enter the amount from the following table in both columns.														
<table border="1"> <thead> <tr> <th>If the amount on line 1e, column (a) or (b) is:</th> <th>The lobbying nontaxable amount is:</th> </tr> </thead> <tbody> <tr> <td>Not over \$500,000</td> <td>20% of the amount on line 1e.</td> </tr> <tr> <td>Over \$500,000 but not over \$1,000,000</td> <td>\$100,000 plus 15% of the excess over \$500,000.</td> </tr> <tr> <td>Over \$1,000,000 but not over \$1,500,000</td> <td>\$175,000 plus 10% of the excess over \$1,000,000.</td> </tr> <tr> <td>Over \$1,500,000 but not over \$17,000,000</td> <td>\$225,000 plus 5% of the excess over \$1,500,000.</td> </tr> <tr> <td>Over \$17,000,000</td> <td>\$1,000,000.</td> </tr> </tbody> </table>		If the amount on line 1e, column (a) or (b) is:	The lobbying nontaxable amount is:	Not over \$500,000	20% of the amount on line 1e.	Over \$500,000 but not over \$1,000,000	\$100,000 plus 15% of the excess over \$500,000.	Over \$1,000,000 but not over \$1,500,000	\$175,000 plus 10% of the excess over \$1,000,000.	Over \$1,500,000 but not over \$17,000,000	\$225,000 plus 5% of the excess over \$1,500,000.	Over \$17,000,000	\$1,000,000.		
If the amount on line 1e, column (a) or (b) is:	The lobbying nontaxable amount is:														
Not over \$500,000	20% of the amount on line 1e.														
Over \$500,000 but not over \$1,000,000	\$100,000 plus 15% of the excess over \$500,000.														
Over \$1,000,000 but not over \$1,500,000	\$175,000 plus 10% of the excess over \$1,000,000.														
Over \$1,500,000 but not over \$17,000,000	\$225,000 plus 5% of the excess over \$1,500,000.														
Over \$17,000,000	\$1,000,000.														
g	Grassroots nontaxable amount (enter 25% of line 1f)														
h	Subtract line 1g from line 1a. If zero or less, enter -0-														
i	Subtract line 1f from line 1c. If zero or less, enter -0-														
j	If there is an amount other than zero on either line 1h or line 1i, did the organization file Form 4720 reporting section 4911 tax for this year?		<input type="checkbox"/> Yes <input type="checkbox"/> No												

4-Year Averaging Period Under Section 501(h)

(Some organizations that made a section 501(h) election do not have to complete all of the five columns below. See the separate instructions for lines 2a through 2f.)

Lobbying Expenditures During 4-Year Averaging Period					
Calendar year (or fiscal year beginning in)	(a) 2011	(b) 2012	(c) 2013	(d) 2014	(e) Total
2a	Lobbying nontaxable amount				
b	Lobbying ceiling amount (150% of line 2a, column (e))				
c	Total lobbying expenditures				
d	Grassroots nontaxable amount				
e	Grassroots ceiling amount (150% of line 2d, column (e))				
f	Grassroots lobbying expenditures				

Part II-B Complete if the organization is exempt under section 501(c)(3) and has NOT filed Form 5768 (election under section 501(h)).

	(a)		(b)
	Yes	No	Amount
For each "Yes," response to lines 1a through 1i below, provide in Part IV a detailed description of the lobbying activity.			
1 During the year, did the filing organization attempt to influence foreign, national, state or local legislation, including any attempt to influence public opinion on a legislative matter or referendum, through the use of:			
a Volunteers?		X	
b Paid staff or management (include compensation in expenses reported on lines 1c through 1i)?	X		
c Media advertisements?		X	
d Mailings to members, legislators, or the public?		X	
e Publications, or published or broadcast statements?		X	
f Grants to other organizations for lobbying purposes?		X	
g Direct contact with legislators, their staffs, government officials, or a legislative body?	X		620,997.
h Rallies, demonstrations, seminars, conventions, speeches, lectures, or any similar means?		X	
i Other activities?		X	
j Total. Add lines 1c through 1i			620,997.
2a Did the activities in line 1 cause the organization to be not described in section 501(c)(3)?		X	
b If "Yes," enter the amount of any tax incurred under section 4912			
c If "Yes," enter the amount of any tax incurred by organization managers under section 4912			
d If the filing organization incurred a section 4912 tax, did it file Form 4720 for this year?		X	

Part III-A Complete if the organization is exempt under section 501(c)(4), section 501(c)(5), or section 501(c)(6).

	1	Yes	No
1 Were substantially all (90% or more) dues received nondeductible by members?	1		
2 Did the organization make only in-house lobbying expenditures of \$2,000 or less?	2		
3 Did the organization agree to carry over lobbying and political expenditures from the prior year?	3		

Part III-B Complete if the organization is exempt under section 501(c)(4), section 501(c)(5), or section 501(c)(6) and if either (a) BOTH Part III-A, lines 1 and 2, are answered "No," OR (b) Part III-A, line 3, is answered "Yes."

1 Dues, assessments and similar amounts from members	1	
2 Section 162(e) nondeductible lobbying and political expenditures (do not include amounts of political expenses for which the section 527(f) tax was paid).		
a Current year	2a	
b Carryover from last year	2b	
c Total	2c	
3 Aggregate amount reported in section 6033(e)(1)(A) notices of nondeductible section 162(e) dues	3	
4 If notices were sent and the amount on line 2c exceeds the amount on line 3, what portion of the excess does the organization agree to carryover to the reasonable estimate of nondeductible lobbying and political expenditure next year?	4	
5 Taxable amount of lobbying and political expenditures (see instructions)	5	

Part IV Supplemental Information

Provide the descriptions required for Part I-A, line 1; Part I-B, line 4; Part I-C, line 5; Part II-A (affiliated group list); Part II-A, lines 1 and 2 (see instructions); and Part II-B, line 1. Also, complete this part for any additional information.

LOBBYING EXPENDITURES

SCHEDULE C, PART II-B

THE ORGANIZATION UTILIZED THE SERVICES OF A STAFF REGISTERED LOBBYIST AND

THREE GOVERNMENT AFFAIRS FIRMS DURING THE YEAR ENDED JUNE 30, 2015, FOR A

COST OF \$620,997.

Part I Organizations Maintaining Donor Advised Funds or Other Similar Funds or Accounts.

Complete if the organization answered "Yes" to Form 990, Part IV, line 6.

Table with 2 columns: (a) Donor advised funds, (b) Funds and other accounts. Rows include: 1 Total number at end of year, 2 Aggregate value of contributions to (during year), 3 Aggregate value of grants from (during year), 4 Aggregate value at end of year, 5 Did the organization inform all donors and donor advisors in writing that the assets held in donor advised funds are the organization's property, subject to the organization's exclusive legal control?, 6 Did the organization inform all grantees, donors, and donor advisors in writing that grant funds can be used only for charitable purposes and not for the benefit of the donor or donor advisor, or for any other purpose conferring impermissible private benefit?

Part II Conservation Easements.

Complete if the organization answered "Yes" to Form 990, Part IV, line 7.

Table with 2 columns: Held at the End of the Tax Year. Rows include: 1 Purpose(s) of conservation easements held by the organization (check all that apply), 2 Complete lines 2a through 2d if the organization held a qualified conservation contribution in the form of a conservation easement on the last day of the tax year, 3 Number of conservation easements modified, transferred, released, extinguished, or terminated by the organization during the tax year, 4 Number of states where property subject to conservation easement is located, 5 Does the organization have a written policy regarding the periodic monitoring, inspection, handling of violations, and enforcement of the conservation easements it holds?, 6 Staff and volunteer hours devoted to monitoring, inspecting, and enforcing conservation easements during the year, 7 Amount of expenses incurred in monitoring, inspecting, and enforcing conservation easements during the year, 8 Does each conservation easement reported on line 2(d) above satisfy the requirements of section 170(h)(4)(B)(i) and section 170(h)(4)(B)(ii)?, 9 In Part XIII, describe how the organization reports conservation easements in its revenue and expense statement, and balance sheet, and include, if applicable, the text of the footnote to the organization's financial statements that describes the organization's accounting for conservation easements.

Part III Organizations Maintaining Collections of Art, Historical Treasures, or Other Similar Assets.

Complete if the organization answered "Yes" to Form 990, Part IV, line 8.

Table with 2 columns: Revenue and Assets. Rows include: 1a If the organization elected, as permitted under SFAS 116 (ASC 958), not to report in its revenue statement and balance sheet works of art, historical treasures, or other similar assets held for public exhibition, education, or research in furtherance of public service, provide, in Part XIII, the text of the footnote to its financial statements that describes these items, 1b If the organization elected, as permitted under SFAS 116 (ASC 958), to report in its revenue statement and balance sheet works of art, historical treasures, or other similar assets held for public exhibition, education, or research in furtherance of public service, provide the following amounts relating to these items, 2 If the organization received or held works of art, historical treasures, or other similar assets for financial gain, provide the following amounts required to be reported under SFAS 116 (ASC 958) relating to these items.

For Paperwork Reduction Act Notice, see the Instructions for Form 990.

Schedule D (Form 990) 2014

Part III Organizations Maintaining Collections of Art, Historical Treasures, or Other Similar Assets (continued)

- 3 Using the organization's acquisition, accession, and other records, check any of the following that are a significant use of its collection items (check all that apply):
a Public exhibition
b Scholarly research
c Preservation for future generations
d Loan or exchange programs
e Other
4 Provide a description of the organization's collections and explain how they further the organization's exempt purpose in Part XIII.
5 During the year, did the organization solicit or receive donations of art, historical treasures, or other similar assets to be sold to raise funds rather than to be maintained as part of the organization's collection?

Part IV Escrow and Custodial Arrangements. Complete if the organization answered "Yes" to Form 990, Part IV, line 9, or reported an amount on Form 990, Part X, line 21.

- 1a Is the organization an agent, trustee, custodian or other intermediary for contributions or other assets not included on Form 990, Part X?
b If "Yes," explain the arrangement in Part XIII and complete the following table:
Table with columns: Amount, 1c Beginning balance, 1d Additions during the year, 1e Distributions during the year, 1f Ending balance.
2a Did the organization include an amount on Form 990, Part X, line 21, for escrow or custodial account liability?
b If "Yes," explain the arrangement in Part XIII. Check here if the explanation has been provided in Part XIII.

Part V Endowment Funds. Complete if the organization answered "Yes" to Form 990, Part IV, line 10.

Table with 6 columns: (a) Current year, (b) Prior year, (c) Two years back, (d) Three years back, (e) Four years back. Rows include: 1a Beginning of year balance, b Contributions, c Net investment earnings, gains, and losses, d Grants or scholarships, e Other expenditures for facilities and programs, f Administrative expenses, g End of year balance.

- 2 Provide the estimated percentage of the current year end balance (line 1g, column (a)) held as:
a Board designated or quasi-endowment %
b Permanent endowment %
c Temporarily restricted endowment %
The percentages in lines 2a, 2b, and 2c should equal 100%.

- 3a Are there endowment funds not in the possession of the organization that are held and administered for the organization by:
(i) unrelated organizations
(ii) related organizations
b If "Yes" to 3a(ii), are the related organizations listed as required on Schedule R?
Table with Yes/No columns for 3a(i), 3a(ii), 3b.

Part VI Land, Buildings, and Equipment. Complete if the organization answered "Yes" to Form 990, Part IV, line 11a. See Form 990, Part X, line 10.

Table with 5 columns: (a) Cost or other basis (investment), (b) Cost or other basis (other), (c) Accumulated depreciation, (d) Book value. Rows include: 1a Land, b Buildings, c Leasehold improvements, d Equipment, e Other, Total. Add lines 1a through 1e. (Column (d) must equal Form 990, Part X, column (B), line 10(c).)

Part VII Investments - Other Securities.

Complete if the organization answered "Yes" to Form 990, Part IV, line 11b. See Form 990, Part X, line 12.

Table with 3 columns: (a) Description of security or category, (b) Book value, (c) Method of valuation. Rows include (1) Financial derivatives, (2) Closely-held equity interests, (3) Other (A-H), and Total.

Part VIII Investments - Program Related.

Complete if the organization answered "Yes" to Form 990, Part IV, line 11c. See Form 990, Part X, line 13.

Table with 3 columns: (a) Description of investment, (b) Book value, (c) Method of valuation. Rows (1) through (9) and Total.

Part IX Other Assets.

Complete if the organization answered "Yes" to Form 990, Part IV, line 11d. See Form 990, Part X, line 15.

Table with 2 columns: (a) Description, (b) Book value. Rows (1) through (9) and Total.

Part X Other Liabilities.

Complete if the organization answered "Yes" to Form 990, Part IV, line 11e or 11f. See Form 990, Part X, line 25.

Table with 2 columns: (a) Description of liability, (b) Book value. Row 1 includes (1) Federal income taxes, rows (2) through (9), and Total.

2. Liability for uncertain tax positions. In Part XIII, provide the text of the footnote to the organization's financial statements that reports the organization's liability for uncertain tax positions under FIN 48 (ASC 740). Check here if the text of the footnote has been provided in Part XIII [X]

Part XI Reconciliation of Revenue per Audited Financial Statements With Revenue per Return. Complete if the organization answered "Yes" to Form 990, Part IV, line 12a.

Table with 5 main rows and sub-rows (a-e) for adjustments. Total revenue reported as 219,552,353.

Part XII Reconciliation of Expenses per Audited Financial Statements With Expenses per Return. Complete if the organization answered "Yes" to Form 990, Part IV, line 12a.

Table with 5 main rows and sub-rows (a-e) for adjustments. Total expenses reported as 131,618,644.

Part XIII Supplemental Information.

Provide the descriptions required for Part II, lines 3, 5, and 9; Part III, lines 1a and 4; Part IV, lines 1b and 2b; Part V, line 4; Part X, line 2; Part XI, lines 2d and 4b; and Part XII, lines 2d and 4b. Also complete this part to provide any additional information.

SEE PAGE 5

Part XIII Supplemental Information (continued)

FORM 990, SCHEDULE D, PART X, LINE 2

ASC 740-10 FOOTNOTE

ICANN IS EXEMPT FROM FEDERAL AND STATE INCOME TAXES UNDER SECTION 501(C)(3) OF THE INTERNAL REVENUE CODE AND SECTION 23071(D) OF THE CALIFORNIA REVENUE AND TAXATION CODE. ACCORDINGLY, NO PROVISION FOR INCOME TAXES HAS BEEN MADE IN THE ACCOMPANYING FINANCIAL STATEMENTS. HOWEVER, ICANN IS SUBJECT TO INCOME TAXES ON ANY NET INCOME THAT IS DERIVED FROM A TRADE OR BUSINESS, REGULARLY CARRIED ON, AND NOT IN FURTHERANCE OF THE PURPOSES FOR WHICH ICANN WAS GRANTED EXEMPTION. NO INCOME TAX PROVISION HAS BEEN RECORDED; AS THE NET INCOME, IF ANY, FROM ANY UNRELATED TRADE OR BUSINESS, IN THE OPINION OF MANAGEMENT, IS NOT MATERIAL TO THE BASIC FINANCIAL STATEMENTS TAKEN AS A WHOLE.

ICANN BELIEVES IT IS IN COMPLIANCE WITH ALL APPLICABLE LAWS, HOWEVER, UPON AUDIT BY A TAXING AUTHORITY, IF AMOUNTS ARE FOUND DUE, ICANN MAY BE LIABLE FOR SUCH TAXES. MANAGEMENT HAS ANALYZED ICANN'S TAX POSITIONS TAKEN ON FEDERAL AND STATE INCOME TAX RETURNS FOR ALL OPEN TAX YEARS AND HAS CONCLUDED THAT, AS OF JUNE 30, 2015 AND 2014, NO LIABILITIES ARE REQUIRED TO BE RECORDED IN CONNECTION WITH SUCH TAX POSITIONS IN ICANN'S FINANCIAL STATEMENTS. THE FISCAL 2009 THROUGH 2014 TAX YEARS REMAIN OPEN FOR EXAMINATION BY THE TAXING AUTHORITIES. NO INTEREST OR PENALTIES ARE RECOGNIZED DURING THE YEAR AS ICANN HAS NOT RECORDED INCOME TAX CONTINGENCIES. ICANN IS NOT UNDER EXAMINATION BY THE INTERNAL REVENUE SERVICE FOR ANY OPEN TAX YEARS.

Part IV Foreign Forms

- 1 Was the organization a U.S. transferor of property to a foreign corporation during the tax year? *If "Yes," the organization may be required to file Form 926, Return by a U.S. Transferor of Property to a Foreign Corporation (see Instructions for Form 926)* Yes No
- 2 Did the organization have an interest in a foreign trust during the tax year? *If "Yes," the organization may be required to file Form 3520, Annual Return to Report Transactions with Foreign Trusts and Receipt of Certain Foreign Gifts, and/or Form 3520 A, Annual Information Return of Foreign Trust With a U.S. Owner (see Instructions for Forms 3520 and 3520 A; do not file with Form 990)* Yes No
- 3 Did the organization have an ownership interest in a foreign corporation during the tax year? *If "Yes," the organization may be required to file Form 5471, Information Return of U.S. Persons With Respect To Certain Foreign Corporations (see Instructions for Form 5471)* Yes No
- 4 Was the organization a direct or indirect shareholder of a passive foreign investment company or a qualified electing fund during the tax year? *If "Yes," the organization may be required to file Form 8621, Information Return by a Shareholder of a Passive Foreign Investment Company or Qualified Electing Fund (see Instructions for Form 8621)* Yes No
- 5 Did the organization have an ownership interest in a foreign partnership during the tax year? *If "Yes," the organization may be required to file Form 8865, Return of U.S. Persons With Respect To Certain Foreign Partnerships (see Instructions for Form 8865)* Yes No
- 6 Did the organization have any operations in or related to any boycotting countries during the tax year? *If "Yes," the organization may be required to file Form 5713, International Boycott Report (see Instructions for Form 5713; do not file with Form 990)* Yes No

Part V**Supplemental Information**

Complete this part to provide the information required by Part I, line 2 (monitoring of funds); Part I, line 3, column (f) (accounting method; amounts of investments vs. expenditures per region); Part II, line 1 (accounting method); Part III (accounting method); and Part III, column (c) (estimated number of recipients), as applicable. Also complete this part to provide any additional information (see instructions).

SCHEDULE F, PART I, LINE 2

ORGANIZATION'S PROCEDURES FOR MONITORING USE OF GRANTS

AN ICANN FELLOWSHIP IS A GRANT OF SUPPORT THAT IS AWARDED TO ENABLE INDIVIDUALS FROM STAKEHOLDER GROUPS AROUND THE WORLD TO ATTEND ICANN PUBLIC MEETINGS. THIS IS A MEANS-TESTED PROGRAM. APPLICANTS MUST BE CITIZENS OF ECONOMICALLY ELIGIBLE COUNTRIES. ICANN USES THE WORLD BANK CLASSIFICATION OF LOW, LOWER-MIDDLE, AND UPPER-MIDDLE ECONOMIES. THE FELLOWSHIP COVERS THE COST OF ECONOMY CLASS AIRFARE AND HOTEL, AS WELL AS PROVIDING A STIPEND AFTER SUCCESSFUL COMPLETION OF THE PROGRAM, IN ORDER TO ASSIST IN COVERING SOME BASIC EXPENSES INCURRED BY THE FELLOW. RECIPIENTS ARE EXPECTED TO ACTIVELY CONTRIBUTE TO ICANN PROCESSES AND BE A PART OF THE NEXT GENERATION OF ICANN LEADERSHIP.

FELLOWSHIPS ARE AWARDED BY AN INDEPENDENT SELECTION COMMITTEE BASED ON A MIX OF CRITERIA INCLUDING APPLICANT EXPERIENCE AND REFERENCES, GEOGRAPHIC PROXIMITY TO MEETING, RECEIPT OF PAST FELLOWSHIPS, ETC. INDIVIDUALS MAY NOT RECEIVE THIS GRANT OF SUPPORT MORE THAN THREE TIMES. FOR EACH PUBLIC MEETING THAT INCORPORATES THE FELLOWSHIP PROGRAM, A LIST OF SELECTED FELLOWS TO ATTEND THE UPCOMING MEETING IS POSTED ON THE ICANN WEBSITE PRIOR TO THE MEETING. SUBSEQUENT TO THE PUBLIC MEETING, A LIST OF FELLOWS WHO ATTENDED THE MEETING IS POSTED ON THE ICANN WEBSITE.

TRAVEL AND HOTEL COSTS ASSOCIATED WITH FELLOWS PRE-SELECTED TO ATTEND THE PUBLIC MEETING ARE BOOKED AND PAID FOR DIRECTLY BY ICANN. ALL FELLOWS ARE ELIGIBLE TO RECEIVE A FLAT STIPEND NOT TO EXCEED U.S. \$500.00. STIPENDS

Part V Supplemental Information

Complete this part to provide the information required by Part I, line 2 (monitoring of funds); Part I, line 3, column (f) (accounting method; amounts of investments vs. expenditures per region); Part II, line 1 (accounting method); Part III (accounting method); and Part III, column (c) (estimated number of recipients), as applicable. Also complete this part to provide any additional information (see instructions).

ARE GENERALLY PROVIDED TO FELLOWS BY WIRE TRANSFER AND ARE PAID TO EACH FELLOW SUBSEQUENT TO THE MEETING AND AFTER THE FELLOW HAS DEMONSTRATED COMPLETION OF THE FELLOWSHIP PROGRAM. DURING THE TWELVE MONTHS ENDED JUNE 30, 2015, ICANN PAID \$444,643 TO ALLOW ONE HUNDRED AND FORTY-NINE (149) FELLOWSHIP PARTICIPANTS TO ATTEND THREE (3) ICANN PUBLIC MEETINGS.

ICANN ALSO PROVIDES TRAVEL SUPPORT TO OTHER MEMBERS OF THE VOLUNTEER COMMUNITY TO FACILITATE POLICY DEVELOPMENT EFFORTS AND OUTREACH IMPORTANT TO ICANN'S MISSION. THE PROCESS FOR SELECTION IS LARGELY BASED ON SPECIFIC CRITERIA ESTABLISHED BY EACH STAKEHOLDER/CONSTITUENCY GROUP. TRAVEL SUPPORT EXTENDED TO THESE GROUPS IS REPORTED AS PART OF TRAVEL EXPENSES IN PART IX, STATEMENT OF FUNCTIONAL EXPENSES. FOR OTHER CONTRIBUTIONS, STAKEHOLDER ENGAGEMENT STAFF DEVELOP REQUESTS BASED UPON ICANN'S STRATEGIC PLAN AND ICANN'S OPERATING PLAN. SPECIFIC NEEDS WITHIN SPECIFIC REGIONS OF THE WORLD ARE CONSIDERED. ICANN EXECUTIVES REVIEW THE LIST OF SUGGESTED CONTRIBUTIONS AND DECIDE ON WHICH CONTRIBUTIONS TO PURSUE. THE ICANN BOARD AND COMMUNITY CONSIDER THE CONTRIBUTIONS WITHIN THE OVERALL FISCAL YEAR OPERATING PLAN AND BUDGET PROCESS.

SCHEDULE F, PART I, LINE 3

AT JUNE 30, 2015, ICANN HAD INTERNATIONAL OFFICES LOCATED IN BRUSSELS, BELGIUM; ISTANBUL, TURKEY; SINGAPORE, SINGAPORE; AND GENEVA, SWITZERLAND.

THE NUMBER OF PEOPLE IN EACH REGION SHOWN IN PART I LINE 3 COL (C) OF

Part V Supplemental Information

Complete this part to provide the information required by Part I, line 2 (monitoring of funds); Part I, line 3, column (f) (accounting method; amounts of investments vs. expenditures per region); Part II, line 1 (accounting method); Part III (accounting method); and Part III, column (c) (estimated number of recipients), as applicable. Also complete this part to provide any additional information (see instructions).

SCHEDULE F INCLUDES EMPLOYEES AND LONG-TERM INDEPENDENT CONTRACTORS WORKING FOR ICANN.

THE TOTAL EXPENDITURES BY REGION SHOWN IN PART I, LINE 3 COL (F) OF SCHEDULE F INCLUDES:

A. THE AMOUNTS PAID (FOR COMPENSATION, TRAVEL REIMBURSEMENT, AND OTHER COSTS AND EXPENSES) FROM THE US ACCOUNTS PAYABLE DEPARTMENT APPLICABLE TO THE REGION.

B. ALL COSTS ASSOCIATED WITH TWO (2) OF A TOTAL OF THREE (3) ANNUAL PUBLIC MEETINGS (I.E. SINGAPORE, SINGAPORE, AND BUENOS AIRES, ARGENTINA) DURING FISCAL YEAR 2015.

C. AMOUNTS EXPENDED TO FUND THE BRUSSELS, TURKEY, SWITZERLAND AND SINGAPORE BRANCH/LIAISON/REPRESENTATIVE OFFICES, AND PERSONNEL COSTS INCLUDING OFFICE EXPENSES, TRAVEL-RELATED AND OTHER EXPENSES PAID BY THE US ACCOUNTS PAYABLE DEPARTMENT.

Part I Questions Regarding Compensation

		Yes	No
1a	Check the appropriate box(es) if the organization provided any of the following to or for a person listed in Form 990, Part VII, Section A, line 1a. Complete Part III to provide any relevant information regarding these items.		
<input checked="" type="checkbox"/>	First-class or charter travel		
<input type="checkbox"/>	Travel for companions		
<input type="checkbox"/>	Tax indemnification and gross-up payments		
<input type="checkbox"/>	Discretionary spending account		
<input type="checkbox"/>	Housing allowance or residence for personal use		
<input type="checkbox"/>	Payments for business use of personal residence		
<input type="checkbox"/>	Health or social club dues or initiation fees		
<input type="checkbox"/>	Personal services (e.g., maid, chauffeur, chef)		
1b	If any of the boxes on line 1a are checked, did the organization follow a written policy regarding payment or reimbursement or provision of all of the expenses described above? If "No," complete Part III to explain	X	
2	Did the organization require substantiation prior to reimbursing or allowing expenses incurred by all directors, trustees, and officers, including the CEO/Executive Director, regarding the items checked in line 1a?	X	
3	Indicate which, if any, of the following the filing organization used to establish the compensation of the organization's CEO/Executive Director. Check all that apply. Do not check any boxes for methods used by a related organization to establish compensation of the CEO/Executive Director, but explain in Part III.		
<input checked="" type="checkbox"/>	Compensation committee		
<input checked="" type="checkbox"/>	Independent compensation consultant		
<input checked="" type="checkbox"/>	Form 990 of other organizations		
<input checked="" type="checkbox"/>	Written employment contract		
<input checked="" type="checkbox"/>	Compensation survey or study		
<input checked="" type="checkbox"/>	Approval by the board or compensation committee		
4	During the year, did any person listed in Form 990, Part VII, Section A, line 1a, with respect to the filing organization or a related organization:		
4a	Receive a severance payment or change-of-control payment?		X
4b	Participate in, or receive payment from, a supplemental nonqualified retirement plan?		X
4c	Participate in, or receive payment from, an equity-based compensation arrangement?		X
	If "Yes" to any of lines 4a-c, list the persons and provide the applicable amounts for each item in Part III.		
Only section 501(c)(3), 501(c)(4), and 501(c)(29) organizations must complete lines 5-9.			
5	For persons listed in Form 990, Part VII, Section A, line 1a, did the organization pay or accrue any compensation contingent on the revenues of:		
5a	The organization?		X
5b	Any related organization?		X
	If "Yes" to line 5a or 5b, describe in Part III.		
6	For persons listed in Form 990, Part VII, Section A, line 1a, did the organization pay or accrue any compensation contingent on the net earnings of:		
6a	The organization?		X
6b	Any related organization?		X
	If "Yes" to line 6a or 6b, describe in Part III.		
7	For persons listed in Form 990, Part VII, Section A, line 1a, did the organization provide any non-fixed payments not described in lines 5 and 6? If "Yes," describe in Part III	X	
8	Were any amounts reported in Form 990, Part VII, paid or accrued pursuant to a contract that was subject to the initial contract exception described in Regulations section 53.4958-4(a)(3)? If "Yes," describe in Part III		X
9	If "Yes" to line 8, did the organization also follow the rebuttable presumption procedure described in Regulations section 53.4958-6(c)?		

For Paperwork Reduction Act Notice, see the instructions for Form 990.

Schedule J (Form 990) 2014

Part II Officers, Directors, Trustees, Key Employees, and Highest Compensated Employees. Use duplicate copies if additional space is needed.

For each individual whose compensation must be reported in Schedule J, report compensation from the organization on row (i) and from related organizations, described in the instructions, on row (ii). Do not list any individuals that are not listed on Form 990, Part VII.

Note. The sum of columns (B)(i) (iii) for each listed individual must equal the total amount of Form 990, Part VII, Section A, line 1a, applicable column (D) and (E) amounts for that individual.

(A) Name and Title		(B) Breakdown of W 2 and/or 1099-MISC compensation			(C) Retirement and other deferred compensation	(D) Nontaxable benefits	(E) Total of columns (B)(i)-(D)	(F) Compensation in column (B) reported as deferred in prior Form 990

FORM 990, SCHEDULE J, PART I, LINE 7

REGARDING AT-RISK COMPENSATION:

THE OVERARCHING OBJECTIVE OF ICANN'S REMUNERATION FRAMEWORK IS TO ENSURE REMUNERATION PROVIDED IS COMPETITIVE GLOBALLY AND THAT IT PROVIDES STAFF WITH APPROPRIATE MOTIVATION FOR HIGH PERFORMANCE TOWARDS AGREED OBJECTIVES. THIS FRAMEWORK IS DESCRIBED IN DETAIL WITHIN THE DOCUMENT ENTITLED ICANN STAFF REMUNERATION PRACTICES.

[HTTPS://WWW.ICANN.ORG/EN/SYSTEM/FILES/FILES/REMUNERATION-PRACTICES-FY15-01 NOV14-EN.PDF](https://www.icann.org/en/system/files/files/remuneration-practices-fy15-01-nov14-en.pdf)

SCHEDULE J, PART II

ICANN'S OVERALL COMPENSATION PHILOSOPHY IS TO TARGET COMPENSATION BETWEEN THE 50TH AND 75TH PERCENTILE OF THE RELEVANT MARKET, TO ATTRACT AND RETAIN THE RIGHT STAFF. THE DRIVING ELEMENT OF THIS PHILOSOPHY IS THAT

Part III Supplemental Information

Complete this part to provide the information, explanation, or descriptions required for Part I, lines 1a, 1b, 3, 4a, 4b, 4c, 5a, 5b, 6a, 6b, 7, and 8, and for Part II. Also complete this part for any additional information.

ICANN'S COMPENSATION IS MARKET-BASED. ICANN HAS STAFF IN MANY DIFFERENT PARTS OF THE WORLD, AND STRIVES TO APPLY THIS PHILOSOPHY LOCALLY. EMPLOYMENT MARKETS AROUND THE WORLD ARE QUITE DIFFERENT, AND ALSO BRING DIFFERENT TAX, BENEFIT, AND OTHER LOCAL CONDITIONS TO BEAR. IN ADDITION, EXCHANGE RATE FLUCTUATIONS ALSO AFFECT THE U.S. DOLLAR EQUIVALENCE OF THE INTERNATIONAL STAFF.

SCHEDULE J, PART II, LINE 11, COLUMN D

NONTAXABLE BENEFITS FOR TAREK KAMEL INCLUDE BOTH HIS BENEFITS RECEIVED AS AN INDEPENDENT CONTRACTOR, AS WELL AS THOSE RECEIVED AS AN EMPLOYEE DURING THE CALENDAR YEAR.

FORM 990, PART I, LINE 1 AND PART III, LINE I

ORGANIZATION'S MISSION

THE MISSION OF THE INTERNET CORPORATION FOR ASSIGNED NAMES AND NUMBERS

("ICANN") IS TO COORDINATE, AT THE OVERALL LEVEL, AND TO ENSURE THE

STABLE AND SECURE OPERATIONS OF, THE GLOBAL INTERNET'S SYSTEM OF UNIQUE

IDENTIFIERS. IN PARTICULAR, ICANN FULFILLS ITS MISSION BY: (I)

COORDINATING THE ASSIGNMENT OF INTERNET TECHNICAL PARAMETERS AS NEEDED TO

MAINTAIN UNIVERSAL CONNECTIVITY ON THE INTERNET; (II) PERFORMING AND

OVERSEEING FUNCTIONS RELATED TO THE COORDINATION OF THE INTERNET PROTOCOL

("IP") ADDRESS SPACE; (III) PERFORMING AND OVERSEEING FUNCTIONS RELATED

TO THE COORDINATION OF THE INTERNET DOMAIN NAME SYSTEM ("DNS"),

INCLUDING, SUPPORTING THE DEVELOPMENT OF, AND IMPLEMENTING POLICIES FOR

DETERMINING THE CIRCUMSTANCES UNDER WHICH NEW TOP-LEVEL DOMAINS ARE ADDED

TO THE DNS ROOT NAME SERVER SYSTEM; (IV) OVERSEEING OPERATION OF THE

AUTHORITATIVE INTERNET DNS ROOT SERVER SYSTEM; AND (V) ENGAGING IN ANY

OTHER RELATED LAWFUL ACTIVITY IN FURTHERANCE OF ITEMS (I) THROUGH (IV).

SEE ADDITIONAL INFORMATION ABOUT ICANN'S PROGRAMS AND ACTIVITIES ON THE

ICANN WEBSITE AND IN THE ICANN ANNUAL REPORT POSTED AT WWW.ICANN.ORG.

FORM 990, PART I, LINE 3 AND PART VI, LINE 1A

GOVERNING BODY

IN ADDITION TO THE 16 VOTING MEMBERS OF THE BOARD OF DIRECTORS, ICANN'S

BYLAWS AS OF JUNE 30, 2015 ALLOWED FOR FOUR (4) NON-VOTING LIAISONS. THE

Name of the organization	Employer identification number
INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	95-4712218

NON-VOTING LIAISONS ARE ENTITLED TO ATTEND BOARD MEETINGS, PARTICIPATE IN BOARD DISCUSSIONS AND DELIBERATIONS, AND HAVE ACCESS (UNDER CONDITIONS ESTABLISHED BY THE BOARD) TO MATERIALS PROVIDED TO DIRECTORS FOR USE IN BOARD DISCUSSIONS, DELIBERATIONS AND MEETINGS.

THE FOLLOWING INDIVIDUALS SERVED AS NON-VOTING LIAISONS DURING THE FISCAL

YEAR ENDING JUNE 30, 2015:

- 1) RAM MOHAN (SSAC LIAISON, 2009 - PRESENT)
- 2) JONNE SOININEN (IETF LIAISON, 2013 - PRESENT)
- 3) SUZANNE WOOLF (RSSAC LIAISON, 2004 - PRESENT)
- 4) THOMAS SCHNEIDER (GAC LIAISON, 2015 - PRESENT)
- 5) HEATHER DRYDEN (GAC LIAISON, 2010 - OCTOBER 2014)

NEW GTLD PROGRAM COMMITTEE

IN ORDER TO HAVE EFFICIENT MEETINGS AND TAKE APPROPRIATE ACTIONS WITH RESPECT TO THE NEW GTLD PROGRAM FOR THE CURRENT ROUND OF THE PROGRAM AND AS RELATED TO THE APPLICANT GUIDEBOOK, THE BOARD CREATED THE NEW GTLD PROGRAM COMMITTEE ("NGPC") IN ACCORDANCE WITH ARTICLE XII OF THE BYLAWS. DURING THE FISCAL YEAR ENDING JUNE 30, 2015, THE NGPC CONSISTED OF ALL BOARD MEMBERS NOT CONFLICTED WITH RESPECT TO THE NEW GTLD PROGRAM. THE BOARD DELEGATED FULL DECISION MAKING AUTHORITY TO THE NGPC AS IT RELATES TO THE CURRENT ROUND OF THE NEW GTLD PROGRAM, WHICH COMMENCED IN JANUARY 2012. ESTABLISHING THIS NEW COMMITTEE WITHOUT CONFLICTED MEMBERS, AND DELEGATING TO ITS DECISION MAKING AUTHORITY, PROVIDED SOME DISTINCT

Name of the organization

95-4712218

ADVANTAGES. FIRST, IT HELPED ELIMINATE ANY UNCERTAINTY FOR CONFLICTED BOARD MEMBERS WITH RESPECT TO ATTENDANCE AT BOARD MEETINGS AND WORKSHOPS SINCE THE NEW GTLD PROGRAM TOPICS COULD BE DEALT WITH AT THE COMMITTEE LEVEL. SECOND, IT ALLOWED FOR ACTIONS TO BE TAKEN WITHOUT A MEETING BY THE COMMITTEE. ACTIONS WITHOUT A MEETING CANNOT BE TAKEN UNLESS DONE VIA ELECTRONIC SUBMISSION BY UNANIMOUS CONSENT; SUCH UNANIMOUS CONSENT CANNOT BE ACHIEVED IF EVEN JUST ONE BOARD MEMBER IS CONFLICTED, AND THEREFORE NOT ALLOWED TO VOTE. THIRD, IT PROVIDED THE COMMUNITY WITH A TRANSPARENT VIEW INTO THE BOARD'S COMMITMENT TO DEALING WITH ACTUAL, POTENTIAL OR PERCEIVED CONFLICTS.

THE NGPC MEMBERS AS OF JUNE 30, 2015 INCLUDED:

CHERINE CHALABY (CHAIR)

FADI CHEHADÉ (MEMBER)

STEPHEN D. CROCKER (MEMBER)

CHRIS DISSPAIN (MEMBER)

ASHA HEMRAJANI (MEMBER)

FORM 990, PART III, LINE 4A

PROGRAM SERVICE ACCOMPLISHMENTS

AS OF JUNE 30, 2015, THE INTERNET NAMESPACE CONSISTED OF 22 LEGACY, 600 NEW GENERIC TOP LEVEL DOMAINS (GTLDs) AND OVER 250 COUNTRY CODE TOP LEVEL DOMAINS (CCTLDs). EACH GTLD HAS A DESIGNATED "REGISTRY OPERATOR" AND, IN MOST CASES (EXCEPT FOR A FEW LEGACY TLDs), A REGISTRY AGREEMENT BETWEEN THE OPERATOR (OR SPONSOR) AND ICANN. THE REGISTRY OPERATOR IS RESPONSIBLE FOR THE TECHNICAL OPERATION OF THE GTLD, INCLUDING ALL OF THE NAMES REGISTERED IN THAT TLD. OVER 2,000 ICANN ACCREDITED REGISTRARS INTERACT WITH REGISTRANTS (AND OTHERS) TO PERFORM DOMAIN NAME REGISTRATION AND OTHER RELATED SERVICES FOR NEW GTLDs. THE NEW GTLD PROGRAM HAS PROVIDED A MEANS FOR PROSPECTIVE REGISTRY OPERATORS TO APPLY FOR NEW GTLDs, AND CREATE NEW OPTIONS FOR CONSUMERS. THE PROGRAM OPENED ITS FIRST APPLICATION ROUND IN JANUARY 2012 AND ICANN RECEIVED 1930 APPLICATIONS.

AS OF JUNE 30, 2015, ALL APPLICATIONS FOR NEW GTLDs THAT HAVE NOT BEEN WITHDRAWN HAVE COMPLETED INITIAL EVALUATION (IE) PHASE AND, WHERE APPLICABLE, EXTENDED EVALUATION (EE) (WITH ONE EXCEPTION). DURING IE AND EE, ALL APPLICATIONS WERE EVALUATED FOR, AMONG OTHER THINGS, FINANCIAL, TECHNICAL/OPERATIONAL, GEOGRAPHIC NAMES, AND REGISTRY SERVICES. FOLLOWING COMPLETION AND PASSING OF IE, AND EE IF APPLICABLE, FOR EACH APPLICATION NOT ON HOLD FOR SOME OTHER REASON, THE REGISTRY AGREEMENT CONTRACTING PHASE OF THE NEW GTLD PROGRAM COMMENCED. CONTRACTING IS A PROCESS THAT RESULTS IN EACH ELIGIBLE APPLICANT ENTERING INTO A REGISTRY AGREEMENT

Name of the organization

INTERNET CORP FOR ASSIGNED NAMES & NUMBERS

Employer identification number

95-4712218

WITH ICANN TO OPERATE A GTLD. NOTE THAT THERE ARE SOME CIRCUMSTANCES THAT EXIST THAT MAY DELAY THE START OF THE CONTRACTING PROCESS INCLUDING, BUT NOT LIMITED TO, PENDING OBJECTION PROCEEDINGS, PENDING ICANN ACCOUNTABILITY MECHANISMS, UNRESOLVED CONTENTION, OR DIRECTION FROM THE ICANN BOARD'S NEW GTLD PROGRAM COMMITTEE.

AFTER COMPLETION OF THE CONTRACTING PHASE, THE APPLICANT CAN ELECT TO ENTER INTO PRE-DELEGATION TESTING. PRE-DELEGATION TESTING (PDT) ENSURES THAT AN APPLICANT HAS THE CAPACITY TO OPERATE A NEW GTLD IN A STABLE, SECURE MANNER. EVERY NEW REGISTRY MUST DEMONSTRATE THAT IT HAS ESTABLISHED OPERATIONS IN ACCORDANCE WITH THE TECHNICAL AND OPERATIONAL CRITERIA DESCRIBED IN THE APPLICANT GUIDEBOOK. AFTER PASSING PDT, A REGISTRY'S GTLD CAN BE INTRODUCED INTO THE ROOT ZONE OF THE INTERNET.

AS OF JUNE 30, 2015, 680 NEW GTLDS WERE DELEGATED IN THE ROOT ZONE.

ICANN IS A MULTISTAKEHOLDER ORGANIZATION THAT COORDINATES THE INTERNET DOMAIN NAME SYSTEM (DNS) AND ADDRESSING FOR THE BENEFIT OF INTERNET USERS WORLDWIDE, ENABLING A SINGLE, INTEROPERABLE INTERNET. ICANN IS RESPONSIBLE FOR THE GLOBAL TECHNICAL COORDINATION OF THE DNS. AS OF JUNE 30, 2015, THERE WERE OVER 240 MILLION INTERNET DOMAIN NAMES, INCLUDING APPROXIMATELY 133 MILLION INTERNET DOMAIN NAMES FOUND IN GENERIC TOP-LEVEL DOMAINS, MOST OF WHICH ARE GOVERNED BY ICANN'S COMMUNITY-DEVELOPED POLICIES. SEE ADDITIONAL INFORMATION ABOUT ICANN'S PROGRAMS AND ACTIVITIES ON THE ICANN WEBSITE AND IN THE ICANN ANNUAL

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

REPORT POSTED AT WWW.ICANN.ORG.

NEW GTLD AUCTIONS

CONTENTION SETS ARE GROUPS OF APPLICATIONS FOR IDENTICAL OR CONFUSINGLY SIMILAR STRINGS. IF TWO OR MORE APPLICANTS ARE UNABLE TO RESOLVE THEIR CONTENTION THROUGH OTHER MEANS, THEY PROCEED TO AN ICANN AUCTION, WHICH IS THE METHOD OF LAST RESORT TO RESOLVE STRING CONTENTIONS AS PRESCRIBED IN MODULE 4 OF THE APPLICANT GUIDEBOOK. A TOTAL OF TWELVE (12) AUCTIONS WERE CONDUCTED DURING THE FISCAL YEAR ENDED JUNE 30, 2015.

FOR MORE INFORMATION ON AUCTIONS VISIT
[HTTP://NEWGTLD.ICANN.ORG/EN/APPLICANTS/AUCTIONS](http://NEWGTLD.ICANN.ORG/EN/APPLICANTS/AUCTIONS)

FORM 990, PART IV, LINES 28A-C

BUSINESS TRANSACTIONS WITH INTERESTED PARTIES

ICANN MAY ENTER INTO OR CONSIDER PARTICIPATION IN SMALL ARM'S LENGTH TRANSACTIONS BETWEEN ICANN AND CERTAIN TAXABLE ORGANIZATIONS WITH WHICH CERTAIN ICANN DIRECTORS OR OFFICERS (OR MEMBERS OF THEIR FAMILIES) MAY HAVE AN AFFILIATION. UNDER ICANN'S CONFLICTS OF INTEREST POLICY, ALL OFFICERS AND DIRECTORS ARE REQUIRED TO DISCLOSE ANY POTENTIAL CONFLICTS OF INTEREST BEFORE ENTERING INTO DISCUSSION ON SUCH MATTERS. IN ADDITION, THE BOARD COMMITTEE RESPONSIBLE FOR CONFLICTS OF INTEREST REVIEWS ALL BOARD MEMBER CONFLICTS OF INTEREST STATEMENTS.

SEE: [HTTP://WWW.ICANN.ORG/EN/GROUPS/BOARD/DOCUMENTS/SOIS](http://WWW.ICANN.ORG/EN/GROUPS/BOARD/DOCUMENTS/SOIS)

AS OF CALENDAR 2014, THE IRS HAS REVISED ITS STATUTORY DEFINITION OF

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

"INTERESTED PERSONS", AS RELATES TO THE TAX FORM 990. AS SUCH, FOR THE PURPOSES OF THIS FILING, ICANN NO LONGER HAS ANY APPLICABLE TRANSACTIONS TO REPORT ON SCHEDULE L - TRANSACTIONS WITH INTERESTED PERSONS.

FORM 990, PART VI, LINE 7A

BODIES THAT APPOINT MEMBERS OF ICANN'S GOVERNING BODY THE NOMINATING COMMITTEE (NOMCOM) IS RESPONSIBLE FOR THE SELECTION OF EIGHT ICANN VOTING BOARD MEMBERS AND FOR OTHER SELECTIONS AS ARE SET FORTH IN THE BYLAWS. (SEE BYLAWS ARTICLE VII, SECTION 1.) THE NOMCOM IS CHARGED WITH POPULATING A PORTION OF THE ICANN BOARD AS NOTED ABOVE, AS WELL AS THE AT-LARGE ADVISORY COMMITTEE ("ALAC"), THE COUNTRY CODE NAMES SUPPORTING ORGANIZATION ("CCNSO") COUNCIL AND THE GENERIC NAMES SUPPORTING ORGANIZATION ("GNSO") COUNCIL. THE NOMCOM COMPLEMENTS THE OTHER MEANS FOR FILLING A PORTION OF KEY ICANN LEADERSHIP POSITIONS ACHIEVED WITHIN THE SUPPORTING ORGANIZATIONS AND ADVISORY COMMITTEES.

THE BYLAWS ALSO STATE THAT THE NOMCOM SHALL ADOPT SUCH OPERATING PROCEDURES AS IT DEEMS NECESSARY, WHICH SHALL BE PUBLISHED ON THE ICANN WEBSITE. THE NOMCOM IS DESIGNED TO FUNCTION INDEPENDENTLY FROM THE BOARD, THE SUPPORTING ORGANIZATIONS, AND ADVISORY COMMITTEES.

MEMBERS OF THE NOMCOM CONTRIBUTE BOTH THEIR UNDERSTANDING OF THE BROAD INTERESTS OF THE INTERNET AS A WHOLE AND THEIR KNOWLEDGE AND EXPERIENCE OF THE CONCERNS AND INTERESTS OF THE INTERNET STAKEHOLDERS THAT HAVE APPOINTED THEM. THE CHALLENGE FOR THE NOMCOM IS TO INTEGRATE THESE PERSPECTIVES AND DERIVE CONSENSUS IN ITS SELECTIONS. ALTHOUGH APPOINTED

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

BY SUPPORTING ORGANIZATIONS AND OTHER ICANN BODIES, INDIVIDUAL NOMCOM MEMBERS ARE NOT ACCOUNTABLE TO THEIR APPOINTING CONSTITUENCIES BUT RATHER TO ICANN AS A WHOLE. NOMCOM MEMBERS ARE ACCOUNTABLE FOR ADHERENCE TO THE BYLAWS AND FOR COMPLIANCE WITH THE RULES AND PROCEDURES ESTABLISHED BY THE NOMCOM.

IN ADDITION, AND ALSO IN ACCORDANCE WITH ICANN'S BYLAWS, EACH OF THE FOLLOWING SUPPORTING ORGANIZATIONS NAME TWO VOTING BOARD MEMBERS TO THE ICANN BOARD, EACH FOR A THREE-YEAR TERM: THE ADDRESS SUPPORTING ORGANIZATION, THE CCNSO AND THE GNSO. FURTHER, THE AT-LARGE COMMUNITY ALSO NAMES ONE VOTING BOARD MEMBER TO THE ICANN BOARD EVERY THREE YEARS.

FORM 990, PART VI, LINES 10A & 10B
LOCAL CHAPTERS, BRANCHES AND AFFILIATES

DURING FISCAL 2015, ICANN HAD OFFICES OUTSIDE OF THE UNITED STATES IN BRUSSELS, BELGIUM; ISTANBUL, TURKEY; SINGAPORE, SINGAPORE; AND GENEVA, SWITZERLAND; ALL OF WHICH PROVIDED OPERATIONAL OR ENGAGEMENT SUPPORT TO THEIR RESPECTIVE GEOGRAPHICAL REGIONS AND/OR TIME ZONES.

FORM 990, PART VI, LINE 11B
FORM 990 REVIEW PROCESS

A COPY OF THE FORM 990 IS PROVIDED TO ICANN'S BOARD MEMBERS BEFORE IT IS FILED. THE PROCESS BY WHICH THE FORM 990 IS PREPARED, REVIEWED AND RECEIVED IS AS FOLLOWS:

1. ICANN ENGAGES AN OUTSIDE TAX PREPARER TO ASSIST IN THE PREPARATION OF

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

ITS FORM 990.

2. ICANN'S CHIEF FINANCIAL OFFICER (CFO), AND OFFICE OF THE GENERAL COUNSEL REVIEW THE FORM 990, AND THE CFO SIGNS OFF FOR APPROVAL.
3. THE FORM 990 IS PROVIDED TO THE ICANN BOARD MEMBERS.

FORM 990, PART VI, LINE 12C
CONFLICTS OF INTEREST POLICY

ICANN HAS WRITTEN CONFLICTS OF INTEREST POLICIES, WHICH ARE APPLICABLE TO ALL BOARD MEMBERS AND STAFF MEMBERS. THE OFFICE OF THE GENERAL COUNSEL MONITORS THE POLICIES WITH OVERSIGHT BY THE BOARD GOVERNANCE COMMITTEE (BGC) AS THEY RELATE TO THE BOARD. A CONFLICTS OF INTEREST DISCLOSURE STATEMENT IS COMPLETED ANNUALLY AND SIGNED BY EACH BOARD MEMBER, OFFICER AND EMPLOYEE. THE STAFF MEMBER AND CONTRACTOR DISCLOSURE STATEMENTS ARE REVIEWED BY THE HEAD OF HUMAN RESOURCES AND DISCUSSED WITH GENERAL COUNSEL'S OFFICE IF ANY ISSUES ARISE. THE BOARD LEVEL DISCLOSURE STATEMENTS ARE REVIEWED BY THE OFFICE OF GENERAL COUNSEL AND THE BGC. THE BOARD MEMBER, OFFICER AND KEY EMPLOYEE CONFLICTS OF INTEREST POLICY CAN BE FOUND AT:

[HTTP://WWW.ICANN.ORG/EN/GROUPS/BOARD/GOVERNANCE/COI.](http://www.icann.org/en/groups/board/governance/coi)

THIS POLICY DESCRIBES THE DUTY TO DISCLOSE, THE PROCEDURES FOR ADDRESSING CONFLICTS OF INTEREST, THE DUTY TO ABSTAIN, HOW VIOLATIONS OF THE CONFLICTS OF INTEREST POLICY WILL BE HANDLED, THE PROCESS BY WHICH ALL COVERED PERSONS SIGN ANNUALLY THEIR AFFIRMATION OF THE POLICY AND DISCLOSE THEIR ACTUAL OR POTENTIAL CONFLICTS, AND THE REQUIREMENT AND NATURE OF PERIODIC REVIEWS.

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

A SUMMARY OF BOARD MEMBER AND OFFICER DISCLOSURE STATEMENTS ARE POSTED ON THE WEBSITE AT: [HTTP://WWW.ICANN.ORG/EN/GROUPS/BOARD/DOCUMENTS/SOIS](http://www.icann.org/en/groups/board/documents/sois)

FORM 990, PART VI, LINES 13 & 14

WHISTLEBLOWER POLICY AND DOCUMENT RETENTION AND DESTRUCTION POLICY

ICANN MAINTAINS AN INTERNAL DOCUMENT RETENTION AND DESTRUCTION POLICY AND HISTORICALLY HAS FOLLOWED BEST INDUSTRY PRACTICES FOR RETENTION AND DESTRUCTION. ICANN ALSO MAINTAINS AN INTERNAL WHISTLEBLOWER (OR "ANONYMOUS HOTLINE") POLICY, THAT ALSO FOLLOWS INDUSTRY BEST PRACTICES.

FORM 990, PART VI, LINES 15A & 15B

PROCESS FOR DETERMINING COMPENSATION

ICANN FOLLOWS PRINCIPLES OF ACCOUNTABILITY AND TRANSPARENCY AND DESCRIBES ITS REMUNERATION PLANS AND PRACTICES, WHICH ARE CONTINUALLY UPDATED. THE VERSION OF ICANN'S REMUNERATION PRACTICES APPLICABLE DURING FY2015 IS POSTED AT:

[HTTPS://WWW.ICANN.ORG/EN/SYSTEM/FILES/FILES/REMUNERATION-PRACTICES-FY15-01
NOV14-EN.PDF](https://www.icann.org/en/system/files/files/remuneration-practices-fy15-01-nov14-en.pdf)

THE PROCESS FOR DETERMINING COMPENSATION, INCLUDING SURVEYS OF COMPARABLE POSITIONS AND OTHER MARKET STUDIES IS DESCRIBED IN THIS REMUNERATION PRACTICES REPORT. OFFICER COMPENSATION IS DISCLOSED AS WELL. SALARIES OF ALL OFFICERS ARE REVIEWED AND APPROVED BY THE BOARD OF DIRECTORS FOLLOWING RECOMMENDATIONS BY THE BOARD COMPENSATION COMMITTEE, WHICH ARE INFORMED BY RECOMMENDATIONS AND COMPARABLE DATA PROVIDED BY INDEPENDENT

Name of the organization INTERNET CORP FOR ASSIGNED NAMES & NUMBERS	Employer identification number 95-4712218
--	--

COMPENSATION EXPERTS. CONFIDENTIAL MINUTES OF THESE MEETINGS ARE MAINTAINED BY THE BOARD SECRETARY AS PART OF THE CORPORATE SECRETARIAT FUNCTION. EACH YEAR THE APPOINTMENT FOR EACH OFFICER IS CONFIRMED BY THE BOARD OF DIRECTORS AT THE ANNUAL GENERAL MEETING. THE COMPENSATION REVIEW PROCESS OCCURS ANNUALLY; THE LAST REVIEW WAS COMPLETED IN JULY, 2014.

QUALITY PROGRAM REPORT FOR INITIAL EVALUATION NOW AVAILABLE

Today CANN published the Quality Program report for Initial Evaluation. The Quality Program was designed and implemented to both improve and measure consistency/precision/accuracy and process fidelity during the Initial Evaluation phase of the New gTLD Program.

JAS Global Advisors was the firm selected to develop and implement the Quality Program. The JAS report is now published to inform the community of the objectives, methodology and findings of the Quality Program. The report also includes analysis and recommendations for areas of improvement.

The results of the Quality Program show that CANN achieved an important goal of consistency and quality in the evaluation of applications. A unified approach to preparing training, synchronizing and conducting pilot exercises with evaluation firms was cited as the most critical factor to this success.

RE: .MUSIC Community Priority Evaluation (“CPE”) for .MUSIC Application ID 1-1115-14110¹ Request under ICANN’s Documentary Information Disclosure Policy (“DIDP”)

Dear ICANN:

This request is submitted under ICANN’s Documentary Information Disclosure Policy by DotMusic Limited (“DotMusic” or “Requestor”) in relation to ICANN’s .MUSIC Community Priority Evaluation (“CPE”). The .MUSIC CPE Report² (the “CPE Report”) found that DotMusic’s community-based Application (the “Application”) did not prevail. DotMusic is investigating the numerous CPE process violations and the contravention of established procedures as set forth in the Reconsideration Request 16-5 (“RR”).³

Some of the ICANN violations of established procedures and policies include:

1. Disregarding International Laws and Conventions with respect to the defined Music Community’s “cohesion” in relation to music copyright;^{4 5}
2. Misapplication and disregard of “Community” Definition from 20A;
3. Misapplication and disregard of “logical alliance” “Community Definition that has “cohesion” and meets criteria according to the Applicant Guidebook (“AGB”);
4. Misapplication and disregard of Community “Name” in Nexus;
5. Misapplication and disregard of AGB “Majority” Criterion in Support;
6. Misapplication and disregard of AGB “Recognized” organizations recognized by both the United Nations (“UN”) and the World Intellectual Property Organization (“WIPO”);⁶

² .MUSIC CPE Report, <https://icann.org/sites/default/files/tlds/music/music-cpe-1-1115-14110-en.pdf>, DIDP Ex.A2

³ See <https://icann.org/resources/pages/reconsideration-16-5-dotmusic-request-2016-02-25-en>

⁴ All music constituent types - regardless whether they are commercial or non-commercial in nature - are reliant on music copyright “cohesion” in one way or another for their activities and participate as a whole in a regulated sector with demonstrated activities tied to music that cohere to international copyright law, united under international treaties, agreements and conventions

⁵ Also See RR-related DotMusic Letter to ICANN Board Governance Committee (“BGC”), <https://icann.org/en/system/files/files/reconsideration-16-5-dotmusic-to-icann-bgc-28mar16-en.pdf>, DIDP Ex.A87

⁶ Also See RR-related IFPI Letter to ICANN Board Governance Committee (“BGC”), <https://icann.org/en/system/files/files/reconsideration-16-5-dotmusic-letter-ifpi-to-icann-24feb16-en.pdf>, DIDP Ex.88

 Available to the Entire Global Music Community.

7. Disregard of global music federations “mainly” dedicated to Community recognized both by UN and WIPO;
8. Misapplication of the AGB’s “Organized” definition in Community Establishment based on false facts and lack of compelling evidence that the Music Community defined is not organized under a regulated sector, international law and international conventions/treaties;
9. Disregard that the Music Community defined existed before 2007 in Community Establishment;
10. Policy misapplication and disregard of ICANN-accepted GAC consensus Category 1 Advice in Community Establishment demonstrating the defined Community’s unity under a regulated sector;⁷
11. Failure to compare and apply consistent scoring across all CPE applications and implement the quality control process to ensure fairness, transparency, predictability and non-discrimination;
12. Economist Intelligence Unit (“EIU”) conflict of interest with competitor Google (Eric Schmidt was on The Economist Board during CPE) in violation of the ICANN-EIU Statement of Work (“SOW”) and Expression of Interest (“EOI”), the AGB and CPE Guidelines, ICANN’s Bylaws, and The Economist’s Guiding Principles; and
13. EIU’s failure to undertake appropriate (if any) research to support compelling conclusions in the CPE Report, despite DotMusic’s (and DotMusic’s supporters’) provision of thousands of pages of “*application materials and...research*” as “*substantive evidence*” of “*cohesion*,”^{8 9} including DotMusic’s in-depth response to the EIU’s Clarifying Questions.¹⁰

A. Context

ICANN’s Documentary Information Disclosure Policy (“DIDP”) is intended to ensure that information contained in documents concerning ICANN’s operational activities, and within ICANN’s possession, custody, or control, is made available to the public unless there is a compelling reason for confidentiality.¹¹ In responding to a request submitted pursuant to the DIDP, ICANN adheres to its *Process for Responding to ICANN’s Documentary Information Disclosure Policy (DIDP) Requests*.¹² According to ICANN, staff first

⁷ Also See RR-related DotMusic Letter to ICANN Board Governance Committee (“BGC”), <https://www.icann.org/en/system/files/files/reconsideration-16-5-dotmusic-to-icann-bgc-17mar16-en.pdf>, DIDP Ex.A89

⁸ Concluding that there is “*no substantive evidence*” that the Music Community defined in its entirety has no cohesion (i.e. does not unite cohesively under international music copyright or is reliant on international conventions) is not a compelling and defensible argument. No facts were presented by the EIU to refute DotMusic’s materials or prove that the Music Community defined has no cohesion under international music copyright or international conventions. In fact, it is a matter of international law, international conventions and government regulations that all of the Music Community depends on music copyright cohesion for its activities and could function as they do without them. In fact nearly all music constituent groups would not exist without cohesion and unity under music copyright.

⁹ DotMusic’s supporters submitted thousands of letters of support, each letter containing “*substantive evidence*” of “*cohesion*,” which the EIU ignored entirely. The EIU did not argue nor oppose DotMusic’s (and its supporters’) facts, materials and evidence in its CPE Report. The EIU chose to remain silent and falsely concluded that there was no evidence of cohesion, despite the overwhelming submission of evidence and supporting documents. According to ICANN, “*DotMusic Limited and its supporters have submitted a high volume of correspondence (hundreds of letters) to ICANN for the CPE Panel’s consideration.*” See <https://www.icann.org/en/system/files/correspondence/willett-to-roussos-zamek-04dec15-en.pdf>, DIDP Ex.86.

¹⁰ DotMusic Response to EIU’s Clarifying Questions, DIDP Ex.A92

identifies all documents responsive to the DIDP request. Staff then reviews those documents to determine whether they fall under any of the DIDP's Nondisclosure Conditions, which include, among several others:

Internal information that, if disclosed, would or would be likely to compromise the integrity of ICANN's deliberative and decision-making process; and

Information exchanged, prepared for, or derived from the deliberative and decision-making process between ICANN, its constituents, and/or other entities with which ICANN cooperates.¹³

According to ICANN, if the documents do fall within any of those Nondisclosure Conditions, ICANN staff determines whether the public interest in the disclosure of those documents outweighs the harm that may be caused by such disclosure.¹⁴

It is also important to note that at the Meeting of the ICANN Board on March 10, 2016, the Board affirmed serious issues raised by a recent Independent Review Proceeding declaration (relating to the CPE of .ECO and .HOTEL) about the lack of consistency and predictability of the CPE process, and encouraged staff to respond to DIDP requests in the most specific and detailed manner possible. To that end, the Board resolved:

Resolved (2016.03.10.11), the Board notes the Panel's suggestions, and: (1) directs the President and CEO, or his designee(s), to ensure that the New gTLD Program Reviews take into consideration the issues raised by the Panel as they relate to the consistency and predictability of the CPE process and third-party provider evaluations; (2) encourages ICANN staff to be as specific and detailed as possible in responding to DIDP requests, particularly when not disclosing requested documents; (3) affirms that, as appropriate, ICANN will continue to ensure that its activities are conducted through open and transparent processes in conformance with Article IV of ICANN's Articles of Incorporation.¹⁵

Requester invokes ICANN's accountability mechanisms to request internal documentation to investigate ICANN's and the Panel's internal deliberation and decision-making process in determining the CPE Report that was grossly negligent as set forth in the RR, because it violated numerous established ICANN procedures and policies.

DotMusic would have passed CPE if the Panel followed established procedures and ICANN processes were managed "*in conformity with relevant principles of international law and applicable international conventions.*"¹⁶ The Panel and ICANN should have recognized music community cohesion through applicable international conventions (such as the 1886 Berne Convention that relates to the protection of

<https://icann.org/en/system/files/files/didp-response-process-29oct13-en.pdf> , DIDP Ex.A4

copyright signed by 171 countries¹⁷) and established international music copyright law. Indeed, The Economist, the parent company of the Economist Intelligence Unit CPE Panel (the “EIU”), also recognizes the Berne Convention because The Economist is reliant on copyright cohesion and international law protection¹⁸ to conduct its primary activities. According to The Economist:

Copyright is a property right that gives the creators of certain kinds of material rights to control the ways in which such material can be used. These rights are established as soon as the material has been created, with no need for official registration. Copyright applies globally and is regulated by a number of international treaties and conventions (including the Berne Convention, the Universal Copyright Convention, the Rome Convention and the Geneva Convention).¹⁹

The Economist’s own words invalidate the EIU’s CPE Report rationale that “*application materials and further research provide no substantive evidence of what the AGB calls “cohesion” – that is, that the various members of the community as defined by the application are ‘united or form a whole.’*”²⁰ Concluding that there is “no substantive evidence” that the music community defined in its entirety has no cohesion (i.e. does not unite cohesively under international music copyright or is reliant on international conventions) is not a compelling and defensible argument. It appears that the EIU failed to undertake appropriate (if any) research to support its conclusions. The decision was rendered despite DotMusic's provision of thousands of pages of “*application materials and...research*” as “*substantive evidence*” of “*cohesion,*” including citing in numerous materials the international Berne Convention. For example, DotMusic defined its Community and clarified in its Application materials that:

The requisite awareness of the community is clear: participation in the Community, the logical alliance of communities of similar nature related to music, -- a symbiotic, interconnected eco-system that functions because of the awareness and recognition of its members. The delineated community exists through its members participation within the logical alliance of communities related to music (the “Community” definition). Music community members participate in a shared system of creation, distribution and promotion of music with common norms and communal behavior e.g. commonly-known and established norms in regards to how music entities perform, record, distribute, share and consume music, including a shared legal framework in a regulated sector governed by common copyright law under the Berne Convention, which was established and agreed upon by over 167 international governments with shared rules and communal regulations.²¹

The importance of copyright and the cohesion of the Music Community was previously recognized by the members of the ICANN Board and the NGPC (who are also members of the BGC) through acceptance of GAC Category 1 Advice that .MUSIC is a “*string that is linked to regulated sector*” that “*should operate in a*

way that is consistent with applicable laws,”²² a Resolution that, in effect, agrees that all music groups that comprise the music community defined (“logical alliance of communities that relate to music”) participate as a whole in a regulated sector with demonstrated activities tied to music that cohere to international copyright law, united under international treaties, agreements and conventions.

B. Documentation Requested

Requester invokes ICANN’s accountability mechanisms to request documentation to determine whether the CPE Panel and ICANN followed established process and policies in the evaluation of the .MUSIC CPE: Among other things, it appears that the CPE Report was prepared in a manner that: i) did not apply criteria in a consistent manner; (ii) misapplied facts and evaluation criteria in the evaluation to establish conclusions that are not compelling nor defensible; and (iii) did not follow ICANN’s quality control process to ensure consistency of approach in scoring, non-discrimination, fairness, predictability and transparency.

Requestor notes that any links or documentation that are publicly available are not requested and do not satisfy this request. DotMusic has access to all publicly available documentation and policies and only requests for documentation that is currently unavailable i.e. internal ICANN documents.

DotMusic respectfully requests the following documentation from ICANN under the *Documentary Information Disclosure Policy*:

- 1) All non-public internal documents (including call records and minutes) of the communication between ICANN, the EIU and independent Quality Control service provider relating the EIU’s consistent, compelling and defensible decision-making process used in developing the CPE Report determination and showcasing how DotMusic’s application and CPE Process was compared to previous prevailing CPE determinations to ensure fairness, non-discrimination, transparency, predictability and consistency;**

Context:

The CPE Report was grossly negligent and violated numerous established procedures, including incorporating false facts, misapplying procedural instructions from the AGB and CPE Guidelines, and inconsistently scoring DotMusic’s Application in CPE in comparison to prevailing CPE determinations.²³

²² <https://icann.org/en/system/files/correspondence/crocker-to-schneider-23jun15-en.pdf>, pp.1-2, DIDP Ex.A41

²³ Also see RR-related letter from the IFPI stating: “We believe the finding to be flawed...Given the scale of the music community’s support for the Dot Music application, it is difficult to understand what level of support a CPE applicant would need to demonstrate to prevail, and this gives rise to serious misgivings about the transparency, consistency, and accountability of the CPE process...highlighting the disparity between the decisions of the EIU Panel. Unfortunately, these inconsistencies have continued in the EIU Panel’s evaluation of the DotMusic application...we note with concern the different criteria that appear to have been applied to the .HOTEL and . MUSIC CPE applications respectively. Also of concern is the EIU Panel’s finding that DotMusic failed to provide documented support from “recognised community institution(s)/member organization(s)”. IFPI is a globally recognised organization...Our members operate in 61 countries and IFPI has affiliated organisations, including national groups in 57 countries. We also administer the internationally recognised ISRC system. We therefore object to the EIU Panel’s finding,” DIDP Ex.88; Also see RR-related letter from the National Music Council, representing almost 50 music organizations and the International Music

Trusted. Safe. Licensed.

- 2) All the non-public internal *draft* CPE Reports and all related internal correspondence between ICANN and the EIU related to (i) DotMusic’s .MUSIC CPE; (ii) the prevailing .RADIO CPE; (iii) the prevailing .HOTEL CPE; (iv) the prevailing .SPA CPE; (v) the prevailing .ECO CPE; (vi) the prevailing .OSAKA CPE; (vii) the .GAY CPE;²⁴ and (viii) all non-public internal correspondence, reports, documents, emails and any other forms of other communication showcasing how DotMusic’s application and CPE Process was compared to other prevailing CPE determinations to ensure fairness, non-discrimination, transparency, predictability and consistency;

Context:

There is precedent to the disclosure of these types of documents. ICANN has publicly disclosed some *draft* CPE reports and deliberative and/or decision-making related emails between the EIU and ICANN concerning the CPE of .LLC, .INC, .LLP and .GMBH in the Dot Registry Independent Review Proceeding (“IRP”).²⁵ DotMusic requests the above-mentioned internal documents to investigate: (i) the CPE inconsistency issues between DotMusic’s CPE in comparison to the prevailing CPE Applications; (ii) the research and evidence used to determine Community Establishment “cohesion” for other prevailing CPE applications in comparison to DotMusic; and (iii) whether or not the Panel assessed DotMusic’s “*logical alliance*” community definition per the AGB and CPE Guidelines in its Determination (*Note*: The CPE Report did not assess nor identify DotMusic’s “*logical alliance*” community definition from DotMusic’s Application answer to 20A as required by the AGB, instead construed its own definition from DotMusic’s Application answer to 20D); and (iv) whether or not the

Council. The letter stated that: “*The international music community has come together across the globe to support the DotMusic application, and we cannot comprehend how the application could have failed on the community criteria... We therefore object to the decision noted above, the basis of which is an apparent inconsistency in the application of the governing rules,*” <https://www.icann.org/en/system/files/files/reconsideration-16-5-national-music-council-to-icann-bgc-28mar16-en.pdf>, DIDP Ex.A90

²⁴ See DIDP Ex.A60 for comparison between DotMusic’s CPE Report and the .RADIO, .HOTEL, .SPA, .ECO, .OSAKA and .GAY CPE Reports that reveals material inconsistencies, the appearance of discrimination, lack of fairness and lack of transparency in violation of both ICANN’s Bylaws and Articles of Incorporation: According to ICANN’s Bylaws “*ICANN shall not apply its standards, policies, procedures, or practices inequitably or single out any particular party for disparate treatment unless justified by substantial and reasonable cause*” under Article 2, Section 3, and “*ICANN and its constituent bodies shall operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness*” under Article 3, See

<https://icann.org/resources/pages/governance/bylaws-en>, DIDP Ex.A72. Under Article 4 of ICANN’s Articles of Incorporation: “*The Corporation shall operate for the benefit of the Internet community as a whole, carrying out its activities in conformity with relevant principles of international law and applicable international conventions and local law and, to the extent appropriate and consistent with these Articles and its Bylaws, through open and transparent processes that enable competition and open entry in Internet-related markets. To this effect, the Corporation shall cooperate as appropriate with relevant international organizations,*”

<https://icann.org/resources/pages/governance/articles-en>, DIDP Ex.A45; Also see RR for more detail on inconsistencies between CPE Report and CPE determinations for .HOTEL, .SPA, .OSAKA, .GAY, .ECO and .RADIO,

<https://icann.org/en/system/files/files/reconsideration-16-5-dotmusic-request-redacted-24feb16-en.pdf>, DIDP Ex.A91

Panel assessed the Applicant Guidebook's ("AGB") "majority" criterion in its deliberation process to determine the CPE Report (*Note*: The CPE Report did not assess nor mention the "majority" criterion as required by the AGB and CPE Guidelines).

According to the Statement of Work ("SOW") signed by ICANN and the EIU, the EIU agreed that its activities will be bound by ICANN's **Governance requirements and governance processes** relating to ICANN's Articles of Incorporation and Bylaws:²⁶

As part of the overall gTLD program, Panel Firm's project management team will work with the Program Office to ensure that the evaluations are completed consistently and completely in adherence to the Applicant Guidebook and in accordance with processes established by the Program Office...Panel Firm will establish a project management approach to manage, coordinate and monitor the evaluation activities based on...ICANN's gTLD Program Governance requirements. Panel Firm will tailor certain project management processes to directly support the Program Office governance processes.²⁷

Moreover, according to the Comparative Evaluation Panel Expressions of Interest ("EOI"), the EIU agreed that "*the evaluation process for selection of new gTLDs will respect the principles of fairness, transparency, avoiding potential conflicts of interest, and non-discrimination*"²⁸ and provided ICANN with a "*statement of the candidate's plan for ensuring fairness, nondiscrimination and transparency.*"²⁹

As such, ICANN's Core Values through its Bylaws were **contractually imposed** on the EIU.³⁰ Implementing a quality control process that compares all CPE results to provide consistent CPE results was a critical process that DotMusic relied upon when applying in 2012. Quality control that compares CPE determinations to ensure consistency would have been easy to incorporate because ICANN had already employed such quality control process throughout the New gTLD Program's Initial Evaluation process: ICANN hired JAS to perform quality control and ensure consistency across hundreds of applications during initial evaluation.³¹ For example, "*a statistically relevant number of technical/operational and financial evaluations were subject to half-blind Content Inspection reviews*

performed on a *de novo* basis” by JAS, which sampled 274 applications (over 12 times the number of CPE applications that were processed by the EIU).³² According to JAS, a 100% “*Per Application Consistency Rating*” was accomplished for 274 applications that were entirely Consistent Post Outreach.³³ Out of the 1930 applications filed in March 2012,³⁴ only 22 have gone through CPE as of the .MUSIC CPE Report determination of February 2016 (i.e. about 1%). ICANN and the EIU also had nearly 4 years to review all 22 community applications and to ensure consistency of approach in determining the CPE Report. ICANN and the EIU were required to ensure equal treatment of similarly situated applicants when one considers that ICANN had already hired JAS to perform a similar function during the Initial Evaluation process that was over twelve (12) times the size of the number of applications going through CPE.

- 3) **All the non-public internal communication documents and non-public internal correspondence between ICANN and the EIU in formulating the CPE Guidelines that were “prepared by the Economist Intelligence Unit”³⁵ before and after the CPE Guidelines public comment period (nearly 1 ½ years after DotMusic’s 2012 Application filing);**

Context:

DotMusic would like to investigate the findings of the CPE Report to the extent that it disregarded the AGB and CPE Guidelines’ “*logical alliance*” criterion. This pertains to DotMusic’s community definition which relates to a “*logical alliance*” (“*delineated and organized logical alliance of communities that relate to music*”). According to the AGB (and CPE Guidelines), with respect to “*Delineation*” and “*Extension*” “*it should be noted that a community can consist of...a logical alliance of communities.*”^{36 37} The AGB and CPE Guidelines also allow communities that are supported and established through multiple organizations and institutions. The relevant provisions provide: “*with respect to “Support,” the plurals in brackets for a score of 2, relate to cases of multiple institutions/organizations. In such cases there must be documented support from institutions/organizations representing a majority of the overall community addressed in order to score 2.*”^{38 39}

The EIU was knowledgeable of both the “*logical alliance*” and “*majority*” criteria because the EIU prepared the CPE Guidelines in 2013. Yet the EIU did not consider either criterion in determining the DotMusic CPE Report. The EIU awarded the maximum *Community Establishment* score to the .HOTEL CPE prevailing applicant by applying the “*logical alliance*” criterion.⁴⁰ Furthermore, the EIU awarded the maximum *Community Support* score to the .RADIO CPE prevailing applicant by applying the

“majority” criterion.⁴¹ In contrast, the EIU disregarded these criteria in DotMusic’s CPE process and did not follow AGB and CPE Guidelines. By not applying these CPE process criteria, the EIU did not follow established procedure that would have resulted in a passing grade for DotMusic’s Application.

- 4) **All non-public internal documents and internal correspondence between ICANN staff that relate to the altering of the original AGB language pertaining to the *Notice of Changes of Information* section of the AGB;**⁴²

Context:

From 2012 to 2014 (after the Application was filed), ICANN introduced material new “change request” language numerous times that harmed the interests of community applicants and resulted in provided preferential treatment to non-community applicants without any formal policy development process.⁴³

- 5) **The names of all the EIU CPE evaluators pertaining to the .MUSIC, .ECO, .RADIO, .SPA, .HOTEL, .OSAKA and .GAY CPE processes and any correspondence between ICANN and Google’s Vice-President (also ex-ICANN chairman and ICANN Strategy Chair) Vinton Cerf to further investigate the appearance of a conflict of interest and ensure that the evaluators were qualified to evaluate a music-related CPE as explicitly required by the AGB and CPE Materials;**

Context:

During the CPE Evaluation process, Google Chairman Eric Schmidt was on the Board of Directors of the Economist Group, the parent company of the EIU. While not necessarily dispositive, the ten (10) community applicants that competed with Google did not prevail in CPE. With the exception of the CPE Process, the names of New gTLD Program Panelists that performed evaluations that could determine a contention set after the Initial Evaluation process (such as Community Objections, Legal Rights Objections, String Similarity Objections, and Public Interest Objections) were publicly disclosed. The CPE process lacked such transparency, increasing the probability of conflicts of interest and eliminating the opportunity for full accountability, and verifying that the panel was qualified as mandated:

All EIU evaluators undergo regular training to ensure full understanding of all CPE requirements as listed in the Applicant Guidebook, as well as to ensure consistent judgment. This process included a pilot training process, which has been followed by regular training sessions to ensure that all evaluators have the same understanding of the evaluation process and procedures. EIU evaluators are

⁴¹ See .RADIO CPE Report, DIDP Ex.A58

⁴² See AGB, §1.2.7, Module 1, p. 1-30: “If at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant. ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round. Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application,” DIDP Ex.A7

⁴³ See DIDP Ex.A52 for “Change Request” policy update changes from 2012 to 2014

highly qualified... and have expertise in applying criteria and standardized methodologies across a broad variety of issues in a consistent and systematic manner."⁴⁴

The panel will be an internationally recognized firm or organization with significant demonstrated expertise in the evaluation and assessment of proposals in which the relationship of the proposal to a defined...community plays an important role...The provider must be able to convene a... panel capable... of evaluating Applications from a wide variety of different communities....The panel must be able to exercise consistent and somewhat subjective judgment in making its evaluations in order to reach conclusions that are compelling and defensible, and... The panel must be able to document the way in which it has done so in each case. ...EIU evaluators are selected based on their knowledge of specific countries, regions and/or industries, as they pertain to Applications....All Applications will subsequently be reviewed by members of the core project team to verify accuracy and compliance with the AGB, and to ensure consistency of approach across all applications."⁴⁵

- 6) **The name of “the appointed independent Quality Control service provider” per the SOW and all non-public internal documents and non-public internal correspondence between “the appointed independent Quality Control service provider for the purposes of helping it to verify that Panel Firm’s evaluation services have been and are performed in accordance with the Quality Control Guidelines” and ICANN and/or the EIU.**⁴⁶

Context:

The CPE Guidelines state that the “EIU will fully cooperate with ICANN’s quality control process.”⁴⁷ Given the CPE inconsistencies between DotMusic’s CPE Report and prevailing community applicants’ CPE Reports, and the grossly negligent process failures, DotMusic requests all non-public internal documents and non-public internal correspondence between ICANN, the EIU and the independent Quality Control service provider pertaining to DotMusic’s CPE Process and the development of the CPE Report “to ensure consistency of approach across all applications”⁴⁸ as explicitly mandated by the CPE Guidelines prepared by the EIU. DotMusic relied on an effective and accountable quality control process to ensure fairness, predictability, non-discrimination and consistency when applying in 2012.

If ICANN denies the disclosure of all the documents requested, DotMusic requests ICANN to:

- i. **Define “public interest” with respect to the DIDP process and explain in detail how “the harm in disclosing the information outweighs the public interest in disclosing the information” in relation to DotMusic’s statements supporting why it serves the public interest for ICANN to release all the documentation requested (See Section C: Why It Serves Public Interest to Release the Documentation Requested);**
- ii. **Provide DotMusic with Privileged Logs which clearly describe as to each document withheld the type of document, the general subject matter thereof, the date on which**

C. Why It Serves Public Interest to Release the Documentation Requested

DotMusic and the Music Community (the defined “*logical alliance*” with members representing over 95% of music consumed globally) have been negatively affected by the CPE Report and ICANN’s actions/inactions in relation to the CPE process. If DotMusic is not awarded .MUSIC, DotMusic, will suffer material brand dilution⁵⁰ and be subject to expensive auctions which (as agreed upon by the European Commission⁵¹) were designed to favor deep pocketed Applicants, such as Google and Amazon. More importantly, the Music Community, Internet users and the global public interest will suffer material harm as evidenced below.

As set forth in the Application, DotMusic has an all-inclusive tent that is united by its core principles consistent with its articulated community-based purpose:

- Creating a trusted, safe online haven for music consumption and licensing
- Establishing a safe home on the Internet for Music Community (“Community”) members regardless of locale or size
- Protecting intellectual property & fighting piracy
- Supporting Musicians’ welfare, rights & fair compensation
- Promoting music and the arts, cultural diversity & music education
- Following a multi-stakeholder approach of fair representation of all types of global music constituents, including a rotating regional Advisory Committee Board working in the Community’s best interest. The global Music Community includes both reaching commercial and non-commercial stakeholders.⁵²

Per DotMusic’s Application and Public Interest Commitments (“PIC”),⁵³ .MUSIC will be launched as a safe haven for legal music consumption that ensures that .MUSIC domains are trusted and authenticated to benefit the interests of the Internet community and the global music community. DotMusic, its current and future music members and supporters will be adversely affected if the Report stands and DotMusic is awarded to any of the competing non-community applicants⁵⁴ (which will also be a disservice to the Internet user community in general) because competing applicants either: (i) lack the music community multi-

stakeholder governance model to represent the community's interests; and/or (ii) lack the extensive music-tailored safeguard policies that DotMusic has to protect consumers and serve the community.⁵⁵ Allowing the CPE Report to stand would turn .MUSIC into an open and unsafe, unreliable and untrusted string governed by non-community interests. **A non-community-based string will create material harm to the legitimate interests of the Music Community, Internet users and consumers, by increasing intellectual property infringement and other types of malicious abuse.** Music is a sensitive string driven by content and copyright protection that must be operated responsibly within its regulated sector as outlined in the Application.

Pirate sites distribute illegal content and continue to steal copyrighted content and siphon millions of dollars away from the creative community, making it much harder for artists to make a living.⁵⁶ Piracy sites are also *"being nurtured by revenues from both mainstream and high risk advertisements... These same sites – which are known to be popular with children and young people – are thereby exposing the latter to materials which are likely to be extremely damaging to them as well as to adults who might likewise be exposed."*⁵⁷ The Music Community is one of the Internet's most vulnerable communities given the adverse effects of mass piracy, intellectual property infringement and malicious abuse on the web and the inefficiencies of the outdated 1998 DMCA Law to provide adequate music copyright protection online.⁵⁸ The DMCA was signed into law in 1998 with a goal of updating copyright laws for the digital age, but it's now disturbingly out of date. Many famous artists and songwriters representing the Music Community filed public comments to the U.S Congress to reform the outdated DMCA:

One of the biggest problems confronting us as songwriters and recording artists today is the Digital Millennium Copyright Act. This law was written and passed in an era that is technologically out-of-date compared to the era in which we live. It has allowed major tech companies to grow and generate huge profits by creating ease of use for consumers to carry almost every recorded song in history in

their pocket via a smartphone, while songwriters' and artists' earnings continue to diminish. Music consumption has skyrocketed, but the monies generated by individual writers and artists for that consumption has plummeted. The growth and support of technology companies should not be at the expense of artists and songwriters. Section 512 of the DMCA has become the all-purpose shield that tech companies hide behind while they threaten the livelihood of music creators. The notice-and-takedown provision to which we refer allows ongoing infringements of the works we create since videos can immediately be re-posted, even after we have requested to have them removed. This outdated law forces us to stand by helplessly as billions of dollars in advertising is sold around illegal copies of our work. Most of the money goes to the tech services -- not to creators. In fact, according to a recently released report by the RIAA, U.S. vinyl sales generated more revenue for the music industry than ad-supported, free streaming by services like YouTube and Spotify over the past year. The DMCA actually thwarts the success of digital services that are prepared to pay musicians a living wage. These legitimate services are having a difficult time getting consumers to pay for music when illegal copies of our music are readily made available through services that hide behind the DMCA. In sum, the DMCA simply doesn't work. It's impossible for tens of thousands of individual songwriters and artists to muster the resources necessary to comply with its application. The tech companies who benefit from the DMCA today were not the intended protectorate when it was signed into law nearly two decades ago. We ask you to recommend sensible reform that balances our interests as creators with the interests of the companies who exploit our creations for their financial enrichment. It's only then that consumers will truly benefit.⁵⁹

19 major music organizations also submitted a joint brief explaining the myriad flaws in the DMCA -- a law passed during the dial-up era -- and how it harms the Music Community:

The Music Community's list of frustrations with the DMCA is long. A broken "notice-and-takedown" system. Toothless repeat infringer policies. Active services mischaracterized as passive intermediaries. Incentives for services to embrace willful blindness instead of preventing known and widespread infringement. The words "representative list" read out of the statute... Several factors have contributed to the failure of the DMCA to fulfill its purpose. To start, Congress enacted the DMCA in 1998 when dial-up Internet speeds and static web sites predominated. Soon thereafter, individuals could be worldwide publishers of content on peer-to-peer networks and service providers began to distribute massive amounts of content uploaded to their servers. And then came along more sophisticated search engines, social networks, and an explosion of smartphones and other mobile Internet access devices. The rules for service providers and tools for content creators set forth in the DMCA proved unsuitable for this new world. There is no evidence that Congress anticipated that Google or any service provider would receive and be required to respond to more than one billion takedown notices. Google wears this as a badge of honor, yet this fact emphasizes the failure of the DMCA to address the challenges faced by content owners today. Given all of these fundamental changes, a law that might have made sense in 1998 is now not only obsolete but actually harmful. The problem is compounded by the fact that, as courts, too, have struggled to apply this outdated law for the present day, DMCA has been shifted from its original intent through a series of judicial rulings to strip away adequate protection for content owners. To start, courts have expanded application of the

⁵⁹ Comments of Recording Artists & Songwriters to U.S. Copyright Office, Library of Congress, *RE: Section 512 Study: Notice and Request for Public Comment, Docket No. 2015-7*. safe harbors well beyond the passive service providers of 1998 to more active distributors of music that compete directly with services that must obtain licenses. The result: a Hobson's Choice for content owners, either to license content for much less than it's worth, or have the broken notice-and-takedown system as the only recourse. Is it any surprise that in this distorted marketplace revenue from sales of vinyl records outpaces revenue from on-demand, ad-supported video platforms making billions of transmissions annually? Courts have also given little meaning to key provisions for content owners in the DMCA bargain. Examples include "red flag" knowledge, repeat infringer policies and representative lists. The result: safe harbor status for services that choose to stick their heads in the sand rather than do their fair share, forcing content owners to divert valuable resources from away creating content to sending minimally effective take down notices, or for content owners with limited resources, to actually refrain from sending takedown notices at all. Content owners, especially those with limited resources, simply cannot take on the entire digital universe alone. At its worst, the DMCA safe harbors have become a business plan for profiting off of stolen content; at best, the system is a de facto government subsidy enriching some digital services at the expense of creators.⁶⁰

Many legal experts in the field of copyright law and music have reached the same conclusion:

The Safe Harbor Provisions were written to prevent isolated infringement by third parties through the use of ISPs and the notice-and-takedown provisions would have alone been an efficient alternative to legal proceedings if the Internet landscape had remained relatively same as it was in 1998. However, today, music creators are faced with the overwhelming burden of detecting these instances of infringement and notifying the service provider every single time a user posts and re-posts the work. Unfortunately, changes in the marketplace have presented the music community with the insurmountable burden of notifying ISPs for millions of instances of infringements which occur by the posting of links on thousands of unauthorized sources. After 18 years of changes in the marketplace, the balance of burdens placed on ISPs and creators to monitor for copyright infringement has greatly tipped in favor of the service providers.⁶¹

Although Music Community members can notify these services when their content is illegally posted, users (or the pirate websites) often repost the same content almost instantly, making it impossible for music community members to prevent the unauthorized distribution of their work. As such the music community is stuck using their own resources to police repeated abuse and in many cases are left bearing the costs of litigation if the service does not comply. To make matters worse, even if music community members are able to secure a judgment against rogue sites, the infringing actor responsible for hosting the site may be impossible to locate, which again leaves the music community without any remedy.⁶²

According to the Content Creators Coalition:

The DMCA was primarily designed to prevent isolated infringement by third parties on specific online sites when connection speeds were slower than today and storage space was limited. In that environment, these third parties were not able to infringe on the massive scale that they do today, and the “takedown notice” provisions were thought to provide an alternative to lengthy and expensive legal proceedings. However, it has had the exact opposite effect, leaving artists with little recourse if a legitimate takedown notice is denied. Legal representation is expensive and Section 512 does not allow for damages in all but the most egregious circumstances.⁶³ ...Instead of sending a relatively small number of “take-down” notices to prevent isolated infringement in a manner that ensures the material doesn’t reappear, musicians are instead faced with the unprecedented burden of attempting to “take-down” literally billions of infringing copies of music and associated links from thousands of unauthorized sources in an environment where infringers feel free to simply continuously repost links to the infringing content. This mismatch between the amount of infringement and the burden of enforcement has increasingly led to the devaluation of music and the perception that there is no effective remedy against unauthorized infringement. Once a song is available, authorized or not, the law provides no means to effectively protect the musicians’ property.⁶⁴ The process doesn’t work for large-scale entities, and the problem is infinitely worse for small-scale entities and individual creators.... What is expensive and difficult for large copyright owners is an impossible challenge for small copyright owners seeking to protect the value of their works from indiscriminate sharing online.⁶⁵ As Maria Schneider, a three-time GRAMMY winning jazz and classical composer, bandleader and conductor noted in describing the frustration with the DMCA, “[t]he DMCA makes it my responsibility to police the entire Internet on a daily basis. As fast as I take my music down, it reappears again on the same site—an endless whack-a-mole game.”⁶⁶

As observed by Marquette University Law School Professor Bruce Boyden:

Even for the largest media companies with the most resources at their disposal, attempting to purge a site of even a fraction of the highest-value content is like trying to bail out an oil tanker with a thimble. . . . The expenses of locating, identifying, and then sending a notice for that many files is so significant that even large companies must limit their efforts.⁶⁷

This observation is confirmed by the world’s largest music company⁶⁸ Universal Music Group (“UMG”):

Like many other copyright owners, UMG has been compelled to devote extraordinary resources . . .and millions of dollars – including personnel expense, investments in computer hardware and software, third-party vendor expenses, and substantial contributions to trade associations – specifically and solely to protect its interests, and those of its recording artists and songwriters, against

online infringement. However, notwithstanding this investment and dedication by UMG, the extent of online infringement and the rate at which it is continuing to grow, coupled with the imbalance of burdens between copyright owners and service providers under the current legal system, have rendered it impossible to fully address the massive violations of UMG's intellectual property rights. UMG...owns or controls the copyright for millions of recordings and several million more compositions... Under the current legal regime, and the burdens it has imposed, UMG is simply unable to protect its entire catalog and the wealth of intellectual property that it represents. ...For purposes of illustration...UMG is the distributor of the Taylor Swift album "1989" which was released by her label, Big Machine Records...The magnitude of the online infringement of "1989" was massive and required significant additional steps. First, UMG adopted a policy of actively searching for and blocking the album and all but one of its tracks on YouTube, rather than monetizing that content on the YouTube platform. And second, UMG devoted additional efforts to taking the recordings down from two other sites – SoundCloud and Tumblr – which paid no royalty at all at the time, and which responded relatively quickly to takedown notices. These efforts came at a considerable cost to both UMG and Big Machine Records. A staff of UMG employees devoted essentially 100% of their time between November 2014 and February 2015 to manually search for infringements of "1989" and its tracks on YouTube and other sites, so that these unlawful uses could be blocked or taken down. These efforts were supplemented by approximately a dozen employees working for IFPI who devoted a significant portion of their work days to the same task. Since the release of the album and through March 11, 2016, UMG or its agents have had to send over 66,000 DMCA takedown notices to online sites hosting copies of "1989" or its tracks. This is in addition to nearly 114,000 blocks that were automatically put in place through YouTube's Content ID system (described in response to No. 15 below), and nearly 30,000 additional blocks or takedowns that UMG or its agents manually placed through online interfaces that YouTube and SoundCloud make available to copyright owners. In addition, trade associations working on UMG's behalf, including RIAA and IFPI, identified over half a million URLs that link to infringements of "1989" since the album was released, and requested that search engines delist those URLs.⁶⁹ On the positive side, these massive efforts bore some fruit. Almost immediately, UMG and Big Machine Records began seeing evidence that consumers looking for unlicensed online copies of "1989" were unable to find them, and were thus being driven to purchase the album.⁷⁰

According to the Copyright Alliance:

Sixty-eight percent of...creators.. have never filed a takedown notice before because (1) they have either never heard of it; (2) it would take too much effort; (3) the process is too difficult to navigate; or (4) they are skeptical it would do anything to stop online infringement.⁷¹ Individual creators who file notices lack the resources of larger copyright owners to make a meaningful impact. Eighty-five percent of those we surveyed said they issue takedown notices all by themselves, taking time away from their creative pursuits, which pushes many to give up enforcement efforts all together. These creators are defenseless against the volume and reach of online infringement, especially in light of how easy it is to re-post something nowadays.⁷²

Furthermore, according to the British Phonographic Industry (BPI):

Concerted efforts by the wider music community to build a healthy digital market have been held back by search engines and other intermediaries continuing to direct users and revenues towards sites that defraud artists and labels. The BPI has repeatedly called on Google and others to do more to ensure that consumers searching for recorded music are referred to legal services in preference to illegal sites, many of which pose risks from viruses, trojans or other harmful or inappropriate content.⁷³

Research data consistently shows that search placement plays an important role in determining where consumers go to acquire music and other entertainment. A 2014 study by the Technology Policy Institute highlighted that “*changing the prominence of pirate and legal links has a strong impact on user choices: users are more likely to consume legally (and less likely to infringe copyright) when legal content is more prominent in search results.*” The study also found that users whose initial search terms indicate an intention to consume pirated content are more likely to use legal channels when pirated content is harder to find in search results.⁷⁴

By not awarding .MUSIC to DotMusic, the Music Community will lose the only opportunity to offer assurance to Internet users that all .MUSIC sites are indeed trusted, safe and licensed. This would also benefit global consumers by helping search engines provide a better user experience by replacing unsafe, insecure pirate sites (that dominate music-themed web search results today) with relevant and higher quality .MUSIC sites.⁷⁵

By virtue of ICANN’s actions and inactions pertaining to the CPE Report and process, the public interest will be harmed and the multi-stakeholder Music Community will not be able to ensure trust and reliability in the DNS for Internet users because the Music Community will not be able to govern the last remaining music-themed gTLD,⁷⁶ in violation of ICANN’s “*key responsibilities is introducing and promoting competition*”⁷⁷ in the registration of domain names, while ensuring the security and stability of the domain name system (DNS).⁷⁸ Further, ICANN disregards its own 2007 Recommendations and Principles that stated

⁷³ <https://www.bpi.co.uk/media-centre/urgent-reform-needed-to-notice-and-takedown-as-removal-of-200-millionth-illegal-search-result-from-google-approaches.aspx>, DIDP Ex.A19

⁷⁶ No community applicant has been awarded a music-themed string in the New gTLD Program.

⁷⁷ ICANN has awarded Amazon the .SONG and .TUNES music-themed strings, See <http://nic.song> and <http://nic.tunes> (DIDP Ex.A23 and DIDP Ex.A24). Amazon is also a competing applicant for .MUSIC. Allowing Amazon to possibly be awarded the three most relevant music-themed strings violates ICANN’s Bylaws with respect to “promoting competition;” The French government also has recently criticized the agreement to move the domain name system to ICANN because “*the move hands too much control to internet giants like Google and Amazon,*” see http://theregister.co.uk/2016/03/24/france_slams_us_govt_internet_transition, http://lemonde.fr/economie/article/2016/03/24/icann-paris-denonce-une-privatisation-de-la-gouvernance-d-internet_4889567_3234.html and <http://proxy-pubminefi.diffusion.finances.gouv.fr/pub/document/18/20672.pdf>, DIDP Ex.A25

“where an applicant lays any claim that the TLD is intended to support a particular community...that claim will be taken on trust.”⁷⁹

Without a reserved, safe and reliable zone on the Internet dedicated to the Music Community, the Internet community and the public interest will be harmed because the Music Community will be unable to promote a trusted and secure sector through enhanced safeguards.

According to WIPO, cybersquatting cases were up in 2015 driven by new gTLDs.⁸⁰ Spamhaus also revealed that “*world’s worst top-level domains*” are new gTLDs stating that “*unsurprisingly, most of the TLDs listed on this page are the “new gTLDs” recently introduced by ICANN.*” Spamhaus released these findings “*in hope that this data can help the “Good” Powers That Be (starting with ICANN) to better focus their attention on network abuse issues, aiming for a better tomorrow for our Internet.*”⁸¹

An ICANN-sponsored survey also reported that consumer trust in new gTLDs is much lower than in legacy TLDs, with approximately 50% of consumers reporting trust in new versus approximately 90% reporting trust in legacy TLDs.⁸² Researchers from the University of California, also found that new TLD domains are more than twice as likely as legacy TLDs to appear on a domain blacklist.⁸³ Further, according to the Anti-Phishing Working Group, malicious actors are testing the new gTLD space as a potential base for their activities.⁸⁴

Cybersecurity firm RiskIQ found that one out of every three content theft sites exposed users to malware. Internet users who visited content theft sites were 28 times more likely to get malware from these sites than from mainstream websites or licensed content providers.⁸⁵ According to the IP Commission Report, such abuse has significantly negative effects on consumers, economies, industry and government:⁸⁶

- *Effects on consumers.* Harm to health, harm to safety, costs incurred as a result of product failure, decreased or increased purchasing power;
- *Effects on economy as a whole.* Decline in economic growth as incentives to innovate are reduced, lost trade revenue, impact on the environment; increase in companies with substandard working conditions;

- *Effects on industry.* Lost sales; lost brand value; reduced scope of operations; lost jobs and reduced ability to provide employee benefits; reduced ability to conduct R&D; increased IP protection expenses for prevention, remediation, and enforcement; increased costs from dealing with malware; reduced incentive to innovate; and
- *Effects on government.* Lost tax revenue; increased IP protection expenses for prevention, remediation, and enforcement, including costs to store, secure, and destroy seized assets; benefit to criminal networks looking to launder money or harm the public; impact on national security; and impact on civilian safety.

According to ICANN, DNS abuse refers to intentionally deceptive, conniving, or unsolicited activities that actively make use of the DNS⁸⁷ to “exploit human weaknesses in the forms of greed, carelessness, and/or naiveté. Thus, end-users tend to be the weakest links in the cyber-security chain.”⁸⁸ According to ICANN, “DNS abuse can take a number of forms, its typical aim is to distribute malware, which is used to disrupt computer operations, gather sensitive information, or gain access to private computer systems.”⁸⁹ According to cybersecurity organization IID, “most new gTLDs have failed to take off and many have already been riddled with so many fraudulent and junk registrations that they are being blocked wholesale.”⁹⁰

Google’s Transparency Report⁹¹ shows that there is widespread copyright infringement and millions of takedown requests for New gTLDs that have music-themed characteristics, such as .ROCKS (which only has 65,047 domain registrations⁹²). Infringing .ROCKS domain names include: *torrents.rocks* (with 1,145,272 copyright infringement takedown requests), *extratorrent.rocks* (940,971), *kickasstorrents.rocks* (561,065), *kickasstorrent.rocks* (507,161), *kickass-torrent.rocks* (434,016), *kickass-torrents.rocks* (348,910), *kickasstorrentz.rocks* (361,161), *thepiratebay.rocks* (264,147), *kickass.rocks* (263,673), *mp3song.rocks* (208,260) and many others retrieved on March 31 2016.⁹³ During the week of February 29, 2016 there were 21,064,571 URL takedown requests for copyright infringement removal (i.e. 125,384 takedowns per hour).⁹⁴

As noted by ICANN and GAC, .MUSIC is “string likely to invoke a level of implied trust from consumers, and carry higher levels of risk associated with consumer harm;” and (ii) that it is a “string that is linked to [a] regulated sector” that “should operate in a way that is consistent with applicable laws,”⁹⁵ As such, it is a certainty that .MUSIC, the most semantic music-themed gTLD in the New gTLD Program, will have exponentially more abuse and piracy than .ROCKS.⁹⁶ Such a result will not serve the public interest. Without community-based enhanced music safeguards in place, the popular .MUSIC string that invokes a high level

of implied trust will be significantly abused by bad actors and experience rampant piracy to the detriment of the Internet as whole.

“The public good fully coincides...with the claims of individuals,” wrote James Madison of the Constitution’s Copyright Clause, which secures the exclusive rights of creators. These rights, like any form of private property, serve as the building blocks of a free market, promoting economic growth and individual liberty. Madison’s remarks remain just as true after more than two hundred years. *“The issues of authors are intertwined with the interests of the public,”* wrote Register of Copyrights Maria Pallante last year. *“As the first beneficiaries of the copyright law, authors are not a counterweight to the public interest but are instead at the very center of the equation.”* Pallante went on to note that *“A law that does not provide for authors would be illogical—hardly a copyright law at all. And it would not deserve the respect of the public.”*⁹⁷

Copyright benefits the public by creating a marketplace for creative and expressive works. [For example, in the U.S] this marketplace currently contributes over \$1 trillion a year to U.S. GDP, directly employs 5.4 million people (with average wages 33% higher than national average), and generates \$141 billion in exports. The existence of this marketplace further incentivizes the creation and dissemination of works which promote the progress of art, science, culture, and knowledge. Consumers experience this benefit firsthand. Millions of consumers are able to enjoy music on numerous platforms that did not exist even a decade ago.⁹⁸

The public benefits of a robust copyright system are not solely economic. Copyright protects human rights. Article 27 of the Universal Declaration of Human Rights (UDHR),⁹⁹ adopted in 1948 by the UN General Assembly, states:

1. Everyone has the right freely to participate in the cultural life of the community, to enjoy the arts and to share in scientific advancement and its benefits.
2. Everyone has the right to the protection of the moral and material interests resulting from any scientific, literary or artistic production of which he is the author.

Copyright also advances free speech values. The Supreme Court has said that *“the Framers intended copyright itself to be the engine of free expression. By establishing a marketable right to the use of one’s expression, copyright supplies the economic incentive to create and disseminate ideas.”*¹⁰⁰ Indeed, creators and the creative communities are on the front lines defending their—and by extension everyone’s—right to free expression.

As indicated earlier, ICANN’s Articles of Incorporation commit ICANN to *“carrying out its activities in conformity with relevant principles of international law and applicable international conventions and local law.”* As such, ICANN’s Articles apply to .MUSIC, a *“string that is linked to regulated sector.”*¹⁰¹

Furthermore, ICANN has a number of policies and obligations concerning their relationship with the Internet user. These include issues such as *“competition, consumer protection, security, stability and resiliency,*

*malicious abuse issues, sovereignty concerns, and rights protection.”*¹⁰² According to the KnjOn Report “Concerning issues of consumer trust on the Internet as they apply to ICANN, the ICANN Compliance function, ICANN registries, and ICANN registrars (March 2016):”

ICANN is not connecting to consumers, but the abusive parties are connecting to consumers. So what the consumer sees is the ugly side of the Internet. The actual access to ICANN’s complaint or compliance process is hidden. ICANN’s website structure appears designed to avoid accepting complaints from consumers and deflecting any responsibility to external entities. Whether by design or negligence, the problem needs to be addressed immediately. Obfuscation and misdirection are not strategies for gaining consumer trust.¹⁰³

Significant abuse and material harm to consumers and the Music Community will be prevented if DotMusic’s community initiative is granted .MUSIC. DotMusic’s community-based enhanced music safeguards will protect the popular and sensitive .MUSIC string. According to ICANN:

ICANN is not the content police.¹⁰⁴

Complaints regarding copyright infringement due to Internet and website content are outside of ICANN’s scope and authority.¹⁰⁵

However, such statements in relation to ICANN’s authority do not release ICANN of serious accountability and responsibility towards serving the public interest and making decisions within its control and authority to maximize consumer trust. As evidenced previously, if DotMusic is not delegated .MUSIC then pirates and bad actors will continue to materially abuse the Music Community and compromise consumer trust. Such malicious conduct will proliferate even further because of the loophole that deters meaningful copyright enforcement compliance because copyright protection is not within ICANN’s authority.

In agreement with the FTC (that “*expressed concerns about the need for more consumer protection safeguards...highlighting again the potential for significant consumer harm...magnify[ing] both the abuse of the domain name system and the...challenges...in tracking down Internet fraudsters*”¹⁰⁶), a safe, secure and trusted .MUSIC gTLD with music community-tailored enhanced safeguards that enforce copyright protection and protect the global music community and enhance consumer trust is of paramount significance.

D. Conclusion

As set forth in the RR, the CPE Report and .MUSIC CPE process present serious deficiencies and concerns of conflicts of interest that were publicly disclosed to the ICANN Board, the ICANN staff and the EIU before the commencement of CPE.¹⁰⁷ There are no compelling reasons for confidentiality in disclosing the requested documents because it would serve the global public interest to do so and ensure the integrity of ICANN's deliberative and decision-making process while protecting consumers and the Music Community. We also note that CPE has invoked the majority of ICANN accountability mechanisms (and ICANN resources) in the last few years. As such, it would serve the public interest to disclose all documents requested to ensure ICANN transparency, accountability, credibility, predictability and non-discrimination.

On April 12th, 2016, the ICANN Board responded to the GNSO's query concerning ICANN's definition of the "public interest." ICANN Chairman Dr. Steve Crocker clarified that "*historically at ICANN, there has been no explicit definition of the term "global public interest" and that "future conversation and work on exploring the public interest within ICANN's remit will require global, multistakeholder, bottom-up discussion."*¹⁰⁸

According to ICANN:

I. Board interpretation and consideration of the public interest

While, historically at ICANN, there has been no explicit definition of the term "global public interest," the Board has understood the term within the context of Paragraph 3 of the Articles of Incorporation: "*In furtherance of the foregoing purposes, and in recognition of the fact that the Internet is an international network of networks, owned by no single nation, individual or organization, the Corporation shall, except as limited by Article 5 hereof, pursue the charitable and*

¹⁰⁷ Before the .MUSIC CPE process commenced, DotMusic publicly informed the ICANN Board and the EIU (at ICANN 52 Public Forum) that: "[DotMusic has] some serious concerns. The chairman of Google, Eric Schmidt, is on the Board of "The Economist." Google is an applicant for .MUSIC. "The Economist" grades our CPE. This is a serious conflict of interest... [DotMusic] will proceed with CPE but with disclosed prejudice." See ICANN 52 Singapore Meeting Public Forum Transcript, February 12, 2015, <https://singapore52.icann.org/en/schedule/thu-public-forum/transcript-public-forum-12feb15-en.pdf>, DIDP Ex.A59; According to the EIU's Statement of Work agreement (the "SOW") with ICANN, the EIU had the opportunity to decline evaluating DotMusic's application in good faith after DotMusic publicly disclosed and raised the issue that there was a serious conflict of interest. According to the SOW, a mere "prospect" of a conflict of interest sufficed to decline the evaluation yet both ICANN and the EIU allowed the .MUSIC CPE to proceed (See EIU Contract and SOW at <http://newgtlds.icann.org/en/applicants/cpe/eiu-contract-sow-information-08apr15-en.zip>, March 12, 2012 Statement of Work No:[2]: "Panel Firm shall be entitled to decline any assigned application or applications it considers, in good faith, will raise the prospect of a conflict of interest," DIDP Ex. A8, Section 4, p.10); Disqualification from a proceeding because of an appearance of a conflict of interest (including cases in which a judge's impartiality might be reasonably questioned) is a globally-recognized requirement in proceedings to ensure fairness, non-discrimination and equal treatment. For example, Title 28 of the U.S. Code § 455 mandates that "*any justice, judge, or magistrate judge of the United States shall disqualify himself in any proceeding in which his impartiality might reasonably be questioned*" See <https://gpo.gov/fdsys/pkg/USCODE-2011-title28/pdf/USCODE-2011-title28-partI-chap21-sec455.pdf>, DIDP Ex.61; Also see Liteky v. United States (92-6921), 510 U.S. 540 (1994): "*Recusal is required whenever there exists a genuine question concerning a judge's impartiality, and not merely when the question arises from an extrajudicial source.*" (p.552) "*The judge does not have to be subjectively biased or prejudiced, so long as he appears to be so.*" (p.554), DIDP Ex.A62

*public purposes of lessening the burdens of government and promoting the global public interest in the operational stability of the Internet by (i) coordinating the assignment of Internet technical parameters as needed to maintain universal connectivity on the Internet; (ii) performing and overseeing functions related to the coordination of the Internet Protocol("IP") address space; (iii) performing and overseeing functions related to the coordination of the Internet domain name system ("DNS"), including the development of policies for determining the circumstances under which new top-level domains are added to the DNS root system; (iv) overseeing operation of the authoritative Internet DNS root server system; and (v) engaging in any other related lawful activity in furtherance of items (i) through (iv)."*¹⁰⁹

According to ICANN's DIDP "*Defined Conditions of Nondisclosure:*"¹¹⁰

Information...may still be made public if ICANN determines, under the particular circumstances, that the public interest in disclosing the information outweighs the harm that may be caused by such disclosure. Further, ICANN reserves the right to deny disclosure of information under conditions not designated above if ICANN determines that the harm in disclosing the information outweighs the public interest in disclosing the information.

Disclosure of the documents requested by DotMusic under the DIDP process does not impact nor influence the "operational stability of the Internet." As such, ICANN's interpretation and consideration of the *public interest* as it applies to Article 3 of ICANN's Articles of Incorporation cannot apply to DotMusic's DIDP Request. As such, ICANN Staff should interpret and consider "*public interest*" from a dictionary definitional perspective:

According to the Cambridge Dictionaries, *public interest* is defined as "*used when talking about people's rights to know the facts about a particular situation.*"¹¹¹

According to MacMillan Dictionary, *public interest* is defined as "*the fact that the public has a right to know about something because it affects them*" or "*the fact that people in general are interested in something.*"¹¹²

According to Oxford Dictionaries, *public interest* is defined as "*the benefit or advantage of the community as a whole; the public good.*"¹¹³

According to Dictionary.com, *public interest* is defined as "*the welfare or well-being of the general public*" and "*appeal or relevance to the general populace.*"¹¹⁴

On April 12, 2016, a California Federal Court ruled against ICANN granting DCA (one of the .AFRICA gTLD applicants) a preliminary injunction invalidating the AGB's covenant not to sue. Neutral Judge Gary Klausner's findings revealed that "*evidence suggests that ICANN intended to deny DCA's application based on pretext:*"

The evidence suggests that ICANN intended to deny DCA's application based on pretext...As such, the Court finds serious questions regarding the enforceability of the Release due to California Civil Code § 1668. Because the Court finds serious questions regarding the enforceability of the Release due to California Civil Code § 1668, the Court need not address DCA's arguments regarding unconscionability or procurement by fraud.¹¹⁵

According to ICANN's Bylaws to "*operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness*"¹¹⁶ and in light of this U.S Court ruling that determined ICANN "*intended to deny DCA's application based on pretext*," DotMusic requests that ICANN disclose all the documents requested in this DIDP Request to serve the global public interest by showing that ICANN did not also intend to deny DotMusic's application from passing CPE.

If ICANN denies the disclosure of all the documents requested in this DIDP Request, DotMusic requests ICANN to:

- i) Define "*public interest*" with respect to the DIDP process and explain in detail how "*the harm in disclosing the information outweighs the public interest in disclosing the information*" in relation to DotMusic's statements supporting why it serves the public interest for ICANN to release all the documentation requested (*See Section C: Why It Serves Public Interest to Release the Documentation Requested*);
- ii) Provide DotMusic with Privileged Logs that clearly describe as to each document withheld the type of document, the general subject matter thereof, the date on which it was created, the authors of the document, all parties who were intended to be recipients of the document, and the legal privilege being claimed, referencing the law that recognizes such claim of privilege; and
- iii) Follow the ICANN Board Resolutions of March 10, 2016 to "*be as specific and detailed as possible in responding to DIDP requests, particularly when not disclosing requested documents.*"¹¹⁷

DotMusic requests the RR be placed on hold until the DIDP Request is fully resolved. Based on the information disclosures and documents requested in this DIDP Request, DotMusic expects to update its RR after the documentation requested is disclosed and gauged.

We thank you for your consideration of this important matter.

Exhibit DIDP A98

Response to Documentary Information Disclosure Policy Request

To: Constantine Roussos on behalf of DotMusic Limited

Date: 15 May 2016

Re: Request No. 20160429-1

Thank you for your Amended Request for Documentary Information dated 29 April 2016 (Amended Request), which was submitted through the Internet Corporation for Assigned Names and Numbers' (ICANN's) Documentary Information Disclosure Policy (DIDP), on behalf of DotMusic Limited (DotMusic or Requester). As ICANN confirmed with DotMusic on 30 April 2016, the original DIDP was withdrawn and replaced by the Amended Request. For reference, a copy of your Amended Request is attached to the email forwarding this Response.

Items Requested

Your Amended Request seeks documentary information relating to the Community Priority Evaluation (CPE) of your application for the .MUSIC gTLD (Application ID: 1-1115-14110) and requests disclosure of:

1. "All non-public internal documents (including call records and minutes) of the communication between ICANN, the EIU and independent Quality Control service provider relating the EIU's consistent, compelling and defensible decision-making process used in developing the CPE Report determination and showcasing how DotMusic's application and CPE Process was compared to previous prevailing CPE determinations to ensure fairness, non-discrimination, transparency, predictability and consistency."
2. "All the non-public internal *draft* CPE Reports and all related internal correspondence between ICANN and the EIU related to (i) DotMusic's .MUSIC CPE; (ii) the prevailing .RADIO CPE; (iii) the prevailing .HOTEL CPE; (iv) the prevailing .SPA CPE; (v) the prevailing .ECO CPE; (vi) the prevailing .OSAKA CPE; (vii) the .GAY CPE; and (viii) all non-public internal correspondence, reports, documents, emails and any other forms of other communication showcasing how DotMusic's application and CPE Process was compared to other prevailing CPE determinations to ensure fairness, non-discrimination, transparency, predictability and consistency."
3. "All the non-public internal communication documents and non-public internal correspondence between ICANN and the EIU in formulating the CPE Guidelines that were "*prepared by the Economist Intelligence Unit*" before and after the CPE Guidelines public comment period (nearly 1 ½ years after DotMusic's 2012 Application filing)."

4. “All non-public internal documents and internal correspondence between ICANN staff that relate to the altering of the original AGB language pertaining to the *Notice of Changes of Information* section of the AGB.”
5. “The names of all the EIU CPE evaluators pertaining to the .MUSIC, .ECO, .RADIO, .SPA, .HOTEL and .OSAKA CPE processes and any correspondence between ICANN and Google’s Vice-President (also ex-ICANN chairman and ICANN Strategy Chair) Vinton Cerf to further investigate the appearance of a conflict of interest and ensure that the evaluators were qualified to evaluate a music-related CPE as explicitly required by the AGB and CPE Materials.”
6. “The name of “*the appointed independent Quality Control service provider*” per the SOW and all non-public internal documents and non-public internal correspondence between “*the appointed independent Quality Control service provider for the purposes of helping it to verify that Panel Firm's evaluation services have been and are performed in accordance with the Quality Control Guidelines*” and ICANN and/or the EIU.”

Response

CPE is a method to resolve string contention. The standards governing CPE are set forth in Module 4.2 of the New gTLD Applicant Guidebook (Guidebook), and are available at <http://newgtlds.icann.org/en/applicants/agb>. CPE will occur only if a community-based applicant in contention selects CPE, and after all applications in the contention set have completed all previous stages of the gTLD evaluation process. (See Guidebook, § 4.2.) CPEs are performed by independent CPE panels that are coordinated by the Economist Intelligent Unit (EIU), an independent third party provider, which contracts with ICANN to perform that coordination role. (See *id.*; see also, CPE webpage at <http://newgtlds.icann.org/en/applicants/cpe>.) The CPE panel’s role is to determine whether a community-based application fulfills the community priority criteria. (See *id.*) The Guidebook, CPE Panel Process Document, and the CPE Guidelines (all of which can be accessed at <http://newgtlds.icann.org/en/applicants/cpe>) set forth the guidelines, procedures, standards and criteria applied to CPEs, and make clear that the EIU and its designated panelists are the only persons or entities involved in the performance of CPEs.

As part of the evaluation process, the CPE panels review and score a community application submitted to CPE against the following four criteria: (i) Community Establishment; (ii) Nexus between Proposed String and Community; (iii) Registration Policies; and (iv) Community Endorsement. An application must score at least 14 out of a possible 16 points to prevail in a CPE; a high bar because awarding priority eliminates all non-community applicants in the contention set as well as any other non-prevailing community applicants. (See Guidebook at § 4.2; see also, CPE webpage at <http://newgtlds.icann.org/en/applicants/cpe>.)

To provide transparency of the CPE process, ICANN has established a CPE webpage on the New gTLD microsite, at <http://newgtlds.icann.org/en/applicants/cpe>, which provides

detailed information about CPEs. In particular, the following information can be accessed through the CPE webpage:

- CPE results, including information regarding to the Application ID, string, contention set number, applicant name, CPE invitation date, whether the applicant elected to participate in CPE, and the CPE status.
(<http://newgtlds.icann.org/en/applicants/cpe#invitations>)
- CPE Panel Process Document
(<http://newgtlds.icann.org/en/applicants/cpe/panel-process-07aug14-en.pdf>)
- EIU Contract and Statement of Work Information (SOW)
(<http://newgtlds.icann.org/en/applicants/cpe/eiu-contract-sow-information-08apr15-en.zip>)
- CPE Guidelines (<http://newgtlds.icann.org/en/applicants/cpe/guidelines-27sep13-en.pdf>)
- Draft CPE Guidelines
(<http://newgtlds.icann.org/en/applicants/cpe/guidelines-16aug13-en.pdf>)
- Community Feedback on Draft CPE Guidelines
(<http://newgtlds.icann.org/en/applicants/cpe#invitations>)
- Updated CPE Frequently Asked Questions
(<http://newgtlds.icann.org/en/applicants/cpe/faqs-10sep14-en.pdf>)
- CPE Processing Timeline
(<http://newgtlds.icann.org/en/applicants/cpe/timeline-10sep14-en.pdf>)

Item 1

Item 1 requests the disclosure of “[a]ll non-public internal documents (including call records and minutes) of the communication between ICANN, the EIU and independent Quality Control service provider” relating to the decision-making process used by the EIU relating to DotMusic’s CPE Report. As a preliminary matter, the Quality Control Program was a program that was implemented solely for the Initial Evaluation phase of the New gTLD Program to ensure that all 1930 applications have followed the same evaluation process and have been evaluated consistently. (See <https://newgtlds.icann.org/en/blog/preparing-evaluators-22nov11-en>.) The Quality Control Program did not extend to CPEs. ICANN therefore does not have any responsive documentation evidencing communication with an “independent Quality service provider” regarding DotMusic’s CPE Report.

As set forth in Module 4.2 of the Guidebook (<http://newgtlds.icann.org/en/applicants/agb/string-contention-procedures-04jun12-en.pdf>), the CPE Panel Process Document (<http://newgtlds.icann.org/en/applicants/cpe/panel-process-07aug14-en.pdf>), and the CPE Guidelines (<http://newgtlds.icann.org/en/applicants/cpe/guidelines-27sep13-en.pdf>), CPEs are performed by the CPE Panel, not ICANN. In response to this DIDP Request, ICANN will provide the email notification to begin CPE of DotMusic’s application that was provided to the EIU on 17 August 2015. As stated in the CPE Panel Process

Document, along with the notice to commence CPE, ICANN delivers to the EIU the public comment(s), if any, received on the application. (See CPE Process Document, Pg. 2, <http://newgtlds.icann.org/en/applicants/cpe/panel-process-07aug14-en.pdf>.)

Additionally, ICANN is also producing an email that was sent to the EIU on 9 December 2015 regarding correspondence to DotMusic concerning letters of support.

To the extent that ICANN has additional documentation that may be responsive to Item 1, those documents are subject to the following DIDP Defined Conditions for Nondisclosure and are not appropriate for disclosure:

- Internal information that, if disclosed, would or would be likely to compromise the integrity of ICANN's deliberative and decision-making process by inhibiting the candid exchange of ideas and communications, including internal documents, memoranda, and other similar communications to or from ICANN Directors, ICANN Directors' Advisors, ICANN staff, ICANN consultants, ICANN contractors, and ICANN agents.
- Information exchanged, prepared for, or derived from the deliberative and decision-making process between ICANN, its constituents, and/or other entities with which ICANN cooperates that, if disclosed, would or would be likely to compromise the integrity of the deliberative and decision-making process between and among ICANN, its constituents, and/or other entities with which ICANN cooperates by inhibiting the candid exchange of ideas and communications.
- Confidential business information and/or internal policies and procedures.
- Drafts of all correspondence, reports, documents, agreements, contracts, emails, or any other forms of communication.

Notwithstanding the applicable Defined Conditions of Nondisclosure, ICANN also evaluated the documents subject to these conditions to determine if the public interest in disclosing them outweighs the harm that may be caused by such disclosure. ICANN has determined that there are no particular circumstances for which the public interest in disclosing the information outweighs the harm that may be caused to ICANN, its contractual relationships, and its contractors' deliberative processes by the requested disclosure.

Item 2

Item 2 seeks the disclosure of “[a]ll the non-public internal *draft* CPE Reports and all related internal correspondence between ICANN and the EIU related to (i) DotMusic’s .MUSIC CPE; (ii) the prevailing .RADIO CPE; (iii) the prevailing .HOTEL CPE; (iv) the prevailing .SPA CPE; (v) the prevailing .ECO CPE; (vi) the prevailing .OSAKA CPE; (vii) the .GAY CPE; and (viii) all non-public internal correspondence, reports, documents, emails and any other forms of other communication showcasing how DotMusic’s application and CPE Process was compared to other prevailing CPE

determinations to ensure fairness, non-discrimination, transparency, predictability and consistency.”

To the extent that there are any documents responsive to Items 2(i) and 2(viii), those documents are subject to the following DIDP Defined Conditions for Nondisclosure and are not appropriate for disclosure:

- Internal information that, if disclosed, would or would be likely to compromise the integrity of ICANN's deliberative and decision-making process by inhibiting the candid exchange of ideas and communications, including internal documents, memoranda, and other similar communications to or from ICANN Directors, ICANN Directors' Advisors, ICANN staff, ICANN consultants, ICANN contractors, and ICANN agents.
- Information exchanged, prepared for, or derived from the deliberative and decision-making process between ICANN, its constituents, and/or other entities with which ICANN cooperates that, if disclosed, would or would be likely to compromise the integrity of the deliberative and decision-making process between and among ICANN, its constituents, and/or other entities with which ICANN cooperates by inhibiting the candid exchange of ideas and communications.
- Confidential business information and/or internal policies and procedures.
- Drafts of all correspondence, reports, documents, agreements, contracts, emails, or any other forms of communication.

With respect to your request for Items 2(ii) through 2(v) seeking documentary information regarding other applicants' CPEs, to the extent that there are any responsive documents, those documents are subject to the following DIDP Defined Conditions for Nondisclosure and are not appropriate for disclosure:

- Internal information that, if disclosed, would or would be likely to compromise the integrity of ICANN's deliberative and decision-making process by inhibiting the candid exchange of ideas and communications, including internal documents, memoranda, and other similar communications to or from ICANN Directors, ICANN Directors' Advisors, ICANN staff, ICANN consultants, ICANN contractors, and ICANN agents.
- Information exchanged, prepared for, or derived from the deliberative and decision-making process between ICANN, its constituents, and/or other entities with which ICANN cooperates that, if disclosed, would or would be likely to compromise the integrity of the deliberative and decision-making process between and among ICANN, its constituents, and/or other entities with which ICANN cooperates by inhibiting the candid exchange of ideas and communications.

- Information provided to ICANN by a party that, if disclosed, would or would be likely to materially prejudice the commercial interests, financial interests, and/or competitive position of such party or was provided to ICANN pursuant to a nondisclosure agreement or nondisclosure provision within an agreement.
- Confidential business information and/or internal policies and procedures.
- Drafts of all correspondence, reports, documents, agreements, contracts, emails, or any other forms of communication.

Notwithstanding the applicable Defined Conditions of Nondisclosure for Items 2(i) through 2(v), ICANN also evaluated the documents subject to these conditions to determine if the public interest in disclosing them outweighs the harm that may be caused by such disclosure. ICANN has determined that there are no particular circumstances for which the public interest in disclosing the information outweighs the harm that may be caused to ICANN, its contractual relationships, and its contractors' deliberative processes by the requested disclosure.

Item 3

Item 3 requests the disclosure of “[a]ll the non-public internal communication documents and non-public internal correspondence between ICANN and the EIU in formulating the CPE Guidelines that were *“prepared by the Economist Intelligence Unit” before and after the CPE Guidelines public comment period.*” In advance of CPE commencing, ICANN published the CPE Evaluation Guidelines to ensure quality, consistency and transparency in the evaluation process. The CPE Guidelines are an accompanying document to the Applicant Guidebook, and are meant to provide additional clarity around the process and scoring principles outlined in the AGB. The Guidelines do not modify the framework or standards laid out in the AGB. The CPE Guidelines were developed by the EIU. On 16 August 2013, ICANN posted a draft version of the CPE Guidelines for community comment. (<https://newgtlds.icann.org/en/applicants/cpe/guidelines-16aug13-en.pdf>; and <https://newgtlds.icann.org/en/announcements-and-media/announcement-4-16aug13-en>.) Twelve comments were received and published on the CPE web page including DotMusic Limited's comment, at <https://newgtlds.icann.org/en/applicants/cpe>. After careful consideration of the community feedback, the EIU finalized and ICANN published the CPE Guidelines on 27 September 2013. (<https://newgtlds.icann.org/en/applicants/cpe/guidelines-27sep13-en.pdf>.)

To the extent that there are any documents responsive to Item 3 that have not been published, those documents are subject to the following Defined Conditions of Nondisclosure and are not appropriate for disclosure:

- Internal information that, if disclosed, would or would be likely to compromise the integrity of ICANN's deliberative and decision-making process by inhibiting the candid exchange of ideas and communications, including internal documents, memoranda, and other similar communications to or from ICANN Directors,

ICANN Directors' Advisors, ICANN staff, ICANN consultants, ICANN contractors, and ICANN agents.

- Information exchanged, prepared for, or derived from the deliberative and decision-making process between ICANN, its constituents, and/or other entities with which ICANN cooperates that, if disclosed, would or would be likely to compromise the integrity of the deliberative and decision-making process between and among ICANN, its constituents, and/or other entities with which ICANN cooperates by inhibiting the candid exchange of ideas and communications.
- Information provided to ICANN by a party that, if disclosed, would or would be likely to materially prejudice the commercial interests, financial interests, and/or competitive position of such party or was provided to ICANN pursuant to a nondisclosure agreement or nondisclosure provision within an agreement.
- Confidential business information and/or internal policies and procedures.
- Drafts of all correspondence, reports, documents, agreements, contracts, emails, or any other forms of communication.

Notwithstanding the applicable Defined Conditions of Nondisclosure, ICANN also evaluated the documents subject to these conditions to determine if the public interest in disclosing them outweighs the harm that may be caused by such disclosure. ICANN has determined that there are no particular circumstances for which the public interest in disclosing the information outweighs the harm that may be caused to ICANN, its contractual relationships, and its contractors' deliberative processes by the requested disclosure.

Item 4

Item 4 seeks the disclosure of “[a]ll non-public internal documents and internal correspondence between ICANN staff that relate to the altering of the original [Applicant Guidebook] AGB language pertaining to the *Notice of Changes of Information* section of the AGB.” According to the explanation set forth in the Request, this Request stems from DotMusic’s belief that ICANN introduced “material new ‘change request’ language numerous times that harmed the interests of community applicants and resulted in provided preferential treatment to non-community applicants without any formal policy development.” This belief and mischaracterization of the Change Request Process misstates the facts and is contradicted by the Applicant Guidebook and the Change Request Process.

The Change Request Process was implemented pursuant to Section 1.2.7 of the Applicant Guidebook (Guidebook), which provides:

If at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant

must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

(Guidebook § 1.2.7, <https://newgtlds.icann.org/en/applicants/agb/intro-04jun12-en.pdf>.) This section of the AGB further states:

ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round. Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application.

The Change Request Process was created during the application window in order to allow applicants to notify ICANN of changes to application materials, as required by Section 1.2.7 of the Guidebook.

In evaluating each change request, ICANN staff considers all available information concerning the change request against the following seven change request determination criteria:

1. ***Explanation*** – Is a reasonable explanation provided?
2. ***Evidence that original submission was in error*** – Are there indicia to support an assertion that the change merely corrects an error?
3. ***Other third parties affected*** – Does the change affect other third parties materially?
4. ***Precedents*** – Is the change similar to others that have already been approved? Could the change lead others to request similar changes that could affect third parties or result in undesirable effects on the program?
5. ***Fairness to applicants*** – Would allowing the change be construed as fair to the general community? Would disallowing the change be construed as unfair?
6. ***Materiality*** – Would the change affect the evaluation score or require re-evaluation of some or all of the application? Would the change affect string contention or community priority consideration?
7. ***Timing*** – Does the timing interfere with the evaluation process in some way? ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round. (AGB §1.2.7.)

(See Change Request Determination Criteria, available at <https://newgtlds.icann.org/en/applicants/global-support/change-requests>.) As explained

in detail on the Change Request Process webpage (<https://newgtlds.icann.org/en/applicants/global-support/change-requests>) and the Applicant Advisory webpage (<https://newgtlds.icann.org/en/applicants/advisories/change-request-set-05sep14-en>), these seven criteria were carefully developed to enable applicants to make necessary changes to their applications while ensuring a fair and equitable process for all applicants. The weight of each criterion may vary on a case-by-case basis, depending on the facts and circumstances surrounding the change request, the application, and the string.

As it relates to community applications, as stated on the Change Request Advisory page, requested all changes to the community definition and registration policies are deferred until after the completion of CPE. (<https://newgtlds.icann.org/en/applicants/advisories/change-request-set-05sep14-en>). In considering these types of change requests, the most relevant criteria are criteria three through seven. Criteria three, five, six, and seven are related and are considered together. (*See id.*)

A change to update an application's community definition and registration policies prior to contracting is material because: (1) other parties' decisions on whether to file a community objection to the application were made on the basis of what was in the application at the time of the objection window; (2) the community definition and registration policies serve, among other things, as a basis for determining the merits of a community objection; and (3) they are evaluated during CPE. (*See id.*)

Approval of a change request to update an application's community definition and registration policies would allow a CPE-eligible applicant to update its application based on learnings from previously posted CPE results. This causes issues of unfairness to the first applicants that went through CPE and did not have the benefit of learning from others. Allowing such a change request would be intended to improve the CPE applicant's chances to prevail in CPE, which would negatively impact the other applicants in the same contention set. Therefore, although a CPE applicant may believe that updating its application's community definition and registration policies prior to completing CPE is necessary because subsequent information showed that it previously failed to set forth criteria in its application that would satisfy CPE criteria, allowing it to do so before CPE would cause issues of unfairness to other applicants. (*See id.*)

As ICANN strives to ensure fair and equitable treatment for all applicants, all change requests of these types have been deferred until after CPE. If an applicant successfully prevails in CPE and enters into contracting, ICANN will consider approving a change request to update the community definition and registration policies prior to execution of the Registry Agreement, provided there are no pending issues impacting the application (i.e., a pending accountability mechanism triggered on the string). (*See id.*)

Contrary to DotMusic's assertion, the language in the Guidebook regarding change requests have not been altered over time. (*See* Guidebook § 1.2.7. at <https://newgtlds.icann.org/en/applicants/agb/intro-04jun12-en.pdf>.) The language in Section 1.2.7 has remained intact since the Guidebook was adopted by the ICANN Board

in June 2011. (See <https://www.icann.org/resources/board-material/resolutions-2011-06-20-en#1>.) ICANN published the change request determination criteria on 5 September 2012. (<http://newgtlds.icann.org/en/applicants/customer-service/change-requests>.) The criteria have not changed since publication. Rather, ICANN has updated the Change Request page as well as published the Applicant Advisory page, to provide more detail about the criteria and how they relate to each other. (See Applicant Advisory at <http://newgtlds.icann.org/en/applicants/advisories/change-request-set-05sep14-en>.)

The Change Request Process page was also updated on 5 September 2014 to include the following additional explanatory information regarding the Change Request Criteria:

These criteria were carefully developed to enable applicants to make necessary changes to their applications while ensuring a fair and equitable process for all applicants.

In evaluating each change request, all available information is considered against the seven criteria above. The weight of each criterion may vary on a case-by-case basis, depending on the facts and circumstances surrounding the change request, the application, and the string.

Explanation – This criterion requires that the applicant provide an explanation for the requested changes. If an explanation is not provided, the applicant is given an opportunity to remediate. As such, this criterion is always met and does not bear as much weight as the other criteria.

Evidence that original submission was in error – This criterion is applicable in cases where the applicant requests a change to correct an error. In this case, the criterion requires that the applicant provide adequate information to support the request. There are few cases of change requests to correct an error. However, when such a case is submitted, this criterion is heavily weighted.

Other third parties affected – This criterion evaluates whether the change request materially impacts other third parties, particularly other applicants. In cases where a change to application material has the potential to materially impact the status of another applicant's application, this criterion is heavily weighted.

Precedents – This criterion assesses whether approval of the change request would create a new precedent, or if it would be in-line with other similar requests that have been approved. At this stage of the New gTLD Program, it is unlikely that a change request that would create a new precedent would be approved.

Fairness to applicants – This criterion evaluates whether approving a change request would put the applicant in a position of advantage or disadvantage compared to other applicants. This criterion is related to the "Other third parties affected" criterion, and if a change request is found to

materially impact other third parties, it will likely be found to cause issues of unfairness.

Materiality – This criterion assesses how the change request will impact the status of the application and its competing applications, the string, the contention set, and any additional Program processes that it or its competing applications must complete such as Community Priority Evaluation ("CPE"). A change that is determined to be material in and of itself will not cause a change request to be rejected. However, it will cause other criteria to weigh more when considered in conjunction with each other.

Timing – This criterion determines whether the timing of the change request impacts the materiality, fairness to applicants, and other third parties affected criteria. In cases where timing of the change request is found to impact these criteria, it will be heavily weighted.

(See <https://newgtlds.icann.org/en/applicants/global-support/change-requests/>.)

Based on the foregoing, ICANN therefore does not have any responsive documentation to this Item.

Item 5

Item 5 seeks the disclosure of “[t]he names of all the EIU CPE evaluators pertaining to the .MUSIC, .ECO, .RADIO, .SPA, .HOTEL and .OSAKA CPE processes and any correspondence between ICANN and Google’s Vice-President (also ex-ICANN chairman and ICANN Strategy Chair) Vinton Cerf to further investigate the appearance of a conflict of interest and ensure that the evaluators were qualified to evaluate a music-related CPE as explicitly required by the AGB and CPE Materials.” To help assure independence of the process and evaluation of CPEs, ICANN (either Board or staff) is not involved with the CPE Panel’s evaluation of criteria, scoring decisions, or underlying analyses. Accordingly, ICANN does not have any information regarding the names of the CPE panel evaluators for any evaluation. Therefore, ICANN does not have any documents responsive to this request.

Further, ICANN does not have any documents responsive to the request for “correspondence between ICANN and Google’s Vice-President (also ex-ICANN chairman and ICANN Strategy Chair) Vinton Cerf to further investigate the appearance of a conflict of interest.” As set forth in the CPE Process Document, as part of the evaluation process, “[a]ll EIU evaluators, including the core team, have ensured that no conflicts of interest exist.” (<https://newgtlds.icann.org/en/applicants/cpe/panel-process-07aug14-en.pdf>.)

With respect to the portion of the request seeking documents related to “ensur[ing] that the evaluators were qualified to evaluate a music-related CPE”, as stated in the CPE

Process Document “[a]ll EIU evaluators undergo regular training to ensure full understanding of all CPE requirements as listed in the Applicant Guidebook, as well as to ensure consistent judgment. This process included a pilot training process, which has been followed by regular training sessions to ensure that all evaluators have the same understanding of the evaluation process and procedures.” The CPE Process Document further states that “EIU evaluators are highly qualified, they speak several languages and have expertise in applying criteria and standardized methodologies across a broad variety of issues in a consistent and systematic manner.”

(<https://newgtlds.icann.org/en/applicants/cpe/panel-process-07aug14-en.pdf>.) As noted above, ICANN is not involved in the selection of CPE evaluators and therefore, ICANN does not have any documents responsive to this item.

Item 6

Item 6 requests the disclosure of “[t]he name of *“the appointed independent Quality Control service provider”* and all non-public internal documents and non-public internal correspondence between *“the appointed independent Quality Control service provider for the purposes of helping it to verify that Panel Firm’s evaluation services have been and are performed in accordance with the Quality Control Guidelines”* and ICANN and/or the EIU.” Your request quotes from Paragraph 12 of the EIU Statement of Work (SOW) No. 2 published on the CPE webpage at <http://newgtlds.icann.org/en/applicants/cpe/eiu-contract-sow-information-08apr15-en.zip>. As specified on page 1 of the SOW, the SOW applies to the EIU’s evaluation services for CPE and Geographic Names. As discussed above in response to Item 1, the Quality Control Program was a program that was implemented solely for the Initial Evaluation phase of the New gTLD Program to ensure that all 1930 applications have followed the same evaluation process and have been evaluated consistently. (See <https://newgtlds.icann.org/en/blog/preparing-evaluators-22nov11-en>.) The Quality Control Program did not extend to CPE. Because Geographic Names evaluation was a part of Initial Evaluation, the reference to the Quality Control Program in Paragraph 12 applied to the EIU’s evaluation services for Geographic Names, not CPE. For these reasons, ICANN does not have any documents responsive to this request.

About DIDP

ICANN’s DIDP is limited to requests for documentary information already in existence within ICANN that is not publicly available. In addition, the DIDP sets forth Defined Conditions of Nondisclosure. To review a copy of the DIDP, please see <http://www.icann.org/en/about/transparency/didp>. ICANN makes every effort to be as responsive as possible to the entirety of your Request. As part of its accountability and transparency commitments, ICANN continually strives to provide as much information to the community as is reasonable. We encourage you to sign up for an account at MyICANN.org, through which you can receive daily updates regarding postings to the portions of ICANN’s website that are of interest because, as we continue to enhance our reporting mechanisms, reports will be posted for public access.

We hope this information is helpful. If you have any further inquiries, please forward them to didp@icann.org.

Subject: Re: Notification to begin evaluation of 1-1115-14110 (.MUSIC)
Date: Monday, August 17, 2015 at 11:11:19 AM Pacific Daylight Time
From: Benjamin Parisi
To: Jared Erwin
CC: Hilary Ewing, Russ Weinstein

Thanks, Jared. We'll let you know if we have any questions about this.

On Mon, Aug 17, 2015 at 10:43 AM, Jared Erwin Contact Informat on Redacted wrote:

Hi Hilary and Ben,

This email serves as the EIU's notification that evaluation can begin on application 1-1115-14110 (DotMusic LTD), community applicant for MUSIC. As per other evaluations, the following are in scope:

- Application questions 1-30a
- Application comments (these have been loaded into the external share drive for your retrieval)
- Correspondence
- Objection outcomes
- Outside research (as necessary)

The CPE micro site (<http://newgtlds.icann.org/en/applicants/cpe>) will be updated later today to reflect that evaluation is now in progress for this applicant.

Please let me know if you have any questions.

Best,

Jared

I. INTRODUCTION

1. This Declaration is the product of an Independent Review (IR) authorized under the Bylaws of the Internet Corporation for Assigned Names and Numbers (ICANN). Those Bylaws contemplate that:

ICANN shall have in place a separate process for independent third-party review of Board actions alleged by an affected party to be inconsistent with the Articles of Incorporation or Bylaws.²

2. Under those Bylaws, standing is conferred on: “[a]ny person materially affected by a decision or action by the Board that he or she asserts is inconsistent with the Articles of Incorporation or Bylaws.”³

3. These proceedings arise out of separate applications by subsidiaries of the complainant, Donuts, Inc., to manage specific gTLDs available under the New gTLD Program authorized by a decision of the ICANN Board in June 2011.⁴ That Program was designed to make available for use an extensive range of new gTLDs and constitutes, according to ICANN, “by far ICANN’s most ambitious expansion of the Internet’s naming system.”⁵ It was undertaken with a view to “enhancing competition and consumer choice, and enabling the benefits of innovation via the introduction of new gTLDs”⁶

4. The Program had been several years in development, and reflects diverse input from “representatives from a wide variety of stakeholder groups.”⁷ The resulting policies and details of implementation are largely consolidated in the “Applicant Guidebook” (Guidebook)⁸—an essential document to which reference will often be made below.

II. THE PARTIES

² ICANN Bylaws, Article IV, Section 3.

³ Id., para. 2.

⁴ Preamble to Guidebook.

⁵ Remarks attributed to ICANN by the Booking.com IR Panel, Declaration of March 3, 2015, para.16.

⁶ Id.

⁷ Specifically:

[G]overnments, individuals, civil society, business and intellectual property constituencies, and the technology community – were engaged in discussions for more than 18 months on such questions as the demand, benefits and risks of new gTLDs, the selection criteria that should be applied, how gTLDs should be allocated, and the contractual conditions that should be required for new gTLD registries going forward.

Guidebook, (Preamble).

⁸ Guidebook, at 1-1, states in relevant part: “ThisGuidebook is the implementation of Board approved consensus policy concerning the introduction of new gTLDs, and has been revised extensively via public comment and consultation over a two-year period.”

5. The entity requesting review in this proceeding, Donuts, Inc., (Donuts) is a Delaware corporation, having its principal place of business in Washington State. Donuts is the sole owner of Steel Edge, LLC and Atomic Cross LLC, the two applicants for the strings giving rise to this IR.

6. It is in the nature of an IR that ICANN is the responding party. ICANN is organized under California law as a “non-profit public benefit corporation” and has its principal place of business in California. By its articles of incorporation, ICANN is restricted to operating “exclusively for charitable, educational, and scientific purposes within the meaning of...the Internal Revenue Code.”⁹ Its Articles elaborate on these purposes and give a sense of ICANN’s distinctive character:

In furtherance of the foregoing purposes, and in recognition of the fact that the Internet is an international network of networks, owned by no single nation, individual or organization, the Corporation shall... pursue the... purposes of lessening the burdens of government and promoting the global public interest in the operational stability of the Internet by (i) coordinating the assignment of Internet technical parameters as needed to maintain universal connectivity on the Internet; (ii) performing and overseeing functions related to the coordination of the Internet Protocol ("IP") address space; (iii) performing and overseeing functions related to the coordination of the Internet domain name system ("DNS"), including the development of policies for determining the circumstances under which new top-level domains are added to the DNS root system; (iv) overseeing operation of the authoritative Internet DNS root server system; and (v) engaging in any other related lawful activity in furtherance of items (i) through (iv).¹⁰

7. As stated by the *ICM Registry Panel*, “ICANN is no ordinary non-profit California corporation. The Government of the United States vested regulatory authority of vast dimension and pervasive global reach in ICANN.”¹¹

III. THE PANEL’S MANDATE IN BRIEF

8. As more fully discussed below in connection with the Panel’s Analysis of the Parties’ arguments, the Panel’s mandate is highly limited. The Panel is called upon to evaluate only acts (and certain failures to act) of the ICANN Board. The Panel is asked to judge such conduct against ICANN’s Bylaws and Articles, and to do so in light of a prescribed standard of review. The Panel serving in the Merck IR¹² described the exercise as follows:

[T]he Independent Review Process is a bespoke process, precisely circumscribed. The precise language used in Article IV, Section 3.4 requires the party seeking to contest an action of the Board to identify exactly such action, and also identify exactly how such action is not consistent with the Articles of Incorporation and Bylaws. Thus, a panel is

⁹ ICANN Articles, Article 3.

¹⁰ ICANN Articles, Article 3.

¹¹ ICM Registry IR Declaration of Feb. 19, 2010, para. 136.

¹² Merck IR Declaration of Dec. 10, 2015.

required to consider only the precise actions contested. Such a contesting party also bears the burden of persuasion.¹³

IV. SOURCES OF PROCEDURAL AND SUBSTANTIVE GUIDANCE

9. This IR is administered by the International Centre for Dispute Resolution (ICDR) under its Arbitration Rules as augmented by the “ICDR Supplementary Procedures for [the ICANN] Independent Review Process.” The latter ICDR text was produced pursuant to a mandate, found in the ICANN Bylaws.¹⁴

10. Given the Panel’s mandate, substantive guidance necessarily comes from ICANN’s Articles and its Bylaws. Additional sources include the Guidebook, as the principal embodiment of ICANN’s documented policies, and “relevant principles of international law and applicable international conventions and local law.”¹⁵

11. The parties have debated underlying facts and the meaning of provisions within certain ICANN constituent sources, including, in particular, ICANN’s Articles, Bylaws and the Applicant Guidebook. They have not, however, appreciably relied on particular bodies of substantive law, and correspondingly have not offered any conflicts of law analyses.

V. PROCEDURAL HISTORY

A. Procedural Events before this Proceeding

12.

On June 13, 2012, Donuts, through its subsidiary Steel Edge, LLC, applied for the string .SPORTS.

On June 13, 2012, Donuts, through its subsidiary Atomic Cross, LLC, applied for the string .RUGBY.

On March 13, 2013, the International Rugby Board (IRB) filed a community objection to Donuts’ application to manage the .RUGBY registry.

On March 13, 2013, SportAccord (SA) filed a community objection to Donuts’ application to manage the .SPORTS registry.

On January 21, 2014, ICC Expert Jonathan Taylor issued his determination sustaining Sport Accord’s objection to Steel Edge’s application to administer the registry for .SPORTS.

On January 31, 2014, ICC Expert Mark Kantor issued his determination sustaining IRB’s objection to Atomic Cross’ application to administer the registry for .RUGBY.

¹³ Merck IR Declaration, para. 22.

¹⁴ See Bylaws, Article IV, Section 3, para. 8. In the event “there is any inconsistency between [the ICDR] Supplementary Procedures and the [ICDR] Rules, [the ICDR] Supplementary Procedures will govern. ICDR Supplemental Procedures, Section 2.

¹⁵ ICANN is charged with carrying out its activities in conformity with “relevant principles of international law and applicable international conventions and local law.” ICANN Articles, Article 4.

On March 24, 2014 (approximately), Donuts sought assistance from ICANN Ombudsman Chris LaHatte in connection with objection rulings including those pertaining to .SPORTS and .RUGBY.

On July 8, 2014, Ombudsman Chris LaHatte, in a letter opinion, ruled that his competency was limited to considering certain matters of process fairness, and thus was not authorized to review the complained-of interpretations of Guidebook principles and law.

B. Procedural Events during this Proceeding

13.

On October 8, 2014, Donuts filed a Request for IR with the ICDR.

On October 8, 2014 Donuts filed with the ICDR a request for relief under ICDR's emergency arbitrator Rules.

On November 14, 2014, ICANN filed a Consolidated Response to Donuts' Request.

On November 21, 2014, Donuts agreed to withdraw its request for emergency relief in exchange for certain undertakings by ICANN.

On July 14, 2015, between 10 and 11:30 a.m. the IR Panel convened with the Parties by phone to conduct an organization meeting.

On July 17, 2015, the Panel issued its Procedural Order No 1.

On August 7, 2015, the Panel issued its Procedural Order No. 2.

On August 11 and 12, 2015, the Panel received from the Parties "post-scripts" on the subject of ICANN Bylaws, Article XI-A, Section 1 and its bearing on Donuts' requests for document production.

On August 14, 2015, the Panel issued its Procedural Order No. 3.

On August 20, 2015, Donuts filed its Supplemental Memorandum in Support of its Request for Independent Review.

On September 7, 2015, the Panel issued its Procedural Order No. 4.

On September 21, 2015, ICANN filed its Response to Donut's Supplemental Memorandum in Support of Request for Independent Review.

On September 24, 2015, the Panel by letter ruling informed the Parties that it had decided not to admit the submissions of certain third parties.

On October 8, 2015, the Hearing for Argument was held at the AAA offices at 725 South Figueroa Street, Suite 400, Los Angeles, CA.

On October 29, 2015, the Parties submitted Post-Hearing Briefs.

By email correspondence between January 4 and January 22, 2016, the Panel put questions to, and received answers from, the Parties concerning, inter alia, aspects of the Record.

VI. ICANN GUIDING PRINCIPLES AND VALUES

14. Both parties to this IR rely on interpretations of ICANN’s Articles and Bylaws. IR Panels in turn are required to compare Board conduct to those constituent documents. It has become customary for IR Declarations to set out somewhat fully the more oft-relied upon provisions of those sources. This Declaration follows that pattern.

15. First, ICANN’s Articles contain the following mandate:

[ICANN] shall operate for the benefit of the Internet community as a whole, carrying out its activities in conformity with relevant principles of international law and applicable international conventions and local law and, to the extent appropriate and consistent with these Articles and its Bylaws, through open and transparent processes that enable competition and open entry in Internet-related markets. To this effect, the Corporation shall cooperate as appropriate with relevant international organizations.¹⁶

16. Article III of ICANN’s Articles requires ICANN constituent bodies to the “maximum extent feasible” to practice transparency and to pursue fairness.¹⁷

17. The ICANN Bylaws, Article II, Section 3, requires, inter alia, that disparate treatment be justified by a “substantial and reasonable” cause.

18. Finally, ICANN Bylaws, Article I, Section 2 enumerates “Core Values.” Those values are to guide decisions and actions of ICANN and its constituent bodies, but are not rules in a technical sense.¹⁸ The enumerated values relied upon by Donuts in particular, are Nos. 6 through 10, as follows:

./...

6. Introducing and promoting competition in the registration of domain names where practicable and beneficial in the public interest.
7. Employing open and transparent policy development mechanisms that (i) promote well-informed decisions based on expert advice, and (ii) ensure that those entities most affected can assist in the policy development process.
8. Making decisions by applying documented policies neutrally and objectively, with integrity and fairness.
9. Acting with a speed that is responsive to the needs of the Internet while, as part of the decision-making process, obtaining informed input from those entities most affected.

¹⁶ ICANN Articles, Article 4.

¹⁷ ICANN Bylaws, Article III, Section 1, state: “ICANN...and its constituent bodies shall operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness.”

¹⁸ In this connection, the Bylaws advise:

[The enumerated] core values are deliberately expressed in very general terms, so that they may provide useful and relevant guidance in the broadest possible range of circumstances. Because they are not narrowly prescriptive, the specific way in which they apply, individually and collectively, to each new situation will necessarily depend on many factors that cannot be fully anticipated or enumerated; and because they are statements of principle rather than practice, situations will inevitably arise in which perfect fidelity to all eleven core values simultaneously is not possible.

10. Remaining accountable to the Internet community through mechanisms that enhance ICANN's effectiveness.

./....

VII. THE APPLICATION AND OBJECTION PROCESSES INVOLVED IN THIS CASE

A. Donuts' Applications

19. The Guidebook requires that all applicants specify if their application is “community-based” (as opposed to “standard” the default designation).¹⁹ A community-based gTLD is one that is “operated for the benefit of a clearly delineated community.”²⁰ The designation is intended “for applications where there are unambiguous associations among the applicant, the community served, and the applied-for gTLD string.”²¹ By contrast, a “standard” applicant “may or may not have a formal relationship with an exclusive registrant or user population [and it] may or may not employ eligibility or use restrictions.”²²

20. The Guidebook provides that “[a] standard gTLD can be used for any purpose consistent with the requirements of the application and evaluation criteria, and with the registry agreement.”²³

21. Rather than pursuing community-based applications in connection with .SPORTS and .RUGBY, Donuts made “standard” applications, as it was fully entitled to do. Consequently, it was not required to “substantiate [by written institutional endorsements in support of the application] its status as representative of [a] community it names in the application”²⁴ nor to “demonstrate an ongoing relationship with a clearly delineated community” nor to represent that it was applying for a string “strongly and specifically related to” a specific named community. Other community-related conditions also did not apply because Donuts' applications were of the standard type.²⁵

22. Importantly, as seen in these proceedings, the fact that an application is not designated as community-based does not preclude a “community objection” from being raised against it.

B. The Objections

1. In General

¹⁹ Guidebook, at 1-25 through 1-26.

²⁰ Guidebook, at 1-25.

²¹ *Id.*

²² *Id.*

²³ *Id.*

²⁴ *Id.*

²⁵ Donuts, for instance, was not required to formulate, for later formalization in its registry agreement, “dedicated registration and use policies for registrants in its proposed gTLD, including appropriate security verification procedures, commensurate with the community-based purpose it has named.” Guidebook, at 1-25. Similarly, unlike a successful community applicant, Donuts would not have been required, after delegation, to undertake “certain ...contractual obligations to operate the gTLD in a manner consistent with the restrictions associated with its community-based designation.” *Id.* at 1-27.

23. The Guidebook informs applicants that a formal objection may be filed against any application.²⁶ In contrast to earlier IRs to have arisen out of objections of different kinds, this IR originates in two “community” objections.²⁷ In pertinent part, the Guidebook provides:

Established institutions associated with clearly delineated communities are eligible to file a community objection. The community named by the objector must be a community strongly associated with the applied-for gTLD string in the application that is the subject of the objection.²⁸

24. Community objections are distinctive in several ways. They may be brought by a competing applicant, provided that entity has standing. They are marshaled by institutions, not natural persons.²⁹ Community objections are not based on a superior legal claim, but rather depend on there being the requisite level of opposition to the application by a “community”, and upon certain other factors outlined below.

25. As evidenced by this case, community opposition may well be a reaction to the applicant for the string (or the applicant’s intended registration policies). The right to object arises because the string in question is associated with the community represented by the objector and the application (or the applicant’s registration policies) creates a certain level of perceived risk that the community will suffer detriment.

2. Community Objector Standing and the Community Element

26. The successful objections prosecuted against .SPORT and .RUGBY were both of the community type. According to the Guidebook, a Community Objection is one expressing “substantial opposition to the gTLD application in question from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted.”³⁰

27. With respect to community objections, there are four elements to standing: 1] the objector must be an established institution;³¹ 2] the objector must have an “ongoing relationship” with the community in question;³² 3] the community in question must be “clearly delineated;”³³ and 4] the community in question must be “strongly associated with” the gTLD string involved.³⁴

²⁶ Guidebook, at 1-26.

²⁷ The four grounds upon which an objection may be filed include one alleging superior legal rights to the string, one invoking the public interest in the observance of norms of morality and public order, one based on confusing similarity between the applied-for string and an existing string, and the one involved in this IRP, which asserts the existence of substantial opposition to the gTLD application from a significant portion of a community to which the gTLD string may be explicitly or implicitly targeted—i.e., a “community objection”. Guidebook, at 3-4.

²⁸ Guidebook, at 1-25.

²⁹ Guidebook, at 3-7.

³⁰ Guidebook, at 3-4.

³¹ *Id.*, at 3-7 through 3-8.

³² *Id.*

³³ *Id.*

³⁴ *Id.*, at 3-7

28. The Guidebook provides two lists of factors that may be balanced to determine if standing requirements have been satisfied,³⁵ but notes that the lists are not exhaustive; that is, the expert appointed to decide the objection may consider “other relevant information.”³⁶ Nor is it “expected that an objector must demonstrate satisfaction of each and every factor considered in order to satisfy the standing requirements.”³⁷

29. The Guidebook references to community objections are somewhat at variance with each other on the question of whether a gTLD can target more than one community. On the one hand, it describes a community objection as being founded on “substantial opposition to the gTLD application from a significant portion of *the* community to which the gTLD string may be explicitly or implicitly targeted.”³⁸ Elsewhere, however, the Guidebook states that the objector must be an “established institution” with “an ongoing relationship with a clearly delineated community.”³⁹

30. The notion that there may be more than one community to which a string alludes is not inconsistent with guidance found in an Implementation Guideline included in the GNSO Final Report of August 8, 2007,⁴⁰ and with the Guidebook’s instructions that the decision maker (in this case, an ICC Expert) may balance numerous factors in determining if the “clearly delineated community” standing condition has been met.⁴¹

3. The Substantive Elements in Community Objections

31. The merits portion of the analysis requires the expert to determine whether there is substantial opposition from a significant portion of the community to which the string may be targeted. The expert is instructed to test the objection against four requirements. A successful objection requires that each be met, and the burden is on the objector to prove each of the four.⁴² They are, to paraphrase: 1] the community invoked by the objector is a clearly delineated

³⁵ As to whether the objector is an established institution the list consists in: [l]evel of global recognition of the institution; [l]ength of time the institution has been in existence; and public historical evidence of its existence, such as the presence of a formal charter or national or international registration, or validation by a government, inter-governmental organization, or treaty. The Guidebook adds: “The institution must not have been established solely in conjunction with the gTLD application process.” *Id.*, at 3-7.

Regarding whether there is the required on-going relationship with a clearly delineated community, the list includes: [t]he presence of mechanisms for participation in activities, membership, and leadership; [i]nstitutional purpose related to the benefit of the associated community; [p]erformance of regular activities that benefit the associated community; and [t]he level of formal boundaries around the community. *Id.*, at 3-8.

³⁶ *Id.*, at 3-8.

³⁷ *Id.*

³⁸ *Id.*, at 3-4 (emphasis added).

³⁹ *Id.*, at 3-7 (emphasis added).

⁴⁰ See Implementation Guideline P (“[C]ommunity should be interpreted broadly and will include, for example, an economic sector, a cultural community, or a linguistic community. It may be a closely related community which believes it is impacted”). In describing the notion of “community”, the Guideline does not seem to distinguish between the standing and merits contexts.

⁴¹ See Guidebook, at 3-8.

⁴² See *Id.*, at 3-22 through 3-25.

community; 2] that community’s opposition to the application is substantial;⁴³ [3] there is a strong association between the community invoked and the applied-for gTLD string (or ‘targeting’);⁴⁴ and [4] the application creates a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted.⁴⁵

32. The Guidebook instructs that if opposition by a number of people or entities is established, and yet the group represented by the objector is not clearly delineated community, the objection will fail.⁴⁶

⁴³ The objector’s burden is to demonstrate “substantial” opposition within the community it has identified itself as representing; the presence of less-than-substantial opposition must lead to the objection failing. To closely paraphrase the Guidebook at 3-23, the non-exhaustive list of factors an expert might consider in testing substantiality includes:

[n]umber of expressions of opposition relative to the composition of the community; [T]he representative nature of entities expressing opposition; Level of recognized stature or weight among sources of opposition; [d]istribution or diversity among sources of expressions of opposition (including: regional subsectors of community; leadership of community; membership of community; historical defense of the community in other contexts; and the costs incurred by objector in expressing opposition, including other channels the objector may have used to convey opposition.)

⁴⁴ Targeting—that is, a strong association between the applied-for gTLD string and the community represented by the objector—is essential for a community objection to prevail. It may be determined by considering, among other factors: [s]tatements contained in application or publically made by the applicant; and associations by the public. If there is some association, but not a strong one, the opposition must fail. Guidebook, at 3-24.

⁴⁵ The Guidebook notes that “[a]n allegation of detriment that consists only of the applicant being delegated the string instead of the objector will not be sufficient for a finding of material detriment.” Guidebook, at 3-24. As with the other four factors, the Guidebook, at 3-24 through 3-25, identifies, non-exhaustively, factors that might be considered by the expert. These are:

[n]ature and extent of damage to the reputation of the community represented by the objector that would result from the applicant’s operation of the applied-for gTLD string; [e]vidence that the applicant is not acting or does not intend to act in accordance with the interests of the community or of users more widely, including evidence that the applicant has not proposed or does not intend to institute effective security protection for user interests; [i]nterference with the core activities of the community that would result from the applicant’s operation of the applied-for gTLD string; [d]ependence of the community represented by the objector on the DNS for its core activities; [n]ature and extent of concrete or economic damage to the community represented by the objector that would result from the applicant’s operation of the applied-for gTLD string; and [l]evel of certainty that alleged detrimental outcomes would occur.

⁴⁶ Guidebook, at 3-13 (paraphrase). In determining whether the community expressing opposition can be regarded as a “clearly delineated”, an expert can balance many factors, according to the Guidebook. The non-exhaustive list provided by the Guidebook includes:

“[t]he level of public recognition of the group as a community at a local and/or global level; [t]he level of formal boundaries around the community and what persons or entities are considered to form the community; the length of time the community has been in existence; the global distribution of the community (this may not apply if the community is territorial); and the number of people or entities that make up the community.

Guidebook, at 3-22 through 3-23.

IIX. THE NATURE OF ICC OBJECTION PROCEEDINGS

A. The ICC-ICANN Relationship

33. The Guidebook contemplates that resolution of objection disputes will be overseen by outside institutions. In the case of “community” objections, duties of administration were committed to the ICC’s Center for Expertise, as evidenced in a Memorandum of Understanding (the MOU). The MOU is broken into a “whereas” introductory segment and a main body which restates agreed terms; these two lists overlap with each other and cite as authorization provisions in the Guidebook. Together they help understand the ICC’s role and its relationship with ICANN. They are accordingly excerpted at length:

Whereas:

ICANN has developed a program for the introduction of new generic top-level domain names (“gTLD” and the “New gTLD Program”); [and]

The rules and procedures for the New gTLD Program are set out in the Applicant Guidebook (the “Guidebook”), the most recent version of which was published by ICANN on 11 January 2012; [and whereas]

The Guidebook, Module 3, includes a procedure by which third parties may object to an application for a new gTLD; [and whereas]

A formal objection may be filed on any one of the following four grounds: (i) String Confusion Objection; (ii) Legal Rights Objection; (iii) Limited Public Interest Objection; and (iv) Community Objection;^[47] [and whereas]

Objections to applications for new gTLDs may be submitted after ICANN posts the public portions of all applications considered complete and ready for evaluation./...;^[48][and whereas]

A formal objection to an application triggers a dispute between the objector and the applicant that shall be heard and decided by an independent expert panel; [and whereas];

A Dispute Resolution Service Provider (“DRSP”) shall administer the proceedings, and shall appoint the panel of experts that will preside over the objection proceedings; [and whereas]

Disputes triggered by objections shall be resolved in accordance with the New gTLD Dispute Resolution Procedure (the “Procedure”) and the rules of procedure of a particular DRSP that have been identified as being applicable to specific objection proceedings under the Procedure (the “DRSP Rules”); [and whereas]

⁴⁷ Citing Guidebook, § 3.2.1.

⁴⁸ Citing Guidebook, §§ 1.1.2.2 & 1.1.2.6.

Upon publication by the DRSP, the findings of the panel will be considered an expert determination and advice that ICANN will accept within the dispute resolution process;^[49] [and whereas]

The DRSP Rules for Limited Public Interest Objections and Community Objections are the Rules for Expertise of the International Chamber of Commerce (the "ICC [Expertise] Rules"), including any applicable Appendices and other supplements to such Rules that may be adopted by the ICC; [and whereas]

The Centre shall select experts and administer dispute proceedings in accordance with the Procedure and the ICC [Expertise] Rules and any supplements to the Rules as adopted by ICC; [and whereas]

The Centre, with advice and support from ICANN, shall establish the necessary structure and procedures (comprising information technology, staffing, etc.) to perform its duties as DRSP in a timely and efficient manner; [and whereas]

ICANN and the Centre shall communicate regularly with each other and seek to optimize the service that the Centre provides as a DRSP in the New gTLD Program; [and whereas]

The International Centre for Expertise of the ICC (the "Centre") has agreed to act as DRSP for ...Community Objections for at least the first round of applications in the New gTLD Program.

ICANN and ICC therefore agree as follows:

[T]he Centre shall for at least the first Round of the New gTLD Program act as DRSP and administer all disputes arising from Limited Public Interest Objections and Community Objections, as foreseen by Guidebook § 3.2.3 and Procedure Article 3.

The DRSP Rules for...Community Objections are the Rules for Expertise of the International Chamber of Commerce (the "ICC [Expertise] Rules"), including any applicable Appendices and other supplements to such Rules that may be adopted by the ICC.

The Centre shall select experts and administer dispute proceedings in accordance with the Procedure and the ICC [Expertise] Rules and any supplements to the Rules as adopted by ICC.

The Centre, with advice and support from ICANN, shall establish the necessary structure and procedures (comprising information technology, staffing, etc.) to perform its duties as DRSP in a timely and efficient manner.

ICANN and the Centre shall communicate regularly with each other and seek to optimize the service that the Centre provides as a DRSP in the New gTLD Program.

B. The Procedural Framework Governing ICC Expert Evaluations

⁴⁹ Citing Guidebook, § 3.4.6.

34. Community objections to gTLD applications are filed directly with the ICC, which is charged with subjecting objections to an administrative review and checking for compliance with certain procedural rules. The Guidebook sets limits of form and length on such objections.⁵⁰ Under the Guidebook, applicants were required to file timely responses upon being notified of an objection.⁵¹

35. The ICC Expertise Rules contemplate that the ICC will appoint an expert only after considering “the prospective expert’s qualifications relevant to the circumstances of the case” and related factors.⁵²

36. Unless otherwise agreed in writing by the parties, experts are to be “independent of the parties involved in the expertise proceedings,” and are required to execute a “statement of independence” along with a written disclosure to the Centre of “any facts or circumstances which might be of such a nature as to call into question the expert’s independence in the eyes of the parties.”⁵³ Such disclosed information is communicated to the parties, who are entitled to object that the expert does not have the necessary qualifications, including independence.

37. The Applicant Guidebook provides that one expert will serve. The Rules identify the expert’s principal task as being to present findings in a written report “after giving the parties the opportunity to be heard and/or to make written submissions.”⁵⁴

38. The Rules as published by the ICC state that, unless otherwise agreed by the parties, “the findings of the expert shall not be binding upon [them].”⁵⁵ However, the ICC Practice Note on the Administration of Cases under the New gTLD Dispute Resolution Procedure (version 2012-01-11), which supplements the ICC Expertise Rules for use in community objection proceedings, reverses that provision; the parties are deemed to have agreed that the expert report is binding upon them. In this regard, the Guidebook also provides that:

“In filing an application for a gTLD, the applicant agrees to accept the applicability of this gTLD dispute resolution process. [Likewise,] an objector accepts the applicability of this gTLD dispute resolution process by filing its objection. Upon publication by the DRSP, the findings of the panel will be considered an expert determination and advice that ICANN will accept within the dispute resolution process.”⁵⁶

⁵⁰ Attachment to Guidebook Module 3, at Article 8.

⁵¹ Guidebook, at 3-11 through 3-14.

⁵² ICC Expertise Rules, Article 3(2).

⁵³ Id., Article 3.

⁵⁴ Id., Article 12(3).

⁵⁵ Id.

⁵⁶ “Guidebook, Section 3.2 (Public Objection and Dispute Resolution Process) citing Guidebook Section § 3.4.6. In turn, the ICC Practice Note states in relevant part: “By accepting the process as defined in Article 1(d) of the [New gTLD Dispute Resolution] Procedure, parties are deemed to have agreed that the expert determination shall be binding upon [them within the meaning of Article 12(3) of the ICC Expertise Rules]. See Practice Note, version 2012-01-11, item 8.

39. On the subject of immunity, the Rules provide the “neither the experts, nor the Centre, nor ICC and its employees...shall be liable to any person for any act or omission in connection with the expertise procedure.”⁵⁷

IX. THE EXPERT DECISIONS IN THIS CASE

A. In General

40. Broadly speaking, Donuts’ dissatisfaction with the performance of the ICC experts involved in this IR relates to two broad categories. First, it complains that the experts misapplied the grounds for community objections and consequently incorrectly found that the objector in each case had carried its burden with respect to them. The second type of flaw, by contrast, consists in what Donuts alleges was a failure by one of the experts to fully disclose relationships he had with organizations affiliated with the objector.

41. In this section, the Panel will describe, in summary fashion only, the two experts’ respective determinations on the merits. The Panel will defer to a later section its discussion of issues related to expert disclosures. Although the Panel will not recount in detail the arguments of both sides or the full reasoning of the respective ICC experts, it will endeavor to touch upon what Donuts characterizes as the errors giving rise to this proceeding.

B. The .RUGBY Objection Proceeding

42. Donuts applied for .RUGBY in competition with International Rugby Board (IRB). IRB lodged a community objection. Central to the objection was Donut’s stated policy with respect to the access it intended to accord to the string. It reflects the same general philosophy associated with all of Donut’s 307 applications. Donut’s intended:

[T]o make each domain open to all legitimate uses of the multiple meanings that Internet users may ascribe to the common, English-language words chosen for those strings.” ... [which along] with the other TLDs in the Donuts family, ... will provide Internet users with opportunities for online identities and expression that do not currently exist. In doing so, the TLD will introduce significant consumer choice and competition to the Internet namespace the very purpose of ICANN’s new TLD program.⁵⁸

43. With respect to .RUGBY in particular, Donuts also posited:

[.RUGBY] is a generic term and its second level names will be attractive to a variety of Internet users. Making this TLD available to a broad audience of registrants is con-

⁵⁷ The Guidebook includes a similar immunity provision, which is nevertheless broader:

Neither the experts, the DRSP, ICANN, nor their respective employees, directors, or consultants will be liable to any party in any action for damages or injunctive relief for any act or omission in connection with any proceeding under the dispute resolution procedures.

Article 22, New gTLD Dispute Resolution Procedure (version 2011-09-19).

⁵⁸ See Application of June 13, 2013 by Atomic Cross for. RUGBY, Item 18(a).

sistent with the competition goals of the New TLD expansion program, and consistent with ICANN's objective of maximizing Internet participation.⁵⁹

44. The expert ruled in favor of IRB. Donuts cites as error before this Panel the expert's analysis concerning the likelihood of material detriment⁶⁰ to the relevant community⁶¹ posed by Donut's proposed registration policies and practices.

45. An examination of the expert's reasoned determination shows that the expert considered several forms of potential detriment, and in assessing them was influenced by what it found to be a close association between the string and one or more communities. In this respect, the expert disagreed with Donut's characterization of the string as "generic." To closely paraphrase the expert's material detriment analysis:

Objector argues that granting the [Donuts] Application would be likely to cause material detriment...for several reasons.

First, Objector points out that...Donuts has applied for gambling-related strings [enumerated] ...[and] seeks to operate gambling-related strings along with ".RUGBY" and other sports-related strings, without limitations and protections to mitigate the adverse consequences...[and] argues that association [with gambling strings] would harm the rugby community.⁶²

46. The expert found the objector's gambling-related thesis "persuasive", in light of measures taken by the rugby community to minimize the adverse effects of gambling and certain regulations and codes of conduct precluding: "Unions, Associations, Rugby bodies, clubs and persons [from engaging] in conduct that would undermine the integrity of the sport or bring it into disrepute."⁶³ The expert observed additionally that "Host Union Agreements prohibit any improper association with gambling-related sponsorships".

He concluded:

[O]peration of the ".RUGBY" gTLD by [Donuts] will create a likelihood of material detriment to the rugby community due to Donuts' proposed cross-ownership of gambling strings and sports strings, and the absence of any meaningful controls and separation in the governance structure.⁶⁴

47. Considering the objector's further theories of material detriment, the expert continued:

[O]bjector claims that persons associated with [Donuts] have a track record for weak operation of domains. [It is objector's] understanding that "the founder and CEO of Donuts was formerly President of [a certain company] with a well-known [negative] track record in the ICANN Community.

⁵⁹ Id.

⁶⁰ Regarding this objection element, see notes 43-46, supra, and accompanying text.

⁶¹ Regarding the relevant community, see notes 30-34, 46, supra, and accompanying text.

⁶² Objection Expertise in IRB v. Atomic Cross, CASE No. EXP/517/ICANN/132 (c. EXP/519/ICANN/134), issued January 31, 2014, paras. 81-83.

⁶³ Id., para. 83.

⁶⁴ Id., para. 84.

[Objector further alleges] that the public record shows that [during his tenure there were] allegations of cybersquatting – the registration, trafficking in, or using [of] domain name[s] with bad-faith intent to profit from the goodwill of a trademark belonging to another [and that] [d]uring this time, [that company and its subsidiaries] lost twenty-six...domain names disputes brought under ICANN’s Uniform Dispute Resolution Policy rules [resulting in many findings].... that “the disputed domain name ha[d] been registered and used in bad faith.”⁶⁵

48. The ICC expert noted Donuts’ silence with respect those alleged former practices. For the expert, the CEO’s history in managing domains, while “not dispositive” did “weigh in the balance.”⁶⁶ He further reasoned that:

The [Donuts] Application [also]...does not propose protection for intellectual property interests other than registered trademarks.... [T]hat approach is insufficient protection for a worldwide community characterized by so many small participants, especially in resource-poor communities and in the developing world.

The [Donuts] Application also does not offer community members an enforceable voice in governance of a gTLD strongly associated with that community. The governance structure for a community-associated domain must necessarily be more protective of the interests of that community than the governance structure for a generic domain.

/...

[It is persuasive also that Donuts] has no links at all with the worldwide rugby community [and] seeks to operate gambling-related strings along with “.RUGBY” and other sports-related strings, without limitations and protections to mitigate the adverse consequences....Donuts has applied for gambling-related strings including .BET, .BINGO, .CARDS, .CASINO and .P●KER.” The failure to have links with a sports-related community with which the domain is strongly associated, together with the prospect of cross-linkage with gambling sites, is a topic that must be the object of discussion with leading voices in the rugby community, as well as the U.K. Government^[67] and other Governments and institutions with a strong interest in the integrity of the sport...

[Although Donuts] has committed to employ a compliance staff to enforce intellectual property protections and restrain fraudulent activity [and] points to “eight additional measures” to protect users... [a] review of the measures [Donuts enumerates as its program to protect intellectual property] shows that few, if any, are new and innovative....

⁶⁵ Id., para. 85.

⁶⁶ Id., para. 86.

⁶⁷ In a preceding portion of the ruling, the expert observed that the strong opposition to the application voiced by the UK was “an extremely important factor in the balance, in view of the substantial role the U.K. plays with respect to the rugby community.” In particular, it was the “unequivocal view...of the Government of the United Kingdom...that these Applicants do ‘not represent the global community of rugby players, supporters and stakeholders [and that they] should withdraw their application.’” See, Id., para. 49.

[Donuts] claims “its absence from the rugby industry enables it to ensure groups and individuals unaffiliated with Objector and its affiliates will have the same opportunity for expression on the TLD as those with incumbent interests.” [However, that response focuses] only on Objector and its affiliates, rather than the rugby community as a whole [and]...fails to take account of the strong association between the rugby community and the particular string “.RUGBY.”

[Donuts] argues that “a group without trademark status or comparable protection on existing gTLDs should not enjoy trademark-level protection in any TLD.” That ...presumes that only registered trademarks are properly entitled to protections. While that may be true for generic domains, it is an overstatement with respect to gTLDs strongly associated with a particular global community. Small, resource-poor and non-commercial participants in a community require protection as well as larger commercial enterprises....

Finally, ...[Donuts] asserts that Objector has failed to show any level of certainty that [Donuts’] operation of the string “.RUGBY” creates a likelihood of material detriment, and no reasonable quantification of such an outcome. There is no quantification threshold in the Procedure for a “material detriment” showing. Since the question is inherently forward-looking for new domains, quantification of likely future harms cannot reasonably be expected to be easy to show. The ICANN process does not require such a rigorous empirical showing.

In light of the foregoing, the [Donuts] Objection is successful and the Objector thus prevails with respect to that Objection.⁶⁸

C. The .SPORTS Objection Proceeding

49. SportAccord (SA)⁶⁹ opposed the application of Donuts based on an alleged material detriment to a delineated community likely to occur from Donuts’ registration policies. According to SA, the relatively free access to the .SP●ORTS registry contemplated by Donuts would allow registrants not sanctioned by organized sports to nonetheless convey the seeming imprimatur of that community (a community referred to by the expert as the “Organized Sports Movement”).⁷⁰

50. The objectors argued also that a perception of an association between a .SPORT registrant and the community would interfere with the community’s anti-drug, anti-gambling, anti-racism messaging by diluting such campaigns with unsanctioned messaging on the same topics.

⁶⁸ Id., paras. 87-100 (passim).

⁶⁹ SportAccord (SA) is described by the expert as a not-for profit “umbrella organization and representative body” formed under Swiss law in 1967. Its members are international sports federations and organizers of sporting events recognized by the International Olympic Committee. Objection Expertise in SportAccord v. Steel Edge, CASE No. EXP/486/ICANN/103 issued January 21, 2014, para. 13.2. SA applied for the gTLD “.SPORT” (as distinct from “.SPORTS”—the gTLD for which Donuts applied).

⁷⁰ Id., paras. 41.1.2 & 41.2.2.

Further, the objector asserted that the registry practices of Donuts would enable ambush marketing, brand-jacking, and use of sports themes in connection with pornography.⁷¹

51. Donuts' defense questioned both SA's standing⁷² and the merits of its objection; the delineated community requirement was central to both aspects of that defense. Donuts maintained that .SPORTS potentially targets a community nearly impossible to effectively delineate,⁷³ being much broader than merely those persons that identify with *organized* sports.

52. Accordingly, argued Donuts, while the putative community of the "Organized Sports Movement" (as the expert characterized it) might be sufficiently targeted by a gTLD denominated less generically, the more generic .SPORTS string implies associations so numerous and diverse that SA cannot claim to have an ongoing relationship with them; nor could the narrow subset consisting in "the Organized Sports Movement" claim to be strongly enough associated with the .SPORTS gTLD to have standing to object.⁷⁴

53. On the merits, the substantial opposition to its application among SA members was, according to Donuts, merely the opposition of a narrow subset of all those for whom sport (in all its forms and modes of appreciation) is a concept. For Donuts, the argument for "substantiality" was weakened accordingly. It followed in Donut's view that a likelihood of detriment to the subset of organized sports bodies and their members and patrons does not equate to a likelihood of detriment to the entire class of natural and juridical entities implicitly targeted by .SPORTS.

54. The expert's analysis differed with that of Donuts. On the critical question of community delineation, the expert interpreted the Guidebook and certain background materials to anticipate that there may be more than one community impliedly targeted by a given gTLD.⁷⁵ The expert interpreted SA's pleadings as referring to organized sports, rather than with all sports activities.⁷⁶ For the expert, .SPORTS readily conjured a strong association with the Organized Sports Movement, a community that could be identified with sufficient precision to confer standing, and likewise to be amenable to assessments of potential detriment and analyses of related objection requirements.

55. One consequence of the expert's finding of a close association between .SPORTS and the Organized Sports Movement was that the requirement of "a likelihood of material detriment" could be more easily satisfied, which ultimately it was deemed to be.⁷⁷

56. A recurrent theme in the expert's reasoning was that impairment of legitimate interests would likely result from Donuts' openly stated intention to "not limit eligibility or otherwise exclude legitimate registrants in second level names"⁷⁸ Not unlike the analysis applied by the expert in the .RUGBY objection proceeding, the .SPORTS expert report devotes several paragraphs to the

⁷¹ Id., paras. 41.2.1 through 41.2.5.

⁷² Id., paras. 13.3, 14.3, 14.6 15.3 and 16.2.

⁷³ Id., paras. 14.3, 14.6.

⁷⁴ Id., paras. 14.3.

⁷⁵ Id., paras. 14.1, 14.6, 15.3, 19 & 20.

⁷⁶ Id., paras. 14.2 & 14.4.

⁷⁷ Id., para. 43.

⁷⁸ Id., paras. 42.2, 43.2.

potential consequences for the relevant community of Donut's open policy.⁷⁹ In analysis broadly similar to that explicated by the .RUGBY expert, the .SPORTS expert also found such protections as are instituted through the registration agreement to not catch many of the practices that the objector fears will be promoted by Donuts' liberal approach to granting registrations.

X. ARGUMENTS OF THE PARTIES

A. Introduction

57. As more fully developed below, this proceeding is instituted to allow an independent panel to compare the actions and certain inactions of the ICANN Board to the obligations attaching to it under ICANN's Articles, its Bylaws and potentially other documents central to the new gTLD program. This Panel is not authorized to assess acts and omissions by other actors unless those can be attributed to the Board on some basis. A core disagreement between the parties is the extent to which any Board action or inaction cognizable by this Panel has been demonstrated by Donuts. Because the Board ordinarily is not directly involved in processing objections, Donuts has faced a difficult obstacle—the need to show an equivalency between the activities of the ICC and its appointed experts on the one hand, and the Board on the other, or alternatively, to show inaction by the Board that is inconsistent with the Articles or Bylaws.

58. What follows is a brief summary of the parties' submissions to help place in context the Panel's analysis below, which analysis will involve a further examination of the parties' positions.

59. The Panel views the arguments as falling under two broad headings. The first category focuses on the acts of the ICC, and more particularly, its experts and, impliedly, proceeds on the basis that those acts are equivalent to, or attributable to, the Board. As such, Donuts would have this Panel judge them directly against the prescriptions and value guides that govern Board conduct. According to Donuts, those acts include manifest errors by the experts in applying the grounds for community objections set out in the Guidebook⁸⁰ and, in the case of one expert, a failure to fully comply with disclosure requirements applicable to ICC Experts.⁸¹

60. Under the second heading are theories of recovery arising largely, but not fully, out of the same facts as the first category; these allege an unfulfilled duty on the Board's part to act in some remedial fashion, or to adjust the scope of remedial actions it has already taken in other contexts.

B. Alleged Misapplication of Community Objection Standards.

1. In General

61. Donuts alleges that it has been prejudiced by misapplications of the rules established for determining community objections. According to Donuts, several of the principles binding ICANN in executing its mandate⁸² have been abridged in the process. In particular, the invention of new rules by experts in sustaining objections constitutes disparate, discriminatory, treatment

⁷⁹ Id., para. 43.

⁸⁰ See, e.g., Donuts Request for IR, para. 3 (experts "completely misconstrued" community objections), and para 8 ("clear violations of the Guidebook" in application of the grounds).

⁸¹ See, e.g., id., paras. 41-42; Donuts Post-Hearing Brief, paras. 7-8.

⁸² See notes 16-18, supra, and accompanying text.

of Donuts, in violation of ICANN's non-discrimination policies;⁸³ correspondingly, Donuts has detrimentally relied on what it sees as Guidebook promises concerning who is entitled to manage registries. In turn, the unpredictability generated by what Donuts sees as expert fiat is a form of non-transparency; as such it is inconsistent with express Articles and Bylaws provisions.⁸⁴ Finally, the rules applied by experts, according to Donuts, have the effect of favoring "entrenched interests" in contravention of ICANN's undertaking to value competition.⁸⁵

2. The .RUGBY Expertise

62. Donuts asserts that the expert's analysis, in effect, imposes the duties of a community applicant on a standard applicant for the registry in question.⁸⁶ Donuts highlights the following passage in the expertise:

Donuts' application creates a likelihood of material detriment because it "does not offer community members an enforceable voice in governance of a gTLD strongly associated with that community [and] the governance structure for a community associated domain must necessarily be more protective of the interests of that community than [that]...for a generic domain."⁸⁷

63. Donuts maintains that the above reasoning reveals a misapplication of the Guidebook to favor certain objectors and a variation in rule application that promotes unequal treatment, and discrimination:

Donuts... applied for new gTLDs legitimately expecting that ICANN would honor the Guidebook. For its sizable investment, Donuts depends upon predictability and consistency in decision-making. Erratic application of Guidebook standards and divergent results in like cases undermine the system. The results have singled out Donuts for disparate treatment in violation of the Bylaws' anti-discrimination creed.⁸⁸

3. The .SPORTS Expertise

⁸³ The ICANN Bylaws, Article II, Section 3, require, inter alia, that disparate treatment be justified by a "substantial and reasonable" cause. See also ICANN Bylaws, Article I, Section 2, Core Value No. 8. ("Making decisions by applying documented policies neutrally and objectively, with integrity and fairness").

⁸⁴ Donuts relies, inter alia, upon ICANN's Articles. See especially, Article 4 ([ICANN] shall...carry[] out its activities ...to the extent appropriate and consistent with these Articles and its Bylaws, through open and transparent processes..."); See also Bylaws, Article III.1 ("ICANN and its constituent bodies shall operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness."); cf. ICANN Bylaws, Article I, Section 2, Core Value No.7 ("Employing open and transparent policy development mechanisms").

⁸⁵ See ICANN Articles, Article 4 (mandating processes...that enable competition and open entry in Internet-related markets.) See also ICANN Bylaws, Article I, Section 2, Core Value No. 6 (Introducing and promoting competition in the registration of domain names where practicable and beneficial in the public interest).

⁸⁶ Donuts' Request for IR, para. 54 (.Rugby ruling "essentially requires Donuts to operate the TLD as a community"); and see *Id.*, para. 72 (under expert holdings, Donuts would have to operate as a community).

⁸⁷ Excerpt from ICC Expert determination in IRB objection (.Rugby) of January 31, 2014, para. 88.

⁸⁸ Donuts' Request for IR, October 8, 2014, para. 9.

64. Donuts’ submissions examine the reasoning of the .SPORTS expert in relative detail. Putting aside its allegation of bias (discussed below), Donuts asserts that the expert disregarded the strict standing and merits requirements established by the Guidebook for community objections, and failed to place the burden on the objector, as required by the Guidebook. Instead, states Donuts, the expert liberalized the requirements for successful objections in general and, in particular, in connection with what constitutes a “clearly-delineated-community.”⁸⁹

65. In community objection analysis, the manner in which the community is demarked affects both standing and success on the merits. Donuts’ alleges that the expert too readily found a close association between the .SPORTS gTLD and what Donuts maintains is a contrived community: organized sports (or the “Organized Sports Movement”).⁹⁰ For Donuts, the string has reference not only to organized sports, but to a much larger and more highly diffuse group of persons who identify with sporting activity in all the modes in which it is experienced.

66. Donuts also questions the experts’ approach to the other community objection requirements⁹¹ and stresses the expert’s apparent failure to apply the Guidebook’s admonition that “[a]n allegation of detriment that consists only of the applicant being delegated the string instead of the objector will not be sufficient for a finding of material detriment.”⁹²

C. Expert Procedural Misconduct; Bias: The .SPORTS Objection

67. Donuts asserts that the expert that decided the .SPORTS objection had represented organizations which are members of SportAccord (SA), the organization that brought the objection.⁹³ The disclosures he made at the time of his appointment were, according to Donuts, incomplete and misleading. In some of its submissions, Donuts combines that premise with what it regards as his one-sided reasoning on the merits to conclude that the expert was motivated by its affiliations with the objector to reach a result favorable to the objector.⁹⁴

D. Alleged Board Failures to Act

1. In General

⁸⁹ See notes 30-46, *supra*, and accompanying text.

⁹⁰ According to Donuts, the objector’s own definition of the relevant community was broad and diffuse—the opposite of clearly delineated. According to the objector, it included: “(i) “individuals and organizations who associate themselves with Sport;” (ii) “practitioners as well as organizers, supporters and audience;” (iii) “individual practitioners of sport, ... spectators, ... fans and sponsors;” and (iv) “any person in the world.” Donuts Request for IR, para. 63.

In its Request, Donuts complained that, rather than finding this capacious delineation to be fatal to the objection, “the expert “strain[ed] to find a ‘clearly delineated’ community, by proposing without providing evidentiary support, that:

“when the vast majority (many millions of organisations and individuals around the world) think of sports, they must obviously think predominantly (if not exclusively) of official, sanctioned forms of sport that are governed and regulated by means of the pyramid model [atop which SA claims to sit].” *Id.*

⁹¹ These will not be recited by the Panel.

⁹² Donuts’ Request for IR, October 8, 2014, para.73 (quoting Guidebook at 3-24).

⁹³ *Id.*, paras. 63-67.

⁹⁴ *Id.*, paras. 63-64.

68. Donuts maintains that although the Board must “‘apply[] documented policies neutrally and objectively, with integrity and fairness,’ it has allowed the .SPORTS...and RUGBY panels to exceed their authority and violate this mandate.” In like fashion, it avers:

[t]he expert decisions contested in this case allow community objections to be used “as anti-competitive weapons”, permitting the objectors to “hijack “generic” terms (“sports” and “rugby”) in a manner that ICANN did not intend.

69. Donuts has specified or alluded to three forms of Board inaction: 1] failure to train ICC experts on the proper application of community objection standards, which failure has led to errors in the application of that standard that prevented Donuts’ applications from advancing; 2] failure to institute a review mechanism to regulate the community objection decisions of ICC experts; and 3] failure to intervene in this individual case. These are taken in turn.

2. Failure to Train

70. Donuts failure-to-train argument relies in part on the DCA case summarized below⁹⁵ and endeavors to establish a duty to act to inform, to provide oversight, to ensure flowing from the powers and responsibilities it attributes to the Board with respect to the new gTLD program. The following excerpt is from a Donuts’ submission:

The facts and reasoning of the DCA Case similarly apply to the second primary point of Donuts’ Request namely, that the Board had an obligation to see to it that experts designated to hear new gTLD objections were “well informed,” applied the “documented policies” of the Guidebook concerning such objections “neutrally and objectively, with integrity and fairness,” and did not apply such standards so as to single out Donuts (or any applicant) for disparate treatment.... ICANN argues that “no ICANN Board Action was the cause” of the violations of which Donuts complains.

./...

Significantly, the DCA Case held the Board responsible for oversight of the acts of ICANN’s “constituent bodies,” such as the GAC, that share ICANN’s obligation to adhere to its Bylaws and other governing documents. GAC “advice” amounts to nothing unless and until ICANN acts upon it. Similarly, the [ICC expert] determinations of new gTLD objection panels constitute “expert advice” that have no effect until accepted by ICANN. Only the Board has the power to appoint or provide for the appointment of such experts. It also has ultimate authority over the new gTLD program. As such, the Board has an obligation to assure compliance with ICANN policies and procedures by DRSPs and experts ruling upon new gTLD objections.⁹⁶

ICANN’s argument to the contrary ignores the obligations of the Board and advisory bodies^[97] such as the DRSPs and their objection panelists. It further overlooks basic principles of causation and agency. ICANN may not view the Board itself as having actually caused Donuts’ injury, and instead prefers to hide behind the ICC and the

⁹⁵ See notes 116-28, *infra*, and accompanying text.

⁹⁶ Donuts’ Supplemental Memorandum of August 20, 2015, paras. 26-28.

⁹⁷ As to the premise that the ICC is an “advisory body”, see notes 183-89, *infra*, and accompanying text.

expert panelists who rendered the decisions that Donuts contends failed to comply with “documented policies” and other governing principles. Certainly, the Board could reasonably foresee that panels may not follow the sole grounds established by the Guidebook for sustaining community objections, or may not apply them consistently.

Donuts therefore asserts that the Board should have provided for training to “inform” DRSPs and experts retained by ICANN regarding the application of the standards for new gTLD objections, as well as requirements of the Bylaws and other governing documents pertaining to conflicts of interest and non-discrimination. Failing to do so would make the Board, under rudimentary legal principles, a proximate cause of harm to Donuts.⁹⁸

3. Failure to Install a Review Mechanism

71. According to Donuts’ Request for IR:

The Board [has also] failed to provide for review in cases of inconsistent results and clear violations of the Guidebook, [such as when] ...each panel finds “material detriment” on the perception that Donuts is not as valid a “steward” of the respective “communities” described...as the objectors themselves a ground which the Guidebook expressly forbids, and one not followed by other objection panelists.⁹⁹

72. Although this allegation can be examined in several ways, it seems to contain at least two theories of relief. One is that had such an appeals mechanism been in place, either its clarifying jurisprudence, or its availability to Donuts in the case at hand, would have prevented or mitigated the effects of what Donuts believes were errant expert determinations. The second thesis is that by failing to implement such a mechanism, the Board favored certain applicants (those facing certain string similarity objections) over Donuts. Donuts suggests:

The Board [proposed] in February 2014 an avenue to review certain perceived inconsistent “string confusion” objection results. Donuts commented in support of the proposal and urged its extension to inconsistent community objection determinations.

The Board refused to act on such requests. Instead, it adopted in October 2014 the limited review mechanism it had proposed eight months earlier. The Board cited its “ultimate responsibility” for the new gTLD program as authority for its action.¹⁰⁰

73. In its post-hearing submission, Donuts alleged:

While the Board has the same power over new gTLD objections, it admits to having chosen consciously not to use it. ICANN made that choice discriminatorily and despite specific and sustained exhortations to take action from a broad constituency including Donuts.

Specifically, Donuts joined with a number of other applicants, large and small, in a November 2013 letter urging the Board to act to correct and prevent community

⁹⁸ Donuts’ Supplemental Memorandum of August 20, 2015, paras. 29-30 (citations omitted).

⁹⁹ Donuts’ Request for IR, para. 8.

¹⁰⁰ Donuts’ Post-Hearing Brief, para. 14.

objection rulings exceeding or failing to apply documented Guidebook standards. The letter suggested, among other things, a review mechanism and panelist training. The Board did not respond.¹⁰¹

4. Failure to Act Remedially in .RUGBY and .SPORTS

74. It is suggested in some of Donuts' submissions that even if not acting programmatically to install safeguards, the Board might have acted in its individual case:

The Board knew how to act when presented with an inequity. It had acted in other contexts ...by establishing advance procedures or participating in decision making to maintain predictability for applicants. It did nothing to protect against *or rectify* the failure to apply the Guidebook's documented policies *in the case of .SPORTS and .RUGBY*, despite having notice of such failures and inconsistencies from Donuts and others.¹⁰²

E. ICANN's Position

75. ICANN's position is straight-forward. It maintains that the acts and omissions about which Donuts complains are not acts or omissions of the Board, and that they therefore are not subject matter falling within the proper scope of an IR:

Donuts has not identified any conduct by the ICANN Board that was inconsistent with ICANN's Articles or Bylaws. In fact, no Board action took place here at all.

Donuts argues that the Board had an obligation to create an appellate review of expert determinations, and that the failure to do so demonstrates the Board's lack of accountability. Yet, Donuts does not identify the source of such an obligation because none exists...Nothing in the Articles or Bylaws states that appellate mechanisms (or anything of the sort) are required for the New gTLD Program. At best, Donuts alleges Board *inaction* in this regard, but in the absence of an affirmative duty to create an appellate mechanism, the Board's failure to do so cannot result in a violation of the Articles or Bylaws.

Next, Donuts invokes Article I, Section 2.7 of the Bylaws, alleging that the Board failed to "promote well-informed decisions based on expert advice" as required therein, but...this portion of ICANN's "Core Values" refers to policy development (e.g., the policy recommendations that were implemented through the New gTLD Program), not expert determinations resolving objections administered by third-party dispute resolution providers. In short, the cited provision is inapplicable to the procedures at issue in this IRP, and Donuts has therefore failed to identify any violation of it (or any other Article or Bylaws provision).

Donuts does not allege any other action or inaction on the part of the ICANN Board. Instead, the remainder of Donuts' arguments challenge the substance of the community objection determination or the ICC's implementation of its own rules, such as those

¹⁰¹ Id., paras. 12-13.

¹⁰² Id., para. 16 (emphasis added).

related to purported conflicts of interest on the part of the expert panelist; however, there was no Board action related to the alleged conflict because the ICC is an independent dispute resolution provider that the Board is not required to oversee.

Moreover...Donuts did not file a reconsideration request, by which it might have brought to the Board's attention its concerns about the ICC's implementation of the objection proceedings, including (for example) whether the ICC should have disqualified an expert for bias.

Donuts does not identify any Board action in connection with Donuts' Applications for .SPORTS and .RUGBY that violates ICANN's Articles or Bylaws....¹⁰³

XI. PRECEDENTS

A. In General

76. This is not the first IR proceeding to have arisen out of the new gTLD program. Several declarations have been issued by other Panels. They are to enjoy "precedential value" according to ICANN's Bylaws.¹⁰⁴ The Panel takes that to mean that it should take account of the reasoning of other Panels in pursuing its own analysis, and should, to the extent warranted, seek consistency. It is not feasible or helpful to survey the existing Declarations in detail; a summary of each, however, will give important background to the Panel's analysis of the case before it.

B. Booking.com¹⁰⁵

77. Booking.com (Booking), is a limited liability that conducts an online hotel reservation service. Its principal focus is on English-language markets. It applied for the .HOTELS string. That string was placed in a contention set with .HOTEIS, with the result that neither applicant could proceed to delegation. That left Booking.com with the options of either privately negotiating with the applicant for .HOTEIS, or proceeding to an auction to settle the contention issue.¹⁰⁶

¹⁰³ Id., paras. 16-20.

¹⁰⁴ Article IV, Section 3.21 states, in part: "The declarations of the IRP Panel, and the Board's subsequent action on those declarations, are final and have precedential value."

¹⁰⁵ Booking.com v. ICANN, ICDR Case No. 50-20-1400-0247.

¹⁰⁶ According to the Guidebook, as traversed by the Booking.com panel (Booking.com IR Declaration, paras. 60-62), within the New gTLD Program, every applied-for string has been subjected to the String Similarity Review set out at Section 2.2.1.1 of the Guidebook. The String Similarity Review checks each applied-for string against existing TLDs, reserved names and other applied-for TLD strings (among other items) for "visual string similarities that would create a probability of user confusion" (Guidebook, at 2-21 et seq.). If applied-for strings are determined to be visually identical or similar to each other, the strings will be placed in a contention set, which is then resolved pursuant to the contention resolution processes in Module 4 of the Guidebook. If a contention set is created, only one of the strings within that contention set may be approved for delegation. In the specific case of Bookings, InterConnect Communications ("InterConnect") performed the string similarity review called for in the Applicant Guidebook. On 26 February 2013, ICANN posted InterConnect's report, which included two non-exact match contention sets (.hotels/.hoteis and .unicorn/.unicom) as well as 230 exact match contention sets. <http://www.icann.org/en/news/announcements/announcement-26feb13-en.htm>. The String Similarity

78. Booking.com unsuccessfully pursued a Request for Reconsideration (RFR) of the decision to place .HOTELS in a contention set with .HOTEIS. It viewed the two strings as quite distinguishable from each other. It subsequently sought an IR.

79. The IR Panel found that Booking.com's allegations of Board failings were of two kinds: 1] those that related to the string similarity review process, essentially as instituted by ICANN; and 2] those that related to the specific processing of the .HOTELS objection.

80. The first category addressed alleged Board conduct "in establishing and overseeing the process by which so-called string similarity reviews are conducted." In particular, it was alleged that the manner in which the Board set up, implemented and supervised "the entire...string similarity review process" and its related failure "to ensure due process and to respect its fundamental obligations to ensure good faith, transparency, fairness and non-discrimination" throughout were acts that were "inconsistent with applicable policies, procedures and rules as set out in ICANN's Articles of Incorporation, Bylaws and gTLD Applicant Guidebook ("Guidebook")."¹⁰⁷

81. As to the first category of allegations, the Panel underscored the distinction between challenges to "validity or fairness of the process as set out in the Guidebook" and those that address "the way in which that process was... implemented and supervised by (or under the authority of) the ICANN Board." That distinction disposed of many of Booking.com's allegations of Board misconduct.

[T]he time has long since passed for Booking.com or any other interested party to ask an IRP panel to review the actions of the ICANN Board in relation to the establishment of the string similarity review process, including Booking.com's claims that specific elements of the process and the Board decisions to implement those elements are inconsistent with ICANN's Articles and Bylaws. Any such claims, even if they had any merit, are long since time-barred by the 30-day limitation period set out in Article IV, Section 3(3) of the Bylaws.

[I]f Booking.com believed that there were problems with the Guidebook, it should have objected at the time the Guidebook was first implemented.....As did all stakeholders, [it had an opportunity to do so].¹⁰⁸

82. This was true despite the Panel's recognition that the process in place had weak elements, some of which it recounted:

[T]he Guidebook provides no definition of "visual similarity", nor any indication of how such similarity is to be objectively measured other than by means of the SWORD

Review was performed in accordance with documentation posted at <http://newgtlds.icann.org/en/program-status/evaluation-panels/geo-names-similarity-process-07jun13-en.pdf>. As part of ICANN's acceptance of the InterConnect's results, a quality assurance review was performed over a random sampling of applications to, among other things, test whether the process referenced above was followed.

¹⁰⁷ Booking.com IR Declaration, para. 67.

¹⁰⁸ *Id.*, paras. 129-30.

algorithm [and] it provides no definition of "confusion," nor any definition or description of an "average, reasonable Internet user."¹⁰⁹

83. Equally, noted the Panel:

The Guidebook mandates the SSP to develop and apply "its own review" of visual similarity and "whether similarities rise to the level of user confusion", in addition to SWORD algorithm, which is intended to be merely "indicative", yet provides no substantive guidelines in this respect.

Nor does the process as it exists provide for gTLD applicants to benefit from the sort of procedural mechanisms - for example, to inform the SSP's review, to receive reasoned determinations from the SSP, or to appeal the merits of those determinations - which Booking.com claims are required under the applicable rules.¹¹⁰

84. Nevertheless, ultimately, the Panel concluded:

[T]he fact is that the sort of mechanisms that Booking.com asserts are required (and which [certain] NGPC members believe should be required) are simply not part of the string similarity review process as currently established. As to whether they *should* be, it is not our place to express an opinion, though we note that such additional mechanisms surely would be consistent with the principles of transparency and fairness.¹¹¹

85. Under the second category of alleged Board failings, Booking.com cited the Board's failure to intervene in the Booking.com application process, either to reconsider and overturn a decision to place .HOTELS in a string contention set or to countermand the result of the Request for Reconsideration.

86. Before the Booking.com IR Panel, this line of argument also faltered. The Guidebook process had been followed with respect to the application in question and that process either did not call for the Board to act or gave the Board discretion not to act.

87. The analysis was not affected by the conclusions reached by Booking.com's expert, that: "[t]here is no probability of user confusion if both .hotels and .hoteis were delegated as gTLD strings into the Internet root zone."¹¹² Nor was it affected by the allegation that the Board was, or should have been, alerted to the errant determination and had ample time to reverse the alleged error "using the authority accorded it by Module 5-4 of the Guidebook to 'individually consider a gTLD application'".¹¹³

88. The IR Panel found that the Board had not failed to discharge any of its obligations of fairness and transparency. The Panel ruled that:

¹⁰⁹ Id., para. 127.

¹¹⁰ Id., paras. 127-28.

¹¹¹ Id., para. 129 (emphasis in original).

¹¹² Id., para. 140.

¹¹³ Id., para. 138.

[T]he Board's acceptance of the SSP's determination did not constitute Board action (or inaction), or a Board decision made (or not made), or by any other body to accept the SSP's determination. The Guidebook provides that when the applied-for strings are determined by the SSP to have the visual similarity likely to give rise to user confusion, they "will be placed in contention set".¹¹⁴

89. "Simply put," reasoned the Panel: "under the Guidebook the Board is neither required nor entitled to intervene at [that] stage to accept or not accept the SSP's determination."¹¹⁵

90. In turn, when acting through the BGC and, subsequently, through the NGCP in response to Booking.com's RFR, the Board discharged its duty to exercise due care and independent judgment. The IR Panel found the BGC's assessment to be detailed and carefully reasoned; the NGCP in turn had given extensive consideration to the BGC Recommendation before accepting it.¹¹⁶

91. The Panel agreed that in theory the Board could have stepped in under Section 5.1 (Module 5-4) of the Guidebook that is to "individually consider [the] application...to determine whether approval would be in the best interest of the Internet community." The Panel found no fault in its failure to do so, however. It observed:

"the fact that the ICANN Board enjoys such discretion and may choose to exercise it any time does not mean that it is bound to exercise it, let alone at the time and in the manner demanded by Booking.com."¹¹⁷

92. In the case at hand:

[T]he Panel [did] not believe that the Board's inaction...in this respect was inconsistent with ICANN's Articles of Incorporation or Bylaws or indeed with ICANN's guiding principles of transparency and fairness, given (1) Booking.com's concession that the string similarity review process was followed; (2) the indisputable conclusion that any challenge to the adoption of the SSP process itself is time-barred; (3) the manifestly thoughtful consideration given to Booking.com's Request for Reconsideration by the BGC; and (4), the fact that, notwithstanding its protestations to the contrary, Booking.com's real dispute seems to be with the process itself rather than how the process was applied in this case.

C. DCA Trust¹¹⁸

93. DCA Trust, was a non-profit organization established under the laws of the Republic of Mauritius for the charitable purpose of, "among other things, advancing information technology

¹¹⁴ Id.

¹¹⁵ Id.

¹¹⁶ Booking.com cited as compelling evidence of ICANN's failure in this regard statements made on the record by several members of the NGPC during its 10 September 2013 meeting at which Booking.com's RFR was denied. The Panel took those views into account, but concentrated its inquiry on whether the Guidebook process had, or had not, been followed.

¹¹⁷ Booking.com IR Declaration, para. 138.

¹¹⁸ DotConnectAfricaTrust (DCA Trust) v. ICANN, Case No. 50 2013 001083.

education in Africa and providing a continental Internet domain name to provide access to internet services for the people of Africa...”¹¹⁹ DCA Trust applied to ICANN for the delegation of the gTLD .AFRICA. It did so in competition with a South African company called ZACR. DCA Trust’s application was opposed by ICANN’s Governmental Advisory Committee (GAC), in a “Consensus Advice” that caused the NGPC to stop processing DCA Trust’s application.¹²⁰

94. Thereafter, DCA Trust pursued an RFR of NGPC’s decision to halt processing of the application. It was unsuccessful; in August of 2013 the BGC recommended to the NGPC that it deny DCA Trust’s Request, and the NGPC followed the BGC’s recommendation.”¹²¹

95. According to the Guidebook:

ICANN’s Governmental Advisory Committee was formed to consider and provide advice on the activities of ICANN as they relate to concerns of governments, particularly matters where there may be an interaction between ICANN’s policies and various laws and international agreements or where they may affect public policy issues.

The process for GAC Advice on New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that may violate national law or raise sensitivities.

GAC members can raise concerns about any application to the GAC. The GAC as a whole will consider concerns raised by GAC members, and agree on GAC advice to forward to the ICANN Board of Directors.¹²²

96. The GAC can offer advice on any application, and that advice can take several forms. The advice it gave in the DCA Trust case communicated that it was the consensus of the GAC that DCA Trust’s application “should not proceed.” According to the Guidebook, such an advice “will create a strong presumption for the ICANN Board that the application should not be approved.”¹²³

97. The established procedure calls for ICANN, upon receipt of such an Advice to publish it, and:

[E]ndeavor to notify the relevant applicant(s) promptly, [after which] [t]he applicant will have a period of 21 calendar days from the publication date in which to submit a response to the ICANN Board.¹²⁴

98. In considering the GAC Advice, the Board “may consult with independent experts, such as those designated to hear objections in the New gTLD Dispute Resolution Procedure...”¹²⁵

¹¹⁹ DCA Trust IR Declaration of July 9, 2015, para. 2.

¹²⁰ Id., para. 5.

¹²¹ Id., paras. 6, 107.

¹²² Guidebook, at 3-1 through 3-2.

¹²³ Guidebook, at 3-2.

¹²⁴ Id., at 3-3.

¹²⁵ Id.

99. In the IR, DCA Trust sought a declaration that ICANN Board violated ICANN's Articles of Incorporation, Bylaws and the Applicant Guidebook (AGB) by, inter alia: "failing to apply ICANN's procedures in a neutral and objective manner", with a level of transparency requisite to procedural fairness, when "without reasonable investigation" it accepted the supposedly consensus-based decision behind the GAC's Advice, and when it approved the Board Governance Committee's (BGC)'s recommendation not to reconsider the NGPC's acceptance of the GAC Objection Advice.

100. Ultimately, the DCA Trust Panel held that, indeed, by acts and failures to act attributable to the Board, it conducted itself in a manner "inconsistent with ICANN's Articles of Incorporation, Bylaws or the Applicant Guidebook."¹²⁶

101. Although the applicant advanced myriad allegations of deficient Board behavior, at the core of the Panel's dispositive analysis was Article III of ICANN's Bylaws (Transparency), Section 1 of which provides:

ICANN...and its constituent bodies shall operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness.

102. The Tribunal ruled that, the Article III transparency mandate applied to the GAC because under Article XI of the ICANN Bylaws the GAC was a "constituent body" of ICANN, albeit one performing only of an advisory function and having no power to bind the Board.¹²⁷

103. In finding that transparency had not been practiced, the Panel was influenced by testimony from the then-Chair of the GAC and other evidence tending to show that the GAC decision was the product of obscure political maneuvering and was accompanied by no rationale (e.g., analysis or findings explaining potential violations of national laws or reporting on sensitivities bearing on the application in question, as one might have expected from consulting the Guidebook).¹²⁸

104. Additionally:

DCA Trust was never given any notice or an opportunity... to make its position known or defend its own interests before the GAC reached consensus...and that the Board of ICANN did not take any steps to address this issue.¹²⁹

105. The acts and omissions chargeable to the Board consisted in the NGPC's uncritical acceptance of the GAC supposed consensus that DCA Trust's application should be opposed, the failure of BGC during the RFR to take account of GAC's deficient process when declining to recommend reconsideration (despite the BGC having been empowered to investigate and fact-find) and the NGPC's ultimate acceptance, again without critical examination, of the BGC's decision recommending against reconsideration.

106. The Panel observed:

The Panel understands that the GAC provides advice to the ICANN Board on matters of public policy, especially in cases where ICANN activities and policies may interact

¹²⁶ DCA Trust IR Declaration, para.148.

¹²⁷ DCA Trust IR Declaration, paras.101-02.

¹²⁸ Id., paras. 102-111.

¹²⁹ Id., para. 109.

with national laws or international agreements, ...that GAC advice is developed through consensus among member nations [and] that although the ICANN Board is required to consider GAC advice and recommendations, it is not obligated to follow those recommendations.

In light of the clear “Transparency” obligation[s]...found in ICANN’s Bylaws, the Panel would have expected the ICANN Board to, at a minimum, investigate the matter further before rejecting DCA Trust’s application [and][t]he Panel would have had a similar expectation with respect to the NGPC Response to the GAC Advice regarding .AFRICA.¹³⁰

D. Vistaprint¹³¹

107. The Vistaprint IR stemmed from a “string confusion” objection, in which the objector prevailed. Applying the Guidebooks criteria,¹³² the expert held that the gTLD .WEBS so nearly resembled .WEB “visually, aurally and in meaning” that it is likely to cause confusion in the mind of the average, reasonable Internet user.¹³³ As a consequence, Vistaprint’s applications (one standard, the other community-based) did not advance, but became subject to the contention set process.¹³⁴

108. There followed a RFR in which the conduct of the expert (treated as analogous to ICANN “staff” for RFR purposes¹³⁵) was evaluated.¹³⁶ The BGC (to whom RFRs are addressed) expressly limited its review to whether the expert violated any established policy or process in reaching its determination, a mandate that did not include performing an evaluation of the correctness of expert’s determinations on the merits.¹³⁷ The BGC concluded after a detailed analysis that there was no indication that the ICDR or the expert had violated any policy or process, or applied the wrong standard, in reaching its determination.¹³⁸

109. In the IR that followed, Vistaprint alleged that the ICDR expert was bound by ICANN’s articulated policies, which he purportedly violated by making certain procedural errors, misapplying the burden of proof,¹³⁹ and incorrectly and arbitrarily assessing the Guidebook’s standards governing string confusion objections.¹⁴⁰ Vistaprint also questioned the expert’s independence and impartiality (or, alternatively, his qualifications) based on “the cursory nature

¹³⁰ Id., paras. 113-14.

¹³¹ Vistaprint Ltd. v. ICANN, ICDR Case No. 01-14-0000-6505.

¹³² Under the Guidebook, Section 3.5.19 (at 3-18), the question is whether the applied-for gTLD string is likely to result in “string confusion”, which exists when “a string so nearly resembles another that it is likely to deceive or cause confusion.” For a likelihood of confusion to exist, it must be probable, not merely possible, that confusion will arise in the mind of the average, reasonable Internet user.

¹³³ Vistaprint IR Declaration of October 9, 2015, paras. 23-24.

¹³⁴ Id., para. 30.

¹³⁵ Id., para. 33.

¹³⁶ Id., paras. 31-39.

¹³⁷ Id., para. 38.

¹³⁸ Id., para. 37.

¹³⁹ Id., paras. 85 (vii), 166.

¹⁴⁰ Id., para.70.

of the Decision and the arbitrary and selective discussion of the parties' arguments...."¹⁴¹ It followed, according to Vistaprint, that it had not received a fair opportunity to present its case to the expert,¹⁴² and that accordingly the Board should not have accepted the expert's determination, but rather should have rejected it based on the Board's "ultimate responsibility for the New gTLD Program" and the right it reserved "to individually consider an application for a new gTLD to determine whether approval would be in the best interest of the Internet community."¹⁴³ Equally, acting through the BGC during the subsequent RFR, the Board, it was argued, should have intervened to address the process deficiencies in question.¹⁴⁴

110. The Vistaprint Panel ruled that it was not empowered "to review the actions or inactions of ICANN's staff or any third parties, such as the ICDR or [objection] experts, who provided services to ICANN."¹⁴⁵ By contrast, the Board's actions when acting through the BGC (which exercises delegated Board authority when considering a RFR), may be assessed in an IR according to the Panel.

111. The Panel reasoned additionally that when petitioned by an applicant to do so, "the ICANN Board has no affirmative duty to review the result in any particular [string confusion] case."¹⁴⁶ In a related observation, the Panel noted:

"[w]hile Guidebook...permits ICANN's Board to individually consider new gTLD applications, such as through the RFR mechanism, it does not require that the Board do so in each and every case, *sua sponte*."¹⁴⁷

112. In reaching the above conclusions, the Panel noted that the availability of the RFR procedure meant an applicant was not without recourse.¹⁴⁸ The Panel also consulted a fuller excerpt of the same Guidebook provision (§ 5.1) relied upon by Vistaprint:

The Board reserves the right to individually consider an application for a new gTLD to determine whether approval would be in the best interest of the Internet community. Under exceptional circumstances, the Board may individually consider a gTLD application. For example, the Board might individually consider an application as a result ... of the use of an ICANN accountability mechanism.

113. The Panel noted that the Guidebook example of the "exceptional circumstances" in which the Board might individually intervene was when the applicant had pursued an accountability mechanism, most notably an RFR.¹⁴⁹

114. Vistaprint also made discrimination claims; there were two related strands to these: One line of argument was that while its application had resulted in a contention set, other applications involving strings said by Vistaprint to be more likely to cause confusion were allowed to proceed

¹⁴¹ Id., para. 26.

¹⁴² Id., para. 83.

¹⁴⁹ Concerning Requests for Reconsideration, see notes 180-82, 227, *infra*, and accompanying text.

to delegation;¹⁵⁰ the second theory was that as to some string similarity cases involving inconsistent expert appraisals, the Board had authorized a further review mechanism selectively to operate, but did not accord Vistaprint the same opportunity.¹⁵¹

115. Vistaprint complained that the BGC had denied its RFR without considering whether such a review mechanism might also be appropriate for dealing with the string confusion determination involving .WEBS/.WEB.¹⁵²

116. The Panel concluded that the Board violated no Article or Bylaw by not establishing a generally available appeals mechanism for string cases, but concurrently found itself challenged by the question whether, on balance, the string cases before it were distinguishable from those in which selective review had been recently authorized. It resolved, however, that it would be premature to rule on that question disparate treatment claim:

The IRP Panel is mindful that it should not substitute its judgment for that of ICANN's Board. The Board has not yet considered Vistaprint's claim of disparate treatment, and the arguments that ICANN makes through its counsel in this IRP do not serve as a substitute for the exercise of independent judgment by the Board. Without the exercise of judgment by ICANN's Board on this question of whether there is any inequitable or disparate treatment regarding Vistaprint's .WEBS gTLD applications, the Board would risk violating its Bylaws, including its core values.¹⁵³

117. The Vistaprint Panel thus found:

[T]hat due to the timing and scope of Vistaprint's Reconsideration Request (and this IRP proceeding), and the timing of ICANN's consultation process and subsequent NGPC resolution authorizing an additional review mechanism for certain gTLD applications that were the subject of adverse SCO decisions, the ICANN Board has not had the opportunity to exercise its judgment on the question of whether, in view of ICANN's Bylaw concerning non-discriminatory treatment and based on the particular circumstances and developments noted above, such an additional review mechanism is appropriate following the SCO expert determination involving Vistaprint's .WEBS applications. Accordingly, it follows that in response to Vistaprint's contentions of disparate treatment in this IRP, ICANN's Board – and not this Panel – should exercise its independent judgment on this issue, in light of all of the foregoing considerations.¹⁵⁴

¹⁵⁰ Id., paras. 176 et seq.

¹⁵¹ See id., para. 181. This latter contention is separate from the question whether the Board should have established a general appeals mechanism to review the merits of string confusion determinations, which contention was rejected by the Vistaprint panel. See id., paras. 174, 175(5).

¹⁵² Id., para. 181. The principal provision implicated by this question was Article II, Section 3's of the Bylaws which prohibits ICANN from applying "its standards, policies, procedures, or practices inequitably or singl[ing] out any particular party for disparate treatment unless justified by substantial and reasonable cause..."

¹⁵³ Id., para. 190.

¹⁵⁴ Id., para. 191.

E. Merck KGaA¹⁵⁵

118. The Merck IR arose out of a Legal Rights Objection (LRO)¹⁵⁶ instituted by Merck with the WIPO Arbitration and Mediation Centre in accordance with the New gTLD Dispute Resolution Procedure.¹⁵⁷ Merck and another company, MSD, had each filed applications with ICANN for new gTLDs incorporating the word “Merck.” Both had objected to the other’s application. By determinations issued in 2013, the sole expert rejected both objections.

119. Merck then instituted an RFR. In that proceeding, the BGC ruled against Merck, concluding:

There is no evidence that the [expert] Panel either applied the improper standard or failed to properly evaluate the parties’ evidence. The expert had “correctly referenced and analyzed the eight factors set out in the Applicant Guidebook relevant to legal rights objections and considered [factors used under analogous regimes]) only as a means to further provide context to one of the eight factors.”¹⁵⁸

120. In the IR that followed, Merck argued, inter alia, that ICANN acted without due diligence and care when it “accepted” the expert determination reflecting what were alleged to be noticeable mistakes in applying ICANN’s LRO standards and that the BGC’s assessment of the relevant circumstances during the RFR was too narrow. Additionally, Merck maintained that the ICANN Board had discriminated against Merck by providing “the possibility for third-party review of some prima facie erroneous expert determinations” but denying the same to similarly situated parties such as Merck.¹⁵⁹ The IR Panel reflected on Merck’s complaints about the ICC expertise and the RFR process as follows:

Merck effectively wanted the BGC to overturn the Sole Panel Expert’s decisions and have the process re-run (which is what it, in substance, wants from this Panel). Its reasons for making that request of the BGC were that the Sole Panel

¹⁵⁵ Merck KGaA v. ICANN, Case No. 01-14-0000-9604.

¹⁵⁶ According to the Guidebook, a holder of existing legal rights (such as trademark) may object that those rights are infringed. Such objections are heard by one expert (unless the parties agree to have three) “with relevant experience in intellectual property rights disputes in proceedings involving an existing legal rights objection:” Guidebook, Section 3.4.4 (at 3-16). In circumstances such as that involved in Merck, the expert’s mandate is to determine “whether the potential use of the applied-for gTLD by the applicant takes unfair advantage of the distinctive character or the reputation of the objector’s registered or unregistered trademark or service mark”. When the objection is based on trademark rights, the panel is instructed to consider a list of non-exclusive factors enumerated in the Guidebook. These include, for example:

Whether the applicant’s intended use of the gTLD would create a likelihood of confusion with the objector’s mark as to the source, sponsorship, affiliation, or endorsement of the gTLD....

Whether the applicant has marks or other intellectual property rights in the sign corresponding to the gTLD, and, if so, whether any acquisition of such a right in the sign, and use of the sign, has been bona fide, and whether the purported or likely use of the gTLD by the applicant is consistent with such acquisition or use....

¹⁵⁷ Merck KGaA v. ICANN, IR Declaration of December 10, 2015.

¹⁵⁸ Determination of the Board Governance Committee (BGC) Reconsideration Request 14-9, April 29, 2014, at 1-2.

¹⁵⁹ Merck IR Declaration, para. 53.

Expert failed to decide the case on the basis of the correct and applicable LRO Standard, and moreover failed to decide the case on the basis of the true and accurate factual record which was presented to him in the course of the dispute. Merck then concludes from those points that it had ‘been denied fundamental due process, as its pleadings were not meaningfully taken into account in the course of the [expert] panel's deliberations, and the panel elected to decide the case on inapplicable grounds.’¹⁶⁰

121. The Merck IR Panel prefaced its analysis by underscoring its limited mandate, and in particular the role of the Standard of Review in confining that charge. Concerning the level of deference, the Panel noted that nothing in the governing disputes architecture required it to approach alleged Board action with deference. Nevertheless, in approaching the BGC’s determinations, it also was “clear that the Panel may not substitute its own view of the merits of the underlying dispute”¹⁶¹ The Merck IR Panel thus limited its mission to examining, not the expert’s performance in making the objection determination, but rather the conduct of the BGC in ruling on the RFR (indisputably ICANN Board conduct).¹⁶²

122. Applying the IR Standard of Review to the BGC’s processing of the RFR, the Panel concluded that there was no evidence that the BGC had failed to carefully and with due diligence equip itself with a reasonable amount of facts in making its assessment or that it failed to consider those facts fully. The Panel declined to assess whether the expert had applied the correct standards, or to perform a de novo review in place of that performed by the BGC. The BGC had determined that the expert had not applied the wrong standards; the Panel considered itself to be without jurisdiction to review the correctness of that finding. It reasoned:

Merck's complaints about the Sole Panel Expert's application, or in its view, non-application of the LRO Standards lack merit. The BGC determined that the Sole Panel Expert did not apply the wrong standards. That is a determination which this Panel does not, because of the precise and limited jurisdiction we have, have the power to second guess. Rather, the critical question for this Panel is whether the BGC exercised due diligence and care in having a reasonable amount of facts in front of them. Merck complains that the BGC did not have "sufficient and accurate facts", and that Merck was thus deprived of an "accurate review of its complaints". These formulations miss the point, and indeed misstate the applicable test in proceedings such as these. The BGC had to have a reasonable amount of facts in front of it, and to exercise due diligence and care in ensuring that it did so. There is no evidence that the BGC did not have a reasonable amount of facts in front of it or consider them fully. It plainly had everything which was before the Sole Panel Expert. Nothing seems to have been withheld from the BGC.

¹⁶⁰ Id., para. 46.

¹⁶¹ Id., para. 21.

¹⁶² To some extent, this followed from the fact that the BGC itself was not empowered to replace the expert’s merits determinations with its own, but rather was limited to verifying that certain processing standards had been met. The IR Panel thus observed: “None of these three bases for the Request for Reconsideration process requires or even permits this Panel to provide for a substitute process for exploring a different conclusion on the merits. Id., para. 47.

Merck's complaints are, in short, not focused upon the applicable test by which this Panel is to review Board action, but rather are focused on the correctness of the conclusion of the Sole Panel Expert. [T]his is not a basis for action by this Panel[.]¹⁶³

123. The Panel also found Merck's discrimination claim lacking. The Panel reasoned that:

[I]t was within the discretion of the BGC and Board...to conclude that the Sole Expert had applied the correct legal standard to the correctly found set of facts. Of course, in different cases, the BGC and Board are entitled to pursue different options depending upon the nature of the cases at issue. It is insufficient to ground an argument of discrimination simply to note that on different occasions the Board has pursued different options among those available to it.¹⁶⁴

XII. MANDATE OF THE PANEL

A. In General

124. The IR Process is one of two review mechanisms intended to ensure that ICANN remains accountable "to the community for operating in a manner that is consistent with [its] Bylaws, and with due regard for the core values set forth in Article I of [those] Bylaws."¹⁶⁵ Both are intended to "reinforce the various accountability mechanisms otherwise set forth in [the] Bylaws, including the transparency provisions of Article III and the Board and other selection mechanisms set forth throughout [the] Bylaws"¹⁶⁶

125. As an IR, the current process is to be distinguished from an RFR, the other accountability process authorized by the Bylaws (Article IV, Section 2), and featured in the IR precedents surveyed above. While both are types of review, the two processes are different in terms of the persons and subject matter falling within their respective remits.

126. The IR mechanism was established to allow "any person materially affected by a decision or action by the Board that he or she asserts is inconsistent with the Articles of Incorporation or Bylaws [to] submit a request for independent review of that decision or action."¹⁶⁷ As implied in that description of standing, under the Bylaws (Article IV, Section 3), an IR Panel must compare "contested actions of the Board to the Articles of Incorporation and Bylaws, and [must declare] whether the Board has acted consistently with the provisions of those Articles of Incorporation and Bylaws." Additionally, as an IR Panel, we are duty-bound to focus on three questions (the "Standard of Review"), as underscored by the Merck Panel in its Declaration, summarized above:

1] Did the Board act without conflict of interest in taking its decision;

¹⁶³ Id., paras. 49-50.

¹⁶⁴ Id., para. 61.

¹⁶⁵ ICANN Bylaws, Article IV, Section 1.

¹⁶⁶ Id.

¹⁶⁷ Id., Article IV, Sec. 3 ("In order to be materially affected, the person must suffer injury or harm that is directly and causally connected to the Board's alleged violation of the Bylaws or the Articles of Incorporation, and not as a result of third parties acting in line with the Board's action").

2] Did the Board exercise due diligence and care in having a reasonable amount of facts in front of them; and

3] Did the Board members exercise independent judgment in taking the decision, believed to be in the best interests of the company?¹⁶⁸

127. The ICDR Supplemental IRP Rules replicate the Bylaws as to the above focus questions, but add:

8. Standard of Review. ./... If a requestor demonstrates that the ICANN Board did not make a reasonable inquiry to determine it had sufficient facts available, ICANN Board members had a conflict of interest in participating in the decision, or the decision was not an exercise in independent judgment, believed by the ICANN Board to be in the best interests of the company, after taking account of the Internet community and the global public interest, the requestor will have established proper grounds for review.

128. Additionally, our ruling as a Panel must be “based solely on the documentation, supporting materials, and arguments submitted by the parties....”¹⁶⁹

B. Board Actions and Failures to Act

129. It seems to have become common ground between the parties to this IR that under some circumstances the requester may legitimately complain of the Board’s failure to take action as well as its affirmative acts. Other Panels are in accord.¹⁷⁰ Not all inaction is actionable, however. Rather, in the Panel’s view, “actionable inaction” is a failure that is inconsistent with a duty to act, whether that duty is formally established by ICANN’s constitutive documents, generated by some other explicit or clearly implied undertaking by the Board, or, powerfully suggested by all the circumstances present. In assessing alleged failures to act, the question is not whether the Board has the power to act, or whether to act would be consistent with the Articles and Bylaws, but whether the Board must act given all the circumstances.

C. Level of Deference

¹⁶⁸ The Bylaws contemplate that, at least sometimes, the complained-of Board action will be evidenced by “minutes of the Board meeting (and the accompanying Board Briefing Materials, if available) that the requesting party contends demonstrates that ICANN violated its Bylaws or Articles of Incorporation.” ICANN Bylaws, Article IV, Section 3.3.

¹⁶⁹ The Bylaws place page limits on Requests for IR and ICANN’s response thereto, but allow each party to submit “documentary evidence supporting [its position] without limitation.” See ICANN Bylaws, Article IV, Section 3, para. 5.

¹⁷⁰ See e.g., Vistaprint IR Declaration, paras.127-128:

It appears that ICANN’s focus in this statement is on affirmative action taken by the BGC in rejecting Vistaprint’s Reconsideration Request; however, this does not eliminate the IRP Panel’s consideration of whether, in the circumstances, inaction (or omission) by the BGC or the full ICANN Board in relation to the issues raised by Vistaprint’s application would be considered a potential violation of the Articles or Bylaws...[T]he Panel considers that a significant question in this IRP concerns one of “omission” – the ICANN Board, through the BGC or otherwise, did not provide relief to Vistaprint in the form of an additional review mechanism, as it did to certain other parties who were the subject of an adverse SCO determination.

130. The corporation laws in most states contain a rich and not fully consistent body of jurisprudence addressing the extent to which boards of directors should be protected in their decision making by one or more presumptions that they acted with due care and in good faith. The law of California, for example, has such jurisprudence.

131. If this were a matter of first impression, this Panel would be required to consider in some detail the applicability of such doctrines in this proceeding. The several Panels to have already addressed the question, however, have done so with relative consistency. In their view, IR Panels are not to accord normal Business Judgment Rule style deference to the work of the ICANN Board, but rather are to pursue “objective” review.¹⁷¹ This conclusion results from the implications of the word “independent”, the explicit standard of review to which the Panel is already bound (which functions in place of the more general Business Judgment Rule jurisprudence) and related justifications. This Panel finds those Declarations sufficiently persuasive that it need not depart from what seems to be the established trend and general approach.

132. Although an IR panel is not bound to accord the Board a presumption of requisite due care, good faith, and the like when examining acts and alleged actionable inaction, the notion that review is objective requires some clarification for the purposes of an IR. In particular, this Panel subscribes to the following furthers parameters:

133. First, whatever label one uses to describe the approach (e.g., “objective,” “de novo,” or “independent”) that approach does not allow the Panel to base its determinations on what it, itself, might have done, had it been the Board. The explicit standard of review—for better or worse—is much narrower than that. In the view of the Booking.com Panel:

[T]here can be no question but that the provisions of the ICANN Bylaws establishing the Independent Review Process and defining the role of an IRP panel specify that the ICANN Board enjoys a large degree of discretion in its decisions and actions. So long as the Board acts without conflict of interest and with due care, it is entitled - indeed, required - to exercise its independent judgment in acting in what it believes to be the best interests of ICANN. The only substantive check on the conduct of the ICANN Board is that such conduct may not be inconsistent with the Articles of Incorporation or Bylaws...[or] with the Guidebook. In that connection, the Panel notes that Article I, Section 2 of the Bylaws also clearly states that in exercising its judgment, the Board (indeed “[a]ny ICANN body making a recommendation or decision”) shall itself “determine which core values are most relevant and how they apply to the specific circumstances of the case at hand.”¹⁷²

134. The present Panel has developed a similar sense of the setting in which it must judge such Board action or inaction as may be identified. As did the Booking.com Panel, this Panel finds that, in the absence of a demonstrable conflict of interest, affording a margin of appreciation to Board action and inaction is to some extent dictated by the Bylaws themselves. As noted in the

¹⁷¹ See Vistaprint IR Declaration, para. 126:

The Panel considers that the question on this issue is now settled. Therefore, in this IRP the ICANN Board’s conduct is to be reviewed and appraised by this Panel objectively and independently, without any presumption of correctness.

¹⁷² Booking.com IR Declaration, para. 129.

above quote from Booking.com, those Bylaws contemplate that ICANN bodies are expected to assess relevance and strive for “an appropriate and defensible balance among competing values” while understanding that:

[T]he specific way in which they apply, individually and collectively, to each new situation will necessarily depend on many factors that cannot be fully anticipated or enumerated; and [that] because [the Core Values] are statements of principle rather than practice, situations will inevitably arise in which perfect fidelity to all eleven core values simultaneously is not possible.¹⁷³

135. Second, a measure of self-restraint is also dictated by the Standard of Review to which this Panel is bound, expressed as it is in terms of whether the Board made “a reasonable inquiry” as opposed to, for example, an “exhaustive” inquiry to determine if it had “sufficient facts available.”¹⁷⁴ Relatedly, to the extent possible given what may be the rather limited fact-finding that can be pursued in an IR, due account ought to be given to such contextual factors as the actual information available to the Board at the relevant time and the array of competing considerations with which it was faced.

136. Finally, complaints about the community objection process as adopted, however well-founded, must be viewed in light of the time bar established in the Bylaws¹⁷⁵ and applied by other Panels.¹⁷⁶ That said, this Panel believes that it may not always be improper to consider *the manner* in which the process, as established by ICANN, was conducted, and in particular the extent to which relevant actors deviated from that process.¹⁷⁷

XIIV. PANEL’S ANALYSIS REGARDING ACTS EQUATED TO BOARD ACTS

A. Panel’s Approach

137. ICANN has argued that the conduct of the ICC and the experts it appoints is neither tantamount to Board action nor properly the basis of any duty on the part of the Board to act. In light of Donuts’ arguments to the contrary, and this Panel’s mandate, the following multipart inquiry arises: should the actions of the ICC or its experts be deemed to be: 1] those of the Board, 2] attributable to the Board, or 3] such as to require the Board to take particular action, which action it in turn did not take.

B. The Extent of Direct or Imputed Equivalency between the Board and the ICC and its Experts

1. In General

¹⁷³ ICANN Bylaws, Article I, Section 2.

¹⁷⁴ See ICDR Supplemental Procedures for ICANN Independent Review Process, Article 8 (essentially restating the Standard of Review set forth in ICANN Bylaws, Article IV, Section 3.4).

¹⁷⁵ See ICANN Bylaws, Article IV, Sec 3(3).

¹⁷⁶ See Booking.com IR Declaration, at para. 129 (“Any such claims, even if they had any merit, are long since time-barred by the 30-day limitation period set out in Article IV, Section 3(3) of the Bylaws”). See note 108, *supra*, and accompanying text.

¹⁷⁷ This was the approach taken by the Bookings.com Panel. See, e.g., para. 163 “[O]ur role in this IRP includes assessing whether the applicable rules – in this case, the rules regarding string similarity review – were followed, not whether such rules are appropriate or advisable.”

138. Some of Donuts' arguments equate the acts of ICC experts, and of the ICC, with those of the Board. There is some variation in how Donuts' explains this equation, but the following, taken from Donuts' Request for an IR, is representative:

Only the Board has the power to appoint or authorize experts to help it make decisions. Under the Guidebook, in fact, it may directly "consult with ... experts ... designated to hear objections." The Board wields ultimate authority over the entire new gTLD program, including to consider any application individually. *As such, the ...objection rulings against Donuts amount to Board action* reviewable and reversible by this proceeding.¹⁷⁸

139. Similarly, in its Supplemental written submission, Donuts maintains:

ICANN contends that its Board has no obligation to ensure that *its* appointed experts act without conflict of interest. However, *appointment of an expert with conflict of interest is clearly a Board action* in violation of ICANN's Bylaws, which, as stated under Bylaws Art. IV § 3.4.a, makes that an express subject of IRP review...[*The Board*, in allowing] that panelist subsequently to rule on the same objector's case against .SPORTS transgresses not only the anti-conflict provision of the Bylaws, but also its non-discrimination mandate at Art. II § 3.¹⁷⁹

2. Do the Bylaws Support Treating as Equivalent to Board Actions those of the ICC and ICC-Appointed Experts?

140. The Panel starts by examining the Bylaws' Article IV (titled: Accountability and Review). With respect to IRs, the focus is on a "decision or action by the Board" alleged to be inconsistent with the Articles of Incorporation or Bylaws. The explicit focus on Board conduct coincides with the heading: "Independent Review of Board Action" and is redoubled in the ICDR Supplemental Rules developed for IRs; the latter Rules essentially repeat the Standard of Review by instructing this Panel to ask, inter alia: did the *ICANN Board*...make a reasonable inquiry to determine it had sufficient facts available; *did ICANN Board members ha[ve] a conflict of interest in participating in the decision*", or produce a decision not "believed *by the ICANN Board* to be in the best interests of the company..."¹⁸⁰

141. When that same accountability Article within the Bylaws authorizes RFRs, by contrast, it does so with a broader explicit reach. It makes the process available not only to address the acts and failures to act of the Board¹⁸¹ but also those of ICANN staff, to the extent conduct of the latter "contradict established ICANN policy(ies)". Consistent with this broader reach, ICANN

¹⁷⁸ Donuts' Request for IR, para. 5 (emphasis added).

¹⁷⁹ Emphasis added; bracketed insert inferred.

¹⁸⁰ ICDR Supplemental Rules for IRP, Article 8.

¹⁸¹ In particular:

[O]ne or more actions or inactions of the ICANN Board that have been taken or refused to be taken without consideration of material information, except where the party submitting the request could have submitted, but did not submit, the information for the Board's consideration at the time of action or refusal to act; or
[O]ne or more actions or inactions of the ICANN Board that are taken as a result of the Board's reliance on false or inaccurate material information.

has acknowledged that the acts and omissions of institutions administering objection proceedings and of the experts they appoint qualify as “staff” conduct, and thus may be the basis of a RFR.¹⁸²

142. No doubt the architects of the IR mechanism could have made the Board directly accountable for designated acts or omissions committed by the ICC and the experts it appoints, either by equating them to Board action or by opening the process to “staff” conduct. The close proximity within the Bylaws of the two accountability processes suggests that differences in the manner of delineating scope were purposeful, not accidental. This seemingly uncontroversial reading of the Bylaws would, however, not preclude attribution to the Board of the conduct of other actors under certain circumstances.

3. Deemed Equivalency; Attribution Theories

143. Donuts does not suggest that in delimiting IR jurisdiction the Bylaws expressly equate the Board with the ICC and its experts. Rather, its position seems to be that ICC experts, in effect, are appointed by the Board by virtue of a delegation of that power to the ICC, which specialized institution in turn makes the appointments on behalf of the Board. As the Panel understands Donuts’ theory, the Board is then accountable for prejudicial errors committed by the ICC or its experts in the course of discharging the mandates given them by the Board. Donuts reasons:

Only the Board has the power to appoint or authorize experts to help it make decisions. Under the Guidebook, in fact, it may directly “consult with ... experts ... designated to hear objections.” The Board wields ultimate authority over the entire new gTLD program, including to consider any application individually. As such, the ... objection rulings against Donuts amount to Board action reviewable and reversible by this proceeding.¹⁸³

144. Donuts relies in particular upon Bylaws Article XI-A, Section 1, Paragraph 4, which it interprets as establishing a close relationship between the experts appointed by the ICC and the Board. Section 1 of Article XI-A authorizes the Board to seek “external advice” from sources other than the Committees that may be available to it. The Section’s first paragraph states that “[t]he purpose of seeking external expert advice is to allow the policy-development process within ICANN to take advantage of existing expertise that resides in the public or private sector but outside of ICANN.” The Section refers to entities commissioned to give advice as “Expert Advisory Panels” which may consist in “public or private sector individuals or entities.” The Section provides that such panels may be appointed by the Board “on its own initiative or at the suggestion of any ICANN body.”

145. In relevant part, Paragraph 4 of Section 1, expressly relied upon by Donuts, states:

Any reference of issues not concerning public policy to an Expert Advisory Panel by the Board or President...shall be made pursuant to terms of reference describing the

¹⁸² See Vistaprint IR Declaration, at note 60 (citing BGC Recommendation on Reconsideration Request 14-5 dated February 27, 2014 (“BGC Determination”), at p. 7, n. 7, Request, Annex 26, and available at <https://www.icann.org/en/system/files/files/determination-vistaprint-27feb14-en.pdf> (last accessed on Sept. 14, 2015)).

¹⁸³ Donuts’ Request for IR, para. 5.

issues on which input and advice is sought and the procedures and schedule to be followed.

146. ICANN offered a different understanding of that provision:

[The relied upon provision] has nothing whatsoever to do with the retention of experts for objections under the Applicant Guidebook for the New gTLD Program or the Board's decision to outsource the objection process to entities such as the [ICC], which have experts that can be appointed to resolve objections asserted against individual gTLD applications. Accordingly, the ICANN Board did not retain the ICC pursuant to Article XI-A of the Bylaws for the New gTLD Program....

Article XI-A of the Bylaws applies to external expert advice sought for the purpose of "allow[ing] the policy-development process within ICANN to take advantage of existing expertise that resides in the public or private sector but outside of ICANN." (Bylaws, Art. XI-A, Section 1.1.). This "policy development process" is the process by which ICANN's various Supporting Organizations develop policy recommendations for ICANN (such as the recommendation by ICANN's Generic Names Supporting Organization to permit a broad expansion of the number of gTLDs).

147. The Panel understands why Donuts invites it to find that the work of ICC experts must have been authorized under Article XI-A. That would show a somewhat direct link between the Board and the ICC experts in this case, and would perhaps imply some level of focused Board processing of individual expert rulings in every case. This would follow from subsequent paragraphs in that article, which elaborate:

[E]xternal advice pursuant to this Section...is advisory and not binding, and is intended to augment the information available to the Board or other ICANN body in carrying out its responsibilities [and that] "prior to any decision by the Board" an opportunity to comment on such advice is to be given to "the Governmental Advisory Committee, in addition to the Supporting Organizations and other Advisory Committees."¹⁸⁴

148. The Panel agrees with Donuts that when the Guidebook states that an ICC expert's finding "will be considered an expert determination"¹⁸⁵ it is not illogical when finding no other specific Bylaw provision on point to assume that Bylaw XI-A may be relevant.

149. The Panel nevertheless agrees with ICANN that the more natural construction of Bylaws Article XI-A is that it authorizes the Board to engage outside experts to aid in policy development, and that by language and structure it appears not to have within its contemplation seriatim ICC appointments to settle objection disputes with a view to generating whatever incremental policy advice might be gleaned from such individual adjudications.

150. Equally, it is difficult to conceive of the MOU between ICANN and the ICC¹⁸⁶ as constituting a Board request for advice on a particular policy. In any event, determinations based on the distinctive set of facts that exists in each objection case seem ill-suited to providing such

¹⁸⁴ ICANN Bylaws, Article XI-A, Section 1, para. 5.

¹⁸⁵ See Guidebook, at 3-17.

¹⁸⁶ See notes 46-51, *supra*, and accompanying text.

“advice” in a form that promotes “the policy-development process within ICANN.”¹⁸⁷ The Guidebook account of the objection process also states that ICC expert rulings will be “...advice that ICANN will accept”, which diverges from Bylaw XI-A’s statement that “[e]xternal advice pursuant to this Section...is advisory and not binding, and is intended to augment the information available to the Board...”

151. Ultimately, of course, there is no need to fit the ICC and its expert regime under Bylaws Article XI-A for such activities to enjoy authorization, or otherwise to be consistent with ICANN’s constituent documents. The California statute under which ICANN operates provides that a corporation of the ICANN type:

[I]n carrying out its activities, shall have all of the powers of a natural person, including, without limitation, the power to: ... (j) Participate with others in any...association, transaction or arrangement of any kind whether or not such participation involves sharing or delegation of control with or to others.¹⁸⁸

152. Additionally, the Panel recalls that ICANN’s Articles entitle ICANN to “cooperate as appropriate with relevant international organizations.”¹⁸⁹

153. To rule, as we do, that Bylaws Article XI-A does not reveal a direct connection between the appointment of ICC experts and the Board, however, does not fully exhaust the ways in which the work of the ICC and its experts might be imputed to the Board. Under certain circumstances, general principles of agency might justify such attribution.

154. Although the precise basis upon which Donuts might wish the Panel to find an agency relationship has not been supplied by Donuts, Donuts’ broader argument in connection with Article XI-A and elsewhere seems to allude to the rudiments of such a theory. It notes, for example, that under AGB § 5.1 the Board “ultimate responsibility for the New gTLD Program” and “reserves the right to individually consider an application for a new gTLD ...”¹⁹⁰

155. Had the agency theory been more fully addressed by the parties,¹⁹¹ the propriety of imputing directly to the Board the acts of the ICC and its experts would most likely depend on how the relationship between the ICC and ICANN is characterized; under the general principles of law known to the Panel that would probably turn upon the level of control that ICANN exerts or is entitled to exert over the ICC’s operations in respect of objection proceedings.

¹⁸⁷ It is true that the decisions produced by ICC experts are “written” as required by Article XI-A, Section 1, para. 5, but they do not function with the ICANN system as “advisory and not binding [advice]... intended to augment the information available to the Board or other ICANN body in carrying out its responsibilities.” Nor do they seem to fit within an architecture that requires that “prior to any decision by the Board” an opportunity to comment on such advice is be given to “the Governmental Advisory Committee, Supporting Organizations and other Advisory Committees.”

¹⁸⁸ Cal. Corporations Code, Section 5140(j).

¹⁸⁹ ICANN Articles of Incorporation, Article 4.

¹⁹⁰ See Donuts Supplemental Memorandum, para. 21.

¹⁹¹ An antecedent step in elaborating such an argument would be to determine what body of law should be consulted by the Panel.

156. Given that the matter was not elaborated upon by Donuts, let alone briefed by the parties, the Panel will not do more than suggest why it considers that, on balance, there is not enough evidence of control in the record to attribute the acts of the ICC and its experts to the ICANN Board. In this regard, the Panel finds the terms of the ICANN-ICC MOU illuminating, if by no means conclusive.

157. Under the MOU, it is for the ICC to select experts and administer the proceedings according to the ICC Rules and any supplements thereto it. It is also for the ICC to “establish the necessary structure and procedures (comprising information technology, staffing, etc.) to perform its duties as DRSP in a timely and efficient manner” (although it is to do so with “with advice and support from ICANN”).

158. The MOU confirms that the ICC-ICANN relationship is a collaborative one under which the ICC enjoys many elements of independence in keeping with its established expertise with respect to the endeavors in question. Moreover, the persistent reference in official ICANN documents to the ICC as a “service provider” when viewed most favorably to Donuts is at most neutral on the question of whether it should be considered an independent contractor as distinct from an agent of ICANN.

159. This Panel concludes given the foregoing, and in accord with the reasoning of other Panels, that the relationship between ICANN and the ICC is not such as to allow an IR Panel “[to] review the actions or inactions of ICANN’s staff or any third parties, such as the [DRSP or objection experts] who provided services to ICANN.”¹⁹² The notion that administering institutions, such as the ICC, are third-party service providers, and not “constituent entities” of ICANN generally or alter egos of the ICANN Board in particular is consistent with most of what one finds in the reasoning other IR Panels.

4. The Theoretical Consequences of Attribution of Substantive Errors

160. Even if this Panel deemed itself authorized as Independent Reviewers to equate the work of ICC experts in their rulings on objections to that of the Board, however, it would stop well short of acting as a plenary review body concerned with errors of fact or the correct application of substantive standards. We would be required to consult the explicit Standard of Review to which we are bound. Thus, we would ask:

1] did the [expert] act without conflict of interest in taking its decision?;

2] did the [expert] exercise due diligence and care in having a reasonable amount of facts in front of [him]?; and

3] did the [expert] exercise independent judgment in taking the decision[.]

161. As to the .RUGBY application, Donuts does not offer an assessment of how the work of Mr. Kantor failed any of these tests; rather, Donuts argues that he misapplied the community objection standards adumbrated in the Guidebook. If in fact that is true—and the Panel’s review of the Mr. Kantor’s reasoning by no means leads to that conclusion—such errors on the merits would fall beyond the three lines of inquiry this Panel is obliged to pursue. In the absence of

¹⁹² Vistaprint IR Declaration, para.150.

further elaboration by Donuts, the .RUGBY proceeding seems readily to clear the hurdles posed by all three questions. Nothing established by Donuts, or apparent from or the record of that proceeding, indicates that a conflict of interest or a lack of independence was present in the work of Mr. Kantor. In turn, the ICC expertise process, which he followed, is one designed to acquaint him with a reasonable amount of facts. Ultimately, to impute Kantor's work to the ICANN Board is to impute conduct not at variance with the Articles or Bylaws, especially when that conduct is considered in light of the required Standard of Review.

162. If other circumstances were equal, the above Standard of Review analysis would apply with equal force to the objection ruling in .SPORTS. Assuming that Mr. Taylor were the agent (or sub-agent) of the Board, his putative errors in applying community objection standards would not be cognizable under the Standard of Review to which this Panel is bound.

163. As is true with respect to the report of the .RUGBY expert, on its face the .SPORT expert opinion shows good conversancy with the parties' arguments and the controlling texts. Whether Donuts agreed with it or not, the reasoning in both cases followed from what appeared to be reasonable fact finding, was lucid, and adopted plausible interpretations of the factual and legal elements involved in those community objections.¹⁹³

164. The .RUGBY and the .SPORTS ruling are not, however, on an equal footing. Donuts alleges that the .SPORTS process was materially defective by virtue of the expert's failure to make sufficient disclosures.

165. If such conduct were deemed by some theory of attribution to be that of the Board, this Panel would struggle with those prongs of the Standard of Review requiring independent, conflict-free, decision making. This Panel finds an insufficient basis, however, for such imputation, for reasons given above.¹⁹⁴ In particular, the deficient case for attribution is not improved merely because alleged conduct in question is the expert's non-disclosure rather than his misapplication of community objection standards. The Panel is not empowered to develop theories on behalf of a party, but must base its declaration on the documents and arguments before it.¹⁹⁵ That Record does not establish a basis for attribution.¹⁹⁶

166. The Panel examines below whether the Board had a duty to act in light of what Donuts alleges were insufficient disclosures by Mr. Taylor when accepting his appointment as the ICC expert for the .SPORTS objection.¹⁹⁷

¹⁹³ Putting aside the question of the expert's alleged conflicts of interest, which explains everything according to Donuts, the outcome in .SPORT expert proceeding seems in part attributable to the expert's firm disapproval of some of Donuts' arguments. See note 214, *infra*, and accompanying text.

¹⁹⁴ See notes 178-92, *supra*, and accompanying text.

¹⁹⁵ ICDR Supplemental ICANN IR Rules, Article 10(a).

¹⁹⁶ No submission by Donuts explains why Mr. Taylor should be regarded as other than an agent, employee or independent contractor of the ICC (itself an independent contractor of ICANN), under which alternative assumptions common law agency principles, absent more, would preclude attribution. Donuts ultimately had the burden of demonstrating under governing law how such attribution might be called for, and it did not do so.

¹⁹⁷ See notes 208-229, *infra*, and accompanying text.

XIV. PANEL'S ANALYSIS REGARDING BOARD FAILURES TO ACT

A. In General

167. Donuts has advanced an analytically distinct set of arguments, which faults the Board for failures to act remedially to ameliorate, prospectively or retroactively, prejudice resulting from errors of substance and procedure committed during the two objection determinations giving rise to this IR. To restate the three main allegations, ICANN failed: 1] to train ICC experts to correctly apply community objection standards; 2] to institute a secondary regime to reconcile inconsistent community objection rulings; and 3] to intervene in this individual case to correct what Donuts argues are obvious substantive errors and a failure of due process by reason of deficient expert disclosure.

168. As outlined above, the Panel considers that some but not all failures to act are cognizable by it. In the Panel's view, "actionable inaction" is a failure by the Board that is inconsistent with a duty to act, whether that duty is formally established by ICANN's constitutive documents, established by some other explicit or clearly implied undertaking by the Board, or, powerfully suggested by all the circumstances present.

169. It follows that not every circumstance in which the Board might be empowered to act gives rise to a duty to act. In particular, when the complaining party points not to an explicit promise to act or a specific obligation to act substantiated in ICANN's constituent documents, but rather relies on the circumstances and more general sources of obligation, actionable inaction would seem to assume circumstances: 1] that are, or ought be, known to the Board; 2] that forcefully impinge on relevant values and principles; and 3] that could reasonably have been expected to be mitigated by Board action. Importantly, even when the three factors just enumerated are present, the inaction must be judged in light of the Standard of Review (that is: it might be that determined inaction is well-informed, independent and conflict-free).

170. As outlined earlier, in accord with what other Panels have concluded,¹⁹⁸ at any given time the Board is confronted with the range of options and is entitled, indeed required, to balance the competing values listed in the Bylaws when deciding what, if anything, to do. The Board need not react merely because it has been petitioned to do so by a stakeholder, commentator or other observer.¹⁹⁹

B. Merits-Related Board Failures to Act

1. In General

171. To the extent that Donuts complains of jurisprudential errors and disarray, its arguments assume that timely action by the Board would have led to added legal certainty, more transparency, higher levels of due process and—by extension—unsuccessful objections in the specific cases here involved through the proper application of community objection standards.

¹⁹⁸ See, e.g., Booking.com IR Declaration, para. 138.

¹⁹⁹ See Id.

2. Failure to Train ICC Experts

172. It is common ground that ICC experts have access to the Applicant Guidebook and other documentation concerning the adaptation of the ICC Expert process for use in determining community objections, but that they received no specific training by ICANN concerning community objection standards. Equally, however, the Board is not specifically required by any constituent document known to the Panel to institute training; nor has it represented that it would perform such training. Consistent with this, Donuts does not argue that it somehow relied on assurances that any expert appointed to decide an objection filing would have received particular training by ICANN.

173. The Panel believes that Donuts has not carried its burdens on this allegation. It has considered several factors:

174. First, the situation is not one in which the Board simply provided no instruction to the experts. The Guidebook itself provides a considerable measure of guidance. It identifies myriad factors for experts to consider in processing community objections, repeats admonitions about an objector's burdens and adds caveats about the need to find all elements satisfied.

175. Further, the Guidebook requires that the experts appointed to each proceeding be appropriately qualified²⁰⁰ and this requirement is restated in the ICC Rules which require the ICC to consider the prospective appointees' qualifications to be considered before an appointment is made.²⁰¹

176. Second, it is to be expected given the Guidebook's multi-factor tests, diversity of factual patterns and the role of advocates that variations in way experts frame issues and apply the governing factors will be perceived; these may or may not reflect genuine differences of approach or the deficiency of one approach compared to another. As a general matter, it would be surprising if among the corpus of reasoned objections to have been issued thus far that a somewhat diverse marketplace of ideas had not developed; some variation is to be expected.

177. Moreover, the errors of which Donuts complains in the current case are said by it to be obvious under the Guidebook. If that is true, training would not necessarily have made any difference. An expert that would ignore the Guidebook would likely also ignore any subsequent training based on the Guidebook. In any event, the Panel's study of the reasoned opinions of the experts involved in this IR—done strictly for fact finding purposes²⁰²—found that neither expert failed to apply the Guidebook factors, nor reached an absurd result.

178. The Panel does not exclude the possibility that jurisprudential disarray might become so acute and prolonged with respect to community objections that the Board would be required to act to improve upon the original manner of equipping experts; Donuts has not demonstrated that such a state of affairs exists, however.

179. The Panel notes as well that, to a large extent, Donuts seems to complain of the system as it was originally instituted, one without training for experts beyond the instruction found in the

²⁰⁰ Guidebook, Section 3.4.4.

²⁰¹ ICC Expertise Rules, Article 3(2).

²⁰² The Panel is not entitled under the guise of an IR to propose an authoritative construction of the Guidebook's community objection standards.

Guidebook. As such, Donuts arguably faces the time bar applicable to such complaints, as recognized by other IR Panels.²⁰³

3. Failure to Institute Appellate Review

180. Similar considerations to those identified with respect to the training of experts apply in assessing the failure of the Board to inaugurate an appeals mechanism of some kind for community objection cases. Donuts argued:

Donuts and others had specifically urged the Board to implement a means for reviewing new gTLD objection rulings inconsistent with ICANN's "documented policies" governing such procedures in the Guidebook....Several months after that... the NGPC proposed...a mechanism for addressing perceived inconsistent results in certain [string confusion] objection cases.... The NGPC specifically cited, as authority for its determination, Guidebook section 5.1, which provides in part as follows:

ICANN's Board of Directors has ultimate responsibility for the New gTLD Program. The Board reserves the right to individually consider an application for a new gTLD to determine whether approval would be in the best interest of the Internet community. Under exceptional circumstances, the Board may individually consider a gTLD application.

181. The Panel believes that to install some sort appeals mechanism might add predictability of outcome and produce greater satisfaction with the process by some. The Panel assumes, without opining, that the Board has the power to institute such a mechanism, and it believes that to do so in a sound fashion after careful study would be consistent with ICANN's Articles and Bylaws.

182. Equally, however, absent jurisprudential disarray so urgently in need of a top-down remedy that the Board would not be entitled to establish other priorities, it may indeed refrain from exercising the power it has already exercised in connection with certain string similarity cases.

183. Even if the record reflected a concrete decision by the Board to take an incremental approach to the implementation of review mechanisms, perhaps delaying in-depth study of the possibility, that Board strategy would be judged against the Standard of Review, and the Board's duty to balance all relevant factors, including those that argue against wholesale adoption of some form of appeals mechanism. In the Panel's view, absent compelling facts to the contrary, the Board need not rush into adding another layer of adjudication or review, whether or not urged to do so by Donuts and others.

4. Failure to Intervene in the Individual Case

184. Relying on the Board's reserved "right to individually consider an application for a new gTLD to determine whether approval would be in the best interest of the Internet community," Donuts faults the Board for not intervening in its individual case.²⁰⁴ To the extent it relies on

²⁰³ See, e.g., reasoning of the Booking.com IR Panel, discussed at note 106, *supra*, and accompanying text.

²⁰⁴ Quoting Guidebook, Section 5.1.

putative errors in the application of the community objection standards, the above analysis applies; the Board can, in the Panel's view, pursue other priorities. Apart from questions about whether the errors alleged by Donuts are as obvious as it asserts, a hypothetical Board policy of ordinarily not responding to ad hoc petitions to intervene with respect to individual applications would seem prudent on its face.

185. Accordingly, the Panel agrees with the Vistaprint Panel, who ruled that “the ICANN Board has no affirmative duty to review the result in any particular...case.”²⁰⁵ As Donuts does in this case, Vistaprint had relied upon the Guidebook's reference to individual Board consideration of applications. As the Vistaprint Panel observed, however, the Guidebook's example of the “exceptional circumstances” that involve individual assessment by the Board is when the disappointed applicant engages the Board through an accountability process such as the RFR.²⁰⁶

186. True, the RFR example, being only that, does not preclude an ad hoc intervention by the Board; it does however remind one of context, and to consider Board inaction in light of the other grievance mechanisms available to applicants, most notably in this case the RFR option.²⁰⁷

XV. PANEL'S ANALYSIS REGARDING FAILURE TO INTERVENE IN THE .SPORTS PROCESS TO ACCOUNT FOR DEFICIENT EXPERT DISCLOSURE.

A. The Disclosure Standard

187. With respect to the .SPORTS objection, Donuts relies heavily on what it considers to have been Mr. Taylor's deficient disclosure. The Panel has suggested above that it does not equate any such failing to direct Board conduct, but Donuts also has advanced a failure to act argument.

188. The ICC Expertise Rules in force at the relevant time contemplated that the ICC would appoint an expert only after considering “the prospective expert's qualifications relevant to the circumstances of the case”²⁰⁸ and that, unless the parties agree otherwise in writing, the experts appointed are to be “independent of the parties involved in the expertise proceedings.”²⁰⁹

189. Experts are to execute a “statement of independence” along with a written disclosure to the Centre of “any facts or circumstances which might be of such a nature as to call into question the expert's independence in the eyes of the parties.” Such disclosed information is communicated to the parties, who are entitled to object that the expert does not have the necessary qualifications, including independence.²¹⁰

190. There is an obvious tension between the desire to find experts with suitable qualifications (which often implies experience in the relevant sector) and the default rule that experts are to be independent of the parties. To a large extent this struggle of opposing considerations is resolved by the expert making the required disclosures, and the system thus heavily depends on the expert to do so.

²⁰⁵ Vistaprint IR Declaration, para. 157.

²⁰⁶ *Id.*, para. 156 (“For example, the Board might individually consider an application as a result ... of the use of an ICANN accountability mechanism.”).

²⁰⁷ See notes 181-82, *supra*, and 227 *infra*, and accompanying text.

²⁰⁸ ICC Expertise Rules, Article 3(2).

²⁰⁹ *Id.*, Article 3(3).

²¹⁰ *Id.*

191. An examination of the disclosure rule as formulated confirms that disclosure is intended to be relatively broad. It is not, for example, limited to circumstances “likely to call into question” the appointee’s independence, but refers instead to matters that “might” do so. Nor is it to be judged in terms of objective, reasonable, parties; the test, instead, is a subjective one asking the prospective expert to determine what should be disclosed when viewed through “the eyes of the[se] parties”.²¹¹

B. The Respective Actors’ Roles in Disclosure

192. It might be argued that Donuts has mainly itself to thank for not being prompted to investigate Mr. Taylor further by what one finds on his resume. His c.v., after all, records in several places that he has represented “sports bodies”, and in diverse contexts.²¹² Given the wide membership enjoyed by SA, it is reasonable to expect that Donuts would have been cued to investigate Mr. Taylor’s background more fully by these disclosures; there would seem to have been a high probability that he had acted on behalf of one or more of SA’s members. Additionally, Donuts should have come to know his c.v. in detail by virtue of its unsuccessful, contemporaneous, attempt to challenge Mr. Taylor in connection with the .SKI objection proceeding.²¹³

193. The sophistication with which Donuts is capable of operating during the appointment process is evidenced moreover by its successful challenge of Mr. McClaren in connection with .RUGBY objection proceeding.²¹⁴ One might also note that essentially the same Taylor resume supplied to Donuts led dot SPORT’S representative, Mr. Young, to seek disqualification of Mr. Taylor based on Taylor’s connections to SA, the same objecting entity against whom Donuts defended in the present case. Moreover, in doing so, Mr. Young seems to have relied on information largely available through a rudimentary internet search.²¹⁵

194. When a disputant fails to discover, or under appreciates, putative conflicts until after receiving an unfavorable result, questions naturally arise about that party’s level of due diligence during the appointment process. Concurrently, Mr. Taylor, to be fair, may well have had in mind rules of disclosure pertaining to other systems, such as those governing under a national arbitration law, while assuming that those standards equaled or surpassed the ICC standard. Nor does it follow, necessarily, from what this Panel regards as his impermissibly abridged disclosures that Taylor was a partisan, such that his determination was the product of bias. While it is true that Mr. Taylor was critical in some respects of the manner in which Donuts’ conducted its defense, the irritation expressed by him may well have been heart-felt, and perhaps justified, rather than an expression of partisanship (the Panel is not in a position to judge).²¹⁶

²¹¹ This would not in every case lead to a duty to err on the side of disclosure; the parties may by involvement in the field both know well the expert and any relevant affiliations he or she has.

²¹² Taylor c.v. as attached to ICC Statement of Independence and Impartiality.

²¹³ Recounted by Donuts in its Request for Independent Review of October 8, 2014, paras. 41, 46- 48.

²¹⁴ Recounted by Donuts at id., para. 53.

²¹⁵ July 1, 2013 letter to ICC by Mr. Young challenging Mr. Taylor’s appointment in relation to .SPORT objection by Sport Accord.

²¹⁶ See Taylor expertise, paras. 16.4-16.5. The expert characterized as “extremely misleading” and “(at the very least) unfortunate” that, upon investigation, a document said by Donuts to establish the policy of ICANN and the Guidebook in fact represented the not-adopted view of a certain private entity, and

195. As for Mr. Taylor’s reasoned determination on the merits, at least on its face, it seems to be a thorough, balanced, and lucid examination of the community objection grounds that flows logically to a conclusion. Whether he was correct in his appreciation of the merits is not for this Panel to assess.

196. Whatever obligations a party has to investigate a potential appointee (and the Panel believes these are not negligible) ultimately it is primarily the ICC expert’s disclosure practices, and not the parties’ due diligence, upon which the integrity of the ICC expertise system depends. A prospective appointee’s failure to be forthcoming, combined with selective disclosures capable of assuaging the concerns of one of the parties, allows the later-dissatisfied party to complain justifiably about the process while also giving it a plausible reason for not itself investigating more deeply.

197. Even without consulting the IBA Conflicts Rules relied on by Donuts’ expert, (which do not apply formally to an ICC Expert proceeding), the Panel would have expected Mr. Taylor to have been more specific in making disclosures based on the above analyzed ICC disclosure formula. He should have identified the members of SA for whom he had recently acted. That would have included listing his advocacy on behalf of the International Tennis Federation (ITF), the conflict which Donuts’ expert found to be most troubling.²¹⁷ In this respect, the Panel notes that the ICC disclosure statement he signed advises, in underscored text, that “any doubt must be resolved in favour of disclosure.”²¹⁸

C. Partial Dissent

198. In light of what all three Panel members regard as disclosure by Mr. Taylor that was on its face insufficient, one member would declare Donuts the prevailing party with respect to the .SPORTS application. He explains why he so holds in a separate document not forming part of this Declaration. Although the majority proceeds on a different basis, it understands how reasonable minds could conclude that the ICC expertise system, as adapted for use in community objection cases, has a systemic defect evident in the case at hand. That defect may allow conflicts to go undetected, and un-remedied, at critical times given that the system combines heavy reliance on adequate candidate disclosure, the absence of court review,²¹⁹ single-member

constituted on the part of Donuts “a contrived argument” intended to defeat the objection but which instead gave rise to a negative inference and questions about Donut’s credibility.

²¹⁷ Savarian Report of October 7, 2014, at para. 32 (ongoing representation of ITF a ‘Waivable Red List’ conflict).

²¹⁸ ICC Disclosure Form (“Statement of Impartiality and Independence”) completed by Jonathan Taylor, June 17, 2013.

²¹⁹ Whether a binding expert determination would be regarded as subject to a set aside proceeding is likely to vary with the national arbitration law in question. With respect to potential lawsuits against ICANN itself, the Guidebook stipulates (emphasis in the original) that:

APPLICANT AGREES NOT TO CHALLENGE, IN COURT OR IN ANY OTHER JUDICIAL FORA, ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION, AND IRREVOCABLY WAIVES ANY RIGHT TO SUE OR PROCEED IN COURT OR ANY OTHER JUDICIAL FORA ON THE BASIS OF ANY OTHER LEGAL CLAIM AGAINST ICANN AND ICANN AFFILIATED PARTIES WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES AND ACCEPTS THAT APPLICANT’S NONENTITLEMENT TO PURSUE ANY RIGHTS, REMEDIES, OR LEGAL CLAIMS AGAINST ICANN OR THE ICANN AFFILIATED PARTIES IN COURT OR ANY OTHER JUDICIAL FORA WITH RESPECT TO THE APPLICATION SHALL MEAN THAT APPLICANT WILL FOREGO ANY RECOVERY OF ANY APPLICATION FEES, MONIES INVESTED IN BUSINESS INFRASTRUCTURE OR OTHER STARTUP

expert tribunals, and a binding process in substitution for the original ICC default rule under which expert determinations are merely advisory.²²⁰

199. Language in at least one precedent, in turn, arguably condones a more plenary review than that which the majority pursues in this case. The Booking.com Panel summarized its investigation as follows:

The Panel finds that Booking.com has failed to identify any instance of Board action or inaction, *including any action or inaction of ICANN staff or a third party (such as ICC, acting as the SSP)*, that could be considered to be inconsistent with ICANN's Articles of Incorporation or Bylaws or with the policies and procedures established in the Guidebook. This includes the challenged actions of the Board (*or any staff or third party*) in relation to what Booking.com calls the implementation and supervision of the string similarity review process generally, as well as the challenged actions of the Board (*or any staff or third party*) in relation to the string similarity review of .hotels in particular.²²¹

200. A similar search in the case at hand might well support a finding that, unlike what was resolved in Booking.com, conduct of certain third parties (Mr. Taylor) was “inconsistent with ICANN's Articles of Incorporation or Bylaws or with the policies and procedures established in the Guidebook” to quote again Booking.com. At least arguably, moreover, no time bar would operate because the complaint is not about the system as installed by ICANN, but rather concerns a failure of the system as designed to be followed in this particular case.

D. The Majority's Position

1. In General

201. The Panel majority finds the views expressed by our colleague to be cogent—indeed, forceful. We take a somewhat different approach, however, and reach a different conclusion.

202. We start by recalling how very narrow our mandate is, and how that confinement is redoubled by the standard of review. Our task is not to assess whether everything worked perfectly in the objection process, but rather whether or not the Board can be said to have violated ICANN's Articles and Bylaws. For reasons discussed above, the requisite Board action cannot be established by equating directly the expert's deficient disclosure, or the ICC's failure to require better disclosure, to a Board failure to disclose or require disclosure, even though some of

COSTS AND ANY AND ALL PROFITS THAT APPLICANT MAY EXPECT TO REALIZE FROM THE OPERATION OF A REGISTRY FOR THE TLD; PROVIDED, THAT APPLICANT MAY UTILIZE ANY ACCOUNTABILITY MECHANISM SET FORTH IN ICANN'S BYLAWS FOR PURPOSES OF CHALLENGING ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES THAT ANY ICANN AFFILIATED PARTY IS AN EXPRESS THIRD PARTY BENEFICIARY OF THIS SECTION 6 AND MAY ENFORCE EACH PROVISION OF THIS SECTION 6 AGAINST APPLICANT.

Guidebook, at 6-3.

²²⁰ See notes 56. *supra*, and accompanying text.

²²¹ Booking.com IR Declaration, paras. 144-45 (emphasis added).

Donuts' submissions have made that leap. More would be needed before this Panel's majority could consider either the ICC or Mr. Taylor to be a partner or agent of the Board.

203. Nor has the ICC been shown by Donuts to be sufficiently analogous to the GAC to warrant Donuts' somewhat heavy reliance on the DCA IR Declaration. Donuts argues:

[T]he DCA Case held the Board responsible for oversight of the acts of ICANN's "constituent bodies," such as the GAC, that share ICANN's obligation to adhere to its Bylaws and other governing documents....GAC "advice" amounts to nothing unless and until ICANN acts upon it. Similarly, the [ICC expert] determinations of new gTLD objection panels constitute "expert advice" that have no effect until accepted by ICANN.²²²

204. This Panel's majority disagrees. It cannot, absent more, regard the ICC as a "constituent body" of ICANN. The DCA IR panel's analysis, by contrast, proceeded from its explicit finding that the GAC is a "constituent entity" of ICANN, and thus subject to its transparency undertakings. That question was the subject of considerable attention at the DAC IR hearing. Ultimately, the Panel formed a solid view of how the GAC fit within ICANN's constitutional structure.²²³ In our case, with so many indications pointing a different direction, the case for considering the ICC a "constituent entity" is far from obvious, and in the majority's view, Donuts has not made its case on that point.

205. The majority also considers that the Booking.com Panel's recounting of its broad but fruitless search for actionable missteps was not a conclusive statement of the proper scope of an IR, but rather reasoning that obviated further inquiry because no missteps were found—process wide. The Panel's report also had the byproduct of not leaving unanswered allegations that experts and service providers had been sub-standard in their work.

2. In Light of Mr. Taylor's Disclosure Practices, Was the Board Required to Act?

206. Donuts, nevertheless, argues that the Board was obliged to act under the circumstances, referred to by it as "egregious." The record does not contain evidence of formal Board consideration of Mr. Taylor's conduct as an expert for this Panel to test against the governing standard of review. Nor does Donuts point to a Board undertaking, or other formal source, that expressly or by clear implication requires the Board to exercise oversight with respect to individual ICC appointments or the sufficiency of an expert's disclosure (although the RFR process arguably provides access to such oversight).

207. Donuts instead posits a duty flowing from the Board's ultimate responsibility for the new gTLD program, its reserved authority to consider individual applications, and an allegation that ICANN officers had been made aware of troubling facts concerning Mr. Taylor. In particular, Donuts avers that there were communications between ICANN and the ICC about Taylor in connection with a proceeding to which Donuts was not party, but which involved SA. Donuts alleged:

²²² Donuts' Supplemental Memorandum of August 20, 2015, para.28.

²²³ See DCA Trust IR Declaration, para.101.

Though the ICC did not provide other applicants with information regarding Mr. Taylor's potential conflicts, it certainly brought the dot Sport request to disqualify Mr. Taylor to ICANN's attention. In turn, ICANN made detailed inquiries of the ICC regarding dot Sport's conflict allegations. Dot Sport began to include ICANN Board members Fadi Chehadé and Cherine Chalaby, as well as Chris LaHatte, ICANN's Ombudsman, on its communications, after which ICANN staff made further inquiries of the ICC.²²⁴

208. In its Post-Hearing brief, Donuts reiterates: “[t]he Board has failed to act upon specific information of which it had express notice regarding the SPORTS panelist's conflict of interest.”²²⁵

209. The chain of emails Donuts cites in support of its allegation that ICANN had become aware of Mr. Taylor's conflicts nevertheless do not support the proposition. Those communications related not to Mr. Taylor, but to a different expert's potential conflicts of interest, and correspondingly do not demonstrate active consideration by ICANN of circumstances related to Mr. Taylor's appointment in the .SPORTS objection proceeding.²²⁶

210. There are also problems with any suggestion that timely Board action to effect Taylor's disqualification—assuming the ICC would have allowed ICANN to so intervene in that fashion—would have led to the appointment of an expert who would have agreed with Donuts' interpretation of the community objection standards. The majority can't help but notice that both Mr. Kantor and Mr. Taylor were persuaded by similar lines of argument, flowing from Donuts' welcoming registration policy, and yet no conflicts have been attributed to Mr. Kantor.

211. In the view of this Panel's majority, however, even if the alleged biases of a particular expert are made known to ICANN officers in the ordinary course of interacting with the ICC, or because ICANN was petitioned by an applicant asking it to intervene, the Board's failure to intervene would have to be considered in light of the range of defensible options available to it and the existing ICANN mechanisms that offer a complaining applicant potential redress. Chief among these alternatives to ad hoc Board intervention is the RFR mechanism, which Donuts elected to forgo in this case.

212. Without purporting to predict the likely outcome of the RFR forgone by Donuts, the majority of this Panel does believe that it would have been an appropriate vehicle by which to address an expert's seemingly insufficient disclosure. The RFR process would have allowed an organ of the Board, with certain fact finding powers, to evaluate Mr. Taylor's conduct, and the ICC's handling of it, to determine if it amounted to: “one or more staff actions or inactions that

²²⁴ Donuts' Post-Hearing Brief of Supplemental Memorandum of August 20, 2015, para.8.

²²⁵ *Id.*, para. 6.

²²⁶ The Panel can only conclude that the compressed briefing schedule involved in this proceeding and the large volume of documents exchanged late in the process left Donuts insufficient time to study, or perhaps identify correctly, the correspondence upon which it relied. The Panel, nevertheless, spent considerable time in pursuing justification for arguments that, while asserted and repeated, proved to be unsupported by the documents to which the Panel was directed by Donuts.

contradict established ICANN policy(ies)”, to quote from the RFR grounds for seeking reconsideration.²²⁷

213. Had Donuts pursued an RFR, not only might some relief have been forthcoming (perhaps obviating this IR) but any RFR recommendation and subsequent processing of it would involve activities likely to fall properly within the jurisdiction of an IR Panel. Indeed, the RFR path is the one routinely taken by other disappointed applicants before resorting to the IR machinery. The Board was entitled to expect that Donuts would do likewise given the architecture in place. Correspondingly, in the view of this Panel’s majority, the Board simply was not required to pursue some other form application-specific intervention in the process.

214. Donuts is no doubt correct that it is not required to pursue an RFR. It is also correct that to the extent it sought a review of the merits, the RFR process would not be appropriate, and to that extent would be futile. The same cannot be so easily said when there is alleged conduct directly implicating the fairness and transparency of ICANN’s “staff”.

215. To its credit, Donuts engaged in an energetic effort to enlist the help of the Ombudsman, Mr. LaHatte. Despite being invited several times by LaHatte to identify some procedural unfairness, Donuts did not, as far as this Panel can ascertain, pin-point the weakness of Taylor’s disclosure. Donuts instead persisted in asking LaHatte to review the merits and to infer bias largely from the way in which Taylor reasoned and his connections²²⁸—to a large extent seeking the very merits review that LaHatte insisted he was not authorized to perform.²²⁹ That is, based on the Donuts’ correspondence with Mr. LaHatte, fairness of process was LaHatte’s concern; given Donuts’ heavy emphasis on the disclosure question in these proceedings, that Donuts appears not to have asked LaHatte to consider the fairness implications of Taylor’s weak disclosure is surprising.

216. Ultimately, on the question of the Board’s alleged failure to act to ameliorate the consequences of Mr. Taylor’s seemingly insufficient disclosure, the majority concludes that the circumstances did not so powerfully suggest a need to act that the Board’s failure to do so transgresses the Articles or the Bylaws or otherwise raises doubts under the Standard of Review. Those circumstances include but are not limited to the availability to Donuts of the RFR process and the Board’s apparent lack of knowledge of any conflicts potentially impairing Taylor’s impartiality that remained both undisclosed and unknown to Donuts.

XVI. DISPARATE TREATMENT CLAIM

217. As noted above, Donuts asserts that the Board has engaged in unjustified discrimination by virtue of its selectivity in installing a mechanism designed to address inconsistent “string

²²⁷ See notes 181-181, *supra*, and accompanying text.

²²⁸ See LaHatte Letter Ruling (Report) of May 25, 2014 finding no jurisdiction to examine merits of expert’s objection ruling. (“The essence of the complaint is that the dispute resolution providers have made errors in the various decisions relating to the names sought by Donuts, where they lost the dispute resolution processes.”); Letter of June 5, 2014 to from Donuts to Chris La Hatte (complaining of conflicts, bias, but not a failure of disclosure).

²²⁹ See email correspondence sent by Chris Lahatte to Jonathon Nevett, May 25, 2014

confusion” objection results. Although Donuts formally supports the initiative, it urges that it should have been extended to inconsistent community objection determinations. Donuts avers:

[T]he Board...admits to having chosen consciously not to use [its power to reach community objection cases]. ICANN made that choice discriminatorily and despite specific and sustained exhortations to take action from a broad constituency including Donuts.²³⁰

218. Donuts relies on Bylaw’s Article II, Section 3. The latter commands that ICANN:

[S]hall not apply its standards, policies, procedures, or practices inequitably or single out any particular party for disparate treatment unless justified by substantial and reasonable cause, such as the promotion of effective competition.

219. By its terms, Article II, Section 3 is not violated if ICANN is justified in its line drawing by “substantial and reasonable” cause. Albeit with a slightly different application of the principle, the Panel agrees with Vistaprint IR Panel that temporal context is important. It is obvious that a fresh phase of study begins when a regime with the many operational features of the new gTLD program moves from planning to implementation. There having been extensive study and stakeholder participation before implementation of the gTLD program, the Board is more likely to violate its duties if acting precipitously rather than with deliberateness.

220. The benefits of deliberateness will in the majority’s view often constitute “substantial and reasonable cause” for selective application of new policies and new mechanisms. Moreover, in the majority’s opinion, the only differences in treatment that implicate Bylaws Article II, Section 3 are those which occur in like circumstances. The record does not allow the Panel to conclude that the considerable consistency issues raised in connection with string similarity cases have emerged in connection with community objection cases as a whole, or with respect to the two expert decisions giving rise to this IR.

221. On the contrary, the materials produced in this case afford ample justification for giving a priority to the string confusion cases,²³¹ which readily give the impression of containing a certain percentage of irreconcilable outcomes. The opprobrium raised among observers, stakeholders and others in reaction to the string confusion cases, correspondingly, seems to have been of a kind and a degree not occurring with respect to community objections.²³²

XVII DONUTS’ CONTRACT THEORIES

222. In its pleadings, Donuts made reference to contractual theories by which it was entitled to relief; these were left under-developed by Donuts.²³³ Nevertheless, for the sake of completeness, the majority observes that no contractual analysis it has considered would lead to a different result than that reached above. Under Donuts’ occasional characterization of itself as being a

²³⁰ Donuts’ Post-Hearing Brief of Oct. 29, 2015, para. 12.

²³¹ See, e.g., Booking.com IR Declaration, paras. 119-30.

²³² Cf. Vistaprint IR Declaration, paras. 188-92.

²³³ In its Request for IR, para. 80, Donuts provided its most complete explanation of its contract theory (“Applicant agrees to the terms of the Guidebook by applying for a new gTLD, thus forming a contract on those terms with ICANN”). The jurisprudential support for its contract formation thesis was not supplied, however.

contracting party, with ICANN being its counter-party, it is the premise that Board conduct that is not consistent with the Guidebook would be a breach of contract. It follows from the analysis adopted above that, assuming arguendo the existence of a contract, no breach has occurred, including no violation of duties of good faith. The same is true of any reliance-based theory the Panel can envision in the absence of focused pleading on the question.

XIIX DECLARATION

223. To a great extent, Donuts' own initial pleading foreshadowed the majority's rulings in this case. It referred to certain post-ICM case "obstacles" instituted by ICANN, such as "subjecting only Board action to scrutiny, and attempting to narrow the scope of review."²³⁴ Perhaps this was intended by Donuts to suggest that ICANN had acted unfairly to insulate itself from accountability. Whatever the intimation, these are not "obstacles" this Panel is free to ignore. As the Bookings.com IR panel observed in considering the case of another disappointed applicant:

In launching this IRP, [the applicant] no doubt realized that it faced an uphill battle. The very limited nature of IRP proceedings is such that any applicant will face significant obstacles in establishing that the ICANN Board acted inconsistently with ICANN's Articles of Incorporation or Bylaws.²³⁵

224. As an IR Panel, we are required under the ICANN Bylaws²³⁶ to:

[D]eclare whether an action or inaction of the Board was inconsistent with the Articles of Incorporation or Bylaws²³⁷

225. Pursuant to this authority, the Panel (by a majority) declares that Donuts has not met its burden to demonstrate action or inaction by the Board that violated ICANN's Articles or its Bylaws.

226. The Panel also has authority to:

[R]ecommend that the Board stay any action or decision, or that the Board take any interim action, until such time as the Board reviews and acts upon the opinion of the IRP[.]

227. There is precedent for taking a broad view of this prerogative.²³⁸ Even though an IR is an accountability mechanism, it also has the potential to serve an advisory function, inasmuch as it represents the views of three independent neutrals. These considerations prompt the majority to offer the following further thoughts.

228. First, the majority cannot say that the .SPORTS expert was motivated by partiality favoring the objector, only that his failure to elaborate on what he may have thought was already implied in his resume erred too heavily on the side of non-disclosure, and was thus unhelpful to the process. Opting for less than robust disclosure is harmful because, at a minimum, when discovered it may create the impression of bias and thus undercut a party's confidence in the

²³⁴ Donuts' Request for IR, para. 21.

²³⁵ Booking.com IR Declaration, para. 141.

²³⁶ ICANN Bylaws, Article IV, Section 3.

²³⁷ Id., Section 3, para. 1(d).

²³⁸ See Booking.com IR Declaration, para. 4; Vistaprint IR Declaration, paras. 186-90.

system. A more substantial peril is realized when weak disclosure is only a precursor to a determination in fact motivated by partisanship.

229. The majority believes that rather than using single expert panels, the community objection process might to advantage employ panels composed of three experts. In such circumstances, partisans can only do limited damage and, correspondingly, any party concerned about the prospect of biased expert determinations should be reassured to a considerable extent by three-person tribunals. In the majority's view, even with the added costs involved, it would be economically justifiable in the long term and not inconsistent with ICANN's values and principles to adopt a three-neutral model as the default in community objection cases.

230. Concerning the community objection proceeding brought by SportAccord in connection with .SPORTS, the majority believes it would not be inconsistent with ICANN's values and principles to provide for a rehearing of that objection, by a different expert (or three experts). In the event that should happen, the applicant and objector would presumably be highly efficient in presenting their respective cases, having already prepared them fully once.

231. The majority also considers that the cases before this Panel involve a predictable conflict of expectations. The Guidebook authorizes a prospective applicant, who espouses a relatively open registration policy, to pursue a standard application to administer a string prone to be associated with one or more communities; not uncharacteristically, those communities will espouse and be galvanized by formal policies and common perspectives that are likely to be incompatible with unrestrained access to the string involved. The majority suggests that the assumptions and policies that lead to this kind of tension warrant further study.

XIX COSTS

232. The Supplemental Rules, which augment the ICDR arbitration Rules for IR proceedings, state:

The IRP PANEL shall fix costs in its DECLARATION. The party not prevailing in an IRP shall ordinarily be responsible for bearing all costs of the proceedings, but under extraordinary circumstances the IRP PANEL may allocate up to half of the costs to the prevailing party, taking into account the circumstances of the case, including the reasonableness of the parties' positions and their contribution to the public interest.

In the event the Requestor has not availed itself, in good faith, of the cooperative engagement or conciliation process, and the requestor is not successful in the Independent Review, the IRP PANEL must award ICANN all reasonable fees and costs incurred by ICANN in the IRP, including legal fees.²³⁹

233. The majority of this Panel has determined that Donuts has not prevailed. The majority does not find that the circumstances warrant departing from the general rule that, ordinarily, "the party not prevailing in an IRP shall...be responsible for bearing all costs of the proceedings."

²³⁹ Supplementary Procedures for ICANN Independent Review Process, Article 11.

234. The majority considers that any contribution to the public interest Donuts might have made by focusing attention on the proper level of disclosure by ICC experts and related matters has been offset by the tenuousness of some of Donuts' positions.²⁴⁰

235. Accordingly, Donuts is to bear all of the fees and expenses of each Member of this Panel, all of the fees and expenses of the ICDR in this IRP, and all expenses of the hearing in Los Angeles on October 8, 2015, including hearing room costs, the fees and expenses of the reporter, and the cost of the transcript.

236. The administrative fees and expenses of the International Centre for Dispute Resolution (ICDR) totaling US\$4,840.00 shall be borne by Donuts, and the compensation and expenses of the Panelists totaling US\$165,895.34 shall be borne by Donuts. Therefore, Donuts shall reimburse ICANN the sum of US\$83,067.66, representing that portion of said fees and expenses in excess of the apportioned costs previously incurred by ICANN.

237. As to legal fees and similar costs incurred by ICANN, because Donuts availed itself of the cooperative engagement process, the Panel is not *required* to "award ICANN all reasonable fees and costs incurred by ICANN in the IRP, including legal fees." The Panel interprets Article 34 of the ICDR Rules as according it discretion to hear the parties on the question of legal fees and to make an award of such fees in whole or in part.²⁴¹

238. Nevertheless, recent precedents—notably Booking.com, Vistaprint, and Merck—(while taking different approaches to the allocation of DRSP and Panel fees) have seemingly established the practice of leaving each party to shoulder its own legal fees. This Panel, in keeping with that trend, unanimously decides that each side should bear its own legal fees and similar costs. It will thus not ask the parties to address through further briefing the proper allocation of such fees in this case.

239. This Final Declaration may be executed in any number of counterparts, each of which shall be deemed an original, and all of which together shall constitute the final Declaration of this IR Panel.

240. As contemplated in Article 30 (2) of the ICDR Arbitration Rules, this Declaration carries two signatures instead of the usual three. Mr. Boesch dissents, in part, and has written separate remarks.

²⁴⁰ See, e.g., notes 183-89, 226, *supra*, and accompanying text.

²⁴¹ The ICDR Rules, Article 34, state in pertinent part:

The arbitral tribunal shall fix the costs of arbitration in its award(s). The tribunal may allocate such costs among the parties if it determines that allocation is reasonable, taking into account the circumstances of the case. Such costs may include: . . . d. the reasonable legal and other costs incurred by the parties; . . .

I, Philip W. Boesch, Jr., Panel Member, decline to sign the Final Declaration of the Panel, for the reasons outlined in this statement, which I respectfully request be attached to and incorporated with the Declaration executed by the other two Members of this Panel.

A. The Promise of Independence, Transparency and Accountability Has Been Violated. There is no disagreement on this Panel and on any Panel considering previous matters, that ICANN is “no ordinary non-profit,” but instead is a “regulatory authority of vast dimension and pervasive global reach.” The very origin of ICANN’s authority relies upon ICANN’s “Affirmation of Commitments” with and to the United States Department of Commerce, which lists as the first “key commitment” by ICANN, to “ensure” that decisions are made in the public interest “and are accountable and transparent.”¹ (Emphasis Added). ICANN Article Section 4 sets forth ICANN’s commitment to “open and transparent processes.” (Emphasis Added). Article 3, Section 1 requires that ICANN “shall operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness.” (Emphasis Added). The ICANN Guidebook requires the decisions to be made by “an independent expert Panel.” (Emphasis Added).

It is the independence of judgment, transparency, and accountability, which ensure fairness and which lay the basic foundation of ICANN’s vast regulation authority. These essential principles, in this Member’s opinion, should be at the forefront of this Panel’s review, because ICANN’s position in this review seeks a rubberstamping of decision-making that was not independent, that was not transparent, and that has not been held accountable. This Member cannot abide the Expert decision in the .SPORTS Application and would not sustain the Objection filed to that Application.

The Expert who decided the .SPORTS Objection, “impermissibly abridged disclosures,” the Majority holds, but then the Majority accommodates by stating that there is no evidence that the Expert really was a “partisan,” and by accepting ICANN’s speculation that the Expert’s decision-making “may” have been “heart-felt.” When ICANN receives its extraordinary power and authority, based on the promise of independent judgment, transparency, and accountability, there is no room for whitewashing the egregious failure of disclosure here. The decision-maker was the lawyer for undisclosed clients directly benefited by his ruling. ICANN argues to let this

¹ Affirmation of Commitments No. 3.

stand because the procedures it argues are applicable do not permit any other options. This Member disagrees. This is the failure of the promise of independent, transparent, accountable decision-making and it should not stand.

B. The Requirement of Conformity With Law. This Panel accepts the notion that ICANN must carry out its activities in conformity with “relevant principles of international law and applicable conventions and local law.” But in this context the Majority discusses the “California business judgment rule,” finds it inapplicable and discusses no other laws, relying on the arguable lack of briefing on conflicts of law. Because the procedures in this case cloak the “expert” with the decision-making power of a judge or arbitrator, the “relevant principles of international law” and “local law” should be those which apply to independent, transparent and accountable decision-making. Conflicts of laws would not seem to deserve much discussion on this point, because there likely are no conflicting laws that permit an arbitrator to decide matters where the arbitrator’s undisclosed clients or business associates would directly benefit from his or her ruling. Laws and rules governing disclosures and the independence of the judiciary and the transparency of decision-making, even AAA and ICDR Rules, do not focus on the need to prove that the decision-maker actively promoted the interests of undisclosed clients as direct beneficiaries of his or her judicial ruling. It is the necessity to avoid the appearance of impropriety that dictates the fullest disclosures.

C. There is and There Should Be A Remedy for “Impermissible” Non-Disclosures. Ultimately it should be the ICC experts’ disclosures and not the parties’ private investigation into the expert’s background, upon which the integrity of the ICC expertise system depends. This also is true for judges, and for arbitrators acting pursuant to the California Arbitration Act or in compliance with the Federal Arbitration Act, or in compliance with ICDR Rules. In fact, this Expert’s signature on his “impermissibly abridged disclosures” actually appears just below the ICC Disclosures Statement, which advises in underscored text that “any doubt must be resolved in favour of disclosure.”

Even though the Expert’s conduct in failing to disclose was “impermissible,” the Majority suggests for a variety of reasons that there is no remedy for this failure—even while the integrity of the ICC expertise system depends on it. With the very integrity of ICANN’s system at issue, this Majority has determined that there are no remedies. If there is no remedy for such a fundamental failure of the independence, transparency and accountability requirements, then this is a systemic defect that required and requires Board action.

This Panel Member also believes, however, that there is and should be a remedy, even within the standards of review, interpretations, and procedures outlined by ICANN and by the Majority.

D. Application of The “Standards of Review” Should Permit a Remedy in This Case.

This Panel, as with all Panels, discusses the “standard of review” typically by focusing on whether the Board acted “without conflict of interest,” whether the Board exercised “due diligence and care” and whether the Board exercised “independent” judgment. Though this Member takes issue with the narrow interpretation by the Majority of “actionable inaction,” it is clear enough from other decisions and even from the Majority in this case, that inaction as well as action may form the basis for the review. In this case, the Board’s inaction was not without conflict of interest; the failure of a remedy affecting the integrity of the IRP system does not suggest due diligence; and allowing this Expert opinion to stand is not the achievement of independent judgment.

The Majority finds many reasons not to act, holding that its mandate is so “very narrow” as to be almost non-existent, and how that “confinement” must be “redoubled by the standard of review.” Opinion at 57.

But the Panel majority also states: “Concerning the community objection proceeding brought by SportAccord in connection with .SPORTS, the majority believes it would not be inconsistent with ICANN’s values and principles to provide for a rehearing of that objection, by a different expert (or three experts).” This seems to be an advisory opinion that Donuts can and perhaps should petition for a rehearing, and that it would “not be inconsistent” with ICANN principles for a rehearing to be granted by some entity in authority.

For the Panel to find that it cannot act except at best in an advisory capacity, and that its neutered role is not a systemic problem, is unsatisfactory and unsatisfying. To this Member, after hundreds of thousands of invested dollars in filing fees and in these proceedings, the advice to Donuts to seek a rehearing (“[a]t least arguably, moreover, no time bar would operate”) is analogous to a punt on first down if not an abdication of responsibility.

Although the Majority analyzes the deference to be or not to be accorded the Board’s actions or inactions, the first question, whether the Board action or inaction is “without conflict of interest,” is a flawed inquiry in the context of this case. Every time the Board or its agents or delegated decision-makers consider action or inaction of any kind, in addressing the decision of the Board’s delegated decision-maker, the Board is acting with and not without conflict of

interest. If the Board promulgates or leaves in place a procedure or standard of review, stacked in favor of its delegated decision-maker, the Board is acting with and not without a conflict of interest. If ICANN's argument is that the standard of review only refers to "certain kinds of conflicts of interests," that is not an apparent conclusion to draw from the language of the Guidebook or the Articles. Not only should no deference be accorded the decision under review, but also the basic principles justifying ICANN's authority—independent judgment, transparency, and accountability—mandate that the procedures and standards for review not be stacked in any way in favor of ICANN's delegated decision-maker, or applied in a manner that suggests that they are. This Panel Member would find that a remedy is available within the existing standards of review, however the Majority seeks to narrow or "confine them."

E. Application of Contract Law Confirms a Remedy. The promise of independent judgment, transparency and accountability, as to decision-making that is essentially judicial in nature, regarding matters of extreme public import and interest, should not be set aside by resort to technical rules of construction contrary both to equity and to applicable principles of law.

Donuts argues, among other things, that it entered into a simple contract by paying its \$185,000 and by filing its Application in accordance with the ICANN Guidebook. No conflicts of laws issues were raised with respect to the basic formation of a contract, and the substantial amounts involved do not suggest anything other than a significant business relationship and mutual commitment. Part of a mutual commitment like this includes, under California law, a covenant of good faith and fair dealing to make certain that the benefits of the contract are achievable by both sides. With the promise of fair dealing, the applicant had every right to expect independent decision-making, transparent decision-making, and accountability of the decision-making, in accordance with fair and reasonable processes. That is a clear covenant by and responsibility of the ICANN Board. This Member also is of the opinion that the applicant had the right to expect that its application would be handled as represented in the Guidebook, without additional terms imposed upon it, including that it operate for the benefit of any one community. ICANN does not persuasively reply and does not reply at all to the substance of this argument.

F. This Case Should Not Turn on the Majority's View of Agency Law. The Panel Majority bases its opinion on the fiction that the Board's delegated decision-maker is a "third-party," even though it is the Board's delegation that sets up this isolation. And, the Majority posits, the outcome of this proceeding might have been different "[h]ad the agency theory been

more fully addressed by the Parties...” (Opinion 48, ¶155). Because this Panel’s century of experience leaves it capable of dealing with the briefings on “agency theory,” this again seems to this Member more like an abdication of responsibility than its articulated focus on burden of proof.

Trying to draw narrow distinctions between whether delegated decision-making is the work of an agent or an independent contractor is just such a technical nicety that would not be acceptable in the simplest workers compensation case, much less acceptable in a matter of extraordinary public interest. The Guidebook makes no such distinction. It acknowledges that experts appointed by or under authority of the Board, pursuant to the Bylaws, shall determine Objections. “The findings of the panel will be considered an expert determination and advice that ICANN will accept within the dispute resolution process.” See Guidebook, §3.4.6.

In its analysis in the Booking.com IRP, that Panel summarized its investigation:

The Panel finds that Booking.com has failed to identify any instance of Board action or inaction, *including any action or inaction of ICANN staff or a third party (such as ICC, acting as the SSP), that could be considered to be inconsistent with ICANN's Articles of Incorporation or Bylaws or with the policies and procedures established in the Guidebook.* This includes the challenged actions of the Board (*or any staff or third party*) in relation to what Booking.com calls the implementation and supervision of the string similarity review process generally, as well as the challenged actions of the Board (*or any staff or third party*) in relation to the string similarity review of .hotels in particular.² (Emphasis Added)

In this case, the conduct of the delegated decision-maker was “inconsistent with ICANN’s Articles of Incorporation [and] Bylaws [and] with the policies and procedures established in the Guidebook,” and it is the opinion of this Member that it disserves the integrity of the system for an opinion to rely upon whether the delegated decision-maker is an agent of the Board, a staff member reporting to the Board, a Board member, or an “independent contractor” of the Board.

² Booking.com Declaration, paras. 144-45.

G. The DCA Case is Not Only Instructive: It Addressed as This Panel Should, the Fundamental Integrity of the System. Similarly, the distinction that is made regarding the DCA case is not only a technical one but one that exalts form over substance. There seems to be very little question that the odor of corruption and impropriety hung over the air of the DCA review; it was the fact that the decision presented a direct and blunt assault on the integrity of the entire process, that led to the DCA conclusion, not the distinctions that might be presented in some state's law between constituents, affiliates, agents, independent contractors, and the like. As stated by the DCA Panel, the Board's failure to maintain its own accountability in any other way leaves the IRP as "the only and ultimate 'accountability' remedy for an applicant."³

In this case, all Panel members agree that the integrity of the system is predicated upon the fullest and complete disclosures by the experts. If experts are appointed who are, charitably, unaware of the requirements of disclosure, unaware of the need to avoid the appearance of impropriety, or aware only of some allegedly lesser standard of disclosure, then that is the system's failure. Whether that is an inadequacy in training, as Donuts argues, whether that result is the failure to intervene in an egregious action, as Donuts argues, or whether that is the emergence of bias over reason, as Donuts argues, or all three, the result of this review should be the same. It is not acceptable to the integrity of the process to speculate that the expert's decision "might have been heart-felt." It is not acceptable for a lawyer, whose undisclosed clients shall directly benefit from his decision, to issue the judgment that he did.⁴

H. This Member Would Not Uphold the Objection to Donuts' Application for .SPORTS. This Member of the Panel would furthermore reverse and deny the Objection. It is incredulous to the Panel Member that this Expert construed "community" in a way that SportAccord explicitly had *not* defined it, stating that it was "self-evident" the community "refer[s] to the individuals and organisations who associate themselves with organized sport," which he calls the "Organised Sports Movement." This Expert strained to find a "clearly delineated" community, even though the objecting party itself had "delineated" it to include: (i) "individuals and organizations who associate themselves with Sport;" (ii) "practitioners as well

³ DCA Declaration, para. 15

⁴ This Member finds it persuasive that this same Expert was disqualified in virtually an identical context and matter. This Member also finds the discussion essentially blaming Donuts' investigation and response not only to be unpersuasive but a slap at the integrity of the system that depends on disclosure.

as organizers, supporters and audience;” (iii) “individual practitioners of sport, ... spectators, ... fans and sponsors;” and (iv) “any person in the world.”

Nevertheless, without any evidence, the Expert made up his own definition of the “community”:

...[W]hen the vast majority (many millions of organisations and individuals around the world) think of sports, they must obviously think predominantly (if not exclusively) of official, sanctioned forms of sport that are governed and regulated by means of the pyramid model [atop which SportAccord claimed it sat].

This Expert also cited as evidence of “substantial opposition” a letter from one of his own clients, and cited as legal authority for one of his conclusions a case in which he acted as counsel for another of his clients. Without any evidence to support his “self-evident” community definition, and plenty of evidence that undisclosed “organized sports” clients are served by the lawyer acting as decision-maker, this Member is left with the self-evident proposition that there is no other excuse for it than allegiance to the entrenched “organized sport organizations” which the Expert and his lawfirm serve as counsel.

The conclusion that the Objection should be denied is reasonable and consistent with the goals and responsibilities of independence, accountability and transparency. The delegated decision-making process, in this case without adequate accountability and independent review, should not be promoted as a fair process. To this Panel Member, it wasn't.

I. This Member Agrees With the Majority Decision to Donuts Application for .RUGBY Affirming the Objection. The integrity of the system is not implicated by the decision on the .RUGBY Objection in the same manner and to the same degree in which it was and is with respect to the .SPORTS Objection. Notwithstanding the opinions presented here that would apply to both Objections, this Member cannot conclude on this record that the delegated decision-making resulted in violation of fundamental principles or covenants, or that the Expert should have reached a different conclusion for other reasons; and therefore this Member does not disagree with the conclusion reached by the Majority with respect to the .RUGBY application.

J. The Awarding of Costs. Because this Member believes that the SportAccord Objection should not have been decided by this Expert in favor of the objecting party, it seems neither fair nor reasonable to award costs and attorneys' fees to ICANN. The Majority further

takes the position that “any contribution to the public interest Donuts might have made by focusing attention on the proper level of disclosure by ICC experts and related matters has been offset by the tenuousness of some of Donuts’ positions” (Opinion 64). What this Member finds even more tenuous than this vague reference are the IRP Panel’s conclusions that it would not be inconsistent with ICANN principles to award a rehearing of the SportAccord Objection, that the IRP Panel can do nothing about the problem it sees, and that even though the Panel cannot act, the problem really is not systemic in nature. The lack of accountability here, to address a blatant failure of disclosure that cuts at the integrity of the process, exposes the failed promises of independence, transparency and accountability and frankly discourages justifiable challenges to ICANN in the future. This Member would have each side bear its own costs and fees under the circumstances.

Dated: May 5, 2016

Respectfully submitted,

Philip W. Boesch, Jr.

Background

Summary

An experienced campaign organizer, research analyst, and project manager, I seek work environments where I will learn constantly from my colleagues and lead projects with high social value that contribute directly to progressive change.

Experience

Manager of Research, Monitoring, and Evaluation - Syria Regional Program

Chemonics International

November 2015 – Present (7 months) | Gaziantep, Turkey

Senior Project Coordinator

The Economist Intelligence Unit (The EIU)

May 2012 – January 2016 (3 years 9 months)

Various custom research projects for large corporate and nonprofit clients.

Arabic Translator

Various

June 2007 – October 2015 (8 years 5 months)

Management Associate

John Snow, Inc. (JSI)

May 2013 – June 2014 (1 year 2 months) | Rosslyn, VA

USAID | DELIVER a multibillion USD global public health program

Director of Community Engagement

CrowdTrust

April 2013 – January 2014 (10 months) | Washington D.C. Metro Area

Business development and crowdfunding community-building.

Organizer, Child Care for All Campaign

Empower DC

June 2009 – December 2011 (2 years 7 months)

- Organized parents and child care providers to advocate for an affordable high-quality child care subsidy program in DC employing a comprehensive strategy with a wide range of organizing tactics.
- Contributed to efforts to unionize DC's home- and center-based child care providers.
- Taught trainings on topics including community organizing, child care policy and funding, the DC budget and legislative process, successful outreach, and strategic campaign planning.
- Succeeded in directing efforts of directly impacted residents to restore funding to DC's child care subsidy program, allowing low-income parents to afford child care to maintain their employment.

Steering Committee Member

Save Our Safety Net DC

2009 – 2011 (2 years) | Washington D.C. Metro Area

Helped lead and manage a campaign to bring progressive income tax reform to DC's local tax code.

Research Analyst

CENTRA Technology, Inc

April 2009 – October 2009 (7 months)

Focus on the Middle East

Consultant

The Egyptian Center for Culture and the Arts

January 2008 – January 2009 (1 year 1 month) | Cairo, Egypt

- Wrote and edited grant proposals to international foundations and managed relationships with them.
- Protected resident artists' rights as professionals in negotiating compensation for performances.
- Wrote, edited, and translated website content, grant reports, publicity and other materials as needed.

Background

Summary

Experienced project manager, researcher and people manager with a focus on operational risk and economic analysis.

Responsible for developing and executing customized projects spanning economic, industry, country and policy research and business advisory for The Economist Intelligence Unit's clients.

Recent projects include research and analysis leading to the development of benchmarking tools in two areas: the Nuclear Threat Initiative's nuclear materials security indices covering 176 countries; an index to assess the attractiveness of manufacturing locations for a major technology firm. In addition, she executed a market assessment and forecasting research program for a major beverages firm that addressed the economic and political outlook, and also provided forecasts by beverage segment for select markets in Latin America.

Hilary also collaborates on business development throughout the Americas and manages a team of analysts.

She was previously based in London where she worked as an economist responsible for economic and political forecasting for selected emerging and developed markets in Asia.

2014 Nuclear Materials Security Index

Nuclear Threat Initiative; developed with the Economist Intelligence Unit

January 8, 2014

The 2014 NTI Index, developed with the Economist Intelligence Unit, highlights positive trends and dangerous gaps in the use, storage and transport of weapons-usable nuclear materials. The Index scores and ranks countries across more than 50 security indicators, with the goal of keeping nuclear materials out of the hands of terrorists.

ICANN (Internet Corporation for Assigned Names and Numbers) Blog

Author: Steve Crocker

27 May 2016

New ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws

Today, on behalf of the [ICANN \(Internet Corporation for Assigned Names and Numbers\) Board](#), I am pleased to announce the [adoption](#) (<http://www.icann.org/resources/board-material/resolutions-2016-05-27-en>) of the [new ICANN \(Internet Corporation for Assigned Names and Numbers\) Bylaws](#) (<https://www.icann.org/en/system/files/files/adopted-bylaws-27may16-en.pdf>), which reflect changes made as a result of the [IANA \(Internet Assigned Numbers Authority\) Stewardship Transition package of proposals](#) (<https://www.icann.org/stewardship-accountability>). The new Bylaws are the result of hundreds of hours of work by the community and the legal teams. The Regional Internet Registries Service Level Agreement and Internet Engineering Task Force Memorandum of Understanding Supplemental Agreement have also been approved for signing and will go into effect after the transition.

Later today, [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) will be transmitting the new Bylaws to the U.S. Department of Commerce's National Telecommunications and Information Administration ([NTIA \(US National Telecommunications and Information Agency\)](#)). [NTIA \(US National Telecommunications and Information Agency\)](#) has previously stated that adoption of the new Bylaws is required for them to complete their review of the proposals.

which is expected to occur in June.

This is an important milestone for ICANN (Internet Corporation for Assigned Names and Numbers) and the community. As we await the release of NTIA (US National Telecommunications and Information Agency)'s report, we continue to prepare for implementation of the transition proposals. We thank everyone for their continued hard work and support during this transition process.

Comments

Constantine Roussos (/profiles/constantine-roussos) 13:52 UTC on 27 May 2016

Dear Chairman Dr. Crocker,

DotMusic commends the community for all their work.

DotMusic has submitted numerous public comments during the public comment period (<https://icann.org/public-comments/draft-new-bylaws-2016-04-21-en>) relating to the draft new ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws to increase ICANN (Internet Corporation for Assigned Names and Numbers)'s transparency and accountability (See DotMusic public comments at <https://forum.icann.org/lists/comments-draft-new-bylaws-21apr16/pdf1IMXmjQQ05.pdf>). ICANN (Internet Corporation for Assigned Names and Numbers) staff created a report on the public comments (See <https://icann.org/en/system/files/files/report-comments-draft-new-bylaws-25may16-en.pdf>) but did not indicate why some revisions were accepted while others that ensured ICANN (Internet Corporation for Assigned Names and Numbers) increased its accountability and transparency were not.

It is clear that the ICANN (Internet Corporation for Assigned Names and Numbers) Board hurried to accept the new Bylaws. 6 days is not reasonable time to assess and adequately take into consideration over 30 public comments, some of which were quite detailed.

Moreover, there was no clarification or discussion by Staff or the Board why some public comments to increase ICANN (Internet Corporation for Assigned Names and Numbers)'s accountability and transparency were not adopted. While ICANN (Internet Corporation for Assigned Names and Numbers) takes on the position of multi-stakeholder bottom up decision-making, it means nothing if comments by certain organizations are always shunned, ignored and dismissed at the gain of certain special interests or to provide ICANN (Internet Corporation for Assigned Names and Numbers) wiggle room to escape true accountability and transparency during the Independent Review Process or Reconsideration Request process. Certain aspects of the new Bylaws pertaining to accountability mechanisms remain problematic and once again are riddled with the appearance of conflicts of interest in favor of ICANN (Internet Corporation for Assigned Names and Numbers).

The new ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws urgently require significantly more responsible, meaningful and impactful revisions to hold ICANN (Internet Corporation for Assigned Names and Numbers) accountable and increase transparency. In fact, internet users and public interest demand it. Thus far, the Internet community has been ineffective in holding ICANN (Internet Corporation for Assigned Names and Numbers) accountable and transparent. It appears this will continue.

Constantine Roussos

Mr. Flip Petillion
Crowell Moring
7, Rue Joseph Stevens
B 1000 Brussels
Belgium

Re: New gTLD Applications for .HOTEL and .ECO

Dear Mr. Petillion:

Thank you for your letter to the members of the ICANN Board and Mr. Akram Atallah, dated 27 April 2016. We have published the letter to the gTLD correspondence page (see <https://www.icann.org/en/system/files/correspondence/petillion-to-atallah-icann-board-27apr16-en.pdf>), and we have addressed your questions below.

As you are aware, on 10 March 2016, the ICANN Board took a resolution to accept the Independent Review Process (IRP) Panel's Final Declaration on the IRP relating to the applications for .HOTEL and .ECO (see <https://www.icann.org/resources/board-material/resolutions-2016-03-10-en#2.a>).

Resolved (2016.03.10.10), the Board accepts the following findings of the Panel's Final Declaration: (1) ICANN is the prevailing party in the Despegar Online SRL, Donuts Inc., Famous Four Media Limited, Fegistry LLC, and Radix FZC v. ICANN IRP; (2) ICANN is the prevailing party in the Little Birch, LLC and Minds + Machines Group Limited v. ICANN IRP; (3) the IRP Panel's analysis is limited to declaring whether the Board has acted consistently with the provisions of ICANN's Articles of Incorporation and Bylaws; (4) the Board (including the Board Governance Committee) acted consistently with the Articles of Incorporation and Bylaws; (5) the parties shall each bear their own expenses including legal fees; and (6) the IRP costs shall be divided between the parties in a 50% (claimants) / 50% (ICANN) proportion.

Resolved (2016.03.10.11), the Board notes the Panel's suggestions, and: (1) directs the President and CEO, or his designee(s), to ensure that the New gTLD Program Reviews take into consideration the issues raised by the Panel as they relate to the consistency and predictability of the CPE process and third party provider evaluations; (2)

<http://icann.org>

encourages ICANN staff to be as specific and detailed as possible in responding to DIDP requests, particularly when not disclosing requested documents; (3) affirms that, as appropriate, ICANN will continue to ensure that its activities are conducted through open and transparent processes in conformance with Article IV of ICANN's Articles of Incorporation; and (4) directs the President and CEO, or his designee(s), to complete the investigation of the issues alleged by the .HOTEL Claimants regarding the portal configuration as soon as feasible and to provide a report to the Board for consideration following the completion of that investigation.

The Board further explained in its rationale (see <https://www.icann.org/resources/board-material/resolutions-2016-03-10-en#2.a.rationale>),

Finally, with respect to the Panel's recommendation that ICANN respond to a letter from the .HOTEL Claimants regarding the portal configuration issue as soon as feasible, the Board notes that staff has informed the Board that it is nearing the end of its investigation of this matter. The Board is recently in receipt of two letters from Claimants regarding the portal configuration issue, dated 1 March 2016 and 8 March 2016, respectively. Staff has provided the Board with an update of its investigation into the issues set forth in the letters. The Board has directed the President and CEO, or his designee(s) to complete its investigation into this matter as soon as feasible. The Board notes that out of a matter of equity and fairness, the investigation should include the opportunity for all relevant parties to be heard. The Board expects the staff will prepare a report for the Board following the completion of its investigation, at which time the Board will consider the .HOTEL Claimants request for cancellation of HOTEL Top-Level Domain S.a.r.l.'s application for .HOTEL.

With reference to this resolution, your letter asked,

In view of the limited rationale supporting the Board's resolution, the ultimate goal of ICANN's consideration of these issues is not entirely clear to my clients. I therefore ask you 1) to clarify whether ICANN's consideration will involve the re evaluation process as requested in my letter of 8 March 2016, and 2) to specify what measures ICANN will take pending the New gTLD Program Reviews to ensure that a re evaluation of the CPE process involving the .hotel (to the extent necessary) and .eco contention sets remains meaningful.

Your question conflates two aspects of the resolution. With respect to the portion of the resolution that "directs the President and CEO, or his designee(s), to ensure that the New gTLD Program Reviews take into consideration the issues raised by the Panel as they relate to

the consistency and predictability of the CPE process and third party provider evaluations,” the ICANN community is currently in the process of reviewing the New gTLD Program, and it will take into consideration the issues raised by the IRP Panel. However, it is not anticipated that the findings of these reviews would impact the processing of applications from the 2012 application round. Such findings from the New gTLD Program Reviews would be considered in the development of future application rounds. With respect to your inquiry concerning the re evaluation of the .HOTEL and .ECO applications within Community Priority Evaluation, nothing in the Board’s resolution speaks to the re evaluation of .HOTEL or .ECO.

We hope that this information provides appropriate clarification on this matter. If you have any questions, please contact our Global Support Center at globalsupport@icann.org.

Sincerely,

A handwritten signature in black ink that reads "Christine A. Willett". The signature is fluid and cursive.

Christine A. Willett
Vice President, GDD Operations

3. Executive Session – CONFIDENTIAL

1. Consent Agenda:

a. Approval of Board Meeting Minutes

Resolved (2016.05.15.01), the Board approves the minutes of the 3, 9 and 10 March 2016 Meetings of the ICANN (Internet Corporation for Assigned Names and Numbers) Board.

b. Security & Stability (Security, Stability and Resiliency) Advisory Committee (Advisory Committee) (SSAC (Security and Stability Advisory Committee)) Appointment

Whereas, the Security (Security – Security, Stability and Resiliency (SSR)) and Stability (Security, Stability and Resiliency) Advisory Committee (Advisory Committee) (SSAC (Security and Stability Advisory Committee)) reviews its membership and makes adjustments from time-to-time.

Whereas, the SSAC (Security and Stability Advisory Committee) Membership Committee, on behalf of the SSAC (Security and Stability Advisory Committee), requested that the Board should appoint John R. Levine to the SSAC (Security and Stability Advisory Committee) for a three-year term beginning immediately upon approval by the Board and ending on 31 December 2019.

Resolved (2016.05.15.02), the Board appoints John R. Levine to the SSAC (Security and Stability Advisory Committee) for a three-year term beginning immediately and ending on 31 December 2019.

Rationale for Resolution 2016.05.15.02

The SSAC (Security and Stability Advisory Committee) is a diverse group of individuals whose expertise in specific subject matters enables the SSAC (Security and Stability Advisory Committee) to fulfill its charter and execute its mission. Since its inception, the SSAC (Security and Stability Advisory Committee) has invited individuals with deep knowledge and experience in technical and security areas that are critical to the security and stability of the Internet's naming and address allocation systems.

The SSAC (Security and Stability Advisory Committee)'s continued operation as a competent body is dependent on the accrual of talented subject matter experts who have consented to volunteer their time and energies to the execution of the SSAC (Security and Stability Advisory Committee) mission. John R. Levine brings a breadth of technical expertise and a well-deserved reputation for excellent technical debate. The SSAC (Security and Stability Advisory Committee) believes he would be a significant contributing member of the SSAC (Security and Stability Advisory Committee), and the Board accepts the SSAC (Security and Stability Advisory Committee) recommendation to appoint John R. Levine to the SSAC (Security and Stability Advisory Committee).

c. GNSO (Generic Names Supporting Organization) gTLD (generic Top Level Domain) Registries Stakeholder Group Charter Amendments (2016)

Whereas, the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws (Article X, Section 5.3) state, "Each [GNSO (Generic Names Supporting Organization)] Stakeholder Group shall maintain recognition with the ICANN (Internet Corporation for Assigned Names and Numbers) Board."

Whereas, the Board has established a Process For Amending GNSO (Generic Names Supporting Organization) Stakeholder Group and Constituency Charters (the "Process").

Whereas, the GNSO (Generic Names Supporting Organization) gTLD (generic Top Level

Domain) Registries Stakeholder Group (RySG (Registries Stakeholder Group)), ICANN (Internet Corporation for Assigned Names and Numbers) staff, and the Organizational Effectiveness Committee (OEC) have completed all steps identified in the Process.

Whereas, the amendments appear to address a number of matters the Board directed to the RySG (Registries Stakeholder Group)'s attention in previous Board Resolution Number 2015.10.22.14.

Resolved (2016.05.15.03), the ICANN (Internet Corporation for Assigned Names and Numbers) Board approves the RySG (Registries Stakeholder Group) Charter Amendments as documented in the briefing materials submitted to the Board. The RySG (Registries Stakeholder Group) and ICANN (Internet Corporation for Assigned Names and Numbers) staff are directed to provide access to the new governing document on the appropriate web pages for the RySG (Registries Stakeholder Group). The Board directs the RySG (Registries Stakeholder Group) to review the changes within one year to determine if they are having the intended impacts. ICANN (Internet Corporation for Assigned Names and Numbers) staff is further directed to share this resolution with the leadership of the RySG (Registries Stakeholder Group).

Rationale for Resolution 2016.05.15.03

Why is the Board addressing this issue now?

ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws (Article X, Section 5.3) state, "Each Stakeholder Group shall maintain recognition with the ICANN (Internet Corporation for Assigned Names and Numbers) Board." The Board has interpreted this language to require that the ICANN (Internet Corporation for Assigned Names and Numbers) Board formally approve any amendments to the governing documents of Stakeholder Groups (SG (Stakeholder Group)) and/or Constituencies in the Generic Names Supporting Organization (Supporting Organization) (GNSO (Generic Names Supporting Organization)).

In September 2013, the Board established a *Process For Amending GNSO (Generic Names Supporting Organization) Stakeholder Group and Constituency Charters* (<http://gns0.icann.org/en/about/stakeholders-constituencies/rsg>) ("Process") to provide a streamlined methodology for compliance with the Bylaws requirement.

Earlier this year, the gTLD (generic Top Level Domain) Registries Stakeholder Group (RySG (Registries Stakeholder Group)) of the GNSO (Generic Names Supporting Organization) approved amendments to its governing documents and availed itself of the Process.

What are the proposals being considered?

The Stakeholder Group has amended its existing Charter document to adjust to an evolving composition of membership and to enable it to more effectively undertake its policy development responsibilities. Among a number of amendments, the most substantial charter changes are in the following areas:

- Creation of a new class of "Association" members;
- Changes to the weighted voting categories and measures of the group; and
- Adjustments to the community fee structure to accommodate the addition of association members.

What stakeholders or others were consulted?

In addition to extensive community deliberations within the RySG (Registries Stakeholder Group), the proposed amendments were subjected to a 43-day Public Comment period (22 February – 4 April 2016). When the period was completed, staff produced a Summary Report for community and Board review on 15 April 2016.

What significant materials did the Board review?

The Board reviewed a redline formatted document of the proposed charter amendments and a copy of the Staff Summary Report summarizing community comments.

What factors did the Board find to be significant?

The GNSO (Generic Names Supporting Organization) Registries Stakeholder Group, ICANN (Internet Corporation for Assigned Names and Numbers) staff, and the Organizational Effectiveness Committee completed all steps identified in the Process. The publication of the amendments for community review and comment resulted in support for the changes.

Are there Positive or Negative Community Impacts?

The Stakeholder Group has amended its existing Charter document to adjust to an evolving composition of membership and to enable it to more effectively undertake its policy development responsibilities.

Are there fiscal impacts/ramifications on ICANN (Internet Corporation for Assigned Names and Numbers) (Strategic Plan, Operating Plan, Budget); the community; and/or the public?

The amendments include adjustments to the RySG (Registries Stakeholder Group) fee structure which could impact individual community members.

Are there any Security, Stability (Security, Stability and Resiliency) or Resiliency (Security Stability & Resiliency (SSR)) issues relating to the DNS (Domain Name System)?

There is no anticipated impact from this decision on the security, stability and resiliency of the domain name system as a result of this decision.

Is this either a defined policy process within ICANN (Internet Corporation for Assigned Names and Numbers)'s Supporting Organizations (Supporting Organizations) or ICANN (Internet Corporation for Assigned Names and Numbers)'s Organizational Administrative Function decision requiring public comment or not requiring public comment?

The proposed amendments were subjected to a 43-day Public Comment period (22 February – 4 April 2016).

d. Conduct at ICANN (Internet Corporation for Assigned Names and Numbers) Meetings

Whereas, during and after ICANN55, the issue of certain community-member conduct toward one another has been raised in various sessions and lists.

Whereas, the Board Governance Committee (BGC) has reviewed proposed revisions to the language of the Expected Standards of Behavior that align with generally accepted broad standards for areas of protection, and recommended that the Board authorize the revised version be posted for public comment.

Whereas, the BGC also has recommended that the Board direct the President and CEO, or his designee(s), to retain an expert, as appropriate, with experience in drafting and implementing relevant anti-harassment policies to assist in the development of a Community anti-harassment policy/procedure to be followed at ICANN (Internet Corporation for Assigned Names and Numbers) Public Meetings.

Resolved (2016.05.15.04), the Board hereby authorizes the posting for public comment of the proposed revised Expected Standards of Behavior.

Resolved (2016.05.15.05), the Board hereby directs the President and CEO, or his designee(s), to retain an expert, as appropriate, with experience in drafting and implementing relevant anti-harassment policies to assist in the development of a Community anti-harassment policy/procedure to be followed at ICANN (Internet Corporation for Assigned Names and

Numbers) Public Meetings, which could include items such as complaints handling and resolution and enforcement processes.

Rationale for Resolutions 2016.05.15.04 – 2016.05.15.05

During and after ICANN55, the issue of certain community-member conduct toward one another has been raised in various sessions and lists, and the Board agreed to address this matter. In response, the Board has confirmed and reiterated that ICANN (Internet Corporation for Assigned Names and Numbers)'s Board and staff take the issue of harassment or other improper conduct at its meetings very seriously. ICANN (Internet Corporation for Assigned Names and Numbers) and members of the community share the goal of ensuring that ICANN (Internet Corporation for Assigned Names and Numbers) community members are able to participate and contribute within an environment that does not tolerate discrimination and that remains free from harassment.

As an organization, ICANN (Internet Corporation for Assigned Names and Numbers) has robust internal policies regarding the issue, including mandatory training for staff and Board members. While ICANN (Internet Corporation for Assigned Names and Numbers) community members are not bound to the same policies and rules as the ICANN (Internet Corporation for Assigned Names and Numbers) Board and staff, ICANN (Internet Corporation for Assigned Names and Numbers) does expect community members to adhere to certain Expected Standards of Behavior (/resources/pages/expected-standards-2012-05-15-en) ("Standards"). The current language of these Standards does not specifically address harassment, but does provide a set of high-level guidelines for interacting with one another. As the Board previously committed, the Board Governance Committee (BGC) was tasked with considering possible enhancements to the language of these Standards. Accordingly, revisions to the Standards have been proposed that are based on generally accepted broad standards for protection, and the BGC has reviewed these and recommended that the Board authorize the posting for public comment of the proposed revised Standards.

In parallel, staff has initiated discussions with community leaders, and the Board and staff have received input from various aspects of the community, about the process for developing a Community anti-harassment policy. It appears from the input received to date that Community members (at least those that have publicly commented) would like to ask ICANN (Internet Corporation for Assigned Names and Numbers) to work with experts, as needed and appropriate, to help develop a proposed Community anti-harassment policy/procedure to be followed at ICANN (Internet Corporation for Assigned Names and Numbers) Public Meetings, which would in turn be presented to the community for further discussion and input. Further, various Community leaders and members, either as part of group calls on the topic or individually, provided a number of specific examples that can inform the drafting of a proposed policy/procedure. These include:

- i. The Ada Initiative (<https://adainitiative.org/continue-our-work/ada-initiative-event-anti-harassment-policy/> (<https://adainitiative.org/continue-our-work/ada-initiative-event-anti-harassment-policy/>));
- ii. The IETF (Internet Engineering Task Force) (<https://www.ietf.org/iesg/statement/ietf-anti-harassment-policy.html> (<https://www.ietf.org/iesg/statement/ietf-anti-harassment-policy.html>));
- iii. The Internet Governance Forum (<http://www.intgovforum.org/cms/aboutigf/igf-code-of-conduct> (<http://www.intgovforum.org/cms/aboutigf/igf-code-of-conduct>));
- iv. The NTEN (Nonprofit Technology Network) (<http://www.nten.org/ntc/about-the-ntc/code-of-conduct/> (<http://www.nten.org/ntc/about-the-ntc/code-of-conduct/>));
- v. RIPE (Rseaux IP Europens) (<https://ripe72.ripe.net/on-site/code-of-conduct/> (<https://ripe72.ripe.net/on-site/code-of-conduct/>));
- vi. The United Nations and its specialized agencies' anti-harassment staff policies (some of these are collected at <http://www.ficsa.org/component/sobipro/?task=download.file&fid=37.1329&sid=1266&Itemid=0>

<http://www.ficsa.org/component/sobipro/?task=download.file&fid=37.1329&sid=1266&Itemid=0>) [DOCX, 36 KB]

In addition, the GNSO (Generic Names Supporting Organization) Chair and Vice Chairs sent a letter on behalf of the GNSO (Generic Names Supporting Organization) Council and suggested a number of considerations to be taken into account in developing an anti-harassment policy and procedure for the Community. A copy of the letter can be viewed at <http://gns0.icann.org/en/correspondence/bladel-to-atallah-25apr16-en.pdf> (<http://gns0.icann.org/en/correspondence/bladel-to-atallah-25apr16-en.pdf>) [PDF, 299 KB].

The BGC therefore also has recommended that the Board direct the President and CEO, or his designee(s), to retain an expert, as appropriate, with experience in drafting and implementing relevant anti-harassment policies to assist in the development of a Community anti-harassment policy/procedure to be followed at ICANN (Internet Corporation for Assigned Names and Numbers) Public Meetings, which could include items such as complaints handling and resolution and enforcement processes. The Board agrees with this approach.

There will be a minor fiscal impact on ICANN (Internet Corporation for Assigned Names and Numbers), which is not anticipated to exceed already budgeted amounts, and it will not have any impact on the security, stability or resiliency of the domain name system.

This decision is an Organizational Administrative Function that does not require public comment.

e. Board Working Group on Internet Governance (BWG-IG)

Whereas, the Internet governance landscape continues to evolve, and ICANN (Internet Corporation for Assigned Names and Numbers)'s role within the Internet governance ecosystem will also continue to evolve and will benefit from an enhanced dialogue between the Board and management working on Internet governance issues.

Whereas, the Board Governance Committee (BGC) has recommended that the Board form a Board Working Group on Internet Governance (BWG-IG) to provide consultation and advice on ICANN (Internet Corporation for Assigned Names and Numbers)'s efforts related to involvement in Internet governance work, as appropriate within ICANN (Internet Corporation for Assigned Names and Numbers)'s mission and in service of ICANN (Internet Corporation for Assigned Names and Numbers)'s strategic plan, which includes providing consultation with ICANN (Internet Corporation for Assigned Names and Numbers) staff on collaboration and engagement in Internet governance activities.

Whereas, the BGC has recommended that the Board appoint the following Board members to the BWG-IG: Rinalia Abdul Rahim, Ron da Silva, Chris Disspain, Markus Kummer (Chair), Erika Mann, George Sadowsky and Lousewies van der Laan.

Resolved (2016.05.15.06), the Board hereby approves the establishment of a Board Working Group on Internet Governance (BWG-IG) in accordance with the Charter recommended by the BGC with the following membership: Rinalia Abdul Rahim, Ron da Silva, Chris Disspain, Markus Kummer (Chair), Erika Mann, George Sadowsky and Lousewies van der Laan.

2. Main Agenda:

a. Consideration of GNSO (Generic Names Supporting Organization) Policy Recommendations concerning the Accreditation of Privacy and Proxy Services

Whereas, on 31 October 2013, the GNSO (Generic Names Supporting Organization) Council approved the charter for a Working Group to conduct a Policy Development Process that had been requested by the ICANN (Internet Corporation for Assigned Names and Numbers) Board concerning the accreditation by ICANN (Internet Corporation for Assigned Names and Numbers) of privacy and proxy domain name registration service providers, as further described

at <http://gnso.icann.org/en/drafts/raa-pp-charter-22oct13-en.pdf> (<http://gnso.icann.org/en/drafts/raa-pp-charter-22oct13-en.pdf>) [PDF, 463 KB].

Whereas, the PDP (Policy Development Process) followed the prescribed PDP (Policy Development Process) steps as stated in the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws, resulting in a Final Report being delivered to the GNSO (Generic Names Supporting Organization) Council on 8 December 2015.

Whereas, the Privacy & Proxy Services Accreditation Issues PDP (Policy Development Process) Working Group (WG (Working Group)) reached Full Consensus (Consensus) on all its final recommendations (see <http://gnso.icann.org/en/issues/raa/ppsai-final-07dec15-en.pdf> (<http://gnso.icann.org/en/issues/raa/ppsai-final-07dec15-en.pdf>)) [PDF, 1.2 MB].

Whereas, the GNSO (Generic Names Supporting Organization) Council reviewed and discussed the final recommendations of the Privacy & Proxy Services Accreditation Issues PDP (Policy Development Process) WG (Working Group), and adopted the recommendations on 21 January 2016 by a unanimous vote (see: <http://gnso.icann.org/en/council/resolutions#201601> (<http://gnso.icann.org/en/council/resolutions#201601>)).

Whereas, the GNSO (Generic Names Supporting Organization) Council vote met and exceeded the required voting threshold (i.e. supermajority) to impose new obligations on ICANN (Internet Corporation for Assigned Names and Numbers) contracted parties.

Whereas, in accordance with the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws, a public comment period was opened on the approved recommendations to provide the community with a reasonable opportunity to comment on their adoption prior to action by the ICANN (Internet Corporation for Assigned Names and Numbers) Board, and the comments received have been summarized and reported (see <https://www.icann.org/en/system/files/files/report-comments-ppsai-recommendations-31mar16-en.pdf> ([/en/system/files/files/report-comments-ppsai-recommendations-31mar16-en.pdf](https://www.icann.org/en/system/files/files/report-comments-ppsai-recommendations-31mar16-en.pdf))) [PDF, 299 KB].

Whereas, the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws provide that the Board is to request the GAC (Governmental Advisory Committee)'s opinion regarding "any policies that are being considered by the Board for adoption that substantially affect the operation of the Internet or third parties, including the imposition of any fees or charges" and "take duly into account any advice timely presented" as a result.

Whereas, the Board notified the GAC (Governmental Advisory Committee) of the publication of the GNSO (Generic Names Supporting Organization)'s final recommendations for public comment on 19 February 2016 (see [https://gacweb.icann.org/download/attachments/27492514/2016-02-19-Steve-Crocker-to-Thomas-Schneider-GNSO-\(Generic-Names-Supporting-Organization\)-PDP-\(Policy-Development-Process\).pdf?version=1&modificationDate=1456046942000&api=v2](https://gacweb.icann.org/download/attachments/27492514/2016-02-19-Steve-Crocker-to-Thomas-Schneider-GNSO-(Generic-Names-Supporting-Organization)-PDP-(Policy-Development-Process).pdf?version=1&modificationDate=1456046942000&api=v2) (<https://gacweb.icann.org/download/attachments/27492514/2016-02-19-Steve-Crocker-to-Thomas-Schneider-GNSO-PDP.pdf?version=1&modificationDate=1456046942000&api=v2>)) [PDF, 819 KB].

Whereas, in its Marrakech Communique issued on 9 March 2016 the GAC (Governmental Advisory Committee) advised the ICANN (Internet Corporation for Assigned Names and Numbers) Board that it needed more time to consider potential public policy concerns relating to the adoption of the final PDP (Policy Development Process) recommendations, and identifying that the June 2016 ICANN56 meeting would be an appropriate opportunity to further consider these items (see [https://gacweb.icann.org/download/attachments/28278854/GAC-\(Governmental-Advisory-Committee\)%20Morocco%2055%20Communique%20FINAL.pdf?version=1&modificationDate=1458046221000&api=v2](https://gacweb.icann.org/download/attachments/28278854/GAC-(Governmental-Advisory-Committee)%20Morocco%2055%20Communique%20FINAL.pdf?version=1&modificationDate=1458046221000&api=v2) (<https://gacweb.icann.org/download/attachments/28278854/GAC%20Morocco%2055%20Communique%20FINAL.pdf?version=1&modificationDate=1458046221000&api=v2>)) [PDF, 567 KB].

Resolved (2016.05.15.07), the Board thanks the GNSO (Generic Names Supporting

Organization) for completing the Board-requested Policy Development Process (PDP (Policy Development Process)) and acknowledges receipt of the PDP (Policy Development Process) Final Report and the GNSO (Generic Names Supporting Organization) Council's Recommendations Report concerning the final PDP (Policy Development Process) recommendations.

Resolved (2016.05.15.08), the Board identifies that more time is required to consider the final PDP (Policy Development Process) recommendations, including time for the provision and consideration of GAC (Governmental Advisory Committee) advice, if any will be provided. The Board anticipates taking further action on the recommendations at the first Board meeting following the ICANN56 Public Meeting in Helsinki, Finland.

Rationale for Resolutions 2016.05.15.07 – 2016.05.15.08

Why is the Board addressing the issue now?

In its October 2011 initiation of negotiations with the Registrar Stakeholder Group for a new form of Registrar Accreditation Agreement (RAA (Registrar Accreditation Agreement)), the ICANN (Internet Corporation for Assigned Names and Numbers) Board also requested an Issue Report from the GNSO (Generic Names Supporting Organization) to start a GNSO (Generic Names Supporting Organization) PDP (Policy Development Process) addressing remaining issues not dealt with in the RAA (Registrar Accreditation Agreement). In June 2013, the ICANN (Internet Corporation for Assigned Names and Numbers) Board approved a new 2013 RAA (Registrar Accreditation Agreement), and the topic of accrediting privacy and proxy services was identified as the sole issue to be resolved through a GNSO (Generic Names Supporting Organization) PDP (Policy Development Process). This topic had also been noted by the Whois Review Team in its Final Report, published in May 2012, in which the Review Team had highlighted the current lack of clear and consistent rules regarding these services, resulting in unpredictable outcomes for stakeholders. The Review Team thought that appropriate oversight over such services would address stakeholder needs and concerns, and recommended that ICANN (Internet Corporation for Assigned Names and Numbers) consider an accreditation system. Until the development of an accreditation program, only certain aspects of such services are covered by an interim specification to the 2013 RAA (Registrar Accreditation Agreement), which is due to expire on 1 January 2017 or the implementation by ICANN (Internet Corporation for Assigned Names and Numbers) of an accreditation program, whichever first occurs.

The GNSO (Generic Names Supporting Organization) Council approved all the final recommendations from the PDP (Policy Development Process) Working Group's Final Report dated 8 December 2015 at its meeting on 21 January 2016, and a Recommendations Report from the Council to the Board on the topic in February 2016. In accordance with the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws, a public comment period was opened to facilitate public input on the adoption of the recommendations. The public comment period closed on 16 March 2016. As outlined in Annex A of the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws, the PDP (Policy Development Process) recommendations are now being forwarded to the Board for its review and action.

What is the proposal being considered?

The GNSO (Generic Names Supporting Organization)'s policy recommendations include minimum mandatory requirements for the operation of privacy and proxy services; the maintenance of designated contact points for abuse reporting and the publication of a list of accredited providers; requirements related to the handling of requests for disclosure and/or publication of a customer's contact details by certain third party requesters; conditions regarding the disclosure and publication of such details as well as the refusal to disclose or publish; and principles governing the de-accreditation of service providers. The full list and scope of the final recommendations can be found in Annex A of the GNSO (Generic Names Supporting Organization) Council's Recommendations Report to the Board (see <http://gns0.icann.org/en/drafts/council-board-ppsai-recommendations-09feb16-en.pdf> (<http://gns0.icann.org/en/drafts/council-board-ppsai-recommendations-09feb16-en.pdf>)) (PDF,

491 KB].

Which stakeholders or others were consulted?

As required by the GNSO (Generic Names Supporting Organization)'s PDP (Policy Development Process) Manual, the Working Group reached out to all GNSO (Generic Names Supporting Organization) Stakeholder Groups and Constituencies as well as other ICANN (Internet Corporation for Assigned Names and Numbers) Supporting Organizations (Supporting Organizations) and Advisory Committees (Advisory Committees) for input during the early phase of the PDP (Policy Development Process). The Working Group also held open community sessions at all the ICANN (Internet Corporation for Assigned Names and Numbers) Public Meetings that occurred during the lifetime of this PDP (Policy Development Process). It also sought input on potential implementation issues from ICANN (Internet Corporation for Assigned Names and Numbers)'s Registrar Services and Compliance teams. Public comment periods were opened for the Preliminary Issue Report that preceded the PDP (Policy Development Process), the Working Group's Initial Report, and the GNSO (Generic Names Supporting Organization) Council's adoption of the Working Group's Final Report. The final recommendations as detailed in the Final Report were completed based on the Working Group's review and analysis of all the public comments and input received in response to its Initial Report.

What concerns or issues were raised by the community?

A significant number of public comments were received by the Working Group concerning the possibility that a distinction might be made between domain name registrants with domains serving non-commercial purposes and registrants who conduct online financial transactions. This had been an open question in the Working Group's Initial Report, as at the time a number of Working Group members had supported that distinction. As a result of further Working Group deliberations following review of the public comments received, the Working Group reached consensus on a recommendation that no such distinction be made for purposes of accrediting services.

Concerns had also been expressed over the need to ensure that there are adequate safeguards in place for maintaining the privacy of customer data, and that a reasonable balance is struck as between a legitimate need for access to information (e.g. by law enforcement and intellectual property rights-holders) and that of protecting privacy. Many public comments received in response to the Working Group's Initial Report also highlighted the potential dangers of disclosing private information without cause, including the threat to the physical safety of certain groups of domain name registrants and privacy/proxy customers. The Working Group's final recommendations include a number of suggested principles and policies that aim to provide more concrete guidance than exists at present for privacy and proxy services, third party requesters of customer information, and domain name registrants in relation to topics such as the handling of customer notifications, information requests and domain name transfers.

The Working Group also received several comments concerning the lack of a detailed framework for the submission and confidential handling of disclosure requests from law enforcement authorities, including from the GAC (Governmental Advisory Committee)'s Public Safety Working Group. In its Initial Report, the Working Group sought community input on the question as to whether and how such a framework might be developed as well as on more specific questions such as whether it should be mandatory for accredited providers to comply with express requests from law enforcement authorities in the provider's jurisdiction not to notify a customer. Based on input received, the Working Group agreed that accredited privacy and proxy service providers should comply with express law enforcement requests not to notify a customer where this is required by applicable law. Providers would be free to voluntarily adopt more stringent standards or otherwise cooperate with law enforcement authorities. As the Working Group did not receive concrete proposals on how a specific framework applicable to law enforcement requests could be developed, its Final Report contains a suggestion for certain minimum requirements that could be included if such a framework is developed in the future.

What significant materials did the Board review?

The Board reviewed the PDP (Policy Development Process) Working Group's Final Report, the GNSO (Generic Names Supporting Organization) Council's Recommendations Report on the topic to the Board, the summary of public comments received in response to the public comment period that was opened following the GNSO (Generic Names Supporting Organization) Council's adoption of the recommendations contained in the Final Report, and GAC (Governmental Advisory Committee) advice received on the topic.

What factors did the Board find to be significant?

The recommendations were developed following the GNSO (Generic Names Supporting Organization) Policy Development Process as set out in Annex A of the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws and have received the unanimous support of the GNSO (Generic Names Supporting Organization) Council. As outlined in the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws, the Council's supermajority support obligates the Board to adopt the recommendations unless, by a vote of more than two-thirds, the Board determines that the recommended policy is not in the best interests of the ICANN (Internet Corporation for Assigned Names and Numbers) community or ICANN (Internet Corporation for Assigned Names and Numbers).

The Bylaws also allow for input from the GAC (Governmental Advisory Committee) in relation to public policy concerns that might be raised if a proposed policy is adopted by the Board. The GAC (Governmental Advisory Committee) has noted that public policy concerns might be raised in the adoption of these policy recommendations, and as such the Board is obliged to take into account any advice that the GAC (Governmental Advisory Committee) may provide in a timely manner on the topic. Therefore, it is prudent for the Board to allow time for the GAC (Governmental Advisory Committee) to provide that advice as indicated in its March 2016 Communiqué.

Are there positive or negative community impacts?

Developing a full accreditation program for privacy and proxy service providers will require significant resources and take a substantial period of time. Deferring adoption of the PDP (Policy Development Process) recommendations will also mean that the need to extend the interim specification in the 2013 RAA (Registrar Accreditation Agreement) beyond its current expiration date will become more urgent.

At present, there is no accreditation scheme in place for privacy and proxy services and no agreed community-developed set of best practices for the provision of such services. This PDP (Policy Development Process) represents an attempt to develop a sound basis for the development and implementation of a proxy/privacy accreditation framework by ICANN (Internet Corporation for Assigned Names and Numbers). This is part of ICANN (Internet Corporation for Assigned Names and Numbers)'s ongoing efforts to improve the Whois system, including implementing recommendations made previously by the Whois Review Team. Implementing many of the GNSO (Generic Names Supporting Organization) recommendations would create a more uniform set of standards for many aspects of privacy and proxy services, including more consistent procedures for the handling, processing and determination of third party requests by accredited providers, into which reasonable safeguards to protect consumer privacy can be incorporated.

Nevertheless, as highlighted above, the implementation of all the recommendations from the PDP (Policy Development Process) will be time- and resource-intensive due to the scale of the project and the fact that this will be the first time ICANN (Internet Corporation for Assigned Names and Numbers) has implemented such a program for this industry sector. While the RAA (Registrar Accreditation Agreement) may serve as a useful reference point for this program, the Working Group's Final Report acknowledged that this may not be the most appropriate model for a number of reasons.

The Working Group's Final Report also notes a few areas where additional work may be required, which could increase the community's workload in the near term. For example, the issue of privacy and proxy services in the context of domain name transfers will need to be

addressed in the next review of the Inter-Registrar Transfer Policy. To the extent that the GAC (Governmental Advisory Committee) provides the Board with timely advice of relevant public policy concerns and the Board accepts such advice, the development of a disclosure framework for law enforcement authorities and other third parties may also need to be considered, possibly in parallel with implementation of the overall accreditation program.

Are there fiscal impacts or ramifications on ICANN (Internet Corporation for Assigned Names and Numbers) (strategic plan, operating plan, budget); the community; and/or the public?

There may be fiscal impacts on ICANN (Internet Corporation for Assigned Names and Numbers) associated with the creation of a new accreditation program specifically covering providers of privacy and proxy services if the PDP (Policy Development Process) recommendations are adopted, regardless of whether this occurs immediately or in the future. However, as the current interim specification in the RAA (Registrar Accreditation Agreement) applicable to such services is due to expire on 1 January 2017, consideration will need to be given to either extending its duration (e.g. to allow for implementation should the PDP (Policy Development Process) recommendations be adopted) or amending and updating it in the event that the PDP (Policy Development Process) recommendations are not adopted.

Are there any security, stability or resiliency issues relating to the DNS (Domain Name System)?

There are no security, stability or resiliency issues relating to the DNS (Domain Name System) that can be directly attributable to the implementation of the PDP (Policy Development Process) recommendations. While the accreditation of privacy and proxy service providers is part of the overall effort at ICANN (Internet Corporation for Assigned Names and Numbers) to improve the Whois system, it does not affect or change either the Whois protocol (including the rollout of the new RDAP, or Registration Data Access Protocol (Protocol)) or the current features of the Whois system. The Working Group made its final recommendations with the understanding that implementation of its recommendations would be done in the context of any other policy or technical changes to the Whois system, which are outside the scope of this PDP (Policy Development Process).

Is this either a defined policy process within ICANN (Internet Corporation for Assigned Names and Numbers)'s Supporting Organizations (Supporting Organizations) or ICANN (Internet Corporation for Assigned Names and Numbers)'s Organizational Administrative Function decision requiring public comment or not requiring public comment?

The recommendations at issue are a result of the defined GNSO (Generic Names Supporting Organization) Policy Development Process. No public comment is required for this deferral action.

b. Report re: .HOTEL

No resolution taken.

c. SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) FY17 Additional Budget Requests Approval

Whereas, prior discussions between community members and ICANN (Internet Corporation for Assigned Names and Numbers) staff members identified the need for an earlier decision on the funding of additional budget requests from ICANN (Internet Corporation for Assigned Names and Numbers)'s Supporting Organizations (Supporting Organizations) (SO (Supporting Organization)) and Advisory Committees (Advisory Committees) (AC (Advisory Committee; or Administrative Contact (of a domain registration))).

Whereas, the staff created an SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) additional budget requests process, to collect,

review and submit for Board approval funding requests from the SOs and ACs.

Whereas, requests were submitted by the ICANN (Internet Corporation for Assigned Names and Numbers) community by the set deadline, and were reviewed by a panel of staff members representing the Policy, Stakeholder Engagement and Finance departments.

Whereas, the review panel recommended the approval of requests representing \$643,700 for approval.

Whereas the Board Finance Committee, reviewed the process followed and the staff proposal, and has recommended that the Board approve the staff recommendation.

Resolved (2016.05.15.09), the Board approves committing \$643,700 during Fiscal Year 2017 to cover the costs associated with the adopted SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) additional budget requests.

Rationale for Resolution 2016.05.15.09

The budget approval earlier in the year is a reasonable accommodation of the established budget approval process and timeline, that facilitate the work of the ICANN (Internet Corporation for Assigned Names and Numbers) community and of the ICANN (Internet Corporation for Assigned Names and Numbers) staff, and does not create additional expenses. The amount of the committed expenses resulting from this resolution is considered sufficiently small to not require that funding resources are specifically identified for each request.

There is no anticipated impact from this decision on the security, stability and resiliency of the domain name system as a result of this decision.

The approval process is an Organizational Administrative process that has already been subject to significant input from the community.

d. October 2016 ICANN (Internet Corporation for Assigned Names and Numbers) Meeting Venue Contracting

Whereas, ICANN (Internet Corporation for Assigned Names and Numbers) intended to hold its third Public Meeting of 2016 in San Juan, Puerto Rico, in the North America region.

Whereas, the Zika Virus outbreak in Puerto Rico has caused the need for a relocation of the Public Meeting.

Whereas, ICANN (Internet Corporation for Assigned Names and Numbers) must identify an alternative venue.

Resolved (2016.05.15.10), the Board authorizes the President and CEO, or his designee(s), to engage in and facilitate all necessary contracting and disbursements for ICANN (Internet Corporation for Assigned Names and Numbers) 57 in an amount [REDACTED FOR NEGOTIATION PURPOSES].

Resolved (2016.05.15.11), specific items within this resolution shall remain confidential for negotiation purposes pursuant to Article III, section 5.2 of the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws until the President and CEO determines that the confidential information may be released.

Rationale for Resolutions 2016.05.15.10 – 2016.05.15.11

As part of ICANN (Internet Corporation for Assigned Names and Numbers)'s Public Meeting schedule, presently three times a year, ICANN (Internet Corporation for Assigned Names and Numbers) hosts a meeting in a different geographic region (as defined in the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws). ICANN (Internet Corporation for Assigned Names and Numbers) 57, originally scheduled for 29 October - 4 November 2016,

was to occur in the North America geographic region. San Juan, Puerto Rico was originally selected. Since the Zika Virus outbreak made it unsuitable for an ICANN (Internet Corporation for Assigned Names and Numbers) Meeting in 2016, staff is tasked with performing a search for suitable, alternative venues for ICANN (Internet Corporation for Assigned Names and Numbers) 57 in all geographic regions of the world, even if the originally scheduled dates must change.

As per the process, the staff will perform a thorough analysis of the meeting facilities to ensure they have met the Meeting Selection Criteria (see <http://meetings.icann.org/location-selection-criteria> (<http://meetings.icann.org/location-selection-criteria>)) to ensure that the identified alternative location for ICANN (Internet Corporation for Assigned Names and Numbers) 57 is appropriate.

There will be a financial impact on ICANN (Internet Corporation for Assigned Names and Numbers) in hosting the meeting and providing travel support as necessary, as well as on the community in incurring costs to travel to the meeting. But such impact would be faced regardless of the location and venue of the meeting. This action will have no impact on the security or the stability of the DNS (Domain Name System).

This is an Organizational Administrative function that does not require public comment.

e. USG IANA (Internet Assigned Numbers Authority) Stewardship Transition – Additional FY16 Expenses and Funding

Whereas, the Board has approved expense budget envelopes to support the IANA (Internet Assigned Numbers Authority) Stewardship Transition Project ("Project") during FY15 and FY16, and all approved budget envelopes will have been used after the ICANN (Internet Corporation for Assigned Names and Numbers) Meeting 55 in Marrakech.

Whereas, a Project Cost Support Team was implemented to produce Project expense estimates for the remainder of FY16 and for FY17 for the Project.

Whereas, Project Cost Support Team produced expense estimates for the Project expenses of up to approximately US\$5.4 million to be incurred through the remainder of FY16.

Whereas, the Board Finance Committee met on 3 March 2016 and has approved to recommend to the Board to approve an additional Project expense budget envelope of up to US\$5.4 million to cover Project expenses through the remainder of FY16.

Resolved (2016.05.15.12), the Board approves a budget envelope of up to US\$5.4 million to cover the costs of the Project to be incurred through the remainder of FY16 to be funded through a fund release from the Reserve Fund.

Rationale for Resolution 2016.05.15.12

The IANA (Internet Assigned Numbers Authority) Stewardship Transition is a major initiative to which the ICANN (Internet Corporation for Assigned Names and Numbers) Community as a whole is dedicating a significant amount of time and resources. ICANN (Internet Corporation for Assigned Names and Numbers)'s support for the community's work towards a successful completion of the Project (including both the USG IANA (Internet Assigned Numbers Authority) Stewardship transition proposal development and the Cross-Community Working Group on Enhancing ICANN (Internet Corporation for Assigned Names and Numbers) Accountability's work), as well as supporting ICANN (Internet Corporation for Assigned Names and Numbers)'s implementation planning efforts is critical for ICANN (Internet Corporation for Assigned Names and Numbers).

Considering its exceptional nature and the significant amount of costs anticipated to be incurred, the funding of this Project could not be provided through the Operating Fund. Accordingly, when the Board approved the FY15 and FY16 Operating Plans and Budgets, it included the anticipated funding of the transition initiative costs through a corresponding withdrawal from the Reserve Fund.

The Board previously approved the FY16 Operating Plan and Budget, which included an estimated budget envelope of US\$7 million for the USG IANA (Internet Assigned Numbers Authority) Stewardship Transition ("Project") to be funded by the Reserve Fund. As the Project used this entire budget envelope by the end of November 2015, the Board approved additional funding of US\$4.5 million on 2 February 2016 to allow the project to be funded through the ICANN (Internet Corporation for Assigned Names and Numbers) Meeting 55 in Marrakech. At ICANN (Internet Corporation for Assigned Names and Numbers) 55 in Marrakech, the Board approved additional funding of US\$1.5 million on 2 February 2016 to allow the project to be funded through the period of time until the PCST team had worked on a FY16 forecast.

The Board reiterated on its 25 June 2015 statement that the Board is "committed to supporting the community in obtaining the advice it needs in developing recommendations in support of the transition process, and also notes the importance of making sure that the funds entrusted to ICANN (Internet Corporation for Assigned Names and Numbers) by the community are used in responsible and efficient ways. Assuring the continuation of cost-control measures over the future work of the independent counsel is encouraged." (See <https://www.icann.org/resources/board-material/resolutions-2015-06-25-en#2.c> ([/resources/board-material/resolutions-2015-06-25-en#2.c](https://www.icann.org/resources/board-material/resolutions-2015-06-25-en#2.c))).

As the community work relative to the accountability track of the Project is expected to continue, further expenses are expected through the remainder of FY16 and during FY17. The implementation planning for other parts of the Project will also continue. Separately, in order to improve visibility on and control of the expenses for this type of project in partnership with the community, a project costs support team is being formed to produce costs estimates for future work.

The Board Finance Committee has determined that an additional budget envelope of approximately US\$5.4 million needs to be approved by Board to allow ICANN (Internet Corporation for Assigned Names and Numbers) to incur further Project expenses for the remainder of FY16.

As this initiative's expenses and funding are approved by the Board, the ICANN (Internet Corporation for Assigned Names and Numbers) Board is now being asked to approve a budget envelope of US\$5.4 million to be funded through a release from the Reserve Fund as an additional expense budget envelope for the remainder of FY16.

This action will not have a direct impact on the security, stability and resiliency of the domain name system.

This is an Organizational Administrative Function that does not require public comment.

f. AOB

i. Enhancing Openness and Transparency – Board Deliberations

Whereas, the Board believes that providing increased access to Board deliberations is important, and that increased openness is an important means of working toward that goal.

Whereas, the ICANN (Internet Corporation for Assigned Names and Numbers) Board discussed at its Amsterdam workshop how to improve its functioning and agreed that enhancing the visibility into the Board deliberations and decision-making processes was an important part of becoming more accountable and more transparent.

Whereas, the Board noted the call from the community for increased openness and transparency.

Whereas, the Board believes that a positive first step towards increased openness is publicly posting transcripts and/or recordings of its deliberative sessions to the extent that such information or dialogue is not subject to confidentiality restrictions or privilege.

Resolved (2016.05.15.13), the Board directs the President and CEO, or his designee(s), to work with the Board to develop a proposed plan for the publication of transcripts and/or recordings of Board deliberative sessions, with such plan to include an assessment of possible resources costs and fiscal impact, and draft processes to: (i) ensure the accuracy of the transcript; and (ii) for redaction of portions of the transcript that should be maintained as confidential or privileged.

Resolved (2016.05.15.14), the Board expects to evaluate the plan in Helsinki, and if satisfactory to begin testing of the proposed processes relating to publication of transcripts and/or recordings of the Board's deliberative sessions as soon as practicable after Helsinki.

Rationale for Resolution 2016.05.15.13 – 2016.05.15.14

In support of the continued call for visibility into Board deliberations and processes, the Board has determined to make available transcripts or recordings, where appropriate, of the Board's deliberative sessions. This effort to enhance openness is likely to also support the ICANN (Internet Corporation for Assigned Names and Numbers) community in enhancing ICANN (Internet Corporation for Assigned Names and Numbers)'s accountability, as it will reduce questions of how and why the Board reaches its decisions. This decision also directly supports ICANN (Internet Corporation for Assigned Names and Numbers)'s previous efforts and the continued goal of operating as openly and transparently in its decision-making. ICANN (Internet Corporation for Assigned Names and Numbers) is also acting consistently with the ICANN (Internet Corporation for Assigned Names and Numbers)'s Bylaws, as set out in Article III, section 1 of the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws, that, "ICANN (Internet Corporation for Assigned Names and Numbers) and its constituent bodies shall operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness." (ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws at <https://www.icann.org/resources/pages/governance/bylaws-en-III> ([/resources/pages/governance/bylaws-en#III](https://www.icann.org/resources/pages/governance/bylaws-en#III)).

There will be issues before the Board for which confidentiality is still required, and that may require redaction of parts or withholding of full transcripts, and it is important that the community and the Board understand how those decisions will be taken. To that end, the Board is directing the development of a plan, which would include proposed processes by which those redaction decisions for confidentiality and privilege are to be made. That plan should be developed as soon as practicable, and should be ready for Board consideration during ICANN56 in Helsinki.

This decision will not have any impact on the security, stability or resiliency of the DNS (Domain Name System). Implementation of this decision may involve increased costs, including, risk and fiscal impact for ICANN (Internet Corporation for Assigned Names and Numbers).

This is an organizational administrative function for which public comment is not required, but such input may be useful at a later point depending upon the plan.

3. Executive Session – CONFIDENTIAL

The Board held a confidential portion of the session relating to employment matters.

2016 Reconsideration Requests – Status Update – 29 April 2016

No:	Requester:	Filing Date:	BGC Action Date: ^{1 2}	NGPC/Board Action Date:	Comments:
16-1	Commercial Connect, LLC	26-Jan-2016	25 February 2016 (Determination); Total days from Request: 30	N/A	
16-2	Commercial Connect, LLC	10-Feb-2016	25 February 2016 (Determination); Total days from Request: 15	N/A	
16-3	dotgay LLC	17-Feb-2016	Tentatively scheduled for May 2016; Total days from Request: TBD		
16-4	Roman Belichenko	9-Feb-2016	Tentatively scheduled for May 2016; Total days from Request: TBD		
16-5	DotMusic Limited	24-Feb-2016	Total days from Request: TBD		Requester requested that consideration of Reconsideration Request 16-5 be placed on hold pending a response to Requester's DIDP Request.

¹ Article IV, Section 2.16 of the Bylaws provide that “[t]he Board Governance Committee shall make a final determination or a recommendation to the Board with respect to a Reconsideration Request *within thirty days following its receipt of the request, unless impractical, in which case it shall report to the Board the circumstances that prevented it from making a final recommendation and its best estimate of the time required to produce such a final determination or recommendation.*” (Bylaws, Art. IV, § 2.16.) Article IV, Section 2.17 of the Bylaws state that the Board (or the NGPC) “shall issue its decision on the recommendation of the Board Governance Committee *within 60 days of receipt of the Reconsideration Request or as soon thereafter as feasible.*” (Bylaws, Art. IV, §2.17.) Requestors are regularly notified at each step of the proceedings, including whether there will be a delay beyond the suggested response deadlines, and whether the matter will be submitted to the NGPC and/or the Board.

² For Reconsideration Requests brought regarding staff action or inaction, and actions by third party panels in the New gTLD Program (including the expert dispute resolution panels) that are being treated as staff actions, the BGC has the option to issue final Determinations or to issue Recommendations to the Board or the NGPC. (*See* Article IV, Section 2.16 of the Bylaws; *see also*, BGC Recommendation on Reconsideration Request 13-5 at <http://www.icann.org/en/groups/board/governance/reconsideration/recommendation-booking-01aug13-en.doc>.)

A. Introduction and Procedural History

1. This Final Declaration is issued by this Independent Review Process (“IRP”) Panel pursuant to the Bylaws of the Internet Corporation for Assigned Names and Numbers (“ICANN”). This IRP has been administered under the International Centre for Dispute Resolution (“ICDR”) International Dispute Resolution Procedures as amended and in effect as of 1 June 2014 along with ICANN’s Supplementary Procedures.
2. On 4 March 2015, following a failed Cooperative Engagement Process with ICANN, Despegar Online SRL, Donuts Inc., Famous Four Media Limited, Fegistry LLC and Radix FZC submitted a Request for IRP in relation to ICANN’s treatment of the generic top level domain (“gTLD”) string .hotel (“the .hotel IRP”).
3. On 17 April 2015, ICANN submitted its Response to this Request.
4. On 15 March 2015, following a failed Cooperative Engagement Process with ICANN, Little Birch, LLC and Minds + Machines Group Limited submitted a Request for IRP in relation to ICANN’s treatment of the gTLD string .eco (“the .eco IRP”).
5. On 27 April 2015, ICANN submitted its Response to this Request.
6. On 12 May 2015, the ICDR confirmed to the parties that the cases regarding .hotel IRP and .eco IRP would be merged and the parties agreed to keep written submissions separate but recognized that the issues presented by the two cases were closely linked and that the parties’ interests in the proceedings were so similar that both should be dealt with during a single hearing.
7. Despegar Online SRL, Donuts Inc., Famous Four Media Limited, Fegistry LLC, Radix FZC, Little Birch, LLC and Minds + Machines Group Limited are all represented by Flip Petillion and Jan Janssen of Crowell & Moring LLP and ICANN is represented by Jeffrey A. LeVee and Rachel Zernik of Jones Day.
8. The IRP Panel consisting of Thomas H. Webster, Dirk P. Tirez and Peter J. Rees QC (Chair) (“Panel”), having been duly constituted to consider these two Requests, conducted a preparatory conference with the party representatives on 25 August 2015 at which, and following consultation with the party representatives, the procedure was fixed by the Panel for the further conduct of the IRP.

9. On 7 October 2015, the Panel received a letter from Fasken Martineau seeking to make submissions to the Panel on behalf of Big Room Inc. (“Big Room”) whilst acknowledging that Big Room was not a party to the IRP.
10. On 19 October 2015, Despegar Online SRL, Donuts Inc., Famous Four Media Limited, Fegistry LLC, Radix FZC, and Minds + Machines Group Limited submitted a Reply to ICANN’s Response in the .hotel IRP matter, and Little Birch, LLC and Minds + Machines Group Limited submitted a Reply to ICANN’s Response in the .eco IRP matter.
11. On 10 November 2015, ICANN submitted its Sur Replies in both the .hotel IRP and the .eco IRP matters.
12. On 20 November 2015, the Panel received an e mail from HOTREC seeking to make submissions to the Panel whilst acknowledging that HOTREC was not a party to the IRP.
13. On 2 December 2015, in advance of the telephone hearing due to take place on 7 December 2015, the Panel sent an e mail to the representatives of the parties asking a number of questions.
14. On 4 December 2015, the parties responded in writing to the Panel’s questions.
15. On 7 December 2015, a telephone hearing took place at which the representatives of all the parties made their submissions to the Panel.

B. Factual Background - General

16. In 2005, ICANN’s Generic Names Supporting Organization (“GNSO”) began a policy development process to consider the introduction of new gTLDs. As part of this process the New gTLD Applicant Guidebook (“Guidebook”) was developed and was approved by the Board of ICANN in June 2011 and the New gTLD Program was launched.
17. The final version of the Guidebook was published on 4 June 2012. It provides detailed instructions to gTLD applicants and sets out the procedures for evaluating new gTLD applications. The Guidebook provides that new gTLD applicants may designate their applications as either standard or community based, the latter to be “operated for the benefit of a clearly delineated community” (Guidebook § 1.2.3.1).
18. If more than one standard application was made for the same gTLD applicants were asked to try and achieve an amicable agreement under which one or more

of them withdrew their applications. If no amicable solution could be found, applicants in contention for the same gTLD would be invited to participate in an auction for the gTLD.

19. If a community based application was made for a gTLD for which other applicants had made standard applications, the community based applicant was invited to elect to proceed to Community Priority Evaluation (“CPE”) whereby its application would be evaluated by a CPE Panel in order to establish whether the application met the CPE criteria. The CPE Panel could award up to a maximum of 16 points to the application on the basis of the CPE criteria. If an application received 14 or more points the applicant would be considered to have prevailed in CPE (Guidebook § 4.2.2). The four CPE criteria are: (i) community establishment; (ii) nexus between proposed string and community; (iii) registration policies; and (iv) community endorsement. Each criterion is worth a maximum of 4 points (Guidebook § 4.2.3).
20. If an applicant prevails in CPE, it will proceed to the next stage of evaluation and other standard applications for the same gTLD will not proceed because the community based application will be considered to have achieved priority (Guidebook § 4.2.2).
21. ICANN appointed an external provider, the Economic Intelligence Unit (“EIU”) to constitute the CPE Panel.
22. ICANN has a Documentary Information Disclosure Policy (“DIDP”), which permits requests to be made to ICANN to make public documents “concerning ICANN’s operational activities, and within ICANN’s possession, custody or control”.
23. ICANN also has in place a process by which any person or entity, materially affected by an action of ICANN, may request review or reconsideration of that action by the Board of ICANN (“Reconsideration Request”) (Art IV.2 of ICANN’s Bylaws).
24. ICANN also has in place a process for independent third party review of Board actions alleged by an affected party to be inconsistent with the Articles of Incorporation or Bylaws of ICANN (Art IV.3 of ICANN’s Bylaws), namely the IRP Process.
25. Article IV.3.4 of ICANN’s Bylaws provides:

“Requests for such independent review shall be referred to an Independent Review Process Panel (“IRP Panel”), which shall be charged with comparing contested actions of the Board to the Articles of Incorporation and Bylaws,

and with declaring whether the Board has acted consistently with the provisions of those Articles of Incorporation and Bylaws. The IRP Panel must apply a defined standard of review to the IRP request, focusing on:

- a. did the Board act without conflict of interest in taking its decision?*
- b. did the Board exercise due diligence and care in having a reasonable amount of facts in front of them?; and*
- c. did the Board members exercise independent judgment in taking the decision, believed to be in the best interests of the company?"*

C. Factual Background - Specific

- 26. Despegar Online SRL, Donuts Inc., Famous Four Media Limited, Fegistry LLC and Radix FZC each submitted standard applications for .hotel. HOTEL Top Level Domain s.a.r.l. ("HTLD") submitted a community based application for .hotel.
- 27. Little Birch, LLC and Minds + Machines Group Limited each submitted standard applications for .eco. Big Room submitted a community based application for .eco.
- 28. On 19 February 2014, HTLD was invited to elect to proceed to CPE, which it did, and its application was forwarded to the EIU for evaluation.
- 29. On 12 March 2014, Big Room was invited to elect to proceed to CPE, which it did, and its application was forwarded to the EIU for evaluation.
- 30. On 11 June 2014, the CPE Panel from EIU issued its report, which determined that HTLD's application should receive 15 points on the CPE criteria, thereby prevailing in CPE with the consequence that the standard applications for .hotel would not proceed.
- 31. On 28 June 2014, Despegar Online SRL, DotHotel Inc., dot Hotel Limited, Fegistry LLC, Spring McCook LLC and Top Level Domain Holdings Limited submitted a Reconsideration Request *"to have that decision by the Community Priority Evaluation panel reconsidered"*, and, on 4 August 2014, Donuts Inc., Fair Winds Partners, LLC, Famous Four Media Limited, Minds + Machines Group Limited and Radix FZC submitted a request to ICANN pursuant to its DIDP for certain documents related to the decision of the CPE Panel.
- 32. On 22 August 2014, the Board Governance Committee ("BGC") of ICANN denied the Reconsideration Request to have the CPE Panel decision reconsidered and, on 3 September 2014, ICANN responded to the DIDP request

by referring to certain correspondence that was publicly available, but not providing any other documentation sought in the DIDP request.

33. On 22 September 2014, Despegar Online SRL, Radix FZC, Famous Four Media Limited, Fegistry LLC, Donuts Inc., and Minds + Machines Group Limited submitted a Reconsideration Request to “*seek reconsideration of ICANN staff’s response to the Requesters’ request for documents pursuant to ICANN’s Document Information Disclosure Policy (“DIDP”)*”, and, on 11 October 2014, the BGC of ICANN denied that Reconsideration Request.
34. On 6 October 2014, the CPE Panel from EIU issued its report, which determined that Big Room’s application should receive 14 points on the CPE criteria, thereby prevailing in CPE with the consequence that the standard applications for .eco would not proceed.
35. On 22 October 2014, Little Birch, LLC and Minds + Machines Group Limited submitted a Reconsideration Request seeking “*the reconsideration of ICANN’s Community Priority Evaluation Panel’s determination whereby [Big Room’s application] prevailed in Community Priority Evaluation*”, They also submitted a request to ICANN pursuant to its DIDP for certain documents related to the decision of the CPE Panel.
36. On 31 October 2014, ICANN responded to the DIDP request by referring to certain correspondence that was publicly available, but not providing any other documentation sought in the DIDP request, and, on 18 November 2014, the BGC of ICANN denied the Reconsideration Request to have the CPE Panel decision reconsidered.
37. On 27 February 2015, ICANN staff became aware of a configuration issue with ICANN’s online New gTLD Applicant and Global Domains Division (“GDD”) portals. It appears that, between 17 March 2014 and 27 February 2015, user credentials were used to obtain sensitive and confidential business information concerning several of the .hotel applicants.
38. On 5 June 2015, Crowell & Moring LLP wrote to the ICANN Board and the President of ICANN’s GDD “*on behalf of Travel Reservations SRL (formerly, Despegar Online SRL), Donuts Inc. (and its subsidiary applicant Spring McCook, LLC), Famous Four Media Limited (and its subsidiary applicant dot Hotel limited), Fegistry LLC, Minds + Machines Group Limited (formerly Top Level Domain Holdings Limited), and Radix FZC (and its subsidiary applicant DotHotel Inc.)*”. The letter requested “*full information concerning this data exposure issue and the actions that have been taken by ICANN to limit damages for the affected parties*” and set out a list of information sought.

39. On 5 July 2015, ICANN responded to the letter of 5 June 2015 under the heading “*Response to Documentary Information Disclosure Policy Request*”. ICANN provided further information concerning the issue and referred to certain information that was publicly available, but did not provide any other documentation.
40. Neither the Board of ICANN nor the President of ICANN’s GDD has responded to the letter of 5 June 2015.

D. Relief Requested

41. The relief requested by the Claimants in both the .hotel and .eco Requests for IRP was, essentially, the same, namely:
- Declare that ICANN breached its Articles of Incorporation, its Bylaws, and or the gTLD Guidebook;
 - Declare that ICANN must reject the determination that HTLD’s application for .hotel and Big Room’s application for .eco be granted community priority;
 - Award Claimants their costs in this proceeding; and
 - Award such other relief as the Panel may find appropriate in order to ensure that the ICANN Board follow its Bylaws, Articles of Incorporation, or other policies, or other relief that Claimants may request after further briefing or argument.
42. In the Reply to ICANN’s Response in the .hotel IRP a further request for relief was added, namely:
- Declare that ICANN must reject HTLD’s application for .hotel.
43. In response to the questions raised by the Panel on 2 December 2015, the Claimants’ representative also asked for the following relief:
- i. That the Panel consider declaring that ICANN continues to act inconsistently with its Articles of Incorporation, its Bylaws, and or the Guidebook by:
 - upholding the determination that HTLD’s application for .hotel be granted community priority;
 - upholding HTLD’s application for .hotel; and
 - upholding the determination that Big Room’s application for .eco be granted community priority.
 - ii. That the Panel declare that ICANN has breached and continues to breach its Articles of Incorporation and/or Bylaws by upholding the

provisions of the gTLD Applicant Guidebook or of the new gTLD policy which are in violation of the Articles of Incorporation and/or Bylaws.

- iii. That the Panel examine the consistency with ICANN's Articles of Incorporation and Bylaws of;
 - the contents of the Guidebook
 - the CPE process itself
 - the selection and appointment process of the EIU as the CPE Panel, and
 - the implementation of the CPE process that has led to ICANN accepting community priority for .hotel and .eco.

E. Claimants' Submissions

44. In their submissions, the Claimants, in both the .hotel and .eco IRPs matters, criticise the CPE process as a whole and complain that the ICANN Board failed to establish, implement and supervise a fair and transparent CPE process in the selection of the CPE Panel. They also complain that the CPE process is unfair, non transparent and discriminatory due to the use of anonymous evaluators, and that no quality review process exists for CPE Panel decisions.
45. In relation to the CPE process as a whole, the Claimants also argue that, as no opportunity is given for applicants to be heard on the substance of a CPE determination (by either the CPE Panel itself, or by ICANN upon receiving the Panel's decision), CPE determinations are made without due process.
46. However, relief in respect of these wider issues was not requested by the Claimants in either the .hotel or .eco Requests, and, although such relief was referred to by the Claimants in their response to the Panel's questions of 2 December 2015, it was confirmed by the Claimants at the hearing on 7 December 2015 that the Claimants were not, in fact, asking the Panel to make a declaration as to the selection process of the CPE Panel by ICANN, nor any declaration as to the CPE process as a whole, nor whether that process breaches ICANN's Articles of Incorporation or Bylaws, nor whether the Guidebook breaches ICANN's Articles of Incorporation or Bylaws.
47. Accordingly, for the purposes of this IRP, it is the submissions made by the Claimants which address the specific relief sought by the Claimants in relation to the granting of CPE in the .hotel and .eco applications that are relevant for the Panel.
48. In the .hotel and .eco Requests and Replies, the Claimants make the following submissions in relation to the CPE Panel's determinations on CPE:

- i. *“By accepting a third-party determination that is contrary to its policies, ICANN has failed to act with due diligence and failed to exercise independent judgment” (.hotel Request § 9, .eco Request § 9)*
- ii. *“The extraordinary outcomes for Big Room’s application for .eco and HTLD’s application for .hotel were only possible due to a completely different and clearly erroneous application of the evaluation criteria in the .eco and .hotel CPE” (.eco Request § 48)*
- iii. *“If the CPE Panel used the same standard as, e.g., in the .gay, .immo and .taxi CPEs, it would never have decided that the requirements for nexus were met” (.hotel Request § 52, .eco Request § 50)*
- iv. *“The abovementioned examples of disparate treatment in the CPE process also show that the CPE process was performed in violation of ICANN’s CPE policy” (.hotel Request § 53, .eco Request § 51)*
- v. *“the CPE Panel in the .hotel CPE committed several additional policy violations. It did not analyze whether there was a ‘community’ within the definition of that term under the rules of the Applicant Guidebook” (.hotel Request § 53)*
- vi. *“the CPE Panel in the .eco CPE committed several additional policy violations. It did not analyze whether there was a ‘community’ within the definition of that term under the rules of the Applicant Guidebook” (.eco Request § 51)*
- vii. *“The requirement of a pre existing community and the suspicious date of incorporation of Big Room have never been examined by the CPE Panel” (.eco Request § 53)*
- viii. *“The CPE Panel also did not provide meaningful reasoning for its decision. It even went as far as inventing facts” (.hotel Request § 55)*
- ix. *“The CPE Panel also did not provide meaningful reasoning for its decision. It even went as far as neglecting obvious facts” (.eco Request § 56)*
- x. *“However, the CPE Panel’s reliance on the support of a distinct, yet undefined, community shows that the support for the .hotel gTLD came from a ‘community’ other than the one that was defined by the applicant. The need to introduce a distinct and undefined community goes against the exact purpose of the CPE policy, requiring support of the community targeted by the string. It is at odds with the CPE Panel’s findings on organization and nexus between the proposed string and the ‘community.’” (.hotel Request § 56)*
- xi. *“the CPE Panel disregarded the obvious point that the .eco string does not identify a community and that it has numerous other meanings beyond the definitions in the OED.....Big Room would not have qualified for community priority if the CPE Panel had not granted the maximum score for uniqueness of the string.” (.eco Request § 58)*
- xii. *“The CPE Panel has never considered the appropriateness of [Big Room’s] appeal process. In contrast, however, the CPE Panel did investigate the*

- appropriateness of proposed appeal processes in other CPEs requiring that the appeals processes be clearly described, failing which the application would score zero on the enforcement requirement.” (.eco Request § 59)*
- xiii. *“The Applicant Guidebook explicitly calls on the Board to individually consider an application under an ICANN accountability mechanism...such as a Request for Reconsideration” (.hotel Request § 64, .eco Request § 67) NB the Panel notes that this is not actually what the Guidebook says. It says that the “Board reserves the right to individually consider an application for a new gTLD....under exceptional circumstances”*
 - xiv. *“Claimants showed that the CPE Panel manifestly misapplied ICANN’s defined standards in the CPE. It is unclear how else to interpret such a fundamental misapplication other than as an obvious policy violation” (.eco Request § 69)*
 - xv. *“Claimants were merely asking that ICANN comply with its own policies and fundamental obligations in relation to the performance of the CPE process” (.hotel Request § 66, .eco Request § 69)*
 - xvi. *“The IRP Panel’s task is to look at whether ICANN’s unquestioning acceptance of the CPE Panel’s advice and ICANN’s refusal to review the issue raised by Claimants are compatible with ICANN’s fundamental obligations” (.hotel Reply § 4, .eco Reply § 3)*
 - xvii. *“ICANN’s reasoning would logically result in any review of the CPE being denied, no matter how arbitrary the original evaluation may be” (.hotel Reply § 4, .eco Reply § 8)*
 - xviii. *“the ICANN Board decided not to check whether or not the evaluation process had been implemented in compliance with principles of fairness, transparency, avoiding conflicts of interest and non-discrimination.” (.hotel Reply § 34, .eco Reply § 33)*
 - xix. *“One cannot investigate whether a standard was applied fairly and correctly without looking into how the standard was applied.....the ICANN Board deliberately refused to examine whether the standard was applied correctly, fairly, equitably and in a non-discriminatory manner” (.hotel Reply § 39, .eco Reply § 38)*
 - xx. *“As the IRP Panel’s task includes a review as to whether ICANN discriminated in the application of its policies and standards, the IRP Panel is obliged to consider how the standards were applied in different cases” (.hotel Reply § 45, .eco Reply § 44)*

49. In the .hotel Reply, the Claimants also make the following submissions in relation to the declaration they are seeking that ICANN must reject HTLD’s application for .hotel:

- i. *“The IRP Panel is also requested to assess ICANN’s refusal to take appropriate action to offer redress to parties affected by the data exposure issue. In coming to its conclusion, the IRP Panel may examine all the*

- relevant information that was available to ICANN in relation to the question of taking action” (.hotel Reply § 4)*
- ii. *“ICANN never showed any willingness to take appropriate measures” (.hotel Reply § 49)*
 - iii. *“In this case a crime was committed seemingly with the specific purpose of obtaining a better position within the new gTLD program, and the crime was made possible due to misuse of user credentials for which HTLD (or an individual associated to HTLD) was responsible....It would indeed not be in the public interest to allocate a critical Internet resource to an entity that is closely linked with individuals who have misused, or who have permitted the misuse of, their user credentials” (.hotel Reply § 50)*

50. Also in the .hotel Reply the Claimants submit:

“Second Claimant in the .eco case, Minds + Machines Group Limited (Minds + Machines), also applied for the .hotel gTLD. Minds + Machines fully supports the claim initiated by Claimants in this case and joins their request. That Minds + Machines join the proceedings is accepted by all Claimants” (.hotel Reply § 2)

F. ICANN’s Submissions

51. In the .hotel and .eco Responses and Sur Replies, ICANN makes the following submissions in relation to the CPE Panel’s determinations on CPE:

- i. *“Claimants did not state a proper basis for reconsideration as defined in ICANN’s Bylaws” (.hotel Response § 4, .eco Response § 4)*
- ii. *“ICANN’s Board....has no obligation to review (substantively or otherwise) any such report” (.hotel Response § 9, .eco Response § 9)*
- iii. *“nothing in the Articles or Bylaws requires the Board [to conduct a substantive review” (.hotel Response § 9, .eco Response § 10)*
- iv. *“neither the creation nor the acceptance of the CPE Panel’s Report regarding HTLD’s Application for .HOTEL constitutes Board action” (.hotel Response § 12)*
- v. *“neither the creation nor the acceptance of the CPE Panel’s Report regarding Big Room’s Application for .ECO constitutes Board action” (.eco Response § 13)*
- vi. *“in making those decisions [acceptance of the Guidebook and the decisions by the Board to reject Claimants’ Reconsideration Request], the Board followed ICANN’s Articles and Bylaws” (.hotel Response § 13, .eco Response § 14)*
- vii. *“BGC denied Claimants’ Reconsideration Request finding that Claimants had ‘failed to demonstrate that the CPE Panel acted in contravention of*

- established policy or procedure' in rendering the Report" (.eco Response § 29)*
- viii. *"BGC denied Claimants' Reconsideration Request [in respect of the DIDP Request] finding that the Claimants had 'failed to demonstrate that ICANN staff acted in contravention of established policy or procedure' in responding to the DIDP Request" (.hotel Response § 28)*
 - ix. *"the reconsideration process does not call for the BGC to perform a substantive review of CPE Reports" (.hotel Response § 49, .eco Response § 49)*
 - x. *"Claimants do not identify any ICANN Article or Bylaws provision that the BGC allegedly violated in reviewing their Reconsideration Request" (.hotel Response § 51, .eco Response § 50)*
 - xi. *"It is not the role of the BGC (or, for that matter, this IRP Panel) to second-guess the substantive determinations of independent, third-party evaluators." (.hotel Response § 53, .eco Response § 52)*
 - xii. *"Claimants' only evidence that the CPE Panel in fact erred is the bare allegation that because certain other, completely separate, applications for entirely different strings did not prevail in CPE then .HOTEL TLD's application also should not have prevailed. Claimants' argument is baseless. The outcome of completely unrelated CPEs does not, and should nor, have any bearing on the outcome of the CPE regarding .HOTEL TLD's Application" (.hotel Response § 55)*
 - xiii. *"Claimants' only evidence that the CPE Panel in fact erred is the bare allegation that because certain other, completely separate, applications for entirely different strings did not prevail in CPE, Big Room's application also should not have prevailed. Claimants' argument is baseless. The outcome of completely unrelated CPEs does not, and should nor, have any bearing on the outcome of the CPE regarding Big Room's Application" (.eco Response § 54)*
 - xiv. *"there is not nor is it desirable to have a process for the BGC or the Board (through the NGPC) to supplant its own determinationover the guidance of an expert panel formed for that particular purpose" (.hotel Sur Reply § 11, .eco Sur Reply § 10)*

52. In the .hotel Sur Reply, ICANN also makes the following submissions in relation to the declaration the Claimants are seeking that ICANN must reject HTLD's application for .hotel:

- i. *"Claimants argue that the Portal Configuration is relevant to this IRP, but they have not identified any Board action or inaction with respect to this issue that violates ICANN's Articles or Bylaws such that it is subject to independent review, now or ever" (.hotel Sur Reply § 23)*

- ii. *“The ICANN Board took no action (and was not required to take action under either the ICANN Articles or Bylaws) with respect to Claimant’s letter and DIDP request” (.hotel Sur Reply § 24)*
- iii. *“Claimants have failed to demonstrate that the Board has a duty to act with respect to Claimants’ belief as to what the Board should do. Again Claimants have also failed to show that the Board’s conduct in this regard has in any way violated ICANN’s Articles or Bylaws” (.hotel Sur Reply § 25)*

53. Also in the .hotel Sur Reply ICANN submits:

*“Minds + Machines Limited (“Minds + Machines”) is not a Claimant in this proceeding but, nevertheless signed the Reply and now seeks to join as an additional claimant. Article 7 of the International Center for Dispute Resolution’s International Dispute Resolution Procedures explicitly provides that “[n]o additional party may be joined after the appointment of any [neutral], unless **all parties**, including the additional party, otherwise agree” (ICDR International Dispute Resolution Procedures, Art. VII (emphasis added)). ICANN does not consent to the joinder of Minds + Machines because any claims Minds + Machines may have with respect to the CPE Report or ICANN’s response to that Report are time-barred (Bylaws, Art. IV, § 3.3 (30 day deadline to file IRP request)” (.hotel Sur-Reply § 35)*

G. The Issues

54. As has already been stated, Article IV.3.4 of ICANN’s Bylaws provides:

“Requests for such independent review shall be referred to an Independent Review Process Panel (“IRP Panel”), which shall be charged with comparing contested actions of the Board to the Articles of Incorporation and Bylaws, and with declaring whether the Board has acted consistently with the provisions of those Articles of Incorporation and Bylaws. The IRP Panel must apply a defined standard of review to the IRP request, focusing on:

- a. did the Board act without conflict of interest in taking its decision?*
- b. did the Board exercise due diligence and care in having a reasonable amount of facts in front of them?; and*
- c. did the Board members exercise independent judgment in taking the decision, believed to be in the best interests of the company?”*

55. Given that the wider issues of the CPE process as a whole, the appointment of EIU and the provisions of Guidebook are not being pursued, the Panel has concluded that the contested actions of the Board of ICANN in this IRP are:
- i. The denial by the BGC on 22 August 2014, of the Reconsideration Request to have the CPE Panel decision in .hotel reconsidered.
 - ii. The denial by the BGC on 11 October 2014 of the Reconsideration Request to seek reconsideration of ICANN staff's response to the DIDP request in relation to the .hotel CPE decision.
 - iii. The denial by the BGC on 18 November 2014, of the Reconsideration Request to have the CPE Panel decision in .eco reconsidered.
 - iv. The continued upholding of HTLD's application for .hotel in the light of the matters raised in Crowell & Moring's letter of 5 June 2015.
56. In addition, the Panel has the procedural issue to deal with of the attempt by Minds + Machines Group Limited to join the .hotel IRP.

H. Analysis - General

57. Before turning to the specific analysis of each of the issues stated above, there are some general points which the Panel wishes to highlight, which have application to one or more of the issues in question.
58. The analysis, which the Panel is charged with carrying out in this IRP, is one of comparing the actions of the Board with the Articles of Incorporation and Bylaws, and declaring whether the Board has acted consistently with the provisions of those Articles of Incorporation and Bylaws. The Panel has identified the following relevant provisions of the Articles of Incorporation and Bylaws against which the actions, or inactions, of the Board should be compared.

Articles of Incorporation

Article 4

The Corporation shall operate for the benefit of the Internet community as a whole, carrying out its activities in conformity with relevant principles of international law and applicable international conventions and local law and, to the extent appropriate and consistent with these Articles and its Bylaws, through open and transparent processes that enable competition and open entry in Internet-related markets. To this effect, the Corporation shall cooperate as appropriate with relevant international organizations.

Bylaws

Article I.2

In performing its mission, the following core values should guide the decisions and actions of ICANN:

- 1. Preserving and enhancing the operational stability, reliability, security, and global interoperability of the Internet.*
- 2. Respecting the creativity, innovation, and flow of information made possible by the Internet by limiting ICANN's activities to those matters within ICANN's mission requiring or significantly benefiting from global coordination.*
- 3. To the extent feasible and appropriate, delegating coordination functions to or recognizing the policy role of other responsible entities that reflect the interests of affected parties.*
- 4. Seeking and supporting broad, informed participation reflecting the functional, geographic, and cultural diversity of the Internet at all levels of policy development and decision-making.*
- 5. Where feasible and appropriate, depending on market mechanisms to promote and sustain a competitive environment.*
- 6. Introducing and promoting competition in the registration of domain names where practicable and beneficial in the public interest.*
- 7. Employing open and transparent policy development mechanisms that (i) promote well-informed decisions based on expert advice, and (ii) ensure that those entities most affected can assist in the policy development process.*
- 8. Making decisions by applying documented policies neutrally and objectively, with integrity and fairness.*
- 9. Acting with a speed that is responsive to the needs of the Internet while, as part of the decision-making process, obtaining informed input from those entities most affected.*
- 10. Remaining accountable to the Internet community through mechanisms that enhance ICANN's effectiveness.*
- 11. While remaining rooted in the private sector, recognizing that governments and public authorities are responsible for public policy and duly taking into account governments' or public authorities' recommendations.*

These core values are deliberately expressed in very general terms, so that they may provide useful and relevant guidance in the broadest possible range of circumstances. Because they are not narrowly prescriptive, the specific way in which they apply, individually and collectively, to each new situation will necessarily depend on many factors that cannot be fully anticipated or enumerated; and because they are statements of principle rather than practice,

situations will inevitably arise in which perfect fidelity to all eleven core values simultaneously is not possible. Any ICANN body making a recommendation or decision shall exercise its judgment to determine which core values are most relevant and how they apply to the specific circumstances of the case at hand, and to determine, if necessary, an appropriate and defensible balance among competing values.

Article II.3

ICANN shall not apply its standards, policies, procedures, or practices inequitably or single out any particular party for disparate treatment unless justified by substantial and reasonable cause, such as the promotion of effective competition.

Article III.1

ICANN and its constituent bodies shall operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness.

Article IV.1

In carrying out its mission as set out in these Bylaws, ICANN should be accountable to the community for operating in a manner that is consistent with these Bylaws, and with due regard for the core values set forth in Article I of these Bylaws. The provisions of this Article, creating processes for reconsideration and independent review of ICANN actions and periodic review of ICANN's structure and procedures, are intended to reinforce the various accountability mechanisms otherwise set forth in these Bylaws, including the transparency provisions of Article III and the Board and other selection mechanisms set forth throughout these Bylaws.

Article IV.3

The Board has designated the Board Governance Committee to review and consider any such Reconsideration Requests. The Board Governance Committee shall have the authority to:

- a. evaluate requests for review or reconsideration;*
- b. summarily dismiss insufficient requests;*
- c. evaluate requests for urgent consideration;*
- d. conduct whatever factual investigation is deemed appropriate;*
- e. request additional written submissions from the affected party, or from other parties;*
- f. make a final determination on Reconsideration Requests regarding staff action or inaction, without reference to the Board of Directors; and*
- g. make a recommendation to the Board of Directors on the merits of the request, as necessary.*

59. In response to the questions posed by the Panel on 2 December 2015, ICANN confirmed its position as follows:

- i. The EIU's determinations are presumptively final. The Board's review on reconsideration is not substantive, but rather is limited to whether the EIU followed established policy or procedure.
- ii. ICANN has an obligation to adhere to all of its obligations under its Articles of Incorporation and its Bylaws.
- iii. The Bylaws, and the BGC's determinations on prior Reconsideration Requests, have established a specific standard for when it is appropriate to reconsider CPE determinations (i.e., when the CPE Panel violated established policy or procedure).
- iv. When considering the Reconsideration Requests in the .eco and .hotel matters, the BGC had before it the EIU's determination and the "facts" that the Claimants had submitted with their Reconsideration Requests. The BGC also considered the Guidebook as well as other published CPE procedures. This was all the information required for the BGC to determine that the EIU had followed established policy and procedure in rendering the CPE determinations.
- v. The Board is not aware (whether through the BGC or otherwise) as to whether EIU makes any comparative analysis of other CPE determinations it has made when considering individual community priority applications.

60. During the hearing on 7 December 2015, ICANN further confirmed its position as follows:

- i. The Claimants (save for Minds + Machines Group Limited in the .hotel IRP) are not time barred from seeking IRP of:
 - a. The denial by the BGC on 22 August 2014 of the Reconsideration Request to have the CPE Panel decision in .hotel reconsidered.
 - b. The denial by the BGC on 11 October 2014 of the Reconsideration Request to seek reconsideration of ICANN staff's response to the DIDP request in relation to the .hotel CPE decision.
 - c. The denial by the BGC on 18 November 2014 of the Reconsideration Request to have the CPE Panel decision in the .eco matter reconsidered.
- ii. There is no ICANN quality review or control process, which compares the determinations of the EIU on the various CPE applications.

- iii. The core values, which apply to ICANN by virtue of its Bylaws, have not been imposed contractually on the EIU, and the EIU are not, in consequence, subject to them.
- iv. The CPE process operated by the EIU involves 5 core EIU staff and 2 independent evaluators. The independent evaluators separately score each CPE application and submit their separate scores to the EIU core staff. The independent evaluators do not confer on the scoring. The independent evaluators are not the same for each CPE application; sometimes both are different and sometimes one is different.
- v. ICANN considers there is nothing in its Articles of Incorporation or Bylaws, which requires ICANN to comply with due process.
- vi. ICANN does not believe that it is subject to any general international law principle requiring it to comply with due process.
- vii. Upon receipt of a Reconsideration Request, ICANN expects the BGC to carry out a procedural review of the CPE determination, not a substantive review and that this procedural review should look at whether the EIU had followed the correct procedure and had correctly applied ICANN policies.

61. In the light of the relevant provisions of the Articles of Incorporation and Bylaws identified above, and the clarifications provided by ICANN as to its position in relation to CPE applications and Reconsideration Requests made in respect of them, the Panel will now consider each of the contested actions of the Board of ICANN in this IRP. In doing so, the Panel has taken into account, where relevant, all the submissions of the parties, including, without limitation, those specifically set out in sections E. and F. above.

62. Given the confirmation by ICANN, that a time bar is not being raised in relation to the substantive issues in this IRP, the Panel does not have to discuss this question save for when it considers Minds + Machines Group Limited's attempt to join in the .hotel IRP.

I. Analysis Specific

1. The denial by the BGC, on 22 August 2014, of the Reconsideration Request to have the CPE Panel decision in .hotel reconsidered.

63. In conducting this analysis, the Panel have carefully considered the CPE report dated 11 June 2014, which determined that HTLD's community based application had prevailed, the Reconsideration Request dated 28 June 2014 and the BGC denial of the Reconsideration Request dated 22 August 2014. In doing so, the Panel has considered whether the Board (through the BGC) has acted consistently with the provisions of ICANN's Articles of Incorporation and Bylaws.

64. The Panel is clear that, in doing so, it is required by ICANN's Bylaws to apply a defined standard of review focusing on:

- a. whether the BGC acted without conflict of interest in taking its decision?
- b. whether the BGC exercised due diligence and care in having a reasonable amount of facts in front of them?; and
- c. whether the BGC exercised independent judgment in taking the decision, believed to be in the best interests of the company?

65. No allegation of conflict of interest has been made by the Claimants and the Panel has no information or documentation upon which it could reach any view as to whether a conflict of interest existed or not. In conclusion, so far as that requirement is concerned, the Panel can make no finding.

66. As to the requirements of due diligence and care, and the exercise of independent judgment, ICANN's position is that the review undertaken by the BGC should be a procedural review of the CPE determination, not a substantive review, and that this procedural review should look at whether the EIU had followed the correct procedure and had correctly applied ICANN policies.

67. That appears to the Panel to be correct, but what is of critical importance is the manner in which the review of whether the EIU has followed the correct procedure and has correctly applied ICANN's policies is conducted.

68. In their Reply in the .hotel IRP at §39 the Claimants submit:

“One cannot investigate whether a standard was applied fairly and correctly without looking into how the standard was applied....The ICANN Board instead limited its review to the question of whether the CPE Panel had made mention of the applicable standard. Such a limited review is not a meaningful one.”

69. The Panel agrees that if the BGC is charged with considering whether the EIU correctly applied ICANN policies (which ICANN accepts it is), then it needs to look into how the standard was applied. It is not sufficient to limit the review to the question of whether mention was made of the relevant policy. The BGC needs to have a reasonable degree of assurance that the EIU has correctly applied the policy.

70. This is particularly so given that the EIU is not subject to ICANN's core values, the EIU independent evaluators are not the same for each CPE application, there is no ICANN quality review or control process which compares the

determinations of the EIU on the various CPE applications and ICANN is not aware as to whether EIU makes any comparative analysis of other CPE determinations it has made when considering individual community priority applications.

71. In their Reconsideration Request of 28 June 2014, at page 5, the Claimants say:

“In this case, however, there are 3 instances where the Panel has not followed the [Guidebook] policy and processes for conducting CPE. Further, the Panel, and ICANN staff have breached more general ICANN policies and procedures in the conduct of this CPE.”

72. The three instances of failure to follow the Guidebook policy alleged by the Claimants are:

1. Failure to identify a “Community”;
2. Failure to consider self awareness and recognition of the community; and
3. Failure to apply the test for Uniqueness.

73. In their Reconsideration Request, the Claimants then go into significant detail as to the ways in which they allege the EIU failed to follow the Guidebook policy. However, in the BGC denial of 22 August 2014, the BGC state:

“...while the Request is couched in terms of the Panel’s purported violations of various procedural requirements, the Requesters do not identify any misapplication of a policy or procedure, but instead challenge the merits of the Panel’s Report, which is not a basis for reconsideration”

74. The BGC’s comment quoted above is plainly wrong as any detailed reading of the Reconsideration Request shows. It is unfortunate that the BGC should have included such comments in its determination as, in the Panel’s view, this has contributed to this IRP and the clear feeling, on the part of the Claimants, that their Reconsideration Request was not treated appropriately by the BGC.

75. In their Reconsideration Request, the Claimants argue that the first question to be asked by the EIU in following the policy and procedure in the Guidebook is whether there is a community that meets the definition of a community under the Guidebook. They say:

“The Panel did not attempt this analysis, in breach of the requirements of the policy and process for CPE.... This is not a disagreement about a finding by the Panel on this topic; the Panel did not consider this definition, nor apply the test for “community” required.... Had it

considered the matter, it would have appreciated that the applicants definition, rather than showing cohesion, depended instead on coercion.”

76. In dealing with this allegation the BGC gave consideration to the definition of community in the Guidebook and stated:

“However, the Requesters point to no obligation to conduct any inquiry as to the definition of community other than those expressed in section 4.2.3 of the Guidebook.....As such, the Requesters fault the Panel for adhering to the Guidebook’s definition of a “community” when evaluating the Application. Given that the Panel must adhere to the standards laid out in the Guidebook, this ground for reconsideration fails.

The Requesters also contend the Applicant’s proposed community, i.e., the “Hotel Community” does not qualify as a community for CPE purposes because “rather than showing cohesion, [it] depend[s] on coercion....But the Panel reached the contrary conclusion... As even the Requesters note, a request for reconsideration cannot challenge the substance of the Panel’s conclusions, but only its adherence to the applicable policies and procedures”

77. In their Reconsideration Request, the Claimants argue that the second question to be asked by the EIU in following the policy and procedure in the Guidebook is whether there was a failure to consider self awareness and recognition of the community. They say:

“...the Panel has imported the test for determining whether there is a “community” self-awareness that the group is a community- into the test for “delineation”. With respect, that is an error of process that further invalidates the findings.

Even if it were not, and self-awareness and recognition are considered with Delineation, the actual response given under that enquiry about “self-awareness and recognition” shows that the Panel does not understand the test that is to be applied....

What is required is a showing by evidence that the members of the alleged community regard themselves as members of a defined community, which is recognised as such by the members, and by people outside the community.

It is important to note that the Panel finds that the alleged community is clearly delineated, because there is an ISO definition of “hotel”, and because every hotel is a member of the alleged community....

The Panel then proceeds through the proper requirements of delineation, which it names accurately organisation and existence before 2007.”

78. In dealing with this allegation, the BGC gave consideration to the definition of delineation in the Guidebook and stated:

“The Panel began its assessment of the test for delineation by noting: “Two conditions must be met to fulfil the requirements for delineation; there must be a clear, straightforward membership definition, and there must be awareness and recognition of a community (as defined by the applicant) among its members” (Report, Pg. 1.) As the Requesters admit, the Panel then “proceeds through the proper requirements of Delineation, which it names accurately....The Requesters thus defeat their own argument, as they squarely concede the Panel assessed the “proper requirements” of the test for delineation.

Again the Requesters dispute the Panel’s allusion to the “awareness and recognition” of the Hotel Community’s members not because that reference constitutes any procedural violation, but because the Requesters simply disagree whether there is any such recognition amongst the Hotel Community’s members.....Disagreement with the Panel’s substantive conclusions, however, is not a proper basis for reconsideration”

79. In their Reconsideration Request, the Claimants argue that the third question to be asked by the EIU in following the policy and procedure in the Guidebook is whether there was a failure properly to apply the test for Uniqueness. They say:

“The Panel has not followed ICANN policy or process in arriving at the conclusion that the string has “no other significant meaning beyond identifying the community” because it has itself cited a significant other meaning and relied on that other meaning (that the word means “an establishment with services and additional facilities where accommodation and in most cases meals are available”) in order to measure and find Delineation.

This is not a disagreement about a conclusion – this is a demonstration of a failure of process by the Panel. It cannot use the significant meaning of “hotel” under an ISO definition for one purpose (a finding under delineation), then deny that meaning and say there is “no other significant meaning” for the purpose of finding Uniqueness....

The word “hotel” means to most of the world what the ISO definition says it means a place for lodging and meals. To assert that it means to most

people the association of business enterprises that run the hotels is unsubstantiated and absurd.”

80. In dealing with this allegation the BGC gave consideration to the definition of uniqueness in the Guidebook and stated:

“The Requesters have identified no procedural deficiency in the Panel’s determination that the uniqueness requirement was met. The Requesters concede that “HOTEL” has the significant meaning of a place for lodging and meals, and common sense dictates that the Hotel Community consists of those engaged in providing those services. The attempt to distinguish between those who run hotels and hotels themselves is merely a semantic distinction. Again, while the Requesters may disagree with the Panel’s substantive conclusion, that is not a proper basis for reconsideration.

81. As for the alleged breaches of more general ICANN policies and procedures in the conduct of the .hotel CPE, the Claimants refer to Article 7 of ICANN’s Affirmation of Commitments and Articles I.2.8, III.1 and IV.2.20 of ICANN’s Bylaws and say:

“Requestor submits that various aspects of the CPE process breach, or risk breaching, these fundamental provisions...there are a number of features which are prejudicial to standard applicants, including:

(a) Insufficient material was made available to them as to who the Panelist was, and their qualifications....

(b) There is no publication of materials to be examined by the Panel....

(c) Insufficient analysis and reasons were given on how the Panelist reached their CPE report....”

82. In dealing with this allegation the BGC stated:

“None of these concerns represent a policy or procedure violation for the purposes of reconsideration under ICANN’s Bylaws. The Guidebook does not provide for any of the benefits that the Requesters claim they did not receive during CPE of the Application. In essence, the Requesters argue that because the Guidebook’s CPE provisions do not include Requester’s “wish list” of procedural requirements, the Panel’s adherence to the Guidebook violates the broadly-phrased fairness principles embodied in ICANN’s foundational documents. Were this a proper ground for reconsideration, every standard applicant would have the ability to rewrite the Guidebook via a reconsideration request.”

- 83.** In considering the original CPE report of 11 June 2014, the Reconsideration Request dated 28 June 2014 and the BGC denial of the Reconsideration request dated 22 August 2014, the Panel have looked closely at whether the BGC simply undertook an administrative “box ticking” exercise to see whether mention was made of the relevant policy or procedure in denying the Reconsideration Request, or whether, as the Panel considers the BGC is required to do, it looked into how the relevant policy or procedure was actually applied by the EIU, and whether, in doing so, the BGC could have a reasonable degree of assurance that the EIU had correctly the applied the policy or procedure.
- 84.** Taking, first of all, the three instances of failure to follow the Guidebook policy alleged by the Claimants, it is clear from the BGC determination document of 22 August 2014 as a whole and, particularly, from those extracts quoted above that each one was carefully considered by the BGC in its determination, and that the BGC did properly consider how the relevant policy or procedure was actually applied by the EIU, and whether, in doing so, the BGC could have a reasonable degree of assurance that the EIU had correctly the applied the policy or procedure.
- 85.** In doing so, the Panel is satisfied that the BGC acted consistently with the provisions of ICANN’s Articles of Incorporation and Bylaws and that the Claimants complaints in this regard are not made out.
- 86.** As for the alleged breaches of more general ICANN policies and procedures in the conduct of the .hotel CPE claimed by the Claimants in the Reconsideration Request, it is clear from the face of these allegations that these are complaints about the CPE process as a whole and are not specific to the .hotel CPE. In consequence of the Claimants’ confirmation at the hearing on 2 December 2015, that relief in respect of the CPE process as a whole is not being pursued, it is not strictly necessary for the Panel to consider this further. However, the Panel wishes to put on record that it considers that the BGC, in denying the Claimants’ Reconsideration Request, acted consistently with the provisions of ICANN’s Articles of Incorporation and Bylaws and that the Claimants’ complaints in this regard are also not made out.

2. The denial by the BGC, on 11 October 2014, of the Reconsideration Request to seek reconsideration of ICANN staff’s response to the DIDP request in relation to the .hotel CPE decision.

- 87.** In conducting this analysis, the Panel has carefully considered the DIDP Request dated 4 August 2014, the Response from ICANN of 3 September 2014, the Reconsideration Request dated 19 September 2014 and the BGC denial of the Reconsideration Request dated 11 October 2014. In doing so, the Panel has

considered whether the Board (through the BGC) has acted consistently with the provisions of ICANN's Articles of Incorporation and Bylaws.

- 88.** The Panel knows that, in doing so, it is required by ICANN's Bylaws to apply a defined standard of review focusing on:
- a. whether the BGC acted without conflict of interest in taking its decision?
 - b. whether the BGC exercised due diligence and care in having a reasonable amount of facts in front of them?; and
 - c. whether the BGC exercised independent judgment in taking the decision, believed to be in the best interests of the company?
- 89.** As with the previous issue, no allegation of conflict of interest has been made by the Claimants and the Panel has no information or documentation upon which it could reach any view as to whether a conflict of interest existed or not. In conclusion, so far as that requirement is concerned, the Panel can make no finding.
- 90.** In line with the approach taken in the previous issue, the Panel consider that the review undertaken by the BGC should look at whether the ICANN staff, in responding to the DIDP Request, followed the correct procedure and correctly applied ICANN policies, and that, in doing so, the BGC needs to look into how the procedure was followed and how policy was applied so that the BGC has a reasonable degree of assurance that the ICANN staff correctly followed the requisite procedure and correctly applied ICANN policies.
- 91.** In their DIDP Request of 4 August 2014, the Claimants asked for four categories of documents, namely:
- 1) *“All correspondence, reports, documents, agreements, contracts, emails, or any other forms of communication (“Communications”) between individual member of ICANN’s Board or any member of ICANN Staff and the [EIU] or any other organisation or third party involved in the selection or organisation of the CPE Panel for the Report, relating to the appointment of the Panel that produced the Report, and dated within the 12 month period preceding the date of the Report;*
 - 2) *The curriculum vitae (“CVs”) of the members appointed to the CPE Panel;*
 - 3) *All Communications (as defined above) between individual members of the CPE Panel and/or ICANN, directly relating to the creation of the Report; and*
 - 4) *All Communications (as defined above) between the CPE Panel and/or Hotel TLD or any other party prior with a material bearing on the creation of the Report.”*

92. In ICANN's Response of 3 September 2014 it was explained that ICANN, whether at Board or staff level, is not involved with the selection to the CPE Panel of the two individual evaluators that perform the scoring in the CPE process and that ICANN is not provided with information about who the evaluators on any individual CPE Panel may be. As this is all done within the EIU, ICANN, it was stated, did neither have the documentation sought in numbered request 1) above, nor did it have the CVs sought in numbered request 2) above. These are clear statements that no such documentation exists.
93. However, the Response goes on to say that to *"the extent that ICANN has documentation with the EIU for the performance of its role as the coordinating firm as it relates to the .HOTEL CPE, those documents are subject to certain of the Defined Conditions of Non-Disclosure set forth in the DIDP."* It then goes on to state the defined Conditions for Nondisclosure upon which ICANN is relying to justify nondisclosure. Five separate Conditions for Nondisclosure are listed.
94. The Response does not give any more detail as to what documents it actually has *"for the performance of its role as the coordinating firm"*, nor which specific Conditions for Nondisclosure apply to which specific documents or category of documents it actually has, and, in consequence, it is not possible to judge whether the policy for nondisclosure has been correctly applied.
95. In dealing with the documentation sought in numbered request 3) above, the Response states *"Because of the EIU's role as the panel firm, ICANN does not have any communications (nor does it maintain any communications) with the evaluators that identify the scoring for any individual CPE. As a result, ICANN does not have documents of this type."* That is a clear and comprehensive statement that such documentation does not exist.
96. However, the Response goes on to say that to *"the extent that ICANN has communications with persons from EIU who are not involved in the scoring of a CPE, but otherwise assist in a particular CPE, (as anticipated in the CPE Panel Process Document), those documents are subject to the following Defined Conditions of Nondisclosure set forth in the DIDP"*. It then goes on to state the defined Conditions for Nondisclosure upon which ICANN is relying to justify nondisclosure. Four separate Conditions for Nondisclosure are listed.
97. The Response does not give any more detail as to what *"communications with persons from EIU who are not involved in the scoring of a CPE"*, nor which specific Conditions for Nondisclosure apply to which specific documents or category of documents it actually has and, in consequence, it is not possible to judge whether the policy for nondisclosure has been correctly applied.

98. In dealing with the documentation sought in numbered request 4) above, the Response states:

“In order to maintain the independence and neutrality of the CPE Panels as coordinated by the EIU, ICANN has limited the ability for requesters or other interested parties to initiate direct contact with the panels the CPE Panel goes through a validation process regarding letters of support or opposition (as described in the CPE Panel Process document) but that is the extent of direct communications that the CPE Panel is expected to have. For process control purposes, from time to time ICANN is cc’d on the CPE Panel’s verification emails. These emails are not appropriate for disclosure pursuant to the following Defined Conditions of Nondisclosure set forth in the DIDP”.

It then goes on to state the single defined Condition for Nondisclosure upon which ICANN is relying to justify nondisclosure.

99. In this instance, unlike those for numbered requests 1), 2) and 3) above, ICANN has described a single category of documents and the single Condition for Nondisclosure upon which it relies, thus making it possible to judge whether the policy for nondisclosure has been correctly applied.

100. In the Panel’s view, it is unfortunate that the ICANN staff did not adopt the same approach to dealing with documents which ICANN was not prepared to disclose when responding to numbered requests 1), 2) and 3) as was adopted with numbered request 4). Simply to say that “*to the extent*” ICANN has documents which fall within the categories requested in numbered requests 1), 2) and 3) such documents are not disclosable, for a variety of reasons, without making any attempt to link categories of document to particular Conditions for Nondisclosure, gives the impression of a process not properly conducted.

101. Such an approach does not provide the confidence that those requesting disclosure of documents are entitled to have, namely that a collection of potentially responsive documents has taken place and a review has actually been conducted by the ICANN staff as to whether any of the documents identified as responsive to the request are subject to any of the Conditions of Nondisclosure, as is required by ICANN’s published policy for responding to DIDP requests. If the ICANN staff had made this clear in the response it could well have provided the Claimants with the reassurance that both procedure and policy had been followed and applied.

102. In the Reconsideration Request of 19 September 2014, the Claimants say:

“ICANN should not interpose such obstacles to access without providing a factual basis to determine if its claimed privileges have any merit. At

minimum, the BGC should review the asserted protections and independently determine if they have any supportable grounds”.

103. Such a request is understandable in the circumstances. Article 4 of ICANN’s Articles of Incorporation require it to carry out its activities *“through open and transparent processes”*. Its Core Values include:

“Making decisions by applying documented policies neutrally and objectively, with integrity and fairness”, its Bylaws include the requirement to “operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness”.

104. The Panel is, of course, charged with reviewing the action of ICANN’s Board, rather than its staff, but the Panel wishes to make clear that, in carrying out its activities, the Board should seek to ensure that ICANN’s staff comply with the Articles of Incorporation and Bylaws of ICANN, and that a failure of the Board to ensure such compliance is a failure of the Board itself.

105. Although the Reconsideration Request said that *“the BGC should review the asserted protections and independently determine if they have any supportable grounds”*, it is the view of the Panel that this should not have been the starting point for the BGC in looking at the actions of the ICANN staff in dealing with the DIDP Request. As has already been said, the BGC does need to have a reasonable degree of assurance that the ICANN staff has correctly followed the requisite procedure and correctly applied ICANN policies. If the BGC considers it has that assurance, the Panel does not consider the BGC is required to conduct any form of independent determination as to the decisions made by the ICANN staff. The BGC would only need to go that far if it came to the conclusion that the ICANN staff had not followed the requisite procedure and/or had not correctly applied ICANN policies.

106. It is obvious, from the face of the denial of the Reconsideration Request issued by the BGC on 11 October 2014, that such an independent determination did not take place, and it appears that the BGC were satisfied that the ICANN staff had correctly followed procedure and applied policy. In the denial the BGC quite correctly state:

“It is ICANN’s responsibility to determine whether requested documents fall within those Nondisclosure Conditions. Specifically, pursuant to the DIDP process “a review is conducted as to whether the documents identified as responsive to the Request are subject to any of the [Nondisclosure Conditions]...Here, in finding that certain requested

documents were subject to Nondisclosure Conditions, ICANN adhered to the DIDP process.

- 107.** Whilst the BGC does not explicitly say that a collection process occurred, it is implicit in the BGC denial that the BGC does believe that process was followed. In dealing specifically with numbered requests 1), 2) and 3), the denial says:

“Here, in finding that certain requested documents were subject to Nondisclosure Conditions, ICANN adhered to the DIDP process. Specifically, as to “documentation with the EIU for the performance of its role” and “communications with persons from EIU who are not involved in the scoring of a CPE,” ICANN analysed the Requesters’ requests in view of the DIDP Nondisclosure Conditions, including those covering “information exchanged, prepared for, or derived from the deliberative and decision-making processes” and “confidential business information and/or internal policies and procedures.”

- 108.** The denial quotes from the DIDP response as follows:

“ICANN must independently undertake the analysis of each Condition as it applies to the documentation at issue, and make the final determination as to whether any Nondisclosure Conditions apply”

The denial then goes on to say:

In conformance with the publicly posted DIDP process.... ICANN undertook such analysis, as noted above, and articulated its conclusions in the DIDP Response. While the Requesters may not agree with ICANN’s determination that certain Nondisclosure Conditions apply here, the requesters identify no policy or procedure that ICANN staff violated in making its determination, and the Requesters’ substantive disagreement with that determination is not a basis for reconsideration.”

- 109.** The denial also reaches a similar conclusion as to the adherence by the ICANN staff to the DIDP process in determining that the potential harm caused by disclosure outweighed the public interest in disclosure.

- 110.** Whilst the Panel considers that the ICANN staff could, and should, have been more explicit as to the process they had followed in refusing disclosure, the BGC determination document of 11 October 2014 provides the requisite degree of confirmation that the correct procedure was actually followed, that the BGC did, properly, consider whether the relevant policy or procedure was actually applied by the ICANN staff and whether, in doing so, the BGC could have a reasonable degree of assurance that the ICANN staff had correctly the applied the policy or procedure.

111. In doing so, the Panel is satisfied that the BGC acted consistently with the provisions of ICANN's Articles of Incorporation and Bylaws and that the Claimants complaints in this regard are not made out.

3. The denial by the BGC, on 18 November 2014, of the Reconsideration Request to have the CPE Panel decision in .eco reconsidered.

112. In conducting this analysis, the Panel has carefully considered the CPE report dated 6 October 2014, which determined that Big Room's community based application had prevailed, the Reconsideration Request dated 22 October 2014 and the BGC denial of the Reconsideration request dated 18 November 2014. In doing so, the Panel has considered whether the Board (through the BGC) has acted consistently with the provisions of ICANN's Articles of Incorporation and Bylaws.
113. The Panel is clear that, in doing so, it is required by ICANN's Bylaws to apply a defined standard of review focusing on:
- a. whether the BGC acted without conflict of interest in taking its decision?
 - b. whether the BGC exercised due diligence and care in having a reasonable amount of facts in front of them?; and
 - c. whether the BGC exercised independent judgment in taking the decision, believed to be in the best interests of the company?
114. As with the previous two issues, no allegation of conflict of interest has been made by the Claimants and the Panel has no information or documentation upon which it could reach any view as to whether a conflict of interest existed or not. In conclusion, so far as that requirement is concerned, the Panel can make no finding.
115. As it did in considering the first issue, and for the reasons stated there, the Panel considers that if the BGC is charged with considering whether the EIU correctly applied ICANN policies (which ICANN accepts it is), then it needs to look into how the standard was applied. It is not sufficient to limit the review to the question of whether mention was made of the relevant policy. The BGC needs to have a reasonable degree of assurance that the EIU has correctly the applied the policy.
116. In their Reconsideration Request of 22 October 2014, at page 10, the Claimants say:

“Requester therefore requests ICANN in accordance with its Reconsideration Request process to:

- Reconsider the Determination, and in particular not award a passing score in view of the [CPE] criteria set out in the [Guidebook] for the reasons expressed in this Reconsideration Request and any reasons, arguments and information to be supplemented to this Request or forming part of a new Reconsideration Request in the future;*
- Reconsider ICANN’s decision that the Requester’s application for the .eco gTLD “Will not Proceed” to contracting; and*
- Restore the “Application Status” of the Requester’s application and the Application submitted by the Applicant to “Evaluation Complete”, their respective “Contention Resolution Statuses” to “Active”, and their “Contention Resolution Result” to “In Contention”.*”

117. Earlier in the Reconsideration Request (at pages 2 and 3), the Claimants argue that the concept “eco” is much broader than the community definition provided by Big Room in its community based application and say:

“the community definition contained in the Application...- in Requester’s opinion does not meet the criteria for community-based gTLDs that have been set out in ICANN’s Applicant Guidebook”

118. The Reconsideration Request goes on to give the reasons for this assertion, which can be summarised as:

- there is no clear and unambiguous definition of the community that Big Room’s community based application is intended to serve;
- the string .eco does not closely describe the community or the community members and over reaches substantially beyond the community referred to in the application;
- the term .eco has various meanings that are completely unrelated to the community determined in Big Room’s application; and
- the CPE Panel failed to detail the letters of opposition received.

119. The BGC’s denial states:

“The Requesters do not identify any misapplication of any policy or procedure by ICANN or the CPE Panel. Rather the Requesters simply disagree with the CPE Panel’s determination and scoring of the Application, and challenge the substantive merits of the CPE Panel’s Report. Specifically, the Requesters contend that the CPE Panel improperly applied the first, second and fourth CPE criteria set forth in the [Guidebook].

Substantive disagreement with the CPE Panel's Report, however, is not a basis for reconsideration. Since the Requesters have failed to demonstrate that the CPE Panel acted in contravention of any established policy or procedure in rendering the Report, the BGC concludes that [the Reconsideration Request] be denied"

120. The BGC denial then goes on to examine whether the EIU properly applied the Guidebook scoring guidelines and CPE Guidelines in respect of each of the items raised by the Claimants and concludes, in respect of each one, that *"the CPE Panel accurately described and applied the Guidebook scoring guidelines and CPE Guidelines"*.
121. In considering the original CPE report of 6 October 2014, the Reconsideration Request dated 22 October 2014 and the BGC denial of the Reconsideration Request dated 18 November 2014, the Panel has looked closely at whether the BGC simply undertook an administrative "box ticking" exercise to see whether mention was made of the relevant policy or procedure in denying the Reconsideration Request, or whether, as the Panel considers the BGC is required to do, it looked into how the relevant policy or procedure was actually applied by the EIU, and whether, in doing so, the BGC could have a reasonable degree of assurance that the EIU had correctly the applied the policy or procedure.
122. Unlike the Reconsideration Request in respect of the .hotel CPE determination, this Reconsideration Request does not raise questions as to whether the EIU followed ICANN policy and procedure. It is, indeed, correctly categorised by the BGC in its denial as a statement of substantive disagreement with the EIU's determination. Nevertheless, it is clear from the BGC determination document of 18 November 2014 as a whole that the BGC did, properly, consider how the relevant policy or procedure was actually applied by the EIU, and whether, in doing so, the BGC could have a reasonable degree of assurance that the EIU had correctly the applied the policy or procedure.
123. In doing so, the Panel is satisfied that the BGC acted consistently with the provisions of ICANN's Articles of Incorporation and Bylaws and that the Claimants complaints in this regard are not made out.

4. The continued upholding of HTLD's application for .hotel in the light of the matters raised in Crowell & Moring's letter of 5 June 2015.

124. Crowell & Moring's letter of 5 June 2015 is addressed for the attention of the Members of the ICANN Board and to Mr Akram Atallah, the President of ICANN's GDD. It makes a number of serious allegations arising from a portal

configuration issue, which ICANN has admitted occurred, and which can be summarised as follows:

- The user credentials of someone called D. Krischenowski were used to conduct over 60 searches resulting in over 200 unauthorized access incidents across an unknown number of gTLDs;
- these searches resulted in the obtaining of sensitive and confidential business information concerning several of the .hotel applicants;
- D. Krischenowski is associated with HTLD; and
- the user of those credentials was deliberately looking for sensitive and confidential business information concerning competing applicants.

125. The letter then goes on to ask for certain information in relation to the portal configuration issue.

126. The letter is clearly addressed to the Members of the Board of ICANN and its President of GDD and asks, largely, for information and not documentation. It appears that the letter was also submitted through ICANN's DIDP and, in consequence, ICANN appears solely to have treated the letter as a DIDP request. Accordingly, on 5 July 2015, the ICANN staff responded in a document entitled "*Response to Documentary Information Disclosure Policy Request*" and stated:

"ICANN's DIDP is limited to requests for documentary information already in existence within ICANN that is not publicly available. Simple requests for non documentary information are not appropriate DIDP requests".

127. As is clear from the face of the letter itself, it is not simply a DIDP request. The attempt by ICANN to treat it solely as such represents, at best, a basic error on its part and, at worst, an attempt by the Board to avoid dealing with what is clearly a serious and sensitive issue, which goes to the integrity of the application process for the .hotel gTLD.

128. To be fair, the DIDP Response goes on to provide much detail as to what ICANN has done in the way of forensic investigation and what that has revealed. It does not, however, state whether any consideration has been given as to the impact on the integrity of the application process for the .hotel gTLD.

129. In the Reply in the .hotel IRP, the Claimants have argued that, in the circumstances, HTLD's application for .hotel must be denied and have asked the Panel to declare that ICANN must reject HTLD's application.

130. In its Sur Reply, ICANN argues that the Claimants have failed to identify any Board action or inaction in this regard that violates any of ICANN's Articles of Incorporation or Bylaws. ICANN states in the Sur Reply that:

“The only Board action (or inaction) that the Claimants vaguely allude to in their Reply is that the Board did not directly respond to a letter addressed to both ICANN Board and staff requesting disclosure of information regarding the Portal Configuration issue. But, it was not the Board's responsibility to do so, and ICANN's Articles and Bylaws do not mandate that the Board reply to every letter it receives”.

131. In the context of the clear problems caused by ICANN's portal configuration problem, and the serious allegations contained in the letter of 5 June 2015, this is, in the view of the Panel, a specious argument.

132. In its Sur Reply, ICANN goes on to say:

“Although Claimants Argue that [HTLD] “is closely linked with individuals who have misused, or have permitted the misuse of, their user credentials...this argument is unsupported and asserts no conduct by the ICANN Board. Claimants have failed to demonstrate that the Board has a duty to act with respect to Claimants' beliefs as to what the Board should do.”

133. Article III.1 of ICANN's Bylaws provides that *“ICANN and its constituent bodies shall operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness.”*

134. The approach taken by the ICANN Board so far in relation to this issue does not, in the view of the Panel, comply with this Bylaw. It is not clear if ICANN has properly investigated the allegation of association between HTLD and D. Krischenowski and, if it has, what conclusions it has reached. Openness and transparency, in the light of such serious allegations, require that it should, and that it should make public the fact of the investigation and the result thereof.

135. The fact that no such investigation has taken place, or if it has the results have not been published, could, in the view of the Panel, amount to Board inaction and fall within the remit of the Panel. However, at the hearing, the Panel was assured by ICANN's representative, that the matter was still under consideration by the Board and that the Panel should not view a failure to act, as at the date of the hearing, as inaction on the part of the Board.

136. In view of the fact that this issue was raised on 5 June 2015 by the Claimants, the Panel is of the view that it cannot remain under consideration by the Board

of ICANN for much longer and that, if no further, appropriate action has been taken by the date of this Declaration, the failure of the Board to act could well amount to inaction on its part.

137. This issue was raised after this IRP process had commenced and has only been the subject of relatively brief argument by the Claimants in their Reply and by ICANN in its Sur Reply. At the hearing, not only did ICANN's representative inform the Panel that the issue was still under consideration by the Board of ICANN, but he also gave an undertaking on behalf of ICANN that if a subsequent IRP was brought in relation to this issue, ICANN would not seek to argue that it had already been adjudicated upon by this Panel.

138. In all the circumstances, the Panel has concluded it should not make a declaration on this issue in this IRP, but that it should remain open to be considered at a future IRP should one be commenced in respect of this issue.

5. The attempt by Minds + Machines Group Limited to join in the .hotel IRP.

139. As has already been stated, in the Claimants' Reply in the .hotel IRP, Minds + Machines Group Limited stated it wished to join in the proceedings and, in its Sur Reply, ICANN objected, relying on Article 7 of the ICDR International Dispute Resolution Procedures.

140. Article 7 provides that "[n]o *additional party may be joined after the appointment of any arbitrator, unless all parties, including the additional party, otherwise agree*". There is nothing in the ICANN Supplementary Procedures that is inconsistent with this provision and, accordingly, it governs the procedure of this IRP.

141. Minds + Machines Group Limited applied for the .hotel gTLD and there does not appear to be any reason why, should it have so wished, it could not have joined with the Claimants in bringing the .hotel IRP. It did not do so and no reason has been given for its failure to do so. Accordingly, pursuant to Article IV.3.3 of ICANN's Bylaws, it is now time barred from doing so.

142. In all the circumstances, the Panel rejects the request of Minds + Machines Group Limited to join this IRP.

J. Conclusion

143. Many general complaints were made by the Claimants as to ICANN's selection process in appointing EIU as the CPE Panel, the process actually followed by

EIU in considering community based applications, and the provisions of the Guidebook. However, the Claimants, sensibly, agreed at the hearing on 7 December 2015 that relief was not being sought in respect of these issues.

144. Nevertheless, a number of the more general issues raised by the Claimants and, indeed, some of the statements made by ICANN at the hearing, give the Panel cause for concern, which it wishes to record here and to which it trusts the ICANN Board will give due consideration.
145. At the hearing, ICANN submitted that it was not subject to a due process obligation neither pursuant to its Articles of Incorporation and Bylaws, nor pursuant to general international legal principles, notwithstanding Article 4 of its Articles of Incorporation. If this was intended as a general statement, the Panel finds this most surprising in the context of the role ICANN fulfils and the language of Article 4 itself. ICANN is a California non profit corporation but Article 4 of the Articles of Incorporation refers to the principles of international law and local law and to the use of open and transparent processes to enable competition and open entry in Internet markets. The Panel understands the importance of administrative procedures, such as the CPE discussed below. The Panel also understands that the EIU and the BGC themselves are not adjudicatory but administrative bodies. Nevertheless, the Panel invites the Board to affirm that, to the extent possible, and compatible with the circumstances and the objects to be achieved by ICANN, transparency and administrative due process should be applicable.
146. Also, at the hearing, ICANN confirmed that, notwithstanding that different individual evaluators can be used to consider different CPE applications, the EIU has no process for comparing the outcome of one CPE evaluation with another in order to ensure consistency. It further confirmed that ICANN itself has no quality review or control process, which compares the determinations of the EIU on CPE applications. Much was made in this IRP of the inconsistencies, or at least apparent inconsistencies, between the outcomes of different CPE evaluations by the EIU, some of which, on the basis solely of the arguments provided by the Claimants, have some merit.
147. The CPE process for this round of gTLDs is almost at an end, so there is little or nothing that ICANN can do now, but the Panel feels strongly that there needs to be a consistency of approach in making CPE evaluations and if different applications are being evaluated by different individual evaluators, some form of outcome comparison, quality review or quality control procedure needs to be in place to ensure consistency, both of approach and marking, by evaluators. As was seen in the .eco evaluation, where a single mark is the difference between prevailing at CPE and not, there needs to be a system in

place that ensures that marks are allocated on a consistent and predictable basis by different individual evaluators.

148. Further, as has already been stated:

In its letter of 4 December 2015, ICANN confirmed that the EIU's determinations are presumptively final, and the Board's review on reconsideration is not substantive, but rather is limited to whether the EIU followed established policy or procedure.

At the hearing on 7 December 2015, ICANN confirmed that the core values, which apply to ICANN by virtue of its Bylaws, have not been imposed contractually on the EIU, and the EIU are not, in consequence, subject to them.

149. The combination of these statements gives cause for concern to the Panel. As has already been noted, Article I.2 of the Bylaws states:

“Any ICANN body making a recommendation or decision shall exercise its judgment to determine which core values are most relevant and how they apply to the specific circumstances of the case at hand, and to determine, if necessary, an appropriate and defensible balance among competing values.”

150. The Panel fails to see why the EIU is not mandated to apply ICANN's core values in making its determinations whilst, obviously, taking into account the limits on direct application of all the core values as reflected in that paragraph of the Bylaws. Accordingly, the Panel suggests that the ICANN Board should ensure that there is a flow through of the application of ICANN's core values to entities such as the EIU.

151. Having expressed the Panel's concern at these general issues, the Panel now turns to the specific issues which, ultimately, it was asked to consider in this IRP. The Panel has found, in relation to each of the specific issues raised in the .hotel and .eco IRPs that it is satisfied that the BGC acted consistently with the provisions of ICANN's Articles of Incorporation and Bylaws, and that the Claimants' complaints have not been made out.

152. In consequence, the Panel will not be making any of the declarations sought by the Claimants.

K. The Prevailing Party and Costs

153. Article IV.3.18 of the Bylaws states:

“The IRP Panel shall make its declaration based solely on the documentation, supporting materials, and arguments submitted by the parties, and in its declaration shall specifically designate the prevailing party. The party not prevailing shall ordinarily be responsible for bearing all the costs of the IRP Provider, but in an extraordinary case the IRP Panel may in its declaration allocate up to half of the costs of the IRP Provider to the prevailing party based upon the circumstances including a consideration of the reasonableness of the parties positions and their contribution to the public interest. Each party to the IRP shall bear its own expenses.”

154. The Panel confirms that it makes its declaration based solely on the documentation, supporting materials and arguments submitted by the parties and that on the basis of that documentation, supporting material and arguments, has concluded that ICANN is the prevailing party, both in respect of the .hotel IRP and the .eco IRP.

155. Although the Claimants have raised some general issues of concern as to the CPE process, the IRP in relation to the .hotel CPE evaluation was always going to fail given the clear and thorough reasoning adopted by the BGC in its denial of the Reconsideration Request and, although the ICANN staff could have responded in a way that made it explicitly clear that they had followed the DIDP Process in rejecting the Claimants’ DIDP request in the .hotel IRP, again the IRP in relation to that rejection was always going to fail given the clarification by the BGC, in its denial of the Reconsideration Request, of the process that was followed.

156. As for the .eco IRP, it is clear that the Reconsideration Request was misconceived and was little more than an attempt to appeal the CPE decision. Again, therefore, the .eco IRP was always going to fail.

157. Finally, although the letter from Crowell & Moring of 5 June 2015 raises some very serious issues, which the Panel considers the ICANN Board needs to address, in the end, the Panel has not had to adjudicate on this issue.

158. In conclusion, therefore, whilst the Panel has declared ICANN to be the prevailing party, the Claimants in this IRP have raised a number of serious issues which give cause for concern and which the Panel considers the Board need to address. In the circumstances, the Panel considers that the Claimants’

contribution to the public interest merits ICANN bearing half of the costs of the IRP Provider, which is the ICDR.

159. Article IV.3.18 provides that “[e]ach party to the IRP shall bear its own expenses”. Rule 11 of ICANN’s Supplementary Procedures provides:

“In the event the Requestor has not availed itself, in good faith, of the cooperative engagement or conciliation process, and the Requestor is not successful in the Independent Review, the IRP Panel must award ICANN all reasonable fees and costs incurred by ICANN in the IRP, including legal fees”

160. ICANN has not sought to argue that any of the Claimants failed to enter into the Cooperative Engagement Process in good faith, and there is no evidence of this in the materials before the Panel. In consequence, the panel considers that, in accordance with Article IV.3.18 of the Bylaws, each side shall bear their own expenses including legal fees.

FOR THE FORGOING REASONS, the Panel hereby:

- (1) Declares that the IRP Request made in relation to the .hotel gTLD by Despegar Online SRL, Donuts Inc., Famous Four Media Limited, Fegistry LLC and Radix FZC is denied;
- (2) Designates ICANN as the prevailing party in the .hotel IRP;
- (3) Declares that the IRP Request made in relation to .eco gTLD by Little Birch, LLC and Minds + Machines Group Limited is denied;
- (4) Designates ICANN as the prevailing party in the .eco IRP;
- (5) Declares that the fees and expenses of the IRP Panel members, totalling US\$113,351.52, and the fees and expenses of the ICDR, totalling US\$11,500.00, shall be born as to half by ICANN, and as to the other half collectively by Despegar Online SRL, Donuts Inc., Famous Four Media Limited, Fegistry LLC, Radix FZC, Little Birch, LLC and Minds +Machines Group Limited (“Applicants”). Therefore, ICANN shall reimburse the Applicants collectively the sum of \$5,750.00 representing that portion of said fees and expenses in excess of the apportioned costs previously incurred by the Applicants; and
- (6) This Final Declaration may be executed in any number of counterparts, each of which shall be deemed an original, and all of which together shall constitute the Final Declaration of this IRP Panel.

ICANN (Internet Corporation for Assigned Names and Numbers) welcomes over 40 diverse practitioners, subject matter experts, and thought leaders as members of the [ICANN \(Internet Corporation for Assigned Names and Numbers\) Strategy Panels \(Strategy Panels\) \(/en/news/announcements/announcement-15jul13-en.htm\)](#) to support development of ICANN (Internet Corporation for Assigned Names and Numbers)'s strategic and operational plans.

ICANN (Internet Corporation for Assigned Names and Numbers) Strategy Panels (Strategy Panels) will serve as an integral part of a framework for cross-community dialogue on strategic matters. Designed to conduct work in critical strategic [areas identified by the community, Board, and staff \(/en/about/planning/strategic-engagement/conversation-input-24jun13-en.pdf\)](#) [PDF, 209 KB], the work of these

panels will build on public input being generated to inform a new, overarching

vision and five-year strategic plan. As [illustrated \(/sites/default/files/strategy-panels-timeline-1400x667-14oct13-en.png\)](/sites/default/files/strategy-panels-timeline-1400x667-14oct13-en.png), there will be extensive information sharing and community engagement with the Panels. Panel output will be posted for public comments and community discussion online and at ICANN (Internet Corporation for Assigned Names and Numbers) meetings, before being factored into ICANN (Internet Corporation for Assigned Names and Numbers)'s [strategic and/or operating plans \(/en/about/planning/strategic-engagement\)](/en/about/planning/strategic-engagement), as appropriate.

A video interview with Theresa Swinehart, Senior Advisor to the President on Strategy, is available [here \(/en/news/press/kits/video-swinehart-strategy-14oct13-en.htm\)](/en/news/press/kits/video-swinehart-strategy-14oct13-en.htm).

[Identifier Technology Innovation \(/en/about/planning/strategic-engagement/identifier-technology\)](/en/about/planning/strategic-engagement/identifier-technology)

Chair

[Paul Mockapetris \(/en/about/planning/strategic-engagement/bios#paul-mockapetris\)](/en/about/planning/strategic-engagement/bios#paul-mockapetris) — Inventor, Domain Name (Domain Name) System

Members

[Jari Arkko \(/en/about/planning/strategic-engagement/identifier-technology/bios#arkko\)](/en/about/planning/strategic-engagement/identifier-technology/bios#arkko) — Chair, Internet Engineering Task Force

[Rick Boivie \(/en/about/planning/strategic-engagement/identifier-technology/bios#boivie\)](/en/about/planning/strategic-engagement/identifier-technology/bios#boivie) — IBM Thomas J. Watson Research Center¹

[Anne-Marie Eklund-Löwinder \(/en/about/planning/strategic-engagement/identifier-technology/bios#eklund-lowinder\)](/en/about/planning/strategic-engagement/identifier-technology/bios#eklund-lowinder) — Security (Security – Security, Stability and Resiliency (SSR))Manager, The Internet Infrastructure Foundation

[Geoff Huston \(/en/about/planning/strategic-engagement/identifier-technology/bios#huston\)](/en/about/planning/strategic-engagement/identifier-technology/bios#huston) — Chief Scientist, Asia-Pacific Network Information Center

[James Seng \(/en/about/planning/strategic-engagement/identifier-technology/bios#seng\)](/en/about/planning/strategic-engagement/identifier-technology/bios#seng) — CEO, Zodiac Holdings

[Paul Vixie \(/en/about/planning/strategic-engagement/identifier-technology/bios#vixie\)](/en/about/planning/strategic-engagement/identifier-technology/bios#vixie) — CEO, Farsight Security

[Lixia Zhang \(/en/about/planning/strategic-engagement/identifier-technology/bios#zhang\)](/en/about/planning/strategic-engagement/identifier-technology/bios#zhang) — Postel Chair of Computer Science, University of California Los Angeles

This panel is dedicated to strategizing engagement with the ICANN (Internet Corporation for Assigned Names and Numbers) community and public on technology matters. Its objectives include developing a technology roadmap for DNS (Domain Name System) and other identifiers, and providing a technology roadmap for ICANN (Internet Corporation for Assigned Names and Numbers) technical and security operations, including best practice recommendations and reference objects.

reference objects.

[ICANN \(Internet Corporation for Assigned Names and Numbers\) Multistakeholder Innovation \(/en/about/planning/strategic-engagement/multistakeholder-innovation\)](#)

Chair

[Beth Simone Noveck \(/en/about/planning/strategic-engagement/bios#beth-simone-noveck\)](#) — Founder and Director, The Governance Lab

Members

[Alison Gillwald \(/en/about/planning/strategic-engagement/multistakeholder-innovation/bios#gillwald\)](#) — Executive Director, Research ICT Africa

[Joi Ito \(/en/about/planning/strategic-engagement/multistakeholder-innovation/bios#ito\)](#) — Director, Massachusetts Institute of Technology Media Lab

[Karim Lakhani \(/en/about/planning/strategic-engagement/multistakeholder-innovation/bios#lakhani\)](#) — Lumry Family Associate Professor of Business Administration, Harvard University

[Guo Liang \(/en/about/planning/strategic-engagement/multistakeholder-innovation/bios#liang\)](#) — Director, China Internet Project

[Geoff Mulgan \(/en/about/planning/strategic-engagement/multistakeholder-innovation/bios#mulgan\)](#) — Chief Executive, National Endowment for Science Technology and the Arts

[Bitange Ndemo \(/en/about/planning/strategic-engagement/multistakeholder-innovation/bios#ndemo\)](#) — Former PS of the Ministry of Communications

This panel is tasked with examining how Internet policy related to unique identifiers might be best managed. It will propose new models for broad, inclusive engagement, consensus-based policymaking, and institutional structures to support such enhanced functions. In addition, it will design processes, tools and platforms to enable the global [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) community to engage in these new forms of participatory decision-making.

[Public Responsibility Framework \(/en/about/planning/strategic-engagement/public-responsibility\)](#)

Chair

[Nii Quaynor \(/en/about/planning/strategic-engagement/bios#nii-quaynor\)](#) — Founding Chairman, [AfriNIC \(African NIC\)](#)

Members

[Tim Berners-Lee \(/en/about/planning/strategic-engagement/public-responsibility/bios#berners-lee\)](/en/about/planning/strategic-engagement/public-responsibility/bios#berners-lee) — Director, World Wide Web Consortium

[Soumitra Dutta \(/en/about/planning/strategic-engagement/public-responsibility/bios#dutta\)](/en/about/planning/strategic-engagement/public-responsibility/bios#dutta) — Dean of Johnson Graduate School of Management, Cornell University

[Bob Hinden \(/en/about/planning/strategic-engagement/public-responsibility/bios#hinden\)](/en/about/planning/strategic-engagement/public-responsibility/bios#hinden) — Check Point Fellow, Check Point Software Technologies

[Blake Irving \(/en/about/planning/strategic-engagement/public-responsibility/bios#irving\)](/en/about/planning/strategic-engagement/public-responsibility/bios#irving) — CEO, Go Daddy

[Nevine Tewfik \(/en/about/planning/strategic-engagement/public-responsibility/bios#tewfik\)](/en/about/planning/strategic-engagement/public-responsibility/bios#tewfik) — Director, Cyber Peace Initiative

[Ra \(Registrar\)úl Zambrano \(/en/about/planning/strategic-engagement/public-responsibility/bios#zambrano\)](/en/about/planning/strategic-engagement/public-responsibility/bios#zambrano) — Team Leader, Inclusive Participation and Global Policy Adviser in the ICT for Development and e-governance team, United Nations Development Program

This panel will propose ICANN (Internet Corporation for Assigned Names and Numbers)'s role and five-year strategic objectives and milestones in promoting the global public interest. It will examine ways of building out ICANN (Internet Corporation for Assigned Names and Numbers)'s base of internationally diverse, knowledgeable and engaged stakeholders, especially within the developing world. It will also propose a framework for achieving those objectives and milestones as well providing advice on specific programs and initiatives.

ICANN (Internet Corporation for Assigned Names and Numbers)'s Role in the Internet Governance Ecosystem (Internet Governance Ecosystem) (/en/about/planning/strategic-engagement/governance-ecosystem)

Chair

[Vinton Cerf \(/en/about/planning/strategic-engagement/bios#vinton-cerf\)](/en/about/planning/strategic-engagement/bios#vinton-cerf) — VP and Chief Internet Evangelist, Google

Members

[Adiel Akplogan \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#akplogan\)](/en/about/planning/strategic-engagement/governance-ecosystem/bios#akplogan) — CEO, AfriNIC (African NIC) Ltd

[Michael Barrett \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#barrett\)](/en/about/planning/strategic-engagement/governance-ecosystem/bios#barrett) — President, The FIDO Alliance

[Hartmut Glaser \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#glaser\)](/en/about/planning/strategic-engagement/governance-ecosystem/bios#glaser) — Executive Secretary, Brazilian Internet Steering Committee/CGI.br

[Hagen Hultsch \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#hultsch\)](#) — Zimory Chairman of the Board
[Janis Karklins \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#karklins\)](#) — Assistant Director General of Communication and Information, United Nations Educational, Scientific & Cultural Organization
[Wolfgang Kleinwächter \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#kleinwachter\)](#) ² — Professor of International Communication Policy and Regulation, University of Aarhus
[Luis Magalhães \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#magalhaes\)](#) — Professor at Instituto Superior Técnico, University of Lisbon
[Debbie Monahan \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#monahan\)](#) — Domain Names Commissioner, Domain Name (Domain Name) Commission Ltd, part of the InternetNZ Group
[Alice Munyua \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#munyua\)](#) — Chair of the Kenya Internet Governance Steering Committee
[P.J. Narayanan \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#narayanan\)](#) — Director, Hyderabad International Institute of Information Technology
[Alejandro Pisanty \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#pisanty\)](#) — Director General, Academic Computing Service of the National University of Mexico
[Carlton Samuels \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#samuels\)](#) — Former Secretariat, Latin America and Caribbean Regional At-Large Advisory Organization
[Ismail Serageldin \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#serageldin\)](#) — Director, Library of Alexandria
[Pindar Wong \(/en/about/planning/strategic-engagement/governance-ecosystem/bios#wong\)](#) — Chairman VeriFi (Hong Kong) Ltd

The [previously announced \(/en/news/announcements/announcement-15jul13-en.htm\)](#) "Strategy Panel on [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#)'s Role in the Internet Organizations' Ecosystem" and the "Strategy Panel on the Role of [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) in the Future of Internet Governance" have been integrated given the topics, and are now covered under this Strategy Panel on "[ICANN \(Internet Corporation for Assigned Names and Numbers\)](#)'s Role in the Internet Governance Ecosystem (Internet Governance Ecosystem)." This panel will review the assumptions, linkages and frameworks that dictate [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#)'s responsibilities in the current Internet ecosystem. It will seek insights into ways to maintain and enhance [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#)'s stewardship of the evolving ecosystem while cultivating thought leadership on ways in which [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) can serve a complex set of Internet constituencies

CONTRIBUTORS

The 5th panel originally identified will be refocused and is expected to be forthcoming later this year.

¹ Joined the panel on *25 October 2013*.

² With Wolfgang Kleinwächter's selection to the ICANN (Internet Corporation for Assigned Names and Numbers) Board, Wolfgang Kleinwächter has stepped down from the panel and we look forward to his and others contributions to the public participation of this panel (16 November 2013).

Exhibit DIDP A108

CV of The Rt. Hon. Professor Sir Robin Jacob

1. I am the Hugh Laddie Professor of Intellectual Property Law at University College London.

Academic studies and early legal career (1960-1967)

2. From 1960 to 1963 I read Natural Sciences (mainly physics) at Trinity College, Cambridge. I then read for the Bar and simultaneously took a law degree. I was called to the Bar by Grays Inn in 1965 and graduated from the London School of Economics (of which I have been a Governor for about 15 years) in 1967.
3. After pupillage (the Bar's name for an apprenticeship) I entered practice as a barrister practising mainly but not exclusively in all forms of intellectual property in 1968. I was in the Chambers of Thomas Blanco White QC and succeeded him as Head of Chambers when he eventually retired in about 1989.

Legal career as a barrister (1965-1993)

4. In 1976 I was appointed by the Attorney-General as the Junior Counsel to the Treasury in Patent matters. In practice this meant that I handled all the Government's intellectual property cases. I represented the Patent Office in all court proceedings up to and including the House of Lords (which is what our highest court was then called) as well as the UK Government in IP cases before the European Court of Justice. I was also the principal advisor for all Government departments in relation to intellectual property cases.
5. In 1981 I 'took silk', that is to say was appointed a Queen's Counsel. I continued in practice at the Patent Bar acting for private clients. In about 1987 I was elected Chairman of the Patent Bar Association (now more appropriately called the Intellectual Property Bar Association). My practice became quite international: I represented clients before the courts of Hong Kong, Singapore and Australia (I am a Queen's Counsel of New South Wales, Australia) as well as the Competition-Directorate of the European Commission. I often

visited the USA to see clients (my first visit was in 1974). In 2007 I was appointed to hear appeals from the Trade Marks Office against refusals to register trade marks and in 1989 I was appointed Deputy Chairman of the Copyright Tribunal (both of these were part-time only). I continued in practice meanwhile.

Career as a High Court Judge (1993-2003)

6. In 1993 I was appointed a High Court judge. I sat in the Chancery Division, part of which consists of the Patents Court (the main judges of that court have particular experience in patents and almost invariably a science degree). The Chancery Division deals with a wide variety of commercial and property related matters such as tax, company law, insolvency, trusts, wills, land law and probate. It also deals with many contractual disputes and of course disputes about IP licensing of which I heard several.
7. Intellectual Property cases are assigned to the Chancery Division. From the outset of my judicial career, I heard and decided many such cases. I have never counted their number but it must run into several hundreds, many of which were patent cases. A search in the BAILII (British and Irish Legal Information website, www.bailii.org under the name "Mr Justice Jacob" produces 690 results. These are not all my decisions for the results will include decisions of other courts which refer to my first instance judgments. But most such first instance judgments will be there. Some early ones may be missing because pre-internet ones are not on the BAILII database. From 1997 to 2001 I was the Supervising Chancery Judge for Birmingham, Bristol and Cardiff which meant I was in charge of Chancery matters in those cities and their associated Circuits and heard the most important cases there. From 1995 until that assignment and thereafter I was the Judge in Charge of the Patents List.

Career as a Court of Appeal Judge (2003-2011)

8. In 2003 I was appointed a "Lord Justice of Appeal," the formal title of a judge of the Court of Appeal of England and Wales. From then until I retired in May 2011 I was in charge of the Intellectual Property List and sat on nearly all

IP cases in the Court of Appeal. A BAILII search produces 504 results. Again not all these are my judgments but I estimate that about half are.

Academic career

9. In early 2011 the opportunity of my present Chair came up. Although I could have stayed in the Court of Appeal for another 5 years (when I would have reached 75) it struck me that here was an opportunity for a new career and challenges. So, with some reluctance, for I was very happy there, I retired from the Court. I continue to sit there from time to time. Some English retired judges (who, is decided by the Lord Chief Justice) are asked back on a daily ad hoc basis. I do about three weeks sitting a year, mainly but not only in IP cases.
10. I am currently the President of the Intellectual Property Judges Association (members are patent judges of European countries).

Extra-judicial activities

11. I have also done many things in the law extra-judicially. In about 1987 I was made a “Bencher” of Grays Inn, one of the four Inns of Court. The Benchers are the governing body. I was Treasurer of the Inn (“Treasurer” was the name given in mediaeval times to the head of an organisation) in 2007. In 2011 my fellow European Judges elected me President of the Intellectual Property Judges’ Association, an association of European patent judges. I am regularly consulted on IP matters by the UK government and the European Commission, most recently in the case of the now-stalled possible revision of the Enforcement Directive (2004/48/EC).
12. I have written extensively on all aspects of Intellectual Property Law as well as other legal subjects. There is rather a lot of this. Attached hereto is a list of most of my publications see Annex 1. It is not complete I have not been that astute to check which lectures have been published and which not.
13. I am also a regular lecturer at conferences. In 2012 for instance I gave a lecture in Singapore (addressing the Asian Patent Attorneys’ Association);

Oxford University (conference about the Common Law of Intellectual Property); a conference in Zurich for INGRES (an association of Swiss IP lawyers) and Basel (the Hoffmann-La Roche lecture); a conference in Brussels organised by OpenForum Europe; another conference in Oxford concerning the Max Planck study of the European Trade Mark system; a trade mark conference in Nijmegen, Holland at the Radbooud University; the annual meeting of the Association of Law Teachers (of which I am President) in Oxford; the Fordham Annual Intellectual Property Conference in New York; an all day meeting in Columbia University with co-authors of a book for which I have written a chapter on copyright and parody (not yet published); the Managing Intellectual Property Conference in London (this year the magazine awarded me its lifetime achievement award); a conference in Brussels organised by the European Commission concerning possible amendment of the Directive on the Enforcement of IP Rights; the European Patent Judges' Symposium in Dublin; meetings with the highest court in Shanghai and the Supreme Court of China in Beijing; and two meetings of the Economic and Scientific Advisory Board (of which I am a member) of the European Patent Office. I sometimes take part in the European Patent Office's Patent Academy programme for teaching patent law to judges from countries which have limited experience of patents, for instance in November 2012 I acted as the judge in a mock trial run for Polish Judges in Krakow which was also filmed for the Academy's distance learning project.

14. In 2013 I have taught on a 1 week intensive course of IP law at the University of Melbourne, attended as an invited lecturer a meeting of ETSI (the mobile phone industry body for setting standards) and taken part in a 2 day teaching programme at the judicial training body of Romania.

Samsung and Google Sign Global Patent License Agreement

on January 27, 2014

| [SHARE](#)

Samsung Electronics and **Google** Inc. furthered their long-term cooperative partnership with a **global patent cross-license agreement** covering a broad range of technologies and business areas. The mutually beneficial agreement covers the two companies' existing patents as well as those filed over the **next 10 years**.

"We're pleased to enter into a cross-license with our partner Samsung," said Allen Lo, Deputy General Counsel for Patents at Google. "By working together on agreements like this, companies can reduce the potential for litigation and focus instead on innovation."

With this agreement, Samsung and Google gain access to each other's industry-leading patent portfolios, paving the way for deeper collaboration on research and development of current and future products and technologies.

"This agreement with Google is highly significant for the technology industry," said Dr. Seungho Ahn, the Head of Samsung's Intellectual Property Center. "Samsung and Google are showing the rest of the industry that there is more to gain from cooperating than engaging in unnecessary patent disputes."

1. Requester Information

Name: Constantinos Roussos

Address: Contact Information Redacted

Email: Contact Information Redacted with a copy to counsel,

2. Request for Reconsideration of: X Staff action/inaction

3. Description of specific action you are seeking to have reconsidered.

DotMusic is challenging ICANN's inaction on 5 issues:

1) In not properly supervising and ensuring that selected Expert candidates of the ICC (i) were appropriately qualified and knowledgeable about core subject matter to correctly apply standards for determining existence of a substantial clearly delineated community invoked which was expressing opposition; (ii) had no direct or indirect conflicts of interest; (iii) were adequately trained and informed to address unique issues presented by Community Objections and gTLD Program including material changes in AGB. The community expected that the ICC would be required to appoint and advise an appropriately qualified "expert," (not just an arbitrator) familiar with the unique needs and requirements presented in the gTLD Program, intellectual property and anti-competitive issues, and the needs and composition of the relevant community (i.e. a music expert for music-themed Objections) (Point 1);

2) In not recognizing the relevance and impact of the exceptional GAC Advice on Community Objection process, and not advising the ICC and Community Objection Experts on effects of new binding contractual material changes in the Program arising from GAC Toronto and Beijing Communique and subsequent GAC Advice: PICs, GAC Category 1 Enhanced Safeguards, Responses to GAC Advice, Board Resolutions, Applicant position Material Changes through their GAC Advice Category 2 Exclusive Access Responses, and revisions to the new gTLD Registry Agreement¹ (the "Material Changes") These addressed GAC Concerns pertaining to exclusive

¹ 3(c) and 3(d) of Specification 11 provided that: (c) Registry Operator will operate the TLD in a transparent manner consistent with general principles of openness and non-discrimination by establishing, publishing and adhering to clear registration policies. (d) Registry Operator of a "Generic String" TLD may not impose eligibility criteria for registering names in the TLD that limit registrations exclusively to a single person or entity and/or that person's or entity's "Affiliates" [. . .]. "Generic String" means a string consisting of a word or term that denominates or describes a general class of goods, services, groups, organizations or things (New gTLD Registry Agreement, July 2nd, 2013, <https://www.icann.org/en/groups/board/documents/resolutions-new-gtld-02jul13-en.htm#1.d>).

access which were directly related to anti-competitive and enhanced safeguard issues (the “Safeguards”) raised in Community Objections. (Point 2);

3) In not creating an appropriate appeal process for Community Objections and denying parties procedures to protect their fundamental rights and legitimate interests, including preventing conflicts of interest, determinations based on applying contradictory standards and on false facts (Point 3).

4) ICANN (i) giving preferential treatment to .brand Applicants and all Applicants without Safeguards in their current applications. ICANN put in motion a process for Applicants to make material changes to their Applications in the form of PICs² and changes in Specification 13.³ This materially undermines the Legal Rights and Community Objection process, contention set neutrality and Applicant equal treatment, and (ii) giving preferential treatment to the String Confusion Objection process to introduce a review mechanism to address perceived inconsistent Expert Determinations limited to Determinations made on String Confusion objections for .CAR/.CARS and .CAM/.COM.⁴ Perceived inconsistent decisions in Community Objection process were not given same type of treatment (Point 4).

5) With respect to GAC Category 2 Advice Response, ICANN did not verify whether some Applications had exclusive access language. This allowed Applicants (e.g. .music LLC, 1-959-51046 – Annex J) to circumvent the change request requirement initiated by ICANN if objected-to Application (such as in the case of Amazon’s .music, .song and .tunes Applications which have to file change requests) contained exclusive access language if disclosed in Applicants’ GAC Response.⁵ In cases of a clear discrepancy between what the Application states and what the objected-to Applicant provided in their Response, ICANN did not taken any action to ensure that these Applicants are required to submit a change request because the Registry Agreement provides that registry operators of a "generic string" TLD may not impose eligibility criteria for registering

names in the TLD that limit registrations exclusively to a single person or entity and/or that person's or entity's "Affiliates" (Section 2.9(c) of Registry Agreement).

4. Date of action/inaction: Determinations were published on February 18th, 2014 (Annex A).

5. On what date did you become aware of action or that action would not be taken?

2/18/2014

6. Describe how you believe you are materially affected by the action or inaction:

ICANN's acceptance of the Expert Determination will allow .MUSIC and .BAND Applicants to proceed to delegation with policies that are unclear and undocumented. The Expert's determination is based on incorrect standards and incorrect information regarding standing of the Objector and the relevance (or in the Expert's determination, the lack thereof) of the GAC Advice. These two critical errors resulted in a flawed decision on Objectors' standing, and allowed the Expert to "avoid" evaluating and determining whether or not the stated Applications created material harm or whether they protected the interests of the affected community. The appropriate standard for standing was applied by other Experts in the case of sensitive strings such as .bank, .insurance, .sport, .sports .bank, .charity and .med (Applications which lacked Safeguards) and against exclusive access registries (such as .polo) with findings of material harm. All these Objections were upheld.⁶ (emphasis added)

DotMusic ("MUSIC") represented Objectors/Related-Objector Entities in Community Objections constituting clearly-delineated community invoked. The Objector American Association of Independent Music ("A2IM") represented its Members (both Labels and Associates), the U.S. Independent label music community and global independent music coalition. These clearly delineated community of established institutions expressing opposition – as evidenced by a public letter to ICANN⁷ by A2IM Coalition - included: Merlin (a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries focusing purely on the interests of the global independent music sector, pg.8), Worldwide Independent Network (representing label

⁶ <http://www.iccwbo.org/products-and-services/arbitration-and-adr/expertise/icann-new-gtld-dispute-resolution/expert-determination/>

⁷ <http://www.icann.org/en/news/correspondence/bengloff-to-crocker-et-al-06mar13-en.pdf>

creators in over 20 countries), Association of Independent Music (representing companies from largest and most respected labels in the world, Pg.6), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe representing 99% of micro, small and medium sized music actors,” Pg.7), who collectively constitute a majority of the independent music community globally invoked (emphasis added) to which strings are explicitly or implicitly targeted. Members of Objector, the International Federation of Arts Councils and Culture Agencies (“IFACCA”), include arts councils and government agencies (ministries of culture) from nearly 70 countries (“Affected Parties”). Both Objectors expressing opposition are clearly delineated and strongly associated with music-themed strings.

On 13th March, 2014, Objections (EXP/462/ICANN/79 (c. EXP/463/ICANN/80, EXP/467/ICANN/84, EXP/470/ICANN/87 EXP/477/ICANN/94), ICC EXP/474/ICANN/91, ICC EXP/459/ICANN/76, ICC EXP/460/ICANN/77) were filed against music-themed Applicants with (i) “open” .music and .band strings without enhanced safeguards to prevent abuse, piracy and protect copyright and intellectual property; or (ii) a discriminatory, anti-competitive exclusive-access registry for .music (the “Objections”) each of which were denied.

As to Point 1 – According to “Selection of Expert Panels” Section 3.4.4 of the new Applicant Guidebook⁸, the Objector(s) relied that the “panel will consist of appropriately qualified experts (emphasis added) appointed to each proceeding by the designated DRSP,” consistent with ICC’s language that “the ICC will constitute a pool of qualified candidates (emphasis added) who can be appointed as experts in the new gTLD proceedings.”⁹

The Determinations (the “Decisions”), demonstrated that Expert had limited on functions of the substantial clearly delineated community invoked and was ill-prepared to understand and address these unique issues by applying correct standards for standing.

The Expert’s qualifications¹⁰ reveal that, while a noted and highly respected expert, he is not an expert on music. None of the Expert’s nearly 50 publicly-listed publications focused on music-related issues or concerns. It also has come to the Objector(s) attention that there have been public

⁸ <http://newgtlds.icann.org/en/applicants/agb/objection-procedures-04jun12-en.pdf>

⁹ <http://www.iccwbo.org/Products-and-Services/Arbitration-and-ADR/Expertise/ICANN-New-gTLD-Dispute-Resolution/Experts/>

¹⁰ <http://www.ucl.ac.uk/laws/academics/profiles/index.shtml?jacob>

comments regarding potential conflicts of interest concerning the Expert and his relationship with Samsung. See e.g. (“U.K judge who issued extreme ruling for Samsung against Apple hired by Samsung”¹¹ and “Conflicts of interest are just classier with English accents”¹²). Further, U.S Government documents reveal Expert worked for Samsung (Annex K) after Panelist ruled in favor of Samsung against Apple in a patent case he was the Judge. Here, Google, an objected-to Applicant, is Samsung’s multi-billion dollar strategic business partner.¹³ Google’s Android has a 79% global market share¹⁴ with Samsung devices dominating 63% of those Android phones.¹⁵ Accordingly, there is a potential appearance of bias (with respect to Google) and ICANN and the ICC accordingly did not retain qualified expert candidates without potential conflicts of interest or those having the relevant experience or expertise to address the unique issues presented by the cases.

Other concerns include, firstly, Expert’s determination that Objectors had no standing in contradiction to AGB. The Expert’s rationale was whether “music” or “band” is a clearly delineated community covering all of mankind. **That is contrary to AGB standards which are whether the community invoked by the Objector(s) is a clearly delineated community (3.5.4)**. Expert’s rationale was also inconsistent with Board Governance Committee’s .CHARITY Re-consideration Decision.¹⁶

The issue is not whether the term “charity” defines a clearly delineated community. The issue, as set forth in the Guidebook, is whether the community invoked by the objector is a clearly delineated community. ...the Panel correctly applied the standards for determining whether the community invoked by the IO was a clearly delineated community. (Determination ¶116, Pg. 2)

Secondly, the Expert agreed with misleading and plainly erroneous statements made by objected-to Applicants **that “GAC Advice was irrelevant” which undermined GAC Advice’s critical relevance to the new gTLD Program despite the Objector(s) Additional Submission** (Annex B). Despite our correspondence, the Expert determined that ICANN did not take “any action” on GAC Advice (despite ICANN agreeing on a process to implement new material binding contractual amendments to “fix” Safeguard issues presented by Objectors) and that GAC Advice was

¹⁵ <http://www.localytics.com/blog/2013/fonblets-and-phablets-samsung-has-share-of-android-mobile-devices/>

¹⁶ <http://www.icann.org/en/groups/board/governance/reconsideration/14-3/determination-corn-lake-27feb14-en.pdf>, Pg.7

“irrelevant”:

What difference does it make?... Nor has ICANN yet taken any action on the advice. (e.g EXP/462/ICANN/79 Determination, ¶18, Pg. 7)... I accordingly hold that the GAC Advice is irrelevant to what I have to decide (e.g EXP/462/ICANN/79 Determination, ¶20, Pg. 7)

In a letter to GAC,¹⁷ the ICANN reiterated the exceptional relevancy of GAC Advice to the new gTLD Program as a “binding contractual obligation” for Applicants:

By implementing the GAC advice as a contractual obligation in the PIC Specification, the GAC’s advice (as implemented) has the weight of a binding contractual obligation.

As to Point 2: The Community Objection(s) filing pre-dated the Beijing Communique and raised the same concerns set forth by the GAC and subsequently agreed upon by ICANN NGPC Resolutions. After the Community Objection proceedings commenced, GAC and ICANN called into question “open” Applications that lacked enhanced safeguards for sensitive music-themed strings and an Application filed to run a generic music-themed gTLD as exclusive-access registry. This very question was presented by Objector at Objector’s significant expense. **ICANN should have taken appropriate measures to either: a) align the proceedings with GAC Advice and NGPC Resolutions in a consistent manner to accurately reflect new contracting provisions without harming Objector(s) whose concerns were aligned with Advice/Resolutions; b) ensure that the ICC and Experts were appropriately advised on the relevancy of GAC Advice/Resolutions and new AGB material changes in contracting.**

The AGB states that the “receipt of GAC advice will not toll the processing of any application (i.e., an application will not be suspended but will continue through the stages of the application process).” (AGB, Section 3.1). The Objectors did not ask to suspend the processing of the Objections but rather for ICANN to communicate such critical GAC Advice that was exceptional and agreed upon by the NGPC in those cases that such advice imitated both the opinion of GAC and ICANN and Objectors. It would be grossly unfair for ICANN to work towards implementing GAC Advice and new material contracting provisions to “fix” the same concerns expressed by the Objectors (i.e. giving the opportunity for objected-to applicants to submit material change PICs to circumvent Objections after seeing every other competitor’s publicly-available Application to

¹⁷ <http://www.icann.org/en/news/correspondence/crocker-to-dryden-10feb14-en.pdf> , Attachment B, Pg.7

“repair” and “fine-tune” their Application’s lack of safeguards to protect the public interest). As per AGB material changes¹⁸ provisions, it is such new material contractual changes for Applicants would be construed as material changes harming Objectors, 3rd-parties and Community Applicants who already had such safeguards in their Application. If such new amendments are implemented by ICANN as contractual obligations, immediately ICANN is liable for “material changes” harming 3rd-parties and Objectors, especially if those provisions were implemented to protect the public interest from the same concerns that were expressed by the Objectors in Objections that were dismissed (emphasis added). If the objected-to Applications were not going to cause a “likelihood of material” harm then why did ICANN agree to GAC Advice and to implement contractual provisions focusing on preventing the same harms expressed in Objections?

As to Point 3: Expert did not apply the AGB Rules on “standing” and relied on misleading and clearly erroneous statements in his Determinations’ rationale, despite Objector submitting clarifying letters and Additional Submissions to both the ICC and the Expert (Annex B, E, J, L).

AGB states that “established institutions associated with clearly delineated communities are eligible to file a community objection” and that the “community is strongly associated with the applied-for gTLD string” (3.2.2.4). In all cases the Expert agreed that Objectors were both “established institutions”:

To my mind A2IM is, on balance to be regarded as established” and “would be fanciful to hold that A2IM has no recognition whatever outside the U.S (e.g EXP/477/ICANN/94, Determination, ¶28, 9). “IFACCA is an established institution, I need not consider this point further” (e.g EXP/474/ICANN/91, ¶23, 7)

However, the Expert ignored the AGB and applied a contradictory test for standing focusing on whether the term defines a clearly delineated community not the Objectors. The issue, as set forth in the Guidebook, is whether the community invoked by the objector is a clearly delineated community (ICANN Board Governance Board, .CHARITY Re-Consideration). In contrast, the Expert incorrectly focused on the string as a generic word and a general “mankind” community, not the community invoked by the Objectors, creating a standard that can never be met since it is impossible to receive letters of support or opposition from all of “mankind” and use “mankind” as a standard for “strong association”:

¹⁸ <http://newgtlds.icann.org/en/applicants/customer-service/change-requests>

Music appeals to nearly all mankind... Just because there is one word covering all kinds of music does not make all mankind into a “music community” – the word will not stretch that far. There is no cohesion or relationship between all those concerned with creating, performing, recording or “consuming” music of all the different sorts known to man (e.g EXP/477/ICANN/94, ¶29, Pg. 9)

Further, the Expert acknowledged that he did not test whether the community invoked is a clearly delineated community or have an implicit/explicit interest in strings and determines that the only established institution eligible for standing has to “amount to a global music community for all mankind” not the “independent music community” or “ministries of culture governments and arts councils”:

If you took them all (Objector’s invoked clearly delineated community) as being a “community” (which I do not) they could only form a part of the global citizenry (all of mankind) which has an interest of any sort in music”...The Objectors “membership (even taken as a whole) cannot in any way be taken to amount to a global music community for all mankind (e.g EXP/477/ICANN/94, ¶30, P.10)

Also the Expert did not apply the standard for a clearly delineated community invoked by the Objector. In contradiction to the AGB, the Expert applied it in a generic sense:

The same generic word covers all music. But a generic word does not itself evidence anything which can be fairly be called a “community” even in the widest sense of the word. There is no public recognition of a music community locally or globally” (EXP/474/ICANN/91, ¶30, Pg. 9).

The AGB standard for standing is not to determine whether the generic word “band” or “music” is a community. As the Board Governance Committee pointed out in other determinations (e.g .gold and .charity), the test is not to determine whether a term is a community but to determine whether the established institution invoked expressing opposition is a clearly delineated community, is substantial and if it has a strong association with the string regardless whether targeting is direct (explicit) or indirect (implicit) i.e. not the Expert’s incorrect standard used that allowed the Expert to rationalize that “because a group of musicians may be called a “band” does not mean it forms anything which can be fairly be called a “community” of bands (EXP/460/ICANN/77, ¶32, Pg. 11). A “community of bands” is not the standard that must be proven. The Expert repeats this standard incorrectly:

Can all carious disparate types of groups of performers around the world who might fall with the description “band” be described as a community? I think not. Just because a group of musicians may be called a “band” does not mean it forms part of anything which can be fairly called a “community” of bands. (EXP/459/ICANN/76, ¶31, Pg. 9).

On one hand the Expert acknowledges that the “.band string is explicitly or implicitly targeted at

groups of musicians” and that Objector’s “members doubtless have an interest in the bands signed to them” but on the other hand uses the incorrect standard by stating that Objector’s “members are not themselves bands at all” and “that the interest is only indirect” (EXP/460/ICANN/77, ¶33, Pg. 11). The test is not to determine whether members of the established institution are “bands” or “music” or that an “indirect interest” in a “band” or “music” themed-string has no weight (in fact, “implicit” (or indirect) targeting is acceptable under the AGB). The appropriate test is whether the established institution has a strong association with the music-themed strings “band” or “music” regardless whether the targeting is explicit or implicit (emphasis added). According to the AGB, the standard is that the “application creates a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted” (AGB, 3.5.4) i.e. targeting “may be explicitly (directly) or implicitly (indirectly) targeted.” (emphasis added). According to the AGB, the Objectors did not have to prove the incorrect standard assumed by the Expert which was:

It is not proved that there is such a thing as a community of bands or that A2IM is “associated” with any bands, still less with a “clearly delineated community” of bands (EXP/459/ICANN/76, ¶35, Pg. 9).

The Expert disregarded the community invoked by Objectors and applied a test that no established institution can ever meet: “The community is effectively humankind” (EXP/474/ICANN/91, ¶31, 9).

Just as in the case of .sport and .charity, the Board Governance Committee correctly applied the correct standard for standing in the .gold Re-Consideration Request determination:

World Gold Council’s community objection, however, refers to the gold industry in general and not to the gold mining industry in particular.” (Id.) And as stated in the Guidebook, for a Community Objection to be successful, the objector must prove, among other “the community invoked by the objector is a clearly delineated community.” (Guidebook, §3.5.4; see also id. (“The objector must prove that the community expressing opposition can be regarded as a clearly delineated community”) (emphasis added)

Here, Objectors and their memberships and affiliations expressing opposition did not invoke the objection on behalf of the “global music community” or “all of mankind.” The Objectors’ clearly delineated community invoked that was expressing opposition did not describe itself as a being a “community” which was a “part of the global citizenry (all of mankind).” **The expressed opposition was on behalf of the independent music community (A2IM) and a federation of nearly 70 governments’ ministries of culture and arts councils (IFACCA). The clearly delineated membership of independent music community brought forward is the globally**

largest and most influential of its kind e.g. A2IM alone (not including IMPALA, Merlin, WIN, AIM and others which expressed opposition – emphasis added) collected 50% of all the Grammy Awards, the most globally-recognized music awards (Annex H). Furthermore, the clearly delineated “ministries of culture governments and arts councils” invoked also constitute substantial opposition. Both are strongly associated with strings and critical to the global, legal promotion and distribution of music (emphasis added).

Despite agreeing that both Objectors are “established institutions” the Expert refused to find that Objectors act as ”spokesperson[s] for [their] members.” This finding was made despite the Expert acknowledging both Objectors’ Mission Statements (e.g. Objector statements that it “will represent the Independent sector’s interests” (EXP/474/ICANN/79, ¶13, P.4 and P.5), The Expert also questioned the Objectors’ authority to represent members despite acknowledging that Objectors received letters of Objection support from their corresponding Board of Directors, including Objection support from Related-Objectors constituting the community invoked. The Expert also failed to consider evidence that both Objectors publicly and privately alerted their Board and all members in newsletters, even posting Objection details publicly.¹⁹ Not a single member expressed disagreement with Objectors’ actions.

No other Expert in the ICC Community Objection proceedings required letters from individual members of an established institution that was objecting except this Expert:

Although it exhibits letters of support from some of its members, there are none at all from any actual band or its manager (e.g EXP/459/ICANN/76, ¶32, Pg. 9)

Just in the case of Community Priority Evaluation (CPE),²⁰ letters from individuals that are not established institutions have no weight with Community Objections. The AGB has no inference of requesting letters from individual members that were not considered established institutions (emphasis added). We communicated this fact with the ICC and the Panel in writing (before and during the proceedings) and even alerted the Expert that if such letters were material we would provide them (Annex E). The ICC correctly agreed that the Rules did not have any language asking

¹⁹ <http://a2im.org/2013/02/04/call-to-action-please-write-icaan-about-how-music-should-be-administered/> and http://www.a2im.org/downloads/Music_US_Objection_Letter_Template.pdf and <http://www.ifacca.org/announcements/2013/02/27/express-your-view-applications-new-music-domain/>

²⁰ <http://newgtlds.icann.org/en/applicants/cpe/guidelines-27sep13-en.pdf>

Objector Related Entities / individual members to send letters to the Expert (Annex L). In context, ICANN never emails .COM registrants to determine whether Verisign's .COM registry should be renewed.²¹ ICANN itself would fail abysmally to meet such a test: ICANN received less than 50 public comments²² (nearly all from ICANN insiders) out of the 112 million .COM registrants.

The Expert also improperly stated that Objectors did not have sufficient association with their own invoked community and membership and discredited DotMusic's associate membership with IFACCA, including DotMusic's supporting membership:

I conclude that A2IM does not have any sufficient association with the invoked community." (e.g EXP/477/ICANN/94, ¶38, Pg. 11) ...IFACCA can not get its own standing by piggybacking members (EXP/474/ICANN/91,¶25, Pg. 8)

In context, governments that comprise GAC are strongly associated to government Ministries of Culture which are members of IFACCA. In fact, the governments are the same (they just constitute different Ministries within the government). Both the position of IFACCA and GAC on Safeguards are the same with no opposition to such positions. If "government culture ministries" have no standing (or a strong association with music-themed, cultural strings), then GAC should have no standing to object either (This is not true per the AGB).

The Expert also relied on false information for determining "Substantial Opposition":

Only 18 label members wrote supporting letters. They are of course a much smaller proportion of the world indie population and still less of the world record company industry. They do not amount to a significant portion of the community targeted. (EXP/477/ICANN/94, ¶42, Pg. 12).

In contradiction to what Expert alleges, the letters submitted constituted the entire Board of the Objector, not individual members. The letters (Annex C) also represent Objector's Coalition of globally-established institutions representing clearly delineated significant portion of independent music community invoked that is strongly associated with the strings. These established institutions – as evidenced by a letter²³ by the A2IM Coalition sent to ICANN - included Merlin (global rights agency for the independent label sector, representing over 20,000 labels from 39 countries focusing purely on interests of global independent music sector, pg.8), Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing

²¹ <http://www.icann.org/en/about/agreements/registries/com/agreement-01dec12-en.htm>

²² <http://forum.icann.org/lists/com-renewal/>

²³ <http://www.icann.org/en/news/correspondence/bengloff-to-crocker-et-al-06mar13-en.pdf>

largest and most respected labels in the world, Pg.6), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises,” Pg.7).

For the Expert to inconsistently conclude “that the Objector’s members form a very minor proportion of the world’s record companies” (EXP/463/ICANN/80, ¶34, 10) and that such Objections hold no standing or that the community invoked has no relationship to the applied-for string is ill-conceived. The Expert even acknowledged that the Objector has “131 Associate Members, some of whom are large and well-known such as Spotify and iTunes.” (EXP/462/ICANN/79, ¶15, 6) is in contrast to his view that the community invoked is not substantial.” A member such as iTunes Apple iTunes,²⁴ another example of “clear membership” with “formal boundaries, geographic reach and size”²⁵ is substantial. The Objector’s memberships cover a global reach and are strongly associated with strings e.g. iTunes accounts for 63% of global digital music market²⁶ – a majority - with 575 million active global members²⁷ who have downloaded 25 billion songs from iTunes’ catalog of over 26 million songs, available in 119 countries. Other members include Pandora (72.4m active users), Spotify (6m paid subscribers, 24 million active users in 35 countries). A2IM members also include entities associated with global governments, such as France (BureauExport²⁸), China (China Audio Video Association²⁹) and Germany (Initiative Musik).³⁰ These three members alone (together with U.S market) represent substantial music economies and a significant portion of community invoked. In context, in 2012 there were 42,100 employed musicians³¹ in the U.S, a country representing 58% of the global digital music market³² and 27% of global music market share. “Size” and “Substantial Opposition” relates

to “a significant portion of the community³³” invoked – i.e. not entire mankind. AGB states “Substantial” should be taken within “context rather than on absolute numbers.”³⁴ As mentioned in Objections and Additional Submissions (Annex B), Objector is strongly associated with strings and community invoked,³⁵ the Coalition for Online Accountability,³⁶ MusicUnited,³⁷, and affiliates such as MusicFirst,³⁸ Copyright Alliance.³⁹

The Objector’s participation and recognition by the U.S Government as an important advocate for international music trade activities⁴⁰ also counters Expert’s incorrect conclusions and provides further evidence that the Expert did not apply the correct standard and failed to accurately balance factors for standing e.g international “recognition” and “activities that benefit associated community.” The Expert failed to appropriately consider and balance standing factors within context. These included: a “presence of mechanisms for participation in activities, membership and leadership” (Both Objectors had strict, clear membership and a formal Board of Directors with voting rights), “an institutional purpose related to the benefit of the associated community” (Both Objectors had a public and clear Mission Statement and Purpose), “performance of regular activities that benefit the associated community” (Both Objectors had international activities and events benefitting members) and “level of formal boundaries around the community” (Both Objectors required members to formally apply to become members with eligibility requirements to be closely associated with the clearly delineated community invoked and pay annual membership to remain a member). As an additional point, the significance and applicability of “formal boundaries” was rejected. It is known that formal boundaries are in place to facilitate a delineated process in which rights holders are compensated and to eliminate piracy and copyright infringement e.g. Objector member iTunes formally requires hundreds of millions of music fans to create formal Apple accounts and abide to strict terms of service to consume music and to ensure that royalties are paid

using clearly delineated, organized systems that identify rights-holders corresponding to each song sold or streamed (Annex F, G, I). In fact, the Expert denies such delineated structured systems such as the ISMN, ISRC, ISWC, ISNO and other systems used to classify music and compensate rights holders (EXP/474/ICANN/91, ¶29, P.9) claiming that “this cloud of words does not convey anything which can be fairly be described as a clearly delineated community” (EXP/474/ICANN/91, ¶30, P.9). If such a clearly delineated community invoked does not exist then the Expert failed to explain how the community’s invoked rights holders get paid from royalties, such as statutory or performance royalties determined by governments and enforced by law. Without formal boundaries and Safeguards, the strictly delineated compensation system that exists would be compromised in favor of piracy and abuse which already is rampant.

The Expert contends that in regard to Objections, “if the fear was really well founded the entire world record industry would be up in arms... The absence of a universal clamour makes it clear to me that the record industry as a whole does not fear material detriment.” (EXP/477/ICANN/94, ¶44, Pg. 12). Again, the Expert ignored the overwhelming evidence presented by the Objector with respect to the invoked community’s fears of piracy, anti-competitive issues and abuse for music-themed gTLDs. Globally-recognized, highly-credible associations strongly associated with strings (and others) voiced serious concerns of the high likelihood of material harm without Safeguards. These included public comments⁴¹ by the Coalition of Online Accountability (included A2IM),⁴² the Copyright Alliance (included A2IM),⁴³ Austrian Music Industry Association,⁴⁴ International Publishers Association,⁴⁵ BREIN Copyright Industry Groups,⁴⁶ as well as ICANN’s Business Constituency⁴⁷ and Intellectual Property Constituency⁴⁸ and many others. **These substantial public comments by A2IM and others mirrored the concerns made by the banking industry whose Objection was upheld against Radix (whose .bank application was**

nearly identical to their .music objected-to application) citing their lack experience and lack of existing relationships in a highly complex regulatory environment:

[H]ighly likely to result in inadvertent non-compliance with bank regulatory measures, in delays in obtaining regulatory consents, in difficulties resolving overlapping requirements imposed by a multiplicity of regulators and policymakers, and in significant concerns on the part of regulatory authorities over the possibility of fraud, consumer abuse, tax evasion and money laundering, other financial crimes and improper avoidance of regulatory measures by means of the Internet. (DotSecure Determination, ¶163, 32)

There the Expert that upheld the .bank Objection noted that concerns were highlighted by bank regulatory authorities in their public comments to ICANN – just as in the case of the community invoked expressing identical concerns for music-themed sensitive strings (emphasis added).

Similarly, an Objection was upheld against Famous Four’s .sport (whose .sport application was nearly identical to their .music objected-to application). Even though the Expert asserted that some detriments alleged by Objector SportAccord were “purely hypothetical”, the Expert concluded that there was a “strong likelihood of material detriment to the rights or legitimate interests of the Sport Community if the application ... is allowed to proceed” and that Objector “proved several links between potential detriments” that the community may suffer and the operation of the .SPORTS string (dot Sport Determination, Pg. 24, ¶163 and Pg. 23, ¶¶157-58). These were exactly the types of detriments that were also presented to ICANN in public comments in a Letter⁴⁹ by .MUSIC, a community-led effort strongly associated with music-themed strings. Another public Letter⁵⁰ was posted on the issues of abuse, piracy and Safeguards for sensitive-music themed strings relating to open and closed strings. The Institute for Policy Innovation assessed the annual harm by piracy at \$12.5 billion, 70,000 lost jobs and \$2 billion in lost wages.⁵¹ Since Napster emerged in 1999, U.S music sales dropped 53% from \$14.6 billion to \$7.0 billion in 2011. From 2004-2009, approximately 30 billion songs were illegally downloaded. NPD reported only 37% of music acquired in 2009 was

⁵⁰ <http://music.us/open-music-themed-sensitive-gtld-harm-without-safeguards.pdf>

⁵¹ http://www.ipi.org/ipi/IPIPublications_nsf/f726f4998ba46f86862567d80074727a/d95dcb90f513f7d78625733e005246fa?OpenDocument

paid for.⁵² Theft on this scale has a devastating impact,⁵³ diminishing the ability to bring the next generation of artists to the marketplace and dwindling the incentive for aspiring artists to make music a career.⁵⁴ In 2010, Harris Interactive found that 23% of consumers regularly download music illegally using Google, highlighting the problem's grand scale. In 2011, Ipsos indicated that 54% of users of unauthorized downloads said they found music through search engines. Popular music searches and sites for which Google had received more than 1,000 copyright complaints were "almost 8 times more likely to appear in the top 10 search results than a well-known, authorized music download site."⁵⁵

As such harms are commonly known, other Experts upheld Objections to "open" applicants relating to sensitive strings (these included .insurance, .charity, .med, .sport, .sports and bank) against all the same objected-to Applicants for music-themed strings. It is reasonable to conclude that if Objectors met standing (through application of the appropriate standard) that material harm pertaining "open" music-themed sensitive strings would also be upheld in the instant music related cases. However, because standing was not determined, Expert did not assess "material harm" and concerns of community invoked were not heard.

The Expert also introduces a new test to require an Objector to evaluate and compare other gTLD Applications and contention "rivalries" which are not part of an Objection dispute since the Community Objection process is not a "beauty contest" to compare Applications. The Expert also made false speculations that the purpose of the Objection is to eliminate a rival applicant:

"DotMusic" appears to be the general name of this rival. Its moving spirit is Mr Constantinos Roussos, named as the Objector's representative in this case. Such support would include eliminating a rival applicant (EXP/474/ICANN/91, ¶19, Pg. 6)

The Objector's representatives (or any rival Applications) are irrelevant to each objected-to case, but the Expert created a new test seeming to require the Objector to compare and comment on

differences between Applications to justify the high likelihood material harm:

The Objector cannot be heard to say that any .music gTLD will cause material harm for it does not object to Mr Roussos' application. Its position in logic must be that his application would cause no detriment but this would. That it has not tried to do (EXP/462/ICANN/79, ¶42, 11)

In fact, the Objectors clearly articulated the material detriment in each corresponding case relating to Safeguards. The Expert failed to grasp the dangers of “open” strings and falsely concludes that “no doubt ICANN will have remedies” if there are violations (EXP/462/ICANN/79, ¶44, Pg. 12) when in fact ICANN is not a “copyright” enforcer and none of ICANN’s policies in the new gTLD Program directly tackle copyright, the DMCA, EDEC and piracy⁵⁶ which negatively affects clearly delineated community invoked.

More worrisome is the Expert calling the Google Transparency Reports (e.g 80 million copyright infringement URL removals from just 2 organizations the RIAA and BPI last year⁵⁷) on mass copyright infringement⁵⁸ and studies conducted by McAfee, Namesentry, Verisign and Symantec (which overwhelmingly prove that open gTLDs are significantly riskier than restricted gTLDs) “irrelevant”:

I fail to see what these general reports have to do with the proposed string. They are not concerned with it – their concern is much more general – about open or closed strings... I therefore hold that these reports are irrelevant (EXP/460/ICANN/77, ¶26 and ¶27, Pg. 10).

This is where the Panel fails to understand the entire premise of these Objections: the underlying concern is about open and closed strings and showing evidence of the likelihood of material detriment against the community invoked if open and closed strings were allowed to proceed. The evidence is overwhelming pertaining to the likelihood of material harm for sensitive strings under an “open” gTLD system, especially in a regulated market which involves copyright. Other examples proving likelihood of harm caused by “open” systems without Safeguards is Android’s open system. Google Android’s open app ecosystem “does not have a strict process to block pirated or malicious

⁵⁶ Music Coalition letter to ICANN, <http://forum.icann.org/lists/comments-gac-safeguard-advice-23apr13/msg00092.html> (<http://forum.icann.org/lists/comments-gac-safeguard-advice-23apr13/pdfJAX15xkyLm.pdf>)

⁵⁷ <https://www.google.com/transparencyreport/removals/copyright/owners/?r=last-year>

⁵⁸ http://www.riaa.com/blog.php?content_selector=riaa-news-blog&blog_selector=clear-facts-&blog_type=&news_month_filter=5&news_year_filter=2012

applications⁵⁹ – analogous to objected-to Applicants “open” policies, making it highly vulnerable to abuse.”⁶⁰ Google’s open platform stats reveal that: (i) 72% of all its apps access at least one high-risk permission,⁶¹ (ii) Malware increased by 580% between 2011 to 2012 with over 175,000,000 downloads deemed “High Risk,”⁶² (iii) Kaspersky Lab: 99% of mobile malicious programs target Google Play’s open platform.⁶³ In antithesis, Apple App Store has a stricter and more restrictive approval process which is safer and less vulnerable to abuse.⁶⁴

Also, in many instances the Expert relied on false or misleading information that was clearly not verify for accuracy. For example, in conclusions, the Expert determined that A2IM – the Objector that Constantinos Roussos represented in Objections – is a supporter of DotMusic, which is untrue. The Expert’s final conclusion Points (¶37, ¶38 and ¶39) pertaining to “detriment” were also based on errors and false facts that were not verified:

“...the Objection itself is not to .band in principle (rather, A2IM is supporting Mr Roussos’s application for .band)”(EXP/459/ICANN/76, ¶38, P.10) ...At the very least, since it supports Mr Roussos’ application for .band, the Objector should have demonstrated how that Application would not cause detriment but this one would” (emphasis added).” (EXP/459/ICANN/76, ¶39, P.10)

These Expert statements prove the Expert lacked appropriate training for this particular process. Such material error include the fact that Roussos did not apply for .band. Moreover this point would not be relevant for the “material detriment” test. It can be verified⁶⁵ that Whatbox (Red Triangle) and Donuts (Auburn Hollow) were the only Applicants for .band. Furthermore, A2IM did not support any .band Application and did not support an Application by Roussos. Determinations decided on the basis of false information or/and incorrect AGB procedures and tests hold absolutely no ground to be upheld and must be dismissed by the BGC. The unintended consequences of allowing false information to determine cases puts in question ICANN’s own credibility and Bylaws.

As to Point 3: lack of an appeal process for Community Objections thereby denying parties

⁶⁵ <https://gtldresult.icann.org/application-result/applicationstatus/viewstatus>

procedures to protect their fundamental rights. The failure of the Board to address a chorus of voices that called for an appeal mechanism to allow appropriate review of cases has prejudiced Objector's ability to protect their members' fundamental and legitimate rights. ICANN's lack of action forced the parties to: a) bear significant expense; b) detrimentally rely on ICANN's stated policies and procedures for Community Objections; c) led to a breach of process; d) has resulted in process in which Applicants will be able to materially change their positions (e.g. from an exclusive access registry to an open registry or adding PICs not in their current Applications); and e) resulted in the selection and appointment of an expert that was not prepared to address the unique issues presented.

As a result of the Decisions, the Affected Parties suffered direct financial harm in order to prepare and file the Objections. The Affected Parties will also suffer financial harm, and the Objectors' community invoked will be negatively affected should the objected-Applicants be ultimately be awarded these music-themed gTLDs.

7. Describe how others may be adversely affected by the action or inaction, if you believe that this is a concern.

Other groups adversely affected by the inaction are community applicants who have serious concerns about the unintended consequences and precedents created in the new gTLD Program in relation to material changes⁶⁶ which are inconsistent to the AGB. Such Material Changes by Applicants (through PICs and other Safeguards) have no consequences or accountability mechanisms to protect community applicants in a contention set. In context, Community Applications already abide to the Registry Dispute Resolution Procedure (RRDRP) accountability mechanism.⁶⁷ Community Applicants also have appropriate restrictions, including policies relating to Eligibility, Name Selection, Content/Use, and Enforcement as community safeguards.

Changes of position occurring during Community Objection proceedings not found in current Applications indicates procedural flaws of Community Objection process and also vindicate Community Objectors' positions. ICANN has even took this issue a step further by revising the new

⁶⁶ <http://newgtlds.icann.org/en/applicants/customer-service/change-requests>

⁶⁷ <http://www.icann.org/en/news/public-comment/rrdrp-15feb10-en.htm>

gTLD Registry Agreement during Objection proceedings with language vindicating Objectors views. According to the AGB, any information that is deemed "false or misleading may result in denial of the application."

Such Material Changes significantly change an Applicant's business model and other critical components in their Application, such as financial statements and their Letter of Credit. Under the ICANN AGB rules such material "changes" will likely "involve additional fees or evaluation in a subsequent application round." As such, the existing new gTLD process has lost meaning since any Applicant is now allowed to "shift" their position without accountability of any sort or ICANN action to prevent such violations. As such, many Objectors were materially harmed by Determinations since Experts lacked fundamental knowledge of community functions. Also Determinations based on false facts and relying on contradictory AGB standards for standing might harm Community Applicants in CPE.

8. Detail of Board or Staff Action – Required Information

On June 19th 2013, a letter was sent to ICANN and the Board which raised serious concerns that "the ICC has not identified expert Panelists that have expertise in music - the relevant subject matter of interest for the communities." On June 24th, 2013 ICANN responded stating that "for the matter of the expertise of the panel members...Section 3.4.4 of the Applicant Guidebook" states:

3.4.4 Selection of Expert Panels - A panel will consist of appropriately qualified experts appointed to each proceeding by the designated DRSP. Experts must be independent of the parties to a dispute resolution proceeding. Each DRSP will follow its adopted procedures for requiring such independence; including procedures for challenging and replacing an expert for lack of independence

ICANN further stated in their response that "ICANN has confidence that the ICC has followed the requirements as expressed by the AGB and has appointed experienced jurists with appropriate qualifications in mediation/arbitration to preside over objection proceedings."

However, ICANN's response that the "appropriate qualifications" of an expert is in "mediation/arbitration" is not mentioned in the AGB. The definition of "expert" is "a person who

has a comprehensive and authoritative knowledge of or skill in a particular area.⁶⁸ Objectors reasonably relied that experts would be “appropriately qualified experts” pertaining to Applications determined and have “comprehensive and authoritative knowledge” in that “particular area.”

ICANN solicited Responses from Applicants for the strings identified by GAC Advice whether they planned to operate strings as exclusive access registries (defined as a registry restricted to a single person or entity and/or that person's or entity's Affiliates" (2.9c of Registry Agreement).

.MUSIC (DotMusic) sent written correspondence to ICANN, the ICC and Expert on Material Changes and process issues relating to Community Objections that ultimately created harm to Objectors, 3rd-parties and Community Applicants (Annex J). The Expert – despite correspondence – failed to investigate the material detriment issues of exclusive access that were presented in cases and did not give standing in any Determination (e.g EXP/474/ICANN/91). Pertinent “material detriment” issues were never heard. ICANN did not act in accordance to its ByLaws and has put in motion new processes to “fix” objected-to Applicants’ Safeguards without any accountability at the expense of Objectors and 3rd-parties. ICANN also did not invite .music LLC to submit a change request (as it did with Amazon) despite its current Application’s exclusive access language (e.g having a “sole registry” and only allowing Accredited Associations formed before 2007 (“Affiliates”)) to offer .music to members (i.e. excluding members of legitimate organizations formed after 2007 or non-“Accredited” Affiliates (Annex J).

Both the ICANN Board and the NGPC responded to the GAC Advice and called for public comment and input regarding “closed generic” Category 2 Applications and took action to materially change how such gTLDs are to be operated and allowed Applicants to intentionally materially change their Applications, in some cases from an exclusive access registry to a non-exclusive registry. During the proceedings ICANN put in motion a process which would ultimately allow Material Changes to Applications in the form of new binding contractual amendments. During this process ICANN failed to respond to Objector’s stated concerns about the effect of GAC Advice on the proceedings and failed to advise the ICC and Expert to consistently align itself with both GAC Advice and NGPC Resolutions.

⁶⁸ Oxford Dictionary, http://www.oxforddictionaries.com/us/definition/american_english/expert

The Affected Parties believe that there was inaction by ICANN:

- 1) in failing to adequately train, advise, and instruct the ICC, thus allowing the ICC to appoint an expert who was unqualified to address the specific issues related to community invoked, its composition, strict delineation and host of intellectual property DNS issues e.g piracy;
- 2) by refusing to present to ICC and Expert, GAC-related issues and new NGPC Resolutions: Responses to GAC Advice, PICs, Board Resolutions, Changes in Applicant positions through the GAC Advice Category 2: Exclusive Access Response Form for Applicants, and revisions to Registry Agreement that addressed GAC Advice allowed the Objection to proceed without consideration of the effect and importance of these exceptional developments that occurred after the Objections were filed;
- 3) by allowing a process to facilitate modifications and material changes to Applications as PICs, or, in response to GAC Advice on Category Exclusive Access Applications, permitted Applicant's to fundamentally change positions during proceedings without ramifications to detriment of Objector;
- 4) in creating a process by which exceptional modifications and material changes to Applications in response to GAC Advice can be facilitated. Failing to address the effect of such actions to ongoing Objections violated Article 4 of the Articles of Incorporation and Article 1, Section 2, 7, 8, and 9 of the ICANN Bylaws resulting in a breach of process and calls into question the legitimacy of the Program; and
- 5) by failing to offer an appropriate appeal mechanism to address clear procedural issues and AGB violations pertaining to Objections especially in cases of unqualified panels using factually incorrect and inconsistent statements and applying contradictory standards.
- 6) by harming applicants in a contention set as well as Community and Legal Rights Objectors against objected-to .music Applicants who relied on the AGB's language.
- 7) in failing to ensure there were no conflicts of interest and bias in panels relating to the new gTLD Objection process as whole. This compromises the credibility of the new gTLD program and sheds light on how Objections were mishandled by ICANN without any accountability on the selection of panels even if there was a clear conflict of interest. Whether Expert signed a statement

of independence and disclosed it to the ICC does not prove there was no conflict of interest or inherent bias from the Expert.

9. What are you asking ICANN to do now?

1) Reimburse or order the ICC to reimburse the Objector for all of its expenses, including but not limited to attorney fees, administrative expenses and Expert fees associated with cases: ICC EXP/462/ICANN/79 (c. EXP/463/ICANN/80, EXP/467/ICANN/84, EXP/470/ICANN/87 EXP/477/ICANN/94), ICC EXP/474/ICANN/91, ICC EXP/459/ICANN/76, ICC EXP/460/ICANN/77;

2) Allow new Community Objections be filed for these cases with appropriate music Expert;

3) Determine that objected-to .music LLC's GAC Responses (that they do not intend to be exclusive access registry) be deemed material and inconsistent with their position in Community Objection Responses and policies in their current Application and initiate a change request for Applicant 1-959-51046 to reflect such material changes pertaining to removing exclusive access language (Annex J) since it violates the AGB (1.2.7) stating that at any time during the evaluation process information previously submitted becomes untrue or inaccurate, the applicant must notify ICANN of such changes. As evidenced in Annex J, information provided was misleading. According to ICANN "Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application."⁶⁹

4) Allow for a Reconsideration of the Decisions by an appropriate and qualified expert and with instruction regarding the GAC Advice and changes made by Applicants.

10. Please state specifically grounds under which you have standing and right to assert this Request for Reconsideration, and the grounds or justifications that support your request.

DotMusic Limited (.MUSIC) is community Applicant for .music and Objector Representative. All Applicants and Objector(s)/Related-Objector Entities are entitled to a fair and appropriate evaluation of procedures. .MUSIC (as a community applicant) could be adversely

⁶⁹ <http://newgtlds.icann.org/en/applicants/customer-service/change-requests>

affected in CPE by Determinations (which relied on contradictory standards and false information). If CPE fails, .MUSIC will be subject to expensive auctions which - as agreed upon by the EU⁷⁰ - were designed to favor deep pocketed Applicants – such as Amazon and Google.

Breach of Fundamental Fairness: Basic principles of due process to proceeding were violated and lacked accountability by ICANN, ICC and Expert despite the excessive costs and resources attributed to filing.

Failure to Consider Evidence: Expert failed to consider relevant evidence relating to: (i) Material Changes and Safeguards; (ii) Standing of Objector as a clearly, delineated community invoked expressing opposition; (iii) Substantial size/ global breadth of Objectors/Related Entities and strong association with music-themed strings;

Violation of ICANN Articles of Incorporation: Article 4 calls ICANN to operate for the benefit of Internet community as a whole, carrying out activities in conformity with relevant principles of international law and applicable international conventions and local law, and to the extent appropriate and consistent with its Articles and Bylaws, through open and transparent processes that enable *competition and open entry in Internet related markets*. ICANN should have properly communicated and delegated functions to the ICC but failed to do so in violation of ByLaws Art. 1, Section 2, 3: *To the extent feasible and appropriate, delegating coordination functions to or recognizing the policy role of other responsible entities that reflect the interests of affected parties.* (ByLaws Art. 1, Section 2, 7 *Employing open and transparent policy development mechanisms that (i) promote well-informed decisions based on expert advice, and (ii) ensure that those entities most affected can assist in the policy development process;* ByLaws Art. 1, Section 2, 8 *Making decisions by applying documented policies neutrally and objectively, with integrity and fairness.*

11. Are you bringing this Reconsideration Request on behalf of multiple persons/entities? Yes

11a. If yes, Is the causal connection between the circumstances of the Reconsideration Request

⁷⁰ <http://forum.icann.org/lists/comments-new-gtld-auction-rules-16dec13/msg00016.html>

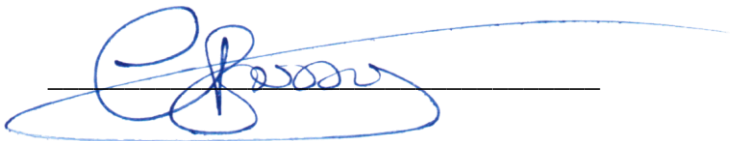

and the harm the same for all of the complaining parties?

The clearly delineated community invoked (i) has a shared, common interest - the legal distribution and promotion of music, (ii) is dependent on DNS (where rampant piracy occurs – Annex F, I) for core activities, and (iii) Determinations of such significance pertaining to enhanced safeguards, competition and exclusive access can create material detriment to legitimate interests of significant portion of the community invoked. Failure of Expert to understand such issues exhibits why these cases require a music expert.

Do you have any documents you want to provide to ICANN? Yes, see Annexes A-L

Terms and Conditions for Submission of Reconsideration Requests:

The Board Governance Committee has the ability to consolidate the consideration of Reconsideration Requests if the issues stated within are sufficiently similar. The Board Governance Committee may dismiss Reconsideration Requests that are querulous or vexatious. Hearings are not required in the Reconsideration Process, however Requestors may request a hearing. The BGC retains the absolute discretion to determine whether a hearing is appropriate, and to call people before it for a hearing. The BGC may take a decision on reconsideration of requests relating to staff action/inaction without reference to the full ICANN Board. Whether recommendations will issue to the ICANN Board is within the discretion of the BGC. The ICANN Board of Director’s decision on the BGC’s reconsideration recommendation is final and not subject to a reconsideration request.

Constantinos Roussos - .MUSIC (DotMusic)

Date: March 4th, 2014

Reconsideration Request Form

1. Requester Information

Name: Constantinos Roussos

Address: Contact Information Redacted

Email: Contact Information Redacted **with a copy to counsel,** Contact Information Redacted

2. Request for Reconsideration of:

X Staff action/inaction

3. Description of specific action you are seeking to have reconsidered.

DotMusic is challenging ICANN's inaction on 3 issues:

1) In not properly supervising and ensuring that appropriately qualified Expert candidates of the International Chamber of Commerce ("ICC") were a) selected; and b) adequately, trained to address the unique issues presented by Community Objections and the gTLD Program. The community expected that the ICC would be required to appoint and advise an appropriately qualified "expert," (not just an arbitrator) familiar with the unique needs and requirements presented in the gTLD Program, intellectual property and anti-competitive issues, and the needs and composition of the relevant community (e.g. a music or intellectual property expert for music-themed Objections)(Point 1);

2) In not recognizing the relevance and impact of the exceptional GAC Advice on the Community Objection process and Community Applicants, and in not advising the ICC and Community Objection Panelists on the GAC Beijing Communiqué of April 11, 2013 and subsequent GAC related issues: Responses to GAC Advice, Board Resolutions, Material Changes in Applicant positions through their GAC Advice Category 2 Exclusive Access Responses, and revisions to the new gTLD Registry Agreement¹ that addressed GAC

¹ 3(c) and 3(d) of Specification 11 provided that: (c) Registry Operator will operate the TLD in a transparent manner consistent with general principles of openness and non-discrimination by establishing, publishing and adhering to clear registration policies. (d) Registry Operator of a "Generic String" TLD may not impose eligibility

Concerns pertaining to exclusive access which were directly related to the anti-competitive issues raised in Community Objections. (Point 2); and

3) In not creating an appropriate appeal process for Community Objections and denying parties procedures to protect their fundamental rights and legitimate interests (Point 3).

4. Date of action/inaction:

The relevant Expert Determinations EXP_461_ICANN_78 (c EXP_479_ICANN_96 EXP_480_ICANN_97) were published on December 9, 2013 (See Annex 1).

5. On what date did you become aware of the action or that action would not be taken?

The Decisions were presented to Objector and made public on December 9, 2013.

6. Describe how you believe you are materially affected by the action or inaction:

DotMusic Limited is a privately-held Cyprus limited liability company representing Community Objectors and Related-Objector Entities in Community Objections. Objector and/or Related-Objector Entities constitute a significant portion of the music community.²

criteria for registering names in the TLD that limit registrations exclusively to a single person or entity and/or that person's or entity's "Affiliates" [. . .]. "Generic String" means a string consisting of a word or term that denominates or describes a general class of goods, services, groups, organizations or things, as opposed to distinguishing a specific brand of goods, services, groups, organizations or things from those others" (New gTLD Registry Agreement, July 2nd, 2013, <https://www.icann.org/en/groups/board/documents/resolutions-new-gtld-02jul13-en.htm#1.d>).

² Objector Associate members include Pandora (<http://a2im.org/groups/pandora>), the world's largest streaming music radio with over 72 million active members (<http://investor.pandora.com/phoenix.zhtml?c=227956&p=irol-newsArticle&id=1860864>) and Apple iTunes (<http://a2im.org/groups/itunes>). iTunes accounts for 63% of global digital music market (<http://appleinsider.com/articles/13/04/16/apples-itunes-rules-digital-music-market-with-63-share>) – a majority - with 575 million active global members (<http://appleinsider.com/articles/13/06/14/apple-now-adding-500000-new-itunes-accounts-per-day>) abiding to strict terms of service and boundaries (<http://www.apple.com/legal/internet-services/itunes/www/index.html>) have downloaded 25 billion songs from iTunes catalog of over 26 million songs, available in 119 countries, regardless whether artist is independent or in a major label (<http://www.apple.com/pr/library/2013/02/06iTunes-Store-Sets-New-Record-with-25-Billion-Songs-Sold.html>). Related Objector Entities include: an international federation of nearly 70 government ministries of culture and arts councils, music distributors that distribute over 70% of global music on retailers such as iTunes and Amazon (e.g. Tune core, with over 500,000,000 sales, distributes more music in one month than all major labels have combined in 100 years, <http://blog.tunecore.com/2012/02/what-the-riaa-wont-tell-you-tunecores-response-to-the-ny-times-op-ed-by-the-riaa-ceo-cary-h-sherman.html>), an international association of music information offices from over 30 countries, music coalitions from leading music territories such as Canada, Brazil, France and others, music communities representing over 3 million musicians, industry professionals and organizations, the national association of recording industry professionals and others (<http://music.us/supporters.htm>).

The American Association of Independent Music is a non-for profit company representing its Members (both Labels and Associates), the U.S. Independent label music community, the World Independent Network, the Association of Independent Music, the Independent Music Companies Association (IMPALA) and the Merlin Network who collectively constitute a majority of the music community (emphasis added) to which the string is explicitly or implicitly targeted. (the “Affected Parties”).

On the 13th of March, 2013 Objections (cases EXP_461_ICANN_78 (c EXP_479_ICANN_96 EXP_480_ICANN_97) were filed against Amazon EU S.A.R.L in connection with music-themed Applications to run an exclusive access registry for .music, .song and .tunes (the “Objections”). The Objections raised concerns, among other things, about Applicant’s Applications to run exclusive-access registries thereby controlling the most semantically significant music-themed-strings and an entire scarce vertical for the distribution and monetization of music.

As to Point 1 – Lack of adequate supervision to ensure appropriately qualified Expert candidates of ICC were selected and adequately trained.

a) According to the “Selection of Expert Panels” Section 3.4.4 of the new Applicant Guidebook³, the Objector(s) relied upon specific language that the “panel will consist of appropriately qualified experts (emphasis added) appointed to each proceeding by the designated DRSP.” This is also consistent with ICC’s language that “the ICC will constitute a pool of qualified candidates (emphasis added) who can be appointed as experts in the new gTLD proceedings.”⁴

The expert appointed to render decisions in EXP_461_ICANN_78 (c EXP_479_ICANN_96 EXP_480_ICANN_97) is not a music, intellectual property, competition regulator or cultural expert versed in the unique music, intellectual property, competition and cultural issues that strongly relate to the music community. The Determinations published on December 9, 2013 (the “Decisions”), demonstrated that the panelist had limited knowledge on the functions of the music community and was ill-prepared to understand and address these unique music community matters.

³ <http://newgtlds.icann.org/en/applicants/agb/objection-procedures-04jun12-en.pdf>

⁴ <http://www.iccwbo.org/Products-and-Services/Arbitration-and-ADR/Expertise/ICANN-New-gTLD-Dispute-Resolution/Experts/>

A glance at the Panelist Francisco Orrego Vicuna's qualifications⁵ reveal that his specialties are: international law, international trade and investment. ICANN and the ICC failure to select qualified expert candidates (such as experts in competition regulation, intellectual property professors/judges/attorneys, or musicologists, ethnomusicologists, or music industry professors/attorneys), was a breach of the AGB and the obligation to create a meaningful evaluation of community concerns. The panelist, while being an arbitrator, was ill-equipped to address the unique issues presented and the Objectors relied to their detriment on the fact that the ICC would select an appropriate expert to review the Objections. Especially given the significant costs involved, it was reasonable to assume that the appropriate experts would be identified. These failures are evident, as follows:

First, the panelist agreed with Applicant's misleading statement that the music community does not rely on the DNS/Internet, holding that:

It is thus not possible to conclude that there is in this case a likelihood of concrete or economic damage to the community or that the Applicant intends to act contrary to the interests of such community or interfere with its activities. The dependence of the community on the DNS for its core activities has not been proven (emphasis added)" (Expert Determination, Section 71, p.24)

Any reasonably qualified expert should have taken judicial knowledge of the indisputable fact that the music community is heavily dependent on the DNS for the core of its activities. It is publicly acknowledged and commonly-known that the community most affected and impacted by the DNS was the music community. The DNS has changed the structure of how music (both legal and illegal) is distributed, marketed and consumed (See Annex 2). The DNS has also contributed to massive illegal piracy (e.g. via search engines, P2P networks or sites such as PirateBay) financially harming the community.

Secondly, the panelist lacked qualifications as an expert to render an opinion on whether the Applicant would be anti-competitive, and in his own words, the panelist claimed that competition regulators were the ones qualified to make such a determination:

Whether there is... anti-competitive behavior...is not something that can be established beforehand and is thus purely speculative... competition regulators will very well know how to address this problem (Section 70, Pg. 25)

⁵ http://www.arbitration-icca.org/about/governing-board/MEMBERS/Francisco_Orrego_Vicuna.html

As such, the panelist declined to render an opinion on a key issue of alleged material harm concerning Applicant's exclusive access gTLD policies (an opinion that an appropriately-qualified expert with experience working with competition regulators would have been equipped to render). Similarly, the panelist also ignored Objector's request to review the overall context of the Applicant's strategy to register close over 60+ gTLDs, all of which were closed generic strings, including, not one, but three music related strings, which presents significant anti-competitive concerns and would warrant further investigation as they are likely to create harm to the community and others. Instead, the panelist treated each music-themed gTLD objection in a mutually exclusive manner contrary to how the cases were presented, calling the Objector's reasonable assertion of likelihood of harm with respect to the Applicant's anti-competitive behavior "speculative" (Section 70, Pg. 25). Notably, the GAC Advice, ICANN revisions to the Registry Agreement and the Applicant's own change of position (from exclusive access to open) – pertinent evidence -- was rejected by the panel. Such evidence - if it had been transmitted by ICANN to the ICC for all Community Objection Panelists to consider - would have required panelists to appropriately opine and address as to the merits of such actions.

The panelist also stated that support for pirate networks does not prove harm "that can be established beforehand and is purely speculative" (Section 70, p.24). This statement flies in the face of irrefutable evidence and knowledge that copyright infringement is illegal and it harms the music community's legitimate interests. Such evidence of the Applicant's activity in pirate networks was ignored without reason and referred to as "speculative."

b) The panelist also denied Objector's standing by ignoring the size, composition and breadth of the Related Objector Entities and by failing to consider the standing of an Objector consisting of globally-recognized Label Members and ignoring Associate Members altogether (who have formal membership boundaries with Objector) that cover hundreds of millions of music community members having formal boundaries with Objector's Members. Furthermore the panel disingenuously asserted without any concrete proof or evidence that independent musicians were not strongly associated with the string "music":

While an association exists of course between the gTLD applied for and the term "music", this is by definition a generic term that might relate to music in general but not specifically to the "independent music community..." (Expert Determination, Section 66, p.24)

Objector Label Members include Labels representing the world's two best-selling artists of 2012, Adele and Taylor Swift,⁶ who are globally recognized and distributed. Associate members, include Apple iTunes (the world's largest music retailer with majority market share), which formally requires hundreds of millions of music fans to create formal Apple accounts and abide to strict terms of service in order to consume music. This is because objector Associate Members providing legal music (e.g. Apple iTunes or Pandora, the world's largest music radio) must ensure that royalties are paid to the music community rights-holders using clearly delineated, organized systems that identify rights-holders corresponding to each song sold or streamed (See Annex 3).

It is a fact that nearly all musicians (over 99%) are considered "independent" i.e. not signed to a major label. In fact, "70% of new music being bought is from artists not tied into old industry⁷" (the non-independents referred to as major labels). If one removes independent musicians from the music community then 99% of all music created would not exist. This undeniably proves the panel's lack of qualifications and incontrovertibly disproves the panelist's disingenuous assertion that the independent music community is not strongly associated with the "term" music. According to the AGB, "Community" is defined as "meaning "fellowship" – while still implying more of cohesion than a mere commonality of interest." The Independent Objector reiterates this definition "as a group of individuals who have something in common." (emphasis added). The common interest universally shared by the community is the "promotion and distribution of music." Furthermore, ICANN's definition of "Size" and "Substantial Opposition" relates to "a significant portion of the community⁸" – i.e. not the entire community. Substantial opposition should be taken within "context rather than on absolute numbers⁹" of a substantial portion of the community. The panelist did not follow the AGB language in regards to what constitutes a significant portion and that substantial opposition should be taken in "context rather than absolute numbers" i.e. not requiring "billions" of written expressions. However the panel curiously stated that "with billions of users the expressions of opposition would need to run in high numbers to meet this test." (Section 63, Pg.23). This clearly showed the panel's lack of understanding to these proceedings' rules that "opposition" relates to (i) opposition from the music community, (ii)

⁶ International Federation of the Phonographic Industry, <http://ifpi.org/content/library/dmr2013.pdf>, P.11

⁷ <http://blog.tunecore.com/2012/02/what-the-riaa-wont-tell-you-tunecores-response-to-the-ny-times-op-ed-by-the-riaa-ceo-cary-h-sherman.html>

⁸ <https://community.icann.org/display/newgtldrg/community+objection+grounds>

⁹ <http://newgtlds.icann.org/en/applicants/agb/string-contention-procedures-04jun12-en.pdf>, Module 4-11

not generically by Internet users, and (iii) be taken “within context” not literally. With such an unreasonable and unjustified statement the panel set an impossible threshold for any Objector to meet since using the number “billions” as a reference point to prove “substantial opposition” is irrational, unfair and ensures that any Objector would fail to meet such a standard (emphasis added). In context, in 2012 there were 42,100 employed musicians¹⁰ in the U.S, a country which represents 58% of the global digital music market¹¹ and 27% of the global music market share.¹² In this context, some Objector U.S Label Members alone represent a significant portion of the global community. As such, denying the Objector standing leads to serious procedural and fairness questions. If the panelist’s statements are taken literally no objector would ever qualify to have their concerns be heard since according to the panelist, **“music” is a generic term and can never have a shared, common interest, nor can a generic term be dependent on the DNS for core activities:**

A broad community may exist at the generic level... but this is not conducive to the clear delineation envisaged under this standard (Section 60, Pg.21)

While an association exists of course between the gTLD applied for and the term “music”, this is by definition a generic term that might relate to music in general but not specifically to the “independent music community” (66, Pg. 22)

The dependence of the community on the DNS for its core activities has not been proven (Section 71, Pg.24)

These statements run contrary to the Independent Objector who states there are many cases of strictly delineated communities and even filed many new gTLD Community Objections (.charity, .healthcare, .hospital, .indians, .med and .medical)¹³ based on his own definition of “community”:

It can include a community of interests, as well as a particular ethnic, religious, linguistic or similar community... a community can be defined as a group of individuals who have something in common ... or a common characteristic ... or share common values, interests or goals.¹⁴

¹³ <http://www.independent-objector-newgtlds.org/home/the-independent-objector-s-objections/>

¹⁴ <http://www.independent-objector-newgtlds.org/home/the-issue-of-closed-generic-gtlds/>, Community Objections, Section 3

While “music” is a generic term, it is dependent on a clearly delineated community which shares the common interest of promoting and distributing unique “music” through clearly delineated systems to compensate music community rights holders attributed to each song (emphasis added).

ICANN’s lack of action in ensuring appropriate selection and training of experts created a material harm to Objectors and the community proceedings.

As to Point 2: lack of consideration of the relevance and impact of the GAC Advice on the Community Objection process and failure to advise the ICC and Community Objection Panelists on the GAC Advice.

The Community Objection filing pre-dated the Beijing Communique and raised the same concerns set forth by the GAC and subsequently recognized by ICANN NGPC Resolutions and actions. After the Community Objection proceedings commenced, GAC and ICANN called into question Applications that were filed to run generic gTLDs as exclusive-access registries. This very question was presented by Objector at Objector’s significant expense. ICANN should have either advised the ICC and Panelists or required the ICC and Panelists to review and evaluate the impact and relevance of GAC Advice, Board Resolutions, and Applicant Responses to Category 2 on Exclusive Access, and revisions to the Registry Agreement to address these concerns.

When extremely significant, indeed program wide, issues were raised, the Board should have taken appropriate measures to either: a) suspend the proceedings to avoid further waste of resources addressing Applications that were called into question by GAC Advice; b) ensured that the ICC and Panelists were appropriately advised and educated regarding the importance and effect of the GAC Advice; and/or c) provided clear guidelines to address these issues without harming Objector(s).

As to Point 3: lack of an appeal process for Community Objections thereby denying parties procedures to protect their fundamental rights.

The failure of the Board to address a chorus of voices that called for an appeal mechanism to allow appropriate review of cases has prejudiced Objector’s ability to protect their members’ fundamental and legitimate rights.

ICANN's lack of action forced the parties to: a) bear significant expense; b) detrimentally rely on ICANN's stated policies and procedures for Community Objections; c) led to a breach of process; d) has resulted in Applicants materially changing their positions (e.g. from an exclusive access registry to an open registry) in the middle of a proceeding; and e) resulted in the selection and appointment of an expert that was not prepared to address the unique issues presented.

As a result of the Decisions, the Affected Parties suffered direct financial harm in order to prepare and file the Objections. The Affected Parties will also suffer financial harm, and their members will be globally affected should Applicant ultimately be awarded the most semantic music themed gTLDs, effectively controlling an entire music-related space on the Internet with unclear and unspecified policies, while disallowing the community from their legitimate right to registering their names under a public-resource gTLD.

The Affected Parties suffered a breach of due process in the proceedings because in the middle of the proceeding the Applicant was allowed to seemingly materially change (make a 180-degree shift) their Application from applying to run an exclusive-access registry to accepting GAC Advice on Category 2 Advice to intentionally open its registries. Affected Parties further suffered a breach in the proceedings when the panel, incredulously, refused to evaluate and consider relevant GAC Advice and other pertinent evidence presented.

7. Describe how others may be adversely affected by the action or inaction, if you believe that this is a concern.

Other groups adversely affected by the inaction are community applicants who have serious concerns about the unintended consequences and precedents created in the new gTLD Program in relation to Material Changes¹⁵ which are inconsistent to the AGB.

ICANN has opened the floodgates for allowing material changes without any consequences or accountability mechanisms to protect community applicants in a contention set by permitting standard Applicants to submit material changes in their Applications in the form of Public Interest Commitments (PICS) to remedy any faults an Application may have. In context, Community Applications already abide to the Registry Dispute Resolution

¹⁵ <http://newgtlds.icann.org/en/applicants/customer-service/change-requests>

Procedure (RRDRP) built-in accountability mechanism¹⁶ while standard Applicants do not. Community Applicants also have appropriate restrictions, including policies relating to authentication, Eligibility, Name Selection, Content/Use, and Enforcement to safeguard their communities.

Furthermore, Applicants with exclusive access Applications were also given the opportunity to respond to GAC Category 2 Advice. Nearly all exclusive access Applicants stated their intent to change their Applications to non-exclusive. Such public Responses negatively interfered with Community Objections since objected-to Applicants submitted GAC Category 2 Responses which directly contradict and are contrary to their Community Objection Responses. This is misleading and undermines the credibility of the new gTLD process. Objected-to Applications were given the opportunity to defend their exclusive access position – like they had in the Objection Responses – but decided against it since there are no repercussions for making inconsistent statements or any accountability mechanisms to prevent misleading the panelists. Also other Applicants used PICs – another form of material changes – in their Community Objection Responses which are not in their current Applications. Such changes of position occurring during Community Objection proceedings not found in current Applications indicates the procedural flaws of the Community Objection process and also vindicate Community Objectors' positions. ICANN has even took this issue a step further by revising the new gTLD Registry Agreement during Objection proceedings with language vindicating Objectors views. According to the AGB, any information that is deemed "false or misleading may result in denial of the application."

Such material changes, whether they are ones relating to changing a registry from “exclusive” to “non-exclusive” access or incorporating Public Interest Commitments (PICs) are clear, material changes, because they materially change an Applicant’s business model and other critical components in their Application, such as financial statements and their Letter of Credit. Under the ICANN AGB rules such material “changes” will likely “involve additional fees or evaluation in a subsequent application round.”

ICANN has introduced and allowed such procedural loopholes which objected-to Applicants have used to circumvent dispute resolution processes and the AGB, while

¹⁶ <http://www.icann.org/en/news/public-comment/rrdrp-15feb10-en.htm>

Community Applicants with responsible and accountable Applications are not allowed to incorporate such public interest changes to meet the CPE threshold. Loopholes, including Responses to GAC Category 2 advice, PICs or new ICANN NGPC Resolutions materially change Applications, negatively affect contention sets, circumvent Community Objections and create material harm to Objectors and community applicants in a contention set. NGPC Resolutions and ICANN's actions have introduced a harmful precedent to the ICANN new gTLD Program without any repercussions, consistent standards followed or accountability. In some cases, Panels have used NGPC Resolutions, the registry agreement revision and PICs against Objectors to prove that with these new resolutions material harm is avoided. This precedent used is a clear loophole benefiting objected-to Applicants at the Objectors' expense as Applicants argued that accepting GAC advice, new NGPC resolutions, new registry agreement revisions and adding PICs – all material changes – prove there is no possibility of material harm. As such, the existing new gTLD process has lost meaning since any standard Applicant is now allowed to “shift” their position without accountability of any sort or ICANN action to prevent such violations. Furthermore, ICANN is also in the process of once again favoring standard Applicants by giving brands special exemptions.¹⁷

Furthermore, community applicants and objectors in general have been materially harmed financially and procedurally as the selection of Community Objection experts was inconsistent with the AGB and the published CPE Guidelines which clearly say that experts are “selected based on their knowledge of specific countries, regions and/or industries, as they pertain to Applications.”¹⁸ Community applicants have relied on the language of the AGB that experts selected would be appropriately qualified with some credible level of knowledge and expertise on the communities reflected in the Applications determined. In many cases, the ICC has selected Panelists with no clearly appropriate qualifications or credible experience with respect to communities reflected in the Applications determined, which is a clear violation of the AGB, Section 3.4.4 which states that the “panel will consist of appropriately qualified experts.” As such, many Objectors were materially harmed by Determinations since Panelists lacked fundamental knowledge of community functions and such precedents might likely harm them in CPE Evaluation.

8. Detail of Board or Staff Action – Required Information

Provide the Required Detailed Explanation here:

On June 19th 2013, a letter was sent to ICANN and the Board which raised serious concerns that "the ICC has not identified expert Panelists that have expertise in music - the relevant subject matter of interest for the communities."

On June 24th, 2013 ICANN responded stating that "for the matter of the expertise of the panel members...Section 3.4.4 of the Applicant Guidebook" states:

3.4.4 Selection of Expert Panels - A panel will consist of appropriately qualified experts appointed to each proceeding by the designated DRSP. Experts must be independent of the parties to a dispute resolution proceeding. Each DRSP will follow its adopted procedures for requiring such independence; including procedures for challenging and replacing an expert for lack of independence...There will be one expert in proceedings involving a community objection.

ICANN further stated in their response that "ICANN has confidence that the ICC has followed the requirements as expressed by the AGB and has appointed experienced jurists with appropriate qualifications in mediation/arbitration to preside over objection proceedings."

However, ICANN's response that the "appropriate qualifications" of an expert is in "mediation/arbitration" is not mentioned in the AGB. The definition of "expert" is "a person who has a comprehensive and authoritative knowledge of or skill in a particular area.¹⁹" Objectors reasonably relied on the fact that experts would be "appropriately qualified experts" pertaining to the Applications determined and have "comprehensive and authoritative knowledge" in that "particular area."

ICANN's correspondence opens up serious issues of lack of clarity, accountability and transparency in regards to the Community Objection process since the AGB clearly states the word "expert.", not the words "mediator" or "arbitrator" which would have been the appropriate words if ICANN's correspondence statements were applicable. This opens up new questions about the fairness of the process and the high probability of confusion based on the fact that ICANN did refer to the Panelists as "experts" not "arbitrators" or "mediators." This is aligned and consistent with the language used in another community-related

¹⁹ Oxford Dictionary, http://www.oxforddictionaries.com/us/definition/american_english/expert

evaluation process where experts are used – the Community Priority Evaluation. Specifically, CPE Guidelines clearly state that “evaluators are selected based on their knowledge of specific countries, regions and/or industries, as they pertain to Applications”²⁰ which is consistent with the definition of “expert” not an arbitrator or mediator. There is no mention in the AGB that the expert’s “appropriate qualifications” would be in “mediation/arbitration” because such qualifications would be inappropriate since they would directly harm Objectors given that Objectors would have the impossible burden of educating unqualified mediators/arbitrators on community specifics, how the community functions and other complexities requiring significantly more words than the maximum permitted in filing.

On July 30th an Additional Submission in light of GAC Advice/NGPC material change Resolutions and clarifications with respect to Amazon misleading Response statements about Objector's standing and material harm was submitted to Panelist:

Per Ms. Kořak's, message of July 30, 2013, we have been directed to confer directly with you. As you may be aware, yesterday we submitted Objector's Request for Leave to File an Additional Submission and Reply to Applicant's Response. Per the attached filing, this submission is made in accordance with Art 17 of the Attachment to Module 3 of the Applicant Guidebook.

On August 20th, the Panelist completely ignored material changes to the Program by GAC Advice, NGPC Resolutions and Applicant misleading statements and rejected the Additional Submission referring to its content as “not exceptional” despite the material changes’ influential impact on all new gTLDs and rule changes exceptionally affecting all Applicants:

Having examined the file... the Expert is of the opinion that it contains all the necessary elements required to reach a Determination on this dispute. Accordingly the Expert considers that there is no need to invite additional submissions as envisaged under Article 17 (a) of the Procedural Rules governing these proceedings. The Expert further notes the Applicant's comment to the effect that under Article 18 of the Procedural Rules production of documents is limited to exceptional cases. No such exceptional case exists at this time. On the basis of these considerations the Request is denied and its contents are not to be included in the file of this case.

In regard to GAC Advice, ICANN solicited responses from applicants for the strings identified by the GAC regarding whether they planned to operate the applied-for TLDs as exclusive access registries (defined as a registry restricted to a single person or entity and/or

²⁰ <http://newgtlds.icann.org/en/applicants/cpe/guidelines-27sep13-en.pdf>, Pg.22

that person's or entity's Affiliates" (as defined in Section 2.9c of the Registry Agreement). The responses were submitted to the New gTLD Program Committee (NGPC) of the ICANN Board. On 28 September 2013, the NGPC adopted a Resolution on GAC Category 2 Advice²¹ allowing applicants not planning to operate as exclusive access registries, and that are prepared to enter the Registry Agreement as approved, to move forward to contracting.

On October 8th, .MUSIC (DotMusic) sent written correspondence to ICANN²² in relation to Applicant Responses:

We write as a follow-up to our most recent Letter to ICANN (October 8th)²³ to formally record and publish our concerns about new material changes arising from ICANN NGPC Resolutions and their impact on the current Community Objection process. Specifically, we would like to highlight the effect of potentially prejudicial "exceptions" through the acceptance of certain GAC advice and ICANN NPGC resolutions.

On October 10th, 2013 .MUSIC followed up its email after the release of GAC Category 2 Advice Form Responses:

... it has come to our attention that two of the Applicants we have mentioned in our Letter (who are subject to community objections) have materially changed their opinion and clearly stated that their generic string application(s) for music-themed TLDs will no longer be operated as "exclusive" TLDs, a clear statement of admittance that their original applications' "exclusive" access music-themed TLDs create a strong likelihood of harm.

This is exactly the kind of issues on material changes our Letter has been trying to illustrate in light of ongoing Community Objections on the subject matter which now have no other predictable and consistent recourse but to be upheld given the transparent admittance by these Applicants: Amazon,²⁴ Far Further/ .music LLC.²⁵ We kindly request these statements by these two Applicants and our Letter be forwarded to the ICC Panelists since they are crucially pertinent to the cases at hand. We also kindly request some clarification statements from both ICANN and the ICC how such material changes will be addressed and handled since these Applicants' community objection responses were inconsistent with these GAC Category 2 Advice statements they have just made. It is clearly evident that (i) their original application submission was not done in error and such material changes and GAC Category 2 Advice statements: (i) affect third-parties materially, especially objectors and applicants in contention set, (ii) create

²³ <http://www.icann.org/en/news/correspondence/roussos-to-crocker-et-al-12jul13-en.pdf> on the 12th, July 2013 with ICANN response at <http://www.icann.org/en/news/correspondence/willett-to-roussos-14aug13-en.pdf> on 14th August, 2013

²⁴ <http://newgtlds.icann.org/sites/default/files/applicants/09oct13/gac-advice-response-1-1316-18029-en.pdf>

²⁵ <http://newgtlds.icann.org/sites/default/files/applicants/09oct13/gac-advice-response-1-959-51046-en.pdf>

unfairness to both objectors and applicants in contention set, (iii) are material, and (iv), if allowed, create a precedent with unintended consequences to the new gTLD Program.

ICANN responded on October 22nd, 2013.²⁶ On October 10, 2013 another email was sent to the Expert and the ICC pertaining to Amazon's GAC 2 Response material change and position change in relation to their exclusive access applications for music-themed .music, .song and .tunes alerting GAC of their intentions to change their registries from exclusive to non-exclusive:

As you may not yet be aware, on October 9, 2013 (yesterday), ICANN published a submission by the Objected-to Applicant that materially affects the instant proceedings. Accordingly, Objector respectfully submits that these statements, and proposed sweeping changes to the Applicant's Applications be considered in connection with the instant matter.

As set forth below, to avoid further conflict with the Beijing Communiqué -- addressing concerns about Category 2 closed generic strings (and the same arguments asserted by Objector and under consideration in the instant proceedings) -- Applicant advised ICANN that it will materially change its position from running the .music, .tunes and .song TLDs as closed exclusive registries to open registries.

Accordingly, the Objector respectfully submits that the instant proceedings must now include an evaluation and consideration of the following ICANN publications dated October 9th, 2013 whereby Applicant states that it will change its Applications from "closed" and "exclusive" to "open."

Through these submissions the Applicant is attempting to circumvent this Objection and other criticism levied against it by "agreeing" to open its exclusive music-themed Registries. See New gTLD GAC Advice: Category 2 Safeguards and Applicant Responses Published October 9, 2013²⁷ and Applicant's Response to GAC Advice Category 2: Exclusive Access.²⁸

These newly-published statements by the Objected-to Applicant (published last night by ICANN) are contrary and inconsistent with the Applicant's Responses to the instant Community Objections. The foregoing submissions establish that the Applicant's originally-exclusionary polices in the objected-to Application(s) are not in the global public interest and would create a certainty of material harm to the legitimate interests of the music community and the global public interest.

Amazon has materially changed its stance with a new statement that their generic string application(s) for music-themed TLDs will no longer be operated as "exclusive" registries even though their current application(s) squarely state that "the TLD(s) will be operated as an exclusive registry." It is evident that Amazon's original position in relation to "exclusive" registry access has changed. Amazon's

²⁶ <http://www.icann.org/en/news/correspondence/willett-to-roussos-22oct13-en.pdf>

²⁷ <http://newgtlds.icann.org/en/applicants/gac-advice/cat2-safeguards>

²⁸ <http://newgtlds.icann.org/sites/default/files/applicants/09oct13/gac-advice-response-1-1316-18029-en.pdf>

proposed reverse in course is not yet approved and provides new evidence that Objector's concerns - which were raised prior to any public discussion about the harm of closed generics - should be upheld.

On the date that the instant Objections were filed, Applicant's music-themed applications (.music, .song and .tunes) created a certainty of material harm and were against the global public interest. The Applicant's proposed changes to its Applications are not yet approved and final by ICANN and thus the material harm still exists. Therefore, the only remedy is for this Panel to move to protect the community and public interest.

Objector also notes that ICANN's New gTLD Program Committee's (NGPC) Scorecard Resolution No. 10 dated September 28th, 2013²⁹ pertaining to the "Registry Agreement as approved by the NGPC, prohibits exclusive registry access for generic strings (emphasis added)." Here too, the NGPC resolution "is consistent with the GAC advice." The NGPC has directed ICANN "staff to move forward with the contracting process for applicants for strings identified in the Category 2 Safeguard Advice that are prepared to enter into the Registry Agreement as approved." Essentially, the NGPC and the objected-to Applicant have agreed with Objector's concerns that closed, exclusive registries for .music, .song and .tunes are improper and harmful.

If an expert determination has already been made that is contrary to upholding the Community Objection against the Applicant, we respectfully request the case be re-opened to address these new contradictory statements by the Applicant and to render a determination that: (i) is consistent with the Applicant's newly published conflicting statements; and (ii) is aligned with GAC advice and ICANN NGPC Resolutions on the issue of exclusive registry access for generic strings. Applicant is free to respond to these points and defend its material changes to open these strings in the midst of this Objection.

For the instant Community Objections to have meaning, and this process to maintain integrity, the matter must be re-opened and the issue be submitted for re-evaluation by the Expert.

On October 11, 2013, the Community Objection panelist in relation to Amazon's closed .music, .tunes and .song applications, Francisco Orrego Vicuña, responded:

I am in receipt of the parties' respective communications dated 10th and 11th October, 2013 in respect of the submission of new information in these cases. The Expert must inform the parties that no such new information can be considered at this stage in the context of the decisions on the cases noted... under Article 21 of the Dispute Resolution Procedure the Expert is directed to submit its Determination within 45 days of the constitution of the panel. This date has passed...The Objector's request in his communication of 10th October is accordingly not accepted.

²⁹ <http://www.icann.org/en/groups/board/documents/resolutions-new-gtld-annex-1-28sep13-en.pdf>

On November 26th, 2013 the ICC replied to our correspondence and informed in an email that such new information can be considered by the Expert:

...the Centre has also taken note of the exchange of e-mails between the parties and the Expert with regard to the request for re-opening the case following the Applicant's changes in its Applications. The Centre also notes the Objector's request that the ICC "*review this issue, allow discussion and provide clarification on these points*". The Centre would like to draw your attention to the fact, that the procedure for changing Applications, including the obligation of the Applicant to provide the explanations thereof, is governed by ICANN's rules... please be informed that the decision to re-open the case, should the need arise, and to take into account new or amended documents, is taken by the Expert (emphasis added) based on the information available and nature of the cases in question.

On November 26th, 2013 a response was sent to the ICC and Panelist:

After carefully reviewing the public Expert Determinations,³⁰ it is apparently clear that Experts have appropriately used the Applicant Guidebook as a strong reference for their Determinations and rules which makes this issue relevant and procedural in nature. As you have indicated, the procedure for changing Applications is governed by ICANN rules... The Centre also clearly noted that... "the decision to re-open the case, should the need arise, and to take into account new or amended documents, is taken by the Expert based on the information available and the nature of the cases in question.

The rules that the Expert must abide to are governed by ICANN rules and procedures, most notably the language contained in the Applicant Guidebook (AGB). There are specific provisions in regards to Material Changes found in the AGB³¹ to which all Applicants – including both Amazon (.music 1-1316-18029, .song 1-1317-53837, .tunes 1-1317-30761) and .music LLC/Far Further (.music 1-959-51046) must abide to, especially if their position is one of "exclusive access." However, they have publicly responded to GAC with a position which is 180 degrees different to their Responses to the ICC and different to their Application. This is misleading, inconsistent and legitimate grounds for concern with respect to procedures. If both Applicants' Responses and "original" Applications were so strong, they did have the option to defend their position with respect to GAC advice - as they did in their Objection Responses - but have now conveniently chosen a different direction, which is misleading and creates a harmful precedent in the ICANN process governing dispute resolution procedures.

It is reasonable to assume that in any proceeding – whether it is one conducted in a court of law or under an ICANN's dispute resolution procedure – that any inconsistencies or changes in position not reflected in the original testimony – the original Application (without any PICs or GAC Advice Category 1 or 2 material

³⁰ <http://www.iccwbo.org/products-and-services/arbitration-and-adr/expertise/icann-new-gtld-dispute-resolution/expert-determination/>

³¹ <http://newgtlds.icann.org/en/applicants/customer-service/change-requests>

changes) or their Responses to Objections - should be investigated by the Expert so that the procedures followed by the Expert are compliant with the Applicant Guidebook and no harmful precedent, unintended consequences or loopholes are created.

The ICANN Guidebook's section on "Material Changes" is clear that any information that is deemed "false or misleading may result in denial of the application" (AGB). We strongly believe that many – if not all - music-themed Applicants have provided misleading information in their Responses to the Community Objections because such Responses are not made public by the Centre (emphasis added). As such, there is no Applicant accountability towards the ICANN dispute resolution process or transparency with the Centre since the Applicants' Responses are not made public. We are deeply concerned with misleading music-themed gTLD Applicant Community Objection Responses especially those given to Experts that GAC Advice was "irrelevant." Such statements would not be seen under a positive light by both GAC or the ICANN NGPC if they were made public to them.

It is clear that if an Application is materially changed from "exclusive" to "non-exclusive" (by incorporating Category 2 safeguards) or incorporating Category 1 enhanced safeguards, it will affect its business model, its financial statements and its Letter of Credit. Under the ICANN AGB rules such "changes" will likely "involve additional fees or evaluation in a subsequent application round" (AGB) because the entire premise of the Applicant's Application has changed materially.

Last Thursday at the ICANN Public Forum in Buenos Aires/Argentina, we publicly informed the ICANN Board of these types of procedural loophole concerns which objected-to Applicants can use to circumvent the dispute resolution process. We have also met with the ICANN Ombudsman to express these same concerns and he recommended to reach out to the ICC and the Expert Panelist. The fact that the Centre agrees that "ICANN's new gTLD dispute resolution procedure does not provide for any specific provision in this regard" is clear evidence of procedural loopholes that Objected-to Applicants could use to their benefit to circumvent the Community Objections.

Our objective is that Objections are treated in a transparent and accountable manner, consistent with the Applicant Guidebook and rules contained in the AGB in regards to Material Changes or with respect to a change of position that was not in the original Application. We hope that the Experts acknowledge the issues at hand and the harmful precedent as illustrated in the Material Changes section of the AGB... music-themed gTLD Objectors' arguments, whether on the issue of "exclusive access" or "enhanced safeguards," were based on the Applicant's stated positions found in their Applications... Ultimately, the Expert should rule on the Applicant's stated Policies as found in their Applications taking into consideration any relevant new statements by the Applicant as well as new, pertinent ICANN NGPC Resolutions with respect to "exclusive access" or lack of "enhanced safeguards." Otherwise, the process has no meaning, and as long as a party can "shift" position to avoid scrutiny, there is no accountability.

Allowing inconsistent statements to be a justification for avoiding an adverse verdict would create a scenario that obviates the need for the Panel in the first place. We agree with the ICANN Resolutions and they provide additional evidence from ICANN - who, as the ICC agrees, writes the Rules - on the obvious harm created by music-themed Applications that do not have “adequate safeguards” or have “exclusive access.” We hope that the Expert Determinations are consistent and do not allow process loopholes for Objected-to Applicants to circumvent the process and the new ICANN NGPC resolutions which have vindicated the concerns presented in the music-themed Community Objections.

On December 3rd, 2013 the ICC responded to our correspondence:

The Centre carefully considered your comments regarding the above-mentioned case and the provisions of the Procedure and the Rules in this regard. Further, we have communicated your concerns to ICANN. However, at this point the Centre can only proceed pursuant to the current version of the Procedure which does not provide for the possibility of an amendment of the Objection in the course of the proceedings, unless permitted by the Expert (Emphasis Added). Accordingly, it is in his discretion to decide whether to take into account additional submissions...

There is also a lack of clarity with regard to the rules and procedures followed by the ICC and the panelist which are contradictory. On one hand the ICC states that Additional Submissions or amendments due to material changes at any stage of the proceedings can be “permitted by the Expert” and that “it is in his discretion to decide whether to take into account additional submissions”, while on the other hand the Expert denies having this power claiming that “no such new information can be considered at this stage in the context of the decisions on the cases noted” because “under Article 21 of the Dispute Resolution Procedure the Expert is directed to submit its Determination within 45 days of the constitution of the panel.”

It is noted that the ICANN Board and the NGPC responded to the GAC Advice and called for public comment and input regarding “closed generic” Category 2 Applications and took action to materially change how such gTLDs are to be operated and allowed Applicants to intentionally materially change their Applications, in some cases from an exclusive access registry to an open access registry – allowing substantial amendments to Applications during proceedings. During this process ICANN failed to respond to Objector’s stated concerns about the effect of GAC Advice on the proceedings and failed to advise the ICC and panel about the decisions made by ICANN. Moreover, at any point ICANN could have suspended

the Community Objection proceedings to allow for a reasoned review and consideration of the impact of such material changes on the wider gTLD process and Community Objections.

The Affected Parties believe that there was inaction by ICANN:

1) in failing to adequately train, advise, and instruct the ICC allowing the ICC to appoint an expert who was unqualified to address the specific issues related to music community presented by the Objector. The panel's unfamiliarity with the music community, its cultural composition, its strict delineation and a host of intellectual property issues it faces on the DNS (such as rampant piracy_ as well as the unique impact of the gTLD program on worldwide distribution of music, resulted in a fundamentally flawed decision that is a reversible error (emphasis added);

2) by refusing to present to the ICC and the panelist, GAC-related issues and new NGPC Resolutions: Responses to GAC Advice, Board Resolutions, Changes in Applicant positions through the GAC Advice Category 2: Exclusive Access Response Form for Applicants, and revisions to Registry Agreement that addressed GAC Advice allowed the Objection to proceed without consideration of the effect and importance of these exceptional developments that occurred after the Objections were filed;

3) by allowing a process to facilitate modifications and material changes to Applications are facilitated in response to GAC Advise on Category Exclusive Access Applications permitted Applicant's to fundamentally change positions in the middle of the proceedings without ramifications to the material detriment of Objector;

4) in creating a process by which exceptional modifications and material changes to Applications in response to GAC Advise on Category Exclusive Access Applications can be facilitated. Failing to address the effect of such actions to on-going Objections violated Article 4 of the Articles of Incorporation and Article 1, Section 2, 7, 8, and 9 of the ICANN Bylaws resulting in a breach of process and calls into question the legitimacy of the program; and

5) by failing to offer an appropriate appeal mechanism to address clear procedural issues and AGB violations pertaining to Objections especially in cases of unqualified panels and factually incorrect and inconsistent statements.

6) by harming applicants in a contention set as well as Community and Legal Rights Objectors against Amazon for the same strings that relied on the AGB's language. Amazon's position change in regards to exclusive-access, affects both Community Objections and Legal Rights Objections since they vindicate Objectors' arguments on the material harm test.

7) in failing to ensure there were no conflicts of interest and bias in panels relating to the new gTLD Objection process as whole. The Applicant's general counsel Doug Isenberg representing Amazon in these new gTLD Community Objections was also a Panelist determining a decision against another Objector (Food Network) in a new gTLD Legal Rights Objection proceeding. DotMusic has been involved in both Community Objections and Legal Rights Objections against Applicant for the same objected-to music-themed strings and such panel selection conflicts violate the AGB and introduces unintended precedents in that other panels may rely on for their determination. This compromises the credibility of the new gTLD program and sheds light on how Objections were mishandled by ICANN without any accountability on the selection of panels even if there was a clear conflict of interest.

9. What are you asking ICANN to do now?

The Affected Parties respectfully request that ICANN:

1) Reimburse or order the ICC to reimburse the Objector for all of its expenses, including but not limited to attorney fees, administrative expenses and Expert fees associated with cases: EXP_461_ICANN_78 (c EXP_479_ICANN_96 EXP_480_ICANN_97); and

2) Allow for new Community Objections to be filed for these Applications with the appointment of an appropriate Expert (noted as an expert in music/intellectual property/competition regulation);

3) Determine that Applicants that have made public statements intending to substantially amend their Applications by responding to GAC Advice be deemed material and inconsistent with their position in Community Objection Responses and rule in favor of Objectors given that it is admission of their harmful policies; or

4) Allow for a Reconsideration of the Decisions by an appropriate and qualified expert and with instruction regarding the GAC Advice and changes made by Applicants

10. Please state specifically the grounds under which you have the standing and the right to assert this Request for Reconsideration, and the grounds or justifications that support your request.

DotMusic Limited (.MUSIC) is a new gTLD Applicant for the .music music-themed community application. The new gTLD Applicant and Objector(s)/Related-Objector Entities are entitled to a fair and appropriate evaluation of the AGB policies and procedures. Moreover, DotMusic as a competing applicant is adversely affected by ICANNs granting of modifications and changes to Applications in response to GAC Advice on Category 2 Exclusive Access Applications publicly stating Applicant's intention to fundamentally amend Applications and change positions without consideration on how such action affected other Applicants or the Community Objection process.

Furthermore, such panel decisions and false statements not based on facts pertaining to Objector's standing as a clearly delineated community (See Annex 3) or the music community's dependence on the DNS for activities (See Annex 2) can adversely affect the Community Priority Evaluation (and DotMusic as a community applicant) since EIU Evaluators could use the expert's factually incorrect opinion as precedent and fail Community Applicants in general (emphasis). DotMusic has spent over 8 years, significant resources and millions of dollars building the .music brand and receiving support from a significant portion of the community to pass CPE. If CPE fails, DotMusic will be subject to expensive auctions which were designed to favor deep pocketed standard Applicants – such as Amazon and Google – not community applicants.

The Objector and Related Objector Entities were entitled to a fair and appropriate management of the Objection proceedings in accordance with the AGB. By providing inadequate training and guidance to the ICC, ICANN allowed the ICC to appoint an unqualified expert that resulted in fundamentally flawed proceedings, factually incorrect statements and a harmful determination which creates a harmful precedent.

Breach of Fundamental Fairness

Basic principles of due process to the proceeding were violated and lacked accountability by ICANN, the ICC and the Panel. ICANN failed to consider concerns about the selection of the panel and the ICC failed to follow the procedures the AGB set in relation to selecting an

appropriately qualified expert in the subject-matter reflecting the Applications despite the excessive costs and resources attributed to filing. The panel also selected not to hear legitimate concerns and striking evidence by the Objector which were crucially relevant even contradicting the ICC's clear statements that it was up to panel's discretion to do so.

Failure to Consider Evidence

The Panel failed to consider relevant evidence relating to: (i) The Applicant deciding not to defend their exclusive access position and making a complete position change in their GAC Category 2 Response public statements changing from exclusive-access to non-exclusive, proving that their current Application creates a likelihood of material harm leading to a ruling favoring Objector; (ii) The clear standing of Objector as a clearly, delineated community; (iii) The significant size and global breadth of the Objector Members; (iv) How the music community is dependent on DNS/Internet for core activities.

Violation of ICANN Articles of Incorporation

Article 4 calls for ICANN to operate for the benefit of the Internet community as a whole, carrying out its activities in conformity with relevant principles of international law and applicable international conventions and local law, and to the extent appropriate and consistent with its Articles and ByLaws, through open and transparent processes that enable *competition and open entry in Internet related markets*.

ICANN should have properly communicated and delegated functions to the ICC and failed to do so in violation of ByLaws Art. 1, Section 2, 3 *To the extent feasible and appropriate, delegating coordination functions to or recognizing the policy role of other responsible entities that reflect the interests of affected parties*.

ICANN or the NGPC should have properly communicated to the ICC and the Panelists the existence and effect of GAC Advice, PICs, NGPC Resolutions and Registry Agreement revisions on pending Objections. ICANN or the NGPC should have also considered the effect of allowing such substantial amendments to Applications and material changes to the gTLD Program (ByLaws Art. 1, Section 2, 7 *Employing open and transparent policy development mechanisms that (i) promote well-informed decisions based on expert advice, and (ii) ensure that those entities most affected can assist in the policy development*

process; ByLaws Art. 1, Section 2, 8 Making decisions by applying documented policies neutrally and objectively, with integrity and fairness.

Between April, 2013 and December 9, 2013 (the date of the Decision), ICANN could have acted to protect Applicants and Objector from material harm by properly addressing material flaws with the ICC Process and/or informing the ICC and Panelists regarding the GAC Advice and related issues (ByLaws Art. 1, Section 2, 9 *Acting with a speed that is responsive to the needs of the Internet while, as part of the decision-making process, obtaining informed input from those entities most affected*; ByLaws Art. 1, Section 2, 10 *Remaining accountable to the Internet community through mechanisms that enhance ICANN's effectiveness*; ByLaws Art. 1, Section 2, 11 *While remaining rooted in the private sector, recognizing that governments and public authorities are responsible for public policy and duly taking into account governments' or public authorities' recommendations*; and ByLaws Art. 3, Section 1 *ICANN and its constituent bodies shall operate to the maximum extent feasible in an open and transparent manner and consistent with procedures designed to ensure fairness.*

11. Are you bringing this Reconsideration Request on behalf of multiple persons or entities?

X Yes

11a. If yes, Is the causal connection between the circumstances of the Reconsideration Request and the harm the same for all of the complaining parties?

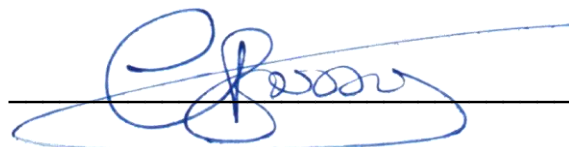

Yes, because the music community (i) has a shared, common interest - the legal distribution and promotion of music, (ii) is dependent on the DNS (where rampant piracy occurs) for core activities, and since (iii) Determinations of such significance pertaining to competition and exclusive access can create material detriment to the legitimate interests of a significant portion of the music community that is represented by the Affected parties. Failure of the panelist to understand that the music community is reliant on the DNS exhibits why this particular case requires someone familiar with music/intellectual property matters.

Do you have any documents you want to provide to ICANN?

Yes, please see Annex. Attached are the (i) 3 Expert Determinations for .music, .song, and .tunes (See Annex 1), (ii) Proof of evidence that the music community is reliant on the DNS/Internet for core activities (See Annex 2), and (iii) Proof of evidence that the music community is clearly and strictly delineated (See Annex 3), which was mentioned in the Additional Submission.

Terms and Conditions for Submission of Reconsideration Requests

The Board Governance Committee has the ability to consolidate the consideration of Reconsideration Requests if the issues stated within are sufficiently similar. The Board Governance Committee may dismiss Reconsideration Requests that are querulous or vexatious. Hearings are not required in the Reconsideration Process, however Requestors may request a hearing. The BGC retains the absolute discretion to determine whether a hearing is appropriate, and to call people before it for a hearing. The BGC may take a decision on reconsideration of requests relating to staff action/inaction without reference to the full ICANN Board. Whether recommendations will issue to the ICANN Board is within the discretion of the BGC. The ICANN Board of Director's decision on the BGC's reconsideration recommendation is final and not subject to a reconsideration request.

AMENDED AND RESTATED ARTICLES OF INCORPORATION OF INTERNET CORPORATION FOR ASSIGNED NAMES AND NUMBERS

1. The name of this corporation is Internet Corporation for Assigned Names and Numbers (the “**Corporation**”).
2. This Corporation is a nonprofit public benefit corporation and is not organized for the private gain of any person. It is organized under the California Nonprofit Public Benefit Corporation Law for charitable and public purposes. The Corporation is organized, and will be operated, exclusively for charitable, educational, and scientific purposes within the meaning of § 501(c)(3) of the Internal Revenue Code of 1986, as amended (the “**Code**”), or the corresponding provision of any future United States tax code. Any reference in these Articles to the Code shall include the corresponding provisions of any future United States tax code. In furtherance of the foregoing purposes, and in recognition of the fact that the Internet is an international network of networks, owned by no single nation, individual or organization, the Corporation shall, except as limited by Article 4 hereof, pursue the charitable and public purposes of lessening the burdens of government and promoting the global public interest in the operational stability of the Internet, as such global public interest may be determined from time to time by the multistakeholder community through an inclusive bottom-up multistakeholder community process, by carrying out the mission set forth in the bylaws of the Corporation (“**Bylaws**”).
3. The Corporation shall operate in a manner consistent with these Articles and its Bylaws for the benefit of the Internet community as a whole, carrying out its activities in conformity with relevant principles of international law and international conventions and applicable local law and through open and transparent processes that enable competition and open entry in Internet-related markets. To this effect, the Corporation shall cooperate as appropriate with relevant international organizations.
4. Notwithstanding any other provision of these Articles:
 - a. The Corporation shall not carry on any other activities not permitted to be carried on (i) by a corporation exempt from United States income tax under § 501(c)(3) of the Code or (ii) by a corporation, contributions to which are deductible under § 170(c)(2) of the Code.

- b. No substantial part of the activities of the Corporation shall be the carrying on of propaganda, or otherwise attempting to influence legislation, and the Corporation shall be empowered to make the election under § 501 (h) of the Code.
 - c. The Corporation shall not participate in, or intervene in (including the publishing or distribution of statements) any political campaign on behalf of or in opposition to any candidate for public office.
 - d. No part of the net earnings of the Corporation shall inure to the benefit of or be distributable to its directors, trustees, officers, or other private persons, except that the Corporation shall be authorized and empowered to pay reasonable compensation for services rendered and to make payments and distributions in furtherance of the purposes set forth in Article 2 hereof.
5. To the full extent permitted by the California Nonprofit Public Benefit Corporation Law or any other applicable laws presently or hereafter in effect, no director of the Corporation shall be personally liable to the Corporation for or with respect to any acts or omissions in the performance of his or her duties as a director of the Corporation. Any repeal or modification of this Article 5 shall not adversely affect any right or protection of a director of the Corporation existing immediately prior to such repeal or modification.
6. Upon the dissolution of the Corporation, the Corporation's assets shall be distributed for one or more of the exempt purposes set forth in Article 2 hereof and, if possible, to a § 501(c)(3) organization organized and operated exclusively to lessen the burdens of government and promote the global public interest in the operational stability of the Internet, or shall be distributed to a governmental entity for such purposes, or for such other charitable and public purposes that lessen the burdens of government by providing for the operational stability of the Internet. Any assets not so disposed of shall be disposed of by a court of competent jurisdiction of the county in which the principal office of the Corporation is then located, exclusively for such purposes or to such organization or organizations, as such court shall determine, that are organized and operated exclusively for such purposes, unless no such corporation exists, and in such case any assets not disposed of shall be distributed to a § 501(c)(3) corporation chosen by such court.
7. Any amendment to these Articles shall require (a) the affirmative vote of at least three-fourths of the directors of the Corporation, and (b) approval in writing by the Empowered Community, a California nonprofit association established by the Bylaws (the “**Empowered Community**”), following procedures set forth in Article 25.2 of the Bylaws.

8. Any transaction or series of transactions that would result in the sale or disposition of all or substantially all of ICANN's assets shall require (a) the affirmative vote of at least three-fourths of the directors of the Corporation, and (b) approval in writing by the Empowered Community prior to the consummation of the transaction, following procedures set forth in Article 26 of the Bylaws.

Exhibit DIDP A114

**DETERMINATION
OF THE BOARD GOVERNANCE COMMITTEE (BGC)
RECONSIDERATION REQUEST 15-8**

20 JUNE 2015

The Requester, Atgron, Inc, seeks reconsideration of the ICANN Board Governance Committee's ("BGC's") summary dismissal of Reconsideration Request 15-5, which sought reconsideration of the BGC's determination of Reconsideration Request 15-1. Request 15-1, filed by the Requester on 15 January 2015, challenged staff's actions in processing the Requester's Registry Services Evaluation Policy ("RSEP") request to allow the Requester to offer third-level domain name registrations in .WED.

The Bylaws provide that the BGC "may summarily dismiss a Reconsideration Request if, among other things: (i) the requestor fails to meet the requirements for bringing a Reconsideration Request; [or] (ii) it is frivolous, querulous or vexatious."¹ The BGC finds summary dismissal appropriate here because this is the third reconsideration request filed by the Requester based on the exact same facts and circumstances, raising the exact same arguments, and, as twice before, the Requester fails to satisfy the reconsideration criteria set forth in the Bylaws.² Furthermore, the Requester's conduct in filing multiple requests regarding the same underlying facts and raising the same arguments borders on frivolous, querulous, and vexatious. The BGC therefore summarily dismisses Request 15-8. The BGC also notes that ICANN is

¹ Bylaws, Art. IV, § 2.9.

² Article IV, § 2.2 of ICANN's Bylaws states in relevant part that any entity may submit a request for reconsideration or review of an ICANN action or inaction to the extent that it has been adversely affected by:

- (a) one or more staff actions or inactions that contradict established ICANN policy(ies); or
- (b) one or more actions or inactions of the ICANN Board that have been taken or refused to be taken without consideration of material information, except where the party submitting the request could have submitted, but did not submit, the information for the Board's consideration at the time of action or refusal to act; or
- (c) one or more actions or inactions of the ICANN Board that are taken as a result of the Board's reliance on false or inaccurate material information.

charged with using its resources in the public benefit; responding to the Requester's repeated reconsideration requests, when they do not raise any new arguments or assert any grounds for reconsideration, is not an appropriate use of those resources.

Exhibit DIDP A115

**DETERMINATION
OF THE BOARD GOVERNANCE COMMITTEE (BGC)
RECONSIDERATION REQUESTS 16-1 AND 16-2**

25 FEBRUARY 2016

Commercial Connect, LLC (Requester) filed two Reconsideration Requests—Requests 16-1 and 16-2 (collectively, Requests)—regarding the same subject matter.¹ In Request 16-2, the Requester seeks reconsideration of ICANN staff’s determination to proceed with the scheduled 27 January 2016 auction for .SHOP (Auction). In Request 16-1, the Requester seeks reconsideration of ICANN’s staff’s determination that the Requester’s time to invoke the Cooperative Engagement Process (CEP) regarding the Board’s denial of Reconsideration Request 15-13 (Request 15-13) had passed, and argues that ICANN staff “prevented” it from filing a valid Request for Independent Review Process (IRP). The Requester also renews the challenges that it raised in Request 15-13 to a Community Priority Evaluation (CPE) panel’s report finding that the Requester’s application for .SHOP did not achieve priority through CPE (CPE Report), and ICANN’s acceptance of that report.

I. Brief Summary.

The Requester submitted a community-based application for .SHOP (Application). Eight other applications were also submitted for .SHOP. The Requester’s Application did not prevail in CPE and therefore remained in contention with the eight other applications.

Requests 16-1 and 16-2 represent the *fifth and sixth* reconsideration requests that the Requester has filed related to its Application. In Request 16-2, the Requester seeks to somehow undo the results of the .SHOP Auction that occurred on 27 January 2016 – an auction in which the Requester previously had chosen not to participate. In Request 16-1, the Requester renews

¹ Because the Requests are made by the same Requester and raise sufficiently similar issues, they will be addressed in the same proceeding. Bylaws, Art. IV, § 2.8

its time-barred challenge to the CPE Report finding that its Application was not entitled to community priority. The Requester also challenges ICANN staff's determination that the Requester had missed the Bylaws-mandated deadline to initiate CEP regarding the Board's denial of Request 15-13. The Requester likewise claims that ICANN staff acted to prevent it from initiating an IRP regarding the Board's denial of Request 15-13.

The Requester's claims are unsupported and are the latest in a long line of frivolous abuses of ICANN's accountability mechanisms by the Requester. The Requester's renewed attempt to challenge the CPE Report is improper and time-barred. The Requester has not raised any new arguments or evidence since its previous challenge to the CPE report in Request 15-13, which was denied. As to the other issues raised by the Requester, the facts demonstrate that ICANN staff adhered to established policy and procedure with respect to the Auction, took unprecedented steps to keep the Requester apprised of, and involved in, the Auction, and properly responded to the Requester's many incomplete, aborted, and/or improper attempts to invoke ICANN's accountability mechanisms. The BGC therefore denies Requests 16-1 and 16-2.

The BGC is also deeply concerned by the Requester's repeated abuses of ICANN's accountability mechanisms and New gTLD Program processes, all of which appear to be last ditch delay tactics. These include, but certainly are not limited to, the Requester's filing of a frivolous lawsuit and a vacuous motion for temporary restraining order against ICANN in federal court in violation of the Terms and Conditions of the Applicant Guidebook (Guidebook), as well as the Requester's invocation of essentially *every* accountability mechanism within a 24-hour period before the Auction, after the Requester affirmatively decided to not participate in the Auction. ICANN has expended and diverted significant resources and funds engaging with the Requester and responding to its numerous, last-minute attempts to stop the .SHOP Auction.

Although providing fair, open, and transparent access to ICANN’s accountability mechanisms is critical to ICANN’s mandate, there is no justification for ICANN and members of its community having to suffer repeated baseless invocations of those mechanisms.

II. Facts.

A. Background Facts.

1. The Requester’s Application

In 2000, the ICANN Board adopted a measured and responsible application process for the introduction of new gTLDs.² The Requester submitted an application for .SHOP during this “proof-of-concept” round (2000 Application). In its 2000 Application, the Requester acknowledged that it had “no legally enforceable right to acceptance or any other treatment of [its] application or to the delegation in any particular manner of any top-level domain that may be established in the authoritative DNS root.”³ The Requester also expressly agreed in its 2000 Application to “*release[] and forever discharge[] ICANN . . . from any and all claims and liabilities relating in any way to (a) any action or inaction by or on behalf of ICANN in connection with this application or (b) the establishment or failure to establish a new TLD.*”⁴ The Requester’s 2000 Application was not approved by ICANN.

In 2012, as part of the New gTLD Program, the Requester submitted a community-based application for .SHOP. As provided for in the Guidebook, because the Requester had applied for .SHOP in its 2000 Application but was not awarded the string, the Requester received an US\$86,000 offset for its .SHOP Application.⁵ In accepting this credit, the Requester signed a

³ 2000 Application, *available at* https://archive.icann.org/en/tlds/mall1/_2_I6.1_AppTrans.htm, ¶ B12; *see also id.* ¶ B6 (“there is no understanding, assurance, or agreement that this application will be selected for negotiations toward entry of an agreement with a registry operator”).)

⁴ *Id.* ¶ B14.2 (emphasis added.)

⁵ Guidebook, § 1.5.1.

credit request form (2000 Credit Request Form) confirming that it “was not awarded any string pursuant to the 2000 proof-of-concept round and [] has no legal claims arising from the 2000 proof-of-concept process.”⁶

In addition, the Requester, like all others submitting applications in connection with the 2012 New gTLD Program, acknowledged and agreed to the Terms and Conditions set forth in Module 6 of the Guidebook. Among those Terms and Conditions is a waiver and release barring all actions in court or other judicial fora against ICANN or its Affiliated Parties (as defined in Guidebook Module 6) arising out of ICANN’s or those Affiliated Parties’ evaluation of any new gTLD application:

6. Applicant hereby releases ICANN and the ICANN Affiliated Parties [i.e., ICANN’s affiliates, subsidiaries, directors, officers, employees, consultants, evaluators, and agents] from any and all claims by applicant that arise out of, are based upon, or are in any way related to, any action, or failure to act, by ICANN or any ICANN Affiliated Party in connection with ICANN’s or an ICANN Affiliated Party’s review of this application, investigation or verification, any characterization or description of applicant or the information in this application, any withdrawal of this application or the decision by ICANN to recommend, or not to recommend, the approval of applicant’s gTLD application. APPLICANT AGREES NOT TO CHALLENGE, IN COURT OR IN ANY OTHER JUDICIAL FORA, ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION, AND IRREVOCABLY WAIVES ANY RIGHT TO SUE OR PROCEED IN COURT OR ANY OTHER JUDICIAL FORA ON THE BASIS OF ANY OTHER LEGAL CLAIM AGAINST ICANN AND ICANN AFFILIATED PARTIES WITH RESPECT TO THE APPLICATION. . . .⁷

Following the results of a String Similarity Review (SSR) process and the determinations on various string confusion objections, the Requester’s Application was placed into a contention set with eight other applications for .SHOP.

The Requester filed twenty-one string confusion objections against applicants for strings like .BUY, .ECOM, .SALE, .SHOPYOURWAY, and for strings representing words such as

⁶ New gTLD Application 2000 Round Credit Request, *available at* <https://www.icann.org/en/system/files/files/cc-v-icann-oyler-declaration-exhibits-a-f-25jan16-en.pdf>.

⁷ Guidebook, Module 6, ¶ 6.

“web shop” in languages such as Chinese, Japanese, and Arabic.⁸ All but two of the Requester’s twenty-one objections were overruled, and one of the two objections in which the Requester prevailed was later overturned.⁹

In 2013 and 2014, the Requester also filed *three* separate Reconsideration Requests relating to its Application.¹⁰ All three Reconsideration Requests were denied.¹¹

Because the Requester submitted a community application, it was invited to participate in CPE. The Requester elected to participate in CPE, and on 21 May 2105, the CPE Panel issued the CPE Report, determining that the Requester’s Application scored only five out of 16 possible points on the CPE criteria—11 points less than the minimum required to achieve priority—and therefore did not prevail in CPE.¹²

On 10 July 2015, the Requester filed its *fourth* reconsideration request, Reconsideration Request 15-13, seeking reconsideration of the CPE Report, and challenging various procedures

⁸ See <http://newgtlds.icann.org/en/program-status/odr/determination>.

⁹ *Id.* One of the determinations finding that the Requester prevailed (Determination) was perceived as inconsistent with another string similarity objection determination. The NGPC resolved that the Determination should be re-evaluated, and the dispute resolution service provider that conducted the re-evaluation of the objection proceeding later overturned the Determination as unreasonable. NGPC Resolutions 2014.10.12.NG02-03, *available at* <https://www.icann.org/resources/board-material/resolutions-new-gtld-2014-10-12-en#2.b>; Final Determination on Case No. 0115 0003 3821, *available at* <https://newgtlds.icann.org/sites/default/files/drsp/21aug15/determination-2-1-1318-15593-en.pdf>.

governing the New gTLD Program, as well as the SSR process and the adjudication of various string confusion objections, which ultimately resulted in the contention set for its Application.¹³

On 24 August 2015, the BGC recommended that Request 15-13 be denied, determining that the Requester's claims were time-barred, and in any event, the Requester had not demonstrated a basis for reconsideration with respect to the CPE Report or otherwise.¹⁴

On 28 September 2015, the New gTLD Program Committee (NGPC) accepted the BGC's recommendation to deny Request 15-13 (28 September 2015 Resolution).¹⁵ The minutes of that meeting were published on 19 October 2015.¹⁶

On 3 November 2015, the deadline for the Requester to invoke CEP relating to the 28 September 2015 Resolution expired.¹⁷

2. The Requester's Attempts to Delay the Resolution of the .SHOP Contention Set.

Following the denial of Request 15-13, rather than timely invoking the accountability mechanisms available to it, the Requester began to engage in months-long pattern of dilatory tactics aimed at preventing ICANN staff from facilitating resolution of the .SHOP contention set. On 17 November 2015, the day before a Request for IRP relating to the 28 September 2015 Resolution would have been due, the Requester filed a request pursuant to ICANN's Documentary Information Disclosure Policy (DIDP), seeking additional information regarding

¹³ Request 15-13, *available at* <https://www.icann.org/en/system/files/files/reconsideration-request-15-13-commercial-connect-with-appendices-10jul15-en.pdf>

SSRs, auctions, and other issues.¹⁸ The same day, the Requester appeared to make a request for CEP and stated that it anticipated initiating an IRP relating to the 28 September 2015 Resolution. The Requester claimed that it had delayed doing so on the mistaken impression that the minutes of that meeting had not yet been published, and then had been unable to submit a Request for IRP due to alleged issues with the International Centre for Dispute Resolution's (ICDR) website. The Requester attached a two-page Notice of IRP form (without any of the supporting documentation required to initiate an IRP) and requested a 30-day extension to initiate an IRP.¹⁹

On 18 November 2015, ICANN advised the Requester that minutes of the NGPC's 28 September 2015 meeting had been published on 19 October 2015 and directed the Requester to the link for the published minutes.²⁰ ICANN also advised the Requester that the deadline to initiate a CEP related to the 28 September 2015 Resolution had been 3 November 2015, and that the Bylaws-mandated deadline to file an IRP Request was 18 November 2015.²¹ Additionally, ICANN provided the Requester with links to pages on the ICDR's website with information about the requirements for filing IRP Requests to help assist the Requester with its attempts to initiate an IRP.²² With respect to the request for a 30-day extension, ICANN informed the Requester that because the deadline is mandated by ICANN's Bylaws, ICANN could not grant the requested extension.²³ In this time frame, the Requester never properly initiated CEP or an IRP, notwithstanding ICANN and the ICDR's attempt to assist the Requester.

On 29 October 2015, all applications in the .SHOP contention set were invited to enter into the auction process. Applicants were given a deadline of 26 November 2015 to elect to

¹⁸ DIDP Request, available at <https://www.icann.org/en/system/files/files/didp-20151117-1-smith-request-17nov15-en.pdf>.

²³ *Id.*

enter into the auction process and participate in the auction.²⁴ On 20 November 2015, ICANN sent the Requester a reminder regarding the 26 November 2015 deadline.²⁵ On 25 November 2015, the Requester asked for and received an extension to 1 December 2015 to respond to the auction invitation.²⁶ Despite repeated reminders by ICANN, the Requester did not respond to the auction request, as it had stated that it would do.²⁷ Instead, it informed ICANN on 4 December 2015 that it felt it should not have to respond while trying to determine a way forward with its IRP, and that it did not have sufficient information regarding the Auction.²⁸

On 3 December 2015, the Requester informed ICANN that it was “still [its] intent to file [a] request for Independent Review . . . but [was] still unclear on what is needed and how to proceed.”²⁹ The ICDR, which was copied on the Requester’s email, responded providing the Requester with all the relevant information for initiating an IRP. ICANN followed up, continuing to try to help the Requester, stating that ICANN understood that the ICDR had “provided [the Requester] with what appears to be all the relevant information needed to file your request for Independent Review. If you have any additional questions, please let us know.”³⁰

On 10 December 2015, ICANN was contacted by [an](#) attorney retained by the Requester. She stated that the Requester was considering pursuing an IRP relating to Request 15-13 and sought additional information regarding when that request would be considered by the NGPC.³¹ On 12 December 2015, ICANN responded to the attorney, setting forth the information it had

previously provided the Requester by email on 18 November 2015 (including that the NGPC had considered Request 15-13 on 28 September 2015, and that the minutes of that meeting had been published on 19 October 2015).³²

On 11 December 2015, ICANN provided the Requester with further information regarding the auction process.³³ ICANN also specifically advised the Requester that at that time there were no accountability mechanisms affecting the .SHOP contention set and that the Auction was still scheduled for 27 January 2016.³⁴ ICANN repeated these reminders on 15, 18, and 22 December 2015.³⁵ On 23 December 2015, ICANN sent the Requester yet another reminder, further advising the Requester that if it wished to participate in the Auction it would need to submit a bidder agreement by 15 January 2016.³⁶

On 6 January 2016, the Requester filed a lawsuit regarding the Requester's Application and 2000 Application against ICANN and the ICDR in the United States District Court for the Western District of Kentucky, together with a motion for Temporary Restraining Order and Preliminary Injunction (Motion for TRO/PI).³⁷ Despite the Requester's claims of exigent circumstances in the lawsuit and Motion for TRO/PI, the Requester never served ICANN with a copy of the summons, complaint, or motion papers.

Despite the filing of the Requester's lawsuit, on 7 January 2016, ICANN participated in a telephone conference with the Requester, again advising the Requester of the 15 January 2016 deadline for submitting a bidder agreement and also advising it that the deadline to deposit

auction fees was 20 January 2016.³⁸ ICANN sent the Requester a final reminder on 15 January 2016.³⁹ The Requester did not submit a bidder agreement.

On 11 January 2016, after ICANN through its own means had learned of the Requester's lawsuit, ICANN's outside counsel sent the Requester's counsel a letter advising that the Requester's lawsuit was barred by the waivers and releases accepted by Requester in Module 6, Requester's 2000 Application and the 2000 Round Credit Form, and that the lawsuit was a breach of Requester's Application.⁴⁰ For these reasons, and others, ICANN's counsel demanded that the Requester withdraw the lawsuit or risk ICANN pursuing sanctions against the Requester and its counsel for filing a frivolous lawsuit as well as the risk of ICANN terminating the Requester's Application for breach of the Guidebook's terms and conditions.⁴¹

Knowing of these risks, the Requester proceeded with its lawsuit. However, on 18 January 2016, the Requester's counsel filed a motion to withdraw as counsel, stating that he had not been aware of the waivers and releases when the suit was filed and had a "fundamental disagreement" with the Requester's decision to proceed with the suit.⁴² On 25 January 2016, despite not having been served in the case, ICANN made a special appearance to oppose the Requester's Motion for TRO/PI based on an order from the court.⁴³ On 26 January 2016, the court denied the Requester's Motion for TRO/PI, finding that the Requester had failed to show a likelihood of success on the merits of its claims because the releases agreed to by Requester were "clear and comprehensive."⁴⁴ The court also granted the Requester's counsel's motion to

withdraw, finding that “[g]ood cause exists where an attorney’s continued representation of a client could subject counsel to [] sanctions.”⁴⁵

On 22 January 2016, and while the Requester’s Motion for TRO/PI was pending, a representative for the Requester sent ICANN a Notice of IRP filing, but did not provide the supporting documents required to complete its filing.⁴⁶ On 26 January 2016, the ICDR informed the Requester’s representative by email that its attempt to initiate an IRP was defective and “not sufficient in order to proceed with administration of this matter,” under the ICDR Rules and the Supplementary Procedures for IRPs, because it was not accompanied by the requisite supporting documentation.⁴⁷

Then, less than 24 hours before the Auction was scheduled to take place, the Requester attempted to invoke *all* of ICANN’s accountability mechanisms in a late and last-ditch effort to stop the Auction, in which it had previously and affirmatively chosen not to participate. First, on the morning of 26 January 2016, the Requester attempted to initiate a CEP regarding the 28 September 2015 Resolution.⁴⁸ ICANN staff promptly informed the Requester, as it had previously done on two other occasions, that the deadline to initiate a CEP relating to that Board action was 3 November 2015, nearly three months earlier.⁴⁹

Second, later that afternoon the Requester filed a complaint with the Ombudsman, which the Ombudsman declined for lack of jurisdiction in light of the Requester’s lawsuit.⁵⁰

Third, on the same day, the Requester filed Request 16-1, its *fifth* reconsideration request related to its .SHOP Application, seeking reconsideration of ICANN staff’s determination that

the time to initiate a CEP had passed, arguing that staff had somehow prevented it from initiating an IRP, and renewing the various challenges raised in Request 15-13.⁵¹ The Requester included other applicants in the .SHOP contention set on many of these communications, despite requests that he not do so and in violation of ICANN's auction rules.⁵²

Finally, on the morning of 27 January 2016, less than two hours before the scheduled Auction, the Requester submitted a Request for Emergency Arbitrator to the ICDR (Emergency Request).⁵³ Without conceding the Requester's claims or the appropriateness and merit of the Emergency Request, ICANN immediately informed the ICDR that it would not challenge the Requester's pursuit of its Emergency Request.⁵⁴ Accordingly, the ICDR moved forward with the Emergency Request.

The .SHOP Auction was conducted on 27 January 2016, as had been scheduled to do since 29 October 2015.

On 28 January 2016, ICANN received an email from the ICDR stating that the Requester was seeking a short stay of the Emergency Request.⁵⁵ On 1 February 2016, the Requester's counsel notified the ICDR that the Requester was suspending its Emergency Request.⁵⁶ On 2 February 2016, the ICDR informed the Requester and ICANN that, based on the Requester's

⁵¹ Request 16-1.

⁵² Exhibit J, Pgs. 115-16. The auction rules provide that from the time auction deposits are submitted until after an auction concludes, applicants within the relevant contention set are not allowed to communicate with each other regarding the contention set. *See* New gTLD Auction Rules, Pg. 12, *available at* <https://newgtlds.icann.org/en/applicants/auctions>. The Blackout Period for the .SHOP Auction began on 20 January 2016.

⁵⁵ Exhibit P, Pg. 161.

⁵⁶ Exhibit Q, Pgs. 163-64.

suspension, the ICDR was terminating the appointment of an emergency panelist to hear the Emergency Request.⁵⁷

Then, the Requester sought from the ICDR an extension to 5 February 2016 to submit papers supporting an IRP Request, which the ICDR permitted without consulting ICANN.⁵⁸ On 5 February 2016, the Requester sought another extension from the ICDR to submit papers supporting an IRP Request.⁵⁹ ICANN's counsel responded to the ICDR and the Requester that since the Requester had not yet filed any written submissions supporting an IRP Request, as required by ICANN's Bylaws and the Supplementary Procedures, the Requester had not yet initiated an IRP, and in ICANN's view extensions were not relevant.⁶⁰

On 10 February 2016, the Requester filed Reconsideration Request 16-2, its *sixth* reconsideration request, seeking reconsideration of ICANN staff's decision to go ahead with the 27 January 2016 Auction.⁶¹ On 10 February 2016, the Requester filed another IRP Request with the ICDR. The ICDR is in the process of administering the Requester's latest IRP Request. On 19 February 2016, however, the Requester's counsel failed to appear at a scheduled administrative hearing for that IRP.

B. Relief Requested.

In Request 16-1, the Requester asks that ICANN

1. “[I]dentify and correct[] process and policy errors that have been made by the EIU and ICANN” with respect to the issues raised by the Requester (relating to the CPE);⁶²

⁶² Request 16-1, § 9, Pg. 4.

2. “[A]ccept the Requester’s Notice of Independent Review submitted on 17 November 2015 and the initiation of the Cooperative Engagement Process by the Requester on the same date;”⁶³
3. “[S]uspend the process for string contention resolution in relation to the .SHOP gTLD.”⁶⁴
4. Appoint a third party to perform a new CPE for the Requester’s Application or “[d]etermine that the [Requester] meets the Community standards . . . and allow [the Requester] to proceed to delegation.”⁶⁵

In Request 16-2, the Requester asks that ICANN

1. “[P]rovide a full explanation of why ICANN has not approved Requester’s application in the context of the 2000 round, in light of ICANN’s Mission and Core Values;”⁶⁶
2. Explain why ICANN “ignored Requester’s initial application in making determinations in the context of the 2000 round and the New gTLD Program, and more in particular the CPE and auction processes;”⁶⁷
3. “[S]et aside the results of the New gTLD Program Auction for the .SHOP contention set . . . pending the outcome of Reconsideration Request 16-1 and any Accountability Mechanisms Requester may invoke following the determination by ICANN;”⁶⁸
4. “[S]uspend the process for entering into an agreement with any party having participated in the auction process for the .SHOP gTLD before any pending or future Accountability Mechanisms relating to applications for the .SHOP gTLD have been completed.”⁶⁹

III. The Relevant Standards for Evaluating Reconsideration Requests.

ICANN’s Bylaws provide for reconsideration of a Board or staff action or inaction in accordance with specified criteria.⁷⁰ The Requester challenges the actions of staff and of a third party service provider. Dismissal of a request for reconsideration of staff action or inaction is appropriate if the BGC concludes, and the Board agrees to the extent that the BGC deems that further consideration by the Board is necessary, that the requesting party does not have standing because the party failed to satisfy the reconsideration criteria set forth in the Bylaws. The reconsideration process can properly be invoked for challenges to determinations rendered by panels formed by third party service providers, such as the EIU, where it can be stated that a panel failed to follow the established policies or procedures in reaching its determination, or that staff failed to follow its policies or procedures in accepting that determination.⁷¹

IV. Analysis and Rationale.

A. ICANN Staff Complied with Established Policy in Proceeding with the Scheduled Action for .SHOP.

In Request 16-2, the Requester argues that ICANN staff violated established policy by proceeding with the scheduled 27 January 2016 .SHOP Auction despite the fact that the Requester had submitted a reconsideration request—Request 16-1—on 26 January 2016.⁷²

ICANN’s website states that “a string contention set will be eligible to enter into the New gTLD

⁷⁰ Bylaws, Art. IV, § 2. Article IV, § 2.2 of ICANN’s Bylaws states in relevant part that any entity may submit a request for reconsideration or review of an ICANN action or inaction to the extent that it has been adversely affected by:

- (a) one or more staff actions or inactions that contradict established ICANN policy(ies); or
- (b) one or more actions or inactions of the ICANN Board that have been taken or refused to be taken without consideration of material information, except where the party submitting the request could have submitted, but did not submit, the information for the Board’s consideration at the time of action or refusal to act; or
- (c) one or more actions or inactions of the ICANN Board that are taken as a result of the Board’s reliance on false or inaccurate material information.

⁷¹ See <http://www.icann.org/en/groups/board/governance/reconsideration/recommendation-booking-01aug13-en.doc>, BGC Recommendation on Reconsideration Request 13-5.

⁷² Request 16-2, § 8, Pgs. 3-4.

Program Auction” only where “[a]ll active applications in the contention set have . . . [n]o pending ICANN Accountability Mechanisms.”⁷³ The Requester argues that Request 16-1, filed a day before the .SHOP Auction, represented a pending accountability mechanism that should have stayed the scheduled action.

However, contrary to what the Requester argues, there were no pending accountability mechanisms when the .SHOP contention set entered into the auction process. Specifically, the invitations for the .SHOP Auction were sent on 29 October 2015, three months before the scheduled auction date and at a time when no accountability mechanisms were pending. The Requester received an invitation, as well as numerous reminders from ICANN staff about deadlines related to the Auction. The Requester never accepted the invitation (despite having received multiple extensions of time to do so). The Requester also failed to invoke any accountability mechanisms, despite repeated reminders from ICANN staff (on 11, 25, 18, and 22 December 2015) that there were no pending accountability mechanisms affecting the .SHOP contention set and that the Auction was still scheduled for 27 January 2016. Meanwhile, the technical and financial preparations for the Auction went forward.

On 22 January 2016, the Requester filed a Notice of IRP, but did not properly invoke an ICANN accountability mechanism because the filing did not comport with the ICDR’s Rules and Supplementary Procedures. As the ICDR informed the Requester, on 26 January 2016, the Notice of IRP was defective and “not sufficient in order to proceed with administration of this matter,” because it was not accompanied by a supporting, written submission.

Finally, Request 16-1, filed by the Requester the day before the .SHOP Auction, and the Emergency Request, filed two hours before the Auction was set to begin, were not proper

⁷³ See <https://newgtlds.icann.org/en/applicants/auctions>.

methods to stay the scheduled Auction and ICANN received no “order” or any other direction from the ICDR to stay the auction. The Requester’s belated attempt to invoke an accountability mechanism represented a meritless and improper eleventh hour attempt to delay the scheduled Auction, when the Requester could have taken numerous actions long before to try to do so. Delaying the Auction at such a late date would have caused further significant delays to the other members of the .SHOP contention set, all of which had suffered from earlier delays caused by the Requester’s conduct in initiating earlier accountability mechanisms, and had already placed significant amounts of money in escrow in reliance on the Auction going ahead as scheduled. As such, ICANN staff properly determined that it would not violate established policy to proceed with the .SHOP Auction despite the Requester’s belatedly filed reconsideration request.

B. ICANN Staff Complied with Established Policy in Declining to Extend the Bylaws-Mandated Deadline for CEP.

In Request 16-1, the Requester argues that it attempted to initiate CEP on 17 November 2015 and again 26 January 2016, but was informed that the deadline to initiate CEP had already expired and could not be extended.⁷⁴ The Rules for CEP, which are incorporated into the Bylaws, provide that CEP must be initiated within 15 days of the posting of Board minutes that the requesting party contends demonstrate that the Board violated its Bylaws or Articles of Incorporation.⁷⁵ As ICANN staff repeatedly informed the Requester (which it did for the first time in November 2015), because the minutes relating to the 28 September 2015 Resolution the Requester seeks to challenge were posted on 19 October 2015, the deadline to initiate CEP expired on 3 November 2015. For ICANN staff to have extended this deadline could itself have been a violation of ICANN’s Bylaws. As such, staff did not violate any established policy in

⁷⁴ Request 16-1, § 8, Pg. 8.

⁷⁵ Cooperative Engagement Process, ¶ 2, *available at* <https://www.icann.org/en/system/files/files/cep-11apr13-en.pdf>; Bylaws, Art. IV, § 3.14.

determining that it could not extend the Bylaws-mandated deadline for the Requester to initiate CEP.

The BGC notes that CEP is a voluntary process and is not a prerequisite to file an IRP. The BGC also notes that the Requester was well aware of the 3 November 2015 deadline when it again attempted to initiate CEP on 26 January 2016, almost three months late and the day before the scheduled .SHOP Auction. ICANN had specifically informed the Requester on 18 November 2015 of the CEP deadline. The Requester then improperly used ICANN's denial of its time-barred CEP request as a pretext to file a "timely" Request 16-1. As discussed further below, Request 16-1 raises numerous time-barred arguments unrelated to the Requester's CEP request.

C. The Requester Never Properly Initiated an IRP.

In Request 16-1, the Requester also appears to argue that ICANN somehow prevented the Requester from initiating an IRP relating to the 28 September 2015 Resolution.⁷⁶ To the contrary, ICANN staff repeatedly attempted to assist the Requester to initiate an IRP.

As demonstrated by the 18 November 2016 email from ICANN attached to Request 16-1, when the Requester sought assistance filing an IRP Request with the ICDR, ICANN provided the Requester with all the information necessary to initiate an IRP, including links to the pages on ICDR's website containing information on filing fees, forms, and guides.⁷⁷ ICANN also reminded the Requester that it had not properly filed an IRP Request, and that the deadline to do so was that day.⁷⁸

⁷⁶ Request 16-1, § 8, Pg. 9.

⁷⁷ Exhibits to Request 16-1 (18 November 2015 email from E. Le to J. Smith, *available at* <https://www.icann.org/en/system/files/files/reconsideration-16-1-commercial-connect-attachments-redacted-26jan16-en.pdf>.

⁷⁸ *Id.*

Despite having all the relevant information, the Requester did not file an IRP Request. Instead, weeks later, on 3 December 2015, the Requester informed ICANN that it was “still [its] intent to file [a] request for Independent Review . . .but [was] still unclear on what is needed and how to proceed.” The ICDR, which was copied on the Requester’s email, responded providing the Requester with all the relevant information for initiating an IRP. ICANN followed up—still attempting to help and not to prevent the Requester from initiating an IRP—stating that it appeared the ICDR had “provided [the Requester] with what appears to be all the relevant information needed to file your request for Independent Review. If you have any additional questions, please let us know.” ICANN did not receive a response from the Requester.

On 22 January 2016, a representative for the Requester sent ICANN a two-page Notice of IRP filing, but again did not provide the supporting documents required to initiate an IRP. On 10 February 2016—almost three months after the 30-day deadline mandated by the Bylaws—the Requester finally submitted to the ICDR the documents required to initiate an IRP regarding the 28 September 2015 Resolution.

As this history reflects, at no time did ICANN staff prevent the Requester from initiating an IRP. To the contrary, ICANN staff repeatedly informed the Requester of the relevant deadlines and provided the Requester with all the relevant information required to initiate an IRP, even after the deadline to properly to do had long since passed. The Requester’s months-long delay in initiating an IRP was not caused by ICANN, but rather is consistent with the Requester’s other delayed invocations of ICANN’s accountability mechanisms.

D. The Requester's Renewed Argument of Issues Raised in Request 15-13 Is Improper and Time-Barred.

Finally, in Request 16-1 the Requester renews the same argument it raised in Request 15-13—challenging the results of the CPE Report finding its Application did not prevail in CPE.⁷⁹ The BGC issued its recommendation on Request 15-13 on 24 August 2015, and the NGPC accepted that recommendation on 28 September 2015. The 28 September 2015 Resolution and accompanying rationale were posted on 30 September 2015. The deadline to seek reconsideration of the 28 September 2015 Resolution was therefore 13 October 2015—over two months before the Requester submitted Request 16-1. The Requester gives no reason for its delay in seeking reconsideration of the 28 September 2015 Resolution.⁸⁰ Its Request is time-barred, and for this reason alone, its request is denied.

The BGC also notes that the Requester does not raise any new arguments or facts besides those already raised in Request 15-13. ICANN is charged with using its resources in the public benefit; responding to repeated reconsideration requests, when they are based on the same circumstances and do not assert any grounds for reconsideration, is not an appropriate use of those resources. For the reasons discussed in the BGC's Recommendation on Request 15-13, the Requester has not stated a basis for reconsideration of the CPE Report.⁸¹

V. Determination.

Based on the foregoing, the BGC concludes that the Requester has not stated proper grounds for reconsideration, and therefore denies Requests 16-1 and 16-2. In addition, the BGC notes that it is also deeply concerned by the Requester's repeated abuses of ICANN's

⁷⁹ Request 16-1, § 8, Pgs. 3-9.

⁸⁰ Notably, Request 15-13 was itself time-barred by over a month. The CPE Report was published on 21 May 2015. Thus, any reconsideration request challenging the CPE Report must have been filed by 5 June 2015. Bylaws, Art. IV, § 2.5. The Requester, however, did not file Request 15-13 until 10 July 2015, over a month after the filing deadline.

⁸¹ BGC Recommendation on Request 15-13, Pgs. 8-20.

accountability mechanisms and New gTLD Program processes, as described above and as explained further below.

First, the Requester filed suit against ICANN in a United States District Court, despite having accepted multiple releases—in its 2000 Application, its Credit Request Form and its New gTLD Application—barring it from bringing any claims against ICANN related to the Requester’s applications. On 11 January 2016, ICANN’s outside counsel informed the Requester of these releases and stated that if the lawsuit was not immediately dismissed, ICANN would “deem [the Requester] in material breach of the Terms and Conditions of its Application as well as the terms of the Credit Request Form, which may lead to the cancellation of [the Requester’s] Application.” Despite this, the Requester did not withdraw its lawsuit and proceeded with its Motion for TRO/PI. Thus, ICANN was required to expend considerable resources responding to the Requester’s frivolous Motion for TRO/PI. The Requester’s Motion for TRO/PI was denied by the court based on its finding that the Requester had failed to show a likelihood of success on the merits of its claims, and that the releases agreed to by the Requester were “clear and comprehensive.”

Next, as detailed above, the Requester has repeatedly and improperly invoked ICANN’s accountability mechanisms in an attempt to delay the resolution of the .SHOP contention set without any even arguably proper basis to do so. The Requester has filed six reconsideration requests relating to its Application, two of which, Request 15-13 and Request 16-1, raised arguments that were plainly time-barred. Further, Request 16-1 improperly raised the same arguments raised in Request 15-13. The Requester also repeatedly attempted to initiate CEP despite being informed that the Bylaws-mandated deadline for doing so had expired. Finally, despite repeatedly claiming that it was invoking the independent review process, the Requester

failed to actually file an IRP Request that even attempted to conform with the rules until 10 February 2016, almost three months past the Bylaws-mandated deadline.

Within 24 hours before the .SHOP Auction was set to go forward, the Requester made numerous frivolous attempts to invoke every ICANN accountability mechanism in a blatant attempt to halt the scheduled Auction. The Requester invoked CEP (despite knowing that it was time-barred by months), filed Request 16-1 (also raising time-barred arguments), and filed a complaint with the Ombudsman (which was declined for lack of jurisdiction). The day of the Auction, the Requester filed with the ICDR an Emergency Request for relief from an IRP emergency panel that (although time-barred) could have been filed well in advance of the Auction and which was ultimately abandoned by the Requester.

As discussed, ICANN is a nonprofit public benefit corporation charged with ensuring the stable and secure operation of the domain name system and remaining accountable to the Internet community while also using its resources in the public benefit.⁸² ICANN has expended significant resources engaging with the Requester and responding to the many (and mostly improper) filings described above. Although it is critical that all within the ICANN community have fair access to ICANN's accountability mechanisms, there is no justification for ICANN and members of its community having to suffer repeated baseless invocations of those mechanisms. .

⁸² Bylaws, Art. I, §§ 1, 2.10.

How .MUSIC Will Go Mainstream and Benefit ICANN's New gTLD Program

Jan 06 2016 10:27 AMPDT | Comments 6 | Views 37 938

By [Constantine Roussos](#)

[Comment](#) | [Print](#)

Since the launch of the New gTLD Program in 2012, it has become evident that new gTLD registrations overestimated the demand for new Top Level Domain name extensions. Furthermore, new gTLD registrations did not anticipate the hurdles in raising awareness, not to mention creating adoption for new domains. Even the most pessimistic New gTLD Program critics did not expect such unsurprising results. It was a wake up call for many in the domain industry. The New gTLD Program currently lacks credibility. No new gTLD has yet to go mainstream and capture the world's imagination.

Obstacles to New gTLD Success: Competing with .COM, Awareness and Adoption

At the start of last year, [nc magazine](#) asserted in January 2015 that "given the challenges facing TLD adoption, it's unlikely that TLDs will make a huge marketing impact in 2015 unless there is some sort of game changing development."

At the same time, [Forbes](#) agreed with that assessment:

"In contrast to the slippery territory of the new domains, the existing names are solidly established. The .COM extension has been around for almost 30 years, and every Fortune 500 company has a .COM registration. The top 50 global brands direct customers to a .COM homepage. Almost all educational institutions use a .EDU suffix. And others like .ORG clearly stand for nonprofit organizations. People have come to rely on these familiar domains and are more than a little hesitant to incur the costs and uncertainty of venturing into new territory. Not a single leading brand has switched its online identity to one of the new domains, despite all the hype surrounding their introduction a year ago."

Many in the domain community also had some harsh words about the launch of ICANN's New gTLD Program:

Domain Name Wire (DNW) has been following ICANN's New gTLD Program closely since its inception in January 2014. DNW criticized the launch in a post titled "[New TLDs come out with a whimper](#)," followed by another [article](#) in March 2014 with harsh criticism stating that "the launch of new domain names has been anything but smooth. Confusion. Frustration. Incompetence." Nearly 2 years later, DNW [revised the New gTLD Program](#), asserting that "[2015] wasn't a break through year. Hundreds more top level domain names hit the market during 2015. But adoption of new domains didn't take off, proving what many in the industry have been saying: this is going to be a long, gradual process."

Dr. Paul Vixie, a pioneer of the internet's domain name system (DNS), took the criticism a step further according to [ZDNet](#):

"I think it is a money grab. My own view is that ICANN functions as a regulator, and that as a regulator it has been captured by the industry that they are regulating. I think that there was no end user demand whatsoever for more so-called DNS extensions [or] global generic top level domains (gTLDs). They're gradually rolling out, and they are all commercial failures."

As one of the biggest proponents of the New gTLD Program throughout the years, I am disappointed with the results of the New gTLD Program. Before the launch of the New gTLD Program in 2012, all proponents of the New gTLD Program worked together following a culture of "all for one and one for all" with a shared vision to get the New gTLD Program approved and launched. Unfortunately, those collaborative dynamics quickly changed to the detriment of the New gTLD Program and ICANN.

Michael Berkens from [TheDomainer](#) made an astute observation in January 2015, stating that "the new gTLD [registries] better not hope it's a zero sum game where you can win if only someone else loses."

Otherwise it could be an everyone loses scenario "

My opinion is unwavering new gTLD success is about collaboration and cooperative competition known as cooperation to spur trust and adoption. Cooperation is defined as collaboration between business competitors in the hope of mutually beneficial results.

This is why they have been one of the biggest cheerleaders of community gTLDs. They are all about expanding the value pie by creating shared value to all community constituents. The value of the community-based network effects seen in TLDs such as .EDU, .GOV, and .ORG Registrants involved in US post-secondary education, US government or non-profits will choose .EDU, .GOV, and .ORG respectively over .COM because those TLDs stand for something that is trusted and believable by the general public. Another example is .BANK which is carving out its niche by becoming the status quo for banks following the trust model. However, none of these success stories are achievable without community-based policies implemented, high quality content and usage relevant to those respective communities. Serving a higher purpose provides more meaning than the semantic value of the TLD.

Many new gTLD registrars have made a colossal mistake trying to compete head-to-head with .COM under the non-differentiated factory approach of generally "open" TLDs. Most have employed identical marketing launches without offering a meaningful and innovative value proposition to registrants. The marketplace has spoken. By following the same "old school" TLD marketing playbook, the most likely outlook for new gTLD registrars are diminishing returns, especially for new gTLD registrars that lack the economies of scale and competitive advantage. A non-differentiated gTLD competing head-on with .COM (which shares all its attributes except the gTLD's novelty name) is a losing strategy and does not benefit CANN's New gTLD Program or raise awareness.

The only successful route for new gTLD registrars to compete is one based on "value innovation." This means to forget competing directly with .COM and making .COM irrelevant by strategically changing the playing field. Malcolm Gladwell's best seller "David and Goliath: Underdogs, Misfits and the Art of Battling Giants" [elaborates further](#).

"Davids win all the time. The political scientist Ivan Arreguin Toft recently looked at every war fought in the past 200 years between strong and weak combatants. The Goliaths he found won in 71.5% of the cases. Arreguin Toft was analyzing conflicts in which one side was at least ten times as powerful in terms of armed might and population as its opponent, and even in those lopsided contests the underdog won almost 33% of the time. When an underdog fought like David, he usually won. But most of the time underdogs didn't fight like David."

Bottom line, you cannot beat .COM fighting them under their own generally "open" and non-differentiated rules. .COM will always have a colossal home court advantage. The reason is simple. .COM has billions of dollars spent in marketing to raise awareness [over 120 million registrations](#) and decades of user recognition. Verisign is fortunate that they do not have to spend a dime in mainstream promotion because they have others. The .COM adopters spend billions. The .COM adopters are those who prefer the status quo because educating the general public over a new gTLD is difficult, expensive, and confusing. The only way to break the status quo is making a TLD the status quo by widespread community adoption.

The only way that a new gTLD can go mainstream is to share some of the same characteristics shared by .EDU, .GOV, or other community-tailored TLDs that are aligned with a community-based purpose that would convince registrants to choose a new TLD as the first option over a .COM. Such an objective is insurmountable if a TLD follows a non-differentiated, open approach without any policies catering to the corresponding community. Laying the foundations for adoption is critical for success. It also takes widespread adoption from the corresponding communities for such a feat to happen.

There are some key questions most gTLD registrars failed to answer. How can a new gTLD registry effectively differentiate itself to effortlessly convince the most appropriate registrants (the communities generally associated with each gTLD) to register, develop, and market those new domains as the official website and email address online? This is the only way to ensure that usage and compelling content from new gTLDs become more prevalent and eventually go mainstream. While some isolated domain name success stories with new gTLD are expected, such outliers do very little to increase awareness for the New gTLD Program helping all new gTLD registrars as a result. Jeff Davdoff, Donuts chief marketing officer [stated](#) that "pop culture usage is really going to accelerate the movement. Nothing beats the power of pop culture to drive a movement." Such an assessment is precise but a few select moves and studies using a new gTLD will not impact nor change the widespread perception of new TLDs as "wastelands." [Will music domains make the internet better or just more of a crowded wasteland?](#) Isolated new gTLD success stories do not constitute adoption because of their limited reach and longevity. Ongoing marketing and community adoption is paramount to success.

adopt on of a new gTLD that would create the multiplier network effect that would virtually spread across all marketing channels fostering an environment of high quality relevant and trusted content to increase exposure through higher search result rankings

The only remaining gTLD that can accomplish this is the MUS C community based gTLD DotMus c is the only MUS C applicant that has followed unfettered principles deals and Mission aligned with the community based purpose that the Community subscribes to such as

- creating a trusted identifier and safe haven for music consumption
- protecting musicians' rights and intellectual property
- fighting copyright infringement supporting fair compensation and music education and
- following a multi stakeholder approach of representation of all types of global music constituents without discrimination

To accomplish this objective DotMus c developed its Mission and Regulation Policies using a consensus driven bottom up methodology via feedback and universal principles collected in its ongoing extensive [public global Music Community consultation outreach campaign](#) launched in 2008

These principles and community tailored policies to which the entire global music community subscribes to is the underlying reason why DotMus c has amassed the largest global music coalition ever assembled to support a music cause including [organizations with members representing over 95% of global music](#) it bears noting that the [multi stakeholder MUS C Governance Board](#) is comprised of the most trusted and globally recognized organizations associated with music

DotMus c is expected to qualify as a "community" because it [exceeds the required Community Priority Evaluation \(CPE\) criteria consistent with previous prevailing E.U. determinations](#) for OSAKA HOTEL RADIO ECO and SPA Thus far DotMus c has received over 2 000 letters of support more than all CPE applicants combined DotMus c has also been supported by highly influential featured artists and the [International Music Organization \(AO\)](#) that represents featured artists globally Such adoption would make MUS C a driving force for CANN's New gTLD Program Popular artists that have voiced support for the MUS C community initiative include [Radhead](#) [mogen Heap](#) [Travis](#) [Sandie Shaw](#) and many others This unprecedented level of awareness resulted in monumental support before the MUS C gTLD has even launched

DotMus c's value based innovation for a MUS C community led initiative is one of creating differentiated value and making a difference that truly matters For example DotMus c does not allow parking pages According to [nLDStats](#) the vast majority of new gTLD domains an astounding 71 35% are parked (as of January 3rd 2015) This unique policy for MUS C is one of the most innovative restrictions in the New gTLD Program because it mandates website development usage and higher quality content Legal music content and usage seeking Furthermore MUS C can be the first TLD with copyright protection provisions and enforcement These ensure MUS C is a safe haven for legal music consumption and licensing and to increase consumer trust and safety These include policies to stop domain hopping takedown policies in the case of mass privacy authorization provisions permanent blocks privacy and proxy provisions true name and address mandates trusted sender complaint policies and many other [MUS C enhanced safeguards](#)

DotMusic has created a strong, trusted brand for itself over the last decade and has raised unprecedented support and awareness in both the domain and music industries that will be leveraged by DotMusic to become the first new gTLD to be community and industry adopted and to go mainstream. This feat cannot be achieved at such a scale under a MUS C gTLD model that lacks community based policies serving the music community and has no multi stakeholder governance structure The semantic value of a new gTLD alone cannot convince an entire community to adopt it

The semantic value of new gTLDs is currently the most prevalent value proposition to register a new domain Semantic value usage and general awareness will increase steadily over time for new gTLDs but more is needed to catapult that growth rate this is a win win situation for all players involved CANN will have more success stories to convincingly vindicate the launch of its New gTLD Program and to demonstrate that it has served the global public interest and increased competition diversity and consumer choice New gTLD registries (especially portfolio TLD registries) will also benefit because raised awareness and mainstream adoption of new gTLDs will persuade registrants to choose new gTLDs over COM because the risk of confusion and lack of awareness of the existence of new gTLDs will have decreased As more gTLDs are used and marketed globally the growth of new gTLDs will increase dramatically given the multiplier effect benefiting all constituents involved

The Way Forward: Collaboration and Co-opetition

The way forward for the domain industry is co-opetition in which new gTLD registries act with what all stakeholders recognize as partial congruence of interests This approach of cooperative competition based on shared mutually beneficial interests would be similar to the culture adopted by the new gTLD

aplicants before the New gTLD Program was launched. Sharing a similar purpose ultimately convinced CANN to launch the New gTLD Program. Today the challenges concerning the general public to register new gTLDs and proving the New gTLD Program's merits wrong. As one of the biggest advocates of CANN's New gTLD Program, it's my belief that the only way to achieve these goals through genuine cooperative effort, collaboration and working together to figure out how we can accelerate new gTLD growth and awareness.

The [Business Ethics Journal Review](#) emphasizes the benefits of cooperation:

"Globalization has not just led to greater competition but also to an increase of cooperation. A successful business in times of globalization is not merely a good market actor but also an organization that is able to cooperate. It should be noted that from a theoretical point of view cooperation is a non-economic mode of social interaction (in opposition to exchange and competition) that however is highly relevant for concrete business practices since it might lead to positive economic consequences."

It has been adequately proven that competing directly with COM is an unsustainable losing battle. For long-term success, growing profitability and sustainability, new gTLD registrars will eventually have to collaborate to realign their interests and business strategies under a shared value model in a manner that is beneficial to all parties in the domain value chain. Creating this indirect competitive advantage is ultimately the only way to compete with COM. One for all, and all for one.

.MUSIC Will Go Mainstream Benefiting the New gTLD Program and ICANN

We believe that a community-based MUSIC launch will propel CANN's New gTLD Program to new heights, benefiting all parties involved: the global music community, CANN, new gTLD registrars, and society as a whole. A widespread, community-adopted MUSIC has the highest chance of any gTLD to achieve the goal of a new gTLD going mainstream and becoming industry-adopted, to raise unprecedented new gTLD awareness with the general public.

As [Diffuser.fm points out](#), MUSIC "could be the biggest thing to happen to the web" and live up to the expectations voiced in December 2015 at [Techcrunch Disrupt](#) as a "game-changing" new gTLD and to become a "global home and first of its kind database for the music community" as disclosed recently in [Billboard magazine](#).

DotMusic is a prime position to jumpstart the New gTLD Program and create the necessary momentum to raise public awareness about new gTLDs. The domain community has a lot of positive developments to look forward to in 2016.

This post is part of the original article "[How MUSIC will go mainstream and benefit ICANN's New gTLD Program](#)." For more information, visit the [MUSIC website](#).

The half step law of demand

[Michael Elling](#) Jan 13, 2016 5:20 PMPDT

While appreciate everything the author said and documented, it struck me that one of the big reasons music may never take off is that one has 2 extra keystrokes and needs to "learn" about a new suffix. Why wasn't "mus" considered? I could already see the tagline "when the feeling strikes type mus".

The half step law of demand says that every additional step reduces demand by half. In this case, its "three" steps resulting in 1/8th the addressable market.

MUSIC is the ISO 3166 standard country...

MUS is the ISO 3166 standard country

Constantine Roussos Jan 13 2016 6:47 PM PDT

MUS is the ISO 3166 standard country code for the country Mauritius. According to the CANN Applicant Guidebook an applicant cannot register these ISO country codes. For example Google applied for .AND but withdrew its application because it was the .SO code for the country Andorra.

User behavior shows that context, communication, and simplicity is more important than abbreviations that may create confusion. Interview a thousand people and ask them what "mus" stands for. Many will say "muslim" others will say "museum". Of course many will guess that it is "music". Why resort to guesswork? Do we want to confuse users or give them what they are looking for exactly? MUSIC is more intuitive for "music" than MUS.

Marketing is all about the right communication, simplicity, and volume. Confusing users is not effective marketing.

Following user behavior is also important. Ask someone to search for Radhead's music on Google. Will they search for "Radhead music" or "Radhead music?" For certain they will search for the exact match because they are looking for the most relevant result. Users rarely search using abbreviations of words. It's also important for search engines to give users what they are looking for, so being specific gives you higher quality, more relevant, and trusted results. Such a feat can be accomplished with an exact match, not an abbreviation, unless we find a way to change user search behavior (we cannot).

Regardless whether any suffix is 3 letters or 5 letters, the user will still have to know that it exists. Evidence shows that it's not as important as you think. If you do a search in the United Kingdom, most search results will be of domains that end in .CO.UK. In Australia, the equivalent would be .COM.AU and so forth. .CO.UK and .COM.AU were the standards that were adopted by all within those geographic communities. In the UK, the .CO.UK extensions are more prevalent than .COM.

Another example are two new gTLDs that have launched: .ONLINE and .ONL. Both stand for "online". According to nTLDstats.com, .ONLINE has nearly 130,000 registrations while .ONL has just over 5,000 (as of today). The marketplace has shown that a longer, more relevant string is better than a shorter, abbreviated one that may cause confusion.

If you were Google, would you use .GOO or .GOOGLE? If you were Microsoft, would you use .MIC or .MICROSOFT? Amazon would certainly prefer to have .AMAZON over .AMZN.

In conclusion, the biggest predictor of success in the New gTLD Program is community/industry adoption and usage based on community-tailored policies that serve a higher purpose and cater to the community associated with each gTLD string.

↳ Address Clarity

Michael Elling Jan 14 2016 6:58 AM PDT

Thanks Constantine. Good points and clarifications.

Typically companies are used to having the rTLDs as synonyms to their names. But otherwise, understand your other points and agree about the industry adoption being a key issue.

That said, it's still a big hill to climb versus the billions of users out there. Good luck!

Michael

Penetration and timeframes

Michael Elling Jan 14 2016 7:03 AM PDT

Constantine,

I was wondering if you or someone at DotMusic has modeled future scenarios in terms of registrations and users and what the assumptions are that get to those levels?

Thanks

Michael

↳ **Michael, Our approach with .MUSIC has not been**

Constantine Roussos Jan 14 2016 10:26 AM PDT

Michael

Our approach with .MUSIC has not been to focus on registration volumes at all. We believe this is the wrong approach for music because the purpose of the .MUSIC community initiative is to launch a safe, trusted, and secure .MUSIC extension. As witnessed in the New gTLD Program, the total number of registrations can be manipulated by lowering price or offering free registrations. Registration volume alone is not a predictor of success. Usage and industry adoption. Some TLDs have millions of registrations but their usage rates are low. Another adverse effect of focusing on high volume by adopting a low price strategy is the proliferation of spam, phishing, and other forms of abuse because of the lower financial risk that cheaper or free domains offer to bad actors.

Both .EDU and .GOV have significantly lower registration volumes than other legacy TLDs but their usage is enormous, meaningful, and impactful. Google also values them as "authority" domains with high link popularity (or high PageRank), so this is why search engine optimization experts seek to get anchor backward links from .EDU or .GOV domains. It helps them with their search engine ranking efforts.

Our model is close to the .EDU model. Registrations for .EDU are restricted to U.S. post-secondary educational institutions that meet certain accreditation standards. Our .MUSIC model is only offered to members of the global music community that have to agree and certify that they abide to certain music-tailored policies, such as:

1) Eligibility: Only members of the global music community are eligible. They can belong to Music Community Member Organizations (e.g., be a member of The Recording Academy) or identify with any music community (i.e., have the requisite awareness of belonging to the community) with active participation in music-related activities. All .MUSIC registrants will also be verified using two-step authentication.

2) Name Selection: Registrants can only register the real names, acronym, or DBA. We also have a Globally Protected Marks List (GPML) of famous music brands and artists that no one can register except the authorized music brand or artist. This prevents cybersquatting and the big problem that exists in .COM: many big name artists do not have the exact match name in .COM. In many cases, fans have registered them or the band names so generic that it's too expensive to buy in the aftermarket.

3) Content and Use: Only legal music-related content and music-related usage is allowed. This way, the relevancy and quality factor for music is addressed. We also prohibit parking pages to make sure that users have a better user experience when visiting .MUSIC sites and find what they expect from music.

4) Enforcement: There are both proactive and reactive enforcement measures and mechanisms, including random compliance checks, crowdsourced enforcement, and enhanced safeguard provisions to protect copyright infringement. We also have an array of appeals mechanisms as well to ensure that registrants and complainants can have redress.

The aggregate effect of all these music-tailored policies is to create a safe haven for legal music consumption, which ensures that any traffic or monies goes to the music community, not uncensored or pirate websites. Fans also will be assured that when they interact with a .MUSIC domain, that the registrant is who they say they are and not an impersonator. Trust, security, and safety is critical to the future success of .MUSIC.
