

Exhibit DIDP A1

New gTLD Application Submitted to ICANN by: DotMusic Limited

Application Downloaded On: 16 May 2014

String: MUSIC

Application ID: 1-1115-14110

Applicant Information

1. Full legal name

[DotMusic Limited](#)

2. Address of the principal place of business

Contact Information Redacted

3. Phone number

Contact Information Redacted

4. Fax number

Contact Information Redacted

5. If applicable, website or URL

<http://music.us>

Primary Contact

6(a). Name

[Constantinos Roussos](#)

6(b). Title

[Founder](#)

6(c). Address

6(d). Phone Number

Contact Information Redacted

6(e). Fax Number

6(f). Email Address

Contact Information Redacted

Secondary Contact

7(a). Name

Tina Dam

7(b). Title

COO

7(c). Address

7(d). Phone Number

Contact Information Redacted

7(e). Fax Number

7(f). Email Address

Contact Information Redacted

Proof of Legal Establishment

8(a). Legal form of the Applicant

Limited Liability Company (Ltd)

8(b). State the specific national or other jurisdiction that defines the type of entity identified in 8(a).

Cyprus Companies Law Republic of Cyprus, Ministry of Commerce, Industry and Tourism
Department of Registrar of Companies and Receiver, Nicosia

8(c). Attach evidence of the applicant's establishment.

Attachments are not displayed on this form.

9(a). If applying company is publicly traded, provide the exchange and symbol.

9(b). If the applying entity is a subsidiary, provide the parent company.

9(c). If the applying entity is a joint venture, list all joint venture partners.

Applicant Background

11(a). Name(s) and position(s) of all directors

Name	Position

Constantinos Roussos	Managing Director
----------------------	-------------------

11(b). Name(s) and position(s) of all officers and partners

Name	Position
Tina Dam	COO

11(c). Name(s) and position(s) of all shareholders holding at least 15% of shares

Name	Position
Constantinos Roussos	Managing Director

11(d). For an applying entity that does not have directors, officers, partners, or shareholders: Name(s) and position(s) of all individuals having legal or executive responsibility

Applied-for gTLD string

13. Provide the applied-for gTLD string. If an IDN, provide the U-label.

MUSIC

14A. If applying for an IDN, provide the A-label (beginning with "xn--").

14B. If an IDN, provide the meaning, or restatement of the string in English, that is, a description of the literal meaning of the string in the opinion of the applicant.

14C1. If an IDN, provide the language of the label (in English).

14C2. If an IDN, provide the language of the label (as referenced by ISO-639-1).

14D1. If an IDN, provide the script of the label (in English).

14D2. If an IDN, provide the script of the label (as referenced by ISO 15924).

14E. If an IDN, list all code points contained in the U-label according to Unicode form.

15A. If an IDN, upload IDN tables for the proposed registry. An IDN table must include:

1. the applied-for gTLD string relevant to the tables,
2. the script or language designator (as defined in BCP 47),
3. table version number,
4. effective date (DD Month YYYY), and
5. contact name, email address, and phone number.

Submission of IDN tables in a standards-based format is encouraged.

15B. Describe the process used for development of the IDN tables submitted, including consultations and sources used.

15C. List any variants to the applied-for gTLD string according to the relevant IDN tables.

16. Describe the applicant's efforts to ensure that there are no known operational or rendering problems concerning the applied-for gTLD string. If such issues are known, describe steps that will be taken to mitigate these issues in software and other applications.

DotMusic has carefully examined the applied-for string "MUSIC" and found that deployment of it will not cause adverse operational, rendering issues, or general user-confusion issues due to visual similarity with existing TLDs/ISO3166 lists/ICANN reserved list of names & list of ineligible strings.

However some non-adverse issues exist and mitigation plans are developed for them to ensure a careful and a safe introduction, as follows:

1. Application software is not consistent in their functionality across TLDs, including for example:
 - Length of TLD, where some software was programmed to only accept email or web strings ending in .com, or perhaps of the length of 2 or 3 characters.
 - Name completion, where when you enter "example" in a browser bar you get "example.com" or diversion to a search engine.
 - Display of A-labels for SLDs as opposed to the U-label entered or clicked on and hence expected by the user.
 - Other affirmative decisions based on trusting a certain TLD, domain type, and/or management of the subdomains of the TLD, where some could result in blocking the TLD and all its subdomains.

Jointly these issues results in non-consistent user-experience across applications. Some are historic and simple information will help solve them; the issue with TLDs longer than 2 or 3 characters that was a big issue in the 2000-01 new TLDs but now largely eliminated; other has to do with trust in the TLD Policies.

DotMusic staff has worked directly with all ICANN projects concerning the Universal Acceptance of TLDs since 2003, and will continue. DotMusic has initiated an outreach campaign communicating with Browsers and Search Engine Operators to provide information about the .MUSIC TLD mission, registration policies associated protection mechanism. DotMusic staff has and will participate in application-focused events to mitigate the issues and thereby provide a consistent approach for .MUSIC registrants and users. DotMusic takes full responsibility for any such issues; will provide information for registrars and work jointly with the gTLD stakeholders to enable general global acceptance of all TLDs.

2. Visual Confusion

DotMusic has conducted due diligence in comparing the string "music" toward any existing TLDs, future ccTLDs, 3-character country codes per the ISO list, reserved and otherwise ineligible strings per the ICANN Applicant Guidebook, and against any country- or territory names. .MUSIC is represented in standard ASCII, fulfills technical standards and due to the length, construction, and meaning of the string, we have found that it is not conflicting with any of the restrictions placed by ICANN. We have also found that the string does not relate confusingly to a country/regional/geographic name.

As a result the TLD is safe for delegation and will not create adverse effects for registrants and users of the domain name under it.

17. OPTIONAL.

Provide a representation of the label according to the International Phonetic Alphabet (<http://www.langsci.ucl.ac.uk/ipa/>).

18A. Describe the mission/purpose of your proposed gTLD.

The .MUSIC Mission/Purpose is:

- Creating a trusted, safe online haven for music consumption & licensing
- Establishing a safe home on the Internet for Music Community ("Community") members regardless of locale or size
- Protecting intellectual property & fighting piracy
- Supporting Musicians' welfare, rights & fair compensation
- Promoting music and the arts, cultural diversity & music education
- Following a multi-stakeholder approach of fair representation of all types of global music constituents, including a rotating regional Advisory Committee Board working in the Community's best interest

The global Music Community includes both reaching commercial and non-commercial stakeholders. Details of Music Community Establishment can be found in question #20.

.MUSIC will effectively differentiate itself by addressing the key online usage issues of safety, trust, consistency, brand recognition as well as communicate site subject-matter: music-related content. The TLD will be exclusive to the Community and will incorporate enhanced safeguards and Use policies to protect creators, intellectual property and rights holders.

DotMusic will also provide non-registry services and activities which have been established through ongoing outreach efforts. Community members need to be able to distinguish themselves from illegal or unlicensed sites. Ensuring monies flow to rightful owners and the Music Community is critical to the .MUSIC Mission. Purpose-driven services and activities are:

1. Development of Music Community Social Network Premium Domain Channels (Channels) sorted by category types, e.g. genres. It will leverage Search Engine Optimization (SEO) best practices to improve .MUSIC website search result rankings. The objective is for .MUSIC domains to signal a badge of trust that enables search engines to provide music consumers more relevant and safer search results while reducing infringing and unlicensed rogue sites. Premium Channel development will also include a global Song Registry
2. Promoting arts and music through sponsorships, events and Music Community activities; Enriching society with artistic and cultural diversity;
3. Advancing music education and the study of music in school curriculum by donating proceeds of domain registrations to relevant causes
4. Re-inventing music discovery and search innovation by leading the way to establish the Industry standard for official music sites to benefit the at-large global Music Community and the Internet
5. Enabling legal music licensing via a global Song Registry akin to the International Music Registry (IMR - www.wipo.int/imr) & Global Repertoire Database (GRD - www.globalrepertoiredatabase.com / International Copyright Enterprise) initiatives.

The Mission/Purpose has been established through interactions with the Community via numerous outreach activities and upon experiences gained in previous ICANN new gTLD introductions. The Mission/Purpose is consistent with ICANN's Affirmation of Commitments (AoC) and Basic Principles of the IMR with participants including RIAA, IFPI, SCAPR, ACTRA, SAMRO, IRSC, ECAD, CIAM). These include:

- The "vital importance of transparency, openness and non-discrimination." (www.internationalmusicregistry.org/portal/en/basic_principles.html)
- "Ensuring accountability, transparency and the interests of global Internet users", "enhancing the operational stability, reliability, resiliency, security, and global interoperability of the DNS" and "promoting competition, consumer trust, and consumer choice" while "adequately addressing consumer protection, malicious abuse, and rights protection issues" (www.icann.org/en/about/agreements/aoc/affirmation-of-commitments-30sep09-en.htm)

DotMusic Mission/Purpose guiding principles:

TRANSPARENCY OPENNESS & ACCOUNTABILITY

DotMusic has been an accessible and transparently visible .MUSIC applicant since 2008 communicating its intentions publicly at music events, online through its website and social media outreach, and through mainstream/non-mainstream media. The .MUSIC registration policies and protection mechanisms have been developed using a bottom-up, multi-stakeholder methodology with input from international Music Community members in both the commercial and non-commercial sector.

DotMusic serves the Community without conflicts of interest and is accountable to the Community by establishing an Advisory Committee & Policy Board with representation from each constituency in the Community. The Committee will advise and provide perspective on .MUSIC issues such as broad policy matters and introductions of new services to meet Community needs.

INTERNATIONAL COMMUNITY PARTICIPATION, COMMUNICATION AND OUTREACH

Since 2008, DotMusic has participated in over one hundred public events globally (www.music.us/events.htm), including public speaking engagements, keynote addresses, major music and domain conferences, festivals, events and expos; earned media (broadcast, online and print) in major mainstream publications, online press, and thousands of blog and social media mentions; over 1.5 million emails of support; top search engine results for .MUSIC site(s); and over 5 million social media followers; sponsored major Music Community events globally to explain the intended benefits of the .MUSIC TLD, requesting support and letters of intent or interest by partners or Music Community Member Organizations (mCMO) for this .MUSIC application.

Specific details of these activities can be found in response to question 18b(vi). Support letters are attached in response to question 20f (Updated list: www.music.us/letters). .MUSIC is trademarked in over 20 countries; has been using the brand in commerce (<http://music.us/commerce>), advertising and sponsorships, in domain registrations as an authorized reseller, merchandising and other commercial activities.

STANDARDS COMPLIANCE, SECURITY, RESILIENCY, AND STABILITY

Afilias is the DNS Registry provider for .MUSIC. Details of technical and operational capabilities matching the .MUSIC mission are provided in responses to questions #24-44.

COMPETITION, INNOVATION, FAIRNESS, AND CONSUMER CHOICE

Balanced domain registration restrictions and a broad Music Community definition ensures the entire Music Community can register .MUSIC domains, provides fairness in .MUSIC domain availability, advantaged branding position, avoid anti-competitive concerns and anti-trust actions.

The Premium Channels will maximize the competitive landscape and innovation in both the music and domain space.

INTELLECTUAL PROPERTY PROTECTION AND TRUST

In consultation with major music constituents, including multiple Coalitions (such as a Coalition that include the RIAA, ASCAP, BMI, SESAC, IFPI, A2IM, FIM, CISAC, IMPALA, NMPA, SABAM, FIM and others), DotMusic has developed policies to protect intellectual property, fight piracy and ensure .MUSIC domains are allocated in a fair method so that music consumers and Internet users are assured the highest level of trust and authenticity when they visit a .MUSIC domain.

A Global Protected Marks Lists (GPML) will reserve all major music brands and established artists, such as RIAA-certified platinum-selling bands.

Phased launches provides rights holders a first-come in the .MUSIC Sunrise, auction of multiple initial landrush domain inquiries, and eventually allows all stakeholders of the Community to register. All registrants must adhere to restricted Use, Name and Anti-Abuse policies that will be monitored to prevent bad practices harming the Music Community.

Dispute mechanisms, compliance efforts, and data validation processes will provide an added level of trust.

DotMusic will conduct reviews of the applicability, usability, overall Community satisfaction. Results will be provided to the Music Community publicly for feedback and we look forward to providing review results and expertise in the ICANN Post-Launch

18B. How do you expect that your proposed gTLD will benefit registrants, Internet users, and others?

.MUSIC will benefit the registrants and Internet users by providing an immediately-identifiable exclusive domain for the Music Community to use as their online home. Registrants will have the opportunity to register their preferred domain under .MUSIC which might not be available today under .COM or other preferred TLDs.

(i) The .MUSIC goal is to provide an exclusive, trusted, safe music-branded domain for the Music Community. .MUSIC will enable the Community to project identification, accountability and transparency to Internet users under a unique, music-themed domain.

TRUSTED gTLD

Trust will be achieved via protection policies and associated compliance functions to increase legal music consumption and ensure monies flow to rightful owners not pirates. Relevant, trusted content will enable search engines to rank .MUSIC domains higher in music-related searches than illegal sites.

PREMIUM CHANNELS

DotMusic has conducted an extensive communications outreach campaign and research activities within the Community to identify needs for value-added services beyond .MUSIC domains. It has been affirmed that the Community has a need for (i) a faster, easier and simpler way to license songs on a global basis and (ii) differentiated online resources of information about music, containing regional, national and local Community member information, powered by their associated dynamic content, services or products.

Premium Channels will offer opportunities to promote cultural diversity and unique music content. The level of information and content shared in the Premium Channels will be at the sole discretion of registrants. Registrants can promote themselves, their content, share contact information, communicate, network and engage in commerce with music consumers and each other. Unlike using search engines, the Premium Channels will provide Internet users a quick and intuitive search mechanism through direct navigation discovery. For example, a music consumer searching for reggae music can directly visit "reggae.MUSIC" to find registrants that offer reggae-related music, content, services and products. Premium Channels will:

- Promote Community members
- Increase legal commerce/business/collaboration
- Facilitate the sharing of contact information & enable more efficient communication
- Provide a quick and intuitive reference to music-related content through direct navigation
- Offer networking opportunities & increased exposure
- Promote cultural diversity, the arts & music education
- Differentiate Community members from each other
- Promote interaction, communication & support amongst the Community
- Promote music innovation

The Premium Channels will also include the development of a global Song Registry to facilitate a faster, easier and simpler way to legally license registrant songs.

(ii) .MUSIC will advance competition, differentiation and innovation in many ways. It will provide competition to TLDs that Community members might otherwise choose. .MUSIC domains restricted only to the Community will provide members branding differentiation along with the opportunity of registering their preferred domain under a self-explanatory music-themed TLD that clearly identifies them.

An exclusive and uniquely identifiable .MUSIC TLD will provide the Community differentiation that also benefits users who are searching for music-related content from international regions. DotMusic will provide Premium Channels and a Song Registry where the Community and Internet users can network, share information and engage in commerce in a trusted, secure ecosystem - a safe haven for legal music consumption and song licensing ensuring monies flow to the Community not unlicensed sites.

.MUSIC will compete with existing TLDs and be aligned with the FCC on principles affirming that "free and open competition benefits consumers and the global community by ensuring lower prices, new and better products and services, and greater consumer choice than occurs under monopoly conditions. A competitive market promotes innovation by rewarding producers that invent, develop, and introduce new and innovative products and production processes. By doing so, the wealth of the society as a whole is increased (FCC, Competition in Telecommunications Services, www.fcc.gov/connectglobe/sec5.html)."

Through its value chain, DotMusic will prevent TLD commoditization and achieve a competitive advantage by developing a unique differentiated TLD with Premium Channels offering registrants a more compelling value proposition than existing TLDs.

Stimulating competition and innovation is paramount to DotMusic's Mission. The .MUSIC rotating, all-inclusive, global multi-stakeholder Advisory Committee and Policy Board will not only represent the interests of all constituents but will also ensure any policy incorporated is consistent with the .MUSIC Use Policy and Mission/Purpose benefitting a multi-stakeholder model of neutral, equal and fair representation deterring anti-trust/anti-competitive practices.

.MUSIC will be run in an all-inclusive manner serving the global Community as a critical public resource benefitting and empowering all constituents in a non-discriminatory and fair manner irrespective of size, locale or commercial/non-commercial status.

To mitigate any anti-trust or privacy issues associated with registrant user data (such as highly-sensitive private or trade proprietary information) that compromises the confidentiality of Community members, DotMusic will incorporate Community membership eligibility restricted only to members verifying themselves as Community members based on NAICS/ISIC classifications and agreeing to Community-focused Use policies and dispute resolution/takedown mechanisms to benefit the .MUSIC Mission/Purpose and multi-stakeholder mission and to protect DotMusic from privacy and monopoly laws. Any violation of the membership criteria, Use and other Policies might lead to the cancellation of membership status, including domain takedown if deemed appropriate.

Community members will be able to use their membership credentials to be included in the uniquely-classified Premium Channels that are sorted according to NAICS/ISIC classifications. For example, music publishers (NAICS code 512230) will be able to organically self-categorize themselves in a highly relevant manner and be included in the Publishers.MUSIC Premium Channel using their membership credentials to participate.

DotMusic will also stimulate innovation through intellectual property (IP) protection (National Economic Council, A Strategy for American Innovation: Securing our Economic Growth & Prosperity; www.whitehouse.gov/innovation/strategy, 2011). By promoting innovation and protecting IP rights DotMusic will harness the inherent creativity of its Community.

Innovation, the process through which new ideas are generated and commercialized, is a key force behind Music Community global economic growth and competitiveness and the creation of new and better ways of producing goods/services (Maddison, Angus, The World of Economy, Organization for Economic Co-operation & Development, 2006).

Innovation protected by IP rights is paramount to creating new music jobs and growing music exports having a positive pervasive effect on the entire Music Community with benefits flowing both upstream (supply chain) and downstream (distribution) to every constituent fueling creativity, commercial distinctiveness and promoting open, competitive markets. DotMusic's incorporation of enhanced safeguards will protect creators from unlawful use of their work and be consistent with ESA/USPTO perspectives outlining that effective IP protection spurs innovation, competition, and technology advancement in markets in which IP is transacted (ESA & USPTO, U.S Department of Commerce, Intellectual Property & U.S Economy, www.esa.doc.gov/sites/default/files/reports/documents/ipandtheuseconomyindustriesinfocus.pdf, 2012).

DotMusic will:

- Harness an environment that promotes creation & innovation
- Protect creators from unauthorized IP infringement
- Facilitate legal exploitation of rights
- Stimulate new innovative music business models & licensing opportunities
- Enable a more efficient market

(iii) Traditional search engine results pages are agnostic whether music-related domains are legal or not. Despite the fact that there are less than 1000 legal music download stores on the web, the number of illegal sites significantly outnumber legal sites resulting in rampant, widespread music piracy and hundreds of thousands of monthly URL takedown requests. Piracy continues to adversely affect music sales and hurt the Community. However when visiting .MUSIC sites Internet users are provided with immediate music identification and a level of confidence and trust not available today.

Many legal music download stores do not offer songs directly through an open web browser but require consumers to use their proprietary software to access and buy songs. Since there are only a few search engine-friendly legal music sites to compete with illegitimate sites, most music-related search rankings are dominated by unlicensed sites. In many cases, 80% of artist-related top search engine results are infringing sites according to the IFPI: "Mass numbers of takedown notices are sent to search engines each month asking them to delist links to non-legal content. However, response times vary and delays still occur...there are also sometimes restrictions on the number of non-legal links that rights holders can notify. These need to be removed, and search engines should take measures to prevent notified infringing links re-appearing in results (www.digitalmusicnews.com/permalink/2012/120124search)."

Premium Channels will reduce exposure to pirated content to Internet users by serving secure and high quality relevant content to search engines to achieve top search engine results for a long tail of music-related keywords served by the differentiated, unique and niche Premium Channels incorporating local, national and regional searches. This type of search result ranking criteria is already implemented by search engines with existing TLDs (such as .DE for local content served to users in Germany).

Search engines will modify their algorithms to accommodate relevant, high quality and unique content, especially if it can be used as a filter to counter copyright-infringing sites and provide better search results.

.MUSIC domains can serve as trusted signals for search engines and used as filters for legal, licensed and safe music sites with relevant, quality content. .MUSIC domains will be validated to belong to Community members, who can only use the domains under Community-focused Policies. This way, Internet users will experience trusted interactions with registrants and be confident that any interaction is with legitimate Community members.

(iv) DotMusic has implemented measures to protect IP rights in registrations under .MUSIC, and to ensure that .MUSIC domains are used in a manner benefitting the Community resulting in reducing bad behaviors that currently exist relating to IP infringement.

Policies are built to match Community needs based on Community feedback and experience from the previous ICANN new gTLD launches. They are established to ensure a higher security level for .MUSIC domains than what is considered standard requirements for gTLDs.

.MUSIC will be launched with all standard gTLD registration rules (See response 27 for .MUSIC lifecycle). DotMusic will also adhere to all ICANN-mandated rights protection mechanisms and consensus policies (See 20e response).

RESERVATION PROTECTION: Second-level names will be reserved per ICANN requirements, including country-territory names (see response 22) and names for registry operations.

INNOVATIVE PREMIUM NAMES RESERVATIONS: Premium name reservations to develop the Premium Channels (e.g Rock.MUSIC) to promote registrants and enable music discovery.

RIGHTS PROTECTION & NOTIFICATIONS SYSTEM:

- Globally Protected Marks List (GPML) will reserve and protect domains of major music brands and established artists, such as RIAA-certified platinum-selling bands against cybersquatting.
- Trademark Clearing House will be implemented per ICANN specifications.
- Names Selection Policy ensuring that only music-related names are registered as domains under .MUSIC; restrictions:
 - 1) The name of (entire or portion of) the musician, band, company, organization, e.g. the registrant's "doing business as" name
 - 2) An acronym representing the registrant
 - 3) A name that recognizes or generally describes the registrant
 - 4) A name related to the mission or activities of the registrant

THREE TIME-RESTRICTED LAUNCH PHASES: (i) Sunrise for and to protect trademark holders (ii) Music Community Member Organization (MCMO) Landrush for registrants with demonstrated MCMO memberships (iii) a premium names Landrush period. Multiple applications for the same domain will be decided upon via a mini-auction after each phase. Following the completion of these phases the .MUSIC domain registration is available to the Community members on a first-come-first-serve availability (General registration).

USE POLICY for all domain registrants under .MUSIC regardless of the applicable launch phase; incorporated in the registration agreement for all registrants. The primary goal of the policy is to allow registrars and DotMusic to take down domains that violate Policies and IP rights (See response 20).

ANTI-ABUSE POLICY for all registrants under .MUSIC; incorporated in the registration agreement for all registrants to prevent malicious use of domains which can lead to security and stability issues for the registry, registrars, registrants and Internet users (See response 28).

REGISTRY DATA VALIDATION: DotMusic will validate elements of the received WHOIS data as a requirement for domain registration, also providing access to Premium Channels, such as the registrant's:

- Email address through validation links
- Phone number through validated PIN-codes

COMPLIANCE & ENFORCEMENT

DotMusic will take proactive and reactive measures to enforce its Policies. Proactive measures are taken at the time of registration. Reactive measures are addressed via compliance and enforcement mechanisms and through dispute processes.

Allegation that a domain is not used for legitimate music purposes or otherwise infringes on Policies shall be enforced under the provisions of the .MUSIC Policy & Copyright Infringement Dispute Resolution Process ("MPCIDRP"); described in question 28 response.

The MPCIDRP is not a replacement for alleged violation of the UDRP/URS/PDDRP/RRDRP, which shall be enforced under the provisions contained therein.

The DRP's are required in the registrars' registration agreements with registrants. Proceedings must be brought by interested 3rd-parties in accordance with associated policies and procedures to dispute resolution providers.

DotMusic will conduct random compliance checks across all the .MUSIC Policies. Periodically a sample of .MUSIC registrations will be verified for compliance with all established Policies. If a registrant is found out of compliance with any of the .MUSIC Policies the registrant will be notified that the domain will be placed on registry lock. The registrant will have a reasonable time period to fix the compliance matter or the domain will be terminated. Repeat offenders of Policies will be placed on a special monitoring list that DotMusic will conduct additional compliance checks against. DotMusic holds the right to prohibit repeat offenders from registering .MUSIC domains for a period of time or indefinitely. DotMusic will review all policies and processes on a regular basis with involvement from the .MUSIC Advisory Committee and discussed publicly at Community events.

(v) .MUSIC will use best practices around privacy and data protection. Afiliias, the back-end registry provider will administer specific WHOIS protections per response 26, and promote WHOIS accuracy per question 28 response.

Most Community members want to be discovered and have as much visibility and exposure as possible. DotMusic will provide this unique and branded visibility. The domain registration services and Premium Channel participation offered to registrants will be designed to respect the privacy of personally identifiable and confidential information, including applicable laws. Information provided by registrants for inclusion in Premium Channels will be publicly accessible. All other information provided by registrants to establish compliance with the Policies will remain private.

(vi) To meet the benefits described in responses to 18b (i-v) DotMusic has conducted ongoing outreach activities to serve the global Community.

Pursuant to its mission, DotMusic has been publicly conducting global outreach to the Community since 2008 to explain the intended benefits of .MUSIC, requesting support, letters of intent or interest by partners and MCMOs for .MUSIC.

A complete list of events relating to the ongoing outreach efforts can be found at www.music.us/events.htm. Extensive use of differentiated .MUSIC sites, social media presence, marketing and thousands of discussions/media mentions were conducted on the web in an open, publicly-accessible manner. Over 1,500,000 have signed the .MUSIC TLD Initiative petition. Support letters are attached in response to question 20f. The most updated list can be found on www.music.us/letters. Other outreach efforts include:

- Earned media (broadcast, online, print): Forbes, Billboard, Hollywood Reporter, Los Angeles Times, Washington Post, World Trademark Review (www.music.us/news.htm), other major mainstream publications, online press, and thousands of blogs/social media mentions.
- Google and Bing search engines have ranked the official DotMusic website (www.music.us) on the top of search engine results for term "music" ((#23 Google, #25 Bing - March 6th, 2012), which is one of the most competitive keyword terms on the web according to Google Adwords (277m global searches on Google, costing advertisers about \$9k a day in clicks for top rankings www.music.us/adwords/google-adwords-keyword-music.jpg).
- The official DotMusic site ranks on the top of both Google's and Bing's search engines for TLD terms such as "DotMusic", "dot music", "music domain", "music TLD", "music gTLD", "music top-level domain", "music generic top level domain" (www.music.us/seo).
- Social media: Participation of over 5 million social media followers across the most popular

social media websites, active since 2009 with hundreds of thousands of communication/status updates for participants, including:
Myspace, the Internet's largest music artist community (4.2m friends: www.myspace.com/musicextension)
Facebook, the world's largest social media site (Over 100k likes on www.facebook.com/musicextension and www.facebook.com/dotmusic and about 5k group members on www.facebook.com/groups/46381289474)
Twitter, the world's largest micro-blogging site (200k+ followers on www.twitter.com/mus, about 50k followers on www.twitter.com/dotmusic, about 60k+ followers on www.twitter.com/musicextension, about 31k+ on www.twitter.com/dot_music, about 21k+ followers on www.twitter.com/musicdomain) and other social media sites.
DotMusic sponsored major Community events globally, including SxSW, Midem, Billboard, CMJ, Digital Music Forum, SF Music Tech, SoundCtrl, Social Media Week, ASCAP Expo, Popkomm, Miami Music Festival, Future of Music Policy Summit, Bandwidth, New Music Park Thing, and domain events such as ICANN meetings in Seoul/South Korea, Brussels/Belgium, Cartagena/Colombia. Outreach has spanned all geographical continents and segments of the Community. DotMusic will continue its global outreach throughout 2012 and beyond

18C. What operating rules will you adopt to eliminate or minimize social costs (e.g., time or financial resource costs, as well as various types of consumer vulnerabilities)? What other steps will you take to minimize negative consequences/costs imposed upon consumers?

(i)
In the three initial launch phases - Sunrise, mCMO Landrush and General Landrush - multiple applications will be resolved via auction. During the general availability stage domains will be allocated in a first come-first serve basis. Please refer to question 18b(iv) and 20e for more detail.

(ii)
The .MUSIC registration fee will adopt a moderate, competitive pricing point taking into consideration Community feedback and outreach, the TLD's premium value proposition, differentiation, security and safety concerns, and other significant factors such as:
1. Most Community members are price sensitive since they operate in a highly competitive, fragmented environment with decreasing average music consumer spending that is aggravated by rampant piracy and competition from other forms of entertainment and substitute products/services.
2. As illustrated by the McAfee's 2011 "Mapping the Mal Web" Report (http://us.mcafee.com/en-us/local/docs/MTMW_Report.pdf), pricing is one of the most influential factors considered by registrants aiming to conduct malicious activity and abuse. Low priced domains have a higher likelihood for abuse. Prices in the middle to higher end are enough of a sufficient financial barrier to entry to reduce the number of registrants offering low quality content not useful to most Internet users, such as parking pages. Premium pricing will also help reduce cybersquatting and piracy. Registrants are more likely to register a cheaper domain to conduct illegal activity since it is less financially risky.
3. A benchmark analysis of comparable gTLDs and ccTLDs existing today (Please refer to responses to questions 45-49 for assumptions).
DotMusic will not be low price leader in the domain space because low price leadership will have an adverse effect on DotMusic's objective to brand .MUSIC as a differentiated, value-added domain. Competing on price alone is not an effective strategy for DotMusic because it usually leads to commoditization and a low-margin business that relies primarily on the core benefit of the TLD: the branded music-themed meaning of a novelty domain extension. Adopting a moderate, competitive pricing strategy will complement DotMusic's goal to continually invest in the TLD to create innovative services, provide new offerings, opportunities and benefits to registrants beyond a branded TLD and achieve augmented and potential product differentiation. Furthermore, DotMusic's goal is to align consumer perception of a differentiated TLD with an optimal domain price that communicates the premium nature of .MUSIC, its unique value proposition and benefits.

The .MUSIC price will also include registrant participation in the .MUSIC Premium Channels. DotMusic will offer the Music Community an affordable domain to build a unique and exclusive presence online, ensuring the cost of the domain is optimally priced to prevent malicious behavior and abuse traditionally experienced in lower priced domains and domains that lack enhanced safeguards. Depending on the cost of doing business and other economic factors, DotMusic may from time to time increase or lower the wholesale price in accordance with the provisions of Section 2.10 of the New gTLD Registry Agreement. However, final registration prices to registrants will be determined by accredited registrars. Registrants will have the flexibility to register a domain for a period of 1, 2, 3, 5 or 10 years. DotMusic might choose to incorporate cost benefits in relation to advantageous pricing, introductory discounts, or bulk discounts to assist in increasing domain sales if needed to meet registry financial and operational needs, especially in the situation where the most likely projected registration volume (see responses to questions #45-50) is not met. In that situation, DotMusic will strongly consider implementing targeted marketing campaigns that include discounted prices.

Otherwise DotMusic does not have specific plans for advantageous pricing, introductory pricing, nor plans for any bulk registration discounts.

(iii)
DotMusic will not offer long term or permanent contracts (beyond that of the maximum term of 10 years) for domains. DotMusic has carefully considered the needs of the Music Community in setting its prices on its services using a value-based pricing strategy as opposed to cost-based pricing methods. Any price escalations or reductions will be reasonably justified and managed in accordance with the provisions of Section 2.10 of the New gTLD Registry Agreement.

PARKING PAGES: DotMusic will prohibit the use of parked pages. .MUSIC sites will be subject to the content and use restrictions described in response to question 18b and question 20e. Parked sites can only be used as temporary pages assigned to a domain at the time of registration and stay in place until the registrant has a website developed and ready to go live in a reasonable time period.

.MUSIC and its Premium Channels offer a robust, cost-effective means for the Community to assert their identities online. DotMusic is committed to launch and manage .MUSIC in a responsible manner for the Community with enhanced safeguards. DotMusic's substantial activities since 2008 highlight the diligent preparation of this application to serve the Community's interest. This includes minimizing and eliminating social costs; establishing a better financial income stream for Community members; financially assisting by sponsoring Community causes, non-for profit organizations, events, conferences and educational activities; promoting legal music commerce; and assisting the Community in establishment of new improved innovative services to address their needs. Steps and plans incorporated by DotMusic to minimize negative costs upon consumers, registrants and Internet users include:

DISCOVERY, SEARCH ENGINE & NETWORK EFFECT BENEFITS

A more indirect minimization of social costs relates to registrants and users having an immediate benefit of easy recognition and discovery via the .MUSIC Premium Channels. Engagement through Premium Channel social networks increases business opportunities and minimizes marketing costs for registrants.

DotMusic's goal to replace top search rankings of illegal music sites will be tackled by implementing search engine optimization best-practices for Premium Channels that will also complement .MUSIC registrant sites. This will increase general brand awareness and instill trust in .MUSIC sites by creating a safe haven for music consumption and improving international music discovery.

ENHANCED SAFEGUARDS & FIGHTING PIRACY

The .MUSIC Use policy, enhanced safeguards and Premium Channels will benefit registrants, IP rights holders and their music-related content and will help them achieve higher search engine rankings that would replace fraudulent sites that provide free or otherwise illegal music. As a result musicians, creators and other rights holders will enjoy more visibility and an additional income stream that otherwise was provided to illegal sites. This way .MUSIC can reduce the costs and expenses imposed upon the Music Community to fight piracy.

STRATEGIC INNOVATION

- Fostering open innovation by building Premium Channels and developing a Premium Channel global Song Registry to enable easier, faster and simpler way to license music.

PURPOSE, VALUES & LEADERSHIP

- Creating an organizational culture with strong values and high integrity serving the Community and the public interest.
- Developing value-oriented, registrant-driven methods for measuring and recognizing performance while aligning management and leadership, culture and values, and strategy and vision with registrant customer-centricity.

CUSTOMER CENTRICITY

- Maintaining customer stickiness by simplifying and personalizing the TLD value proposition, enhancing Community engagement and complementing the network effect benefits offered by the diverse, targeted and niche Premium Channels.

GLOBAL MINDSET

- Expanding successfully across borders and cultures including launching language-based IDN channels to cater a multilingual growing Internet user base especially in regions with lower legal music penetration and consumption.

COMMUNITY & GOVERNANCE

- Enhancing the Advisory Committee & Policy Board's role in strategic planning, goal setting, initiating positive change and strengthening governance to ensure accountability, responsibility and ethical business practices in the public interest, while eliminating preventable social costs.
- Creating business and social value by adopting a shared values system of innovation that fosters successful interaction with key stakeholders, governments and non-government associations and promotes social responsibility towards the Community.
- DotMusic understands the difficulties faced by the content industries to cope with changes created by the digital revolution. DotMusic's neutral multi-stakeholder governance of equal representation of all music constituents is based on gaining stakeholder consensus to enable the development of a domain Industry standard in .MUSIC that serves registrants and Internet

users and assures that rightful entities can own and leverage their .MUSIC domain to eliminate cybersquatting and piracy issues, while building trust with consumers to ensure commercial activities are trusted and monies flow to the music community not pirates or unlicensed sites. - The .MUSIC Community, as established and delineated in Question 20, represents the majority of the overall Community and ensures that its expressions of support cover a balanced, diverse and representative blend of Community stakeholders, including constituents representing over 70 governments culture agencies and/or arts councils, over 35 countries' music information centers, music export offices, country-led music coalitions, digital distributors representing most of the music distributed on the leading legal music stores, music associations and organizations representing the interests of many Community members, and other entities. Refer to 20f for documented support from organizations representing a majority of the overall Community, including process and rationale behind expressions of support.

DOMAIN ALLOCATION, INDUSTRY STANDARDS & CONSUMER TRUST

DotMusic recognizes that many Community members do not own their domain names in .COM or other extensions because they were late to register their preferred domain name, were victims of cybersquatting or could not recover their domain from fans. This issue is prevalent for most popular artists that have a generic term as their name. DotMusic has incorporated enhanced safeguards, such as the Globally Protected Marks List to safeguard popular brands from cybersquatting, registration eligibility and use policies, and a MCMO domain allocation phase to benefit Community registrants. This way the .MUSIC domain will establish a new methodology of assigning domain names to the rightful owners. Consumers can type their favorite artistname.MUSIC directly in the browser bypassing Google and other search engines and ensuring music fans and consumers are accessing the legal, official artist site in the fastest and simplest way possible reducing Internet user search and time costs.

Officially licensed .MUSIC domains can give search engines a unique identifier and a signal of trust and relevancy not available today which can be used to achieve higher search results to help replace the proliferation of illegal rogue sites found in top of search results for music terms. This unique filter will help protect and benefit registrants, Internet users and instill trust in consumers since the DMCA has shown to be ineffective. Google URL takedown requests have more than doubled in less than a year, approaching about 300,000 URL removals a week. 5 out of the top 12 copyright owners requesting URL takedown requests are music entities (www.google.com/transparencyreport/removals/copyright/owners/?r=last-year). This problem does not only harm the Music Community. It harms other IP-driven communities, such as movies, software, games and books.

Community buy-in is critical to establish these legal standards to facilitate safer, trusted and enhanced commerce on the web while fighting piracy and unlicensed sites. The music-themed domain is built with usage polices that will enable taking down infringing sites, protecting trademarks and help the exploitation of copyrights by providing a safe haven for legal music distribution, consumption and licensing.

The goal is to create a secure Industry standard domain matching Community needs with enhanced safeguards not available in current TLDs. Standards save money and drive productivity. The music-themed TLD will be launched in an intuitive, simple manner to leverage the interoperability, effectiveness and efficiency of the open web and the DNS. By using the same standards communicating data becomes easier and cheaper ensuring more revenue is distributed across the whole digital music supply chain to the rightful entities not rogue sites. The DotMusic Song Registry will also benefit the Community by enabling registrants to legally license their works territorially in a simple, fast and easy way. This way IP can be utilized and commercialized more efficiently to assist the Community to better serve an entire music value chain globally.

INTEROPERABILITY & TLD UNIVERSAL ACCEPTANCE

DotMusic will work with leading browser/application/software/web-related developers and vendors to lift any artificial constraints relating to .MUSIC. Universal acceptance efforts will complement the TLD and its utility to Internet users and help fulfill the continued realization of the Internet's potential for communication and commerce. DotMusic will conduct outreach efforts to technology providers to help incorporate new TLD interoperability standards relating to:

- Browsers & DNS tools
- Registrars & RIR systems
- Network infrastructure
- Hosting & email
- Network management & security tools
- Applications
- Databases
- Hardware & devices

19. Is the application for a community-based TLD?

Yes

20A. Provide the name and full description of the community that the applicant is committing to serve. In the event that this application is included in a community priority evaluation, it will be scored based on the community identified in response to this question. The name of the community does not have to be formally adopted for the application to be designated as community-based.

The name of the community served is the "Music Community" ("Community"). The parentheses below reflect ICANN's Applicant Guidebook 4.2.3 Criterion Definitions; Delineation; Extension; Nexus; Uniqueness; Eligibility; Name Selection; Content and Use; Enforcement; Support; Opposition. DotMusic will use clear, organized, consistent and interrelated criteria to demonstrate Community Establishment beyond reasonable doubt and incorporate safeguards in membership criteria "aligned with the community-based Purpose" and mitigate anti-trust and confidentiality/privacy concerns by protecting the Community of considerable size/extension while ensuring there is no material detriment to Community rights/legitimate interests. Registrants will be verified using Community-organized, unified "criteria taken from holistic perspective with due regard of Community particularities" that "invoke a formal membership" without discrimination, conflict of interest or "likelihood of material detriment to the rights and legitimate interests" of the Community:

(i) Qualification criteria as delineated by recognized NAICS codes corresponding to Community member classification music entity types. This classification-based delineation will also be consistent with registrant Premium Channel membership criteria ("ELIGIBILITY")

(ii) Domain naming conditions ("NAME SELECTION")

(iii) Restrictions relating to domain usage and content ("CONTENT & USE")

(iv) Enforcement mechanisms to uphold Community Establishment and meet Nexus Criteria, consistent with our clear, organized delineation of the Community ("ENFORCEMENT")

The Community is a strictly delineated and organized community of individuals, organizations and business, a "logical alliance of communities of a similar nature ("COMMUNITY")", that relate to music: the art of combining sounds rhythmically, melodically or harmonically. "MUSIC" has no other significant meaning or name beyond the definition offered by popular dictionaries and encyclopedias that define "MUSIC" as relating to "combining sounds rhythmically, melodically or harmonically ("UNIQUENESS")." The Community corresponds to the community relating to "the art of combining sounds rhythmically, melodically and harmonically" ("IDENTIFY"). The Community is distinct, sharing similar needs and attitudinal and behavioral patterns in relation to music-related activities, music production and its consumption. The "MUSIC" string matches the name ("NAME") of the Community and is the established name by which the Community is commonly known by others, such as the traditional media using phrases such as the "MUSIC" artists, "MUSIC" producers and "MUSIC" publishers to classify commonly known Music Community entity types ("NEXUS"). "MUSIC" matches the name of the Community entirely and is unique since no-one commonly refers to classes relating to the "MUSIC" Community using alternative words to replace the established Community word "MUSIC" identifying the Community ("UNIQUENESS"). For example, using a "COMMUNITY string" plus "CLASS" methodology, no-one refers to "MUSIC" "ARTISTS" as "SONG" "ARTISTS." The string "MUSIC" clearly identifies the Community and is unique and rarely replaceable in the Community language context perspective. Also the "MUSIC" string is commonly used in classification systems such as ISMN, ISRC, ISWC, ISNI and Dewey. For example, the Dewey Decimal Classification system, published in 1876 (LONGEVITY;PRE-EXISTING), has code 780 relating to "MUSIC".

The Community served is defined as music stakeholders being structurally organized using pre-existing, strictly delineated classes ("DELINEATION") and recognized criteria to clearly organize the Community ("ORGANIZED") classified by:

- North American Industrial Classification System codes (NAICS) used by the Census Bureau (www.census.gov/eos/www/naics) and Federal statistical agencies as the classification standard for the purpose of collecting, analyzing, and publishing statistical data related to the U.S.
- United Nations International Standard Industrial Classification (ISIC) system (www.unstats.un.org/unsd/publication/seriesM/seriesm_4rev4e.pdf), to "delineate according to what is the customary combination of activities" (www.unstats.un.org/unsd/class/family/family2.asp?Cl=17), such as those representing the Community.

The Music Community is strictly delineated using established NAICS codes that align with the (i) characteristics of the globally recognized, organized Community, and (ii) .MUSIC global rotating multi-stakeholder Advisory Board model of fair representation, irrespective of locale, size or commercial/non-commercial status, organized with the following delineation (corresponding NAICS code in parenthesis):

- Musical groups and artists (711130)
- Independent music artists, performers, arrangers & composers (711500)
- Music publishers (512230)
- Music recording industries (512290)
- Music recording & rehearsal studios (512240)
- Music distributors, promoters & record labels (512220)
- Music production companies & record producers (512210)
- Live musical producers (711130)
- Musical instrument manufacturers (339992)
- Musical instruments & supplies stores (451140)
- Music stores (451220)
- Music accountants (541211)
- Music lawyers (541110)
- Musical groups & artists (711130)

- Music education & schools (611610)
- Music agents & managers (711400)
- Music promoters & performing arts establishments (711300)
- Music promoters of performing arts with facilities (711310)
- Music promoters of performing arts without facilities (711320)
- Music performing arts companies (711100)
- Other music performing arts companies (711190)
- Music record reproducing companies (334612)
- Music, audio and video equipment manufacturers (334310)
- Music radio networks (515111)
- Music radio stations (515112)
- Music archives & libraries (519120)
- Music business & management consultants (541611)
- Music collection agencies & performance rights organizations (561440)
- Music therapists (621340)
- Music business associations (813910)
- Music coalitions, associations, organizations, information centers & export offices (813920)
- Music unions (813930)
- Music public relations agencies (541820)
- Music journalists & bloggers (711510)
- Internet Music radio station (519130)
- Music broadcasters (515120)
- Music video producers (512110)
- Music marketing services (541613)
- Music & audio engineers (541330)
- Music ticketing (561599)
- Music recreation establishments (722410)
- Music fans/clubs (813410)

The Music Community's geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries ("EXTENSION") with a Community of considerable size with millions of constituents ("SIZE").

The Community has bought, sold, and bartered music for as long ("LONGEVITY") as it has been made (R. Burnett, International Music Industry, 1996 and P. Gronow, International History of the Recording Industry, 1998). The Community is a delineated network where production and distribution of music occur in a process relying on labor division and technology. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial (M. Talbot, Business of Music, 2002). The foundation for the structured and strictly delineated Community only resulted from the interplay between the growing music publishing business and an emerging public music concert culture in the 18th century ("PRE-EXISTING"). Consequently, music publishers and concert promoters assumed the function of institutional gatekeepers of the Music Community who decided which music reached consumers and in what form, thus setting the parameters within which creativity was able to unfold (P. Tschmuck, Creativity & Innovation in the Music Industry, Institute of Culture Management & Culture Science, 2006).

20B. Explain the applicant's relationship to the community identified in 20(a).

DotMusic is a member of:

- International Federation of Arts Councils & Culture Agencies (IFACCA) serving a global community of arts councils and government ministries of culture representing over 70 countries (www.ifacca.org)
- American Association of Independent Music (A2IM) serving the independent Music Community (www.a2im.org)
- National Association of Recording Manufacturers (NARM) the music business association formed in 1958 (www.narm.com)

DotMusic was founded in 2004 under the Music.us umbrella by Community member Constantine Roussos, an independent musician, songwriter and certified sound engineer, who also produced albums for artists such as Family of Snail, Katie Quinlan, Some Change from US, Pigeon's Rhythm and David Silverman. It was through his interactions with the Community that he recognized the opportunity for a safer and more trusted innovative, community-based music-themed TLD. He is also a member of the National Association of Recording Industry Professionals and other music organizations.

Other DotMusic team members include:

Robert Singerman: NARAS member with over 30 years of experience as an agent, manager, label executive, consultant, producer, venue programmer and music supervisor; represented R.E.M, Gipsy Kings, James Brown, Suzanne Vega, 10,000 Maniacs and others; directed the European Music Office for the European Commission (EU) and the French Music Export Office in the U.S; represents Brazilian music, funded by APEX, the Brazilian trade organization.

Ken Abdo: A known artist advocate; a life-long multi-instrumentalist/songwriter and former DJ; served as legal counsel to artists including Jonny Lang, Michelle Branch, Owl City and Hall & Oates.

Bob Donnelly: Music industry attorney with over 35 years of experience; 41-awarded platinum albums.

John Simson: A singer-songwriter; managed country artists who sold over 10 Million albums and won 6 Grammys; ex-director of SoundExchange, the first performing rights organization formed to

collect digital performance royalties for sound recording copyright owners & artists; co-founded the Washington Area Music Association; ex-president of the NARAS/Grammys D.C. chapter; National Trustee of the Academy; Board of the Alliance of Artists & Record Companies; member of the Folk Alliance and the Country Music Association.

Paul Bezilla: Bassist in various bands; entertainment lawyer for over 25 years; clients included Frank Sinatra, Cher, Quincy Jones, Warner Bros, and Disney.

DotMusic is the only Community member with advanced professional technical, policy, and operational TLD management experience led by DNS veteran Tina Dam to meet DotMusic's primary role: to launch, operate and maintain trusted Music Community-based TLD.

RELATION TO MUSIC COMMUNITY

Pursuant to its mission, DotMusic has been conducting extensive outreach to the Community since 2008 to brand itself and its mission to convey the benefits of .MUSIC and requesting Community support letters. Since 2008 DotMusic has led Music Community efforts to the ICANN community through dedicated participation at ICANN meetings and other DNS/new TLD related events. The mCMO domain allocation method during the Landrush phase was created by DotMusic to allow Community members to register through established Community organizations. During the General Registration phase the TLD is open to all Community members for registration but also restricted by Eligibility, Use and other Policies, including enhanced safeguards.

DotMusic has been a strong Community supporter and participant as demonstrated in its ongoing efforts to build a sustainable TLD with policies dedicated to match the needs of the Community using a multi-stakeholder model, while ensuring it is implemented in a manner fulfilling DNS and ICANN technical, political and legal requirements.

DotMusic has publicly branded itself in an open, transparent and accessible manner through differentiated .MUSIC-related sites, social media, online marketing and through tens of thousands of web discussions/media mentions. Over 1,500,000 have signed the .MUSIC Initiative petition; over 5 million have liked/followed DotMusic in popular social media sites; and a significant number of leading mCMOs have signed support/interest letters as demonstrated in response to question 20f.

Other activities include sponsorships of Community events such as SxSW, Midem, Billboard, CMJ, Digital Music Forum, SF Music Tech, SoundCtrl, Social Media Week, ASCAP Expo, Popkomm, Miami Music Festival, Future of Music Policy Summit, Bandwidth, New Music Park Thing and others.

Social Media presence includes:

- Myspace, the Internet's largest music artist community (4.2 million friends: www.myspace.com/musicextension)
- Facebook, the world's largest social media site (Over 100,000 likes on www.facebook.com/musicextension and www.facebook.com/DotMusic and about 5,000 group members on www.facebook.com/groups/46381289474)
- Twitter, the world's largest micro-blogging site (220,000+ followers on www.twitter.com/mus, about 50,000 followers on www.twitter.com/DotMusic, about 60,000+ followers on www.twitter.com/musicextension, about 31,000+ on www.twitter.com/dot_music, about 21,000+ followers on www.twitter.com/musicdomain) and other social media sites

DotMusic also branded itself through earned media including:

- Forbes, Billboard, Hollywood Reporter, Los Angeles Times, Washington Post, World Trademark Review (www.music.us/news.htm), other mainstream publications, online press and thousands of blogs and social media mentions
- Google and Bing search engines have ranked the official DotMusic site (www.music.us) on the top of search engine results for the term "music" ((#23 Google, #25 Bing - March 6th, 2012), one of the most competitive keyword terms on the web according to Google Adwords (277 million global searches on Google, costing advertisers over \$9k a day in clicks - www.music.us/adwords/google-adwords-keyword-music.jpg)
- The official DotMusic site ranks on the top of both Google's and Bing's search engines for terms such as "dotmusic", "dot music", "music domain", "music TLD", "music gTLD", "music top-level domain", "music generic top level domain" (www.music.us/seo)

A complete list of events relating to the ongoing outreach campaign can be found on www.music.us/events.htm

DotMusic will continue its active outreach and participation efforts in the Community and anticipates receipt of additional support letters from Community members throughout and beyond the ICANN TLD evaluation process.

ACCOUNTABILITY MECHANISMS

DotMusic will be accountable to the Community by serving them without conflicts of interest and:

- Creating and managing a trusted safe online haven for music consumption
- Establishing a safe home on the Internet for Community members to differentiate themselves regardless of locale, segment or size
- Enforcing registration policies that enhance and preserve the integrity of the Community
- Enabling music discovery & Community member promotion through Premium Channels
- Protecting intellectual property & fighting piracy
- Supporting musicians' welfare, rights & fair compensation
- Promoting music and arts, cultural diversity and music education
- Following a neutral multi-stakeholder governance of fair representation of all global music constituents
- Soliciting Community advice through the Advisory Committee
- Offering registration from a proven, scalable registry platform with 100% DNS availability

The rotating, global Advisory Committee will represent all Community stakeholder groups per the NAICS codes list, such as musicians, songwriters, composers, industry professionals, collection agencies, associations, unions, businesses, education, arts councils/export offices/government agencies, managers, promoters and agents. The Committee will operate under Bylaws central to the .MUSIC Mission, Core Values, and commitment to serve the Community and public interest.

20C. Provide a description of the community-based purpose of the applied-for gTLD.

The .MUSIC mission/purpose is:

- Creating a trusted, safe online haven for music consumption
- Establishing a safe home on the Internet for Music Community members regardless of locale or size
- Protecting intellectual property and fighting piracy
- Supporting musicians' welfare, rights & fair compensation
- Promoting music and the arts, cultural diversity and music education
- Following a multi-stakeholder approach of fair representation of all types of global music constituents, including a rotating regional advisory board working in the best interests of the Music Community

The Music Community encompasses global reaching commercial and non-commercial stakeholders, and amateur stakeholders.

.MUSIC will effectively differentiate itself by addressing the key online usage issues of safety, trust, consistency, brand recognition as well as communicate a website's content subject-matter: music-related content. The exclusivity of the .MUSIC TLD will be established by protection mechanisms for established Music Community entities, while also allowing Do-It-Yourself artists to register and use their .MUSIC domain consistent with .MUSIC Use Policy.

In addition to .MUSIC domain registrations, DotMusic will provide related services which have been established through ongoing outreach efforts. Music Community members need to be able to distinguish themselves from illegal and right infringing websites, a critical factor for the Music Community to ensure that monies flow to the right holders. DotMusic launch-related services are:

1. Developing the Music Community Social Network Premium Domain Channels (Premium Channels) sorted by NAICS classifications and category types e.g. genre/language. They will leverage Search Engine Optimization (SEO) best practices to improve .MUSIC site search result rankings. The objective is for .MUSIC domains to signal a badge of trust that enables search engines to provide music consumers more relevant and safer search results while reducing infringing and unlicensed rogue websites. Premium Channel development will also include a global Song Registry
2. Enriching society with artistic and cultural diversity; promoting arts and music through sponsorships, events and Music Community activities
3. Advancing music education and the study of music in school curriculum by donating proceeds of domain registrations to relevant causes
4. Re-inventing music discovery and search innovation by leading the way to establish the global music standard for official music websites to benefit the at-large global Music Community and the Internet

The .MUSIC mission and purpose has been established by interactions with Community members through numerous outreach activities and upon experiences gained in previous ICANN new gTLD launches. The mission/purpose is consistent with ICANN's Affirmation of Commitments (AoC) and Basic Principles of the International Music Registry (IMR - with participants including RIAA, IFPI, SCAPR, ACTRA, SAMRO, IRSC, ECAD, CIAM), including:

- the "vital importance of transparency, openness and non-discrimination." (www.internationalmusicregistry.org/portal/en/basic_principles.html) and
- "ensuring accountability, transparency and the interests of global Internet users", "enhancing the operational stability, reliability, resiliency, security, and global interoperability of the DNS" and "promoting competition, consumer trust, and consumer choice" while "adequately addressing consumer protection, malicious abuse, and rights protection issues" (www.icann.org/en/about/agreements/aoc/affirmation-of-commitments-30sep09-en.htm).

DotMusic mission/purpose guiding principles:

TRANSPARENCY OPENNESS & ACCOUNTABILITY

DotMusic has been an accessible and transparently visible .MUSIC applicant since 2008 communicating its intentions publicly at music events, online through its website and social media outreach, and through mainstream and non-mainstream media. The .MUSIC registration policies and protection mechanisms have been developed using a bottom-up, multi-stakeholder methodology with input from international Music Community members in both the commercial and non-commercial sector.

DotMusic serves the Community without conflicts of interest and is accountable to the Community by establishing a Music Community Advisory Committee with representation from each constituency in the Community. The Committee will advise and provide perspective on .MUSIC issues such as broad policy matters and introductions of new services to meet the Community needs.

INTERNATIONAL COMMUNITY PARTICIPATION, COMMUNICATION AND OUTREACH

Since 2008, DotMusic has participated in over one hundred public events globally (full list: www.music.us/events.htm), including public speaking engagements, keynote addresses, major music and domain conferences, festivals, events and expos; earned media (broadcast, online and print) in major mainstream publications, online press, and thousands of blog and social media mentions; over 1.5 million emails of support; top search engine results for DotMusic website; and over 5 million social media followers; sponsored major Music Community events globally to explain the intended benefits of the .MUSIC TLD, requesting support and letters of intent or

interest by supporters or Music Community Member Organizations (mCMO) for this .MUSIC application.

Specific details of these activities can be found in response to question 18b(vi). Support letters are attached in response to question 20f (updated list can be found on www.music.us/letters).

.MUSIC is trademarked in over 20 countries; has been using the brand in commerce (www.music.us/commerce), advertising and sponsorships, in domain registrations as an authorized reseller, merchandising and other commercial activities.

STANDARDS COMPLIANCE, SECURITY, RESILIENCY, AND STABILITY

Afilias is the DNS Registry provider for .MUSIC. Details of technical and operational capabilities matching the .MUSIC mission are provided in responses to questions #24-44.

COMPETITION, INNOVATION, FAIRNESS, AND CONSUMER CHOICE

Balanced domain registration restrictions and an inclusive, delineated Community definition ensures the entire Music Community can register .MUSIC domains, provides fairness in .MUSIC domain availability, offers a branding advantage, avoid conflicts of interest, anti-competitive concerns and anti-trust actions.

The Premium Channels will maximize the competitive landscape and innovation in both the music and domain space.

INTELLECTUAL PROPERTY PROTECTION AND TRUST

In consultation with major music constituents, including multiple Coalitions (such as a Coalition that includes the RIAA, ASCAP, BMI, SESAC, IFPI, A2IM, FIM, CISAC, IMPALA, NMPA, SABAM, FIM and others), DotMusic has developed policies to protect intellectual property, fight piracy and ensure .MUSIC domains are allocated in fair methods so that music consumers and Internet users are assured the highest level of trust and authenticity when they visit a .MUSIC domain.

A Global Protected Marks List (GPML) will reserve all major music brands and established artists, such as RIAA-certified platinum-selling bands.

Phased launches provides rights holders a first-come in the .MUSIC Sunrise, auction of multiple initial landrush domain inquiries, and eventually allows all stakeholders of the Music Community to register. All registrants must adhere to restricted Use, Name and Anti-Abuse policies and other enhanced safeguards to prevent detrimental practices that harm the Community.

Dispute mechanisms, compliance efforts, and data validation processes will provide an added level of trust.

DotMusic will conduct reviews of the applicability, usability, overall Music Community satisfaction. Results will be publicly provided to the Music Community for feedback and looks forward to providing review results and expertise in the ICANN Post-Launch New gTLD Review.

20D. Explain the relationship between the applied- for gTLD string and the community identified in 20(a).

The .MUSIC string relates to the Community by:

- Completely representing the entire Community. It relates to all music-related constituents using an all-inclusive, multi-stakeholder model
- Directly communicating that the content is music-related and representing the Community in a positive and beneficial manner consistent with the .MUSIC Purpose and Use policy
- Incorporating enhanced policies and safeguards matching Community needs
- Branding music-related constituents/entities on the Internet through a unique music-identifying suffix
- Serving the Community by implementing supporting services that are built and recommended by Community stakeholders and brought to .MUSIC through its multi-stakeholder Advisory Committee
- Creating a source of creativity, cultural identity, recreation and employment through a music-themed TLD

The .MUSIC affiliation with the Music Community, including interconnected functional activities, relate to the same groups identified by the Cultural Ministers' Council's "Statistical Framework for the Music Sector" scoping study (H. Hoegh-Guldberg and R. Letts, Statistical Framework for the Music Sector, 2005 www.culturaldata.gov.au/sites/www.culturaldata.gov.au/files/A_Statistical_Framework_for_the_Music

- Musicians including composers & songwriters
- The recording industry including record companies, producers, manufacturers, distributors of physical/digital products, studios and self-produced recordings
- Audiences at all public performances and venue operators

The Community is not subject to merely commercial/financial variables. The music Community is driven primarily by technology and the socio-cultural environment that influence music-related media cultures and consumer behavior, including the Community itself.

The socio-cultural environment drives the TLD, including the cultural diversity that provides space within the Community for many genres/participants, general socioeconomic and demographic factors and their impact on diverse local environments, and the support that the Community

gives to new creators/performers. The string and Community share a particular cultural ambience: a sensitivity and preference for certain cultural expressions. The ambience is diverse and influential: music preferences of different sections of the society vary, ranging from metal to classical; Socio-economic distributions and demographic patterns, such as age.

.MUSIC will take these factors that relate to cultural-identity into consideration and add value to the Community through the Premium Channels sorted to address NAICS classifications, genre (e.g www.Reggae.music), style, mood, language and other culturally-significant music attributes to catalyze innovation, music identification and to bolster:
The cultural relationship between .MUSIC and the Community is based on the creation of a mutually beneficial ecosystem that is driven by value generation and supports value chains that make a difference that truly matters to:

- Creators, performers, bands, ensembles & orchestras
- Live performances
- Recording
- Airplay
- Distribution
- Others (e.g film, video, advertising)

.MUSIC relates to the Community by representing all constituents involved in music creation, production and distribution, including government culture agencies and arts councils and other complementor organizations involved in support activities that are aligned with the .MUSIC mission.

.MUSIC strategic activities that relate to the Community focus on:

- Creativity, skill and talent
- Wealth and job creation through the generation, protection and exploitation of intellectual property
- Creating music-related intangible inputs that add economic and social value
- Connecting music-related content in a meaningful and organized manner that will benefit both the Community and Internet users.

These strategic activities are consistent with the creative industries strategy that was defined, refined and introduced by the Blair U.K government through the Creative Industries Task Force started in 1997 (U.K Department for Culture, Media & Sport (DCMS 2001), Creative Industries Mapping Study - www.culture.gov.uk/global/publications/archive_2001/ci_mapping_doc_2001.htm).

Michael Chanan (Short History of Recording and its Effects on Music, 1995) and Peter Martland (Business History of the Gramophone Company Ltd (1887-1918), 1992) identify factors shared by the Community:

- Music offers the opportunity of enhancing Community earnings
- Music can spread the fame of members of the Community widely, as far afield as the Community's distribution systems permit
- Fame can be further exploited using global transport systems for touring
- Music, by virtue of its permanence, can create a form of immortality for Community members, which prior to the invention of sound technology had been denied to them

The Community and the .MUSIC string share a core value system of artistic expression with diverse, niche subcultures and socio-economic interactions between music creators, their value chain, distribution channel, and ultimately engaging fans as well as other music constituents subscribing to common ideals.

The Community genre dynamics are akin to those found in other culturally-driven Communities identifying cultural identity such as those relating to nationality, language, ethnicity, sexual orientation, religion. Just like languages such as English, music theory follows an organized set of rules relating to composition and performance.

A Community music genre is a conventional category that identifies music belonging to a Community-shared tradition or set of conventions. Cultural criteria relating to genres include a combination of art type; time period; regional/national origins; and social function. Fabbri defines genre as "a kind of music, as it is acknowledged by a community for any reason or purpose or criteria, i.e a set of music events whose course is governed by rules accepted by a community" and it is "characterized by cultural features." Genres are characterized using the following types of rules, of which only the first is related strictly to music content:

- Formal & technical: Content-based practices
- Semiotic: Abstract concepts communicated
- Behavior: How composers, performers and audiences appear and behave
- Social & ideological: Genres and demographic links such as age, race, sex, political views
- Economical & juridical: Laws and economic systems supporting a genre

(F. Fabbri, Theory of Musical Genres, Popular Music Perspectives, 1981)

Genres inform musicians how they are influenced by identification with different communities and by the music industry (J. Toynbee, Making Popular Music: Musicians, Creativity & Institutions, 2000).

Music genres have "significant importance beyond simply its utility in organizing music. The Community actively identifies culturally with certain genres of music, as can easily be observed in the differences in the ways that many fans of death metal or rap dress and speak, for example. Genre is so important to listeners, in fact, that psychological research has found that the style of a piece can influence listeners' liking for it more than the piece itself (A. North, & D. Hargreaves, Liking for Musical Styles, Music Scientiae,1997)."

Genre is an "intentional concept shared by a given community, much in the same way we ascribe and interpret meanings to words in our languages" akin to a "linguistic category. Music is

founded not on intrinsic properties but on extrinsic habits (F. Pachet, Representing Musical Genre: A State of the Art, Journal of New Music Research, 2003)." The Premium Channels will be organized to reflect these Community cultural nuances

.MUSIC & COMMUNITY SUPPORT

See 20f for documented support from institutions/organizations representing majority of the Community and description of the process/rationale used relating to the expression of support.

20E. Provide a complete description of the applicant's intended registration policies in support of the community-based purpose of the applied-for gTLD. Policies and enforcement mechanisms are expected to constitute a coherent set.

DotMusic has incorporated enhanced policies to ensure only eligible members of the Music Community who comply with the values, purpose and mission of the TLD can participate; to ensure domains are used in a manner benefitting the Community; to protect intellectual property; and to safeguard domains from malicious conduct and copyright infringement.

The policies are built to match Music Community needs, based on years of feedback from Music Community members and on experience from the previous ICANN new gTLD introductions, as well as established to ensure a higher level of security for .MUSIC than what is considered standard for gTLDs.

Aside from the policies described below .MUSIC will be launched with standard gTLD lifecycle requirements per response to question #27. DotMusic will adhere to all ICANN mandated rights protection mechanisms and consensus policies.

RESERVATION PROTECTION:

DotMusic will reserve names at the second level per ICANN requirements. The Country and Territory Names are reserved per the response to question #22. Names to support registry operations, e.g. nic.MUSIC can only be registered by DotMusic.

INNOVATIVE PREMIUM NAMES RESERVATIONS:

DotMusic will reserve premium names that will be used in an innovative manner to benefit eligible members including the development of Premium Channels, such as genres (e.g. Rock.MUSIC), that will define the locale web of music, promote Community members based on their classification/category, and improve music discovery.

RIGHTS PROTECTION AND NOTIFICATIONS SYSTEM:

- Globally Protected Marks List (GPML) will ensure major music brands and established artists, such as RIAA-certified platinum-selling bands, are protected not cybersquatted. These are reserved at all times.
- Trademark Clearing House and its notification mechanisms will be implemented in accordance to ICANN specifications.
- Names Selection Policy - to ensure only music-related names are registered as domains under .MUSIC, with the following restrictions:
 - 1) A name of (entire or portion of) the musician, band, company, organization, e.g. the registrants "doing business as" name
 - 2) An acronym representing the registrant
 - 3) A name that recognizes or generally describes the registrant, or
 - 4) A name related to the mission or activities of the registrant

SUNRISE LAUNCH W/ TRADEMARK VALIDATION

This is the first phase of .MUSIC domain registration. It is a phase designed to protect trademarks in the roll-out of .MUSIC. The Sunrise is the time when regional, national and international trademark and service mark holders can apply for .MUSIC domains.

The eligibility requirements will be verified, and multiple registration applications for the same string will be auctioned, except for GPML entries that supersede any other sunrise registration applications.

The Sunrise Challenge Process solves disputes concerning domains registered under the Sunrise Policy.

Details of the Sunrise Policy and Challenge Process can be found in response to question #29.

MUSIC COMMUNITY MEMBER ORGANIZATION (MCMO) LANDRUSH LAUNCH

This is the second phase of .MUSIC domain registration. It is a limited-time period reserved for members of DotMusic-accredited music Community Member Organizations (mCMO). Unique registrations will be granted to the sole registrant and delegated at the close of the time period; multiple registration requests for the same string will go through an auction.

LANDRUSH LAUNCH

This is the third phase of .MUSIC domain registration; a limited- time period. Unique registrations will be granted to the registrant; multiple registration requests for the same domain will go through an auction.

Landrush is designed for members of the Music Community that want to secure premium .MUSIC domains giving members the chance to register their preferred .MUSIC domains; multiple registration requests for the same domain will go through an auction.

GENERAL AVAILABILITY

This is the fourth and final phase of registration of .MUSIC domains. .MUSIC registrations will

now be available to Music Community members on a first come, first served basis.

USE POLICY

This policy is in place for .MUSIC registrants regardless of the applicable launch phase. It is developed with extensive participation of Music Community members; tailored to meet the specific needs of the Music Community; and solve issues currently existing in the Music Community related to intellectual property infringement and malicious conduct.

The policy is incorporated in the registration agreement for all .MUSIC registrants. DotMusic may modify or revise these use policies at any time. Registrants agree to be bound by such modifications or revisions. Registrants that do not accept and abide by the registration agreement are disqualified from domain registrations.

The following use requirements apply:

- Use only for music-related activities
- Comply with applicable laws and regulations and not participate in, facilitate, or further illegal activities
- Do not post or submit content that is illegal, threatening, abusive, harassing, defamatory, libelous, deceptive, fraudulent, invasive of another's privacy, or tortious
- Respect the intellectual property rights of others by posting or submitting only content that is owned, licensed, or otherwise have the right to post or submit
- Immediately notify us if there is a security breach, other member in compliance or illegal activity on .MUSIC sites
- Do not register a domain containing an established music brand's name in bad faith that might be deemed confusing to Internet users and the Music Community
- Do not use any automated process to access or use the .MUSIC sites or any process, whether automated or manual, to capture data or content from any service for any reason
- Do not use any service or any process to damage, disable, impair, or otherwise attack .MUSIC sites or the networks connected to .MUSIC sites

ANTI-ABUSE POLICY

This policy is in place for all registrants under .MUSIC and addresses the identification and prompt action on malicious abuse of domains. Such activity can lead to security and stability issues for the registry, registrars, and registrants, and general users of the Internet which the policy is in place to prevent. The policy is incorporated in the .MUSIC registration agreement with all registrants and detailed in response to question #28.

REGISTRY DATA VALIDATION

While DotMusic will hold the thick WHOIS data provided through registrars, we will also validate elements of the received WHOIS data:

1. The registrant's email address through validation links
2. The registrant's phone number through validated PIN-codes

Upon successful completion of these two steps, DotMusic will provide the registrant their Music Community membership details; used to join/access the Premium Channels. All future .MUSIC domains associated with the registrant-verified email address will not be re-verified.

COMPLIANCE AND ENFORCEMENT

DotMusic will take proactive and reactive measures to enforce its TLD policies. Proactive measures are taken at the time of registration. Reactive measures are addressed via compliance and enforcement mechanisms and through dispute processes.

Any violation of the .MUSIC Policies will be enforced on a case-by-case, fact-specific basis:

1. Any allegation that a domain is not used for legitimate music purposes or otherwise infringes on the .MUSIC Policies shall be enforced under the provisions of the .MUSIC Policy & Copyright Infringement Dispute Resolution Process ("MPCIDRP") as described in our response to question #28.
2. Any alleged violation of the UDRP shall be enforced under the provisions contained therein, as modified by the URS.

The MPCIDRP, UDRP, and URS are required in the registrars' registration agreements with registrants. Proceedings under the MPCIDRP, UDRP, and URS must be brought by interested third parties in accordance with the associated policies and procedures.

DotMusic will conduct random compliance efforts across all the .MUSIC Policies. Periodically a sample of .MUSIC registrations will be verified for compliance with all established .MUSIC Policies.

If a Registrant is found out of compliance with any of the .MUSIC Policies the registrant will be notified that the domain will be placed on registry lock. The registrant will have a reasonable time period to fix the compliance matter or the domain will be terminated. Repeat offenders will be placed on a special monitoring list that DotMusic staff will conduct additional compliance checks against. DotMusic holds the right to prohibit repeat offenders from registering .MUSIC domains for a period of time or indefinitely.

DotMusic will review all policies and processes on a regular basis with involvement from the .MUSIC Advisory Committee and will present them publicly to enable Music Community constituents to provide feedback. DotMusic will also conduct registrar and registrant surveys based on the level of registrant satisfaction concerning .MUSIC usability and how to improve value proposition.

DotMusic reserves the right to deny, cancel or transfer any registration that it deems necessary, in its discretion, to protect the integrity and stability of the registry, to comply with any applicable laws, government rules or requirements, requests of law enforcement, in compliance with any dispute resolution process, or to avoid any liability, civil or criminal, on the part of DotMusic, as well as its affiliates, subsidiaries, officers, directors and employees. DotMusic reserves the right to freeze a domain during resolution of a dispute. DotMusic reserves the right to terminate a domain for failure by the registrant to demonstrate

it meets .MUSIC policies.

20F. Attach any written endorsements for the application from established institutions representative of the community identified in 20(a). An applicant may submit written endorsements by multiple institutions, if relevant to the community.

21A. Is the application for a geographic name?

No

22. Describe proposed measures for protection of geographic names at the second and other levels in the applied-for gTLD. This should include any applicable rules and procedures for reservation and/or release of such names.

DotMusic protects geographic names at the second level of .MUSIC by the following described measures. These have been developed in response to the GAC's Principles regarding New gTLDs, dated March 28, 2007, and to adhere to the requirements of the ICANN Registry Agreement Specification 5.

In correspondence with GAC principle 2.7, DotMusic will block all country and territory names as registrations under .MUSIC. To accomplish this DotMusic will prior to launch (i) place the names on a reserved list that can solely be released as second-level registrations under .MUSIC by an agreement with the respective country or territory and with ICANN; and (ii) include in its registration policies that country and territory names are prohibited at lower levels.

The names reserved as country and territory names will correspond to the requirements in the ICANN Registry Agreement Specification 5, paragraph 5; and paragraph 2 where all two-character labels will be reserved for registration to ensure that any release of such names is done to the appropriate corresponding country or territory and thereby avoid user confusion.

When DotMusic is launching Internationalized Domain Names DotMusic will place translated versions of country and territory names on a reserved list that also only can be released for registration if an agreement has been reached with the corresponding country or territory and ICANN.

DotMusic will implement multiple dispute resolution policies to address dispute over any names not reserved by the above provisions; see response to question #20e and #28 and #29. In particular all domains awarded to registrants are subject to the Uniform Domain Name Dispute Resolution Policy (UDRP), and to any properly-situated court proceeding. DotMusic will ensure appropriate procedures to allow governments, public authorities or IGO's to challenge abuses of names with national or geographic significance at the second level. DotMusic will institute a provision in the registry-registrar agreements and the registrar-registrant agreements, to suspend domains names in the event of a dispute. DotMusic may exercise that right in the case of a dispute over a geographic name.

The release of a two-character, country, or territory name as second level registration under .MUSIC will be done in agreement with the corresponding country or territory, ICANN. DotMusic will define a procedure so that governments can request the above reserved domain(s) if they would like to take possession of them. This procedure will be based on existing methodology developed for the release of country names in the .INFO TLD. For example, we will require a written request from the country's GAC representative, or a written request from the country's relevant Ministry or Department. We will allow the designated beneficiary (the Registrant) to register the name, with an accredited Afiliat Registrar, possibly using an authorization number transmitted directly to the designated beneficiary in the country concerned.

DotMusic will be working closely with the International Federation of Arts Councils and Culture Agencies, with national members from over 70 countries comprised of governments' Ministries of Culture and Arts Councils covering all continents, to ensure country names protection and the promotion of government-related cultural and music initiatives. Strategic partners include UNESCO, African Arts Institute, Asia-Pacific Regional Centre of the Culturelink Network, European League of Institutes of the Arts, European Research Institute for Comparative Cultural Policy and the Arts, European Commission Directorate General Education & Culture, Fundació Interarts, International Conference on Cultural Policy Research, International Network for Contemporary Performing Arts, International Federation of Coalitions for Cultural Diversity, International Network for Cultural Diversity, ISPA - International Society for the Performing

Arts Foundation, National Assembly of State Arts Agencies, Organization of American States, Observatory of Cultural Policies in Africa, Organización de Estados Iberoamericanos, Caribbean and Pacific Group of States, United Cities and Local Governments.

Ministries of Culture Agencies and Arts Councils include:

Albania (Ministry of Tourism, Culture, Youth & Sport)
Armenia (Ministry of Culture)
Australia (Australia Council for the Arts)
Bahamas (Ministry of Youth, Sports & Culture)
Belgium (Fédération Wallonie-Bruxelles, Cabinet de la Culture)
Belgium (Ministry of the Flemish Community, Arts & Heritage)
Belize (National Institute of Culture & History)
Botswana (Department of Arts & Culture, Ministry of Youth, Sport & Culture)
Bulgaria (National Culture Fund)
Cambodia (Ministry of Culture & Fine Arts)
Canada (Canada Council for the Arts)
Cayman Islands (Cayman National Cultural Foundation)
Chile (Consejo Nacional de la Cultura y las Artes)
China (CFLAC - China Federation of Literary & Art Circles)
Colombia (Ministerio de Cultura de Colombia)
Cook Islands (Ministry of Cultural Development)
Croatia (Ministarstvo Kulture - Ministry of Culture)
Cuba (Ministerio de Cultura de la República de Cuba)
Denmark (Kulturstyrelsen - Danish Agency for Culture)
Egypt (Ministry of Culture)
England (Arts Council England)
Fiji (Fiji Arts Council)
Finland (Arts Council of Finland)
France (Ministère de la Culture et de la Communication de France)
Gambia (National Council for Arts & Culture of The Gambia)
Grenada (Grenada Arts Council)
Guyana (National Trust of Guyana, Ministry of Culture, Youth and Sport)
Hong Kong (Home Affairs Bureau, Culture Section Government of Hong Kong)
Iceland (Ministry of Education, Science & Culture)
India (Ministry of Culture)
Ireland (Arts Council of Ireland - An Chomhairle Ealaíon)
Jamaica (Ministry of Youth, Sport & Culture)
Japan (Japan Foundation)
Kenya (Bomas of Kenya)
Lithuania (Ministry of Culture)
Luxembourg (Ministère de la Culture)
Malawi (Ministry of Tourism, Wildlife & Culture)
Malaysia (Ministry of Information, Communication & Culture)
Maldives (Ministry of Tourism, Arts & Culture)
Malta (Malta Council for Culture and the Arts)
Mongolia (Ministry of Education, Culture & Science)
Mozambique (Ministério da Cultura)
Namibia (National Arts Council of Namibia)
Netherlands (Mondriaan Fund)
Netherlands (Nederlands Fonds voor Podiumkunsten, Fund for Performing Arts)
Netherlands (Nederlands Letterenfonds - Dutch Foundation for Literature)
Netherlands (Raad voor Cultuur - Council for Culture)
Netherlands (SICA - Stichting Internationale Culturele Activiteiten)
New Zealand (Creative New Zealand - Toi Aotearoa)
Niger (Ministere de la Communication, des Nouvelles Technologies de l'Information et de la Culture)
Nigeria (National Council for Arts & Culture)
Northern Ireland (Arts Council of Northern Ireland)
Norway (Norsk Kulturråd - Arts Council Norway)
Palau (Ministry of Community & Cultural Affairs)
Papua New Guinea (Ministry of Culture & Tourism)
Philippines (National Commission for Culture & the Arts)
Portugal (Direcção-Geral das Artes)
Qatar (Ministry of Culture, Arts & Heritage)
Romania (Ministry of Culture & National Heritage)
Saudi Arabia (Ministry of Culture & Information)
Scotland (Creative Scotland)
Senegal (Ministère de la Culture et du Tourisme)
Serbia (International Cultural Centre Belgrade)
Seychelles (Ministry of Community Development, Youth, Sport & Culture)
Singapore (National Arts Council of Singapore)
Slovenia (Ministry of Education, Science, Culture and Sport)
Solomon Islands (Ministry of Culture & Tourism)
South Africa (National Arts Council of South Africa)
South Korea (Arts Council Korea)
Spain (Secretaría de Estado de Cultura, España)
Swaziland (Swaziland National Council of Arts and Culture)
Sweden (Statens Kulturråd - Swedish Arts Council)
Switzerland (Pro Helvetia - Swiss Arts Council)
Tanzania (Basata: National Arts Council)

Tunisia (Ministry of Culture)
United Arab Emirates (Sharjah Museums Council)
USA (National Endowment for the Arts)
USA (National Endowment for the Humanities)
Vietnam (Ministry of Culture, Sports & Tourism)
Wales (Cygnor Celfyddydau Cymru - Arts Council of Wales)
Zambia (National Arts Council of Zambia)
Zimbabwe (National Arts Council of Zimbabwe)

DotMusic also has support from the International Association of Music Information Centres (IAMIC), a global network of organizations which document and promote the music from our time. IAMIC will also help .MUSIC with its outreach efforts relating to the protection of country-name domains and the allocation of the domains to the proper government authorities to promote culture and music from those territories. IAMIC "supports the work of 40 member organizations in 37 countries. Music Information Centers across the world bear fundamental similarities: they provide specialized music resources for music students, performers, composers and music teachers; they act as visitor centers for any member of the public with an interest in learning about national musical heritage; they develop audiences for new music through educational and promotional projects."

These include:

Australia (Australian Music Centre)
Austria (MICA - Music Information Center Austria)
Belgium (Flanders Music Centre)
Belgium (CEBEDEM - Belgian Centre for Music Documentation)
Belgium (MATRIX)
Brazil (CIDDIC-Brasil/UNICAMP)
Canada (Canadian Music Centre)
Croatia (Croatian Music Information Centre KDZ)
Cyprus (Cyprus Music Information Center - CyMIC)
Czech Republic (Czech Music Information Centre)
Denmark (Danish Arts Agency - Music Centre)
England (Sound and Music - SAM)
Estonia (Estonian Music Information Centre)
Finland (Finnish Music Information Centre Fimic)
France (CDMC - Centre de documentation de la musique contemporaine)
Georgia (Georgian Music Information Centre)
Germany (German Music Information Centre)
Greece (Greek Music Information Centre / Institute for Research on Music and Acoustics)
Hungary (BMC Hungarian Music Information Center)
Iceland (Iceland Music Information Centre)
Ireland (Contemporary Music Centre, Ireland)
Israel (Israel Music Information Centre / Israel Music Institute)
Italy (CIDIM / AMIC)
Latvia (Latvian Music Information Centre - LMIC)
Lithuania (Lithuanian Music Information and Publishing Centre)
Luxembourg (Luxembourg Music Information Centre)
Netherlands (Netherlands Music Information Centre)
New Zealand (Centre for New Zealand Music - SOUNZ)
Norway (Music Information Centre Norway)
Poland (Polish Music Information Centre)
Portugal (Portuguese Music Research & Information Centre / Miso Music Portugal)
Scotland (Scottish Music Centre)
Slovakia (Music Centre Slovakia)
Slovenia (Slovene Music Information Centre)
South Africa (Music Communication Centre of Southern Africa - MCCOSA)
Sweden (Svensk Musik)
Switzerland (Fondation SUISA pour la musique)
USA (American Music Center)
Wales (Ty Cerdd - Welsh Music Information Centre)

DotMusic already holds support from multiple music export offices from different countries/territories. The music export offices are typically run by government agencies, and have expressed and signed letters of interest to administer the corresponding [countryname/territoryname.MUSIC] in an appropriate manner that benefits the music industry for that corresponding country/territory. The support gathered this far is attached in response to question #20, is publicly available at www.music.us/letters. DotMusic expects additional interest expressed from other countries and territories as the DotMusic outreach continues.

Other GAC Principles regarding New gTLDs are defined elsewhere in this application, for example methods for limiting the need for defensive registrations in paragraph 2.9 is described in response to question #18b and #20e.

23. Provide name and full description of all the Registry Services to be provided. Descriptions should include both technical and business components of each proposed service, and address any potential security or stability concerns.

The following registry services are customary services offered by a registry operator:

- A. Receipt of data from registrars concerning registration of domain names and name servers.
- B. Dissemination of TLD zone files.
- C. Dissemination of contact or other information concerning domain name registrations (e.g., port-43 WHOIS, Web- based Whois, RESTful Whois service).
- D. Internationalized Domain Names, where offered.
- E. DNS Security Extensions (DNSSEC). The applicant must describe whether any of these registry services are intended to be offered in a manner unique to the TLD.

Additional proposed registry services that are unique to the registry must also be described.

Throughout the technical portion (#23 - #44) of this application, answers are provided directly from Afiliias, the back-end provider of registry services for this TLD. DotMusic chose Afiliias as its back-end provider because Afiliias has more experience successfully applying to ICANN and launching new TLDs than any other provider. Afiliias is the ICANN-contracted registry operator of the .INFO and .MOBI TLDs, and Afiliias is the back-end registry services provider for other ICANN TLDs including .ORG, .ASIA, .AERO, and .XXX.

Registry services for this TLD will be performed by Afiliias in the same responsible manner used to support 16 top level domains today. Afiliias supports more ICANN-contracted TLDs (6) than any other provider currently. Afiliias' primary corporate mission is to deliver secure, stable and reliable registry services. This TLD will utilize an existing, proven team and platform for registry services with:

- A stable and secure, state-of-the-art, EPP-based SRS with ample storage capacity, data security provisions and scalability that is proven with registrars who account for over 95% of all gTLD domain name registration activity (over 375 registrars);
- A reliable, 100% available DNS service (zone file generation, publication and dissemination) tested to withstand severe DDoS attacks and dramatic growth in Internet use;
- A WHOIS service that is flexible and standards compliant, with search capabilities to address both registrar and end-user needs; includes consideration for evolving standards, such as RESTful, or draft-kucherawy-wierds;
- Experience introducing IDNs in the following languages: German (DE), Spanish (ES), Polish (PL), Swedish (SV), Danish (DA), Hungarian (HU), Icelandic (IS), Latvian (LV), Lithuanian (LT), Korean (KO), Simplified and Traditional Chinese (CN), Devanagari (HI-DEVA), Russian (RU), Belarusian (BE), Ukrainian (UK), Bosnian (BS), Serbian (SR), Macedonian (MK) and Bulgarian (BG) across the TLDs it serves;
- A registry platform that is both IPv6 and DNSSEC enabled;
- An experienced, respected team of professionals active in standards development of innovative services such as DNSSEC and IDN support;
- Methods to limit domain abuse, remove outdated and inaccurate data, and ensure the integrity of the SRS, and;
- Customer support and reporting capabilities to meet financial and administrative needs, e.g., 24x7 call center support, integration support, billing, and daily, weekly, and monthly reporting.

Afiliias will support this TLD in accordance with the specific policies and procedures of DotMusic (the "registry operator"), leveraging a proven registry infrastructure that is fully operational, staffed with professionals, massively provisioned, and immediately ready to launch and maintain this TLD.

The below response includes a description of the registry services to be provided for this TLD, additional services provided to support registry operations, and an overview of Afiliias' approach to registry management.

Registry services to be provided

To support this TLD, DotMusic and Afiliias will offer the following registry services, all in accordance with relevant technical standards and policies:

- Receipt of data from registrars concerning registration for domain names and nameservers, and provision to registrars of status information relating to the EPP-based domain services for registration, queries, updates, transfers, renewals, and other domain management functions. Please see our responses to questions #24, #25, and #27 for full details, which we request be incorporated here by reference.
- Operation of the registry DNS servers: The Afiliias DNS system, run and managed by Afiliias, is a massively provisioned DNS infrastructure that utilizes among the most sophisticated DNS architecture, hardware, software and redundant design created. Afiliias' industry-leading system works in a seamless way to incorporate nameservers from any number of other secondary DNS service vendors. Please see our response to question #35 for full details, which we request be incorporated here by reference.
- Dissemination of TLD zone files: Afiliias' distinctive architecture allows for real-time updates and maximum stability for zone file generation, publication and dissemination. Please see our response to question #34 for full details, which we request be incorporated here by reference.
- Dissemination of contact or other information concerning domain registrations: A port 43 WHOIS service with basic and expanded search capabilities with requisite measures to prevent abuse. Please see our response to question #26 for full details, which we request be

incorporated here by reference.

- Internationalized Domain Names (IDNs): Ability to support all protocol valid Unicode characters at every level of the TLD, including alphabetic, ideographic and right-to-left scripts, in conformance with the ICANN IDN Guidelines. Please see our response to question #44 for full details, which we request be incorporated here by reference.
- DNS Security Extensions (DNSSEC): A fully DNSSEC-enabled registry, with a stable and efficient means of signing and managing zones. This includes the ability to safeguard keys and manage keys completely. Please see our response to question #43 for full details, which we request be incorporated here by reference.

Each service will meet or exceed the contract service level agreement. All registry services for this TLD will be provided in a standards-compliant manner.

Security

Afilias addresses security in every significant aspect - physical, data and network as well as process. Afilias' approach to security permeates every aspect of the registry services provided. A dedicated security function exists within the company to continually identify existing and potential threats, and to put in place comprehensive mitigation plans for each identified threat. In addition, a rapid security response plan exists to respond comprehensively to unknown or unidentified threats. The specific threats and Afilias mitigation plans are defined in our response to question #30(b); please see that response for complete information. In short, Afilias is committed to ensuring the confidentiality, integrity, and availability of all information.

New registry services

No new registry services are planned for the launch of this TLD.

Additional services to support registry operation

Numerous supporting services and functions facilitate effective management of the TLD. These support services are also supported by Afilias, including:

- Customer support: 24x7 live phone and e-mail support for customers to address any access, update or other issues they may encounter. This includes assisting the customer identification of the problem as well as solving it. Customers include registrars and the registry operator, but not registrants except in unusual circumstances. Customers have access to a web-based portal for a rapid and transparent view of the status of pending issues.
- Financial services: billing and account reconciliation for all registry services according to pricing established in respective agreements.

Reporting is an important component of supporting registry operations. Afilias will provide reporting to the registry operator and registrars, and financial reporting.

Reporting provided to registry operator

Afilias provides an extensive suite of reports to the registry operator, including daily, weekly and monthly reports with data at the transaction level that enable the registry operator to track and reconcile at whatever level of detail preferred. Afilias provides the exact data required by ICANN in the required format to enable the registry operator to meet its technical reporting requirements to ICANN.

In addition, Afilias offers access to a data warehouse capability that will enable near real-time data to be available 24x7. This can be arranged by informing the Afilias Account Manager regarding who should have access. Afilias' data warehouse capability enables drill-down analytics all the way to the transaction level.

Reporting available to registrars

Afilias provides an extensive suite of reporting to registrars and has been doing so in an exemplary manner for more than ten years. Specifically, Afilias provides daily, weekly and monthly reports with detail at the transaction level to enable registrars to track and reconcile at whatever level of detail they prefer.

Reports are provided in standard formats, facilitating import for use by virtually any registrar analytical tool. Registrar reports are available for download via a secure administrative interface. A given registrar will only have access to its own reports. These include the following:

- Daily Reports: Transaction Report, Billable Transactions Report, and Transfer Reports;
- Weekly: Domain Status and Nameserver Report, Weekly Nameserver Report, Domains Hosted by Nameserver Weekly Report, and;
- Monthly: Billing Report and Monthly Expiring Domains Report.

Weekly registrar reports are maintained for each registrar for four weeks. Weekly reports older than four weeks will be archived for a period of six months, after which they will be deleted.

Financial reporting

Registrar account balances are updated real-time when payments and withdrawals are posted to the registrars' accounts. In addition, the registrar account balances are updated as and when they perform billable transactions at the registry level.

Afilias provides Deposit/Withdrawal Reports that are updated periodically to reflect payments received or credits and withdrawals posted to the registrar accounts.

The following reports are also available: a) Daily Billable Transaction Report, containing

details of all the billable transactions performed by all the registrars in the SRS, b) daily e-mail reports containing the number of domains in the registry and a summary of the number and types of billable transactions performed by the registrars, and c) registry operator versions of most registrar reports (for example, a daily Transfer Report that details all transfer activity between all of the registrars in the SRS).

Afilias approach to registry support

Afilias, the back end registry services provider for this TLD, is dedicated to managing the technical operations and support of this TLD in a secure, stable and reliable manner. Afilias has worked closely with DotMusic to review specific needs and objectives of this TLD. The resulting comprehensive plans are illustrated in technical responses #24-44, drafted by Afilias given DotMusic requirements. Afilias and DotMusic also worked together to provide financial responses for this application which demonstrate cost and technology consistent with the size and objectives of this TLD.

Afilias is the registry services provider for this and several other TLD applications. Over the past 11 years of providing services for gTLD and ccTLDs, Afilias has accumulated experience about resourcing levels necessary to provide high quality services with conformance to strict service requirements. Afilias currently supports over 20 million domain names, spread across 16 TLDs, with over 400 accredited registrars.

Since its founding, Afilias is focused on delivering secure, stable and reliable registry services. Several essential management and staff who designed and launched the Afilias registry in 2001 and expanded the number of TLDs supported, all while maintaining strict service levels over the past decade, are still in place today. This experiential continuity will endure for the implementation and on-going maintenance of this TLD. Afilias operates in a matrix structure, which allows its staff to be allocated to various critical functions in both a dedicated and a shared manner. With a team of specialists and generalists, the Afilias project management methodology allows efficient and effective use of our staff in a focused way.

With over a decade of registry experience, Afilias has the depth and breadth of experience that ensure existing and new needs are addressed, all while meeting or exceeding service level requirements and customer expectations. This is evident in Afilias' participation in business, policy and technical organizations supporting registry and Internet technology within ICANN and related organizations. This allows Afilias to be at the forefront of security initiatives such as: DNSSEC, wherein Afilias worked with Public Interest Registry (PIR) to make the .ORG registry the first DNSSEC enabled gTLD and the largest TLD enabled at the time; in enhancing the Internet experience for users across the globe by leading development of IDNs; in pioneering the use of open-source technologies by its usage of PostgreSQL, and; being the first to offer near-real-time dissemination of DNS zone data.

The ability to observe tightening resources for critical functions and the capacity to add extra resources ahead of a threshold event are factors that Afilias is well versed in. Afilias' human resources team, along with well-established relationships with external organizations, enables it to fill both long-term and short-term resource needs expediently.

Afilias' growth from a few domains to serving 20 million domain names across 16 TLDs and 400 accredited registrars indicates that the relationship between the number of people required and the volume of domains supported is not linear. In other words, servicing 100 TLDs does not automatically require 6 times more staff than servicing 16 TLDs. Similarly, an increase in the number of domains under management does not require in a linear increase in resources. Afilias carefully tracks the relationship between resources deployed and domains to be serviced, and pro-actively reviews this metric in order to retain a safe margin of error. This enables Afilias to add, train and prepare new staff well in advance of the need, allowing consistent delivery of high quality services.

24. Shared Registration System (SRS) Performance: describe

- the plan for operation of a robust and reliable SRS. SRS is a critical registry function for enabling multiple registrars to provide domain name registration services in the TLD. SRS must include the EPP interface to the registry, as well as any other interfaces intended to be provided, if they are critical to the functioning of the registry. Please refer to the requirements in Specification 6 (section 1.2) and Specification 10 (SLA Matrix) attached to the Registry Agreement; and
- resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).

A complete answer should include, but is not limited to:

A high-level SRS system description;

- Representative network diagram(s);
- Number of servers;
- Description of interconnectivity with other registry systems;
- Frequency of synchronization between servers; and
- Synchronization scheme (e.g., hot standby, cold standby).

THE RESPONSE FOR THIS QUESTION USES ANGLE BRACKETS (THE " <" and ">" CHARACTERS, or < and >), WHICH ICANN INFORMS US (CASE ID 11027) CANNOT BE PROPERLY RENDERED IN TAS DUE TO SECURITY CONCERNS. HENCE, THE ANSWER BELOW AS DISPLAYED IN TAS MAY NOT RENDER THE FULL RESPONSE AS INTENDED. THEREFORE, THE FULL ANSWER TO THIS QUESTION IS ALSO ATTACHED AS A PDF FILE, ACCORDING TO SPECIFIC GUIDANCE FROM ICANN UNDER CASE ID 11027.

Answers for this question (#24) are provided directly from Afiliias, the back-end provider of registry services for this TLD.

Afiliias operates a state-of-the-art EPP-based Shared Registration System (SRS) that is secure, stable and reliable. The SRS is a critical component of registry operations that must balance the business requirements for the registry and its customers, such as numerous domain acquisition and management functions. The SRS meets or exceeds all ICANN requirements given that Afiliias:

- Operates a secure, stable and reliable SRS which updates in real-time and in full compliance with Specification 6 of the new gTLD Registry Agreement;
- Is committed to continuously enhancing our SRS to meet existing and future needs;
- Currently exceeds contractual requirements and will perform in compliance with Specification 10 of the new gTLD Registry Agreement;
- Provides SRS functionality and staff, financial, and other resources to more than adequately meet the technical needs of this TLD, and;
- Manages the SRS with a team of experienced technical professionals who can seamlessly integrate this TLD into the Afiliias registry platform and support the TLD in a secure, stable and reliable manner.

Description of operation of the SRS, including diagrams

Afiliias' SRS provides the same advanced functionality as that used in the .INFO and .ORG registries, as well as the fourteen other TLDs currently supported by Afiliias. The Afiliias registry system is standards-compliant and utilizes proven technology, ensuring global familiarity for registrars, and it is protected by our massively provisioned infrastructure that mitigates the risk of disaster.

EPP functionality is described fully in our response to question #25; please consider those answers incorporated here by reference. An abbreviated list of Afiliias SRS functionality includes:

- Domain registration: Afiliias provides registration of names in the TLD, in both ASCII and IDN forms, to accredited registrars via EPP and a web-based administration tool.
- Domain renewal: Afiliias provides services that allow registrars the ability to renew domains under sponsorship at any time. Further, the registry performs the automated renewal of all domain names at the expiration of their term, and allows registrars to rescind automatic renewals within a specified number of days after the transaction for a full refund.
- Transfer: Afiliias provides efficient and automated procedures to facilitate the transfer of sponsorship of a domain name between accredited registrars. Further, the registry enables bulk transfers of domains under the provisions of the Registry-Registrar Agreement.
- RGP and restoring deleted domain registrations: Afiliias provides support for the Redemption Grace Period (RGP) as needed, enabling the restoration of deleted registrations.
- Other grace periods and conformance with ICANN guidelines: Afiliias provides support for other grace periods that are evolving as standard practice inside the ICANN community. In addition, the Afiliias registry system supports the evolving ICANN guidelines on IDNs.

Afiliias also supports the basic check, delete, and modify commands.

As required for all new gTLDs, Afiliias provides "thick" registry system functionality. In this model, all key contact details for each domain are stored in the registry. This allows better access to domain data and provides uniformity in storing the information.

Afiliias' SRS complies today and will continue to comply with global best practices including relevant RFCs, ICANN requirements, and this TLD's respective domain policies. With over a decade of experience, Afiliias has fully documented and tested policies and procedures, and our highly skilled team members are active participants of the major relevant technology and standards organizations, so ICANN can be assured that SRS performance and compliance are met. Full details regarding the SRS system and network architecture are provided in responses to questions #31 and #32; please consider those answers incorporated here by reference.

SRS servers and software

All applications and databases for this TLD will run in a virtual environment currently hosted by a cluster of servers equipped with the latest Intel Westmere multi-core processors. (It is

possible that by the time this application is evaluated and systems deployed, Westmere processors may no longer be the "latest"; the Afiliast policy is to use the most advanced, stable technology available at the time of deployment.) The data for the registry will be stored on storage arrays of solid state drives shared over a fast storage area network. The virtual environment allows the infrastructure to easily scale both vertically and horizontally to cater to changing demand. It also facilitates effective utilization of system resources, thus reducing energy consumption and carbon footprint.

The network firewalls, routers and switches support all applications and servers. Hardware traffic shapers are used to enforce an equitable access policy for connections coming from registrars. The registry system accommodates both IPv4 and IPv6 addresses. Hardware load balancers accelerate TLS/SSL handshaking and distribute load among a pool of application servers.

Each of the servers and network devices are equipped with redundant, hot-swappable components and multiple connections to ancillary systems. Additionally, 24x7 support agreements with a four-hour response time at all our data centers guarantee replacement of failed parts in the shortest time possible.

Examples of current system and network devices used are:

- Servers: Cisco UCS B230 blade servers
- SAN storage arrays: IBM Storwize V7000 with Solid State Drives
- SAN switches: Brocade 5100
- Firewalls: Cisco ASA 5585-X
- Load balancers: F5 Big-IP 6900
- Traffic shapers: Procera PacketLogic PL8720
- Routers: Juniper MX40 3D
- Network switches: Cisco Nexus 7010, Nexus 5548, Nexus 2232

These system components are upgraded and updated as required, and have usage and performance thresholds which trigger upgrade review points. In each data center, there is a minimum of two of each network component, a minimum of 25 servers, and a minimum of two storage arrays.

Technical components of the SRS include the following items, continually checked and upgraded as needed: SRS, WHOIS, web admin tool, DNS, DNS distributor, reporting, invoicing tools, and deferred revenue system (as needed).

All hardware is massively provisioned to ensure stability under all forecast volumes from launch through "normal" operations of average daily and peak capacities. Each and every system application, server, storage and network device is continuously monitored by the Afiliast Network Operations Center for performance and availability. The data gathered is used by dynamic predictive analysis tools in real-time to raise alerts for unusual resource demands. Should any volumes exceed established thresholds, a capacity planning review is instituted which will address the need for additions well in advance of their actual need.

SRS diagram and interconnectivity description

As with all core registry services, the SRS is run from a global cluster of registry system data centers, located in geographic centers with high Internet bandwidth, power, redundancy and availability. All of the registry systems will be run in a <n+1> setup, with a primary data center and a secondary data center. For detailed site information, please see our responses to questions #32 and #35. Registrars access the SRS in real-time using EPP.

A sample of the Afiliast SRS technical and operational capabilities (displayed in Figure 24-a) include:

- Geographically diverse redundant registry systems;
- Load balancing implemented for all registry services (e.g. EPP, WHOIS, web admin) ensuring equal experience for all customers and easy horizontal scalability;
- Disaster Recovery Point objective for the registry is within one minute of the loss of the primary system;
- Detailed and tested contingency plan, in case of primary site failure, and;
- Daily reports, with secure access for confidentiality protection.

As evidenced in Figure 24-a, the SRS contains several components of the registry system. The interconnectivity ensures near-real-time distribution of the data throughout the registry infrastructure, timely backups, and up-to-date billing information.

The WHOIS servers are directly connected to the registry database and provide real-time responses to queries using the most up-to-date information present in the registry.

Committed DNS-related EPP objects in the database are made available to the DNS Distributor via a dedicated set of connections. The DNS Distributor extracts committed DNS-related EPP objects in real time and immediately inserts them into the zone for dissemination.

The Afiliast system is architected such that read-only database connections are executed on database replicas and connections to the database master (where write-access is executed) are carefully protected to ensure high availability.

This interconnectivity is monitored, as is the entire registry system, according to the plans detailed in our response to question #42.

Synchronization scheme

Registry databases are synchronized both within the same data center and in the backup data center using a database application called Slony. For further details, please see the responses to questions #33 and #37. Slony replication of transactions from the publisher (master) database to its subscribers (replicas) works continuously to ensure the publisher and its subscribers remain synchronized. When the publisher database completes a transaction the Slony replication system ensures that each replica also processes the transaction. When there are no transactions to process, Slony "sleeps" until a transaction arrives or for one minute, whichever comes first. Slony "wakes up" each minute to confirm with the publisher that there has not been a transaction and thus ensures subscribers are synchronized and the replication time lag is minimized. The typical replication time lag between the publisher and subscribers depends on the topology of the replication cluster, specifically the location of the subscribers relative to the publisher. Subscribers located in the same data center as the publisher are typically updated within a couple of seconds, and subscribers located in a secondary data center are typically updated in less than ten seconds. This ensures real-time or near-real-time synchronization between all databases, and in the case where the secondary data center needs to be activated, it can be done with minimal disruption to registrars.

SRS SLA performance compliance

Afilias has a ten-year record of delivering on the demanding ICANN SLAs, and will continue to provide secure, stable and reliable service in compliance with SLA requirements as specified in the new gTLD Registry Agreement, Specification 10, as presented in Figure 24-b.

The Afilias SRS currently handles over 200 million EPP transactions per month for just .INFO and .ORG. Overall, the Afilias SRS manages over 700 million EPP transactions per month for all TLDs under management.

Given this robust functionality, and more than a decade of experience supporting a thick TLD registry with a strong performance history, Afilias, on behalf of DotMusic, will meet or exceed the performance metrics in Specification 10 of the new gTLD Registry Agreement. The Afilias services and infrastructure are designed to scale both vertically and horizontally without any downtime to provide consistent performance as this TLD grows. The Afilias architecture is also massively provisioned to meet seasonal demands and marketing campaigns. Afilias' experience also gives high confidence in the ability to scale and grow registry operations for this TLD in a secure, stable and reliable manner.

SRS resourcing plans

Since its founding, Afilias is focused on delivering secure, stable and reliable registry services. Several essential management and staff who designed and launched the Afilias registry in 2001 and expanded the number of TLDs supported, all while maintaining strict service levels over the past decade, are still in place today. This experiential continuity will endure for the implementation and on-going maintenance of this TLD. Afilias operates in a matrix structure, which allows its staff to be allocated to various critical functions in both a dedicated and a shared manner. With a team of specialists and generalists, the Afilias project management methodology allows efficient and effective use of our staff in a focused way.

Over 100 Afilias team members contribute to the management of the SRS code and network that will support this TLD. The SRS team is composed of Software Engineers, Quality Assurance Analysts, Application Administrators, System Administrators, Storage Administrators, Network Administrators, Database Administrators, and Security Analysts located at three geographically separate Afilias facilities. The systems and services set up and administered by these team members are monitored 24x7 by skilled analysts at two NOCs located in Toronto, Ontario (Canada) and Horsham, Pennsylvania (USA). In addition to these team members, Afilias also utilizes trained project management staff to maintain various calendars, work breakdown schedules, utilization and resource schedules and other tools to support the technical and management staff. It is this team who will both deploy this TLD on the Afilias infrastructure, and maintain it. Together, the Afilias team has managed 11 registry transitions and six new TLD launches, which illustrate its ability to securely and reliably deliver regularly scheduled updates as well as a secure, stable and reliable SRS service for this TLD.

25. Extensible Provisioning Protocol (EPP): provide a detailed description of the interface with registrars, including how the applicant will comply with EPP in RFCs 3735 (if applicable), and 5730-5734.

If intending to provide proprietary EPP extensions, provide documentation consistent with RFC 3735, including the EPP templates and schemas that will be used.

Describe resourcing plans (number and description of personnel roles allocated to this area).

A complete answer is expected to be no more than 5 pages. If there are proprietary EPP extensions, a complete answer is also expected to be no more than 5 pages per EPP extension.

Answers for this question (#25) are provided by Afilias, the back-end provider of registry services for this TLD.

Afilias has been a pioneer and innovator in the use of EPP. .INFO was the first EPP-based gTLD registry and launched on EPP version 02/00. Afilias has a track record of supporting TLDs on

standards-compliant versions of EPP. Afilias will operate the EPP registrar interface as well as a web-based interface for this TLD in accordance with RFCs and global best practices. In addition, Afilias will maintain a proper OT&E (Operational Testing and Evaluation) environment to facilitate registrar system development and testing.

Afilias' EPP technical performance meets or exceeds all ICANN requirements as demonstrated by:

- A completely functional, state-of-the-art, EPP-based SRS that currently meets the needs of various gTLDs and will meet this new TLD's needs;
- A track record of success in developing extensions to meet client and registrar business requirements such as multi-script support for IDNs;
- Supporting six ICANN gTLDs on EPP: .INFO, .ORG, .MOBI, .AERO, .ASIA and .XXX
- EPP software that is operating today and has been fully tested to be standards-compliant;
- Proven interoperability of existing EPP software with ICANN-accredited registrars, and;
- An SRS that currently processes over 200 million EPP transactions per month for both .INFO and .ORG. Overall, Afilias processes over 700 million EPP transactions per month for all 16 TLDs under management.

The EPP service is offered in accordance with the performance specifications defined in the new gTLD Registry Agreement, Specification 10.

EPP Standards

The Afilias registry system complies with the following revised versions of the RFCs and operates multiple ICANN TLDs on these standards, including .INFO, .ORG, .MOBI, .ASIA and .XXX. The systems have been tested by our Quality Assurance ("QA") team for RFC compliance, and have been used by registrars for an extended period of time:

- 3735 - Guidelines for Extending EPP
- 3915 - Domain Registry Grace Period Mapping
- 5730 - Extensible Provisioning Protocol (EPP)
- 5731 - Domain Name Mapping
- 5732 - Host Mapping
- 5733 - Contact Mapping
- 5734 - Transport Over TCP
- 5910 - Domain Name System (DNS) Security Extensions Mapping for the Extensible Provisioning Protocol (EPP)

This TLD will support all valid EPP commands. The following EPP commands are in operation today and will be made available for this TLD. See attachment #25a for the base set of EPP commands and copies of Afilias XSD schema files, which define all the rules of valid, RFC compliant EPP commands and responses that Afilias supports. Any customized EPP extensions, if necessary, will also conform to relevant RFCs.

Afilias staff members actively participated in the Internet Engineering Task Force (IETF) process that finalized the new standards for EPP. Afilias will continue to actively participate in the IETF and will stay abreast of any updates to the EPP standards.

EPP software interface and functionality

Afilias will provide all registrars with a free open-source EPP toolkit. Afilias provides this software for use with both Microsoft Windows and Unix/Linux operating systems. This software, which includes all relevant templates and schema defined in the RFCs, is available on sourceforge.net and will be available through the registry operator's website.

Afilias' SRS EPP software complies with all relevant RFCs and includes the following functionality:

- EPP Greeting: A response to a successful connection returns a greeting to the client. Information exchanged can include: name of server, server date and time in UTC, server features, e.g., protocol versions supported, languages for the text response supported, and one or more elements which identify the objects that the server is capable of managing;
- Session management controls: <login> to establish a connection with a server, and <logout> to end a session;
- EPP Objects: Domain, Host and Contact for respective mapping functions;
- EPP Object Query Commands: Info, Check, and Transfer (query) commands to retrieve object information, and;
- EPP Object Transform Commands: five commands to transform objects: <create> to create an instance of an object, <delete> to remove an instance of an object, <renew> to extend the validity period of an object, <update> to change information associated with an object, and <transfer> to manage changes in client sponsorship of a known object.

Currently, 100% of the top domain name registrars in the world have software that has already been tested and certified to be compatible with the Afilias SRS registry. In total, over 375 registrars, representing over 95% of all registration volume worldwide, operate software that has been certified compatible with the Afilias SRS registry. Afilias' EPP Registrar Acceptance Criteria are available in attachment #25b, EPP OT&E Criteria.

Free EPP software support

Afilias analyzes and diagnoses registrar EPP activity log files as needed and is available to assist registrars who may require technical guidance regarding how to fix repetitive errors or exceptions caused by misconfigured client software.

Registrars are responsible for acquiring a TLS/SSL certificate from an approved certificate authority, as the registry-registrar communication channel requires mutual authentication;

Afilias will acquire and maintain the server-side TLS/SSL certificate. The registrar is responsible for developing support for TLS/SSL in their client application. Afilias will provide free guidance for registrars unfamiliar with this requirement.

Registrar data synchronization

There are two methods available for registrars to synchronize their data with the registry:

- Automated synchronization: Registrars can, at any time, use the EPP <info> command to obtain definitive data from the registry for a known object, including domains, hosts (nameservers) and contacts.
- Personalized synchronization: A registrar may contact technical support and request a data file containing all domains (and associated host (nameserver) and contact information) registered by that registrar, within a specified time interval. The data will be formatted as a comma separated values (CSV) file and made available for download using a secure server.

EPP modifications

There are no unique EPP modifications planned for this TLD.

All ICANN TLDs must offer a Sunrise as part of a rights protection program. Afilias uses EPP extensions that allow registrars to submit trademark and other intellectual property rights (IPR) data to the registry. These extensions are:

- An <ipr:name> element that indicates the name of Registered Mark.
- An <ipr:number> element that indicates the registration number of the IPR.
- An <ipr:ccLocality> element that indicates the origin for which the IPR is established (a national or international trademark registry).
- An <ipr:entitlement> element that indicates whether the applicant holds the trademark as the original "OWNER", "CO-OWNER" or "ASSIGNEE".
- An <ipr:appDate> element that indicates the date the Registered Mark was applied for.
- An <ipr:regDate> element that indicates the date the Registered Mark was issued and registered.
- An <ipr:class> element that indicates the class of the registered mark.
- An <ipr:type> element that indicates the Sunrise phase the application applies for.

Note that some of these extensions might be subject to change based on ICANN-developed requirements for the Trademark Clearinghouse.

EPP resourcing plans

Since its founding, Afilias is focused on delivering secure, stable and reliable registry services. Several essential management and staff who designed and launched the Afilias registry in 2001 and expanded the number of TLDs supported, all while maintaining strict service levels over the past decade, are still in place today. This experiential continuity will endure for the implementation and on-going maintenance of this TLD. Afilias operates in a matrix structure, which allows its staff to be allocated to various critical functions in both a dedicated and a shared manner. With a team of specialists and generalists, the Afilias project management methodology allows efficient and effective use of our staff in a focused way.

108 Afilias team members directly contribute to the management and development of the EPP based registry systems. As previously noted, Afilias is an active member of IETF and has a long documented history developing and enhancing EPP. These contributors include 11 developers and 14 QA engineers focused on maintaining and enhancing EPP server side software. These engineers work directly with business staff to timely address existing needs and forecast registry/registrar needs to ensure the Afilias EPP software is effective today and into the future. A team of eight data analysts work with the EPP software system to ensure that the data flowing through EPP is securely and reliably stored in replicated database systems. In addition to the EPP developers, QA engineers, and data analysts, other EPP contributors at Afilias include: Technical Analysts, the Network Operations Center and Data Services team members.

26. Whois: describe

- how the applicant will comply with Whois specifications for data objects, bulk access, and lookups as defined in Specifications 4 and 10 to the Registry Agreement;
- how the Applicant's Whois service will comply with RFC 3912; and
- resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).

A complete answer should include, but is not limited to:

- A high-level Whois system description;
- Relevant network diagram(s);
- IT and infrastructure resources (e.g., servers, switches, routers and other components);

Description of interconnectivity with other registry systems; and

Frequency of synchronization between servers.

To be eligible for a score of 2, answers must also include:

- Provision for Searchable Whois capabilities; and
- A description of potential forms of abuse of this feature, how these risks will be mitigated, and the basis for these descriptions

A complete answer is expected to be no more than 5 pages.

Answers for this question (#26) are provided by Afilias, the back-end provider of registry services for this TLD.

Afilias operates the WHOIS (registration data directory service) infrastructure in accordance with RFCs and global best practices, as it does for the 16 TLDs it currently supports. Designed to be robust and scalable, Afilias' WHOIS service has exceeded all contractual requirements for over a decade. It has extended search capabilities, and methods of limiting abuse.

The WHOIS service operated by Afilias meets and exceeds ICANN's requirements. Specifically, Afilias will:

- Offer a WHOIS service made available on port 43 that is flexible and standards-compliant;
- Comply with all ICANN policies, and meeting or exceeding WHOIS performance requirements in Specification 10 of the new gTLD Registry Agreement;
- Enable a Searchable WHOIS with extensive search capabilities that offers ease of use while enforcing measures to mitigate access abuse, and;
- Employ a team with significant experience managing a compliant WHOIS service.

Such extensive knowledge and experience managing a WHOIS service enables Afilias to offer a comprehensive plan for this TLD that meets the needs of constituents of the domain name industry and Internet users. The service has been tested by our QA team for RFC compliance, and has been used by registrars and many other parties for an extended period of time. Afilias' WHOIS service currently serves almost 500 million WHOIS queries per month, with the capacity already built in to handle an order of magnitude increase in WHOIS queries, and the ability to smoothly scale should greater growth be needed.

WHOIS system description and diagram

The Afilias WHOIS system, depicted in figure 26-a, is designed with robustness, availability, compliance, and performance in mind. Additionally, the system has provisions for detecting abusive usage (e.g., excessive numbers of queries from one source). The WHOIS system is generally intended as a publicly available single object lookup system. Afilias uses an advanced, persistent caching system to ensure extremely fast query response times.

Afilias will develop restricted WHOIS functions based on specific domain policy and regulatory requirements as needed for operating the business (as long as they are standards compliant). It will also be possible for contact and registrant information to be returned according to regulatory requirements. The WHOIS database supports multiple string and field searching through a reliable, free, secure web-based interface.

Data objects, interfaces, access and lookups

Registrars can provide an input form on their public websites through which a visitor is able to perform WHOIS queries. The registry operator can also provide a Web-based search on its site. The input form must accept the string to query, along with the necessary input elements to select the object type and interpretation controls. This input form sends its data to the Afilias port 43 WHOIS server. The results from the WHOIS query are returned by the server and displayed in the visitor's Web browser. The sole purpose of the Web interface is to provide a user-friendly interface for WHOIS queries.

Afilias will provide WHOIS output as per Specification 4 of the new gTLD Registry Agreement. The output for domain records generally consists of the following elements:

- The name of the domain registered and the sponsoring registrar;
- The names of the primary and secondary nameserver(s) for the registered domain name;
- The creation date, registration status and expiration date of the registration;
- The name, postal address, e-mail address, and telephone and fax numbers of the domain name holder;
- The name, postal address, e-mail address, and telephone and fax numbers of the technical contact for the domain name holder;
- The name, postal address, e-mail address, and telephone and fax numbers of the administrative contact for the domain name holder, and;
- The name, postal address, e-mail address, and telephone and fax numbers of the billing contact for the domain name holder.

The following additional features are also present in Afilias' WHOIS service:

- Support for IDNs, including the language tag and the Punycode representation of the IDN in addition to Unicode Hex and Unicode HTML formats;

- Enhanced support for privacy protection relative to the display of confidential information.

Afilias will also provide sophisticated WHOIS search functionality that includes the ability to conduct multiple string and field searches.

Query controls

For all WHOIS queries, a user is required to enter the character string representing the information for which they want to search. The object type and interpretation control parameters to limit the search may also be specified. If object type or interpretation control parameter is not specified, WHOIS will search for the character string in the Name field of the Domain object.

WHOIS queries are required to be either an "exact search" or a "partial search," both of which are insensitive to the case of the input string.

An exact search specifies the full string to search for in the database field. An exact match between the input string and the field value is required.

A partial search specifies the start of the string to search for in the database field. Every record with a search field that starts with the input string is considered a match. By default, if multiple matches are found for a query, then a summary containing up to 50 matching results is presented. A second query is required to retrieve the specific details of one of the matching records.

If only a single match is found, then full details will be provided. Full detail consists of the data in the matching object as well as the data in any associated objects. For example: a query that results in a domain object includes the data from the associated host and contact objects.

WHOIS query controls fall into two categories: those that specify the type of field, and those that modify the interpretation of the input or determine the level of output to provide. Each is described below.

The following keywords restrict a search to a specific object type:

- Domain: Searches only domain objects. The input string is searched in the Name field.
 - Host: Searches only nameserver objects. The input string is searched in the Name field and the IP Address field.
 - Contact: Searches only contact objects. The input string is searched in the ID field.
 - Registrar: Searches only registrar objects. The input string is searched in the Name field.
- By default, if no object type control is specified, then the Name field of the Domain object is searched.

In addition, Afilias WHOIS systems can perform and respond to WHOIS searches by registrant name, postal address and contact names. Deployment of these features is provided as an option to the registry operator, based upon registry policy and business decision making.

Figure 26-b presents the keywords that modify the interpretation of the input or determine the level of output to provide.

By default, if no interpretation control keywords are used, the output will include full details if a single match is found and a summary if multiple matches are found.

Unique TLD requirements

There are no unique WHOIS requirements for this TLD.

Sunrise WHOIS processes

All ICANN TLDs must offer a Sunrise as part of a rights protection program. Afilias uses EPP extensions that allow registrars to submit trademark and other intellectual property rights (IPR) data to the registry. The following corresponding data will be displayed in WHOIS for relevant domains:

- Trademark Name: element that indicates the name of the Registered Mark.
- Trademark Number: element that indicates the registration number of the IPR.
- Trademark Locality: element that indicates the origin for which the IPR is established (a national or international trademark registry).
- Trademark Entitlement: element that indicates whether the applicant holds the trademark as the original "OWNER", "CO-OWNER" or "ASSIGNEE".
- Trademark Application Date: element that indicates the date the Registered Mark was applied for.
- Trademark Registration Date: element that indicates the date the Registered Mark was issued and registered.
- Trademark Class: element that indicates the class of the Registered Mark.
- IPR Type: element that indicates the Sunrise phase the application applies for.

IT and infrastructure resources

All the applications and databases for this TLD will run in a virtual environment hosted by a cluster of servers equipped with the latest Intel Westmere multi-core processors (or a more advanced, stable technology available at the time of deployment). The registry data will be stored on storage arrays of solid-state drives shared over a fast storage area network. The virtual environment allows the infrastructure to easily scale both vertically and horizontally to cater to changing demand. It also facilitates effective utilization of system resources thus reducing energy consumption and carbon footprint.

The applications and servers are supported by network firewalls, routers and switches. The WHOIS system accommodates both IPv4 and IPv6 addresses.

Each of the servers and network devices are equipped with redundant hot-swappable components and multiple connections to ancillary systems. Additionally, 24x7 support agreements with our hardware vendor with a 4-hour response time at all our data centers guarantees replacement of failed parts in the shortest time possible.

Models of system and network devices used are:

- Servers: Cisco UCS B230 blade servers
- SAN storage arrays: IBM Storwize V7000 with Solid State Drives
- Firewalls: Cisco ASA 5585-X
- Load balancers: F5 Big-IP 6900
- Traffic shapers: Procera PacketLogic PL8720
- Routers: Juniper MX40 3D
- Network switches: Cisco Nexus 7010, Nexus 5548, Nexus 2232

There will be at least four virtual machines (VMs) offering WHOIS service. Each VM will run at least two WHOIS server instances - one for registrars and one for the public. All instances of the WHOIS service is made available to registrars and the public are rate limited to mitigate abusive behavior.

Frequency of synchronization between servers

Registration data records from the EPP publisher database will be replicated to the WHOIS system database on a near-real-time basis whenever an update occurs.

Specifications 4 and 10 compliance

The WHOIS service for this TLD will meet or exceed the performance requirements in the new gTLD Registry Agreement, Specification 10. Figure 26-c provides the exact measurements and commitments. Afiliias has a 10 year track record of exceeding WHOIS performance and a skilled team to ensure this continues for all TLDs under management.

The WHOIS service for this TLD will meet or exceed the requirements in the new gTLD Registry Agreement, Specification 4.

RFC 3912 compliance

Afiliias will operate the WHOIS infrastructure in compliance with RFCs and global best practices, as it does with the 16 TLDs Afiliias currently supports.

Afiliias maintains a registry-level centralized WHOIS database that contains information for every registered domain and for all host and contact objects. The WHOIS service will be available on the Internet standard WHOIS port (port 43) in compliance with RFC 3912. The WHOIS service contains data submitted by registrars during the registration process. Changes made to the data by a registrant are submitted to Afiliias by the registrar and are reflected in the WHOIS database and service in near-real-time, by the instance running at the primary data center, and in under ten seconds by the instance running at the secondary data center, thus providing all interested parties with up-to-date information for every domain. This service is compliant with the new gTLD Registry Agreement, Specification 4.

The WHOIS service maintained by Afiliias will be authoritative and complete, as this will be a "thick" registry (detailed domain contact WHOIS is all held at the registry); users do not have to query different registrars for WHOIS information, as there is one central WHOIS system. Additionally, visibility of different types of data is configurable to meet the registry operator's needs.

Searchable WHOIS

Afiliias offers a searchable WHOIS on a web-based Directory Service. Partial match capabilities are offered on the following fields: domain name, registrar ID, and IP address. In addition, Afiliias WHOIS systems can perform and respond to WHOIS searches by registrant name, postal address and contact names.

Providing the ability to search important and high-value fields such as registrant name, address and contact names increases the probability of abusive behavior. An abusive user could script a set of queries to the WHOIS service and access contact data in order to create or sell a list of names and addresses of registrants in this TLD. Making the WHOIS machine readable, while preventing harvesting and mining of WHOIS data, is a key requirement integrated into the Afiliias WHOIS systems. For instance, Afiliias limits search returns to 50 records at a time. If bulk queries were ever necessary (e.g., to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process), Afiliias makes such query responses available to carefully screened and limited staff members at the registry operator (and customer support staff) via an internal data warehouse. The Afiliias WHOIS system accommodates anonymous access as well as pre-identified and profile-defined uses, with full audit and log capabilities.

The WHOIS service has the ability to tag query responses with labels such as "Do not redistribute" or "Special access granted". This may allow for tiered response and reply scenarios. Further, the WHOIS service is configurable in parameters and fields returned, which allow for flexibility in compliance with various jurisdictions, regulations or laws.

Afiliias offers exact-match capabilities on the following fields: registrar ID, nameserver name,

and nameserver's IP address (only applies to IP addresses stored by the registry, i.e., glue records). Search capabilities are fully available, and results include domain names matching the search criteria (including IDN variants). Afilias manages abuse prevention through rate limiting and CAPTCHA (described below). Queries do not require specialized transformations of internationalized domain names or internationalized data fields

Please see "Query Controls" above for details about search options and capabilities.

Deterring WHOIS abuse

Afilias has adopted two best practices to prevent abuse of the WHOIS service: rate limiting and CAPTCHA.

Abuse of WHOIS services on port 43 and via the Web is subject to an automated rate-limiting system. This ensures that uniformity of service to users is unaffected by a few parties whose activities abuse or otherwise might threaten to overload the WHOIS system.

Abuse of web-based public WHOIS services is subject to the use of CAPTCHA (Completely Automated Public Turing test to tell Computers and Humans Apart) technology. The use of CAPTCHA ensures that uniformity of service to users is unaffected by a few parties whose activities abuse or otherwise might threaten to overload the WHOIS system. The registry operator will adopt a CAPTCHA on its Web-based WHOIS.

Data mining of any sort on the WHOIS system is strictly prohibited, and this prohibition is published in WHOIS output and in terms of service.

For rate limiting on IPv4, there are configurable limits per IP and subnet. For IPv6, the traditional limitations do not apply. Whenever a unique IPv6 IP address exceeds the limit of WHOIS queries per minute, the same rate-limit for the given 64 bits of network prefix that the offending IPv6 IP address falls into will be applied. At the same time, a timer will start and rate-limit validation logic will identify if there are any other IPv6 address within the original 80-bit (<48) prefix. If another offending IPv6 address does fall into the <48 prefix then rate-limit validation logic will penalize any other IPv6 addresses that fall into that given 80-bit (<48) network. As a security precaution, Afilias will not disclose these limits.

Pre-identified and profile-driven role access allows greater granularity and configurability in both access to the WHOIS service, and in volume/frequency of responses returned for queries.

Afilias staff are key participants in the ICANN Security & Stability Advisory Committee's deliberations and outputs on WHOIS, including SAC003, SAC027, SAC033, SAC037, SAC040, and SAC051. Afilias staff are active participants in both technical and policy decision making in ICANN, aimed at restricting abusive behavior.

WHOIS staff resourcing plans

Since its founding, Afilias is focused on delivering secure, stable and reliable registry services. Several essential management and staff who designed and launched the Afilias registry in 2001 and expanded the number of TLDs supported, all while maintaining strict service levels over the past decade, are still in place today. This experiential continuity will endure for the implementation and on-going maintenance of this TLD. Afilias operates in a matrix structure, which allows its staff to be allocated to various critical functions in both a dedicated and a shared manner. With a team of specialists and generalists, the Afilias project management methodology allows efficient and effective use of our staff in a focused way.

Within Afilias, there are 11 staff members who develop and maintain the compliant WHOIS systems. They keep pace with access requirements, thwart abuse, and continually develop software. Of these resources, approximately two staffers are typically required for WHOIS-related code customization. Other resources provide quality assurance, and operations personnel maintain the WHOIS system itself. This team will be responsible for the implementation and on-going maintenance of the new TLD WHOIS service.

27. Registration Life Cycle: provide a detailed description of the proposed registration lifecycle for domain names in the proposed gTLD. The description must:

- explain the various registration states as well as the criteria and procedures that are used to change state;
- describe the typical registration lifecycle of create/update/delete and all intervening steps such as pending, locked, expired, and transferred that may apply;
- clearly explain any time elements that are involved - for instance details of add-grace or redemption grace periods, or notice periods for renewals or transfers; and
- describe resourcing plans for this aspect of the criteria (number and description of personnel roles allocated to this area).

The description of the registration lifecycle should be supplemented by the inclusion of a state diagram, which captures definitions, explanations of trigger points, and transitions from state to state.

If applicable, provide definitions for aspects of the registration lifecycle that are not covered by standard EPP RFCs.

A complete answer is expected to be no more than 5 pages.

THE RESPONSE FOR THIS QUESTION USES ANGLE BRACKETS (THE " < " and " > " CHARACTERS, or < and >), WHICH ICANN INFORMS US (CASE ID 11027) CANNOT BE PROPERLY RENDERED IN TAS DUE TO SECURITY CONCERNS. HENCE, THE ANSWER BELOW AS DISPLAYED IN TAS MAY NOT RENDER THE FULL RESPONSE AS INTENDED. THEREFORE, THE FULL ANSWER TO THIS QUESTION IS ALSO ATTACHED AS A PDF FILE, ACCORDING TO SPECIFIC GUIDANCE FROM ICANN UNDER CASE ID 11027.

Answers for this question (#27) are provided by Afiliias, the back-end provider of registry services for this TLD.

Afiliias has been managing registrations for over a decade. Afiliias has had experience managing registrations for over a decade and supports comprehensive registration lifecycle services including the registration states, all standard grace periods, and can address any modifications required with the introduction of any new ICANN policies.

This TLD will follow the ICANN standard domain lifecycle, as is currently implemented in TLDs such as .ORG and .INFO. The main parts in a domain are: (i) Registration Period; (ii) the Auto-Renew Grace Period; (iii) Redemption Grace Period; and (iv) Pending Delete. As a special requirement to meet the .MUSIC mission established in response to question #18, catering to the needs of the Music Community DotMusic will in the Registration phase conduct data validations for all registrations and additional verifications of eligibility for registrations conducted in the Sunrise and Landrush phases. More details in response to question #20e. The below response includes: a diagram and description of the lifecycle of a domain name in this TLD, including domain creation, transfer protocols, grace period implementation and the respective time frames for each; and the existing resources to support the complete lifecycle of a domain.

As depicted in Figure 27-a, prior to the beginning of the Trademark Claims Service or Sunrise IP protection program[s], Afiliias will support the reservation of names in accordance with the new gTLD Registry Agreement, Specification 5, as described in response to question #22. Registration period.

After the IP protection programs and the general launch, eligible registrants may choose an accredited registrar to register a domain name. The registrar will check availability on the requested domain name and if available, will collect specific objects such as, the required contact and host information from the registrant. The registrar will then provision the information into the registry system using standard Extensible Provisioning Protocol ("EPP") commands through a secure connection to the registry backend service provider.

When the domain is created, the standard five day Add Grace Period begins, the domain and contact information are available in WHOIS, and normal operating EPP domain statuses will apply. Other specifics regarding registration rules for an active domain include:

- The domain must be unique;
- Restricted or reserved domains cannot be registered;
- The domain can be registered from 1-10 years;
- The domain can be renewed at any time for 1-10 years, but cannot exceed 10 years;
- The domain can be explicitly deleted at any time;
- The domain can be transferred from one registrar to another except during the first 60 days following a successful registration or within 60 days following a transfer; and, Contacts and hosts can be modified at any time.

The following describe the domain status values recognized in WHOIS when using the EPP protocol following RFC 5731.

- OK or Active: This is the normal status for a domain that has no pending operations or restrictions.
- Inactive: The domain has no delegated name servers.
- Locked: No action can be taken on the domain. The domain cannot be renewed, transferred, updated, or deleted. No objects such as contacts or hosts can be associated to, or disassociated from the domain. This status includes: Delete Prohibited / Server Delete Prohibited, Update Prohibited / Server Update Prohibited, Transfer Prohibited, Server Transfer Prohibited, Renew Prohibited, Server Renew Prohibited.
- Hold: The domain will not be included in the zone. This status includes: Client Hold, Server Hold.
- Transfer Prohibited: The domain cannot be transferred away from the sponsoring registrar. This status includes: Client Transfer Prohibited, Server Transfer Prohibited.

The following describe the registration operations that apply to the domain name during the registration period.

- a. Domain modifications: This operation allows for modifications or updates to the domain attributes to include:
- i. Registrant Contact

- ii. Admin Contact
- iii. Technical Contact
- iv. Billing Contact
- v. Host or nameservers
- vi. Authorization information
- vii. Associated status values

A domain with the EPP status of Client Update Prohibited or Server Update Prohibited may not be modified until the status is removed.

- b. Domain renewals: This operation extends the registration period of a domain by changing the expiration date. The following rules apply:
- i. A domain can be renewed at any time during its registration term,
 - ii. The registration term cannot exceed a total of 10 years.

A domain with the EPP status of Client Renew Prohibited or Server Renew Prohibited cannot be renewed.

- c. Domain deletions: This operation deletes the domain from the Shared Registry Services (SRS). The following rules apply:
- i. A domain can be deleted at any time during its registration term, if the domain is deleted during the Add Grace Period or the Renew/Extend Grace Period, the sponsoring registrar will receive a credit,
 - ii. A domain cannot be deleted if it has "child" nameservers that are associated to other domains.

A domain with the EPP status of Client Delete Prohibited or Server Delete Prohibited cannot be deleted.

- d. Domain transfers: A transfer of the domain from one registrar to another is conducted by following the steps below.
- i. The registrant must obtain the applicable <authInfo> code from the sponsoring (losing) registrar.
 - Every domain name has an authInfo code as per EPP RFC 5731. The authInfo code is a six- to 16-character code assigned by the registrar at the time the name was created. Its purpose is to aid identification of the domain owner so proper authority can be established (it is the "password" to the domain).
 - Under the Registry-Registrar Agreement, registrars will be required to provide a copy of the authInfo code to the domain registrant upon his or her request.
 - ii. The registrant must provide the authInfo code to the new (gaining) registrar, who will then initiate a domain transfer request. A transfer cannot be initiated without the authInfo code.
 - Every EPP <transfer> command must contain the authInfo code or the request will fail. The authInfo code represents authority to the registry to initiate a transfer.
 - iii. Upon receipt of a valid transfer request, the registry automatically asks the sponsoring (losing) registrar to approve the request within five calendar days.
 - When a registry receives a transfer request the domain cannot be modified, renewed or deleted until the request has been processed. This status must not be combined with either Client Transfer Prohibited or Server Transfer Prohibited status.
 - If the sponsoring (losing) registrar rejects the transfer within five days, the transfer request is cancelled. A new domain transfer request will be required to reinitiate the process.
 - If the sponsoring (losing) registrar does not approve or reject the transfer within five days, the registry automatically approves the request.
 - iv. After a successful transfer, it is strongly recommended that registrars change the authInfo code, so that the prior registrar or registrant cannot use it anymore.
 - v. Registrars must retain all transaction identifiers and codes associated with successful domain object transfers and protect them from disclosure.
 - vi. Once a domain is successfully transferred the status of TRANSFERPERIOD is added to the domain for a period of five days.
 - vii. Successful transfers will result in a one year term extension (resulting in a maximum total of 10 years), which will be charged to the gaining registrar.

e. Bulk transfer: Afiliias, supports bulk transfer functionality within the SRS for situations where ICANN may request the registry to perform a transfer of some or all registered objects (includes domain, contact and host objects) from one registrar to another registrar. Once a bulk transfer has been executed, expiry dates for all domain objects remain the same, and all relevant states of each object type are preserved. In some cases the gaining and the losing registrar as well as the registry must approved bulk transfers. A detailed log is captured for each bulk transfer process and is archived for audit purposes. DotMusic will support ICANN's Transfer Dispute Resolution Process. DotMusic will work with Afiliias to respond to Requests for Enforcement (law enforcement or court orders) and will follow that process.

1. Auto-renew grace period

The Auto-Renew Grace Period displays as AUTORENEWPERIOD in WHOIS. An auto-renew must be requested by the registrant through the sponsoring registrar and occurs if a domain name registration is not explicitly renewed or deleted by the expiration date and is set to a maximum of 45 calendar days. In this circumstance the registration will be automatically renewed by the registry system the first day after the expiration date. If a Delete, Extend, or Transfer occurs within the AUTORENEWPERIOD the following rules apply:

i. Delete. If a domain is deleted the sponsoring registrar at the time of the deletion receives a credit for the auto-renew fee. The domain then moves into the Redemption Grace Period with a status of PENDING DELETE RESTORABLE.

ii. Renew/Extend. A domain can be renewed as long as the total term does not exceed 10 years. The account of the sponsoring registrar at the time of the extension will be charged for the additional number of years the registration is renewed.

iii. Transfer (other than ICANN-approved bulk transfer). If a domain is transferred, the losing registrar is credited for the auto-renew fee, and the year added by the operation is cancelled. As a result of the transfer, the expiration date of the domain is extended by minimum of one year as long as the total term does not exceed 10 years. The gaining registrar is charged for the additional transfer year(s) even in cases where a full year is not added because of the maximum 10 year registration restriction.

2. Redemption grace period

During this period, a domain name is placed in the PENDING DELETE RESTORABLE status when a registrar requests the deletion of a domain that is not within the Add Grace Period. A domain can remain in this state for up to 30 days and will not be included in the zone file. The only action a registrar can take on a domain is to request that it be restored. Any other registrar requests to modify or otherwise update the domain will be rejected. If the domain is restored it moves into PENDING RESTORE and then OK. After 30 days if the domain is not restored it moves into PENDING DELETE SCHEDULED FOR RELEASE before the domain is released back into the pool of available domains.

3. Pending delete

During this period, a domain name is placed in PENDING DELETE SCHEDULED FOR RELEASE status for five days, and all Internet services associated with the domain will remain disabled and domain cannot be restored. After five days the domain is released back into the pool of available domains.

Other grace periods

All ICANN required grace periods will be implemented in the registry backend service provider's system including the Add Grace Period (AGP), Renew/Extend Grace Period (EGP), Transfer Grace Period (TGP), Auto-Renew Grace Period (ARGP), and Redemption Grace Period (RGP). The lengths of grace periods are configurable in the registry system. At this time, the grace periods will be implemented following other gTLDs such as .ORG. More than one of these grace periods may be in effect at any one time. The following are accompanying grace periods to the registration lifecycle.

Add Grace Period

The Add Grace Period displays as ADDPERIOD in WHOIS and is set to five calendar days following the initial registration of a domain. If the domain is deleted by the registrar during this period, the registry provides a credit to the registrar for the cost of the registration. If a Delete, Renew/Extend, or Transfer operation occurs within the five calendar days, the following rules apply.

i. Delete. If a domain is deleted within this period the sponsoring registrar at the time of the deletion is credited for the amount of the registration. The domain is deleted from the registry backend service provider's database and is released back into the pool of available domains.

ii. Renew/Extend. If the domain is renewed within this period and then deleted, the sponsoring registrar will receive a credit for both the registration and the extended amounts. The account of the sponsoring registrar at the time of the renewal will be charged for the initial registration plus the number of years the registration is extended. The expiration date of the domain registration is extended by that number of years as long as the total term does not exceed 10 years.

iii. Transfer (other than ICANN-approved bulk transfer). Transfers under Part A of the ICANN Policy on Transfer of Registrations between registrars may not occur during the ADDPERIOD or at any other time within the first 60 days after the initial registration. Enforcement is the responsibility of the registrar sponsoring the domain name registration and is enforced by the SRS.

Renew / Extend grace period

The Renew / Extend Grace Period displays as RENEWPERIOD in WHOIS and is set to five calendar days following an explicit renewal on the domain by the registrar. If a Delete, Extend, or Transfer occurs within the five calendar days, the following rules apply:

i. Delete. If a domain is deleted within this period the sponsoring registrar at the time of the deletion receives a credit for the renewal fee. The domain then moves into the Redemption Grace Period with a status of PENDING DELETE RESTORABLE.

ii. Renew/Extend. A domain registration can be renewed within this period as long as the total term does not exceed 10 years. The account of the sponsoring registrar at the time of the extension will be charged for the additional number of years the registration is renewed.

iii. Transfer (other than ICANN-approved bulk transfer). If a domain is transferred within the Renew/Extend Grace Period, there is no credit to the losing registrar for the renewal fee. As a result of the transfer, the expiration date of the domain registration is extended by a minimum of one year as long as the total term for the domain does not exceed 10 years.

If a domain is auto-renewed, then extended, and then deleted within the Renew/Extend Grace Period, the registrar will be credited for any auto-renew fee charged and the number of years for the extension. The years that were added to the domain's expiration as a result of the auto-renewal and extension are removed. The deleted domain is moved to the Redemption Grace Period with a status of PENDING DELETE RESTORABLE.

Transfer Grace Period

The Transfer Grace period displays as TRANSFERPERIOD in WHOIS and is set to five calendar days after the successful transfer of domain name registration from one registrar to another registrar. Transfers under Part A of the ICANN Policy on Transfer of Registrations between registrars may not occur during the TRANSFERPERIOD or within the first 60 days after the transfer. If a Delete or Renew/Extend occurs within that five calendar days, the following rules apply:

i. Delete. If the domain is deleted by the new sponsoring registrar during this period, the registry provides a credit to the registrar for the cost of the transfer. The domain then moves into the Redemption Grace Period with a status of PENDING DELETE RESTORABLE.

ii. Renew/Extend. If a domain registration is renewed within the Transfer Grace Period, there is no credit for the transfer. The registrar's account will be charged for the number of years the registration is renewed. The expiration date of the domain registration is extended by the renewal years as long as the total term does not exceed 10 years.

Special considerations

As established in this application .MUSIC is a community TLD with the Music Policy and Copyright Infringement Dispute Resolution Process to solve dispute concerning the established eligibility criteria for domain name registrants under .MUSIC; as described in response to question #20e.

Further, .MUSIC will conduct auctions for multiple registration applications for the same domain name in the Sunrise and Landrush phases; exceptions is the globally Protected marks List that supersedes any registration applications. More details are provided in response to question #18b and #20e. Afilias will manage the domain name auction using existing technology. Upon the completion of the auction, any domain name acquired will then follow the standard lifecycle of a domain.

Registration lifecycle resources

Since its founding, Afilias is focused on delivering secure, stable and reliable registry services. Several essential management and staff who designed and launched the Afilias registry in 2001 and expanded the number of TLDs supported, all while maintaining strict service levels over the past decade, are still in place today. This experiential continuity will endure for the implementation and on-going maintenance of this TLD. Afilias operates in a matrix structure, which allows its staff to be allocated to various critical functions in both a dedicated and a shared manner. With a team of specialists and generalists, the Afilias project management methodology allows efficient and effective use of our staff in a focused way. Virtually all Afilias resource are involved in the registration lifecycle of domains. There are a few areas where registry staff devote resources to registration lifecycle issues:

a. Supporting Registrar Transfer Disputes. The registry operator will have a compliance staffer handle these disputes as they arise; they are very rare in the existing gTLDs.

b. Afilias has its development and quality assurance departments on hand to modify the grace period functionality as needed, if ICANN issues new Consensus Policies or the RFCs change. Afilias has more than 30 staff members in these departments.

28. Abuse Prevention and Mitigation: Applicants should describe the proposed policies and procedures to minimize abusive registrations and other activities that have a negative impact on Internet users. A complete answer should include, but is not limited to:

- An implementation plan to establish and publish on its website a single abuse point of contact responsible for addressing matters requiring expedited attention and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller;
- Policies for handling complaints regarding abuse;
- Proposed measures for removal of orphan glue records for names removed from the zone when

provided with evidence in written form that the glue is present in connection with malicious conduct (see Specification 6); and

- Resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).

To be eligible for a score of 2, answers must include measures to promote Whois accuracy as well as measures from one other area as described below.

- Measures to promote Whois accuracy (can be undertaken by the registry directly or by registrars via requirements in the Registry-Registrar Agreement (RRA)) may include, but are not limited to:
 - Authentication of registrant information as complete and accurate at time of registration. Measures to accomplish this could include performing background checks, verifying all contact information of principals mentioned in registration data, reviewing proof of establishment documentation, and other means
 - Regular monitoring of registration data for accuracy and completeness, employing authentication methods, and establishing policies and procedures to address domain names with inaccurate or incomplete Whois data; and
 - If relying on registrars to enforce measures, establishing policies and procedures to ensure compliance, which may include audits, financial incentives, penalties, or other means. Note that the requirements of the RAA will continue to apply to all ICANN-accredited registrars.
- A description of policies and procedures that define malicious or abusive behavior, capture metrics, and establish Service Level Requirements for resolution, including service levels for responding to law enforcement requests. This may include rapid takedown or suspension systems and sharing information regarding malicious or abusive behavior with industry partners;
- Adequate controls to ensure proper access to domain functions (can be undertaken by the registry directly or by registrars via requirements in the Registry-Registrar Agreement (RRA)) may include, but are not limited to:
 - Requiring multi-factor authentication (i.e., strong passwords, tokens, one-time passwords) from registrants to process update, transfers, and deletion requests;
 - Requiring multiple, unique points of contact to request and/or approve update, transfer, and deletion requests; and
 - Requiring the notification of multiple, unique points of contact when a domain has been updated, transferred, or deleted.

A complete answer is expected to be no more than 20 pages.

DotMusic, working with Afiliias, will take the requisite operational and technical steps to promote WHOIS data accuracy, limit domain abuse, remove outdated and inaccurate data, and other security measures to ensure the integrity of the TLD. The specific measures include, but are not limited to:

- Posting a TLD Anti-Abuse Policy that clearly defines abuse, and provide point-of-contact information for reporting suspected abuse;
- Committing to rapid identification and resolution of abuse, including suspensions;
- Ensuring completeness of WHOIS information at the time of registration;
- Performing data validations of WHOIS elements at time of registration and exploring mechanisms for re-evaluation when registrants update such information;
- Publishing and maintaining procedures for removing orphan glue records for names removed from the zone,
- Introducing the .MUSIC Policy & Copyright Infringement Dispute Resolution Process ("MPCIDRP") to ensure eligibility requirements, use and naming policies as established in response to question #20e, and;
- Establishing measures to deter WHOIS abuse, including rate-limiting, determining data syntax validity, and implementing and enforcing requirements from the Registry-Registrar Agreement.

Abuse policy

The Abuse Policy stated below will be enacted under the contractual authority of the registry operator through the Registry-Registrar Agreement, and the obligations will be passed on to and made binding upon registrants. This policy will be posted on the TLD web site along with contact information for registrants or users to report suspected abuse.

The policy is designed to address the malicious use of domain names. The registry operator and its registrars will make reasonable attempts to limit significant harm to Internet users. This policy is not intended to take the place of the Uniform Domain Name Dispute Resolution Policy (UDRP) or the Uniform Rapid Suspension System (URS), and it is not to be used as an alternate form of dispute resolution or as a brand protection mechanism. Its intent is not to burden law-abiding or innocent registrants and domain users; rather, the intent is to deter those who use domain names maliciously by engaging in illegal or fraudulent activity.

Repeat violations of the Abuse policy will result in a case-by-case review of the abuser(s), and the registry operator reserves the right to escalate the issue, with the intent of levying sanctions that are allowed under the TLD anti-abuse policy.

The below policy is a recent version of the policy that has been used by the .INFO registry since 2008, and the .ORG registry since 2009. It has proven to be an effective and flexible tool.

.MUSIC Anti-Abuse Policy

The following Anti-Abuse Policy is effective upon launch of the TLD. Malicious use of domain names will not be tolerated. The nature of such abuses creates security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. The registry operator definition of abusive use of a domain includes, without limitation, the following:

- Illegal or fraudulent actions;
- Spam: The use of electronic messaging systems to send unsolicited bulk messages. The term applies to email spam and similar abuses such as instant messaging spam, mobile messaging spam, and the spamming of web sites and Internet forums;
- Phishing: The use of counterfeit web pages that are designed to trick recipients into divulging sensitive data such as personally identifying information, usernames, passwords, or financial data;
- Pharming: The redirecting of unknowing users to fraudulent sites or services, typically through, but not limited to, DNS hijacking or poisoning;
- Willful distribution of malware: The dissemination of software designed to infiltrate or damage a computer system without the owner's informed consent. Examples include, without limitation, computer viruses, worms, keyloggers, and Trojan horses.
- Malicious fast-flux hosting: Use of fast-flux techniques with a botnet to disguise the location of web sites or other Internet services, or to avoid detection and mitigation efforts, or to host illegal activities.
- Botnet command and control: Services run on a domain name that are used to control a collection of compromised computers or "zombies," or to direct distributed denial-of-service attacks (DDoS attacks);
- Illegal Access to Other Computers or Networks: Illegally accessing computers, accounts, or networks belonging to another party, or attempting to penetrate security measures of another individual's system (often known as "hacking"). Also, any activity that might be used as a precursor to an attempted system penetration (e.g., port scan, stealth scan, or other information gathering activity).

Pursuant to the Registry-Registrar Agreement, registry operator reserves the right at its sole discretion to deny, cancel, or transfer any registration or transaction, or place any domain name(s) on registry lock, hold, or similar status, that it deems necessary: (1) to protect the integrity and stability of the registry; (2) to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process; (3) to avoid any liability, civil or criminal, on the part of registry operator, as well as its affiliates, subsidiaries, officers, directors, and employees; (4) per the terms of the registration agreement and this Anti-Abuse Policy, or (5) to correct mistakes made by registry operator or any registrar in connection with a domain name registration. Registry operator also reserves the right to place upon registry lock, hold, or similar status a domain name during resolution of a dispute.

The policy stated above will be accompanied by notes about how to submit a report to the registry operator's abuse point of contact, and how to report an orphan glue record suspected of being used in connection with malicious conduct (see below).

Abuse point of contact and procedures for handling abuse complaints

The registry operator will establish an abuse point of contact. This contact will be a role-based e-mail address of the form "abuse@registry.MUSIC". This e-mail address will allow multiple staff members to monitor abuse reports on a 24x7 basis, and then work toward closure of cases as each situation calls for. For tracking purposes, the registry operator will have a ticketing system with which all complaints will be tracked internally. The reporter will be provided with the ticket reference identifier for potential follow-up. Afilias will integrate its existing ticketing system with the registry operator's to ensure uniform tracking and handling of the complaint. This role-based approach has been used successfully by ISPs, e-mail service providers, and registrars for many years, and is considered a global best practice.

The registry operator's designated abuse handlers will then evaluate complaints received via the abuse system address. They will decide whether a particular issue is of concern, and decide what action, if any, is appropriate.

In general, the registry operator will find itself receiving abuse reports from a wide variety of parties, including security researchers and Internet security companies, financial institutions such as banks, Internet users, and law enforcement agencies among others. Some of these parties may provide good forensic data or supporting evidence of the malicious behavior.

In other cases, the party reporting an issue may not be familiar with how to provide such data or proof of malicious behavior. It is expected that a percentage of abuse reports to the registry operator will not be actionable, because there will not be enough evidence to support the complaint (even after investigation), and because some reports or reporters will simply not be credible.

The security function includes a communication and outreach function, with information sharing with industry partners regarding malicious or abusive behavior, in order to ensure coordinated abuse mitigation across multiple TLDs.

Assessing abuse reports requires great care, and the registry operator will rely upon professional, trained investigators who are versed in such matters. The goals are accuracy, good record-keeping, and a zero false-positive rate so as not to harm innocent registrants.

Different types of malicious activities require different methods of investigation and documentation. Further, the registry operator expects to face unexpected or complex situations that call for professional advice, and will rely upon professional, trained investigators as needed.

In general, there are two types of domain abuse that must be addressed:

- a) Compromised domains. These domains have been hacked or otherwise compromised by criminals, and the registrant is not responsible for the malicious activity taking place on the domain. For example, the majority of domain names that host phishing sites are compromised. The goal in such cases is to get word to the registrant (usually via the registrar) that there is a problem that needs attention with the expectation that the registrant will address the problem in a timely manner. Ideally such domains do not get suspended, since suspension would disrupt legitimate activity on the domain.
- b) Malicious registrations. These domains are registered by malefactors for the purpose of abuse. Such domains are generally targets for suspension, since they have no legitimate use.

The standard procedure is that the registry operator will forward a credible alleged case of malicious domain name use to the domain's sponsoring registrar with a request that the registrar investigate the case and act appropriately. The registrar will be provided evidence collected as a result of the investigation conducted by the trained abuse handlers. As part of the investigation, if inaccurate or false WHOIS registrant information is detected, the registrar is notified about this. The registrar is the party with a direct relationship with—and a direct contract with—the registrant. The registrar will also have vital information that the registry operator will not, such as:

- Details about the domain purchase, such as the payment method used (credit card, PayPal, etc.);
- The identity of a proxy-protected registrant;
- The purchaser's IP address;
- Whether there is a reseller involved, and;
- The registrant's past sales history and purchases in other TLDs (insofar as the registrar can determine this).

Registrars do not share the above information with registry operators due to privacy and liability concerns, among others. Because they have more information with which to continue the investigation, and because they have a direct relationship with the registrant, the registrar is in the best position to evaluate alleged abuse. The registrar can determine if the use violates the registrar's legal terms of service or the registry Anti-Abuse Policy, and can decide whether or not to take any action. While the language and terms vary, registrars will be expected to include language in their registrar-registrant contracts that indemnifies the registrar if it takes action, and allows the registrar to suspend or cancel a domain name; this will be in addition to the registry Anti-Abuse Policy. Generally, registrars can act if the registrant violates the registrar's terms of service, or violates ICANN policy, or if illegal activity is involved, or if the use violates the registry's Anti-Abuse Policy.

If a registrar does not take action within a time period indicated by the registry operator (usually 24 hours), the registry operator might then decide to take action itself. At all times, the registry operator reserves the right to act directly and immediately if the potential harm to Internet users seems significant or imminent, with or without notice to the sponsoring registrar.

The registry operator will be prepared to call upon relevant law enforcement bodies as needed. There are certain cases, for example, Illegal pharmacy domains, where the registry operator will contact the Law Enforcement Agencies to share information about these domains, provide all the evidence collected and work closely with them before any action will be taken for suspension. The specific action is often dependent upon the jurisdiction of the registry operator, although the operator in all cases will adhere to applicable laws and regulations.

When valid court orders or seizure warrants are received from courts or law enforcement agencies of relevant jurisdiction, the registry operator will order execution in an expedited fashion. Compliance with these will be a top priority and will be completed as soon as possible and within the defined timelines of the order. There are certain cases where Law Enforcement Agencies request information about a domain including but not limited to:

- Registration information
- History of a domain, including recent updates made
- Other domains associated with a registrant's account
- Patterns of registrant portfolio

Requests for such information is handled on a priority basis and sent back to the requestor as soon as possible. Afiliias sets a goal to respond to such requests within 24 hours.

DotMusic and Afiliias may also engage in proactive screening of its zone for malicious use of the domains in the TLD, and report problems to the sponsoring registrars. DotMusic will from time to time evaluate the necessity in proactive screenings and may take advantage of a combination of the following resources, among others:

- Blocklists of domain names and nameservers published by organizations such as SURBL and Spamhaus.
- Anti-phishing feeds, which will provide URLs of compromised and maliciously registered domains being used for phishing.
- Analysis of registration or DNS query data [DNS query data received by the TLD nameservers.]

The registry operator will keep records and track metrics regarding abuse and abuse reports. These will include:

- Number of abuse reports received by the registry's abuse point of contact described above;
- Number of cases and domains referred to registrars for resolution;
- Number of cases and domains where the registry took direct action;
- Resolution times;
- Number of domains in the TLD that have been blacklisted by major anti-spam blacklist providers, and;
- Phishing site uptimes in the TLD.

Removal of orphan glue records

By definition, orphan glue records used to be glue records. Glue records are related to delegations and are necessary to guide iterative resolvers to delegated nameservers. A glue record becomes an orphan when its parent nameserver record is removed without also removing the corresponding glue record. (Please reference the ICANN SSAC paper SAC048 at: <http://www.icann.org/en/committees/security/sac048.pdf>.) Orphan glue records may be created when a domain (example.tld) is placed on EPP ServerHold or ClientHold status. When placed on Hold, the domain is removed from the zone and will stop resolving. However, any child nameservers (now orphan glue) of that domain (e.g., nsl.example.tld) are left in the zone. It is important to keep these orphan glue records in the zone so that any innocent sites using that nameserver will continue to resolve. This use of Hold status is an essential tool for suspending malicious domains.

Afiliias observes the following procedures, which are being followed by other registries and are generally accepted as DNS best practices. These procedures are also in keeping with ICANN SSAC recommendations.

When a request to delete a domain is received from a registrar, the registry first checks for the existence of glue records. If glue records exist, the registry will check to see if other domains in the registry are using the glue records. If other domains in the registry are using the glue records then the request to delete the domain will fail until no other domains are using the glue records. If no other domains in the registry are using the glue records then the glue records will be removed before the request to delete the domain is satisfied. If no glue records exist then the request to delete the domain will be satisfied.

If a registrar cannot delete a domain because of the existence of glue records that are being used by other domains, then the registrar may refer to the zone file or the "weekly domain hosted by nameserver report" to find out which domains are using the nameserver in question and attempt to contact the corresponding registrar to request that they stop using the nameserver in the glue record. The registry operator does not plan on performing mass updates of the associated DNS records.

The registry operator will accept, evaluate, and respond appropriately to complaints that orphan glue is being used maliciously. Such reports should be made in writing to the registry operator, and may be submitted to the registry's abuse point-of-contact. If it is confirmed that an orphan glue record is being used in connection with malicious conduct, the registry operator will have the orphan glue record removed from the zone file. Afiliias has the technical ability to execute such requests as needed.

Methods to promote WHOIS accuracy

The creation and maintenance of accurate WHOIS records is an important part of registry management. As described in our response to question #26, WHOIS, the registry operator will manage a secure, robust and searchable WHOIS service for this TLD.

WHOIS data accuracy

The registry operator will offer a "thick" registry system. In this model, all key contact details for each domain name will be stored in a central location by the registry. This allows better access to domain data, and provides uniformity in storing the information. The registry operator will ensure that the required fields for WHOIS data (as per the defined policies for the TLD) are enforced at the registry level. This ensures that the registrars are providing required domain registration data. Fields defined by the registry policy to be mandatory are documented as such and must be submitted by registrars. The Afiliias registry system verifies formats for relevant individual data fields (e.g. e-mail, and phone/fax numbers). Only valid country codes are allowed as defined by the ISO 3166 code list. The Afiliias WHOIS system is extensible, and is capable of using the VAULT system, described further below.

To further ensure that registrants under .MUSIC can be reached DotMusic will introduce data validation of some WHOIS elements as part of the .MUSIC policies as described in response to

question #20. DotMusic will explore mechanisms for data re-validation if all validated elements for one registrant are modified, such as could be the case in a registrant transfers.

Similar to the centralized abuse point of contact described above, the registry operator can institute a contact email address which could be utilized by third parties to submit complaints for inaccurate or false WHOIS data detected. DotMusic will in its periodic evaluations of the overall functionality and usability of .MUSIC include assessment of needs for a Whois data accuracy point of contact. DotMusic will work dedicatedly and directly with law-enforcement agencies, authorities, ICANN working Groups, and other security experts in the ongoing development of promoting WHOIS data accuracy. This information will be processed by Afiliás' support department and forwarded to the registrars. The registrars can work with the registrants of those domains to address these complaints. Afiliás will audit registrars on a yearly basis to verify whether the complaints being forwarded are being addressed or not. This functionality, available to all registry operators, is activated based on the registry operator's business policy.

Afiliás also incorporates a spot-check verification system where a randomly selected set of domain names are checked periodically for accuracy of WHOIS data. Afiliás' .PRO registry system incorporates such a verification system whereby 1% of total registrations or 100 domains, whichever number is larger, are spot-checked every month to verify the domain name registrant's critical information provided with the domain registration data. With both a highly qualified corps of engineers and a 24x7 staffed support function, Afiliás will integrate such spot-check functionality into this TLD, based on the registry operator's business policy. Note: This functionality will not work for proxy protected WHOIS information, where registrars or their resellers have the actual registrant data. The solution to that problem lies with either registry or registrar policy, or a change in the general marketplace practices with respect to proxy registrations.

Finally, Afiliás' registry systems have a sophisticated set of billing and pricing functionality which aids registry operators who decide to provide a set of financial incentives to registrars for maintaining or improving WHOIS accuracy. For instance, it is conceivable that the registry operator may decide to provide a discount for the domain registration or renewal fees for validated registrants, or levy a larger cost for the domain registration or renewal of proxy domain names. The Afiliás system has the capability to support such incentives on a configurable basis, towards the goal of promoting better WHOIS accuracy. DotMusic has no specific plans for price discounts, but will consider that as a part of marketing initiatives in cases where the Most Likely scenario registration volume is not met, as discussed in response to questions 45-50.

Role of registrars

As part of the RRA (Registry Registrar Agreement), the registry operator will require the registrar to be responsible for ensuring the input of accurate WHOIS data by their registrants. The Registrar/Registered Name Holder Agreement will include a specific clause to ensure accuracy of WHOIS data, and to give the registrar rights to cancel or suspend registrations if the Registered Name Holder fails to respond to the registrar's query regarding accuracy of data. ICANN's WHOIS Data Problem Reporting System (WDPRS) will be available to those who wish to file WHOIS inaccuracy reports, as per ICANN policy (<http://wdprs.internic.net/>).

Controls to ensure proper access to domain functions

Several measures are in place in the Afiliás registry system to ensure proper access to domain functions, including authentication provisions in the RRA relative to notification and contact updates via use of AUTH-INFO codes.

IP address access control lists, TLS/SSL certificates and proper authentication are used to control access to the registry system. Registrars are only given access to perform operations on the objects they sponsor.

Every domain will have a unique AUTH-INFO code. The AUTH-INFO code is a 6- to 16-character code assigned by the registrar at the time the name is created. Its purpose is to aid identification of the domain owner so proper authority can be established. It is the "password" to the domain name. Registrars must use the domain's password in order to initiate a registrar-to-registrar transfer. It is used to ensure that domain updates (update contact information, transfer, or deletion) are undertaken by the proper registrant, and that this registrant is adequately notified of domain update activity. Only the sponsoring registrar of a domain has access to the domain's AUTH-INFO code stored in the registry, and this is accessible only via encrypted, password-protected channels.

Information about other registry security measures such as encryption and security of registrar channels are confidential to ensure the security of the registry system. The details can be found in the response to question #30b.

.MUSIC Community Specific Protections

In protection of the interests of the Music Community, in line with the .MUSIC mission established in response to question #18, DotMUSIC reserves the right to deny, cancel, transfer and registration that it deems necessary, in its discretion, to protect the integrity and stability of the registry, to comply with any applicable laws, government rules or requirements, requests of law enforcement agencies, in compliance with any dispute resolution process result, or to avoid any liability, civil, or criminal, on the part of the registry operator, its affiliates, subsidiaries, officers, directors, and employees. DotMusic reserves the right to lock a domain name during resolution of a dispute. DotMusic reserves the right to terminate a domain at any time for failure of the registrant to demonstrate that it meets all established

requirements under .MUSIC policies.

.MUSIC has established specific protection mechanisms as described in the response to question #20e. As a means to cure any disputes concerning adherence to the .MUSIC requirements and policies, DotMUSIC is establishing the .MUSIC Policy & Copyright Infringement Dispute Resolution Process ("MPCIDRP"). All .MUSIC registrants will be bound by this policy by means of the .MUSIC Registration Agreement.

The MPCIDRP may be invoked by any third part in order to solve a dispute with a registrant over the registration or use of the registration in violation of the .MUSIC policies. A dispute filing can take place with any approved MPCIDRP dispute resolution provider and must specify how the domain name is in violation of the purposes contemplated by the definition and qualification of a .MUSIC.

The details of the MPCIDRP will be published prior to the launch of .MUSIC. Details of the process, proceedings, and supplemental rules a complainant must follow will be developed in coordination with respective dispute resolution providers and it will also be published prior to launch of .MUSIC.

Validation and abuse mitigation mechanisms

Afilias has developed advanced validation and abuse mitigation mechanisms. These capabilities and mechanisms are described below. These services and capabilities are discretionary and may be utilized by the registry operator based on their policy and business need.

Afilias has the ability to analyze the registration data for known patterns at the time of registration. A database of these known patterns is developed from domains and other associated objects (e.g., contact information) which have been previously detected and suspended after being flagged as abusive. Any domains matching the defined criteria can be flagged for investigation. Once analyzed and confirmed by the domain anti-abuse team members, these domains may be suspended. This provides proactive detection of abusive domains.

Provisions are available to enable the registry operator to only allow registrations by pre-authorized and verified contacts. These verified contacts are given a unique code that can be used for registration of new domains. Such provision will be used in the case where holders of a mark in the Globally Protected Marks list (a protection mechanism explained in response to question #20e) wish to register their mark under .MUSIC; and it can also be used for release of the reserved country and territory names per response to question #22.

Registrant pre-verification and authentication

As previously mentioned DotMUSIC will validate certain data elements in relation to domain name registrations. The methods used may be modified from time to time as technology in this area advance, and will be selected to avoid too much interruption for the registrant. One of the systems that could be used for validity and identity authentication is VAULT (Validation and Authentication Universal Lookup). It utilizes information obtained from a series of trusted data sources with access to billions of records containing data about individuals for the purpose of providing independent age and id verification as well as the ability to incorporate additional public or private data sources as required. At present it has the following: US Residential Coverage - 90% of Adult Population and also International Coverage - Varies from Country to Country with a minimum of 80% coverage (24 countries, mostly European).

Various verification elements can be used. Examples might include applicant data such as name, address, phone, etc. Multiple methods could be used for verification include integrated solutions utilizing API (XML Application Programming Interface) or sending batches of requests.

- Verification and Authentication requirements would be based on TLD operator requirements or specific criteria.
- Based on required WHOIS Data; registrant contact details (name, address, phone)
- If address/ZIP can be validated by VAULT, the validation process can continue (North America +25 International countries)
- If in-line processing and registration and EPP/API call would go to the verification clearinghouse and return up to 4 challenge questions.
- If two-step registration is required, then registrants would get a link to complete the verification at a separate time. The link could be specific to a domain registration and pre-populated with data about the registrant.
- If WHOIS data is validated a token would be generated and could be given back to the registrar which registered the domain.
- WHOIS data would reflect the Validated Data or some subset, i.e., fields displayed could be first initial and last name, country of registrant and date validated. Other fields could be generic validation fields much like a "privacy service".
- A "Validation Icon" customized script would be sent to the registrants email address. This could be displayed on the website and would be dynamically generated to avoid unauthorized use of the Icon. When clicked on the Icon would should limited WHOIS details i.e. Registrant: jdoe, Country: USA, Date Validated: March 29, 2011, as well as legal disclaimers.
- Validation would be annually renewed, and validation date displayed in the WHOIS.

Abuse prevention resourcing plans

Since its founding, Afilias is focused on delivering secure, stable and reliable registry services. Several essential management and staff who designed and launched the Afilias registry in 2001 and expanded the number of TLDs supported, all while maintaining strict service levels over the past decade, are still in place today. This experiential continuity will endure for the implementation and on-going maintenance of this TLD. Afilias operates in a matrix

structure, which allows its staff to be allocated to various critical functions in both a dedicated and a shared manner. With a team of specialists and generalists, the Afilias project management methodology allows efficient and effective use of our staff in a focused way. Abuse prevention and detection is a function that is staffed across the various groups inside Afilias, and requires a team effort when abuse is either well hidden or widespread, or both. While all of Afilias' 200+ employees are charged with responsibility to report any detected abuse, the engineering and analysis teams, numbering over 30, provide specific support based on the type of abuse and volume and frequency of analysis required. The Afilias security and support teams have the authority to initiate mitigation.

Afilias has developed advanced validation and abuse mitigation mechanisms. These capabilities and mechanisms are described below. These services and capabilities are discretionary and may be utilized by the registry operator based on their policy and business need.

This TLD's anticipated volume of registrations in the first three years of operations is listed in response #46. Afilias and the registry operator's anti-abuse function anticipates the expected volume and type of registrations, and together will adequately cover the staffing needs for this TLD. The registry operator will maintain an abuse response team, which may be a combination of internal staff and outside specialty contractors, adjusting to the needs of the size and type of TLD. The team structure planned for this TLD is based on several years of experience responding to, mitigating, and managing abuse for TLDs of various sizes. The team will generally consist of abuse handlers (probably internal), a junior analyst, (either internal or external), and a senior security consultant (likely an external resource providing the registry operator with extra expertise as needed). These responders will be specially trained in the investigation of abuse complaints, and will have the latitude to act expeditiously to suspend domain names (or apply other remedies) when called for.

The exact resources required to maintain an abuse response team must change with the size and registration procedures of the TLD. An initial abuse handler is necessary as a point of contact for reports, even if a part-time responsibility. The abuse handlers monitor the abuse email address for complaints and evaluate incoming reports from a variety of sources. A large percentage of abuse reports to the registry operator may be unsolicited commercial email. The designated abuse handlers can identify legitimate reports and then decide what action is appropriate, either to act upon them, escalate to a security analyst for closer investigation, or refer them to registrars as per the above-described procedures. A TLD with rare cases of abuse would conform to this structure.

If multiple cases of abuse within the same week occur regularly, the registry operator will consider staffing internally a security analyst to investigate the complaints as they become more frequent. Training an abuse analyst requires 3-6 months and likely requires the active guidance of an experienced senior security analyst for guidance and verification of assessments and recommendations being made.

If this TLD were to regularly experience multiple cases of abuse within the same day, a full-time senior security analyst would likely be necessary. A senior security analyst capable of fulfilling this role should have several years of experience and able to manage and train the internal abuse response team.

The abuse response team will also maintain subscriptions for several security information services, including the blocklists from organizations like SURBL and Spamhaus and anti-phishing and other domain related abuse (malware, fast-flux etc.) feeds. The pricing structure of these services may depend on the size of the domain and some services will include a number of rapid suspension requests for use as needed.

For a large TLD, regular audits of the registry data are required to maintain control over abusive registrations. When a registrar with a significant number of registrations has been compromised or acted maliciously, the registry operator may need to analyze a set of registration or DNS query data. A scan of all the domains of a registrar is conducted only as needed. Scanning and analysis for a large registrar may require as much as a week of full-time effort for a dedicated machine and team.

29. Rights Protection Mechanisms: Applicants must describe how their registry will comply with policies and practices that minimize abusive registrations and other activities that affect the legal rights of others, such as the Uniform Domain Name Dispute Resolution Policy (UDRP), Uniform Rapid Suspension (URS) system, and Trademark Claims and Sunrise services at startup.

A complete answer should include:

- A description of how the registry operator will implement safeguards against allowing unqualified registrations (e.g., registrations made in violation of the registry's eligibility restrictions or policies), and reduce opportunities for behaviors such as phishing or pharming. At a minimum, the registry operator must offer a Sunrise period and a Trademark Claims service during the required time periods, and implement decisions rendered under the URS on an ongoing basis; and

- A description of resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).

>To be eligible for a score of 2, answers must also include additional measures specific to rights protection, such as abusive use policies, takedown procedures, registrant pre-verification, or authentication procedures, or other covenants.

A complete answer is expected to be no more than 10 pages.

Rights protection is a core responsibility of the TLD operator, and is supported by a fully-developed plan for rights protection that includes:

- Establishing mechanisms to prevent unqualified registrations (e.g., registrations made in violation of the registry's eligibility restrictions or policies);
- Implementing a robust Sunrise program, utilizing the Trademark Clearinghouse, the services of one of ICANN's approved dispute resolution providers, a trademark validation agent, and drawing upon sunrise policies and rules used successfully in previous gTLD launches;
- Implementing a professional trademark claims program that utilizes the Trademark Clearinghouse, and drawing upon models of similar programs used successfully in previous TLD launches;
- Complying with the URS requirements;
- Complying with the UDRP;
- Complying with the PDDRP,
- Complying with the RRDRP and;
- Including all ICANN-mandated and independently developed rights protection mechanisms ("RPMs") in the registry-registrar agreement entered into by ICANN-accredited registrars authorized to register names in the TLD.

The response below details the rights protection mechanisms at the launch of the TLD (Sunrise and Trademark Claims Service) which comply with rights protection policies (URS, UDRP, PDDRP, RRDRP, and other ICANN RPMs), outlines additional provisions made for rights protection, and provides the resourcing plans.

Safeguards for rights protection at the launch of the TLD

The launch of this TLD will include the operation of a trademark claims service according to the defined ICANN processes for checking a registration request and alerting trademark holders of potential rights infringement.

Sunrise Period

The Sunrise Period will be an exclusive period of time, prior to the opening of public registration, when trademark and service mark holders will be able to submit registration applications for domain names that correspond to their marks. Following the Sunrise Period, and Landrush Period DotMusic will open registration to first-come-first-serve registrants.

The anticipated Rollout Schedule for the Sunrise Period will be as follows:

Phase 1: 60 days Sunrise Period for trademark holders and service mark holders to submit applications for .MUSIC domain name registrations corresponding to their marks. To maximize fairness multiple registration applications for the same domain name will be decided upon via auctions. A 30 day Quiet Period will follow the sunrise period for testing and evaluation.

Phase 2: 60 days Music Community Member Organization Landrush: a limited-time period reserved for members of DotMusic-accredited Music Community Member Organizations (mCMO). Multiple registration requests for the same string will be decided upon via an auction. A 30 day Quiet Period will follow this phase as well to allow for testing and evaluation.

One month after close of Quiet Period - Registration in the TLD domain will be opened for general availability. Domains will be registered on a first-come-first-serve basis.

Sunrise Period Requirements & Restrictions

To be eligible for participation in the Sunrise Phase of .MUSIC a trademark holder must fulfill the requirements set forth in the 11 January 2012 ICANN Applicant Guidebook, Trademark Clearinghouse Specification, section 7.2; or any subsequent updates thereto.

Currently the Sunrise eligibility requirements (SERs) include: (i) ownership of a mark that satisfies the criteria set forth in section 7.2 of the Trademark Clearing House specifications, (ii) description of international class of goods or services covered by registration; (iii) representation that all provided information is true and correct; and (iv) provision of data sufficient to document rights in the trademark.

The Sunrise Dispute Resolution Policy (SDRP) will allow challenges based on the following four grounds: (i) at time the challenged domain name was registered, the registrants did not hold a trademark registration of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; (ii) the domain name is not identical to the mark on which the registrant based its Sunrise registration; (iii) the trademark registration on which the registrant based its Sunrise registration is not of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or

treaty; or (iv) the trademark registration on which the domain name registrant based its Sunrise registration did not issue on or before the effective date of the Registry Agreement and was not applied for on or before ICANN announced the applications received. The established grounds may change as ICANN is finalizing Sunrise requirements in its Trademark Clearing House specification.

Sunrise registrations can be made in terms of 1, 2, 3, 5, or 10 year registrations.

Ongoing rights protection mechanisms

Several mechanisms will be in place to protect rights in this TLD. As described in our responses to questions #27 and #28, measures are in place to ensure domain transfers and updates are only initiated by the appropriate domain holder, and an experienced team is available to respond to legal actions by law enforcement or court orders.

This TLD will conform to all ICANN RPMs including URS (defined below), UDRP, PDDRP, and all measures defined in Specification 7 of the new TLD agreement.

Uniform Rapid Suspension (URS)

The registry operator will implement decisions rendered under the URS on an ongoing basis. Per the URS policy posted on ICANN's Web site as of this writing, the registry operator will receive notice of URS actions from the ICANN-approved URS providers. These emails will be directed immediately to the registry operator's support staff, which is on duty 24x7. The support staff will be responsible for creating a ticket for each case, and for executing the directives from the URS provider. All support staff will receive pertinent training.

As per ICANN's URS guidelines, within 24 hours of receipt of the notice of complaint from the URS provider, the registry operator shall "lock" the domain, meaning the registry shall restrict all changes to the registration data, including transfer and deletion of the domain names, but the name will remain in the TLD DNS zone file and will thus continue to resolve. The support staff will "lock" the domain by associating the following EPP statuses with the domain and relevant contact objects:

- ServerUpdateProhibited, with an EPP reason code of "URS"
- ServerDeleteProhibited, with an EPP reason code of "URS"
- ServerTransferProhibited, with an EPP reason code of "URS"
- The registry operator's support staff will then notify the URS provider immediately upon locking the domain name, via email.

The registry operator's support staff will retain all copies of emails from the URS providers, assign them a tracking or ticket number, and will track the status of each opened URS case through to resolution via spreadsheet or database.

The registry operator's support staff will execute further operations upon notice from the URS providers. The URS provider is required to specify the remedy and required actions of the registry operator, with notification to the registrant, the complainant, and the registrar.

As per the URS guidelines, if the complainant prevails, the "registry operator shall suspend the domain name, which shall remain suspended for the balance of the registration period and would not resolve to the original web site. The nameservers shall be redirected to an informational web page provided by the URS provider about the URS. The WHOIS for the domain name shall continue to display all of the information of the original registrant except for the redirection of the nameservers. In addition, the WHOIS shall reflect that the domain name will not be able to be transferred, deleted or modified for the life of the registration."

Community TLD considerations

As described in response to question #20e and #28 DotMusic will implement several policies surrounding .MUSIC to fulfill the mission in support of Music Community needs. The applicable requirements will be validated at time of registration, and in addition ongoing use, naming, and anti-abuse policies are also in place to ensure continued establishment of a safe and secure TLD that is not only operated but used in the interest of the Music Community. A dedicated dispute resolution policy is in place to solve disputes concerning infringement of the .MUSIC Policy.

Rights protection via the RRA

The following will be memorialized and be made binding via the Registry-Registrar and Registrar-Registrant Agreements:

- The registry may reject a registration request or a reservation request, or may delete, revoke, suspend, cancel, or transfer a registration or reservation under the following criteria:
 - a. to enforce registry policies and ICANN requirements; each as amended from time to time;
 - b. that is not accompanied by complete and accurate information as required by ICANN requirements and/or registry policies or where required information is not updated and/or corrected as required by ICANN requirements and/or registry policies;
 - c. to protect the integrity and stability of the registry, its operations, and the TLD system;
 - d. to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the registry;
 - e. to establish, assert, or defend the legal rights of the registry or a third party or to avoid any civil or criminal liability on the part of the registry and/or its affiliates, subsidiaries, officers, directors, representatives, employees, contractors, and stockholders;

f. to correct mistakes made by the registry or any accredited registrar in connection with a registration; or
g. as otherwise provided in the Registry-Registrar Agreement and/or the Registrar-Registrant Agreement.

Reducing opportunities for behaviors such as phishing or pharming

In our response to question #28, the registry operator has described its anti-abuse program. Rather than repeating the policies and procedures here, please see our response to question #28 for full details.

With specific respect to phishing and pharming, it should be noted .MUSIC with its specified registration price, (detailed in response to questions #45-50), and restrictions and protections in regards to registrations and usage of the domains (detailed in response to question #20e) under it is considered a low risk target for such attacks. This is confirmed by McAfee's 2011 security report (http://us.mcafee.com/en-us/local/docs/MTMW_Report.pdf) stating that low-priced domains are more vulnerable for such attacks, and restricted TLDs bear low risks. Further, per the Anti-Phishing Working Group surveys and activities that is and will be monitored by DotMusic; the latest study shows that in 2011 only 2% of domain names used for phishing were targeting brand names, corresponding to 5,700 names.

Since all criminal activity (such as phishing and pharming) is a small percentage of domain registrations overall and precluded by the mission, values and policies of DotMusic and .MUSIC, criminal activity is not expected to be a problem. If such activity occurs due to hacking or other compromises, the registry operator will take prompt and effective steps to eliminate the activity.

In the case of this TLD, DotMusic will apply an approach that addresses registered domain names (rather than potentially registered domains). This approach will not infringe upon the rights of eligible registrants to register domains, and allows DotMusic internal controls, as well as community-developed UDRP and URS policies and procedures if needed, to deal with complaints, should there be any.

Afilias is a member of various security fora which provide access to lists of names in each TLD which may be used for malicious purposes. Such identified names will be subject to the TLD anti-abuse policy, including rapid suspensions after due process.

Rights protection resourcing plans

Since its founding, Afilias is focused on delivering secure, stable and reliable registry services. Several essential management and staff who designed and launched the Afilias registry in 2001 and expanded the number of TLDs supported, all while maintaining strict service levels over the past decade, are still in place today. This experiential continuity will endure for the implementation and on-going maintenance of this TLD. Afilias operates in a matrix structure, which allows its staff to be allocated to various critical functions in both a dedicated and a shared manner. With a team of specialists and generalists, the Afilias project management methodology allows efficient and effective use of our staff in a focused way.

Supporting RPMs requires several departments within the registry operator as well as within Afilias. The implementation of Sunrise and the Trademark Claims service and on-going RPM activities will pull from the 102 Afilias staff members of the engineering, product management, development, security and policy teams at Afilias and the support staff of the registry operator, which is on duty 24x7. A trademark validator will also be assigned within the registry operator, whose responsibilities may require as much as 50% of full-time employment if the domains under management were to exceed several million. No additional hardware or software resources are required to support this as Afilias has fully-operational capabilities to manage abuse today.

30A. Security Policy: provide a summary of the security policy for the proposed registry, including but not limited to:

- indication of any independent assessment reports demonstrating security capabilities, and provisions for periodic independent assessment reports to test security capabilities;
- description of any augmented security levels or capabilities commensurate with the nature of the applied for gTLD string, including the identification of any existing international or industry relevant security standards the applicant commits to following (reference site must be provided);
- list of commitments made to registrants concerning security levels.

To be eligible for a score of 2, answers must also include:

- Evidence of an independent assessment report demonstrating effective security controls (e.g., ISO 27001).

A summary of the above should be no more than 20 pages. Note that the complete security policy for the registry is required to be submitted in accordance with 30(b).

The answer to question #30a is provided by Afilias, the back-end provider of registry services for this TLD.

Afilias aggressively and actively protects the registry system from known threats and vulnerabilities, and has deployed an extensive set of security protocols, policies and procedures to thwart compromise. Afilias' robust and detailed plans are continually updated and tested to ensure new threats are mitigated prior to becoming issues. Afilias will continue these rigorous security measures, which include:

- Multiple layers of security and access controls throughout registry and support systems;
- 24x7 monitoring of all registry and DNS systems, support systems and facilities;
- Unique, proven registry design that ensures data integrity by granting only authorized access to the registry system, all while meeting performance requirements;
- Detailed incident and problem management processes for rapid review, communications, and problem resolution, and;
- Yearly external audits by independent, industry-leading firms, as well as twice-yearly internal audits.

Security policies and protocols

Afilias has included security in every element of its service, including facilities, hardware, equipment, connectivity/Internet services, systems, computer systems, organizational security, outage prevention, monitoring, disaster mitigation, and escrow/insurance, from the original design, through development, and finally as part of production deployment. Examples of threats and the confidential and proprietary mitigation procedures are detailed in our response to question #30(b).

There are several important aspects of the security policies and procedures to note:

- Afilias hosts domains in data centers around the world that meet or exceed global best practices.
- Afilias' DNS infrastructure is massively provisioned as part of its DDoS mitigation strategy, thus ensuring sufficient capacity and redundancy to support new gTLDs.
- Diversity is an integral part of all of our software and hardware stability and robustness plan, thus avoiding any single points of failure in our infrastructure.
- Access to any element of our service (applications, infrastructure and data) is only provided on an as-needed basis to employees and a limited set of others to fulfill their job functions. The principle of least privilege is applied.
- All registry components - critical and non-critical - are monitored 24x7 by staff at our NOCs, and the technical staff has detailed plans and procedures that have stood the test of time for addressing even the smallest anomaly. Well-documented incident management procedures are in place to quickly involve the on-call technical and management staff members to address any issues.

Afilias follows the guidelines from the ISO 27001 Information Security Standard (Reference: http://www.iso.org/iso/iso_catalogue/catalogue_tc/catalogue_detail.htm?csnumber=42103) for the management and implementation of its Information Security Management System. Afilias also utilizes the COBIT IT governance framework to facilitate policy development and enable controls for appropriate management of risk (Reference: <http://www.isaca.org/cobit>). Best practices defined in ISO 27002 are followed for defining the security controls within the organization. Afilias continually looks to improve the efficiency and effectiveness of our processes, and follows industry best practices as defined by the IT Infrastructure Library, or ITIL (Reference: <http://www.ital-officialsite.com/>).

The Afilias registry system is located within secure data centers that implement a multitude of security measures both to minimize any potential points of vulnerability and to limit any damage should there be a breach. The characteristics of these data centers are described fully in our response to question #30(b).

The Afilias registry system employs a number of multi-layered measures to prevent unauthorized access to its network and internal systems. Before reaching the registry network, all traffic is required to pass through a firewall system. Packets passing to and from the Internet are inspected, and unauthorized or unexpected attempts to connect to the registry servers are both logged and denied. Management processes are in place to ensure each request is tracked and documented, and regular firewall audits are performed to ensure proper operation. 24x7 monitoring is in place and, if potential malicious activity is detected, appropriate personnel are notified immediately.

Afilias employs a set of security procedures to ensure maximum security on each of its servers, including disabling all unnecessary services and processes and regular application of security-related patches to the operating system and critical system applications. Regular external vulnerability scans are performed to verify that only services intended to be available are accessible.

Regular detailed audits of the server configuration are performed to verify that the configurations comply with current best security practices. Passwords and other access means are changed on a regular schedule and are revoked whenever a staff member's employment is terminated.

Access to registry system

Access to all production systems and software is strictly limited to authorized operations staff members. Access to technical support and network operations teams where necessary are read only and limited only to components required to help troubleshoot customer issues and perform routine checks. Strict change control procedures are in place and are followed each time a change is required to the production hardware/application. User rights are kept to a minimum at all times. In the event of a staff member's employment termination, all access is removed immediately.

Afilias applications use encrypted network communications. Access to the registry server is controlled. Afilias allows access to an authorized registrar only if each of the authentication factors matches the specific requirements of the requested authorization. These mechanisms are also used to secure any web-based tools that allow authorized registrars to access the registry. Additionally, all write transactions in the registry (whether conducted by authorized registrars or the registry's own personnel) are logged.

EPP connections are encrypted using TLS/SSL, and mutually authenticated using both certificate checks and login/password combinations. Web connections are encrypted using TLS/SSL for an encrypted tunnel to the browser, and authenticated to the EPP server using login/password combinations.

All systems are monitored for security breaches from within the data center and without, using both system-based and network-based testing tools. Operations staff also monitor systems for security-related performance anomalies. Triple-redundant continual monitoring ensures multiple detection paths for any potential incident or problem. Details are provided in our response to questions #30(b) and #42. Network Operations and Security Operations teams perform regular audits in search of any potential vulnerability.

To ensure that registrar hosts configured erroneously or maliciously cannot deny service to other registrars, Afilias uses traffic shaping technologies to prevent attacks from any single registrar account, IP address, or subnet. This additional layer of security reduces the likelihood of performance degradation for all registrars, even in the case of a security compromise at a subset of registrars.

There is a clear accountability policy that defines what behaviors are acceptable and unacceptable on the part of non-staff users, staff users, and management. Periodic audits of policies and procedures are performed to ensure that any weaknesses are discovered and addressed. Aggressive escalation procedures and well-defined Incident Response management procedures ensure that decision makers are involved at early stages of any event.

In short, security is a consideration in every aspect of business at Afilias, and this is evidenced in a track record of a decade of secure, stable and reliable service.

Independent assessment

Supporting operational excellence as an example of security practices, Afilias performs a number of internal and external security audits each year of the existing policies, procedures and practices for:

- Access control;
- Security policies;
- Production change control;
- Backups and restores;
- Batch monitoring;
- Intrusion detection, and
- Physical security.

Afilias has an annual Type 2 SSAE 16 audit performed by PricewaterhouseCoopers (PwC). Further, PwC performs testing of the general information technology controls in support of the financial statement audit. A Type 2 report opinion under SSAE 16 covers whether the controls were properly designed, were in place, and operating effectively during the audit period (calendar year). This SSAE 16 audit includes testing of internal controls relevant to Afilias' domain registry system and processes. The report includes testing of key controls related to the following control objectives:

- Controls provide reasonable assurance that registrar account balances and changes to the registrar account balances are authorized, complete, accurate and timely.
- Controls provide reasonable assurance that billable transactions are recorded in the Shared Registry System (SRS) in a complete, accurate and timely manner.
- Controls provide reasonable assurance that revenue is systemically calculated by the Deferred Revenue System (DRS) in a complete, accurate and timely manner.
- Controls provide reasonable assurance that the summary and detail reports, invoices, statements, registrar and registry billing data files, and ICANN transactional reports provided to registry operator(s) are complete, accurate and timely.
- Controls provide reasonable assurance that new applications and changes to existing applications are authorized, tested, approved, properly implemented and documented.
- Controls provide reasonable assurance that changes to existing system software and implementation of new system software are authorized, tested, approved, properly implemented and documented.
- Controls provide reasonable assurance that physical access to data centers is restricted to properly authorized individuals.
- Controls provide reasonable assurance that logical access to system resources is restricted to properly authorized individuals.
- Controls provide reasonable assurance that processing and backups are appropriately

authorized and scheduled and that deviations from scheduled processing and backups are identified and resolved.

The last Type 2 report issued was for the year 2010, and it was unqualified, i.e., all systems were evaluated with no material problems found.

During each year, Afiliias monitors the key controls related to the SSAE controls. Changes or additions to the control objectives or activities can result due to deployment of new services, software enhancements, infrastructure changes or process enhancements. These are noted and after internal review and approval, adjustments are made for the next review.

In addition to the PricewaterhouseCoopers engagement, Afiliias performs internal security audits twice a year. These assessments are constantly being expanded based on risk assessments and changes in business or technology.

Additionally, Afiliias engages an independent third-party security organization, PivotPoint Security, to perform external vulnerability assessments and penetration tests on the sites hosting and managing the Registry infrastructure. These assessments are performed with major infrastructure changes, release of new services or major software enhancements. These independent assessments are performed at least annually. A report from a recent assessment is attached with our response to question #30(b).

Afiliias has engaged with security companies specializing in application and web security testing to ensure the security of web-based applications offered by Afiliias, such as the Web Admin Tool (WAT) for registrars and registry operators.

Finally, Afiliias has engaged IBM's Security services division to perform ISO 27002 gap assessment studies so as to review alignment of Afiliias' procedures and policies with the ISO 27002 standard. Afiliias has since made adjustments to its security procedures and policies based on the recommendations by IBM.

Special TLD considerations

Afiliias' rigorous security practices are regularly reviewed; if there is a need to alter or augment procedures for this TLD, they will be done so in a planned and deliberate manner.

Commitments to registrant protection

With over a decade of experience protecting domain registration data, Afiliias understands registrant security concerns. Afiliias supports a "thick" registry system in which data for all objects are stored in the registry database that is the centralized authoritative source of information. As an active member of IETF (Internet Engineering Task Force), ICANN's SSAC (Security & Stability Advisory Committee), APWG (Anti-Phishing Working Group), MAAWG (Messaging Anti-Abuse Working Group), USENIX, and ISACA (Information Systems Audits and Controls Association), the Afiliias team is highly attuned to the potential threats and leading tools and procedures for mitigating threats. As such, registrants should be confident that:

- Any confidential information stored within the registry will remain confidential;
- The interaction between their registrar and Afiliias is secure;
- The Afiliias DNS system will be reliable and accessible from any location;
- The registry system will abide by all polices, including those that address registrant data;
- Afiliias will not introduce any features or implement technologies that compromise access to the registry system or that compromise registrant security.

Afiliias has directly contributed to the development of the documents listed below and we have implemented them where appropriate. All of these have helped improve registrants' ability to protect their domains name(s) during the domain name lifecycle.

- [SAC049]: SSAC Report on DNS Zone Risk Assessment and Management (03 June 2011)
- [SAC044]: A Registrant's Guide to Protecting Domain Name Registration Accounts (05 November 2010)
- [SAC040]: Measures to Protect Domain Registration Services Against Exploitation or Misuse (19 August 2009)
- [SAC028]: SSAC Advisory on Registrar Impersonation Phishing Attacks (26 May 2008)
- [SAC024]: Report on Domain Name Front Running (February 2008)
- [SAC022]: Domain Name Front Running (SAC022, SAC024) (20 October 2007)
- [SAC011]: Problems caused by the non-renewal of a domain name associated with a DNS Name Server (7 July 2006)
- [SAC010]: Renewal Considerations for Domain Name Registrants (29 June 2006)
- [SAC007]: Domain Name Hijacking Report (SAC007) (12 July 2005)

To protect any unauthorized modification of registrant data, Afiliias mandates TLS/SSL transport (per RFC 5246) and authentication methodologies for access to the registry applications. Authorized registrars are required to supply a list of specific individuals (five to ten people) who are authorized to contact the registry. Each such individual is assigned a pass phrase. Any support requests made by an authorized registrar to registry customer service are authenticated by registry customer service. All failed authentications are logged and reviewed regularly for potential malicious activity. This prevents unauthorized changes or access to registrant data by individuals posing to be registrars or their authorized contacts.

These items reflect an understanding of the importance of balancing data privacy and access for registrants, both individually and as a collective, worldwide user base.

The Afiliias 24/7 Customer Service Center consists of highly trained staff who collectively are proficient in 15 languages, and who are capable of responding to queries from registrants whose

domain name security has been compromised - for example, a victim of domain name hijacking. Afilias provides specialized registrant assistance guides, including specific hand-holding and follow-through in these kinds of commonly occurring circumstances, which can be highly distressing to registrants

Security resourcing plans

Please refer to our response to question #30b for security resourcing plans.

DIDP Exhibit A2

New gTLD Program
Community Priority Evaluation Report
Report Date: 10 February 2016

Application ID:	1-1115-14110
Applied-for String:	MUSIC
Applicant Name:	DotMusic Limited

Overall Community Priority Evaluation Summary

Community Priority Evaluation Result	Did Not Prevail
<p>Thank you for your participation in the New gTLD Program. After careful consideration and extensive review of the information provided in your application, including documents of support, the Community Priority Evaluation panel determined that the application did not meet the requirements specified in the Applicant Guidebook. Your application did not prevail in Community Priority Evaluation.</p> <p>Your application may still resolve string contention through the other methods as described in Module 4 of the Applicant Guidebook.</p>	

Panel Summary

Overall Scoring	10 Point(s)	
<u>Criteria</u>	<u>Earned</u>	<u>Achievable</u>
#1: Community Establishment	0	4
#2: Nexus between Proposed String and Community	3	4
#3: Registration Policies	4	4
#4: Community Endorsement	3	4
Total	10	16
Minimum Required Total Score to Pass <u>14</u>		

Criterion #1: Community Establishment	0/4 Point(s)
<u>1-A Delineation</u>	<u>0/2 Point(s)</u>
<p>The Community Priority Evaluation panel determined that the community as defined by the application did not meet the criterion for Delineation as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook (AGB), as the community defined in the application does not demonstrate sufficient delineation, organization, or pre-existence. The application received a score of 0 out of 2 points under criterion 1-A: Delineation.</p> <p><u>Delineation</u> Two conditions must be met to fulfill the requirements for delineation: there must be a clear, straightforward membership definition and there must be awareness and recognition of a community (as defined by the applicant) among its members.</p>	

The community defined in the application is “delineated using established NAICS codes that align with the (i) characteristics of the globally recognized, organized Community, and (ii) .MUSIC global rotating multi-stakeholder Advisory Board model of fair representation, irrespective of locale, size or commercial/non-commercial status” (Application, 20A). The applicant lists over 40 categories of community member and identifies each with a North American Industry Classification System (NAICS) code that is further narrowed by the applicant’s requirement that “only those that are defined by and identify with the sub-set of the NAICS code that relates to “music” would qualify as a member of the Community.” According to the application, these categories, with the NAICS code cited by the applicant, are:

- Musical groups and artists (711130)
- Independent music artists, performers, arrangers & composers (711500)
- Music publishers (512230)
- Music recording industries (512290)
- Music recording & rehearsal studios (512240)
- Music distributors, promoters & record labels (512220)
- Music production companies & record producers (512210)
- Live musical producers (711130)
- Musical instrument manufacturers (339992)
- Musical instruments & supplies stores (451140)
- Music stores (451220)
- Music accountants (541211)
- Music lawyers (541110)
- Musical groups & artists (711130)
- Music education & schools (611610)
- Music agents & managers (711400)
- Music promoters & performing arts establishments (711300)
- Music promoters of performing arts with facilities (711310)
- Music promoters of performing arts without facilities (711320)
- Music performing arts companies (711100)
- Other music performing arts companies (711190)
- Music record reproducing companies (334612)
- Music, audio and video equipment manufacturers (334310)
- Music radio networks (515111)
- Music radio stations (515112)
- Music archives & libraries (519120)
- Music business & management consultants (541611)
- Music collection agencies & performance rights organizations (561440)
- Music therapists (621340)
- Music business associations (813910)
- Music coalitions, associations, organizations, information centers & export offices (813920)
- Music unions (813930)
- Music public relations agencies (541820)
- Music journalists & bloggers (711510)
- Internet Music radio station (519130)
- Music broadcasters (515120)
- Music video producers (512110)
- Music marketing services (541613)
- Music & audio engineers (541330)
- Music ticketing (561599)
- Music recreation establishments (722410)
- Music fans/clubs (813410) [Application, 20A]

The Panel notes that for some member categories noted above, the official NAICS code definition refers to a broader industry group or an industry group that is not identical to the one cited by the applicant. For example, “Music accountants” (541211) is defined in the NAICS as “Offices of Certified Public

Accountants”, and “Music lawyers” (541110) are defined as “Offices of Lawyers”.

In addition to the above-named member categories, the applicant also includes in its application a more general definition of its community: “all constituents involved in music creation, production and distribution, including government culture agencies and arts councils and other complementor organizations involved in support activities that are aligned with the .MUSIC mission” (Application, 20D). The application materials make clear that these entities, which may not be included in the list of member categories above, are strictly related to the functioning of those other categories within the defined community’s music-related activities.

The applicant thereby bounds community membership by way of well-defined categories. Therefore the Panel has determined that the applicant provides a clear and straightforward membership definition. The various categories relating to the creation, production, and distribution of music as well as the several other related entities that contribute to these music-related operations are clearly delineated as per AGB guidelines for the first criterion of Delineation.

However, according to the AGB, “community” implies “more of cohesion than a mere commonality of interest” and there should be “an awareness and recognition of a community among its members.” The community as defined in the application does not demonstrate an awareness and recognition among its members. The application materials and further research provide no substantive evidence of what the AGB calls “cohesion” – that is, that the various members of the community as defined by the application are “united or form a whole” (Oxford Dictionaries).

While the Panel acknowledges that many of these individuals would share a “commonality of interest” in music, according to the AGB this is not sufficient to demonstrate the requisite awareness and recognition of a community among its members. While individuals within some of the member categories may show cohesion within a category or across a subset of the member categories, the number of individuals included in the defined community that do not show such cohesion is considerable enough that the community defined as a whole cannot be said to have the cohesion required by the AGB.

The Panel therefore determined that there is insufficient awareness and recognition of a community among the proposed community members, and that they do not therefore cohere as a community as required by the AGB. The defined community as a whole, in all its member categories, does not meet the AGB’s requirement for community awareness and recognition. Therefore, the Panel determined that the community as defined in the application satisfies one of the two conditions to fulfill the requirements for delineation, and therefore does not receive credit for delineation.

Organization

Two conditions must be met to fulfill the requirements for organization: there must be at least one entity mainly dedicated to the community and there must be documented evidence of community activities.

The community as defined in the application is disperse geographically and across a wide array of music-related activities, including all the categories listed in the previous section, such as creation, production, and distribution, among others. The applicant has made reference to, and has documented support from, several organizations that are a dedicated subset of the defined community. However, based on the Panel’s research, there is no entity mainly dedicated to the entire community as defined by the applicant in all its geographic reach and range of categories. Research showed that those organizations that do exist represent members of the defined community only in a limited geographic area or only in certain fields within the community.

According to the AGB, “organized” implies that there is at least one entity mainly dedicated to the community, with documented evidence of community activities.” An “organized” community, according to the AGB, is one that is represented by at least one entity that encompasses the entire community as defined by the applicant. There should, therefore, be at least one entity that encompasses and organizes individuals and organizations in all of the more than 40 member categories included by the application. Based on information provided in the application materials and the Panel’s research, there is no entity that organizes the community defined in the application in all the breadth of categories explicitly defined.

The Panel determined that the community as defined in the application does not satisfy either of the two conditions to fulfill the requirements for organization.

Pre-existence

To fulfill the requirements for pre-existence, the community must have been active prior to September 2007 (when the new gTLD policy recommendations were completed) and must display an awareness and recognition of a community among its members.

The community as defined in the application was not active prior to September 2007. According to section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, the CPE process is conceived to identify qualified community-based applications, while preventing both “false positives” (awarding undue priority to an application that refers to a “community” construed merely to obtain a sought-after generic word as a gTLD string) and “false negatives” (not awarding priority to a qualified community application). The Panel determined that this application refers to a “community” construed to obtain a sought-after generic word as a gTLD string.

The applicant has a very large degree of support from musical organizations. Many of these organizations were active prior to 2007. However, the fact that each organization was active prior to 2007 does not mean that these organizations were active as a community prior to 2007, as required by the AGB guidelines. That is, since those organizations and their members do not themselves form a cohesive community as defined in the AGB, they cannot be considered to be a community that was active as such prior to 2007.

The Panel determined that the community as defined in the application does not fulfill the requirements for pre-existence.

1-B Extension

0/2 Point(s)

The Panel determined that the community as identified in the application did not meet the criterion for Extension specified in section 4.2.3 (Community Priority Evaluation Criteria) of the AGB, as the application did not fulfill the requirements for size, nor demonstrate the longevity of the community. The application received a score of 0 out of 2 points under criterion 1-B: Extension.

Size

Two conditions must be met to fulfill the requirements for size: the community must be of considerable size and must display an awareness and recognition of a community among its members.

The community as defined in the application is of considerable size, both in terms of geographical reach and number of members. According to the applicant:

The Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries... with a Community of considerable size with millions of constituents... (Application, 20A)

However, as previously noted, the community as defined in the application does not show evidence of “cohesion” among its members, as required by the AGB.¹ Therefore, it fails the second criterion for Size.

The Panel determined that the community as defined in the application only satisfies one of the two conditions to fulfill the requirements for size.

Longevity

Two conditions must be met to fulfill the requirements for longevity: the community must demonstrate longevity and must display an awareness and recognition of a community among its members.

According to the application, “The Community has bought, sold, and bartered music for as long

¹As stated previously, according to the AGB, “community” implies “more of cohesion than a mere commonality of interest... There should be: (a) an awareness and recognition of a community among its members...” Failing such qualities, the AGB’s requirements for community establishment are not met.

(“LONGEVITY”) as it has been made”. The Panel acknowledges that as an activity, music has a long history and that many parts of the defined community show longevity. However, because the community is construed, the longevity of the defined community as a whole cannot be demonstrated. According to section 4.2.3 (Community Priority Evaluation Criteria) of the AGB, the CPE process is conceived to identify qualified community-based applications, while preventing both “false positives” (awarding undue priority to an application that refers to a “community” construed merely to get a sought-after generic word as a gTLD string) and “false negatives” (not awarding priority to a qualified community application).

The Panel determined that this application refers to a proposed community construed to obtain a sought-after generic word as a gTLD. As previously stated, the community as defined in the application does not have awareness and recognition among its members. Failing this kind of “cohesion,” the community defined by the application does not meet the AGB’s standards for a community. Therefore, as a construed community, the proposed community cannot meet the AGB’s requirements for longevity.

The Panel determined that the community as defined in the application does not satisfy either of the two conditions to fulfill the requirements for longevity.

Criterion #2: Nexus between Proposed String and Community	3/4 Point(s)
2-A Nexus	2/3 Point(s)
<p>The Panel determined that the application partially met the criterion for Nexus as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the AGB. The string identifies but does not match the name of the community as defined in the application, and it is not a well-known short-form or abbreviation of the community. The application received a score of 2 out of 3 points under criterion 2-A: Nexus.</p>	
<p>To receive a partial score for Nexus, the applied-for string must identify the community. According to the AGB, “Identify” means that the applied for string closely describes the community or the community members, without over-reaching substantially beyond the community.” In addition to meeting the criterion for “identify”, in order to receive the maximum score for Nexus, the applied-for string must match the name of the community or be a well-known short-form or abbreviation of the community.</p>	
<p>Because the community defined in the application is a collection of many categories of individuals and organizations, and because there is no single entity that serves all of these categories in all their geographic breadth, there is no “established name” for the applied-for string to match, as required by the AGB for a full score on Nexus. The community, as defined in the application, includes some entities that are only tangentially related to music, such as accountants and lawyers, and which may not be automatically associated with the gTLD string. However, the applicant has limited the subset of such professionals included in the defined community². Moreover, the applicant has also included “musical groups and artists” and “independent music artists, performers, arrangers & composers” in its defined community. The string MUSIC identifies these member categories, which include individuals and entities involved in the creation of music. Thus the applied-for string does identify the individuals and organizations included in the applicant’s defined community member categories due to their association with music, which the applicant defines as “the art of combining sounds rhythmically, melodically or harmonically” (Application, 20A).</p>	
<p>The Panel determined that the applied-for string identifies (but does not match) the name of the community as defined in the application without over-reaching substantially. It therefore partially meets the requirements for Nexus.</p>	
2-B Uniqueness	1/1 Point(s)

² The applicant lists over 40 categories of community member and identifies each with a North American Industry Classification System (NAICS) code that is further narrowed by the applicant’s requirement that “only those that are defined by and identify with the sub-set of the NAICS code that relates to “music” would qualify as a member of the Community.”

The Community Priority Evaluation panel determined that the application met the criterion for Uniqueness as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the string has no other significant meaning beyond identifying the community described in the application. The application received a maximum score of 1 point under criterion 2-B: Uniqueness.

To fulfill the requirements for Uniqueness, the string must have no other significant meaning beyond identifying the community described in the application. The string as defined in the application demonstrates uniqueness, as the string does not have any other significant meaning beyond identifying the individuals, organizations, and activities associated with the music-related member categories defined by the applicant. The Community Priority Evaluation panel determined that the applied-for string satisfies the condition to fulfill the requirements for uniqueness.

Criterion #3: Registration Policies	4/4 Point(s)
3-A Eligibility	1/1 Point(s)
<p>The Panel determined that the application met the criterion for Eligibility as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the AGB, as eligibility is restricted to community members. The application received a maximum score of 1 point under criterion 3-A: Eligibility.</p> <p>To fulfill the requirements for Eligibility, the registration policies must restrict the eligibility of prospective registrants to community members. According to the applicant, this requirement is met by verifying registrants' participation in one of the defined community member categories:</p> <p style="padding-left: 40px;">Registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership” without discrimination, conflict of interest or “likelihood of material detriment to the rights and legitimate interests” of the Community:</p> <p style="padding-left: 40px;">(i) Qualification criteria as delineated by recognized NAICS codes corresponding to Community member classification music entity types. (Application, 20A)</p> <p>The Panel determined that the application satisfies the condition to fulfill the requirements for Eligibility.</p>	
3-B Name Selection	1/1 Point(s)
<p>The Community Priority Evaluation panel determined that the application met the criterion for Name Selection as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as name selection rules are consistent with the articulated community-based purpose of the applied-for TLD. The application received a maximum score of 1 point under criterion 3-B: Name Selection.</p> <p>To fulfill the requirements for Name Selection, the registration policies for name selection for registrants must be consistent with the articulated, community-based purpose of the applied-for gTLD. The applicant has included in its application several name selection rules that are consistent with its community-based purpose, which is “creating a trusted, safe online haven for music consumption” while ensuring that musicians' rights are protected:</p> <p style="padding-left: 40px;">Names Selection Policy – to ensure only music-related names are registered as domains under .MUSIC, with the following restrictions:</p> <ol style="list-style-type: none"> 1) A name of (entire or portion of) the musician, band, company, organization, e.g. the registrants “doing business as” name 2) An acronym representing the registrant 3) A name that recognizes or generally describes the registrant, or 4) A name related to the mission or activities of the registrant <p>The Community Priority Evaluation panel determined that the application satisfied the condition to fulfill the requirements for Name Selection.</p>	
3-C Content and Use	1/1 Point(s)
<p>The Community Priority Evaluation panel determined that the application met the criterion for Content and</p>	

Use as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the rules for content and use are consistent with the articulated community-based purpose of the applied-for TLD. The application received a maximum score of 1 point under criterion 3-C: Content and Use.

To fulfill the requirements for Content and Use, the registration policies for content and use must be consistent with the articulated, community-based purpose of the applied-for gTLD. The application includes several content and use requirements, all of which are consistent with its community-based purpose of “creating a trusted, safe online haven for music consumption” while ensuring that musicians’ rights are protected:

The following use requirements apply:

- Use only for music-related activities
- Comply with applicable laws and regulations and not participate in, facilitate, or further illegal activities
- Do not post or submit content that is illegal, threatening, abusive, harassing, defamatory, libelous, deceptive, fraudulent, invasive of another’s privacy, or tortious
- Respect the intellectual property rights of others by posting or submitting only content that is owned, licensed, or otherwise have the right to post or submit
- Immediately notify us if there is a security breach, other member noncompliance or illegal activity on .MUSIC sites
- Do not register a domain containing an established music brand’s name in bad faith that might be deemed confusing to Internet users and the Music Community
- Do not use any automated process to access or use the .MUSIC sites or any process, whether automated or manual, to capture data or content from any service for any reason
- Do not use any service or any process to damage, disable, impair, or otherwise attack .MUSIC sites or the networks connected to .MUSIC sites (Application, 20E)

The Community Priority Evaluation panel determined that the application satisfied the condition to fulfill the requirements for Content and Use.

3-D Enforcement **1/1 Point(s)**

The Panel determined that the application meets the criterion for Enforcement as specified in section 4.2.3 (Community Priority Evaluation Criteria) of the AGB. The application provides specific enforcement measures and coherent and appropriate appeals mechanisms. The application received a score of 1 point under criterion 3-D: Enforcement.

Two conditions must be met to fulfill the requirements for Enforcement: the registration policies must include specific enforcement measures constituting a coherent set, and there must be appropriate appeals mechanisms. The applicant outlined policies that include specific enforcement measures for enforcing its policies, including random compliance checks and special monitoring. The application also references a dispute resolution process, and provides a clear description of an appeals process in the Public Interest Commitments (PIC). The PIC was utilized to verify that the applicant has appropriate appeals mechanisms. The Panel determined that the application satisfies both of the two requirements for Enforcement and therefore scores 1 point.

Criterion #4: Community Endorsement **3/4 Point(s)**

Support for or opposition to a CPE gTLD application may come in any of three ways: through an application comment on ICANN’s website, attachment to the application, or by correspondence with ICANN. The Panel reviews these comments and documents and, as applicable, attempts to verify them as per the guidelines published on the ICANN CPE website. Further details and procedures regarding the review and verification process may be found at <http://newgtlds.icann.org/en/applicants/cpe>.

The table below summarizes the review and verification of support and opposition documents for the DotMusic Limited application for the string “MUSIC”. Note that some entities provided multiple letters of support through one or more of the mechanisms noted above. In these cases, each letter is counted separately in the table below. For example, if a letter of support from an entity was received via attachments, and a

separate letter received via correspondence, each letter is counted as reviewed, valid for verification (where appropriate), verification attempted (where appropriate) and successfully verified (where appropriate).

Summary of Review & Verification of Support/Opposition Materials as of 13 October 2015³

	Total Received and Reviewed	Total Valid for Verification	Verification Attempted	Successfully Verified
Application Comments	157	0	0	0
Attachments to 20(f)	150	68	68	40
Correspondence ⁴	331	160	160	40
Grand Total	638	228	228	80

4-A Support

1/2 Point(s)

The Community Priority Evaluation panel has determined that the application partially met the criterion for Support specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as there was documented support from at least one group with relevance. The application received a score of 1 out of 2 points under criterion 4-A: Support.

To receive the maximum score for Support, the applicant is, or has documented support from, the recognized community institution(s)/member organization(s), or has otherwise documented authority to represent the community. In this context, “recognized” refers to the institution(s)/organization(s) that, through membership or otherwise, are clearly recognized by the community members as representative of the community. To receive a partial score for Support, the applicant must have documented support from at least one group with relevance. “Relevance” refers to the communities explicitly and implicitly addressed by the application’s defined community.

The Community Priority Evaluation panel has determined that the applicant was not the recognized community institution(s)/member organization(s), nor did it have documented authority to represent the community, or documented support from the recognized community institution(s)/member organization(s). The panel has not found evidence of a single such organization recognized by all of the defined community’s members as representative of the defined community in its entirety. However, the applicant possesses documented support from many groups with relevance; their verified documentation of support contained a description of the process and rationale used in arriving at the expression of support, showing their understanding of the implications of supporting the application. Despite the wide array of organizational support, however, the applicant does not have the support from the recognized community institution, as noted above, and the Panel has not found evidence that such an organization exists. The Community Priority Evaluation Panel has determined that the applicant partially satisfies the requirements for Support.

4-B Opposition

2/2 Point(s)

³ The table reflects all comments, attachments, and pieces of correspondence received by the Panel as of the date noted pertaining to the application. The Verification Attempted column includes efforts made by the Panel to contact those entities that did not include contact information. ICANN notified the applicant on 4 December 2015 that although the applicant submitted a high volume of correspondence, “Much of this correspondence was submitted well after the deadline...any correspondence dated later than 13 October 2015 or submitted from today on will not go through the Panel’s verification process and may not be considered by the Panel.”

⁴ The Panel reviewed 53 pieces of correspondence that contained 331 individual letters.

The Community Priority Evaluation panel determined that the application met the criterion for Opposition specified in section 4.2.3 (Community Priority Evaluation Criteria) of the Applicant Guidebook, as the application did not receive any relevant verified opposition. The application received the maximum score of 2 points under criterion 4-B: Opposition.

To receive the maximum score for Opposition, the application must not have received any opposition of relevance. To receive a partial score for Opposition, the application must have received opposition from, at most, one group of non-negligible size.

The application did not receive any letters of relevant and verified opposition. The Community Priority Evaluation Panel determined that the applicant satisfied the requirements for Opposition.

Disclaimer: Please note that these Community Priority Evaluation results do not necessarily determine the final result of the application. In limited cases the results might be subject to change. These results do not constitute a waiver or amendment of any provision of the AGB or the Registry Agreement. For updated application status and complete details on the program, please refer to the AGB and the ICANN New gTLDs microsite at <newgtlds.icann.org>.

ICANN Documentary Information Disclosure Policy

NOTE: With the exception of personal email addresses, phone numbers and mailing addresses, DIDP Requests are otherwise posted in full on ICANN's website, unless there are exceptional circumstances requiring further redaction

ICANN's Documentary Information Disclosure Policy (DIDP) is intended to ensure that information contained in documents concerning ICANN's operational activities and within ICANN's possession, custody or control is made available to the public unless there is a compelling reason for confidentiality.

A principal element of ICANN's approach to transparency and information disclosure is the identification of a comprehensive set of materials that ICANN makes available on its website as a matter of course.

Specifically, ICANN has

- identified many of the categories of documents that are already made public as a matter of due course
- Developed a time frame for responding to requests for information not already publicly available
- identified specific conditions for nondisclosure of information
- Described the mechanism under which requestors may appeal a denial of disclosure

Public Documents

ICANN posts on its website at www.icann.org numerous categories of documents in due course. A list of those categories follows:

- Annual Reports – <http://www.icann.org/en/about/annual-reports>
- Articles of Incorporation – <http://www.icann.org/en/about/governance/articles>
- Board Meeting Transcripts, Minutes and Resolutions – <http://www.icann.org/en/groups/board/meetings>
- Budget – <http://www.icann.org/en/about/financials>
- Bylaws (current) – <http://www.icann.org/en/about/governance/bylaws>
- Bylaws (archives) – <http://www.icann.org/en/about/governance/bylaws/archive>
- Correspondence – <http://www.icann.org/correspondence/>
- Financial Information – <http://www.icann.org/en/about/financials>
- Litigation Documents – <http://www.icann.org/en/news/litigation>
- Major Agreements – <http://www.icann.org/en/about/agreements>
- Monthly Registry Reports – <http://www.icann.org/en/resources/registries/reports>
- Operating Plan – <http://www.icann.org/en/about/planning>
- Policy Documents – <http://www.icann.org/en/general/policy.html>
- Speeches, Presentations & Publications – <http://www.icann.org/presentations>
- Strategic Plan – <http://www.icann.org/en/about/planning>
- Material Information relating to the Address Supporting Organization (ASO) – <http://aso.icann.org/docs> including ASO policy documents, Regional Name Registry (RR) policy documents, guidelines and procedures, meeting agendas and minutes, presentations, routing statistics and information regarding the RRs
- Material Information relating to the Generic Supporting Organization (GNSO) – <http://gnso.icann.org> – including correspondence and presentations, council resolutions, requests for comments, draft documents, policies, reference documents (see <http://gnso.icann.org/reference-documents.html>) and council administration documents (see <http://gnso.icann.org/council/docs.shtml>)
- Material Information relating to the Country Code Names Supporting Organization (ccNSO) – <http://ccnso.icann.org> – including meeting agendas, minutes, reports and presentations
- Material Information relating to the A Large Advisory Committee (ALAC) – <http://a-large.icann.org> – including correspondence, statements and meeting minutes
- Material Information relating to the Governmental Advisory Committee (GAC) – <http://gac.icann.org/web/index.shtml> – including operating principles, gTLD principles, ccTLD principles, principles regarding gTLD Whois issues, communiqués and meeting transcripts and agendas
- Material Information relating to the Root Server Advisory Committee (RSSAC) – <http://www.icann.org/en/groups/rssac> – including meeting minutes and information surrounding ongoing projects
- Material Information relating to the Security and Stability Advisory Committee (SSAC) – <http://www.icann.org/en/groups/ssac> – including its charter, various presentations, work plans, reports and advisories

Responding to Information Requests

If a member of the public requests information not already publicly available, ICANN will respond to the extent feasible to reasonable requests within 30 calendar days of receipt of the request. If a time frame will not be met, ICANN will inform the requester in writing as to when a response will be provided, setting forth the reasons necessary for the extension of time to respond. If ICANN denies the information request, it will provide a written statement of the request or identifying the reasons for the denial.

Defined Conditions for Nondisclosure

ICANN has identified the following set of conditions for the nondisclosure of information:

- Information provided by or to a government or in an official organization or any form of recipient of such information in the expectation that the information will be kept confidential and/or would or likely would materially prejudice ICANN's relationship with that party.
- Information that if disclosed would or would be likely to compromise the integrity of ICANN's deliberative and decision-making process by inhibiting the candid exchange of ideas and communications, including in email documents, memoranda, and other similar communications, or from ICANN Directors, ICANN Directors' Advisors, ICANN staff, ICANN consultants, ICANN contractors, and ICANN agents.
- Information exchanged, prepared for, or derived from the deliberative and decision-making process between ICANN constituents and/or other entities with which ICANN cooperates, that if disclosed would or would be likely to compromise the integrity of the deliberative and decision-making process between ICANN constituents and/or other entities with which ICANN cooperates by inhibiting the candid exchange of ideas and communications.
- Personnel, medical, contractual, remuneration, and similar records relating to an individual's personal information, when the disclosure of such information would or likely would constitute an invasion of personal privacy, as well as proceedings of internal appeal mechanisms and investigations.
- Information provided to ICANN by a party that if disclosed would or would be likely to materially prejudice the commercial interests, financial interests, and/or competitive position of such party or was provided to ICANN pursuant to a nondisclosure agreement or nondisclosure provision within an agreement.
- Confidential business information and/or internal policies and procedures.
- Information that if disclosed would or would be likely to endanger the life, health, or safety of any individual or materially prejudice the administration of justice.
- Information subject to attorney-client, attorney-work product, privilege, or any other applicable privilege or disclosure of which might prejudice any internal, governmental, or legal investigation.
- Drafts of all correspondence, reports, documents, agreements, contracts, emails, or any other forms of communication.
- Information that relates in any way to the security and stability of the Internet, including the operation of the DNS Root, or any changes, modifications, or additions to the root zone.
- Trade secrets and commercial and financial information not publicly disclosed by ICANN.
- Information requests (i) which are not reasonable, (ii) which are excessive or overly burdensome, (iii) complying with which is not feasible, or (iv) are made with an abusive or vexatious purpose or by a vexatious or querulous individual.

Information that falls within any of the conditions set forth above may still be made public if ICANN determines under the particular circumstances that the public interest in disclosing the information outweighs the harm that may be caused by such disclosure. Further, ICANN reserves the right to deny disclosure of information under conditions not designated above if ICANN determines that the harm in disclosing the information outweighs the public interest in disclosing the information.

ICANN shall not be required to create or compile summaries of any documented information, and shall not be required to respond to requests seeking information that is already publicly available.

Appeal of Denials

To the extent a requester chooses to appeal a denial of information from ICANN, the requester may follow the Reconsideration Request procedures or Independent Review procedures, to the extent either is applicable as set forth in Article V, Sections 2 and 3 of the ICANN Bylaws, which can be found at <http://www.icann.org/en/about/governance/bylaws>.

DIDP Requests and Responses

Requests submitted under the DIDP and ICANN responses are available here: <http://www.icann.org/en/about/transparency>.

Guidelines for the Posting of Board Briefing Materials

The posting of Board Briefing Materials on the Board Meeting Minutes page (<http://www.icann.org/en/groups/board/meetings>) is guided by the application of the DIDP. The Guidelines for the Posting of Board Briefing Materials are available at <http://www.icann.org/en/groups/board/documents/briefing-materials-guidelines-21mar11-en.htm>.

To submit a request, send an email to didp@icann.org

DIDP Exhibit A4

PROCESS FOR RESPONDING TO ICANN'S DOCUMENTARY INFORMATION DISCLOSURE POLICY (DIDP) REQUESTS

The following sets forth the process guidelines for responding to a DIDP Request.

1. Upon receipt of a DIDP Request, ICANN staff performs a review of the Request and identifies what documentary information is requested and the staff members who may be in possession of or have knowledge regarding information responsive to the Request.
2. Staff conducts interviews of the relevant staff member(s) and performs a thorough search for documents responsive to the DIDP Request.
3. Documents collected are reviewed for responsiveness.
4. A review is conducted as to whether the documents identified as responsive to the Request are subject to any of the Defined Conditions for Nondisclosure identified at <http://www.icann.org/en/about/transparency/didp>.
5. To the extent that any responsive documents fall within any Defined Conditions for Nondisclosure, a review is conducted as to whether, under the particular circumstances, the public interest in disclosing the documentary information outweighs the harm that may be caused by such disclosure.
6. Documents that have been determined as responsive and appropriate for public disclosure are posted in the appropriate locations on ICANN's website. To the extent that the publication of any documents is appropriate but premature at the time the Response is due, ICANN will so indicate in its Response to the DIDP Request and notify the Requester upon publication.
7. Staff prepares a Response to the DIDP Request within thirty calendar days from receipt of the Request. The Response will be sent to the Requester by email. The Response and Request will also be posted on the DIDP page at <http://www.icann.org/en/about/transparency> in accordance with the posting guidelines set forth at <http://www.icann.org/en/about/transparency/didp>.

1. Consent Agenda:

a. Approval of Board Meeting Minutes

Resolved (2016.03.10.01), the Board approves the minutes of the 3 February 2016 Regular Meeting of the ICANN (Internet Corporation for Assigned Names and Numbers) Board.

b. Appointment of F-Root Server Operator Representative to the RSSAC (Root Server System Advisory Committee)

Whereas, the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws call for the establishment of a Root Server System Advisory Committee (Advisory Committee) (RSSAC (Root Server System Advisory Committee)) with the role to advise the ICANN (Internet Corporation for Assigned Names and Numbers) community and Board on matters relating to the operation, administration, security, and integrity of the Root Server System of the Internet.

Whereas, the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws call for appointment by the Board of Directors of RSSAC (Root Server System Advisory Committee) members based on recommendations from the RSSAC (Root Server System Advisory Committee) Co-Chairs.

Whereas, the RSSAC (Root Server System Advisory Committee) Co-Chairs recommended for consideration by the Board of Directors the appointment of a representative from the F-root server operator to the RSSAC (Root Server System Advisory Committee).

Resolved (2016.03.10.02), the Board of Directors appoints to the RSSAC (Root Server System Advisory Committee) the representative from F-root server F-root server operator, Brian Reid, through 31 December 2018.

functions-
2015-10-15-en)

- ▶ [Contact \(/resources/pages/contact-2012-02-06-en\)](#)

- ▶ [Help \(/resources/pages/help-2012-02-03-en\)](#)

Rationale for Resolution 2016.03.10.02

In May 2013, the root server operators (RSO) agreed to an initial membership of RSO representatives for [RSSAC \(Root Server System Advisory Committee\)](#), and each RSO nominated an individual. The Board of Directors approved the initial membership of [RSSAC \(Root Server System Advisory Committee\)](#) in July 2013 with staggered terms.

Jim Martin, the F-root server operator representative, served an initial two-year term, which expired on 31 December 2015. On 2 December 2015, the Board of Directors re-appointed him to a full, three-year term expiring on 31 December 2018.

The F-root server operator, Internet Systems Consortium, has requested to change its representative from Jim Martin to Brian Reid for the remainder of the term.

The appointment of this [RSSAC \(Root Server System Advisory Committee\)](#) member is not anticipated to have any fiscal impact on [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#), though there are budgeted resources necessary for ongoing support of the [RSSAC \(Root Server System Advisory Committee\)](#).

This resolution is an organizational administrative function for which no public comment is required. The appointment of [RSSAC \(Root Server System Advisory Committee\)](#) members contributes to the commitment of [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) to strengthening the security, stability, and resiliency of the [DNS \(Domain Name System\)](#).

c. Appointment of Independent Auditors

Whereas, Article XVI of the [ICANN \(Internet Corporation for Assigned Names and Numbers\) Bylaws](#) ([http://www.icann.org/general/bylaws.htm \(/general/bylaws.htm\)](http://www.icann.org/general/bylaws.htm (/general/bylaws.htm))) requires that after the end of the fiscal year, the books of [ICANN \(Internet](#)

Corporation for Assigned Names and Numbers) must be audited by certified public accountants, which shall be appointed by the Board.

Whereas, the Board Audit Committee has discussed the engagement of the independent auditor for the fiscal year ending 30 June 2016, and has recommended that the Board authorize the President and CEO, or his designee(s), to take all steps necessary to engage BDO LLP and BDO member firms.

Resolved (2016.03.10.03), the Board authorizes the President and CEO, or his designee(s), to take all steps necessary to engage BDO LLP and BDO member firms as the auditors for the financial statements for the fiscal year ending 30 June 2016.

Rationale for Resolution 2016.03.10.03

The audit firm BDO LLP and BDO member firms were engaged for the annual independent audits of the fiscal year ending 30 June 2014 and the fiscal year ending 30 June 2015. Based on the report from staff and the Audit Committee's evaluation of the work performed, the committee has unanimously recommended that the Board authorize the President and CEO, or his designee(s), to take all steps necessary to engage BDO LLP and BDO member firms as ICANN (Internet Corporation for Assigned Names and Numbers)'s annual independent auditor for the fiscal year ended 30 June 2016 for any annual independent audit requirements in any jurisdiction.

The engagement of an independent auditor is in fulfillment of ICANN (Internet Corporation for Assigned Names and Numbers)'s obligations to undertake an audit of ICANN (Internet Corporation for Assigned Names and Numbers)'s financial statements. This furthers ICANN (Internet Corporation for Assigned Names and Numbers)'s accountability to its Bylaws and processes, and the results of the independent auditors work will be publicly available. There is a fiscal impact to the engagement that has already been budgeted. There is no

impact on the security or the stability of the DNS (Domain Name System) as a result of this appointment.

This is an Organizational Administrative Function not requiring public comment.

d. Investment Policy Update

Whereas, the Board Finance Committee requested that an outside expert review the Investment Policy to ensure it is appropriate for ICANN (Internet Corporation for Assigned Names and Numbers).

Whereas, the outside expert completed a review of the ICANN (Internet Corporation for Assigned Names and Numbers) Investment Policy and concluded that overall the Investment Policy continues to support well the conservative philosophy of ICANN (Internet Corporation for Assigned Names and Numbers)'s investment strategy.

Whereas, the outside expert recommends that a few modifications be made to the Investment Policy to enhance and clarify some provisions, but do not change the overall investment strategy.

Resolved (2016.03.10.04), the Board endorses and adopts the ICANN (Internet Corporation for Assigned Names and Numbers) Investment Policy as revised.

Rationale for Resolution 2016.03.10.04

In furtherance of its due diligence in regards to ICANN (Internet Corporation for Assigned Names and Numbers)'s Investment Policy ("Policy"), the Board Finance Committee (BFC) requested staff to engage an investment consulting firm to review the Policy. For this purpose, ICANN (Internet Corporation for Assigned Names and Numbers) used the services of Bridgebay Investment Consultant Services ("Bridgebay"), which had also performed the previous review of

the Policy in 2011 and 2014. As a result of its review process, Bridgebay recommended a few modifications to the Policy, intended to: (i) clarify the description of the Policy's risk profile; (ii) add low-risk allowable assets (money market funds); and (iii) clarify the flexible approach, for rebalancing the assets in accordance with the strategic allocation, and extended the range of allowable investment to enable the manager to increase fixed income for defensive purposes. Bridgebay also made additional suggested revisions to language, including items such as: clarification of required securities grades and update of the accounting standard name for fair value measurements. Bridgebay presented comments, analysis and the suggested changes to the Policy to the BFC during its meeting of 2 February 2016. These limited Policy modifications will enable the investment manager to optimize its asset allocation strategy for ICANN (Internet Corporation for Assigned Names and Numbers)'s Reserve Fund in a conservative, risk-controlled manner.

Adopting the suggested modifications is expected to be in the best interest of ICANN (Internet Corporation for Assigned Names and Numbers) and the ICANN (Internet Corporation for Assigned Names and Numbers) community in that it is meant to enhance and clarify certain aspects of ICANN (Internet Corporation for Assigned Names and Numbers)'s investment strategy. This action is not expected to have any fiscal impact, or any impact on the security, stability and resiliency of the domain name system.

This is an Organizational Administrative Function that does not require public comment.

e. **Next Steps for the Internationalized Registration Data (WHOIS (WHOIS (pronounced "who is"; not an acronym))) Final Report**

Whereas, in 2012, the Board [adopted \(/en/groups/board/documents/resolutions-08nov12-en.htm#1.a\)](/en/groups/board/documents/resolutions-08nov12-en.htm#1.a) an [Action Plan \(/en/groups/board/documents/briefing-materials-1-08nov12-](/en/groups/board/documents/briefing-materials-1-08nov12-)

[en.pdf](#) [PDF, 265 KB] to address the recommendations of the first WHOIS (WHOIS (pronounced "who is"; not an acronym)) Review Team, calling for ICANN (Internet Corporation for Assigned Names and Numbers) to (i) continue to fully enforce existing consensus policy and contractual conditions relating to WHOIS (WHOIS (pronounced "who is"; not an acronym)), and (ii) create an expert working group to determine the fundamental purpose and objectives of collecting, maintaining and providing access to gTLD (generic Top Level Domain) registration data, to serve as a foundation for a Board-initiated GNSO (Generic Names Supporting Organization) policy development process (PDP (Policy Development Process)).

Whereas, the WHOIS (WHOIS (pronounced "who is"; not an acronym)) Policy Review Team, in the [WHOIS \(WHOIS \(pronounced "who is"; not an acronym\)\) RT Final Report \(/en/system/files/files/final-report-11may12-en.pdf\)](#), [PDF, 1.44 MB] highlighted the need to define requirements and develop data models with the following recommendations:

"ICANN (Internet Corporation for Assigned Names and Numbers) should task a working group..., to determine appropriate internationalized domain name registration data requirements and evaluate available solutions; at a minimum, the data requirements should apply to all new gTLDs, and the working group should consider ways to encourage consistency of approach across the gTLD (generic Top Level Domain) and (on a voluntary basis) ccTLD (Country Code Top Level Domain) space..."

And

"The final data model, including (any) requirements for the translation or transliteration of the registration data, should be incorporated in the relevant Registrar and Registry agreements ..."

Whereas, to address these WHOIS (WHOIS (pronounced "who is"; not an acronym)) Review Team recommendations, the Action Plan (/en/groups/board/documents/briefing-materials-1-08nov12-en.pdf) [PDF, 265 KB] called for a series of activities aimed at developing policies and a technical data model and framework for internationalizing WHOIS (WHOIS (pronounced "who is"; not an acronym)), including,

- i. Convening of an expert working group (known as the IRD Working Group) to determine the requirements for the submission and display of internationalized registration data.
- ii. A GNSO (Generic Names Supporting Organization) Policy Development Process (PDP (Policy Development Process)) to determine whether translation or transliteration of contact information is needed.

Whereas, in September 2015, the Board approved (/resources/board-material/resolutions-2015-09-28-en#1.b) a new consensus policy developed by the GNSO (Generic Names Supporting Organization) related to the translation and transliteration of WHOIS (WHOIS (pronounced "who is"; not an acronym)) contact data, for which the implementation planning is currently underway.

Whereas the IRD Working Group produced the IRD Final Report (https://whois.icann.org/sites/default/files/files/ird-expert-wg-final-23sep15-en.pdf), [PDF, 268 KB] that includes the Data Model requested by the Board, and principles and requirements for internationalizing registration data (such as WHOIS (WHOIS (pronounced "who is"; not an acronym)))).

Resolved (2016.03.10.05), the Board hereby receives the IRD Final Report (https://whois.icann.org/sites/default/files/files/ird-expert-wg-final-23sep15-en.pdf) [PDF, 268 KB] and thanks the IRD Working Group for the significant effort and work exerted that produced the proposed data model for internationalizing registration data as reflected in the IRD Final

Report.

Resolved (2016.03.10.06), the Board requests that the GNSO (Generic Names Supporting Organization) Council review the broader policy implications of the IRD Final Report (<https://whois.icann.org/sites/default/files/files/ird-expert-wg-final-23sep15-en.pdf>) [PDF, 268 KB] as they relate to other GNSO (Generic Names Supporting Organization) policy development work on WHOIS (WHOIS (pronounced "who is"; not an acronym)) issues, and, at a minimum, forward the IRD Final Report (<https://whois.icann.org/sites/default/files/files/ird-expert-wg-final-23sep15-en.pdf>) [PDF, 268 KB] as an input to the GNSO (Generic Names Supporting Organization) PDP (Policy Development Process) on the Next Generation Registration Directory Services to Replace WHOIS (WHOIS (pronounced "who is"; not an acronym)) that is currently underway.

Resolved (2016.03.10.07), the President and CEO, or his designee(s), is directed to work with the implementation review team for the new consensus policy on translation and transliteration to consider the IRD Working Group's data model and requirements and incorporate them, where appropriate, to the extent that the IRD's recommendations are consistent with, and facilitate the implementation of the new consensus policy on translation and transliteration.

Rationale for Resolutions 2016.03.10.05 – 2016.03.10.07

Why is the Board addressing the issue?

This resolution continues the Board's attention to the implementation of the Action Plan (</en/groups/board/documents/briefing-materials-1-08nov12-en.pdf>) [PDF, 265 KB] adopted by the Board in response to the WHOIS (WHOIS (pronounced "who is"; not an acronym)) Review Team's recommendations (</en/system/files/files/final-report-11may12-en.pdf>). [PDF, 1.44 MB] This resolution arises out of a series of efforts identified in

the Action Plan commenced at the Board's request with the aim of internationalizing WHOIS (WHOIS (pronounced "who is"; not an acronym)) contact data. It also facilitates the implementation of the recently adopted and related consensus policy on translation and transliteration of WHOIS (WHOIS (pronounced "who is"; not an acronym)) data approved (/resources/board-material/resolutions-2015-09-28-en#1.b) by the Board on 28 September 2015.

What is the proposal being considered?

Under the Affirmation of Commitments (AoC), ICANN (Internet Corporation for Assigned Names and Numbers) is committed to enforcing its existing policy relating to WHOIS (WHOIS (pronounced "who is"; not an acronym)) (subject to applicable laws), which "requires that ICANN (Internet Corporation for Assigned Names and Numbers) implement measures to maintain timely, unrestricted and public access to accurate and complete WHOIS (WHOIS (pronounced "who is"; not an acronym)) information..." The AoC obligates ICANN (Internet Corporation for Assigned Names and Numbers) to organize no less frequently than every three years a community review of WHOIS (WHOIS (pronounced "who is"; not an acronym)) policy and its implementation to assess the extent to which WHOIS (WHOIS (pronounced "who is"; not an acronym)) policy is effective and its implementation meets the legitimate needs of law enforcement and promotes consumer trust. Under this timeline, the second WHOIS (WHOIS (pronounced "who is"; not an acronym)) Review Team is to be convened in late 2016.

In 2012, the first WHOIS (WHOIS (pronounced "who is"; not an acronym)) Review Team recommended in its Final Report (/en/system/files/files/final-report-11may12-en.pdf) [PDF, 1.44 MB] that the Board take measures to improve WHOIS (WHOIS (pronounced "who is"; not an acronym)). Its findings state: "work needs to proceed with priority in coordination with other relevant work beyond ICANN (Internet Corporation for Assigned Names and Numbers)'s ambit, to make internationalized domain name registration data accessible." In response, the

Board adopted a two-prong approach that simultaneously directed ICANN (Internet Corporation for Assigned Names and Numbers) to (1) implement improvements to the current WHOIS (WHOIS (pronounced "who is"; not an acronym)) system based on the Action Plan (/en/groups/board/documents/briefing-materials-1-08nov12-en.pdf) [PDF, 265 KB] that was based on the recommendations of the WHOIS (WHOIS (pronounced "who is"; not an acronym)) Review Team, and (2) launch a new effort, achieved through the creation of the Expert Working Group, to focus on the purpose and provision of gTLD (generic Top Level Domain) directory services, to serve as PDP (Policy Development Process) on the Next Generation Registration Directory Services to Replace WHOIS (WHOIS (pronounced "who is"; not an acronym)) commenced in January 2016 with a call for volunteers (/news/announcement-2016-01-04-en).

The effect of the Board's action today, i.e. forwarding the IRD Final Report (<https://whois.icann.org/sites/default/files/files/ird-expert-wg-final-23sep15-en.pdf>) [PDF, 268 KB] to the GNSO (Generic Names Supporting Organization) for appropriate follow-up policy work, is aimed at internationalizing WHOIS (WHOIS (pronounced "who is"; not an acronym)) contact data, as part of the Action Plan (/en/groups/board/documents/briefing-materials-1-08nov12-en.pdf), [PDF, 265 KB] in order to improve WHOIS (WHOIS (pronounced "who is"; not an acronym)) and enable non US-ASCII script to be included in WHOIS (WHOIS (pronounced "who is"; not an acronym)) records. At a minimum, the PDP (Policy Development Process) on the Next Generation Registration Directory Services to Replace WHOIS (WHOIS (pronounced "who is"; not an acronym)) should take into account the IRD Final Report recommendations.

Today's action also instructs the President and CEO to consider the IRD's technical data model & non-policy related requirements, as appropriate, as part of the implementation of the new consensus policy on translation and transliteration of registration data, to the extent that its findings are consistent

with the new consensus policy, and facilitate its implementation.

What factors did the Board find to be significant?

Internationalization of the Internet's identifiers is a key ICANN (Internet Corporation for Assigned Names and Numbers) priority. Much of the currently accessible domain name registration data (DNRD) (previously referred to as WHOIS (WHOIS (pronounced "who is"; not an acronym)) data) is encoded in free form US-ASCII script. This legacy condition is convenient for WHOIS (WHOIS (pronounced "who is"; not an acronym)) service users who are sufficiently familiar with languages that can be submitted and displayed in US-ASCII to be able to use US-ASCII script to submit registration data, make and receive queries using that script. However, this data is less useful to the WHOIS (WHOIS (pronounced "who is"; not an acronym)) service users who are only familiar with languages that require script support other than US-ASCII for correct submission or display.

The data model recommended by in the IRD Final Report (https://whois.icann.org/sites/default/files/files/ird-expert-wg-final-23sep15-en.pdf) [PDF, 268 KB] creates a standard framework for submitting and displaying internationalized registration data and facilitates the implementation of the new consensus policy on translation and transliteration of contact data.

What significant materials did the Board review?

The Board reviewed the IRD Final Report (https://whois.icann.org/sites/default/files/files/ird-expert-wg-final-23sep15-en.pdf) [PDF, 268 KB] and other briefing materials submitted by staff.

Are there fiscal impacts or ramifications on ICANN (Internet Corporation for Assigned Names and Numbers) (strategic plan, operating plan, or budget)?

The work to improve and internationalize WHOIS (WHOIS

(pronounced "who is"; not an acronym)) is not expected to require additional resources beyond those included in the Board-approved FY16 Operating Plan and Budget, and the FY17 Operating Plan and Budget, when adopted.

Are there any security, stability or resiliency issues relating to the DNS (Domain Name System)?

This action is not expected to have an immediate impact on the security, stability or resiliency of the DNS (Domain Name System), though the outcomes of this work may result in positive impacts, since improvements in the accessibility of WHOIS (WHOIS (pronounced "who is"; not an acronym)) in multiple scripts and dialogues may enable the resolution of technical issues affecting the security, stability or resiliency of the DNS (Domain Name System).

Is public comment required prior to Board action?

As this is a continuation of prior Board actions, this is an Organizational Administrative Action, for which public comment is not necessary prior to adoption.

f. Board Member Mentorship Program

Whereas, on 3 February 2016, the ICANN (Internet Corporation for Assigned Names and Numbers) Board approved the initial set of key performance indicators (KPIs) to measure the Board Performance and Improvement efforts as per the recommendations of the Final Report of the Second Accountability and Transparency Review Team (ATRT2) published on 31 December 2013.

Whereas, the initial set of KPIs encompasses, among other things, the measurement of the effectiveness and success of a New Board Mentorship Program.

Whereas, the Board is engaged in an ongoing process to develop comprehensive and holistic practices to enhance its

performance and measure its effectiveness and improvement efforts over time.

Whereas, the Board recognizes the importance of establishing programs aiming at guiding and supporting the Board members' on-boarding and development processes to improve the Board members' individual skills set and the Board's collegial performance.

Whereas the Board Mentorship Program will ease new Board members into the culture of ICANN (Internet Corporation for Assigned Names and Numbers), as well as into the specifics of their roles.

Whereas the Board Governance Committee (BGC) has recommended that the Board adopt the New Board Mentorship Program as a voluntary-basis program.

Resolved (2016.03.10.08), the Board adopts the New Board Mentorship Program set forth in Attachment A to the Reference Materials to this Board Paper, and agrees with the BGC that the Board Mentorship Program should be assessed, evaluated and reviewed to adapt to the need of the Board to consistently improve its performance over time.

Rationale for Resolution 2016.03.10.08

The implementation of [recommendations \(/en/about/aoc-review/atrt/final-recommendations-31dec13-en.pdf\)](/en/about/aoc-review/atrt/final-recommendations-31dec13-en.pdf) [PDF, 3.46 MB] from the Second Accountability and Transparency Review Team (ATRT2) began in June 2014, shortly after the Board accepted the recommendations.

Since then, the Board Governance Committee, as per Section I.A of the its charter (see [https://www.icann.org/resources/pages/charter-06-2012-02-25-en \(/resources/pages/charter-06-2012-02-25-en\)](https://www.icann.org/resources/pages/charter-06-2012-02-25-en (/resources/pages/charter-06-2012-02-25-en))) has been tasked to review comprehensively the Board's performance and to develop relevant and substantive programs and practices to support the

individual and the collegial improvement efforts and to measure their effectiveness over time.

Mentoring programs are globally recognized as useful practices to enhance productivity and performance and to facilitate the settlement of new recruits into the Organization. Additionally, the mentorship enables experienced, highly competent people to pass their expertise on to others who need to acquire specified skills, in particular, mentoring encourages the development of leadership competencies that are highly desirable at Board level.

Adopting this new Board Mentorship Program will have no direct fiscal impact on ICANN (Internet Corporation for Assigned Names and Numbers) or the community, and will not have an impact of the security, stability and resiliency of the domain name system.

This is an Organization Administrative Function that does not require public comment.

g. **USG IANA (Internet Assigned Numbers Authority) Stewardship Transition – Additional FY16 Expenses and Funding**

Whereas, the Board has approved an expense budget envelopes to support the IANA (Internet Assigned Numbers Authority) Stewardship Transition Project ("Project") during FY15 and FY16, and all approved budget envelopes will have been used after the ICANN (Internet Corporation for Assigned Names and Numbers) Meeting 55 in Marrakech.

Whereas, a Project Cost Support Team is being implemented to produce Project expense estimates for the remainder of FY16 and for FY17 for the Project.

Whereas, it is projected that further Project expenses of up to approximately US\$1.5 million will be incurred while the Project Cost Support Team is producing cost estimates.

Whereas, the Board Finance Committee met on 3 March 2016 and has approved to recommend to the Board to approve an additional Project expense budget envelope of up to US\$1.5 million to cover Project expenses while the Project Cost Support Team is working to produce estimates.

Resolved (2016.03.10.09), the Board approves a budget envelope of up to US\$1.5 million, as an interim measure, to cover the costs of the Project to be incurred until the first estimate is produced, to be funded through a fund release from the Reserve Fund.

Rationale for Resolution 2016.03.10.09

The IANA (Internet Assigned Numbers Authority) Stewardship Transition is a major initiative to which the ICANN (Internet Corporation for Assigned Names and Numbers) Community as a whole is dedicating a significant amount of time and resources. ICANN (Internet Corporation for Assigned Names and Numbers)'s support for the community's work towards a successful completion of the Project (including both the USG IANA (Internet Assigned Numbers Authority) Stewardship transition proposal development and the Cross-Community Working Group on Enhancing ICANN (Internet Corporation for Assigned Names and Numbers) Accountability's work) is critical for ICANN (Internet Corporation for Assigned Names and Numbers).

Considering its exceptional nature and the significant amount of costs anticipated to be incurred, the funding of this Project could not be provided through the Operating Fund. Accordingly, when the Board approved the FY15 and FY16 Operating Plans and Budgets, it included the anticipated funding of the transition initiative costs through a corresponding withdrawal from the Reserve Fund.

The Board previously approved the FY16 Operating Plan and Budget, which included an estimated budget envelope of US\$7 million for the USG IANA (Internet Assigned Numbers

Authority) Stewardship Transition ("The Project") to be funded by the Reserve Fund. As the Project used this entire budget envelope by the end of November 2015, the Board approved additional funding of US\$4.5 million on 2 February 2016 to allow the project to be funded through the ICANN (Internet Corporation for Assigned Names and Numbers) Meeting 55 in Marrakech.

The Board reiterates its 25 June 2015 statement that the Board is "committed to supporting the community in obtaining the advice it needs in developing recommendations in support of the transition process, and also notes the importance of making sure that the funds entrusted to ICANN (Internet Corporation for Assigned Names and Numbers) by the community are used in responsible and efficient ways. Assuring the continuation of cost-control measures over the future work of the independent counsel is encouraged." (See <https://www.icann.org/resources/board-material/resolutions-2015-06-25-en#2.c> ([/resources/board-material/resolutions-2015-06-25-en#2.c](https://www.icann.org/resources/board-material/resolutions-2015-06-25-en#2.c))).

As the community work relative to the accountability track of the Project is expected to continue, further expenses are expected through the remainder of FY16 and during FY17. The implementation planning for other parts of the Project will also continue. Separately, in order to improve visibility on and control of the expenses for this type of project in partnership with the community, a Project Costs Support Team is being formed to produce costs estimates for future work.

The Board Finance Committee has determined that an additional budget envelope of approximately US\$1.5 million needs to be approved by Board to allow ICANN (Internet Corporation for Assigned Names and Numbers) to incur further Project expenses for a short period of time after the end of the ICANN (Internet Corporation for Assigned Names and Numbers) 55 Meeting. This will give the necessary time to the project cost support team to produce estimates. These estimates will then be used by the Board to consider and approve a budget envelope for a longer period of time forward.

As this initiative's expenses and funding are approved by the Board, the ICANN (Internet Corporation for Assigned Names and Numbers) Board is now approving as an additional interim measure a budget envelope of up to US\$1.5 million to be funded through a release from the Reserve Fund to cover the estimated costs to be incurred after the end of the ICANN (Internet Corporation for Assigned Names and Numbers) 55 meeting until such time a cost estimate will be ready. The Board will be asked to approve an additional expense budget envelope for the remainder of FY16, on the basis of the estimated future expenses produced by the Project Cost Support Team.

This action will not have a direct impact on the security, stability and resiliency of the domain name system.

This is an Organizational Administrative Function that does not require public comment.

h. Thank You to Local Host of ICANN (Internet Corporation for Assigned Names and Numbers) 55 Meeting

The Board wishes to extend its thanks to the local host organizer, ANRT, for its support.

i. Thank You to Sponsors of ICANN (Internet Corporation for Assigned Names and Numbers) 55 Meeting

The Board wishes to thank the following sponsors: Verisign, Inc., Nominet UK, NCC Group, PDR Solutions FZC, China Internet Network Information Center (CNNIC), Public Interest Registry, CentralNic, Afilias plc, Radix FZC, Rightside, dotistanbul, fmai, .MA and Office National Des Aeroports.

j. Thank You to Interpreters, Staff, Event and Hotel Teams of ICANN (Internet Corporation for

Assigned Names and Numbers) 55 Meeting

The Board expresses its deepest appreciation to the scribes, interpreters, audiovisual team, technical teams, and the entire ICANN (Internet Corporation for Assigned Names and Numbers) staff for their efforts in facilitating the smooth operation of the meeting.

The Board would also like to thank the management and staff of the Palmeraie Conference Center and Hotels for providing a wonderful facility to hold this event. Special thanks are extended to Patrick Lebufno, Director General Delegue, Palmeraie Conference Center and Hotels; Boubker Bernoussi, Director of Convention Services for Palmeraie Conference Center and Hotels; Loubna El Mekkaoui, Sales Manager for Palmeraie Conference Center and Hotels; Mohamed Aziz, Director, Food and Beverage; Hassan Agouzoul, Executive Chef; Hafsa Aitouhan, Event Manager; and Jamal Drifi, Banquet Director.

2. Main Agenda:

a. Consideration of .ECO and .HOTEL IRP Declaration

Whereas, on 12 February 2016, an Independent Review Process (IRP) Panel (Panel) issued its Final Declaration in the IRPs relating to .HOTEL and .ECO.

Whereas, the Panel declared ICANN (Internet Corporation for Assigned Names and Numbers) to be the prevailing party in both IRPs, and, among other things, declared that the Board's actions or inactions did not in any way violate ICANN (Internet Corporation for Assigned Names and Numbers)'s Articles of Incorporation or Bylaws. (See Final Declaration, ¶¶ 151-156, <https://www.icann.org/en/system/files/files/irp-despegar-online-et-al-final-declaration-12feb16-en.pdf> (/en/system/files/files/irp-despegar-online-et-al-final-declaration-12feb16-en.pdf).) [PDF, 2.16 MB]

Whereas, while the Panel declared ICANN (Internet Corporation for Assigned Names and Numbers) to be the prevailing party in both the .HOTEL and .ECO IRPs, the Panel also suggested that: (1) the Board consider additional measures be added in the future to increase the consistency and predictability of the CPE process and third-party provider evaluations; (2) the Board encourage ICANN (Internet Corporation for Assigned Names and Numbers) staff to be as specific and detailed as possible in responding to requests made pursuant to ICANN (Internet Corporation for Assigned Names and Numbers)'s Documentary Information Disclosure Policy (DIDP); (3) the Board affirm, when appropriate, that ICANN (Internet Corporation for Assigned Names and Numbers)'s activities are conducted through open and transparent processes in conformance with Article IV of ICANN (Internet Corporation for Assigned Names and Numbers)'s Articles of Incorporation; and (4) the Board respond to a letter from the .HOTEL Claimants regarding the portal configuration issue as soon as feasible.

Whereas, in accordance with Article IV, section 3.21 of ICANN (Internet Corporation for Assigned Names and Numbers)'s Bylaws, the Board has considered the Panel's Final Declaration.

Resolved (2016.03.10.10), the Board accepts the following findings of the Panel's Final Declaration: (1) ICANN (Internet Corporation for Assigned Names and Numbers) is the prevailing party in the Despegar Online SRL, Donuts Inc., Famous Four Media Limited, Fegistry LLC, and Radix FZC v. ICANN (Internet Corporation for Assigned Names and Numbers) IRP; (2) ICANN (Internet Corporation for Assigned Names and Numbers) is the prevailing party in the Little Birch, LLC and Minds + Machines Group Limited v. ICANN (Internet Corporation for Assigned Names and Numbers) IRP; (3) the IRP Panel's analysis is limited to declaring whether the Board has acted consistently with the provisions of ICANN (Internet Corporation for Assigned Names and Numbers)'s Articles of Incorporation and Bylaws; (4) the Board (including the Board

Governance Committee) acted consistently with the Articles of Incorporation and Bylaws; (5) the parties shall each bear their own expenses including legal fees; and (6) the IRP costs shall be divided between the parties in a 50% (claimants) / 50% (ICANN (Internet Corporation for Assigned Names and Numbers)) proportion.

Resolved (2016.03.10.11), the Board notes the Panel's suggestions, and: (1) directs the President and CEO, or his designee(s), to ensure that the New gTLD (generic Top Level Domain) Program Reviews take into consideration the issues raised by the Panel as they relate to the consistency and predictability of the CPE process and third-party provider evaluations; (2) encourages ICANN (Internet Corporation for Assigned Names and Numbers) staff to be as specific and detailed as possible in responding to DIDP requests, particularly when not disclosing requested documents; (3) affirms that, as appropriate, ICANN (Internet Corporation for Assigned Names and Numbers) will continue to ensure that its activities are conducted through open and transparent processes in conformance with Article IV of ICANN (Internet Corporation for Assigned Names and Numbers)'s Articles of Incorporation; and (4) directs the President and CEO, or his designee(s), to complete the investigation of the issues alleged by the .HOTEL Claimants regarding the portal configuration as soon as feasible and to provide a report to the Board for consideration following the completion of that investigation.

Rationale for Resolutions 2016.03.10.10 – 2016.03.10.11

Despegar Online SRL, Donuts Inc., Famous Four Media Limited, Fegistry LLC, and Radix FZC (collectively, ".HOTEL Claimants") filed a request for an Independent Review Process (IRP) challenging the Community Priority Evaluation (CPE) Panel Report finding that the one community application for .HOTEL prevailed in CPE (the ".HOTEL IRP"). Specifically, the .HOTEL Claimants filed Reconsideration Request 14-34 seeking reconsideration of the CPE Panel Report, and

Reconsideration Request 14-39 seeking reconsideration of ICANN (Internet Corporation for Assigned Names and Numbers) staff's determination, pursuant to the Documentary Information Disclosure Policy (DIDP), that certain documents related to the CPE Panel Report were not appropriate for disclosure under the DIDP Defined Conditions for Nondisclosure. The Board Governance Committee (BGC) denied Reconsideration Requests 14-34 and 14-39, finding that the .HOTEL Claimants had not stated proper grounds for reconsideration. The .HOTEL IRP challenged the denial of Reconsideration Requests 14-34 and 14-39, and argued that the Board should have take further action with respect to the CPE Panel Report.

Little Birch LLC and Minds + Machines Group Limited (collectively, ".ECO Claimants") filed an IRP Request challenging the CPE Panel Report finding that the one community application for .ECO prevailed in CPE (the ".ECO IRP"). Specifically, the .ECO Claimants filed Reconsideration Request 14-46, seeking reconsideration of the CPE Panel Report. The BGC denied Reconsideration Request 14-46, finding that the .ECO Claimants had not stated proper grounds for reconsideration. The .ECO IRP challenged the denial of Reconsideration Request 14-46, and alleged that ICANN (Internet Corporation for Assigned Names and Numbers) "has failed to act with due diligence and failed to exercise independent judgment" in "adopting" the CPE Panel Report, and requested that ICANN (Internet Corporation for Assigned Names and Numbers) be "required to overturn the CPE in relation to .eco and allow the .ECO Claimants' applications to proceed on their own merits."

On 12 May 2015, the .HOTEL and the .ECO IRPs were consolidated under a single IRP Panel (Panel). The Panel held a telephonic hearing on 7 December 2015. On 12 February 2016, the three-member Panel issued its Final Declaration. After consideration and discussion, pursuant to Article IV, Section 3.21 of the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws, the Board adopts the findings of

the Panel, which are summarized below, and can be found in full at <https://www.icann.org/en/system/files/files/irp-despegar-online-et-al-final-declaration-12feb16-en.pdf> (/en/system/files/files/irp-despegar-online-et-al-final-declaration-12feb16-en.pdf). [PDF, 2.16 MB]

The Panel found that the "analysis, which the Panel is charged with carrying out in this IRP, is one of comparing the actions of the Board with the Articles of Incorporation and Bylaws, and declaring whether the Board has acted consistently with the provisions of those Articles of Incorporation and Bylaws." (Final Declaration at ¶ 58.)

Using the applicable standard of review, the Panel found that: (1) ICANN (Internet Corporation for Assigned Names and Numbers) is the prevailing party in the *Despegar Online SRL, Donuts Inc., Famous Four Media Limited, Fegistry LLC, and Radix FZC v. ICANN (Internet Corporation for Assigned Names and Numbers)* IRP; (2) ICANN (Internet Corporation for Assigned Names and Numbers) is the prevailing party in the *Little Birch, LLC and Minds + Machines Group Limited v. ICANN (Internet Corporation for Assigned Names and Numbers)* IRP; (3) the Board (including the Board Governance Committee) acted consistently with the Articles of Incorporation and Bylaws; (4) the parties shall each bear their own expenses including legal fees; and (5) the IRP costs shall be divided between the parties in a 50% (claimants) / 50% (ICANN (Internet Corporation for Assigned Names and Numbers)) proportion. (See Final Declaration at ¶¶ 151, 154-156, 160.)

More specifically, the Panel found that the .HOTEL IRP "was always going to fail given the clear and thorough reasoning adopted by the BGC in its denial" of Reconsideration Requests 14-34 and 14-39. (Final Declaration at ¶ 155.) And, "[a]s for the .eco IRP, it is clear that the Reconsideration Request [14-46] was misconceived and was little more than an attempt to appeal the CPE decision. Again, therefore, the .eco IRP was always going to fail." (Final Declaration at ¶ 156.)

It should be noted that, while ruling in ICANN (Internet Corporation for Assigned Names and Numbers)'s favor and denying both IRPs, the Panel did make some observations and suggestions for the Board's consideration. In particular, while recognizing that the New gTLD (generic Top Level Domain) Program is near its end "and there is little or nothing that ICANN (Internet Corporation for Assigned Names and Numbers) can do now," the Panel suggested that a system be put in place to ensure that CPE evaluations are conducted "on a consistent and predictable basis by different individual evaluators," and to ensure that ICANN (Internet Corporation for Assigned Names and Numbers)'s core values "flow through...to entities such as the EIU." (*Id.* at ¶¶ 147, 150.) The Panel also noted that ICANN (Internet Corporation for Assigned Names and Numbers) staff could have better explained its determination that certain requested documents were subject to the Defined Conditions for Nondisclosure in the Documentary Information Disclosure Policy (DIDP). (*Id.* at ¶ 110.) The Panel also suggested that "to the extent possible, and compatible with the circumstances and the objects to be achieved by ICANN (Internet Corporation for Assigned Names and Numbers)" in taking a particular decision (*Id.* at ¶ 145), the Board affirm that ICANN (Internet Corporation for Assigned Names and Numbers) carries out its activities "through open and transparent processes" pursuant to Article IV of ICANN (Internet Corporation for Assigned Names and Numbers)'s Articles of Incorporation. In addition, the Panel encouraged ICANN (Internet Corporation for Assigned Names and Numbers) to respond to a letter from the .HOTEL Claimants regarding the portal configuration issue as soon as feasible. (*Id.* at ¶ 134.)

The Board acknowledges the foregoing suggestions by the Panel. The Board has considered the suggestions and notes that it will ensure that the New gTLD (generic Top Level Domain) Program Reviews take into consideration the issues raised by the Panel as they relate to the consistency and predictability of the CPE process and third-party provider

evaluations. The Board also affirms that ICANN (Internet Corporation for Assigned Names and Numbers), as appropriate, will continue to ensure that its activities are conducted through open and transparent processes in conformance with Article IV of ICANN (Internet Corporation for Assigned Names and Numbers)'s Articles of Incorporation. The Board also encourages ICANN (Internet Corporation for Assigned Names and Numbers) staff to be as specific and detailed as possible in responding to DIDP requests, particularly when determining that requested documents will not be disclosed. In this regard, the Board notes that the Cross Community Working Group (CCWG) on Enhancing ICANN (Internet Corporation for Assigned Names and Numbers) Accountability has identified that reviewing and enhancing the DIDP is one of the topics that it will address in Workstream 2. This work, which will be further framed starting at the ICANN55 meeting in Marrakech, is likely to include review of the scope of the DIDP Defined Conditions for Nondisclosure.

Finally, with respect to the Panel's recommendation that ICANN (Internet Corporation for Assigned Names and Numbers) respond to a letter from the .HOTEL Claimants regarding the portal configuration issue as soon as feasible, the Board notes that staff has informed the Board that it is nearing the end of its investigation of this matter. The Board is recently in receipt of two letters from Claimants regarding the portal configuration issue, dated 1 March 2016 and 8 March 2016, respectively. Staff has provided the Board with an update of its investigation into the issues set forth in the letters. The Board has directed the President and CEO, or his designee(s) to complete its investigation into this matter as soon as feasible. The Board notes that out of a matter of equity and fairness, the investigation should include the opportunity for all relevant parties to be heard. The Board expects the staff will prepare a report for the Board following the completion of its investigation, at which time the Board will consider the .HOTEL Claimants request for cancellation of HOTEL Top-Level Domain S.a.r.l.'s application for .HOTEL.

As required, the Board has considered the Final Declaration. As this Board has previously indicated, the Board takes very seriously the results of one of ICANN (Internet Corporation for Assigned Names and Numbers)'s long-standing accountability mechanisms. Accordingly, and for the reasons set forth in this Resolution and Rationale, the Board has accepted the Panel's Final Declaration as indicated above. Adopting the Panel's Final Declaration will have no direct financial impact on the organization and no direct impact on the security, stability or resiliency of the domain name system.

This is an Organizational Administrative function that does not require public comment.

b. IANA (Internet Assigned Numbers Authority) Stewardship Transition Proposal from ICG (IANA Stewardship Transition Coordination Group)

Whereas, on 14 March 2014, the National Telecommunications and Information Administration (NTIA (US National Telecommunications and Information Agency)) of the United States Department of Commerce announced its intention to transition the stewardship of the IANA (Internet Assigned Numbers Authority) Functions to the global multistakeholder community.

Whereas, NTIA (US National Telecommunications and Information Agency) asked ICANN (Internet Corporation for Assigned Names and Numbers) to convene global stakeholders to develop a proposal to transition the current role played by NTIA (US National Telecommunications and Information Agency) in the coordination of the Internet's domain name system (DNS (Domain Name System)). NTIA (US National Telecommunications and Information Agency) required that the proposal for transition must have broad community support and uphold the following principles:

- Support and enhance the multistakeholder model;

- Maintain the security, stability, and resiliency of the Internet DNS (Domain Name System);
- Meet the needs and expectation of the global customers and partners of the IANA (Internet Assigned Numbers Authority) services; and,
- Maintain the openness of the Internet.

NTIA (US National Telecommunications and Information Agency) also stated it would not accept a proposal that replaces the NTIA (US National Telecommunications and Information Agency) role with a government-led or an inter-governmental organization solution.

Whereas, after public input into the design of the process, the IANA (Internet Assigned Numbers Authority) Stewardship Transition Coordination Group (ICG (IANA Stewardship Transition Coordination Group)) was formed, with 30 members representing 13 communities of both direct and indirect stakeholders each selected by their respective communities. The communities represented were the At-Large Advisory Committee (Advisory Committee), Address Supporting Organization (Supporting Organization), Country-Code Names Supporting Organization (Supporting Organization), Governmental Advisory Committee (Advisory Committee), Generic Names Supporting Organization (Supporting Organization), Generic Top-Level Domain Registries, International Chamber of Commerce/Business Action to Support the Information Society, Internet Architecture Board, Internet Engineering Task Force, Internet Society, Number Resource Organization, Root Server System Advisory Committee (Advisory Committee), and the Security (Security – Security, Stability and Resiliency (SSR))and Stability (Security, Stability and Resiliency) Advisory Committee (Advisory Committee). A liaison from the ICANN (Internet Corporation for Assigned Names and Numbers) Board, as well as an IANA (Internet Assigned Numbers Authority) Staff Liaison Expert were also named. The ICG (IANA Stewardship Transition

Coordination Group) is supported by an independent Secretariat.

Whereas, in response to its request, each of those operating communities in turn developed their own team to coordinate the development of a plan to submit to the ICG (IANA Stewardship Transition Coordination Group). The ICG (IANA Stewardship Transition Coordination Group) received plans from the Domain Names communities (developed in the Cross-Community Working Group to Develop an IANA (Internet Assigned Numbers Authority) Stewardship Transition Proposal, or the CWG-Stewardship) in June 2015, the Number Resources community (developed by the Consolidated RIR (Regional Internet Registry) IANA (Internet Assigned Numbers Authority) Stewardship Proposal Team, or CRISP) in January 2015, and the Protocol (Protocol) Parameters community (developed in the IANAPLAN team) in January 2015. The CWG-Stewardship, CRISP and IANAPLAN teams each developed their plans through open consultation processes. The ICG (IANA Stewardship Transition Coordination Group) took these three community-developed plans and assessed them individually and collectively in order to determine whether: (1) the community processes were open and inclusive and if consensus was achieved for the plans; (2) the proposals are complete and clear; (3) the three proposals together are compatible and interoperable, provide appropriate accountability mechanisms, and are workable; and (4) the proposals together meet the NTIA (US National Telecommunications and Information Agency) criteria.

Whereas, the ICG (IANA Stewardship Transition Coordination Group) found that each of its assessment criteria were met, and coordinated the three plans into a single unified Proposal. The Proposal went out for public comment from August-September 2015, and received 157 comments on the combined proposal from a wide variety of stakeholders, including individuals, operational communities, supporting organizations and advisory committees within the ICANN (Internet Corporation for Assigned Names and Numbers) community, businesses and

trade associations, civil society groups, governments, and others from all regions of the world.

Whereas, upon deliberation and consideration of public comments, the ICG ([IANA Stewardship Transition Coordination Group](#)) achieved unanimous support among its members for the Proposal. The ICG ([IANA Stewardship Transition Coordination Group](#)) completed its work on 29 October 2015 and finalized its proposal, with the exception of one item. The CWG-Stewardship plan identified contingencies on the work of the Cross-Community Working Group on Enhancing ICANN ([Internet Corporation for Assigned Names and Numbers](#)) Accountability (CCWG-Accountability), and the ICG ([IANA Stewardship Transition Coordination Group](#)) received confirmation from the CWG-Stewardship on 29 February 2016 that the contingencies had been met.

Whereas, the CCWG-Accountability finalized its report on 10 March 2016, and thus provided the final confirmation to the ICG ([IANA Stewardship Transition Coordination Group](#)) on the meeting of the interdependencies with the CWG-Stewardship's portion of the Proposal.

Whereas, on 10 March 2016, the ICG ([IANA Stewardship Transition Coordination Group](#)) formally transmitted its report to the ICANN ([Internet Corporation for Assigned Names and Numbers](#)) Board for consideration.

Whereas, during the Proposal development process, the Board engaged in each part of the process. The Board monitored the development of all parts of the proposals and provided public comment as appropriate, including commenting on both the first and second versions of the CWG plan, and on 8 September 2015 providing a comment on the ICG ([IANA Stewardship Transition Coordination Group](#)) Proposal noting some specific concerns that should be addressed during the implementation phase. The Board's input to the ICG ([IANA Stewardship Transition Coordination Group](#)) is at <https://comments.ianacg.org/pdf/submission/submission121.pdf>

<https://comments.ianacg.org/pdf/submission/submission121.pdf>). [PDF, 133 KB] A comprehensive list of all the ICANN (Internet Corporation for Assigned Names and Numbers) Board's input into the processes are detailed at <https://www.icann.org/resources/pages/board-input-stewardship-accountability-2015-07-10-en> (</resources/pages/board-input-stewardship-accountability-2015-07-10-en>).

Whereas, on 19 February 2016, the Board held an information call wherein it refreshed its review of the ICG (IANA Stewardship Transition Coordination Group) Proposal in anticipation that the Proposal would soon be delivered.

Resolved (2016.03.10.12), the ICANN (Internet Corporation for Assigned Names and Numbers) Board accepts the ICG (IANA Stewardship Transition Coordination Group)'s IANA (Internet Assigned Numbers Authority) Stewardship Transition Proposal.

Resolved (2016.03.10.13), the Board approves of the transmittal of the Proposal to the National Telecommunications & Information Administration of the United States Department of Commerce in response to NTIA (US National Telecommunications and Information Agency)'s 14 March 2014 announcement.

Resolved (2016.03.10.14), the President and CEO, or his designee, is directed to plan for the implementation of the Proposal so that ICANN (Internet Corporation for Assigned Names and Numbers) is operationally ready to implement in the event NTIA (US National Telecommunications and Information Agency) approves of the Proposal and the IANA (Internet Assigned Numbers Authority) Functions Contract expires.

Resolved (2016.03.10.15), the Board expresses its deep appreciation for the tireless efforts of the ICG (IANA Stewardship Transition Coordination Group) chairs and members in developing the Proposal, as well as the chairs, members and participants in the CWG-Stewardship, CRISP and IANAPLAN teams. The development of the coordinated

Proposal across these four volunteer teams is a true demonstration of the strength and triumph of the multistakeholder model.

Rationale for Resolution 2016.03.10.12 – 2016.03.10.15

The acceptance and transmittal of the ICG (IANA Stewardship Transition Coordination Group)'s IANA (Internet Assigned Numbers Authority) Stewardship Transition Proposal to NTIA (US National Telecommunications and Information Agency) is the culmination of a nearly two-year process. NTIA (US National Telecommunications and Information Agency)'s call for ICANN (Internet Corporation for Assigned Names and Numbers) to convene global stakeholders to develop a proposal to transition the current role played by NTIA (US National Telecommunications and Information Agency) in the coordination of the Internet's unique identifiers has been met. This is the end of the first phase in the path towards the privatization of DNS (Domain Name System) management, a goal since ICANN (Internet Corporation for Assigned Names and Numbers)'s formation.

The global multistakeholder community embraced NTIA (US National Telecommunications and Information Agency)'s call to action, first developing the plan for how the proposal will be developed, at <https://www.icann.org/resources/pages/process-next-steps-2014-06-06-en> (</resources/pages/process-next-steps-2014-06-06-en>) after a call for public input, available at <https://www.icann.org/resources/pages/draft-proposal-2014-04-08-en> (</resources/pages/draft-proposal-2014-04-08-en>). The IANA (Internet Assigned Numbers Authority) Stewardship Transition Coordination Team, or ICG (IANA Stewardship Transition Coordination Group), was formed out of that effort, comprised of individuals selected by each represented community. These 30 individuals represent 13 communities of both direct and indirect stakeholders who together delivered a proposal to recommending a transition plan of NTIA (US National Telecommunications and Information

Agency)'s stewardship of IANA (Internet Assigned Numbers Authority) functions to the Internet community, consistent with the key principles outlined in the NTIA (US National Telecommunications and Information Agency) March 14 announcement. The ICG (IANA Stewardship Transition Coordination Group) membership is identified at <https://www.icann.org/resources/pages/icg-members-2014-07-29-en> (/resources/pages/icg-members-2014-07-29-en). The ICG (IANA Stewardship Transition Coordination Group) documented its work at <https://www.ianacg.org/> (<https://www.ianacg.org/>).

The ICG (IANA Stewardship Transition Coordination Group) called upon the operational communities to develop comprehensive plans for transition of NTIA (US National Telecommunications and Information Agency)'s role as it relates to each of the three functions served under the IANA (Internet Assigned Numbers Authority) Functions Contract. The Request for Transition Proposals, at <https://www.icann.org/news/announcement-2014-09-09-en> (/news/announcement-2014-09-09-en), specified a comprehensive list of requirements, including: descriptions of how the community uses the IANA (Internet Assigned Numbers Authority) functions and existing arrangements; proposed oversight and accountability arrangements post-transition; transition implications; identification of the how the NTIA (US National Telecommunications and Information Agency) criteria are met; and description of community process and consensus assessment.

The operating communities each responded through separate teams. The Domain Names communities formed the Cross-Community Working Group to Develop an IANA (Internet Assigned Numbers Authority) Stewardship Transition Proposal (CWG-Stewardship), <https://community.icann.org/x/37fhAg> (<https://community.icann.org/x/37fhAg>). The Domain Name (Domain Name) Community's report was the result of over 100 calls or meetings, 2 public consultations and more than 4,000 email messages. The final proposal received the consensus

support of the CWG with no objections or minority statements recorded for Chartering Organization consideration.

The Number Resources community formed the Consolidated RIR (Regional Internet Registry) IANA (Internet Assigned Numbers Authority) Stewardship Proposal Team (CRISP), tracked at <https://www.nro.net/nro-and-internet-governance/iana-oversight/consolidated-rir-iana-stewardship-proposal-team-crisp-team> (<https://www.nro.net/nro-and-internet-governance/iana-oversight/consolidated-rir-iana-stewardship-proposal-team-crisp-team>). Within the Number Resources community, each of the five RIRs also performed work to support the CRISP work, and details on those proceedings can be accessed from <https://www.icann.org/en/stewardship/community> ([/en/stewardship/community](https://www.icann.org/en/stewardship/community)). Each region contributed to the community consensus via regionally defined processes suitable to their particular local needs and culture.

The Protocol (Protocol) Parameters community established the IANAPLAN working group to elaborate a response, with a mailing list at <http://www.ietf.org/iana-transition.html> (<http://www.ietf.org/iana-transition.html>). Anyone was welcome to join the conversation and participate in the development. A publicly archived and open mailing list was created to this end and yielded 2,252 emails.

Upon receipt of all three reports, the ICG (IANA Stewardship Transition Coordination Group) reviewed each report to consider if: (1) the community processes were open and inclusive and if consensus was achieved for the plans; (2) the proposals are complete and clear; (3) the three proposals together are compatible and interoperable, provide appropriate accountability mechanisms, and are workable; and (4) the proposals together meet the NTIA (US National Telecommunications and Information Agency) criteria. The ICG (IANA Stewardship Transition Coordination Group) Proposal details the findings on each of these elements and the Board agrees with these findings.

The ICG (IANA Stewardship Transition Coordination Group) received 157 comments on its draft combined proposal from a wide variety of stakeholders, including individuals, operational communities, supporting organizations and advisory committees within the ICANN (Internet Corporation for Assigned Names and Numbers) community, businesses and trade associations, civil society groups, governments, and others from all regions of the world. In support of the proposal, the ICG (IANA Stewardship Transition Coordination Group) produced a comprehensive summary of public comments (<https://www.ianacg.org/icg-files/documents/Public-Comment-Summary-final.pdf> (<https://www.ianacg.org/icg-files/documents/Public-Comment-Summary-final.pdf>) [PDF, 253 KB] to identify the comments received and how they were addressed in the Proposal. The comments, on the whole, also support the ICG (IANA Stewardship Transition Coordination Group)'s findings.

The ICG (IANA Stewardship Transition Coordination Group)'s deliberations were extensive. Seven face-to-face meetings, 26 conference calls and the exchange of 5,627 emails were the tools needed to build the report. To maintain and safeguard the inclusiveness of the process, interpretation services were provided for meetings. Translations of working documents were delivered, and inputs received in languages other than English were also translated. Seven engagement sessions were organized to foster awareness and receive feedback. The ICG (IANA Stewardship Transition Coordination Group) called for input to its work at different phases, including a call for comments to validate community support for how ICG (IANA Stewardship Transition Coordination Group) was performing its work. ICANN (Internet Corporation for Assigned Names and Numbers) in its facilitation of the process provided all resources and support requested by the community to develop a consensus proposal.

The two most important considerations for the Board are on the compatibility and interoperability of the three plans, and whether the proposals meet NTIA (US National Telecommunications and Information Agency)'s criteria.

Compatibility and interoperability

The Board has reviewed all three components of the plan. As the Board stated in its 8 September 2015 comments to the [ICG \(IANA Stewardship Transition Coordination Group\)](#), <https://comments.ianacg.org/pdf/submission/submission121.pdf> (<https://comments.ianacg.org/pdf/submission/submission121.pdf>), [PDF, 133 KB] "While the [ICG \(IANA Stewardship Transition Coordination Group\)](#) has asserted that there are no incompatibilities between the three operational communities' proposals received (also known as the CRISP, CWG-Stewardship, and IANAPLAN responses), there are some implementation details and foreseen complexities that will need further coordination with the communities for clarity. As implementation occurs, ways to address the elements of the proposal may evolve, and in our comments below, we have endeavored to highlight some of these and provide the [ICG \(IANA Stewardship Transition Coordination Group\)](#) with implementation suggestions.

We do not believe that any of these issues poses a threat to the viability of the final [ICG \(IANA Stewardship Transition Coordination Group\)](#) Proposal. We hope that these implementation issues and details can be resolved in the implementation phase, but we urge the community and where needed the [ICG \(IANA Stewardship Transition Coordination Group\)](#) to consider these issues and begin to clarify as soon as practicable in the interests of a smooth [IANA \(Internet Assigned Numbers Authority\)](#) Stewardship Transition."

The areas identified by the Board on potential areas of overlap that require further coordination in the implementation phase include: (1) new service levels and operational changes; (2) jointly managed functions; (3) the relationship between the "Post Transition [IANA \(Internet Assigned Numbers Authority\)](#)" identified perform the naming-related functions and the other operating communities; and (4) transfer to successor operator requirements. [ICANN \(Internet Corporation for Assigned Names and Numbers\)](#) stands ready to work with the

communities to address these issues within the implementation planning phase.

NTIA (US National Telecommunications and Information Agency) Criteria Appear To Be Met

The Board agrees with the ICG (IANA Stewardship Transition Coordination Group)'s determination that the NTIA (US National Telecommunications and Information Agency) criteria have been met through the consensus-supported ICG (IANA Stewardship Transition Coordination Group) Proposal.

1. Support and enhance the multistakeholder model.

The ICG (IANA Stewardship Transition Coordination Group) noted, and the Board agrees, that each of the operating communities modeled their post-transition proposal on the existing arrangements and structures. The arrangements between ICANN (Internet Corporation for Assigned Names and Numbers) and the Protocol (Protocol) Parameters and Numbers Resource communities remain largely unchanged, and the multistakeholder nature of oversight in the naming community will likely be enhanced through the development of community-based standing committees and review processes. The existing IANA (Internet Assigned Numbers Authority) Functions Contract served as the basis for many of the proposed post-transition plans, with enhanced responsibility placed on the multistakeholder community in overseeing the work.

2. Maintain the security, stability, and resiliency of the Internet DNS (Domain Name System).

The Board agrees with the ICG (IANA Stewardship Transition Coordination Group) that the security, stability and resiliency of the Internet DNS (Domain Name System) are maintained through the combined Proposal. There is no change suggested by the Numbers

Resource or Protocol (Protocol) Parameters

communities that could impact the security, stability or resiliency of the DNS (Domain Name System). These proposals are built upon the existing structure.

Though the Names community is calling for the creation of a subsidiary of ICANN (Internet Corporation for Assigned Names and Numbers) to perform the naming function, ICANN (Internet Corporation for Assigned Names and Numbers) agrees with the ICG (IANA Stewardship Transition Coordination Group) that this portion of the proposal also maintains the security, stability and resiliency of the Internet DNS (Domain Name System). There is minimal change contemplated for the technical delivery of the naming-related functions, and the role remains unchanged.

ICANN (Internet Corporation for Assigned Names and Numbers) agrees that it is essential to have a contract in place between ICANN (Internet Corporation for Assigned Names and Numbers) and the Root Zone (Root Zone) Maintainer prior to any expiration of the IANA (Internet Assigned Numbers Authority) Functions Contract, and this is key to security and stability concerns.

3. Meet the needs and expectation of the global customers and partners of the IANA (Internet Assigned Numbers Authority) services.

The Board agrees with the ICG (IANA Stewardship Transition Coordination Group) that this condition has been met. The ICG (IANA Stewardship Transition Coordination Group) stated "All three communities determined that the global customers and partners of the IANA (Internet Assigned Numbers Authority) services and their communities of stakeholders are presently satisfied with the performance of the IANA (Internet Assigned Numbers Authority) functions by the IANA

(Internet Assigned Numbers Authority) department of ICANN (Internet Corporation for Assigned Names and Numbers). The combined proposal is not expected to impact that."

4. *Maintain the openness of the Internet.*

The ICG (IANA Stewardship Transition Coordination Group) determined "The combined proposal requires that the IANA (Internet Assigned Numbers Authority) services, associated policy development processes, and IANA (Internet Assigned Numbers Authority) registries remain fully open and accessible just as they are today." The Board agrees that the ICG (IANA Stewardship Transition Coordination Group) Proposal, though it identifies some organizational changes through which the IANA (Internet Assigned Numbers Authority) Functions will be delivered, otherwise has no impact on the variety of open policy development processes or on the databases and IANA (Internet Assigned Numbers Authority) registries that are available today.

5. *No replacement of the NTIA (US National Telecommunications and Information Agency) role with a government-led or an inter-governmental organization solution.*

NTIA (US National Telecommunications and Information Agency) also specified that its role could not be replaced by a government-led or an inter-governmental organization solution. This condition is met. None of the operating communities define a role for a government-led or inter-governmental organization solution, relying instead on the operating communities and other indirect customers of the IANA (Internet Assigned Numbers Authority) functions to perform the different oversight and accountability roles. The Proposal affirms the role of the multistakeholder community.

Resource Implication

Accepting the Proposal and transmitting the Proposal to NTIA (US National Telecommunications and Information Agency) do not, specifically impose any resource requirements on ICANN (Internet Corporation for Assigned Names and Numbers). However, the planning for implementation that is necessary to be at a place that ICANN (Internet Corporation for Assigned Names and Numbers) is ready to implement these changes if the IANA (Internet Assigned Numbers Authority) Functions Contract expires. That effort requires significant resources, such as systems and reporting updates, funding the development of an affiliate not-for-profit entity, development of changes to ICANN (Internet Corporation for Assigned Names and Numbers)'s Bylaws as well as governing documents for the new entity, completing contracts necessary for the performance of the IANA (Internet Assigned Numbers Authority) functions, and constituting the new community-based groups involved in oversight in the future. Both the community and ICANN (Internet Corporation for Assigned Names and Numbers) will be called upon to devote time to this effort. Fiscally, the implementation planning must proceed with considerations of fiscal responsibility, and the Board looks forward to working with the community to develop cost management tools that will result in better estimation of costs. The Board will use these estimates to guide future budgeting decisions on the IANA (Internet Assigned Numbers Authority) Stewardship Transition work.

During the development of proposal, ICANN (Internet Corporation for Assigned Names and Numbers) provided funding and staff resources for various aspects of the work, including initiating the work of the ICG (IANA Stewardship Transition Coordination Group), travel costs for face-to-face meetings, funding an independent Secretariat to support the ICG (IANA Stewardship Transition Coordination Group), staff support to the CWG-Stewardship, and funding external counsel to advise the CWG in the development of its proposal. The funds expended to date on the collective ICG (IANA

Stewardship Transition Coordination Group) effort helped provide the multistakeholder community with the opportunity to develop the proposals with the levels of independence it said were important. Further, the availability of external advice supported the CWG's debate and dialogue that led to its final recommendations. Providing these resources was an important facet of assuring multistakeholder participation in this work.

DNS (Domain Name System) Impact

The acceptance and transmittal of this Proposal are not expected to have any impact on the security, stability and resiliency of the Internet DNS (Domain Name System). Planning for implementation of the Proposal helps assure that ICANN (Internet Corporation for Assigned Names and Numbers) can continue the performance of the required functions, even in a post-transition environment, with no environment, with no impact on security, stability or resiliency.

Conclusion

Taking this action today is an important affirmation of the multistakeholder model. The global multistakeholder community came together and developed a plan for the transition of the IANA (Internet Assigned Numbers Authority) Functions Stewardship. Issues were debated in multiple fora. Public comments were received, analyzed and incorporated. The resulting Proposal has the consensus of the operating communities impacted by the respective portions, as well. The Proposal also received unanimous consensus from across the 13 communities represented in the ICG (IANA Stewardship Transition Coordination Group).

The Board thanks NTIA (US National Telecommunications and Information Agency) for giving the multistakeholder community the opportunity to develop this Proposal. Accepting this report and transmitting it to NTIA (US National Telecommunications and Information Agency) for consideration is an important step in maintaining accountability to the multistakeholder community,

and the Board serves the public interest in taking this decision.

This is an Organizational Administrative Function that has been subject to multiple levels of public comment.

c. **Proposal from CCWG on Enhancing ICANN (Internet Corporation for Assigned Names and Numbers) Accountability**

Whereas, on 14 March 2014, the National Telecommunications and Information Administration of the United States Department of Commerce announced its intention to transition the stewardship of the IANA (Internet Assigned Numbers Authority) Functions to the global multistakeholder community.

Whereas, NTIA (US National Telecommunications and Information Agency) asked ICANN (Internet Corporation for Assigned Names and Numbers) to convene global stakeholders to develop a proposal to transition the current role performed by NTIA (US National Telecommunications and Information Agency) in the coordination of the Internet's domain name system (DNS (Domain Name System)). NTIA (US National Telecommunications and Information Agency) required that the proposal for transition must have broad community support and uphold the following principles:

- Support and enhance the multistakeholder model;
- Maintain the security, stability, and resiliency of the Internet DNS (Domain Name System);
- Meet the needs and expectation of the global customers and partners of the IANA (Internet Assigned Numbers Authority) services; and,
- Maintain the openness of the Internet.

NTIA (US National Telecommunications and Information Agency) also stated it would not accept a proposal that replaces the NTIA (US National Telecommunications and

Information Agency) role with a government-led or an inter-governmental organization solution.

Whereas, during initial discussions on how to proceed with the transition process, the ICANN (Internet Corporation for Assigned Names and Numbers) multistakeholder community, raised concerns on the impact of the transition on ICANN (Internet Corporation for Assigned Names and Numbers)'s accountability, with the removal of the perceived backstop of NTIA (US National Telecommunications and Information Agency)'s historical role.

Whereas, ICANN (Internet Corporation for Assigned Names and Numbers) supported the community in the development of the Cross-Community Working Group on Enhancing ICANN (Internet Corporation for Assigned Names and Numbers) Accountability (CCWG-Accountability), chartered by the Address Supporting Organization (Supporting Organization), the At-Large Advisory Committee (Advisory Committee), the Country Code Names Supporting Organization (Supporting Organization), the Generic Names Supporting Organization (Supporting Organization), the Governmental Advisory Committee (Advisory Committee) and the Security (Security – Security, Stability and Resiliency (SSR))and Stability (Security, Stability and Resiliency) Advisory Committee (Advisory Committee). The CCWG-Accountability has 28 members from across the Chartering Organizations, with an additional 175 registered participants.

Whereas, the CCWG-Accountability's work was determined to be interrelated with the work to develop a proposal being developed by the IANA (Internet Assigned Numbers Authority) Stewardship Transition Coordination Group (ICG (IANA Stewardship Transition Coordination Group)), the proposal called for by NTIA (US National Telecommunications and Information Agency) in its announcement. ICANN (Internet Corporation for Assigned Names and Numbers) agreed that after the Board considered the CCWG-Accountability proposal, it would be transmitted to NTIA (US National

Telecommunications and Information Agency) to support its evaluation of the ICG (IANA Stewardship Transition Coordination Group)'s proposal.

Whereas, the CCWG-Accountability's work is divided into two phases:

- **Work Stream 1:** focused on mechanisms enhancing ICANN (Internet Corporation for Assigned Names and Numbers) accountability that must be in place or committed to within the time frame of the IANA (Internet Assigned Numbers Authority) Stewardship Transition; and
- **Work Stream 2:** focused on addressing accountability topics for which a timeline for developing solutions and full implementation may extend beyond the IANA (Internet Assigned Numbers Authority) Stewardship Transition.

Whereas, the CCWG-Accountability's deliberations to date have focused on preparing a set of recommendations to fulfill its Work Stream 1 objectives, and defining the topics that will be considered for Work Stream 2. The CCWG-Accountability developed its report in multiple phases and iterations that included participation beyond the CCWG-Accountability, and beyond ICANN (Internet Corporation for Assigned Names and Numbers) as a whole.

Whereas, the CCWG-Accountability requested that counsel external to ICANN (Internet Corporation for Assigned Names and Numbers) be made available to provide advice on the governance issues that the CCWG-Accountability identified as necessary as part of its work. In coordination with ICANN (Internet Corporation for Assigned Names and Numbers), two sets of legal counsel were engaged and have provided advice and counsel directly to the CCWG-Accountability. ICANN (Internet Corporation for Assigned Names and Numbers) funds the work of these two firms.

Whereas, in October 2014, the Board committed to a process

through which it would consider the consensus-based recommendations of the CCWG-Accountability in Resolution 2014.10.16.16 at <https://www.icann.org/resources/board-material/resolutions-2014-10-16-en#2.d> (</resources/board-material/resolutions-2014-10-16-en#2.d>).

Whereas, the Board has been closely following the work of the CCWG-Accountability, including identifying a liaison to the group, and active participation from across the Board in CCWG-Accountability meetings. The Board has participated in the public comment processes on the iterations of the CCWG-Accountability reports, and has provided interim inputs into the deliberations on an ongoing basis. A comprehensive list of all the ICANN (Internet Corporation for Assigned Names and Numbers) Board's input into the process is detailed at <https://www.icann.org/resources/pages/board-input-stewardship-accountability-2015-07-10-en> (</resources/pages/board-input-stewardship-accountability-2015-07-10-en>).

Whereas, on 10 March 2016, the CCWG-Accountability Co-Chairs transmitted its Cross Community Working Group on Enhancing ICANN (Internet Corporation for Assigned Names and Numbers) Accountability (CCWG-Accountability) Work Stream 1 Report ("Report") to the ICANN (Internet Corporation for Assigned Names and Numbers) Board, confirming that the recommendations achieved consensus in the CCWG-Accountability. The Report was approved by five of the Chartering Organizations, with the sixth, the GAC (Governmental Advisory Committee), submitting a statement of non-objection to transmitting the Report to the Board. The CCWG-Accountability also confirmed the support of the Cross-Community Working Group to Develop an IANA (Internet Assigned Numbers Authority) Stewardship Transition Proposal (CWG-Stewardship), the group responsible for developing the Domain Names Community's input into the IANA (Internet Assigned Numbers Authority) Stewardship Transition Coordination Group's proposal. The CWG-Stewardship had identified certain contingencies on the CCWG-Accountability's recommendations, which were confirmed as met.

Resolved (2016.03.10.16), the ICANN (Internet Corporation for Assigned Names and Numbers) Board accepts the Cross Community Working Group on Enhancing ICANN (Internet Corporation for Assigned Names and Numbers) Accountability (CCWG-Accountability) Work Stream 1 Report ("Report").

Resolved (2016.03.10.17), the Board approves of the transmittal of the Report the National Telecommunications & Information Administration of the United States Department of Commerce to accompany the IANA (Internet Assigned Numbers Authority) Stewardship Transition Proposal developed by the IANA (Internet Assigned Numbers Authority) Stewardship Transition Coordination Group.

Resolved (2016.03.10.18), the President and CEO, or his designee, is directed to plan for the implementation of the Report so that ICANN (Internet Corporation for Assigned Names and Numbers) is operationally ready to implement in the event NTIA (US National Telecommunications and Information Agency) approves of the IANA (Internet Assigned Numbers Authority) Stewardship Transition Proposal and the IANA (Internet Assigned Numbers Authority) Functions Contract expires. The Board is committed to working with the community to identify the portions of the CCWG-Accountability recommendations that can be implemented in the event that it is determined that ICANN (Internet Corporation for Assigned Names and Numbers)'s obligations to perform the IANA (Internet Assigned Numbers Authority) Functions will remain under contract with NTIA (US National Telecommunications and Information Agency).

Resolved (2016.03.10.19), the Board expresses its deep appreciation for the tireless efforts of the CCWG-Accountability chairs, rapporteurs, members and participants, as well as the global community that came together in developing the Report. The intensity and level of engagement from across the community, as well as the spirit of cooperation and compromise that led to this Report is a true demonstration of the strength and triumph of the multistakeholder model.

Rationale for Resolution 2016.03.10.16 – 2016.03.10.19

The acceptance of the Cross Community Working Group on Enhancing ICANN (Internet Corporation for Assigned Names and Numbers) Accountability (CCWG-Accountability) Work Stream 1 Report ("Report") represents a milestone in the evolution of the multistakeholder model. The CCWG-Accountability was created out of a call from across the ICANN (Internet Corporation for Assigned Names and Numbers) community on a review of the impacts on ICANN (Internet Corporation for Assigned Names and Numbers)'s accountability with the removal of the perceived backstop from the historical contract with NTIA (US National Telecommunications and Information Agency) in the event the stewardship of the IANA (Internet Assigned Numbers Authority) Functions is transitioned to the multistakeholder community. This Work Stream 1 Report was developed by the 28 members of the CCWG-Accountability, representing six Chartering Organizations, and 175 participants. The development of this Report required over 220 meetings (face-to-face or telephonic), three public comment periods, and more than 13,900 email messages. The dedication of the CCWG-Accountability, including intense debate and resulting compromise from all participants, is an example of what the multistakeholder model can achieve. The CCWG-Accountability work is only part of the coordinated effort to achieve the delivery of a proposal to NTIA (US National Telecommunications and Information Agency) on the IANA (Internet Assigned Numbers Authority) Stewardship Transition.

The CCWG-Accountability Work Stream 1 recommendations have a few main areas of focus:

- A revised Mission Statement for the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws that clarifies what ICANN (Internet Corporation for Assigned Names and Numbers) does, while not changing ICANN (Internet Corporation for Assigned Names and

Numbers)'s historic mission.

- An enhanced Independent Review Process with a broader scope, reaffirming the IRP's power to ensure ICANN (Internet Corporation for Assigned Names and Numbers) stays within its Mission. The IRP will become binding upon ICANN (Internet Corporation for Assigned Names and Numbers).
- Enhancements to the Reconsideration Request process.
- New specific powers for the ICANN (Internet Corporation for Assigned Names and Numbers) community that can be enforced when the usual methods of discussion and dialogue have not effectively built consensus, including the powers to:
 - Reject ICANN (Internet Corporation for Assigned Names and Numbers) Budgets, IANA (Internet Assigned Numbers Authority) Budgets or Strategic/Operating Plans.
 - Reject changes to ICANN (Internet Corporation for Assigned Names and Numbers)'s Standard Bylaws.
 - Approve changes to new Fundamental Bylaws, Articles of Incorporation and ICANN (Internet Corporation for Assigned Names and Numbers)'s sale or other disposition of all or substantially all of ICANN (Internet Corporation for Assigned Names and Numbers)'s assets.
 - Remove an individual ICANN (Internet Corporation for Assigned Names and Numbers) Board Director.
 - Recall the entire ICANN (Internet Corporation for Assigned Names and Numbers) Board.
 - Initiate a binding Independent Review Process on behalf of the Community.
 - Reject ICANN (Internet Corporation for Assigned

Names and Numbers) Board decisions relating to reviews of the IANA (Internet Assigned Numbers Authority) functions, including the triggering of Post-Transition IANA (Internet Assigned Numbers Authority) separation.

- Inspect ICANN (Internet Corporation for Assigned Names and Numbers)'s books and records, and initiate investigatory audits.

The CCWG-Accountability recommendations also describe how the community will come together to exercise their new powers, including paths of escalation and community dialogue. The community will ultimately have the power and standing, through the development of a "designator" structure under California law, to enforce these powers in court, though the escalation paths are designed to reduce the need to ever resort to court for resolution. The Board is supportive of the CCWG-Accountability's focus on internal resolution and the Independent Review Process, as opposed to encouraging the ICANN (Internet Corporation for Assigned Names and Numbers) community to rely upon the judicial system as a regular tool in holding ICANN (Internet Corporation for Assigned Names and Numbers) accountable.

Other areas of the CCWG-Accountability recommendations include the insertion of a commitment to recognition of human rights, incorporating the reviews called for under the Affirmation of Commitments into the ICANN (Internet Corporation for Assigned Names and Numbers) Bylaws, modifying the structural reviews to include considerations of SO (Supporting Organization)/AC (Advisory Committee; or Administrative Contact (of a domain registration)) Accountability, and affirming the GAC (Governmental Advisory Committee)'s current advisory role and the deference given by the Board, while refining the threshold needed for the Board to not act consistently with GAC (Governmental Advisory Committee) consensus advice. The CCWG-Accountability also specified some elements of accountability that relate to the

CWG-Stewardship's portion of the IANA (Internet Assigned Numbers Authority) Stewardship Transition Proposal.

Finally, the CCWG-Accountability recommendations scope the topics that will be considered within its Work Stream 2, and identify that the Board will consider those continuous improvement recommendations with the same process the Board identified for the Work Stream 1 recommendations.

The CCWG-Accountability produced three drafts of recommendations to reach this final Report. The first draft was out for public comment from 4 May 2015 through 12 June 2015 and received 31 comment submissions. The second draft was out for public comment from 3 August 2015 through 12 September 2015 and received 93 comment submissions. The third draft was out for public comment from 30 November 2015 through 21 December 2015 and received 89 comment submissions. For each of these public comment periods and document releases, the CCWG-Accountability held multiple webinars to describe the mechanisms in the proposal and answer any questions. The CCWG-Accountability also held engagement sessions at each of the ICANN (Internet Corporation for Assigned Names and Numbers) meetings and individual members conducted their own outreach around the globe at regional and national events and conferences.

The CCWG-Accountability relied upon advice provided by two external law firms, Sidley Austin LLP and Adler & Colvin, which were retained after the need for external inputs was determined by the CCWG-Accountability to be essential to its review of ICANN (Internet Corporation for Assigned Names and Numbers)'s governance structure, and to test the legal inputs provided by ICANN (Internet Corporation for Assigned Names and Numbers). ICANN (Internet Corporation for Assigned Names and Numbers) facilitated the engagement process in collaboration with the CCWG-Accountability, and pays the legal fees. When addressing such important and broad issues, the availability of these legal inputs provided the CCWG-Accountability with the tools to perform their work and

have full deliberations. ICANN (Internet Corporation for Assigned Names and Numbers) in its facilitation of the process provided all resources and support requested by the community to develop a consensus report.

Meeting the NTIA (US National Telecommunications and Information Agency) Criteria

The Board agrees that it is important for the CCWG-Accountability recommendations that modify ICANN (Internet Corporation for Assigned Names and Numbers)'s governance structure to uphold the same criteria that NTIA (US National Telecommunications and Information Agency) defined for the transition of the stewardship of the technical IANA (Internet Assigned Numbers Authority) functions. ICANN (Internet Corporation for Assigned Names and Numbers), as the organization that will remain responsible for the performance of the IANA (Internet Assigned Numbers Authority) functions, must have the same safeguards. The Board agrees with the CCWG's assessment that NTIA (US National Telecommunications and Information Agency)'s criteria are met.

1. Support and Enhance the Multistakeholder Model

At Annex 14 of its Report, the CCWG-Accountability identifies the ways in which its recommendations support and enhance the multistakeholder model. The Board agrees that the specific items enumerated in the Report support this criterion. More fundamentally, however, the recommendations as a whole demonstrate more reliance upon the multistakeholder community coming together to influence not just policy, but also ICANN (Internet Corporation for Assigned Names and Numbers)'s governing documents and some of ICANN (Internet Corporation for Assigned Names and Numbers)'s key operational decisions as well, such as planning for budgets and operating plans. The multistakeholder community is given more individual and

collective access to paths of redress, and assurances of the binding nature of those tools. The spirit of this Report is for a community that has more determination over ICANN (Internet Corporation for Assigned Names and Numbers). It will be important that those taking on greater responsibilities continue to consider how to evolve their own accountability efforts, as will be considered in Work Stream 2.

2. *Maintain the Security, Stability (Security, Stability and Resiliency) and Resiliency (Security Stability & Resiliency (SSR)) of the Internet DNS (Domain Name System)*

Along with the items identified by the CCWG-Accountability in Annex 14 of its Report, the Board notes that the security, stability and resiliency of the Internet DNS (Domain Name System) are maintained through the CCWG-Accountability recommendations first and foremost through the affirmation that ICANN (Internet Corporation for Assigned Names and Numbers)'s mission, while clarified, remains unchanged, and any future attempt to change that mission will require both Board and community consent. The CCWG-Accountability has identified that there are core components of ICANN (Internet Corporation for Assigned Names and Numbers)'s budget that will remain operational even if there is a dispute between the community and ICANN (Internet Corporation for Assigned Names and Numbers) on the budget, and those core components include operations that relate to the security and stability of the Internet DNS (Domain Name System).

3. *Meet the needs and expectations of the partners of the IANA (Internet Assigned Numbers Authority) Functions*

Along with the items identified by the CCWG-Accountability in Annex 14 of its report, the

Board notes that this criterion is met by the consideration of the needs of the customers of the IANA (Internet Assigned Numbers Authority) Functions and the coordination of recommendations that complement the IANA (Internet Assigned Numbers Authority) Stewardship Transition Proposal. The needs identified by the CWG-Stewardship have been incorporated into the recommendations, and the CWG-Stewardship has affirmed that its contingencies were met. The CCWG-Accountability also coordinated with the other operating communities to confirm that their concerns on clarification on mission and applicability of independent review processes were addressed.

4. *Maintain the Openness of the Internet*

In addition to the items identified by the CCWG-Accountability in Annex 14 of its Report, the Board agrees that this criterion is met through the development of open processes where community members might wish to engage. Maintaining open processes where community members have not only a voice, but also an opportunity to impact, is expected to enhance ICANN (Internet Corporation for Assigned Names and Numbers)'s accountability and the multistakeholder model itself. Strengthening ICANN (Internet Corporation for Assigned Names and Numbers) through the strengthening of the multistakeholder model is the key way to maintain the openness of the Internet and continued participation in ICANN (Internet Corporation for Assigned Names and Numbers)'s processes. The recognition of the roles of all stakeholders at ICANN (Internet Corporation for Assigned Names and Numbers) is another important aspect of meeting this criterion.

The Board also agrees that the future work scheduled for Work Stream 2, focusing on issues such as enhancing transparency, diversity, community

accountability, and defining how staff can be more accountable to the community also are geared towards continued enhancement of engagement in ICANN (Internet Corporation for Assigned Names and Numbers) and maintaining the model.

5. *No replacement of the NTIA (US National Telecommunications and Information Agency) role with a government-led or an inter-governmental organization solution*

In addition to the CCWG-Accountability's discussion of how this criteria is met, the Board agrees that this criteria is met, again, through a strong grounding in the multistakeholder community. The recommendations reaffirm the role of each of the structures within ICANN (Internet Corporation for Assigned Names and Numbers), and do not create inequalities in how each of the groups participate, even as the ICANN (Internet Corporation for Assigned Names and Numbers) community moves beyond policy development work and into new operational activities. The role of governments in ICANN (Internet Corporation for Assigned Names and Numbers) is affirmed, as well as the Governmental Advisory Committee (Advisory Committee)'s autonomy over its own operating procedures, while at the same time creating more predictability in the Board providing special consideration only to GAC (Governmental Advisory Committee) advice that is within ICANN (Internet Corporation for Assigned Names and Numbers)'s mission and provided with defined consensus.

Minority and Voting Statements

The Board notes that there were five minority statements provided to the CCWG-Accountability on its final Report. Appendix A of the report details both the process that the CCWG-Accountability followed to reach consensus. The

Appendix also includes the minority statements in full.

In the 10 March 2016 letter transmitting the Report to the Board, the Board has been informed by the CCWG-Accountability co-chairs that consensus was reached on the recommendations. Further, the Chartering Organizations have each approved (with one non-objection) to the forwarding of the final Report to the Board for consideration, though the minority statements were provided by those associated with various Chartering Organizations. There were also voting statements provided within the GNSO (Generic Names Supporting Organization) on parts of the recommendations, at times mirroring the issues previously raised in the minority statements. The GAC (Governmental Advisory Committee), in providing its non-objection, noted the support for a large majority of the recommendations and lack of consensus over others.

Given the full process for the development of the Report, the numerous concessions made by all in reaching the consensus recommendations, and the approval (or non-objection) of all of the Chartering Organizations, the Board considers that the existence of these voting and minority statements does not create a barrier to the acceptance of the Report. The Board encourages the CCWG-Accountability to consider if any of the concerns raised in the minority or voting statements can appropriately be addressed within the topics defined for Work Stream 2 or used as guidance in implementation.

Resource Implication

Accepting the Report and transmitting it to NTIA (US National Telecommunications and Information Agency) does not specifically impose any resource requirements on ICANN (Internet Corporation for Assigned Names and Numbers). However, the planning for implementation that is necessary to be in place for ICANN (Internet Corporation for Assigned Names and Numbers) is ready to implement these changes when appropriate. That effort requires significant resources,

including amending ICANN (Internet Corporation for Assigned Names and Numbers)'s Bylaws, supporting the revisions to the Independent Review Process, confirming that processes are in place for the community escalation processes, and other planning as required. The implementation planning for the entirety of the IANA (Internet Assigned Numbers Authority) Stewardship Transition Process is a coordinated effort, with the interrelated operational and accountability requirements within the ICG (IANA Stewardship Transition Coordination Group)'s Proposal and the CCWG-Accountability's Report considered together. Given that there is the possibility that NTIA (US National Telecommunications and Information Agency) may not be able to approve ICG (IANA Stewardship Transition Coordination Group)'s Proposal, if that determination is made, the Board is committed to work with the community to implement those parts of the CCWG-Accountability Report that do not interfere with the obligations ICANN (Internet Corporation for Assigned Names and Numbers) would maintain under an IANA (Internet Assigned Numbers Authority) Functions Contract with NTIA (US National Telecommunications and Information Agency).

Both the community and ICANN (Internet Corporation for Assigned Names and Numbers) will be called upon to devote time to this effort. The implementation planning must proceed with considerations of fiscal responsibility, and the Board looks forward to working with the community to develop cost management tools that will result in better estimation of costs. The Board will use these estimates to guide future budgeting decisions on the CCWG-Accountability work, including implementation and Work Stream 2. As Work Stream 2 proceeds, the Board urges close consideration of the types of legal support needed now that the broad governance changes developed in Work Stream 1 are accepted and on path for implementation, and the issues reserved for Work Stream 2 may not be as legal in nature.

During the development of the Report, ICANN (Internet Corporation for Assigned Names and Numbers) provided

funding and staff resources for all aspects of the work, including things such as travel support and coordination of face-to-face meetings, secretariat support, external counsel, report drafting and graphics, and translations. The funds expended to date on the CCWG-Accountability helped provide the multistakeholder community with the opportunity to develop the Report with the levels of independence it said were important. Further, the availability of external advice supported the CCWG-Accountability's debate and dialogue that led to its final recommendations. Providing these resources was an important facet of assuring multistakeholder participation in this work.

DNS (Domain Name System) Impact

The acceptance and transmittal of this Report are not expected to have any impact on the security, stability and resiliency of the Internet DNS (Domain Name System).

Conclusion

Taking this action today is an important affirmation of the multistakeholder model. The global multistakeholder community came together and developed a plan to enhance the accountability of ICANN (Internet Corporation for Assigned Names and Numbers) to help support the transition of the IANA (Internet Assigned Numbers Authority) Functions Stewardship. Issues were debated in multiple fora. Public comments were received, analyzed and incorporated. Many difficult issues were resolved, with compromises across the community. In the end, the multistakeholder community developed recommendations that reserve to it unprecedented power in ICANN (Internet Corporation for Assigned Names and Numbers), with meaningful and binding escalation paths to enforce these new rights. The CCWG-Accountability also has considered how to make sure the key commitments from the existing Affirmation of Commitments remain in place through incorporation into the Bylaws, and other enhancements to enhance accountability and transparency in ICANN (Internet Corporation for Assigned Names and Numbers)'s operations. The Report is supported by

a consensus of the CCWG-Accountability, and approved by all but one Chartering Organization, which has noted its non-objection to submitting the Report to ICANN (Internet Corporation for Assigned Names and Numbers). Accepting this Report is an important step in maintaining accountability to the multistakeholder community, and the Board serves the public interest in taking this decision.

This is an Organizational Administrative Function that has been subject to multiple levels of public comment.

d. Thank You to Staff

Resolved (2016.03.10.20), the Board thanks the ICANN (Internet Corporation for Assigned Names and Numbers) staff who worked on all aspects of the development of the transition and accountability proposals. This effort has been supported by staff from across the entire organization. The Board also thanks all the staff who supported ICANN (Internet Corporation for Assigned Names and Numbers) during this period of intense activity.

Exhibit DIDP A6

Community Priority Evaluation (CPE) Guidelines

Prepared by The Economist Intelligence Unit

Interconnection between Community Priority Evaluation (CPE) Guidelines and the Applicant Guidebook (AGB)

The CPE Guidelines are an accompanying document to the AGB, and are meant to provide additional clarity around the process and scoring principles outlined in the AGB. This document does not modify the AGB framework, nor does it change the intent or standards laid out in the AGB. The Economist Intelligence Unit (EIU) is committed to evaluating each applicant under the criteria outlined in the AGB. The CPE Guidelines are intended to increase transparency, fairness and predictability around the assessment process.

Criterion #1: Community Establishment

This section relates to the community as explicitly identified and defined according to statements in the application. (The implicit reach of the applied-for string is not considered here, but taken into account when scoring Criterion #2, “Nexus between Proposed String and Community.”)

Measured by

1-A Delineation

1-B Extension

A maximum of 4 points is possible on the Community Establishment criterion, and each sub-criterion has a maximum of 2 possible points.

1-A Delineation

AGB Criteria	Evaluation Guidelines
Scoring	
<p>2= Clearly delineated, organized, and pre-existing community.</p> <p>1= Clearly delineated and pre-existing community, but not fulfilling the requirements for a score of 2.</p> <p>0= Insufficient delineation and pre-existence for a score of 1.</p>	<p>The following questions must be scored when evaluating the application:</p> <p><i>Is the community clearly delineated?</i></p> <p><i>Is there at least one entity mainly dedicated to the community?</i></p> <p><i>Does the entity (referred to above) have documented evidence of community activities?</i></p> <p><i>Has the community been active since at least September 2007?</i></p>
Definitions	
<p>“Community” - Usage of the expression “community” has evolved considerably from its Latin origin – “communitas” meaning “fellowship” – while still implying more of cohesion than a mere commonality of interest. Notably, as “community” is used throughout the application, there should be: (a) an awareness and recognition of a community among its members; (b) some</p>	<p>The “community,” as it relates to Criterion #1, refers to the stated community in the application.</p> <p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Was the entity established to administer the community?</i> • <i>Does the entity’s mission statement clearly identify the community?</i>

<p>understanding of the community’s existence prior to September 2007 (when the new gTLD policy recommendations were completed); and (c) extended tenure or longevity—non-transience—into the future.</p>	<p>Additional research may need to be performed to establish that there is documented evidence of community activities. Research may include reviewing the entity’s web site, including mission statements, charters, reviewing websites of community members (pertaining to groups), if applicable, etc.</p>
<p>"Delineation" relates to the membership of a community, where a clear and straight-forward membership definition scores high, while an unclear, dispersed or unbound definition scores low.</p>	<p>“Delineation” also refers to the extent to which a community has the requisite awareness and recognition from its members.</p> <p>The following non-exhaustive list denotes elements of straight-forward member definitions: fees, skill and/or accreditation requirements, privileges or benefits entitled to members, certifications aligned with community goals, etc.</p>
<p>"Pre-existing" means that a community has been active as such since before the new gTLD policy recommendations were completed in September 2007.</p>	
<p>"Organized" implies that there is at least one entity mainly dedicated to the community, with documented evidence of community activities.</p>	<p>“Mainly” could imply that the entity administering the community may have additional roles/functions beyond administering the community, but one of the key or primary purposes/functions of the entity is to administer a community or a community organization.</p> <p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Was the entity established to administer the community?</i> • <i>Does the entity’s mission statement clearly identify the community?</i>
<p>Criterion 1-A guidelines</p>	
<p>With respect to “Delineation” and “Extension,” it should be noted that a community can consist of legal entities (for example, an association of suppliers of a particular service), of individuals (for example, a language community) or of a logical alliance of communities (for example, an international federation of national communities of a similar nature). All are viable as such, provided the requisite awareness and recognition of the</p>	<p>With respect to the Community, consider the following:</p> <ul style="list-style-type: none"> • <i>Are community members aware of the existence of the community as defined by the applicant?</i> • <i>Do community members recognize the community as defined by the applicant?</i>

<p>community is at hand among the members. Otherwise the application would be seen as not relating to a real community and score 0 on both “Delineation” and “Extension.”</p> <p>With respect to “Delineation,” if an application satisfactorily demonstrates all three relevant parameters (delineation, pre-existing and organized), then it scores a 2.</p>	<ul style="list-style-type: none"> • <i>Is there clear evidence of such awareness and recognition?</i>
--	---

1-B Extension

AGB Criteria	Evaluation Guidelines
Scoring	
<p>Extension:</p> <p>2=Community of considerable size and longevity</p> <p>1=Community of either considerable size or longevity, but not fulfilling the requirements for a score of 2.</p> <p>0=Community of neither considerable size nor longevity</p>	<p>The following questions must be scored when evaluating the application:</p> <p><i>Is the community of considerable size?</i></p> <p><i>Does the community demonstrate longevity?</i></p>
Definitions	
<p>“Extension” relates to the dimensions of the community, regarding its number of members, geographical reach, and foreseeable activity lifetime, as further explained in the following.</p>	
<p>"Size" relates both to the number of members and the geographical reach of the community, and will be scored depending on the context rather than on absolute numbers - a geographic location community may count millions of members in a limited location, a language community may have a million members with some spread over the globe, a community of service providers may have "only" some hundred members although well spread over the globe, just to mention some examples - all these can be regarded as of "considerable size."</p>	<p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Is the designated community large in terms of membership and/or geographic dispersion?</i>

<p>"Longevity" means that the pursuits of a community are of a lasting, non-transient nature.</p>	<p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Is the community a relatively short-lived congregation (e.g. a group that forms to represent a one-off event)?</i> • <i>Is the community forward-looking (i.e. will it continue to exist in the future)?</i>
<p>Criterion 1-B Guidelines</p>	
<p>With respect to "Delineation" and "Extension," it should be noted that a community can consist of legal entities (for example, an association of suppliers of a particular service), of individuals (for example, a language community) or of a logical alliance of communities (for example, an international federation of national communities of a similar nature). All are viable as such, provided the requisite awareness and recognition of the community is at hand among the members. Otherwise the application would be seen as not relating to a real community and score 0 on both "Delineation" and "Extension."</p> <p>With respect to "Extension," if an application satisfactorily demonstrates both community size and longevity, it scores a 2.</p>	

Criterion #2: Nexus between Proposed String and Community

This section evaluates the relevance of the string to the specific community that it claims to represent.

Measured by

2-A Nexus

2-B Uniqueness

A maximum of 4 points is possible on the Nexus criterion, and with the Nexus sub-criterion having a maximum of 3 possible points, and the Uniqueness sub-criterion having a maximum of 1 possible point.

2-A Nexus

AGB Criteria	Evaluation Guidelines
Scoring	
<p>Nexus:</p> <p>3= The string matches the name of the community or is a well-known short-form or abbreviation of the community</p> <p>2= String identifies the community, but does not qualify for a score of 3</p> <p>0= String nexus does not fulfill the requirements for a score of 2</p>	<p>The following question must be scored when evaluating the application:</p> <p style="text-align: center;"><i>Does the string match the name of the community or is it a well-known short-form or abbreviation of the community name? The name may be, but does not need to be, the name of an organization dedicated to the community.</i></p>
Definitions	
<p>“Name” of the community means the established name by which the community is commonly known by others. It may be, but does not need to be, the name of an organization dedicated to the community.</p>	<p>“Others” refers to individuals outside of the community itself, as well as the most knowledgeable individuals in the wider geographic and language environment of direct relevance. It also refers to recognition from other organization(s), such as quasi-official, publicly recognized institutions, or other peer groups.</p>
<p>“Identify” means that the applied for string closely describes the community or the community members, without over-reaching substantially beyond the community.</p>	<p>“Match” is of a higher standard than “identify” and means ‘corresponds to’ or ‘is equal to’.</p> <p>“Identify” does not simply mean ‘describe’, but means ‘closely describes the community’.</p> <p>“Over-reaching substantially” means that the string indicates a wider geographical or thematic remit than the community has.</p>

	<p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Does the string identify a wider or related community of which the applicant is a part, but is not specific to the applicant’s community?</i> • <i>Does the string capture a wider geographical/thematic remit than the community has? The “community” refers to the community as defined by the applicant.</i> • <i>An Internet search should be utilized to help understand whether the string identifies the community and is known by others.</i> • <i>Consider whether the application mission statement, community responses, and websites align.</i>
<p>Criterion 2-A Guidelines</p>	
<p>With respect to “Nexus,” for a score of 3, the essential aspect is that the applied-for string is commonly known by others as the identification / name of the community.</p> <p>With respect to “Nexus,” for a score of 2, the applied-for string should closely describe the community or the community members, without over-reaching substantially beyond the community. As an example, a string could qualify for a score of 2 if it is a noun that the typical community member would naturally be called in the context. If the string appears excessively broad (such as, for example, a globally well-known but local tennis club applying for “.TENNIS”) then it would not qualify for a 2.</p>	

2-B Uniqueness

<p>AGB Criteria</p>	<p>Evaluation Guidelines</p>
<p>Scoring</p>	
<p>Uniqueness: 1=String has no other significant meaning beyond</p>	<p>The following question must be scored when evaluating the application:</p>

<p>identifying the community described in the application. 0=String does not fulfill the requirement for a score of 1.</p>	<p><i>Does the string have any other significant meaning (to the public in general) beyond identifying the community described in the application?</i></p>
<p>Definitions</p>	
<p>“Identify” means that the applied for string closely describes the community or the community members, without over-reaching substantially beyond the community.</p>	<p>“Over-reaching substantially” means that the string indicates a wider geographical or thematic remit than the community has.</p>
<p>“Significant meaning” relates to the public in general, with consideration of the community language context added</p>	<p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Will the public in general immediately think of the applying community when thinking of the applied-for string?</i> • <i>If the string is unfamiliar to the public in general, it may be an indicator of uniqueness.</i> • <i>Is the geography or activity implied by the string?</i> • <i>Is the size and delineation of the community inconsistent with the string?</i> • <i>An internet search should be utilized to find out whether there are repeated and frequent references to legal entities or communities other than the community referenced in the application.</i>
<p>Criterion 2-B Guidelines</p>	
<p>"Uniqueness" will be scored both with regard to the community context and from a general point of view. For example, a string for a particular geographic location community may seem unique from a general perspective, but would not score a 1 for uniqueness if it carries another significant meaning in the common language used in the relevant community location. The phrasing "...beyond identifying the community" in the score of 1 for "uniqueness" implies a requirement that the string does identify the community, i.e. scores</p>	

2 or 3 for "Nexus," in order to be eligible for a score of 1 for "Uniqueness."

It should be noted that "Uniqueness" is only about the meaning of the string - since the evaluation takes place to resolve contention there will obviously be other applications, community-based and/or standard, with identical or confusingly similar strings in the contention set to resolve, so the string will clearly not be "unique" in the sense of "alone."

Criterion #3: Registration Policies

This section evaluates the applicant’s registration policies as indicated in the application. Registration policies are the conditions that the future registry will set for prospective registrants, i.e. those desiring to register second-level domain names under the registry.

Measured by

3-A Eligibility

3-B Name Selection

3-C Content and Use

3-D Enforcement

A maximum of 4 points is possible on the Registration Policies criterion and each sub-criterion has a maximum of 1 possible point.

3-A Eligibility

AGB Criteria	Evaluation Guidelines
Scoring	
Eligibility: 1= Eligibility restricted to community members 0= Largely unrestricted approach to eligibility	The following question must be scored when evaluating the application: <i>Is eligibility for being allowed as a registrant restricted?</i>
Definitions	
“Eligibility” means the qualifications that organizations or individuals must have in order to be allowed as registrants by the registry.	
Criterion 3-A Guidelines	
With respect to “eligibility” the limitation to community “members” can invoke a formal membership but can also be satisfied in other ways, depending on the structure and orientation of the community at hand. For example, for a geographic location community TLD, a limitation to members of the community can be achieved by requiring that the registrant’s physical address be within the boundaries of the location.	

3-B Name Selection

AGB Criteria	Evaluation Guidelines
Scoring	
<p>Name selection: 1= Policies include name selection rules consistent with the articulated community-based purpose of the applied-for TLD 0= Policies do not fulfill the requirements for a score of 1</p>	<p>The following questions must be scored when evaluating the application:</p> <p style="text-align: center;"><i>Do the applicant’s policies include name selection rules?</i></p> <p style="text-align: center;"><i>Are name selection rules consistent with the articulated community-based purpose of the applied-for gTLD?</i></p>
Definitions	
<p>“Name selection” means the conditions that must be fulfilled for any second-level domain name to be deemed acceptable by the registry.</p>	<p>Consider the following:</p> <ul style="list-style-type: none"> • <i>Are the name selection rules consistent with the entity’s mission statement?</i>
Criterion 3-B Guidelines	
<p>With respect to “Name selection,” scoring of applications against these subcriteria will be done from a holistic perspective, with due regard for the particularities of the community explicitly addressed. For example, an application proposing a TLD for a language community may feature strict rules imposing this language for name selection as well as for content and use, scoring 1 on both B and C above. It could nevertheless include forbearance in the enforcement measures for tutorial sites assisting those wishing to learn the language and still score 1 on D. More restrictions do not automatically result in a higher score. The restrictions and corresponding enforcement mechanisms proposed by the applicant should show an alignment with the community-based purpose of the TLD and demonstrate continuing accountability to the community named in the application.</p>	

3-C Content and Use

AGB Criteria	Evaluation Guidelines
--------------	-----------------------

Scoring	
<p>Content and use: 1= Policies include rules for content and use consistent with the articulated community-based purpose of the applied-for TLD 0= Policies do not fulfill the requirements for a score of 1</p>	<p>The following questions must be scored when evaluating the application:</p> <p><i>Do the applicant’s policies include content and use rules?</i></p> <p><i>If yes, are content and use rules consistent with the articulated community-based purpose of the applied-for gTLD?</i></p>
Definitions	
<p>“Content and use” means the restrictions stipulated by the registry as to the content provided in and the use of any second-level domain name in the registry.</p>	<p>Consider the following:</p> <ul style="list-style-type: none"> <i>Are the content and use rules consistent with the applicant’s mission statement?</i>
Criterion 3-C Guidelines	
<p>With respect to “Content and Use,” scoring of applications against these subcriteria will be done from a holistic perspective, with due regard for the particularities of the community explicitly addressed. For example, an application proposing a TLD for a language community may feature strict rules imposing this language for name selection as well as for content and use, scoring 1 on both B and C above. It could nevertheless include forbearance in the enforcement measures for tutorial sites assisting those wishing to learn the language and still score 1 on D. More restrictions do not automatically result in a higher score. The restrictions and corresponding enforcement mechanisms proposed by the applicant should show an alignment with the community-based purpose of the TLD and demonstrate continuing accountability to the community named in the application.</p>	

3-D Enforcement

AGB Criteria	Evaluation Guidelines
Scoring	
<p>Enforcement 1= Policies include specific enforcement measures</p>	<p>The following question must be scored when evaluating the application:</p>

<p>(e.g. investigation practices, penalties, takedown procedures) constituting a coherent set with appropriate appeal mechanisms 0= Policies do not fulfill the requirements for a score of 1</p>	<p><i>Do the policies include specific enforcement measures constituting a coherent set with appropriate appeal mechanisms?</i></p>
---	---

Definitions

<p>“Enforcement” means the tools and provisions set out by the registry to prevent and remedy any breaches of the conditions by registrants.</p>	<p>“Coherent set” refers to enforcement measures that ensure continued accountability to the named community, and can include investigation practices, penalties, and takedown procedures with appropriate appeal mechanisms. This includes screening procedures for registrants, and provisions to prevent and remedy any breaches of its terms by registrants.</p> <p>Consider the following: Do the enforcement measures include:</p> <ul style="list-style-type: none"> • <i>Investigation practices</i> • <i>Penalties</i> • <i>Takedown procedures (e.g., removing the string)</i> • <i>Whether such measures are aligned with the community-based purpose of the TLD</i> • <i>Whether such measures demonstrate continuing accountability to the community named in the application</i>
--	---

Criterion 3-D Guidelines

<p>With respect to “Enforcement,” scoring of applications against these subcriteria will be done from a holistic perspective, with due regard for the particularities of the community explicitly addressed. For example, an application proposing a TLD for a language community may feature strict rules imposing this language for name selection as well as for content and use, scoring 1 on both B and C above. It could nevertheless include forbearance in the enforcement measures for tutorial sites assisting those wishing to learn the language and still score 1 on D. More restrictions do not automatically result in a higher score. The restrictions and corresponding enforcement</p>	
--	--

mechanisms proposed by the applicant should show an alignment with the community-based purpose of the TLD and demonstrate continuing accountability to the community named in the application.	
--	--

Criterion #4: Community Endorsement

This section evaluates community support and/or opposition to the application. Support and opposition will be scored in relation to the communities explicitly addressed in the application, with due regard for communities implicitly addressed by the string.

Measured by

4-A Support

4-B Opposition

A maximum of 4 points is possible on the Community Endorsement criterion and each sub-criterion (Support and Opposition) has a maximum of 2 possible points.

4-A Support

AGB Criteria	Evaluation Guidelines
Scoring	
<p>Support:</p> <p>2= Applicant is, or has documented support from, the recognized community institution(s)/member organization(s), or has otherwise documented authority to represent the community</p> <p>1= Documented support from at least one group with relevance, but insufficient support for a score of 2</p> <p>0= Insufficient proof of support for a score of 1</p>	<p>The following questions must be scored when evaluating the application:</p> <p><i>Is the applicant the recognized community institution or member organization?</i></p> <p>To assess this question please consider the following:</p> <p><i>a. Consider whether the community institution or member organization is the clearly recognized representative of the community.</i></p> <p>If the applicant meets this provision, proceed to Letter(s) of support and their verification. If it does not, or if there is more than one recognized community institution or member organization (and the applicant is one of them), consider the following:</p> <p><i>Does the applicant have documented</i></p>

	<p><i>support from the recognized community institution(s)/member organization(s) to represent the community?</i></p> <p>If the applicant meets this provision, proceed to Letter(s) of support and their verification. If not, consider the following:</p> <p><i>Does the applicant have documented authority to represent the community?</i></p> <p>If the applicant meets this provision, proceed to Letter(s) of support and their verification. If not, consider the following:</p> <p><i>Does the applicant have support from at least one group with relevance?</i></p> <p>If the applicant meets this provision, proceed to Letter(s) of support and their verification.</p> <p>➤ Instructions on letter(s) of support requirements are located below, in Letter(s) of support and their verification</p>
Definitions	
<p>“Recognized” means the institution(s)/organization(s) that, through membership or otherwise, are clearly recognized by the community members as representative of that community.</p>	
<p>“Relevance” and “relevant” refer to the communities explicitly and implicitly addressed. This means that opposition from communities not identified in the application but with an association to the applied for string would be considered relevant.</p>	<p>The institution(s)/organization(s) could be deemed relevant when not identified in the application but has an association to the applied-for string.</p>
Criterion 4-A Guidelines	
<p>With respect to “Support,” it follows that documented support from, for example, the only national association relevant to a particular community on a national level would score a 2 if the string is clearly oriented to that national level, but only a 1 if the string implicitly addresses similar communities in other nations.</p>	<p>Letter(s) of support and their verification: Letter(s) of support must be evaluated to determine both the relevance of the organization and the validity of the documentation and must meet the criteria spelled out below. The letter(s) of support is an input used to determine the relevance of the organization and the validity of</p>

<p>Also with respect to “Support,” the plurals in brackets for a score of 2, relate to cases of multiple institutions/organizations. In such cases there must be documented support from institutions/organizations representing a majority of the overall community addressed in order to score 2.</p> <p>The applicant will score a 1 for “Support” if it does not have support from the majority of the recognized community institutions/member organizations, or does not provide full documentation that it has authority to represent the community with its application. A 0 will be scored on “Support” if the applicant fails to provide documentation showing support from recognized community institutions/community member organizations, or does not provide documentation showing that it has the authority to represent the community. It should be noted, however, that documented support from groups or communities that may be seen as implicitly addressed but have completely different orientations compared to the applicant community will not be required for a score of 2 regarding support.</p> <p>To be taken into account as relevant support, such documentation must contain a description of the process and rationale used in arriving at the expression of support. Consideration of support is not based merely on the number of comments or expressions of support received.</p>	<p>the documentation.</p> <p>Consider the following:</p> <p>Are there multiple institutions/organizations supporting the application, with documented support from institutions/organizations representing a majority of the overall community addressed?</p> <p>Does the applicant have support from the majority of the recognized community institution/member organizations?</p> <p>Has the applicant provided full documentation that it has authority to represent the community with its application?</p> <p>A majority of the overall community may be determined by, but not restricted to, considerations such as headcount, the geographic reach of the organizations, or other features such as the degree of power of the organizations.</p> <p><u>Determining relevance and recognition</u></p> <p><i>Is the organization relevant and/or recognized as per the definitions above?</i></p> <p><u>Letter requirements & validity</u></p> <p><i>Does the letter clearly express the organization’s support for the community-based application?</i></p> <p><i>Does the letter demonstrate the organization’s understanding of the string being requested?</i></p> <p><i>Is the documentation submitted by the applicant valid (i.e. the organization exists and the letter is authentic)?</i></p> <p>To be taken into account as relevant support, such documentation must contain a description of the process and rationale used in arriving at the expression of support. Consideration of support is not based merely on the number of comments or</p>
--	--

	expressions of support received.
--	----------------------------------

4-B Opposition

AGB Criteria	Evaluation Guidelines
Scoring	
<p>Opposition:</p> <p>2= No opposition of relevance</p> <p>1= Relevant opposition from one group of non-negligible size</p> <p>0= Relevant opposition from two or more groups of non-negligible size</p>	<p>The following question must be scored when evaluating the application:</p> <p style="text-align: center;"><i>Does the application have any opposition that is deemed relevant?</i></p>
Definitions	
<p>“Relevance” and “relevant” refer to the communities explicitly and implicitly addressed. This means that opposition from communities not identified in the application but with an association to the applied for string would be considered relevant.</p>	<p>Consider the following:</p> <p>For “non-negligible” size, “relevant” and “relevance” consider:</p> <ul style="list-style-type: none"> • <i>If the application has opposition from communities that are deemed to be relevant.</i> • <i>If a web search may help determine relevance and size of the objecting organization(s).</i> • <i>If there is opposition by some other reputable organization(s), such as a quasi-official, publicly recognized organization(s) or a peer organization(s)?</i> • <i>If there is opposition from a part of the community explicitly or implicitly addressed?</i>
Criterion 4-B Guidelines	
<p>When scoring “Opposition,” previous objections to the application as well as public comments during the same application round will be taken into account and assessed in this context. There will be no presumption that such objections or comments would prevent a score of 2 or lead to any particular score for “Opposition.” To be taken into account as relevant opposition, such objections or</p>	<p>Letter(s) of opposition and their verification: Letter(s) of opposition should be evaluated to determine both the relevance of the organization and the validity of the documentation and should meet the criteria spelled out below.</p> <p><u>Determining relevance and recognition</u> <i>Is the organization relevant and/or</i></p>

<p>comments must be of a reasoned nature. Sources of opposition that are clearly spurious, unsubstantiated, made for a purpose incompatible with competition objectives, or filed for the purpose of obstruction will not be considered relevant.</p>	<p><i>recognized as per the definitions above?</i></p> <p><u>Letter requirements & validity</u></p> <p><i>Does the letter clearly express the organization's opposition to the applicant's application?</i></p> <p><i>Does the letter demonstrate the organization's understanding of the string being requested?</i></p> <p><i>Is the documentation submitted by the organization valid (i.e. the organization exists and the letter is authentic)?</i></p> <p>To be considered relevant opposition, such documentation should contain a description of the process and rationale used in arriving at the expression of opposition. Consideration of opposition is not based merely on the number of comments or expressions of opposition received.</p>
---	---

Verification of letter(s) of support and opposition

Additional information on the verification of letter(s) of support and opposition:

- Changes in governments may result in new leadership at government agencies. As such, the signatory need only have held the position as of the date the letter was signed or sealed.
- A contact name should be provided in the letter(s) of support or opposition.
- The contact must send an email acknowledging that the letter is authentic, as a verbal acknowledgement is not sufficient.
- In cases where the letter was signed or sealed by an individual who is not currently holding that office or a position of authority, the letter is valid only if the individual was the appropriate authority at the time that the letter was signed or sealed.

About the Community Priority Evaluation Panel and its Processes

The Economist Intelligence Unit (EIU) is the business information arm of The Economist Group, publisher of The Economist. Through a global network of more than 900 analysts and contributors, the EIU continuously assesses political, economic, and business conditions in more than 200 countries. As the world's leading provider of country intelligence, the EIU helps executives, governments, and institutions by providing timely, reliable, and impartial analysis.

The EIU was selected as a Panel Firm for the gTLD evaluation process based on a number of criteria, including:

- The panel will be an internationally recognized firm or organization with significant demonstrated expertise in the evaluation and assessment of proposals in which the relationship of the proposal to a defined public or private community plays an important role.
- The provider must be able to convene a linguistically and culturally diverse panel capable, in the aggregate, of evaluating Applications from a wide variety of different communities.
- The panel must be able to exercise consistent and somewhat subjective judgment in making its evaluations in order to reach conclusions that are compelling and defensible, and
- The panel must be able to document the way in which it has done so in each case.

The evaluation process will respect the principles of fairness, transparency, avoiding potential conflicts of interest, and non-discrimination. Consistency of approach in scoring Applications will be of particular importance.

The following principles characterize the EIU evaluation process for gTLD applications:

- All EIU evaluators must ensure that no conflicts of interest exist.
- All EIU evaluators must undergo training and be fully cognizant of all CPE requirements as listed in the Applicant Guidebook. This process will include a pilot testing process.
- EIU evaluators are selected based on their knowledge of specific countries, regions and/or industries, as they pertain to Applications.
- Language skills will also be considered in the selection of evaluators and the assignment of specific Applications.
- All applications will be evaluated and scored, in the first instance by two evaluators, working independently.
- All Applications will subsequently be reviewed by members of the core project team to verify accuracy and compliance with the AGB, and to ensure consistency of approach across all applications.

- The EIU will work closely with ICANN when questions arise and when additional information may be required to evaluate an application.
- The EIU will fully cooperate with ICANN's quality control process.

**gTLD Applicant
Guidebook**

Version 2012-06-04

4 June 2012

Preamble

New gTLD Program Background

New gTLDs have been in the forefront of ICANN's agenda since its creation. The new gTLD program will open up the top level of the Internet's namespace to foster diversity, encourage competition, and enhance the utility of the DNS.

Currently the namespace consists of 22 gTLDs and over 250 ccTLDs operating on various models. Each of the gTLDs has a designated "registry operator" and, in most cases, a Registry Agreement between the operator (or sponsor) and ICANN. The registry operator is responsible for the technical operation of the TLD, including all of the names registered in that TLD. The gTLDs are served by over 900 registrars, who interact with registrants to perform domain name registration and other related services. The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market. When the program launches its first application round, ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

The program has its origins in carefully deliberated policy development work by the ICANN community. In October 2007, the Generic Names Supporting Organization (GNSO)—one of the groups that coordinate global Internet policy at ICANN—formally completed its policy development work on new gTLDs and approved a set of 19 policy recommendations. Representatives from a wide variety of stakeholder groups—governments, individuals, civil society, business and intellectual property constituencies, and the technology community—were engaged in discussions for more than 18 months on such questions as the demand, benefits and risks of new gTLDs, the selection criteria that should be applied, how gTLDs should be allocated, and the contractual conditions that should be required for new gTLD registries going forward. The culmination of this policy development process was a decision by the ICANN Board of Directors to adopt the community-developed policy in June 2008. A thorough brief to the policy process and outcomes can be found at <http://gnso.icann.org/issues/new-gtlds>.

ICANN's work next focused on implementation: creating an application and evaluation process for new gTLDs that is aligned with the policy recommendations and provides a clear roadmap for applicants to reach delegation, including Board approval. This implementation work is reflected in the drafts of the applicant guidebook that were released for public comment, and in the explanatory papers giving insight into rationale behind some of the conclusions reached on specific topics. Meaningful community input has led to revisions of the draft applicant guidebook. In parallel, ICANN has established the resources needed to successfully launch and operate the program. This process concluded with the decision by the ICANN Board of Directors in June 2011 to launch the New gTLD Program.

For current information, timelines and activities related to the New gTLD Program, please go to <http://www.icann.org/en/topics/new-gtld-program.htm>.

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 1

4 June 2012

Module 1

Introduction to the gTLD Application Process

This module gives applicants an overview of the process for applying for a new generic top-level domain, and includes instructions on how to complete and submit an application, the supporting documentation an applicant must submit with an application, the fees required, and when and how to submit them.

This module also describes the conditions associated with particular types of applications, and the stages of the application life cycle.

Prospective applicants are encouraged to read and become familiar with the contents of this entire module, as well as the others, before starting the application process to make sure they understand what is required of them and what they can expect at each stage of the application evaluation process.

For the complete set of the supporting documentation and more about the origins, history and details of the policy development background to the New gTLD Program, please see <http://gnso.icann.org/issues/new-gtlds/>.

This Applicant Guidebook is the implementation of Board-approved consensus policy concerning the introduction of new gTLDs, and has been revised extensively via public comment and consultation over a two-year period.

1.1 Application Life Cycle and Timelines

This section provides a description of the stages that an application passes through once it is submitted. Some stages will occur for all applications submitted; others will only occur in specific circumstances. Applicants should be aware of the stages and steps involved in processing applications received.

1.1.1 Application Submission Dates

The user registration and application submission periods open at **00:01 UTC 12 January 2012**.

The user registration period closes at **23:59 UTC 29 March 2012**. New users to TAS will not be accepted beyond this

time. Users already registered will be able to complete the application submission process.

Applicants should be aware that, due to required processing steps (i.e., online user registration, application submission, fee submission, and fee reconciliation) and security measures built into the online application system, it might take substantial time to perform all of the necessary steps to submit a complete application. Accordingly, applicants are encouraged to submit their completed applications and fees as soon as practicable after the Application Submission Period opens. Waiting until the end of this period to begin the process may not provide sufficient time to submit a complete application before the period closes. Accordingly, new user registrations will not be accepted after the date indicated above.

The application submission period closes at **23:59 UTC 12 April 2012**.

To receive consideration, all applications must be submitted electronically through the online application system by the close of the application submission period.

An application will not be considered, in the absence of exceptional circumstances, if:

- It is received after the close of the application submission period.
- The application form is incomplete (either the questions have not been fully answered or required supporting documents are missing). Applicants will not ordinarily be permitted to supplement their applications after submission.
- The evaluation fee has not been paid by the deadline. Refer to Section 1.5 for fee information.

ICANN has gone to significant lengths to ensure that the online application system will be available for the duration of the application submission period. In the event that the system is not available, ICANN will provide alternative instructions for submitting applications on its website.

1.1.2 Application Processing Stages

This subsection provides an overview of the stages involved in processing an application submitted to ICANN. Figure 1-1 provides a simplified depiction of the process. The shortest and most straightforward path is marked with bold lines, while certain stages that may or may not be

applicable in any given case are also shown. A brief description of each stage follows.

Figure 1-1 – Once submitted to ICANN, applications will pass through multiple stages of processing.

1.1.2.1 Application Submission Period

At the time the application submission period opens, those wishing to submit new gTLD applications can become registered users of the TLD Application System (TAS).

After completing the user registration, applicants will supply a deposit for each requested application slot (see section 1.4), after which they will receive access to the full application form. To complete the application, users will answer a series of questions to provide general information, demonstrate financial capability, and demonstrate technical and operational capability. The supporting documents listed in subsection 1.2.2 of this module must also be submitted through the online application system as instructed in the relevant questions.

Applicants must also submit their evaluation fees during this period. Refer to Section 1.5 of this module for additional information about fees and payments.

Each application slot is for one gTLD. An applicant may submit as many applications as desired; however, there is no means to apply for more than one gTLD in a single application.

Following the close of the application submission period, ICANN will provide applicants with periodic status updates on the progress of their applications.

1.1.2.2 Administrative Completeness Check

Immediately following the close of the application submission period, ICANN will begin checking all applications for completeness. This check ensures that:

- All mandatory questions are answered;
- Required supporting documents are provided in the proper format(s); and
- The evaluation fees have been received.

ICANN will post the public portions of all applications considered complete and ready for evaluation within two weeks of the close of the application submission period. Certain questions relate to internal processes or information: applicant responses to these questions will not be posted. Each question is labeled in the application form as to whether the information will be posted. See posting designations for the full set of questions in the attachment to Module 2.

The administrative completeness check is expected to be completed for all applications in a period of approximately 8 weeks, subject to extension depending on volume. In the event that all applications cannot be processed within this period, ICANN will post updated process information and an estimated timeline.

1.1.2.3 Comment Period

Public comment mechanisms are part of ICANN's policy development, implementation, and operational processes. As a private-public partnership, ICANN is dedicated to: preserving the operational security and stability of the Internet, promoting competition, achieving broad representation of global Internet communities, and developing policy appropriate to its mission through bottom-up, consensus-based processes. This necessarily involves the participation of many stakeholder groups in a public discussion.

ICANN will open a comment period (the Application Comment period) at the time applications are publicly posted on ICANN's website (refer to subsection 1.1.2.2). This period will allow time for the community to review and submit comments on posted application materials

(referred to as “application comments.”) The comment forum will require commenters to associate comments with specific applications and the relevant panel. Application comments received within a 60-day period from the posting of the application materials will be available to the evaluation panels performing the Initial Evaluation reviews. This period is subject to extension, should the volume of applications or other circumstances require. **To be considered by evaluators, comments must be received in the designated comment forum within the stated time period.**

Evaluators will perform due diligence on the application comments (i.e., determine their relevance to the evaluation, verify the accuracy of claims, analyze meaningfulness of references cited) and take the information provided in these comments into consideration. In cases where consideration of the comments has impacted the scoring of the application, the evaluators will seek clarification from the applicant. Statements concerning consideration of application comments that have impacted the evaluation decision will be reflected in the evaluators’ summary reports, which will be published at the end of Extended Evaluation.

Comments received after the 60-day period will be stored and available (along with comments received during the comment period) for other considerations, such as the dispute resolution process, as described below.

In the new gTLD application process, all applicants should be aware that that comment fora are a mechanism for the public to bring relevant information and issues to the attention of those charged with handling new gTLD applications. Anyone may submit a comment in a public comment forum.

Comments and the Formal Objection Process: A distinction should be made between application comments, which may be relevant to ICANN’s task of determining whether applications meet the established criteria, and formal objections that concern matters outside those evaluation criteria. The formal objection process was created to allow a full and fair consideration of objections based on certain limited grounds outside ICANN’s evaluation of applications on their merits (see subsection 3.2).

Public comments will not be considered as formal objections. Comments on matters associated with formal objections will not be considered by panels during Initial Evaluation. These comments will be available to and may

be subsequently considered by an expert panel during a dispute resolution proceeding (see subsection 1.1.2.9). However, in general, application comments have a very limited role in the dispute resolution process.

String Contention: Comments designated for the Community Priority Panel, as relevant to the criteria in Module 4, may be taken into account during a Community Priority Evaluation.

Government Notifications: Governments may provide a notification using the application comment forum to communicate concerns relating to national laws. However, a government's notification of concern will not in itself be deemed to be a formal objection. A notification by a government does not constitute grounds for rejection of a gTLD application. A government may elect to use this comment mechanism to provide such a notification, in addition to or as an alternative to the GAC Early Warning procedure described in subsection 1.1.2.4 below.

Governments may also communicate directly to applicants using the contact information posted in the application, e.g., to send a notification that an applied-for gTLD string might be contrary to a national law, and to try to address any concerns with the applicant.

General Comments: A general public comment forum will remain open through all stages of the evaluation process, to provide a means for the public to bring forward any other relevant information or issues.

1.1.2.4 GAC Early Warning

Concurrent with the 60-day comment period, ICANN's Governmental Advisory Committee (GAC) may issue a GAC Early Warning notice concerning an application. This provides the applicant with an indication that the application is seen as potentially sensitive or problematic by one or more governments.

The GAC Early Warning is a notice only. It is not a formal objection, nor does it directly lead to a process that can result in rejection of the application. However, a GAC Early Warning should be taken seriously as it raises the likelihood that the application could be the subject of GAC Advice on New gTLDs (see subsection 1.1.2.7) or of a formal objection (see subsection 1.1.2.6) at a later stage in the process.

A GAC Early Warning typically results from a notice to the GAC by one or more governments that an application might be problematic, e.g., potentially violate national law or raise sensitivities. A GAC Early Warning may be issued for any reason.¹ The GAC may then send that notice to the Board – constituting the GAC Early Warning. ICANN will notify applicants of GAC Early Warnings as soon as practicable after receipt from the GAC. The GAC Early Warning notice may include a nominated point of contact for further information.

GAC consensus is not required for a GAC Early Warning to be issued. Minimally, the GAC Early Warning must be provided in writing to the ICANN Board, and be clearly labeled as a GAC Early Warning. This may take the form of an email from the GAC Chair to the ICANN Board. For GAC Early Warnings to be most effective, they should include the reason for the warning and identify the objecting countries.

Upon receipt of a GAC Early Warning, the applicant may elect to withdraw the application for a partial refund (see subsection 1.5.1), or may elect to continue with the application (this may include meeting with representatives from the relevant government(s) to try to address the concern). To qualify for the refund described in subsection 1.5.1, the applicant must provide notification to ICANN of its election to withdraw the application within 21 calendar days of the date of GAC Early Warning delivery to the applicant.

To reduce the possibility of a GAC Early Warning, all applicants are encouraged to identify potential sensitivities in advance of application submission, and to work with the relevant parties (including governments) beforehand to mitigate concerns related to the application.

1.1.2.5 Initial Evaluation

Initial Evaluation will begin immediately after the administrative completeness check concludes. All complete applications will be reviewed during Initial Evaluation. At the beginning of this period, background screening on the applying entity and the individuals named in the application will be conducted. Applications

¹ While definitive guidance has not been issued, the GAC has indicated that strings that could raise sensitivities include those that "purport to represent or that embody a particular group of people or interests based on historical, cultural, or social components of identity, such as nationality, race or ethnicity, religion, belief, culture or particular social origin or group, political opinion, membership of a national minority, disability, age, and/or a language or linguistic group (non-exhaustive)" and "those strings that refer to particular sectors, such as those subject to national regulation (such as .bank, .pharmacy) or those that describe or are targeted to a population or industry that is vulnerable to online fraud or abuse."

must pass this step in conjunction with the Initial Evaluation reviews.

There are two main elements of the Initial Evaluation:

1. String reviews (concerning the applied-for gTLD string). String reviews include a determination that the applied-for gTLD string is not likely to cause security or stability problems in the DNS, including problems caused by similarity to existing TLDs or reserved names.
2. Applicant reviews (concerning the entity applying for the gTLD and its proposed registry services). Applicant reviews include a determination of whether the applicant has the requisite technical, operational, and financial capabilities to operate a registry.

By the conclusion of the Initial Evaluation period, ICANN will post notice of all Initial Evaluation results. Depending on the volume of applications received, such notices may be posted in batches over the course of the Initial Evaluation period.

The Initial Evaluation is expected to be completed for all applications in a period of approximately 5 months. If the volume of applications received significantly exceeds 500, applications will be processed in batches and the 5-month timeline will not be met. The first batch will be limited to 500 applications and subsequent batches will be limited to 400 to account for capacity limitations due to managing extended evaluation, string contention, and other processes associated with each previous batch.

If batching is required, a secondary time-stamp process will be employed to establish the batches. (Batching priority will not be given to an application based on the time at which the application was submitted to ICANN, nor will batching priority be established based on a random selection method.)

The secondary time-stamp process will require applicants to obtain a time-stamp through a designated process which will occur after the close of the application submission period. The secondary time stamp process will occur, if required, according to the details to be published on ICANN's website. (Upon the Board's approval of a final designation of the operational details of the "secondary timestamp" batching process, the final plan will be added as a process within the Applicant Guidebook.)

If batching is required, the String Similarity review will be completed on all applications prior to the establishment of evaluation priority batches. For applications identified as part of a contention set, the entire contention set will be kept together in the same batch.

If batches are established, ICANN will post updated process information and an estimated timeline.

Note that the processing constraints will limit delegation rates to a steady state even in the event of an extremely high volume of applications. The annual delegation rate will not exceed 1,000 per year in any case, no matter how many applications are received.²

1.1.2.6 *Objection Filing*

Formal objections to applications can be filed on any of four enumerated grounds, by parties with standing to object. The objection filing period will open after ICANN posts the list of complete applications as described in subsection 1.1.2.2, and will last for approximately 7 months.

Objectors must file such formal objections directly with dispute resolution service providers (DRSPs), not with ICANN. The objection filing period will close following the end of the Initial Evaluation period (refer to subsection 1.1.2.5), with a two-week window of time between the posting of the Initial Evaluation results and the close of the objection filing period. Objections that have been filed during the objection filing period will be addressed in the dispute resolution stage, which is outlined in subsection 1.1.2.9 and discussed in detail in Module 3.

All applicants should be aware that third parties have the opportunity to file objections to any application during the objection filing period. Applicants whose applications are the subject of a formal objection will have an opportunity to file a response according to the dispute resolution service provider's rules and procedures. An applicant wishing to file a formal objection to another application that has been submitted would do so within the objection filing period, following the objection filing procedures in Module 3.

Applicants are encouraged to identify possible regional, cultural, property interests, or other sensitivities regarding TLD strings and their uses before applying and, where

² See "Delegation Rate Scenarios for New gTLDs" at <http://icann.org/en/topics/new-gtlds/delegation-rate-scenarios-new-gtlds-06oct10-en.pdf> for additional discussion.

possible, consult with interested parties to mitigate any concerns in advance.

1.1.2.7 Receipt of GAC Advice on New gTLDs

The GAC may provide public policy advice directly to the ICANN Board on any application. The procedure for GAC Advice on New gTLDs described in Module 3 indicates that, to be considered by the Board during the evaluation process, the GAC Advice on New gTLDs must be submitted by the close of the objection filing period. A GAC Early Warning is not a prerequisite to use of the GAC Advice process.

If the Board receives GAC Advice on New gTLDs stating that it is the consensus of the GAC that a particular application should not proceed, this will create a strong presumption for the ICANN Board that the application should not be approved. If the Board does not act in accordance with this type of advice, it must provide rationale for doing so.

See Module 3 for additional detail on the procedures concerning GAC Advice on New gTLDs.

1.1.2.8 Extended Evaluation

Extended Evaluation is available only to certain applicants that do not pass Initial Evaluation.

Applicants failing certain elements of the Initial Evaluation can request an Extended Evaluation. If the applicant does not pass Initial Evaluation and does not expressly request an Extended Evaluation, the application will proceed no further. The Extended Evaluation period allows for an additional exchange of information between the applicant and evaluators to clarify information contained in the application. The reviews performed in Extended Evaluation do not introduce additional evaluation criteria.

An application may be required to enter an Extended Evaluation if one or more proposed registry services raise technical issues that might adversely affect the security or stability of the DNS. The Extended Evaluation period provides a time frame for these issues to be investigated. Applicants will be informed if such a review is required by the end of the Initial Evaluation period.

Evaluators and any applicable experts consulted will communicate the conclusions resulting from the additional review by the end of the Extended Evaluation period.

At the conclusion of the Extended Evaluation period, ICANN will post summary reports, by panel, from the Initial and Extended Evaluation periods.

If an application passes the Extended Evaluation, it can then proceed to the next relevant stage. If the application does not pass the Extended Evaluation, it will proceed no further.

The Extended Evaluation is expected to be completed for all applications in a period of approximately 5 months, though this timeframe could be increased based on volume. In this event, ICANN will post updated process information and an estimated timeline.

1.1.2.9 Dispute Resolution

Dispute resolution applies only to applicants whose applications are the subject of a formal objection.

Where formal objections are filed and filing fees paid during the objection filing period, independent dispute resolution service providers (DRSPs) will initiate and conclude proceedings based on the objections received. The formal objection procedure exists to provide a path for those who wish to object to an application that has been submitted to ICANN. Dispute resolution service providers serve as the fora to adjudicate the proceedings based on the subject matter and the needed expertise. Consolidation of objections filed will occur where appropriate, at the discretion of the DRSP.

As a result of a dispute resolution proceeding, either the applicant will prevail (in which case the application can proceed to the next relevant stage), or the objector will prevail (in which case either the application will proceed no further or the application will be bound to a contention resolution procedure). In the event of multiple objections, an applicant must prevail in all dispute resolution proceedings concerning the application to proceed to the next relevant stage. Applicants will be notified by the DRSP(s) of the results of dispute resolution proceedings.

Dispute resolution proceedings, where applicable, are expected to be completed for all applications within approximately a 5-month time frame. In the event that volume is such that this timeframe cannot be accommodated, ICANN will work with the dispute resolution service providers to create processing procedures and post updated timeline information.

1.1.2.10 String Contention

String contention applies only when there is more than one qualified application for the same or similar gTLD strings.

String contention refers to the scenario in which there is more than one qualified application for the identical gTLD string or for similar gTLD strings. In this Applicant Guidebook, “similar” means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.

Applicants are encouraged to resolve string contention cases among themselves prior to the string contention resolution stage. In the absence of resolution by the contending applicants, string contention cases are resolved either through a community priority evaluation (if a community-based applicant elects it) or through an auction.

In the event of contention between applied-for gTLD strings that represent geographic names, the parties may be required to follow a different process to resolve the contention. See subsection 2.2.1.4 of Module 2 for more information.

Groups of applied-for strings that are either identical or similar are called contention sets. All applicants should be aware that if an application is identified as being part of a contention set, string contention resolution procedures will not begin until all applications in the contention set have completed all aspects of evaluation, including dispute resolution, if applicable.

To illustrate, as shown in Figure 1-2, Applicants A, B, and C all apply for .EXAMPLE and are identified as a contention set. Applicants A and C pass Initial Evaluation, but Applicant B does not. Applicant B requests Extended Evaluation. A third party files an objection to Applicant C’s application, and Applicant C enters the dispute resolution process. Applicant A must wait to see whether Applicants B and C successfully complete the Extended Evaluation and dispute resolution phases, respectively, before it can proceed to the string contention resolution stage. In this example, Applicant B passes the Extended Evaluation, but Applicant C does not prevail in the dispute resolution proceeding. String contention resolution then proceeds between Applicants A and B.

Figure 1-2 – All applications in a contention set must complete all previous evaluation and dispute resolution stages before string contention resolution can begin.

Applicants prevailing in a string contention resolution procedure will proceed toward delegation of the applied-for gTLDs.

String contention resolution for a contention set is estimated to take from 2.5 to 6 months to complete. The time required will vary per case because some contention cases may be resolved in either a community priority evaluation or an auction, while others may require both processes.

1.1.2.11 Transition to Delegation

Applicants successfully completing all the relevant stages outlined in this subsection 1.1.2 are required to carry out a series of concluding steps before delegation of the applied-for gTLD into the root zone. These steps include execution of a registry agreement with ICANN and completion of a pre-delegation technical test to validate information provided in the application.

Following execution of a registry agreement, the prospective registry operator must complete technical set-up and show satisfactory performance on a set of technical tests before delegation of the gTLD into the root zone may be initiated. If the pre-delegation testing requirements are not satisfied so that the gTLD can be delegated into the root zone within the time frame specified in the registry agreement, ICANN may in its sole and absolute discretion elect to terminate the registry agreement.

Once all of these steps have been successfully completed, the applicant is eligible for delegation of its applied-for gTLD into the DNS root zone.

It is expected that the transition to delegation steps can be completed in approximately 2 months, though this could take more time depending on the applicant's level of preparedness for the pre-delegation testing and the volume of applications undergoing these steps concurrently.

1.1.3 Lifecycle Timelines

Based on the estimates for each stage described in this section, the lifecycle for a straightforward application could be approximately 9 months, as follows:

Figure 1-3 – A straightforward application could have an approximate 9-month lifecycle.

The lifecycle for a highly complex application could be much longer, such as 20 months in the example below:

Figure 1-4 – A complex application could have an approximate 20-month lifecycle.

1.1.4 Posting Periods

The results of application reviews will be made available to the public at various stages in the process, as shown below.

Period	Posting Content
During Administrative Completeness Check	Public portions of all applications (posted within 2 weeks of the start of the Administrative Completeness Check).
End of Administrative Completeness Check	Results of Administrative Completeness Check.
GAC Early Warning Period	GAC Early Warnings received.
During Initial Evaluation	Status updates for applications withdrawn or ineligible for further review. Contention sets resulting from String Similarity review.

Period	Posting Content
End of Initial Evaluation	Application status updates with all Initial Evaluation results.
GAC Advice on New gTLDs	GAC Advice received.
End of Extended Evaluation	Application status updates with all Extended Evaluation results. Evaluation summary reports from the Initial and Extended Evaluation periods.
During Objection Filing/Dispute Resolution	Information on filed objections and status updates available via Dispute Resolution Service Provider websites. Notice of all objections posted by ICANN after close of objection filing period.
During Contention Resolution (Community Priority Evaluation)	Results of each Community Priority Evaluation posted as completed.
During Contention Resolution (Auction)	Results from each auction posted as completed.
Transition to Delegation	Registry Agreements posted when executed. Pre-delegation testing status updated.

1.1.5 Sample Application Scenarios

The following scenarios briefly show a variety of ways in which an application may proceed through the evaluation process. The table that follows exemplifies various processes and outcomes. This is not intended to be an exhaustive list of possibilities. There are other possible combinations of paths an application could follow.

Estimated time frames for each scenario are also included, based on current knowledge. Actual time frames may vary depending on several factors, including the total number

of applications received by ICANN during the application submission period. It should be emphasized that most applications are expected to pass through the process in the shortest period of time, i.e., they will not go through extended evaluation, dispute resolution, or string contention resolution processes. Although most of the scenarios below are for processes extending beyond nine months, it is expected that most applications will complete the process within the nine-month timeframe.

Scenario Number	Initial Evaluation	Extended Evaluation	Objection(s) Filed	String Contention	Approved for Delegation Steps	Estimated Elapsed Time
1	Pass	N/A	None	No	Yes	9 months
2	Fail	Pass	None	No	Yes	14 months
3	Pass	N/A	None	Yes	Yes	11.5 – 15 months
4	Pass	N/A	Applicant prevails	No	Yes	14 months
5	Pass	N/A	Objector prevails	N/A	No	12 months
6	Fail	Quit	N/A	N/A	No	7 months
7	Fail	Fail	N/A	N/A	No	12 months
8	Fail	Pass	Applicant prevails	Yes	Yes	16.5 – 20 months
9	Fail	Pass	Applicant prevails	Yes	No	14.5 – 18 months

Scenario 1 – Pass Initial Evaluation, No Objection, No Contention – In the most straightforward case, the application passes Initial Evaluation and there is no need for an Extended Evaluation. No objections are filed during the objection period, so there is no dispute to resolve. As there is no contention for the applied-for gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD. Most applications are expected to complete the process within this timeframe.

Scenario 2 – Extended Evaluation, No Objection, No Contention – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. As with Scenario 1, no objections are filed

during the objection period, so there is no dispute to resolve. As there is no contention for the gTLD string, the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

Scenario 3 – Pass Initial Evaluation, No Objection, Contention – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. No objections are filed during the objection period, so there is no dispute to resolve. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, the application prevails in the contention resolution, so the applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

Scenario 4 – Pass Initial Evaluation, Win Objection, No Contention – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing (refer to Module 3, Objection Procedures). The objection is heard by a dispute resolution service provider panel that finds in favor of the applicant. The applicant can enter into a registry agreement and the application can proceed toward delegation of the applied-for gTLD.

Scenario 5 – Pass Initial Evaluation, Lose Objection – In this case, the application passes the Initial Evaluation so there is no need for Extended Evaluation. During the objection period, multiple objections are filed by one or more objectors with standing for one or more of the four enumerated objection grounds. Each objection is heard by a dispute resolution service provider panel. In this case, the panels find in favor of the applicant for most of the objections, but one finds in favor of the objector. As one of the objections has been upheld, the application does not proceed.

Scenario 6 – Fail Initial Evaluation, Applicant Withdraws – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant decides to withdraw the application rather than continuing with Extended Evaluation. The application does not proceed.

Scenario 7 – Fail Initial Evaluation, Fail Extended Evaluation -- In this case, the application fails one or more aspects of the Initial Evaluation. The applicant requests Extended Evaluation for the appropriate elements. However, the

application fails Extended Evaluation also. The application does not proceed.

Scenario 8 – Extended Evaluation, Win Objection, Pass Contention – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing. The objection is heard by a dispute resolution service provider panel that finds in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, the applicant prevails over other applications in the contention resolution procedure, the applicant can enter into a registry agreement, and the application can proceed toward delegation of the applied-for gTLD.

Scenario 9 – Extended Evaluation, Objection, Fail Contention – In this case, the application fails one or more aspects of the Initial Evaluation. The applicant is eligible for and requests an Extended Evaluation for the appropriate elements. Here, the application passes the Extended Evaluation. During the objection filing period, an objection is filed on one of the four enumerated grounds by an objector with standing. The objection is heard by a dispute resolution service provider that finds in favor of the applicant. However, there are other applications for the same or a similar gTLD string, so there is contention. In this case, another applicant prevails in the contention resolution procedure, and the application does not proceed.

Transition to Delegation – After an application has successfully completed Initial Evaluation, and other stages as applicable, the applicant is required to complete a set of steps leading to delegation of the gTLD, including execution of a registry agreement with ICANN, and completion of pre-delegation testing. Refer to Module 5 for a description of the steps required in this stage.

1.1.6 Subsequent Application Rounds

ICANN's goal is to launch subsequent gTLD application rounds as quickly as possible. The exact timing will be based on experiences gained and changes required after this round is completed. The goal is for the next application round to begin within one year of the close of the application submission period for the initial round.

ICANN has committed to reviewing the effects of the New gTLD Program on the operations of the root zone system after the first application round, and will defer the delegations in a second application round until it is determined that the delegations resulting from the first round did not jeopardize root zone system security or stability.

It is the policy of ICANN that there be subsequent application rounds, and that a systemized manner of applying for gTLDs be developed in the long term.

1.2 Information for All Applicants

1.2.1 Eligibility

Established corporations, organizations, or institutions in good standing may apply for a new gTLD. Applications from individuals or sole proprietorships will not be considered. Applications from or on behalf of yet-to-be-formed legal entities, or applications presupposing the future formation of a legal entity (for example, a pending Joint Venture) will not be considered.

ICANN has designed the New gTLD Program with multiple stakeholder protection mechanisms. Background screening, features of the gTLD Registry Agreement, data and financial escrow mechanisms are all intended to provide registrant and user protections.

The application form requires applicants to provide information on the legal establishment of the applying entity, as well as the identification of directors, officers, partners, and major shareholders of that entity. The names and positions of individuals included in the application will be published as part of the application; other information collected about the individuals will not be published.

Background screening at both the entity level and the individual level will be conducted for all applications to confirm eligibility. This inquiry is conducted on the basis of the information provided in questions 1-11 of the application form. ICANN may take into account information received from any source if it is relevant to the criteria in this section. If requested by ICANN, all applicants will be required to obtain and deliver to ICANN and ICANN's background screening vendor any consents or agreements of the entities and/or individuals named in questions 1-11 of the application form necessary to conduct background screening activities.

ICANN will perform background screening in only two areas: (1) General business diligence and criminal history; and (2) History of cybersquatting behavior. The criteria used for criminal history are aligned with the “crimes of trust” standard sometimes used in the banking and finance industry.

In the absence of exceptional circumstances, applications from any entity with or including any individual with convictions or decisions of the types listed in (a) – (m) below will be automatically disqualified from the program.

- a. within the past ten years, has been convicted of any crime related to financial or corporate governance activities, or has been judged by a court to have committed fraud or breach of fiduciary duty, or has been the subject of a judicial determination that ICANN deems as the substantive equivalent of any of these;
- b. within the past ten years, has been disciplined by any government or industry regulatory body for conduct involving dishonesty or misuse of the funds of others;
- c. within the past ten years has been convicted of any willful tax-related fraud or willful evasion of tax liabilities;
- d. within the past ten years has been convicted of perjury, forswearing, failing to cooperate with a law enforcement investigation, or making false statements to a law enforcement agency or representative;
- e. has ever been convicted of any crime involving the use of computers, telephony systems, telecommunications or the Internet to facilitate the commission of crimes;
- f. has ever been convicted of any crime involving the use of a weapon, force, or the threat of force;
- g. has ever been convicted of any violent or sexual offense victimizing children, the

elderly, or individuals with disabilities;

- h. has ever been convicted of the illegal sale, manufacture, or distribution of pharmaceutical drugs, or been convicted or successfully extradited for any offense described in Article 3 of the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988³;
- i. has ever been convicted or successfully extradited for any offense described in the United Nations Convention against Transnational Organized Crime (all Protocols)^{4 5};
- j. has been convicted, within the respective timeframes, of aiding, abetting, facilitating, enabling, conspiring to commit, or failing to report any of the listed crimes above (i.e., within the past 10 years for crimes listed in (a) - (d) above, or ever for the crimes listed in (e) - (i) above);
- k. has entered a guilty plea as part of a plea agreement or has a court case in any jurisdiction with a disposition of Adjudicated Guilty or Adjudication Withheld (or regional equivalents), within the respective timeframes listed above for any of the listed crimes (i.e., within the past 10 years for crimes listed in (a) - (d) above, or ever for the crimes listed in (e) - (i) above);
- l. is the subject of a disqualification imposed by ICANN and in effect at the time the application is considered;
- m. has been involved in a pattern of adverse, final decisions indicating that the applicant

³ <http://www.unodc.org/unodc/en/treaties/illicit-traffic.html>

⁴ <http://www.unodc.org/unodc/en/treaties/CTOC/index.html>

⁵ It is recognized that not all countries have signed on to the UN conventions referenced above. These conventions are being used solely for identification of a list of crimes for which background screening will be performed. It is not necessarily required that an applicant would have been convicted pursuant to the UN convention but merely convicted of a crime listed under these conventions, to trigger these criteria.

or individual named in the application was engaged in cybersquatting as defined in the Uniform Domain Name Dispute Resolution Policy (UDRP), the Anti-Cybersquatting Consumer Protection Act (ACPA), or other equivalent legislation, or was engaged in reverse domain name hijacking under the UDRP or bad faith or reckless disregard under the ACPA or other equivalent legislation. Three or more such decisions with one occurring in the last four years will generally be considered to constitute a pattern.

- n. fails to provide ICANN with the identifying information necessary to confirm identity at the time of application or to resolve questions of identity during the background screening process;
- o. fails to provide a good faith effort to disclose all relevant information relating to items (a) – (m).

Background screening is in place to protect the public interest in the allocation of critical Internet resources, and ICANN reserves the right to deny an otherwise qualified application based on any information identified during the background screening process. For example, a final and legally binding decision obtained by a national law enforcement or consumer protection authority finding that the applicant was engaged in fraudulent and deceptive commercial practices as defined in the Organization for Economic Co-operation and Development (OECD) Guidelines for Protecting Consumers from Fraudulent and Deceptive Commercial Practices Across Borders⁶ may cause an application to be rejected. ICANN may also contact the applicant with additional questions based on information obtained in the background screening process.

All applicants are required to provide complete and detailed explanations regarding any of the above events as part of the application. Background screening information will not be made publicly available by ICANN.

Registrar Cross-Ownership -- ICANN-accredited registrars are eligible to apply for a gTLD. However, all gTLD registries

⁶ http://www.oecd.org/document/56/0,3746,en_2649_34267_2515000_1_1_1_1.00.html

are required to abide by a Code of Conduct addressing, *inter alia*, non-discriminatory access for all authorized registrars. ICANN reserves the right to refer any application to the appropriate competition authority relative to any cross-ownership issues.

Legal Compliance -- ICANN must comply with all U.S. laws, rules, and regulations. One such set of regulations is the economic and trade sanctions program administered by the Office of Foreign Assets Control (OFAC) of the U.S. Department of the Treasury. These sanctions have been imposed on certain countries, as well as individuals and entities that appear on OFAC's List of Specially Designated Nationals and Blocked Persons (the SDN List). ICANN is prohibited from providing most goods or services to residents of sanctioned countries or their governmental entities or to SDNs without an applicable U.S. government authorization or exemption. ICANN generally will not seek a license to provide goods or services to an individual or entity on the SDN List. In the past, when ICANN has been requested to provide services to individuals or entities that are not SDNs, but are residents of sanctioned countries, ICANN has sought and been granted licenses as required. In any given case, however, OFAC could decide not to issue a requested license.

1.2.2 Required Documents

All applicants should be prepared to submit the following documents, which are required to accompany each application:

1. **Proof of legal establishment** – Documentation of the applicant's establishment as a specific type of entity in accordance with the applicable laws of its jurisdiction.
2. **Financial statements** – Applicants must provide audited or independently certified financial statements for the most recently completed fiscal year for the applicant. In some cases, unaudited financial statements may be provided.

As indicated in the relevant questions, supporting documentation should be submitted in the original language. English translations are not required.

All documents must be valid at the time of submission. Refer to the Evaluation Criteria, attached to Module 2, for additional details on the requirements for these documents.

Some types of supporting documentation are required only in certain cases:

1. **Community endorsement** – If an applicant has designated its application as community-based (see section 1.2.3), it will be asked to submit a written endorsement of its application by one or more established institutions representing the community it has named. An applicant may submit written endorsements from multiple institutions. If applicable, this will be submitted in the section of the application concerning the community-based designation.

At least one such endorsement is required for a complete application. The form and content of the endorsement are at the discretion of the party providing the endorsement; however, the letter must identify the applied-for gTLD string and the applying entity, include an express statement of support for the application, and supply the contact information of the entity providing the endorsement.

Written endorsements from individuals need not be submitted with the application, but may be submitted in the application comment forum.

2. **Government support or non-objection** – If an applicant has applied for a gTLD string that is a geographic name (as defined in this Guidebook), the applicant is required to submit documentation of support for or non-objection to its application from the relevant governments or public authorities. Refer to subsection 2.2.1.4 for more information on the requirements for geographic names. If applicable, this will be submitted in the geographic names section of the application.
3. **Documentation of third-party funding commitments** – If an applicant lists funding from third parties in its application, it must provide evidence of commitment by the party committing the funds. If applicable, this will be submitted in the financial section of the application.

1.2.3 Community-Based Designation

All applicants are required to designate whether their application is **community-based**.

1.2.3.1 Definitions

For purposes of this Applicant Guidebook, a **community-based gTLD** is a gTLD that is operated for the benefit of a clearly delineated community. Designation or non-

designation of an application as community-based is entirely at the discretion of the applicant. Any applicant may designate its application as community-based; however, each applicant making this designation is asked to substantiate its status as representative of the community it names in the application by submission of written endorsements in support of the application. Additional information may be requested in the event of a community priority evaluation (refer to section 4.2 of Module 4). An applicant for a community-based gTLD is expected to:

1. Demonstrate an ongoing relationship with a clearly delineated community.
2. Have applied for a gTLD string strongly and specifically related to the community named in the application.
3. Have proposed dedicated registration and use policies for registrants in its proposed gTLD, including appropriate security verification procedures, commensurate with the community-based purpose it has named.
4. Have its application endorsed in writing by one or more established institutions representing the community it has named.

For purposes of differentiation, an application that has not been designated as community-based will be referred to hereinafter in this document as a **standard application**. A standard gTLD can be used for any purpose consistent with the requirements of the application and evaluation criteria, and with the registry agreement. A standard applicant may or may not have a formal relationship with an exclusive registrant or user population. It may or may not employ eligibility or use restrictions. Standard simply means here that the applicant has not designated the application as community-based.

1.2.3.2 Implications of Application Designation

Applicants should understand how their designation as community-based or standard will affect application processing at particular stages, and, if the application is successful, execution of the registry agreement and subsequent obligations as a gTLD registry operator, as described in the following paragraphs.

Objection / Dispute Resolution – All applicants should understand that a formal objection may be filed against any application on community grounds, even if the applicant has not designated itself as community-based or

declared the gTLD to be aimed at a particular community. Refer to Module 3, Objection Procedures.

String Contention – Resolution of string contention may include one or more components, depending on the composition of the contention set and the elections made by community-based applicants.

- A **settlement between the parties** can occur at any time after contention is identified. The parties will be encouraged to meet with an objective to settle the contention. Applicants in contention always have the opportunity to resolve the contention voluntarily, resulting in the withdrawal of one or more applications, before reaching the contention resolution stage.
- A **community priority evaluation** will take place only if a community-based applicant in a contention set elects this option. All community-based applicants in a contention set will be offered this option in the event that there is contention remaining after the applications have successfully completed all previous evaluation stages.
- An **auction** will result for cases of contention not resolved by community priority evaluation or agreement between the parties. Auction occurs as a contention resolution means of last resort. If a community priority evaluation occurs but does not produce a clear winner, an auction will take place to resolve the contention.

Refer to Module 4, String Contention Procedures, for detailed discussions of contention resolution procedures.

Contract Execution and Post-Delegation – A community-based applicant will be subject to certain post-delegation contractual obligations to operate the gTLD in a manner consistent with the restrictions associated with its community-based designation. Material changes to the contract, including changes to the community-based nature of the gTLD and any associated provisions, may only be made with ICANN's approval. The determination of whether to approve changes requested by the applicant will be at ICANN's discretion. Proposed criteria for approving such changes are the subject of policy discussions.

Community-based applications are intended to be a narrow category, for applications where there are

unambiguous associations among the applicant, the community served, and the applied-for gTLD string. Evaluation of an applicant's designation as community-based will occur only in the event of a contention situation that results in a community priority evaluation. However, any applicant designating its application as community-based will, if the application is approved, be bound by the registry agreement to implement the community-based restrictions it has specified in the application. This is true even if there are no contending applicants.

1.2.3.3 Changes to Application Designation

An applicant may not change its designation as standard or community-based once it has submitted a gTLD application for processing.

1.2.4 Notice concerning Technical Acceptance Issues with New gTLDs

All applicants should be aware that approval of an application and entry into a registry agreement with ICANN do not guarantee that a new gTLD will immediately function throughout the Internet. Past experience indicates that network operators may not immediately fully support new top-level domains, even when these domains have been delegated in the DNS root zone, since third-party software modification may be required and may not happen immediately.

Similarly, software applications sometimes attempt to validate domain names and may not recognize new or unknown top-level domains. ICANN has no authority or ability to require that software accept new top-level domains, although it does prominently publicize which top-level domains are valid and has developed a basic tool to assist application providers in the use of current root-zone data.

ICANN encourages applicants to familiarize themselves with these issues and account for them in their startup and launch plans. Successful applicants may find themselves expending considerable efforts working with providers to achieve acceptance of their new top-level domains.

Applicants should review <http://www.icann.org/en/topics/TLD-acceptance/> for background. IDN applicants should also review the material concerning experiences with IDN test strings in the root zone (see <http://idn.icann.org/>).

1.2.5 Notice concerning TLD Delegations

ICANN is only able to create TLDs as delegations in the DNS root zone, expressed using NS records with any corresponding DS records and glue records. There is no policy enabling ICANN to place TLDs as other DNS record types (such as A, MX, or DNAME records) in the root zone.

1.2.6 Terms and Conditions

All applicants must agree to a standard set of Terms and Conditions for the application process. The Terms and Conditions are available in Module 6 of this guidebook.

1.2.7 Notice of Changes to Information

If at any time during the evaluation process information previously submitted by an applicant becomes untrue or inaccurate, the applicant must promptly notify ICANN via submission of the appropriate forms. This includes applicant-specific information such as changes in financial position and changes in ownership or control of the applicant.

ICANN reserves the right to require a re-evaluation of the application in the event of a material change. This could involve additional fees or evaluation in a subsequent application round.

Failure to notify ICANN of any change in circumstances that would render any information provided in the application false or misleading may result in denial of the application.

1.2.8 Voluntary Designation for High Security Zones

An ICANN stakeholder group has considered development of a possible special designation for "High Security Zone Top Level Domains" ("HSTLDs"). The group's Final Report can be found at <http://www.icann.org/en/topics/new-gtlds/hstld-final-report-11mar11-en.pdf>.

The Final Report may be used to inform further work. ICANN will support independent efforts toward developing voluntary high-security TLD designations, which may be available to gTLD applicants wishing to pursue such designations.

1.2.9 Security and Stability

Root Zone Stability: There has been significant study, analysis, and consultation in preparation for launch of the

New gTLD Program, indicating that the addition of gTLDs to the root zone will not negatively impact the security or stability of the DNS.

It is estimated that 200-300 TLDs will be delegated annually, and determined that in no case will more than 1000 new gTLDs be added to the root zone in a year. The delegation rate analysis, consultations with the technical community, and anticipated normal operational upgrade cycles all lead to the conclusion that the new gTLD delegations will have no significant impact on the stability of the root system. Modeling and reporting will continue during, and after, the first application round so that root-scaling discussions can continue and the delegation rates can be managed as the program goes forward.

All applicants should be aware that delegation of any new gTLDs is conditional on the continued absence of significant negative impact on the security or stability of the DNS and the root zone system (including the process for delegating TLDs in the root zone). In the event that there is a reported impact in this regard and processing of applications is delayed, the applicants will be notified in an orderly and timely manner.

1.2.10 Resources for Applicant Assistance

A variety of support resources are available to gTLD applicants. Financial assistance will be available to a limited number of eligible applicants. To request financial assistance, applicants must submit a separate financial assistance application in addition to the gTLD application form.

To be eligible for consideration, all financial assistance applications must be received by **23:59 UTC 12 April 2012**. Financial assistance applications will be evaluated and scored against pre-established criteria.

In addition, ICANN maintains a webpage as an informational resource for applicants seeking assistance, and organizations offering support.

See <http://newgtlds.icann.org/applicants/candidate-support> for details on these resources.

1.2.11 Updates to the Applicant Guidebook

As approved by the ICANN Board of Directors, this Guidebook forms the basis of the New gTLD Program. ICANN reserves the right to make reasonable updates and

changes to the Applicant Guidebook at any time, including as the possible result of new technical standards, reference documents, or policies that might be adopted during the course of the application process. Any such updates or revisions will be posted on ICANN's website.

1.3 Information for Internationalized Domain Name Applicants

Some applied-for gTLD strings are expected to be Internationalized Domain Names (IDNs). IDNs are domain names including characters used in the local representation of languages not written with the basic Latin alphabet (a - z), European-Arabic digits (0 - 9), and the hyphen (-). As described below, IDNs require the insertion of A-labels into the DNS root zone.

1.3.1 IDN-Specific Requirements

An applicant for an IDN string must provide information indicating compliance with the IDNA protocol and other technical requirements. The IDNA protocol and its documentation can be found at <http://icann.org/en/topics/idn/rfcs.htm>.

Applicants must provide applied-for gTLD strings in the form of both a **U-label** (the IDN TLD in local characters) and an **A-label**.

An A-label is the ASCII form of an IDN label. Every IDN A-label begins with the IDNA ACE prefix, "xn--", followed by a string that is a valid output of the Punycode algorithm, making a maximum of 63 total ASCII characters in length. The prefix and string together must conform to all requirements for a label that can be stored in the DNS including conformance to the LDH (host name) rule described in RFC 1034, RFC 1123, and elsewhere.

A U-label is the Unicode form of an IDN label, which a user expects to see displayed in applications.

For example, using the current IDN test string in Cyrillic script, the U-label is <испытание> and the A-label is <xn--80akhbyknj4f>. An A-label must be capable of being produced by conversion from a U-label and a U-label must be capable of being produced by conversion from an A-label.

Applicants for IDN gTLDs will also be required to provide the following at the time of the application:

1. Meaning or restatement of string in English. The applicant will provide a short description of what the string would mean or represent in English.
2. Language of label (ISO 639-1). The applicant will specify the language of the applied-for gTLD string, both according to the ISO codes for the representation of names of languages, and in English.
3. Script of label (ISO 15924). The applicant will specify the script of the applied-for gTLD string, both according to the ISO codes for the representation of names of scripts, and in English.
4. Unicode code points. The applicant will list all the code points contained in the U-label according to its Unicode form.
5. Applicants must further demonstrate that they have made reasonable efforts to ensure that the encoded IDN string does not cause any rendering or operational problems. For example, problems have been identified in strings with characters of mixed right-to-left and left-to-right directionality when numerals are adjacent to the path separator (i.e., the dot).⁷

If an applicant is applying for a string with known issues, it should document steps that will be taken to mitigate these issues in applications. While it is not possible to ensure that all rendering problems are avoided, it is important that as many as possible are identified early and that the potential registry operator is aware of these issues. Applicants can become familiar with these issues by understanding the IDNA protocol (see <http://www.icann.org/en/topics/idn/rfcs.htm>), and by active participation in the IDN wiki (see <http://idn.icann.org/>) where some rendering problems are demonstrated.

6. **[Optional]** - Representation of label in phonetic alphabet. The applicant may choose to provide its applied-for gTLD string notated according to the International Phonetic Alphabet (<http://www.langsci.ucl.ac.uk/ipa/>). Note that this information will not be evaluated or scored. The information, if provided, will be used as a guide to ICANN in responding to inquiries or speaking of the application in public presentations.

⁷ See examples at <http://stupid.domain.name/node/683>

1.3.2 IDN Tables

An IDN table provides the list of characters eligible for registration in domain names according to the registry's policy. It identifies any multiple characters that are considered equivalent for domain name registration purposes ("variant characters"). Variant characters occur where two or more characters can be used interchangeably.

Examples of IDN tables can be found in the Internet Assigned Numbers Authority (IANA) IDN Repository at <http://www.iana.org/procedures/idn-repository.html>.

In the case of an application for an IDN gTLD, IDN tables must be submitted for the language or script for the applied-for gTLD string (the "top level tables"). IDN tables must also be submitted for each language or script in which the applicant intends to offer IDN registrations at the second or lower levels.

Each applicant is responsible for developing its IDN Tables, including specification of any variant characters. Tables must comply with ICANN's IDN Guidelines⁸ and any updates thereto, including:

- Complying with IDN technical standards.
- Employing an inclusion-based approach (i.e., code points not explicitly permitted by the registry are prohibited).
- Defining variant characters.
- Excluding code points not permissible under the guidelines, e.g., line-drawing symbols, pictographic dingbats, structural punctuation marks.
- Developing tables and registration policies in collaboration with relevant stakeholders to address common issues.
- Depositing IDN tables with the IANA Repository for IDN Practices (once the TLD is delegated).

An applicant's IDN tables should help guard against user confusion in the deployment of IDN gTLDs. Applicants are strongly urged to consider specific linguistic and writing system issues that may cause problems when characters are used in domain names, as part of their work of defining variant characters.

⁸ See <http://www.icann.org/en/topics/idn/implementation-guidelines.htm>

To avoid user confusion due to differing practices across TLD registries, it is recommended that applicants cooperate with TLD operators that offer domain name registration with the same or visually similar characters.

As an example, languages or scripts are often shared across geographic boundaries. In some cases, this can cause confusion among the users of the corresponding language or script communities. Visual confusion can also exist in some instances between different scripts (for example, Greek, Cyrillic and Latin).

Applicants will be asked to describe the process used in developing the IDN tables submitted. ICANN may compare an applicant's IDN table with IDN tables for the same languages or scripts that already exist in the IANA repository or have been otherwise submitted to ICANN. If there are inconsistencies that have not been explained in the application, ICANN may ask the applicant to detail the rationale for differences. For applicants that wish to conduct and review such comparisons prior to submitting a table to ICANN, a table comparison tool will be available.

ICANN will accept the applicant's IDN tables based on the factors above.

Once the applied-for string has been delegated as a TLD in the root zone, the applicant is required to submit IDN tables for lodging in the IANA Repository of IDN Practices. For additional information, see existing tables at <http://iana.org/domains/idn-tables/>, and submission guidelines at <http://iana.org/procedures/idn-repository.html>.

1.3.3 IDN Variant TLDs

A variant TLD string results from the substitution of one or more characters in the applied-for gTLD string with variant characters based on the applicant's top level tables.

Each application contains one applied-for gTLD string. The applicant may also declare any variant strings for the TLD in its application. However, no variant gTLD strings will be delegated through the New gTLD Program until variant management solutions are developed and implemented.⁹ Declaring variant strings is informative only and will not imply any right or claim to the declared variant strings.

⁹ The ICANN Board directed that work be pursued on variant management in its resolution on 25 Sep 2010, <http://www.icann.org/en/minutes/resolutions-25sep10-en.htm#2.5>.

When a variant delegation process is established, applicants may be required to submit additional information such as implementation details for the variant TLD management mechanism, and may need to participate in a subsequent evaluation process, which could contain additional fees and review steps.

The following scenarios are possible during the gTLD evaluation process:

- a. Applicant declares variant strings to the applied-for gTLD string in its application. If the application is successful, the applied-for gTLD string will be delegated to the applicant. The declared variant strings are noted for future reference. These declared variant strings will not be delegated to the applicant along with the applied-for gTLD string, nor will the applicant have any right or claim to the declared variant strings.

Variant strings listed in successful gTLD applications will be tagged to the specific application and added to a "Declared Variants List" that will be available on ICANN's website. A list of pending (i.e., declared) variant strings from the IDN ccTLD Fast Track is available at <http://icann.org/en/topics/idn/fast-track/string-evaluation-completion-en.htm>.

ICANN may perform independent analysis on the declared variant strings, and will not necessarily include all strings listed by the applicant on the Declared Variants List.

- b. Multiple applicants apply for strings that are identified by ICANN as variants of one another. These applications will be placed in a contention set and will follow the contention resolution procedures in Module 4.
- c. Applicant submits an application for a gTLD string and does not indicate variants to the applied-for gTLD string. ICANN will not identify variant strings unless scenario (b) above occurs.

Each variant string declared in the application must also conform to the string requirements in section 2.2.1.3.2.

Variant strings declared in the application will be reviewed for consistency with the top-level tables submitted in the application. Should any declared variant strings not be

based on use of variant characters according to the submitted top-level tables, the applicant will be notified and the declared string will no longer be considered part of the application.

Declaration of variant strings in an application does not provide the applicant any right or reservation to a particular string. Variant strings on the Declared Variants List may be subject to subsequent additional review per a process and criteria to be defined.

It should be noted that while variants for second and lower-level registrations are defined freely by the local communities without any ICANN validation, there may be specific rules and validation criteria specified for variant strings to be allowed at the top level. It is expected that the variant information provided by applicants in the first application round will contribute to a better understanding of the issues and assist in determining appropriate review steps and fee levels going forward.

1.4 Submitting an Application

Applicants may complete the application form and submit supporting documents using ICANN's TLD Application System (TAS). To access the system, each applicant must first register as a TAS user.

As TAS users, applicants will be able to provide responses in open text boxes and submit required supporting documents as attachments. Restrictions on the size of attachments as well as the file formats are included in the instructions on the TAS site.

Except where expressly provided within the question, all application materials must be submitted in English.

ICANN will not accept application forms or supporting materials submitted through other means than TAS (that is, hard copy, fax, email), unless such submission is in accordance with specific instructions from ICANN to applicants.

1.4.1 Accessing the TLD Application System

The TAS site will be accessible from the New gTLD webpage (<http://www.icann.org/en/topics/new-gtld-program.htm>), and will be highlighted in communications regarding the opening of the application submission period. Users of TAS will be expected to agree to a standard set of terms of use

including user rights, obligations, and restrictions in relation to the use of the system.

1.4.1.1 User Registration

TAS user registration (creating a TAS user profile) requires submission of preliminary information, which will be used to validate the identity of the parties involved in the application. An overview of the information collected in the user registration process is below:

No.	Questions
1	Full legal name of Applicant
2	Principal business address
3	Phone number of Applicant
4	Fax number of Applicant
5	Website or URL, if applicable
6	Primary Contact: Name, Title, Address, Phone, Fax, Email
7	Secondary Contact: Name, Title, Address, Phone, Fax, Email
8	Proof of legal establishment
9	Trading, subsidiary, or joint venture information
10	Business ID, Tax ID, VAT registration number, or equivalent of Applicant
11	Applicant background: previous convictions, cybersquatting activities
12	Deposit payment confirmation and payer information

A subset of identifying information will be collected from the entity performing the user registration, in addition to the applicant information listed above. The registered user could be, for example, an agent, representative, or

employee who would be completing the application on behalf of the applicant.

The registration process will require the user to request the desired number of application slots. For example, a user intending to submit five gTLD applications would complete five application slot requests, and the system would assign the user a unique ID number for each of the five applications.

Users will also be required to submit a deposit of USD 5,000 per application slot. This deposit amount will be credited against the evaluation fee for each application. The deposit requirement is in place to help reduce the risk of frivolous access to the online application system.

After completing the registration, TAS users will receive access enabling them to enter the rest of the application information into the system. Application slots will be populated with the registration information provided by the applicant, which may not ordinarily be changed once slots have been assigned.

No new user registrations will be accepted after **23:59 UTC 29 March 2012**.

ICANN will take commercially reasonable steps to protect all applicant data submitted from unauthorized access, but cannot warrant against the malicious acts of third parties who may, through system corruption or other means, gain unauthorized access to such data.

1.4.1.2 Application Form

Having obtained the requested application slots, the applicant will complete the remaining application questions. An overview of the areas and questions contained in the form is shown here:

No.	Application and String Information
12	Payment confirmation for remaining evaluation fee amount
13	Applied-for gTLD string
14	IDN string information, if applicable
15	IDN tables, if applicable

16	Mitigation of IDN operational or rendering problems, if applicable
17	Representation of string in International Phonetic Alphabet (Optional)
18	Mission/purpose of the TLD
19	Is the application for a community-based TLD?
20	If community based, describe elements of community and proposed policies
21	Is the application for a geographic name? If geographic, documents of support required
22	Measures for protection of geographic names at second level
23	Registry Services: name and full description of all registry services to be provided
	Technical and Operational Questions (External)
24	Shared registration system (SRS) performance
25	EPP
26	Whois
27	Registration life cycle
28	Abuse prevention & mitigation
29	Rights protection mechanisms
30(a)	Security
	Technical and Operational Questions (Internal)
30(b)	Security
31	Technical overview of proposed registry
32	Architecture

33	Database capabilities
34	Geographic diversity
35	DNS service compliance
36	IPv6 reachability
37	Data backup policies and procedures
38	Escrow
39	Registry continuity
40	Registry transition
41	Failover testing
42	Monitoring and fault escalation processes
43	DNSSEC
44	IDNs (Optional)
	Financial Questions
45	Financial statements
46	Projections template: costs and funding
47	Costs: setup and operating
48	Funding and revenue
49	Contingency planning: barriers, funds, volumes
50	Continuity: continued operations instrument

1.4.2 Customer Service during the Application Process

Assistance will be available to applicants throughout the application process via the Applicant Service Center (ASC). The ASC will be staffed with customer service agents

to answer questions relating to the New gTLD Program, the application process, and TAS.

1.4.3 Backup Application Process

If the online application system is not available, ICANN will provide alternative instructions for submitting applications.

1.5 Fees and Payments

This section describes the fees to be paid by the applicant. Payment instructions are also included here.

1.5.1 gTLD Evaluation Fee

The gTLD evaluation fee is required from all applicants. This fee is in the amount of USD 185,000. The evaluation fee is payable in the form of a 5,000 deposit submitted at the time the user requests an application slot within TAS, and a payment of the remaining 180,000 submitted with the full application. ICANN will not begin its evaluation of an application unless it has received the full gTLD evaluation fee by **23:59 UTC 12 April 2012**.

The gTLD evaluation fee is set to recover costs associated with the new gTLD program. The fee is set to ensure that the program is fully funded and revenue neutral and is not subsidized by existing contributions from ICANN funding sources, including generic TLD registries and registrars, ccTLD contributions and RIR contributions.

The gTLD evaluation fee covers all required reviews in Initial Evaluation and, in most cases, any required reviews in Extended Evaluation. If an extended Registry Services review takes place, an additional fee will be incurred for this review (see section 1.5.2). There is no additional fee to the applicant for Extended Evaluation for geographic names, technical and operational, or financial reviews.

Refunds -- In certain cases, refunds of a portion of the evaluation fee may be available for applications that are withdrawn before the evaluation process is complete. An applicant may request a refund at any time until it has executed a registry agreement with ICANN. The amount of the refund will depend on the point in the process at which the withdrawal is requested, as follows:

Refund Available to Applicant	Percentage of Evaluation Fee	Amount of Refund
Within 21 calendar days of a GAC Early	80%	USD 148,000

Refund Available to Applicant	Percentage of Evaluation Fee	Amount of Refund
Warning		
After posting of applications until posting of Initial Evaluation results	70%	USD 130,000
After posting Initial Evaluation results	35%	USD 65,000
After the applicant has completed Dispute Resolution, Extended Evaluation, or String Contention Resolution(s)	20%	USD 37,000
After the applicant has entered into a registry agreement with ICANN		None

Thus, any applicant that has not been successful is eligible for at least a 20% refund of the evaluation fee if it withdraws its application.

An applicant that wishes to withdraw an application must initiate the process through TAS. Withdrawal of an application is final and irrevocable. Refunds will only be issued to the organization that submitted the original payment. All refunds are paid by wire transfer. Any bank transfer or transaction fees incurred by ICANN, or any unpaid evaluation fees, will be deducted from the amount paid. Any refund paid will be in full satisfaction of ICANN's obligations to the applicant. The applicant will have no entitlement to any additional amounts, including for interest or currency exchange rate changes.

Note on 2000 proof-of-concept round applicants -- Participants in ICANN's proof-of-concept application process in 2000 may be eligible for a credit toward the evaluation fee. The credit is in the amount of USD 86,000 and is subject to:

- submission of documentary proof by the applicant that it is the same entity, a successor in interest to the same entity, or an affiliate of the same entity that applied previously;
- a confirmation that the applicant was not awarded any TLD string pursuant to the 2000 proof-of-concept application round and that the applicant has no legal claims arising from the 2000 proof-of-concept process; and
- submission of an application, which may be modified from the application originally submitted in 2000, for the same TLD string that such entity applied for in the 2000 proof-of-concept application round.

Each participant in the 2000 proof-of-concept application process is eligible for at most one credit. A maximum of one credit may be claimed for any new gTLD application submitted according to the process in this guidebook. Eligibility for this credit is determined by ICANN.

1.5.2 Fees Required in Some Cases

Applicants may be required to pay additional fees in certain cases where specialized process steps are applicable. Those possible additional fees¹⁰ include:

- **Registry Services Review Fee** – If applicable, this fee is payable for additional costs incurred in referring an application to the Registry Services Technical Evaluation Panel (RSTEP) for an extended review. Applicants will be notified if such a fee is due. The fee for a three-member RSTEP review team is anticipated to be USD 50,000. In some cases, five-member panels might be required, or there might be increased scrutiny at a greater cost. The amount of the fee will cover the cost of the RSTEP review. In the event that reviews of proposed registry services can be consolidated across multiple applications or applicants, ICANN will apportion the fees in an equitable manner. In every case, the applicant will be advised of the cost before initiation of the review. Refer to subsection 2.2.3 of Module 2 on Registry Services review.

¹⁰ The estimated fee amounts provided in this section 1.5.2 will be updated upon engagement of panel service providers and establishment of fees.

- **Dispute Resolution Filing Fee** – This amount must accompany any filing of a formal objection and any response that an applicant files to an objection. This fee is payable directly to the applicable dispute resolution service provider in accordance with the provider’s payment instructions. ICANN estimates that filing fees could range from approximately USD 1,000 to USD 5,000 (or more) per party per proceeding. Refer to the appropriate provider for the relevant amount. Refer to Module 3 for dispute resolution procedures.
- **Advance Payment of Costs** – In the event of a formal objection, this amount is payable directly to the applicable dispute resolution service provider in accordance with that provider’s procedures and schedule of costs. Ordinarily, both parties in the dispute resolution proceeding will be required to submit an advance payment of costs in an estimated amount to cover the entire cost of the proceeding. This may be either an hourly fee based on the estimated number of hours the panelists will spend on the case (including review of submissions, facilitation of a hearing, if allowed, and preparation of a decision), or a fixed amount. In cases where disputes are consolidated and there are more than two parties involved, the advance payment will occur according to the dispute resolution service provider’s rules.

The prevailing party in a dispute resolution proceeding will have its advance payment refunded, while the non-prevailing party will not receive a refund and thus will bear the cost of the proceeding. In cases where disputes are consolidated and there are more than two parties involved, the refund of fees will occur according to the dispute resolution service provider’s rules.

ICANN estimates that adjudication fees for a proceeding involving a fixed amount could range from USD 2,000 to USD 8,000 (or more) per proceeding. ICANN further estimates that an hourly rate based proceeding with a one-member panel could range from USD 32,000 to USD 56,000 (or more) and with a three-member panel it could range from USD 70,000 to USD 122,000 (or more). These estimates may be lower if the panel does not call for written submissions beyond the objection and response, and does not allow a hearing. Please

refer to the appropriate provider for the relevant amounts or fee structures.

- **Community Priority Evaluation Fee** – In the event that the applicant participates in a community priority evaluation, this fee is payable as a deposit in an amount to cover the cost of the panel's review of that application (currently estimated at USD 10,000). The deposit is payable to the provider appointed to handle community priority evaluations. Applicants will be notified if such a fee is due. Refer to Section 4.2 of Module 4 for circumstances in which a community priority evaluation may take place. An applicant who scores at or above the threshold for the community priority evaluation will have its deposit refunded.

ICANN will notify the applicants of due dates for payment in respect of additional fees (if applicable). This list does not include fees (annual registry fees) that will be payable to ICANN following execution of a registry agreement.

1.5.3 Payment Methods

Payments to ICANN should be submitted by **wire transfer**. Instructions for making a payment by wire transfer will be available in TAS.¹¹

Payments to Dispute Resolution Service Providers should be submitted in accordance with the provider's instructions.

1.5.4 Requesting a Remittance Form

The TAS interface allows applicants to request issuance of a remittance form for any of the fees payable to ICANN. This service is for the convenience of applicants that require an invoice to process payments.

1.6 Questions about this Applicant Guidebook

For assistance and questions an applicant may have in the process of completing the application form, applicants should use the customer support resources available via the ASC. Applicants who are unsure of the information being sought in a question or the parameters for acceptable documentation are encouraged to communicate these questions through the appropriate

¹¹ Wire transfer is the preferred method of payment as it offers a globally accessible and dependable means for international transfer of funds. This enables ICANN to receive the fee and begin processing applications as quickly as possible.

support channels before the application is submitted. This helps avoid the need for exchanges with evaluators to clarify information, which extends the timeframe associated with processing the application.

Currently, questions may be submitted via <newgtld@icann.org>. To provide all applicants equitable access to information, ICANN will make all questions and answers publicly available.

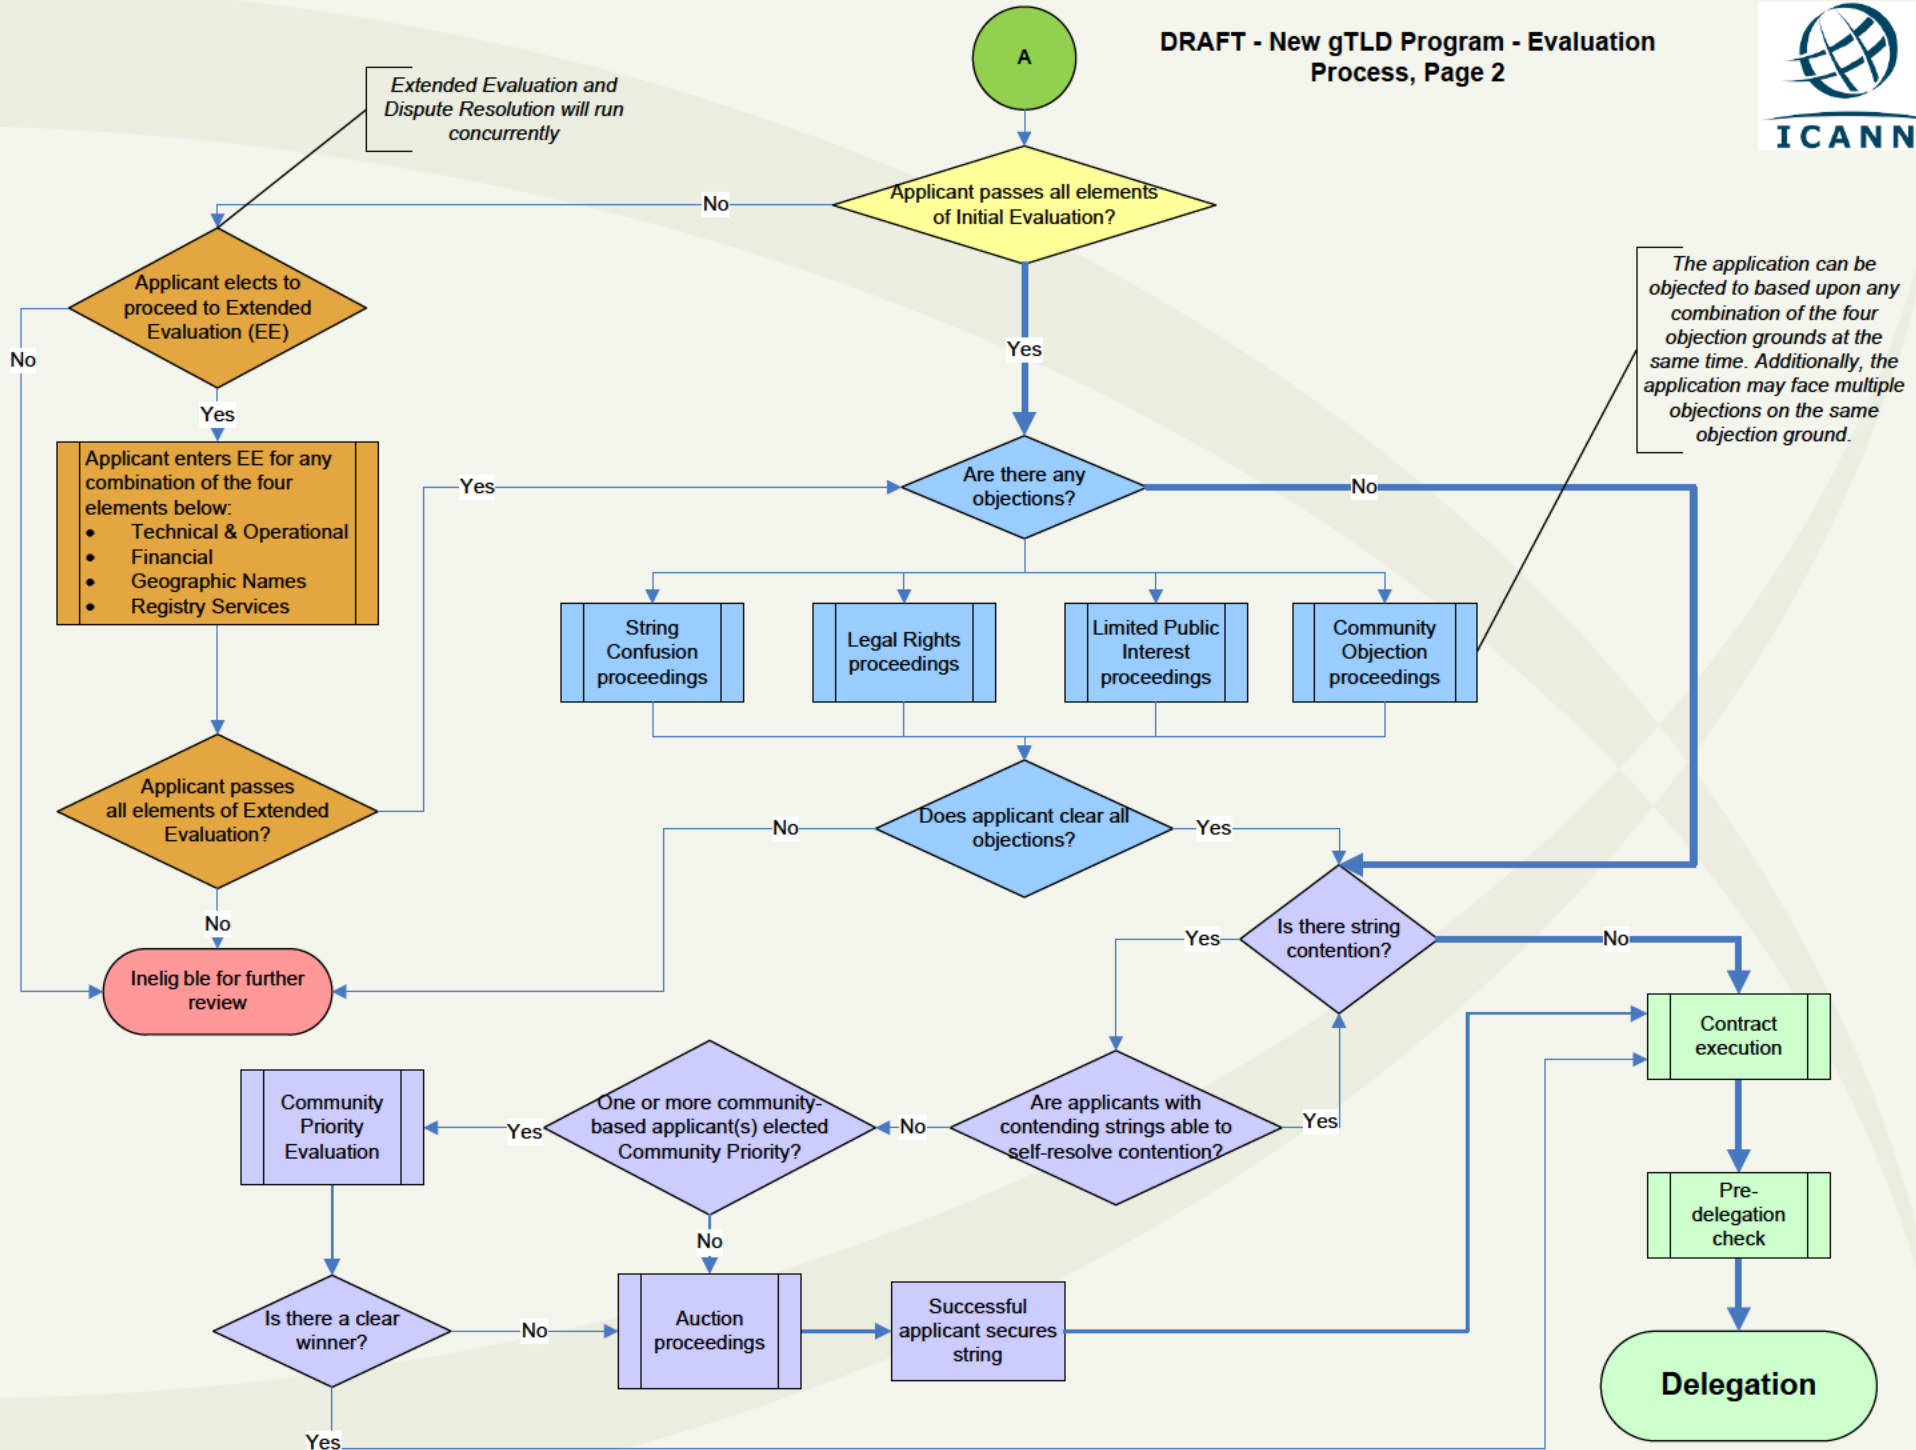

All requests to ICANN for information about the process or issues surrounding preparation of an application must be submitted to the ASC. ICANN will not grant requests from applicants for personal or telephone consultations regarding the preparation of an application. Applicants that contact ICANN for clarification about aspects of the application will be referred to the ASC.

Answers to inquiries will only provide clarification about the application forms and procedures. ICANN will not provide consulting, financial, or legal advice.

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 2

4 June 2012

Module 2

Evaluation Procedures

This module describes the evaluation procedures and criteria used to determine whether applied-for gTLDs are approved for delegation. All applicants will undergo an Initial Evaluation and those that do not pass all elements may request Extended Evaluation.

The first, required evaluation is the **Initial Evaluation**, during which ICANN assesses an applied-for gTLD string, an applicant's qualifications, and its proposed registry services.

The following assessments are performed in the **Initial Evaluation**:

- String Reviews
 - String similarity
 - Reserved names
 - DNS stability
 - Geographic names
- Applicant Reviews
 - Demonstration of technical and operational capability
 - Demonstration of financial capability
 - Registry services reviews for DNS stability issues

An application must pass all these reviews to pass the Initial Evaluation. Failure to pass any one of these reviews will result in a failure to pass the Initial Evaluation.

Extended Evaluation may be applicable in cases in which an applicant does not pass the Initial Evaluation. See Section 2.3 below.

2.1 Background Screening

Background screening will be conducted in two areas:

- (a) General business diligence and criminal history; and
- (b) History of cybersquatting behavior.

The application must pass both background screening areas to be eligible to proceed. Background screening results are evaluated according to the criteria described in section 1.2.1. Due to the potential sensitive nature of the material, applicant background screening reports will not be published.

The following sections describe the process ICANN will use to perform background screening.

2.1.1 General business diligence and criminal history

Applying entities that are publicly traded corporations listed and in good standing on any of the world's largest 25 stock exchanges (as listed by the World Federation of Exchanges) will be deemed to have passed the general business diligence and criminal history screening. The largest 25 will be based on the domestic market capitalization reported at the end of the most recent calendar year prior to launching each round.¹

Before an entity is listed on an exchange, it must undergo significant due diligence including an investigation by the exchange, regulators, and investment banks. As a publicly listed corporation, an entity is subject to ongoing scrutiny from shareholders, analysts, regulators, and exchanges. All exchanges require monitoring and disclosure of material information about directors, officers, and other key personnel, including criminal behavior. In totality, these requirements meet or exceed the screening ICANN will perform.

For applicants not listed on one of these exchanges, ICANN will submit identifying information for the entity, officers, directors, and major shareholders to an international background screening service. The service provider(s) will use the criteria listed in section 1.2.1 and return results that match these criteria. Only publicly available information will be used in this inquiry.

ICANN is in discussions with INTERPOL to identify ways in which both organizations can collaborate in background screenings of individuals, entities and their identity documents consistent with both organizations' rules and regulations. Note that the applicant is expected to disclose potential problems in meeting the criteria in the application, and provide any clarification or explanation at the time of application submission. Results returned from

¹ See <http://www.world-exchanges.org/statistics/annual/2010/equity-markets/domestic-market-capitalization>

the background screening process will be matched with the disclosures provided by the applicant and those cases will be followed up to resolve issues of discrepancies or potential false positives.

If no hits are returned, the application will generally pass this portion of the background screening.

2.1.2 History of cybersquatting

ICANN will screen applicants against UDRP cases and legal databases as financially feasible for data that may indicate a pattern of cybersquatting behavior pursuant to the criteria listed in section 1.2.1.

The applicant is required to make specific declarations regarding these activities in the application. Results returned during the screening process will be matched with the disclosures provided by the applicant and those instances will be followed up to resolve issues of discrepancies or potential false positives.

If no hits are returned, the application will generally pass this portion of the background screening.

2.2 Initial Evaluation

The Initial Evaluation consists of two types of review. Each type is composed of several elements.

String review: The first review focuses on the applied-for gTLD string to test:

- Whether the applied-for gTLD string is so similar to other strings that it would create a probability of user confusion;
- Whether the applied-for gTLD string might adversely affect DNS security or stability; and
- Whether evidence of requisite government approval is provided in the case of certain geographic names.

Applicant review: The second review focuses on the applicant to test:

- Whether the applicant has the requisite technical, operational, and financial capability to operate a registry; and
- Whether the registry services offered by the applicant might adversely affect DNS security or stability.

2.2.1 String Reviews

In the Initial Evaluation, ICANN reviews every applied-for gTLD string. Those reviews are described in greater detail in the following subsections.

2.2.1.1 String Similarity Review

This review involves a preliminary comparison of each applied-for gTLD string against existing TLDs, Reserved Names (see subsection 2.2.1.2), and other applied-for strings. The objective of this review is to prevent user confusion and loss of confidence in the DNS resulting from delegation of many similar strings.

Note: In this Applicant Guidebook, “similar” means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.

The visual similarity check that occurs during Initial Evaluation is intended to augment the objection and dispute resolution process (see Module 3, Dispute Resolution Procedures) that addresses all types of similarity.

This similarity review will be conducted by an independent String Similarity Panel.

2.2.1.1.1 Reviews Performed

The String Similarity Panel’s task is to identify visual string similarities that would create a probability of user confusion.

The panel performs this task of assessing similarities that would lead to user confusion in four sets of circumstances, when comparing:

- Applied-for gTLD strings against existing TLDs and reserved names;
- Applied-for gTLD strings against other applied-for gTLD strings;
- Applied-for gTLD strings against strings requested as IDN ccTLDs; and
- Applied-for 2-character IDN gTLD strings against:
 - Every other single character.
 - Any other 2-character ASCII string (to protect possible future ccTLD delegations).

Similarity to Existing TLDs or Reserved Names – This review involves cross-checking between each applied-for string and the lists of existing TLD strings and Reserved Names to determine whether two strings are so similar to one another that they create a probability of user confusion.

In the simple case in which an applied-for gTLD string is identical to an existing TLD or reserved name, the online application system will not allow the application to be submitted.

Testing for identical strings also takes into consideration the code point variants listed in any relevant IDN table. For example, protocols treat equivalent labels as alternative forms of the same label, just as “foo” and “Foo” are treated as alternative forms of the same label (RFC 3490).

All TLDs currently in the root zone can be found at <http://iana.org/domains/root/db/>.

IDN tables that have been submitted to ICANN are available at <http://www.iana.org/domains/idn-tables/>.

Similarity to Other Applied-for gTLD Strings (String Contention Sets) – All applied-for gTLD strings will be reviewed against one another to identify any similar strings. In performing this review, the String Similarity Panel will create contention sets that may be used in later stages of evaluation.

A contention set contains at least two applied-for strings identical or similar to one another. Refer to Module 4, String Contention Procedures, for more information on contention sets and contention resolution.

ICANN will notify applicants who are part of a contention set as soon as the String Similarity review is completed. (This provides a longer period for contending applicants to reach their own resolution before reaching the contention resolution stage.) These contention sets will also be published on ICANN’s website.

Similarity to TLD strings requested as IDN ccTLDs -- Applied-for gTLD strings will also be reviewed for similarity to TLD strings requested in the IDN ccTLD Fast Track process (see <http://www.icann.org/en/topics/idn/fast-track/>). Should a conflict with a prospective fast-track IDN ccTLD be identified, ICANN will take the following approach to resolving the conflict.

If one of the applications has completed its respective process before the other is lodged, that TLD will be delegated. A gTLD application that has successfully completed all relevant evaluation stages, including dispute resolution and string contention, if applicable, and is eligible for entry into a registry agreement will be considered complete, and therefore would not be disqualified by a newly-filed IDN ccTLD request. Similarly, an IDN ccTLD request that has completed evaluation (i.e., is validated) will be considered complete and therefore would not be disqualified by a newly-filed gTLD application.

In the case where neither application has completed its respective process, where the gTLD application does not have the required approval from the relevant government or public authority, a validated request for an IDN ccTLD will prevail and the gTLD application will not be approved. The term “validated” is defined in the IDN ccTLD Fast Track Process Implementation, which can be found at <http://www.icann.org/en/topics/idn>.

In the case where a gTLD applicant has obtained the support or non-objection of the relevant government or public authority, but is eliminated due to contention with a string requested in the IDN ccTLD Fast Track process, a full refund of the evaluation fee is available to the applicant if the gTLD application was submitted prior to the publication of the ccTLD request.

Review of 2-character IDN strings — In addition to the above reviews, an applied-for gTLD string that is a 2-character IDN string is reviewed by the String Similarity Panel for visual similarity to:

- a) Any one-character label (in any script), and
- b) Any possible two-character ASCII combination.

An applied-for gTLD string that is found to be too similar to a) or b) above will not pass this review.

2.2.1.1.2 Review Methodology

The String Similarity Panel is informed in part by an algorithmic score for the visual similarity between each applied-for string and each of other existing and applied-for TLDs and reserved names. The score will provide one objective measure for consideration by the panel, as part of the process of identifying strings likely to result in user confusion. In general, applicants should expect that a higher visual similarity score suggests a higher probability

that the application will not pass the String Similarity review. However, it should be noted that the score is only indicative and that the final determination of similarity is entirely up to the Panel's judgment.

The algorithm, user guidelines, and additional background information are available to applicants for testing and informational purposes.² Applicants will have the ability to test their strings and obtain algorithmic results through the application system prior to submission of an application.

The algorithm supports the common characters in Arabic, Chinese, Cyrillic, Devanagari, Greek, Japanese, Korean, and Latin scripts. It can also compare strings in different scripts to each other.

The panel will also take into account variant characters, as defined in any relevant language table, in its determinations. For example, strings that are not visually similar but are determined to be variant TLD strings based on an IDN table would be placed in a contention set. Variant TLD strings that are listed as part of the application will also be subject to the string similarity analysis.³

The panel will examine all the algorithm data and perform its own review of similarities between strings and whether they rise to the level of string confusion. In cases of strings in scripts not yet supported by the algorithm, the panel's assessment process is entirely manual.

The panel will use a common standard to test for whether string confusion exists, as follows:

Standard for String Confusion – String confusion exists where a string so nearly resembles another visually that it is likely to deceive or cause confusion. For the likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

2.2.1.1.3 Outcomes of the String Similarity Review

An application that fails the String Similarity review due to similarity to an existing TLD will not pass the Initial Evaluation,

² See <http://icann.sword-group.com/algorithm/>

³ In the case where an applicant has listed Declared Variants in its application (see subsection 1.3.3), the panel will perform an analysis of the listed strings to confirm that the strings are variants according to the applicant's IDN table. This analysis may include comparison of applicant IDN tables with other existing tables for the same language or script, and forwarding any questions to the applicant.

and no further reviews will be available. Where an application does not pass the String Similarity review, the applicant will be notified as soon as the review is completed.

An application for a string that is found too similar to another applied-for gTLD string will be placed in a contention set.

An application that passes the String Similarity review is still subject to objection by an existing TLD operator or by another gTLD applicant in the current application round. That process requires that a string confusion objection be filed by an objector having the standing to make such an objection. Such category of objection is not limited to visual similarity. Rather, confusion based on any type of similarity (including visual, aural, or similarity of meaning) may be claimed by an objector. Refer to Module 3, Dispute Resolution Procedures, for more information about the objection process.

An applicant may file a formal objection against another gTLD application on string confusion grounds. Such an objection may, if successful, change the configuration of the preliminary contention sets in that the two applied-for gTLD strings will be considered in direct contention with one another (see Module 4, String Contention Procedures). The objection process will not result in removal of an application from a contention set.

2.2.1.2 *Reserved Names and Other Unavailable Strings*

Certain names are not available as gTLD strings, as detailed in this section.

2.2.1.2.1 *Reserved Names*

All applied-for gTLD strings are compared with the list of top-level Reserved Names to ensure that the applied-for gTLD string does not appear on that list.

Top-Level Reserved Names List

<i>AFRINIC</i>	<i>IANA-SERVERS</i>	<i>NRO</i>
<i>ALAC</i>	<i>ICANN</i>	<i>RFC-EDITOR</i>
<i>APNIC</i>	<i>IESG</i>	<i>RIPE</i>
<i>ARIN</i>	<i>IETF</i>	<i>ROOT-SERVERS</i>
<i>ASO</i>	<i>INTERNIC</i>	<i>RSSAC</i>
<i>CCNSO</i>	<i>INVALID</i>	<i>SSAC</i>
<i>EXAMPLE*</i>	<i>IRTF</i>	<i>TEST*</i>
<i>GAC</i>	<i>ISTF</i>	<i>TLD</i>

<i>GNSO</i>	<i>LACNIC</i>	<i>WHOIS</i>
<i>GTLD-SERVERS</i>	<i>LOCAL</i>	<i>WWW</i>
<i>IAB</i>	<i>LOCALHOST</i>	
<i>IANA</i>	<i>NIC</i>	
*Note that in addition to the above strings, ICANN will reserve translations of the terms "test" and "example" in multiple languages. The remainder of the strings are reserved only in the form included above.		

If an applicant enters a Reserved Name as its applied-for gTLD string, the application system will recognize the Reserved Name and will not allow the application to be submitted.

In addition, applied-for gTLD strings are reviewed during the String Similarity review to determine whether they are similar to a Reserved Name. An application for a gTLD string that is identified as too similar to a Reserved Name will not pass this review.

2.2.1.2.2 *Declared Variants*

Names appearing on the Declared Variants List (see section 1.3.3) will be posted on ICANN's website and will be treated essentially the same as Reserved Names, until such time as variant management solutions are developed and variant TLDs are delegated. That is, an application for a gTLD string that is identical or similar to a string on the Declared Variants List will not pass this review.

2.2.1.2.3 *Strings Ineligible for Delegation*

The following names are prohibited from delegation as gTLDs in the initial application round. Future application rounds may differ according to consideration of further policy advice.

These names are not being placed on the Top-Level Reserved Names List, and thus are not part of the string similarity review conducted for names on that list. Refer to subsection 2.2.1.1: where applied-for gTLD strings are reviewed for similarity to existing TLDs and reserved names, the strings listed in this section are not reserved names and accordingly are not incorporated into this review.

Applications for names appearing on the list included in this section will not be approved.

2.2.1.3 DNS Stability Review

This review determines whether an applied-for gTLD string might cause instability to the DNS. In all cases, this will involve a review for conformance with technical and other requirements for gTLD strings (labels). In some exceptional cases, an extended review may be necessary to investigate possible technical stability problems with the applied-for gTLD string.

Note: All applicants should recognize issues surrounding invalid TLD queries at the root level of the DNS.

Any new TLD registry operator may experience unanticipated queries, and some TLDs may experience a non-trivial load of unanticipated queries. For more information, see the Security and Stability Advisory Committee (SSAC)'s report on this topic at <http://www.icann.org/en/committees/security/sac045.pdf>. Some publicly available statistics are also available at <http://stats.l.root-servers.org/>.

ICANN will take steps to alert applicants of the issues raised in SAC045, and encourage the applicant to prepare to minimize the possibility of operational difficulties that would pose a stability or availability problem for its registrants and users. However, this notice is merely an advisory to applicants and is not part of the evaluation, unless the string raises significant security or stability issues as described in the following section.

2.2.1.3.1 DNS Stability: String Review Procedure

New gTLD labels must not adversely affect the security or stability of the DNS. During the Initial Evaluation period, ICANN will conduct a preliminary review on the set of applied-for gTLD strings to:

- ensure that applied-for gTLD strings comply with the requirements provided in section 2.2.1.3.2, and
- determine whether any strings raise significant security or stability issues that may require further review.

There is a very low probability that extended analysis will be necessary for a string that fully complies with the string requirements in subsection 2.2.1.3.2 of this module. However, the string review process provides an additional safeguard if unanticipated security or stability issues arise concerning an applied-for gTLD string.

In such a case, the DNS Stability Panel will perform an extended review of the applied-for gTLD string during the Initial Evaluation period. The panel will determine whether the string fails to comply with relevant standards or creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, and will report on its findings.

If the panel determines that the string complies with relevant standards and does not create the conditions

described above, the application will pass the DNS Stability review.

If the panel determines that the string does not comply with relevant technical standards, or that it creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, the application will not pass the Initial Evaluation, and no further reviews are available. In the case where a string is determined likely to cause security or stability problems in the DNS, the applicant will be notified as soon as the DNS Stability review is completed.

2.2.1.3.2 *String Requirements*

ICANN will review each applied-for gTLD string to ensure that it complies with the requirements outlined in the following paragraphs.

If an applied-for gTLD string is found to violate any of these rules, the application will not pass the DNS Stability review. No further reviews are available.

Part I -- Technical Requirements for all Labels (Strings) – The technical requirements for top-level domain labels follow.

- 1.1 The ASCII label (i.e., the label as transmitted on the wire) must be valid as specified in technical standards *Domain Names: Implementation and Specification* (RFC 1035), and *Clarifications to the DNS Specification* (RFC 2181) and any updates thereto. This includes the following:
 - 1.1.1 The label must have no more than 63 characters.
 - 1.1.2 Upper and lower case characters are treated as identical.
- 1.2 The ASCII label must be a valid host name, as specified in the technical standards *DOD Internet Host Table Specification* (RFC 952), *Requirements for Internet Hosts — Application and Support* (RFC 1123), and *Application Techniques for Checking and Transformation of Names* (RFC 3696), *Internationalized Domain Names in Applications (IDNA)*(RFCs 5890-5894), and any updates thereto. This includes the following:
 - 1.2.1 The ASCII label must consist entirely of letters (alphabetic characters a-z), or

- 1.2.2 The label must be a valid IDNA A-label (further restricted as described in Part II below).

Part II -- Requirements for Internationalized Domain Names

– These requirements apply only to prospective top-level domains that contain non-ASCII characters. Applicants for these internationalized top-level domain labels are expected to be familiar with the Internet Engineering Task Force (IETF) IDNA standards, Unicode standards, and the terminology associated with Internationalized Domain Names.

- 2.1 The label must be an A-label as defined in IDNA, converted from (and convertible to) a U-label that is consistent with the definition in IDNA, and further restricted by the following, non-exhaustive, list of limitations:
 - 2.1.1 Must be a valid A-label according to IDNA.
 - 2.1.2 The derived property value of all codepoints used in the U-label, as defined by IDNA, must be PVALID or CONTEXT (accompanied by unambiguous contextual rules).⁴
 - 2.1.3 The general category of all codepoints, as defined by IDNA, must be one of (Li, Lo, Lm, Mn, Mc).
 - 2.1.4 The U-label must be fully compliant with Normalization Form C, as described in *Unicode Standard Annex #15: Unicode Normalization Forms*. See also examples in <http://unicode.org/faq/normalization.html>.
 - 2.1.5 The U-label must consist entirely of characters with the same directional property, or fulfill the requirements of the Bidi rule per RFC 5893.
- 2.2 The label must meet the relevant criteria of the ICANN *Guidelines for the Implementation of Internationalised Domain Names*. See <http://www.icann.org/en/topics/idn/implementation>

⁴ It is expected that conversion tools for IDNA will be available before the Application Submission period begins, and that labels will be checked for validity under IDNA. In this case, labels valid under the previous version of the protocol (IDNA2003) but not under IDNA will not meet this element of the requirements. Labels that are valid under both versions of the protocol will meet this element of the requirements. Labels valid under IDNA but not under IDNA2003 may meet the requirements; however, applicants are strongly advised to note that the duration of the transition period between the two protocols cannot presently be estimated nor guaranteed in any specific timeframe. The development of support for IDNA in the broader software applications environment will occur gradually. During that time, TLD labels that are valid under IDNA, but not under IDNA2003, will have limited functionality.

[n-guidelines.htm](#). This includes the following, non-exhaustive, list of limitations:

- 2.2.1 All code points in a single label must be taken from the same script as determined by the Unicode Standard Annex #24: Unicode Script Property (See <http://www.unicode.org/reports/tr24/>).
- 2.2.2 Exceptions to 2.2.1 are permissible for languages with established orthographies and conventions that require the commingled use of multiple scripts. However, even with this exception, visually confusable characters from different scripts will not be allowed to co-exist in a single set of permissible code points unless a corresponding policy and character table are clearly defined.

Part III - Policy Requirements for Generic Top-Level

Domains – These requirements apply to all prospective top-level domain strings applied for as gTLDs.

- 3.1 Applied-for gTLD strings in ASCII must be composed of three or more visually distinct characters. Two-character ASCII strings are not permitted, to avoid conflicting with current and future country codes based on the ISO 3166-1 standard.
- 3.2 Applied-for gTLD strings in IDN scripts must be composed of two or more visually distinct characters in the script, as appropriate.⁵ Note, however, that a two-character IDN string will not be approved if:
 - 3.2.1 It is visually similar to any one-character label (in any script); or
 - 3.2.2 It is visually similar to any possible two-character ASCII combination.

See the String Similarity review in subsection 2.2.1.1 for additional information on this requirement.

⁵ Note that the Joint ccNSO-GNSO IDN Working Group (JIG) has made recommendations that this section be revised to allow for single-character IDN gTLD labels. See the JIG Final Report at <http://gns0.icann.org/drafts/jig-final-report-30mar11-en.pdf>. Implementation models for these recommendations are being developed for community discussion.

2.2.1.4 Geographic Names Review

Applications for gTLD strings must ensure that appropriate consideration is given to the interests of governments or public authorities in geographic names. The requirements and procedure ICANN will follow in the evaluation process are described in the following paragraphs. Applicants should review these requirements even if they do not believe their intended gTLD string is a geographic name. All applied-for gTLD strings will be reviewed according to the requirements in this section, regardless of whether the application indicates it is for a geographic name.

2.2.1.4.1 Treatment of Country or Territory Names⁶

Applications for strings that are country or territory names will not be approved, as they are not available under the New gTLD Program in this application round. A string shall be considered to be a country or territory name if:

- i. it is an alpha-3 code listed in the ISO 3166-1 standard.
- ii. it is a long-form name listed in the ISO 3166-1 standard, or a translation of the long-form name in any language.
- iii. it is a short-form name listed in the ISO 3166-1 standard, or a translation of the short-form name in any language.
- iv. it is the short- or long-form name association with a code that has been designated as “exceptionally reserved” by the ISO 3166 Maintenance Agency.
- v. it is a separable component of a country name designated on the “Separable Country Names List,” or is a translation of a name appearing on the list, in any language. See the Annex at the end of this module.
- vi. it is a permutation or transposition of any of the names included in items (i) through (v). Permutations include removal of spaces, insertion of punctuation, and addition or

⁶ Country and territory names are excluded from the process based on advice from the Governmental Advisory Committee in recent communiqués providing interpretation of Principle 2.2 of the GAC Principles regarding New gTLDs to indicate that strings which are a meaningful representation or abbreviation of a country or territory name should be handled through the forthcoming ccPDP, and other geographic strings could be allowed in the gTLD space if in agreement with the relevant government or public authority.

removal of grammatical articles like “the.” A transposition is considered a change in the sequence of the long or short-form name, for example, “RepublicCzech” or “IslandsCayman.”

- vii. it is a name by which a country is commonly known, as demonstrated by evidence that the country is recognized by that name by an intergovernmental or treaty organization.

2.2.1.4.2 *Geographic Names Requiring Government Support*

The following types of applied-for strings are considered geographic names and must be accompanied by documentation of support or non-objection from the relevant governments or public authorities:

1. An application for any string that is a representation, in any language, of the capital city name of any country or territory listed in the ISO 3166-1 standard.
2. An application for a city name, where the applicant declares that it intends to use the gTLD for purposes associated with the city name.

City names present challenges because city names may also be generic terms or brand names, and in many cases city names are not unique. Unlike other types of geographic names, there are no established lists that can be used as objective references in the evaluation process. Thus, city names are not universally protected. However, the process does provide a means for cities and applicants to work together where desired.

An application for a city name will be subject to the geographic names requirements (i.e., will require documentation of support or non-objection from the relevant governments or public authorities) if:

- (a) It is clear from applicant statements within the application that the applicant will use the TLD primarily for purposes associated with the city name; and

- (b) The applied-for string is a city name as listed on official city documents.⁷
3. An application for any string that is an exact match of a *sub-national place name*, such as a county, province, or state, listed in the ISO 3166-2 standard.
 4. An application for a string listed as a UNESCO region⁸ or appearing on the “Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings” list.⁹

In the case of an application for a string appearing on either of the lists above, documentation of support will be required from at least 60% of the respective national governments in the region, and there may be no more than one written statement of objection to the application from relevant governments in the region and/or public authorities associated with the continent or the region.

Where the 60% rule is applied, and there are common regions on both lists, the regional composition contained in the “Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other groupings” takes precedence.

An applied-for gTLD string that falls into any of 1 through 4 listed above is considered to represent a geographic name. In the event of any doubt, it is in the applicant’s interest to consult with relevant governments and public authorities and enlist their support or non-objection prior to submission of the application, in order to preclude possible objections and pre-address any ambiguities concerning the string and applicable requirements.

Strings that include but do not match a geographic name (as defined in this section) will not be considered geographic names as defined by section 2.2.1.4.2, and therefore will not require documentation of government support in the evaluation process.

⁷ City governments with concerns about strings that are duplicates, nicknames or close renderings of a city name should not rely on the evaluation process as the primary means of protecting their interests in a string. Rather, a government may elect to file a formal objection to an application that is opposed by the relevant community, or may submit its own application for the string.

⁸ See <http://www.unesco.org/new/en/unesco/worldwide/>.

⁹ See <http://unstats.un.org/unsd/methods/m49/m49regin.htm>.

For each application, the Geographic Names Panel will determine which governments are relevant based on the inputs of the applicant, governments, and its own research and analysis. In the event that there is more than one relevant government or public authority for the applied-for gTLD string, the applicant must provide documentation of support or non-objection from all the relevant governments or public authorities. It is anticipated that this may apply to the case of a sub-national place name.

It is the applicant's responsibility to:

- identify whether its applied-for gTLD string falls into any of the above categories; and
- identify and consult with the relevant governments or public authorities; and
- identify which level of government support is required.

Note: the level of government and which administrative agency is responsible for the filing of letters of support or non-objection is a matter for each national administration to determine. Applicants should consult within the relevant jurisdiction to determine the appropriate level of support.

The requirement to include documentation of support for certain applications does not preclude or exempt applications from being the subject of objections on community grounds (refer to subsection 3.1.1 of Module 3), under which applications may be rejected based on objections showing substantial opposition from the targeted community.

2.2.1.4.3 Documentation Requirements

The documentation of support or non-objection should include a signed letter from the relevant government or public authority. Understanding that this will differ across the respective jurisdictions, the letter could be signed by the minister with the portfolio responsible for domain name administration, ICT, foreign affairs, or the Office of the Prime Minister or President of the relevant jurisdiction; or a senior representative of the agency or department responsible for domain name administration, ICT, foreign affairs, or the Office of the Prime Minister. To assist the applicant in determining who the relevant government or public authority may be for a potential geographic name, the applicant may wish to consult with the relevant

Governmental Advisory Committee (GAC) representative.¹⁰

The letter must clearly express the government's or public authority's support for or non-objection to the applicant's application and demonstrate the government's or public authority's understanding of the string being requested and its intended use.

The letter should also demonstrate the government's or public authority's understanding that the string is being sought through the gTLD application process and that the applicant is willing to accept the conditions under which the string will be available, i.e., entry into a registry agreement with ICANN requiring compliance with consensus policies and payment of fees. (See Module 5 for a discussion of the obligations of a gTLD registry operator.)

A sample letter of support is available as an attachment to this module.

Applicants and governments may conduct discussions concerning government support for an application at any time. Applicants are encouraged to begin such discussions at the earliest possible stage, and enable governments to follow the processes that may be necessary to consider, approve, and generate a letter of support or non-objection.

It is important to note that a government or public authority is under no obligation to provide documentation of support or non-objection in response to a request by an applicant.

It is also possible that a government may withdraw its support for an application at a later time, including after the new gTLD has been delegated, if the registry operator has deviated from the conditions of original support or non-objection. Applicants should be aware that ICANN has committed to governments that, in the event of a dispute between a government (or public authority) and a registry operator that submitted documentation of support from that government or public authority, **ICANN will comply with a legally binding order** from a court in the jurisdiction of the government or public authority that has given support to an application.

2.2.1.4.4 Review Procedure for Geographic Names

A Geographic Names Panel (GNP) will determine whether each applied-for gTLD string represents a geographic

¹⁰ See <https://gacweb.icann.org/display/gacweb/GAC+Members>

name, and verify the relevance and authenticity of the supporting documentation where necessary.

The GNP will review all applications received, not only those where the applicant has noted its applied-for gTLD string as a geographic name. For any application where the GNP determines that the applied-for gTLD string is a country or territory name (as defined in this module), the application will not pass the Geographic Names review and will be denied. No additional reviews will be available.

For any application where the GNP determines that the applied-for gTLD string is not a geographic name requiring government support (as described in this module), the application will pass the Geographic Names review with no additional steps required.

For any application where the GNP determines that the applied-for gTLD string is a geographic name requiring government support, the GNP will confirm that the applicant has provided the required documentation from the relevant governments or public authorities, and that the communication from the government or public authority is legitimate and contains the required content. ICANN may confirm the authenticity of the communication by consulting with the relevant diplomatic authorities or members of ICANN's Governmental Advisory Committee for the government or public authority concerned on the competent authority and appropriate point of contact within their administration for communications.

The GNP may communicate with the signing entity of the letter to confirm their intent and their understanding of the terms on which the support for an application is given.

In cases where an applicant has not provided the required documentation, the applicant will be contacted and notified of the requirement, and given a limited time frame to provide the documentation. If the applicant is able to provide the documentation before the close of the Initial Evaluation period, and the documentation is found to meet the requirements, the applicant will pass the Geographic Names review. If not, the applicant will have additional time to obtain the required documentation; however, if the applicant has not produced the required documentation by the required date (at least 90 calendar days from the date of notice), the application will be considered incomplete and will be ineligible for further review. The applicant may reapply in subsequent application rounds, if desired, subject to the fees and requirements of the specific application rounds.

If there is more than one application for a string representing a certain geographic name as described in this section, and the applications have requisite government approvals, the applications will be suspended pending resolution by the applicants. If the applicants have not reached a resolution by either the date of the end of the application round (as announced by ICANN), or the date on which ICANN opens a subsequent application round, whichever comes first, the applications will be rejected and applicable refunds will be available to applicants according to the conditions described in section 1.5.

However, in the event that a contention set is composed of multiple applications with documentation of support from the same government or public authority, the applications will proceed through the contention resolution procedures described in Module 4 when requested by the government or public authority providing the documentation.

If an application for a string representing a geographic name is in a contention set with applications for similar strings that have not been identified as geographical names, the string contention will be resolved using the string contention procedures described in Module 4.

2.2.2 Applicant Reviews

Concurrent with the applied-for gTLD string reviews described in subsection 2.2.1, ICANN will review the applicant's technical and operational capability, its financial capability, and its proposed registry services. Those reviews are described in greater detail in the following subsections.

2.2.2.1 Technical/Operational Review

In its application, the applicant will respond to a set of questions (see questions 24 – 44 in the Application Form) intended to gather information about the applicant's technical capabilities and its plans for operation of the proposed gTLD.

Applicants are not required to have deployed an actual gTLD registry to pass the Technical/Operational review. It will be necessary, however, for an applicant to demonstrate a clear understanding and accomplishment of some groundwork toward the key technical and operational aspects of a gTLD registry operation. Subsequently, each applicant that passes the technical evaluation and all other steps will be required to complete

a pre-delegation technical test prior to delegation of the new gTLD. Refer to Module 5, Transition to Delegation, for additional information.

2.2.2.2 Financial Review

In its application, the applicant will respond to a set of questions (see questions 45-50 in the Application Form) intended to gather information about the applicant's financial capabilities for operation of a gTLD registry and its financial planning in preparation for long-term stability of the new gTLD.

Because different registry types and purposes may justify different responses to individual questions, evaluators will pay particular attention to the consistency of an application across all criteria. For example, an applicant's scaling plans identifying system hardware to ensure its capacity to operate at a particular volume level should be consistent with its financial plans to secure the necessary equipment. That is, the evaluation criteria scale with the applicant plans to provide flexibility.

2.2.2.3 Evaluation Methodology

Dedicated technical and financial evaluation panels will conduct the technical/operational and financial reviews, according to the established criteria and scoring mechanism included as an attachment to this module. These reviews are conducted on the basis of the information each applicant makes available to ICANN in its response to the questions in the Application Form.

The evaluators may request clarification or additional information during the Initial Evaluation period. For each application, clarifying questions will be consolidated and sent to the applicant from each of the panels. The applicant will thus have an opportunity to clarify or supplement the application in those areas where a request is made by the evaluators. These communications will occur via TAS. Unless otherwise noted, such communications will include a 2-week deadline for the applicant to respond. Any supplemental information provided by the applicant will become part of the application.

It is the applicant's responsibility to ensure that the questions have been fully answered and the required documentation is attached. Evaluators are entitled, but not obliged, to request further information or evidence from an applicant, and are not obliged to take into account any information or evidence that is not made

available in the application and submitted by the due date, unless explicitly requested by the evaluators.

2.2.3 Registry Services Review

Concurrent with the other reviews that occur during the Initial Evaluation period, ICANN will review the applicant's proposed registry services for any possible adverse impact on security or stability. The applicant will be required to provide a list of proposed registry services in its application.

2.2.3.1 Definitions

Registry services are defined as:

1. operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry zone servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by the registry agreement;
2. other products or services that the registry operator is required to provide because of the establishment of a consensus policy; and
3. any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator.

Proposed registry services will be examined to determine if they might raise significant stability or security issues. Examples of services proposed by existing registries can be found at <http://www.icann.org/en/registries/rsep/>. In most cases, these proposed services successfully pass this inquiry.

Registry services currently provided by gTLD registries can be found in registry agreement appendices. See <http://www.icann.org/en/registries/agreements.htm>.

A full definition of registry services can be found at <http://www.icann.org/en/registries/rsep/rsep.html>.

For purposes of this review, security and stability are defined as follows:

Security – an effect on security by the proposed registry service means (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or

resources on the Internet by systems operating in accordance with all applicable standards.

Stability – an effect on stability means that the proposed registry service (1) does not comply with applicable relevant standards that are authoritative and published by a well-established, recognized, and authoritative standards body, such as relevant standards-track or best current practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects the throughput, response time, consistency, or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant standards-track or best current practice RFCs and relying on registry operator’s delegation information or provisioning services.

2.2.3.2 Customary Services

The following registry services are customary services offered by a registry operator:

- Receipt of data from registrars concerning registration of domain names and name servers
- Dissemination of TLD zone files
- Dissemination of contact or other information concerning domain name registrations (e.g., port-43 WHOIS, Web-based Whois, RESTful Whois)
- DNS Security Extensions

The applicant must describe whether any of these registry services are intended to be offered in a manner unique to the TLD.

Any additional registry services that are unique to the proposed gTLD registry should be described in detail. Directions for describing the registry services are provided at http://www.icann.org/en/registries/rsep/rrs_sample.html.

2.2.3.3 TLD Zone Contents

ICANN receives a number of inquiries about use of various record types in a registry zone, as entities contemplate different business and technical models. Permissible zone contents for a TLD zone are:

- Apex SOA record.
- Apex NS records and in-bailiwick glue for the TLD’s DNS servers.

- NS records and in-balliwick glue for DNS servers of registered names in the TLD.
- DS records for registered names in the TLD.
- Records associated with signing the TLD zone (i.e., RRSIG, DNSKEY, NSEC, and NSEC3).

An applicant wishing to place any other record types into its TLD zone should describe in detail its proposal in the registry services section of the application. This will be evaluated and could result in an extended evaluation to determine whether the service would create a risk of a meaningful adverse impact on security or stability of the DNS. Applicants should be aware that a service based on use of less-common DNS resource records in the TLD zone, even if approved in the registry services review, might not work as intended for all users due to lack of application support.

2.2.3.4 Methodology

Review of the applicant's proposed registry services will include a preliminary determination of whether any of the proposed registry services could raise significant security or stability issues and require additional consideration.

If the preliminary determination reveals that there may be significant security or stability issues (as defined in subsection 2.2.3.1) surrounding a proposed service, the application will be flagged for an extended review by the Registry Services Technical Evaluation Panel (RSTEP), see <http://www.icann.org/en/registries/rsep/rstep.html>. This review, if applicable, will occur during the Extended Evaluation period (refer to Section 2.3).

In the event that an application is flagged for extended review of one or more registry services, an additional fee to cover the cost of the extended review will be due from the applicant. Applicants will be advised of any additional fees due, which must be received before the additional review begins.

2.2.4 Applicant's Withdrawal of an Application

An applicant who does not pass the Initial Evaluation may withdraw its application at this stage and request a partial refund (refer to subsection 1.5 of Module 1).

2.3 *Extended Evaluation*

An applicant may request an Extended Evaluation if the application has failed to pass the Initial Evaluation elements concerning:

- Geographic names (refer to subsection 2.2.1.4). There is no additional fee for an extended evaluation in this instance.
- Demonstration of technical and operational capability (refer to subsection 2.2.2.1). There is no additional fee for an extended evaluation in this instance.
- Demonstration of financial capability (refer to subsection 2.2.2.2). There is no additional fee for an extended evaluation in this instance.
- Registry services (refer to subsection 2.2.3). Note that this investigation incurs an additional fee (the Registry Services Review Fee) if the applicant wishes to proceed. See Section 1.5 of Module 1 for fee and payment information.

An Extended Evaluation does not imply any change of the evaluation criteria. The same criteria used in the Initial Evaluation will be used to review the application in light of clarifications provided by the applicant.

From the time an applicant receives notice of failure to pass the Initial Evaluation, eligible applicants will have 15 calendar days to submit to ICANN the Notice of Request for Extended Evaluation. If the applicant does not explicitly request the Extended Evaluation (and pay an additional fee in the case of a Registry Services inquiry) the application will not proceed.

2.3.1 *Geographic Names Extended Evaluation*

In the case of an application that has been identified as a geographic name requiring government support, but where the applicant has not provided sufficient evidence of support or non-objection from all relevant governments or public authorities by the end of the Initial Evaluation period, the applicant has additional time in the Extended Evaluation period to obtain and submit this documentation.

If the applicant submits the documentation to the Geographic Names Panel by the required date, the GNP will perform its review of the documentation as detailed in

section 2.2.1.4. If the applicant has not provided the documentation by the required date (at least 90 calendar days from the date of the notice), the application will not pass the Extended Evaluation, and no further reviews are available.

2.3.2 Technical/Operational or Financial Extended Evaluation

The following applies to an Extended Evaluation of an applicant's technical and operational capability or financial capability, as described in subsection 2.2.2.

An applicant who has requested Extended Evaluation will again access the online application system (TAS) and clarify its answers to those questions or sections on which it received a non-passing score (or, in the case of an application where individual questions were passed but the total score was insufficient to pass Initial Evaluation, those questions or sections on which additional points are possible). The answers should be responsive to the evaluator report that indicates the reasons for failure, or provide any amplification that is not a material change to the application. Applicants may not use the Extended Evaluation period to substitute portions of new information for the information submitted in their original applications, i.e., to materially change the application.

An applicant participating in an Extended Evaluation on the Technical / Operational or Financial reviews will have the option to have its application reviewed by the same evaluation panelists who performed the review during the Initial Evaluation period, or to have a different set of panelists perform the review during Extended Evaluation.

The Extended Evaluation allows an additional exchange of information between the evaluators and the applicant to further clarify information contained in the application. This supplemental information will become part of the application record. Such communications will include a deadline for the applicant to respond.

ICANN will notify applicants at the end of the Extended Evaluation period as to whether they have passed. If an application passes Extended Evaluation, it continues to the next stage in the process. If an application does not pass Extended Evaluation, it will proceed no further. No further reviews are available.

2.3.3 Registry Services Extended Evaluation

This section applies to Extended Evaluation of registry services, as described in subsection 2.2.3.

If a proposed registry service has been referred to the Registry Services Technical Evaluation Panel (RSTEP) for an extended review, the RSTEP will form a review team of members with the appropriate qualifications.

The review team will generally consist of three members, depending on the complexity of the registry service proposed. In a 3-member panel, the review could be conducted within 30 to 45 calendar days. In cases where a 5-member panel is needed, this will be identified before the extended evaluation starts. In a 5-member panel, the review could be conducted in 45 calendar days or fewer.

The cost of an RSTEP review will be covered by the applicant through payment of the Registry Services Review Fee. Refer to payment procedures in section 1.5 of Module 1. The RSTEP review will not commence until payment has been received.

If the RSTEP finds that one or more of the applicant's proposed registry services may be introduced without risk of a meaningful adverse effect on security or stability, these services will be included in the applicant's registry agreement with ICANN. If the RSTEP finds that the proposed service would create a risk of a meaningful adverse effect on security or stability, the applicant may elect to proceed with its application without the proposed service, or withdraw its application for the gTLD. In this instance, an applicant has 15 calendar days to notify ICANN of its intent to proceed with the application. If an applicant does not explicitly provide such notice within this time frame, the application will proceed no further.

2.4 Parties Involved in Evaluation

A number of independent experts and groups play a part in performing the various reviews in the evaluation process. A brief description of the various panels, their evaluation roles, and the circumstances under which they work is included in this section.

2.4.1 Panels and Roles

The **String Similarity Panel** will assess whether a proposed gTLD string creates a probability of user confusion due to similarity with any reserved name, any existing TLD, any requested IDN ccTLD, or any new gTLD string applied for in the current application round. This occurs during the String Similarity review in Initial Evaluation. The panel may also review IDN tables submitted by applicants as part of its work.

The **DNS Stability Panel** will determine whether a proposed string might adversely affect the security or stability of the DNS. This occurs during the DNS Stability String review in Initial Evaluation.

The **Geographic Names Panel** will review each application to determine whether the applied-for gTLD represents a geographic name, as defined in this guidebook. In the event that the string is a geographic name requiring government support, the panel will ensure that the required documentation is provided with the application and verify that the documentation is from the relevant governments or public authorities and is authentic.

The **Technical Evaluation Panel** will review the technical components of each application against the criteria in the Applicant Guidebook, along with proposed registry operations, in order to determine whether the applicant is technically and operationally capable of operating a gTLD registry as proposed in the application. This occurs during the Technical/Operational reviews in Initial Evaluation, and may also occur in Extended Evaluation if elected by the applicant.

The **Financial Evaluation Panel** will review each application against the relevant business, financial and organizational criteria contained in the Applicant Guidebook, to determine whether the applicant is financially capable of maintaining a gTLD registry as proposed in the application. This occurs during the Financial review in Initial Evaluation, and may also occur in Extended Evaluation if elected by the applicant.

The **Registry Services Technical Evaluation Panel (RSTEP)** will review proposed registry services in the application to determine if they pose a risk of a meaningful adverse impact on security or stability. This occurs, if applicable, during the Extended Evaluation period.

Members of all panels are required to abide by the established Code of Conduct and Conflict of Interest guidelines included in this module.

2.4.2 Panel Selection Process

ICANN has selected qualified third-party providers to perform the various reviews, based on an extensive selection process.¹¹ In addition to the specific subject matter expertise required for each panel, specified qualifications are required, including:

- The provider must be able to convene – or have the capacity to convene - globally diverse panels and be able to evaluate applications from all regions of the world, including applications for IDN gTLDs.
- The provider should be familiar with the IETF IDNA standards, Unicode standards, relevant RFCs and the terminology associated with IDNs.
- The provider must be able to scale quickly to meet the demands of the evaluation of an unknown number of applications. At present it is not known how many applications will be received, how complex they will be, and whether they will be predominantly for ASCII or non-ASCII gTLDs.
- The provider must be able to evaluate the applications within the required timeframes of Initial and Extended Evaluation.

2.4.3 Code of Conduct Guidelines for Panelists

The purpose of the New gTLD Program (“Program”) Code of Conduct (“Code”) is to prevent real and apparent conflicts of interest and unethical behavior by any Evaluation Panelist (“Panelist”).

Panelists shall conduct themselves as thoughtful, competent, well prepared, and impartial professionals throughout the application process. Panelists are expected to comply with equity and high ethical standards while assuring the Internet community, its constituents, and the public of objectivity, integrity, confidentiality, and credibility. Unethical actions, or even the appearance of compromise, are not acceptable. Panelists are expected

¹¹ <http://newgtlds.icann.org/about/evaluation-panels-selection-process>

to be guided by the following principles in carrying out their respective responsibilities. This Code is intended to summarize the principles and nothing in this Code should be considered as limiting duties, obligations or legal requirements with which Panelists must comply.

Bias -- Panelists shall:

- not advance personal agendas or non-ICANN approved agendas in the evaluation of applications;
- examine facts as they exist and not be influenced by past reputation, media accounts, or unverified statements about the applications being evaluated;
- exclude themselves from participating in the evaluation of an application if, to their knowledge, there is some predisposing factor that could prejudice them with respect to such evaluation; and
- exclude themselves from evaluation activities if they are philosophically opposed to or are on record as having made generic criticism about a specific type of applicant or application.

Compensation/Gifts -- Panelists shall not request or accept any compensation whatsoever or any gifts of substance from the Applicant being reviewed or anyone affiliated with the Applicant. (Gifts of substance would include any gift greater than USD 25 in value).

If the giving of small tokens is important to the Applicant's culture, Panelists may accept these tokens; however, the total of such tokens must not exceed USD 25 in value. If in doubt, the Panelist should err on the side of caution by declining gifts of any kind.

Conflicts of Interest -- Panelists shall act in accordance with the "New gTLD Program Conflicts of Interest Guidelines" (see subsection 2.4.3.1).

Confidentiality -- Confidentiality is an integral part of the evaluation process. Panelists must have access to sensitive information in order to conduct evaluations. Panelists must maintain confidentiality of information entrusted to them by ICANN and the Applicant and any other confidential information provided to them from whatever source,

except when disclosure is legally mandated or has been authorized by ICANN. "Confidential information" includes all elements of the Program and information gathered as part of the process – which includes but is not limited to: documents, interviews, discussions, interpretations, and analyses – related to the review of any new gTLD application.

Affirmation -- All Panelists shall read this Code prior to commencing evaluation services and shall certify in writing that they have done so and understand the Code.

2.4.3.1 Conflict of Interest Guidelines for Panelists

It is recognized that third-party providers may have a large number of employees in several countries serving numerous clients. In fact, it is possible that a number of Panelists may be very well known within the registry / registrar community and have provided professional services to a number of potential applicants.

To safeguard against the potential for inappropriate influence and ensure applications are evaluated in an objective and independent manner, ICANN has established detailed Conflict of Interest guidelines and procedures that will be followed by the Evaluation Panelists. To help ensure that the guidelines are appropriately followed ICANN will:

- Require each Evaluation Panelist (provider and individual) to acknowledge and document understanding of the Conflict of Interest guidelines.
- Require each Evaluation Panelist to disclose all business relationships engaged in at any time during the past six months.
- Where possible, identify and secure primary and backup providers for evaluation panels.
- In conjunction with the Evaluation Panelists, develop and implement a process to identify conflicts and re-assign applications as appropriate to secondary or contingent third party providers to perform the reviews.

Compliance Period -- All Evaluation Panelists must comply with the Conflict of Interest guidelines beginning with the opening date of the Application Submission period and ending with the public announcement by ICANN of the

final outcomes of all the applications from the Applicant in question.

Guidelines -- The following guidelines are the minimum standards with which all Evaluation Panelists must comply. It is recognized that it is impossible to foresee and cover all circumstances in which a potential conflict of interest might arise. In these cases the Evaluation Panelist should evaluate whether the existing facts and circumstances would lead a reasonable person to conclude that there is an actual conflict of interest.

Evaluation Panelists and Immediate Family Members:

- Must not be under contract, have or be included in a current proposal to provide Professional Services for or on behalf of the Applicant during the Compliance Period.
- Must not currently hold or be committed to acquire any interest in a privately-held Applicant.
- Must not currently hold or be committed to acquire more than 1% of any publicly listed Applicant's outstanding equity securities or other ownership interests.
- Must not be involved or have an interest in a joint venture, partnership or other business arrangement with the Applicant.
- Must not have been named in a lawsuit with or against the Applicant.
- Must not be a:
 - Director, officer, or employee, or in any capacity equivalent to that of a member of management of the Applicant;
 - Promoter, underwriter, or voting trustee of the Applicant; or
 - Trustee for any pension or profit-sharing trust of the Applicant.

Definitions--

Evaluation Panelist: An Evaluation Panelist is any individual associated with the review of an application. This includes

any primary, secondary, and contingent third party Panelists engaged by ICANN to review new gTLD applications.

Immediate Family Member: Immediate Family Member is a spouse, spousal equivalent, or dependent (whether or not related) of an Evaluation Panelist.

Professional Services: include, but are not limited to legal services, financial audit, financial planning / investment, outsourced services, consulting services such as business / management / internal audit, tax, information technology, registry / registrar services.

2.4.3.2 Code of Conduct Violations

Evaluation panelist breaches of the Code of Conduct, whether intentional or not, shall be reviewed by ICANN, which may make recommendations for corrective action, if deemed necessary. Serious breaches of the Code may be cause for dismissal of the person, persons or provider committing the infraction.

In a case where ICANN determines that a Panelist has failed to comply with the Code of Conduct, the results of that Panelist's review for all assigned applications will be discarded and the affected applications will undergo a review by new panelists.

Complaints about violations of the Code of Conduct by a Panelist may be brought to the attention of ICANN via the public comment and applicant support mechanisms, throughout the evaluation period. Concerns of applicants regarding panels should be communicated via the defined support channels (see subsection 1.4.2). Concerns of the general public (i.e., non-applicants) can be raised via the public comment forum, as described in Module 1.

2.4.4 Communication Channels

Defined channels for technical support or exchanges of information with ICANN and with evaluation panels are available to applicants during the Initial Evaluation and Extended Evaluation periods. Contacting individual ICANN staff members, Board members, or individuals engaged by ICANN to perform an evaluation role in order to lobby for a particular outcome or to obtain confidential information about applications under review is not appropriate. In the interests of fairness and equivalent treatment for all applicants, any such individual contacts will be referred to the appropriate communication channels.

DRAFT - New gTLD Program – Initial Evaluation and Extended Evaluation

Application is confirmed as complete and ready for evaluation during Administrative Completeness Check

Background Screening
Third-party provider reviews applicant's background.

Initial Evaluation – String Review

Initial Evaluation – Applicant Review

String Similarity
String Similarity Panel reviews applied-for strings to ensure they are not too similar to existing TLDs or Reserved Names.

DNS Stability
All strings reviewed and in extraordinary cases, DNS Stability Panel may perform extended review for possible technical stability issues.

Geographic Names
Geographic Names Panel determines if applied-for string is geographic name requiring government support.

Technical and Operational Capability
Technical and Operational panel reviews applicant's answers to questions and supporting documentation.

Financial Capability
Financial panel reviews applicant's answers to questions and supporting documentation.

Registry Services
Preliminary review of applicant's registry services and referral to RSTEP for further review during Extended Evaluation where necessary

Panel compares all applied-for strings and creates contention sets.

Panel confirms supporting documentation where required.

ICANN will seek to publish contention sets prior to publication of full IE results.

Does applicant pass all elements of Initial Evaluation?

Applicant elects to pursue **Extended Evaluation**?

Extended Evaluation process

Applicant continues to subsequent steps.

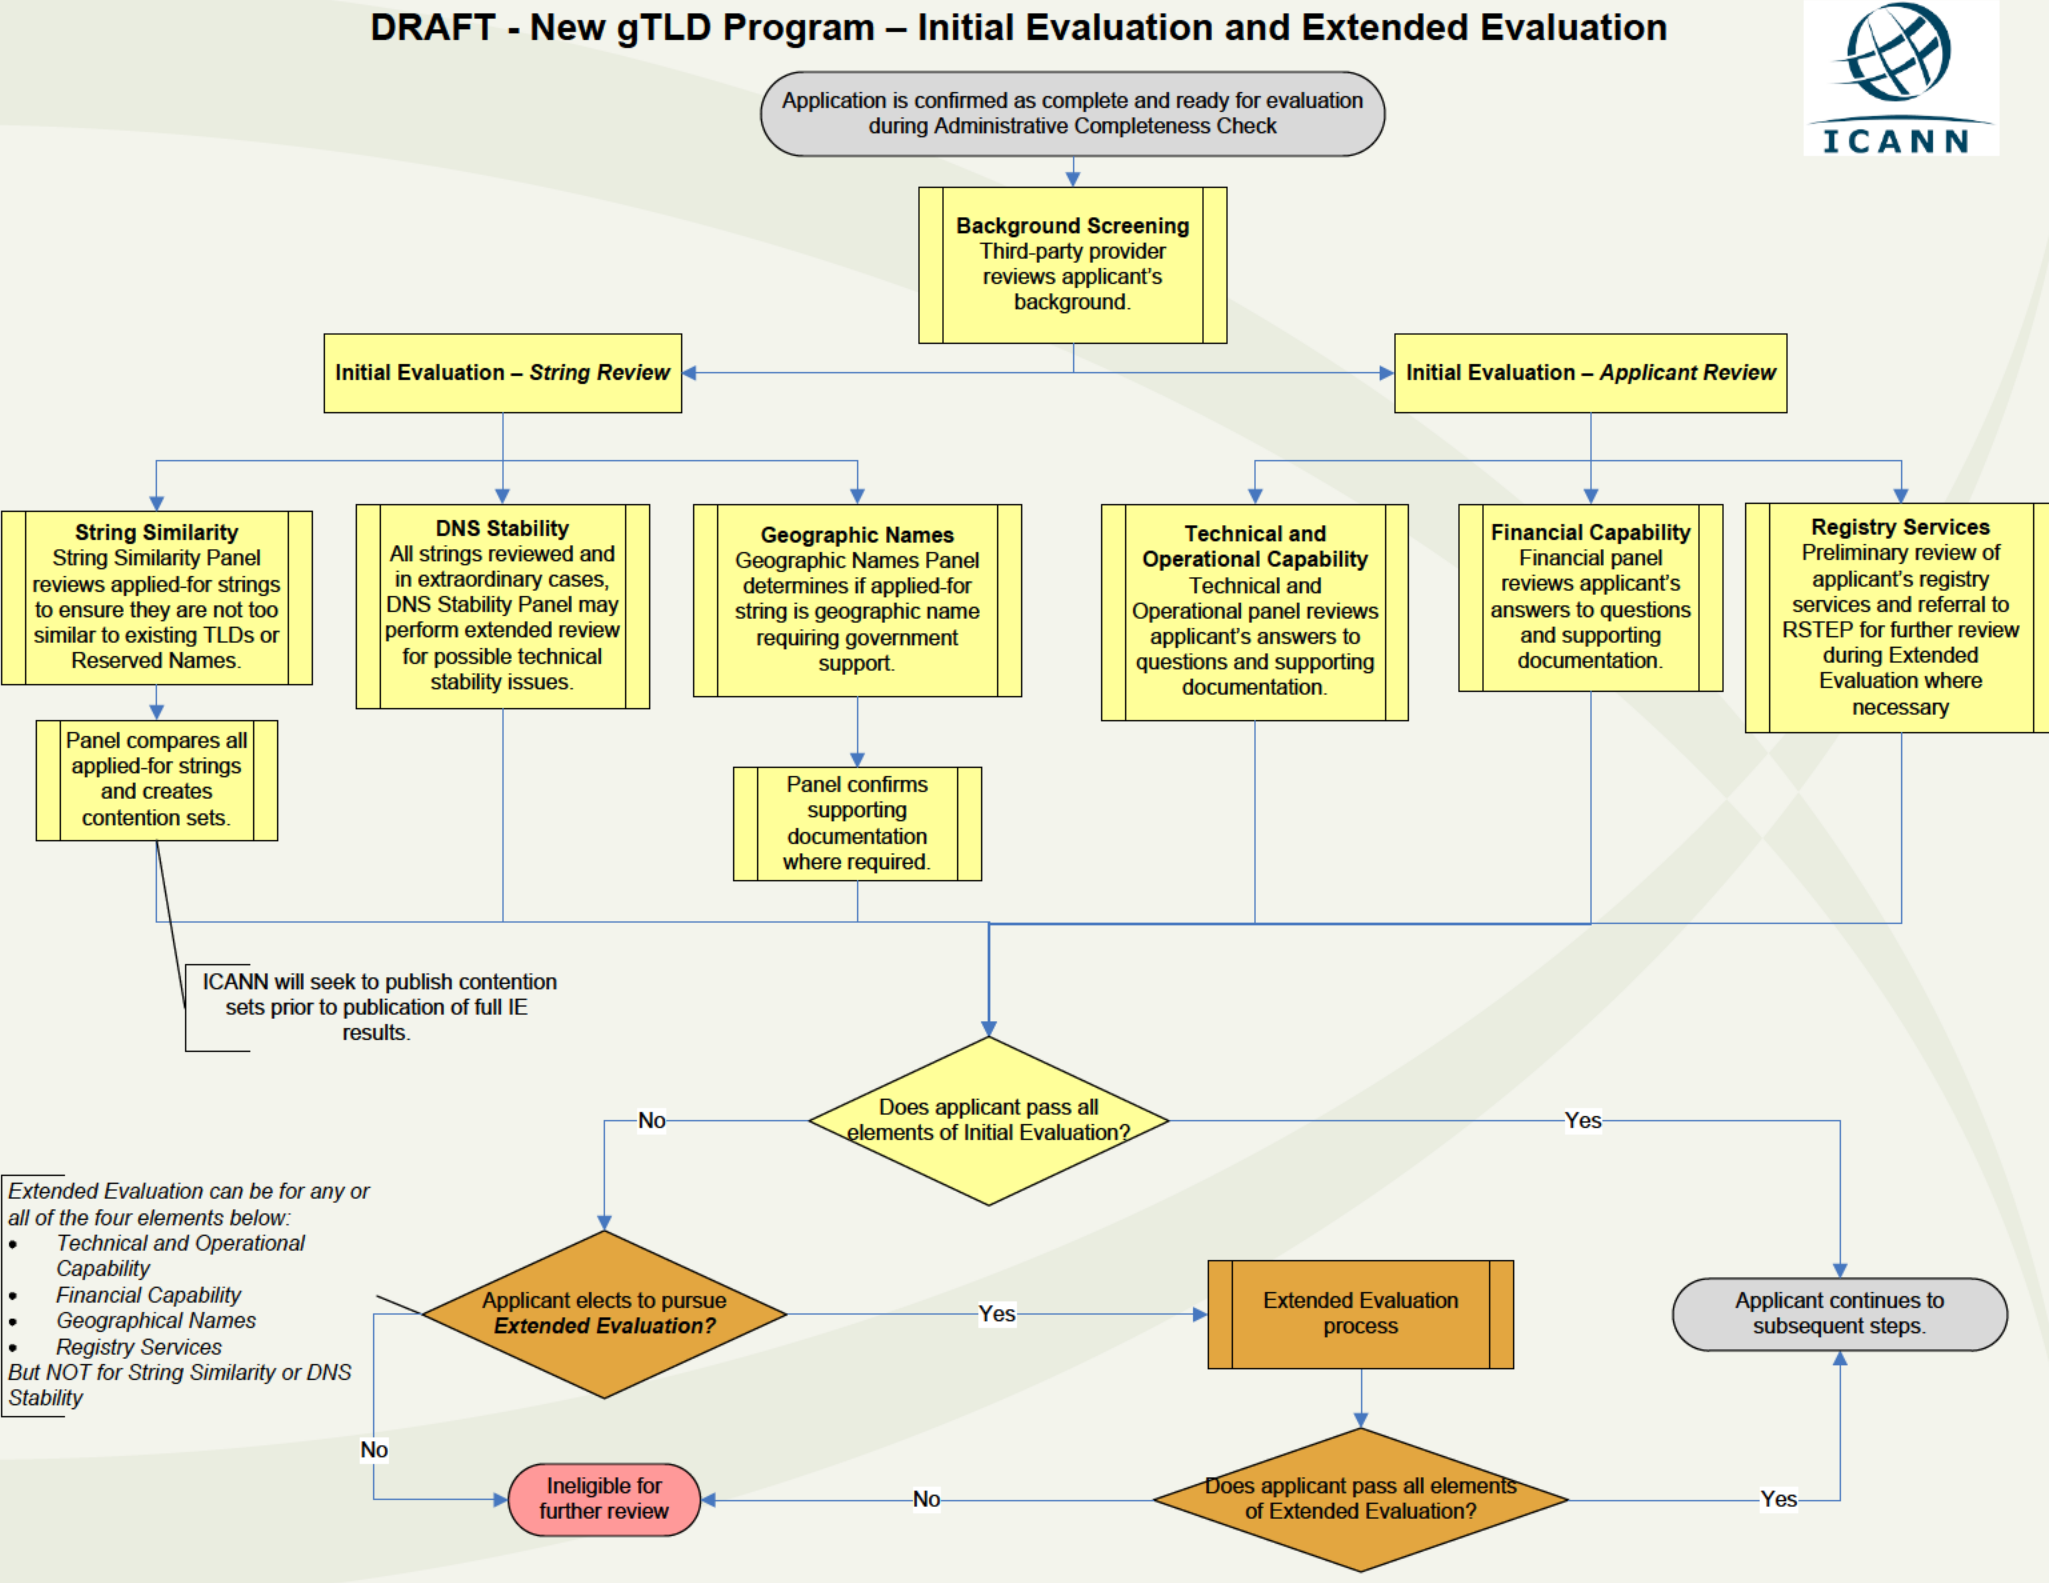

Ineligible for further review

Does applicant pass all elements of Extended Evaluation?

Extended Evaluation can be for any or all of the four elements below:

- Technical and Operational Capability
- Financial Capability
- Geographical Names
- Registry Services

But NOT for String Similarity or DNS Stability

Annex: Separable Country Names List

gTLD application restrictions on country or territory names are tied to listing in property fields of the ISO 3166-1 standard. Notionally, the ISO 3166-1 standard has an “English short name” field which is the common name for a country and can be used for such protections; however, in some cases this does not represent the common name. This registry seeks to add additional protected elements which are derived from definitions in the ISO 3166-1 standard. An explanation of the various classes is included below.

Separable Country Names List

Code	English Short Name	Cl.	Separable Name

Maintenance

A Separable Country Names Registry will be maintained and published by ICANN Staff.

Each time the ISO 3166-1 standard is updated with a new entry, this registry will be reappraised to identify if the changes to the standard warrant changes to the entries in this registry. Appraisal will be based on the criteria listing in the "Eligibility" section of this document.

Codes reserved by the ISO 3166 Maintenance Agency do not have any implication on this registry, only entries derived from normally assigned codes appearing in ISO 3166-1 are eligible.

If an ISO code is struck off the ISO 3166-1 standard, any entries in this registry deriving from that code must be struck.

Eligibility

Each record in this registry is derived from the following possible properties:

- Class A:** The ISO 3166-1 English Short Name is comprised of multiple, separable parts whereby the country is comprised of distinct sub-entities. Each of these separable parts is eligible in its own right for consideration as a country name. For example, "Antigua and Barbuda" is comprised of "Antigua" and "Barbuda."
- Class B:** The ISO 3166-1 English Short Name (1) or the ISO 3166-1 English Full Name (2) contains additional language as to the type of country the entity is, which is often not used in common usage when referencing the country. For example, one such short name is "The Bolivarian Republic of Venezuela" for a country in common usage referred to as "Venezuela."
- ** Macedonia is a separable name in the context of this list; however, due to the ongoing dispute listed in UN documents between the Hellenic Republic (Greece) and the Former Yugoslav Republic of Macedonia over the name, no country will be afforded attribution or rights to the name "Macedonia" until the dispute over the name has been resolved. See <http://daccess-dds-ny.un.org/doc/UNDOC/GEN/N93/240/37/IMG/N9324037.pdf>.
- Class C:** The ISO 3166-1 Remarks column containing synonyms of the country name, or sub-national entities, as denoted by "often referred to as," "includes", "comprises", "variant" or "principal islands".

In the first two cases, the registry listing must be directly derivative from the English Short Name by excising words and articles. These registry listings do not include vernacular or other non-official terms used to denote the country.

Eligibility is calculated in class order. For example, if a term can be derived both from Class A and Class C, it is only listed as Class A.

Attachment to Module 2

Sample Letter of Government Support

[This letter should be provided on official letterhead]

ICANN
Suite 330, 4676 Admiralty Way
Marina del Rey, CA 90292

Attention: New gTLD Evaluation Process

Subject: Letter for support for [TLD requested]

This letter is to confirm that [government entity] fully supports the application for [TLD] submitted to ICANN by [applicant] in the New gTLD Program. As the [Minister/Secretary/position] I confirm that I have the authority of the [x government/public authority] to be writing to you on this matter. [Explanation of government entity, relevant department, division, office, or agency, and what its functions and responsibilities are]

The gTLD will be used to [explain your understanding of how the name will be used by the applicant. This could include policies developed regarding who can register a name, pricing regime and management structures.] [Government/public authority/department] has worked closely with the applicant in the development of this proposal.

The [x government/public authority] supports this application, and in doing so, understands that in the event that the application is successful, [applicant] will be required to enter into a Registry Agreement with ICANN. In doing so, they will be required to pay fees to ICANN and comply with consensus policies developed through the ICANN multi-stakeholder policy processes.

[Government / public authority] further understands that, in the event of a dispute between [government/public authority] and the applicant, ICANN will comply with a legally binding order from a court in the jurisdiction of [government/public authority].

[Optional] This application is being submitted as a community-based application, and as such it is understood that the Registry Agreement will reflect the community restrictions proposed in the application. In the event that we believe the registry is not complying with these restrictions, possible avenues of recourse include the Registry Restrictions Dispute Resolution Procedure.

[Optional] I can advise that in the event that this application is successful [government/public authority] will enter into a separate agreement with the applicant. This agreement will outline the conditions under which we support them in the operation of the TLD, and circumstances under which we would withdraw that support. ICANN will not be a party to this agreement, and enforcement of this agreement lies fully with [government/public authority].

[Government / public authority] understands that the Geographic Names Panel engaged by ICANN will, among other things, conduct due diligence on the authenticity of this documentation. I would request that if additional information is required during this process, that [name and contact details] be contacted in the first instance.

Thank you for the opportunity to support this application.

Yours sincerely

Signature from relevant government/public authority

Attachment to Module 2

Evaluation Questions and Criteria

Since ICANN was founded in 1998 as a not-for-profit, multi-stakeholder organization, one of its key mandates has been to promote competition in the domain name market. ICANN's mission specifically calls for the corporation to maintain and build on processes that will ensure competition and consumer interests – without compromising Internet security and stability. This includes the consideration and implementation of new gTLDs. It is ICANN's goal to make the criteria and evaluation as objective as possible.

While new gTLDs are viewed by ICANN as important to fostering choice, innovation and competition in domain registration services, the decision to launch these coming new gTLD application rounds followed a detailed and lengthy consultation process with all constituencies of the global Internet community.

Any public or private sector organization can apply to create and operate a new gTLD. However the process is not like simply registering or buying a second-level domain name. Instead, the application process is to evaluate and select candidates capable of running a registry, a business that manages top level domains such as, for example, .COM or .INFO. Any successful applicant will need to meet published operational and technical criteria in order to preserve Internet stability and interoperability.

I. Principles of the Technical and Financial New gTLD Evaluation Criteria

- Principles of conservatism. This is the first round of what is to be an ongoing process for the introduction of new TLDs, including Internationalized Domain Names. Therefore, the criteria in this round require applicants to provide a thorough and thoughtful analysis of the technical requirements to operate a registry and the proposed business model.
- The criteria and evaluation should be as objective as possible.
 - With that goal in mind, an important objective of the new TLD process is to diversify the namespace, with different registry business models and target audiences. In some cases, criteria that are objective, but that ignore the differences in business models and target audiences of new registries, will tend to make the process exclusionary. For example, the business model for a registry targeted to a small community need not possess the same robustness in funding and technical infrastructure as a registry intending to compete with large gTLDs. Therefore purely objective criteria such as a requirement for a certain amount of cash on hand will not provide for the flexibility to consider different business models. The process must provide for an objective evaluation framework, but allow for adaptation according to the differing models applicants will present. Within that framework, applicant responses will be evaluated against the criteria in light of the proposed model.
 - Therefore the criteria should be flexible: able to scale with the overall business approach, providing that the planned approach is consistent and coherent, and can withstand highs and lows.

- Criteria can be objective in areas of registrant protection, for example:
 - Providing for funds to continue operations in the event of a registry failure.
 - Adherence to data escrow, registry failover, and continuity planning requirements.
- The evaluation must strike the correct balance between establishing the business and technical competence of the applicant to operate a registry (to serve the interests of registrants), while not asking for the detailed sort of information or making the judgment that a venture capitalist would. ICANN is not seeking to certify business success but instead seeks to encourage innovation while providing certain safeguards for registrants.
- New registries must be added in a way that maintains DNS stability and security. Therefore, ICANN asks several questions so that the applicant can demonstrate an understanding of the technical requirements to operate a registry. ICANN will ask the applicant to demonstrate actual operational technical compliance prior to delegation. This is in line with current prerequisites for the delegation of a TLD.
- Registrant protection is emphasized in both the criteria and the scoring. Examples of this include asking the applicant to:
 - Plan for the occurrence of contingencies and registry failure by putting in place financial resources to fund the ongoing resolution of names while a replacement operator is found or extended notice can be given to registrants,
 - Demonstrate a capability to understand and plan for business contingencies to afford some protections through the marketplace,
 - Adhere to DNS stability and security requirements as described in the technical section, and
 - Provide access to the widest variety of services.

II. Aspects of the Questions Asked in the Application and Evaluation Criteria

The technical and financial questions are intended to inform and guide the applicant in aspects of registry start-up and operation. The established registry operator should find the questions straightforward while inexperienced applicants should find them a natural part of planning.

Evaluation and scoring (detailed below) will emphasize:

- How thorough are the answers? Are they well thought through and do they provide a sufficient basis for evaluation?
- Demonstration of the ability to operate and fund the registry on an ongoing basis:
 - Funding sources to support technical operations in a manner that ensures stability and security and supports planned expenses,
 - Resilience and sustainability in the face of ups and downs, anticipation of contingencies,
 - Funding to carry on operations in the event of failure.

- Demonstration that the technical plan will likely deliver on best practices for a registry and identification of aspects that might raise DNS stability and security issues.
- Ensures plan integration, consistency and compatibility (responses to questions are not evaluated individually but in comparison to others):
 - Funding adequately covers technical requirements,
 - Funding covers costs,
 - Risks are identified and addressed, in comparison to other aspects of the plan.

III. Scoring

Evaluation

- The questions, criteria, scoring and evaluation methodology are to be conducted in accordance with the principles described earlier in section I. With that in mind, globally diverse evaluation panelists will staff evaluation panels. The diversity of evaluators and access to experts in all regions of the world will ensure application evaluations take into account cultural, technical and business norms in the regions from which applications originate.
- Evaluation teams will consist of two independent panels. One will evaluate the applications against the financial criteria. The other will evaluate the applications against the technical & operational criteria. Given the requirement that technical and financial planning be well integrated, the panels will work together and coordinate information transfer where necessary. Other relevant experts (e.g., technical, audit, legal, insurance, finance) in pertinent regions will provide advice as required.
- Precautions will be taken to ensure that no member of the Evaluation Teams will have any interest or association that may be viewed as a real or potential conflict of interest with an applicant or application. All members must adhere to the Code of Conduct and Conflict of Interest guidelines that are found in Module 2.
- Communications between the evaluation teams and the applicants will be through an online interface. During the evaluation, evaluators may pose a set of clarifying questions to an applicant, to which the applicant may respond through the interface.

Confidentiality: ICANN will post applications after the close of the application submission period. The application form notes which parts of the application will be posted.

Scoring

- Responses will be evaluated against each criterion. A score will be assigned according to the scoring schedule linked to each question or set of questions. In several questions, 1 point is the maximum score that may be awarded. In several other questions, 2 points are awarded for a response that exceeds requirements, 1 point is awarded for a response that meets requirements and 0 points are awarded for a response that fails to meet requirements. Each question must receive at least a score of "1," making each a "pass/fail" question.
- In the Continuity question in the financial section(see Question #50), up to 3 points are awarded if an applicant provides, at the application stage, a financial instrument that will guarantee ongoing registry operations in the event of a business failure. This extra

point can serve to guarantee passing the financial criteria for applicants who score the minimum passing score for each of the individual criteria. The purpose of this weighting is to reward applicants who make early arrangements for the protection of registrants and to accept relatively riskier business plans where registrants are protected.

- There are 21 Technical & Operational questions. Each question has a criterion and scoring associated with it. The scoring for each is 0, 1, or 2 points as described above. One of the questions (IDN implementation) is optional. Other than the optional questions, all Technical & Operational criteria must be scored a 1 or more or the application will fail the evaluation.
- The total technical score must be equal to or greater than 22 for the application to pass. That means the applicant can pass by:
 - Receiving a 1 on all questions, including the optional question, and a 2 on at least one mandatory question; or
 - Receiving a 1 on all questions, excluding the optional question and a 2 on at least two mandatory questions.

This scoring methodology requires a minimum passing score for each question and a slightly higher average score than the per question minimum to pass.

- There are six Financial questions and six sets of criteria that are scored by rating the answers to one or more of the questions. For example, the question concerning registry operation costs requires consistency between the technical plans (described in the answers to the Technical & Operational questions) and the costs (described in the answers to the costs question).
- The scoring for each of the Financial criteria is 0, 1 or 2 points as described above with the exception of the Continuity question, for which up to 3 points are possible. All questions must receive at least a 1 or the application will fail the evaluation.
- The total financial score on the six criteria must be 8 or greater for the application to pass. That means the applicant can pass by:
 - Scoring a 3 on the continuity criteria, or
 - Scoring a 2 on any two financial criteria.
- Applications that do not pass Initial Evaluation can enter into an extended evaluation process as described in Module 2. The scoring is the same.

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
Applicant Information	1	Full legal name of the Applicant (the established entity that would enter into a Registry Agreement with ICANN)	Y	Responses to Questions 1 - 12 are required for a complete application. Responses are not scored.			
	2	Address of the principal place of business of the Applicant. This address will be used for contractual purposes. No Post Office boxes are allowed.	Y				
	3	Phone number for the Applicant's principal place of business.	Y				
	4	Fax number for the Applicant's principal place of business.	Y				
	5	Website or URL, if applicable.	Y				
Primary Contact for this Application	6	Name	Y	The primary contact is the individual designated with the primary responsibility for management of the application, including responding to tasks in the TLD Application System (TAS) during the various application phases. Both contacts listed should also be prepared to receive inquiries from the public.			
		Title	Y				
		Date of birth	N				
		Country of birth	N				
		Address	N				
		Phone number	Y				
		Fax number	Y				
		Email address	Y				
Secondary Contact for this Application	7	Name	Y	The secondary contact is listed in the event the primary contact is unavailable to continue with the application process.			
		Title	Y				
		Date of birth	N				
		Country of birth	N				
		Address	N				
		Phone number	Y				
		Fax number	Y				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		Email address	Y				
Proof of Legal Establishment	8	(a) Legal form of the Applicant. (e.g., partnership, corporation, non-profit institution).	Y				
		(b) State the specific national or other jurisdiction that defines the type of entity identified in 8(a).	Y	In the event of questions regarding proof of establishment, the applicant may be asked for additional details, such as the specific national or other law applying to this type of entity			
		(c) Attach evidence of the applicant's establishment as the type of entity identified in Question 8(a) above, in accordance with the applicable laws identified in Question 8(b).	Y	Applications without valid proof of legal establishment will not be evaluated further. Supporting documentation for proof of legal establishment should be submitted in the original language.			
	9	(a) If the applying entity is publicly traded, provide the exchange and symbol.	Y				
		(b) If the applying entity is a subsidiary, provide the parent company.	Y				
		(c) If the applying entity is a joint venture, list all joint venture partners.	Y				
	10	Business ID, Tax ID, VAT registration number, or equivalent of the Applicant.	N				
Applicant Background	11	(a) Enter the full name, date and country of birth, contact information (permanent residence), and position of all directors (i.e., members of the applicant's Board of Directors, if applicable).	Partial	<p>Applicants should be aware that the names and positions of the individuals listed in response to this question will be published as part of the application. The contact information listed for individuals is for identification purposes only and will not be published as part of the application.</p> <p>Background checks may be conducted on individuals named in the applicant's response to question 11. Any material misstatement or misrepresentation (or omission of material information) may cause the application to be rejected.</p> <p>The applicant certifies that it has obtained permission for the posting of the names and positions of individuals included in this application.</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(b) Enter the full name, date and country of birth, contact information (permanent residence), and position of all officers and partners. Officers are high-level management officials of a corporation or business, for example, a CEO, vice president, secretary, chief financial officer. Partners would be listed in the context of a partnership or other such form of legal entity.	Partial				
		(c) Enter the full name and contact information of all shareholders holding at least 15% of shares, and percentage held by each. For a shareholder entity, enter the principal place of business. For a shareholder individual, enter the date and country of birth and contact information (permanent residence).	Partial				
		(d) For an applying entity that does not have directors, officers, partners, or shareholders, enter the full name, date and country of birth, contact information (permanent residence), and position of all individuals having overall legal or executive responsibility for the applying entity.	Partial				
		(e) Indicate whether the applicant or any of the individuals named above: <ul style="list-style-type: none"> i. within the past ten years, has been convicted of any crime related to financial or corporate governance activities, or has been judged by a court to have committed fraud or breach of fiduciary duty, or has been the subject of a judicial determination that is the substantive equivalent of any of these; ii. within the past ten years, has been disciplined by any government or industry regulatory body for conduct involving dishonesty or misuse of funds of others; iii. within the past ten years has been convicted of any willful tax-related fraud or willful evasion of tax liabilities; iv. within the past ten years has been convicted of perjury, forswearing, failing to cooperate with a law enforcement investigation, or making false statements to a law enforcement agency or representative; 	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>v. has ever been convicted of any crime involving the use of computers, telephony systems, telecommunications or the Internet to facilitate the commission of crimes;</p> <p>vi. has ever been convicted of any crime involving the use of a weapon, force, or the threat of force;</p> <p>vii. has ever been convicted of any violent or sexual offense victimizing children, the elderly, or individuals with disabilities;</p> <p>viii. has ever been convicted of the illegal sale, manufacture, or distribution of pharmaceutical drugs, or been convicted or successfully extradited for any offense described in Article 3 of the United Nations Convention Against Illicit Traffic in Narcotic Drugs and Psychotropic Substances of 1988;</p> <p>ix. has ever been convicted or successfully extradited for any offense described in the United Nations Convention against Transnational Organized Crime (all Protocols);</p> <p>x. has been convicted, within the respective timeframes, of aiding, abetting, facilitating, enabling, conspiring to commit, or failing to report any of the listed crimes (i.e., within the past 10 years for crimes listed in (i) - (iv) above, or ever for the crimes listed in (v) - (ix) above);</p> <p>xi. has entered a guilty plea as part of a plea agreement or has a court case in any jurisdiction with a disposition of Adjudicated Guilty or Adjudication Withheld (or regional equivalents) within the respective timeframes listed above for any of the listed crimes (i.e., within the past 10 years for crimes listed in (i) - (iv) above, or ever for the crimes listed in (v) - (ix) above);</p> <p>xii. is the subject of a disqualification imposed by ICANN and in effect at the time of this application.</p> <p>If any of the above events have occurred, please provide details.</p>					

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		(f) Indicate whether the applicant or any of the individuals named above have been involved in any decisions indicating that the applicant or individual named in the application was engaged in cybersquatting, as defined in the Uniform Domain Name Dispute Resolution Policy (UDRP), Anti-cybersquatting Consumer Protection Act (ACPA), or other equivalent legislation, or was engaged in reverse domain name hijacking under the UDRP or bad faith or reckless disregard under the ACPA or equivalent legislation.	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook for details.			
		(g) Disclose whether the applicant or any of the individuals named above has been involved in any administrative or other legal proceeding in which allegations of intellectual property infringement relating to registration or use of a domain name have been made. Provide an explanation related to each such instance.	N	ICANN may deny an otherwise qualified application based on the background screening process. See section 1.2.1 of the guidebook for details.			
		(h) Provide an explanation for any additional background information that may be found concerning the applicant or any individual named in the application, which may affect eligibility, including any criminal convictions not identified above.	N				
Evaluation Fee	12	(a) Enter the confirmation information for payment of the evaluation fee (e.g., wire transfer confirmation number).	N	<p>The evaluation fee is paid in the form of a deposit at the time of user registration, and submission of the remaining amount at the time the full application is submitted. The information in question 12 is required for each payment.</p> <p>The full amount in USD must be received by ICANN. Applicant is responsible for all transaction fees and exchange rate fluctuation.</p> <p>Fedwire is the preferred wire mechanism; SWIFT is also acceptable. ACH is not recommended as these funds will take longer to clear and could affect timing of the application processing.</p>

		(e) Bank address	N				
		(f) Wire date	N				
Applied-for gTLD string	13	Provide the applied-for gTLD string. If applying for an IDN, provide the U-label.	Y	Responses to Questions 13-17 are not scored, but are used for database and validation purposes. The U-label is an IDNA-valid string of Unicode characters, including at least one non-ASCII character.			
	14	(a) If applying for an IDN, provide the A-label (beginning with "xn--").	Y				
		(b) If an IDN, provide the meaning, or restatement of the string in English, that is, a description of the literal meaning of the string in the opinion of the applicant.	Y				
		(c) If an IDN, provide the language of the label (both in English and as referenced by ISO-639-1).	Y				
		(d) If an IDN, provide the script of the label (both in English and as referenced by ISO 15924).	Y				
		(e) If an IDN, list all code points contained in the U-label according to Unicode form.	Y	For example, the string "HELLO" would be listed as U+0048 U+0065 U+006C U+006C U+0066.			
	15	(a) If an IDN, upload IDN tables for the proposed registry. An IDN table must include: <ol style="list-style-type: none"> 1. the applied-for gTLD string relevant to the tables, 2. the script or language designator (as defined in BCP 47), 3. table version number, 4. effective date (DD Month YYYY), and 5. contact name, email address, and phone number. <p>Submission of IDN tables in a standards-based format is encouraged.</p>	Y	In the case of an application for an IDN gTLD, IDN tables must be submitted for the language or script for the applied-for gTLD string. IDN tables must also be submitted for each language or script in which the applicant intends to offer IDN registrations at the second level (see question 44). IDN tables should be submitted in a machine-readable format. The model format described in Section 5 of RFC 4290 would be ideal. The format used by RFC 3743 is an acceptable alternative. Variant generation algorithms that are more complex (such as those with contextual			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				rules) and cannot be expressed using these table formats should be specified in a manner that could be re-implemented programmatically by ICANN. Ideally, for any complex table formats, a reference code implementation should be provided in conjunction with a description of the generation rules.			
		(b) Describe the process used for development of the IDN tables submitted, including consultations and sources used.	Y				
		(c) List any variants to the applied-for gTLD string according to the relevant IDN tables.	Y	Variant TLD strings will not be delegated as a result of this application. Variant strings will be checked for consistency and, if the application is approved, will be entered on a Declared IDN Variants List to allow for future allocation once a variant management mechanism is established for the top level. Inclusion of variant TLD strings in this application is for information only and confers no right or claim to these strings upon the applicant.			
	16	Describe the applicant's efforts to ensure that there are no known operational or rendering problems concerning the applied-for gTLD string. If such issues are known, describe steps that will be taken to mitigate these issues in software and other applications.	Y				
	17	OPTIONAL. Provide a representation of the label according to the International Phonetic Alphabet (http://www.langsci.ucl.ac.uk/ipa/).	Y	If provided, this information will be used as a guide to ICANN in communications regarding the application.			
Mission/Purpose	18	(a) Describe the mission/purpose of your proposed gTLD.	Y	The information gathered in response to Question 18 is intended to inform the post-launch review of the New gTLD Program, from the perspective of assessing the relative costs and benefits achieved in the expanded gTLD space. For the application to be considered complete, answers to this section must be fulsome and sufficiently quantitative and detailed to inform future study on plans vs. results.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				<p>The New gTLD Program will be reviewed, as specified in section 9.3 of the Affirmation of Commitments. This will include consideration of the extent to which the introduction or expansion of gTLDs has promoted competition, consumer trust and consumer choice, as well as effectiveness of (a) the application and evaluation process, and (b) safeguards put in place to mitigate issues involved in the introduction or expansion.</p> <p>The information gathered in this section will be one source of input to help inform this review. This information is not used as part of the evaluation or scoring of the application, except to the extent that the information may overlap with questions or evaluation areas that are scored.</p> <p>An applicant wishing to designate this application as community-based should ensure that these responses are consistent with its responses for question 20 below.</p>			
		(b) How do you expect that your proposed gTLD will benefit registrants, Internet users, and others?	Y	<p>Answers should address the following points:</p> <ul style="list-style-type: none"> i. What is the goal of your proposed gTLD in terms of areas of specialty, service levels, or reputation? ii. What do you anticipate your proposed gTLD will add to the current space, in terms of competition, differentiation, or innovation? iii. What goals does your proposed gTLD have in terms of user experience? iv. Provide a complete description of the applicant's intended registration policies in support of the goals listed above. v. Will your proposed gTLD impose any measures for 			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				<p>protecting the privacy or confidential information of registrants or users? If so, please describe any such measures.</p> <p>Describe whether and in what ways outreach and communications will help to achieve your projected benefits.</p>			
	18	(c) What operating rules will you adopt to eliminate or minimize social costs (e.g., time or financial resource costs, as well as various types of consumer vulnerabilities)? What other steps will you take to minimize negative consequences/costs imposed upon consumers?	Y	<p>Answers should address the following points:</p> <ul style="list-style-type: none"> i. How will multiple applications for a particular domain name be resolved, for example, by auction or on a first-come/first-serve basis? ii. Explain any cost benefits for registrants you intend to implement (e.g., advantageous pricing, introductory discounts, bulk registration discounts). iii. Note that the Registry Agreement requires that registrars be offered the option to obtain initial domain name registrations for periods of one to ten years at the discretion of the registrar, but no greater than ten years. Additionally, the Registry Agreement requires advance written notice of price increases. Do you intend to make contractual commitments to registrants regarding the magnitude of price escalation? If so, please describe your plans. 			
Community-based Designation	19	Is the application for a community-based TLD?	Y	There is a presumption that the application is a standard application (as defined in the Applicant Guidebook) if this question is left unanswered.			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				The applicant's designation as standard or community-based cannot be changed once the application is submitted.			
	20	(a) Provide the name and full description of the community that the applicant is committing to serve. In the event that this application is included in a community priority evaluation, it will be scored based on the community identified in response to this question. The name of the community does not have to be formally adopted for the application to be designated as community-based.	Y	<p>Descriptions should include:</p> <ul style="list-style-type: none"> • How the community is delineated from Internet users generally. Such descriptions may include, but are not limited to, the following: membership, registration, or licensing processes, operation in a particular industry, use of a language. • How the community is structured and organized. For a community consisting of an alliance of groups, details about the constituent parts are required. • When the community was established, including the date(s) of formal organization, if any, as well as a description of community activities to date. • The current estimated size of the community, both as to membership and geographic extent. 		<p>Responses to Question 20 will be regarded as firm commitments to the specified community and reflected in the Registry Agreement, provided the application is successful.</p> <p>Responses are not scored in the Initial Evaluation. Responses may be scored in a community priority evaluation, if applicable. Criteria and scoring methodology for the community priority evaluation are described in Module 4 of the Applicant Guidebook.</p>	
		(b) Explain the applicant's relationship to the community identified in 20(a).	Y	<p>Explanations should clearly state:</p> <ul style="list-style-type: none"> • Relations to any community organizations. • Relations to the community and its constituent parts/groups. • Accountability mechanisms of the applicant to the community. 			
		(c) Provide a description of the community-based purpose of the applied-for gTLD.	Y	<p>Descriptions should include:</p> <ul style="list-style-type: none"> • Intended registrants in the TLD. • Intended end-users of the TLD. • Related activities the applicant has carried out or intends to carry out in service of this purpose. • Explanation of how the purpose is of a lasting nature. 			
		(d) Explain the relationship between the applied-for gTLD string and the community identified in 20(a).	Y	<p>Explanations should clearly state:</p> <ul style="list-style-type: none"> • relationship to the established name, if any, of the community. 			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				<ul style="list-style-type: none"> relationship to the identification of community members. any connotations the string may have beyond the community. 			
		(e) Provide a complete description of the applicant's intended registration policies in support of the community-based purpose of the applied-for gTLD. Policies and enforcement mechanisms are expected to constitute a coherent set.	Y	<p>Descriptions should include proposed policies, if any, on the following:</p> <ul style="list-style-type: none"> Eligibility: who is eligible to register a second-level name in the gTLD, and how will eligibility be determined. Name selection: what types of second-level names may be registered in the gTLD. Content/Use: what restrictions, if any, the registry operator will impose on how a registrant may use its registered name. Enforcement: what investigation practices and mechanisms exist to enforce the policies above, what resources are allocated for enforcement, and what appeal mechanisms are available to registrants. 			
		(f) Attach any written endorsements for the application from established institutions representative of the community identified in 20(a). An applicant may submit written endorsements by multiple institutions, if relevant to the community.	Y	<p>At least one such endorsement is required for a complete application. The form and content of the endorsement are at the discretion of the party providing the endorsement; however, the letter must identify the applied-for gTLD string and the applying entity, include an express statement support for the application, and the supply the contact information of the entity providing the endorsement.</p> <p>Endorsements from institutions not mentioned in the response to 20(b) should be accompanied by a clear description of each such institution's relationship to the community.</p> <p>Endorsements presented as supporting documentation for this question should be submitted in the original language.</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
Geographic Names	21	(a) Is the application for a geographic name?	Y	<p>An applied-for gTLD string is considered a geographic name requiring government support if it is: (a) the capital city name of a country or territory listed in the ISO 3166-1 standard; (b) a city name, where it is clear from statements in the application that the applicant intends to use the gTLD for purposes associated with the city name; (c) a sub-national place name listed in the ISO 3166-2 standard; or (d) a name listed as a UNESCO region or appearing on the "Composition of macro geographic (continental) or regions, geographic sub-regions, and selected economic and other groupings" list. See Module 2 for complete definitions and criteria.</p> <p>An application for a country or territory name, as defined in the Applicant Guidebook, will not be approved.</p>			
		(b) If a geographic name, attach documentation of support or non-objection from all relevant governments or public authorities.	N	<p>See the documentation requirements in Module 2 of the Applicant Guidebook.</p> <p>Documentation presented in response to this question should be submitted in the original language.</p>			
Protection of Geographic Names	22	Describe proposed measures for protection of geographic names at the second and other levels in the applied-for gTLD. This should include any applicable rules and procedures for reservation and/or release of such names.	Y	<p>Applicants should consider and describe how they will incorporate Governmental Advisory Committee (GAC) advice in their management of second-level domain name registrations. See "Principles regarding New gTLDs" at https://gacweb.icann.org/display/GACADV/New+gTLDs.</p> <p>For reference, applicants may draw on existing methodology developed for the reservation and release of country names in the .INFO top-level domain. See the Dot Info Circular at https://gacweb.icann.org/display/GACADV/New+gTLDs.</p> <p>Proposed measures will be posted for public comment as part of the application. However, note that procedures for release of geographic names at the second level</p>			

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				must be separately approved according to Specification 5 of the Registry Agreement. That is, approval of a gTLD application does not constitute approval for release of any geographic names under the Registry Agreement. Such approval must be granted separately by ICANN.			
Registry Services	23	<p>Provide name and full description of all the Registry Services to be provided. Descriptions should include both technical and business components of each proposed service, and address any potential security or stability concerns.</p> <p>The following registry services are customary services offered by a registry operator:</p> <ul style="list-style-type: none"> A. Receipt of data from registrars concerning registration of domain names and name servers. B. Dissemination of TLD zone files. C. Dissemination of contact or other information concerning domain name registrations (e.g., port-43 WHOIS, Web-based Whois, RESTful Whois service). D. Internationalized Domain Names, where offered. E. DNS Security Extensions (DNSSEC). <p>The applicant must describe whether any of these registry services are intended to be offered in a manner unique to the TLD.</p> <p>Additional proposed registry services that are unique to the registry must also be described.</p>	Y	<p>Registry Services are defined as the following: (1) operations of the Registry critical to the following tasks: (i) the receipt of data from registrars concerning registrations of domain names and name servers; (ii) provision to registrars of status information relating to the zone servers for the TLD; (iii) dissemination of TLD zone files; (iv) operation of the Registry zone servers; and (v) dissemination of contact and other information concerning domain name server registrations in the TLD as required by the Registry Agreement; and (2) other products or services that the Registry Operator is required to provide because of the establishment of a Consensus Policy; (3) any other products or services that only a Registry Operator is capable of providing, by reason of its designation as the Registry Operator. A full definition of Registry Services can be found at http://www.icann.org/en/registries/rsep/rsep.html.</p> <p>Security: For purposes of this Applicant Guidebook, an effect on security by the proposed Registry Service means (1) the unauthorized disclosure, alteration, insertion or destruction of Registry Data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with applicable standards.</p> <p>Stability: For purposes of this Applicant Guidebook, an effect on stability shall mean that the proposed Registry Service (1) is not compliant with applicable relevant standards that are authoritative and published by a well-established, recognized and</p>		<p>Responses are not scored. A preliminary assessment will be made to determine if there are potential security or stability issues with any of the applicant's proposed Registry Services. If any such issues are identified, the application will be referred for an extended review. See the description of the Registry Services review process in Module 2 of the Applicant Guidebook. Any information contained in the application may be considered as part of the Registry Services review. If its application is approved, applicant may engage in only those registry services defined in the application, unless a new request is submitted to ICANN in accordance with the Registry Agreement.</p>	

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
				authoritative standards body, such as relevant Standards-Track or Best Current Practice RFCs sponsored by the IETF, or (2) creates a condition that adversely affects the throughput, response time, consistency or coherence of responses to Internet servers or end systems, operating in accordance with applicable relevant standards that are authoritative and published by a well-established, recognized and authoritative standards body, such as relevant Standards-Track or Best Current Practice RFCs and relying on Registry Operator's delegation information or provisioning.			
Demonstration of Technical & Operational Capability (External)	24	<p>Shared Registration System (SRS) Performance: describe</p> <ul style="list-style-type: none"> the plan for operation of a robust and reliable SRS. SRS is a critical registry function for enabling multiple registrars to provide domain name registration services in the TLD. SRS must include the EPP interface to the registry, as well as any other interfaces intended to be provided, if they are critical to the functioning of the registry. Please refer to the requirements in Specification 6 (section 1.2) and Specification 10 (SLA Matrix) attached to the Registry Agreement; and resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). <p>A complete answer should include, but is not limited to:</p> <ul style="list-style-type: none"> A high-level SRS system description; Representative network diagram(s); Number of servers; Description of interconnectivity with other registry systems; Frequency of synchronization between servers; and Synchronization scheme (e.g., hot standby, cold standby). 	Y	<p>The questions in this section (24-44) are intended to give applicants an opportunity to demonstrate their technical and operational capabilities to run a registry. In the event that an applicant chooses to outsource one or more parts of its registry operations, the applicant should still provide the full details of the technical arrangements.</p> <p>Note that the resource plans provided in this section assist in validating the technical and operational plans as well as informing the cost estimates in the Financial section below.</p> <p>Questions 24-30(a) are designed to provide a description of the applicant's intended technical and operational approach for those registry functions that are outward-facing, i.e., interactions with registrars, registrants, and various DNS users. Responses to these questions will be published to allow review by affected parties.</p>	0-1	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> a plan for operating a robust and reliable SRS, one of the five critical registry functions; scalability and performance consistent with the overall business approach, and planned size of the registry; a technical plan that is adequately resourced in the planned costs detailed in the financial section; and evidence of compliance with Specification 6 (section 1.2) to the Registry Agreement. 	<p>1 - meets requirements: Response includes</p> <ol style="list-style-type: none"> An adequate description of SRS that substantially demonstrates the applicant's capabilities and knowledge required to meet this element; Details of a well-developed plan to operate a robust and reliable SRS; SRS plans are sufficient to result in compliance with Specification 6 and Specification 10 to the Registry Agreement; SRS is consistent with the technical, operational and financial approach described in the application; and Demonstrates that adequate technical resources are already on hand, or committed or readily available to carry out this function. <p>0 - fails requirements: Does not meet all the requirements to score 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		A complete answer is expected to be no more than 5 pages. (As a guide, one page contains approximately 4000 characters).					
	25	<p>Extensible Provisioning Protocol (EPP): provide a detailed description of the interface with registrars, including how the applicant will comply with EPP in RFCs 3735 (if applicable), and 5730-5734.</p> <p>If intending to provide proprietary EPP extensions, provide documentation consistent with RFC 3735, including the EPP templates and schemas that will be used.</p> <p>Describe resourcing plans (number and description of personnel roles allocated to this area).</p> <p>A complete answer is expected to be no more than 5 pages. If there are proprietary EPP extensions, a complete answer is also expected to be no more than 5 pages per EPP extension.</p>	Y		0-1	<p>Complete answer demonstrates:</p> <p>(1) complete knowledge and understanding of this aspect of registry technical requirements;</p> <p>(2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry; and</p> <p>(3) a technical plan that is adequately resourced in the planned costs detailed in the financial section;</p> <p>(4) ability to comply with relevant RFCs;</p> <p>(5) if applicable, a well-documented implementation of any proprietary EPP extensions; and</p> <p>(6) if applicable, how proprietary EPP extensions are consistent with the registration lifecycle as described in Question 27.</p>	<p>1 - meets requirements: Response includes</p> <p>(1) Adequate description of EPP that substantially demonstrates the applicant's capability and knowledge required to meet this element;</p> <p>(2) Sufficient evidence that any proprietary EPP extensions are compliant with RFCs and provide all necessary functionalities for the provision of registry services;</p> <p>(3) EPP interface is consistent with the technical, operational, and financial approach as described in the application; and</p> <p>(4) Demonstrates that technical resources are already on hand, or committed or readily available.</p> <p>0 - fails requirements: Does not meet all the requirements to score 1.</p>
	26	<p>Whois: describe</p> <ul style="list-style-type: none"> • how the applicant will comply with Whois specifications for data objects, bulk access, and lookups as defined in Specifications 4 and 10 to the Registry Agreement; • how the Applicant's Whois service will comply with RFC 3912; and • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). <p>A complete answer should include, but is not limited to:</p>	Y	The Registry Agreement (Specification 4) requires provision of Whois lookup services for all names registered in the TLD. This is a minimum requirement. Provision for Searchable Whois as defined in the scoring column is a requirement for achieving a score of 2 points.	0-2	<p>Complete answer demonstrates:</p> <p>(1) complete knowledge and understanding of this aspect of registry technical requirements, (one of the five critical registry functions);</p> <p>(2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry;</p> <p>(3) a technical plan that is adequately resourced in the</p>	<p>2 – exceeds requirements: Response meets all the attributes for a score of 1 and includes:</p> <p>(1) A Searchable Whois service: Whois service includes web-based search capabilities by domain name, registrant name, postal address, contact names, registrar IDs, and Internet Protocol addresses without arbitrary limit. Boolean search capabilities may be offered. The service shall include appropriate precautions to avoid abuse of this feature (e.g., limiting access to legitimate authorized users), and the</p>

	39	<p>Registry Continuity: describe how the applicant will comply with registry continuity obligations as described in Specification 6 (section 3) to the registry agreement. This includes conducting registry operations using diverse, redundant servers to ensure continued operation of critical functions in the case of technical failure.</p> <p>Describe resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area).</p> <p>The response should include, but is not limited to, the following elements of the business continuity plan:</p> <ul style="list-style-type: none"> • Identification of risks and threats to compliance with registry continuity obligations; • Identification and definitions of vital business functions (which may include registry services beyond the five critical registry functions) versus other registry functions and supporting operations and technology; • Definitions of Recovery Point Objectives and Recovery Time Objective; and • Descriptions of testing plans to promote compliance with relevant obligations. <p>To be eligible for a score of 2, answers must also include:</p> <ul style="list-style-type: none"> • A highly detailed plan that provides for leading practice levels of availability; and • Evidence of concrete steps such as a contract with a backup provider (in addition to any currently designated service operator) or a maintained hot site. <p>A complete answer is expected to be no more than 15 pages.</p>	N	<p>For reference, applicants should review the ICANN gTLD Registry Continuity Plan at http://www.icann.org/en/registries/continuity/gtld-registry-continuity-plan-25apr09-en.pdf.</p> <p>A Recovery Point Objective (RPO) refers to the point in time to which data should be recovered following a business disruption or disaster. The RPO allows an organization to define a window of time before a disruption or disaster during which data may be lost and is independent of the time it takes to get a system back on-line. If the RPO of a company is two hours, then when a system is brought back on-line after a disruption/disaster, all data must be restored to a point within two hours before the disaster.</p> <p>A Recovery Time Objective (RTO) is the duration of time within which a process must be restored after a business disruption or disaster to avoid what the entity may deem as unacceptable consequences. For example, pursuant to the draft Registry Agreement DNS service must not be down for longer than 4 hours. At 4 hours ICANN may invoke the use of an Emergency Back End Registry Operator to take over this function. The entity may deem this to be an unacceptable consequence therefore they may set their RTO to be something less than 4 hours and would build continuity plans accordingly.</p> <p>Vital business functions are functions that are critical to the success of the operation. For example, if a registry operator provides an additional service beyond the five critical registry functions, that it deems as central to its TLD, or supports an operation that is central to the TLD, this might be identified as a vital business function.</p>	0-2	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> (1) detailed description showing plans for compliance with registry continuity obligations; (2) a technical plan scope/scale that is consistent with the overall business approach and planned size of the registry; (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; and (4) evidence of compliance with Specification 6 to the Registry Agreement. 	<p>2 - exceeds requirements: Response meets all attributes for a score of 1 and includes:</p> <ol style="list-style-type: none"> (1) Highly developed and detailed processes for maintaining registry continuity; and (2) Evidence of concrete steps, such as a contract with a backup service provider or a maintained hot site. <p>1 - meets requirements: Response includes:</p> <ol style="list-style-type: none"> (1) Adequate description of a Registry Continuity plan that substantially demonstrates capability and knowledge required to meet this element; (2) Continuity plans are sufficient to result in compliance with requirements (Specification 6); (3) Continuity plans are consistent with the technical, operational, and financial approach as described in the application; and (4) Demonstrates an adequate level of resources that are on hand, committed readily available to carry out this function. <p>0 - fails requirements: Does not meet all the requirements to score a 1.</p>
	40	<p>Registry Transition: provide a Service Migration plan (as described in the Registry Transition Processes) that could be followed in the event</p>	N		0-1	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> (1) complete knowledge and 	<p>1 - meets requirements: Response includes</p> <ol style="list-style-type: none"> (1) Adequate description of a registry

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>that it becomes necessary to permanently transition the proposed gTLD to a new operator. The plan must take into account, and be consistent with the vital business functions identified in the previous question.</p> <p>Elements of the plan may include, but are not limited to:</p> <ul style="list-style-type: none"> • Preparatory steps needed for the transition of critical registry functions; • Monitoring during registry transition and efforts to minimize any interruption to critical registry functions during this time; and • Contingency plans in the event that any part of the registry transition is unable to move forward according to the plan. <p>A complete answer is expected to be no more than 10 pages.</p>				<p>understanding of the Registry Transition Processes; and</p> <p>(2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry.</p>	<p>transition plan that substantially demonstrates the applicant's capability and knowledge required to meet this element;</p> <p>(2) A description of an adequate registry transition plan with appropriate monitoring during registry transition; and</p> <p>(3) Transition plan is consistent with the technical, operational, and financial approach as described in the application.</p> <p>0 - fails requirements: Does not meet all the requirements to score a 1.</p>
	41	<p>Failover Testing: provide</p> <ul style="list-style-type: none"> • a description of the failover testing plan, including mandatory annual testing of the plan. Examples may include a description of plans to test failover of data centers or operations to alternate sites, from a hot to a cold facility, registry data escrow testing, or other mechanisms. The plan must take into account and be consistent with the vital business functions identified in Question 39; and • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). <p>The failover testing plan should include, but is not limited to, the following elements:</p> <ul style="list-style-type: none"> • Types of testing (e.g., walkthroughs, takedown of sites) and the frequency of testing; • How results are captured, what is done 	N		0-1	<p>Complete answer demonstrates:</p> <p>(1) complete knowledge and understanding of this aspect of registry technical requirements;</p> <p>(2) a technical plan scope/scale consistent with the overall business approach and planned size of the registry; and</p> <p>(3) a technical plan that is adequately resourced in the planned costs detailed in the financial section.</p>	<p>1 - meets requirements: Response includes</p> <p>(1) An adequate description of a failover testing plan that substantially demonstrates the applicant's capability and knowledge required to meet this element;</p> <p>(2) A description of an adequate failover testing plan with an appropriate level of review and analysis of failover testing results;</p> <p>(3) Failover testing plan is consistent with the technical, operational, and financial approach as described in the application; and</p> <p>(4) Demonstrates an adequate level of resources that are on hand, committed or readily available to carry out this function.</p> <p>0 - fails requirements Does not meet all the requirements to score a 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>with the results, and with whom results are shared;</p> <ul style="list-style-type: none"> • How test plans are updated (e.g., what triggers an update, change management processes for making updates); • Length of time to restore critical registry functions; • Length of time to restore all operations, inclusive of critical registry functions; and • Length of time to migrate from one site to another. <p>A complete answer is expected to be no more than 10 pages.</p>					
	42	<p>Monitoring and Fault Escalation Processes: provide</p> <ul style="list-style-type: none"> • a description of the proposed (or actual) arrangements for monitoring critical registry systems (including SRS, database systems, DNS servers, Whois service, network connectivity, routers and firewalls). This description should explain how these systems are monitored and the mechanisms that will be used for fault escalation and reporting, and should provide details of the proposed support arrangements for these registry systems. • resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). <p>To be eligible for a score of 2, answers must also include:</p> <ul style="list-style-type: none"> • Meeting the fault tolerance / monitoring guidelines described • Evidence of commitment to provide a 24x7 fault response team. <p>A complete answer is expected to be no more than 10 pages.</p>	N		0-2	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> (1) complete knowledge and understanding of this aspect of registry technical requirements; (2) a technical plan scope/scale that is consistent with the overall business approach and planned size of the registry; (3) a technical plan that is adequately resourced in the planned costs detailed in the financial section; and (4) consistency with the commitments made to registrants and registrars regarding system maintenance. 	<p>2 - exceeds requirements: Response meets all attributes for a score of 1 and includes</p> <ol style="list-style-type: none"> (1) Evidence showing highly developed and detailed fault tolerance/monitoring and redundant systems deployed with real-time monitoring tools / dashboard (metrics) deployed and reviewed regularly; (2) A high level of availability that allows for the ability to respond to faults through a 24x7 response team. <p>1 - meets requirements: Response includes</p> <ol style="list-style-type: none"> (1) Adequate description of monitoring and fault escalation processes that substantially demonstrates the applicant's capability and knowledge required to meet this element; (2) Evidence showing adequate fault tolerance/monitoring systems planned with an appropriate level of monitoring and limited periodic review being performed; (3) Plans are consistent with the technical, operational, and financial approach described in the application; and (4) Demonstrates an adequate level of resources that are on hand,

							committed or readily available to carry out this function. 0 - fails requirements: Does not meet all the requirements to score 1.
	43	<p>DNSSEC: Provide</p> <ul style="list-style-type: none"> The registry's DNSSEC policy statement (DPS), which should include the policies and procedures the proposed registry will follow, for example, for signing the zone file, for verifying and accepting DS records from child domains, and for generating, exchanging, and storing keying material; Describe how the DNSSEC implementation will comply with relevant RFCs, including but not limited to: RFCs 4033, 4034, 4035, 5910, 4509, 4641, and 5155 (the latter will only be required if Hashed Authenticated Denial of Existence will be offered); and resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). <p>A complete answer is expected to be no more than 5 pages. Note, the DPS is required to be submitted as part of the application</p>	N		0-1	<p>Complete answer demonstrates:</p> <ol style="list-style-type: none"> complete knowledge and understanding of this aspect of registry technical requirements, one of the five critical registry functions; a technical plan scope/scale that is consistent with the overall business approach and planned size of the registry; a technical plan that is adequately resourced in the planned costs detailed in the financial section; and an ability to comply with relevant RFCs. 	<p>1 - meets requirements: Response includes</p> <ol style="list-style-type: none"> An adequate description of DNSSEC that substantially demonstrates the applicant's capability and knowledge required to meet this element; Evidence that TLD zone files will be signed at time of launch, in compliance with required RFCs, and registry offers provisioning capabilities to accept public key material from registrants through the SRS ; An adequate description of key management procedures in the proposed TLD, including providing secure encryption key management (generation, exchange, and storage); Technical plan is consistent with the technical, operational, and financial approach as described in the application; and Demonstrates an adequate level of resources that are already on hand, committed or readily available to carry out this function. <p>0 - fails requirements: Does not meet all the requirements to score 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
	44	<p>OPTIONAL. IDNs:</p> <ul style="list-style-type: none"> State whether the proposed registry will support the registration of IDN labels in the TLD, and if so, how. For example, explain which characters will be supported, and provide the associated IDN Tables with variant characters identified, along with a corresponding registration policy. This includes public interfaces to the databases such as Whois and EPP. Describe how the IDN implementation will comply with RFCs 5809-5893 as well as the ICANN IDN Guidelines at http://www.icann.org/en/topics/idn/implementation-guidelines.htm. Describe resourcing plans for the initial implementation of, and ongoing maintenance for, this aspect of the criteria (number and description of personnel roles allocated to this area). <p>A complete answer is expected to be no more than 10 pages plus attachments.</p>	N	<p>IDNs are an optional service at time of launch. Absence of IDN implementation or plans will not detract from an applicant's score. Applicants who respond to this question with plans for implementation of IDNs at time of launch will be scored according to the criteria indicated here.</p> <p>IDN tables should be submitted in a machine-readable format. The model format described in Section 5 of RFC 4290 would be ideal. The format used by RFC 3743 is an acceptable alternative. Variant generation algorithms that are more complex (such as those with contextual rules) and cannot be expressed using these table formats should be specified in a manner that could be re-implemented programmatically by ICANN. Ideally, for any complex table formats, a reference code implementation should be provided in conjunction with a description of the generation rules.</p>	0-1	<p>IDNs are an optional service. Complete answer demonstrates: (1) complete knowledge and understanding of this aspect of registry technical requirements; (2) a technical plan that is adequately resourced in the planned costs detailed in the financial section; (3) consistency with the commitments made to registrants and the technical, operational, and financial approach described in the application; (4) issues regarding use of scripts are settled and IDN tables are complete and publicly available; and (5) ability to comply with relevant RFCs.</p>	<p>1 - meets requirements for this optional element: Response includes</p> <ol style="list-style-type: none"> Adequate description of IDN implementation that substantially demonstrates the applicant's capability and knowledge required to meet this element; An adequate description of the IDN procedures, including complete IDN tables, compliance with IDNA/IDN guidelines and RFCs, and periodic monitoring of IDN operations; Evidence of ability to resolve rendering and known IDN issues or spoofing attacks; IDN plans are consistent with the technical, operational, and financial approach as described in the application; and Demonstrates an adequate level of resources that are on hand, committed readily available to carry out this function. <p>0 - fails requirements: Does not meet all the requirements to score a 1.</p>
Demonstration of Financial Capability	45	<p>Financial Statements: provide</p> <ul style="list-style-type: none"> audited or independently certified financial statements for the most recently completed fiscal year for the applicant, and audited or unaudited financial statements for the most recently ended interim financial period for the applicant for which this information may be released. <p>For newly-formed applicants, or where financial statements are not audited, provide:</p> <ul style="list-style-type: none"> the latest available unaudited financial statements; and an explanation as to why audited or independently certified financial statements are not available. <p>At a minimum, the financial statements should be provided for the legal entity listed as the applicant.</p>	N	<p>The questions in this section (45-50) are intended to give applicants an opportunity to demonstrate their financial capabilities to run a registry.</p> <p>Supporting documentation for this question should be submitted in the original language.</p>	0-1	<p>Audited or independently certified financial statements are prepared in accordance with International Financial Reporting Standards (IFRS) adopted by the International Accounting Standards Board (IASB) or nationally recognized accounting standards (e.g., GAAP). This will include a balance sheet and income statement reflecting the applicant's financial position and results of operations, a statement of shareholders equity/partner capital, and a cash flow statement. In the event the applicant is an entity newly formed for the purpose of applying for a gTLD and with little to no operating history</p>	<p>1 - meets requirements: Complete audited or independently certified financial statements are provided, at the highest level available in the applicant's jurisdiction. Where such audited or independently certified financial statements are not available, such as for newly-formed entities, the applicant has provided an explanation and has provided, at a minimum, unaudited financial statements.</p> <p>0 - fails requirements: Does not meet all the requirements to score 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>Financial statements are used in the analysis of projections and costs.</p> <p>A complete answer should include:</p> <ul style="list-style-type: none"> • balance sheet; • income statement; • statement of shareholders equity/partner capital; • cash flow statement, and • letter of auditor or independent certification, if applicable. 				(less than one year), the applicant must submit, at a minimum, pro forma financial statements including all components listed in the question. Where audited or independently certified financial statements are not available, applicant has provided an adequate explanation as to the accounting practices in its jurisdiction and has provided, at a minimum, unaudited financial statements.	
	46	<p>Projections Template: provide financial projections for costs and funding using Template 1, Most Likely Scenario (attached).</p> <p>Note, if certain services are outsourced, reflect this in the relevant cost section of the template.</p> <p>The template is intended to provide commonality among TLD applications and thereby facilitate the evaluation process.</p> <p>A complete answer is expected to be no more than 10 pages in addition to the template.</p>	N		0-1	<p>Applicant has provided a thorough model that demonstrates a sustainable business (even if break-even is not achieved through the first three years of operation).</p> <p>Applicant's description of projections development is sufficient to show due diligence.</p>	<p>1 - meets requirements:</p> <p>(1) Financial projections adequately describe the cost, funding and risks for the application</p> <p>(2) Demonstrates resources and plan for sustainable operations; and</p> <p>(3) Financial assumptions about the registry operations, funding and market are identified, explained, and supported.</p> <p>0 - fails requirements: Does not meet all of the requirements to score a 1.</p>
	47	<p>Costs and capital expenditures: in conjunction with the financial projections template, describe and explain:</p> <ul style="list-style-type: none"> • the expected operating costs and capital expenditures of setting up and operating the proposed registry; • any functions to be outsourced, as indicated in the cost section of the template, and the reasons for outsourcing; • any significant variances between years in any category of expected costs; and • a description of the basis / key assumptions including rationale for the costs provided in the projections template. This may include an 	N	This question is based on the template submitted in question 46.	0-2	<p>Costs identified are consistent with the proposed registry services, adequately fund technical requirements, and are consistent with proposed mission/purpose of the registry. Costs projected are reasonable for a registry of size and scope described in the application. Costs identified include the funding costs (interest expenses and fees) related to the continued operations instrument described in Question 50 below.</p>	<p>2 - exceeds requirements: Response meets all of the attributes for a score of 1 and:</p> <p>(1) Estimated costs and assumptions are conservative and consistent with an operation of the registry volume/scope/size as described by the applicant;</p> <p>(2) Estimates are derived from actual examples of previous or existing registry operations or equivalent; and</p> <p>(3) Conservative estimates are based on those experiences and describe a range of anticipated costs and use the high end of those estimates.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>executive summary or summary outcome of studies, reference data, or other steps taken to develop the responses and validate any assumptions made.</p> <p>As described in the Applicant Guidebook, the information provided will be considered in light of the entire application and the evaluation criteria. Therefore, this answer should agree with the information provided in Template 1 to: 1) maintain registry operations, 2) provide registry services described above, and 3) satisfy the technical requirements described in the Demonstration of Technical & Operational Capability section. Costs should include both fixed and variable costs.</p> <p>To be eligible for a score of two points, answers must demonstrate a conservative estimate of costs based on actual examples of previous or existing registry operations with similar approach and projections for growth and costs or equivalent. Attach reference material for such examples.</p> <p>A complete answer is expected to be no more than 10 pages.</p>				<p>Key assumptions and their rationale are clearly described and may include, but are not limited to:</p> <ul style="list-style-type: none"> • Key components of capital expenditures; • Key components of operating costs, unit operating costs, headcount, number of technical/operating/equipment units, marketing, and other costs; and • Costs of outsourcing, if any. 	<p>1 - meets requirements:</p> <p>(1) Cost elements are reasonable and complete (i.e., cover all of the aspects of registry operations: registry services, technical requirements and other aspects as described by the applicant);</p> <p>(2) Estimated costs and assumptions are consistent and defensible with an operation of the registry volume/scope/size as described by the applicant; and</p> <p>(3) Projections are reasonably aligned with the historical financial statements provided in Question 45.</p> <p>0 - fails requirements: Does not meet all the requirements to score a 1.</p>
		<p>(b) Describe anticipated ranges in projected costs. Describe factors that affect those ranges.</p> <p>A complete answer is expected to be no more than 10 pages.</p>	N				
	48	<p>(a) Funding and Revenue: Funding can be derived from several sources (e.g., existing capital or proceeds/revenue from operation of the proposed registry).</p> <p>Describe:</p> <p>I) How existing funds will provide resources for both: a) start-up of operations, and b) ongoing operations;</p> <p>II) the revenue model including projections for transaction volumes and price (if the applicant does not intend to rely on registration revenue in order to cover the costs of the registry's</p>	N	Supporting documentation for this question should be submitted in the original language.	0-2	<p>Funding resources are clearly identified and adequately provide for registry cost projections. Sources of capital funding are clearly identified, held apart from other potential uses of those funds and available. The plan for transition of funding sources from available capital to revenue from operations (if applicable) is described.</p>	<p>2 - exceeds requirements:</p> <p>Response meets all the attributes for a score of 1 and</p> <p>(1) Existing funds (specifically all funds required for start-up) are quantified, on hand, segregated in an account available only to the applicant for purposes of the application only, ;</p> <p>(2) If on-going operations are to be at least partially resourced from existing funds (rather than revenue from on-going operations) that funding is segregated and</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>operation, it must clarify how the funding for the operation will be developed and maintained in a stable and sustainable manner);</p> <p>III) outside sources of funding (the applicant must, where applicable, provide evidence of the commitment by the party committing the funds). Secured vs unsecured funding should be clearly identified, including associated sources of funding (i.e., different types of funding, level and type of security/collateral, and key items) for each type of funding;</p> <p>IV) Any significant variances between years in any category of funding and revenue; and</p> <p>V) A description of the basis / key assumptions including rationale for the funding and revenue provided in the projections template. This may include an executive summary or summary outcome of studies, reference data, or other steps taken to develop the responses and validate any assumptions made; and</p> <p>VI) Assurances that funding and revenue projections cited in this application are consistent with other public and private claims made to promote the business and generate support. To be eligible for a score of 2 points, answers must demonstrate:</p> <p>I) A conservative estimate of funding and revenue; and</p> <p>II) Ongoing operations that are not dependent on projected revenue.</p> <p>A complete answer is expected to be no more than 10 pages.</p>				<p>Outside sources of funding are documented and verified. Examples of evidence for funding sources include, but are not limited to:</p> <ul style="list-style-type: none"> • Executed funding agreements; • A letter of credit; • A commitment letter; or • A bank statement. <p>Funding commitments may be conditional on the approval of the application. Sources of capital funding required to sustain registry operations on an on-going basis are identified. The projected revenues are consistent with the size and projected penetration of the target markets.</p> <p>Key assumptions and their rationale are clearly described and address, at a minimum:</p> <ul style="list-style-type: none"> • Key components of the funding plan and their key terms; and • Price and number of registrations. 	<p>earmarked for this purpose only in an amount adequate for three years operation;</p> <p>(3) If ongoing operations are to be at least partially resourced from revenues, assumptions made are conservative and take into consideration studies, reference data, or other steps taken to develop the response and validate any assumptions made; and</p> <p>(4) Cash flow models are prepared which link funding and revenue assumptions to projected actual business activity.</p> <p>1 - meets requirements:</p> <p>(1) Assurances provided that materials provided to investors and/or lenders are consistent with the projections and assumptions included in the projections templates;</p> <p>(2) Existing funds (specifically all funds required for start-up) are quantified, committed, identified as available to the applicant;</p> <p>(3) If on-going operations are to be at least partially resourced from existing funds (rather than revenue from on-going operations) that funding is quantified and its sources identified in an amount adequate for three years operation;</p> <p>(4) If ongoing operations are to be at least partially resourced from revenues, assumptions made are reasonable and are directly related to projected business volumes, market size and penetration; and</p> <p>(5) Projections are reasonably aligned with the historical financial statements provided in Question 45.</p> <p>0 - fails requirements: Does not meet all the requirements to score a 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>(b) Describe anticipated ranges in projected funding and revenue. Describe factors that affect those ranges.</p> <p>A complete answer is expected to be no more than 10 pages.</p>	N				
	49	<p>(a) Contingency Planning: describe your contingency planning:</p> <ul style="list-style-type: none"> Identify any projected barriers/risks to implementation of the business approach described in the application and how they affect cost, funding, revenue, or timeline in your planning; Identify the impact of any particular regulation, law or policy that might impact the Registry Services offering; and Describe the measures to mitigate the key risks as described in this question. <p>A complete answer should include, for each contingency, a clear description of the impact to projected revenue, funding, and costs for the 3-year period presented in Template 1 (Most Likely Scenario).</p> <p>To be eligible for a score of 2 points, answers must demonstrate that action plans and operations are adequately resourced in the existing funding and revenue plan even if contingencies occur.</p> <p>A complete answer is expected to be no more than 10 pages.</p>	N		0-2	<p>Contingencies and risks are identified, quantified, and included in the cost, revenue, and funding analyses. Action plans are identified in the event contingencies occur. The model is resilient in the event those contingencies occur. Responses address the probability and resource impact of the contingencies identified.</p>	<p>2 - exceeds requirements: Response meets all attributes for a score of 1 and:</p> <ol style="list-style-type: none"> Action plans and operations are adequately resourced in the existing funding and revenue plan even if contingencies occur. <p>1 - meets requirements:</p> <ol style="list-style-type: none"> Model adequately identifies the key risks (including operational, business, legal, jurisdictional, financial, and other relevant risks); Response gives consideration to probability and resource impact of contingencies identified; and If resources are not available to fund contingencies in the existing plan, funding sources and a plan for obtaining them are identified. <p>0 - fails requirements: Does not meet all the requirements to score a 1.</p>
		<p>(b) Describe your contingency planning where funding sources are so significantly reduced that material deviations from the implementation model are required. In particular, describe:</p> <ul style="list-style-type: none"> how on-going technical requirements will be met; and what alternative funding can be reasonably raised at a later time. <p>Provide an explanation if you do not believe there is any chance of reduced funding.</p>	N				

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>Complete a financial projections template (Template 2, Worst Case Scenario)</p> <p>A complete answer is expected to be no more than 10 pages, in addition to the template.</p>					
		<p>(c) Describe your contingency planning where activity volumes so significantly exceed the high projections that material deviation from the implementation model are required. In particular, how will on-going technical requirements be met?</p> <p>A complete answer is expected to be no more than 10 pages.</p>	N				
	50	<p>(a) Provide a cost estimate for funding critical registry functions on an annual basis, and a rationale for these cost estimates commensurate with the technical, operational, and financial approach described in the application.</p> <p>The critical functions of a registry which must be supported even if an applicant's business and/or funding fails are:</p> <p>(1) DNS resolution for registered domain names</p> <p>Applicants should consider ranges of volume of daily DNS queries (e.g., 0-100M, 100M-1B, 1B+), the incremental costs associated with increasing levels of such queries, and the ability to meet SLA performance metrics.</p> <p>(2) Operation of the Shared Registration System</p> <p>Applicants should consider ranges of volume of daily EPP transactions (e.g., 0-200K, 200K-2M, 2M+), the incremental costs associated with</p>	N	<p>Registrant protection is critical and thus new gTLD applicants are requested to provide evidence indicating that the critical functions will continue to be performed even if the registry fails. Registrant needs are best protected by a clear demonstration that the basic registry functions are sustained for an extended period even in the face of registry failure. Therefore, this section is weighted heavily as a clear, objective measure to protect and serve registrants.</p> <p>The applicant has two tasks associated with adequately making this demonstration of continuity for critical registry functions. First, costs for maintaining critical registrant protection functions are to be estimated (Part a). In evaluating the application, the evaluators will adjudge whether the estimate is reasonable given the systems architecture and overall business approach described elsewhere in the application.</p> <p>The Continuing Operations Instrument (COI) is invoked by ICANN if necessary to pay for an Emergency Back End Registry Operator (EBERO) to maintain the five critical registry functions for a period of three to five years. Thus, the cost estimates are tied to the cost for a third party to provide the functions, not</p>	0-3	<p>Figures provided are based on an accurate estimate of costs. Documented evidence or detailed plan for ability to fund on-going critical registry functions for registrants for a period of three years in the event of registry failure, default or until a successor operator can be designated. Evidence of financial wherewithal to fund this requirement prior to delegation. This requirement must be met prior to or concurrent with the execution of the Registry Agreement.</p>	<p>3 - exceeds requirements: Response meets all the attributes for a score of 1 and:</p> <p>(1) Financial instrument is secured and in place to provide for on-going operations for at least three years in the event of failure.</p> <p>1 - meets requirements:</p> <p>(1) Costs are commensurate with technical, operational, and financial approach as described in the application; and</p> <p>(2) Funding is identified and instrument is described to provide for on-going operations of at least three years in the event of failure.</p> <p>0 - fails requirements: Does not meet all the requirements to score a 1.</p>

	#	Question	Included in public posting	Notes	Scoring Range	Criteria	Scoring
		<p>minimum of three years following the termination of the Registry Agreement. ICANN has identified two methods to fulfill this requirement:</p> <p><u>(i) Irrevocable standby letter of credit (LOC)</u> issued by a reputable financial institution.</p> <ul style="list-style-type: none"> • The amount of the LOC must be equal to or greater than the amount required to fund the registry operations specified above for at least three years. In the event of a draw upon the letter of credit, the actual payout would be tied to the cost of running those functions. • The LOC must name ICANN or its designee as the beneficiary. Any funds paid out would be provided to the designee who is operating the required registry functions. • The LOC must have a term of at least five years from the delegation of the TLD. The LOC may be structured with an annual expiration date if it contains an evergreen provision providing for annual extensions, without amendment, for an indefinite number of periods until the issuing bank informs the beneficiary of its final expiration or until the beneficiary releases the LOC as evidenced in writing. If the expiration date occurs prior to the fifth anniversary of the delegation of the TLD, applicant will be required to obtain a replacement instrument. • The LOC must be issued by a reputable financial institution insured at the highest level in its jurisdiction. Documentation should indicate by whom the issuing institution is insured (i.e., as opposed to by whom the institution is rated). • The LOC will provide that ICANN or its designee shall be unconditionally entitled to a release of funds (full or partial) thereunder upon delivery of written notice by ICANN or its designee. • Applicant should attach an original copy of the executed letter of credit or a draft of the letter of credit containing the full terms and conditions. If not yet executed, the Applicant will be required to provide ICANN with an original copy of the executed LOC prior to or concurrent with the execution of the Registry Agreement. • The LOC must contain at least the following required elements: <ul style="list-style-type: none"> ○ Issuing bank and date of issue. ○ Beneficiary: ICANN / 4676 Admiralty 		<p>this requirement. The applicant must identify which of the two methods is being described. The instrument is required to be in place at the time of the execution of the Registry Agreement.</p> <p>Financial Institution Ratings: The instrument must be issued or held by a financial institution with a rating beginning with "A" (or the equivalent) by any of the following rating agencies: A.M. Best, Dominion Bond Rating Service, Egan-Jones, Fitch Ratings, Kroll Bond Rating Agency, Moody's, Morningstar, Standard & Poor's, and Japan Credit Rating Agency.</p> <p>If an applicant cannot access a financial institution with a rating beginning with "A," but a branch or subsidiary of such an institution exists in the jurisdiction of the applying entity, then the instrument may be issued by the branch or subsidiary or by a local financial institution with an equivalent or higher rating to the branch or subsidiary.</p> <p>If an applicant cannot access any such financial institutions, the instrument may be issued by the highest-rated financial institution in the national jurisdiction of the applying entity, if accepted by ICANN.</p> <p>Execution by ICANN: For any financial instruments that contemplate ICANN being a party, upon the written request of the applicant, ICANN may (but is not obligated to) execute such agreement prior to submission of the applicant's application if the agreement is on terms acceptable to ICANN. ICANN encourages applicants to deliver a written copy of any such agreement (only if it requires ICANN's signature) to ICANN as soon as possible to facilitate ICANN's review. If the financial instrument requires ICANN's signature, then the applicant will receive 3 points for question 50 (for the instrument being "secured and in place") only if ICANN executes the agreement prior to submission of the application. ICANN will determine, in</p>

		<p>of five years from the delegation of the TLD.</p> <ul style="list-style-type: none"> The funds in the deposit escrow account are not considered to be an asset of ICANN. Any interest earnings less bank fees are to accrue to the deposit, and will be paid back to the applicant upon liquidation of the account to the extent not used to pay the costs and expenses of maintaining the escrow. The deposit plus accrued interest, less any bank fees in respect of the escrow, is to be returned to the applicant if the funds are not used to fund registry functions due to a triggering event or after five years, whichever is greater. The Applicant will be required to provide ICANN an explanation as to the amount of the deposit, the institution that will hold the deposit, and the escrow agreement for the account at the time of submitting an application. Applicant should attach evidence of deposited funds in the escrow account, or evidence of provisional arrangement for deposit of funds. Evidence of deposited funds and terms of escrow agreement must be provided to ICANN prior to or concurrent with the execution of the Registry Agreement. 					

Instructions: TLD Applicant – Financial Projections

The application process requires the applicant to submit two cash basis Financial Projections.

The first projection (Template 1) should show the Financial Projections associated with the Most Likely scenario expected. This projection should include the forecasted registration volume, registration fee, and all costs and capital expenditures expected during the start-up period and during the first three years of operations. Template 1 relates to Question 46 (Projections Template) in the application.

We also ask that applicants show as a separate projection (Template 2) the Financial Projections associated with a realistic Worst Case scenario. Template 2 relates to Question 49 (Contingency Planning) in the application.

For each Projection prepared, please include Comments and Notes on the bottom of the projection (in the area provided) to provide those reviewing these projections with information regarding:

1. Assumptions used, significant variances in Operating Cash Flows and Capital Expenditures from year-to-year;
2. How you plan to fund operations;
3. Contingency planning

As you complete Template 1 and Template 2, please reference data points and/or formulas used in your calculations (where appropriate).

Section I – Projected Cash inflows and outflows

Projected Cash Inflows

Lines A and B. Provide the number of forecasted registrations and the registration fee for years 1, 2, and 3. Leave the *Start-up* column blank. The start-up period is for cash costs and capital expenditures only; there should be no cash projections input to this column.

Line C. Multiply lines A and B to arrive at the *Registration Cash Inflow* for line C.

Line D. Provide projected cash inflows from any other revenue source for years 1, 2, and 3. For any figures provided on line D, please disclose the source in the *Comments/Notes* box of Section I. Note, do not include funding in Line D as that is covered in Section VI.

Line E. Add lines C and D to arrive at the total cash inflow.

Projected Operating Cash Outflows

Start up costs - For all line items (F thru L) Please describe the total period of time this start-up cost is expected to cover in the *Comments/Notes* box.

Line F. Provide the projected labor costs for marketing, customer support, and technical support for start-up, year 1, year 2, and year 3. Note, other labor costs should be put in line *L (Other Costs)* and specify the type of labor and associated projected costs in the *Comments/Notes* box of this section.

Line G. *Marketing Costs* represent the amount spent on advertising, promotions, and other marketing activities. This amount should not include labor costs included in Marketing Labor (line *F*).

Lines H through K. Provide projected costs for facilities, G&A, interests and taxes, and Outsourcing for start-up as well as for years 1, 2, and 3. Be sure to list the type of activities that are being outsourced. You may combine certain activities from the same provider as long as an appropriate description of the services being combined is listed in the *Comments/Notes* box.

Line L. Provide any other projected operating costs for start-up, year 1, year 2, year 3. Be sure to specify the type of cost in the *Comments/Notes* box.

Line M. Add lines *F* through *L* to arrive at the total costs for line *M*.

Line N. Subtract line *E* from line *M* to arrive at the projected net operation number for line *N*.

Section IIa – Breakout of Fixed and Variable Operating Cash Outflows

Line A. Provide the projected variable operating cash outflows including labor and other costs that are not fixed in nature. Variable operating cash outflows are expenditures that fluctuate in relationship with increases or decreases in production or level of operations.

Line B. Provide the projected fixed operating cash outflows. Fixed operating cash outflows are expenditures that do not generally fluctuate in relationship with increases or decreases in production or level of operations. Such costs are generally necessary to be incurred in order to operate the base line operations of the organization or are expected to be incurred based on contractual commitments.

Line C – Add lines *A* and *B* to arrive at total Fixed and Variable Operating Cash Outflows for line *C*. This must equal Total Operating Cash Outflows from Section I, Line *M*.

Section IIb – Breakout of Critical Registry Function Operating Cash Outflows

Lines A – E. Provide the projected cash outflows for the five critical registry functions. If these functions are outsourced, the component of the outsourcing fee representing these functions must be separately identified and provided. These costs are based on the applicant's cost to manage these functions and should be calculated separately from the Continued Operations Instrument (COI) for Question 50.

Line F. If there are other critical registry functions based on the applicant's registry business model then the projected cash outflow for this function must be provided with a description added to the *Comment/Notes* box. This projected cash outflow may also be included in the 3-year reserve.

Line G. Add lines *A* through *F* to arrive at the Total Critical Registry Function Cash Outflows.

Section III – Projected Capital Expenditures

Lines A through C. Provide projected hardware, software, and furniture & equipment capital expenditures for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line D. Provide any projected capital expenditures as a result of outsourcing. This should be included for start-up and years 1, 2, and 3. Specify the type of expenditure and describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box of Section III.

Line E – Please describe “other” capital expenditures in the *Comments/Notes* box.

Line F. Add lines A through E to arrive at the Total Capital Expenditures.

Section IV – Projected Assets & Liabilities

Lines A through C. Provide projected cash, account receivables, and other current assets for start-up as well as for years 1, 2, and 3. For *Other Current Assets*, specify the type of asset and describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line D. Add lines A, B, C to arrive at the Total Current Assets.

Lines E through G. Provide projected accounts payable, short-term debt, and other current liabilities for start-up as well as for years 1, 2, and 3. For *Other Current Liabilities*, specify the type of liability and describe the total period of time the start-up up cost is expected to cover in the *Comments/Notes* box.

Line H. Ad lines E through G to arrive at the total current liabilities.

Lines I through K. Provide the projected fixed assets (PP&E), the 3-year reserve, and long-term assets for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line L. Ad lines I through K to arrive at the total long-term assets.

Line M. Provide the projected long-term debt for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box

Section V – Projected Cash Flow

Cash flow is driven by *Projected Net Operations* (Section I), *Projected Capital Expenditures* (Section III), and *Projected Assets & Liabilities* (Section IV).

Line A. Provide the projected net operating cash flows for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line B. Provide the projected capital expenditures for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box of Section V.

Lines C through F. Provide the projected change in non-cash current assets, total current liabilities, debt adjustments, and other adjustments for start-up as well as for years 1, 2, and 3. Please describe the total period of time the start-up cost is expected to cover in the *Comments/Notes* box.

Line G. Add lines A through F to arrive at the projected net cash flow for line H.

Section VI – Sources of Funds

Lines A & B. Provide projected funds from debt and equity at start-up. Describe the sources of debt and equity funding as well as the total period of time the start-up is expected to cover in the *Comments/Notes* box. Please also provide evidence the funding (e.g., letter of commitment).

Line C. Add lines A and B to arrive at the total sources of funds for line C.

General Comments – Regarding Assumptions Used, Significant Variances Between Years, etc.

Provide explanations for any significant variances between years (or expected in years beyond the timeframe of the template) in any category of costing or funding.

General Comments – Regarding how the Applicant Plans to Fund Operations

Provide general comments explaining how you will fund operations. Funding should be explained in detail in response to question 48.

General Comments – Regarding Contingencies

Provide general comments to describe your contingency planning. Contingency planning should be explained in detail in response to question 49.

TLD Applicant -- Financial Projections : **Sample**

Comments / Notes

In local currency (unless noted otherwise)

Sec.	Reference / Formula	Start-up Costs	Live / Operational		
			Year 1	Year 2	Year 3
I) Projected Cash Inflows and Outflows					
A) Forecasted registration volume		-	62 000	81 600	105 180
B) Registration Fee		\$ -	\$ 5.00	\$ 5.50	\$ 6.05
C) Registration cash inflows	A * B	-	310 000	448 800	636 339
D) Other cash inflows		-	35 000	48 000	62 000
E) Total Cash Inflows		-	345 000	496 800	698 339

Provide name of local currency used.

Registration was forecasted based on recent market surveys which we have attached and discussed below. We do not anticipate significant increases in Registration Fees subsequent to year 3.

Other cash inflows represent advertising monies expected from display ads on our website.

Projected Operating Cash Outflows

F) Labor:					
i) Marketing Labor		25 000	66 000	72 000	81 000
ii) Customer Support Labor		5 000	68 000	71 000	74 000
iii) Technical Labor		32 000	45 000	47 000	49 000
G) Marketing		40 000	44 000	26 400	31 680
H) Facilities		7 000	10 000	12 000	14 400
I) General & Administrative		14 000	112 000	122 500	136 000
J) Interest and Taxes		27 500	29 000	29 800	30 760
K) Outsourcing Operating Costs, if any (list the type of activities being outsourced):					

Costs are further detailed and explained in response to question 47.

Provide a list and associated cost for each outsourced function.

i) Hot site maintenance		5 000	7 500	7 500	7 500
ii) Partial Registry Functions		32 000	37 500	41 000	43 000
iii) (list type of activities being outsourced)		-	-	-	-
iv) (list type of activities being outsourced)		-	-	-	-
v) (list type of activities being outsourced)		-	-	-	-
vi) (list type of activities being outsourced)		-	-	-	-
L) Other Operating Costs		12 200	18 000	21 600	25 920
M) Total Operating Cash Outflows		199 700	437 000	450 800	493 260
N) Projected Net Operating Cash flow	E - M	(199 700)	(92 000)	46 000	205 079

Outsourcing hot site to ABC Company cost based on number of servers hosted and customer support

Outsourced certain registry and other functions to ABC registry (applicant should list outsourced functions). Costs for each year are based on expected domains under management

Break out of Fixed and Variable Operating Cash Outflows

A) Total Variable Operating Costs		92 000	195 250	198 930	217 416
B) Total Fixed Operating Costs		107 700	241 750	251 870	275 844
C) Total Operating Cash Outflows	= Sec. I) M CHECK	199 700	437 000	450 800	493 260

Variable Costs:
-Start Up equals all labor plus 75% of marketing.
-Years 1 through 3 equal 75% of all labor plus 50% of Marketing and 30% of G&A and Other Operating Costs
Fixed Costs: equals Total Costs less Variable Costs

Check that II) C equals I) N.

Break out of Critical Registry Function Operating Cash Outflows

A) Operation of SRS			5 000	5 500	6 050
B) Provision of Whois			6 000	6 600	7 260
C) DNS Resolution for Registered Domain Names			7 000	7 700	8 470
D) Registry Data Escrow			8 000	8 800	9 680
E) Maintenance of Zone in accordance with DNSSEC			9 000	9 900	10 890
F) Other					
G) Total Critical Function Cash Outflows			35 000	38 500	42 350

Note: these are based on the applicant's cost to manage these functions and should be calculated separately from the Continued Operations Instrument (COI) for Question 50

Commensurate with Question 24
Commensurate with Question 26
Commensurate with Question 35
Commensurate with Question 38
Commensurate with Question 43

Projected Capital Expenditures

A) Hardware		98 000	21 000	16 000	58 000
B) Software		32 000	18 000	24 000	11 000
C) Furniture & Other Equipment		43 000	22 000	14 000	16 000
D) Outsourcing Capital Expenditures, if any (list the type of capital expenditures):

E) Other Capital Expenditures					
F) Total Capital Expenditures		173 000	61 000	54 000	85 000

-Hardware & Software have a useful life of 3 years
-Furniture & other equipment have a useful life of 5 years

List and describe each identifiable type of outsourcing.

List and describe each identifiable type of outsourcing.

List and describe each identifiable type of outsourcing.

List and describe each identifiable type of outsourcing.

List and describe each identifiable type of outsourcing.

List and describe each identifiable type of outsourcing.

Projected Assets & Liabilities

A) Cash		668 300	474 300	413 00	471 679
B) Accounts receivable			70 000	106 000	160 000
C) Other current assets			40 000	60 000	80 000
D) Total Current Assets		668 300	584 300	579 00	711 679
E) Accounts payable		41 000	110 000	113 000	125 300
F) Short-term Debt					
G) Other Current Liabilities					
H) Total Current Liabilities		41 000	110 000	113 000	125 300
I) Total Property, Plant & Equipment (PP&E)	= Sec III) F: cumulative Prior Yr - Cur Yr	173 000	234 000	288 000	373 000
J) 3-year Reserve		186 000	186 000	186 000	186 000
K) Other Long-term Assets					
L) Total Long-term Assets		359 000	420 000	474 000	559 000
M) Total Long-term Debt		1 000 000	1 000 000	1 000 000	1 000 000

Should equal amount calculated for Question 50

Principal payments on the line of credit with XYZ Bank will not be incurred until Year 5. Interest will be paid as incurred and is reflected in Sec. I) J.

Projected Cash flow (excl. 3-year Reserve)

A) Net operating cash flows	= Sec. I) N	(199 700)	(92 000)	46 000	205 079
B) Capital expenditures	= Sec. III) FE	(173 000)	(61 000)	(54 000)	(85 000)
C) Change in Non Cash Current Assets	= Sec. IV) (B) C: Prior Yr - Cur Yr	n/a	(110 000)	(56 000)	(74 000)
D) Change in Total Current Liabilities	= Sec. IV) H: Cur Yr - Prior Yr	41 000	69 000	3 000	12 300
E) Debt Adjustments	= Sec. IV) F and M: Cur Yr - Prior Yr	n/a	-	-	-
F) Other Adjustments					
G) Projected Net Cash flow		(331 700)	(194 000)	(61 000)	58 379

The \$41k in Start Up Costs represents an offset of the Accounts Payable reflected in the Projected balance sheet. Subsequent years are based on changes in Current Liabilities where Prior Year is subtracted from the Current year.

Sources of funds

A) Debt:					
i) On-hand at time of application		1 000 000			
ii) Contingent and/or committed but not yet on-hand					
B) Equity:					
i) On-hand at time of application					
ii) Contingent and/or committed but not yet on-hand					
C) Total Sources of funds		1 000 000			

See below for comments on funding. Revenues are further detailed and explained in response to question 48.

General Comments (Notes Regarding Assumptions Used, Significant Variances Between Years, etc.):

We expect the number of registrations to grow at approximately 30% per year with an increase in the registration fee of \$1 per year for the first three years. These volume assumptions are based on the attached (i) market data and (ii) published benchmark registry growth. Fee assumptions are aligned with the growth plan and anticipated demand based on the registration curve. We anticipate our costs will increase at a controlled pace over the first three years except for marketing costs which will be higher in the start-up and first year as we establish our brand name and work to increase registrations. Operating costs are supported by the attached (i) benchmark report for a basket of similar registries and (ii) a build-up of costs based on our current operations. Our capital expenditures will be greatest in the start-up phase and then our need to invest in computer hardware and software will level off after the start-up period. Capital expenses are based on contract drafts and discussions held with vendors. We have included and referenced the hardware costs to support the estimates. Our investment in Furniture and Equipment will be greatest in the start-up period as we build our infrastructure and then decrease in the following periods. Start-up: Our start-up phase is anticipated to comprise [X] months in line with benchmark growth curves indicated by prior start-ups and published market data. Our assumptions were derived from the attached support.

Comments regarding how the Applicant plans to Fund operations:

We have recently negotiated a line of credit with XYZ Bank (a copy of the fully executed line of credit agreement has been included with our application) and this funding will allow us to purchase necessary equipment and pay for employees and other Operating Costs during our start-up period and the first few years of operations. We expect that our business operation will be self funded (i.e. revenue from operations will cover all anticipated costs and capital expenditures) by the second half of our second year in operation; we also expect to become profitable with positive cash flow in year three.

General Comments regarding contingencies:

Although we expect to be cash flow positive by the end of year 2, the recently negotiated line of credit will cover our operating costs for the first 4 years of operation if necessary. We have also entered into an agreement with XYZ Co. to assume our registrants should our business model not have the ability to sustain itself in future years. Agreement with XYZ Co. has been included with our application. A full description of risks and a range of potential outcomes and impacts are included in our responses to Question 49. These responses have quantified the impacts of certain probabilities and our negotiated funding and action plans as shown are adequate to fund our initial start-up period.

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 3

4 June 2012

Module 3

Objection Procedures

This module describes two types of mechanisms that may affect an application:

- I. The procedure by which ICANN's Governmental Advisory Committee may provide GAC Advice on New gTLDs to the ICANN Board of Directors concerning a specific application. This module describes the purpose of this procedure, and how GAC Advice on New gTLDs is considered by the ICANN Board once received.
- II. The dispute resolution procedure triggered by a formal objection to an application by a third party. This module describes the purpose of the objection and dispute resolution mechanisms, the grounds for lodging a formal objection to a gTLD application, the general procedures for filing or responding to an objection, and the manner in which dispute resolution proceedings are conducted.

This module also discusses the guiding principles, or standards, that each dispute resolution panel will apply in reaching its expert determination.

All applicants should be aware of the possibility that a formal objection may be filed against any application, and of the procedures and options available in the event of such an objection.

3.1 GAC Advice on New gTLDs

ICANN's Governmental Advisory Committee was formed to consider and provide advice on the activities of ICANN as they relate to concerns of governments, particularly matters where there may be an interaction between ICANN's policies and various laws and international agreements or where they may affect public policy issues.

The process for GAC Advice on New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities.

GAC members can raise concerns about any application to the GAC. The GAC as a whole will consider concerns

raised by GAC members, and agree on GAC advice to forward to the ICANN Board of Directors.

The GAC can provide advice on any application. For the Board to be able to consider the GAC advice during the evaluation process, the GAC advice would have to be submitted by the close of the Objection Filing Period (see Module 1).

GAC Advice may take one of the following forms:

- I. The GAC advises ICANN that it is the consensus of the GAC that a particular application should not proceed. This will create a strong presumption for the ICANN Board that the application should not be approved.
- II. The GAC advises ICANN that there are concerns about a particular application "dot-example." The ICANN Board is expected to enter into dialogue with the GAC to understand the scope of concerns. The ICANN Board is also expected to provide a rationale for its decision.
- III. The GAC advises ICANN that an application should not proceed unless remediated. This will raise a strong presumption for the Board that the application should not proceed unless there is a remediation method available in the Guidebook (such as securing the approval of one or more governments), that is implemented by the applicant.

Where GAC Advice on New gTLDs is received by the Board concerning an application, ICANN will publish the Advice and endeavor to notify the relevant applicant(s) promptly. The applicant will have a period of 21 calendar days from the publication date in which to submit a response to the ICANN Board.

ICANN will consider the GAC Advice on New gTLDs as soon as practicable. The Board may consult with independent experts, such as those designated to hear objections in the New gTLD Dispute Resolution Procedure, in cases where the issues raised in the GAC advice are pertinent to one of the subject matter areas of the objection procedures. The receipt of GAC advice will not toll the processing of any application (i.e., an application will not be suspended but will continue through the stages of the application process).

3.2 *Public Objection and Dispute Resolution Process*

The independent dispute resolution process is designed to protect certain interests and rights. The process provides a path for formal objections during evaluation of the applications. It allows a party with standing to have its objection considered before a panel of qualified experts.

A formal objection can be filed only on four enumerated grounds, as described in this module. A formal objection initiates a dispute resolution proceeding. In filing an application for a gTLD, the applicant agrees to accept the applicability of this gTLD dispute resolution process. Similarly, an objector accepts the applicability of this gTLD dispute resolution process by filing its objection.

As described in section 3.1 above, ICANN's Governmental Advisory Committee has a designated process for providing advice to the ICANN Board of Directors on matters affecting public policy issues, and these objection procedures would not be applicable in such a case. The GAC may provide advice on any topic and is not limited to the grounds for objection enumerated in the public objection and dispute resolution process.

3.2.1 *Grounds for Objection*

A formal objection may be filed on any one of the following four grounds:

String Confusion Objection – The applied-for gTLD string is confusingly similar to an existing TLD or to another applied-for gTLD string in the same round of applications.

Legal Rights Objection – The applied-for gTLD string infringes the existing legal rights of the objector.

Limited Public Interest Objection – The applied-for gTLD string is contrary to generally accepted legal norms of morality and public order that are recognized under principles of international law.

Community Objection – There is substantial opposition to the gTLD application from a significant portion of the community to which the gTLD string may be explicitly or implicitly targeted.

The rationales for these objection grounds are discussed in the final report of the ICANN policy development process for new gTLDs. For more information on this process, see

<http://gnso.icann.org/issues/new-gtlds/pdp-dec05-fr-part-08aug07.htm>.

3.2.2 *Standing to Object*

Objectors must satisfy standing requirements to have their objections considered. As part of the dispute proceedings, all objections will be reviewed by a panel of experts designated by the applicable Dispute Resolution Service Provider (DRSP) to determine whether the objector has standing to object. Standing requirements for the four objection grounds are:

Objection ground	Who may object
String confusion	Existing TLD operator or gTLD applicant in current round. In the case where an IDN ccTLD Fast Track request has been submitted before the public posting of gTLD applications received, and the Fast Track requestor wishes to file a string confusion objection to a gTLD application, the Fast Track requestor will be granted standing.
Legal rights	Rightholders
Limited public interest	No limitations on who may file – however, subject to a “quick look” designed for early conclusion of frivolous and/or abusive objections
Community	Established institution associated with a clearly delineated community

3.2.2.1 *String Confusion Objection*

Two types of entities have standing to object:

- An existing TLD operator may file a string confusion objection to assert string confusion between an applied-for gTLD and the TLD that it currently operates.
- Any gTLD applicant in this application round may file a string confusion objection to assert string confusion between an applied-for gTLD and the gTLD for which it has applied, where string confusion between the two applicants has not already been found in the Initial Evaluation. That is, an applicant does not have standing to object to another application with which it is already in a contention set as a result of the Initial Evaluation.

In the case where an existing TLD operator successfully asserts string confusion with an applicant, the application will be rejected.

In the case where a gTLD applicant successfully asserts string confusion with another applicant, the only possible

outcome is for both applicants to be placed in a contention set and to be referred to a contention resolution procedure (refer to Module 4, String Contention Procedures). If an objection by one gTLD applicant to another gTLD application is unsuccessful, the applicants may both move forward in the process without being considered in direct contention with one another.

3.2.2.2 Legal Rights Objection

A rightsholder has standing to file a legal rights objection. The source and documentation of the existing legal rights the objector is claiming (which may include either registered or unregistered trademarks) are infringed by the applied-for gTLD must be included in the filing.

An intergovernmental organization (IGO) is eligible to file a legal rights objection if it meets the criteria for registration of a .INT domain name¹:

- a) An international treaty between or among national governments must have established the organization; and
- b) The organization that is established must be widely considered to have independent international legal personality and must be the subject of and governed by international law.

The specialized agencies of the UN and the organizations having observer status at the UN General Assembly are also recognized as meeting the criteria.

3.2.2.3 Limited Public Interest Objection

Anyone may file a Limited Public Interest Objection. Due to the inclusive standing base, however, objectors are subject to a "quick look" procedure designed to identify and eliminate frivolous and/or abusive objections. An objection found to be manifestly unfounded and/or an abuse of the right to object may be dismissed at any time.

A Limited Public Interest objection would be manifestly unfounded if it did not fall within one of the categories that have been defined as the grounds for such an objection (see subsection 3.5.3).

A Limited Public Interest objection that is manifestly unfounded may also be an abuse of the right to object. An objection may be framed to fall within one of the

¹ See also <http://www.iana.org/domains/int/policy/>.

accepted categories for Limited Public Interest objections, but other facts may clearly show that the objection is abusive. For example, multiple objections filed by the same or related parties against a single applicant may constitute harassment of the applicant, rather than a legitimate defense of legal norms that are recognized under general principles of international law. An objection that attacks the applicant, rather than the applied-for string, could be an abuse of the right to object.²

The quick look is the Panel's first task, after its appointment by the DRSP and is a review on the merits of the objection. The dismissal of an objection that is manifestly unfounded and/or an abuse of the right to object would be an Expert Determination, rendered in accordance with Article 21 of the New gTLD Dispute Resolution Procedure.

In the case where the quick look review does lead to the dismissal of the objection, the proceedings that normally follow the initial submissions (including payment of the full advance on costs) will not take place, and it is currently contemplated that the filing fee paid by the applicant would be refunded, pursuant to Procedure Article 14(e).

3.2.2.4 Community Objection

Established institutions associated with clearly delineated communities are eligible to file a community objection. The community named by the objector must be a community strongly associated with the applied-for gTLD string in the application that is the subject of the objection. To qualify for standing for a community objection, the objector must prove both of the following:

² The jurisprudence of the European Court of Human Rights offers specific examples of how the term "manifestly ill-founded" has been interpreted in disputes relating to human rights. Article 35(3) of the European Convention on Human Rights provides: "The Court shall declare inadmissible any individual application submitted under Article 34 which it considers incompatible with the provisions of the Convention or the protocols thereto, manifestly ill-founded, or an abuse of the right of application." The ECHR renders reasoned decisions on admissibility, pursuant to Article 35 of the Convention. (Its decisions are published on the Court's website <http://www.echr.coe.int>.) In some cases, the Court briefly states the facts and the law and then announces its decision, without discussion or analysis. E.g., Decision as to the Admissibility of Application No. 34328/96 by Egbert Peree against the Netherlands (1998). In other cases, the Court reviews the facts and the relevant legal rules in detail, providing an analysis to support its conclusion on the admissibility of an application. Examples of such decisions regarding applications alleging violations of Article 10 of the Convention (freedom of expression) include: *Décision sur la recevabilité de la requête no 65831/01 présentée par Roger Garaudy contre la France* (2003); *Décision sur la recevabilité de la requête no 65297/01 présentée par Eduardo Fernando Alves Costa contre le Portugal* (2004).

The jurisprudence of the European Court of Human Rights also provides examples of the abuse of the right of application being sanctioned, in accordance with ECHR Article 35(3). See, for example, *Décision partielle sur la recevabilité de la requête no 61164/00 présentée par Gérard Duringer et autres contre la France et de la requête no 18589/02 contre la France* (2003).

It is an established institution – Factors that may be considered in making this determination include, but are not limited to:

- Level of global recognition of the institution;
- Length of time the institution has been in existence; and
- Public historical evidence of its existence, such as the presence of a formal charter or national or international registration, or validation by a government, inter-governmental organization, or treaty. The institution must not have been established solely in conjunction with the gTLD application process.

It has an ongoing relationship with a clearly delineated community – Factors that may be considered in making this determination include, but are not limited to:

- The presence of mechanisms for participation in activities, membership, and leadership;
- Institutional purpose related to the benefit of the associated community;
- Performance of regular activities that benefit the associated community; and
- The level of formal boundaries around the community.

The panel will perform a balancing of the factors listed above, as well as other relevant information, in making its determination. It is not expected that an objector must demonstrate satisfaction of each and every factor considered in order to satisfy the standing requirements.

3.2.3 Dispute Resolution Service Providers

To trigger a dispute resolution proceeding, an objection must be filed by the posted deadline date, directly with the appropriate DRSP for each objection ground.

- The International Centre for Dispute Resolution has agreed to administer disputes brought pursuant to string confusion objections.
- The Arbitration and Mediation Center of the World Intellectual Property Organization has agreed to administer disputes brought pursuant to legal rights objections.

- The International Center of Expertise of the International Chamber of Commerce has agreed to administer disputes brought pursuant to Limited Public Interest and Community Objections.

ICANN selected DRSPs on the basis of their relevant experience and expertise, as well as their willingness and ability to administer dispute proceedings in the new gTLD Program. The selection process began with a public call for expressions of interest³ followed by dialogue with those candidates who responded. The call for expressions of interest specified several criteria for providers, including established services, subject matter expertise, global capacity, and operational capabilities. An important aspect of the selection process was the ability to recruit panelists who will engender the respect of the parties to the dispute.

3.2.4 Options in the Event of Objection

Applicants whose applications are the subject of an objection have the following options:

The applicant can work to reach a settlement with the objector, resulting in withdrawal of the objection or the application;

The applicant can file a response to the objection and enter the dispute resolution process (refer to Section 3.2); or

The applicant can withdraw, in which case the objector will prevail by default and the application will not proceed further.

If for any reason the applicant does not file a response to an objection, the objector will prevail by default.

3.2.5 Independent Objector

A formal objection to a gTLD application may also be filed by the Independent Objector (IO). The IO does not act on behalf of any particular persons or entities, but acts solely in the best interests of the public who use the global Internet.

In light of this public interest goal, the Independent Objector is limited to filing objections on the grounds of Limited Public Interest and Community.

³ See <http://www.icann.org/en/announcements/announcement-21dec07.htm>.

Neither ICANN staff nor the ICANN Board of Directors has authority to direct or require the IO to file or not file any particular objection. If the IO determines that an objection should be filed, he or she will initiate and prosecute the objection in the public interest.

Mandate and Scope - The IO may file objections against “highly objectionable” gTLD applications to which no objection has been filed. The IO is limited to filing two types of objections: (1) Limited Public Interest objections and (2) Community objections. The IO is granted standing to file objections on these enumerated grounds, notwithstanding the regular standing requirements for such objections (see subsection 3.1.2).

The IO may file a Limited Public Interest objection against an application even if a Community objection has been filed, and vice versa.

The IO may file an objection against an application, notwithstanding the fact that a String Confusion objection or a Legal Rights objection was filed.

Absent extraordinary circumstances, the IO is not permitted to file an objection to an application where an objection has already been filed on the same ground.

The IO may consider public comment when making an independent assessment whether an objection is warranted. The IO will have access to application comments received during the comment period.

In light of the public interest goal noted above, the IO shall not object to an application unless at least one comment in opposition to the application is made in the public sphere.

Selection – The IO will be selected by ICANN, through an open and transparent process, and retained as an independent consultant. The Independent Objector will be an individual with considerable experience and respect in the Internet community, unaffiliated with any gTLD applicant.

Although recommendations for IO candidates from the community are welcomed, the IO must be and remain independent and unaffiliated with any of the gTLD applicants. The various rules of ethics for judges and international arbitrators provide models for the IO to declare and maintain his/her independence.

The IO's (renewable) tenure is limited to the time necessary to carry out his/her duties in connection with a single round of gTLD applications.

Budget and Funding – The IO's budget would comprise two principal elements: (a) salaries and operating expenses, and (b) dispute resolution procedure costs – both of which should be funded from the proceeds of new gTLD applications.

As an objector in dispute resolution proceedings, the IO is required to pay filing and administrative fees, as well as advance payment of costs, just as all other objectors are required to do. Those payments will be refunded by the DRSP in cases where the IO is the prevailing party.

In addition, the IO will incur various expenses in presenting objections before DRSP panels that will not be refunded, regardless of the outcome. These expenses include the fees and expenses of outside counsel (if retained) and the costs of legal research or factual investigations.

3.3 *Filing Procedures*

The information included in this section provides a summary of procedures for filing:

- Objections; and
- Responses to objections.

For a comprehensive statement of filing requirements applicable generally, refer to the New gTLD Dispute Resolution Procedure ("Procedure") included as an attachment to this module. In the event of any discrepancy between the information presented in this module and the Procedure, the Procedure shall prevail.

Note that the rules and procedures of each DRSP specific to each objection ground must also be followed. See <http://newgtlds.icann.org/en/program-status/objection-dispute-resolution>.

3.3.1 *Objection Filing Procedures*

The procedures outlined in this subsection must be followed by any party wishing to file a formal objection to an application that has been posted by ICANN. Should an applicant wish to file a formal objection to another gTLD application, it would follow these same procedures.

- All objections must be filed electronically with the appropriate DRSP by the posted deadline date.

Objections will not be accepted by the DRSPs after this date.

- All objections must be filed in English.
- Each objection must be filed separately. An objector wishing to object to several applications must file a separate objection and pay the accompanying filing fees for each application that is the subject of an objection. If an objector wishes to object to an application on more than one ground, the objector must file separate objections and pay the accompanying filing fees for each objection ground.

Each objection filed by an objector must include:

- The name and contact information of the objector.
- A statement of the objector's basis for standing; that is, why the objector believes it meets the standing requirements to object.
- A description of the basis for the objection, including:
 - A statement giving the specific ground upon which the objection is being filed.
 - A detailed explanation of the validity of the objection and why it should be upheld.
- Copies of any documents that the objector considers to be a basis for the objection.

Objections are limited to 5000 words or 20 pages, whichever is less, excluding attachments.

An objector must provide copies of all submissions to the DRSP associated with the objection proceedings to the applicant.

The DRSP will publish, and regularly update a list on its website identifying all objections as they are filed. ICANN will post on its website a notice of all objections filed once the objection filing period has closed.

3.3.2 Objection Filing Fees

At the time an objection is filed, the objector is required to pay a filing fee in the amount set and published by the relevant DRSP. If the filing fee is not paid, the DRSP will

dismiss the objection without prejudice. See Section 1.5 of Module 1 regarding fees.

Funding from ICANN for objection filing fees, as well as for advance payment of costs (see subsection 3.4.7 below) is available to the At-Large Advisory Committee (ALAC). Funding for ALAC objection filing and dispute resolution fees is contingent on publication by ALAC of its approved process for considering and making objections. At a minimum, the process for objecting to a gTLD application will require: bottom-up development of potential objections, discussion and approval of objections at the Regional At-Large Organization (RALO) level, and a process for consideration and approval of the objection by the At-Large Advisory Committee.

Funding from ICANN for objection filing fees, as well as for advance payment of costs, is available to individual national governments in the amount of USD 50,000 with the guarantee that a minimum of one objection per government will be fully funded by ICANN where requested. ICANN will develop a procedure for application and disbursement of funds.

Funding available from ICANN is to cover costs payable to the dispute resolution service provider and made directly to the dispute resolution service provider; it does not cover other costs such as fees for legal advice.

3.3.3 Response Filing Procedures

Upon notification that ICANN has published the list of all objections filed (refer to subsection 3.3.1), the DRSPs will notify the parties that responses must be filed within 30 calendar days of receipt of that notice. DRSPs will not accept late responses. Any applicant that fails to respond to an objection within the 30-day response period will be in default, which will result in the objector prevailing.

- All responses must be filed in English.
- Each response must be filed separately. That is, an applicant responding to several objections must file a separate response and pay the accompanying filing fee to respond to each objection.
- Responses must be filed electronically.

Each response filed by an applicant must include:

- The name and contact information of the applicant.

- A point-by-point response to the claims made by the objector.
- Any copies of documents that it considers to be a basis for the response.

Responses are limited to 5000 words or 20 pages, whichever is less, excluding attachments.

Each applicant must provide copies of all submissions to the DRSP associated with the objection proceedings to the objector.

3.3.4 Response Filing Fees

At the time an applicant files its response, it is required to pay a filing fee in the amount set and published by the relevant DRSP, which will be the same as the filing fee paid by the objector. If the filing fee is not paid, the response will be disregarded, which will result in the objector prevailing.

3.4 Objection Processing Overview

The information below provides an overview of the process by which DRSPs administer dispute proceedings that have been initiated. For comprehensive information, please refer to the New gTLD Dispute Resolution Procedure (included as an attachment to this module).

3.4.1 Administrative Review

Each DRSP will conduct an administrative review of each objection for compliance with all procedural rules within 14 calendar days of receiving the objection. Depending on the number of objections received, the DRSP may ask ICANN for a short extension of this deadline.

If the DRSP finds that the objection complies with procedural rules, the objection will be deemed filed, and the proceedings will continue. If the DRSP finds that the objection does not comply with procedural rules, the DRSP will dismiss the objection and close the proceedings without prejudice to the objector's right to submit a new objection that complies with procedural rules. The DRSP's review or rejection of the objection will not interrupt the time limit for filing an objection.

3.4.2 Consolidation of Objections

Once the DRSP receives and processes all objections, at its discretion the DRSP may elect to consolidate certain objections. The DRSP shall endeavor to decide upon

consolidation prior to issuing its notice to applicants that the response should be filed and, where appropriate, shall inform the parties of the consolidation in that notice.

An example of a circumstance in which consolidation might occur is multiple objections to the same application based on the same ground.

In assessing whether to consolidate objections, the DRSP will weigh the efficiencies in time, money, effort, and consistency that may be gained by consolidation against the prejudice or inconvenience consolidation may cause. The DRSPs will endeavor to have all objections resolved on a similar timeline. It is intended that no sequencing of objections will be established.

New gTLD applicants and objectors also will be permitted to propose consolidation of objections, but it will be at the DRSP's discretion whether to agree to the proposal.

ICANN continues to strongly encourage all of the DRSPs to consolidate matters whenever practicable.

3.4.3 *Mediation*

The parties to a dispute resolution proceeding are encouraged—but not required—to participate in mediation aimed at settling the dispute. Each DRSP has experts who can be retained as mediators to facilitate this process, should the parties elect to do so, and the DRSPs will communicate with the parties concerning this option and any associated fees.

If a mediator is appointed, that person may not serve on the panel constituted to issue an expert determination in the related dispute.

There are no automatic extensions of time associated with the conduct of negotiations or mediation. The parties may submit joint requests for extensions of time to the DRSP according to its procedures, and the DRSP or the panel, if appointed, will decide whether to grant the requests, although extensions will be discouraged. Absent exceptional circumstances, the parties must limit their requests for extension to 30 calendar days.

The parties are free to negotiate without mediation at any time, or to engage a mutually acceptable mediator of their own accord.

3.4.4 Selection of Expert Panels

A panel will consist of appropriately qualified experts appointed to each proceeding by the designated DRSP. Experts must be independent of the parties to a dispute resolution proceeding. Each DRSP will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing an expert for lack of independence.

There will be one expert in proceedings involving a string confusion objection.

There will be one expert, or, if all parties agree, three experts with relevant experience in intellectual property rights disputes in proceedings involving an existing legal rights objection.

There will be three experts recognized as eminent jurists of international reputation, with expertise in relevant fields as appropriate, in proceedings involving a Limited Public Interest objection.

There will be one expert in proceedings involving a community objection.

Neither the experts, the DRSP, ICANN, nor their respective employees, directors, or consultants will be liable to any party in any action for damages or injunctive relief for any act or omission in connection with any proceeding under the dispute resolution procedures.

3.4.5 Adjudication

The panel may decide whether the parties shall submit any written statements in addition to the filed objection and response, and may specify time limits for such submissions.

In order to achieve the goal of resolving disputes rapidly and at reasonable cost, procedures for the production of documents shall be limited. In exceptional cases, the panel may require a party to produce additional evidence.

Disputes will usually be resolved without an in-person hearing. The panel may decide to hold such a hearing only in extraordinary circumstances.

3.4.6 Expert Determination

The DRSPs' final expert determinations will be in writing and will include:

- A summary of the dispute and findings;

- An identification of the prevailing party; and
- The reasoning upon which the expert determination is based.

Unless the panel decides otherwise, each DRSP will publish all decisions rendered by its panels in full on its website.

The findings of the panel will be considered an expert determination and advice that ICANN will accept within the dispute resolution process.

3.4.7 Dispute Resolution Costs

Before acceptance of objections, each DRSP will publish a schedule of costs or statement of how costs will be calculated for the proceedings that it administers under this procedure. These costs cover the fees and expenses of the members of the panel and the DRSP's administrative costs.

ICANN expects that string confusion and legal rights objection proceedings will involve a fixed amount charged by the panelists while Limited Public Interest and community objection proceedings will involve hourly rates charged by the panelists.

Within ten (10) calendar days of constituting the panel, the DRSP will estimate the total costs and request advance payment in full of its costs from both the objector and the applicant. Each party must make its advance payment within ten (10) calendar days of receiving the DRSP's request for payment and submit to the DRSP evidence of such payment. The respective filing fees paid by the parties will be credited against the amounts due for this advance payment of costs.

The DRSP may revise its estimate of the total costs and request additional advance payments from the parties during the resolution proceedings.

Additional fees may be required in specific circumstances; for example, if the DRSP receives supplemental submissions or elects to hold a hearing.

If an objector fails to pay these costs in advance, the DRSP will dismiss its objection and no fees paid by the objector will be refunded.

If an applicant fails to pay these costs in advance, the DSRP will sustain the objection and no fees paid by the applicant will be refunded.

After the hearing has taken place and the panel renders its expert determination, the DRSP will refund the advance payment of costs to the prevailing party.

3.5 Dispute Resolution Principles (Standards)

Each panel will use appropriate general principles (standards) to evaluate the merits of each objection. The principles for adjudication on each type of objection are specified in the paragraphs that follow. The panel may also refer to other relevant rules of international law in connection with the standards.

The objector bears the burden of proof in each case.

The principles outlined below are subject to evolution based on ongoing consultation with DRSPs, legal experts, and the public.

3.5.1 String Confusion Objection

A DRSP panel hearing a string confusion objection will consider whether the applied-for gTLD string is likely to result in string confusion. String confusion exists where a string so nearly resembles another that it is likely to deceive or cause confusion. For a likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average, reasonable Internet user. Mere association, in the sense that the string brings another string to mind, is insufficient to find a likelihood of confusion.

3.5.2 Legal Rights Objection

In interpreting and giving meaning to GNSO Recommendation 3 (“Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law”), a DRSP panel of experts presiding over a legal rights objection will determine whether the potential use of the applied-for gTLD by the applicant takes unfair advantage of the distinctive character or the reputation of the objector’s registered or unregistered trademark or service mark (“mark”) or IGO name or acronym (as identified in the treaty establishing the organization), or unjustifiably impairs the distinctive character or the reputation of the objector’s mark or IGO name or acronym, or otherwise creates an impermissible likelihood of confusion between the applied-for gTLD and the objector’s mark or IGO name or acronym.

In the case where the objection is based on trademark rights, the panel will consider the following non-exclusive factors:

1. Whether the applied-for gTLD is identical or similar, including in appearance, phonetic sound, or meaning, to the objector's existing mark.
2. Whether the objector's acquisition and use of rights in the mark has been bona fide.
3. Whether and to what extent there is recognition in the relevant sector of the public of the sign corresponding to the gTLD, as the mark of the objector, of the applicant or of a third party.
4. Applicant's intent in applying for the gTLD, including whether the applicant, at the time of application for the gTLD, had knowledge of the objector's mark, or could not have reasonably been unaware of that mark, and including whether the applicant has engaged in a pattern of conduct whereby it applied for or operates TLDs or registrations in TLDs which are identical or confusingly similar to the marks of others.
5. Whether and to what extent the applicant has used, or has made demonstrable preparations to use, the sign corresponding to the gTLD in connection with a bona fide offering of goods or services or a bona fide provision of information in a way that does not interfere with the legitimate exercise by the objector of its mark rights.
6. Whether the applicant has marks or other intellectual property rights in the sign corresponding to the gTLD, and, if so, whether any acquisition of such a right in the sign, and use of the sign, has been bona fide, and whether the purported or likely use of the gTLD by the applicant is consistent with such acquisition or use.
7. Whether and to what extent the applicant has been commonly known by the sign corresponding to the gTLD, and if so, whether any purported or likely use of the gTLD by the applicant is consistent therewith and bona fide.
8. Whether the applicant's intended use of the gTLD would create a likelihood of confusion with the objector's mark as to the source, sponsorship, affiliation, or endorsement of the gTLD.

In the case where a legal rights objection has been filed by an IGO, the panel will consider the following non-exclusive factors:

1. Whether the applied-for gTLD is identical or similar, including in appearance, phonetic sound or meaning, to the name or acronym of the objecting IGO;
2. Historical coexistence of the IGO and the applicant's use of a similar name or acronym. Factors considered may include:
 - a. Level of global recognition of both entities;
 - b. Length of time the entities have been in existence;
 - c. Public historical evidence of their existence, which may include whether the objecting IGO has communicated its name or abbreviation under Article 6^{ter} of the Paris Convention for the Protection of Industrial Property.
3. Whether and to what extent the applicant has used, or has made demonstrable preparations to use, the sign corresponding to the TLD in connection with a bona fide offering of goods or services or a bona fide provision of information in a way that does not interfere with the legitimate exercise of the objecting IGO's name or acronym;
4. Whether and to what extent the applicant has been commonly known by the sign corresponding to the applied-for gTLD, and if so, whether any purported or likely use of the gTLD by the applicant is consistent therewith and bona fide; and
5. Whether the applicant's intended use of the applied-for gTLD would create a likelihood of confusion with the objecting IGO's name or acronym as to the source, sponsorship, affiliation, or endorsement of the TLD.

3.5.3 Limited Public Interest Objection

An expert panel hearing a Limited Public Interest objection will consider whether the applied-for gTLD string is contrary to general principles of international law for morality and public order.

Examples of instruments containing such general principles include:

- The Universal Declaration of Human Rights (UDHR)

- The International Covenant on Civil and Political Rights (ICCPR)
- The Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW)
- The International Convention on the Elimination of All Forms of Racial Discrimination
- Declaration on the Elimination of Violence against Women
- The International Covenant on Economic, Social, and Cultural Rights
- The Convention against Torture and Other Cruel, Inhuman, or Degrading Treatment or Punishment
- The International Convention on the Protection of the Rights of all Migrant Workers and Members of their Families
- Slavery Convention
- Convention on the Prevention and Punishment of the Crime of Genocide
- Convention on the Rights of the Child

Note that these are included to serve as examples, rather than an exhaustive list. It should be noted that these instruments vary in their ratification status. Additionally, states may limit the scope of certain provisions through reservations and declarations indicating how they will interpret and apply certain provisions. National laws not based on principles of international law are not a valid ground for a Limited Public Interest objection.

Under these principles, everyone has the right to freedom of expression, but the exercise of this right carries with it special duties and responsibilities. Accordingly, certain limited restrictions may apply.

The grounds upon which an applied-for gTLD string may be considered contrary to generally accepted legal norms relating to morality and public order that are recognized under principles of international law are:

- Incitement to or promotion of violent lawless action;
- Incitement to or promotion of discrimination based upon race, color, gender, ethnicity, religion or national origin, or other similar types of

discrimination that violate generally accepted legal norms recognized under principles of international law;

- Incitement to or promotion of child pornography or other sexual abuse of children; or
- A determination that an applied-for gTLD string would be contrary to specific principles of international law as reflected in relevant international instruments of law.

The panel will conduct its analysis on the basis of the applied-for gTLD string itself. The panel may, if needed, use as additional context the intended purpose of the TLD as stated in the application.

3.5.4 Community Objection

The four tests described here will enable a DRSP panel to determine whether there is substantial opposition from a significant portion of the community to which the string may be targeted. For an objection to be successful, the objector must prove that:

- The community invoked by the objector is a clearly delineated community; and
- Community opposition to the application is substantial; and
- There is a strong association between the community invoked and the applied-for gTLD string; and
- The application creates a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted. Each of these tests is described in further detail below.

Community – The objector must prove that the community expressing opposition can be regarded as a clearly delineated community. A panel could balance a number of factors to determine this, including but not limited to:

- The level of public recognition of the group as a community at a local and/or global level;
- The level of formal boundaries around the community and what persons or entities are considered to form the community;

- The length of time the community has been in existence;
- The global distribution of the community (this may not apply if the community is territorial); and
- The number of people or entities that make up the community.

If opposition by a number of people/entities is found, but the group represented by the objector is not determined to be a clearly delineated community, the objection will fail.

Substantial Opposition – The objector must prove substantial opposition within the community it has identified itself as representing. A panel could balance a number of factors to determine whether there is substantial opposition, including but not limited to:

- Number of expressions of opposition relative to the composition of the community;
- The representative nature of entities expressing opposition;
- Level of recognized stature or weight among sources of opposition;
- Distribution or diversity among sources of expressions of opposition, including:
 - Regional
 - Subsectors of community
 - Leadership of community
 - Membership of community
- Historical defense of the community in other contexts; and
- Costs incurred by objector in expressing opposition, including other channels the objector may have used to convey opposition.

If some opposition within the community is determined, but it does not meet the standard of substantial opposition, the objection will fail.

Targeting – The objector must prove a strong association between the applied-for gTLD string and the community represented by the objector. Factors that could be

balanced by a panel to determine this include but are not limited to:

- Statements contained in application;
- Other public statements by the applicant;
- Associations by the public.

If opposition by a community is determined, but there is no strong association between the community and the applied-for gTLD string, the objection will fail.

Detriment – The objector must prove that the application creates a likelihood of material detriment to the rights or legitimate interests of a significant portion of the community to which the string may be explicitly or implicitly targeted. An allegation of detriment that consists only of the applicant being delegated the string instead of the objector will not be sufficient for a finding of material detriment.

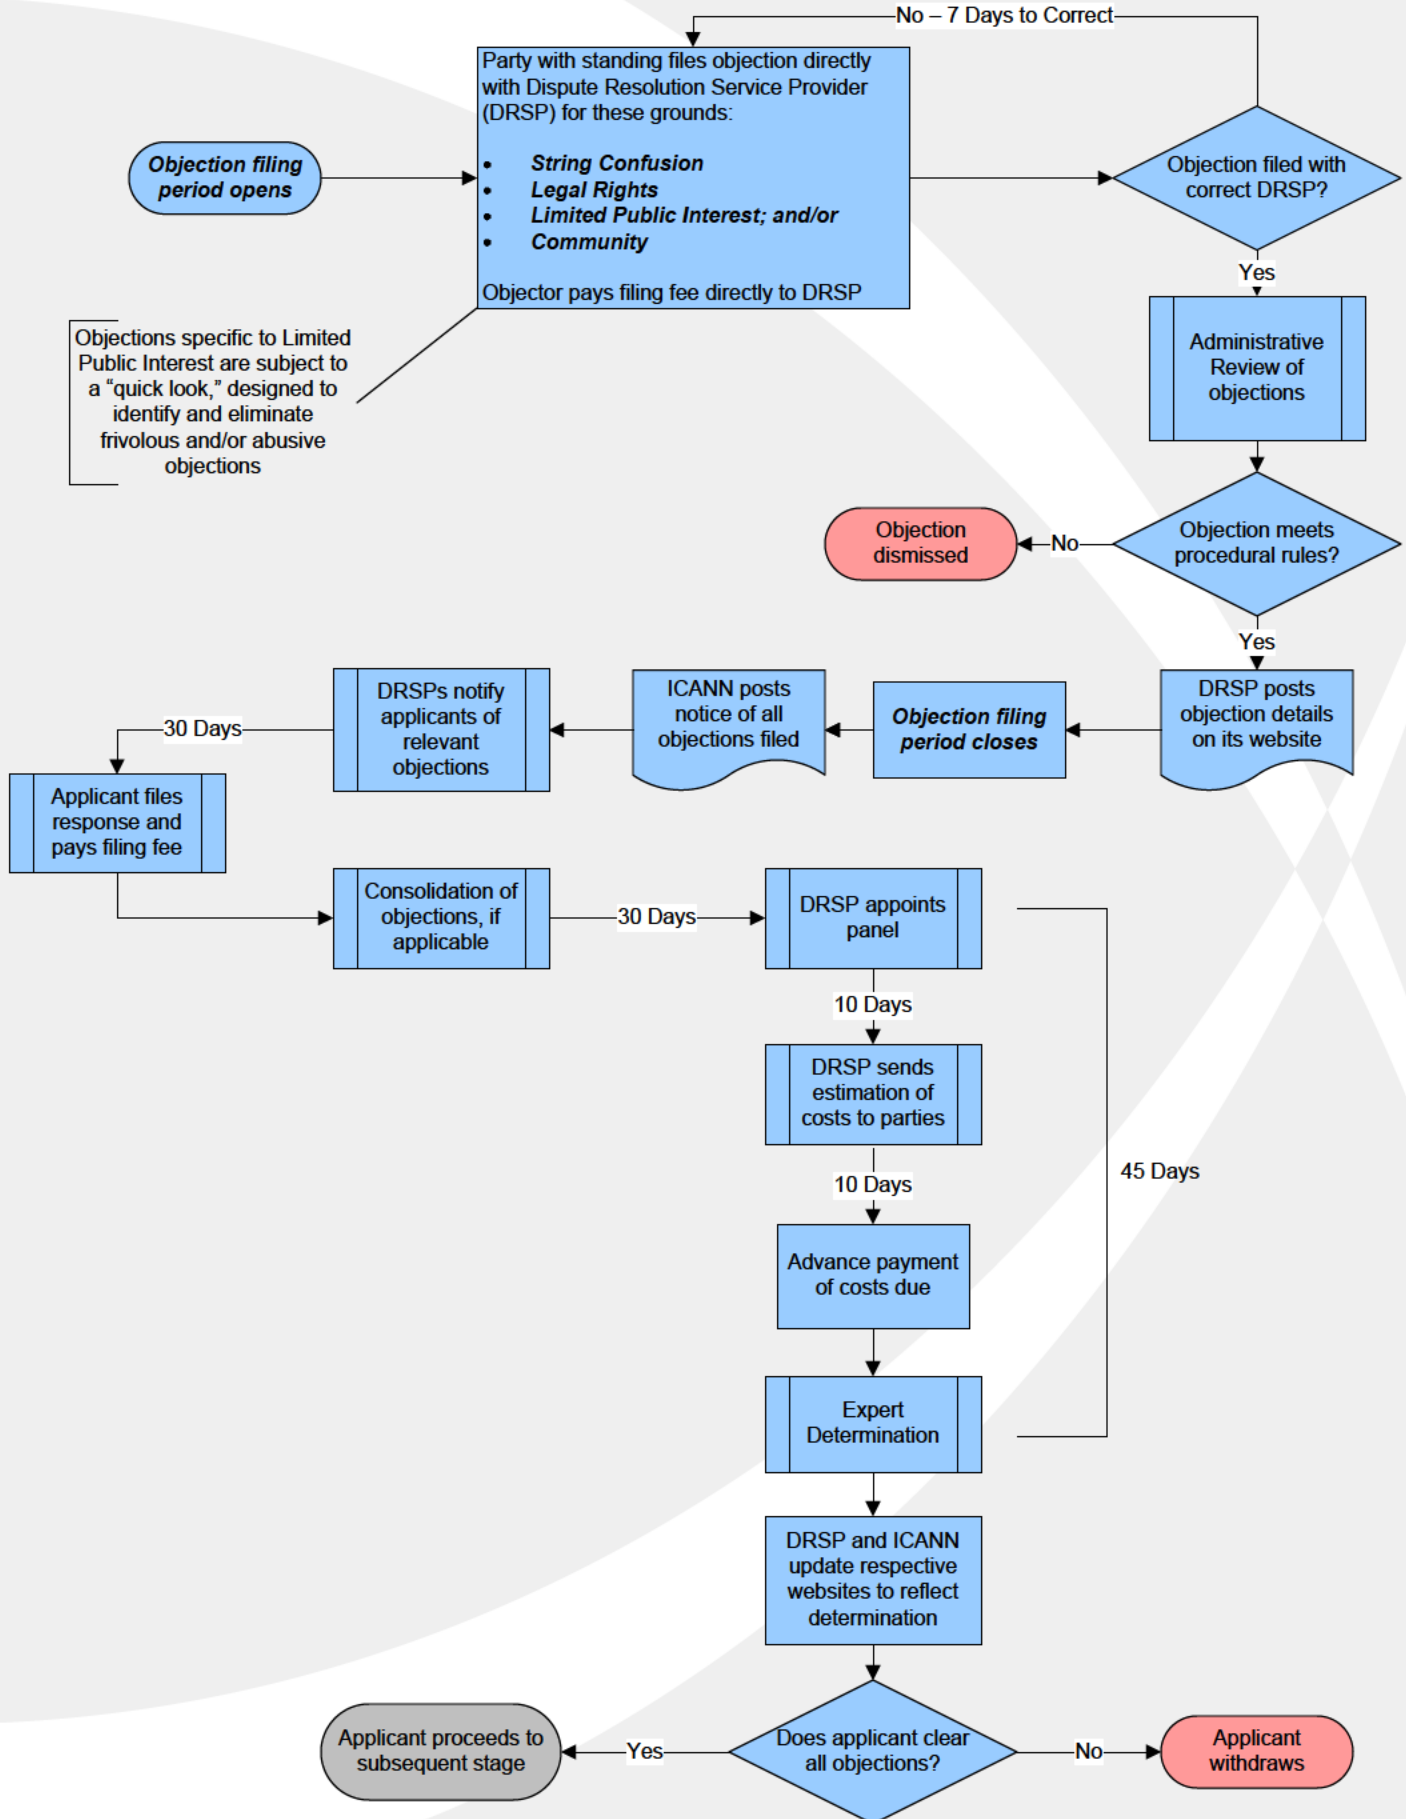

Factors that could be used by a panel in making this determination include but are not limited to:

- Nature and extent of damage to the reputation of the community represented by the objector that would result from the applicant's operation of the applied-for gTLD string;
- Evidence that the applicant is not acting or does not intend to act in accordance with the interests of the community or of users more widely, including evidence that the applicant has not proposed or does not intend to institute effective security protection for user interests;
- Interference with the core activities of the community that would result from the applicant's operation of the applied-for gTLD string;
- Dependence of the community represented by the objector on the DNS for its core activities;
- Nature and extent of concrete or economic damage to the community represented by the objector that would result from the applicant's operation of the applied-for gTLD string; and
- Level of certainty that alleged detrimental outcomes would occur.

If opposition by a community is determined, but there is no likelihood of material detriment to the targeted community resulting from the applicant's operation of the applied-for gTLD, the objection will fail.

The objector must meet all four tests in the standard for the objection to prevail.

DRAFT - New gTLD Program – Objection and Dispute Resolution

Attachment to Module 3

New gTLD Dispute Resolution Procedure

These Procedures were designed with an eye toward timely and efficient dispute resolution. As part of the New gTLD Program, these Procedures apply to all proceedings administered by each of the dispute resolution service providers (DRSP). Each of the DRSPs has a specific set of rules that will also apply to such proceedings.

NEW gTLD DISPUTE RESOLUTION PROCEDURE

Article 1. ICANN's New gTLD Program

- (a) The Internet Corporation for Assigned Names and Numbers ("ICANN") has implemented a program for the introduction of new generic Top-Level Domain Names ("gTLDs") in the internet. There will be a succession of rounds, during which applicants may apply for new gTLDs, in accordance with terms and conditions set by ICANN.
- (b) The new gTLD program includes a dispute resolution procedure, pursuant to which disputes between a person or entity who applies for a new gTLD and a person or entity who objects to that gTLD are resolved in accordance with this New gTLD Dispute Resolution Procedure (the "Procedure").
- (c) Dispute resolution proceedings shall be administered by a Dispute Resolution Service Provider ("DRSP") in accordance with this Procedure and the applicable DRSP Rules that are identified in Article 4(b).
- (d) By applying for a new gTLD, an applicant accepts the applicability of this Procedure and the applicable DRSP's Rules that are identified in Article 4(b); by filing an objection to a new gTLD, an objector accepts the applicability of this Procedure and the applicable DRSP's Rules that are identified in Article 4(b). The parties cannot derogate from this Procedure without the express approval of ICANN and from the applicable DRSP Rules without the express approval of the relevant DRSP.

Article 2. Definitions

- (a) The "Applicant" or "Respondent" is an entity that has applied to ICANN for a new gTLD and that will be the party responding to the Objection.
- (b) The "Objector" is one or more persons or entities who have filed an objection against a new gTLD for which an application has been submitted.
- (c) The "Panel" is the panel of Experts, comprising one or three "Experts," that has been constituted by a DRSP in accordance with this Procedure and the applicable DRSP Rules that are identified in Article 4(b).
- (d) The "Expert Determination" is the decision upon the merits of the Objection that is rendered by a Panel in a proceeding conducted under this Procedure and the applicable DRSP Rules that are identified in Article 4(b).
- (e) The grounds upon which an objection to a new gTLD may be filed are set out in full in Module 3 of the Applicant Guidebook. Such grounds are identified in this Procedure, and are based upon the Final Report on the Introduction of New Generic Top-Level Domains, dated 7 August 2007, issued by the ICANN Generic Names Supporting Organization (GNSO), as follows:
 - (i) "String Confusion Objection" refers to the objection that the string comprising the potential gTLD is confusingly similar to an existing top-level domain or another string applied for in the same round of applications.
 - (ii) "Existing Legal Rights Objection" refers to the objection that the string comprising the potential new gTLD infringes the existing legal rights of others

that are recognized or enforceable under generally accepted and internationally recognized principles of law.

- (iii) "Limited Public Interest Objection" refers to the objection that the string comprising the potential new gTLD is contrary to generally accepted legal norms relating to morality and public order that are recognized under principles of international law.
- (iv) "Community Objection" refers to the objection that there is substantial opposition to the application from a significant portion of the community to which the string may be explicitly or implicitly targeted.
- (f) "DRSP Rules" are the rules of procedure of a particular DRSP that have been identified as being applicable to objection proceedings under this Procedure.

Article 3. Dispute Resolution Service Providers

The various categories of disputes shall be administered by the following DRSPs:

- (a) String Confusion Objections shall be administered by the International Centre for Dispute Resolution.
- (b) Existing Legal Rights Objections shall be administered by the Arbitration and Mediation Center of the World Intellectual Property Organization.
- (c) Limited Public Interest Objections shall be administered by the International Centre for Expertise of the International Chamber of Commerce.
- (d) Community Objections shall be administered by the International Centre for Expertise of the International Chamber of Commerce.

Article 4. Applicable Rules

- (a) All proceedings before the Panel shall be governed by this Procedure and by the DRSP Rules that apply to a particular category of objection. The outcome of the proceedings shall be deemed an Expert Determination, and the members of the Panel shall act as experts.
- (b) The applicable DRSP Rules are the following:
 - (i) For a String Confusion Objection, the applicable DRSP Rules are the ICDR Supplementary Procedures for ICANN's New gTLD Program.
 - (ii) For an Existing Legal Rights Objection, the applicable DRSP Rules are the WIPO Rules for New gTLD Dispute Resolution.
 - (iii) For a Limited Public Interest Objection, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce (ICC), as supplemented by the ICC as needed.
 - (iv) For a Community Objection, the applicable DRSP Rules are the Rules for Expertise of the International Chamber of Commerce (ICC), as supplemented by the ICC as needed.
- (c) In the event of any discrepancy between this Procedure and the applicable DRSP Rules, this Procedure shall prevail.

- (d) The place of the proceedings, if relevant, shall be the location of the DRSP that is administering the proceedings.
- (e) In all cases, the Panel shall ensure that the parties are treated with equality, and that each party is given a reasonable opportunity to present its position.

Article 5. Language

- (a) The language of all submissions and proceedings under this Procedure shall be English.
- (b) Parties may submit supporting evidence in its original language, provided and subject to the authority of the Panel to determine otherwise, that such evidence is accompanied by a certified or otherwise official English translation of all relevant text.

Article 6. Communications and Time Limits

- (a) All communications by the Parties with the DRSPs and Panels must be submitted electronically. A Party that wishes to make a submission that is not available in electronic form (e.g., evidentiary models) shall request leave from the Panel to do so, and the Panel, in its sole discretion, shall determine whether to accept the non-electronic submission.
- (b) The DRSP, Panel, Applicant, and Objector shall provide copies to one another of all correspondence (apart from confidential correspondence between the Panel and the DRSP and among the Panel) regarding the proceedings.
- (c) For the purpose of determining the date of commencement of a time limit, a notice or other communication shall be deemed to have been received on the day that it is transmitted in accordance with paragraphs (a) and (b) of this Article.
- (d) For the purpose of determining compliance with a time limit, a notice or other communication shall be deemed to have been sent, made or transmitted if it is dispatched in accordance with paragraphs (a) and (b) of this Article prior to or on the day of the expiration of the time limit.
- (e) For the purpose of calculating a period of time under this Procedure, such period shall begin to run on the day following the day when a notice or other communication is received.
- (f) Unless otherwise stated, all time periods provided in the Procedure are calculated on the basis of calendar days

Article 7. Filing of the Objection

- (a) A person wishing to object to a new gTLD for which an application has been submitted may file an objection ("Objection"). Any Objection to a proposed new gTLD must be filed before the published closing date for the Objection Filing period.
- (b) The Objection must be filed with the appropriate DRSP, using a model form made available by that DRSP, with copies to ICANN and the Applicant.
- (c) The electronic addresses for filing Objections (the specific addresses shall be made available once they are created by providers):
 - (i) A String Confusion Objection must be filed at: [●].

- (ii) An Existing Legal Rights Objection must be filed at: [●].
 - (iii) A Limited Public Interest Objection must be filed at: [●].
 - (iv) A Community Objection must be filed at: [●].
- (d) All Objections must be filed separately:
- (i) An Objector who wishes to object to an application on more than one ground must file separate objections with the appropriate DRSP(s).
 - (ii) An Objector who wishes to object to more than one gTLD must file separate objections to each gTLD with the appropriate DRSP(s).
- (e) If an Objection is filed with the wrong DRSP, that DRSP shall promptly notify the Objector of the error and that DRSP shall not process the incorrectly filed Objection. The Objector may then cure the error by filing its Objection with the correct DRSP within seven (7) days of receipt of the error notice, failing which the Objection shall be disregarded. If the Objection is filed with the correct DRSP within seven (7) days of receipt of the error notice but after the lapse of the time for submitting an Objection stipulation by Article 7(a) of this Procedure, it shall be deemed to be within this time limit.

Article 8. Content of the Objection

- (a) The Objection shall contain, *inter alia*, the following information:
- (i) The names and contact information (address, telephone number, email address, etc.) of the Objector;
 - (ii) A statement of the Objector's basis for standing; and
 - (iii) A description of the basis for the Objection, including:
 - (aa) A statement of the ground upon which the Objection is being filed, as stated in Article 2(e) of this Procedure;
 - (bb) An explanation of the validity of the Objection and why the objection should be upheld.
- (b) The substantive portion of the Objection shall be limited to 5,000 words or 20 pages, whichever is less, excluding attachments. The Objector shall also describe and provide copies of any supporting or official documents upon which the Objection is based.
- (c) At the same time as the Objection is filed, the Objector shall pay a filing fee in the amount set in accordance with the applicable DRSP Rules and include evidence of such payment in the Objection. In the event that the filing fee is not paid within ten (10) days of the receipt of the Objection by the DRSP, the Objection shall be dismissed without prejudice.

Article 9. Administrative Review of the Objection

- (a) The DRSP shall conduct an administrative review of the Objection for the purpose of verifying compliance with Articles 5-8 of this Procedure and the applicable DRSP Rules, and inform the Objector, the Applicant and ICANN of the result of its review within

fourteen (14) days of its receipt of the Objection. The DRSP may extend this time limit for reasons explained in the notification of such extension.

- (b) If the DRSP finds that the Objection complies with Articles 5-8 of this Procedure and the applicable DRSP Rules, the DRSP shall confirm that the Objection shall be registered for processing.
- (c) If the DRSP finds that the Objection does not comply with Articles 5-8 of this Procedure and the applicable DRSP Rules, the DRSP shall have the discretion to request that any administrative deficiencies in the Objection be corrected within five (5) days. If the deficiencies in the Objection are cured within the specified period but after the lapse of the time limit for submitting an Objection stipulated by Article 7(a) of this Procedure, the Objection shall be deemed to be within this time limit.
- (d) If the DRSP finds that the Objection does not comply with Articles 5-8 of this Procedure and the applicable DRSP Rules, and the deficiencies in the Objection are not corrected within the period specified in Article 9(c), the DRSP shall dismiss the Objection and close the proceedings, without prejudice to the Objector's submission of a new Objection that complies with this Procedure, provided that the Objection is filed within the deadline for filing such Objections. The DRSP's review of the Objection shall not interrupt the running of the time limit for submitting an Objection stipulated by Article 7(a) of this Procedure.
- (e) Immediately upon registering an Objection for processing, pursuant to Article 9(b), the DRSP shall post the following information about the Objection on its website: (i) the proposed string to which the Objection is directed; (ii) the names of the Objector and the Applicant; (iii) the grounds for the Objection; and (iv) the dates of the DRSP's receipt of the Objection.

Article 10. ICANN's Dispute Announcement

- (a) Within thirty (30) days of the deadline for filing Objections in relation to gTLD applications in a given round, ICANN shall publish a document on its website identifying all of the admissible Objections that have been filed (the "Dispute Announcement"). ICANN shall also directly inform each DRSP of the posting of the Dispute Announcement.
- (b) ICANN shall monitor the progress of all proceedings under this Procedure and shall take steps, where appropriate, to coordinate with any DRSP in relation to individual applications for which objections are pending before more than one DRSP.

Article 11. Response to the Objection

- (a) Upon receipt of the Dispute Announcement, each DRSP shall promptly send a notice to: (i) each Applicant for a new gTLD to which one or more admissible Objections have been filed with that DRSP; and (ii) the respective Objector(s).
- (b) The Applicant shall file a response to each Objection (the "Response"). The Response shall be filed within thirty (30) days of the transmission of the notice by the DRSP pursuant to Article 11(a).
- (c) The Response must be filed with the appropriate DRSP, using a model form made available by that DRSP, with copies to ICANN and the Objector.

- (d) The Response shall contain, inter alia, the following information:
 - (i) The names and contact information (address, telephone number, email address, etc.) of the Applicant; and
 - (ii) A point-by-point response to the statements made in the Objection.
- (e) The substantive portion of the Response shall be limited to 5,000 words or 20 pages, whichever is less, excluding attachments. The Applicant shall also describe and provide copies of any supporting or official documents upon which the Response is based.
- (f) At the same time as the Response is filed, the Applicant shall pay a filing fee in the amount set and published by the relevant DRSP (which shall be the same as the filing fee paid by the Objector) and include evidence of such payment in the Response. In the event that the filing fee is not paid within ten (10) days of the receipt of the Response by the DRSP, the Applicant shall be deemed to be in default, any Response disregarded and the Objection shall be deemed successful.
- (g) If the DRSP finds that the Response does not comply with Articles 11(c) and (d)(1) of this Procedure and the applicable DRSP Rules, the DRSP shall have the discretion to request that any administrative deficiencies in the Response be corrected within five (5) days. If the administrative deficiencies in the Response are cured within the specified period but after the lapse of the time limit for submitting a Response pursuant to this Procedure, the Response shall be deemed to be within this time limit.
- (g) If the Applicant fails to file a Response to the Objection within the 30-day time limit, the Applicant shall be deemed to be in default and the Objection shall be deemed successful. No fees paid by the Applicant will be refunded in case of default.

Article 12. Consolidation of Objections

- (a) The DRSP is encouraged, whenever possible and practicable, and as may be further stipulated in the applicable DRSP Rules, to consolidate Objections, for example, when more than one Objector has filed an Objection to the same gTLD on the same grounds. The DRSP shall endeavor to decide upon consolidation prior to issuing its notice pursuant to Article 11(a) and, where appropriate, shall inform the parties of the consolidation in that notice.
- (b) If the DRSP itself has not decided to consolidate two or more Objections, any Applicant or Objector may propose the consolidation of Objections within seven (7) days of the notice given by the DRSP pursuant to Article 11(a). If, following such a proposal, the DRSP decides to consolidate certain Objections, which decision must be made within 14 days of the notice given by the DRSP pursuant to Article 11(a), the deadline for the Applicant's Response in the consolidated proceeding shall be thirty (30) days from the Applicant's receipt of the DRSP's notice of consolidation.
- (c) In deciding whether to consolidate Objections, the DRSP shall weigh the benefits (in terms of time, cost, consistency of decisions, etc.) that may result from the consolidation against the possible prejudice or inconvenience that the consolidation may cause. The DRSP's determination on consolidation shall be final and not subject to appeal.
- (d) Objections based upon different grounds, as summarized in Article 2(e), shall not be consolidated.

Article 13. The Panel

- (a) The DRSP shall select and appoint the Panel of Expert(s) within thirty (30) days after receiving the Response.
- (b) Number and specific qualifications of Expert(s):
 - (i) There shall be one Expert in proceedings involving a String Confusion Objection.
 - (ii) There shall be one Expert or, if all of the Parties so agree, three Experts with relevant experience in intellectual property rights disputes in proceedings involving an Existing Legal Rights Objection.
 - (iii) There shall be three Experts recognized as eminent jurists of international reputation, one of whom shall be designated as the Chair. The Chair shall be of a nationality different from the nationalities of the Applicant and of the Objector, in proceedings involving a Limited Public Interest Objection.
 - (iv) There shall be one Expert in proceedings involving a Community Objection.
- (c) All Experts acting under this Procedure shall be impartial and independent of the parties. The applicable DRSP Rules stipulate the manner by which each Expert shall confirm and maintain their impartiality and independence.
- (d) The applicable DRSP Rules stipulate the procedures for challenging an Expert and replacing an Expert.
- (e) Unless required by a court of law or authorized in writing by the parties, an Expert shall not act in any capacity whatsoever, in any pending or future proceedings, whether judicial, arbitral or otherwise, relating to the matter referred to expert determination under this Procedure.

Article 14. Costs

- (a) Each DRSP shall determine the costs for the proceedings that it administers under this Procedure in accordance with the applicable DRSP Rules. Such costs shall cover the fees and expenses of the members of the Panel, as well as the administrative fees of the DRSP (the "Costs").
- (b) Within ten (10) days of constituting the Panel, the DRSP shall estimate the total Costs and request the Objector and the Applicant/Respondent each to pay in advance the full amount of the Costs to the DRSP. Each party shall make its advance payment of Costs within ten (10) days of receiving the DRSP's request for payment and submit to the DRSP evidence of such payment. The respective filing fees paid by the Parties shall be credited against the amounts due for this advance payment of Costs.
- (c) The DRSP may revise its estimate of the total Costs and request additional advance payments from the parties during the proceedings.
- (d) Failure to make an advance payment of Costs:
 - (i) If the Objector fails to make the advance payment of Costs, its Objection shall be dismissed and no fees that it has paid shall be refunded.

- (ii) If the Applicant fails to make the advance payment of Costs, the Objection will be deemed to have been sustained and no fees that the Applicant has paid shall be refunded.
- (e) Upon the termination of the proceedings, after the Panel has rendered its Expert Determination, the DRSP shall refund to the prevailing party, as determined by the Panel, its advance payment(s) of Costs.

Article 15. Representation and Assistance

- (a) The parties may be represented or assisted by persons of their choice.
- (b) Each party or party representative shall communicate the name, contact information and function of such persons to the DRSP and the other party (or parties in case of consolidation).

Article 16. Negotiation and Mediation

- (a) The parties are encouraged, but not required, to participate in negotiations and/or mediation at any time throughout the dispute resolution process aimed at settling their dispute amicably.
- (b) Each DRSP shall be able to propose, if requested by the parties, a person who could assist the parties as mediator.
- (c) A person who acts as mediator for the parties shall not serve as an Expert in a dispute between the parties under this Procedure or any other proceeding under this Procedure involving the same gTLD.
- (d) The conduct of negotiations or mediation shall not, *ipso facto*, be the basis for a suspension of the dispute resolution proceedings or the extension of any deadline under this Procedure. Upon the joint request of the parties, the DRSP or (after it has been constituted) the Panel may grant the extension of a deadline or the suspension of the proceedings. Absent exceptional circumstances, such extension or suspension shall not exceed thirty (30) days and shall not delay the administration of any other Objection.
- (e) If, during negotiations and/or mediation, the parties agree on a settlement of the matter referred to the DRSP under this Procedure, the parties shall inform the DRSP, which shall terminate the proceedings, subject to the parties' payment obligation under this Procedure having been satisfied, and inform ICANN and the parties accordingly.

Article 17. Additional Written Submissions

- (a) The Panel may decide whether the parties shall submit any written statements in addition to the Objection and the Response, and it shall fix time limits for such submissions.
- (b) The time limits fixed by the Panel for additional written submissions shall not exceed thirty (30) days, unless the Panel, having consulted the DRSP, determines that exceptional circumstances justify a longer time limit.

Article 18. Evidence

In order to achieve the goal of resolving disputes over new gTLDs rapidly and at reasonable cost, procedures for the production of documents shall be limited. In exceptional cases, the Panel may require a party to provide additional evidence.

Article 19. Hearings

- (a) Disputes under this Procedure and the applicable DRSP Rules will usually be resolved without a hearing.
- (b) The Panel may decide, on its own initiative or at the request of a party, to hold a hearing only in extraordinary circumstances.
- (c) In the event that the Panel decides to hold a hearing:
 - (i) The Panel shall decide how and where the hearing shall be conducted.
 - (ii) In order to expedite the proceedings and minimize costs, the hearing shall be conducted by videoconference if possible.
 - (iii) The hearing shall be limited to one day, unless the Panel decides, in exceptional circumstances, that more than one day is required for the hearing.
 - (iv) The Panel shall decide whether the hearing will be open to the public or conducted in private.

Article 20. Standards

- (a) For each category of Objection identified in Article 2(e), the Panel shall apply the standards that have been defined by ICANN.
- (b) In addition, the Panel may refer to and base its findings upon the statements and documents submitted and any rules or principles that it determines to be applicable.
- (c) The Objector bears the burden of proving that its Objection should be sustained in accordance with the applicable standards.

Article 21. The Expert Determination

- (a) The DRSP and the Panel shall make reasonable efforts to ensure that the Expert Determination is rendered within forty-five (45) days of the constitution of the Panel. In specific circumstances such as consolidated cases and in consultation with the DRSP, if significant additional documentation is requested by the Panel, a brief extension may be allowed.
- (b) The Panel shall submit its Expert Determination in draft form to the DRSP's scrutiny as to form before it is signed, unless such scrutiny is specifically excluded by the applicable DRSP Rules. The modifications proposed by the DRSP to the Panel, if any, shall address only the form of the Expert Determination. The signed Expert Determination shall be communicated to the DRSP, which in turn will communicate that Expert Determination to the Parties and ICANN.
- (c) When the Panel comprises three Experts, the Expert Determination shall be made by a majority of the Experts.

- (d) The Expert Determination shall be in writing, shall identify the prevailing party and shall state the reasons upon which it is based. The remedies available to an Applicant or an Objector pursuant to any proceeding before a Panel shall be limited to the success or dismissal of an Objection and to the refund by the DRSP to the prevailing party, as determined by the Panel in its Expert Determination, of its advance payment(s) of Costs pursuant to Article 14(e) of this Procedure and any relevant provisions of the applicable DRSP Rules.
- (e) The Expert Determination shall state the date when it is made, and it shall be signed by the Expert(s). If any Expert fails to sign the Expert Determination, it shall be accompanied by a statement of the reason for the absence of such signature.
- (f) In addition to providing electronic copies of its Expert Determination, the Panel shall provide a signed hard copy of the Expert Determination to the DRSP, unless the DRSP Rules provide for otherwise.
- (g) Unless the Panel decides otherwise, the Expert Determination shall be published in full on the DRSP's website.

Article 22. Exclusion of Liability

In addition to any exclusion of liability stipulated by the applicable DRSP Rules, neither the Expert(s), nor the DRSP and its employees, nor ICANN and its Board members, employees and consultants shall be liable to any person for any act or omission in connection with any proceeding conducted under this Procedure.

Article 23. Modification of the Procedure

- (a) ICANN may from time to time, in accordance with its Bylaws, modify this Procedure.
- (b) The version of this Procedure that is applicable to a dispute resolution proceeding is the version that was in effect on the day when the relevant application for a new gTLD is submitted.

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 4

4 June 2012

Module 4

String Contention Procedures

This module describes situations in which contention over applied-for gTLD strings occurs, and the methods available to applicants for resolving such contention cases.

4.1 String Contention

String contention occurs when either:

1. Two or more applicants for an identical gTLD string successfully complete all previous stages of the evaluation and dispute resolution processes; or
2. Two or more applicants for similar gTLD strings successfully complete all previous stages of the evaluation and dispute resolution processes, and the similarity of the strings is identified as creating a probability of user confusion if more than one of the strings is delegated.

ICANN will not approve applications for proposed gTLD strings that are identical or that would result in user confusion, called contending strings. If either situation above occurs, such applications will proceed to contention resolution through either community priority evaluation, in certain cases, or through an auction. Both processes are described in this module. A group of applications for contending strings is referred to as a contention set.

(In this Applicant Guidebook, “similar” means strings so similar that they create a probability of user confusion if more than one of the strings is delegated into the root zone.)

4.1.1 Identification of Contention Sets

Contention sets are groups of applications containing identical or similar applied-for gTLD strings. Contention sets are identified during Initial Evaluation, following review of all applied-for gTLD strings. ICANN will publish preliminary contention sets once the String Similarity review is completed, and will update the contention sets as necessary during the evaluation and dispute resolution stages.

Applications for identical gTLD strings will be automatically assigned to a contention set. For example, if Applicant A and Applicant B both apply for .TLDSTRING, they will be identified as being in a contention set. Such testing for identical strings also takes into consideration the code point variants listed in any relevant IDN table. That is, two or more applicants whose applied-for strings or designated variants are variant strings according to an IDN table submitted to ICANN would be considered in direct contention with one another. For example, if one applicant applies for string A and another applies for string B, and strings A and B are variant TLD strings as defined in Module 1, then the two applications are in direct contention.

The String Similarity Panel will also review the entire pool of applied-for strings to determine whether the strings proposed in any two or more applications are so similar that they would create a probability of user confusion if allowed to coexist in the DNS. The panel will make such a determination for each pair of applied-for gTLD strings. The outcome of the String Similarity review described in Module 2 is the identification of contention sets among applications that have direct or indirect contention relationships with one another.

Two strings are in **direct contention** if they are identical or similar to one another. More than two applicants might be represented in a direct contention situation: if four different applicants applied for the same gTLD string, they would all be in direct contention with one another.

Two strings are in **indirect contention** if they are both in direct contention with a third string, but not with one another. The example that follows explains direct and indirect contention in greater detail.

In Figure 4-1, Strings A and B are an example of direct contention. Strings C and G are an example of indirect contention. C and G both contend with B, but not with one another. The figure as a whole is one contention set. A contention set consists of all applications that are linked by string contention to one another, directly or indirectly.

Figure 4-1 – This diagram represents one contention set, featuring both directly and indirectly contending strings.

While preliminary contention sets are determined during Initial Evaluation, the final configuration of the contention sets can only be established once the evaluation and dispute resolution process stages have concluded. This is because any application excluded through those processes might modify a contention set identified earlier.

A contention set may be augmented, split into two sets, or eliminated altogether as a result of an Extended Evaluation or dispute resolution proceeding. The composition of a contention set may also be modified as some applications may be voluntarily withdrawn throughout the process.

Refer to Figure 4-2: In contention set 1, applications D and G are eliminated. Application A is the only remaining application, so there is no contention left to resolve.

In contention set 2, all applications successfully complete Extended Evaluation and Dispute Resolution, so the original contention set remains to be resolved.

In contention set 3, application F is eliminated. Since application F was in direct contention with E and J, but E and J are not in contention with one other, the original contention set splits into two sets: one containing E and K in direct contention, and one containing I and J.

Figure 4-2 – Resolution of string contention cannot begin until all applicants within a contention set have completed all applicable previous stages.

The remaining contention cases must then be resolved through community priority evaluation or by other means, depending on the circumstances. In the string contention resolution stage, ICANN addresses each contention set to achieve an unambiguous resolution.

As described elsewhere in this guidebook, cases of contention might be resolved by community priority evaluation or an agreement among the parties. Absent that, the last-resort contention resolution mechanism will be an auction.

4.1.2 *Impact of String Confusion Dispute Resolution Proceedings on Contention Sets*

If an applicant files a string confusion objection against another application (refer to Module 3), and the panel finds that user confusion is probable (that is, finds in favor of the objector), the two applications will be placed in direct contention with each other. Thus, the outcome of a dispute resolution proceeding based on a string confusion objection would be a new contention set structure for the relevant applications, augmenting the original contention set.

If an applicant files a string confusion objection against another application, and the panel finds that string

confusion does not exist (that is, finds in favor of the responding applicant), the two applications will not be considered in direct contention with one another.

A dispute resolution outcome in the case of a string confusion objection filed by another applicant will not result in removal of an application from a previously established contention set.

4.1.3 Self-Resolution of String Contention

Applicants that are identified as being in contention are encouraged to reach a settlement or agreement among themselves that resolves the contention. This may occur at any stage of the process, once ICANN publicly posts the applications received and the preliminary contention sets on its website.

Applicants may resolve string contention in a manner whereby one or more applicants withdraw their applications. An applicant may not resolve string contention by selecting a new string or by replacing itself with a joint venture. It is understood that applicants may seek to establish joint ventures in their efforts to resolve string contention. However, material changes in applications (for example, combinations of applicants to resolve contention) will require re-evaluation. This might require additional fees or evaluation in a subsequent application round. Applicants are encouraged to resolve contention by combining in a way that does not materially affect the remaining application. Accordingly, new joint ventures must take place in a manner that does not materially change the application, to avoid being subject to re-evaluation.

4.1.4 Possible Contention Resolution Outcomes

An application that has successfully completed all previous stages and is no longer part of a contention set due to changes in the composition of the contention set (as described in subsection 4.1.1) or self-resolution by applicants in the contention set (as described in subsection 4.1.3) may proceed to the next stage.

An application that prevails in a contention resolution procedure, either community priority evaluation or auction, may proceed to the next stage.

In some cases, an applicant who is not the outright winner of a string contention resolution process can still proceed. This situation is explained in the following paragraphs.

If the strings within a given contention set are all identical, the applications are in direct contention with each other and there can only be one winner that proceeds to the next step.

However, where there are both direct and indirect contention situations within a set, more than one string may survive the resolution.

For example, consider a case where string A is in contention with B, and B is in contention with C, but C is not in contention with A. If A wins the contention resolution procedure, B is eliminated but C can proceed since C is not in direct contention with the winner and both strings can coexist in the DNS without risk for confusion.

4.2 Community Priority Evaluation

Community priority evaluation will only occur if a community-based applicant selects this option. Community priority evaluation can begin once all applications in the contention set have completed all previous stages of the process.

The community priority evaluation is an independent analysis. Scores received in the applicant reviews are not carried forward to the community priority evaluation. Each application participating in the community priority evaluation begins with a score of zero.

4.2.1 Eligibility for Community Priority Evaluation

As described in subsection 1.2.3 of Module 1, all applicants are required to identify whether their application type is:

- Community-based; or
- Standard.

Applicants designating their applications as community-based are also asked to respond to a set of questions in the application form to provide relevant information if a community priority evaluation occurs.

Only community-based applicants are eligible to participate in a community priority evaluation.

At the start of the contention resolution stage, all community-based applicants within remaining contention sets will be notified of the opportunity to opt for a community priority evaluation via submission of a deposit by a specified date. Only those applications for which a deposit has been received by the deadline will be scored in the community priority evaluation. Following the evaluation, the deposit will be refunded to applicants that score 14 or higher.

Before the community priority evaluation begins, the applicants who have elected to participate may be asked to provide additional information relevant to the community priority evaluation.

4.2.2 Community Priority Evaluation Procedure

Community priority evaluations for each eligible contention set will be performed by a community priority panel appointed by ICANN to review these applications. The panel's role is to determine whether any of the community-based applications fulfills the community priority criteria. Standard applicants within the contention set, if any, will not participate in the community priority evaluation.

If a single community-based application is found to meet the community priority criteria (see subsection 4.2.3 below), that applicant will be declared to prevail in the community priority evaluation and may proceed. If more than one community-based application is found to meet the criteria, the remaining contention between them will be resolved as follows:

- In the case where the applications are in indirect contention with one another (see subsection 4.1.1), they will both be allowed to proceed to the next stage. In this case, applications that are in direct contention with any of these community-based applications will be eliminated.
- In the case where the applications are in direct contention with one another, these applicants will proceed to an auction. If all parties agree and present a joint request, ICANN may postpone the auction for a three-month period while the parties attempt to reach a settlement before proceeding to auction. This is a one-time option; ICANN will grant no more than one such request for each set of contending applications.

If none of the community-based applications are found to meet the criteria, then all of the parties in the contention set (both standard and community-based applicants) will proceed to an auction.

Results of each community priority evaluation will be posted when completed.

Applicants who are eliminated as a result of a community priority evaluation are eligible for a partial refund of the gTLD evaluation fee (see Module 1).

4.2.3 Community Priority Evaluation Criteria

The Community Priority Panel will review and score the one or more community-based applications having elected the community priority evaluation against four criteria as listed below.

The scoring process is conceived to identify qualified community-based applications, while preventing both “false positives” (awarding undue priority to an application that refers to a “community” construed merely to get a sought-after generic word as a gTLD string) and “false negatives” (not awarding priority to a qualified community application). This calls for a holistic approach, taking multiple criteria into account, as reflected in the process. The scoring will be performed by a panel and be based on information provided in the application plus other relevant information available (such as public information regarding the community represented). The panel may also perform independent research, if deemed necessary to reach informed scoring decisions.

It should be noted that a qualified community application eliminates all directly contending standard applications, regardless of how well qualified the latter may be. This is a fundamental reason for very stringent requirements for qualification of a community-based application, as embodied in the criteria below. Accordingly, a finding by the panel that an application does not meet the scoring threshold to prevail in a community priority evaluation is not necessarily an indication the community itself is in some way inadequate or invalid.

The sequence of the criteria reflects the order in which they will be assessed by the panel. The utmost care has been taken to avoid any “double-counting” - any negative aspect found in assessing an application for one criterion

should only be counted there and should not affect the assessment for other criteria.

An application must score at least 14 points to prevail in a community priority evaluation. The outcome will be determined according to the procedure described in subsection 4.2.2.

Criterion #1: Community Establishment (0-4 points)

A maximum of 4 points is possible on the Community Establishment criterion:

As measured by:

A. Delineation (2)

2	1	0
Clearly delineated, organized, and pre-existing community.	Clearly delineated and pre-existing community, but not fulfilling the requirements for a score of 2.	Insufficient delineation and pre-existence for a score of 1.

B. Extension (2)

2	1	0
Community of considerable size and longevity.	Community of either considerable size or longevity, but not fulfilling the requirements for a score of 2.	Community of neither considerable size nor longevity.

This section relates to the community as explicitly identified and defined according to statements in the application. (The implicit reach of the applied-for string is not

considered here, but taken into account when scoring Criterion #2, "Nexus between Proposed String and Community.")

Criterion 1 Definitions

- "Community" - Usage of the expression "community" has evolved considerably from its Latin origin – "communitas" meaning "fellowship" – while still implying more of cohesion than a mere commonality of interest. Notably, as "community" is used throughout the application, there should be:
(a) an awareness and recognition of a community among its members; (b) some understanding of the community's existence prior to September 2007 (when the new gTLD policy recommendations were completed); and (c) extended tenure or longevity—non-transience—into the future.
- "Delineation" relates to the membership of a community, where a clear and straight-forward membership definition scores high, while an unclear, dispersed or unbound definition scores low.
- "Pre-existing" means that a community has been active as such since before the new gTLD policy recommendations were completed in September 2007.
- "Organized" implies that there is at least one entity mainly dedicated to the community, with documented evidence of community activities.
- "Extension" relates to the dimensions of the community, regarding its number of members, geographical reach, and foreseeable activity lifetime, as further explained in the following.
- "Size" relates both to the number of members and the geographical reach of the community, and will be scored depending on the context rather than on absolute numbers - a geographic location community may count millions of members in a limited location, a language community may have a million members with some spread over the globe, a community of service providers may have "only" some hundred members although well spread over the globe, just to mention some examples - all these can be regarded as of "considerable size."

- "Longevity" means that the pursuits of a community are of a lasting, non-transient nature.

Criterion 1 Guidelines

With respect to "Delineation" and "Extension," it should be noted that a community can consist of legal entities (for example, an association of suppliers of a particular service), of individuals (for example, a language community) or of a logical alliance of communities (for example, an international federation of national communities of a similar nature). All are viable as such, provided the requisite awareness and recognition of the community is at hand among the members. Otherwise the application would be seen as not relating to a real community and score 0 on both "Delineation" and "Extension."

With respect to "Delineation," if an application satisfactorily demonstrates all three relevant parameters (delineation, pre-existing and organized), then it scores a 2.

With respect to "Extension," if an application satisfactorily demonstrates both community size and longevity, it scores a 2.

Criterion #2: Nexus between Proposed String and Community (0-4 points)

A maximum of 4 points is possible on the Nexus criterion:

As measured by:

A. Nexus (3)

3	2	0
The string matches the name of the community or is a well-known short-form or abbreviation of the community	String identifies the community, but does not qualify for a score of 3.	String nexus does not fulfill the requirements for a score of 2.

3	2	0
---	---	---

name.

B. Uniqueness (1)

1	0
---	---

String has no other significant meaning beyond identifying the community described in the application.

String does not fulfill the requirement for a score of 1.

This section evaluates the relevance of the string to the specific community that it claims to represent.

Criterion 2 Definitions

- "Name" of the community means the established name by which the community is commonly known by others. It may be, but does not need to be, the name of an organization dedicated to the community.
- "Identify" means that the applied for string closely describes the community or the community members, without over-reaching substantially beyond the community.

Criterion 2 Guidelines

With respect to "Nexus," for a score of 3, the essential aspect is that the applied-for string is commonly known by others as the identification / name of the community.

With respect to "Nexus," for a score of 2, the applied-for string should closely describe the community or the community members, without over-reaching substantially beyond the community. As an example, a string could qualify for a score of 2 if it is a noun that the typical community member would naturally be called in the context. If the string appears excessively broad (such as, for example, a globally well-known but local tennis club applying for ".TENNIS") then it would not qualify for a 2.

With respect to "Uniqueness," "significant meaning" relates to the public in general, with consideration of the community language context added.

"Uniqueness" will be scored both with regard to the community context and from a general point of view. For example, a string for a particular geographic location community may seem unique from a general perspective, but would not score a 1 for uniqueness if it carries another significant meaning in the common language used in the relevant community location. The phrasing "...beyond identifying the community" in the score of 1 for "uniqueness" implies a requirement that the string does identify the community, i.e. scores 2 or 3 for "Nexus," in order to be eligible for a score of 1 for "Uniqueness."

It should be noted that "Uniqueness" is only about the *meaning* of the string - since the evaluation takes place to resolve contention there will obviously be other applications, community-based and/or standard, with identical or confusingly similar strings in the contention set to resolve, so the string will clearly not be "unique" in the sense of "alone."

Criterion #3: Registration Policies (0-4 points)

A maximum of 4 points is possible on the Registration Policies criterion:

As measured by:

A. Eligibility (1)

1	0
Eligibility restricted to community members.	Largely unrestricted approach to eligibility.

B. Name selection (1)

1	0
Policies include name selection rules consistent with the articulated community-based purpose of the applied-for gTLD.	Policies do not fulfill the requirements for a score of 1.

C. Content and use (1)

1	0
Policies include rules for content and use consistent with the articulated community-based purpose of the applied-for gTLD.	Policies do not fulfill the requirements for a score of 1.

D. Enforcement (1)

1	0
Policies include specific enforcement measures (e.g. investigation practices, penalties, takedown procedures) constituting a coherent set with appropriate appeal mechanisms.	Policies do not fulfill the requirements for a score of 1.

This section evaluates the applicant's registration policies as indicated in the application. Registration policies are the conditions that the future registry will set for prospective registrants, i.e. those desiring to register second-level domain names under the registry.

Criterion 3 Definitions

- "Eligibility" means the qualifications that entities or individuals must have in order to be allowed as registrants by the registry.
- "Name selection" means the conditions that must be fulfilled for any second-level domain name to be deemed acceptable by the registry.
- "Content and use" means the restrictions stipulated by the registry as to the content provided in and the use of any second-level domain name in the registry.
- "Enforcement" means the tools and provisions set out by the registry to prevent and remedy any breaches of the conditions by registrants.

Criterion 3 Guidelines

With respect to "Eligibility," the limitation to community "members" can invoke a formal membership but can also be satisfied in other ways, depending on the structure and orientation of the community at hand. For example, for a geographic location community TLD, a limitation to members of the community can be achieved by requiring that the registrant's physical address is within the boundaries of the location.

With respect to "Name selection," "Content and use," and "Enforcement," scoring of applications against these sub-criteria will be done from a holistic perspective, with due regard for the particularities of the community explicitly addressed. For example, an application proposing a TLD for a language community may feature strict rules imposing this language for name selection as well as for content and use, scoring 1 on both B and C above. It could nevertheless include forbearance in the enforcement measures for tutorial sites assisting those wishing to learn the language and still score 1 on D. More restrictions do not automatically result in a higher score. The restrictions and corresponding enforcement mechanisms proposed by the applicant should show an alignment with the community-based purpose of the TLD and demonstrate continuing accountability to the community named in the application.

Criterion #4: Community Endorsement (0-4 points)

4	3	2	1	0	
Community Endorsement					
High		←————→			Low

As measured by:

A. Support (2)

2	1	0
Applicant is, or has documented support from, the recognized community institution(s)/ member organization(s) or has otherwise documented authority to represent the community.	Documented support from at least one group with relevance, but insufficient support for a score of 2.	Insufficient proof of support for a score of 1.

B. Opposition (2)

2	1	0
No opposition of relevance.	Relevant opposition from one group of non-negligible size.	Relevant opposition from two or more groups of non-negligible size.

This section evaluates community support and/or opposition to the application. Support and opposition will be scored in relation to the communities explicitly addressed as stated in the application, with due regard for the communities implicitly addressed by the string.

Criterion 4 Definitions

- "Recognized" means the institution(s)/organization(s) that, through membership or otherwise, are clearly recognized by

the community members as representative of the community.

- "Relevance" and "relevant" refer to the communities explicitly and implicitly addressed. This means that opposition from communities not identified in the application but with an association to the applied-for string would be considered relevant.

Criterion 4 Guidelines

With respect to "Support," it follows that documented support from, for example, the only national association relevant to a particular community on a national level would score a 2 if the string is clearly oriented to that national level, but only a 1 if the string implicitly addresses similar communities in other nations.

Also with respect to "Support," the plurals in brackets for a score of 2, relate to cases of multiple institutions/organizations. In such cases there must be documented support from institutions/organizations representing a majority of the overall community addressed in order to score 2.

The applicant will score a 1 for "Support" if it does not have support from the majority of the recognized community institutions/member organizations, or does not provide full documentation that it has authority to represent the community with its application. A 0 will be scored on "Support" if the applicant fails to provide documentation showing support from recognized community institutions/community member organizations, or does not provide documentation showing that it has the authority to represent the community. It should be noted, however, that documented support from groups or communities that may be seen as implicitly addressed but have completely different orientations compared to the applicant community will not be required for a score of 2 regarding support.

To be taken into account as relevant support, such documentation must contain a description of the process and rationale used in arriving at the expression of support. Consideration of support is not based merely on the number of comments or expressions of support received.

When scoring "Opposition," previous objections to the application as well as public comments during the same application round will be taken into account and assessed

in this context. There will be no presumption that such objections or comments would prevent a score of 2 or lead to any particular score for “Opposition.” To be taken into account as relevant opposition, such objections or comments must be of a reasoned nature. Sources of opposition that are clearly spurious, unsubstantiated, made for a purpose incompatible with competition objectives, or filed for the purpose of obstruction will not be considered relevant.

4.3 Auction: Mechanism of Last Resort

It is expected that most cases of contention will be resolved by the community priority evaluation, or through voluntary agreement among the involved applicants. Auction is a tie-breaker method for resolving string contention among the applications within a contention set, if the contention has not been resolved by other means.

An auction will not take place to resolve contention in the case where the contending applications are for geographic names (as defined in Module 2). In this case, the applications will be suspended pending resolution by the applicants.

An auction will take place, where contention has not already been resolved, in the case where an application for a geographic name is in a contention set with applications for similar strings that have not been identified as geographic names.

In practice, ICANN expects that most contention cases will be resolved through other means before reaching the auction stage. However, there is a possibility that significant funding will accrue to ICANN as a result of one or more auctions.¹

¹ The purpose of an auction is to resolve contention in a clear, objective manner. It is planned that costs of the new gTLD program will offset by fees, so any funds coming from a last resort contention resolution mechanism such as auctions would result (after paying for the auction process) in additional funding. Any proceeds from auctions will be reserved and earmarked until the uses of funds are determined. Funds must be used in a manner that supports directly ICANN's Mission and Core Values and also allows ICANN to maintain its not for profit status.

Possible uses of auction funds include formation of a foundation with a clear mission and a transparent way to allocate funds to projects that are of interest to the greater Internet community, such as grants to support new gTLD applications or registry operators from communities in subsequent gTLD rounds, the creation of an ICANN-administered/community-based fund for specific projects for the benefit of the Internet community, the creation of a registry continuity fund for the protection of registrants (ensuring that funds would be in place to support the operation of a gTLD registry until a successor could be found), or establishment of a security fund to expand use of secure protocols, conduct research, and support standards development organizations in accordance with ICANN's security and stability mission.

4.3.1 Auction Procedures

An auction of two or more applications within a contention set is conducted as follows. The auctioneer successively increases the prices associated with applications within the contention set, and the respective applicants indicate their willingness to pay these prices. As the prices rise, applicants will successively choose to exit from the auction. When a sufficient number of applications have been eliminated so that no direct contentions remain (i.e., the remaining applications are no longer in contention with one another and all the relevant strings can be delegated as TLDs), the auction will be deemed to conclude. At the auction's conclusion, the applicants with remaining applications will pay the resulting prices and proceed toward delegation. This procedure is referred to as an "ascending-clock auction."

This section provides applicants an informal introduction to the practicalities of participation in an ascending-clock auction. It is intended only as a general introduction and is only preliminary. The detailed set of Auction Rules will be available prior to the commencement of any auction proceedings. If any conflict arises between this module and the auction rules, the auction rules will prevail.

For simplicity, this section will describe the situation where a contention set consists of two or more applications for identical strings.

All auctions will be conducted over the Internet, with participants placing their bids remotely using a web-based software system designed especially for auction. The auction software system will be compatible with current versions of most prevalent browsers, and will not require the local installation of any additional software.

Auction participants ("bidders") will receive instructions for access to the online auction site. Access to the site will be password-protected and bids will be encrypted through SSL. If a bidder temporarily loses connection to the Internet, that bidder may be permitted to submit its bids in a given auction round by fax, according to procedures described

The amount of funding resulting from auctions, if any, will not be known until all relevant applications have completed this step. Thus, a detailed mechanism for allocation of these funds is not being created at present. However, a process can be pre-established to enable community consultation in the event that such funds are collected. This process will include, at a minimum, publication of data on any funds collected, and public comment on any proposed models.

in the auction rules. The auctions will generally be conducted to conclude quickly, ideally in a single day.

The auction will be carried out in a series of auction rounds, as illustrated in Figure 4-3. The sequence of events is as follows:

1. For each auction round, the auctioneer will announce in advance: (1) the start-of-round price, (2) the end-of-round price, and (3) the starting and ending times of the auction round. In the first auction round, the start-of-round price for all bidders in the auction will be USD 0. In later auction rounds, the start-of-round price will be its end-of-round price from the previous auction round.

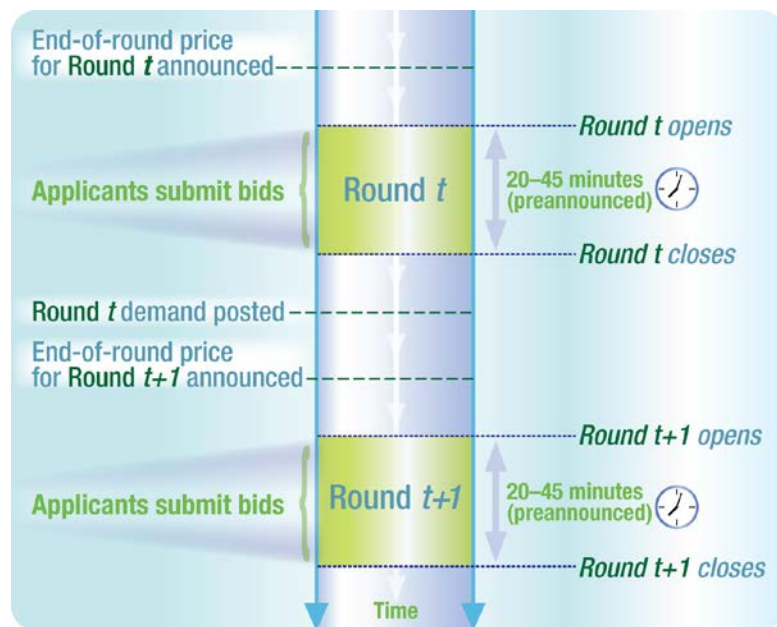

Figure 4-3 – Sequence of events during an ascending-clock auction.

2. During each auction round, bidders will be required to submit a bid or bids representing their willingness to pay within the range of intermediate prices between the start-of-round and end-of-round prices. In this way a bidder indicates its willingness to stay in the auction at all prices through and including the end-of-auction round price, or its wish to exit the auction at a price less than the end-of-auction round price, called the exit bid.
3. Exit is irrevocable. If a bidder exited the auction in a previous auction round, the bidder is not permitted to re-enter in the current auction round.

4. Bidders may submit their bid or bids at any time during the auction round.
5. Only bids that comply with all aspects of the auction rules will be considered valid. If more than one valid bid is submitted by a given bidder within the time limit of the auction round, the auctioneer will treat the last valid submitted bid as the actual bid.
6. At the end of each auction round, bids become the bidders' legally-binding offers to secure the relevant gTLD strings at prices up to the respective bid amounts, subject to closure of the auction in accordance with the auction rules. In later auction rounds, bids may be used to exit from the auction at subsequent higher prices.
7. After each auction round, the auctioneer will disclose the aggregate number of bidders remaining in the auction at the end-of-round prices for the auction round, and will announce the prices and times for the next auction round.
 - Each bid should consist of a single price associated with the application, and such price must be greater than or equal to the start-of-round price.
 - If the bid amount is strictly less than the end-of-round price, then the bid is treated as an exit bid at the specified amount, and it signifies the bidder's binding commitment to pay up to the bid amount if its application is approved.
 - If the bid amount is greater than or equal to the end-of-round price, then the bid signifies that the bidder wishes to remain in the auction at all prices in the current auction round, and it signifies the bidder's binding commitment to pay up to the end-of-round price if its application is approved. Following such bid, the application cannot be eliminated within the current auction round.
 - To the extent that the bid amount exceeds the end-of-round price, then the bid is also treated as a proxy bid to be carried forward to the next auction round. The bidder will be permitted to change the proxy bid amount in the next auction round, and the amount of the proxy bid will not constrain the bidder's ability to submit any valid bid amount in the next auction round.

- No bidder is permitted to submit a bid for any application for which an exit bid was received in a prior auction round. That is, once an application has exited the auction, it may not return.
 - If no valid bid is submitted within a given auction round for an application that remains in the auction, then the bid amount is taken to be the amount of the proxy bid, if any, carried forward from the previous auction round or, if none, the bid is taken to be an exit bid at the start-of-round price for the current auction round.
8. This process continues, with the auctioneer increasing the price range for each given TLD string in each auction round, until there is one remaining bidder at the end-of-round price. After an auction round in which this condition is satisfied, the auction concludes and the auctioneer determines the clearing price. The last remaining application is deemed the successful application, and the associated bidder is obligated to pay the clearing price.

Figure 4-4 illustrates how an auction for five contending applications might progress.

Figure 4-4 – Example of an auction for five mutually-contending applications.

- Before the first auction round, the auctioneer announces the end-of-round price P_1 .
- During Auction round 1, a bid is submitted for each application. In Figure 4-4, all five bidders submit bids of at least P_1 . Since the aggregate demand exceeds one, the auction proceeds to Auction round 2. The auctioneer discloses that five contending applications remained at P_1 and announces the end-of-round price P_2 .
- During Auction round 2, a bid is submitted for each application. In Figure 4-4, all five bidders submit bids of at least P_2 . The auctioneer discloses that five contending applications remained at P_2 and announces the end-of-round price P_3 .
- During Auction round 3, one of the bidders submits an exit bid at slightly below P_3 , while the other four bidders submit bids of at least P_3 . The auctioneer discloses that four contending applications remained at P_3 and announces the end-of-round price P_4 .
- During Auction round 4, one of the bidders submits an exit bid midway between P_3 and P_4 , while the other three remaining bidders submit bids of at least P_4 . The auctioneer discloses that three contending applications remained at P_4 and announces the end-of-auction round price P_5 .
- During Auction round 5, one of the bidders submits an exit bid at slightly above P_4 , and one of the bidders submits an exit bid at P_c midway between P_4 and P_5 . The final bidder submits a bid greater than P_c . Since the aggregate demand at P_5 does not exceed one, the auction concludes in Auction round 5. The application associated with the highest bid in Auction round 5 is deemed the successful application. The clearing price is P_c , as this is the lowest price at which aggregate demand can be met.

To the extent possible, auctions to resolve multiple string contention situations will be conducted simultaneously.

4.3.1.1 Currency

For bids to be comparable, all bids in the auction will be submitted in any integer (whole) number of US dollars.

4.3.1.2 Fees

A bidding deposit will be required of applicants participating in the auction, in an amount to be determined. The bidding deposit must be transmitted by wire transfer to a specified bank account specified by ICANN or its auction provider at a major international bank, to be received in advance of the auction date. The amount of the deposit will determine a bidding limit for each bidder: the bidding deposit will equal 10% of the bidding limit; and the bidder will not be permitted to submit any bid in excess of its bidding limit.

In order to avoid the need for bidders to pre-commit to a particular bidding limit, bidders may be given the option of making a specified deposit that will provide them with unlimited bidding authority for a given application. The amount of the deposit required for unlimited bidding authority will depend on the particular contention set and will be based on an assessment of the possible final prices within the auction.

All deposits from non-defaulting losing bidders will be returned following the close of the auction.

4.3.2 Winning Bid Payments

Any applicant that participates in an auction will be required to sign a bidder agreement that acknowledges its rights and responsibilities in the auction, including that its bids are legally binding commitments to pay the amount bid if it wins (i.e., if its application is approved), and to enter into the prescribed registry agreement with ICANN— together with a specified penalty for defaulting on payment of its winning bid or failing to enter into the required registry agreement.

The winning bidder in any auction will be required to pay the full amount of the final price within 20 business days of the end of the auction. Payment is to be made by wire transfer to the same international bank account as the bidding deposit, and the applicant's bidding deposit will be credited toward the final price.

In the event that a bidder anticipates that it would require a longer payment period than 20 business days due to verifiable government-imposed currency restrictions, the bidder may advise ICANN well in advance of the auction and ICANN will consider applying a longer payment period to all bidders within the same contention set.

Any winning bidder for whom the full amount of the final price is not received within 20 business days of the end of an auction is subject to being declared in default. At their sole discretion, ICANN and its auction provider may delay the declaration of default for a brief period, but only if they are convinced that receipt of full payment is imminent.

Any winning bidder for whom the full amount of the final price is received within 20 business days of the end of an auction retains the obligation to execute the required registry agreement within 90 days of the end of auction. Such winning bidder who does not execute the agreement within 90 days of the end of the auction is subject to being declared in default. At their sole discretion, ICANN and its auction provider may delay the declaration of default for a brief period, but only if they are convinced that execution of the registry agreement is imminent.

4.3.3 Post-Default Procedures

Once declared in default, any winning bidder is subject to immediate forfeiture of its position in the auction and assessment of default penalties. After a winning bidder is declared in default, the remaining bidders will receive an offer to have their applications accepted, one at a time, in descending order of their exit bids. In this way, the next bidder would be declared the winner subject to payment of its last bid price. The same default procedures and penalties are in place for any runner-up bidder receiving such an offer.

Each bidder that is offered the relevant gTLD will be given a specified period—typically, four business days—to respond as to whether it wants the gTLD. A bidder who responds in the affirmative will have 20 business days to submit its full payment. A bidder who declines such an offer cannot revert on that statement, has no further obligations in this context and will not be considered in default.

The penalty for defaulting on a winning bid will equal 10% of the defaulting bid.² Default penalties will be charged against any defaulting applicant's bidding deposit before the associated bidding deposit is returned.

² If bidders were given the option of making a specified deposit that provided them with unlimited bidding authority for a given application and if the winning bidder utilized this option, then the penalty for defaulting on a winning bid will be the lesser of the following: (1) 10% of the defaulting bid, or (2) the specified deposit amount that provided the bidder with unlimited bidding authority.

4.4 *Contention Resolution and Contract Execution*

An applicant that has been declared the winner of a contention resolution process will proceed by entering into the contract execution step. (Refer to section 5.1 of Module 5.)

If a winner of the contention resolution procedure has not executed a contract within 90 calendar days of the decision, ICANN has the right to deny that application and extend an offer to the runner-up applicant, if any, to proceed with its application. For example, in an auction, another applicant who would be considered the runner-up applicant might proceed toward delegation. This offer is at ICANN's option only. The runner-up applicant in a contention resolution process has no automatic right to an applied-for gTLD string if the first place winner does not execute a contract within a specified time. If the winning applicant can demonstrate that it is working diligently and in good faith toward successful completion of the steps necessary for entry into the registry agreement, ICANN may extend the 90-day period at its discretion. Runner-up applicants have no claim of priority over the winning application, even after what might be an extended period of negotiation.

DRAFT - New gTLD Program - String Contention

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 5

4 June 2012

Module 5

Transition to Delegation

This module describes the final steps required of an applicant for completion of the process, including execution of a registry agreement with ICANN and preparing for delegation of the new gTLD into the root zone.

5.1 Registry Agreement

All applicants that have successfully completed the evaluation process—including, if necessary, the dispute resolution and string contention processes—are required to enter into a registry agreement with ICANN before proceeding to delegation.

After the close of each stage in the process, ICANN will send a notification to those successful applicants that are eligible for execution of a registry agreement at that time.

To proceed, applicants will be asked to provide specified information for purposes of executing the registry agreement:

1. Documentation of the applicant's continued operations instrument (see Specification 8 to the agreement).
2. Confirmation of contact information and signatory to the agreement.
3. Notice of any material changes requested to the terms of the agreement.
4. The applicant must report: (i) any ownership interest it holds in any registrar or reseller of registered names, (ii) if known, any ownership interest that a registrar or reseller of registered names holds in the applicant, and (iii) if the applicant controls, is controlled by, or is under common control with any registrar or reseller of registered names. ICANN retains the right to refer an application to a competition authority prior to entry into the registry agreement if it is determined that the registry-registrar cross-ownership

arrangements might raise competition issues. For this purpose "control" (including the terms "controlled by" and "under common control with") means the possession, directly or indirectly, of the power to direct or cause the direction of the management or policies of a person or entity, whether through the ownership of securities, as trustee or executor, by serving as a member of a board of directors or equivalent governing body, by contract, by credit arrangement or otherwise.

To ensure that an applicant continues to be a going concern in good legal standing, ICANN reserves the right to ask the applicant to submit additional updated documentation and information before entering into the registry agreement.

ICANN will begin processing registry agreements one month after the date of the notification to successful applicants. Requests will be handled in the order the complete information is received.

Generally, the process will include formal approval of the agreement without requiring additional Board review, so long as: the application passed all evaluation criteria; there are no material changes in circumstances; and there are no material changes to the base agreement. There may be other cases where the Board requests review of an application.

Eligible applicants are expected to have executed the registry agreement within nine (9) months of the notification date. Failure to do so may result in loss of eligibility, at ICANN's discretion. An applicant may request an extension of this time period for up to an additional nine (9) months if it can demonstrate, to ICANN's reasonable satisfaction, that it is working diligently and in good faith toward successfully completing the steps necessary for entry into the registry agreement.

The registry agreement can be reviewed in the attachment to this module. Certain provisions in the agreement are labeled as applicable to governmental and intergovernmental entities only. Private entities, even if supported by a government or IGO, would not ordinarily be eligible for these special provisions.

All successful applicants are expected to enter into the agreement substantially as written. Applicants may request and negotiate terms by exception; however, this extends

the time involved in executing the agreement. In the event that material changes to the agreement are requested, these must first be approved by the ICANN Board of Directors before execution of the agreement.

ICANN's Board of Directors has ultimate responsibility for the New gTLD Program. The Board reserves the right to individually consider an application for a new gTLD to determine whether approval would be in the best interest of the Internet community. Under exceptional circumstances, the Board may individually consider a gTLD application. For example, the Board might individually consider an application as a result of GAC Advice on New gTLDs or of the use of an ICANN accountability mechanism.

5.2 Pre-Delegation Testing

Each applicant will be required to complete pre-delegation technical testing as a prerequisite to delegation into the root zone. This pre-delegation test must be completed within the time period specified in the registry agreement.

The purpose of the pre-delegation technical test is to verify that the applicant has met its commitment to establish registry operations in accordance with the technical and operational criteria described in Module 2.

The test is also intended to indicate that the applicant can operate the gTLD in a stable and secure manner. All applicants will be tested on a pass/fail basis according to the requirements that follow.

The test elements cover both the DNS server operational infrastructure and registry system operations. In many cases the applicant will perform the test elements as instructed and provide documentation of the results to ICANN to demonstrate satisfactory performance. At ICANN's discretion, aspects of the applicant's self-certification documentation can be audited either on-site at the services delivery point of the registry or elsewhere as determined by ICANN.

5.2.1 Testing Procedures

The applicant may initiate the pre-delegation test by submitting to ICANN the Pre-Delegation form and accompanying documents containing all of the following information:

- All name server names and IPv4/IPv6 addresses to be used in serving the new TLD data;
- If using anycast, the list of names and IPv4/IPv6 unicast addresses allowing the identification of each individual server in the anycast sets;
- If IDN is supported, the complete IDN tables used in the registry system;
- A test zone for the new TLD must be signed at test time and the valid key-set to be used at the time of testing must be provided to ICANN in the documentation, as well as the TLD DNSSEC Policy Statement (DPS);
- The executed agreement between the selected escrow agent and the applicant; and
- Self-certification documentation as described below for each test item.

ICANN will review the material submitted and in some cases perform tests in addition to those conducted by the applicant. After testing, ICANN will assemble a report with the outcome of the tests and provide that report to the applicant.

Any clarification request, additional information request, or other request generated in the process will be highlighted and listed in the report sent to the applicant.

ICANN may request the applicant to complete load tests considering an aggregated load where a single entity is performing registry services for multiple TLDs.

Once an applicant has met all of the pre-delegation testing requirements, it is eligible to request delegation of its applied-for gTLD.

If an applicant does not complete the pre-delegation steps within the time period specified in the registry agreement, ICANN reserves the right to terminate the registry agreement.

5.2.2 Test Elements: DNS Infrastructure

The first set of test elements concerns the DNS infrastructure of the new gTLD. In all tests of the DNS infrastructure, all requirements are independent of whether IPv4 or IPv6 is used. All tests shall be done both over IPv4 and IPv6, with reports providing results according to both protocols.

UDP Support -- The DNS infrastructure to which these tests apply comprises the complete set of servers and network infrastructure to be used by the chosen providers to deliver DNS service for the new gTLD to the Internet. The documentation provided by the applicant must include the results from a system performance test indicating available network and server capacity and an estimate of expected capacity during normal operation to ensure stable service as well as to adequately address Distributed Denial of Service (DDoS) attacks.

Self-certification documentation shall include data on load capacity, latency and network reachability.

Load capacity shall be reported using a table, and a corresponding graph, showing percentage of queries responded against an increasing number of queries per second generated from local (to the servers) traffic generators. The table shall include at least 20 data points and loads of UDP-based queries that will cause up to 10% query loss against a randomly selected subset of servers within the applicant's DNS infrastructure. Responses must either contain zone data or be NXDOMAIN or NODATA responses to be considered valid.

Query latency shall be reported in milliseconds as measured by DNS probes located just outside the border routers of the physical network hosting the name servers, from a network topology point of view.

Reachability will be documented by providing information on the transit and peering arrangements for the DNS server locations, listing the AS numbers of the transit providers or peers at each point of presence and available bandwidth at those points of presence.

TCP support -- TCP transport service for DNS queries and responses must be enabled and provisioned for expected load. ICANN will review the capacity self-certification documentation provided by the applicant and will perform TCP reachability and transaction capability tests across a

randomly selected subset of the name servers within the applicant's DNS infrastructure. In case of use of anycast, each individual server in each anycast set will be tested.

Self-certification documentation shall include data on load capacity, latency and external network reachability.

Load capacity shall be reported using a table, and a corresponding graph, showing percentage of queries that generated a valid (zone data, NODATA, or NXDOMAIN) response against an increasing number of queries per second generated from local (to the name servers) traffic generators. The table shall include at least 20 data points and loads that will cause up to 10% query loss (either due to connection timeout or connection reset) against a randomly selected subset of servers within the applicant's DNS infrastructure.

Query latency will be reported in milliseconds as measured by DNS probes located just outside the border routers of the physical network hosting the name servers, from a network topology point of view.

Reachability will be documented by providing records of TCP-based DNS queries from nodes external to the network hosting the servers. These locations may be the same as those used for measuring latency above.

DNSSEC support -- Applicant must demonstrate support for EDNS(0) in its server infrastructure, the ability to return correct DNSSEC-related resource records such as DNSKEY, RRSIG, and NSEC/NSEC3 for the signed zone, and the ability to accept and publish DS resource records from second-level domain administrators. In particular, the applicant must demonstrate its ability to support the full life cycle of KSK and ZSK keys. ICANN will review the self-certification materials as well as test the reachability, response sizes, and DNS transaction capacity for DNS queries using the EDNS(0) protocol extension with the "DNSSEC OK" bit set for a randomly selected subset of all name servers within the applicant's DNS infrastructure. In case of use of anycast, each individual server in each anycast set will be tested.

Load capacity, query latency, and reachability shall be documented as for UDP and TCP above.

5.2.3 Test Elements: Registry Systems

As documented in the registry agreement, registries must provide support for EPP within their Shared Registration System, and provide Whois service both via port 43 and a web interface, in addition to support for the DNS. This section details the requirements for testing these registry systems.

System performance -- The registry system must scale to meet the performance requirements described in Specification 10 of the registry agreement and ICANN will require self-certification of compliance. ICANN will review the self-certification documentation provided by the applicant to verify adherence to these minimum requirements.

Whois support -- Applicant must provision Whois services for the anticipated load. ICANN will verify that Whois data is accessible over IPv4 and IPv6 via both TCP port 43 and via a web interface and review self-certification documentation regarding Whois transaction capacity. Response format according to Specification 4 of the registry agreement and access to Whois (both port 43 and via web) will be tested by ICANN remotely from various points on the Internet over both IPv4 and IPv6.

Self-certification documents shall describe the maximum number of queries per second successfully handled by both the port 43 servers as well as the web interface, together with an applicant-provided load expectation.

Additionally, a description of deployed control functions to detect and mitigate data mining of the Whois database shall be documented.

EPP Support -- As part of a shared registration service, applicant must provision EPP services for the anticipated load. ICANN will verify conformance to appropriate RFCs (including EPP extensions for DNSSEC). ICANN will also review self-certification documentation regarding EPP transaction capacity.

Documentation shall provide a maximum Transaction per Second rate for the EPP interface with 10 data points corresponding to registry database sizes from 0 (empty) to the expected size after one year of operation, as determined by applicant.

Documentation shall also describe measures taken to handle load during initial registry operations, such as a land-rush period.

IPv6 support -- The ability of the registry to support registrars adding, changing, and removing IPv6 DNS records supplied by registrants will be tested by ICANN. If the registry supports EPP access via IPv6, this will be tested by ICANN remotely from various points on the Internet.

DNSSEC support -- ICANN will review the ability of the registry to support registrars adding, changing, and removing DNSSEC-related resource records as well as the registry's overall key management procedures. In particular, the applicant must demonstrate its ability to support the full life cycle of key changes for child domains. Inter-operation of the applicant's secure communication channels with the IANA for trust anchor material exchange will be verified.

The practice and policy document (also known as the DNSSEC Policy Statement or DPS), describing key material storage, access and usage for its own keys is also reviewed as part of this step.

IDN support -- ICANN will verify the complete IDN table(s) used in the registry system. The table(s) must comply with the guidelines in <http://iana.org/procedures/idn-repository.html>.

Requirements related to IDN for Whois are being developed. After these requirements are developed, prospective registries will be expected to comply with published IDN-related Whois requirements as part of pre-delegation testing.

Escrow deposit -- The applicant-provided samples of data deposit that include both a full and an incremental deposit showing correct type and formatting of content will be reviewed. Special attention will be given to the agreement with the escrow provider to ensure that escrowed data can be released within 24 hours should it be necessary. ICANN may, at its option, ask an independent third party to demonstrate the reconstitutability of the registry from escrowed data. ICANN may elect to test the data release process with the escrow agent.

5.3 Delegation Process

Upon notice of successful completion of the ICANN pre-delegation testing, applicants may initiate the process for delegation of the new gTLD into the root zone database.

This will include provision of additional information and completion of additional technical steps required for delegation. Information about the delegation process is available at <http://iana.org/domains/root/>.

5.4 Ongoing Operations

An applicant that is successfully delegated a gTLD will become a “Registry Operator.” In being delegated the role of operating part of the Internet’s domain name system, the applicant will be assuming a number of significant responsibilities. ICANN will hold all new gTLD operators accountable for the performance of their obligations under the registry agreement, and it is important that all applicants understand these responsibilities.

5.4.1 What is Expected of a Registry Operator

The registry agreement defines the obligations of gTLD registry operators. A breach of the registry operator’s obligations may result in ICANN compliance actions up to and including termination of the registry agreement. Prospective applicants are encouraged to review the following brief description of some of these responsibilities.

Note that this is a non-exhaustive list provided to potential applicants as an introduction to the responsibilities of a registry operator. For the complete and authoritative text, please refer to the registry agreement.

A registry operator is obligated to:

Operate the TLD in a stable and secure manner. The registry operator is responsible for the entire technical operation of the TLD. As noted in RFC 1591¹:

“The designated manager must do a satisfactory job of operating the DNS service for the domain. That is, the actual management of the assigning of domain names, delegating subdomains and operating nameservers must be done with technical competence. This includes keeping

¹ See <http://www.rfc-editor.org/rfc/rfc1591.txt>

the central IR² (in the case of top-level domains) or other higher-level domain manager advised of the status of the domain, responding to requests in a timely manner, and operating the database with accuracy, robustness, and resilience.”

The registry operator is required to comply with relevant technical standards in the form of RFCs and other guidelines. Additionally, the registry operator must meet performance specifications in areas such as system downtime and system response times (see Specifications 6 and 10 of the registry agreement).

Comply with consensus policies and temporary policies.

gTLD registry operators are required to comply with consensus policies. Consensus policies may relate to a range of topics such as issues affecting interoperability of the DNS, registry functional and performance specifications, database security and stability, or resolution of disputes over registration of domain names.

To be adopted as a consensus policy, a policy must be developed by the Generic Names Supporting Organization (GNSO)³ following the process in Annex A of the ICANN Bylaws.⁴ The policy development process involves deliberation and collaboration by the various stakeholder groups participating in the process, with multiple opportunities for input and comment by the public, and can take significant time.

Examples of existing consensus policies are the Inter-Registrar Transfer Policy (governing transfers of domain names between registrars), and the Registry Services Evaluation Policy (establishing a review of proposed new registry services for security and stability or competition concerns), although there are several more, as found at <http://www.icann.org/en/general/consensus-policies.htm>.

gTLD registry operators are obligated to comply with both existing consensus policies and those that are developed in the future. Once a consensus policy has been formally adopted, ICANN will provide gTLD registry operators with notice of the requirement to implement the new policy and the effective date.

² IR is a historical reference to “Internet Registry,” a function now performed by ICANN.

³ <http://gns0.icann.org>

⁴ <http://www.icann.org/en/general/bylaws.htm#AnnexA>

In addition, the ICANN Board may, when required by circumstances, establish a temporary policy necessary to maintain the stability or security of registry services or the DNS. In such a case, all gTLD registry operators will be required to comply with the temporary policy for the designated period of time.

For more information, see Specification 1 of the registry agreement.

Implement start-up rights protection measures. The registry operator must implement, at a minimum, a Sunrise period and a Trademark Claims service during the start-up phases for registration in the TLD, as provided in the registry agreement. These mechanisms will be supported by the established Trademark Clearinghouse as indicated by ICANN.

The Sunrise period allows eligible rightsholders an early opportunity to register names in the TLD.

The Trademark Claims service provides notice to potential registrants of existing trademark rights, as well as notice to rightsholders of relevant names registered. Registry operators may continue offering the Trademark Claims service after the relevant start-up phases have concluded.

For more information, see Specification 7 of the registry agreement and the Trademark Clearinghouse model accompanying this module.

Implement post-launch rights protection measures. The registry operator is required to implement decisions made under the Uniform Rapid Suspension (URS) procedure, including suspension of specific domain names within the registry. The registry operator is also required to comply with and implement decisions made according to the Trademark Post-Delegation Dispute Resolution Policy (PDDRP).

The required measures are described fully in the URS and PDDRP procedures accompanying this module. Registry operators may introduce additional rights protection measures relevant to the particular gTLD.

Implement measures for protection of country and territory names in the new gTLD. All new gTLD registry operators are required to provide certain minimum protections for country and territory names, including an initial reservation requirement and establishment of applicable rules and

procedures for release of these names. The rules for release can be developed or agreed to by governments, the GAC, and/or approved by ICANN after a community discussion. Registry operators are encouraged to implement measures for protection of geographical names in addition to those required by the agreement, according to the needs and interests of each gTLD's particular circumstances. (See Specification 5 of the registry agreement).

Pay recurring fees to ICANN. In addition to supporting expenditures made to accomplish the objectives set out in ICANN's mission statement, these funds enable the support required for new gTLDs, including: contractual compliance, registry liaison, increased registrar accreditations, and other registry support activities. The fees include both a fixed component (USD 25,000 annually) and, where the TLD exceeds a transaction volume, a variable fee based on transaction volume. See Article 6 of the registry agreement.

Regularly deposit data into escrow. This serves an important role in registrant protection and continuity for certain instances where the registry or one aspect of the registry operations experiences a system failure or loss of data. (See Specification 2 of the registry agreement.)

Deliver monthly reports in a timely manner. A registry operator must submit a report to ICANN on a monthly basis. The report includes registrar transactions for the month and is used by ICANN for calculation of registrar fees. (See Specification 3 of the registry agreement.)

Provide Whois service. A registry operator must provide a publicly available Whois service for registered domain names in the TLD. (See Specification 4 of the registry agreement.)

Maintain partnerships with ICANN-accredited registrars. A registry operator creates a Registry-Registrar Agreement (RRA) to define requirements for its registrars. This must include certain terms that are specified in the Registry Agreement, and may include additional terms specific to the TLD. A registry operator must provide non-discriminatory access to its registry services to all ICANN-accredited registrars with whom it has entered into an RRA, and who are in compliance with the requirements. This includes providing advance notice of pricing changes to all

registrars, in compliance with the time frames specified in the agreement. (See Article 2 of the registry agreement.)

Maintain an abuse point of contact. A registry operator must maintain and publish on its website a single point of contact responsible for addressing matters requiring expedited attention and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. A registry operator must also take reasonable steps to investigate and respond to any reports from law enforcement, governmental and quasi-governmental agencies of illegal conduct in connection with the use of the TLD. (See Article 2 and Specification 6 of the registry agreement.)

Cooperate with contractual compliance audits. To maintain a level playing field and a consistent operating environment, ICANN staff performs periodic audits to assess contractual compliance and address any resulting problems. A registry operator must provide documents and information requested by ICANN that are necessary to perform such audits. (See Article 2 of the registry agreement.)

Maintain a Continued Operations Instrument. A registry operator must, at the time of the agreement, have in place a continued operations instrument sufficient to fund basic registry operations for a period of three (3) years. This requirement remains in place for five (5) years after delegation of the TLD, after which time the registry operator is no longer required to maintain the continued operations instrument. (See Specification 8 to the registry agreement.)

Maintain community-based policies and procedures. If the registry operator designated its application as community-based at the time of the application, the registry operator has requirements in its registry agreement to maintain the community-based policies and procedures it specified in its application. The registry operator is bound by the Registry Restrictions Dispute Resolution Procedure with respect to disputes regarding execution of its community-based policies and procedures. (See Article 2 to the registry agreement.)

Have continuity and transition plans in place. This includes performing failover testing on a regular basis. In the event that a transition to a new registry operator becomes necessary, the registry operator is expected to cooperate

by consulting with ICANN on the appropriate successor, providing the data required to enable a smooth transition, and complying with the applicable registry transition procedures. (See Articles 2 and 4 of the registry agreement.)

Make TLD zone files available via a standardized process.

This includes provision of access to the registry's zone file to credentialed users, according to established access, file, and format standards. The registry operator will enter into a standardized form of agreement with zone file users and will accept credential information for users via a clearinghouse. (See Specification 4 of the registry agreement.)

Implement DNSSEC. The registry operator is required to sign the TLD zone files implementing Domain Name System Security Extensions (DNSSEC) in accordance with the relevant technical standards. The registry must accept public key material from registrars for domain names registered in the TLD, and publish a DNSSEC Policy Statement describing key material storage, access, and usage for the registry's keys. (See Specification 6 of the registry agreement.)

5.4.2 What is Expected of ICANN

ICANN will continue to provide support for gTLD registry operators as they launch and maintain registry operations. ICANN's gTLD registry liaison function provides a point of contact for gTLD registry operators for assistance on a continuing basis.

ICANN's contractual compliance function will perform audits on a regular basis to ensure that gTLD registry operators remain in compliance with agreement obligations, as well as investigate any complaints from the community regarding the registry operator's adherence to its contractual obligations. See <http://www.icann.org/en/compliance/> for more information on current contractual compliance activities.

ICANN's Bylaws require ICANN to act in an open and transparent manner, and to provide equitable treatment among registry operators. ICANN is responsible for maintaining the security and stability of the global Internet, and looks forward to a constructive and cooperative relationship with future gTLD registry operators in furtherance of this goal.

Draft – New gTLD Program - Transition to Delegation

(Timeframes are estimates only)

Applicant Doc Prep 1 Month

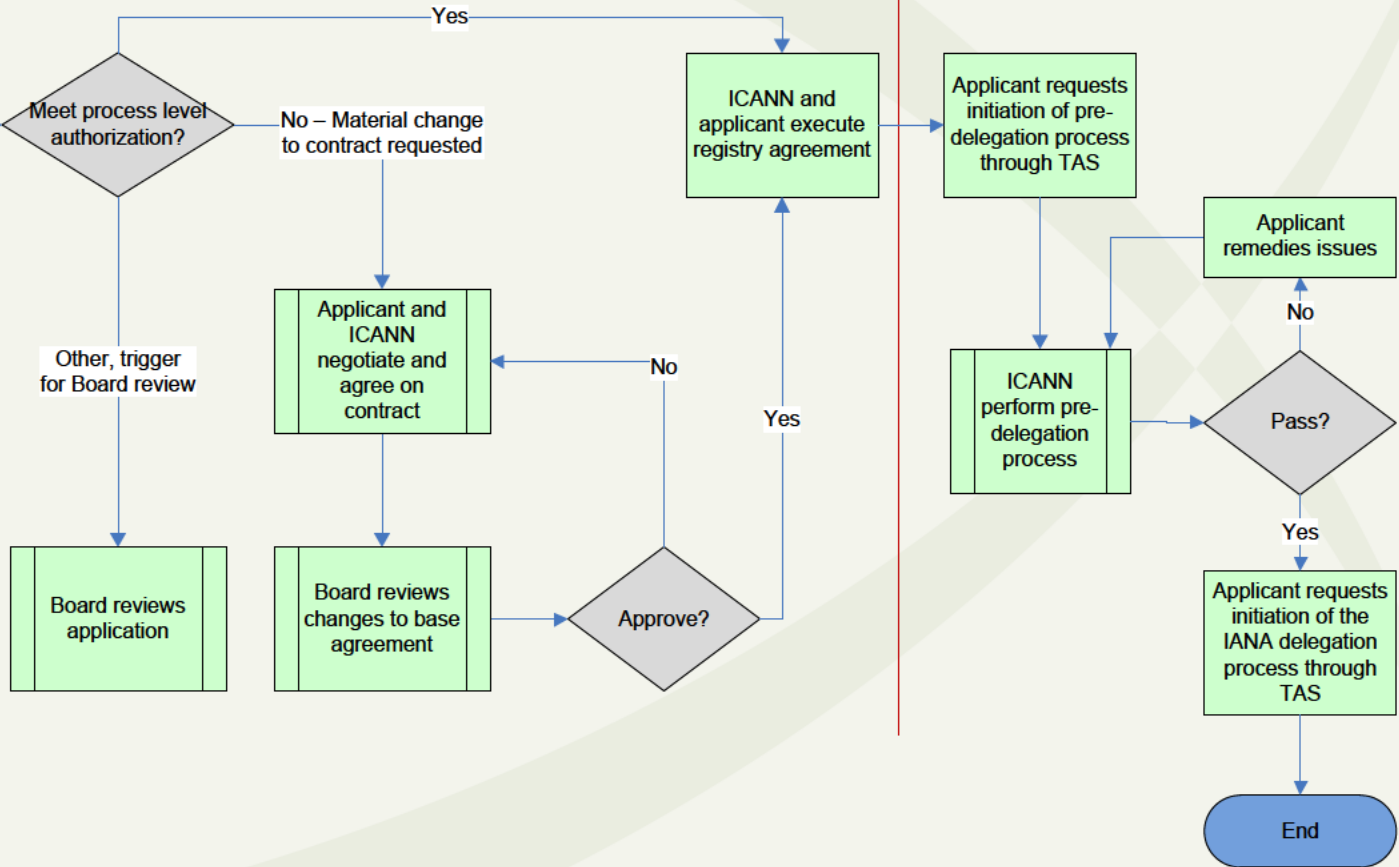

Contracting – 1 day to 9 months

Pre-Delegation Testing – 1 to 12 months

ICANN provides notice of eligibility to applicant

Applicant prepares documentation for contracting

- Includes:
- Material changes in circumstances
 - Continued Operations instrument
 - Designated contracting parties

New gTLD Agreement

This document contains the registry agreement associated with the Applicant Guidebook for New gTLDs.

Successful gTLD applicants would enter into this form of registry agreement with ICANN prior to delegation of the new gTLD. (Note: ICANN reserves the right to make reasonable updates and changes to this proposed agreement during the course of the application process, including as the possible result of new policies that might be adopted during the course of the application process).

REGISTRY AGREEMENT

This REGISTRY AGREEMENT (this “Agreement”) is entered into as of _____ (the “Effective Date”) between Internet Corporation for Assigned Names and Numbers, a California nonprofit public benefit corporation (“ICANN”), and _____, a _____ (“Registry Operator”).

ARTICLE 1.

DELEGATION AND OPERATION OF TOP-LEVEL DOMAIN; REPRESENTATIONS AND WARRANTIES

1.1 Domain and Designation. The Top-Level Domain to which this Agreement applies is _____ (the “TLD”). Upon the Effective Date and until the end of the Term (as defined in Section 4.1), ICANN designates Registry Operator as the registry operator for the TLD, subject to the requirements and necessary approvals for delegation of the TLD and entry into the root-zone.

1.2 Technical Feasibility of String. While ICANN has encouraged and will continue to encourage universal acceptance of all top-level domain strings across the Internet, certain top-level domain strings may encounter difficulty in acceptance by ISPs and webhosters and/or validation by web applications. Registry Operator shall be responsible for ensuring to its satisfaction the technical feasibility of the TLD string prior to entering into this Agreement.

1.3 Representations and Warranties.

(a) Registry Operator represents and warrants to ICANN as follows:

(i) all material information provided and statements made in the registry TLD application, and statements made in writing during the negotiation of this Agreement, were true and correct in all material respects at the time made, and such information or statements continue to be true and correct in all material respects as of the Effective Date except as otherwise previously disclosed in writing by Registry Operator to ICANN;

(ii) Registry Operator is duly organized, validly existing and in good standing under the laws of the jurisdiction set forth in the preamble hereto, and Registry Operator has all requisite power and authority and obtained all necessary approvals to enter into and duly execute and deliver this Agreement; and

(iii) Registry Operator has delivered to ICANN a duly executed instrument that secures the funds required to perform registry functions for the TLD in the event of the termination or expiration of this Agreement (the “Continued Operations Instrument”), and such instrument is a binding obligation of the parties thereto, enforceable against the parties thereto in accordance with its terms.

(b) ICANN represents and warrants to Registry Operator that ICANN is a nonprofit public benefit corporation duly organized, validly existing and in good standing under the laws of the State of California, United States of America. ICANN has all requisite power and authority and obtained all necessary corporate approvals to enter into and duly execute and deliver this Agreement.

ARTICLE 2.

COVENANTS OF REGISTRY OPERATOR

Registry Operator covenants and agrees with ICANN as follows:

2.1 Approved Services; Additional Services. Registry Operator shall be entitled to provide the Registry Services described in clauses (a) and (b) of the first paragraph of Section 2.1 in the specification at [*see specification 6*] (“Specification 6”) and such other Registry Services set forth on Exhibit A (collectively, the “Approved Services”). If Registry Operator desires to provide any Registry Service that is not an Approved Service or is a modification to an Approved Service (each, an “Additional Service”), Registry Operator shall submit a request for approval of such Additional Service pursuant to the Registry Services Evaluation Policy at <http://www.icann.org/en/registries/rsep/rsep.html>, as such policy may be amended from time to time in accordance with the bylaws of ICANN (as amended from time to time, the “ICANN Bylaws”) applicable to Consensus Policies (the “RSEP”). Registry Operator may offer Additional Services only with the written approval of ICANN, and, upon any such approval, such Additional Services shall be deemed Registry Services under this Agreement. In its reasonable discretion, ICANN may require an amendment to this Agreement reflecting the provision of any Additional Service which is approved pursuant to the RSEP, which amendment shall be in a form reasonably acceptable to the parties.

2.2 Compliance with Consensus Policies and Temporary Policies. Registry Operator shall comply with and implement all Consensus Policies and Temporary Policies found at <http://www.icann.org/general/consensus-policies.htm>, as of the Effective Date and as may in the future be developed and adopted in accordance with the ICANN Bylaws, provided such future Consensus Policies and Temporary Policies are adopted in accordance with the procedure and relate to those topics and subject to those limitations set forth at [*see specification 1*]* (“Specification 1”).

2.3 Data Escrow. Registry Operator shall comply with the registry data escrow procedures posted at [*see specification 2*]*.

2.4 Monthly Reporting. Within twenty (20) calendar days following the end of each calendar month, Registry Operator shall deliver to ICANN reports in the format posted in the specification at [*see specification 3*]*.

2.5 Publication of Registration Data. Registry Operator shall provide public access to registration data in accordance with the specification posted at [*see specification 4*]* (“Specification 4”).

2.6 Reserved Names. Except to the extent that ICANN otherwise expressly authorizes in writing, Registry Operator shall comply with the restrictions on registration of character strings set forth at [*see specification 5*]* (“Specification 5”). Registry Operator may establish policies concerning the reservation or blocking of additional character strings within the TLD at its discretion. If Registry Operator is the registrant for any domain names in the Registry TLD (other than the Second-Level Reservations for Registry Operations from Specification 5), such registrations must be through an ICANN accredited registrar. Any such registrations will be considered Transactions (as defined in Section 6.1) for purposes of calculating the Registry-Level Transaction Fee to be paid to ICANN by Registry Operator pursuant to Section 6.1.

2.7 Registry Interoperability and Continuity. Registry Operator shall comply with the Registry Interoperability and Continuity Specifications as set forth in Specification 6.

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

2.8 Protection of Legal Rights of Third Parties. Registry Operator must specify, and comply with, a process and procedures for launch of the TLD and initial registration-related and ongoing protection of the legal rights of third parties as set forth in the specification at [*see specification 7*]* (“Specification 7”). Registry Operator may, at its election, implement additional protections of the legal rights of third parties. Any changes or modifications to the process and procedures required by Specification 7 following the Effective Date must be approved in advance by ICANN in writing. Registry Operator must comply with all remedies imposed by ICANN pursuant to Section 2 of Specification 7, subject to Registry Operator’s right to challenge such remedies as set forth in the applicable procedure described therein. Registry Operator shall take reasonable steps to investigate and respond to any reports from law enforcement and governmental and quasi-governmental agencies of illegal conduct in connection with the use of the TLD. In responding to such reports, Registry Operator will not be required to take any action in contravention of applicable law.

2.9 Registrars.

(a) Registry Operator must use only ICANN accredited registrars in registering domain names. Registry Operator must provide non-discriminatory access to Registry Services to all ICANN accredited registrars that enter into and are in compliance with the registry-registrar agreement for the TLD; provided, that Registry Operator may establish non-discriminatory criteria for qualification to register names in the TLD that are reasonably related to the proper functioning of the TLD. Registry Operator must use a uniform non-discriminatory agreement with all registrars authorized to register names in the TLD. Such agreement may be revised by Registry Operator from time to time; provided, however, that any such revisions must be approved in advance by ICANN.

(b) If Registry Operator (i) becomes an Affiliate or reseller of an ICANN accredited registrar, or (ii) subcontracts the provision of any Registry Services to an ICANN accredited registrar, registrar reseller or any of their respective Affiliates, then, in either such case of (i) or (ii) above, Registry Operator will give ICANN prompt notice of the contract, transaction or other arrangement that resulted in such affiliation, reseller relationship or subcontract, as applicable, including, if requested by ICANN, copies of any contract relating thereto; provided, that ICANN will not disclose such contracts to any third party other than relevant competition authorities. ICANN reserves the right, but not the obligation, to refer any such contract, transaction or other arrangement to relevant competition authorities in the event that ICANN determines that such contract, transaction or other arrangement might raise competition issues.

(c) For the purposes of this Agreement: (i) “Affiliate” means a person or entity that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, the person or entity specified, and (ii) “control” (including the terms “controlled by” and “under common control with”) means the possession, directly or indirectly, of the power to direct or cause the direction of the management or policies of a person or entity, whether through the ownership of securities, as trustee or executor, by serving as an employee or a member of a board of directors or equivalent governing body, by contract, by credit arrangement or otherwise.

2.10 Pricing for Registry Services.

(a) With respect to initial domain name registrations, Registry Operator shall provide ICANN and each ICANN accredited registrar that has executed the registry-registrar agreement for the TLD advance written notice of any price increase (including as a result of the elimination of any refunds, rebates, discounts, product tying or other programs which had the effect of reducing the price charged to registrars, unless such refunds, rebates, discounts, product tying or other programs are of a limited

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

duration that is clearly and conspicuously disclosed to the registrar when offered) of no less than thirty (30) calendar days. Registry Operator shall offer registrars the option to obtain initial domain name registrations for periods of one to ten years at the discretion of the registrar, but no greater than ten years.

(b) With respect to renewal of domain name registrations, Registry Operator shall provide ICANN and each ICANN accredited registrar that has executed the registry-registrar agreement for the TLD advance written notice of any price increase (including as a result of the elimination of any refunds, rebates, discounts, product tying, Qualified Marketing Programs or other programs which had the effect of reducing the price charged to registrars) of no less than one hundred eighty (180) calendar days. Notwithstanding the foregoing sentence, with respect to renewal of domain name registrations: (i) Registry Operator need only provide thirty (30) calendar days notice of any price increase if the resulting price is less than or equal to (A) for the period beginning on the Effective Date and ending twelve (12) months following the Effective Date, the initial price charged for registrations in the TLD, or (B) for subsequent periods, a price for which Registry Operator provided a notice pursuant to the first sentence of this Section 2.10(b) within the twelve (12) month period preceding the effective date of the proposed price increase; and (ii) Registry Operator need not provide notice of any price increase for the imposition of the Variable Registry-Level Fee set forth in Section 6.3. Registry Operator shall offer registrars the option to obtain domain name registration renewals at the current price (i.e. the price in place prior to any noticed increase) for periods of one to ten years at the discretion of the registrar, but no greater than ten years.

(c) In addition, Registry Operator must have uniform pricing for renewals of domain name registrations (“Renewal Pricing”). For the purposes of determining Renewal Pricing, the price for each domain registration renewal must be identical to the price of all other domain name registration renewals in place at the time of such renewal, and such price must take into account universal application of any refunds, rebates, discounts, product tying or other programs in place at the time of renewal. The foregoing requirements of this Section 2.10(c) shall not apply for (i) purposes of determining Renewal Pricing if the registrar has provided Registry Operator with documentation that demonstrates that the applicable registrant expressly agreed in its registration agreement with registrar to higher Renewal Pricing at the time of the initial registration of the domain name following clear and conspicuous disclosure of such Renewal Pricing to such registrant, and (ii) discounted Renewal Pricing pursuant to a Qualified Marketing Program (as defined below). The parties acknowledge that the purpose of this Section 2.10(c) is to prohibit abusive and/or discriminatory Renewal Pricing practices imposed by Registry Operator without the written consent of the applicable registrant at the time of the initial registration of the domain and this Section 2.10(c) will be interpreted broadly to prohibit such practices. For purposes of this Section 2.10(c), a “Qualified Marketing Program” is a marketing program pursuant to which Registry Operator offers discounted Renewal Pricing, provided that each of the following criteria is satisfied: (i) the program and related discounts are offered for a period of time not to exceed one hundred eighty (180) calendar days (with consecutive substantially similar programs aggregated for purposes of determining the number of calendar days of the program), (ii) all ICANN accredited registrars are provided the same opportunity to qualify for such discounted Renewal Pricing; and (iii) the intent or effect of the program is not to exclude any particular class(es) of registrations (e.g., registrations held by large corporations) or increase the renewal price of any particular class(es) of registrations. Nothing in this Section 2.10(c) shall limit Registry Operator’s obligations pursuant to Section 2.10(b).

(d) Registry Operator shall provide public query-based DNS lookup service for the TLD (that is, operate the Registry TLD zone servers) at its sole expense.

2.11 Contractual and Operational Compliance Audits.

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(a) ICANN may from time to time (not to exceed twice per calendar year) conduct, or engage a third party to conduct, contractual compliance audits to assess compliance by Registry Operator with its representations and warranties contained in Article 1 of this Agreement and its covenants contained in Article 2 of this Agreement. Such audits shall be tailored to achieve the purpose of assessing compliance, and ICANN will (a) give reasonable advance notice of any such audit, which notice shall specify in reasonable detail the categories of documents, data and other information requested by ICANN, and (b) use commercially reasonable efforts to conduct such audit in such a manner as to not unreasonably disrupt the operations of Registry Operator. As part of such audit and upon request by ICANN, Registry Operator shall timely provide all responsive documents, data and any other information necessary to demonstrate Registry Operator's compliance with this Agreement. Upon no less than five (5) business days notice (unless otherwise agreed to by Registry Operator), ICANN may, as part of any contractual compliance audit, conduct site visits during regular business hours to assess compliance by Registry Operator with its representations and warranties contained in Article 1 of this Agreement and its covenants contained in Article 2 of this Agreement.

(b) Any audit conducted pursuant to Section 2.11(a) will be at ICANN's expense, unless (i) Registry Operator (A) controls, is controlled by, is under common control or is otherwise Affiliated with, any ICANN accredited registrar or registrar reseller or any of their respective Affiliates, or (B) has subcontracted the provision of Registry Services to an ICANN accredited registrar or registrar reseller or any of their respective Affiliates, and, in either case of (A) or (B) above, the audit relates to Registry Operator's compliance with Section 2.14, in which case Registry Operator shall reimburse ICANN for all reasonable costs and expenses associated with the portion of the audit related to Registry Operator's compliance with Section 2.14, or (ii) the audit is related to a discrepancy in the fees paid by Registry Operator hereunder in excess of 5% to ICANN's detriment, in which case Registry Operator shall reimburse ICANN for all reasonable costs and expenses associated with the entirety of such audit. In either such case of (i) or (ii) above, such reimbursement will be paid together with the next Registry-Level Fee payment due following the date of transmittal of the cost statement for such audit.

(c) Notwithstanding Section 2.11(a), if Registry Operator is found not to be in compliance with its representations and warranties contained in Article 1 of this Agreement or its covenants contained in Article 2 of this Agreement in two consecutive audits conducted pursuant to this Section 2.11, ICANN may increase the number of such audits to one per calendar quarter.

(d) Registry Operator will give ICANN immediate notice of the commencement of any of the proceedings referenced in Section 4.3(d) or the occurrence of any of the matters specified in Section 4.3(f).

2.12 Continued Operations Instrument. Registry Operator shall comply with the terms and conditions relating to the Continued Operations Instrument set forth in the specification at [*see specification 8*].

2.13 Emergency Transition. Registry Operator agrees that in the event that any of the registry functions set forth in Section 6 of Specification 10 fails for a period longer than the emergency threshold for such function set forth in Section 6 of Specification 10, ICANN may designate an emergency interim registry operator of the registry for the TLD (an "Emergency Operator") in accordance with ICANN's registry transition process (available at _____) (as the same may be amended from time to time, the "Registry Transition Process") until such time as Registry Operator has demonstrated to ICANN's reasonable satisfaction that it can resume operation of the registry for the TLD without the reoccurrence of such failure. Following such demonstration, Registry Operator may transition back into operation of the registry for the TLD pursuant to the procedures set out in the Registry Transition Process,

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

provided that Registry Operator pays all reasonable costs incurred (i) by ICANN as a result of the designation of the Emergency Operator and (ii) by the Emergency Operator in connection with the operation of the registry for the TLD, which costs shall be documented in reasonable detail in records that shall be made available to Registry Operator. In the event ICANN designates an Emergency Operator pursuant to this Section 2.13 and the Registry Transition Process, Registry Operator shall provide ICANN or any such Emergency Operator with all data (including the data escrowed in accordance with Section 2.3) regarding operations of the registry for the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such Emergency Operator. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event that an Emergency Operator is designated pursuant to this Section 2.13. In addition, in the event of such failure, ICANN shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable.

2.14 Registry Code of Conduct. In connection with the operation of the registry for the TLD, Registry Operator shall comply with the Registry Code of Conduct as set forth in the specification at [*see specification 9*].

2.15 Cooperation with Economic Studies. If ICANN initiates or commissions an economic study on the impact or functioning of new generic top-level domains on the Internet, the DNS or related matters, Registry Operator shall reasonably cooperate with such study, including by delivering to ICANN or its designee conducting such study all data reasonably necessary for the purposes of such study requested by ICANN or its designee, provided, that Registry Operator may withhold any internal analyses or evaluations prepared by Registry Operator with respect to such data. Any data delivered to ICANN or its designee pursuant to this Section 2.15 shall be fully aggregated and anonymized by ICANN or its designee prior to any disclosure of such data to any third party.

2.16 Registry Performance Specifications. Registry Performance Specifications for operation of the TLD will be as set forth in the specification at [*see specification 10*]*. Registry Operator shall comply with such Performance Specifications and, for a period of at least one year, shall keep technical and operational records sufficient to evidence compliance with such specifications for each calendar year during the Term.

2.17 Personal Data. Registry Operator shall (i) notify each ICANN-accredited registrar that is a party to the registry-registrar agreement for the TLD of the purposes for which data about any identified or identifiable natural person (“Personal Data”) submitted to Registry Operator by such registrar is collected and used under this Agreement or otherwise and the intended recipients (or categories of recipients) of such Personal Data, and (ii) require such registrar to obtain the consent of each registrant in the TLD for such collection and use of Personal Data. Registry Operator shall take reasonable steps to protect Personal Data collected from such registrar from loss, misuse, unauthorized disclosure, alteration or destruction. Registry Operator shall not use or authorize the use of Personal Data in a way that is incompatible with the notice provided to registrars.

2.18 [Note: For Community-Based TLDs Only] Obligations of Registry Operator to TLD Community. Registry Operator shall establish registration policies in conformity with the application submitted with respect to the TLD for: (i) naming conventions within the TLD, (ii) requirements for registration by members of the TLD community, and (iii) use of registered domain names in conformity with the stated purpose of the community-based TLD. Registry Operator shall operate the TLD in a manner that allows the TLD community to discuss and participate in the development and modification of policies and practices for the TLD. Registry Operator shall establish procedures for the enforcement of registration policies for the TLD, and resolution of disputes concerning compliance with TLD registration

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

policies, and shall enforce such registration policies. Registry Operator agrees to implement and be bound by the Registry Restrictions Dispute Resolution Procedure as set forth at [*insert applicable URL*] with respect to disputes arising pursuant to this Section 2.18.]

ARTICLE 3.

COVENANTS OF ICANN

ICANN covenants and agrees with Registry Operator as follows:

3.1 Open and Transparent. Consistent with ICANN’s expressed mission and core values, ICANN shall operate in an open and transparent manner.

3.2 Equitable Treatment. ICANN shall not apply standards, policies, procedures or practices arbitrarily, unjustifiably, or inequitably and shall not single out Registry Operator for disparate treatment unless justified by substantial and reasonable cause.

3.3 TLD Nameservers. ICANN will use commercially reasonable efforts to ensure that any changes to the TLD nameserver designations submitted to ICANN by Registry Operator (in a format and with required technical elements specified by ICANN at <http://www.iana.org/domains/root/> will be implemented by ICANN within seven (7) calendar days or as promptly as feasible following technical verifications.

3.4 Root-zone Information Publication. ICANN’s publication of root-zone contact information for the TLD will include Registry Operator and its administrative and technical contacts. Any request to modify the contact information for the Registry Operator must be made in the format specified from time to time by ICANN at <http://www.iana.org/domains/root/>.

3.5 Authoritative Root Database. To the extent that ICANN is authorized to set policy with regard to an authoritative root server system, ICANN shall use commercially reasonable efforts to (a) ensure that the authoritative root will point to the top-level domain nameservers designated by Registry Operator for the TLD, (b) maintain a stable, secure, and authoritative publicly available database of relevant information about the TLD, in accordance with ICANN publicly available policies and procedures, and (c) coordinate the Authoritative Root Server System so that it is operated and maintained in a stable and secure manner; provided, that ICANN shall not be in breach of this Agreement and ICANN shall have no liability in the event that any third party (including any governmental entity or internet service provider) blocks or restricts access to the TLD in any jurisdiction.

ARTICLE 4.

TERM AND TERMINATION

4.1 Term. The term of this Agreement will be ten years from the Effective Date (as such term may be extended pursuant to Section 4.2, the “Term”).

4.2 Renewal.

(a) This Agreement will be renewed for successive periods of ten years upon the expiration of the initial Term set forth in Section 4.1 and each successive Term, unless:

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(i) Following notice by ICANN to Registry Operator of a fundamental and material breach of Registry Operator's covenants set forth in Article 2 or breach of its payment obligations under Article 6 of this Agreement, which notice shall include with specificity the details of the alleged breach, and such breach has not been cured within thirty (30) calendar days of such notice, (A) an arbitrator or court has finally determined that Registry Operator has been in fundamental and material breach of such covenant(s) or in breach of its payment obligations, and (B) Registry Operator has failed to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court; or

(ii) During the then current Term, Registry Operator shall have been found by an arbitrator (pursuant to Section 5.2 of this Agreement) on at least three (3) separate occasions to have been in fundamental and material breach (whether or not cured) of Registry Operator's covenants set forth in Article 2 or breach of its payment obligations under Article 6 of this Agreement.

(b) Upon the occurrence of the events set forth in Section 4.2(a) (i) or (ii), the Agreement shall terminate at the expiration of the then current Term.

4.3 Termination by ICANN.

(a) ICANN may, upon notice to Registry Operator, terminate this Agreement if: (i) Registry Operator fails to cure (A) any fundamental and material breach of Registry Operator's representations and warranties set forth in Article 1 or covenants set forth in Article 2, or (B) any breach of Registry Operator's payment obligations set forth in Article 6 of this Agreement, each within thirty (30) calendar days after ICANN gives Registry Operator notice of such breach, which notice will include with specificity the details of the alleged breach, (ii) an arbitrator or court has finally determined that Registry Operator is in fundamental and material breach of such covenant(s) or in breach of its payment obligations, and (iii) Registry Operator fails to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

(b) ICANN may, upon notice to Registry Operator, terminate this Agreement if Registry Operator fails to complete all testing and procedures (identified by ICANN in writing to Registry Operator prior to the date hereof) for delegation of the TLD into the root zone within twelve (12) months of the Effective Date. Registry Operator may request an extension for up to additional twelve (12) months for delegation if it can demonstrate, to ICANN's reasonable satisfaction, that Registry Operator is working diligently and in good faith toward successfully completing the steps necessary for delegation of the TLD. Any fees paid by Registry Operator to ICANN prior to such termination date shall be retained by ICANN in full.

(c) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator fails to cure a material breach of Registry Operator's obligations set forth in Section 2.12 of this Agreement within thirty (30) calendar days of delivery of notice of such breach by ICANN, or if the Continued Operations Instrument is not in effect for greater than sixty (60) consecutive calendar days at any time following the Effective Date, (ii) an arbitrator or court has finally determined that Registry Operator is in material breach of such covenant, and (iii) Registry Operator fails to cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(d) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator makes an assignment for the benefit of creditors or similar act, (ii) attachment, garnishment or similar proceedings are commenced against Registry Operator, which proceedings are a material threat to Registry Operator's ability to operate the registry for the TLD, and are not dismissed within sixty (60) days of their commencement, (iii) a trustee, receiver, liquidator or equivalent is appointed in place of Registry Operator or maintains control over any of Registry Operator's property, (iv) execution is levied upon any property of Registry Operator, (v) proceedings are instituted by or against Registry Operator under any bankruptcy, insolvency, reorganization or other laws relating to the relief of debtors and such proceedings are not dismissed within thirty (30) days of their commencement, or (vi) Registry Operator files for protection under the United States Bankruptcy Code, 11 U.S.C. Section 101 et seq., or a foreign equivalent or liquidates, dissolves or otherwise discontinues its operations or the operation of the TLD.

(e) ICANN may, upon thirty (30) calendar days' notice to Registry Operator, terminate this Agreement pursuant to Section 2 of Specification 7, subject to Registry Operator's right to challenge such termination as set forth in the applicable procedure described therein.

(f) ICANN may, upon notice to Registry Operator, terminate this Agreement if (i) Registry Operator knowingly employs any officer that is convicted of a misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such officer is not terminated within thirty (30) calendar days of Registry Operator's knowledge of the foregoing, or (ii) any member of Registry Operator's board of directors or similar governing body is convicted of a misdemeanor related to financial activities or of any felony, or is judged by a court of competent jurisdiction to have committed fraud or breach of fiduciary duty, or is the subject of a judicial determination that ICANN reasonably deems as the substantive equivalent of any of the foregoing and such member is not removed from Registry Operator's board of directors or similar governing body within thirty (30) calendar days of Registry Operator's knowledge of the foregoing.

(g) *[Applicable to intergovernmental organizations or governmental entities only.]*
ICANN may terminate this Agreement pursuant to Section 7.14.

4.4 Termination by Registry Operator.

(a) Registry Operator may terminate this Agreement upon notice to ICANN if, (i) ICANN fails to cure any fundamental and material breach of ICANN's covenants set forth in Article 3, within thirty (30) calendar days after Registry Operator gives ICANN notice of such breach, which notice will include with specificity the details of the alleged breach, (ii) an arbitrator or court has finally determined that ICANN is in fundamental and material breach of such covenants, and (iii) ICANN fails to comply with such determination and cure such breach within ten (10) calendar days or such other time period as may be determined by the arbitrator or court.

(b) Registry Operator may terminate this Agreement for any reason upon one hundred eighty (180) calendar day advance notice to ICANN.

4.5 Transition of Registry upon Termination of Agreement. Upon expiration of the Term pursuant to Section 4.1 or Section 4.2 or any termination of this Agreement pursuant to Section 4.3 or Section 4.4, Registry Operator shall provide ICANN or any successor registry operator that may be designated by ICANN for the TLD in accordance with this Section 4.5 with all data (including the data

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

escrowed in accordance with Section 2.3) regarding operations of the registry for the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such successor registry operator. After consultation with Registry Operator, ICANN shall determine whether or not to transition operation of the TLD to a successor registry operator in its sole discretion and in conformance with the Registry Transition Process; provided, however, that if Registry Operator demonstrates to ICANN's reasonable satisfaction that (i) all domain name registrations in the TLD are registered to, and maintained by, Registry Operator for its own exclusive use, (ii) Registry Operator does not sell, distribute or transfer control or use of any registrations in the TLD to any third party that is not an Affiliate of Registry Operator, and (iii) transitioning operation of the TLD is not necessary to protect the public interest, then ICANN may not transition operation of the TLD to a successor registry operator upon the expiration or termination of this Agreement without the consent of Registry Operator (which shall not be unreasonably withheld, conditioned or delayed). For the avoidance of doubt, the foregoing sentence shall not prohibit ICANN from delegating the TLD pursuant to a future application process for the delegation of top-level domains, subject to any processes and objection procedures instituted by ICANN in connection with such application process intended to protect the rights of third parties. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event of a transition of the TLD pursuant to this Section 4.5. In addition, ICANN or its designee shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable, regardless of the reason for termination or expiration of this Agreement.

[Alternative Section 4.5 Transition of Registry upon Termination of Agreement text for intergovernmental organizations or governmental entities or other special circumstances:

“Transition of Registry upon Termination of Agreement. Upon expiration of the Term pursuant to Section 4.1 or Section 4.2 or any termination of this Agreement pursuant to Section 4.3 or Section 4.4, in connection with ICANN's designation of a successor registry operator for the TLD, Registry Operator and ICANN agree to consult each other and work cooperatively to facilitate and implement the transition of the TLD in accordance with this Section 4.5. After consultation with Registry Operator, ICANN shall determine whether or not to transition operation of the TLD to a successor registry operator in its sole discretion and in conformance with the Registry Transition Process. In the event ICANN determines to transition operation of the TLD to a successor registry operator, upon Registry Operator's consent (which shall not be unreasonably withheld, conditioned or delayed), Registry Operator shall provide ICANN or such successor registry operator for the TLD with any data regarding operations of the TLD necessary to maintain operations and registry functions that may be reasonably requested by ICANN or such successor registry operator in addition to data escrowed in accordance with Section 2.3 hereof. In the event that Registry Operator does not consent to provide such data, any registry data related to the TLD shall be returned to Registry Operator, unless otherwise agreed upon by the parties. Registry Operator agrees that ICANN may make any changes it deems necessary to the IANA database for DNS and WHOIS records with respect to the TLD in the event of a transition of the TLD pursuant to this Section 4.5. In addition, ICANN or its designee shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable, regardless of the reason for termination or expiration of this Agreement.”]

4.6 Effect of Termination. Upon any expiration of the Term or termination of this Agreement, the obligations and rights of the parties hereto shall cease, provided that such expiration or termination of this Agreement shall not relieve the parties of any obligation or breach of this Agreement accruing prior to such expiration or termination, including, without limitation, all accrued payment obligations arising under Article 6. In addition, Article 5, Article 7, Section 2.12, Section 4.5, and this

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

Section 4.6 shall survive the expiration or termination of this Agreement. For the avoidance of doubt, the rights of Registry Operator to operate the registry for the TLD shall immediately cease upon any expiration of the Term or termination of this Agreement.

ARTICLE 5.

DISPUTE RESOLUTION

5.1 Cooperative Engagement. Before either party may initiate arbitration pursuant to Section 5.2 below, ICANN and Registry Operator, following initiation of communications by either party, must attempt to resolve the dispute by engaging in good faith discussion over a period of at least fifteen (15) calendar days.

5.2 Arbitration. Disputes arising under or in connection with this Agreement, including requests for specific performance, will be resolved through binding arbitration conducted pursuant to the rules of the International Court of Arbitration of the International Chamber of Commerce. The arbitration will be conducted in the English language and will occur in Los Angeles County, California. Any arbitration will be in front of a single arbitrator, unless (i) ICANN is seeking punitive or exemplary damages, or operational sanctions, or (ii) the parties agree in writing to a greater number of arbitrators. In either case of clauses (i) or (ii) in the preceding sentence, the arbitration will be in front of three arbitrators with each party selecting one arbitrator and the two selected arbitrators selecting the third arbitrator. In order to expedite the arbitration and limit its cost, the arbitrator(s) shall establish page limits for the parties' filings in conjunction with the arbitration, and should the arbitrator(s) determine that a hearing is necessary, the hearing shall be limited to one (1) calendar day, provided that in any arbitration in which ICANN is seeking punitive or exemplary damages, or operational sanctions, the hearing may be extended for one (1) additional calendar day if agreed upon by the parties or ordered by the arbitrator(s) based on the arbitrator(s) independent determination or the reasonable request of one of the parties thereto. The prevailing party in the arbitration will have the right to recover its costs and reasonable attorneys' fees, which the arbitrator(s) shall include in the awards. In the event the arbitrators determine that Registry Operator has been repeatedly and willfully in fundamental and material breach of its obligations set forth in Article 2, Article 6 or Section 5.4 of this Agreement, ICANN may request the arbitrators award punitive or exemplary damages, or operational sanctions (including without limitation an order temporarily restricting Registry Operator's right to sell new registrations). In any litigation involving ICANN concerning this Agreement, jurisdiction and exclusive venue for such litigation will be in a court located in Los Angeles County, California; however, the parties will also have the right to enforce a judgment of such a court in any court of competent jurisdiction.

[Alternative **Section 5.2 Arbitration** text for intergovernmental organizations or governmental entities or other special circumstances:

“Arbitration. Disputes arising under or in connection with this Agreement, including requests for specific performance, will be resolved through binding arbitration conducted pursuant to the rules of the International Court of Arbitration of the International Chamber of Commerce. The arbitration will be conducted in the English language and will occur in Geneva, Switzerland, unless another location is mutually agreed upon by Registry Operator and ICANN. Any arbitration will be in front of a single arbitrator, unless (i) ICANN is seeking punitive or exemplary damages, or operational sanctions, or (ii) the parties agree in writing to a greater number of arbitrators. In either case of clauses (i) or (ii) in the preceding sentence, the arbitration will be in front of three arbitrators with each party selecting one arbitrator and the two selected arbitrators selecting the third arbitrator. In order to expedite the arbitration and limit its cost, the arbitrator(s) shall establish page limits for the parties' filings in conjunction with the

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

arbitration, and should the arbitrator(s) determine that a hearing is necessary, the hearing shall be limited to one (1) calendar day, provided that in any arbitration in which ICANN is seeking punitive or exemplary damages, or operational sanctions, the hearing may be extended for one (1) additional calendar day if agreed upon by the parties or ordered by the arbitrator(s) based on the arbitrator(s) independent determination or the reasonable request of one of the parties thereto. The prevailing party in the arbitration will have the right to recover its costs and reasonable attorneys' fees, which the arbitrator(s) shall include in the awards. In the event the arbitrators determine that Registry Operator has been repeatedly and willfully in fundamental and material breach of its obligations set forth in Article 2, Article 6 or Section 5.4 of this Agreement, ICANN may request the arbitrators award punitive or exemplary damages, or operational sanctions (including without limitation an order temporarily restricting Registry Operator's right to sell new registrations). In any litigation involving ICANN concerning this Agreement, jurisdiction and exclusive venue for such litigation will be in a court located in Geneva, Switzerland, unless an another location is mutually agreed upon by Registry Operator and ICANN; however, the parties will also have the right to enforce a judgment of such a court in any court of competent jurisdiction."}]

5.3 Limitation of Liability. ICANN's aggregate monetary liability for violations of this Agreement will not exceed an amount equal to the Registry-Level Fees paid by Registry Operator to ICANN within the preceding twelve-month period pursuant to this Agreement (excluding the Variable Registry-Level Fee set forth in Section 6.3, if any). Registry Operator's aggregate monetary liability to ICANN for breaches of this Agreement will be limited to an amount equal to the fees paid to ICANN during the preceding twelve-month period (excluding the Variable Registry-Level Fee set forth in Section 6.3, if any), and punitive and exemplary damages, if any, awarded in accordance with Section 5.2. In no event shall either party be liable for special, punitive, exemplary or consequential damages arising out of or in connection with this Agreement or the performance or nonperformance of obligations undertaken in this Agreement, except as provided in Section 5.2. Except as otherwise provided in this Agreement, neither party makes any warranty, express or implied, with respect to the services rendered by itself, its servants or agents, or the results obtained from their work, including, without limitation, any implied warranty of merchantability, non-infringement or fitness for a particular purpose.

5.4 Specific Performance. Registry Operator and ICANN agree that irreparable damage could occur if any of the provisions of this Agreement was not performed in accordance with its specific terms. Accordingly, the parties agree that they each shall be entitled to seek from the arbitrator specific performance of the terms of this Agreement (in addition to any other remedy to which each party is entitled).

ARTICLE 6.

FEES

6.1 Registry-Level Fees. Registry Operator shall pay ICANN a Registry-Level Fee equal to (i) the Registry Fixed Fee of US\$6,250 per calendar quarter and (ii) the Registry-Level Transaction Fee. The Registry-Level Transaction Fee will be equal to the number of annual increments of an initial or renewal domain name registration (at one or more levels, and including renewals associated with transfers from one ICANN-accredited registrar to another, each a "Transaction"), during the applicable calendar quarter multiplied by US\$0.25; provided, however that the Registry-Level Transaction Fee shall not apply until and unless more than 50,000 Transactions have occurred in the TLD during any calendar quarter or any four calendar quarter period (the "Transaction Threshold") and shall apply to each Transaction that occurred during each quarter in which the Transaction Threshold has been met, but shall not apply to each quarter in which the Transaction Threshold has not been met. Registry Operator shall pay the Registry-

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

Level Fees on a quarterly basis by the 20th day following the end of each calendar quarter (i.e., on April 20, July 20, October 20 and January 20 for the calendar quarters ending March 31, June 30, September 30 and December 31) of the year to an account designated by ICANN.

6.2 Cost Recovery for RSTEP. Requests by Registry Operator for the approval of Additional Services pursuant to Section 2.1 may be referred by ICANN to the Registry Services Technical Evaluation Panel ("RSTEP") pursuant to that process at <http://www.icann.org/en/registries/rsep/>. In the event that such requests are referred to RSTEP, Registry Operator shall remit to ICANN the invoiced cost of the RSTEP review within ten (10) business days of receipt of a copy of the RSTEP invoice from ICANN, unless ICANN determines, in its sole and absolute discretion, to pay all or any portion of the invoiced cost of such RSTEP review.

6.3 Variable Registry-Level Fee.

(a) If the ICANN accredited registrars (as a group) do not approve pursuant to the terms of their registrar accreditation agreements with ICANN the variable accreditation fees established by the ICANN Board of Directors for any ICANN fiscal year, upon delivery of notice from ICANN, Registry Operator shall pay to ICANN a Variable Registry-Level Fee, which shall be paid on a fiscal quarter basis, and shall accrue as of the beginning of the first fiscal quarter of such ICANN fiscal year. The fee will be calculated and invoiced by ICANN on a quarterly basis, and shall be paid by Registry Operator within sixty (60) calendar days with respect to the first quarter of such ICANN fiscal year and within twenty (20) calendar days with respect to each remaining quarter of such ICANN fiscal year, of receipt of the invoiced amount by ICANN. The Registry Operator may invoice and collect the Variable Registry-Level Fees from the registrars who are party to a registry-registrar agreement with Registry Operator (which agreement may specifically provide for the reimbursement of Variable Registry-Level Fees paid by Registry Operator pursuant to this Section 6.3); provided, that the fees shall be invoiced to all ICANN accredited registrars if invoiced to any. The Variable Registry-Level Fee, if collectible by ICANN, shall be an obligation of Registry Operator and shall be due and payable as provided in this Section 6.3 irrespective of Registry Operator's ability to seek and obtain reimbursement of such fee from registrars. In the event ICANN later collects variable accreditation fees for which Registry Operator has paid ICANN a Variable Registry-Level Fee, ICANN shall reimburse the Registry Operator an appropriate amount of the Variable Registry-Level Fee, as reasonably determined by ICANN. If the ICANN accredited registrars (as a group) do approve pursuant to the terms of their registrar accreditation agreements with ICANN the variable accreditation fees established by the ICANN Board of Directors for a fiscal year, ICANN shall not be entitled to a Variable-Level Fee hereunder for such fiscal year, irrespective of whether the ICANN accredited registrars comply with their payment obligations to ICANN during such fiscal year.

(b) The amount of the Variable Registry-Level Fee will be specified for each registrar, and may include both a per-registrar component and a transactional component. The per-registrar component of the Variable Registry-Level Fee shall be specified by ICANN in accordance with the budget adopted by the ICANN Board of Directors for each ICANN fiscal year. The transactional component of the Variable Registry-Level Fee shall be specified by ICANN in accordance with the budget adopted by the ICANN Board of Directors for each ICANN fiscal year but shall not exceed US\$0.25 per domain name registration (including renewals associated with transfers from one ICANN-accredited registrar to another) per year.

6.4 Adjustments to Fees. Notwithstanding any of the fee limitations set forth in this Article 6, commencing upon the expiration of the first year of this Agreement, and upon the expiration of each year thereafter during the Term, the then current fees set forth in Section 6.1 and Section 6.3 may be

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

adjusted, at ICANN's discretion, by a percentage equal to the percentage change, if any, in (i) the Consumer Price Index for All Urban Consumers, U.S. City Average (1982-1984 = 100) published by the United States Department of Labor, Bureau of Labor Statistics, or any successor index (the "CPI") for the month which is one (1) month prior to the commencement of the applicable year, over (ii) the CPI published for the month which is one (1) month prior to the commencement of the immediately prior year. In the event of any such increase, ICANN shall provide notice to Registry Operator specifying the amount of such adjustment. Any fee adjustment under this Section 6.4 shall be effective as of the first day of the year in which the above calculation is made.

6.5 Additional Fee on Late Payments. For any payments thirty (30) calendar days or more overdue under this Agreement, Registry Operator shall pay an additional fee on late payments at the rate of 1.5% per month or, if less, the maximum rate permitted by applicable law.

ARTICLE 7.

MISCELLANEOUS

7.1 Indemnification of ICANN.

(a) Registry Operator shall indemnify and defend ICANN and its directors, officers, employees, and agents (collectively, "Indemnitees") from and against any and all third-party claims, damages, liabilities, costs, and expenses, including reasonable legal fees and expenses, arising out of or relating to intellectual property ownership rights with respect to the TLD, the delegation of the TLD to Registry Operator, Registry Operator's operation of the registry for the TLD or Registry Operator's provision of Registry Services, provided that Registry Operator shall not be obligated to indemnify or defend any Indemnitee to the extent the claim, damage, liability, cost or expense arose: (i) due to the actions or omissions of ICANN, its subcontractors, panelists or evaluators specifically related to and occurring during the registry TLD application process (other than actions or omissions requested by or for the benefit of Registry Operator), or (ii) due to a breach by ICANN of any obligation contained in this Agreement or any willful misconduct by ICANN. This Section shall not be deemed to require Registry Operator to reimburse or otherwise indemnify ICANN for costs associated with the negotiation or execution of this Agreement, or with monitoring or management of the parties' respective obligations hereunder. Further, this Section shall not apply to any request for attorney's fees in connection with any litigation or arbitration between or among the parties, which shall be governed by Article 5 or otherwise awarded by a court or arbitrator.

[Alternative **Section 7.1(a)** text for intergovernmental organizations or governmental entities:

"Registry Operator shall use its best efforts to cooperate with ICANN in order to ensure that ICANN does not incur any costs associated with claims, damages, liabilities, costs and expenses, including reasonable legal fees and expenses, arising out of or relating to intellectual property ownership rights with respect to the TLD, the delegation of the TLD to Registry Operator, Registry Operator's operation of the registry for the TLD or Registry Operator's provision of Registry Services, provided that Registry Operator shall not be obligated to provide such cooperation to the extent the claim, damage, liability, cost or expense arose due to a breach by ICANN of any of its obligations contained in this Agreement or any willful misconduct by ICANN. This Section shall not be deemed to require Registry Operator to reimburse or otherwise indemnify ICANN for costs associated with the negotiation or execution of this Agreement, or with monitoring or management of the parties' respective obligations hereunder. Further, this Section shall not apply to any request for attorney's fees in connection with any

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

litigation or arbitration between or among the parties, which shall be governed by Article 5 or otherwise awarded by a court or arbitrator.”]

(b) For any claims by ICANN for indemnification whereby multiple registry operators (including Registry Operator) have engaged in the same actions or omissions that gave rise to the claim, Registry Operator’s aggregate liability to indemnify ICANN with respect to such claim shall be limited to a percentage of ICANN’s total claim, calculated by dividing the number of total domain names under registration with Registry Operator within the TLD (which names under registration shall be calculated consistently with Article 6 hereof for any applicable quarter) by the total number of domain names under registration within all top level domains for which the registry operators thereof are engaging in the same acts or omissions giving rise to such claim. For the purposes of reducing Registry Operator’s liability under Section 7.1(a) pursuant to this Section 7.1(b), Registry Operator shall have the burden of identifying the other registry operators that are engaged in the same actions or omissions that gave rise to the claim, and demonstrating, to ICANN’s reasonable satisfaction, such other registry operators’ culpability for such actions or omissions. For the avoidance of doubt, in the event that a registry operator is engaged in the same acts or omissions giving rise to the claims, but such registry operator(s) do not have the same or similar indemnification obligations to ICANN as set forth in Section 7.1(a) above, the number of domains under management by such registry operator(s) shall nonetheless be included in the calculation in the preceding sentence. [*Note: This Section 7.1(b) is inapplicable to intergovernmental organizations or governmental entities.*]

7.2 Indemnification Procedures. If any third-party claim is commenced that is indemnified under Section 7.1 above, ICANN shall provide notice thereof to Registry Operator as promptly as practicable. Registry Operator shall be entitled, if it so elects, in a notice promptly delivered to ICANN, to immediately take control of the defense and investigation of such claim and to employ and engage attorneys reasonably acceptable to ICANN to handle and defend the same, at Registry Operator’s sole cost and expense, provided that in all events ICANN will be entitled to control at its sole cost and expense the litigation of issues concerning the validity or interpretation of ICANN’s policies, Bylaws or conduct. ICANN shall cooperate, at Registry Operator’s cost and expense, in all reasonable respects with Registry Operator and its attorneys in the investigation, trial, and defense of such claim and any appeal arising therefrom, and may, at its own cost and expense, participate, through its attorneys or otherwise, in such investigation, trial and defense of such claim and any appeal arising therefrom. No settlement of a claim that involves a remedy affecting ICANN other than the payment of money in an amount that is fully indemnified by Registry Operator will be entered into without the consent of ICANN. If Registry Operator does not assume full control over the defense of a claim subject to such defense in accordance with this Section 7.2, ICANN will have the right to defend the claim in such manner as it may deem appropriate, at the cost and expense of Registry Operator and Registry Operator shall cooperate in such defense. [*Note: This Section 7.2 is inapplicable to intergovernmental organizations or governmental entities.*]

7.3 Defined Terms. For purposes of this Agreement, unless such definitions are amended pursuant to a Consensus Policy at a future date, in which case the following definitions shall be deemed amended and restated in their entirety as set forth in such Consensus Policy, Security and Stability shall be defined as follows:

(a) For the purposes of this Agreement, an effect on “Security” shall mean (1) the unauthorized disclosure, alteration, insertion or destruction of registry data, or (2) the unauthorized access to or disclosure of information or resources on the Internet by systems operating in accordance with all applicable standards.

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

(b) For purposes of this Agreement, an effect on “Stability” shall refer to (1) lack of compliance with applicable relevant standards that are authoritative and published by a well-established and recognized Internet standards body, such as the relevant Standards-Track or Best Current Practice Requests for Comments (“RFCs”) sponsored by the Internet Engineering Task Force; or (2) the creation of a condition that adversely affects the throughput, response time, consistency or coherence of responses to Internet servers or end systems operating in accordance with applicable relevant standards that are authoritative and published by a well-established and recognized Internet standards body, such as the relevant Standards-Track or Best Current Practice RFCs, and relying on Registry Operator's delegated information or provisioning of services.

7.4 No Offset. All payments due under this Agreement will be made in a timely manner throughout the Term and notwithstanding the pendency of any dispute (monetary or otherwise) between Registry Operator and ICANN.

7.5 Change in Control; Assignment and Subcontracting. Neither party may assign this Agreement without the prior written approval of the other party, which approval will not be unreasonably withheld. Notwithstanding the foregoing, ICANN may assign this Agreement in conjunction with a reorganization or re-incorporation of ICANN to another nonprofit corporation or similar entity organized in the same legal jurisdiction in which ICANN is currently organized for the same or substantially the same purposes. For purposes of this Section 7.5, a direct or indirect change of control of Registry Operator or any material subcontracting arrangement with respect to the operation of the registry for the TLD shall be deemed an assignment. ICANN shall be deemed to have reasonably withheld its consent to any such a direct or indirect change of control or subcontracting arrangement in the event that ICANN reasonably determines that the person or entity acquiring control of Registry Operator or entering into such subcontracting arrangement (or the ultimate parent entity of such acquiring or subcontracting entity) does not meet the ICANN-adopted registry operator criteria or qualifications then in effect. In addition, without limiting the foregoing, Registry Operator must provide no less than thirty (30) calendar days advance notice to ICANN of any material subcontracting arrangements, and any agreement to subcontract portions of the operations of the TLD must mandate compliance with all covenants, obligations and agreements by Registry Operator hereunder, and Registry Operator shall continue to be bound by such covenants, obligations and agreements. Without limiting the foregoing, Registry Operator must also provide no less than thirty (30) calendar days advance notice to ICANN prior to the consummation of any transaction anticipated to result in a direct or indirect change of control of Registry Operator. Such change of control notification shall include a statement that affirms that the ultimate parent entity of the party acquiring such control meets the ICANN-adopted specification or policy on registry operator criteria then in effect, and affirms that Registry Operator is in compliance with its obligations under this Agreement. Within thirty (30) calendar days of such notification, ICANN may request additional information from Registry Operator establishing compliance with this Agreement, in which case Registry Operator must supply the requested information within fifteen (15) calendar days. If ICANN fails to expressly provide or withhold its consent to any direct or indirect change of control of Registry Operator or any material subcontracting arrangement within thirty (30) (or, if ICANN has requested additional information from Registry Operator as set forth above, sixty (60)) calendar days of the receipt of written notice of such transaction from Registry Operator, ICANN shall be deemed to have consented to such transaction. In connection with any such transaction, Registry Operator shall comply with the Registry Transition Process.

7.6 Amendments and Waivers.

(a) If ICANN determines that an amendment to this Agreement (including to the Specifications referred to herein) and all other registry agreements between ICANN and the Applicable

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

Registry Operators (the “Applicable Registry Agreements”) is desirable (each, a “Special Amendment”), ICANN may submit a Special Amendment for approval by the Applicable Registry Operators pursuant to the process set forth in this Section 7.6, provided that a Special Amendment is not a Restricted Amendment (as defined below). Prior to submitting a Special Amendment for such approval, ICANN shall first consult in good faith with the Working Group (as defined below) regarding the form and substance of a Special Amendment. The duration of such consultation shall be reasonably determined by ICANN based on the substance of the Special Amendment. Following such consultation, ICANN may propose the adoption of a Special Amendment by publicly posting such amendment on its website for no less than thirty (30) calendar days (the “Posting Period”) and providing notice of such amendment by ICANN to the Applicable Registry Operators in accordance with Section 7.8. ICANN will consider the public comments submitted on a Special Amendment during the Posting Period (including comments submitted by the Applicable Registry Operators).

(b) If, within two (2) calendar years of the expiration of the Posting Period (the “Approval Period”), (i) the ICANN Board of Directors approves a Special Amendment (which may be in a form different than submitted for public comment) and (ii) such Special Amendment receives Registry Operator Approval (as defined below), such Special Amendment shall be deemed approved (an “Approved Amendment”) by the Applicable Registry Operators (the last date on which such approvals are obtained is herein referred to as the “Amendment Approval Date”) and shall be effective and deemed an amendment to this Agreement upon sixty (60) calendar days notice from ICANN to Registry Operator (the “Amendment Effective Date”). In the event that a Special Amendment is not approved by the ICANN Board of Directors or does not receive Registry Operator Approval within the Approval Period, the Special Amendment will have no effect. The procedure used by ICANN to obtain Registry Operator Approval shall be designed to document the written approval of the Applicable Registry Operators, which may be in electronic form.

(c) During the thirty (30) calendar day period following the Amendment Approval Date, Registry Operator (so long as it did not vote in favor of the Approved Amendment) may apply in writing to ICANN for an exemption from the Approved Amendment (each such request submitted by Registry Operator hereunder, an “Exemption Request”). Each Exemption Request will set forth the basis for such request and provide detailed support for an exemption from the Approved Amendment. An Exemption Request may also include a detailed description and support for any alternatives to, or a variation of, the Approved Amendment proposed by such Registry Operator. An Exemption Request may only be granted upon a clear and convincing showing by Registry Operator that compliance with the Approved Amendment conflicts with applicable laws or would have a material adverse effect on the long-term financial condition or results of operations of Registry Operator. No Exemption Request will be granted if ICANN determines, in its reasonable discretion, that granting such Exemption Request would be materially harmful to registrants or result in the denial of a direct benefit to registrants. Within ninety (90) calendar days of ICANN’s receipt of an Exemption Request, ICANN shall either approve (which approval may be conditioned or consist of alternatives to or a variation of the Approved Amendment) or deny the Exemption Request in writing, during which time the Approved Amendment will not amend this Agreement; provided, that any such conditions, alternatives or variations shall be effective and, to the extent applicable, will amend this Agreement as of the Amendment Effective Date. If the Exemption Request is approved by ICANN, the Approved Amendment will not amend this Agreement. If such Exemption Request is denied by ICANN, the Approved Amendment will amend this Agreement as of the Amendment Effective Date (or, if such date has passed, such Approved Amendment shall be deemed effective immediately on the date of such denial), provided that Registry Operator may, within thirty (30) calendar days following receipt of ICANN’s determination, appeal ICANN’s decision to deny the Exemption Request pursuant to the dispute resolution procedures set forth in Article 5. The Approved

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

Amendment will be deemed not to have amended this Agreement during the pendency of the dispute resolution process. For avoidance of doubt, only Exemption Requests submitted by Registry Operator that are approved by ICANN pursuant to this Section 7.6(c) or through an arbitration decision pursuant to Article 5 shall exempt Registry Operator from any Approved Amendment, and no exemption request granted to any other Applicable Registry Operator (whether by ICANN or through arbitration) shall have any effect under this Agreement or exempt Registry Operator from any Approved Amendment.

(d) Except as set forth in this Section 7.6, no amendment, supplement or modification of this Agreement or any provision hereof shall be binding unless executed in writing by both parties, and nothing in this Section 7.6 shall restrict ICANN and Registry Operator from entering into bilateral amendments and modifications to this Agreement negotiated solely between the two parties. No waiver of any provision of this Agreement shall be binding unless evidenced by a writing signed by the party waiving compliance with such provision. No waiver of any of the provisions of this Agreement or failure to enforce any of the provisions hereof shall be deemed or shall constitute a waiver of any other provision hereof, nor shall any such waiver constitute a continuing waiver unless otherwise expressly provided. For the avoidance of doubt, nothing in this Section 7.6 shall be deemed to limit Registry Operator's obligation to comply with Section 2.2.

(e) For purposes of this Section 7.6, the following terms shall have the following meanings:

(i) "Applicable Registry Operators" means, collectively, the registry operators of the top-level domains party to a registry agreement that contains a provision similar to this Section 7.6, including Registry Operator.

(ii) "Registry Operator Approval" means the receipt of each of the following: (A) the affirmative approval of the Applicable Registry Operators whose payments to ICANN accounted for two-thirds of the total amount of fees (converted to U.S. dollars, if applicable) paid to ICANN by all the Applicable Registry Operators during the immediately previous calendar year pursuant to the Applicable Registry Agreements, and (B) the affirmative approval of a majority of the Applicable Registry Operators at the time such approval is obtained. For avoidance of doubt, with respect to clause (B), each Applicable Registry Operator shall have one vote for each top-level domain operated by such Registry Operator pursuant to an Applicable Registry Agreement.

(iii) "Restricted Amendment" means the following: (i) an amendment of Specification 1, (ii) except to the extent addressed in Section 2.10 hereof, an amendment that specifies the price charged by Registry Operator to registrars for domain name registrations, (iii) an amendment to the definition of Registry Services as set forth in the first paragraph of Section 2.1 of Specification 6, or (iv) an amendment to the length of the Term.

(iv) "Working Group" means representatives of the Applicable Registry Operators and other members of the community that ICANN appoints, from time to time, to serve as a working group to consult on amendments to the Applicable Registry Agreements (excluding bilateral amendments pursuant to Section 7.6(d)).

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

7.7 No Third-Party Beneficiaries. This Agreement will not be construed to create any obligation by either ICANN or Registry Operator to any non-party to this Agreement, including any registrar or registered name holder.

7.8 General Notices. Except for notices pursuant to Section 7.6, all notices to be given under or in relation to this Agreement will be given either (i) in writing at the address of the appropriate party as set forth below or (ii) via facsimile or electronic mail as provided below, unless that party has given a notice of change of postal or email address, or facsimile number, as provided in this agreement. All notices under Section 7.6 shall be given by both posting of the applicable information on ICANN's web site and transmission of such information to Registry Operator by electronic mail. Any change in the contact information for notice below will be given by the party within thirty (30) calendar days of such change. Notices, designations, determinations, and specifications made under this Agreement will be in the English language. Other than notices under Section 7.6, any notice required by this Agreement will be deemed to have been properly given (i) if in paper form, when delivered in person or via courier service with confirmation of receipt or (ii) if via facsimile or by electronic mail, upon confirmation of receipt by the recipient's facsimile machine or email server, provided that such notice via facsimile or electronic mail shall be followed by a copy sent by regular postal mail service within two (2) business days. Any notice required by Section 7.6 will be deemed to have been given when electronically posted on ICANN's website and upon confirmation of receipt by the email server. In the event other means of notice become practically achievable, such as notice via a secure website, the parties will work together to implement such notice means under this Agreement.

7.9 Entire Agreement. This Agreement (including those specifications and documents incorporated by reference to URL locations which form a part of it) constitutes the entire agreement of the parties hereto pertaining to the operation of the TLD and supersedes all prior agreements, understandings, negotiations and discussions, whether oral or written, between the parties on that subject.

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

7.10 English Language Controls. Notwithstanding any translated version of this Agreement and/or specifications that may be provided to Registry Operator, the English language version of this Agreement and all referenced specifications are the official versions that bind the parties hereto. In the event of any conflict or discrepancy between any translated version of this Agreement and the English language version, the English language version controls. Notices, designations, determinations, and specifications made under this Agreement shall be in the English language.

7.11 Ownership Rights. Nothing contained in this Agreement shall be construed as establishing or granting to Registry Operator any property ownership rights or interests in the TLD or the letters, words, symbols or other characters making up the TLD string.

7.12 Severability. This Agreement shall be deemed severable; the invalidity or unenforceability of any term or provision of this Agreement shall not affect the validity or enforceability of the balance of this Agreement or of any other term hereof, which shall remain in full force and effect. If any of the provisions hereof are determined to be invalid or unenforceable, the parties shall negotiate in good faith to modify this Agreement so as to effect the original intent of the parties as closely as possible.

7.13 Court Orders. ICANN will respect any order from a court of competent jurisdiction, including any orders from any jurisdiction where the consent or non-objection of the government was a requirement for the delegation of the TLD. Notwithstanding any other provision of this Agreement, ICANN's implementation of any such order will not be a breach of this Agreement.

[Note: The following section is applicable to intergovernmental organizations or governmental entities only.]

7.14 Special Provision Relating to Intergovernmental Organizations or Governmental Entities.

(a) ICANN acknowledges that Registry Operator is an entity subject to public international law, including international treaties applicable to Registry Operator (such public international law and treaties, collectively hereinafter the “Applicable Laws”). Nothing in this Agreement and its related specifications shall be construed or interpreted to require Registry Operator to violate Applicable Laws or prevent compliance therewith. The Parties agree that Registry Operator’s compliance with Applicable Laws shall not constitute a breach of this Agreement.

(b) In the event Registry Operator reasonably determines that any provision of this Agreement and its related specifications, or any decisions or policies of ICANN referred to in this Agreement, including but not limited to Temporary Policies and Consensus Policies (such provisions, specifications and policies, collectively hereinafter, “ICANN Requirements”), may conflict with or violate Applicable Law (hereinafter, a “Potential Conflict”), Registry Operator shall provide detailed notice (a “Notice”) of such Potential Conflict to ICANN as early as possible and, in the case of a Potential Conflict with a proposed Consensus Policy, no later than the end of any public comment period on such proposed Consensus Policy. In the event Registry Operator determines that there is Potential Conflict between a proposed Applicable Law and any ICANN Requirement, Registry Operator shall provide detailed Notice of such Potential Conflict to ICANN as early as possible and, in the case of a Potential Conflict with a proposed Consensus Policy, no later than the end of any public comment period on such proposed Consensus Policy.

(c) As soon as practicable following such review, the parties shall attempt to resolve the Potential Conflict by cooperative engagement pursuant to the procedures set forth in Section 5.1. In

* Final text will be posted on ICANN website; agreement reference to be replaced by hyperlink.

addition, Registry Operator shall use its best efforts to eliminate or minimize any impact arising from such Potential Conflict between Applicable Laws and any ICANN Requirement. If, following such cooperative engagement, Registry Operator determines that the Potential Conflict constitutes an actual conflict between any ICANN Requirement, on the one hand, and Applicable Laws, on the other hand, then ICANN shall waive compliance with such ICANN Requirement (provided that the parties shall negotiate in good faith on a continuous basis thereafter to mitigate or eliminate the effects of such non-compliance on ICANN), unless ICANN reasonably and objectively determines that the failure of Registry Operator to comply with such ICANN Requirement would constitute a threat to the Security and Stability of Registry Services, the Internet or the DNS (hereinafter, an “ICANN Determination”). Following receipt of notice by Registry Operator of such ICANN Determination, Registry Operator shall be afforded a period of ninety (90) calendar days to resolve such conflict with an Applicable Law. If the conflict with an Applicable Law is not resolved to ICANN’s complete satisfaction during such period, Registry Operator shall have the option to submit, within ten (10) calendar days thereafter, the matter to binding arbitration as defined in subsection (d) below. If during such period, Registry Operator does not submit the matter to arbitration pursuant to subsection (d) below, ICANN may, upon notice to Registry Operator, terminate this Agreement with immediate effect.

(d) If Registry Operator disagrees with an ICANN Determination, Registry Operator may submit the matter to binding arbitration pursuant to the provisions of Section 5.2, except that the sole issue presented to the arbitrator for determination will be whether or not ICANN reasonably and objectively reached the ICANN Determination. For the purposes of such arbitration, ICANN shall present evidence to the arbitrator supporting the ICANN Determination. If the arbitrator determines that ICANN did not reasonably and objectively reach the ICANN Determination, then ICANN shall waive Registry Operator’s compliance with the subject ICANN Requirement. If the arbitrators or pre-arbitral referee, as applicable, determine that ICANN did reasonably and objectively reach the ICANN Determination, then, upon notice to Registry Operator, ICANN may terminate this Agreement with immediate effect.

(e) Registry Operator hereby represents and warrants that, to the best of its knowledge as of the date of execution of this Agreement, no existing ICANN Requirement conflicts with or violates any Applicable Law.

(f) Notwithstanding any other provision of this Section 7.14, following an ICANN Determination and prior to a finding by an arbitrator pursuant to Section 7.14(d) above, ICANN may, subject to prior consultations with Registry Operator, take such reasonable technical measures as it deems necessary to ensure the Security and Stability of Registry Services, the Internet and the DNS. These reasonable technical measures shall be taken by ICANN on an interim basis, until the earlier of the date of conclusion of the arbitration procedure referred to in Section 7.14(d) above or the date of complete resolution of the conflict with an Applicable Law. In case Registry Operator disagrees with such technical measures taken by ICANN, Registry Operator may submit the matter to binding arbitration pursuant to the provisions of Section 5.2 above, during which process ICANN may continue to take such technical measures. In the event that ICANN takes such measures, Registry Operator shall pay all costs incurred by ICANN as a result of taking such measures. In addition, in the event that ICANN takes such measures, ICANN shall retain and may enforce its rights under the Continued Operations Instrument and Alternative Instrument, as applicable.

EXHIBIT A

Approved Services

SPECIFICATION 1

CONSENSUS POLICIES AND TEMPORARY POLICIES SPECIFICATION

1. Consensus Policies.

- 1.1. “*Consensus Policies*” are those policies established (1) pursuant to the procedure set forth in ICANN's Bylaws and due process, and (2) covering those topics listed in Section 1.2 of this document. The Consensus Policy development process and procedure set forth in ICANN's Bylaws may be revised from time to time in accordance with the process set forth therein.
- 1.2. Consensus Policies and the procedures by which they are developed shall be designed to produce, to the extent possible, a consensus of Internet stakeholders, including the operators of gTLDs. Consensus Policies shall relate to one or more of the following:
 - 1.2.1. issues for which uniform or coordinated resolution is reasonably necessary to facilitate interoperability, security and/or stability of the Internet or Domain Name System (“DNS”);
 - 1.2.2. functional and performance specifications for the provision of Registry Services;
 - 1.2.3. Security and Stability of the registry database for the TLD;
 - 1.2.4. registry policies reasonably necessary to implement Consensus Policies relating to registry operations or registrars;
 - 1.2.5. resolution of disputes regarding the registration of domain names (as opposed to the use of such domain names); or
 - 1.2.6. restrictions on cross-ownership of registry operators and registrars or registrar resellers and regulations and restrictions with respect to registry operations and the use of registry and registrar data in the event that a registry operator and a registrar or registrar reseller are affiliated.
- 1.3. Such categories of issues referred to in Section 1.2 shall include, without limitation:
 - 1.3.1. principles for allocation of registered names in the TLD (e.g., first-come/first-served, timely renewal, holding period after expiration);
 - 1.3.2. prohibitions on warehousing of or speculation in domain names by registries or registrars;
 - 1.3.3. reservation of registered names in the TLD that may not be registered initially or that may not be renewed due to reasons reasonably related to (i) avoidance of confusion among or misleading of users, (ii) intellectual property, or (iii) the technical management of the DNS or the Internet (e.g., establishment of reservations of names from registration); and
 - 1.3.4. maintenance of and access to accurate and up-to-date information concerning domain name registrations; and procedures to avoid disruptions of domain name registrations due to suspension or termination of operations by a registry operator or a registrar, including procedures for allocation of responsibility for serving registered domain names in a TLD affected by such a suspension or termination.
- 1.4. In addition to the other limitations on Consensus Policies, they shall not:

- 1.4.1. prescribe or limit the price of Registry Services;
 - 1.4.2. modify the terms or conditions for the renewal or termination of the Registry Agreement;
 - 1.4.3. modify the limitations on Temporary Policies (defined below) or Consensus Policies;
 - 1.4.4. modify the provisions in the registry agreement regarding fees paid by Registry Operator to ICANN; or
 - 1.4.5. modify ICANN's obligations to ensure equitable treatment of registry operators and act in an open and transparent manner.
2. **Temporary Policies.** Registry Operator shall comply with and implement all specifications or policies established by the Board on a temporary basis, if adopted by the Board by a vote of at least two-thirds of its members, so long as the Board reasonably determines that such modifications or amendments are justified and that immediate temporary establishment of a specification or policy on the subject is necessary to maintain the stability or security of Registry Services or the DNS ("*Temporary Policies*").
- 2.1. Such proposed specification or policy shall be as narrowly tailored as feasible to achieve those objectives. In establishing any Temporary Policy, the Board shall state the period of time for which the Temporary Policy is adopted and shall immediately implement the Consensus Policy development process set forth in ICANN's Bylaws.
 - 2.1.1. ICANN shall also issue an advisory statement containing a detailed explanation of its reasons for adopting the Temporary Policy and why the Board believes such Temporary Policy should receive the consensus support of Internet stakeholders.
 - 2.1.2. If the period of time for which the Temporary Policy is adopted exceeds 90 days, the Board shall reaffirm its temporary adoption every 90 days for a total period not to exceed one year, in order to maintain such Temporary Policy in effect until such time as it becomes a Consensus Policy. If the one year period expires or, if during such one year period, the Temporary Policy does not become a Consensus Policy and is not reaffirmed by the Board, Registry Operator shall no longer be required to comply with or implement such Temporary Policy.
3. **Notice and Conflicts.** Registry Operator shall be afforded a reasonable period of time following notice of the establishment of a Consensus Policy or Temporary Policy in which to comply with such policy or specification, taking into account any urgency involved. In the event of a conflict between Registry Services and Consensus Policies or any Temporary Policy, the Consensus Policies or Temporary Policy shall control, but only with respect to subject matter in conflict.

SPECIFICATION 2

DATA ESCROW REQUIREMENTS

Registry Operator will engage an independent entity to act as data escrow agent (“*Escrow Agent*”) for the provision of data escrow services related to the Registry Agreement. The following Technical Specifications set forth in Part A, and Legal Requirements set forth in Part B, will be included in any data escrow agreement between Registry Operator and the Escrow Agent, under which ICANN must be named a third-party beneficiary. In addition to the following requirements, the data escrow agreement may contain other provisions that are not contradictory or intended to subvert the required terms provided below.

PART A – TECHNICAL SPECIFICATIONS

1. **Deposits.** There will be two types of Deposits: Full and Differential. For both types, the universe of Registry objects to be considered for data escrow are those objects necessary in order to offer all of the approved Registry Services.
 - 1.1 “**Full Deposit**” will consist of data that reflects the state of the registry as of 00:00:00 UTC on each Sunday.
 - 1.2 “**Differential Deposit**” means data that reflects all transactions that were not reflected in the last previous Full or Differential Deposit, as the case may be. Each Differential Deposit will contain all database transactions since the previous Deposit was completed as of 00:00:00 UTC of each day, but Sunday. Differential Deposits must include complete Escrow Records as specified below that were not included or changed since the most recent full or Differential Deposit (i.e., newly added or modified domain names).

2. **Schedule for Deposits.** Registry Operator will submit a set of escrow files on a daily basis as follows:
 - 2.1 Each Sunday, a Full Deposit must be submitted to the Escrow Agent by 23:59 UTC.
 - 2.2 The other six days of the week, the corresponding Differential Deposit must be submitted to Escrow Agent by 23:59 UTC.

3. **Escrow Format Specification.**
 - 3.1 **Deposit’s Format.** Registry objects, such as domains, contacts, name servers, registrars, etc. will be compiled into a file constructed as described in draft-arias-noguchi-registry-data-escrow, see [1]. The aforementioned document describes some elements as optional; Registry Operator will include those elements in the Deposits if they are available. Registry Operator will use the draft version available at the time of signing the Agreement, if not already an RFC. Once the specification is published as an RFC, Registry Operator will implement that specification, no later than 180 days after. UTF-8 character encoding will be used.

 - 3.2 **Extensions.** If a Registry Operator offers additional Registry Services that require submission of additional data, not included above, additional “extension schemas” shall be defined in a case by case base to represent that data. These “extension schemas” will be specified as described in [1]. Data related to the “extensions schemas” will be included in the deposit file described in section 3.1. ICANN and the respective Registry shall work together to agree on such new objects’ data escrow specifications.

4. **Processing of Deposit files.** The use of compression is recommended in order to reduce electronic data transfer times, and storage capacity requirements. Data encryption will be used to ensure the privacy of registry escrow data. Files processed for compression and encryption will be in the binary OpenPGP format as per OpenPGP Message Format - RFC 4880, see [2]. Acceptable algorithms for Public-key cryptography, Symmetric-key cryptography, Hash and Compression are those enumerated in RFC 4880, not marked as deprecated in OpenPGP IANA Registry, see [3], that are also royalty-free. The process to follow for a data file in original text format is:
- (1) The file should be compressed. The suggested algorithm for compression is ZIP as per RFC 4880.
 - (2) The compressed data will be encrypted using the escrow agent's public key. The suggested algorithms for Public-key encryption are Elgamal and RSA as per RFC 4880. The suggested algorithms for Symmetric-key encryption are TripleDES, AES128 and CAST5 as per RFC 4880.
 - (3) The file may be split as necessary if, once compressed and encrypted is larger than the file size limit agreed with the escrow agent. Every part of a split file, or the whole file if split is not used, will be called a processed file in this section.
 - (4) A digital signature file will be generated for every processed file using the Registry's private key. The digital signature file will be in binary OpenPGP format as per RFC 4880 [2], and will not be compressed or encrypted. The suggested algorithms for Digital signatures are DSA and RSA as per RFC 4880. The suggested algorithm for Hashes in Digital signatures is SHA256.
 - (5) The processed files and digital signature files will then be transferred to the Escrow Agent through secure electronic mechanisms, such as, SFTP, SCP, HTTPS file upload, etc. as agreed between the Escrow Agent and the Registry Operator. Non-electronic delivery through a physical medium such as CD-ROMs, DVD-ROMs, or USB storage devices may be used if authorized by ICANN.
 - (6) The Escrow Agent will then validate every (processed) transferred data file using the procedure described in section 8.
5. **File Naming Conventions.** Files will be named according to the following convention: {gTLD}_{YYYY-MM-DD}_{type}_S{#}_R{rev}.{ext} where:
- 5.1 {gTLD} is replaced with the gTLD name; in case of an IDN-TLD, the ASCII-compatible form (A-Label) must be used;
 - 5.2 {YYYY-MM-DD} is replaced by the date corresponding to the time used as a timeline watermark for the transactions; i.e. for the Full Deposit corresponding to 2009-08-02T00:00Z, the string to be used would be "2009-08-02";
 - 5.3 {type} is replaced by:
 - (1) "full", if the data represents a Full Deposit;
 - (2) "diff", if the data represents a Differential Deposit;
 - (3) "thin", if the data represents a Bulk Registration Data Access file, as specified in section 3 of Specification 4;
 - 5.4 {#} is replaced by the position of the file in a series of files, beginning with "1"; in case of a lone file, this must be replaced by "1".
 - 5.5 {rev} is replaced by the number of revision (or resend) of the file beginning with "0";
 - 5.6 {ext} is replaced by "sig" if it is a digital signature file of the quasi-homonymous file. Otherwise it is replaced by "ryde".

6. **Distribution of Public Keys.** Each of Registry Operator and Escrow Agent will distribute its public key to the other party (Registry Operator or Escrow Agent, as the case may be) via email to an email address to be specified. Each party will confirm receipt of the other party's public key with a reply email, and the distributing party will subsequently reconfirm the authenticity of the key transmitted via offline methods, like in person meeting, telephone, etc. In this way, public key transmission is authenticated to a user able to send and receive mail via a mail server operated by the distributing party. Escrow Agent, Registry and ICANN will exchange keys by the same procedure.
7. **Notification of Deposits.** Along with the delivery of each Deposit, Registry Operator will deliver to Escrow Agent and to ICANN a written statement (which may be by authenticated e-mail) that includes a copy of the report generated upon creation of the Deposit and states that the Deposit has been inspected by Registry Operator and is complete and accurate. Registry Operator will include the Deposit's "id" and "resend" attributes in its statement. The attributes are explained in [1].
8. **Verification Procedure.**
 - (1) The signature file of each processed file is validated.
 - (2) If processed files are pieces of a bigger file, the latter is put together.
 - (3) Each file obtained in the previous step is then decrypted and uncompressed.
 - (4) Each data file contained in the previous step is then validated against the format defined in [1].
 - (5) If [1] includes a verification process, that will be applied at this step.
If any discrepancy is found in any of the steps, the Deposit will be considered incomplete.
9. **References.**

PART B – LEGAL REQUIREMENTS

1. **Escrow Agent.** Prior to entering into an escrow agreement, the Registry Operator must provide notice to ICANN as to the identity of the Escrow Agent, and provide ICANN with contact information and a copy of the relevant escrow agreement, and all amendment thereto. In addition, prior to entering into an escrow agreement, Registry Operator must obtain the consent of ICANN to (a) use the specified Escrow Agent, and (b) enter into the form of escrow agreement provided. ICANN must be expressly designated a third-party beneficiary of the escrow agreement. ICANN reserves the right to withhold its consent to any Escrow Agent, escrow agreement, or any amendment thereto, all in its sole discretion.
2. **Fees.** Registry Operator must pay, or have paid on its behalf, fees to the Escrow Agent directly. If Registry Operator fails to pay any fee by the due date(s), the Escrow Agent will give ICANN written notice of such non-payment and ICANN may pay the past-due fee(s) within ten business days after receipt of the written notice from Escrow Agent. Upon payment of the past-due fees by ICANN, ICANN shall have a claim for such amount against Registry Operator, which Registry Operator shall be required to submit to ICANN together with the next fee payment due under the Registry Agreement.
3. **Ownership.** Ownership of the Deposits during the effective term of the Registry Agreement shall remain with Registry Operator at all times. Thereafter, Registry Operator shall assign any such ownership rights (including intellectual property rights, as the case may be) in such Deposits to ICANN. In the event that during the term of the Registry Agreement any Deposit is released from escrow to ICANN, any intellectual property rights held by Registry Operator in the Deposits will automatically be licensed on a non-exclusive, perpetual, irrevocable, royalty-free, paid-up basis to ICANN or to a party designated in writing by ICANN.
4. **Integrity and Confidentiality.** Escrow Agent will be required to (i) hold and maintain the Deposits in a secure, locked, and environmentally safe facility, which is accessible only to authorized representatives of Escrow Agent, (ii) protect the integrity and confidentiality of the Deposits using commercially reasonable measures and (iii) keep and safeguard each Deposit for one year. ICANN and Registry Operator will be provided the right to inspect Escrow Agent's applicable records upon reasonable prior notice and during normal business hours. Registry Operator and ICANN will be provided with the right to designate a third-party auditor to audit Escrow Agent's compliance with the technical specifications and maintenance requirements of this Specification 2 from time to time.

If Escrow Agent receives a subpoena or any other order from a court or other judicial tribunal pertaining to the disclosure or release of the Deposits, Escrow Agent will promptly notify the Registry Operator and ICANN unless prohibited by law. After notifying the Registry Operator and ICANN, Escrow Agent shall allow sufficient time for Registry Operator or ICANN to challenge any such order, which shall be the responsibility of Registry Operator or ICANN; provided, however, that Escrow Agent does not waive its rights to present its position with respect to any such order. Escrow Agent will cooperate with the Registry Operator or ICANN to support efforts to quash or limit any subpoena, at such party's expense. Any party requesting additional assistance shall pay Escrow Agent's standard charges or as quoted upon submission of a detailed request.

5. **Copies.** Escrow Agent may be permitted to duplicate any Deposit, in order to comply with the terms and provisions of the escrow agreement.
6. **Release of Deposits.** Escrow Agent will make available for electronic download (unless otherwise requested) to ICANN or its designee, within twenty-four hours, at the Registry Operator's expense, all Deposits in Escrow Agent's possession in the event that the Escrow Agent receives a request from Registry Operator to effect such delivery to ICANN, or receives one of the following written notices by ICANN stating that:
- 6.1 the Registry Agreement has expired without renewal, or been terminated; or
 - 6.2 ICANN failed, with respect to (a) any Full Deposit or (b) five Differential Deposits within any calendar month, to receive, within five calendar days after the Deposit's scheduled delivery date, notification of receipt from Escrow Agent; (x) ICANN gave notice to Escrow Agent and Registry Operator of that failure; and (y) ICANN has not, within seven calendar days after such notice, received notice from Escrow Agent that the Deposit has been received; or
 - 6.3 ICANN has received notification from Escrow Agent of failed verification of a Full Deposit or of failed verification of five Differential Deposits within any calendar month and (a) ICANN gave notice to Registry Operator of that receipt; and (b) ICANN has not, within seven calendar days after such notice, received notice from Escrow Agent of verification of a remediated version of such Full Deposit or Differential Deposit; or
 - 6.4 Registry Operator has: (i) ceased to conduct its business in the ordinary course; or (ii) filed for bankruptcy, become insolvent or anything analogous to any of the foregoing under the laws of any jurisdiction anywhere in the world; or
 - 6.5 Registry Operator has experienced a failure of critical registry functions and ICANN has asserted its rights pursuant to Section 2.13 of the Registry Agreement; or
 - 6.6 a competent court, arbitral, legislative, or government agency mandates the release of the Deposits to ICANN.

Unless Escrow Agent has previously released the Registry Operator's Deposits to ICANN or its designee, Escrow Agent will deliver all Deposits to ICANN upon termination of the Registry Agreement or the Escrow Agreement.

7. **Verification of Deposits.**
- 7.1 Within twenty-four hours after receiving each Deposit or corrected Deposit, Escrow Agent must verify the format and completeness of each Deposit and deliver to ICANN a copy of the verification report generated for each Deposit. Reports will be delivered electronically, as specified from time to time by ICANN.
 - 7.2 If Escrow Agent discovers that any Deposit fails the verification procedures, Escrow Agent must notify, either by email, fax or phone, Registry Operator and ICANN of such nonconformity within twenty-four hours after receiving the non-conformant Deposit. Upon notification of such verification failure, Registry Operator must begin developing modifications, updates, corrections, and other fixes of the Deposit necessary for the Deposit to pass the verification procedures and deliver such fixes to Escrow Agent as promptly as possible.
8. **Amendments.** Escrow Agent and Registry Operator shall amend the terms of the Escrow Agreement to conform to this Specification 2 within ten (10) calendar days of any amendment or modification to this Specification 2. In the event of a conflict between this Specification 2 and the Escrow Agreement, this Specification 2 shall control.
9. **Indemnity.** Registry Operator shall indemnify and hold harmless Escrow Agent and each of its directors, officers, agents, employees, members, and stockholders ("Escrow Agent Indemnitees")

absolutely and forever from and against any and all claims, actions, damages, suits, liabilities, obligations, costs, fees, charges, and any other expenses whatsoever, including reasonable attorneys' fees and costs, that may be asserted by a third party against any Escrow Agent Indemnitees in connection with the Escrow Agreement or the performance of Escrow Agent or any Escrow Agent Indemnitees thereunder (with the exception of any claims based on the misrepresentation, negligence, or misconduct of Escrow Agent, its directors, officers, agents, employees, contractors, members, and stockholders). Escrow Agent shall indemnify and hold harmless Registry Operator and ICANN, and each of their respective directors, officers, agents, employees, members, and stockholders ("Indemnitees") absolutely and forever from and against any and all claims, actions, damages, suits, liabilities, obligations, costs, fees, charges, and any other expenses whatsoever, including reasonable attorneys' fees and costs, that may be asserted by a third party against any Indemnitee in connection with the misrepresentation, negligence or misconduct of Escrow Agent, its directors, officers, agents, employees and contractors.

SPECIFICATION 3

FORMAT AND CONTENT FOR REGISTRY OPERATOR MONTHLY REPORTING

Registry Operator shall provide one set of monthly reports per gTLD to _____ with the following content. ICANN may request in the future that the reports be delivered by other means and using other formats. ICANN will use reasonable commercial efforts to preserve the confidentiality of the information reported until three months after the end of the month to which the reports relate.

1. Per-Registrar Transactions Report. This report shall be compiled in a comma separated-value formatted file as specified in RFC 4180. The file shall be named “gTLD-transactions-yyyymm.csv”, where “gTLD” is the gTLD name; in case of an IDN-TLD, the A-label shall be used; “yyyymm” is the year and month being reported. The file shall contain the following fields per registrar:

Field #	Field Name	Description
01	registrar-name	registrar's full corporate name as registered with IANA
02	iana-id	http://www.iana.org/assignments/registrar-ids
03	total-domains	total domains under sponsorship
04	total-nameservers	total name servers registered for TLD
05	net-adds-1-yr	number of domains successfully registered with an initial term of one year (and not deleted within the add grace period)
06	net-adds-2-yr	number of domains successfully registered with an initial term of two years (and not deleted within the add grace period)
07	net-adds-3-yr	number of domains successfully registered with an initial term of three years (and not deleted within the add grace period)
08	net-adds-4-yr	number of domains successfully registered with an initial term of four years (and not deleted within the add grace period)
09	net-adds-5-yr	number of domains successfully registered with an initial term of five years (and not deleted within the add grace period)
10	net-adds-6-yr	number of domains successfully registered with an initial term of six years (and not deleted within the add grace period)
11	net-adds-7-yr	number of domains successfully registered with an initial term of seven years (and not deleted within the add grace period)

12	net-adds-8-yr	number of domains successfully registered with an initial term of eight years (and not deleted within the add grace period)
13	net-adds-9-yr	number of domains successfully registered with an initial term of nine years (and not deleted within the add grace period)
14	net-adds-10-yr	number of domains successfully registered with an initial term of ten years (and not deleted within the add grace period)
15	net-renews-1-yr	number of domains successfully renewed either automatically or by command with a new renewal period of one year (and not deleted within the renew grace period)
16	net-renews-2-yr	number of domains successfully renewed either automatically or by command with a new renewal period of two years (and not deleted within the renew grace period)
17	net-renews-3-yr	number of domains successfully renewed either automatically or by command with a new renewal period of three years (and not deleted within the renew grace period)
18	net-renews-4-yr	number of domains successfully renewed either automatically or by command with a new renewal period of four years (and not deleted within the renew grace period)
19	net-renews-5-yr	number of domains successfully renewed either automatically or by command with a new renewal period of five years (and not deleted within the renew grace period)
20	net-renews-6-yr	number of domains successfully renewed either automatically or by command with a new renewal period of six years (and not deleted within the renew grace period)
21	net-renews-7-yr	number of domains successfully renewed either automatically or by command with a new renewal period of seven years (and not deleted within the renew grace period)
22	net-renews-8-yr	number of domains successfully renewed either automatically or by command with a new renewal period of eight years (and not deleted within the renew grace period)
23	net-renews-9-yr	number of domains successfully renewed either

		automatically or by command with a new renewal period of nine years (and not deleted within the renew grace period)
24	net-renews-10-yr	number of domains successfully renewed either automatically or by command with a new renewal period of ten years (and not deleted within the renew grace period)
25	transfer-gaining-successful	transfers initiated by this registrar that were ack'd by the other registrar – either by command or automatically
26	transfer-gaining-nacked	transfers initiated by this registrar that were n'acked by the other registrar
27	transfer-losing-successful	transfers initiated by another registrar that this registrar ack'd – either by command or automatically
28	transfer-losing-nacked	transfers initiated by another registrar that this registrar n'acked
29	transfer-disputed-won	number of transfer disputes in which this registrar prevailed
30	transfer-disputed-lost	number of transfer disputes this registrar lost
31	transfer-disputed-noddecision	number of transfer disputes involving this registrar with a split or no decision
32	deleted-domains-grace	domains deleted within the add grace period
33	deleted-domains-nograce	domains deleted outside the add grace period
34	restored-domains	domain names restored from redemption period
35	restored-noreport	total number of restored names for which the registrar failed to submit a restore report
36	agp-exemption-requests	total number of AGP (add grace period) exemption requests
37	agp-exemptions-granted	total number of AGP (add grace period) exemption requests granted
38	agp-exempted-domains	total number of names affected by granted AGP (add grace period) exemption requests
39	attempted-adds	number of attempted (successful and failed) domain name create commands

The first line shall include the field names exactly as described in the table above as a “header line” as described in section 2 of RFC 4180. The last line of each report shall include totals for each column across all registrars; the first field of this line shall read “Totals” while the second field shall be left empty in that line. No other lines besides the ones described above shall be included. Line breaks shall be <U+000D, U+000A> as described in RFC 4180.

2. Registry Functions Activity Report. This report shall be compiled in a comma separated-value formatted file as specified in RFC 4180. The file shall be named “gTLD-activity-yyyymm.csv”, where “gTLD” is the gTLD name; in case of an IDN-TLD, the A-label shall be used; “yyyymm” is the year and month being reported. The file shall contain the following fields:

Field #	Field Name	Description
01	operational-registrars	number of operational registrars at the end of the reporting period
02	ramp-up-registrars	number of registrars that have received a password for access to OT&E at the end of the reporting period
03	pre-ramp-up-registrars	number of registrars that have requested access, but have not yet entered the ramp-up period at the end of the reporting period
04	zfa-passwords	number of active zone file access passwords at the end of the reporting period
05	whois-43-queries	number of WHOIS (port-43) queries responded during the reporting period
06	web-whois-queries	number of Web-based Whois queries responded during the reporting period, not including searchable Whois
07	searchable-whois-queries	number of searchable Whois queries responded during the reporting period, if offered
08	dns-udp-queries-received	number of DNS queries received over UDP transport during the reporting period
09	dns-udp-queries-responded	number of DNS queries received over UDP transport that were responded during the reporting period
10	dns-tcp-queries-received	number of DNS queries received over TCP transport during the reporting period
11	dns-tcp-queries-responded	number of DNS queries received over TCP transport that were responded during the reporting period
12	srs-dom-check	number of SRS (EPP and any other interface) domain name “check” requests responded during the reporting period
13	srs-dom-create	number of SRS (EPP and any other interface) domain name “create” requests responded during the reporting period
14	srs-dom-delete	number of SRS (EPP and any other interface) domain name “delete” requests responded during the reporting period
15	srs-dom-info	number of SRS (EPP and any other interface) domain name “info” requests responded during the reporting period
16	srs-dom-renew	number of SRS (EPP and any other interface) domain name

		“renew” requests responded during the reporting period
17	srs-dom-rgp-restore-report	number of SRS (EPP and any other interface) domain name RGP “restore” requests responded during the reporting period
18	srs-dom-rgp-restore-request	number of SRS (EPP and any other interface) domain name RGP “restore” requests delivering a restore report responded during the reporting period
19	srs-dom-transfer-approve	number of SRS (EPP and any other interface) domain name “transfer” requests to approve transfers responded during the reporting period
20	srs-dom-transfer-cancel	number of SRS (EPP and any other interface) domain name “transfer” requests to cancel transfers responded during the reporting period
21	srs-dom-transfer-query	number of SRS (EPP and any other interface) domain name “transfer” requests to query about a transfer responded during the reporting period
22	srs-dom-transfer-reject	number of SRS (EPP and any other interface) domain name “transfer” requests to reject transfers responded during the reporting period
23	srs-dom-transfer-request	number of SRS (EPP and any other interface) domain name “transfer” requests to request transfers responded during the reporting period
24	srs-dom-update	number of SRS (EPP and any other interface) domain name “update” requests (not including RGP restore requests) responded during the reporting period
25	srs-host-check	number of SRS (EPP and any other interface) host “check” requests responded during the reporting period
26	srs-host-create	number of SRS (EPP and any other interface) host “create” requests responded during the reporting period
27	srs-host-delete	number of SRS (EPP and any other interface) host “delete” requests responded during the reporting period
28	srs-host-info	number of SRS (EPP and any other interface) host “info” requests responded during the reporting period
29	srs-host-update	number of SRS (EPP and any other interface) host “update” requests responded during the reporting period
30	srs-cont-check	number of SRS (EPP and any other interface) contact “check” requests responded during the reporting period
31	srs-cont-create	number of SRS (EPP and any other interface) contact “create” requests responded during the reporting period

32	srs-cont-delete	number of SRS (EPP and any other interface) contact “delete” requests responded during the reporting period
33	srs-cont-info	number of SRS (EPP and any other interface) contact “info” requests responded during the reporting period
34	srs-cont-transfer-approve	number of SRS (EPP and any other interface) contact “transfer” requests to approve transfers responded during the reporting period
35	srs-cont-transfer-cancel	number of SRS (EPP and any other interface) contact “transfer” requests to cancel transfers responded during the reporting period
36	srs-cont-transfer-query	number of SRS (EPP and any other interface) contact “transfer” requests to query about a transfer responded during the reporting period
37	srs-cont-transfer-reject	number of SRS (EPP and any other interface) contact “transfer” requests to reject transfers responded during the reporting period
38	srs-cont-transfer-request	number of SRS (EPP and any other interface) contact “transfer” requests to request transfers responded during the reporting period
39	srs-cont-update	number of SRS (EPP and any other interface) contact “update” requests responded during the reporting period

The first line shall include the field names exactly as described in the table above as a “header line” as described in section 2 of RFC 4180. No other lines besides the ones described above shall be included. Line breaks shall be <U+000D, U+000A> as described in RFC 4180.

SPECIFICATION 4

SPECIFICATION FOR REGISTRATION DATA PUBLICATION SERVICES

1. **Registration Data Directory Services.** Until ICANN requires a different protocol, Registry Operator will operate a WHOIS service available via port 43 in accordance with RFC 3912, and a web-based Directory Service at <whois.nic.TLD> providing free public query-based access to at least the following elements in the following format. ICANN reserves the right to specify alternative formats and protocols, and upon such specification, the Registry Operator will implement such alternative specification as soon as reasonably practicable.

1.1. The format of responses shall follow a semi-free text format outline below, followed by a blank line and a legal disclaimer specifying the rights of Registry Operator, and of the user querying the database.

1.2. Each data object shall be represented as a set of key/value pairs, with lines beginning with keys, followed by a colon and a space as delimiters, followed by the value.

1.3. For fields where more than one value exists, multiple key/value pairs with the same key shall be allowed (for example to list multiple name servers). The first key/value pair after a blank line should be considered the start of a new record, and should be considered as identifying that record, and is used to group data, such as hostnames and IP addresses, or a domain name and registrant information, together.

1.4. Domain Name Data:

1.4.1. **Query format:** whois EXAMPLE.TLD

1.4.2. **Response format:**

```

1.6. Nameserver Data:

1.6.1. **Query format:** whois "NS1.EXAMPLE.TLD" or whois "nameserver (IP Address)"

1.6.2. **Response format:**

Server Name: NS1.EXAMPLE.TLD
 IP Address: 192.0.2.123
 IP Address: 2001:0DB8::1
 Registrar: Example Registrar, Inc.
 WHOIS Server: whois.example-registrar.tld
 Referral URL: http://www.example-registrar.tld
 >>> Last update of WHOIS database: 2009-05-29T20:15:00Z <<<

1.7. The format of the following data fields: domain status, individual and organizational names, address, street, city, state/province, postal code, country, telephone and fax numbers, email addresses, date and times should conform to the mappings specified in EPP RFCs 5730-5734 so that the display of this information (or values return in WHOIS responses) can be uniformly processed and understood.

1.8. **Searchability.** Offering searchability capabilities on the Directory Services is optional but if offered by the Registry Operator it shall comply with the specification described in this section.

1.8.1. Registry Operator will offer searchability on the web-based Directory Service.

1.8.2. Registry Operator will offer partial match capabilities, at least, on the following fields: domain name, contacts and registrant's name, and contact and registrant's postal address, including all the sub-fields described in EPP (e.g., street, city, state or province, etc.).

1.8.3. Registry Operator will offer exact-match capabilities, at least, on the following fields: registrar id, name server name, and name server's IP address (only applies to IP addresses stored by the registry, i.e., glue records).

1.8.4. Registry Operator will offer Boolean search capabilities supporting, at least, the following logical operators to join a set of search criteria: AND, OR, NOT.

1.8.5. Search results will include domain names matching the search criteria.

1.8.6. Registry Operator will: 1) implement appropriate measures to avoid abuse of this feature (e.g., permitting access only to legitimate authorized users); and 2) ensure the feature is in compliance with any applicable privacy laws or policies.

2. Zone File Access

2.1. Third-Party Access

2.1.1. **Zone File Access Agreement.** Registry Operator will enter into an agreement with any Internet user that will allow such user to access an Internet host server or servers designated by Registry Operator and download zone file data. The agreement will be standardized, facilitated and administered by a Centralized Zone Data Access Provider (the “CZDA Provider”). Registry Operator will provide access to zone file data per Section 2.1.3 and do so using the file format described in Section 2.1.4. Notwithstanding the foregoing, (a) the CZDA Provider may reject the request for access of any user that does not satisfy the credentialing requirements in Section 2.1.2 below; (b) Registry Operator may reject the request for access of any user that does not provide correct or legitimate credentials under Section 2.1.2 or where Registry Operator reasonably believes will violate the terms of Section 2.1.5. below; and, (c) Registry Operator may revoke access of any user if Registry Operator has evidence to support that the user has violated the terms of Section 2.1.5.

2.1.2. **Credentialing Requirements.** Registry Operator, through the facilitation of the CZDA Provider, will request each user to provide it with information sufficient to correctly identify and locate the user. Such user information will include, without limitation, company name, contact name, address, telephone number, facsimile number, email address, and the Internet host machine name and IP address.

2.1.3. **Grant of Access.** Each Registry Operator will provide the Zone File FTP (or other Registry supported) service for an ICANN-specified and managed URL (specifically, <TLD>.zda.icann.org where <TLD> is the TLD for which the registry is responsible) for the user to access the Registry’s zone data archives. Registry Operator will grant the user a non-exclusive, non-transferable, limited right to access Registry Operator’s Zone File FTP server, and to transfer a copy of the top-level domain zone files, and any associated cryptographic checksum files no more than once per 24 hour period using FTP, or other data transport and access protocols that may be prescribed by ICANN. For every zone file access server, the zone files are in the top-level directory called <zone>.zone.gz, with <zone>.zone.gz.md5 and <zone>.zone.gz.sig to verify downloads. If the Registry Operator also provides historical data, it will use the naming pattern <zone>-yyyymmdd.zone.gz, etc.

2.1.4. **File Format Standard.** Registry Operator will provide zone files using a sub-format of the standard Master File format as originally defined in RFC 1035, Section 5, including all the records present in the actual zone used in the public DNS. Sub-format is as follows:

1. Each record must include all fields in one line as: <domain-name> <TTL> <class> <type> <RDATA>.
2. Class and Type must use the standard mnemonics and must be in lower case.

3. TTL must be present as a decimal integer.
4. Use of /X and /DDD inside domain names is allowed.
5. All domain names must be in lower case.
6. Must use exactly one tab as separator of fields inside a record.
7. All domain names must be fully qualified.
8. No \$ORIGIN directives.
9. No use of "@" to denote current origin.
10. No use of "blank domain names" at the beginning of a record to continue the use of the domain name in the previous record.
11. No \$INCLUDE directives.
12. No \$TTL directives.
13. No use of parentheses, e.g., to continue the list of fields in a record across a line boundary.
14. No use of comments.
15. No blank lines.
16. The SOA record should be present at the top and (duplicated at) the end of the zone file.
17. With the exception of the SOA record, all the records in a file must be in alphabetical order.
18. One zone per file. If a TLD divides its DNS data into multiple zones, each goes into a separate file named as above, with all the files combined using tar into a file called <tld>.zone.tar.

2.1.5. Use of Data by User. Registry Operator will permit user to use the zone file for lawful purposes; provided that, (a) user takes all reasonable steps to protect against unauthorized access to and use and disclosure of the data, and (b) under no circumstances will Registry Operator be required or permitted to allow user to use the data to, (i) allow, enable, or otherwise support the transmission by e-mail, telephone, or facsimile of mass unsolicited, commercial advertising or solicitations to entities other than user's own existing customers, or (ii) enable high volume, automated, electronic processes that send queries or data to the systems of Registry Operator or any ICANN-accredited registrar.

2.1.6. Term of Use. Registry Operator, through CZDA Provider, will provide each user with access to the zone file for a period of not less than three (3) months. Registry Operator will allow users to renew their Grant of Access.

2.1.7. No Fee for Access. Registry Operator will provide, and CZDA Provider will facilitate, access to the zone file to user at no cost.

2.2 Co-operation

2.2.1. Assistance. Registry Operator will co-operate and provide reasonable assistance to ICANN and the CZDA Provider to facilitate and maintain the efficient access of zone file data by permitted users as contemplated under this Schedule.

2.3 ICANN Access. Registry Operator shall provide bulk access to the zone files for the TLD to ICANN or its designee on a continuous basis in the manner ICANN may reasonably specify from time to time.

2.4 Emergency Operator Access. Registry Operator shall provide bulk access to the zone files for the TLD to the Emergency Operators designated by ICANN on a continuous basis in the manner ICANN may reasonably specify from time to time.

3. Bulk Registration Data Access to ICANN

3.1. Periodic Access to Thin Registration Data. In order to verify and ensure the operational stability of Registry Services as well as to facilitate compliance checks on accredited registrars, Registry Operator will provide ICANN on a weekly basis (the day to be designated by ICANN) with up-to-date Registration Data as specified below. Data will include data committed as of 00:00:00 UTC on the day previous to the one designated for retrieval by ICANN.

3.1.1. Contents. Registry Operator will provide, at least, the following data for all registered domain names: domain name, domain name repository object id (roid), registrar id (IANA ID), statuses, last updated date, creation date, expiration date, and name server names. For sponsoring registrars, at least, it will provide: registrar name, registrar repository object id (roid), hostname of registrar Whois server, and URL of registrar.

3.1.2. Format. The data will be provided in the format specified in Specification 2 for Data Escrow (including encryption, signing, etc.) but including only the fields mentioned in the previous section, i.e., the file will only contain Domain and Registrar objects with the fields mentioned above. Registry Operator has the option to provide a full deposit file instead as specified in Specification 2.

3.1.3. Access. Registry Operator will have the file(s) ready for download as of 00:00:00 UTC on the day designated for retrieval by ICANN. The file(s) will be made available for download by SFTP, though ICANN may request other means in the future.

3.2. Exceptional Access to Thick Registration Data. In case of a registrar failure, de-accreditation, court order, etc. that prompts the temporary or definitive transfer of its domain names to another registrar, at the request of ICANN, Registry Operator will provide ICANN with up-to-date data for the domain names of the losing registrar. The data will be provided in the format specified in Specification 2 for Data Escrow. The file will only contain data related to the domain names of the losing registrar. Registry Operator will provide the data within 2 business days. Unless otherwise agreed by Registry Operator and ICANN, the file will be made available for download by ICANN in the same manner as the data specified in Section 3.1. of this Specification.

SPECIFICATION 5

SCHEDULE OF RESERVED NAMES AT THE SECOND LEVEL IN GTLD REGISTRIES

Except to the extent that ICANN otherwise expressly authorizes in writing, Registry Operator shall reserve (i.e., Registry Operator shall not register, delegate, use or otherwise make available such labels to any third party, but may register such labels in its own name in order to withhold them from delegation or use) names formed with the following labels from initial (i.e. other than renewal) registration within the TLD:

1. **Example. The label “EXAMPLE”** shall be reserved at the second level and at all other levels within the TLD at which Registry Operator makes registrations.
2. **Two-character labels.** All two-character labels shall be initially reserved. The reservation of a two-character label string may be released to the extent that Registry Operator reaches agreement with the government and country-code manager. The Registry Operator may also propose release of these reservations based on its implementation of measures to avoid confusion with the corresponding country codes.
3. **Tagged Domain Names.** Labels may only include hyphens in the third and fourth position if they represent valid internationalized domain names in their ASCII encoding (for example "xn--ndk061n").
4. **Second-Level Reservations for Registry Operations.** The following names are reserved for use in connection with the operation of the registry for the TLD. Registry Operator may use them, but upon conclusion of Registry Operator's designation as operator of the registry for the TLD they shall be transferred as specified by ICANN: NIC, WWW, IRIS and WHOIS.
5. **Country and Territory Names.** The country and territory names contained in the following internationally recognized lists shall be initially reserved at the second level and at all other levels within the TLD at which the Registry Operator provides for registrations:
 - 5.1. the short form (in English) of all country and territory names contained on the ISO 3166-1 list, as updated from time to time, including the European Union, which is exceptionally reserved on the ISO 3166-1 list, and its scope extended in August 1999 to any application needing to represent the name European Union
<http://www.iso.org/iso/support/country_codes/iso_3166_code_lists/iso-3166-1_decoding_table.htm#EU>;
 - 5.2. the United Nations Group of Experts on Geographical Names, Technical Reference Manual for the Standardization of Geographical Names, Part III Names of Countries of the World; and
 - 5.3. the list of United Nations member states in 6 official United Nations languages prepared by the Working Group on Country Names of the United Nations Conference on the Standardization of Geographical Names;

provided, that the reservation of specific country and territory names may be released to the extent that Registry Operator reaches agreement with the applicable government(s), provided, further, that

Registry Operator may also propose release of these reservations, subject to review by ICANN's Governmental Advisory Committee and approval by ICANN.

SPECIFICATION 6

REGISTRY INTEROPERABILITY AND CONTINUITY SPECIFICATIONS

1. Standards Compliance

1.1. **DNS.** Registry Operator shall comply with relevant existing RFCs and those published in the future by the Internet Engineering Task Force (IETF) including all successor standards, modifications or additions thereto relating to the DNS and name server operations including without limitation RFCs 1034, 1035, 1982, 2181, 2182, 2671, 3226, 3596, 3597, 4343, and 5966.

1.2. **EPP.** Registry Operator shall comply with relevant existing RFCs and those published in the future by the Internet Engineering Task Force (IETF) including all successor standards, modifications or additions thereto relating to the provisioning and management of domain names using the Extensible Provisioning Protocol (EPP) in conformance with RFCs 5910, 5730, 5731, 5732, 5733 and 5734. If Registry Operator implements Registry Grace Period (RGP), it will comply with RFC 3915 and its successors. If Registry Operator requires the use of functionality outside the base EPP RFCs, Registry Operator must document EPP extensions in Internet-Draft format following the guidelines described in RFC 3735. Registry Operator will provide and update the relevant documentation of all the EPP Objects and Extensions supported to ICANN prior to deployment.

1.3. **DNSSEC.** Registry Operator shall sign its TLD zone files implementing Domain Name System Security Extensions (“DNSSEC”). During the Term, Registry Operator shall comply with RFCs 4033, 4034, 4035, 4509 and their successors, and follow the best practices described in RFC 4641 and its successors. If Registry Operator implements Hashed Authenticated Denial of Existence for DNS Security Extensions, it shall comply with RFC 5155 and its successors. Registry Operator shall accept public-key material from child domain names in a secure manner according to industry best practices. Registry shall also publish in its website the DNSSEC Practice Statements (DPS) describing critical security controls and procedures for key material storage, access and usage for its own keys and secure acceptance of registrants’ public-key material. Registry Operator shall publish its DPS following the format described in “DPS-framework” (currently in draft format, see <http://tools.ietf.org/html/draft-ietf-dnsop-dnssec-dps-framework>) within 180 days after the “DPS-framework” becomes an RFC.

1.4. **IDN.** If the Registry Operator offers Internationalized Domain Names (“IDNs”), it shall comply with RFCs 5890, 5891, 5892, 5893 and their successors. Registry Operator shall comply with the ICANN IDN Guidelines at <http://www.icann.org/en/topics/idn/implementation-guidelines.htm>, as they may be amended, modified, or superseded from time to time. Registry Operator shall publish and keep updated its IDN Tables and IDN Registration Rules in the IANA Repository of IDN Practices as specified in the ICANN IDN Guidelines.

1.5. **IPv6.** Registry Operator shall be able to accept IPv6 addresses as glue records in its Registry System and publish them in the DNS. Registry Operator shall offer public IPv6 transport for, at least, two of the Registry’s name servers listed in the root zone with the corresponding IPv6 addresses registered with IANA. Registry Operator should follow “DNS IPv6 Transport Operational Guidelines” as described in BCP 91 and the recommendations and considerations described in RFC 4472. Registry Operator shall offer public IPv6 transport for its Registration Data Publication Services as defined in Specification 4 of this Agreement; e.g. Whois (RFC 3912), Web based Whois. Registry Operator shall offer public IPv6 transport for its Shared Registration System (SRS) to any Registrar, no later than six months after receiving the first request in writing from a gTLD accredited Registrar willing to operate with the SRS over IPv6.

2. Registry Services

2.1. **Registry Services.** “Registry Services” are, for purposes of the Registry Agreement, defined as the following: (a) those services that are operations of the registry critical to the following tasks: the receipt of data from registrars concerning registrations of domain names and name servers; provision to registrars of status information relating to the zone servers for the TLD; dissemination of TLD zone files; operation of the registry DNS servers; and dissemination of contact and other information concerning domain name server registrations in the TLD as required by this Agreement; (b) other products or services that the Registry Operator is required to provide because of the establishment of a Consensus Policy as defined in Specification 1; (c) any other products or services that only a registry operator is capable of providing, by reason of its designation as the registry operator; and (d) material changes to any Registry Service within the scope of (a), (b) or (c) above.

2.2. **Wildcard Prohibition.** For domain names which are either not registered, or the registrant has not supplied valid records such as NS records for listing in the DNS zone file, or their status does not allow them to be published in the DNS, the use of DNS wildcard Resource Records as described in RFCs 1034 and 4592 or any other method or technology for synthesizing DNS Resources Records or using redirection within the DNS by the Registry is prohibited. When queried for such domain names the authoritative name servers must return a “Name Error” response (also known as NXDOMAIN), RCODE 3 as described in RFC 1035 and related RFCs. This provision applies for all DNS zone files at all levels in the DNS tree for which the Registry Operator (or an affiliate engaged in providing Registration Services) maintains data, arranges for such maintenance, or derives revenue from such maintenance.

3. Registry Continuity

3.1. **High Availability.** Registry Operator will conduct its operations using network and geographically diverse, redundant servers (including network-level redundancy, end-node level redundancy and the implementation of a load balancing scheme where applicable) to ensure continued operation in the case of technical failure (widespread or local), or an extraordinary occurrence or circumstance beyond the control of the Registry Operator.

3.2. **Extraordinary Event.** Registry Operator will use commercially reasonable efforts to restore the critical functions of the registry within 24 hours after the termination of an extraordinary event beyond the control of the Registry Operator and restore full system functionality within a maximum of 48 hours following such event, depending on the type of critical function involved. Outages due to such an event will not be considered a lack of service availability.

3.3. **Business Continuity.** Registry Operator shall maintain a business continuity plan, which will provide for the maintenance of Registry Services in the event of an extraordinary event beyond the control of the Registry Operator or business failure of Registry Operator, and may include the designation of a Registry Services continuity provider. If such plan includes the designation of a Registry Services continuity provider, Registry Operator shall provide the name and contact information for such Registry Services continuity provider to ICANN. In the case of an extraordinary event beyond the control of the Registry Operator where the Registry Operator cannot be contacted, Registry Operator consents that ICANN may contact the designated Registry Services continuity provider, if one exists. Registry Operator shall conduct Registry Services Continuity testing at least once per year.

4. Abuse Mitigation

4.1. **Abuse Contact.** Registry Operator shall provide to ICANN and publish on its website its accurate contact details including a valid email and mailing address as well as a primary contact for handling inquiries related to malicious conduct in the TLD, and will provide ICANN with prompt notice of any changes to such contact details.

4.2. **Malicious Use of Orphan Glue Records.** Registry Operators shall take action to remove orphan glue records (as defined at <http://www.icann.org/en/committees/security/sac048.pdf>) when provided with evidence in written form that such records are present in connection with malicious conduct.

5. Supported Initial and Renewal Registration Periods

5.1. **Initial Registration Periods.** Initial registrations of registered names may be made in the registry in one (1) year increments for up to a maximum of ten (10) years. For the avoidance of doubt, initial registrations of registered names may not exceed ten (10) years.

5.2. **Renewal Periods.** Renewal of registered names may be made in one (1) year increments for up to a maximum of ten (10) years. For the avoidance of doubt, renewal of registered names may not extend their registration period beyond ten (10) years from the time of the renewal.

SPECIFICATION 7

MINIMUM REQUIREMENTS FOR RIGHTS PROTECTION MECHANISMS

1. **Rights Protection Mechanisms.** Registry Operator shall implement and adhere to any rights protection mechanisms (“RPMs”) that may be mandated from time to time by ICANN. In addition to such RPMs, Registry Operator may develop and implement additional RPMs that discourage or prevent registration of domain names that violate or abuse another party’s legal rights. Registry Operator will include all ICANN mandated and independently developed RPMs in the registry-registrar agreement entered into by ICANN-accredited registrars authorized to register names in the TLD. Registry Operator shall implement in accordance with requirements established by ICANN each of the mandatory RPMs set forth in the Trademark Clearinghouse (posted at [url to be inserted when final Trademark Clearinghouse is adopted]), which may be revised by ICANN from time to time. Registry Operator shall not mandate that any owner of applicable intellectual property rights use any other trademark information aggregation, notification, or validation service in addition to or instead of the ICANN-designated Trademark Clearinghouse.

2. **Dispute Resolution Mechanisms.** Registry Operator will comply with the following dispute resolution mechanisms as they may be revised from time to time:

- a. the Trademark Post-Delegation Dispute Resolution Procedure (PDDRP) and the Registration Restriction Dispute Resolution Procedure (RRDRP) adopted by ICANN (posted at [urls to be inserted when final procedure is adopted]). Registry Operator agrees to implement and adhere to any remedies ICANN imposes (which may include any reasonable remedy, including for the avoidance of doubt, the termination of the Registry Agreement pursuant to Section 4.3(e) of the Registry Agreement) following a determination by any PDDRP or RRDRP panel and to be bound by any such determination; and
- b. the Uniform Rapid Suspension system (“URS”) adopted by ICANN (posted at [url to be inserted]), including the implementation of determinations issued by URS examiners.

SPECIFICATION 8

CONTINUED OPERATIONS INSTRUMENT

1. The Continued Operations Instrument shall (a) provide for sufficient financial resources to ensure the continued operation of the critical registry functions related to the TLD set forth in Section [__] of the Applicant Guidebook posted at [url to be inserted upon finalization of Applicant Guidebook] (which is hereby incorporated by reference into this Specification 8) for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period of one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6th) anniversary of the Effective Date, and (b) be in the form of either (i) an irrevocable standby letter of credit, or (ii) an irrevocable cash escrow deposit, each meeting the requirements set forth in Section [__] of the Applicant Guidebook posted at [url to be inserted upon finalization of Applicant Guidebook] (which is hereby incorporated by reference into this Specification 8). Registry Operator shall use its best efforts to take all actions necessary or advisable to maintain in effect the Continued Operations Instrument for a period of six (6) years from the Effective Date, and to maintain ICANN as a third party beneficiary thereof. Registry Operator shall provide to ICANN copies of all final documents relating to the Continued Operations Instrument and shall keep ICANN reasonably informed of material developments relating to the Continued Operations Instrument. Registry Operator shall not agree to, or permit, any amendment of, or waiver under, the Continued Operations Instrument or other documentation relating thereto without the prior written consent of ICANN (such consent not to be unreasonably withheld). The Continued Operations Instrument shall expressly state that ICANN may access the financial resources of the Continued Operations Instrument pursuant to Section 2.13 or Section 4.5 [*insert for government entity*: or Section 7.14] of the Registry Agreement.
2. If, notwithstanding the use of best efforts by Registry Operator to satisfy its obligations under the preceding paragraph, the Continued Operations Instrument expires or is terminated by another party thereto, in whole or in part, for any reason, prior to the sixth anniversary of the Effective Date, Registry Operator shall promptly (i) notify ICANN of such expiration or termination and the reasons therefor and (ii) arrange for an alternative instrument that provides for sufficient financial resources to ensure the continued operation of the Registry Services related to the TLD for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period of one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6) anniversary of the Effective Date (an “Alternative Instrument”). Any such Alternative Instrument shall be on terms no less favorable to ICANN than the Continued Operations Instrument and shall otherwise be in form and substance reasonably acceptable to ICANN.
3. Notwithstanding anything to the contrary contained in this Specification 8, at any time, Registry Operator may replace the Continued Operations Instrument with an alternative

instrument that (i) provides for sufficient financial resources to ensure the continued operation of the Registry Services related to the TLD for a period of three (3) years following any termination of this Agreement on or prior to the fifth anniversary of the Effective Date or for a period one (1) year following any termination of this Agreement after the fifth anniversary of the Effective Date but prior to or on the sixth (6) anniversary of the Effective Date, and (ii) contains terms no less favorable to ICANN than the Continued Operations Instrument and is otherwise in form and substance reasonably acceptable to ICANN. In the event Registry Operation replaces the Continued Operations Instrument either pursuant to paragraph 2 or this paragraph 3, the terms of this Specification 8 shall no longer apply with respect to the original Continuing Operations Instrument, but shall thereafter apply with respect to such replacement instrument(s).

SPECIFICATION 9

Registry Operator Code of Conduct

1. In connection with the operation of the registry for the TLD, Registry Operator will not, and will not allow any parent, subsidiary, Affiliate, subcontractor or other related entity, to the extent such party is engaged in the provision of Registry Services with respect to the TLD (each, a “Registry Related Party”), to:
 - a. directly or indirectly show any preference or provide any special consideration to any registrar with respect to operational access to registry systems and related registry services, unless comparable opportunities to qualify for such preferences or considerations are made available to all registrars on substantially similar terms and subject to substantially similar conditions;
 - b. register domain names in its own right, except for names registered through an ICANN accredited registrar that are reasonably necessary for the management, operations and purpose of the TLD, provided, that Registry Operator may reserve names from registration pursuant to Section 2.6 of the Registry Agreement;
 - c. register names in the TLD or sub-domains of the TLD based upon proprietary access to information about searches or resolution requests by consumers for domain names not yet registered (commonly known as, "front-running");
 - d. allow any Affiliated registrar to disclose user data to Registry Operator or any Registry Related Party, except as necessary for the management and operations of the TLD, unless all unrelated third parties (including other registry operators) are given equivalent access to such user data on substantially similar terms and subject to substantially similar conditions; or
 - e. disclose confidential registry data or confidential information about its Registry Services or operations to any employee of any DNS services provider, except as necessary for the management and operations of the TLD, unless all unrelated third parties (including other registry operators) are given equivalent access to such confidential registry data or confidential information on substantially similar terms and subject to substantially similar conditions.
2. If Registry Operator or a Registry Related Party also operates as a provider of registrar or registrar-reseller services, Registry Operator will, or will cause such Registry Related Party to, ensure that such services are offered through a legal entity separate from Registry Operator, and maintain separate books of accounts with respect to its registrar or registrar-reseller operations.
3. Registry Operator will conduct internal reviews at least once per calendar year to

- ensure compliance with this Code of Conduct. Within twenty (20) calendar days following the end of each calendar year, Registry Operator will provide the results of the internal review, along with a certification executed by an executive officer of Registry Operator certifying as to Registry Operator's compliance with this Code of Conduct, via email to an address to be provided by ICANN. (ICANN may specify in the future the form and contents of such reports or that the reports be delivered by other reasonable means.) Registry Operator agrees that ICANN may publicly post such results and certification.
4. Nothing set forth herein shall: (i) limit ICANN from conducting investigations of claims of Registry Operator's non-compliance with this Code of Conduct; or (ii) provide grounds for Registry Operator to refuse to cooperate with ICANN investigations of claims of Registry Operator's non-compliance with this Code of Conduct.
 5. Nothing set forth herein shall limit the ability of Registry Operator or any Registry Related Party, to enter into arms-length transactions in the ordinary course of business with a registrar or reseller with respect to products and services unrelated in all respects to the TLD.
 6. Registry Operator may request an exemption to this Code of Conduct, and such exemption may be granted by ICANN in ICANN's reasonable discretion, if Registry Operator demonstrates to ICANN's reasonable satisfaction that (i) all domain name registrations in the TLD are registered to, and maintained by, Registry Operator for its own exclusive use, (ii) Registry Operator does not sell, distribute or transfer control or use of any registrations in the TLD to any third party that is not an Affiliate of Registry Operator, and (iii) application of this Code of Conduct to the TLD is not necessary to protect the public interest.

SPECIFICATION 10

REGISTRY PERFORMANCE SPECIFICATIONS

1. Definitions

- 1.1. **DNS.** Refers to the Domain Name System as specified in RFCs 1034, 1035, and related RFCs.
- 1.2. **DNSSEC proper resolution.** There is a valid DNSSEC chain of trust from the root trust anchor to a particular domain name, e.g., a TLD, a domain name registered under a TLD, etc.
- 1.3. **EPP.** Refers to the Extensible Provisioning Protocol as specified in RFC 5730 and related RFCs.
- 1.4. **IP address.** Refers to IPv4 or IPv6 addresses without making any distinction between the two. When there is need to make a distinction, IPv4 or IPv6 is used.
- 1.5. **Probes.** Network hosts used to perform (DNS, EPP, etc.) tests (see below) that are located at various global locations.
- 1.6. **RDDS.** Registration Data Directory Services refers to the collective of WHOIS and Web-based WHOIS services as defined in Specification 4 of this Agreement.
- 1.7. **RTT.** Round-Trip Time or **RTT** refers to the time measured from the sending of the first bit of the first packet of the sequence of packets needed to make a request until the reception of the last bit of the last packet of the sequence needed to receive the response. If the client does not receive the whole sequence of packets needed to consider the response as received, the request will be considered unanswered.
- 1.8. **SLR.** Service Level Requirement is the level of service expected for a certain parameter being measured in a Service Level Agreement (SLA).

2. Service Level Agreement Matrix

	Parameter	SLR (monthly basis)
DNS	DNS service availability	0 min downtime = 100% availability
	DNS name server availability	≤ 432 min of downtime (≈ 99%)
	TCP DNS resolution RTT	≤ 1500 ms, for at least 95% of the queries
	UDP DNS resolution RTT	≤ 500 ms, for at least 95% of the queries
	DNS update time	≤ 60 min, for at least 95% of the probes
RDDS	RDDS availability	≤ 864 min of downtime (≈ 98%)
	RDDS query RTT	≤ 2000 ms, for at least 95% of the queries
	RDDS update time	≤ 60 min, for at least 95% of the probes
EPP	EPP service availability	≤ 864 min of downtime (≈ 98%)
	EPP session-command RTT	≤ 4000 ms, for at least 90% of the commands
	EPP query-command RTT	≤ 2000 ms, for at least 90% of the commands
	EPP transform-command RTT	≤ 4000 ms, for at least 90% of the commands

Registry Operator is encouraged to do maintenance for the different services at the times and dates of statistically lower traffic for each service. However, note that there is no provision for planned outages or similar; any downtime, be it for maintenance or due to system failures, will be noted simply as downtime and counted for SLA purposes.

3. DNS

- 3.1. **DNS service availability.** Refers to the ability of the group of listed-as-authoritative name servers of a particular domain name (e.g., a TLD), to answer DNS queries from DNS probes. For the service to be considered available at a particular moment, at least, two of the delegated name servers registered in the DNS must have successful results from “**DNS tests**” to each of their public-DNS registered “**IP addresses**” to which the name server resolves. If 51% or more of the DNS testing probes see the service as unavailable during a given time, the DNS service will be considered unavailable.
- 3.2. **DNS name server availability.** Refers to the ability of a public-DNS registered “**IP address**” of a particular name server listed as authoritative for a domain name, to answer DNS queries from an Internet user. All the public DNS-registered “**IP address**” of all name servers of the domain name being monitored shall be tested individually. If 51% or more of the DNS testing probes get undefined/unanswered results from “**DNS tests**” to a name server “**IP address**” during a given time, the name server “**IP address**” will be considered unavailable.
- 3.3. **UDP DNS resolution RTT.** Refers to the **RTT** of the sequence of two packets, the UDP DNS query and the corresponding UDP DNS response. If the **RTT** is 5 times greater than the time specified in the relevant **SLR**, the **RTT** will be considered undefined.
- 3.4. **TCP DNS resolution RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the DNS response for only one DNS query. If the **RTT** is 5 times greater than the time specified in the relevant **SLR**, the **RTT** will be considered undefined.
- 3.5. **DNS resolution RTT.** Refers to either “**UDP DNS resolution RTT**” or “**TCP DNS resolution RTT**”.
- 3.6. **DNS update time.** Refers to the time measured from the reception of an EPP confirmation to a transform command on a domain name, until the name servers of the parent domain name answer “**DNS queries**” with data consistent with the change made. This only applies for changes to DNS information.
- 3.7. **DNS test.** Means one non-recursive DNS query sent to a particular “**IP address**” (via UDP or TCP). If DNSSEC is offered in the queried DNS zone, for a query to be considered answered, the signatures must be positively verified against a corresponding DS record published in the parent zone or, if the parent is not signed, against a statically configured Trust Anchor. The answer to the query must contain the corresponding information from the Registry System, otherwise the query will be considered unanswered. A query with a “**DNS resolution RTT**” 5 times higher than the corresponding **SLR**, will be considered unanswered. The possible results to a DNS test are: a number in milliseconds corresponding to the “**DNS resolution RTT**” or, undefined/unanswered.
- 3.8. **Measuring DNS parameters.** Every minute, every DNS probe will make an UDP or TCP “**DNS test**” to each of the public-DNS registered “**IP addresses**” of the name servers of the domain

name being monitored. If a “**DNS test**” result is undefined/unanswered, the tested IP will be considered unavailable from that probe until it is time to make a new test.

3.9. **Collating the results from DNS probes.** The minimum number of active testing probes to consider a measurement valid is 20 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

3.10. **Distribution of UDP and TCP queries.** DNS probes will send UDP or TCP “**DNS test**” approximating the distribution of these queries.

3.11. **Placement of DNS probes.** Probes for measuring DNS parameters shall be placed as near as possible to the DNS resolvers on the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

4. **RDDS**

4.1. **RDDS availability.** Refers to the ability of all the RDDS services for the TLD, to respond to queries from an Internet user with appropriate data from the relevant Registry System. If 51% or more of the RDDS testing probes see any of the RDDS services as unavailable during a given time, the RDDS will be considered unavailable.

4.2. **WHOIS query RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the WHOIS response. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

4.3. **Web-based-WHOIS query RTT.** Refers to the **RTT** of the sequence of packets from the start of the TCP connection to its end, including the reception of the HTTP response for only one HTTP request. If Registry Operator implements a multiple-step process to get to the information, only the last step shall be measured. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

4.4. **RDDS query RTT.** Refers to the collective of “**WHOIS query RTT**” and “**Web-based-WHOIS query RTT**”.

4.5. **RDDS update time.** Refers to the time measured from the reception of an EPP confirmation to a transform command on a domain name, host or contact, up until the servers of the RDDS services reflect the changes made.

4.6. **RDDS test.** Means one query sent to a particular “**IP address**” of one of the servers of one of the RDDS services. Queries shall be about existing objects in the Registry System and the responses must contain the corresponding information otherwise the query will be considered unanswered. Queries with an **RTT** 5 times higher than the corresponding SLR will be considered as unanswered. The possible results to an RDDS test are: a number in milliseconds corresponding to the **RTT** or undefined/unanswered.

4.7. **Measuring RDDS parameters.** Every 5 minutes, RDDS probes will select one IP address from all the public-DNS registered “**IP addresses**” of the servers for each RDDS service of the TLD being monitored and make an “**RDDS test**” to each one. If an “**RDDS test**” result is

undefined/unanswered, the corresponding RDDS service will be considered as unavailable from that probe until it is time to make a new test.

4.8. **Collating the results from RDDS probes.** The minimum number of active testing probes to consider a measurement valid is 10 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

4.9. **Placement of RDDS probes.** Probes for measuring RDDS parameters shall be placed inside the networks with the most users across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

5. **EPP**

5.1. **EPP service availability.** Refers to the ability of the TLD EPP servers as a group, to respond to commands from the Registry accredited Registrars, who already have credentials to the servers. The response shall include appropriate data from the Registry System. An EPP command with “**EPP command RTT**” 5 times higher than the corresponding SLR will be considered as unanswered. If 51% or more of the EPP testing probes see the EPP service as unavailable during a given time, the EPP service will be considered unavailable.

5.2. **EPP session-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a session command plus the reception of the EPP response for only one EPP session command. For the login command it will include packets needed for starting the TCP session. For the logout command it will include packets needed for closing the TCP session. EPP session commands are those described in section 2.9.1 of EPP RFC 5730. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.

5.3. **EPP query-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a query command plus the reception of the EPP response for only one EPP query command. It does not include packets needed for the start or close of either the EPP or the TCP session. EPP query commands are those described in section 2.9.2 of EPP RFC 5730. If the **RTT** is 5-times or more the corresponding SLR, the **RTT** will be considered undefined.

5.4. **EPP transform-command RTT.** Refers to the **RTT** of the sequence of packets that includes the sending of a transform command plus the reception of the EPP response for only one EPP transform command. It does not include packets needed for the start or close of either the EPP or the TCP session. EPP transform commands are those described in section 2.9.3 of EPP RFC 5730. If the **RTT** is 5 times or more the corresponding SLR, the **RTT** will be considered undefined.

5.5. **EPP command RTT.** Refers to “**EPP session-command RTT**”, “**EPP query-command RTT**” or “**EPP transform-command RTT**”.

5.6. **EPP test.** Means one EPP command sent to a particular “**IP address**” for one of the EPP servers. Query and transform commands, with the exception of “create”, shall be about existing objects in the Registry System. The response shall include appropriate data from the Registry System. The possible results to an EPP test are: a number in milliseconds corresponding to the “**EPP command RTT**” or undefined/unanswered.

5.7. **Measuring EPP parameters.** Every 5 minutes, EPP probes will select one “**IP address**“ of the EPP servers of the TLD being monitored and make an “**EPP test**”; every time they should alternate between the 3 different types of commands and between the commands inside each category. If an “**EPP test**” result is undefined/unanswered, the EPP service will be considered as unavailable from that probe until it is time to make a new test.

5.8. **Collating the results from EPP probes.** The minimum number of active testing probes to consider a measurement valid is 5 at any given measurement period, otherwise the measurements will be discarded and will be considered inconclusive; during this situation no fault will be flagged against the SLRs.

5.9. **Placement of EPP probes.** Probes for measuring EPP parameters shall be placed inside or close to Registrars points of access to the Internet across the different geographic regions; care shall be taken not to deploy probes behind high propagation-delay links, such as satellite links.

6. **Emergency Thresholds**

The following matrix presents the Emergency Thresholds that, if reached by any of the services mentioned above for a TLD, would cause the Emergency Transition of the Critical Functions as specified in Section 2.13. of this Agreement.

Critical Function	Emergency Threshold
DNS service (all servers)	4-hour downtime / week
DNSSEC proper resolution	4-hour downtime / week
EPP	24-hour downtime / week
RDDS (WHOIS/Web-based WHOIS)	24-hour downtime / week
Data Escrow	Breach of the Registry Agreement caused by missing escrow deposits as described in Specification 2, Part B, Section 6.

7. **Emergency Escalation**

Escalation is strictly for purposes of notifying and investigating possible or potential issues in relation to monitored services. The initiation of any escalation and the subsequent cooperative investigations do not in themselves imply that a monitored service has failed its performance requirements.

Escalations shall be carried out between ICANN and Registry Operators, Registrars and Registry Operator, and Registrars and ICANN. Registry Operators and ICANN must provide said emergency operations departments. Current contacts must be maintained between ICANN and Registry Operators and published to Registrars, where relevant to their role in escalations, prior to any processing of an Emergency Escalation by all related parties, and kept current at all times.

7.1. **Emergency Escalation initiated by ICANN**

Upon reaching 10% of the Emergency thresholds as described in Section 6, ICANN’s emergency operations will initiate an Emergency Escalation with the relevant Registry Operator. An Emergency Escalation consists of the following minimum elements: electronic (i.e., email or SMS) and/or voice contact notification to the Registry Operator’s emergency operations department with detailed information concerning the issue being escalated, including evidence of monitoring failures, cooperative trouble-shooting of the monitoring failure between ICANN staff and the Registry Operator, and the

commitment to begin the process of rectifying issues with either the monitoring service or the service being monitoring.

7.2. Emergency Escalation initiated by Registrars

Registry Operator will maintain an emergency operations departments prepared to handle emergency requests from registrars. In the event that a registrar is unable to conduct EPP transactions with the Registry because of a fault with the Registry Service and is unable to either contact (through ICANN mandated methods of communication) the Registry Operator, or the Registry Operator is unable or unwilling to address the fault, the registrar may initiate an Emergency Escalation to the emergency operations department of ICANN. ICANN then may initiate an Emergency Escalation with the Registry Operator as explained above.

7.3. Notifications of Outages and Maintenance

In the event that a Registry Operator plans maintenance, they will provide related notice to the ICANN emergency operations department, at least, 24 hours ahead of that maintenance. ICANN's emergency operations department will note planned maintenance times, and suspend Emergency Escalation services for the monitored services during the expected maintenance outage period.

If Registry Operator declares an outage, as per their contractual obligations with ICANN, on services under SLA and performance requirements, it will notify the ICANN emergency operations department. During that declared outage, ICANN's emergency operations department will note and suspend Emergency Escalation services for the monitored services involved.

8. Covenants of Performance Measurement

8.1. **No interference.** Registry Operator shall not interfere with measurement **Probes**, including any form of preferential treatment of the requests for the monitored services. Registry Operator shall respond to the measurement tests described in this Specification as it would do with any other request from Internet users (for DNS and RDDS) or registrars (for EPP).

8.2. **ICANN testing registrar.** Registry Operator agrees that ICANN will have a testing registrar used for purposes of measuring the **SLRs** described above. Registry Operator agrees to not provide any differentiated treatment for the testing registrar other than no billing of the transactions. ICANN shall not use the registrar for registering domain names (or other registry objects) for itself or others, except for the purposes of verifying contractual compliance with the conditions described in this Agreement.

TRADEMARK CLEARINGHOUSE
4 JUNE 2012

1. PURPOSE OF CLEARINGHOUSE

- 1.1 The Trademark Clearinghouse is a central repository for information to be authenticated, stored, and disseminated, pertaining to the rights of trademark holders. ICANN will enter into an arms-length contract with service provider or providers, awarding the right to serve as a Trademark Clearinghouse Service Provider, i.e., to accept, authenticate, validate and facilitate the transmission of information related to certain trademarks.
- 1.2 The Clearinghouse will be required to separate its two primary functions: (i) authentication and validation of the trademarks in the Clearinghouse; and (ii) serving as a database to provide information to the new gTLD registries to support pre-launch Sunrise or Trademark Claims Services. Whether the same provider could serve both functions or whether two providers will be determined in the tender process.
- 1.3 The Registry shall only need to connect with one centralized database to obtain the information it needs to conduct its Sunrise or Trademark Claims Services regardless of the details of the Trademark Clearinghouse Service Provider's contract(s) with ICANN.
- 1.4 Trademark Clearinghouse Service Provider may provide ancillary services, as long as those services and any data used for those services are kept separate from the Clearinghouse database.
- 1.5 The Clearinghouse database will be a repository of authenticated information and disseminator of the information to a limited number of recipients. Its functions will be performed in accordance with a limited charter, and will not have any discretionary powers other than what will be set out in the charter with respect to authentication and validation. The Clearinghouse administrator(s) cannot create policy. Before material changes are made to the Clearinghouse functions, they will be reviewed through the ICANN public participation model.
- 1.6 Inclusion in the Clearinghouse is not proof of any right, nor does it create any legal rights. Failure to submit trademarks into the Clearinghouse should not be perceived to be lack of vigilance by trademark holders or a waiver of any rights, nor can any negative influence be drawn from such failure.

2. SERVICE PROVIDERS

- 2.1 The selection of Trademark Clearinghouse Service Provider(s) will be subject to predetermined criteria, but the foremost considerations will be the ability to store, authenticate, validate and disseminate the data at the highest level of technical stability

and security without interference with the integrity or timeliness of the registration process or registry operations.

2.2 Functions – Authentication/Validation; Database Administration. Public commentary has suggested that the best way to protect the integrity of the data and to avoid concerns that arise through sole-source providers would be to separate the functions of database administration and data authentication/validation.

2.2.1 One entity will authenticate registrations ensuring the word marks qualify as registered or are court-validated word marks or word marks that are protected by statute or treaty. This entity would also be asked to ensure that proof of use of marks is provided, which can be demonstrated by furnishing a signed declaration and one specimen of current use.

2.2.2 The second entity will maintain the database and provide Sunrise and Trademark Claims Services (described below).

2.3 Discretion will be used, balancing effectiveness, security and other important factors, to determine whether ICANN will contract with one or two entities - one to authenticate and validate, and the other to, administer in order to preserve integrity of the data.

2.4 Contractual Relationship.

2.4.1 The Clearinghouse shall be separate and independent from ICANN. It will operate based on market needs and collect fees from those who use its services. ICANN may coordinate or specify interfaces used by registries and registrars, and provide some oversight or quality assurance function to ensure rights protection goals are appropriately met.

2.4.2 The Trademark Clearinghouse Service Provider(s) (authenticator/validator and administrator) will be selected through an open and transparent process to ensure low costs and reliable, consistent service for all those utilizing the Clearinghouse services.

2.4.3 The Service Provider(s) providing the authentication of the trademarks submitted into the Clearinghouse shall adhere to rigorous standards and requirements that would be specified in an ICANN contractual agreement.

2.4.4 The contract shall include service level requirements, customer service availability (with the goal of seven days per week, 24 hours per day, 365 days per year), data escrow requirements, and equal access requirements for all persons and entities required to access the Trademark Clearinghouse database.

- 2.4.5 To the extent practicable, the contract should also include indemnification by Service Provider for errors such as false positives for participants such as Registries, ICANN, Registrants and Registrars.
- 2.5. Service Provider Requirements. The Clearinghouse Service Provider(s) should utilize regional marks authentication service providers (whether directly or through sub-contractors) to take advantage of local experts who understand the nuances of the trademark in question. Examples of specific performance criteria details in the contract award criteria and service-level-agreements are:
 - 2.5.1 provide 24 hour accessibility seven days a week (database administrator);
 - 2.5.2 employ systems that are technically reliable and secure (database administrator);
 - 2.5.3 use globally accessible and scalable systems so that multiple marks from multiple sources in multiple languages can be accommodated and sufficiently cataloged (database administrator and validator);
 - 2.5.4 accept submissions from all over the world - the entry point for trademark holders to submit their data into the Clearinghouse database could be regional entities or one entity;
 - 2.5.5 allow for multiple languages, with exact implementation details to be determined;
 - 2.5.6 provide access to the Registrants to verify and research Trademark Claims Notices;
 - 2.5.7 have the relevant experience in database administration, validation or authentication, as well as accessibility to and knowledge of the various relevant trademark laws (database administrator and authenticator); and
 - 2.5.8 ensure through performance requirements, including those involving interface with registries and registrars, that neither domain name registration timeliness, nor registry or registrar operations will be hindered (database administrator).

3. CRITERIA FOR TRADEMARK INCLUSION IN CLEARINGHOUSE

- 3.1 The trademark holder will submit to one entity – a single entity for entry will facilitate access to the entire Clearinghouse database. If regional entry points are used, ICANN will publish an information page describing how to locate regional submission points. Regardless of the entry point into the Clearinghouse, the authentication procedures established will be uniform.
- 3.2 The standards for inclusion in the Clearinghouse are:
 - 3.2.1 Nationally or regionally registered word marks from all jurisdictions.
 - 3.2.2 Any word mark that has been validated through a court of law or other judicial proceeding.

- 3.2.3 Any word mark protected by a statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion.
 - 3.2.4 Other marks that constitute intellectual property.
 - 3.2.5 Protections afforded to trademark registrations do not extend to applications for registrations, marks within any opposition period or registered marks that were the subject of successful invalidation, cancellation or rectification proceedings.
- 3.3 The type of data supporting entry of a registered word mark into the Clearinghouse must include a copy of the registration or the relevant ownership information, including the requisite registration number(s), the jurisdictions where the registrations have issued, and the name of the owner of record.
- 3.4 Data supporting entry of a judicially validated word mark into the Clearinghouse must include the court documents, properly entered by the court, evidencing the validation of a given word mark.
- 3.5 Data supporting entry into the Clearinghouse of word marks protected by a statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion, must include a copy of the relevant portion of the statute or treaty and evidence of its effective date.
- 3.6 Data supporting entry into the Clearinghouse of marks that constitute intellectual property of types other than those set forth in sections 3.2.1-3.2.3 above shall be determined by the registry operator and the Clearinghouse based on the services any given registry operator chooses to provide.
- 3.7 Registrations that include top level extensions such as “icann.org” or “.icann” as the word mark will not be permitted in the Clearinghouse regardless of whether that mark has been registered or it has been otherwise validated or protected (e.g., if a mark existed for icann.org or .icann, neither will not be permitted in the Clearinghouse).
- 3.8 All mark holders seeking to have their marks included in the Clearinghouse will be required to submit a declaration, affidavit, or other sworn statement that the information provided is true and current and has not been supplied for an improper purpose. The mark holder will also be required to attest that it will keep the information supplied to the Clearinghouse current so that if, during the time the mark is included in the Clearinghouse, a registration gets cancelled or is transferred to another entity, or in the case of a court- or Clearinghouse-validated mark the holder abandons use of the mark, the mark holder has an affirmative obligation to notify the Clearinghouse. There will be penalties for failing to keep information current. Moreover, it is anticipated that there will be a process whereby registrations can be

removed from the Clearinghouse if it is discovered that the marks are procured by fraud or if the data is inaccurate.

- 3.9 As an additional safeguard, the data will have to be renewed periodically by any mark holder wishing to remain in the Clearinghouse. Electronic submission should facilitate this process and minimize the cost associated with it. The reason for periodic authentication is to streamline the efficiencies of the Clearinghouse and the information the registry operators will need to process and limit the marks at issue to the ones that are in use.

4. USE OF CLEARINGHOUSE DATA

- 4.1 All mark holders seeking to have their marks included in the Clearinghouse will have to consent to the use of their information by the Clearinghouse. However, such consent would extend only to use in connection with the stated purpose of the Trademark Clearinghouse Database for Sunrise or Trademark Claims services. The reason for such a provision would be to presently prevent the Clearinghouse from using the data in other ways without permission. There shall be no bar on the Trademark Clearinghouse Service Provider or other third party service providers providing ancillary services on a non-exclusive basis.
- 4.2 In order not to create a competitive advantage, the data in the Trademark Clearinghouse should be licensed to competitors interested in providing ancillary services on equal and non-discriminatory terms and on commercially reasonable terms if the mark holders agree. Accordingly, two licensing options will be offered to the mark holder: (a) a license to use its data for all required features of the Trademark Clearinghouse, with no permitted use of such data for ancillary services either by the Trademark Clearinghouse Service Provider or any other entity; or (b) license to use its data for the mandatory features of the Trademark Clearinghouse and for any ancillary uses reasonably related to the protection of marks in new gTLDs, which would include a license to allow the Clearinghouse to license the use and data in the Trademark Clearinghouse to competitors that also provide those ancillary services. The specific implementation details will be determined, and all terms and conditions related to the provision of such services shall be included in the Trademark Clearinghouse Service Provider's contract with ICANN and subject to ICANN review.
- 4.3 Access by a prospective registrant to verify and research Trademark Claims Notices shall not be considered an ancillary service, and shall be provided at no cost to the Registrant. Misuse of the data by the service providers would be grounds for immediate termination.

5. DATA AUTHENTICATION AND VALIDATION GUIDELINES

- 5.1 One core function for inclusion in the Clearinghouse would be to authenticate that the data meets certain minimum criteria. As such, the following minimum criteria are suggested:
- 5.1.1 An acceptable list of data authentication sources, i.e. the web sites of patent and trademark offices throughout the world, third party providers who can obtain information from various trademark offices;
 - 5.1.2 Name, address and contact information of the applicant is accurate, current and matches that of the registered owner of the trademarks listed;
 - 5.1.3 Electronic contact information is provided and accurate;
 - 5.1.4 The registration numbers and countries match the information in the respective trademark office database for that registration number.
- 5.2 For validation of marks by the Clearinghouse that were not protected via a court, statute or treaty, the mark holder shall be required to provide evidence of use of the mark in connection with the bona fide offering for sale of goods or services prior to application for inclusion in the Clearinghouse. Acceptable evidence of use will be a signed declaration and a single specimen of current use, which might consist of labels, tags, containers, advertising, brochures, screen shots, or something else that evidences current use.

6. MANDATORY RIGHTS PROTECTION MECHANISMS

All new gTLD registries will be required to use the Trademark Clearinghouse to support its pre-launch or initial launch period rights protection mechanisms (RPMs). These RPMs, at a minimum, must consist of a Trademark Claims service and a Sunrise process.

- 6.1 Trademark Claims service
- 6.1.1 New gTLD Registry Operators must provide Trademark Claims services during an initial launch period for marks in the Trademark Clearinghouse. This launch period must occur for at least the first 60 days that registration is open for general registration.
 - 6.1.2 A Trademark Claims service is intended to provide clear notice to the prospective registrant of the scope of the mark holder's rights in order to minimize the chilling effect on registrants (Trademark Claims Notice). A form that describes the required elements is attached. The specific statement by

prospective registrant warrants that: (i) the prospective registrant has received notification that the mark(s) is included in the Clearinghouse; (ii) the prospective registrant has received and understood the notice; and (iii) to the best of the prospective registrant's knowledge, the registration and use of the requested domain name will not infringe on the rights that are the subject of the notice.

- 6.1.3 The Trademark Claims Notice should provide the prospective registrant access to the Trademark Clearinghouse Database information referenced in the Trademark Claims Notice to enhance understanding of the Trademark rights being claimed by the trademark holder. These links (or other sources) shall be provided in real time without cost to the prospective registrant. Preferably, the Trademark Claims Notice should be provided in the language used for the rest of the interaction with the registrar or registry, but it is anticipated that at the very least in the most appropriate UN-sponsored language (as specified by the prospective registrant or registrar/registry).
- 6.1.4 If the domain name is registered in the Clearinghouse, the registrar (again through an interface with the Clearinghouse) will promptly notify the mark holders(s) of the registration after it is effectuated.
- 6.1.5 The Trademark Clearinghouse Database will be structured to report to registries when registrants are attempting to register a domain name that is considered an "Identical Match" with the mark in the Clearinghouse. "Identical Match" means that the domain name consists of the complete and identical textual elements of the mark. In this regard: (a) spaces contained within a mark that are either replaced by hyphens (and vice versa) or omitted; (b) only certain special characters contained within a trademark are spelled out with appropriate words describing it (@ and &); (c) punctuation or special characters contained within a mark that are unable to be used in a second-level domain name may either be (i) omitted or (ii) replaced by spaces, hyphens or underscores and still be considered identical matches; and (d) no plural and no "marks contained" would qualify for inclusion.

6.2 Sunrise service

- 6.2.1 Sunrise registration services must be offered for a minimum of 30 days during the pre-launch phase and notice must be provided to all trademark holders in the Clearinghouse if someone is seeking a sunrise registration. This notice will be provided to holders of marks in the Clearinghouse that are an Identical Match to the name to be registered during Sunrise.
- 6.2.2 Sunrise Registration Process. For a Sunrise service, sunrise eligibility requirements (SERs) will be met as a minimum requirement, verified by Clearinghouse data, and

incorporate a Sunrise Dispute Resolution Policy (SDRP).

- 6.2.3 The proposed SERs include: (i) ownership of a mark (that satisfies the criteria in section 7.2 below), (ii) optional registry elected requirements re: international class of goods or services covered by registration; (iii) representation that all provided information is true and correct; and (iv) provision of data sufficient to document rights in the trademark.
- 6.2.4 The proposed SDRP must allow challenges based on at least the following four grounds: (i) at time the challenged domain name was registered, the registrant did not hold a trademark registration of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; (ii) the domain name is not identical to the mark on which the registrant based its Sunrise registration; (iii) the trademark registration on which the registrant based its Sunrise registration is not of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; or (iv) the trademark registration on which the domain name registrant based its Sunrise registration did not issue on or before the effective date of the Registry Agreement and was not applied for on or before ICANN announced the applications received.
- 6.2.5 The Clearinghouse will maintain the SERs, validate and authenticate marks, as applicable, and hear challenges.

7. PROTECTION FOR MARKS IN CLEARINGHOUSE

The scope of registered marks that must be honored by registries in providing Trademarks Claims services is broader than those that must be honored by registries in Sunrise services.

- 7.1 For Trademark Claims services - Registries must recognize and honor all word marks that have been or are: (i) nationally or regionally registered; (ii) court-validated; or (iii) specifically protected by a statute or treaty in effect at the time the mark is submitted to the Clearinghouse for inclusion. No demonstration of use is required.
- 7.2 For Sunrise services - Registries must recognize and honor all word marks: (i) nationally or regionally registered and for which proof of use – which can be a declaration and a single specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse; or (ii) that have been court-validated; or (iii) that are specifically protected by a statute or treaty currently in effect and that was in effect on or before 26 June 2008.

8. COSTS OF CLEARINGHOUSE

Costs should be completely borne by the parties utilizing the services. Trademark holders will pay to register the Clearinghouse, and registries will pay for Trademark Claims and Sunrise services. Registrars and others who avail themselves of Clearinghouse services will pay the Clearinghouse directly.

TRADEMARK NOTICE

[In English and the language of the registration agreement]

You have received this Trademark Notice because you have applied for a domain name which matches at least one trademark record submitted to the Trademark Clearinghouse.

You may or may not be entitled to register the domain name depending on your intended use and whether it is the same or significantly overlaps with the trademarks listed below.

Your rights to register this domain name may or may not be protected as noncommercial use or "fair use" by the laws of your country. [in bold italics or all caps]

Please read the trademark information below carefully, including the trademarks, jurisdictions, and goods and service for which the trademarks are registered. Please be aware that not all jurisdictions review trademark applications closely, so some of the trademark information below may exist in a national or regional registry which does not conduct a thorough or substantive review of trademark rights prior to registration.

If you have questions, you may want to consult an attorney or legal expert on trademarks and intellectual property for guidance.

If you continue with this registration, you represent that, you have received and you understand this notice and to the best of your knowledge, your registration and use of the requested domain name will not infringe on the trademark rights listed below.

The following [number] Trademarks are listed in the Trademark Clearinghouse:

1. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant: Trademark Registrant Contact:

[with links to the TM registrations as listed in the TM Clearinghouse]

2. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant:

Trademark Registrant Contact:

***** [with links to the TM registrations as listed in the TM Clearinghouse]

X. 1. Mark: Jurisdiction: Goods: [click here for more if maximum character count is exceeded] International Class of Goods and Services or Equivalent if applicable: Trademark Registrant: Trademark Registrant Contact:

**UNIFORM RAPID SUSPENSION SYSTEM (“URS”)
4 JUNE 2012**

DRAFT PROCEDURE

1. Complaint

1.1 Filing the Complaint

- a) Proceedings are initiated by electronically filing with a URS Provider a Complaint outlining the trademark rights and the actions complained of entitling the trademark holder to relief.
- b) Each Complaint must be accompanied by the appropriate fee, which is under consideration. The fees will be non-refundable.
- c) One Complaint is acceptable for multiple related companies against one Registrant, but only if the companies complaining are related. Multiple Registrants can be named in one Complaint only if it can be shown that they are in some way related. There will not be a minimum number of domain names imposed as a prerequisite to filing.

1.2 Contents of the Complaint

The form of the Complaint will be simple and as formulaic as possible. There will be a Form Complaint. The Form Complaint shall include space for the following:

- 1.2.1 Name, email address and other contact information for the Complaining Party (Parties).
- 1.2.2 Name, email address and contact information for any person authorized to act on behalf of Complaining Parties.
- 1.2.3 Name of Registrant (i.e. relevant information available from Whois) and Whois listed available contact information for the relevant domain name(s).
- 1.2.4 The specific domain name(s) that are the subject of the Complaint. For each domain name, the Complainant shall include a copy of the currently available Whois information and a description and copy, if available, of the offending portion of the website content associated with each domain name that is the subject of the Complaint.
- 1.2.5 The specific trademark/service marks upon which the Complaint is based and pursuant to which the Complaining Parties are asserting their rights to them, for which goods and in connection with what services.
- 1.2.6 A statement of the grounds upon which the Complaint is based setting forth facts showing that the Complaining Party is entitled to relief, namely:

1.2.6.1. that the registered domain name is identical or confusingly similar to a word mark: (i) for which the Complainant holds a valid national or regional registration and that is in current use; or (ii) that has been validated through court proceedings; or (iii) that is specifically protected by a statute or treaty in effect at the time the URS complaint is filed.

- a. Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use in commerce - was submitted to, and validated by, the Trademark Clearinghouse)
- b. Proof of use may also be submitted directly with the URS Complaint.

and

1.2.6.2. that the Registrant has no legitimate right or interest to the domain name; and

1.2.6.3. that the domain was registered and is being used in bad faith.

A non-exclusive list of circumstances that demonstrate bad faith registration and use by the Registrant include:

- a. Registrant has registered or acquired the domain name primarily for the purpose of selling, renting or otherwise transferring the domain name registration to the complainant who is the owner of the trademark or service mark or to a competitor of that complainant, for valuable consideration in excess of documented out-of pocket costs directly related to the domain name; or
- b. Registrant has registered the domain name in order to prevent the trademark holder or service mark from reflecting the mark in a corresponding domain name, provided that Registrant has engaged in a pattern of such conduct; or
- c. Registrant registered the domain name primarily for the purpose of disrupting the business of a competitor; or
- d. By using the domain name Registrant has intentionally attempted to attract for commercial gain, Internet users to Registrant's web site or other on-line location, by creating a likelihood of confusion with the complainant's mark as to the source, sponsorship, affiliation, or endorsement of Registrant's web site or location or of a product or service on that web site or location.

1.2.7 A box in which the Complainant may submit up to 500 words of explanatory free form text.

1.2.8. An attestation that the Complaint is not being filed for any improper basis and that there is a sufficient good faith basis for filing the Complaint.

2. Fees

2.1 URS Provider will charge fees to the Complainant. Fees are thought to be in the range of USD 300 per proceeding, but will ultimately be set by the Provider.

2.2 Complaints listing fifteen (15) or more disputed domain names registered by the same registrant will be subject to a Response Fee which will be refundable to the prevailing party. Under no circumstances shall the Response Fee exceed the fee charged to the Complainant.

3. Administrative Review

3.1 Complaints will be subjected to an initial administrative review by the URS Provider for compliance with the filing requirements. This is a review to determine that the Complaint contains all of the necessary information, and is not a determination as to whether a *prima facie* case has been established.

3.2 The Administrative Review shall be conducted within two (2) business days of submission of the Complaint to the URS Provider.

3.3 Given the rapid nature of this Procedure, and the intended low level of required fees, there will be no opportunity to correct inadequacies in the filing requirements.

3.4 If a Complaint is deemed non-compliant with filing requirements, the Complaint will be dismissed without prejudice to the Complainant filing a new complaint. The initial filing fee shall not be refunded in these circumstances.

4. Notice and Locking of Domain

4.1 Upon completion of the Administrative Review, the URS Provider must immediately notify the registry operator (via email) ("Notice of Complaint") after the Complaint has been deemed compliant with the filing requirements. Within 24 hours of receipt of the Notice of Complaint from the URS Provider, the registry operator shall "lock" the domain, meaning the registry shall restrict all changes to the registration data, including transfer and deletion of the domain names, but the name will continue to resolve. The registry operator will notify the URS Provider immediately upon locking the domain name ("Notice of Lock").

4.2 Within 24 hours after receiving Notice of Lock from the registry operator, the URS Provider shall notify the Registrant of the Complaint, sending a hard copy of the Notice of Complaint to the addresses listed in the Whois contact information, and providing an electronic copy of the Complaint, advising of the locked status, as well as the potential

effects if the Registrant fails to respond and defend against the Complaint. Notices must be clear and understandable to Registrants located globally. The Notice of Complaint shall be in English and translated by the Provider into the predominant language used in the registrant's country or territory.

- 4.3 All Notices to the Registrant shall be sent through email, fax (where available) and postal mail. The Complaint and accompanying exhibits, if any, shall be served electronically.
- 4.4 The URS Provider shall also electronically notify the registrar of record for the domain name at issue via the addresses the registrar has on file with ICANN.

5. The Response

- 5.1 A Registrant will have 14 calendar days from the date the URS Provider sent its Notice of Complaint to the Registrant to electronically file a Response with the URS Provider. Upon receipt, the Provider will electronically send a copy of the Response, and accompanying exhibits, if any, to the Complainant.
- 5.2 No filing fee will be charged if the Registrant files its Response prior to being declared in default or not more than thirty (30) days following a Determination. For Responses filed more than thirty (30) days after a Determination, the Registrant should pay a reasonable non-refundable fee for re-examination, plus a Response Fee as set forth in section 2.2 above if the Complaint lists twenty-six (26) or more disputed domain names against the same registrant. The Response Fee will be refundable to the prevailing party.
- 5.3 Upon request by the Registrant, a limited extension of time to respond may be granted by the URS Provider if there is a good faith basis for doing so. In no event shall the extension be for more than seven (7) calendar days.
- 5.4 The Response shall be no longer than 2,500 words, excluding attachments, and the content of the Response should include the following:
 - 5.4.1 Confirmation of Registrant data.
 - 5.4.2 Specific admission or denial of each of the grounds upon which the Complaint is based.
 - 5.4.3 Any defense which contradicts the Complainant's claims.
 - 5.4.4 A statement that the contents are true and accurate.
- 5.5 In keeping with the intended expedited nature of the URS and the remedy afforded to a successful Complainant, affirmative claims for relief by the Registrant will not be permitted except for an allegation that the Complainant has filed an abusive Complaint.
- 5.6 Once the Response is filed, and the URS Provider determines that the Response is compliant with the filing requirements of a Response (which shall be on the same day),

the Complaint, Response and supporting materials will immediately be sent to a qualified Examiner, selected by the URS Provider, for review and Determination. All materials submitted are considered by the Examiner.

- 5.7 The Response can contain any facts refuting the claim of bad faith registration by setting out any of the following circumstances:
- 5.7.1 Before any notice to Registrant of the dispute, Registrant's use of, or demonstrable preparations to use, the domain name or a name corresponding to the domain name in connection with a bona fide offering of goods or services; or
 - 5.7.2 Registrant (as an individual, business or other organization) has been commonly known by the domain name, even if Registrant has acquired no trademark or service mark rights; or
 - 5.7.3 Registrant is making a legitimate or fair use of the domain name, without intent for commercial gain to misleadingly divert consumers or to tarnish the trademark or service mark at issue.

Such claims, if found by the Examiner to be proved based on its evaluation of all evidence, shall result in a finding in favor of the Registrant.

- 5.8 The Registrant may also assert Defenses to the Complaint to demonstrate that the Registrant's use of the domain name is not in bad faith by showing, for example, one of the following:
- 5.8.1 The domain name is generic or descriptive and the Registrant is making fair use of it.
 - 5.8.2 The domain name sites are operated solely in tribute to or in criticism of a person or business that is found by the Examiner to be fair use.
 - 5.8.3 Registrant's holding of the domain name is consistent with an express term of a written agreement entered into by the disputing Parties and that is still in effect.
 - 5.8.4 The domain name is not part of a wider pattern or series of abusive registrations because the Domain Name is of a significantly different type or character to other domain names registered by the Registrant.
- 5.9 Other factors for the Examiner to consider:
- 5.9.1 Trading in domain names for profit, and holding a large portfolio of domain names, are of themselves not indicia of bad faith under the URS. Such conduct, however, may be abusive in a given case depending on the circumstances of the dispute. The Examiner must review each case on its merits.
 - 5.9.2 Sale of traffic (i.e. connecting domain names to parking pages and earning click-per-view revenue) does not in and of itself constitute bad faith under the URS.

Such conduct, however, may be abusive in a given case depending on the circumstances of the dispute. The Examiner will take into account:

5.9.2.1. the nature of the domain name;

5.9.2.2. the nature of the advertising links on any parking page associated with the domain name; and

5.9.2.3. that the use of the domain name is ultimately the Registrant's responsibility.

6. Default

- 6.1 If at the expiration of the 14-day answer period (or extended period if granted), the Registrant does not submit an answer, the Complaint proceeds to Default.
- 6.2 In either case, the Provider shall provide Notice of Default via email to the Complainant and Registrant, and via mail and fax to Registrant. During the Default period, the Registrant will be prohibited from changing content found on the site to argue that it is now a legitimate use and will also be prohibited from changing the Whois information.
- 6.3 All Default cases proceed to Examination for review on the merits of the claim.
- 6.4 If after Examination in Default cases, the Examiner rules in favor of Complainant, Registrant shall have the right to seek relief from Default via de novo review by filing a Response at any time up to six months after the date of the Notice of Default. The Registrant will also be entitled to request an extension of an additional six months if the extension is requested before the expiration of the initial six-month period.
- 6.5 If a Response is filed after: (i) the Respondent was in Default (so long as the Response is filed in accordance with 6.4 above); and (ii) proper notice is provided in accordance with the notice requirements set forth above, the domain name shall again resolve to the original IP address as soon as practical, but shall remain locked as if the Response had been filed in a timely manner before Default. The filing of a Response after Default is not an appeal; the case is considered as if responded to in a timely manner.
- 6.5 If after Examination in Default case, the Examiner rules in favor of Registrant, the Provider shall notify the Registry Operator to unlock the name and return full control of the domain name registration to the Registrant.

7. Examiners

- 7.1 One Examiner selected by the Provider will preside over a URS proceeding.
- 7.2 Examiners should have demonstrable relevant legal background, such as in trademark law, and shall be trained and certified in URS proceedings. Specifically, Examiners shall be provided with instructions on the URS elements and defenses and how to conduct the examination of a URS proceeding.

- 7.3 Examiners used by any given URS Provider shall be rotated to the extent feasible to avoid “forum or examiner shopping.” URS Providers are strongly encouraged to work equally with all certified Examiners, with reasonable exceptions (such as language needs, non-performance, or malfeasance) to be determined on a case by case analysis.

8. Examination Standards and Burden of Proof

- 8.1 The standards that the qualified Examiner shall apply when rendering its Determination are whether:
- 8.1.2 The registered domain name is identical or confusingly similar to a word mark: (i) for which the Complainant holds a valid national or regional registration and that is in current use; or (ii) that has been validated through court proceedings; or (iii) that is specifically protected by a statute or treaty currently in effect and that was in effect at the time the URS Complaint is filed; and
- 8.1.2.1 Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse.
- 8.1.2.2 Proof of use may also be submitted directly with the URS Complaint.
- 8.1.2 The Registrant has no legitimate right or interest to the domain name; and
- 8.1.3 The domain was registered and is being used in a bad faith.
- 8.2 The burden of proof shall be clear and convincing evidence.
- 8.3 For a URS matter to conclude in favor of the Complainant, the Examiner shall render a Determination that there is no genuine issue of material fact. Such Determination may include that: (i) the Complainant has rights to the name; and (ii) the Registrant has no rights or legitimate interest in the name. This means that the Complainant must present adequate evidence to substantiate its trademark rights in the domain name (e.g., evidence of a trademark registration and evidence that the domain name was registered and is being used in bad faith in violation of the URS).
- 8.4 If the Examiner finds that the Complainant has not met its burden, or that genuine issues of material fact remain in regards to any of the elements, the Examiner will reject the Complaint under the relief available under the URS. That is, the Complaint shall be dismissed if the Examiner finds that evidence was presented or is available to the Examiner to indicate that the use of the domain name in question is a non-infringing use or fair use of the trademark.
- 8.5 Where there is any genuine contestable issue as to whether a domain name registration and use of a trademark are in bad faith, the Complaint will be denied, the URS proceeding will be terminated without prejudice, e.g., a UDRP, court proceeding or

another URS may be filed. The URS is not intended for use in any proceedings with open questions of fact, but only clear cases of trademark abuse.

- 8.6 To restate in another way, if the Examiner finds that all three standards are satisfied by clear and convincing evidence and that there is no genuine contestable issue, then the Examiner shall issue a Determination in favor of the Complainant. If the Examiner finds that any of the standards have not been satisfied, then the Examiner shall deny the relief requested, thereby terminating the URS proceeding without prejudice to the Complainant to proceed with an action in court of competent jurisdiction or under the UDRP.

9. Determination

- 9.1 There will be no discovery or hearing; the evidence will be the materials submitted with the Complaint and the Response, and those materials will serve as the entire record used by the Examiner to make a Determination.
- 9.2 If the Complainant satisfies the burden of proof, the Examiner will issue a Determination in favor of the Complainant. The Determination will be published on the URS Provider's website. However, there should be no other preclusive effect of the Determination other than the URS proceeding to which it is rendered.
- 9.3 If the Complainant does not satisfy the burden of proof, the URS proceeding is terminated and full control of the domain name registration shall be returned to the Registrant.
- 9.4 Determinations resulting from URS proceedings will be published by the service provider in a format specified by ICANN.
- 9.5 Determinations shall also be emailed by the URS Provider to the Registrant, the Complainant, the Registrar, and the Registry Operator, and shall specify the remedy and required actions of the registry operator to comply with the Determination.
- 9.6 To conduct URS proceedings on an expedited basis, examination should begin immediately upon the earlier of the expiration of a fourteen (14) day Response period (or extended period if granted), or upon the submission of the Response. A Determination shall be rendered on an expedited basis, with the stated goal that it be rendered within three (3) business days from when Examination began. Absent extraordinary circumstances, however, Determinations must be issued no later than five (5) days after the Response is filed. Implementation details will be developed to accommodate the needs of service providers once they are selected. (The tender offer for potential service providers will indicate that timeliness will be a factor in the award decision.)

10. Remedy

- 10.1 If the Determination is in favor of the Complainant, the decision shall be immediately transmitted to the registry operator.

- 10.2 Immediately upon receipt of the Determination, the registry operator shall suspend the domain name, which shall remain suspended for the balance of the registration period and would not resolve to the original web site. The nameservers shall be redirected to an informational web page provided by the URS Provider about the URS. The URS Provider shall not be allowed to offer any other services on such page, nor shall it directly or indirectly use the web page for advertising purposes (either for itself or any other third party). The Whois for the domain name shall continue to display all of the information of the original Registrant except for the redirection of the nameservers. In addition, the Whois shall reflect that the domain name will not be able to be transferred, deleted or modified for the life of the registration.
- 10.3 There shall be an option for a successful Complainant to extend the registration period for one additional year at commercial rates.
- 10.4 No other remedies should be available in the event of a Determination in favor of the Complainant.

11. Abusive Complaints

- 11.1 The URS shall incorporate penalties for abuse of the process by trademark holders.
- 11.2 In the event a party is deemed to have filed two (2) abusive Complaints, or one (1) “deliberate material falsehood,” that party shall be barred from utilizing the URS for one-year following the date of issuance of a Determination finding a complainant to have: (i) filed its second abusive complaint; or (ii) filed a deliberate material falsehood.
- 11.3 A Complaint may be deemed abusive if the Examiner determines:
 - 11.3.1 it was presented solely for improper purpose such as to harass, cause unnecessary delay, or needlessly increase the cost of doing business; and
 - 11.3.2 (i) the claims or other assertions were not warranted by any existing law or the URS standards; or (ii) the factual contentions lacked any evidentiary support
- 11.4 An Examiner may find that Complaint contained a deliberate material falsehood if it contained an assertion of fact, which at the time it was made, was made with the knowledge that it was false and which, if true, would have an impact on the outcome on the URS proceeding.
- 11.5 Two findings of “deliberate material falsehood” shall permanently bar the party from utilizing the URS.
- 11.6 URS Providers shall be required to develop a process for identifying and tracking barred parties, and parties whom Examiners have determined submitted abusive complaints or deliberate material falsehoods.

- 11.7 The dismissal of a complaint for administrative reasons or a ruling on the merits, in itself, shall not be evidence of filing an abusive complaint.
- 11.8 A finding that filing of a complaint was abusive or contained a deliberate materially falsehood can be appealed solely on the grounds that an Examiner abused his/her discretion, or acted in an arbitrary or capricious manner.

12. Appeal

- 12.1 Either party shall have a right to seek a de novo appeal of the Determination based on the existing record within the URS proceeding for a reasonable fee to cover the costs of the appeal. An appellant must identify the specific grounds on which the party is appealing, including why the appellant claims the Examiner's Determination was incorrect.
- 12.2 The fees for an appeal shall be borne by the appellant. A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint. The Appeal Panel, to be selected by the Provider, may request, in its sole discretion, further statements or documents from either of the Parties.
- 12.3 Filing an appeal shall not change the domain name's resolution. For example, if the domain name no longer resolves to the original nameservers because of a Determination in favor of the Complainant, the domain name shall continue to point to the informational page provided by the URS Provider. If the domain name resolves to the original nameservers because of a Determination in favor of the registrant, it shall continue to resolve during the appeal process.
- 12.4 An appeal must be filed within 14 days after a Determination is issued and any Response must be filed 14 days after an appeal is filed.
- 12.5 If a respondent has sought relief from Default by filing a Response within six months (or the extended period if applicable) of issuance of initial Determination, an appeal must be filed within 14 days from date the second Determination is issued and any Response must be filed 14 days after the appeal is filed.
- 12.6 Notice of appeal and findings by the appeal panel shall be sent by the URS Provider via e-mail to the Registrant, the Complainant, the Registrar, and the Registry Operator.
- 12.7 The Providers' rules and procedures for appeals, other than those stated above, shall apply.

13. Other Available Remedies

The URS Determination shall not preclude any other remedies available to the appellant, such as UDRP (if appellant is the Complainant), or other remedies as may be available in a court of competition jurisdiction. A URS Determination for or against a party shall not prejudice the

party in UDRP or any other proceedings.

14. Review of URS

A review of the URS procedure will be initiated one year after the first Examiner Determination is issued. Upon completion of the review, a report shall be published regarding the usage of the procedure, including statistical information, and posted for public comment on the usefulness and effectiveness of the procedure.

TRADEMARK POST-DELEGATION DISPUTE RESOLUTION PROCEDURE (TRADEMARK PDDRP)
4 JUNE 2012

1. Parties to the Dispute

The parties to the dispute will be the trademark holder and the gTLD registry operator. ICANN shall not be a party.

2. Applicable Rules

2.1 This procedure is intended to cover Trademark post-delegation dispute resolution proceedings generally. To the extent more than one Trademark PDDRP provider ("Provider") is selected to implement the Trademark PDDRP, each Provider may have additional rules that must be followed when filing a Complaint. The following are general procedures to be followed by all Providers.

2.2 In the Registry Agreement, the registry operator agrees to participate in all post-delegation procedures and be bound by the resulting Determinations.

3. Language

3.1 The language of all submissions and proceedings under the procedure will be English.

3.2 Parties may submit supporting evidence in their original language, provided and subject to the authority of the Expert Panel to determine otherwise, that such evidence is accompanied by an English translation of all relevant text.

4. Communications and Time Limits

4.1 All communications with the Provider must be submitted electronically.

4.2 For the purpose of determining the date of commencement of a time limit, a notice or other communication will be deemed to have been received on the day that it is transmitted to the appropriate contact person designated by the parties.

4.3 For the purpose of determining compliance with a time limit, a notice or other communication will be deemed to have been sent, made or transmitted on the day that it is dispatched.

4.4 For the purpose of calculating a period of time under this procedure, such period will begin to run on the day following the date of receipt of a notice or other communication.

4.5 All references to day limits shall be considered as calendar days unless otherwise specified.

5. Standing

- 5.1 The mandatory administrative proceeding will commence when a third-party complainant (“Complainant”) has filed a Complaint with a Provider asserting that the Complainant is a trademark holder (which may include either registered or unregistered marks as defined below) claiming that one or more of its marks have been infringed, and thereby the Complainant has been harmed, by the registry operator’s manner of operation or use of the gTLD.
- 5.2 Before proceeding to the merits of a dispute, and before the Respondent is required to submit a substantive Response, or pay any fees, the Provider shall appoint a special one-person Panel to perform an initial “threshold” review (“Threshold Review Panel”).

6. Standards

For purposes of these standards, “registry operator” shall include entities directly or indirectly controlling, controlled by or under common control with a registry operator, whether by ownership or control of voting securities, by contract or otherwise where ‘control’ means the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of an entity, whether by ownership or control of voting securities, by contract or otherwise.

6.1 Top Level:

A complainant must assert and prove, by clear and convincing evidence, that the registry operator’s affirmative conduct in its operation or use of its gTLD string that is identical or confusingly similar to the complainant’s mark, causes or materially contributes to the gTLD doing one of the following:

(a) taking unfair advantage of the distinctive character or the reputation of the complainant’s mark; or

(b) impairing the distinctive character or the reputation of the complainant’s mark; or

(c) creating a likelihood of confusion with the complainant’s mark.

An example of infringement at the top-level is where a TLD string is identical to a trademark and then the registry operator holds itself out as the beneficiary of the mark.

6.2 Second Level

Complainants are required to prove, by clear and convincing evidence that, through the registry operator’s affirmative conduct:

(a) there is a substantial pattern or practice of specific bad faith intent by the registry operator to profit from the sale of trademark infringing domain names; and

(b) the registry operator's bad faith intent to profit from the systematic registration of domain names within the gTLD that are identical or confusingly similar to the complainant's mark, which:

(i) takes unfair advantage of the distinctive character or the reputation of the complainant's mark; or

(ii) impairs the distinctive character or the reputation of the complainant's mark, or

(iii) creates a likelihood of confusion with the complainant's mark.

In other words, it is not sufficient to show that the registry operator is on notice of possible trademark infringement through registrations in the gTLD. The registry operator is not liable under the PDDRP solely because: (i) infringing names are in its registry; or (ii) the registry operator knows that infringing names are in its registry; or (iii) the registry operator did not monitor the registrations within its registry.

A registry operator is not liable under the PDDRP for any domain name registration that: (i) is registered by a person or entity that is unaffiliated with the registry operator; (ii) is registered without the direct or indirect encouragement, inducement, initiation or direction of any person or entity affiliated with the registry operator; and (iii) provides no direct or indirect benefit to the registry operator other than the typical registration fee (which may include other fees collected incidental to the registration process for value added services such as enhanced registration security).

An example of infringement at the second level is where a registry operator has a pattern or practice of actively and systematically encouraging registrants to register second level domain names and to take unfair advantage of the trademark to the extent and degree that bad faith is apparent. Another example of infringement at the second level is where a registry operator has a pattern or practice of acting as the registrant or beneficial user of infringing registrations, to monetize and profit in bad faith.

7. Complaint

7.1 Filing:

The Complaint will be filed electronically. Once the Administrative Review has been completed and the Provider deems the Complaint to be in compliance, the Provider will electronically serve the Complaint and serve a paper notice on the registry operator that is the subject of the Complaint ("Notice of Complaint") consistent with the contact information listed in the Registry Agreement.

7.2 Content:

7.2.1 The name and contact information, including address, phone, and email address, of the Complainant, and, to the best of Complainant's knowledge, the name and address of the current owner of the registration.

- 7.2.2 The name and contact information, including address, phone, and email address of any person authorized to act on behalf of Complainant.
- 7.2.3 A statement of the nature of the dispute, and any relevant evidence, which shall include:
- (a) The particular legal rights claim being asserted, the marks that form the basis for the dispute and a short and plain statement of the basis upon which the Complaint is being filed.
 - (b) A detailed explanation of how the Complainant's claim meets the requirements for filing a claim pursuant to that particular ground or standard.
 - (c) A detailed explanation of the validity of the Complaint and why the Complainant is entitled to relief.
 - (d) A statement that the Complainant has at least 30 days prior to filing the Complaint notified the registry operator in writing of: (i) its specific concerns and specific conduct it believes is resulting in infringement of Complainant's trademarks and (ii) its willingness to meet to resolve the issue.
 - (e) An explanation of how the mark is used by the Complainant (including the type of goods/services, period and territory of use – including all on-line usage) or otherwise protected by statute, treaty or has been validated by a court or the Clearinghouse.
 - (f) Copies of any documents that the Complainant considers to evidence its basis for relief, including evidence of current use of the Trademark at issue in the Complaint and domain name registrations.
 - (g) A statement that the proceedings are not being brought for any improper purpose.
 - (h) A statement describing how the registration at issue has harmed the trademark owner.
- 7.3 Complaints will be limited 5,000 words and 20 pages, excluding attachments, unless the Provider determines that additional material is necessary.
- 7.4 At the same time the Complaint is filed, the Complainant will pay a non-refundable filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within 10 days of the receipt of the Complaint by the Provider, the Complaint will be dismissed without prejudice.

8. Administrative Review of the Complaint

- 8.1 All Complaints will be reviewed by the Provider within five (5) business days of submission to the Provider to determine whether the Complaint contains all necessary information and complies with the procedural rules.
- 8.2 If the Provider finds that the Complaint complies with procedural rules, the Complaint will be deemed filed, and the proceedings will continue to the Threshold Review. If the Provider finds that the Complaint does not comply with procedural rules, it will electronically notify the Complainant of such non-compliance and provide the Complainant five (5) business days to submit an amended Complaint. If the Provider does not receive an amended Complaint within the five (5) business days provided, it will dismiss the Complaint and close the proceedings without prejudice to the Complainant's submission of a new Complaint that complies with procedural rules. Filing fees will not be refunded.
- 8.3 If deemed compliant, the Provider will electronically serve the Complaint on the registry operator and serve the Notice of Complaint consistent with the contact information listed in the Registry Agreement.

9. Threshold Review

- 9.1 Provider shall establish a Threshold Review Panel, consisting of one panelist selected by the Provider, for each proceeding within five (5) business days after completion of Administrative Review and the Complaint has been deemed compliant with procedural rules.
- 9.2 The Threshold Review Panel shall be tasked with determining whether the Complainant satisfies the following criteria:
 - 9.2.1 The Complainant is a holder of a word mark that: (i) is nationally or regionally registered and that is in current use; or (ii) has been validated through court proceedings; or (iii) that is specifically protected by a statute or treaty at the time the PDDRP complaint is filed;
 - 9.2.1.1 Use can be shown by demonstrating that evidence of use – which can be a declaration and one specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse
 - 9.2.1.2 Proof of use may also be submitted directly with the Complaint.
 - 9.2.2 The Complainant has asserted that it has been materially harmed as a result of trademark infringement;
 - 9.2.3 The Complainant has asserted facts with sufficient specificity that, if everything the Complainant asserted is true, states a claim under the Top Level Standards herein
OR

The Complainant has asserted facts with sufficient specificity that, if everything the Complainant asserted is true, states a claim under the Second Level Standards herein;

9.2.4 The Complainant has asserted that: (i) at least 30 days prior to filing the Complaint the Complainant notified the registry operator in writing of its specific concerns and specific conduct it believes is resulting in infringement of Complainant's trademarks, and its willingness to meet to resolve the issue; (ii) whether the registry operator responded to the Complainant's notice of specific concerns; and (iii) if the registry operator did respond, that the Complainant attempted to engage in good faith discussions to resolve the issue prior to initiating the PDDRP.

9.3 Within ten (10) business days of date Provider served Notice of Complaint, the registry operator shall have the opportunity, but is not required, to submit papers to support its position as to the Complainant's standing at the Threshold Review stage. If the registry operator chooses to file such papers, it must pay a filing fee.

9.4 If the registry operator submits papers, the Complainant shall have ten (10) business days to submit an opposition.

9.5 The Threshold Review Panel shall have ten (10) business days from due date of Complainant's opposition or the due date of the registry operator's papers if none were filed, to issue Threshold Determination.

9.6 Provider shall electronically serve the Threshold Determination on all parties.

9.7 If the Complainant has not satisfied the Threshold Review criteria, the Provider will dismiss the proceedings on the grounds that the Complainant lacks standing and declare that the registry operator is the prevailing party.

9.8 If the Threshold Review Panel determines that the Complainant has standing and satisfied the criteria then the Provider will commence the proceedings on the merits.

10. Response to the Complaint

10.1 The registry operator must file a Response to each Complaint within forty-five (45) days after the date of the Threshold Review Panel Declaration.

10.2 The Response will comply with the rules for filing of a Complaint and will contain the name and contact information for the registry operator, as well as a point-by-point response to the statements made in the Complaint.

10.3 The Response must be filed with the Provider and the Provider must serve it upon the Complainant in electronic form with a hard-copy notice that it has been served.

- 10.4 Service of the Response will be deemed effective, and the time will start to run for a Reply, upon confirmation that the electronic Response and hard-copy notice of the Response was sent by the Provider to the addresses provided by the Complainant.
- 10.5 If the registry operator believes the Complaint is without merit, it will affirmatively plead in its Response the specific grounds for the claim.

11. Reply

- 11.1 The Complainant is permitted ten (10) days from Service of the Response to submit a Reply addressing the statements made in the Response showing why the Complaint is not “without merit.” A Reply may not introduce new facts or evidence into the record, but shall only be used to address statements made in the Response. Any new facts or evidence introduced in a Response shall be disregarded by the Expert Panel.
- 11.2 Once the Complaint, Response and Reply (as necessary) are filed and served, a Panel will be appointed and provided with all submissions.

12. Default

- 12.1 If the registry operator fails to respond to the Complaint, it will be deemed to be in default.
- 12.2 Limited rights to set aside the finding of default will be established by the Provider, but in no event will they be permitted absent a showing of good cause to set aside the finding of default.
- 12.3 The Provider shall provide notice of Default via email to the Complainant and registry operator.
- 12.4 All Default cases shall proceed to Expert Determination on the merits.

13. Expert Panel

- 13.1 The Provider shall establish an Expert Panel within 21 days after receiving the Reply, or if no Reply is filed, within 21 days after the Reply was due to be filed.
- 13.2 The Provider shall appoint a one-person Expert Panel, unless any party requests a three- member Expert Panel. No Threshold Panel member shall serve as an Expert Panel member in the same Trademark PDDRP proceeding.
- 13.3 In the case where either party requests a three-member Expert Panel, each party (or each side of the dispute if a matter has been consolidated) shall select an Expert and the two selected Experts shall select the third Expert Panel member. Such selection shall be made pursuant to the Providers rules or procedures. Trademark PDDRP panelists within a Provider shall be rotated to the extent feasible.

- 13.4 Expert Panel member must be independent of the parties to the post-delegation challenge. Each Provider will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing a panelist for lack of independence.

14. Costs

- 14.1 The Provider will estimate the costs for the proceedings that it administers under this procedure in accordance with the applicable Provider rules. Such costs will be estimated to cover the administrative fees of the Provider, the Threshold Review Panel and the Expert Panel, and are intended to be reasonable.
- 14.2 The Complainant shall be required to pay the filing fee as set forth above in the “Complaint” section, and shall be required to submit the full amount of the Provider estimated administrative fees, the Threshold Review Panel fees and the Expert Panel fees at the outset of the proceedings. Fifty percent of that full amount shall be in cash (or cash equivalent) to cover the Complainant’s share of the proceedings and the other 50% shall be in either cash (or cash equivalent), or in bond, to cover the registry operator’s share if the registry operator prevails.
- 14.3 If the Panel declares the Complainant to be the prevailing party, the registry operator is required to reimburse Complainant for all Panel and Provider fees incurred. Failure to do shall be deemed a violation of the Trademark PDDRP and a breach of the Registry Agreement, subject to remedies available under the Agreement up to and including termination.

15. Discovery

- 15.1 Whether and to what extent discovery is allowed is at the discretion of the Panel, whether made on the Panel’s own accord, or upon request from the Parties.
- 15.2 If permitted, discovery will be limited to that for which each Party has a substantial need.
- 15.3 In extraordinary circumstances, the Provider may appoint experts to be paid for by the Parties, request live or written witness testimony, or request limited exchange of documents.
- 15.4 At the close of discovery, if permitted by the Expert Panel, the Parties will make a final evidentiary submission, the timing and sequence to be determined by the Provider in consultation with the Expert Panel.

16. Hearings

- 16.1 Disputes under this Procedure will be resolved without a hearing unless either party requests a hearing or the Expert Panel determines on its own initiative that one is necessary.

- 16.2 If a hearing is held, videoconferences or teleconferences should be used if at all possible. If not possible, then the Expert Panel will select a place for hearing if the Parties cannot agree.
- 16.3 Hearings should last no more than one day, except in the most extraordinary circumstances.
- 16.4 All dispute resolution proceedings will be conducted in English.

17. Burden of Proof

The Complainant bears the burden of proving the allegations in the Complaint; the burden must be by clear and convincing evidence.

18. Remedies

- 18.1 Since registrants are not a party to the action, a recommended remedy cannot take the form of deleting, transferring or suspending registrations (except to the extent registrants have been shown to be officers, directors, agents, employees, or entities under common control with a registry operator).
- 18.2 Recommended remedies will not include monetary damages or sanctions to be paid to any party other than fees awarded pursuant to section 14.
- 18.3 The Expert Panel may recommend a variety of graduated enforcement tools against the registry operator if it the Expert Panel determines that the registry operator is liable under this Trademark PDDRP, including:
 - 18.3.1 Remedial measures for the registry to employ to ensure against allowing future infringing registrations, which may be in addition to what is required under the registry agreement, except that the remedial measures shall not:
 - (a) Require the Registry Operator to monitor registrations not related to the names at issue in the PDDRP proceeding; or
 - (b) Direct actions by the registry operator that are contrary to those required under the Registry Agreement;
 - 18.3.2 Suspension of accepting new domain name registrations in the gTLD until such time as the violation(s) identified in the Determination is(are) cured or a set period of time;

OR,

- 18.3.3 In extraordinary circumstances where the registry operator acted with malice, providing for the termination of a Registry Agreement.

- 18.4 In making its recommendation of the appropriate remedy, the Expert Panel will consider the ongoing harm to the Complainant, as well as the harm the remedies will create for other, unrelated, good faith domain name registrants operating within the gTLD.
- 18.5 The Expert Panel may also determine whether the Complaint was filed “without merit,” and, if so, award the appropriate sanctions on a graduated scale, including:
 - 18.5.1 Temporary bans from filing Complaints;
 - 18.5.2 Imposition of costs of registry operator, including reasonable attorney fees; and
 - 18.5.3 Permanent bans from filing Complaints after being banned temporarily.
- 18.6 Imposition of remedies shall be at the discretion of ICANN, but absent extraordinary circumstances, those remedies will be in line with the remedies recommended by the Expert Panel.

19. The Expert Panel Determination

- 19.1 The Provider and the Expert Panel will make reasonable efforts to ensure that the Expert Determination is issued within 45 days of the appointment of the Expert Panel and absent good cause, in no event later than 60 days after the appointment of the Expert Panel.
- 19.2 The Expert Panel will render a written Determination. The Expert Determination will state whether or not the Complaint is factually founded and provide the reasons for that Determination. The Expert Determination should be publicly available and searchable on the Provider’s web site.
- 19.3 The Expert Determination may further include a recommendation of specific remedies. Costs and fees to the Provider, to the extent not already paid, will be paid within thirty (30) days of the Expert Panel’s Determination.
- 19.4 The Expert Determination shall state which party is the prevailing party.
- 19.5 While the Expert Determination that a registry operator is liable under the standards of the Trademark PDDRP shall be taken into consideration, ICANN will have the authority to impose the remedies, if any, that ICANN deems appropriate given the circumstances of each matter.

20. Appeal of Expert Determination

- 20.1 Either party shall have a right to seek a de novo appeal of the Expert Determination of liability or recommended remedy based on the existing record within the Trademark PDDRP proceeding for a reasonable fee to cover the costs of the appeal.
- 20.2 An appeal must be filed with the Provider and served on all parties within 20 days after an Expert Determination is issued and a response to the appeal must be filed within 20

days after the appeal. Manner and calculation of service deadlines shall in consistent with those set forth in Section 4 above, "Communication and Time Limits."

- 20.3 A three-member Appeal Panel is to be selected by the Provider, but no member of the Appeal Panel shall also have been an Expert Panel member.
- 20.4 The fees for an appeal in the first instance shall be borne by the appellant.
- 20.5 A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint.
- 20.6 The Appeal Panel may request at its sole discretion, further statements or evidence from any party regardless of whether the evidence pre-dates the filing of the Complaint if the Appeal Panel determines such evidence is relevant.
- 20.7 The prevailing party shall be entitled to an award of costs of appeal.
- 20.8 The Providers rules and procedures for appeals, other than those stated above, shall apply.

21. Challenge of a Remedy

- 21.1 ICANN shall not implement a remedy for violation of the Trademark PDDRP for at least 20 days after the issuance of an Expert Determination, providing time for an appeal to be filed.
- 21.2 If an appeal is filed, ICANN shall stay its implementation of a remedy pending resolution of the appeal.
- 21.3 If ICANN decides to implement a remedy for violation of the Trademark PDDRP, ICANN will wait ten (10) business days (as observed in the location of its principal office) after notifying the registry operator of its decision. ICANN will then implement the decision unless it has received from the registry operator during that ten (10) business-day period official documentation that the registry operator has either: (a) commenced a lawsuit against the Complainant in a court of competent jurisdiction challenging the Expert Determination of liability against the registry operator, or (b) challenged the intended remedy by initiating dispute resolution under the provisions of its Registry Agreement. If ICANN receives such documentation within the ten (10) business day period, it will not seek to implement the remedy in furtherance of the Trademark PDDRP until it receives: (i) evidence of a resolution between the Complainant and the registry operator; (ii) evidence that registry operator's lawsuit against Complainant has been dismissed or withdrawn; or (iii) a copy of an order from the dispute resolution provider selected pursuant to the Registry Agreement dismissing the dispute against ICANN whether by reason of agreement of the parties or upon determination of the merits.

- 21.4 The registry operator may challenge ICANN's imposition of a remedy imposed in furtherance of an Expert Determination that the registry operator is liable under the PDDRP, to the extent a challenge is warranted, by initiating dispute resolution under the provisions of its Registry Agreement. Any arbitration shall be determined in accordance with the parties' respective rights and duties under the Registry Agreement. Neither the Expert Determination nor the decision of ICANN to implement a remedy is intended to prejudice the registry operator in any way in the determination of the arbitration dispute. Any remedy involving a termination of the Registry Agreement must be according to the terms and conditions of the termination provision of the Registry Agreement.
- 21.5 Nothing herein shall be deemed to prohibit ICANN from imposing remedies at any time and of any nature it is otherwise entitled to impose for a registry operator's non-compliance with its Registry Agreement.

22. Availability of Court or Other Administrative Proceedings

- 22.1 The Trademark PDDRP is not intended as an exclusive procedure and does not preclude individuals from seeking remedies in courts of law, including, as applicable, review of an Expert Determination as to liability.
- 22.2 In those cases where a Party submits documented proof to the Provider that a Court action involving the same Parties, facts and circumstances as the Trademark PDDRP was instituted prior to the filing date of the Complaint in the Trademark PDDRP, the Provider shall suspend or terminate the Trademark PDDRP.

REGISTRY RESTRICTIONS DISPUTE RESOLUTION PROCEDURE (RRDRP)¹
4 JUNE 2012

1. Parties to the Dispute

The parties to the dispute will be the harmed established institution and the gTLD registry operator. ICANN shall not be a party.

2. Applicable Rules

2.1 This procedure is intended to cover these dispute resolution proceedings generally. To the extent more than one RRDRP provider (“Provider”) is selected to implement the RRDRP, each Provider may have additional rules and procedures that must be followed when filing a Complaint. The following are the general procedure to be followed by all Providers.

2.2 In any new community-based gTLD registry agreement, the registry operator shall be required to agree to participate in the RRDRP and be bound by the resulting Determinations.

3. Language

3.1 The language of all submissions and proceedings under the procedure will be English.

3.2 Parties may submit supporting evidence in their original language, provided and subject to the authority of the RRDRP Expert Panel to determine otherwise, that such evidence is accompanied by an English translation of all relevant text.

4. Communications and Time Limits

4.1 All communications with the Provider must be filed electronically.

4.2 For the purpose of determining the date of commencement of a time limit, a notice or other communication will be deemed to have been received on the day that it is transmitted to the appropriate contact person designated by the parties.

4.3 For the purpose of determining compliance with a time limit, a notice or other communication will be deemed to have been sent, made or transmitted on the day that it is dispatched.

¹ Initial complaints that a Registry has failed to comply with registration restrictions shall be processed through a Registry Restriction Problem Report System (RRPRS) using an online form similar to the Whois Data Problem Report System (WDPRS) at InterNIC.net. A nominal processing fee could serve to decrease frivolous complaints. The registry operator shall receive a copy of the complaint and will be required to take reasonable steps to investigate (and remedy if warranted) the reported non-compliance. The Complainant will have the option to escalate the complaint in accordance with this RRDRP, if the alleged non-compliance continues. Failure by the Registry to address the complaint to complainant’s satisfaction does not itself give the complainant standing to file an RRDRP complaint.

- 4.4 For the purpose of calculating a period of time under this procedure, such period will begin to run on the day following the date of receipt of a notice or other communication.
- 4.5 All references to day limits shall be considered as calendar days unless otherwise specified.

5. Standing

- 5.1 The mandatory administrative proceeding will commence when a third-party complainant (“Complainant”) has filed a Complaint with a Provider asserting that the Complainant is a harmed established institution as a result of the community-based gTLD registry operator not complying with the registration restrictions set out in the Registry Agreement.
- 5.2 Established institutions associated with defined communities are eligible to file a community objection. The “defined community” must be a community related to the gTLD string in the application that is the subject of the dispute. To qualify for standing for a community claim, the Complainant must prove both: it is an established institution, and has an ongoing relationship with a defined community that consists of a restricted population that the gTLD supports.
- 5.3 Complainants must have filed a claim through the Registry Restriction Problem Report System (RRPRS) to have standing to file an RRDRP.
- 5.4 The Panel will determine standing and the Expert Determination will include a statement of the Complainant’s standing.

6. Standards

- 6.1 For a claim to be successful, the claims must prove that:
 - 6.1.1 The community invoked by the objector is a defined community;
 - 6.1.2 There is a strong association between the community invoked and the gTLD label or string;
 - 6.1.3 The TLD operator violated the terms of the community-based restrictions in its agreement;
 - 6.1.4 There is a measureable harm to the Complainant and the community named by the objector.

7. Complaint

- 7.1 Filing:

The Complaint will be filed electronically. Once the Administrative Review has been completed and the Provider deems the Complaint to be in compliance, the Provider will electronically serve the Complaint and serve a hard copy and fax notice on the registry operator consistent with the contact information listed in the Registry Agreement.

7.2 Content:

- 7.2.1 The name and contact information, including address, phone, and email address, of the Complainant, the registry operator and, to the best of Complainant's knowledge, the name and address of the current owner of the registration.
- 7.2.2 The name and contact information, including address, phone, and email address of any person authorized to act on behalf of Complainant.
- 7.2.3 A statement of the nature of the dispute, which must include:
 - 7.2.3.1 The particular registration restrictions in the Registry Agreement with which the registry operator is failing to comply; and
 - 7.2.3.2 A detailed explanation of how the registry operator's failure to comply with the identified registration restrictions has caused harm to the complainant.
- 7.2.4 A statement that the proceedings are not being brought for any improper purpose.
- 7.2.5 A statement that the Complainant has filed a claim through the RRPRS and that the RRPRS process has concluded.
- 7.2.6 A statement that Complainant has not filed a Trademark Post-Delegation Dispute Resolution Procedure (PDDRP) complaint relating to the same or similar facts or circumstances.

7.3 Complaints will be limited to 5,000 words and 20 pages, excluding attachments, unless the Provider determines that additional material is necessary.

7.4 Any supporting documents should be filed with the Complaint.

7.5 At the same time the Complaint is filed, the Complainant will pay a filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within 10 days of the receipt of the Complaint by the Provider, the Complaint will be dismissed without prejudice to the Complainant to file another complaint.

8. Administrative Review of the Complaint

8.1 All Complaints will be reviewed within five (5) business days of submission by panelists designated by the applicable Provider to determine whether the Complainant has complied with the procedural rules.

- 8.2 If the Provider finds that the Complaint complies with procedural rules, the Complaint will be deemed filed, and the proceedings will continue. If the Provider finds that the Complaint does not comply with procedural rules, it will electronically notify the Complainant of such non-compliance and provide the Complainant five (5) business days to submit an amended Complaint. If the Provider does not receive an amended Complaint within the five (5) business days provided, it will dismiss the Complaint and close the proceedings without prejudice to the Complainant's submission of a new Complaint that complies with procedural rules. Filing fees will not be refunded if the Complaint is deemed not in compliance.
- 8.3 If deemed compliant, the Provider will electronically serve the Complaint on the registry operator and serve a paper notice on the registry operator that is the subject of the Complaint consistent with the contact information listed in the Registry Agreement.

9. Response to the Complaint

- 9.1 The registry operator must file a response to each Complaint within thirty (30) days of service the Complaint.
- 9.2 The Response will comply with the rules for filing of a Complaint and will contain the names and contact information for the registry operator, as well as a point by point response to the statements made in the Complaint.
- 9.3 The Response must be electronically filed with the Provider and the Provider must serve it upon the Complainant in electronic form with a hard-copy notice that it has been served.
- 9.4 Service of the Response will be deemed effective, and the time will start to run for a Reply, upon electronic transmission of the Response.
- 9.5 If the registry operator believes the Complaint is without merit, it will affirmatively plead in its Response the specific grounds for the claim.
- 9.6 At the same time the Response is filed, the registry operator will pay a filing fee in the amount set in accordance with the applicable Provider rules. In the event that the filing fee is not paid within ten (10) days of the receipt of the Response by the Provider, the Response will be deemed improper and not considered in the proceedings, but the matter will proceed to Determination.

10 Reply

- 10.1 The Complainant is permitted ten (10) days from Service of the Response to submit a Reply addressing the statements made in the Response showing why the Complaint is not "without merit." A Reply may not introduce new facts or evidence into the record, but shall only be used to address statements made in the Response. Any new facts or evidence introduced in a Response shall be disregarded by the Expert Panel.
- 10.2 Once the Complaint, Response and Reply (as necessary) are filed and served, a Panel will be appointed and provided with all submissions.

11. Default

- 11.1 If the registry operator fails to respond to the Complaint, it will be deemed to be in default.
- 11.2 Limited rights to set aside the finding of default will be established by the Provider, but in no event will it be permitted absent a showing of good cause to set aside the finding of Default.
- 11.3 The Provider shall provide Notice of Default via email to the Complainant and registry operator.
- 11.4 All Default cases shall proceed to Expert Determination on the merits.

12. Expert Panel

- 12.1 The Provider shall select and appoint a single-member Expert Panel within (21) days after receiving the Reply, or if no Reply is filed, within 21 days after the Reply was due to be filed.
- 12.2 The Provider will appoint a one-person Expert Panel unless any party requests a three-member Expert Panel.
- 12.3 In the case where either party requests a three-member Expert Panel, each party (or each side of the dispute if a matter has been consolidated) shall select an Expert and the two selected Experts shall select the third Expert Panel member. Such selection shall be made pursuant to the Provider's rules or procedures. RRDRP panelists within a Provider shall be rotated to the extent feasible.
- 12.4 Expert Panel members must be independent of the parties to the post-delegation challenge. Each Provider will follow its adopted procedures for requiring such independence, including procedures for challenging and replacing an Expert for lack of independence.

13. Costs

- 13.1 The Provider will estimate the costs for the proceedings that it administers under this procedure in accordance with the applicable Provider Rules. Such costs will cover the administrative fees, including the Filing and Response Fee, of the Provider, and the Expert Panel fees, and are intended to be reasonable.
- 13.2 The Complainant shall be required to pay the Filing fee as set forth above in the "Complaint" section, and shall be required to submit the full amount of the other Provider-estimated administrative fees, including the Response Fee, and the Expert Panel fees at the outset of the proceedings. Fifty percent of that full amount shall be in cash (or cash equivalent) to cover the Complainant's share of the proceedings and the other 50% shall be in either cash (or cash equivalent), or in bond, to cover the registry operator's share if the registry operator prevails.

- 13.3 If the Panel declares the Complainant to be the prevailing party, the registry operator is required to reimburse Complainant for all Panel and Provider fees incurred, including the Filing Fee. Failure to do so shall be deemed a violation of the RRDRP and a breach of the Registry Agreement, subject to remedies available under the Agreement up to and including termination.
- 13.4 If the Panel declares the registry operator to be the prevailing party, the Provider shall reimburse the registry operator for its Response Fee.

14. Discovery/Evidence

- 14.1 In order to achieve the goal of resolving disputes rapidly and at a reasonable cost, discovery will generally not be permitted. In exceptional cases, the Expert Panel may require a party to provide additional evidence.
- 14.2 If permitted, discovery will be limited to that for which each Party has a substantial need.
- 14.3 Without a specific request from the Parties, but only in extraordinary circumstances, the Expert Panel may request that the Provider appoint experts to be paid for by the Parties, request live or written witness testimony, or request limited exchange of documents.

15. Hearings

- 15.1 Disputes under this RRDRP will usually be resolved without a hearing.
- 15.2 The Expert Panel may decide on its own initiative, or at the request of a party, to hold a hearing. However, the presumption is that the Expert Panel will render Determinations based on written submissions and without a hearing.
- 15.3 If a request for a hearing is granted, videoconferences or teleconferences should be used if at all possible. If not possible, then the Expert Panel will select a place for hearing if the parties cannot agree.
- 15.4 Hearings should last no more than one day, except in the most exceptional circumstances.
- 15.5 If the Expert Panel grants one party's request for a hearing, notwithstanding the other party's opposition, the Expert Panel is encouraged to apportion the hearing costs to the requesting party as the Expert Panel deems appropriate.
- 15.6 All dispute resolution proceedings will be conducted in English.

16. Burden of Proof

The Complainant bears the burden of proving its claim; the burden should be by a preponderance of the evidence.

17. Recommended Remedies

- 17.1 Since registrants of domain names registered in violation of the agreement restriction are not a party to the action, a recommended remedy cannot take the form of deleting, transferring or suspending registrations that were made in violation of the agreement restrictions (except to the extent registrants have been shown to be officers, directors, agents, employees, or entities under common control with a registry operator).
- 17.2 Recommended remedies will not include monetary damages or sanctions to be paid to any party other than fees awarded pursuant to section 13.
- 17.3 The Expert Panel may recommend a variety of graduated enforcement tools against the registry operator if the Expert Panel determines that the registry operator allowed registrations outside the scope of its promised limitations, including:
- 17.3.1 Remedial measures, which may be in addition to requirements under the registry agreement, for the registry to employ to ensure against allowing future registrations that do not comply with community-based limitations; except that the remedial measures shall not:
- (a) Require the registry operator to monitor registrations not related to the names at issue in the RRDRP proceeding, or
 - (b) direct actions by the registry operator that are contrary to those required under the registry agreement
- 17.3.2 Suspension of accepting new domain name registrations in the gTLD until such time as the violation(s) identified in the Determination is(are) cured or a set period of time;
- OR,
- 17.3.3 In extraordinary circumstances where the registry operator acted with malice providing for the termination of a registry agreement.
- 17.3 In making its recommendation of the appropriate remedy, the Expert Panel will consider the ongoing harm to the Complainant, as well as the harm the remedies will create for other, unrelated, good faith domain name registrants operating within the gTLD.

18. The Expert Determination

- 18.1 The Provider and the Expert Panel will make reasonable efforts to ensure that the Expert Determination is rendered within 45 days of the appointment of the Expert Panel and absent good cause, in no event later than 60 days after the appointment of the Expert Panel.
- 18.2 The Expert Panel will render a written Determination. The Expert Determination will state whether or not the Complaint is factually founded and provide the reasons for its

Determination. The Expert Determination should be publicly available and searchable on the Provider's web site.

- 18.3 The Expert Determination may further include a recommendation of specific remedies. Costs and fees to the Provider, to the extent not already paid, will be paid within thirty (30) days of the Expert Determination.
- 18.4 The Expert Determination shall state which party is the prevailing party.
- 18.5 While the Expert Determination that a community-based restricted gTLD registry operator was not meeting its obligations to police the registration and use of domains within the applicable restrictions shall be considered, ICANN shall have the authority to impose the remedies ICANN deems appropriate, given the circumstances of each matter.

19. Appeal of Expert Determination

- 19.1 Either party shall have a right to seek a de novo appeal of the Expert Determination based on the existing record within the RDRP proceeding for a reasonable fee to cover the costs of the appeal.
- 19.2 An appeal must be filed with the Provider and served on all parties within 20 days after an Expert Determination is issued and a response to the appeal must be filed within 20 days after the appeal. Manner and calculation of service deadlines shall in consistent with those set forth in Section 4 above, "Communication and Time Limits."
- 19.3 A three-member Appeal Panel is to be selected by the Provider, but no member of the Appeal Panel shall also have been an Expert Panel member.
- 19.4 The fees for an appeal in the first instance shall be borne by the appellant.
- 19.5 A limited right to introduce new admissible evidence that is material to the Determination will be allowed upon payment of an additional fee, provided the evidence clearly pre-dates the filing of the Complaint.
- 19.6 The Appeal Panel may request at its sole discretion, further statements or evidence from any party regardless of whether the evidence pre-dates the filing of the Complaint if the Appeal Panel determines such evidence is relevant.
- 19.7 The prevailing party shall be entitled to an award of costs of appeal.
- 19.8 The Providers rules and procedures for appeals, other than those stated above, shall apply.

20. Breach

- 20.1 If the Expert determines that the registry operator is in breach, ICANN will then proceed to notify the registry operator that it is in breach. The registry operator will be given the opportunity to cure the breach as called for in the Registry Agreement.

- 20.2 If registry operator fails to cure the breach then both parties are entitled to utilize the options available to them under the registry agreement, and ICANN may consider the recommended remedies set forth in the Expert Determination when taking action.
- 20.3 Nothing herein shall be deemed to prohibit ICANN from imposing remedies at any time and of any nature it is otherwise entitled to impose for a registry operator's non-compliance with its Registry Agreement.

21. Availability of Court or Other Administrative Proceedings

- 21.1 The RRDRP is not intended as an exclusive procedure and does not preclude individuals from seeking remedies in courts of law, including, as applicable, review of an Expert Determination as to liability.
- 21.2 The parties are encouraged, but not required to participate in informal negotiations and/or mediation at any time throughout the dispute resolution process but the conduct of any such settlement negotiation is not, standing alone, a reason to suspend any deadline under the proceedings.

gTLD Applicant Guidebook

(v. 2012-06-04)

Module 6

4 June 2012

Module 6

Top-Level Domain Application - Terms and Conditions

By submitting this application through ICANN's online interface for a generic Top Level Domain (gTLD) (this application), applicant (including all parent companies, subsidiaries, affiliates, agents, contractors, employees and any and all others acting on its behalf) agrees to the following terms and conditions (these terms and conditions) without modification. Applicant understands and agrees that these terms and conditions are binding on applicant and are a material part of this application.

1. Applicant warrants that the statements and representations contained in the application (including any documents submitted and oral statements made and confirmed in writing in connection with the application) are true and accurate and complete in all material respects, and that ICANN may rely on those statements and representations fully in evaluating this application. Applicant acknowledges that any material misstatement or misrepresentation (or omission of material information) may cause ICANN and the evaluators to reject the application without a refund of any fees paid by Applicant. Applicant agrees to notify ICANN in writing of any change in circumstances that would render any information provided in the application false or misleading.
2. Applicant warrants that it has the requisite organizational power and authority to make this application on behalf of applicant, and is able to make all agreements, representations, waivers, and understandings stated in these terms and conditions and to enter into the form of registry agreement as posted with these terms and conditions.
3. Applicant acknowledges and agrees that ICANN has the right to determine not to proceed with any and all applications for new gTLDs, and that there is no assurance that any additional gTLDs will be created. The decision to review, consider and approve an application to establish one or more

gTLDs and to delegate new gTLDs after such approval is entirely at ICANN's discretion. ICANN reserves the right to reject any application that ICANN is prohibited from considering under applicable law or policy, in which case any fees submitted in connection with such application will be returned to the applicant.

4. Applicant agrees to pay all fees that are associated with this application. These fees include the evaluation fee (which is to be paid in conjunction with the submission of this application), and any fees associated with the progress of the application to the extended evaluation stages of the review and consideration process with respect to the application, including any and all fees as may be required in conjunction with the dispute resolution process as set forth in the application. Applicant acknowledges that the initial fee due upon submission of the application is only to obtain consideration of an application. ICANN makes no assurances that an application will be approved or will result in the delegation of a gTLD proposed in an application. Applicant acknowledges that if it fails to pay fees within the designated time period at any stage of the application review and consideration process, applicant will forfeit any fees paid up to that point and the application will be cancelled. Except as expressly provided in this Application Guidebook, ICANN is not obligated to reimburse an applicant for or to return any fees paid to ICANN in connection with the application process.
5. Applicant shall indemnify, defend, and hold harmless ICANN (including its affiliates, subsidiaries, directors, officers, employees, consultants, evaluators, and agents, collectively the ICANN Affiliated Parties) from and against any and all third-party claims, damages, liabilities, costs, and expenses, including legal fees and expenses, arising out of or relating to: (a) ICANN's or an ICANN Affiliated Party's consideration of the application, and any approval rejection or withdrawal of the application; and/or (b) ICANN's or an ICANN Affiliated Party's reliance on information provided by applicant in the application.

6. Applicant hereby releases ICANN and the ICANN Affiliated Parties from any and all claims by applicant that arise out of, are based upon, or are in any way related to, any action, or failure to act, by ICANN or any ICANN Affiliated Party in connection with ICANN's or an ICANN Affiliated Party's review of this application, investigation or verification, any characterization or description of applicant or the information in this application, any withdrawal of this application or the decision by ICANN to recommend, or not to recommend, the approval of applicant's gTLD application. APPLICANT AGREES NOT TO CHALLENGE, IN COURT OR IN ANY OTHER JUDICIAL FORA, ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION, AND IRREVOCABLY WAIVES ANY RIGHT TO SUE OR PROCEED IN COURT OR ANY OTHER JUDICIAL FORA ON THE BASIS OF ANY OTHER LEGAL CLAIM AGAINST ICANN AND ICANN AFFILIATED PARTIES WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES AND ACCEPTS THAT APPLICANT'S NONENTITLEMENT TO PURSUE ANY RIGHTS, REMEDIES, OR LEGAL CLAIMS AGAINST ICANN OR THE ICANN AFFILIATED PARTIES IN COURT OR ANY OTHER JUDICIAL FORA WITH RESPECT TO THE APPLICATION SHALL MEAN THAT APPLICANT WILL FOREGO ANY RECOVERY OF ANY APPLICATION FEES, MONIES INVESTED IN BUSINESS INFRASTRUCTURE OR OTHER STARTUP COSTS AND ANY AND ALL PROFITS THAT APPLICANT MAY EXPECT TO REALIZE FROM THE OPERATION OF A REGISTRY FOR THE TLD; PROVIDED, THAT APPLICANT MAY UTILIZE ANY ACCOUNTABILITY MECHANISM SET FORTH IN ICANN'S BYLAWS FOR PURPOSES OF CHALLENGING ANY FINAL DECISION MADE BY ICANN WITH RESPECT TO THE APPLICATION. APPLICANT ACKNOWLEDGES THAT ANY ICANN AFFILIATED PARTY IS AN EXPRESS THIRD PARTY BENEFICIARY OF THIS SECTION 6 AND MAY ENFORCE EACH PROVISION OF THIS SECTION 6 AGAINST APPLICANT.

7. Applicant hereby authorizes ICANN to publish on ICANN's website, and to disclose or publicize in any other manner, any materials submitted to, or obtained or generated by, ICANN and the ICANN Affiliated Parties in connection with the application, including evaluations, analyses and any other

materials prepared in connection with the evaluation of the application; provided, however, that information will not be disclosed or published to the extent that this Applicant Guidebook expressly states that such information will be kept confidential, except as required by law or judicial process. Except for information afforded confidential treatment, applicant understands and acknowledges that ICANN does not and will not keep the remaining portion of the application or materials submitted with the application confidential.

8. Applicant certifies that it has obtained permission for the posting of any personally identifying information included in this application or materials submitted with this application. Applicant acknowledges that the information that ICANN posts may remain in the public domain in perpetuity, at ICANN's discretion. Applicant acknowledges that ICANN will handle personal information collected in accordance with its gTLD Program privacy statement <http://newgtlds.icann.org/en/applicants/agb/program-privacy>, which is incorporated herein by this reference. If requested by ICANN, Applicant will be required to obtain and deliver to ICANN and ICANN's background screening vendor any consents or agreements of the entities and/or individuals named in questions 1-11 of the application form necessary to conduct these background screening activities. In addition, Applicant acknowledges that to allow ICANN to conduct thorough background screening investigations:
 - a. Applicant may be required to provide documented consent for release of records to ICANN by organizations or government agencies;
 - b. Applicant may be required to obtain specific government records directly and supply those records to ICANN for review;
 - c. Additional identifying information may be required to resolve questions of identity of individuals within the applicant organization;

- d. Applicant may be requested to supply certain information in the original language as well as in English.
9. Applicant gives ICANN permission to use applicant's name in ICANN's public announcements (including informational web pages) relating to Applicant's application and any action taken by ICANN related thereto.
10. Applicant understands and agrees that it will acquire rights in connection with a gTLD only in the event that it enters into a registry agreement with ICANN, and that applicant's rights in connection with such gTLD will be limited to those expressly stated in the registry agreement. In the event ICANN agrees to recommend the approval of the application for applicant's proposed gTLD, applicant agrees to enter into the registry agreement with ICANN in the form published in connection with the application materials. (Note: ICANN reserves the right to make reasonable updates and changes to this proposed draft agreement during the course of the application process, including as the possible result of new policies that might be adopted during the course of the application process). Applicant may not resell, assign, or transfer any of applicant's rights or obligations in connection with the application.
11. Applicant authorizes ICANN to:
 - a. Contact any person, group, or entity to request, obtain, and discuss any documentation or other information that, in ICANN's sole judgment, may be pertinent to the application;
 - b. Consult with persons of ICANN's choosing regarding the information in the application or otherwise coming into ICANN's possession, provided, however, that ICANN will use reasonable efforts to ensure that such persons maintain the confidentiality of information in the application that this Applicant Guidebook expressly states will be kept confidential.

12. For the convenience of applicants around the world, the application materials published by ICANN in the English language have been translated into certain other languages frequently used around the world. Applicant recognizes that the English language version of the application materials (of which these terms and conditions is a part) is the version that binds the parties, that such translations are non-official interpretations and may not be relied upon as accurate in all respects, and that in the event of any conflict between the translated versions of the application materials and the English language version, the English language version controls.
13. Applicant understands that ICANN has a long-standing relationship with Jones Day, an international law firm, and that ICANN intends to continue to be represented by Jones Day throughout the application process and the resulting delegation of TLDs. ICANN does not know whether any particular applicant is or is not a client of Jones Day. To the extent that Applicant is a Jones Day client, by submitting this application, Applicant agrees to execute a waiver permitting Jones Day to represent ICANN adverse to Applicant in the matter. Applicant further agrees that by submitting its Application, Applicant is agreeing to execute waivers or take similar reasonable actions to permit other law and consulting firms retained by ICANN in connection with the review and evaluation of its application to represent ICANN adverse to Applicant in the matter.
14. ICANN reserves the right to make reasonable updates and changes to this applicant guidebook and to the application process, including the process for withdrawal of applications, at any time by posting notice of such updates and changes to the ICANN website, including as the possible result of new policies that might be adopted or advice to ICANN from ICANN advisory committees during the course of the application process. Applicant acknowledges that ICANN may make such updates and changes and agrees that its application will be subject to any such updates and changes. In the event that Applicant has completed and submitted its application prior to

such updates or changes and Applicant can demonstrate to ICANN that compliance with such updates or changes would present a material hardship to Applicant, then ICANN will work with Applicant in good faith to attempt to make reasonable accommodations in order to mitigate any negative consequences for Applicant to the extent possible consistent with ICANN's mission to ensure the stable and secure operation of the Internet's unique identifier systems.

Exhibit DIDP A8

Statement of Work Under Contractor Consulting Agreement

The Economist Intelligence Unit, NA, Incorporated ("Panel Firm") and the Internet Corporation for Assigned Names and Numbers (ICANN) agree to perform the services outlined in Exhibit B-1 (Statement of Work) and in accordance with the New gTLD Program Consulting Agreement dated July 26, 2011 by and between the Panel Firm and ICANN.

Print Name: Vinay Shah

Title: General Counsel & Secretary

Title: CFO

Date: 6 October 2011

Date: Oct 5, 2011

Exhibit B1 – Additional Services

Statement of Work –Application Review Simulation Exercise

ICANN desires to engage The Economist Intelligence Unit, NA, Inc. (referred to herein as “Panel Firm”) to develop and document their evaluation approach via an Evaluator Guide and perform application review simulation exercises to test and update the Evaluator Guide. This SOW specifically addresses the Geographic Names and Community Priority evaluation panels.

The objective of this work is to validate the evaluation approach among panels of the same type and inform the training and quality control panels of both the approach and process so they may complete their respective development efforts.

Deliverables:

The Panel Firm will provide to ICANN the following Deliverables related to simulation preparation, execution, and resultant outcomes. The Panel Firm will issue the final Deliverables following receipt of comments (feedback) from ICANN.

Non-Responsive Information Redacted; Relates to Other Scope of Work Not Related to Community Priority Evaluation

2. A Community Priority evaluation guide

The evaluation guide is the Panel Firm’s approach for performing evaluation as per the respective requirements defined by the New gTLD Applicant Guidebook (AGB). By extension, the evaluation guide will also be the mechanism by which Panel Firm’s evaluators will perform their work. It will be provided to ICANN’s consultant responsible for developing evaluation panel training for incorporation into the training guides.

3. A list of recommendations for Applicant Guidebook (AGB) supplemental notes to applicants

In order to minimize the need for asking clarification questions of New gTLD Applicants, ICANN intends to create and publish supplemental notes as part of their applicant guidance materials. In the process of evaluation simulation exercises, panels will identify and document recommendations for content to be included in the supplemental notes. Such notes are intended to better inform applicants and solicit complete, clear, and concise application responses, thereby improving the evaluation process and results.

Non-Responsive Information Redacted; Relates to Other Scope of Work Not Related to Community Priority Evaluation

Exhibit B1 – Additional Services

Statement of Work –Application Review Simulation Exercise

Non-Responsive Information Redacted; Relates to Other Scope of Work Not Related to Community Priority Evaluation

5. A Community Priority evaluation processing flow chart

ICANN will use a Quality Control panel to review evaluation processes of the various panels. In order to inform the QC panel of the processes to be used by the evaluation panel, ICANN wishes each panel to document their respective evaluation processes. This is separate from the evaluation approach, which is one detailed component of the broader evaluation process.

6. Training Content and Approach

The evaluation firms will be responsible for providing input into the development of training. As such, the main deliverables are a Training Model, an Evaluator Skill & Experience Profile, and Instructor Examples/Cases. Below is an explanation of each:

Training Model- This model is an overview of how the Panel Firm intends to train their teams. In addition, this model should reference any systems and/or materials that the Panel Firm will use to train their teams.

Evaluator Skill & Experience Profile- An experience profile should be developed for each of the main functions within the evaluation process. For example, there could be a profile for the analysts used to validate the authenticity of governmental documents. This profile is intended to be role based rather than a separate profile for each resource. ICANN intends to provide a template for the Panel Firm to complete.

Instructor Examples/Cases- Examples or cases of simulation material that may come from an applicant. These examples will be consumed during the actual Core Team training in subsequent project phases.

Approach and Scope of Engagement:

This engagement is expected to last approximately ten (10) weeks from September 26, 2011 to December 5, 2011 in accordance with the schedule outlined below. **Confidential Business Information**

Confidential Business Information

Actual hours will be invoiced to ICANN monthly. The Economist Intelligence Unit will manage against the scope and estimated hours provided in this Amendment, and inform ICANN if a change in scope or estimated hours may occur. Changes in scope and estimated hours must be agreed upon in writing ahead of time by both the Economist Intelligence Unit and ICANN.

- **Non-Responsive Information Redacted; Relates to Other Scope of Work Not Related to Community Priority Evaluation**
- 3 “mock” Community Priority application responses for Consultant simulation exercise
- Guidance as required on relevant sections of the AGB
- Timely feedback on draft documents
- Participation in simulation debrief meetings

New gTLD Program Consulting Agreement

This Consulting Master Services Agreement (together with the Exhibits and Attachments hereto, this "Agreement") is effective as of July 26, 2011 (the "Effective Date"), by and between the Internet Corporation for Assigned Names and Numbers ("ICANN"), a California nonprofit public benefit corporation, with its principal offices located at 4676 Admiralty Way, Suite 330, Marina del Rey, CA, USA 90292 and The Economist Intelligence Unit, NA, Incorporated, with its principal offices located at 750 Third Avenue, 5th Floor, New York, NY 10017, hereinafter referred to as "Contractor".

WHEREAS, Contractor and ICANN desire to enter into an agreement for the performance by Contractor of certain professional consulting services in connection with activities being conducted by ICANN.

NOW THEREFORE, in consideration of the foregoing, the mutual promises and covenants contained herein, and other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

1. **SERVICES:** Contractor shall provide to ICANN such professional consulting services as are set forth in statements of work (each a "Statement of Work") signed by and in a form acceptable to both parties, which shall set forth the manner of the work which will be provided to ICANN pursuant to this Agreement (the "Services") and the products and materials to be produced by Contractor pursuant to the Services (the "Products"). Any Services provided hereunder shall be rendered by Contractor in a manner consistent with industry standards, and shall be provided in accordance with all applicable laws. Contractor's Services shall not be exclusive to ICANN, provided that during the term of Contractor's engagement hereunder, Contractor will not render services that prevent, interfere or conflict with, or delay the prompt performance of the Services.

2. **TERM:** Contractor shall render the Services on the date or dates set forth on any Statements of Work entered into hereunder.

3. **COMPENSATION:** Subject to all the provisions of this Agreement, including, but not limited to, the "Supplemental Terms" (attached hereto as Exhibit A) and any and all Statements of Work, ICANN agrees to pay Contractor as full and complete consideration for Contractor's services hereunder, and Contractor agrees to accept, the sum as set out in the applicable Statement of Work, payable in US Dollars for the Services, which shall be paid in accordance with the payment schedule set forth in such Statement of Work.

4. **RIGHTS:**

(a) In consideration of the amounts payable by ICANN pursuant to Section 3, and subject to Section 4(b), Contractor assigns to ICANN exclusive ownership rights, in perpetuity of all copyright in and to the Products.

(b) Notwithstanding any provision of this Agreement, any and all rights (including without limitation copyright, trademarks and rights in data) in and to any content, data, brands and materials included in the Products that are in existence prior to the commencement of the Services to be provided under any and all Statements of Work (the "Pre-Existing Materials") shall not be transferred to ICANN and shall remain the exclusive property of Contractor or its licensors. Contractor grants to ICANN a non-exclusive, perpetual, royalty free license (including the right to sublicense to other parties) to use, reproduce, modify and distribute any Pre-Existing Materials on condition that: (i) such Pre-Existing Materials are used as part of the Products they are provided within and only as required in order to use the Products; and (ii) no modification shall be made that misrepresents or distorts the content or meaning of such Pre-Existing Materials.

(c) The transfer in Section 4(a) shall, subject to Section 4(b), include the right to apply for any and all patents arising from the Products and to register any copyright subsisting therein (collectively, the "Legal Rights")

(d) Save as set out in any applicable Statement of Work, Contractor will not be entitled to any royalty, commission or other payment with respect to the Products or Legal Rights in addition to the fees payable for the services to be provided under such Statement of Work.

(e) Contractor warrants that all Products will be Contractor's original work and do not infringe any copyrights, trade secrets, trademarks, patents or other proprietary rights of any third party.

5. INDEPENDENT CONTRACTOR STATUS: Contractor acknowledges and agrees that Contractor is an Independent Contractor and that Contractor's employees or agents, if any, are not employees or agents of ICANN for any purpose, including but not limited to national or local withholding or employer taxation obligations. Contractor agrees to indemnify and hold ICANN harmless (including attorney's fees and costs incurred by ICANN) should Contractor fail to meet Contractor's obligations with respect to its employees with regard to the payment or withholding of social security and other taxes, federal and state (or other such political or governmental subdivision) income taxes, unemployment insurance, and similar items should ICANN be held liable or responsible therefore. Contractor retains the sole right to control or direct the manner in which the Services are to be performed. Without limiting the foregoing, ICANN retains the right to inspect, to stop work, to prescribe alterations, and generally supervise Contractor's work to insure its conformity with the applicable Statement of Work. Contractor acknowledges that Contractor has no authority for or on behalf of ICANN to make, enter into or amend any contracts or agreements or to take any action which would impose liability on ICANN, without the express written consent of an authorized officer of ICANN. Contractor represents to ICANN that Contractor is engaged in an independent calling and will comply with all laws regarding business permits and licenses that may be required to carry out Contractor's obligations under this Agreement.

6. IMMIGRATION LAW: With respect to each of Contractor's employees who render services to ICANN hereunder, Contractor shall be responsible for compliance with all applicable immigration laws, including the U.S. Immigration Reform and Control Act of 1986, and with all employment eligibility verification provisions required by law.

7. INTERPRETATION: In the event of a conflict between: (i) this Agreement; and (ii) any Statement(s) of Work, the terms of the applicable Statement of Work shall prevail.

[signature page follows]

The parties shall indicate their acceptance of this Agreement by signing in the appropriate space provided below.

EXHIBIT A
SUPPLEMENTAL TERMS

1. **RIGHTS OBLIGATIONS:** Except as set forth in the applicable Statement of Work, Contractor agrees that ICANN shall have the exclusive right, but not the obligation, to register copyright and file applications for patents throughout the world to protect ICANN's Legal Rights in and to the Products and that Contractor shall, upon the request of ICANN, perform (at no cost to Contractor) such legal acts and execute and deliver to ICANN, any such documents, applications and assignments reasonably requested by ICANN to register ICANN's Legal Rights in and to the Products.

2. **FORCE MAJEURE:** In the event of an occurrence of an event of force majeure, as the term is generally understood, ICANN shall have the right to suspend this Agreement and shall have the right, but not the obligation, to extend this Agreement by the length of any such suspension. If an event of force majeure continues for eight (8) consecutive weeks, ICANN shall have the right to terminate this Agreement.

3. **WARRANTIES:** Contractor represents and warrants to ICANN as follows:
 - (a) Contractor is fully authorized to enter into, and perform its obligations under this Agreement. This Agreement creates lawful, valid, and binding obligations, enforceable against Contractor in accordance with its terms.

 - (b) Contractor has the right to grant all rights granted herein, including but not limited to all necessary literary, artistic, musical and/or intellectual property rights, and is free to enter into and fully perform this Agreement.

 - (c) The exercise of rights granted herein, the performance of the Services and the delivery of the Products will not infringe on any of the following rights of any third party: copyright, trademark, or other intellectual property rights.

 - (d) Contractor has not entered and shall not enter into any arrangement or agreement that will interfere or conflict with the rights granted to ICANN hereunder.

Confidential Business Information

Confidential Business Information

5. CONFIDENTIALITY

(a) Each party acknowledges that it may disclose Confidential Information (as defined below) to the other in connection with this Agreement. The party receiving the Confidential Information will: (i) maintain it in confidence, except to the extent necessary to carry out the purposes of this Agreement, in which event confidentiality and use restrictions will be imposed upon the parties to whom such disclosures are made; (ii) use at least the same degree of care in maintaining its secrecy as it uses in maintaining the secrecy of its own Confidential Information, but in no event less than a reasonable degree of care; (iii) at the disclosing party's option, destroy or return all copies, notes, packages, diagrams, computer memory media and all other materials containing any portion of the Confidential Information to the disclosing party promptly following the earlier of (A) such party's request, (B) completion of the intended use of the Confidential Information, or (C) termination of this Agreement; and (iv) not use the Confidential Information other than for purposes of fulfilling its obligations under this Agreement. "Confidential Information" means all proprietary, secret or confidential information or data relating to either of the parties and its operations, employees, products or services, and any Personal Information. "Personal Information" means personally identifiable information relating to such party's employees, consumers and potential consumers. Each party will notify

the other party immediately upon discovery of any lost or altered Confidential Information.

(b) Information will not be considered Confidential Information to the extent, but only to the extent, that such information: (i) is already known to the receiving party free of any restriction at the time it is obtained from the other party; (ii) is subsequently learned from an independent third party free of any restriction and without breach of this Agreement; (iii) becomes publicly available through no wrongful act of either party; (iv) is independently developed by one party without reference to any Confidential Information of the other; or (v) is required to be disclosed by law, regulation, court order or subpoena, provided that the disclosing party will exercise reasonable efforts to notify the other party prior to disclosure. The parties agree also that the existence and terms of this Agreement are confidential and shall not be disclosed by either party without prior consent in writing by the other party.

6. SURVIVING OBLIGATIONS: The parties' representations, warranties, and indemnity obligations shall remain in effect following the termination or expiration of this Agreement.

7. ASSIGNMENT: Neither party may without prior consent in writing assign this Agreement or any of its rights or obligations hereunder.

8. REMEDIES: In recognition of the relative risks and benefits of this Agreement to both ICANN and Contractor, ICANN agrees that, to the fullest extent permitted by law, except for claims for indemnification under Section 4, any liability of Contractor (including its consultants, employees, and agents) for damages to ICANN shall be limited to an amount equal to the total amount paid to Contractor pursuant to this Agreement. EXCEPT FOR CLAIMS FOR INDEMNIFICATION UNDER SECTION 4, IN NO EVENT SHALL ANY PARTY TO THIS AGREEMENT OR ANY OF ITS DIRECTORS, OFFICERS, EMPLOYEES, AGENTS OR SUBCONTRACTORS BE LIABLE TO THE OTHER PARTY UNDER ANY THEORY OF TORT, CONTRACT, STRICT LIABILITY OR OTHER LEGAL OR EQUITABLE THEORY FOR LOST PROFITS, EXEMPLARY, PUNITIVE, SPECIAL, INCIDENTAL, INDIRECT, CONSEQUENTIAL DAMAGES OR THE LIKE, EACH OF WHICH IS HEREBY EXCLUDED BY AGREEMENT OF THE PARTIES REGARDLESS OF WHETHER SUCH DAMAGES WERE FORESEEABLE OR WHETHER EITHER PARTY OR ANY ENTITY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

9. TERMINATION:

(a) Each Party shall have the right to terminate this Agreement or any Statement of Work for convenience. Termination under this provision will be effective thirty (30) days after written notice by one party to the other; provided, that ICANN will be required to make payment for all work in progress and Products actually delivered under any active Statement of Work in the event of a termination of this Agreement or the applicable Statement of Work pursuant to this Section 9(a); and, provided, further, that, without prejudice to the generality of Section 7 of the Agreement to which these Supplemental Terms are attached, the termination provisions of each Statement of Work, if any, will supersede this Section 9(a).

(b) Each party shall have the right to terminate this Agreement if such party has a good faith belief, based on the facts then available, that the other party has engaged in any of the following conduct: fraud, misappropriation or embezzlement of funds, or gross misconduct. Termination under this provision shall be effective immediately upon receipt of notice by the relevant party.

(c) Other Provisions: Either party shall have the right to terminate this Agreement pursuant to other provisions contained throughout this Agreement, including but not limited to Section 2 (if ICANN) of these Supplemental Terms. Nothing contained within this provision shall negate or override its rights to terminate contained within other provisions herein, and it may elect at its option the most favorable applicable termination provision or provisions contained within this Agreement.

10. DEFAULT:

(a) If either party fails, refuses or neglects to perform any of its material obligations hereunder, for any reason other than incapacity, such party shall be in "default" of this Agreement. If either party refuses or states that it will refuse to comply with any of its material obligations hereunder, such refusal or statement may be treated by the other party as an immediate default, regardless of whether the time for performance of such obligation or obligations has arrived. Further, a party may, at any time, make a written request for the other party to confirm in writing its intentions and willingness to comply with its obligations hereunder, either generally or with respect to any particular matter. If, within five (5) days from delivery of such request at the address for notices set forth herein (exclusive of Saturdays, Sundays and federal holidays), the recipient of the request fails to deliver the requested information to the other party, such failure may be treated by such other party as an immediate default.

(b) Either party may suspend this Agreement with respect to performance of its obligations while any default of the other party continues.

11. CURING PROVISION: Neither party shall bring or make any claim that the other party has breached any of the provisions hereunder unless such party has first made a written demand to cure such failure, and the other party has not satisfied the obligations within ten (10) business days of receipt of such demand. The written demand shall specify the provision claimed to be breached, the date such obligation or performance was to have been satisfied and any other identifying specifics.

12. MISCELLANEOUS:

(a) No Implied Waiver: No failure on the part of ICANN or Contractor to exercise and no delay in exercising, and no course of dealing with respect to any right, power or privilege under this Agreement shall operate as a waiver thereof, nor shall any single or partial exercise of any right, power or privilege under this Agreement preclude the exercise of any other right, power or privilege.

(b) Counterparts: This Agreement may be executed in two or more counterparts (and by different parties on separate counterparts) each of which shall be an original, but all of which together shall constitute one and the same instrument.

(c) No Violation of Law: If any provision of this Agreement shall be deemed invalid or unenforceable as written, it shall be construed, to the greatest extent possible, in a manner which shall render it valid and enforceable, and any limitations on the scope or duration of any such provision necessary to make it valid and enforceable shall be deemed to a part hereof; no invalidity or unenforceability shall affect any other portion of this Agreement.

(d) Choice of Law and Submission to Jurisdiction: This Agreement shall be governed by applicable U.S. federal law and by the laws of the State of California applicable to contracts entered into and to be wholly performed within the State of California. Contractor and ICANN hereby submit and consent to the jurisdiction of the State and Federal Courts located in Los Angeles County, California, USA.

(e) Paragraph Headings: Paragraph headings contained in this Agreement are for convenience and shall not be considered for any purpose in construing this Agreement.

13. NOTICES: Any notice given under this Agreement will be in writing and will be effective (a) upon receipt if (i) delivered by hand or (ii) sent via overnight mail by a nationally recognized express delivery service; or (b) three (3) days after deposit in the U.S. mail, postage prepaid, certified mail return receipt requested, when addressed as follows:

To ICANN:
Internet Corporation for Assigned Names

14. ENTIRE AGREEMENT: This Agreement cancels and supersedes all prior negotiations and understandings between ICANN and Contractor relating hereto. This Agreement is not valid or binding unless and until in writing and signed by a duly authorized officer of ICANN and Contractor. No amendment, modification, extension, release, discharge or waiver of this Agreement, or any provision hereof, shall be valid or binding unless in writing and signed by a duly authorized officer of ICANN and Contractor. No oral agreement shall be binding on ICANN or Contractor unless and until reduced to writing and signed by a duly authorized officer of ICANN and Contractor.

Appendix 1
Form of Notice and Acknowledgement

[Name of Third Party]
Address Attention:

The advice, recommendations and information in the document included with this notice were prepared for the sole benefit of the Internet Corporation for Assigned Names and Numbers (ICANN), based on the specific facts and circumstances of ICANN, and its use is limited to the scope of The Economist Intelligence Unit, NA, Incorporated's ("EIU") engagement for ICANN. It has been provided to you for informational purposes only and you are not authorized by EIU to rely upon it and any such reliance by you or anyone else shall be at your or their own risk. You acknowledge and agree that EIU accepts no responsibility or liability in respect of the advice, recommendations or other information in such document to any person or organization other than ICANN. You shall have no right to disclose the advice, recommendations or other information in such document to anyone else without including a copy of this notice and, unless disclosure is required by law or to fulfill a professional obligation required under applicable professional standards, obtaining a signed acknowledgement of this notice from the party to whom disclosure is made and you provide a copy thereof to ICANN and EIU. You acknowledge and agree that you will be responsible for any damages suffered by EIU as a result of your failure to comply with the terms of this notice.

Please acknowledge your acceptance of the foregoing by signing and returning to us a copy of this letter.

Very truly yours,

ICANN

Statement of Work No:[2]

ICANN New gTLD Program

**Application Evaluation Services – Community Priority Evaluation
and Geographic Names**

March 12th, 2012

Mr. Akram Atallah
Chief Operating Officer
Internet Corporation for Assigned Names & Numbers
4676 Admiralty Way, Suite 330
Marina del Rey, CA 90292

Mr. Atallah,

The Economist Intelligence Unit, NA, Incorporated ("Panel Firm") will provide the Internet Corporation for Assigned Names and Numbers ("ICANN") with professional services to assist in the new Generic Top-Level Domain (gTLD) program in relation to the Community Priority and Geographic Names Panels. This Statement of Work ("SOW") outlines the activities to be performed and work product to be provided along with anticipated professional fees and expenses. The engagement team is expected to begin work on or about June 2012 with targeted completion of this SOW within 12 to 20 months from that date. If these dates change due to changes or other circumstances impacting the gTLD program, ICANN and Panel Firm will adjust dates and the start time accordingly (and anticipated professional fees and expenses to the extent applicable) via a Change Request. It is acknowledged that any modification of professional fees and expenses may impact the allocation of applications to Panel Firm.

1. Background

This SOW is entered into pursuant to the *New gTLD Program Consulting Services Agreement* between Panel Firm and ICANN dated 26 July 2011 ("**Master Agreement**").

Unless expressly defined in this SOW, any capitalized terms will have the meaning given to them in the Master Agreement. In this SOW, "Panelist" has the same meaning as "Panelist" or "Evaluation Panelist" in Section 2.4.3 of the Applicant Guidebook.

2. Scope and Objectives

The objectives of this SOW are to outline the scope, approach, activities and deliverables related to providing panel evaluation assistance to ascertain whether each application assigned to Panel Firm (subject to any conflict handling) has successfully met the criteria set forth in the *19 September 2011 New gTLD Applicant Guidebook* ("**Applicant Guidebook**"). Panel evaluation services will be conducted by applying scoring or other criteria in the Applicant Guidebook as well as the guidance provided in the mandatory evaluator training and the gTLD Evaluation Principles Guide provided by ICANN and developed for evaluation panels. Panel Firm will provide evaluation panel services to ICANN during the opening round¹ ("round one") of the new gTLD application program for the following appointed panel(s):

- **Community Priority Evaluation Panel**

This panel will be responsible for reviewing each (subject to conflicts as dealt with below) community-based application in Contention Sets, where community priority evaluation has been elected, to determine if the application fulfils the community priority criteria pursuant to the requirements outlined in Applicant Guidebook Section 4.2 Community Priority Evaluation.

The review will occur during the String Contention resolution period following the end of Initial Evaluation and/or Extended Evaluation, if applicable. The objectives and scope of the community priority evaluation panel will be to score the assigned application on the four criteria described in the Applicant Guidebook. The results of this review will be comprised of individual scoring for each criteria, including rationale, and a panel summary for each application reviewed in a format defined by ICANN and agreed on by Panel Firm. The summary includes an overall pass/fail result. The Panel Firm will consider application information forwarded by ICANN, including Community Priority panel application comments.

Non-Responsive Information Redacted; Relates to Other Scope of Work Not Related to Community Priority Evaluation

¹ "opening round" is distinct from an application batch. The opening round may be broken-up into multiple batches at ICANN's discretion. This SOW covers services provided in all batches that comprise the first initial application round under the Applicant Guidebook.

3. Approach, Activities and Deliverables

Panel Evaluation Approach and Activities

As part of the String Contention phase, Panel Firm will perform the panel evaluation services outlined above for assigned applications. ICANN's new gTLD Program Office ("**Program Office**") will assign applications for evaluation by Panel Firms generally based on a number of factors such as conflicts of interest with a particular applicant, scalability or capacity to complete timely evaluations. ICANN reserves the right to allocate applications to Panel Firm as it deems appropriate to ensure all application processing considerations and requirements are being met.

Note: "Panellist" has the same meaning as "Panelist" or "Evaluation Panelist" in Section 2.4.3 of the Applicant Guidebook.

The approach for evaluating each application is as follows:

String Contention Periods:

Note, the String Contention periods will occur in two separate phases. The first phase will run concurrent with Extended Evaluation and will cover applications that have passed Initial Evaluation and do not have any Objection(s) filed against them or associated GAC Advice presented to the Board. The second phase will run after the Extended Evaluation and Dispute Resolution Periods have closed and the Board has addressed any associated GAC Advice.

Review and Evaluate: Community Priority Evaluation (CPE)

The approach begins with the review and evaluation of the questions, related responses and supporting documentation provided by the applicants for each application. Panellists will perform the evaluation and analysis of the applicant's responses to the Community questions against the established criteria in the Applicant Guidebook and will follow the procedures outlined in the gTLD Evaluation Principles guide.

The detailed activities and analysis for the CPE during the String Contention resolution period are as follows:

1. Review each question, response and supporting documentation (where relevant). Note that ICANN will provide to Panel Firm all relevant and necessary information submitted to it as part of the application as well as supplemental material in support of the application as relates to its community status. Where Panel Firm determines

that additional application information or supporting material that ICANN has received is necessary to conduct the Community Priority Evaluation and requests that material, ICANN will provide it subject to any restrictions.

2. Establish that there is adequate information and supporting documentation to provide a basis for evaluation. If the information and supporting information is inadequate, Panellists will escalate to management according to the established Program Office processes. Adequate information and supporting documentation is defined as follows:
 - a. Complete – the response and supporting documentation provided by the applicant is sufficient for the Panel to perform the review
 - b. Appropriate – the response and supporting documentation provided by the applicant is relevant to the specific question and/or set of questions
3. Determine whether additional subject-matter support is required to interpret the supporting documentation provided by the applicant. For example, if the supporting documentation provided is in a language other than English, Panel Firm may translate the documentation or provide a subject-matter professional who would be similarly capable of reviewing and analysing the documentation. In addition, if the response and/or supporting documentation require additional technical expertise due to additional complexity, uniqueness, etc., Panel Firm will provide the necessary skill sets to review and analyse the documentation.
4. Evaluate the provided response and supporting documentation (where relevant) to each question to ascertain compliance to the Application criteria
5. Provide a recommended score according to the scoring schedule linked to each question or set of questions (i.e., 0 – fails requirement, 1/2- meets requirements, 2/3 exceeds requirements).

Non-Responsive Information Redacted; Relates to Other Scope of Work Not Related to Community Priority Evaluation

Document and Summarize

As part of the overall panel evaluation approach, Panel Firm will document their evaluation activities and results and provide a summary of the analysis performed to reach the recommended result—Non-Responsive Information Redacted Relates to Other Scope of Work Not Related to Community Priority Evaluation or a score, for Community Priority applicants—by question or area in the application. Documentation of the evaluation activities and results will be prepared and a summary of the rationale for each score will be documented in the TLD Application System (TAS) according to guidelines established by the Program Office and agreed on by Panel Firm.

The detailed activities to document and summarize the Community Priority evaluation and analysis are as follows:

1. Document the evaluation and analysis for each question to demonstrate how the Panellist determined a score for each question based on the established criteria
2. Provide a summary of the rationale and recommended score for each question.

Complete and Support

As part of the overall panel evaluation approach, Panel Firm will perform an internal management/quality control review of the completed evaluation activities and approve the rationale and recommended result—Non-Responsive Information Redacted; Relates to Other Scope of Work Not Related to Community Priority Evaluation or a score, for Community Priority applicants—prior to submitting to ICANN. In addition, Panellists and/or Panel Firm management will also provide ad-hoc support and documentation as requested by ICANN's Quality Control function as part of the overall gTLD evaluation quality control process (see Quality Control below).

The detailed activities to complete and support the Community Priority Evaluation and analysis are as follows:

1. Review the evaluation and analysis performed by the Panellists and the summary of the rationale and recommended scores based on overall reasonableness and adherence to the established criteria in the Applicant Guidebook and the gTLD Evaluation Principles guide.
2. Approve the rationale and recommended scores to finalize and complete the evaluation
3. Provide an overall summary of the evaluation, rationale, and recommended scores to ICANN for final review and approval

Non-Responsive Information Redacted; Relates to Other Scope of Work Not Related to Community
Priority Evaluation

Quality Control

Panel Firm acknowledges that consistency of application processing is a key success factor for the new gTLD program. As such, ICANN is requiring certain critical phases of application processing be subject to a Quality Control (QC) program.

The QC program will consist of procedural/administrative completeness checks. It is planned that the QC program will review a total of 35% of applications for procedural completeness.

Further details of Panel Firm's obligations under the QC program are described in Section 8 below

Panel Evaluation Key Deliverables

The key deliverables for panel evaluations are as follows:

- A completed Evaluator Template (from the New gTLD Evaluation Principles guide) for each application reviewed;
- A summary of the rationale and recommended score for each question for CPE applicants; and
- Non-Responsive Information Redacted; Relates to Other Scope of Work Not Related to Community Priority Evaluation

In general, the above will be captured via TAS or as otherwise reasonably requested in the event of the Contingency Plan in Section 7 below.

A matrix outlining the program responsibilities for the above steps and deliverables is contained in Exhibit C of this SOW.

** Note: While the detailed documentation of the evaluation analysis is not a key deliverable to ICANN, Panel Firm will provide copies of application evaluation work paper documentation to ICANN if requested. Refer to Section 9(B). Retention Requirements.

Project Management Approach

Panel Firm will provide on-going project management support in an effort to facilitate the completion of evaluation activities to be on time and within budget (to the extent within Panel Firm's control). As part of the overall gTLD program, Panel Firm's project management team will work with the Program Office to ensure that the evaluations are completed consistently and completely in adherence to the Applicant Guidebook and in accordance with processes established by the Program Office.

Panel Firm will establish a project management approach to manage, coordinate and monitor the evaluation activities based on Panel Firm's proprietary engagement management standards and ICANN's gTLD Program Governance requirements. Panel Firm will tailor certain project management processes to directly support the Program Office governance processes. These include:

- Status reporting – Panel Firm will manage evaluation activities progress for each application and provide reasonable on-going status updates to the Program Office as defined in the governance procedures and agreed on by Panel Firm. Panel Firm will manage resources and overall capacity for its evaluation services and provide status update reports to the Program Office as reasonably requested.
- Conflict check - Panel Firm will implement a process to identify and communicate potential conflicts of interest to support Program Office application allocation process
- Other support – Panel Firm will provide support, as reasonably requested by the Program Office, as it relates to its appointed evaluation panels including:
 - Issue management – the processes to ensure program level issues are identified and resolved in a timely manner to minimize the impact to the execution of the gTLD Program.
 - Vendor management – the processes necessary to manage all aspects of the vendor relationship including contract administration and performance.
 - Resource and budgeting – the processes to manage scheduling (scalability & capacity) of resources and program budget across all phases of the gTLD program.

- o Communication – the processes to manage communication between various key stakeholders to ensure accurate and timely flow of information as reasonably required
- o Continuous Improvement – the processes to identify and implement improvements to the overall gTLD program. Panel firms, during status reporting, will provide feedback on process improvement opportunities as they are identified

Project Management Reporting

- Provide on-going status reports to Program Office to monitor progress, capacity, budget, and other areas as highlighted above.

An overview matrix summarizing the program responsibilities and deliverables is contained in Exhibit C of this SOW.

4. Conflict of Interest and Code of Conduct

Note: “Panellist” has the same meaning as “Panelist” or “Evaluation Panelist” in Section 2.4.3 of the Applicant Guidebook.

Panel Firm will ensure that its Panellists are advised and made aware of their obligation to comply with the Conflict of Interest Guidelines and Code of Conduct Guidelines (as set out in Section 2.4.3 of the Applicant Guidebook).

Each Panellist assigned is expected to have read and perform services in compliance with Conflict of Interest Guidelines and Code of Conduct Guidelines. ICANN may require Panellists to submit a signed acknowledgement in the format set out in Exhibit B of this SOW. ICANN may alternatively permit Panel Firm to collect and manage individual Panellists’ signed acknowledgement consistent with Exhibit B of this SOW within its own consolidated and documented central register which ICANN (or its nominated QC service provider) may request to inspect and verify compliance.

In accordance with the Conflict of Interest Guidelines, Panel Firm will confirm its implementation of a satisfactory Conflict of Interest monitoring and disclosure protocol with ICANN.

Panel Firm will require that it and each Panellist working under this Statement of Work during the Compliance Period (as defined in the Applicant Guidebook) must:

- (a) Not engage in any direct or indirect communication with any Applicant regarding the gTLD application process; and
- (b) Obtain ICANN’s prior written approval (which will not be unreasonably withheld or delayed) in relation to the content of any proposed press release or other public communication concerning the evaluation services, reference to ICANN as a

customer of the Panel Firm or any other subject matter under this SOW prior to any release or publication.

Panel Firm shall be entitled to decline any assigned application or applications it considers, in good faith, will raise the prospect of a conflict of interest or is inconsistent with its professional obligations or requirements. Panel Firm will promptly notify ICANN where it wishes to excuse itself from an assigned application or applications due to conflict or professional obligations. ICANN will re-assign any such application or applications to be evaluated by another panel firm.

ICANN understands that Panel Firm may discuss confidential information regarding gTLD application process handling, co-ordination and process improvements with other panel firms. Confidential information that specifically identifies an applicant or the commercial terms and conditions of the Master Agreement or this SOW must not be disclosed or shared with other panels firms.

5. Personnel and Contractors

Panel Firm will notify ICANN of any Panellists or project management personnel, including sub-contractors, being removed from this engagement within a commercially reasonable time frame after such event (e.g. no less than 30 days where practical, otherwise as soon practical) unless such removal is part of Panel Firm's ordinary resource management and scaling activities. In addition, ICANN reserves the right to:

- a. Direct the prompt removal of any Panellist or sub-contractor from the performance of evaluation services by written notice due to any material or ongoing breach of either the Code of Conduct or Conflict of Interest Guidelines by that individual;
- (b) By written notice for any other reasonable grounds in the interests of the new gTLD Program as determined by ICANN; and
- (c) Interview and reasonably reject/approve replacement candidates.

Panel Firm must:

- (a) Ensure that Panellists assigned to conduct evaluations have successfully completed the relevant new gTLD panellist training developed by ICANN;
- (b) Agree to be bound by the TLD Application System (TAS) Terms of Use (in the form set out in Exhibit A to this SOW and as may be generally amended by ICANN from time to time) in connection with any use of the TAS to perform the evaluation services under this SOW; and
- (c) Comply with the confidentiality obligations under the Master Agreement with ICANN.

Where Panel Firm engages independent third party sub-contractors to assist with the evaluation services, Panel Firm will ensure that each contractor is contractually bound by an obligation of confidentiality broadly consistent with the confidentiality obligations of the Panel Firm under the Master Agreement.

6. Service-Level Agreements

Unless otherwise indicated, to ensure ICANN is able to meet all published timelines in the Applicant Guidebook, Panel firm will comply with the following service level metrics:

- The initial set of Panellists for round one must successfully complete the gTLD Training Program
- Any subsequent Panellist joining at a later date must successfully complete the gTLD training program prior to commencing evaluation analysis
- A Conflict of Interest report (format and detail as determined by ICANN and agreed by Panel Firm) must be completed and submitted to ICANN within four weeks after the close of the Application Window, which is expected to be 12 April 2012
- Community Priority Panel -final evaluation results for an application will be provided to ICANN within 15 business days from being assigned. Note: time extensions as agreed will be allowed to address permitted exceptions such as clarifications by ICANN or from the Applicant.
- Non-Responsive Information Redacted; Relates to Other Scope of Work Not Related to Community Priority Evaluation

7. gTLD Program Contingencies

In addition to the termination provisions set forth in the Master Agreement, ICANN reserves the right, without prejudice to Panel Firm's rights in respect of fees and costs, to notify the Panel Firm that evaluation services under this SOW will be suspended or terminated (as the case may be) where ICANN determines that the New gTLD Program is being suspended or terminated due to external contingencies impacting the continuation of the New gTLD Program. This includes, but is not limited to, litigation initiated by a governmental authority or regulatory agency, a determination or directive from a court, governmental authority or regulatory agency with competent jurisdiction, or a threat to the security or stability of the Internet or the Domain Name System (DNS).

As noted in the Applicant Guidebook, if a significant number of applications are received beyond stated processing capacity, ICANN will invoke a batching process. Under these circumstances the processes and timelines outlined in this SOW (along, potentially, with the fees) will be impacted. ICANN will work with Panel Firm to determine the impact and agree upon a mutually acceptable approach.

In the event that the TLD Application System is or becomes unavailable for an unscheduled or extended period (including due to unauthorized security intrusions, hacking or denial of service attacks), ICANN will invoke its processing contingency plan and work with panels to receive evaluation results via an alternate, secure mechanism. Under these circumstances the processes and timelines outlined in this SOW may be impacted.

8. gTLD Program Quality Control (QC)

Panel Firm will reasonably co-operate and provide reasonably requested documentation to ICANN and its appointed independent Quality Control service provider for the purposes of helping it to verify that Panel Firm's evaluation services have been and are performed in accordance with QC Guidelines. ICANN agrees that its appointed independent Quality Control service provider will be bound by at least the same confidentiality undertakings as Panel Firm.

Reasonable written notice will be given to Panel Firm prior to any QC request.

The detailed activities to provide support to on-going gTLD evaluation process Quality Control requirements include the following:

1. For each completed application review, Panel Firm will complete an ICANN provided Application Evaluation Process Log (AEP Log) to confirm that all activities in the evaluation process have been properly completed. ICANN will agree upon the contents of the AEP Log with Panel Firm prior to commencement of evaluations.
2. For each application selected for procedural completeness review, the Panel Firm will provide evidence that all steps described above in "Panel Evaluation Approach and Activities" have been completed.
3. Access to working papers as required verifying Panel Firm's compliance.

Panellists and managers shall be available to participate in a resolution process in the event a discrepancy is found during QC. The above tasks are subject to change. Notification of any change will be communicated by ICANN and agreed to with Panel Firm.

9. Advisories and ICANN policies

(A) Security

Panel Firm will access ICANN's TLD Application System ("TAS") from a secure device (to an agreed level of security), and take reasonable security precautions within Panel Firm's networks and devices that are used to connect to TAS.

Panel Firm will either comply with reasonable written data security requirements that ICANN may provide from time to time in connection with performing the evaluation services or provide an explanation of why it is unable or unwilling to do so.

To the extent compliance with data security requirements results in a material change to the scope of services, schedule and/or fees/expenses for such services, ICANN will work with the Panel Firm to discuss the impact and agree a revision of costs and time schedules to reflect such circumstances, and formalise such changes via a Change Request

(B) Retention Requirements

All source documents created by Panel Firm or a Panellist in connection with any evaluation services (including Panel Firm and Panellist working papers and notes) must be retained for a minimum of 5 years from the completion of application reviews for the opening round. Panel Firm will provide copies of application evaluation working paper documentation to ICANN if requested.

(C) Advisories and Compliance

To the extent ICANN publishes or updates reasonable advisories and/or policies and notifies such advisories/policies/updates from time to time to evaluation panellists and the Panel Firm in relation to the performance of Evaluation Services, the Panel Firm will either comply with such advisories and/or policies or provide an explanation of why it is unable or unwilling so to do. Panel firm acknowledges that non-compliance with updates to reasonable advisories and/or policies may impact the allocation of applications for evaluation.

To the extent compliance with any new advisory or ICANN policy results in a material change to the scope of services, schedule and/or fees/expenses for such services, ICANN will work with the Panel Firm to discuss the impact and agree a revision of costs and time schedules to reflect such circumstances, and formalise such changes via a Change Request.

10. Terms and Conditions

This SOW is governed by the terms and conditions of the Master Agreement which are incorporated by reference.

The following provisions are agreed to be supplemental to the terms and conditions of the Master Agreement ("**Supplemental SOW Terms**"). To the extent of any inconsistency between the Supplemental SOW Terms and the Master Agreement, the Supplemental SOW Terms will prevail.

(a) Fees

In the event that Panel Firm evaluation services under this SOW are suspended or terminated by ICANN for any reason other than for breach by Panel Firm of the SOW or Master Agreement terms, Panel Firm will be entitled to full payment for services performed under this SOW up to the time of notification of suspension or termination of services.

(b) Panel Firm's role and use of the Panel Firm's name

The parties acknowledge and agree the following in relation to Panel Firm's role under this SOW:-

- (i) the Panel Firm acts as a service provider to ICANN, assessing applications and recommending an outcome, as well as to provide (as applicable) a written explanation setting out its rationale;
- (ii) ICANN will be free in its complete discretion to decide whether to follow Panel Firm's determination and to issue a decision on that basis or not;
- (iii) ICANN will be solely responsible to applicants and other interested parties for the decisions it decides to issue and the Panel Firm shall have no responsibility nor liability to ICANN for any decision issued by ICANN except to the extent the Panel Firm's evaluation and recommendation of a relevant application constitutes wilful misconduct or is fraudulent, negligent or in breach of any of the Panel Firm obligations under this SOW;
- (iv) each decision and all associated materials must be issued by ICANN in its own name only, without any reference to the Panel Firm unless agreed in writing in advance;
- (v) ICANN will make no use of the Panel Firm's name, brand or logo without its prior approval in writing, and where so approved, ICANN shall refer to EIU as an "Appointed Evaluation Panel Firm"; and
- (vi) ICANN will not identify Panel Firm evaluation services with any individual or specific applicants, applications or results of the evaluation except in accordance with this SOW and the Master Agreement.
- (vii) ICANN shall procure that each applicant agrees in advance that it will accept ICANN's final decision and waives any rights it may have to take any action against ICANN and its service providers (including, for the avoidance of any doubt, the Panel Firm).

11. Professional Fees

Confidential Business Information

Fees

Confidential Business Information

12. Change Control

(a) A "Change Request" is a request to amend this SOW or any document attached to it or referred to in this SOW. Either party may initiate a Change Request in writing. A Change Request will document details of the impact that the proposed change will have on any of the terms of this SOW and include, if relevant, any additional costs or timing changes.

(b) On receipt of a Change Request either party will use reasonable commercial efforts to respond within 5 business days (or other agreed extended period) of receipt as to their acceptance or otherwise of the Change Request.

(c) A Change Request shall become a "SOW Amendment" when the Change Request is agreed and signed by authorized representatives of both parties. An agreed SOW Amendment will be incorporated into this SOW and will amend this SOW as documented and agreed. The reasonable costs of implementing a SOW Amendment and any

amendments to the Professional Fees (if any) will be borne as set out in the SOW Amendment.

(d) If either party is unwilling to accept a Change Request suggested by the other (or any term of any Change Request) then this SOW will continue unchanged.

TLD Application System (TAS) Terms of Use & Privacy Statement

TLD APPLICATION SYSTEM (TAS) – TERMS OF USE – PANEL FIRM

THE FOLLOWING TERMS OF USE GOVERN ANY ACCESS OR USE OF THE INTERNET CORPORATION FOR ASSIGNED NAMES AND NUMBERS' ("ICANN") TLD APPLICATION SYSTEM ("TAS") BY EVALUATION PANEL FIRMS. PANEL FIRM AGREES TO BE BOUND BY AND COMPLY WITH THESE TERMS OF USE.

1. DEFINITIONS

"Commencement Date" means the date that the User receives a user name and password to access the TAS.

"Panel Firm" or "You" means an evaluation panel firm appointed by ICANN to evaluate assigned TLD application(s) under ICANN's new gTLD Program.

"User" means an authorized employee or contractor of a Panel Firm who has been provided access to the TAS.

2. AUTHORITY

You represent and warrant that Users are an employee or contractor of Panel Firm and have been authorized to access TAS on behalf of Panel Firm.

3. USE LICENSE

3.1 License Grant. Subject to complying with these Terms of Use, ICANN grants to You from the Commencement Date, a limited, non sublicenseable, non-exclusive, non-transferable license to use the TAS ("License") for the sole purpose of reviewing and evaluating TLD application(s) assigned to Panel Firm.

3.2 Username and Password. You agree that any User TAS log in and password must not be shared. You are responsible for maintaining the confidentiality of User account log in and password information, and for the security of User's computer to access the TAS. In the event of a breach of security, You agree to immediately instruct Users to change their password and to promptly (and in any event, within one business day) notify ICANN of such breach in writing. You will remain liable for compliance with these Terms of Use and any use or activity of the TAS under your Users' log in access (including any violations of these Terms of Use or if You allow another individual or organization to access or use the TAS using your Users' log in credentials).

3.3 Restrictions. You must not: (a) reverse engineer, disassemble, decompile or otherwise attempt to access or determine TAS source code; (b) re distribute or sublicense access to the TAS, or any part thereof, to any third party; (c) engage in any malicious or illegal behavior in connection with access or use of the TAS (including without limitation, submitting malicious code or engaging in other activity designed to compromise the availability, security or data of the TAS); (d) remove, modify or obscure any copyright, trademark or other proprietary rights notices that are contained in or on software accessed under this License; or (e) allow, assist or permit a third party to do any of the foregoing.

3.4 Technical Support. ICANN or a third party on ICANN's behalf will provide technical support for TAS services.

4. INTELLECTUAL PROPERTY RIGHTS

The TAS and all intellectual property rights therein, is licensed to You, not sold. All rights in the TAS not provided to You under these Terms of Use are expressly retained by ICANN and its licensors.

5. PERSONAL INFORMATION

You acknowledge that any personal or identifying information You consent to submit to the TAS is collected, stored and used for the purposes of processing and evaluating an application under ICANN's new gTLD Program. ICANN will handle personal information collected in accordance with its gTLD Program privacy statement at <http://newgtlds.icann.org/en/applicants/agnb/program-privacy>, which is incorporated herein by this reference.

6. TERMINATION

6.1 ICANN may terminate the License if You commit a breach of any of the Terms of Use and if capable of remedy, fail to remedy the breach within fourteen (14) calendar days of receiving written notice from ICANN. Notwithstanding the foregoing, ICANN may immediately terminate the License if (a) You commit a breach of Section 3.3 or Section 8 of the Terms of Use, or (b) the contract between Panel Firm and ICANN with respect to the provision of evaluation services is terminated.

6.2 You may terminate the License and your personal login by written or email notification to ICANN via ICANN's customer support contact address.

6.3 In the event of termination, You must cease using the TAS. You further acknowledge that ICANN may terminate your Users' password, account and use of the TAS immediately upon the effective date of termination.

7. DISCLAIMER & LIMITATION OF LIABILITY

7.1 USE OF THE TAS AND THIS LICENSE IS PROVIDED ON AN "AS IS" AND "AS AVAILABLE" BASIS. TO THE FULLEST EXTENT PERMITTED BY LAW, ICANN, ITS OFFICERS, DIRECTORS, EMPLOYEES, LICENSORS AND AGENTS DISCLAIM ALL WARRANTIES, EXPRESS OR IMPLIED, IN CONNECTION WITH THE TAS AND AN APPLICANT'S OR USER'S USE OF THE TAS. ICANN MAKES NO WARRANTIES OR REPRESENTATIONS ABOUT THE FITNESS FOR USE, NON INFRINGEMENT, AVAILABILITY OR RELIABILITY OF THE TAS OR THAT THE TAS IS ERROR FREE.

7.2 IN NO EVENT SHALL ICANN, ITS OFFICERS, DIRECTORS, EMPLOYEES, LICENSORS OR AGENTS, BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, PUNITIVE, OR CONSEQUENTIAL DAMAGES WHATSOEVER RESULTING FROM ANY (I) ERRORS, MISTAKES, OR INACCURACIES IN THE TAS OR TAS DATA, (II) INJURY OR DAMAGE, OF ANY NATURE WHATSOEVER, RESULTING FROM ACCESS TO AND USE OF THE TAS, (III) INTERRUPTION OR CESSATION OF TRANSMISSION TO OR FROM THE TAS, (IV) BUGS, VIRUSES, TROJAN HORSES, OR THE LIKE, WHICH MAYBE TRANSMITTED TO OR THROUGH THE TAS BY ANY THIRD PARTY, (V) DENIAL OF SERVICE OR ANY MALICIOUS SECURITY EXPLOIT INVOLVING THE TAS, AND/OR (VI) LOSS OR DAMAGE OF ANY KIND INCURRED AS A RESULT OF ANY USE, COMPROMISE OR LOSS OF PERSONAL DATA AND CONTENT POSTED, TRANSMITTED, OR OTHERWISE MADE AVAILABLE VIA THE TAS, WHETHER BASED ON WARRANTY, CONTRACT, TORT, OR ANY OTHER LEGAL THEORY, AND WHETHER OR NOT APPLICANT OR USER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. THE FOREGOING LIMITATION OF LIABILITY SHALL APPLY TO THE FULLEST EXTENT PERMITTED BY LAW IN ANY APPLICABLE JURISDICTION.

8. THIRD PARTY PROVIDER SUBLICENSE TERMS

The TAS incorporates software licensed from Microsoft Corporation. You agree to the following terms and conditions in relation to use of these Microsoft products in accessing or using the TAS:

8.1 High Risk Use. You must not use the software under this License in any application or situation where the software failure could lead to death or serious bodily injury of any person, or to severe physical or environmental damage.

8.2 You must not remove any copyright, trademark, or patent notices contained in or on the software products under this License. You have no right under this agreement to use any Microsoft logos in any manner whatsoever. You must use the appropriate trademark, product descriptor, and trademark symbol (either "TM" or "®") and clearly indicate Microsoft's (or Microsoft's suppliers') ownership of such marks whenever a Microsoft product is first referenced in any written or visual communication. A listing of Microsoft's trademarks can be found at <http://www.microsoft.com/trademarks>. You must not undertake any action that will interfere with or diminish Microsoft's (or Microsoft's suppliers') right, title and/or interest in the trademark(s) or trade name(s). At Microsoft's request, You must provide samples of all your written or visual materials that use a Microsoft product name.

8.3 You acknowledge that your name, address, and country in which you are located may be provided to Microsoft in monthly end use reports under Microsoft sublicense requirements.

9. GENERAL

9.1 ICANN may modify these Terms of Use via written or electronic notice to You. Any access or use of the TAS by You, following such notification, will be treated as your acceptance of the revised Terms of Use.

9.2 Sections 4 to 9 survive any termination or expiry of the License.

9.3 Any non English translation of these Terms of Use that ICANN may make available are for convenience only. In the event of any inconsistency between the translated version and the English version, the English version of these Terms of Use will prevail.

9.4 These Terms of Use are governed by the laws of the State of California.

New gTLD Program

Personal Data Privacy Statement

The Internet Corporation for Assigned Names and Numbers ("ICANN") respects and is committed to ensuring the protection of personal information collected from the Applicant and new gTLD Program participants, including users of the TLD Application System ("User"), and used in connection with new gTLD Program application process (the "Program"). ICANN will handle all personal information provided under the Program as described in this Personal Data Privacy Statement ("Privacy Statement").

By participating in the Program, including using the TLD Application System ("TAS"), the User and the Applicant accept the practices described in this Privacy Statement. In addition to this Privacy Statement, ICANN has established Terms of Use that set forth the general rules and policies governing the use of the TAS. You can review the Terms of Use by visiting www.icann.org/ >.

1. International Transfers

The Program may be operated and administered entirely outside the jurisdiction where the User and/or Applicant are domiciled. Please note that any personal information provided to ICANN in connection with the Program will be transferred to and processed in the United States. On his/her own behalf, and on behalf of the Applicant and each of its relevant personnel, the User hereby consents to these transfers, and is solely responsible for ensuring that the personal information provided to ICANN and its designees complies with the laws of the User's and Applicant's jurisdiction(s).

2. Personal Information Collection and Use

Application submission. The Program application submission generally involves the collection and use of minimal personal information. The types of personal information ICANN collects will be: name, postal address, telephone number, and email address. This personal information is used to initially process and administer the Program application, including background checks of certain Applicant's personnel. This information will also be used by ICANN, its service providers, and agents to provide general support services and to process TLD applications for the Program.

Application administration: As part of the application process, ICANN may request certain personal information about the Applicant's directors and officers, and other relevant personnel, such as full name, date of birth, city and country of primary residence and country of birth. ICANN and its service providers use this information to conduct necessary background checks and other evaluations as part of the Program's application process, in accordance with the requirements of the <Applicant Guidebook Terms and Conditions>. This use is based on consent provided by agreeing to the <TAS Terms of Use > and the <Applicant Guidebook Terms and Conditions>. In certain circumstances, the results of initial background checks may require ICANN to request additional personal information to conclude necessary background checks or other Program application evaluations.

Support information. ICANN receives personal information as part of general support queries, email, feedback, comment or other communications with our Customer Service Center or other ICANN staff regarding the Program. ICANN may retain those communications in order to process inquiries, respond to requests and improve the TAS. ICANN may include your personal information in publishing your comments or feedback on the ICANN website for the benefit of others or to comply with ICANN's accountability and transparency principles located at <http://www.icann.org/en/accountability/overview-en.htm> and disclosure policies located at <http://www.icann.org/en/transparency/didp-en.htm>. ICANN may monitor or record your call or communication sessions with the Applicant Support Center for quality assurance and staff training purposes, or as a record of communication.

Sensitive personal information. ICANN does not collect sensitive personal information (e.g. personal medical or health information, racial or ethnic origin, or political opinions, etc.) in connection with the Program. You will be notified if such sensitive personal information is necessary in connection with the Program, such as to conduct further background checks.

In addition, when using the TAS, ICANN may collect the following types of non-identifying information:

Automatically logged information: The TAS automatically records information that the browser sends whenever the TAS is used. This information may include information such as IP address, browser type, internet service provider (ISP), date/time stamp, page viewed, and other similar data. ICANN uses this information to administer the TAS, general web page analytics, track the use of TAS and to develop Program support. This information is not linked to personally identifiable information.

Cookies: Cookies and other user tracking devices (e.g., local shared objects) may be stored on the User's computer when using TAS. A cookie is a small text file that is stored on a user's computer for record keeping purposes. ICANN uses session ID cookies to confirm that a User is logged in. These cookies terminate once the User closes the browser. ICANN may also deploy persistent cookies to improve TAS, including by storing user preferences and tracking user trends. While most browsers are set to accept cookies and other tracking devices by default, Users are always free to decline cookies if the browser permits, but some parts of TAS may not work properly. The browser manufacturer has information on changing the default setting for that specific browser. The User acknowledges the use of such tracking devices as noted in this Privacy Statement, and hereby consents to having such tracking devices stored on the User's computer.

3. Sharing of Personal Information

ICANN will share personal information with Program evaluation panelists, contractors and other agents for the purpose of processing TLD applications on ICANN's behalf, and providing other services for the Program. ICANN requires that these parties agree to handle this information in compliance with appropriate confidentiality obligations and security measures.

ICANN will provide personal information to third parties, government authorities and agencies as and when required to: (i) comply with applicable laws, regulations, legal process or enforceable governmental request; (ii) protect ICANN's or a third party's legal rights; (iii) receive contracted services or use of licensed products from third party providers; (iv) comply with any court order or legal proceeding; (v) comply with ICANN's accountability and transparency principles and disclosure policy; (vi) detect, prevent or otherwise address fraud or other criminal activity or errors, security or technical issues; or (vii) protect against imminent harm to the rights, property or safety of ICANN, our users or the public as required or permitted by law.

ICANN will not sell or otherwise share any personal information with third parties for marketing purposes. ICANN will not provide any personal information to third parties for commercial services in relation to the Program unless the User and/or the relevant Applicant personnel have given specific permission or direction.

4. Information Security and Integrity

ICANN will use industry standard safeguards, including firewalls, security patches and anti virus programs to protect the confidentiality of personal information collected as part of the Program. When using TAS, personal information will be encrypted using secure socket layer technology ("SSL").

Access to personal information is restricted to ICANN staff, contractors and agents who need to know this information to manage the Program activities on behalf of ICANN. ICANN staff, contractors and agents will be bound by confidentiality obligations and, where appropriate, they may be subject to discipline, including termination and prosecution, if they breach these confidentiality obligations.

ICANN will take reasonable steps to ensure that personal information collected is relevant to its intended use and is complete.

ICANN's Program website contain links to other third party websites which are subject to the respective privacy policies of those third parties. ICANN is not responsible for the privacy practices of such linked third party sites, and their owners and operators.

Due to the open communication nature of the Internet, ICANN cannot represent, warrant or guarantee that communications stored on ICANN servers will be free from unauthorized access by third parties, loss, misuse or alterations. While ICANN will take reasonable and appropriate security measures noted above to protect against unauthorized access, disclosure, alteration or destruction of personal information received, ICANN DISCLAIMS ANY AND ALL LIABILITY FOR UNAUTHORIZED ACCESS OR USE OR COMPROMISE OF YOUR PERSONAL INFORMATION SUBMITTED THROUGH THE TAS. USERS AND APPLICANTS ARE HEREBY ADVISED THAT THEY SUBMIT SUCH PERSONAL INFORMATION AT THEIR OWN RISK.

5. Accessing and Updating Personal Information

The User and other authorized Applicant personnel may view stored personal information in relation to the Applicant and User profile, or a TLD application by accessing the relevant information screens within the TAS. As submitted information is used in evaluation checks and processes, submitted information cannot be modified without contacting our Customer Service Center. ICANN will endeavor to respond to requests to access, correct or update any other personal information ICANN retain in connection with the Program. Requests may be sent by email to our Customer Service Center at newgtld@icann.org.

ICANN will retain personal information stored on our servers in accordance with our general archival practices.

6. Changes to this Privacy Statement

Please note that ICANN may revise this Privacy Statement from time to time throughout the Program. ICANN will post any Privacy Statement changes on the Program's website. If the changes are material, ICANN may also provide notification via email according to the registered TAS log in email for the Applicant. The Applicant's continued participation in the Program application process, including the User's use of TAS, after such change will be deemed acceptance by the User and the Applicant of the revised Privacy Statement.

7. Questions or Contacting ICANN

If you have any questions about this Privacy Statement, please feel free to contact ICANN at newgtld@icann.org or write to:

Instructions:

1. A completed and signed form must be received and maintained by Panel Firm before a personal login for the TAS will be issued to a Panellist.
2. On request, Panel Firm will provide a copy of this form to ICANN's new gTLD Program Office.

If you have any questions in regards to this Form, please contact ICANN's new gTLD Program Office.

Exhibit C

Program Responsibilities

The following table is intended to be a general summary of key program responsibilities outlined in this SOW. This table is not intended to be an exhaustive list or replace other responsibilities set out in this SOW.

Evaluation Process Task		ICANN	Panel
0 Pre-Evaluation			
0.1	Agree to Code of Conduct		✓
0.2	Training participation and certification of evaluation panelists		✓
Conflict of Interest			
0.3	Agree to conflict of interest policy		✓
0.4	Provide list of Applicants	✓	
0.5	Complete conflict of interest check against Applicant listing		✓
1 String Contention Procedures and Evaluation (Initial and Extended Evaluation, as applicable)			
1.1	Assign Application(s) to Panels	✓	
1.2	Collect & Provide Application Comments	✓	
1.3	Read & Consider Application Comments in Evaluation		✓
1.4	Request Clarifications to Applicant as Necessary		✓
1.5	Provide Clarifications to Applicant & Obtain Response	✓	
1.6	Consider Clarification Responses in Evaluation		✓
1.7	Evaluate & Score Question, Provide Summary		✓
1.8	Complete all Required Evaluation Templates		✓
1.9	Maintain evaluation documentation per ICANN retention policies		✓
1.10	Provide Evaluation Results, Summaries & Templates to ICANN		✓
2 Program Management			
2.1	Manage/Scale Resources based on application volume	✓	✓
2.2	Report Status (using required templates)		✓
2.3	Attend status & ad hoc meetings	✓	✓
Quality Control			
2.4	Perform Issue Management	✓	✓
2.5	Document Issues (using required templates)	✓	✓
2.6	Attend issue tracking meetings	✓	✓
2.7	Perform QC Process Reviews	✓	
2.8	Respond to QC Info Requests		✓
2.9	Participate in QC Reconciliation as Applicable		✓
Continuous Improvement (CI)			
2.10	Manage CI Processes/Implement Changes	✓	
2.11	Adopt & Integrate Changes	✓	✓
2.12	Participate in CI Meetings	✓	✓

Statement of Work Amendment #1

ICANN New gTLD Program

Application Evaluation Services – Community Priority Evaluation and Geographic Names

The Internet Corporation for Assigned Names and Numbers (“ICANN”) and The Economist Intelligence Unit, NA, Incorporated (“Panel Firm” or “EIU”) agree to amend **Statement of Work No.2** between the parties dated 12 March 2012 (“SOW”) pursuant to their *New gTLD Program Consulting Services Agreement* dated 26 July 2011, in accordance with the terms of this Statement of Work Amendment (“**Amendment**”) and commencing from 21 December 2012 (the “**Amendment Effective Date**”).

Unless otherwise defined in this Amendment, all capitalized terms have the meaning given to them in the Agreement and the SOW.

The parties agree to the following:

Dear ICANN,

The European Commission appreciates the opportunity to comment on the recently updated ICANN's New gTLD Auction Rules and welcomes ICANN's interest in the community views expressed in Buenos Aires, including at the GAC and Public Forum.

Please find below our comments.

Best regards

Public Comment on new gTLD Auction Rules

1. General comments

We are deeply concerned about the implications that the Auction Rules in the gTLD program may have for the protection of public policy interests, competition, openness and innovation. As a general principle, ICANN should implement Auction Rules that are consistent with its Bylaws, its non-for profit status, the objectives of the new gTLD Program and the Applicant Guidebook to promote competition, diversity, innovation and consumer choice. As expressed in several comments already submitted during the comment period, the current

Auction Rules are advantageous for portfolio applicants rather than for small, innovative and community applicants, which is at odds with the "diversity and innovation" policy that ICANN seeks to promote. It would be desirable to give these applicants a more even playing field when they come up against larger portfolio holders in the contention process. Also, ICANN's auction rules has not yet proven convincing to the community and deserves being revisited in light of the input received.

2. Relevant GAC advice

The European Commission regards positively the explicit mention in the Auction Rules of the need to "resolve any applicable GAC advice" prior to the participation in the auction process, as part of the applicant's "eligibility" criteria, but regrets the lack of reference to "community applications" or applications with community support, despite the reiterated GAC advice. In this regard the European Commission seizes this opportunity to recall the following passages of recent GAC advice:

* "The GAC advises the board that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information." (Beijing Communiqué)

* "The GAC reiterates its advice from the Beijing Communiqué regarding preferential treatment for all applications which have demonstrable community support, while noting community concerns over the high costs for pursuing a Community Objection process as well as over the high threshold for passing Community Priority Evaluation". (Durban Communiqué)

* "The GAC requests a briefing on the public policy implications of holding auctions to resolve string contention (including community applications)." (Buenos Aires Communiqué).

It is essential that the outcome of the briefing on the public policy implications of holding auctions requested in the Buenos Aires GAC Communiqué and the reflections of the GAC on this particular issue are fully taken into account when defining the Auction Rules. Particularly, the auction process should not be initiated until the GAC's briefing request is duly addressed by the ICANN Board.

3. ALAC - Community applications statement

It is important to make a specific reference to the At-Large Community (ALAC) statement of 9.08.2013 on preferential treatment for community applications in string contention; ALAC stressed that some of the new gTLD applications that are intended for communities and have wide public support were not submitted as community applications; those applications are currently in contention with others not designed for the benefit of specific communities and driven purely by commercial considerations. In this regard the European Commission (consistent with its position in the GAC) fully endorses the GAC view that community applications and applications with community support should be given preferential treatment in the new gTLD string contention resolution process, and remind the clear above mentioned GAC Beijing and Durban Communiqués.

4. Security and consumer protection

Security and consumer protection are fundamental public policy objectives. Therefore we endorse those comments proposing that the winning applicant is contractually required to ensure that all security related gTLDs adopt technologies that improve the level of trust of Internet users. A "secure" gTLD implies that the resources offered are truly secure and operating under specific policies that warrant a dedicated level of security to end users. It is therefore contrary to this public policy interest that the winning applicant is decided through an auction process that may simply favour deep pocket applications.

Therefore we will repeat again our concern about the negative impact that auctions may have for the preservation and enhancement of the operational stability, reliability, security and global interoperability of the Internet, as expressed during the Buenos Aires GAC meeting: "The European Commission believes that in the new gTLD program, ICANN should aim not just to maintain, but also enhance the level of consumer protection and confidence in gTLDs. ICANN should therefore take this social and community responsibility into account in their implementation plan. It is our understanding that trusted domains such as .safe, .secure and .security risks being awarded to applicants based only upon the price they are willing to pay in an auction. We therefore urge ICANN, in the interest of fostering innovative solutions that enhance global security, not to allow purely commercial interests to prevail in the delegation of these domains.

5. Negotiations between applicants prior to the Auction process

Over and above, there seems not to be any incentive for financially strong applicants to solve the contention "through voluntary agreement among the involved applicants". This solution places an unnecessary burden on applicants and departs from the artificial assumption that parties are eager to negotiate.

6. Destination (use) of Auction funds

We also note the lack of clarity as regards the destination of the significant funds that ICANN will receive as a result of these auctions; it is therefore highly recommended that ICANN begins a consultation process with the community to determine the allocation of the funds gathered through this process, with a focus on its use for community support, capacity building and engagement of stakeholders in least developed nations.

7. Unilateral powers to modify Auction Rules

ICANN shall not be entitled in its sole discretion to amend these Auction Rules "for any auction at any time and for any reason prior to the deposit deadline for that auction". The abovementioned unilateral power to change the rules currently under negotiation only contributes to increase applicants' uncertainty. The European Commission fully supports that "Any proposed changes, at a minimum, should be announced publicly at least 30 days in advance of any auction, and should be for good cause based on exigent circumstances".

We are confident that community input received will allow ICANN to amend the current draft Auction Rules (version 2013.12.12) in a manner consistent with ICANN's objectives and fully rooted in the principle of fairness.

Exhibit DIDP A10

Online Pirates Thrive on Legitimate Ad Dollars

By Associated Press | June 03, 2014 1:11 PM EDT

Movie and music piracy thrives online in part because crafty website operators receive advertising dollars from major companies like Comcast, Ford and McDonald's.

That's the conclusion of several recent reports that shed light on Internet piracy's funding sources.

Content thieves attract visitors with the promise of free downloads and streams of the latest hit movies, TV shows and songs. Then they profit by pulling in advertising from around the Internet, often concealing their illicit activities so advertising brands remain unaware.

- Pirate Bay Founder Arrested in Sweden
- 84% of Content Consumed in Spain is Pirated
- U.K. Program Looks to Cut Off Pirates' Ad Dollars

Pirate websites run ads that are sometimes covered up by other graphics. They automatically launch legitimate-looking websites as pop-up windows that advertisers don't realize are associated with piracy. At the end of the day, the pirate website operators still receive a check for serving up a number of views and clicks.

The illicit activity is estimated to generate millions of dollars annually. That's only a small portion of the roughly \$40 billion of online ad spending every year. Yet it is helping to feed the creation of millions of copyright-infringing websites that provide stolen content to a growing global audience.

"(Companies) placed their ads on the assumption that they were going to be on high-quality sites and they're not," said Mark Berns, vice president of MediaLink LLC, a consulting firm that produced a study looking into the practice called "Good Money Gone Bad."

The study, commissioned for the Digital Citizen's Alliance, a Washington-based group that advocates for a safer Internet, sampled 596 of the worst-offending websites. Researchers discovered that the infringing websites were displaying ads from 89 premium brands like Walmart, McDonald's, Google, Microsoft and Ford.

"It's certainly fair to say that millions of dollars in revenue from premium brand ads are supporting content theft sites," Berns said.

That's similar to an estimate from DoubleVerify, an online fraud protection company. According to a DoubleVerify report released last May, rogue website operators cheat

mainstream advertisers out of \$6.8 million each month, mainly by "laundering" ad traffic in ways that are hard to detect.

"There's growing awareness of the unscrupulous tactics that sites will go to to collect their dollars," said DoubleVerify chief operating officer Matt McLaughlin.

Several advertisers and top technology firms that operate ad networks -- like Google and Microsoft -- say the fraud is difficult to stop. Ads for Google's Chromecast streaming device and Microsoft's Bing search engine were among those that appeared on pirate websites.

Microsoft said in a statement that while it monitors where its ads end up, it sometimes relies on others bringing infractions to its attention "to take actions on non-compliant sites."

Google said it invests significant resources to keep its and its partners' ads from appearing on pirate sites and requires users of its AdSense service to agree to its anti-piracy policies. "When we find violators of these policies, we'll take the appropriate actions - including blacklisting URLs and, in some cases, ending our relationships with publishers -- as quickly as possible," a spokesman said in a statement.

Several companies listed in the report as having advertised on pirate websites declined to comment, including Comcast, Ford, Toyota, McDonald's, L.L. Bean, Cablevision, Time Warner Cable, and Target.

Dish Network said in a statement that it applies "industry-leading standards ... to continually take measures that prevent our advertising from appearing on pirate sites."

Wal-Mart Stores Inc. spokesman Dan Toporek said the company had blocked tvboxnow.com, a website the Alliance report found had received its ads. Toporek said the Walmart logo may have been used by a third party that wasn't so careful.

Yet it is easy to find legitimate advertisers on websites that peddle in copyright infringement.

When The Associated Press typed in the Web address WWW.UPLOADHOUSE.COM -- a domain that Google said it removed 97 times from its search results because of copyright infringement notices -- one of the first ads on the home page was for an HP Chromebook 11, "made with Google."

Content theft website operators are based all over the world in countries like Russia, Australia and Indonesia. Most shy away from attention. Several people who registered websites identified by Google's Transparency Report as frequent targets of copyright notices didn't respond to messages seeking comment.

The AP received an anonymous response from the email address listed as belonging to the registrant of piracy website SevenTorrents.org. The respondent said that while some advertisers prevent their ads from going on the site, others don't.

"Famous advertising companies like RightMedia blocked this site, I just let other advertisers which do not use those services (place) ads," the respondent wrote. "They

are paying."

The person did not provide their name or location. According to a search on Whois.net, the site is registered to "Mike" in the Adygea republic of Russia.

The respondent also directed The AP to look at the "About Us" section of the website.

The section reads: "We make it easy for those users who are looking for pirated movies to find what they are looking for." At the same time, the site disavows wrongdoing. "I do not encourage or support people who rip or upload these stuff."

The site displayed ads from companies including Citrix Systems Inc., the food delivery service Seamless, shipping company DHL and Mormon.org.

Advertising industry groups are fighting the problem, with limited success.

The Interactive Advertising Bureau's chief operating officer, Patrick Dolan, said in an e-mail interview that despite efforts at certifying ad networks that follow strict guidelines, it's an insurmountable task to track the trillions of ads and millions of websites.

"New sites are created every day, names change, URLs change," he said. "It's impossible to always stop the ads appearing in real time."

John Montgomery, chief operating officer of major ad-buying agency GroupM Interaction, said that by blacklisting some 4,000 pirate websites, his digital ad agencies withheld some \$8 million from pirate websites operators in 2012 and \$13 million in 2013.

But he says GroupM and other advertising agencies need to get better at choking off the flow of funds.

"We're only one agencies group, accounting for 10 percent of (digital advertising) buying," he says. "If we had a more sophisticated list we could have withheld more."

Content owners believe more can be done.

"This is a solvable problem," said Ruth Vitale, executive director of Creative Future, a newly formed piracy-fighting group of movie studios, production companies and creative worker unions. She urged studios and creative workers to speak up. "The creative community hasn't demanded it ... But if our rights are to be respected online, that has to change."

Image Credit: JD Hancock/Flickr (<http://www.flickr.com/photos/jdhancock/4906605522/sizes/o/in/photolist-8tzCSW-4cTQ9-32coRU-6HBfmz-bw3132-6HBeJx-4p3qea-b4LDkk-b4LCQH-6ePn7f-b4LCt8-b4LDdk-b4LDeK-b4LCzg-6VMitw-7c446q-6aPxHG-7bZcuX-d6wA6d-cbfBwu-5Vbxyd-8z42wA-d9Wmf1-aEsV1c-83aRyX-5DVe5b-aEwKms-akHLKA/>)

Pirated movies and TV shows are only part of the story of lost income for creators. A new report released Tuesday points the finger directly at the ad networks serving those sites.

“Good Money Gone Bad (<http://www.digitalcitizensalliance.org/cac/alliance/content.aspx?page=FollowTheProfit>),” a report from the Digital Citizens Alliance (<http://www.digitalcitizensalliance.org/cac/alliance/default.aspx>) (DCA), estimates that content theft sites earned about a quarter of a billion dollars last year from ads.

“Crime can pay,” the report noted, “when you can steal other people’s content.”

The 30 largest pirate sites — the report focused on movie and TV content — will make an average of \$4.4 million annually from ads.

BitTorrent (<http://venturebeat.com/2013/04/24/bittorrent-accelerator-fights-off-piracy-reputation-with-innovation/>) and P2P portal sites, among the most popular site types, can rake in more than \$6 million per year from ads, and even a small site could see more than \$100,000. Since their content is priceless, literally, these sites can have profit margins in the vicinity of 80 percent to 94 percent.

Nearly 600 sites were investigated for the study, which was conducted for DCA by research firm MediaLink LLC. Sites excluded from consideration included porn and hate sites and those with user-generated content. Almost 30 percent of the large sites had ads from premium brands such as Amazon, Lego, McDonalds, and Whole Foods.

Automated Ad Placement

Deputy Executive Director Adam Benson told VentureBeat, “A lot of companies have no idea that their ads are showing up on those sites.”

The key reason: An estimated 53 percent of U.S. online display ad placement was automated last year, as per media strategy firm Magna Global, and that figure is expected to hit 83 percent by 2017.

Way back in the last century, users of the early Internet often shrugged off content piracy (<http://venturebeat.com/2012/06/05/piracy-battle-map-infographic/>). But the scale and damage is different now, the report says:

"The harm caused by content theft now extends well beyond the music and movie industries. It robs designers who rely on the Internet to sell their creations, hurts brands that find themselves associated with illegal and inappropriate sexual and violent content, funds online criminals and provides seed money for other illegal activities."

What to do? The report recommends that advertisers, their networks, and exchanges beef up their voluntary best-practice standards, using automated filters to sift out content-theft sites. A best practices effort, however, was also attempted in 2012 (<http://www.adweek.com/news/technology/ad-industry-takes-major-step-fight-online-piracy-140014>). Benson said that this time, the conversation can at least begin with "some hard numbers."

When mobsters meet hackers: the new and improved bank heist

REUTERS (/AUTHOR/REUTERS) MARCH 31, 2016 04:53 AM

Above: Bank

Image Credit: Shutterstock (<http://www.shutterstock.com/pic-362054459/stock-photo-bank-building.html?src=ngGSbS2lJPxDoUMAPc2C1A-1-118>)

(By Jeremy Wagstaff and Jim Finkle, Reuters) — No need for stocking masks and sawn-off shotguns.

The unprecedented heist of \$81 million from the U.S. account of Bangladesh's central bank is the latest among increasingly large thefts by criminals who have leveraged the speed and anonymity of hacking to revolutionize burgling banks.

Hundreds of millions of dollars, and perhaps much more, have been stolen from banks and financial services companies in recent years because of this alliance of traditional and digital criminals, with many victims not reporting the thefts for fear of reputational damage.

Typically, security and cyber-crime experts say, hackers break into the computer

systems of financial institutions and make, or incite others to make, fraudulent transactions to pliant accounts. Organized crime then uses techniques developed over decades to launder the money, giving the alliance much higher rewards than a hold-up or bank vault robbery, with much less risk.

“The internet has made it easier for criminals to get inside banks,” said Shane Shook, an independent security consultant. “Criminals are moving away from consumer-targeted attacks to much more substantial bank hacks because it takes less effort to get more money.”

There’s no evidence that old-fashioned bank robberies are in the decline. But there are increasing instances of the cyber variety of the crime.

Last year, researchers at Russian security software maker Kaspersky Lab publicized the activities of the prolific Carbanak gang, which it says hacked into banks, then ordered fraudulent money transfers and also forced ATMs to spit out cash. Kaspersky estimates the group hit as many as 100 banks, with losses averaging from \$2.5 million to \$10 million per heist.

A Turkish computer hacker pleaded guilty in a U.S. court in March to one of the most astonishing crimes in this category: “Cashing crews” pulled \$40 million out of automated teller machines in 24 countries over a 10-hour period. The 2013 heist was accomplished with the precision of a Hollywood drama, thanks to hackers who breached financial networks, then inflated balances on prepaid debit cards.

In another case, Russian banks lost more than \$25 million over the past six months to a hacker group infecting their computers using tainted phishing emails, according to Russian security firm Group IB.

The malware gave the hackers access to the bank’s inner network, allowing them to craft seemingly authentic transfer requests via networks including the same SWIFT messaging system used in the Bangladesh Bank attack.

“It (the malware) provides remote access to the attacker. Then the attacker manually orders fraudulent transfers over SWIFT or other payment systems,” said Dmitry Volkov, head of cyber intelligence for Group IB.

In the Bangladesh case, the bank says unknown hackers used malware to access the central bank’s computers and spoof messages to the U.S. Federal Reserve Bank. They transferred \$81 million from the central bank’s account at the New York Fed to Philippine banks.

The funds were then passed on to casinos and handed over in cash to a junket operator in Manila, according to testimony at a senate hearing in the Philippines.

A transfer of \$20 million to an entity in Sri Lanka was reported as suspicious because of a spelling mistake in its name and reversed.

Unreported heists

Cyber fraud experts say they expect more big heists because the industry has yet to properly defend itself.

“The fact is that most of the breaches that happen don’t get reported,” said Bryce Boland, chief Asia Pacific security officer of computer security company FireEye.

One senior banking security executive, who declined to be identified because he was not authorized to speak to the media, said he had worked on three cases of cyber thefts that his bank clients had not reported to regulatory authorities. He said the largest involved about \$20 million.

In many jurisdictions, banks and financial services companies were not required to report breaches unless there’s a material impact, Boland said. The definition is left vague enough so that many are not reported at all.

Boland said that while 20 percent of his banking customers had been targeted in the second half of last year, FireEye had also found cases of financial services companies not realizing they had been breached, in one case leaving the attackers inside their computers for five years.

An ongoing Senate hearing in the Philippines is still struggling to determine how the stolen money was laundered, with another hearing scheduled for next week. In most cases the heists go unpunished and the perpetrators remain a mystery.

FireEye’s Boland said the company has compiled detailed dossiers on six of the groups behind attacks on financial services companies, but he said he had less complete data on 600 other groups.

Not all focus on extracting money, he added. Hackers aimed at specific institutions, often at specific individuals, and often for financially useful data — inside information on mergers and acquisitions, for example, or data that could be used to create fake credit cards.

USC Annenberg *Innovation Lab*

USC Annenberg Lab Ad Transparency Report

January 5, 2013

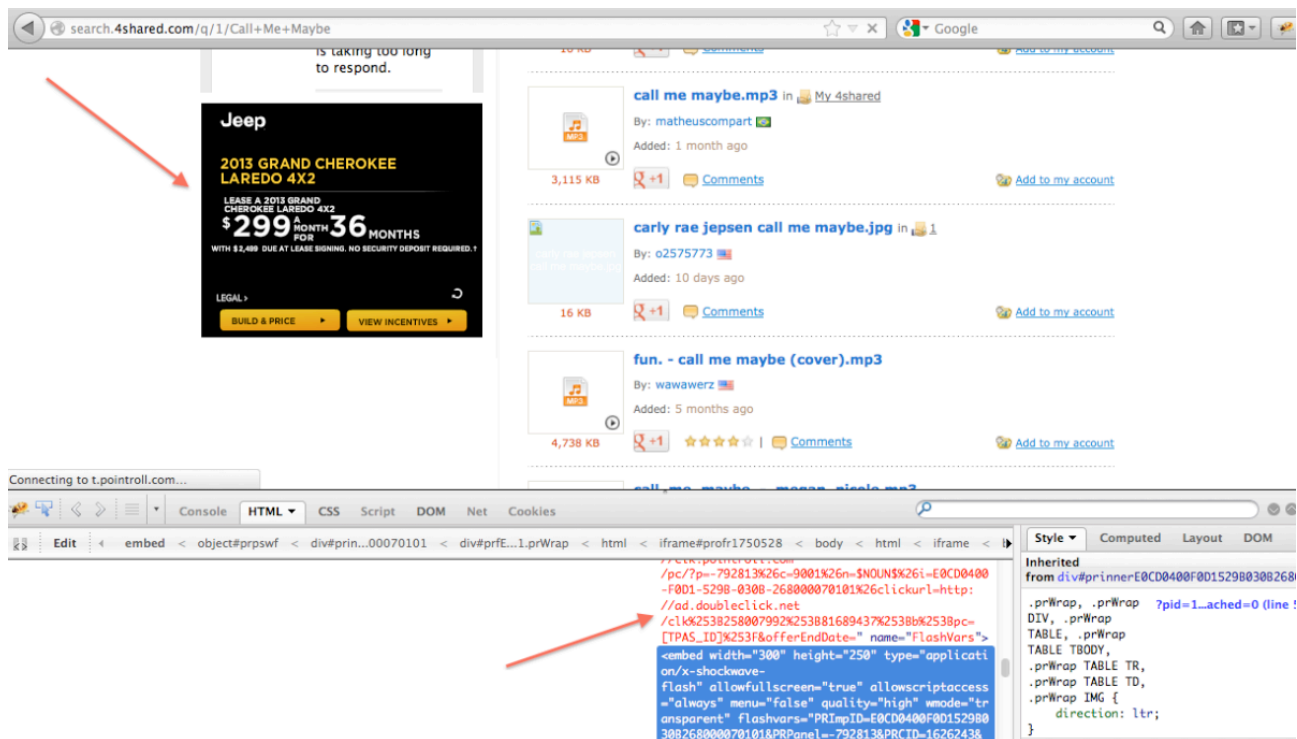

This is the first in a monthly series of reports from the Annenberg Innovation Lab at the University of Southern California that details support by Online Ad Networks of the major pirate movie and music sites around the world. The advertising business has always been a key part of the creative economy from the birth of radio. Advertising dollars have financed the production of television, music and even video games. The rise of ad-supported pirate networks is a relatively new phenomenon stemming from the birth of peer to peer (P2P) Internet sites in 2001. In the last five years, a large number of new advertising networks now service the seemingly infinite advertising inventory of the broadband era. Much of that inventory sits on more than 150,000 pirate entertainment sites. The top ten advertising networks placing the most advertisements to Illicit file sharing sites are:¹

1. [Openx](#)
2. [Google](#) (including Double Click)
3. [Exoclick](#)
4. [Sumotorrent](#)
5. [Propellerads](#)
6. [Yahoo](#) (including Right Media)
7. [Media Shakers](#)
8. [Yesads](#)
9. [Infolinks](#)
10. [tribalfusion.com](#)

The list of top infringing sites was compiled using the [Google Transparency Report](#) of domains with the most Digital Millennium Copyright Act (DMCA) takedown requests.

A recent report, "[The Six Business Models of Copyright Infringement](#)", funded by Google and the firm PRS for Music on Brands, investigated advertising networks and their support of the major pirate movie and music sites around the world. The report found that advertising financed 86% of the P2P search sites that feature illegally distributed content. This finding clearly indicates that many major brands are not aware that they are, in fact, the key source of funds for the piracy industry. It is the goal of this "transparency report" to aid in helping these brands steer their advertising dollars away from sites that exploit film, television and music artists for what appears to be criminal gain.

The report, which will name the top offenders on a monthly basis, was compiled from multiple sources and will identify the top ten advertising networks that place the most advertisements on Illicit file sharing sites. It makes use of an Internet bot that scrapes the Ad Network HTML identifier contained in each advertisement.

A list of the top ten brands appearing on Illicit file sharing sites will appear in the coming months.

Methodology

Advertising network code appearing in the HTML and Javascript URL locations where alleged infringement were occurring was collected from third party sources and from data contained in the Google Transparency report on an ongoing basis for the past twelve months. This data included a vast number of URL locations where alleged infringement were occurring, including youtube.com and blogspot.com data that is not included in the Google Transparency report. This data contains the precise URL location of the alleged infringements. Using server software the HTML and Javascript contained in the precise URL location was captured. Where possible a screen shot of the page was captured. Using the server software, the captured HTML and Javascript was analyzed to determine if there was Advertising Networks Code appearing at those URL locations. The Domain Name represented in the Advertising Network Code associated with the captured HTML and Javascript was then used to determine, to the best of our knowledge, the Advertising Network distributing the advertisements, if any, appearing at the URL location where the alleged infringement was occurring. It is our observation that advertisements flowing from Advertising Exchanges are essentially fungible and the Advertising Network originating the Advertisement may not be the Advertising Network delivering the Advertisement on the page where the Advertising Network Code was detected. In some instances, we used network protocol analyzers to determine the actual server locations where the Advertisements were originating.

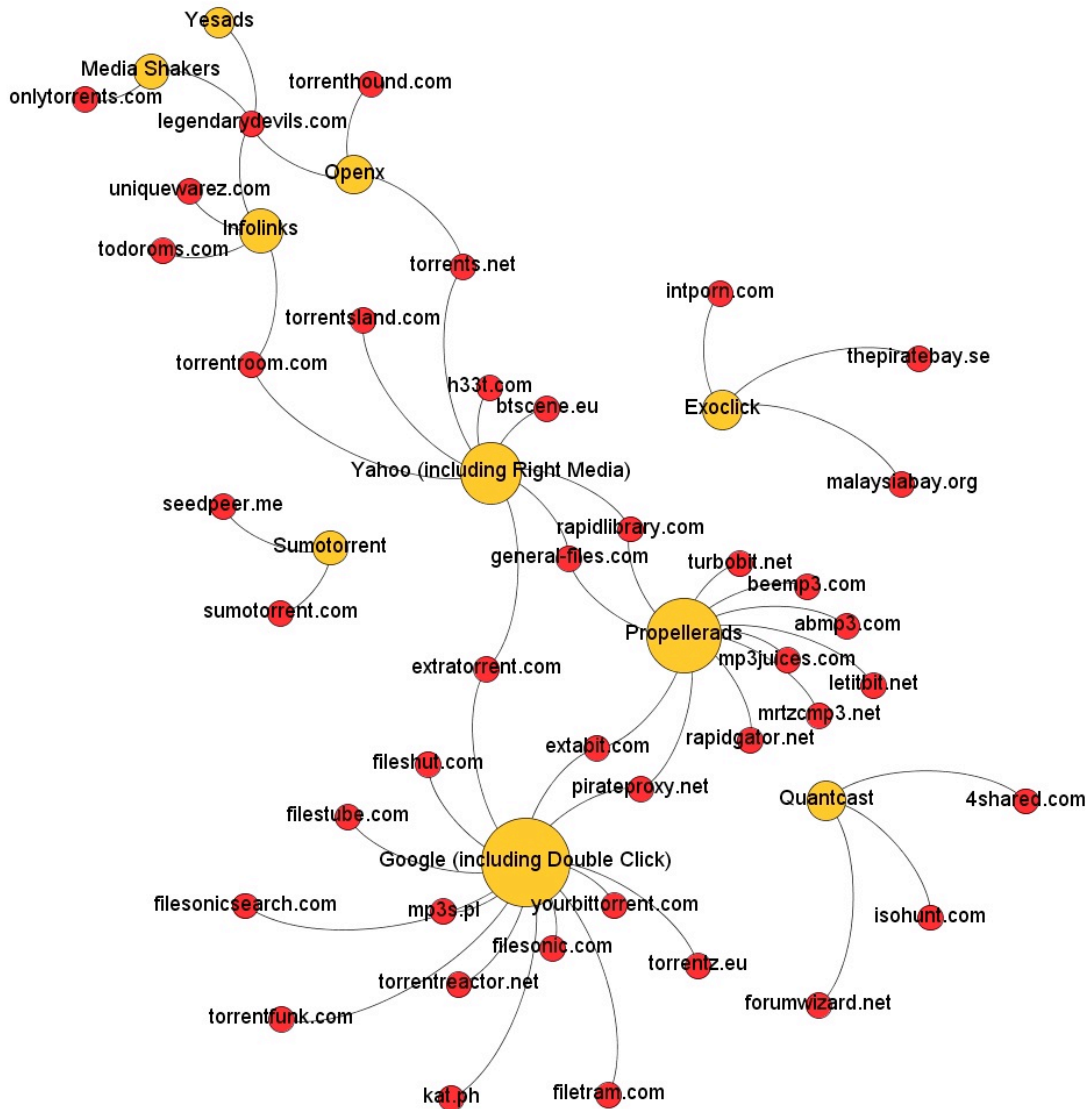

In late December 2012, domains appearing in the alleged infringing sites in the Google Transparency Report were then compared to determine the frequency of Advertising Networks that appeared on these domains for the preceding twelve months. We do not dispute that the landscape may be different today but the focus of this study was to take a historical snapshot now that the Google Transparency Report provides more direction to determine what websites are alleged to be trafficking in stolen intellectual property. We should also note that Google has chosen not to include alleged infringement data for youtube.com and blogspot.com in the Google Transparency report. In our estimation, the inclusion of that data would provide a more accurate view of the landscape.

Going Forward

With the limited tools available and the lack of accessible information to make absolutely definitive determinations, the study relied upon techniques that produced a result that in our best estimation represents the pattern of observed activity. We look forward to working with industry participants to improve our methodology. The data produced by the Google Transparency report contains a vast number of indications of alleged infringement. In development is technology to ingest the entire report as it is updated for real-time processing and reporting.

We are aware of the critique made by Google upon the original release of our findings. They wrote, "In addition to sites that participate in our network, millions of advertisers and publishers use our DoubleClick technology to manage their digital advertising, not just on our network but across the whole web. Advertisers and publishers ultimately decide how to use this technology and we cannot "see" where all these ads appear (nor do we have a revenue share). However, when we do become aware of DoubleClick technology powering ads on copyright-violating sites, we contact the affected advertisers and publishers to take action." However, we need to point out that the instances of Double Click ad code in our data was less than 9% of the total instances of Google advertising code found on the illicit sites. Most of the Google code was from the domains googleadservices.com, googletag.pubads and googlesyndication.com. We are however encouraged that Google has recently increased it's efforts to let advertisers know when their ads are appearing on illicit sites. We assume that effort will be reflected in the January data that we will publish in early February.

Data Visualization

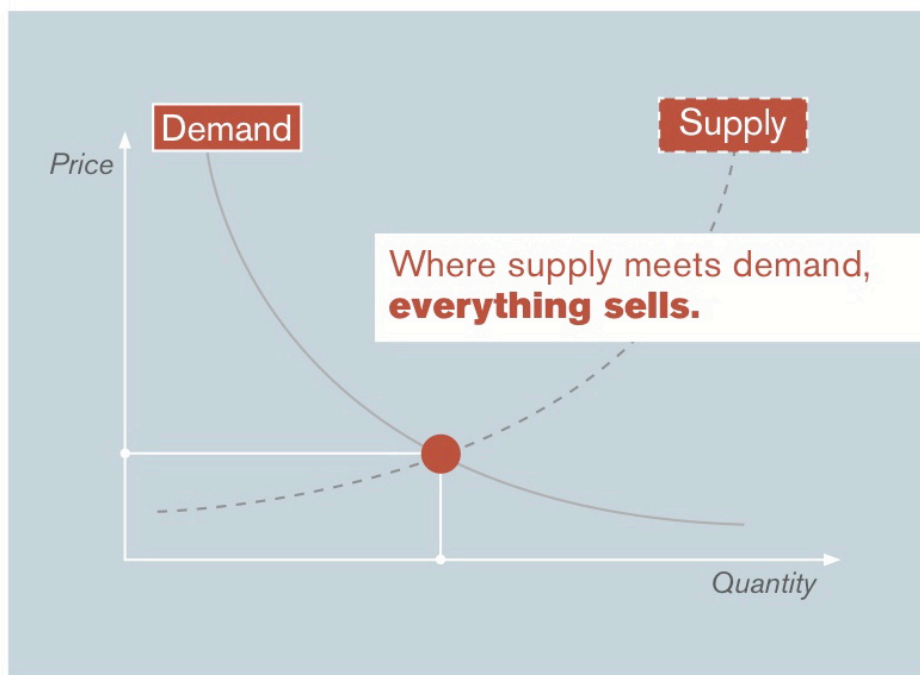

This network graph demonstrates the connections between the top ten advertising networks and some of the larger illicit file sharing sites included in the sample presented in the Annenberg Innovation Lab Transparency Report. It serves as an alternative way to conceptualize the data at the heart of the examination.

Advertising networks are presented in orange and illicit file sharing sites in red. Connections between the nodes represent the presence of ads on the associated sites. Node size for each advertising network is scaled to the number of illicit file sharing sites

each is linked to, the more connections the bigger the circle. More connected advertising networks are situated closer to the center of the graph.

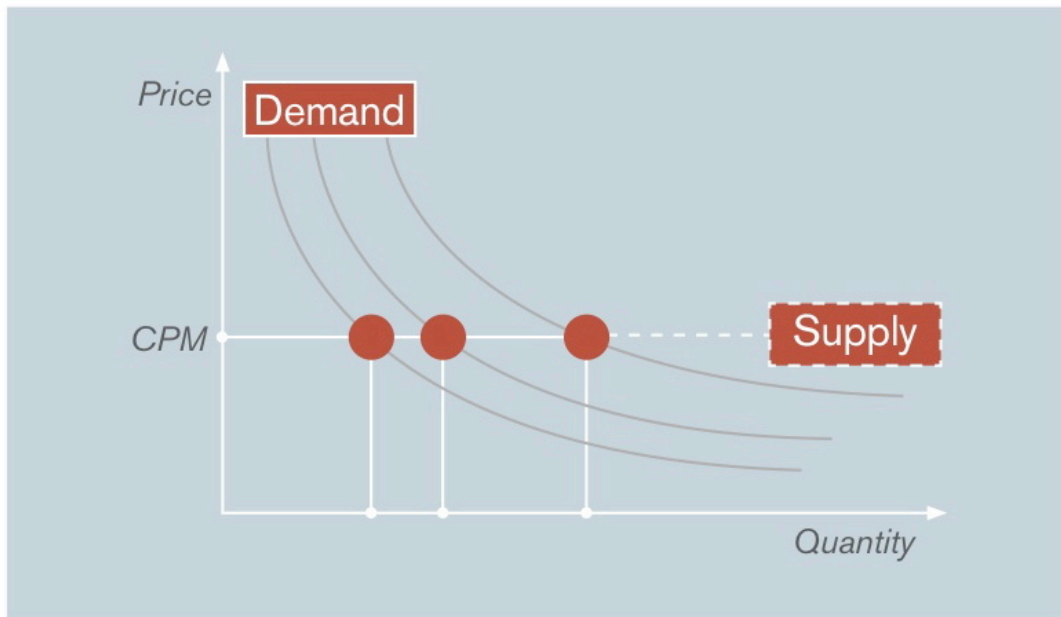

Findings

In the most recent Google Transparency Report, Filestube.com had more than 2,300,000 specific URLs cited for copyright infringement. It appears that large illicit file sharing sites distribute illegal content and continue to steal trademarked, copyrighted content and siphon millions of dollars away from the creative community, making it much harder for artists to make a living. Unlike the legitimate ad supported content sites like Spotify, Pandora or Hulu, the illicit file sharing sites do not return capital to create new content or sustain the creative economy. It appears that many brand advertisers are either unaware that their ad dollars are financing a parasitic business or have decided that the advantages to be gained by targeting a young demographic on illicit file sharing sites trumps their corporate social responsibility. But in a deeper way, the almost infinite ad inventory sitting on the 150,000 illicit file sharing sites named by Google harms the entire media industry by devaluing the worth of legitimate ad inventory. An August 2012 report from Comscore, “The Economics of On Line Advertising” delineates the problem.

In Adam Smith’s classic economy (above) supply is limited and at a certain clearing price everything sells. But as Comscore points out: “In digital media, the marginal cost of adding

new programming or advertising inventory is very low, and has been trending lower for years, as the costs of computer processing and storage have plummeted.” This produces a new supply-demand equation.

In this world, the unlimited supply of ad units on illicit file sharing sites devalues all advertising inventory on the Internet.

The Annenberg Innovation Lab does not propose any particular solution to this dilemma. We do believe that some sort of best practices code of conduct by brands, agencies and advertising networks would be productive. As a prominent Google executive has told us, “following the money is exactly the right focus”. As we have been tracking more than 100 advertising networks over the course of this research, we have come to believe that the lack of transparency in the advertising network industry is a classic case of market failure. It is perhaps a good place for academic research. We believe that both the prominent advertising networks and the major brands do not want to be perceived “to be evil.” In that regard, any mutual assistance we might provide to the industry is freely offered.

annenberglab.org

ⁱ In late February we have had productive talks with Quantcast about our January and February Ad Reports. They have given us access to code, which differentiates between their free, publicly available, self-serve measurement product and their actual revenue-generating advertising product.

We now believe that Quantcast was incorrectly identified as being among the top ten Ad Networks placing ads on infringing piracy sites. Quantcast is undertaking extensive efforts to maintain a global block list of infringing sites, and in the course of our discussions, we were able to help them find and block two additional sites.

Quantcast and USC Annenberg Innovation Lab intend to continue working together to ensure that ads are not placed on infringing sites.

Exhibit DIDP A13

USC Annenberg Lab Ad Transparency Report

Fifth Edition

June 12th 2013

This is the fifth in the ongoing series of Annenberg Innovation Lab's Ad transparency report. Same as the previous editions, this version draws from dataset taken from one month of observation of the top 500 URLs with the most [Digital Millennium Copyright Act](#) (DMCA) takedowns as supplied by [Google's Transparency Report](#). Together with the previous four editions, this report demonstrates both stability and change among advertisers serving non-DMCA compliant websites.

For the month of May the top ten advertising networks on illicit file sharing sites are as follows:

1. Propellerads
2. ExoClick
3. Admxr
4. Wigetmedia
5. Adcash
6. Sumotorrent
7. Adtransfer
8. Zedo (Newcomer)
9. Adexprt (Newcomer)
10. Infolinks

From this month's findings, Propellerads once again retained the number one position with Exoclick holding steady at number two. Wigetmedia remains on the list as number three, as well as Admxr who moved up to the fourth place from eighth in the previous month. Adtransfer, which first appeared in the February edition, came back in May and is holding the seventh position in ranking. In this month's report, Zedo and Adexprt are newcomers, which haven't previously appeared on the report. Adcash, AdMxr and Infolinks have maintained their positions in the ranking.

The one really striking new development in the Ad Piracy world is the decision by Bit Torrent to sell ads on its uTorrent Platform. According to Bit Torrent, the uTorrent client is serving over five billion ads every month. While most of these ads are for Poker software or other non-branded

companies, if major brands start using the platform, uTorrent would certainly move to the top of our survey of brand advertising on Pirate sites.

Brands

While display advertisements provide important funding for content producers and DMCA compliant distributors they can also subsidize illicit file sharing websites. Compounding this problem is the opaque nature of on-demand bidding and ad placement which means brands that *do not* support illicit file-sharing can come to have adverts placed on non-DMCA compliant websites.

In an effort to capture the extent of this process a team at the Innovation Lab coded a sample of screenshots in order to identify major brands whose ads have appeared on file-sharing sites, with advertisements linked to the following brands appearing on the sampled URLs. This is only a sample and is not meant to indicate which brands appear most often on infringing sites.

Ad Council	LG
Allstate	Life Lock
Amazon	Loft
AT&T	Lysol
Best Western	Microsoft
Blackberry	Nextag
Capital One	Nobu Hotel-Caesars Palace
Clear	Southwest Airlines
Deer Park	Spanx
Evony	Strayer University
Flash Player HD	Travelocity
Gameforce	Turbo Tax
Goodyear	USAGC
GoTo Meeting	Verizon
GovMint.com	Video Performer
Gumdrop Pacifier	Visa
Host Palace	Western Union
Host Palace Internet Service	Yahoo Sports
ILivid	ZipCar
Keller	7-11

Besides these major brands numerous small businesses and services also appeared within the sample.

These results were obtained using a cookie-free browser. We stress that they should not be taken as representative of all brands which appear on file-sharing sites. Users may see different

products or services depending on a number of factors including previous browsing history and opt-ins to data exchanges or tracking services.

Methodology

Ad networks identified in this report were isolated by scraping and examining samples of HTML and Javascript code taken from URLs identified by the Google Transparency Report. Drawing from a sample of sub-URLs within each site the raw code of each page was examined and compared against a database of known advertiser tags to determine which networks were involved in a specific site. Visual corroboration was provided by capturing screenshots displaying the advertisements in question, these screenshots also formed the basis for the aforementioned brand identification process.

In some instances the presence of ad code does not always mean that the network is actively serving advertisements to the URL in question. In an attempt to address this situation and to ensure that our methodology discriminates between advertising tags and similarly structured analytic tools, the Innovation Lab has been and continues to be willing to engage in dialogue with members of the advertising community in order to ensure the ongoing fairness of the report. This serves as a corroboration to the code analysis which ensures that the networks identified are actively serving adverts to the URL in question.

The image shows a browser window with a search result for 'Jeep' on 4shared.com. The ad displays '2013 GRAND CHEROKEE LAREDO 4X2' with a lease offer of '\$299 MONTH FOR 36 MONTHS'. A red arrow points from the ad to the developer tools below. The developer tools show the HTML code for the ad, with a red arrow pointing to a specific line of code: `<script src="/pc/?p=792813k26c-9001k26c-SNUNSK261-E0CD0400-F001-5298-0308-268000070101k26c&clickurl=http://ad.doubleclick.net/click?ad=38258007992k253881689437k2538k2538pc-TPAS_ID7k253F&offerEndDate=" name="FlashVars">`. The developer tools also show the 'Style' panel with various CSS rules.

Going Forward

Given the complex nature of online advertisements and the fluid nature of the marketplace the Innovation Lab aims to continue publication of these reports for the foreseeable future. It is our

hope that this information will serve three distinct purposes. Given that many advertising networks have a ban on illicit file-sharing written into their terms of use this report should serve as a mechanism to highlight possible violations among clients. For those seeking to purchase advertisements the Ad Report is also a helpful guide to determine which networks serve sites that align with a client's needs. Finally for the general public the report serves as an educational opportunity, demonstrating the complexity of the online advertising business and as a tool for understanding the role which ads place in content creation and dissemination. In order to strive towards these goals the lab welcomes any and all dialogue with advertisers, networks or members of the public who are seeking clarification or more information about the report or other projects hosted within the organization.

Advertising Transparency Report

Large Pirate sites distribute illegal content and continue to steal trademarked, copyrighted content and siphon millions of dollars away from the creative community, making it much harder for artists to make a living. We do not believe that government regulation alone is the answer to the Piracy problem, but rather that the self-regulation of major sectors like the online advertising industry could make it harder for the “Kim Dotcom’s” of the world to unfairly exploit artists. We look forward to working with advertising agencies and networks in the coming months to address this issue.

How is the Real America Doing?

By Irving

Wladawsky-Berger

Listening to cable news, talk radio, and our heated election campaigns, you might quickly conclude that the US is going to hell, that the best days of America are behind us and that the country is unraveling right in front of our eyes. To a greater or lesser extent, these sentiments are to be expected in a presidential-election year, when the out-of-power party always argues that things are bad and getting worse. But

Abstract

A number of recent studies have investigated the role that advertising plays in funding and sustaining piracy sites. In this study, the composition of advertising on piracy websites in Brazil was analysed, measuring both mainstream and “high-risk” ads¹ using samples generated from the most-complained about sites, as well as the most popular sites (among Brazilians). The results indicated that high-risk ads pose significant problems for Brazilian users, especially children, who may be harmed by exposure to ads promoting the sex industry, gambling, scams and malware.

Links between Brazil-focused piracy websites and Child Exploitation Material (CEM) are also documented. Policy options for dealing with this issue are discussed. CEM poses a threat not only to the children depicted in it but also to children who might be exposed to it. Indeed any viewer who is exposed to CEM is in jeopardy in a number of ways.

The Author

Dr Paul A. Watters is Professor of Information Technology at Massey University and CEO of Cyber Inc. His research interests include cybercrime, security & intelligence, film piracy, and strategies to reduce demand for child abuse material. He previously worked at the University of Ballarat, the Medical Research Council (UK) and Macquarie University. His work has been cited 1,933 times (h-index=21, i-10 index=52). Professor Watters has worked closely with government and industry on many projects, including Westpac, IBM, the Australian Federal Police (AFP), the Attorney General's Department and the Motion Picture Association. He has received three prestigious Australian Research Council grants.

1 Defined as categories which include malware, downloading sites, gambling, scams and the sex industry.

Acknowledgements

The author gratefully acknowledges the help and support of the people who contributed to this paper: Mr. John Carr, senior advisor at ECPAT International, Dr. Victoria Nash, Deputy Director and Fellow Researcher at Oxford Internet Institute, who peer-reviewed the paper, Ms. Marie-Laure Lemineur, Head of the Program Combating Sexual Exploitation of Children Online, Mr. Mark Capaldi, Head of the Research and Policy Program as well as the Communication Department at ECPAT International and the editor, Dr. Ute Navidi.

ECPAT International

ECPAT International² is a global network of organisations working together for the elimination of child prostitution, child pornography and the trafficking of children for sexual purposes. It seeks to ensure that children everywhere enjoy their fundamental rights free and secure from all forms of commercial sexual exploitation.

There are as many as 1.8 million children exploited in prostitution or pornography worldwide and human trafficking alone as an illegal industry generates billions of US dollars. It is believed that nearly 80% of all trafficking worldwide is for sexual exploitation, with over 20% of the victims being children. All children have the right to live free from all forms of sexual exploitation. However, social tolerance to the sexual exploitation of children is increasing. There are millions of child sexual abuse images on the Internet, and that number is growing.

ECPAT works to build collaboration among local organisations and the broader child rights community to form a global social movement for the protection of children from sexual exploitation. The global ECPAT Network is currently composed of 85 members in 77 countries. Its membership reflects the richness and diversity of experience, knowledge and perspectives that arise from working in widely different contexts.

1 INTRODUCTION

To what extent might piracy websites³ be contributing to the contemporary challenges concerning the prevention of child exploitation in Brazil?

A large number of websites, including piracy websites, use advertising as a revenue source to fund their operations (Garz et al, 2015). They make available “space” on their pages (similar to traditional highway banners or billboards) for advertisers to promote their products and services. Historically, advertisers paid websites directly to “lease” this space, and they would pay revenue to the website based on the number of pageviews, or the number of users who clicked on the ad. These days, the buying and selling of website advertising space is very complex, as a number of intermediaries are now involved – advertising networks take ad placement requests from advertisers, and display them across a range of websites, based on matching the interests of the advertiser and the user. Every user’s interests can be tracked by the use of cookies, cross-referenced with other sites that they visit, or search terms that they enter. This enables ad networks that also operate search engines to implement “behavioural advertising”. A further complication is that advertisers can now engage an ad exchange, which seeks to place advertising across multiple ad networks. Each of these developments has placed further distance between the advertiser and the website which is selected to host their advertising. This had led to greater marketplace efficiencies, but also to a loss of control by advertisers.

3 Piracy sites are those which are primarily or wholly associated with facilitating downloads of infringing content. These include sites which provide magnet links or torrent file downloads, file-locker sites and the like. A well-known example would be The Pirate Bay site.

A number of recent studies have looked at the links between online advertising of various kinds, and how profits from displaying these ads fund and sustain piracy (Watters, 2015). These studies have either focused on mainstream advertisers (Taplin, 2013), or high risk advertising, where the ads have the potential to harm the user.

High risk ad categories include malware, downloading sites, gambling, scams and the sex industry. Studies into high risk ads have been undertaken within many countries in the Asia Pacific, including Australia, New Zealand, Canada, Singapore, Malaysia, Taiwan, Hong Kong, Singapore, Vietnam, Indonesia and the Philippines (Watters, 2015; Watters, 2014).⁴ The results of these studies have been used by governments, NGOs and the private sector to guide appropriate policy responses, including regulation (whether by government or by the advertising industry itself), as well as building awareness around the risk of visiting these sites, especially by children.

In trying to understand the scale and scope of high risk advertising in a country like Brazil, a number of approaches have been developed. These aim to model how a user might encounter different types of advertising or be exposed to CEM or links to CEM while searching for pirated material.

In executing the research, representative snapshots were constructed - typically comprising several thousand samples of the kinds of ads most likely to be served to users in a particular country. Two approaches for analysis were developed:

4 These reports can be downloaded from Social Science Research Network (SSRN). http://papers.ssrn.com/sol3/cf_dev/AbsByAuth.cfm?per_id=2166409.

1. The *most-complained about sites*. These are sites indexed by Google that rights holders have identified as being largely concerned with piracy, and where Google has investigated and found that they are in breach of the Digital Millennium Copyright Act (hereinafter DMCA). This provides independent verification⁵ of the rogue nature of such sites, but it does not always follow that the most-complained about sites are always the most popular, particularly in local language sites. This is the approach utilised by Watters et al (2014) for a New Zealand case study; and
2. The *most popular sites*. By using an information-seeking behaviour model, we made use of the Google search engine to identify those sites which are the most relevant given a search term, such as “download free movies”. Furthermore, we used the snowball sampling technique to construct a set of terms for further searches, to find even more sites. Such data can also be supplemented through the use of site lists provided by experts, e.g. lists of sites which have been the subject of civil action or criminal prosecution.

By combining measures of popularity and alleged infringement, it is possible to arrive at an informed snapshot of high risk ad prevalence in a particular market. In some countries, researchers have looked only at the most-complained about sites (especially in relation to Hollywood movies and TV), but this study *also* investigated the most popular sites when using the local language for searching.

In this paper, both types of data collection and analysis were utilised, to understand the advertising landscape, the mainstream and high risk aspects of that environment, and the links that exist between piracy sites and CEM.

1.1 Background

Brazil is the eighth largest economy in the world as measured by GDP.⁶ Total ad spend in Brazil is now US\$20.64b,⁷ with 14.7% of that being digital spend, representing an increase of 15% year-on-year. Mobile advertising is also growing rapidly, at 120% p.a., and now represents 18.1% of digital ad spending. Even a small fraction of this advertising market could be used to fund significant piracy operations, and make significant profits for organised crime (Treverton, 2009).

Being a large and vibrant economy, Brazil has faced a number of challenges in policing intellectual property. A National Council against Piracy and Intellectual Property Crimes (CNCP) has the overall remit to promote intellectual property rights through education, enforcement and policy initiatives.⁸

Additionally, concerns regarding online child exploitation and trafficking have frequently been expressed by Brazilian law enforcement, Government and NGOs. In a recent operation (Operation Darknet), 55 people were arrested in Brazil for participating in a significant CEM “ring”.⁹ Six children were rescued from their abusers during the operation. This incident was not an isolated one, and points to a significant and emerging problem for Brazil, as well as many other countries globally. Whether the problem has existed for a long time, and is

5 A number of studies (e.g. Urban & Quilter, 2006) have shown that Google sometimes processes DMCA mistakenly. According to its own documentation, Google removes 97% of the sites which are reported to it. Google also notifies the site owners (where it is able to) regarding the takedown, and provides an appeal process where false positives have been flagged for removal. An error rate of 3% is thought to be reasonable.

only now receiving investigative attention, or whether the internet is fuelling a rise in technology-enhanced crime, systematic research is required to understand the scale and severity of the problem.

In the following sections, separate studies targeting the most-complained about sites, the most popular sites, and links to child exploitation sites are explored from within Brazil. A disturbing snapshot emerges. Policy options which may help to ameliorate (or minimise) the harms due to advertising, in particular, are outlined.

2 MOST-COMPLAINED ABOUT SITES

To build a database of the sites most-complained about by rightsholders, the Google Transparency Report¹⁰ was used. This Report, among others, lists all of the URLs removed from the Google Index, whenever a complaint from a rightsholder is upheld, i.e., when Google determines that the URL does contain or links to allegedly pirated material.¹¹ In the United States, this process is governed by the Digital Millennium Copyright Act (DMCA). It is interesting to note that the number of complaints upheld by Google almost doubles every year. Note that even when Google chooses to remove a URL from its index, that site is still accessible through the Internet, and could also potentially be found by using other search engines.

In the Report, it is possible to identify the top domains against which complaints have been upheld. These sites range from torrent sites (which host links to pirated content), through to streaming sites, and file locker sites, where URLs for pirated content are made accessible through search engines, but physically downloaded from the locker site. In some cases, the same logical site is hosted on a number of different physical / top-level domains, in order to circumvent legal avenues for takedowns and DMCA complaints.

The methodology used in this study was first outlined by Watters (2014). The basic process is that a URL from each top infringing domain is downloaded a number of times (typically 10 page impressions), and the advertising networks and advertisers are identified. Furthermore, each advertisement is assigned

a category (mainstream or high risk), and the high risk ads are further divided into a number of sub-categories: malware, sex industry, gambling, download site or scams. A semi-automated system has been developed to assist in processing the large volumes of data involved in this kind of analysis.

In this study, the Top 100 most-complained about websites (for the month of September 2015) identified by Google were analysed. They are listed in Appendix A. A simulated user was created using a Virtual Private Network (VPN) connected to Brazil, such that each requested website (and its advertising networks) would “see” a Brazilian user, and content would be customized appropriately.

From the 1,000 pages sampled, a total of 709 advertising items were identified. Table 1 shows the number of advertising items. Note that the automated process for identifying advertising items relies on a database of known multinational advertising networks, and may not be reliable for all locations. This is why every page downloaded is manually analysed for visible ads.

A typical page on one of these sites might include a number of banner ads to the top, left and right of the page, with the main text instructing a user how to download a pirated movie occupying the mid-section. For example, on one search for the site extratorrent.work, with the search term "Disney", a link to a torrent containing a number of Disney children's movies is returned, and a preview of one movie is embedded in the page. Overlaid on this movie preview is an ad for the "Reality Kings" pornography website, with a penis depicted entering a woman's mouth. The same search on thepiratebay.gd also provides a list of Disney torrents, but with further explicit images of nude and semi-nude women promoting pornography websites. Disney was

10 <http://www.google.com/transparencyreport/>

11 Note that Google only undertakes basis informational rather than legal checks (<http://www.google.com/transparencyreport/removals/copyright/faq/>). Google does not adjudicate for fair use, and webmasters may not be notified their pages are removed from search, and counter-notification processes may be beyond the means of many ordinary web users.

selected as a search term because it is the brand that most parents would identify with as encapsulating childhood. Pirates also know this, and make available pirated versions of many of Disney's movies. There is no suggestion that Disney is in any way negligent or responsible for the behaviour of pirates or ad networks. Using Disney as a search term provides insights into ad networks that display pornography in response to searches for children's movies.

The point about “visible ads” may require some explanation. A great many ad networks are active on websites collecting data about browsing habits which they pass on or use to improve their own algorithms, without this being apparent to the browser. Herps et al (2013b) found that Google, for example, had trackers on 86% of the top sites accessed by Australians, and this pattern would be similar globally.

In this study, the actual number of visible ads was 1,402. Of these, some 1,315 were categorized as high risk (93.79%), while 87 were identified as mainstream (6.21%). These results are comparable to other countries where the most-complained about sites have been investigated.¹² A further breakdown of high risk ads into different categories is shown in Table 2.

It can be noted that the most frequent high risk ads were found to belong to the sex industry category (45.15%), followed by download services (25.55%) and scams (13.69%).

Table 3 provides a list of the most prevalent advertised brands identified.

3 MOST POPULAR SITES

In this study, a user model was developed, to replicate how people search for pirated content by means of search engines within Brazil, *only* in the local language. The approach was based on the snowball sampling technique, where a Portuguese seed term was used to find piracy sites on Google Brazil. When a piracy site is identified, any new Portuguese terms associated with piracy were then added to the term list, until no further sites were found (up to a limit of 50). Ten impressions were made of each page. These sites are shown in Appendix B.

A total of 2,088 advertising items were identified in this study. The advertising networks and other tools responsible are shown in Table 4. Once more major brands are listed. Yet in almost the reverse situation of the most-complained about sites, there were relatively few visible ads – 320 in total.

Also, the proportion of mainstream to high risk was reversed: a majority of ads in the most popular sites were mainstream (65.63%) versus 34.38% for high risk. Perhaps the most astonishing result was that there was no sex advertising at all on the local language sites, even though there was significant local language sex advertising on the most complained about sites. Table 5 provides a list of the mainstream advertisers identified in this study, and Table 6 provides a breakdown of the high risk ad categories.

4 LINKS TO CHILD EXPLOITATION MATERIAL

Piracy websites are known to provide links to CEM (Fournier et al, 2014). In a longitudinal study, Prichard et al (2012) found that the term “pthc” (pre-teen hardcore) was consistently more frequently searched for than Harry Potter movies on what was the then #2 most popular torrent site. Other studies (e.g. Rutgaizer et al, 2012) have consistently linked piracy sites and CEM.

In the current two studies reported in the previous sections, some quite startling differences were observed: when the most complained-about sites were reviewed, the sex industry was the top high risk advertiser (and high risk advertising was the dominant category), yet for the most popular local language sites, there was no sex industry advertising. It is not clear why there should be such a difference: perhaps rights holders do not fully use the available intelligence to generate a very clear view of the sites which are actually making the most revenue and/or pose the greatest risk.

One particular category of sex industry website was quite prominent from this sample: manga, or Japanese comics. This category or genre of manga is known to depict simulated sexual acts between adults and children, between children or between children and animals. In many countries, such as the United States and the United Kingdom, obscenity laws cover the depiction of child sexual abuse in cartoon format; in a highly-publicised case, Christopher Handley, an American citizen, pleaded guilty to possessing manga books depicting child sex abuse, even though he possessed no other types of CEM¹³. He received a sentence of 6 months. Yet in Japan, while the possession of CEM has recently been criminalized, it only concerns materials where “real children are being depicted”, therefore this does not cover

13 <http://www.wired.com/2009/05/manga-porn/>

CEM in manga.¹⁴ The UN Special Rapporteur on the sale of children, child prostitution and child pornography recently urged the Japanese authorities to outlaw manga containing extreme child pornographic content.¹⁵

In the study of the most complained about sites, a number of manga piracy sites appear in the Top 100 (including mangapark.me, ranked #23). While many of the titles appear with non-CEM themes, mangapark.me hosts 487 “adult” titles, in which a number deal directly with CEM.

The prevalence of mainstream versus high risk advertising on the mangapark.me site was examined for the pages included in the sample, and 100% of the ads displayed were mainstream. Table 7 below shows the list of brands advertised.

The links between piracy sites, CEM and advertising appear to be quite strong; these links are not exclusive, since advertising of some kind appears on all piracy sites. Consider the case of a CEM user who may use a search engine to identify torrents that contain CEM, and then visit the piracy site. On the piracy site, the user is able to download a torrent, or in some cases, view the material by clicking on a series of links to reveal a preview gallery. At each step, the user is exposed to a range of advertising which the advertising networks deem to be relevant to the user. In some cases, information from the search engine may be combined with referrer pages and other observable data linked through cookies to refine the relevance further. Also, once the user is on the piracy site, they can click on the username of someone sharing CEM material, and see other files that this person has uploaded. As files become more popular with users in terms of downloads, they then tend to rank higher in search results.

The unexpected link to CEM comes in the form of image previews, which users also tend to upload in order for other users to verify that they will be downloading CEM (since there are a large number of fake files on piracy sites; Watters & Layton, 2011). This means that mainstream ad networks placing ads on image hosting sites

used for CEM previews may place ads alongside CEM images, especially when there is a “match” found between the interests of the user, and the advertiser.

To illustrate, one of the terms used by Fournier et al (2014) in their analysis of the CEM peer-to-peer ecosystem, was used in this study to seed an image search on a popular search engine. This returned a number of results which contained links to piracy sites. The first of these was a link to torrenthound.com. On the results page, only sex industry advertising was present. Taking the name of the image sets, a set of results was also returned from thepiratebay.la. The advertising displayed here was also high risk – sex industry and malware downloads. Clicking through further to the detail page for the first torrent, again sex industry advertising. Note that in most cases, the advertising is localized for Brazilian users, in Portuguese.

Unexpectedly, while users could just click the magnet link or download the torrent to obtain the material, a link to an image hosting service is also supplied (imgbox.com). This allows the user to verify that they will be downloading CEM. Yet it is at this stage that mainstream advertising once again (unwittingly) becomes linked to CEM: mainstream ads are placed on the pages where image previews are made available.

Thus, mainstream advertisers are being placed alongside CEM. Two particular examples merit a mention: ads for Nissan motor vehicles and Jockey underwear both were found on this preview page for CEM material. Mainstream advertisers would clearly not want their brands to be damaged in this way, yet the advertising networks and image hosting services have become unsuspecting players in the CEM ecosystem. The images displayed appear to have been produced by a US corporation which lists its WHOIS registration data as being in Russia. The lack of verification or validation of WHOIS registration data is a serious and ongoing impediment to cybercrime investigations, as much of it is fake (Watters et al, 2013b).

5 DISCUSSION

This report analysed piracy sites that are available to Brazilians, by simulating users searching for infringing content on either the most complained about sites (globally), or by searching using the country's official language on a local search engine. While the most complained about sites had primarily high risk advertising, of which a majority was promoting the sex industry, the local language sites had mainly mainstream ads, with nothing displayed from the sex industry. A key question which needs to be answered by further research is whether Brazilians tend to use global piracy sites, or prefer to search for pirated content in Portuguese on local sites. Given the significant amount of sex industry advertising on piracy sites, it is likely that this may become a pathway for young people to become exposed to CEM.

The manga sites in the most complained about category only had mainstream advertisers, including a range of technology companies, car manufacturers and not-for-profit organisations. Hopefully, the realisation that their advertising spending is facilitating access to CEM will ensure that such organisations pay closer attention to their marketing policies. This may be easier said than done: historically, advertisers simply leased ad space on a set of known websites, and when this approach didn't scale with the rise of internet advertising, advertising networks took over the role of bringing together advertisers and ad space. Yet, further complications have arisen over time: new entities, such as ad exchanges play a further intermediary role, allowing advertisers to purchase ad space targeted at quite specific demographics identified by behavioural profiles constructed by these exchanges. Ad networks, agencies and exchanges may be able to differentiate themselves in the marketplace by offering

guarantees that major brands will not appear alongside pornography, gambling, or indeed, be used to support the distribution of CEM.

In terms of policy responses, there are a number of options. From a harm minimisation perspective, given that the most complained about sites contain mostly high risk ads, approaches such as regulatory site blocking are likely to have an impact. A potential risk from this strategy is that users are pushed further towards the fringes of the internet, leaving them more exposed to advertising which may be even more harmful.

Another approach could be to have some sort of reporting mechanism through which the advertisers could be made aware that their ads are being placed on CEM sites, so that they could take direct action. As a result, their marketing teams would have to give a public explanation as well as identify the advertising networks who actually supply the ads. If the advertising networks withdrew from placing ads on these sites, then the sites would have no revenue to fund their illicit operations, and might be forced to close. This approach has been pioneered in the UK, where the City of London Police maintain a list of known illegal sites, known as the Infringing Website List (IWL), that advertising firms can use to ensure that advertising is not sent to those sites.¹⁶ It has resulted in a reduction of mainstream advertising on piracy sites when viewed by British users.

¹⁶ <http://www.bbc.com/news/technology-26788800>

6 CONCLUSION

This report points to ways in which piracy websites are being nurtured by revenues from both mainstream and high risk advertisements and how these same sites – which are known to be popular with children and young people – are thereby exposing the latter to materials which are likely to be extremely damaging to them as well as to adults who might likewise be exposed.

The Brazilian advertising industry has a major responsibility to act against local advertising networks which are placing ads on known piracy websites. If self-regulation is failing, then the Federal Government should step in.

In addition the brands themselves need to take more responsibility for ensuring that their advertising spend does not unintentionally

support sites which pose these type of threats to children and young people. How ironic that advertisers like Teach.org – setup to promote the teaching of young people – should be associated with a CEM title on a piracy site.

The difference between the types of advertising appearing on the most complained about sites and the sites which are most popular with Brazilians seems to suggest a disparity in the level of scrutiny and attention which ought to be addressed.

Bearing this in mind, could a system be established which regularly monitors the advertisements appearing on piracy websites in Brazil and provides timely advice both to the brands and to the advertising networks?

Exhibit DIDP A16

gTLD String: MUSIC

Applicant Entity Name: DotMusic Limited

Application ID#: 1-1115-14110

SPECIFICATION 11 PUBLIC INTEREST COMMITMENTS (“PIC”)

1. Registry Operator will use only ICANN accredited registrars that are party to the Registrar Accreditation Agreement approved by the ICANN Board of Directors on [date to be determined at time of contracting], 2013(or any subsequent form of Registrar Accreditation Agreement approved by the ICANN Board of Directors) in registering domain names. A list of such registrars shall be maintained by ICANN on ICANN’s website.

2. Registry Operator will operate the registry for the TLD in compliance with all commitments, statements of intent and business plans stated in the following sections of Registry Operator’s application to ICANN for the TLD, which commitments, statements of intent and business plans are hereby incorporated by reference into this Agreement. Registry Operator’s obligations pursuant to this paragraph shall be enforceable by ICANN and through the Public Interest Commitment Dispute Resolution Process established by ICANN ((posted at [url to be inserted when final procedure is adopted]), as it may be amended by ICANN from time to time, the “PICDRP”). Registry Operator shall comply with the PICDRP. Registry Operator agrees to implement and adhere to any remedies ICANN imposes (which may include any reasonable remedy, including for the avoidance of doubt, the termination of the Registry Agreement pursuant to Section 4.3(e) of the Registry Agreement) following a determination by any PICDRP panel and to be bound by any such determination.

ENUMERATED DOTMUSIC PUBLIC INTEREST COMMITMENTS

The DotMusic Public Interest Commitments (consistent with the principles, policies and safeguards set forth in DotMusic’s Application) are enumerated below. These are binding contractual commitments, responsive to the PIC Program that bind DotMusic, to the global music community and the public interest. These commitments can be enforced through the ICANN PICDRP. DotMusic affirms its commitment to run a responsible TLD under a community-based governance structure, consistent with the following commitments and obligations:

1. A commitment to serve the best interests of the global music community by enforcing the enhanced safeguards -- including enhanced copyright protection provisions recommended by the music industry -- to protect intellectual property and ensure that .MUSIC is launched in a safe, trusted and manner so that monies flow through legally-licensed .MUSIC sites and Community members as opposed to rogue unlicensed pirate sites or bad actors;
2. A commitment to authenticate .MUSIC registrants to increase trust, security and safety as explicitly stated in DotMusic’s Application;
3. A commitment to not discriminate against any legitimate members of the global music community by adhering to the DotMusic Eligibility policy of non-discrimination that restricts eligibility to Music Community members -- as explicitly stated in DotMusic’s Application -- that have an active, non-tangential relationship with the applied-for string and also have the requisite awareness of the music community they identify with as part of the registration process. This public interest commitment ensures the inclusion of the entire global music community that the string .MUSIC connotes;

4. A commitment that DotMusic Limited will incorporate policies that ensure .MUSIC is highly relevant to the string's subject-matter of music. DotMusic Limited commits to adhere to its Eligibility and Content and Use policies as explicitly stated in DotMusic's Application, which mandate that only legal music-related content can be posted on .MUSIC domains and that only legal music-related activities can be conducted in regards to the registrant usage of .MUSIC domains. DotMusic Limited commits to its Eligibility policy as explicitly stated in DotMusic's Application to exclude those with a passive, casual or peripheral association with the applied-for string;
5. A commitment that the string will be launched under a multi-stakeholder governance structure of representation that includes all music constituents represented by the string, irrespective of type, size or locale, including commercial, non-commercial and amateur constituents, as explicitly stated in DotMusic's Application.

As explicitly stated in its Application, DotMusic commits to:

- i. uphold its Community definition of a "logical alliance of communities of similar nature that relate to music" to incorporate all Music Community members;
 - ii. accredit eligible non-negligible music organizations of relevance without discrimination if they meet the Music Community Member Organization (MCMO) Accreditation criteria;
 - iii. to give members of MCMOs priority to register a .MUSIC domain during the MCMO Launch Phase to help launch .MUSIC responsibly and drive adoption;
 - iv. to allow all legitimate members of the Community as defined to register a .MUSIC domain;
 - v. maintain a rotating, global Advisory Committee ("Policy Advisory Board" "PAB") consisting of and representing all multi-stakeholder constituent types.
6. A commitment to align all Registration Policies (Eligibility; Naming Conditions; Content & Use; Enforcement Measures & Appeals Mechanisms) to its community-based purpose as explicitly stated in DotMusic's Application;
7. A commitment to enforce all Registration Policies with both proactive and reactive enforcement measures, including appropriate appeals mechanisms to fix compliance issues governed under the music-tailored .MUSIC Policy & Copyright Infringement Dispute Resolution Process ("MPCIDRP") as explicitly stated in DotMusic's Application. DotMusic commits that appeals mechanisms will also be administered by independent dispute resolution providers that includes, but is not limited to, the National Arbitration Forum ("NAF"); and
8. A commitment to introduce innovative services that would serve the best interests of the global music community, which may include Premium Channels (which organize all Community members according to their classification type) and a Song Music Licensing Registry (a comprehensive song database registry which will enable quick, simple and legal music licensing at a global scale) as explicitly stated in DotMusic's Application.

Disclaimer*

The following appendix is not part of the Public Interest Commitments (PIC) document. It is provided here at the request of the applicant as clarification to the information provided in the PIC. Unlike the commitments listed in the PIC, the information listed in this appendix would not be included in the Registry Agreement should this applicant be invited to contracting.

*Added 8 May 2015

Appendix: PIC Clarification

HOW THE PIC IS ALIGNED WITH DOTMUSIC'S .MUSIC APPLICATION AND WHY EACH COMMITMENT SERVES THE PUBLIC INTEREST AND MUSIC COMMUNITY

DotMusic Limited (.MUSIC™) is a Community Applicant with: music-tailored Registration Policies consistent with its articulated community-based purpose; enhanced safeguards that protect intellectual property and create a safe haven for legal music consumption and licensing; a multi-stakeholder governance structure representing all constituents connoted by the .MUSIC string, regardless of type, size or local and commercial, non-commercial or amateur status DotMusic's community-based Application will serve the public interest and the global Music Community by providing a safe, authenticated and trusted unique online identifier. (See Appendix A for the DotMusic's .MUSIC community-based Application's specifications).¹

Per the DotMusic Application:²

The .MUSIC mission and purpose is:

- *Creating a trusted, safe online haven for music consumption*
- *Establishing a safe home on the Internet for Music Community members regardless of locale or size*
- *Protecting intellectual property and fighting piracy*
- *Supporting musicians' welfare, rights & fair compensation*
- *Promoting music and the arts, cultural diversity and music education*
- *Following a multi-stakeholder approach of fair representation of all types of global music constituents, including a rotating regional advisory board working in the best interests of the Music Community*

The Music Community encompasses global reaching commercial and non-commercial stakeholders, and amateur stakeholders...

...DotMusic has been an accessible and transparently visible .MUSIC [community] applicant since 2008 communicating its intentions publicly at music events, online through its website and social media outreach, and through mainstream and non-mainstream media. The .MUSIC registration policies and protection mechanisms have been developed using a bottom-up, multi-stakeholder methodology with input from international Music Community members in both the commercial and non-commercial sector.

DotMusic serves the Community without conflicts of interest and is accountable to the Community by establishing a Music Community Advisory Committee with representation from each constituency in the Community. The Committee will advise and provide perspective on .MUSIC issues such as broad policy matters and introductions of new services to meet the Community needs...

...DotMusic has developed policies to protect intellectual property, fight piracy and ensure .MUSIC domains are allocated in fair methods so that music consumers and Internet users are assured the highest level of trust and authenticity when they visit a .MUSIC domain.

A Global Protected Marks List (GPML) will reserve all major music brands and established artists, such as RIAA-certified platinum-selling bands...

¹ DotMusic's community-based gTLD application specifications for applied-for string music, http://music.us/icann/DotMusic_Application_Specifications_Matrix.pdf

² <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadapplication/1392?t:ac=1392>

...Balanced domain registration restrictions and an inclusive, delineated Community definition ensures the entire Music Community can register .MUSIC domains, provides fairness in .MUSIC domain availability, offers a branding advantage, avoid conflicts of interest, anti-competitive concerns and anti-trust actions. (Application Answer to Question 20c)

.MUSIC relates to the Community by representing all constituents involved in music creation, production and distribution, including government culture agencies and arts councils and other complementor organizations involved in support activities that are aligned with the .MUSIC mission. (Application Answer to Question o 20d)

Globally Protected Marks List (GPML) will ensure major music brands and established artists, such as RIAA-certified platinum-selling bands, are protected not cybersquatted. These are reserved at all times. (Application Answer to Question 20d)

DotMusic understands the difficulties faced by the content industries to cope with changes created by the digital revolution. DotMusic's neutral multi-stakeholder governance of equal representation of all music constituents is based on gaining stakeholder consensus to enable the development of a domain Industry standard in .MUSIC that serves registrants and Internet users and assures that rightful entities can own and leverage their .MUSIC domain to eliminate cybersquatting and piracy issues, while building trust with consumers to ensure commercial activities are trusted and monies flow to the music community not pirates or unlicensed sites. (Application Answer to Question 18c iii)

Below, DotMusic provides detailed rationale how the DotMusic Application serves the global public interest as explicitly stated in DotMusic's Application. DotMusic commits to incorporate the following parts in its registry agreements as binding commitments to ensure DotMusic serves the global public interest and the global Music Community:

- A. Commitment of Community all-inclusiveness, non-discrimination and multi-stakeholder governance: The applied-for string (.MUSIC) will be governed under a multi-stakeholder model and will be restricted to only members of the Community (defined in the Application as “a strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music”) who have an active, non-tangential relationship with the applied-for string and the requisite awareness and recognition that they are a part of the defined Community.**

DotMusic commits not to exclude legitimate members of the global Music Community as defined in the Application -- “a strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music.” (Application Answer to Question 20a).

Per the DotMusic Application:

DotMusic will use clear, organized, consistent and interrelated criteria to demonstrate Community Establishment beyond reasonable doubt and incorporate safeguards in membership criteria “aligned with the community-based Purpose” and mitigate anti-trust and privacy concerns by protecting the Community of considerable size and extension while ensuring there is no material detriment to Community rights and their legitimate interests. Registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership” without discrimination, conflict of interest or

“likelihood of material detriment to the rights and legitimate interests” of the Community.
(Application Answer to Question 20a)

DotMusic’s community definition – a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music” (See Application, 20a) – matches the applied-for string because it represents the entire global music community and allows all constituents, including commercial, non-commercial and amateur stakeholders, to register a .MUSIC domain without any conflict of interests, over-reaching or discrimination. The community definition is all-encompassing and is aligned with Wikipedia’s “Music Community” definition (See Appendix I):

*Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants...and non-commercial participants. UNESCO identifies the music community as a “community of identity” implying common identifiable characteristics and cohesive attributes, such as sharing a music culture, norms and subscribing to common ideals related to music... defined....by common values, cohesive norms and interconnected structures to build a community identity ... The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity. It refers to music-related individuals and organizations in a shared environment with shared understandings and practices, modes of production and distribution. The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values...The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions between music creators, their value chain, distribution channel and fans subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial.*³

DotMusic has documented support from recognized community institution(s)/member organization(s) that collectively represent a majority of the overall community. The Community definition is a logical alliance of strictly delineated and organized communities of a similar nature relating to music. This defined Community and the expressions of support for the DotMusic Application represent a majority of the overall music community with a clear and straightforward membership. The requisite awareness of the community is clear: participation in the Community, the logical alliance of communities of similar nature related to music, -- a symbiotic, interconnected eco-system that functions because of the awareness and recognition of its members. The delineated community exists through its members participation within the logical alliance of communities related to music (the “Community” definition).

Music community members participate in a shared system of creation, distribution and promotion of music with common norms and communal behavior e.g. commonly-known and established norms in regards to how music entities perform, record, distribute, share and consume music, including a shared legal framework in a regulated sector governed by common copyright law under the Berne Convention, which was established and agreed upon by over 167 international governments⁴ with shared rules and communal regulations.⁵

³ Music Community. In *Wikipedia*. Retrieved November 26, 2014, from https://en.wikipedia.org/wiki/Music_community

⁴ http://www.wipo.int/treaties/en/ShowResults.jsp?lang=en&treaty_id=15

⁵ The Berne Convention for the Protection of Literary and Artistic Works, usually known as the Berne Convention, is an international agreement governing copyright, which was first accepted in Berne, Switzerland, in 1886 – See http://www.wipo.int/treaties/en/text.jsp?file_id=283698

The Community as defined in the DotMusic Application has at least one entity mainly dedicated to the entire global community. For example, the DotMusic Application includes an “international federation of national communities of a similar nature,” which relates to global governments and music culture covering all constituent types without discrimination. The International Federation of Arts Councils and Culture Agencies (IFACCA) is the only international federation that represents government culture agencies and councils globally.⁶ Their activities include events (world and mini summits, meetings, symposiums, forums, networking events etc.), ACORN (the Arts and Culture Online Readers News Service), research assistance, information exchange, organizing the WorldCP cultural database, and administering the most comprehensive international listing of news and contacts for arts councils and ministries of culture globally. IFACCA’s membership covers the majority of music entities globally, regardless whether they are commercial, non-commercial or amateurs. Music, as an art form, falls under the jurisdiction of each country’s Ministry of Culture governmental agency or arts/music council. IFACCA is the world’s only “global network of national arts funding agencies.” The degree of power and influence of government agencies with respect to music surpasses any organization type because collectively these are the agencies that: (i) provide the majority of funding for music-related activities globally; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.⁷

In fact, in addition to IFACCA there are several other entities that are mainly dedicated to the Community as defined by the Application. Another such organization that has supported the launch of a community-based .music top-level domain is the International Music Council (IMC) founded in 1949 by UNESCO. The IMC represents over 200 million music constituents from over 150 countries and over 1000 organizations.⁸

The applied-for string entirely matches and captures the name of the Community defined i.e. the string entirely represents all possible music community members under the Community definition.

The .MUSIC Community, as established and delineated in Question 20, represents the majority of the overall Community and ensures that its expressions of support cover a balanced, diverse and representative blend of Community stakeholders, including constituents representing over 70 governments culture agencies and/or arts councils, over 35 countries’ music information centers, music export offices, country-led music coalitions, digital distributors representing most of the music distributed on the leading legal music stores, music associations and organizations representing the interests of many Community members, and other entities. (Application Answer to Question 18c iii)

The process by which DotMusic has received its support is through its global communication outreach campaign. Pursuant to its Mission, DotMusic has been conducting extensive outreach to the Community since 2008 to brand itself and its mission to convey the benefits of .MUSIC and requesting Community support letters. Since 2008 DotMusic has led Music Community efforts to the ICANN community through dedicated participation at ICANN meetings and other DNS/new TLD related events. The Music Community Member Organization (mCMO) domain allocation method during the Landrush phase was created by DotMusic to allow Community members to register through established Community organizations. During the General Registration phase the TLD is open to all Community members for registration but also restricted by Eligibility, Use and other Policies, including enhanced safeguards.

⁶ http://www.ifacca.org/membership/current_members/

⁷ http://www.ifacca.org/strategic_partners/

⁸ <http://www.imc-cim.org/about-imc-separator/who-we-are.html>

DotMusic has been a strong Community supporter and participant as demonstrated in its ongoing efforts to build a sustainable TLD with policies dedicated to match the needs of the Community using a multistakeholder model, while ensuring it is implemented in a manner fulfilling DNS and ICANN technical, political and legal requirements.

DotMusic has publicly branded itself in an open, transparent and accessible manner through differentiated .MUSIC-related sites, social media, online marketing and through tens of thousands of web discussions/media mentions. Over 1,500,000 have signed the .MUSIC Initiative petition; over 5 million have liked/retweeted DotMusic in popular social media sites; and a significant number of leading mCMOs have signed support/interest letters as shown in response to this question. (Application Answer to Question 20f⁹)

DotMusic's process and rationale behind the expressions of support and the creation of its Registration Policies (Eligibility; Name Selection; Content and Use; Enforcement; and other Enhanced Safeguards) was established through DotMusic's ongoing, decade-long public community outreach campaign and interactions with the Community:

The .MUSIC mission and purpose has been established by interactions with Community members through numerous outreach activities and upon experiences gained in previous ICANN new gTLD launches. The mission/purpose is consistent with ICANN's Affirmation of Commitments (AoC) and Basic Principles of the International Music Registry (IMR - with participants including RIAA, IFPI, SCAPR, ACTRA, SAMRO, IRSC, ECAD, CIAM), including:

- *the "vital importance of transparency, openness and non-discrimination"¹⁰*
- *"ensuring accountability, transparency and the interests of global Internet users", "enhancing the operational stability, reliability, resiliency, security, and global interoperability of the DNS" and "promoting competition, consumer trust, and consumer choice" while "adequately addressing consumer protection, malicious abuse, and rights protection issues"¹¹ (Application Answer to Question 20c)*

A complete list of events relating to the ongoing outreach campaign can be found on www.music.us/events.htm. (Application Answer to Question 20b)

According to the Application, DotMusic will continue its outreach (See Appendix H for Global Outreach Music Community Communication Campaign and Events) to ensure community adoption of .MUSIC:

DotMusic will continue its active outreach and participation efforts in the Community and anticipates receipt of additional support letters from Community members throughout and beyond the ICANN TLD evaluation process. (Application Answer to Question 20b)

Registration Eligibility is restricted to members belonging to the Community as defined in the Application. Per the DotMusic Application Community definition, these Community members must belong to the "strictly delineated and organized...logical alliance...of "communities related to music." Community members of DotMusic-Accredited Music Community Member Organizations (MCMOs) will be given priority to register .MUSIC domains during the MCMO Launch Phase prior to General Registration to help drive industry adoption and ensure that rightful owners register their names (See Appendix B for current DotMusic's MCMOs).

⁹ <https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails/downloadattachment/140935?t:ac=1392> , Pg.3 and Pg.4

¹⁰ www.internationalmusicregistry.org/portal/en/basic_principles.html

¹¹ www.icann.org/en/about/agreements/aoc/affirmation-of-commitments-30sep09-en.htm

DOMAIN ALLOCATION, INDUSTRY STANDARDS & CONSUMER TRUST

DotMusic has incorporated enhanced safeguards, such as...MCMO domain allocation...a new methodology of assigning domain names to the rightful owners. (Application Answer to Question 20a)

The DotMusic Eligibility Registration Policy to restrict .MUSIC only to music Community members was made public by DotMusic in February 2011 in Billboard magazine, the recognized music industry trade publication:

Organizing the music industry on the web can only be accomplished by utilizing the root of the Internet Domain Name System (DNS). Not only does a .MUSIC Top-Level Domain bring consistency, organization and centralization, it also assures ownership and control still remains in the hands of the music industry.

.MUSIC is being launched as a community-based domain. This means that only members of the music community will be able to register the domain. [The] decision to launch .MUSIC as an exclusive, community-based domain was strategic and integral to ensuring that .MUSIC websites create a trusted Internet zone for music consumption. An example of a TLD that has enjoyed success using this approach is .EDU for education.

Verifying members has shown to increase trust, credibility and the sense of true community. The .MUSIC domain will be exclusive only to authentic music community members...By incorporating efficient registration policy-making and domain name authentication, monies will flow directly into the pockets of artists and the music community, not to pirates or unlicensed illegitimate websites.

By using this quality-driven strategy, as opposed to focusing on maximizing the quantity of total domain registrations, weaknesses become strengths and problems become solutions.

The .MUSIC domain will serve as a badge of trust, safety and credibility to the music consumer. By allowing only verified music community members to register their domain, .MUSIC will ensure it will be used in a safe and responsible manner. Confidential consumer data, security and stability are a priority. Stricter guidelines for registration will also help protect Internet users from malware, phishing or any other malicious behavior that can arise as well as increase trust.

The objective with .MUSIC was to connect a Top-Level Domain with a purpose-driven initiative that is committed in creating value for the music community and making a difference that matters for artists. The mission of the .MUSIC initiative is focused on the music community owning and controlling their home and brand on the Web in a transparent, accountable, trusted way, while experiencing the benefits of the .MUSIC network effect.¹²

To qualify as MCMOs, Music Community Member Organizations will require .music-accreditation from DotMusic (See Appendix C for .music Accreditation requirements and accreditation application form¹³). The MCMO criteria are consistent with ICANN Applicant Guidebook's criteria for Community

¹² Constantine Roussos, Billboard, How .music Will Save the Industry, <http://www.billboard.com/biz/articles/news/1179256/constantine-roussos-guest-post-how-music-will-save-the-industry>, February 15, 2011

¹³.music Accreditation Requirements for Music Community Member Organizations (MCMO), http://music.us/DotMusic_Music_Community_MCMO_Application.pdf, Section 2.0, Pg.2

Establishment.¹⁴ Community members can register a .music domain through an MCMO during the MCMO Launch Phase if the MCMO meets the Accreditation criteria:

1. *Clear delineation: The Community organization must have clear and straightforward membership and the requisite awareness and recognition from those members.*
2. *Organized: The Community organization must administer the community members and have membership rules (e.g. Terms of Service or Membership Code of Conduct).*
3. *Community organization must relate to music in a non-tangential or non-peripheral manner.*
4. *Membership aligns with the Nexus of the Community and the String, which is explicitly relevant to music. Any tangential or implicit associations with the Nexus of the Community and the String will not be regarded as delineated memberships since they would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships would not constitute a qualifying membership of an accredited MCMO and would be ineligible for registration.*
5. *Community organization activities are aligned with the .MUSIC Mission and Purpose.*
6. *Membership is of non-negligible size.*
7. *Membership geographic dispersion is either international or national (i.e. organizations with merely local memberships do not qualify).*
8. *Forward-looking longevity: Membership pursuits are of a lasting, non-transient nature (i.e. will continue to exist in the future).*
9. *Membership activities must be involved in the legal production and/or the distribution and/or the promotion of music (i.e. of the same nature).*
10. *The Community organization's functions must legally comply with the string's regulated sector in relation to copyright and clearly abide to the sector's clearly, delineated systems to ensure fair compensation and proper allocation of royalties to Community rights holders. (See MCMO Accreditation Requirements¹⁵)*

As stated in DotMusic's Application, the Community must have the requisite awareness and recognition from its members, who in turn must meet clear and straight-forward membership criteria with the Community.

.MUSIC relates to the Community by representing all constituents involved in music creation, production and distribution. (Application Answer to Question 20d)

The Community and the .MUSIC string share a core value system of artistic expression with diverse, niche subcultures and socio-economic interactions between music creators, their value chain, distribution channel, and ultimately engaging fans as well as other music constituents subscribing to common ideals. (Application Answer to Question 20d)

As mentioned in the Application, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).”

¹⁴ Applicant Guidebook, Community Establishment, <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>, Pg. 194-196 and CPE Final Guidelines, <http://newgtlds.icann.org/en/applicants/cpe/guidelines-27sep13-en.pdf>, Pg. 3-5

¹⁵ music Accreditation Requirements for Music Community Member Organizations (MCMO), [http://music.us/DotMusic Music Community MCMO Application.pdf](http://music.us/DotMusic%20Music%20Community%20MCMO%20Application.pdf), Section 2.0, Pg.2. If DotMusic determines that a MCMO applicant does not fulfill the MCMO Accreditation criteria then the MCMO applicant that was rejected eligibility can appeal the decision by filing a Music Community Member Organization (MCMO) Eligibility Reconsideration Request with the National Arbitration Forum Dispute Resolution Provider (See <http://domains.adrforum.com/resource.aspx?id=2190>, Pg.5)

The defined Community is delineated and organized because it operates in a regulated sector that uses numerous globally-recognized standards and classification systems, which identify who the individual songwriters, publishers and rights holders are and which songs they are associated with so that Community members are appropriately compensated, regardless whether the constituent is a commercial, non-commercial or amateur entity:

The “MUSIC” string is commonly used in classification systems such as ISMN,¹⁶ ISRC,¹⁷ ISWC,¹⁸ ISNI¹⁹. (Application Answer to Question 20a)

DotMusic has sorted the Community definition according to recognized criteria: existing classification systems that are used to clearly define and identify entity types. To ensure non-discrimination of music constituents and to guarantee that only music entities are automatically associated with the gTLD, DotMusic requires that the entity type is music-related with the requisite awareness of the symbiotic and interdependent nature of the Community consistent with the Community definition in DotMusic’s Application.

DotMusic expects that the substantial majority of all of its registrations will originate from the music entity type classified as “Musical groups and artists” (e.g. See North American Industrial Classification System (NAICS) code 711130²⁰ or the United Nations Industrial Classification (ISIC) code 9214²¹). All music constituent types that are associated with the string must have a relationship with “music” and have the requisite awareness of DotMusic’s defined Community to be part of the Community. In accordance with its articulated community-based purpose, DotMusic commits that all music constituent types are eligible for registration.

DotMusic has required all music entity types to be “music”-related. For example, all eligible entities delineated and organized under constituent types (using NAICS as a reference for clearly classifying

¹⁶ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and

http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

¹⁷ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

¹⁸ The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

¹⁹ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

²⁰ The equivalent code for the NAICS code for “Musical groups and artists” (See <http://unstats.un.org/unsd/cr/registry/regcssm.asp?Cl=230&Lg=1&Co=711130>) under the United Nations International Standard of Industrial Classification (ISIC) is “Musicians and musical groups” with code 9214, See <https://unstats.un.org/unsd/cr/registry/regso2.asp?Cl=17&Co=9214&Lg=1>

²¹ See <http://www.census.gov/econ/isp/sampler.php?naicscode=711130&naicslevel=6>. The corresponding code relating to music-related activities according to the United Nations International Standard Industrial Classification (ISIC) is 592 (“sound recording and music publishing activities”), See

http://unstats.un.org/unsd/publication/seriesM/seriesm_4rev4e.pdf Pg. 209 and

<http://unstats.un.org/unsd/cr/registry/regcs.asp?Cl=27&Co=592&Lg=1>. According to the United Nations, “NAICS does provides more comparability to ISIC” and “NAICS is more detailed and recognizes many more high-tech and service industries,” See <http://unstats.un.org/unsd/class/intercop/expertgroup/1998/ac63-10.pdf>, Pg.8

constituent types) must have an association with the gTLD and “music” with respect to their primary activity. This is because the string naturally identifies all entities involved in music. For example, the NAICS code for “lawyers” is 541110. According to DotMusic’s Application, .music is only restricted to the “music” Community and excludes any peripheral entities. DotMusic’s Application has added the word “music” next to the DotMusic-selected NAICS code to ensure that the eligible Community members are automatically associated with the string. In this example, eligibility is restricted to “*Music lawyers (541110)*” (See Application Answer to Question 20a below) i.e. general, non-music lawyers are prohibited from registration because they are peripheral entities not automatically associated with the gTLD.

This serves the public interest because it increases the music-focused relevancy of the string and ensures that registrants eligible under .music match and are automatically associated the .music applied-for string i.e. there is an alignment between the proposed string and DotMusic’s Community definition.²² This music-only eligibility is also in alignment with the Content & Use requirement that any content and usage must be music-only. This coherent set of restrictions serves the public interest because it is consistent with the string’s articulated community-based purpose tailored for music. According to the Application:

The Community served is defined as music stakeholders being structurally organized using pre-existing, strictly delineated classes and recognized criteria to clearly organize the Community classified by:

- *North American Industrial Classification System codes (NAICS²³) used by the Census Bureau and Federal statistical agencies as the classification standard for the purpose of collecting, analyzing, and publishing statistical data related to the U.S.*
- *United Nations International Standard Industrial Classification (ISIC) system²⁴ to “delineate according to what is the customary combination of activities”²⁵ such as those representing the Community.*

The Music Community is strictly delineated using established NAICS codes that align with the (i) characteristics of the globally recognized, organized Community, and (ii) .MUSIC global rotating multi-stakeholder Advisory Board model of fair representation, irrespective of locale, size or commercial/non-commercial status, organized with the following delineation (corresponding NAICS code in parenthesis):

- *Musical groups and artists (711130)*
- *Independent music artists, performers, arrangers & composers (711500)*
- *Music publishers (512230)*
- *Music recording industries (512290)*
- *Music recording & rehearsal studios (512240)*
- *Music distributors, promoters & record labels (512220)*
- *Music production companies & record producers (512210)*
- *Live musical producers (711130)*
- *Musical instrument manufacturers (339992)*
- *Musical instruments & supplies stores (451140)*
- *Music stores (451220)*
- *Music accountants (541211)*

²² Community Definition: A strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music (“MCMOs”). See Application Answer to Question 20a

²³ <http://www.census.gov/eos/www/naics>

²⁴ http://www.unstats.un.org/unsd/publication/seriesM/seriesm_4rev4e.pdf

 - Music & audio engineers (541330)
 - Music ticketing (561599)
 - Music recreation establishments (722410)
 - Music fans/clubs (813410)
- (Application Answer to Question 20a)

The defined Community -- the clearly delineated and organized logical alliance of communities related to music -- represents the entire global Music Community in terms of size, locale extension and type:

The Music Community encompasses global reaching commercial and non-commercial stakeholders, and amateur stakeholders. (Application Answer to Question 20c)

.MUSIC relates to the Community by representing all constituents involved in music creation, production and distribution... aligned with the .MUSIC mission. (Application Answer to Question 20d)

The Music Community's geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents. (Application Answer to Question 20a)

While the exact size of the global Music Community as defined is unknown (there is no evidence providing an exact, finite number because amateur entities are also included in the Community's definition), it is in the considerable millions as explicitly stated in the DotMusic Application. DotMusic's definition of the Community and mutually-inclusive Registration Policies ensure that eligible members are only music-related and associated with the string. This is because the string identifies all constituents involved in music. Music-only participation optimizes the relevancy of .music domains to the string and entirely matches the nexus

between the string and Community defined. The Community Definition, Eligibility Criteria and Content & Requirement ensure that peripheral industries and entities not related to music are excluded so that the string and the defined Community matches and aligns in a consistent manner per the Application's community-based purpose i.e. only entities with music-related activities are able to register .music domains.

While some music constituent types in DotMusic's definition and classification might comprise a minority in numbers (e.g. music lawyers) when compared to the primary and core constituent classification type (music groups and artists), the inclusion of every music constituent type is paramount to the purpose of the string. Every music constituent type critically contributes to the function and operation of the music sector within a regulated framework given the symbiotic overlapping nature of the Community as defined and structured. Music would not function as it does today without the participation of all music constituent types. The inclusion of all music constituent types serves the public interest because it ensures the Community matches the nexus of the string without discrimination, while excluding peripheral, casual entities with a tangential relationship with the Community defined who would not otherwise have any fundamental need for a .music domain given the string's articulated community-based purpose and the string's Content and Use requirements that mandate that usage only relates to music activities and licensed, legitimate music content.

As highlighted by the Council of Europe, it is imperative to serve the public interest by protecting the communities that are affiliated with the sensitive strings. This means not discriminating against Community members with legitimate interests to register a .music domain.

"Community" connotes a collection of people bound together by common practices, norms and interests.²⁶ UNESCO, a specialized agency of the United Nations, identifies "music" as a Community of Identity implying common identifiable characteristics such as having in common a culture such as music. Community of Identity "implies common identifiable characteristics or attributes such as having in common a culture. By culture we mean: language, music, religion and customs."²⁷

The string will include all music entity types as defined in the Application and will also be governed under a multi-stakeholder governance model of fair representation irrespective of type, size or locale. The .MUSIC Policy Advisory Board (PAB) will ensure the string is run in the best interests of the Community:

The rotating, global Advisory Committee will represent all Community stakeholder groups... The Committee will operate under Bylaws central to the .MUSIC Mission, Core Values, and commitment to serve the Community and public interest. (Application Answer to Question 20b)

The .MUSIC string is a public resource and should be shared by all global Music Community members. Any exclusion or discrimination against legitimate Music Community members would not serve the global public interest and be considered anti-competitive. DotMusic serves the global public interest by including the entire global Music Community without discrimination and ensuring that each type of global music constituent, regardless of size or locale, has a seat on table of the diverse multi-stakeholder model of .music governance which ensures fair representation. The incorporation of the Policy Advisory Board (PAB) also ensures continued accountability to the global public interest and the Community at-large, especially the string's sector. With respect to .MUSIC's governance structure and Community establishment, the Community structure is aligned with DotMusic's rotating, global Advisory Committee representing all multi-stakeholder constituent types.

The Community defined serves the public interest because it is pre-existing, is forward looking and is not a proposed community that was construed to favor a limited oligopoly of a select few music organizations (at

²⁶ Michael Urban, Getting By on the Blues: Music, Culture, and Community in a Transitional Russia, <http://onlinelibrary.wiley.com/doi/10.1111/0036-0341.00235/abstract>, 2002

²⁷ UNESCO, Understanding the Community, http://www.unesco.org/education/aladin/paldin/pdf/course01/unit_06.pdf, Pg. 3-5

the expense of a significant portion of legitimate community members that would be excluded even if they are associated with the string) or construed to obtain a sought-after generic word as a gTLD.

According to the Application:

The Community has bought, sold, and bartered music for as long (“LONGEVITY”) as it has been made (R. Burnett, International Music Industry, 1996 and P. Gronow, International History of the Recording Industry, 1998). The Community is a delineated network where production and distribution of music occur in a process relying on labor division and technology. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial (M. Talbot, Business of Music, 2002). The foundation for the structured and strictly delineated Community only resulted from the interplay between the growing music publishing business and an emerging public music concert culture in the 18th century. (Application Answer to Question 20a).

Some pre-existing examples of community members include Breitkopf & Härtel, the world’s oldest publishing house founded in 1719²⁸ and Zildjian, the world’s oldest music company founded in 1623.²⁹

The clearly delineated and organized logical alliance of communities related to music will continue to grow over time, especially in developing regions which are under-represented and are forecasted to have the highest growth rate in the music sector given the increasing number of Internet users from that region and a proliferation of new legal online music services which are highly limited in those regions (There are only over 450 recognized legal music services online, the majority of which is offered in developed nations³⁰). According to the IFPI 2014 Digital Music Report:

*New services with big global ambitions are launching, such as Beats and iTunes Radio — services that we hope will soon spread around the world. Meanwhile, the existing international services, such as Deezer, Google Play, iTunes, Spotify and YouTube are generating income in many new markets following their global expansion. The competition is intense and consumer choice is ever-widening — these are very positive dynamics in the development of the digital music landscape...The music industry has become a mixed economy of diverse consumer channels and revenue streams. This has been an amazing transformation, dramatically expanding the way artists reach their fans across the globe... Digital music, on a global scale, is going to the next level. Emerging markets have huge potential, and, through digital, the music business is moving to unlock it. Most of these territories are seeing internet and mobile music penetration soaring, with rising demand for handheld devices. The great news is that a wide variety of licensed music services are available to meet this demand. Emerging music markets also need new ways of thinking in the digital world, particularly in countries with undeveloped payment systems and low credit card usage... None of these exciting developments changes the fact that there is still one overriding obstacle to market development in most emerging markets — and that is rampant digital piracy... Our focus on creating a fair playing field, supported by strong laws and effective enforcement, remains undiminished.*³¹

The definition of the Community and the policies for the applied-for string match the composition and needs of the global Music Community. All components of the Application’s Community Definition, Delineation and Registration Policies are not mutually exclusive. They must all be met to ensure eligibility and a successful .music domain registration.

²⁸ <http://www.breitkopf.com/news/start>

²⁹ <http://zildjian.com/About/History/Background>

³⁰ <http://www.ifpi.org/downloads/Digital-Music-Report-2014.pdf>, Pg. 44

³¹ <http://www.ifpi.org/downloads/Digital-Music-Report-2014.pdf>, Pg. 5

The .MUSIC string is restricted to only music Community members with the requisite awareness of the Community as explicitly stated in DotMusic's Application. DotMusic's policies serve the public interest by enabling and fostering the same intense competition and choice that exists in the music sector while leveling the playing field and accommodating new markets and the opportunity for global music growth. By including all types of legitimate music members, DotMusic will ensure that its policies are aligned with its Mission and would serve the global public interest.

- B. Commitment to Enhanced Safeguards protect intellectual property, fight piracy and exclude bad actors and non-music related entities with a tangential relationship with the Community to prevent registration abuse and misuse. These Enhanced Safeguards will reinforce trust under an authenticated top-level domain identifier; enable Community adoption of an Industry Standard for official music websites; increase credible music-related relevancy and quality control under .MUSIC domains to outrank pirated sites in search engine result pages; and to protect Intellectual Property ("IP") by creating a safe haven for legal music consumption and licensing under the .music gTLD ensuring monies flow through legally-licensed .MUSIC sites and Community members not rogue unlicensed pirate sites or bad actors.**

.MUSIC is a string that relates to a highly regulated sector pertaining to copyright and intellectual property regulated by government. The global Music Community is highly reliant on the Domain Name System (DNS) for the core of its activities including monetization, marketing and distribution. The global Music Community continues to experience significant economic harm from mass copyright infringement from pirate sites and networks. In addition, the global Music Community is vulnerable to malicious abuse from cybersquatters, impersonators and bad actors given the popularity of music. This is why entities with a casual, tangential relationship with music (i.e. without the requisite awareness of belonging to the Community) or those entities belonging to pirate networks or unlicensed networks are entirely excluded from the Music Community definition. According to NetNames, the cost of digitally pirated music and other Internet-distributed media is \$75 billion per year. 432 million internet users regularly pirate content and consume 24% of all Internet bandwidth across North America, Europe by infringing digital content. In fact 98% of data transferred using Peer-to-Peer (P2P) networks is copyrighted.³²

According to the European Commission, the digital distribution of music has resulted in a significant decline in the income of songwriters and recording artists.³³ According to the IFPI's 2013 Digital Music Report, the availability of digital distribution channels has made it easy to distribute music on a mass scale without obtaining a license.³⁴ DMCA takedown procedures are ineffective in combating illegal distribution. Although the physical marketplace continues to be displaced by the digital marketplace, the digital marketplace has not reached a level of economic maturity sufficient to provide songwriters and recording artists with an income comparable to that earned when physical distribution was the norm.³⁵ According to the RIAA:

As several of the creative content and IP industries have stated³⁶ the notice and takedown system of the DMCA for today's Internet is simply antiquated, deficient, ineffective and, as judicially interpreted,³⁷ so weakened that it no longer strikes the careful balance sought by Congress. As evidenced by data in various filings and studies, the current system is resource intensive, doesn't result in meaningful protection, doesn't keep down infringing material in any meaningful respect, and has resulted in unintended consequences.³⁸ To reiterate, locking both creators and intermediaries into an old, ineffective system creates inefficiencies, squelches innovation and stunts the growth of new Internet services that consumers demand, while also limiting the ability to properly address the potential abuse that the current system may inadvertently incentivize.³⁹

Today many cybercriminals are using domain names to conduct malicious activities by registering them under phony information to remain anonymous or under a trustworthy name to appear to be legitimate with the intention of exploiting the name in bad faith by confusing Internet users.

DotMusic is the only .music Applicant that fulfills and exceeds the Enhanced Safeguards⁴⁰ that were endorsed by the following music organizations:⁴¹

- American Association for Independent Music (A2IM)
- American Federation of Musicians (AFM)
- American Society of Composers, Authors and Publishers (ASCAP)
- Broadcast Music, Inc. (BMI)
- Recording Industry Association of America (RIAA)
- International Confederation of Music Publishers (ICMP)
- International Confederation of Societies of Authors and Composers (CISAC)
- International Federation of the Phonographic Industry (IFPI)
- National Music Publishers' Association (NMPA)
- SESAC

³⁶ See comments submitted by A2IM, ASCAP, BMI, NMPA, RIAA and SGA, <http://www.ntia.doc.gov/federal-register-notice/2013/comments-received-department-commerce-green-paper-11132013>, 2013

³⁷ See *UMG Recordings, Inc. v. Veoh Networks Inc.*, 665 F. Supp. 2d 1099 (2009), *UMG Recordings, Inc. v. Shelter Capital Partners LLC*, 667 F.3d 1022 (9th Cir. 2011); *Capitol Records, Inc. v. MP3Tunes, LLC*, 611 F. Supp. 2d 342 (SDNY 2009). *Viacom, Inc. v. YouTube, Inc.*, 718 F. Supp. 2d 514 (SDNY. 2010), *aff'd in part, rev'd in part, and remanded*, 676 F.3d 19 (2d Cir. 2012), reaffirmed, 107 USPQ 2d BNA 1157 (SDNY. 2013), currently on appeal to the Second Circuit, is another example of misinterpretation of the statute, although that decision was reversed in part on appeal. ⁴⁰ http://www.onlineaccountability.net/pdf/2012_Mar06_EnhancedSafeguards.PDF

⁴¹ http://www.onlineaccountability.net/pdf/2012_Aug09_Enhanced_Safeguards_Endorsing_Organizations.PDF

These Enhanced Safeguards include:

- Mandatory two-step authentication for all members, encompassing personal validation via phone and email
- MCMO Launch Phase Domain Allocation: During this phase, a .MUSIC registration is only valid if registrants are verified members of .music accredited Music Community Member Organizations (MCMOs)
- Acceptable Use Policy (AUP) certification by registrants that .music will be used only for licensed, legitimate activities, and not to facilitate piracy or counterfeiting
- Proactive auditing with appropriate remediation steps should follow when violations are detected.
- Prompt, accessible mechanisms for right holder complaints via the DotMusic's .MUSIC Policy & Copyright Infringement Dispute Resolution Process ("MPCIDRP") that the AUP is being violated or that piracy, counterfeiting or other abuses are being enabled. Complaints trigger an expeditious investigation, with prompt notice to registrants, a reasonable opportunity for them to respond and swift corrective action when violations are found.
- Predictable consequences for registrants who violate AUP certification, allow infringing activities, falsify registrant contact data, etc. Potential consequences include cancellation of the registered domain where the abuse occurs; possible cancellation of other domains registered by same or affiliated parties; and bar on future registrations by same or affiliated registrant, in the case of serial offenders.
- Seats at the table for right holders as registry policies reflecting these safeguards are further developed, implemented, and enforced. DotMusic incorporates a music community multi-stakeholder governance model with a Policy Advisory Board Committee for all music constituent types
- Capability and commitment to implement Enhanced Safeguards effectively

DotMusic's Mission is to create an Industry Standard for trusted and authenticated official music sites under the verified .music signal post restricted to the global Music Community. According to the Application:

Music Community members need to be able to distinguish themselves from illegal and right infringing websites, a critical factor for the Music Community to ensure that monies flow to the right holders. (Application Answer to Question 20c)

Even the U.S Supreme Court, in discussing the intent of the U.S. Copyright Clause, stated that "*evidence from the founding... suggests that inducing dissemination was viewed as an appropriate means to promote science*"⁴² which highlights how a trusted and authenticated .MUSIC used to distribute legitimate music content can serve the public interest.

To eliminate abuse by bad actors who engage in intellectual property infringement, fraud and deception (while, in parallel, preventing any registrations from casual entities with tangential relationships with music), DotMusic is has incorporated music-tailored Enhanced Safeguards in its Registration Policies that exceed what is considered standard for gTLDs and what is required by ICANN:

DotMusic has incorporated enhanced policies to ensure only eligible members of the Music Community who comply with the values, purpose and mission of the TLD can participate; to ensure domains are used in a manner benefiting the Community; to protect intellectual property; and to safeguard domains from malicious conduct and copyright infringement.

⁴² *Golan v. Holder*, 609 F. 3d 1076, 21. <http://www.supremecourt.gov/opinions/11pdf/10-545.pdf> P.3

The policies are built to match Music Community needs, based on years of feedback from Music Community members and on experience from the previous ICANN new gTLD introductions, as well as established to ensure a higher level of security for .MUSIC than what is considered standard for gTLDs. (Application Answer to Question 20e)

These Enhanced Policies include:

- i. **Eligibility:** Only members of the Community can register a .music domain and must have a clear membership with the defined Community.

As explicitly stated in DotMusic's Application, all members of the Community must have a clear membership and the requisite awareness and recognition of the Community they belong to since they have taken pro-active affirmative action to be part of the Community defined (i.e. they opted-in the Community in a formal, straight-forward manner). These eligibility policies ensure that casual entities with a tangential relationship with music and pirates are excluded since they compromise the Purpose of the applied-for string and would not otherwise have a legitimate claim or reason to register a .music especially given the growing number of other alternative, non-restrictive TLD options they can choose from.

If a member is determined not to be a member of the Community then the registrant would be violating DotMusic's Eligibility criteria resulting in the suspension of the registered .music domain. The registrant can appeal the suspension and be given reasonable time to fix their incompliance:

"If a Registrant is found out of compliance with any of the .MUSIC Policies the registrant will be notified that the domain will be placed on registry lock. The registrant will have a reasonable time period to fix the compliance matter or the domain will be terminated."(Application Answer to Question 20e)

The string will be launched according to different priority-based phases to ensure fairness of allocation, to ensure that famous music brands (and those entities with verifiable music-related trademarks) are protected and to drive industry adoption and awareness.

These phases were designed to ensure that allocation was done in a fair, responsible and organized manner. According to the Application:

SUNRISE LAUNCH W/ TRADEMARK VALIDATION

This is the first phase of .MUSIC domain registration. It is a phase designed to protect trademarks in the roll-out of .MUSIC. The Sunrise is the time when regional, national and international trademark and service mark holders can apply for .MUSIC domains. The eligibility requirements will be verified, and multiple registration applications for the same string will be auctioned, except for GPML entries that supersede any other sunrise registration applications. The Sunrise Challenge Process solves disputes concerning domains registered under the Sunrise Policy.

MUSIC COMMUNITY MEMBER ORGANIZATION (MCMO) LANDRUSH LAUNCH

This is the second phase of .MUSIC domain registration. It is a limited-time period reserved for members of DotMusic-accredited music Community Member Organizations (mCMO). Unique registrations will be granted to the sole registrant and delegated at the close of the time period; multiple registration requests for the same string will go through an auction.

LANDRUSH LAUNCH

This is the third phase of .MUSIC domain registration; a limited- time period. Unique registrations will be granted to the registrant; multiple registration requests for the same domain will go through an auction. Landrush is designed for members of the Music Community that want to secure premium .MUSIC domains giving members the chance to register their preferred .MUSIC domains; multiple registration requests for the same domain will go through an auction.

GENERAL AVAILABILITY

This is the fourth and final phase of registration of .MUSIC domains. .MUSIC registrations will now be available to Music Community members on a first come, first served basis. (Application Answer to Question 20e)

The first phase, called the Sunrise Launch, is reserved for those music brands that are listed under the DotMusic Globally Protected Marks List⁴³ (GPML) and those entities with valid music trademarks. If there are multiple requests for entities with valid music trademarks then these will be resolved by auction. GPML registration supersedes any valid music trademark the trademark is owned by the legitimate owner of the famous name in the GPML. This policy was adopted to prevent 3rd-parties from manipulating the trademark allocation method to register a famous music name without being the legitimate owner of the famous brand name (See Appendix D for GPML).

The second registration period is called the MCMO Landrush Launch for music Community members belonging to .music-accredited⁴⁴ Music Community Member Organizations. All major digital retailers, such as Apple iTunes, have thousands of artist names which conflict because they are identical or confusingly similar (See Appendix E for artist naming conflict examples of identical or confusingly similar artists who share the same artist name according to music data aggregator MusicBrainz). For example, there are over 10 artists called Bliss globally distributed on major digital retailers. On the same token there are over 10 artists called Rain globally who are distributed on digital music retailers or music streaming services. This is also confirmed by Rovi, a company which manages music artist metadata databases for some of the world's largest digital music retailers (such as Apple iTunes) and popular music apps (such as Shazam). According to the Wall Street Journal:

The last decade's digital revolution not only transformed the way people listen to music, it changed the way bands establish identities. In the past, identically named acts often carved out livings in separate regions, oblivious or indifferent to one another. Now, it takes only moments for a musician to create an online profile and upload songs, which can potentially reach listeners around the world.”

“There are about 1.4 million artist names, including 29 individual musicians named John Williams, in the database of Rovi Corp, which owns Web sites including AllMusic.com and licenses editorial content to Apple's iTunes and other music services. Last year, Rovi added an average of 6,521 new names a month to its database. And the repeats are piling up. Eighteen acts, past and present, laid claim to the most common name in Rovi's files: Bliss.

⁴³ DotMusic's Globally Protected Marks List, <http://music.us/icann/GPML.pdf>

⁴⁴ music Accreditation Requirements for Music Community Member Organizations (MCMO), [http://music.us/DotMusic Music Community MCMO Application.pdf](http://music.us/DotMusic_Music_Community_MCMO_Application.pdf) , Section 2.0, Pg.2

*Next up: Mirage and One, with 15 iterations each, followed by Gemini, Legacy, Paradox and Rain.*⁴⁵

There are also cases of popular artists involved in disputes over their names, including famous bands such as Bush⁴⁶ and One Direction. According to the Hollywood Reporter:

*With only so many great band names out there, the history of pop music is replete with disputes: Dinosaur vs. Dinosaur Jr., Death from Above vs. Death from Above 1979, Galaxie 500 vs. Galaxie. In some instances, bands simply agree to change their name. For instance, Pink Floyd was originally called The Tea Set before finding out about a band with the same name. Same goes for The Grateful Dead, originally called The Warlocks, or The Chemical Brothers, originally called The Dust Brothers. Other times, bands have been forced to add prefixes or suffixes to make a distinction to an existing band: See The Charlatans UK, The English Beat or Wham UK.*⁴⁷

To enhance fairness, equal opportunity for registration and to serve the public interest, multiple registration requests for the same name made by different entities during the MCMO Launch Phase will be resolved by auction.

Because the string identifies all music constituents – commercial, non-commercial and amateurs – many will not have a verifiable membership with a community organization. The Landrush Launch phase will enable all the remaining global music community entities not belonging to a verifiable community organization to register a .music domain. Just like in the MCMO Landrush phase multiple registration requests for the same name will be resolved through auctions.

The last phase, General Availability, will make .music domains available to the entire global music community as defined on a first-come, first-serve basis, regardless whether community members belong to a community organization or not, just as long as they can identify the community they belong to which is consistent with the definition of the Community: “the strictly delineation and organized logical alliance of communities related to music.” All Community members are aware of and recognize their inclusion in the defined Community because of their active participation in this clearly defined Community. This ensures inclusion of the entire global community the string represents and exclusion of unrelated-entities not associated with the music string. This way there is a clear alignment between the string .MUSIC and the Community defined.

Furthermore, beyond identifying what community they belong to, all global Music Community members must authenticate themselves through a two-step email and phone validation process to ensure accountability, safety and quality control:

REGISTRY DATA VALIDATION

While DotMusic will hold the thick WHOIS data provided through registrars, we will also validate elements of the received WHOIS data:

- 1) The registrant’s email address through validation links*
- 2) The registrant’s phone number through validated PIN-codes*

⁴⁵ Wall Street Journal, From ABBA to ZZ Top, All the Good Band Names Are Taken. Internet Age Raises Stakes for Being First, <http://online.wsj.com/news/articles/SB20001424052748703357104575045584007339958>, February 17, 2010

⁴⁶ http://exclaim.ca/MusicSchool/NeedToKnow/how_to_understand_naming_issues

⁴⁷ <http://www.hollywoodreporter.com/thr-esq/simon-cowells-record-label-sued-310179>

Upon successful completion of these two steps, DotMusic will provide the registrant their Music Community membership details; used to join/access the Premium Channels. (Application Answer to Question 20e)

This is the same two-factor authentication process conducted by many popular banks to ensure safety and to prevent fraudsters and impersonators from malicious conduct or illegitimate activity.

DotMusic is the only .music Applicant that uses this mandatory two-step factor authentication method tied to the Name Selection and the Content and Use policies and the .music Eligibility process. This authentication methodology describes the verification process DotMusic will use to determine that community members are who they say they are and are validated. The importance of MCMOs and the two-step validation process is rooted in the community-based purpose of ensuring .music is a trusted, music-related TLD that is restricted to community members, who have fulfilled all Eligibility, Name Selection and Content and Use criteria and have passed identity verifications to eliminate abuse and fraud. This is to serve the public interest and to ensure .music will be used in a manner that is aligned with .music’s articulated community-based purpose. Each MCMO will be given access to the database of registrants that have been verified in association with their membership with them. If an MCMO does not acknowledge a registrant as a verified member then the registrant will be in compliance with the Registration Policies and will be given opportunity to appeal and “fix” their in compliance or else their registration would be terminated:

If a Registrant is found out of compliance with any of the .MUSIC Policies the registrant will be notified that the domain will be placed on registry lock. The registrant will have a reasonable time period to fix the compliance matter or the domain will be terminated. (Application Answer to Question 20e)

- ii. Name Selection: To prevent cybersquatting, impersonation and bad actors from registering a Music Community member’s name, DotMusic requires that a registrant follows naming conditions which only allows members to register domains with their name (or part thereof) or acronym or “Doing Business As” or description recognizing them. According to the Application:

Names Selection Policy – to ensure only music-related names are registered as domains under .MUSIC, with the following restrictions:

- 1) A name of (entire or portion of) the musician, band, company, organization, e.g. the registrants “doing business as” name*
- 2) An acronym representing the registrant*
- 3) A name that recognizes or generally describes the registrant, or*
- 4) A name related to the mission or activities of the registrant (Application Answer to Question 20e)*

Furthermore, DotMusic’s Policies state that a registrant can:

“not register a domain containing an established music brand’s name in bad faith that might be deemed confusing to Internet users and the Music Community” (Application Answer to Question 20e)

Also DotMusic’s Policies reiterate that the:

“Globally Protected Marks List (GPML) will ensure major music brands and established artists, such as RIAA-certified platinum-selling bands, are protected not cybersquatted. These are reserved at all times.” (Application Answer to Question 20e)

The Name Selection policy was developed to prevent registration of domain names by 3rd parties that have no rights to the names registered. In conjunction the Globally Protected Marks List, the naming conditions will protect famous music brands from cybersquatting while reducing the loopholes that allow music fan registration of famous music artist names if they do not use them in bad faith.⁴⁸

- iii. **Content & Use:** To keep content relevant, ensure higher quality content and prevent registrants from engaging in unrelated activities on .music domains, DotMusic requires that registrants engage in only music-related activities in relation to the Use of the .music domain. Furthermore, to prevent unrelated content, DotMusic requires that registrants only post music-related content:

The .MUSIC Use policy, enhanced safeguards and Premium Channels will benefit registrants, IP rights holders and their music-related content and will help them achieve higher search engine rankings that would replace fraudulent sites that provide free or otherwise illegal music. As a result musicians, creators and other rights holders will enjoy more visibility and an additional income stream that otherwise was provided to illegal sites. This way .MUSIC can reduce the costs and expenses imposed upon the Music Community to fight piracy. (Answer 18c)

.MUSIC will effectively differentiate itself by addressing the key online usage issues of safety, trust, consistency, brand recognition as well as communicate a website's content subject-matter: music-related content. (Answer 20c)

Directly communicating that the content is music-related and representing the Community in a positive and beneficial manner consistent with the .MUSIC Purpose and Use policy (Application Answer to Question 20d)

Creating music-related intangible inputs that add economic and social value. Connecting music-related content in a meaningful and organized manner that will benefit both the Community and Internet users. (Answer 20d)

Use only for music-related activities (Application Answer to Question 20e)

Content and Use policies, in conjunction with the registrant authentication, Eligibility and Name Selection policies, will also help increase the search ranking of .MUSIC domains. According to Google, its search engine will highly weigh trust, security and high quality content (i.e. content that is considered relevant, safe and legitimate) as ranking signals for its search engine results.⁴⁹

Parking pages are also prohibited because they provide a low level of engagement with users and are treated by search engines as low quality sites which never appear in the top of search engine results for popular terms:

⁴⁸ There are UDRP domain name dispute cases that music fans have prevailed over famous music artists These include UDRP cases ruling against Lady Gaga (LadyGaga.org, See <http://domains.adrforum.com/domains/decisions/1403808.htm>), Van Halen (EdwardVanHalen.com, See <http://www.wipo.int/amc/en/domains/decisions/html/2000/d2000-1313.html>), Bruce Springsteen (BruceSpringsteen.com, See <http://www.wipo.int/amc/en/domains/decisions/html/2000/d2000-1532.html>) and Tupac Shakur (Tupac.com, See <http://www.disputes.org/decisions/0348.htm>).

⁴⁹ See Google, <http://insidesearch.blogspot.com/2012/08/an-update-to-our-search-algorithms.html> and <http://googlewebmastercentral.blogspot.com/2014/08/https-as-ranking-signal.html>

PARKING PAGES: DotMusic will prohibit the use of parked pages. .MUSIC sites will be subject to the content and use restrictions described in response to question 18b and question 20e. Parked sites can only be used as temporary pages assigned to a domain at the time of registration and stay in place until the registrant has a website developed and ready to go live in a reasonable time period (Application Answer to Question 18c iii)

Furthermore, DotMusic requires that the music content on .music sites is licensed or owned by the registrant.

Respect the intellectual property rights of others by posting or submitting only content that is owned, licensed, or otherwise have the right to post or submit. (Application Answer to Question 20e)

Any .music domain name which is challenged by 3rd-parties to have unlicensed content will be locked temporarily and then terminated if the registrant does not appeal the challenge with the Registry and fix the compliance matter. The registrant can appeal the 3rd-party challenge to fix the compliance matter if the registrant believes they are in compliance and not violating any copyright violation. Any repeat offenders will be subject to an indefinite ban from registration:

If a Registrant is found out of compliance with any of the .MUSIC Policies the registrant will be notified that the domain will be placed on registry lock. The registrant will have a reasonable time period to fix the compliance matter or the domain will be terminated. Repeat offenders will be placed on a special monitoring list that DotMusic staff will conduct additional compliance checks against. DotMusic holds the right to prohibit repeat offenders from registering .MUSIC domains for a period of time or indefinitely. (Application Answer to Question 20e)

The following Content and Use requirements apply:

- *Use only for music-related activities*
- *Comply with applicable laws and regulations and not participate in, facilitate, or further illegal activities*
- *Do not post or submit content that is illegal, threatening, abusive, harassing, defamatory, libelous, deceptive, fraudulent, invasive of another's privacy, or tortious*
- *Respect the intellectual property rights of others by posting or submitting only content that is owned, licensed, or otherwise have the right to post or submit*
- *Immediately notify us if there is a security breach, other member incompliance or illegal activity on .MUSIC sites*
- *Do not register a domain containing an established music brand's name in bad faith that might be deemed confusing to Internet users and the Music Community*
- *Do not use any automated process to access or use the .MUSIC sites or any process, whether automated or manual, to capture data or content from any service for any reason*
- *Do not use any service or any process to damage, disable, impair, or otherwise attack .MUSIC sites or the networks connected to .MUSIC sites (Application Answer to Question 20e)*

If there is a non-spurious and reasonable allegation/notification of Content/Use policy incompliance, then DotMusic places the domain in lockdown/takedown mode. If the registrant does not fix the compliance matter in a reasonable time then the domain is terminated. Repeat offenders will be blacklisted. Also, this

enforcement applies to other policies as well, such as Eligibility, Name Selection, the music Globally Protected Marks List, Parking Pages and other restrictions DotMusic has to serve the global music community and public interest in a meaningful and music-tailored manner. These Content & Use policies will provide a better quality and safer user experience and are in alignment with DotMusic’s Mission to ensure that .music will be a trusted domain. These policies also safeguard the Community since they (i) prevent domain hopping; (ii) take down mass copyright infringers; (iii) confirm that the poster of music content has the expressed authorization to post music-related content; (iv) place permanent blocks on domains registered by blacklisted mass copyright infringers; strengthen copyright and trademark enforcement by facilitating complaint submissions from trusted senders; promote transparency by including the true name and address of operator if domain makes available any music owned or posted by a third party, while also preventing the abuse of privacy and proxy services to conduct illegal activities.

According to the DotMusic Application, the “.MUSIC Mission and Purpose is creating a trusted, safe online haven for music consumption” and “protecting intellectual property and fighting piracy.” The TLD will be exclusive to the Community and “will incorporate enhanced safeguards and Use policies to protect creators, intellectual property and rights holders.”

DotMusic has developed “policies to protect intellectual property, fight piracy and ensure .MUSIC domains are allocated using fair methods so that music consumers and Internet users are assured the highest level of trust and authenticity when they visit a .MUSIC domain.”

“A Global Protected Marks List (GPML) will reserve all major music brands and established artists, such as RIAA-certified platinum-selling bands. The music-themed domain is built with usage polices that will enable taking down infringing sites, protecting trademarks and help the exploitation of copyrights by providing a safe haven for legal music distribution, consumption and licensing.” (See Application Answer to Question 18).

“DotMusic will review all policies and processes on a regular basis with involvement from the .MUSIC Advisory Committee⁵⁰ [PAB].” (See Application Answer to Question 20).

DotMusic has a Content and Use registration policy agreement focused on protecting copyright “tailored to solve issues currently related to intellectual property infringement. Registrants that do not accept and abide by the registration agreement are disqualified from domain registrations.” Registrants must:

- i. “Respect the intellectual property rights of others by posting or submitting only content that is owned, licensed, or otherwise have the right to post or submit.”
- ii. “Immediately notify [DotMusic] if there is a security breach, other member incompliance or illegal activity on .MUSIC sites;”
- iii. “Do not register a domain containing an established music brand’s name in bad faith that might be deemed confusing to Internet users and the Music Community.” (See Application Answer to Question 20).

“Any allegation that a domain is not used for legitimate music purposes or otherwise infringes on the .MUSIC Policies shall be enforced under the provisions of the .MUSIC Policy & Copyright Infringement Dispute Resolution Process (“MPCIDRP”). If a Registrant is found out of compliance with any of the .MUSIC Policies the registrant will be notified that the domain will be placed on registry lock. The registrant will have a reasonable time period to fix the compliance matter or the domain will be terminated.”

⁵⁰ DotMusic will be launched under a community-based, multi-stakeholder governance structure of fair representation encompassing all music constituent types.

Repeat offenders will be placed on a special monitoring list. DotMusic holds the right to prohibit repeat offenders from registering .MUSIC domains.”

“DotMusic reserves the right to deny, cancel or transfer any registration that it deems necessary, in its discretion, to protect the integrity and stability of the registry... DotMusic reserves the right to freeze a domain during resolution of a dispute. DotMusic reserves the right to terminate a domain for failure by the registrant to demonstrate it meets .MUSIC policies.” (See Application Answer to Question 20).

A global music community coalition led by the RIAA “on behalf of over 15 national and international trade associations” -- who “represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world’s music”⁵¹ -- expressed its support for .MUSIC to be under a “community” application model, including encouraging statements in support of DotMusic’s policies that stated that the coalition “was encouraged to see” that DotMusic “included several measures to deter and address copyright infringement within that TLD.”⁵² DotMusic has incorporated all RIAA-recommended copyright protection provisions in its policies that are subject to the Music Policy & Copyright Infringement Dispute Resolution Process (“MPCIDRP”) in the case of disputes. These enhanced safeguard provisions to protection copyright and intellectual property to protect the global music community and serve the global public interest by instilling consumer trust and safety include:

Stopping Domain Hopping:

All domains that trusted senders (such as the RIAA or other legitimate, globally-recognized and relevant music organizations) have sent over 10K notices against will be on the block domain list, which will continually be updated, unless there is evidence that the domain has been authorized by most of the applicable rights holders to use the content in question. At least a two third (2/3) vote from the .MUSIC Advisory Committee is required to permit the domain to remain live.

Take Down Policies:

Development and application of policies that:

- Make it a violation of .MUSIC policies if registrant does not comply with DotMusic’s Content and Use policy to protect copyright. A notice about one piece of content on site being abused will require registrant to search for and remove all instances of that content on/available via their site i.e. registrant will be given reasonable time to fix the compliance matter or else will have their domain terminated;
- Require a stringent repeat infringer policy.

The takedown process and timeline after complaint is received about a pirate engaging in mass copyright infringement on a .MUSIC domain is as follows:

1. The DotMusic Registry receives complaint.
2. The DotMusic compliance team assesses whether the complaint is legitimate/reasoned or spurious in nature. The decision is made within 2-7 days depending on the complexity of the complaint.
3. If the complaint is accepted then the registrar is notified that the domain will be frozen and suspended. The registrar had to agree to the DotMusic TOS beforehand so has to follow our policies. The registrar has 7 days to notify the registrant and wait for a response from the registrant. If the issue is not resolved within 7 days then the registrar notifies DotMusic that the issue was not resolved.

⁵¹ <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf> , Pg.3, Appendix A

⁵² <https://www.icann.org/en/system/files/correspondence/riaa-to-icann-05mar15-en.pdf> , Pg.1

4. Upon notification of the registrar that the issue was not resolved then DotMusic notifies Afiliias to suspend and lockdown the domain name. The action response to suspend and lockdown the domain by Afiliias is within 48hrs. The registrant can no longer transfer the domain and cannot make any changes to their domain. The registrant then has 2 weeks to fix the compliance matter.
5. If the compliance matter is not resolved then the domain is terminated.
6. The registrant can appeal the decision with NAF or WIPO within 30 days after the domain is terminated. It will cost them a few thousand dollars but the odds are stacked up against them to prevail since the registrant must prove that the takedown and termination was not of reasoned nature.
7. UDRP cases usually take 60 days to be decided. The typical timeline for a UDRP case, from filing of a complaint to completion of the process is 60 days, (which is relatively short compared to the uncertain timelines with court litigation). Also, only one document needs to be submitted by the Complainant, and one Response filed by the Respondent. Once a complaint has been filed, a Respondent has 20 days to respond, and WIPO/NAF will assign a Panelist within 5 days after a response has been made. Panelists are required to issue a decision to the relevant domain name registrar within 14 days of being assigned, and then the registrar is required to carry out the decision within 10 days.

Authorization:

Confirmation that “content that they otherwise have the right to post” means that the poster has express authorization to post the content.

Permanent Block:

Blocked domains will not be made available for registration by any third party unless there is a two third (2/3) vote by the Advisory Committee to permit the string to be put back in the pool for registration.

Privacy / Proxy:

Requirement that privacy/proxy services will be compliant with DotMusic’s Name Selection policy (mandating that the domain is the name of the registrant, their acronym, “doing business as,” description of their mission or activities) and discloses the beneficial registrant as per DotMusic’s Registration Policies. If such disclosure is not made then the registrant will not be allowed to proceed with registration. If the domain is deemed incompliant while the domain is live then the domain will be suspended and the registrant will be given reasonable time to fix the compliance matter. If the registrant fails to fix the compliance matter then the domain will be terminated.

True name and address:

If a .MUSIC domain makes available any music owned or posted by a third party via the site (directly or indirectly), the domain must prominently post on the site the true name of the website operator, a contact person at the operator, phone number, physical address, and email address at which the contact person may be contacted.

Trusted Sender Complaint:

If .MUSIC receives a complaint from a trusted sender (such as the RIAA or any other legitimate, globally-recognized and relevant music organization), then DotMusic will investigate the complaint and suspend the domain, giving the registrant reasonable time to fix the compliance matter. The site will be suspended during the pendency of any dispute resolution that may occur regarding the complaint. The domain will be terminated if the registrant does not fix the compliance matter or fails to respond to the complaint.

- iv. **Pricing:** In tandem with the verification and other restricted registration requirements, DotMusic will incorporate a moderate, competitive price setting as another Enhanced Safeguard to protect .music from abuse:

The .MUSIC registration fee will adopt a moderate, competitive pricing point taking into consideration Community feedback and outreach, the TLD's premium value proposition, differentiation, security and safety concerns, and other significant factors such as:

- 1) *Most Community members are price sensitive since they operate in a highly competitive, fragmented environment with decreasing average music consumer spending that is aggravated by rampant piracy and competition from other forms of entertainment and substitute products/services.*
- 2) *As illustrated by the McAfee's 2011 "Mapping the Mal Web" Report⁵³, pricing is one of the most influential factors considered by registrants aiming to conduct malicious activity and abuse. Low priced domains have a higher likelihood for abuse. Prices in the middle to higher end are enough of a sufficient financial barrier to entry to reduce the number of registrants offering low quality content not useful to most Internet users, such as parking pages. Premium pricing will also help reduce cybersquatting and piracy. Registrants are more likely to register a cheaper domain to conduct illegal activity since it is less financially risky.*

DotMusic will not be low price leader in the domain space because low price leadership will have an adverse effect on DotMusic's objective to brand .MUSIC as a differentiated, value-added domain. Competing on price alone is not an effective strategy for DotMusic because it usually leads to commoditization and a low-margin business that relies primarily on the core benefit of the TLD: the branded music-themed meaning of a novelty domain extension. Adopting a moderate, competitive pricing strategy will complement DotMusic's goal to continually invest in the TLD to create innovative services, provide new offerings, opportunities and benefits to registrants beyond a branded TLD and achieve augmented and potential product differentiation. Furthermore, DotMusic's goal is to align consumer perception of a differentiated TLD with an optimal domain price that communicates the premium nature of .MUSIC, its unique value proposition and benefits.

The .MUSIC price will also include registrant participation in the .MUSIC Premium Channels. DotMusic will offer the Music Community an affordable domain to build a unique and exclusive presence online, ensuring the cost of the domain is optimally priced to prevent malicious behavior and abuse traditionally experienced in lower priced domains and domains that lack enhanced safeguards. (Application Answer to Question 18c ii)

By appropriately setting a moderate price for a .music registration, a necessary economic barrier will be raised to prevent bad actors from registration while not being too costly for legitimate Music Community members. The price will deter bad actors from registering .music domain and force them to look at cheaper top-level domain alternatives to conduct malicious activities from.

Non-regulated sector specific strings (such as .COM or newly applied-for strings, such as .WEB or .ONLINE) should be globally-accessible and open. However, strings in a regulated sector that relate to niche industries that are highly dependent on copyright monetization on the Internet and are reliant on the DNS for core activities must be protected with appropriate enhanced safeguards under a multi-stakeholder community

⁵³ http://us.mcafee.com/en-us/local/docs/MTMW_Report.pdf

model of governance. A highly sensitive .music domain which is vulnerable to abuse and piracy cannot be served as an open string without restrictions or appropriate authentication of registrants.

An open string without enhanced safeguards to protect intellectual property will not have the wide support of the Music Community nor would it have the support of ICANN’s Government Advisory Committee (GAC) which has reiterated its support for community Applications “with demonstrable support” and re-affirmed the position of DotMusic’s Application that enhanced safeguards for .music’s regulated sector serve the global public interest and must be a mandatory public commitment.⁵⁴ DotMusic exceeds the safeguards contained in the ICANN NGPC Resolutions that pertained to Category 1 Advice. GAC agrees that DotMusic’s Community-based commitments are aligned to serve the public interest and advised ICANN to give “preferential treatment for all applications which have demonstrable community support” such as DotMusic. Furthermore, in a letter⁵⁵ sent to ICANN on February 4th, 2014, the Director of the European Commission of the EU fully endorsed the “GAC view that community applications and applications with community support should be given preferential treatment” because they serve the public interest. At the Singapore ICANN meeting in March 2014, GAC reiterated that advice advised ICANN “to protect the public interest and improve outcomes for communities.”⁵⁶ ICANN approved this GAC advice in Resolutions to take “better account of community views and improving outcomes for communities.”⁵⁷ As such, the exclusion of entities which have a tangential relationship with music serves the global public interest since it mitigates abuse and fulfills the Mission of DotMusic to launch a safe, trusted and authenticated community-based .music top-level domain.

The objective of DotMusic is to incorporate registration-related policies with Enhanced Safeguards. Given the popularity and sensitive nature of the regulated applied-for string, DotMusic has ensured that weak policies that are vulnerable to abuse – including the lack of appropriate safeguards and controls – are not contained in the DotMusic Application. DotMusic’s strategy of the incorporation of Enhanced Safeguards in its Registration Policies ensures that unintended consequences, which create opportunities for rampant abuse and misuse of DNS-related registration services by bad actors, are eliminated in a proactive manner under strict enforcement measures. This Public Interest Commitment will ensure that the Community controls .MUSIC and that monies flow to the Community through legally-licensed .MUSIC sites and Community organizations.

C. Commitment to incorporate coherent and music-specific Enforcement measures, including appropriate appeals mechanisms to ensure that DotMusic is accountable to the Community.

Sensitive strings that are vulnerable to intellectual property infringement, such as .music, will be subject to significant abuse. Reactive enforcement policies are not enough to protect the interests of music creators. This is consistent with the findings outlined by the Economist in its most recent Special Report on Cyber Security that “prevention is better than cure” and its recommendations to incorporate proactive, defensive policies and enforcement rather than relying on merely reactive enforcement policies to prevent malicious abuse:

Companies, markets and countries are increasingly under attack from cyber-criminals. They need to get much better at protecting themselves... Securing cyberspace is hard because the architecture of the internet was designed to promote connectivity, not security. Its founders focused on getting it to

⁵⁴ ICANN NGPC Resolutions, <https://www.icann.org/en/system/files/files/resolutions-new-gtld-annex-2-05feb14-en.pdf>, Annex 2, February 5th, 2014

⁵⁵ <http://forum.icann.org/lists/comments-new-gtld-auction-rules-16dec13/msg00016.html>

⁵⁶ <https://gacweb.icann.org/download/attachments/27132037/Final%20Communique%20-%20Singapore%202014.pdf?version=2&modificationDate=1396429776778&api=v2> (Pg.4, Section 3, 1a)

⁵⁷ GAC Register #18, <http://www.icann.org/en/groups/board/documents/resolutions-new-gtld-annex-1-10sep13-en.pdf>

work and did not worry much about threats... A recent estimate by the Centre for Strategic and International Studies (CSIS) puts the annual global cost of digital crime and intellectual-property theft at \$445 billion... All too often breaches are caused by simple blunders... Over the next few years billions of new devices will be fitted with tiny computers that connect them to the web and make them more useful dubbed “the internet of things.”⁵⁸ Cybercrimes often involve multiple jurisdictions, which makes investigations complicated and time-consuming. And good cybersleuths are hard to find.⁵⁹ Ideally, organizations should avoid catching an infection in the first place – but that requires them to get better at a basic security hygiene.⁶⁰ The rise of organized crime on the internet and the imminent arrival of the internet of things will only increase concerns about widening the security gap. Prevention is better than cure. More vigilance and better defenses can make cyberspace a lot safer.⁶¹

ICANN’s new gTLD Program launch has the potential to create new opportunities and to better integrate the creative sectors with the digital economy. However the launch also poses serious threats to those engaged in creating, producing and disseminating creative music works. The music sector has historically been vulnerable to online theft, infringement and other fraud. It continues to experience unacceptably high levels of such abuse. If .music is launched without adequate safeguards, it would likely become a haven for continued and increased copyright infringement, criminal and illegal activity. That would be disastrous for the creative global music sectors, jobs, economic growth and competitiveness.

DotMusic has incorporated proactive Enhanced Safeguards to reduce these serious risks (See Section B, Commitment to Enhanced Safeguards), while maximizing the potential benefits of a trusted .music that will foster a haven for legal music consumption and licensing. In addition, DotMusic’s Registration Policies include specific both coherent proactive and reactive Enforcement measures with appropriate appeals mechanisms. DotMusic’s Enforcement Registration Policy exceeds minimum requirements mandated by ICANN because .music’s community-based purpose is to ensure proper enforcement of DotMusic’s Enhanced Safeguards (See B, Enhanced Safeguards Commitment) and appropriate Community accountability mechanisms (such as the Policy Advisory Board/Committee and appeals mechanisms). DotMusic has incorporated comprehensive Enforcement measures consistent with its community-based purpose and aligned with its music-tailored .MUSIC Policy & Copyright Infringement Dispute Resolution Process (“MPCIDRP”) which goes beyond the ICANN UDRP/URS/PDDRP/RRDRP which are established under the new gTLD Program.

According to the Application:

Compliance & Enforcement: DotMusic will take proactive and reactive measures to enforce its Policies. Proactive measures are taken at the time of registration. Reactive measures are addressed via compliance and enforcement mechanisms and through dispute processes.

⁵⁸ Martin Giles, The Economist Special Report on Cyber Security, Defending the Digital Frontier, <http://www.economist.com/news/special-report/21606416-companies-markets-and-countries-are-increasingly-under-attack-cyber-criminals>. ⁶¹ Martin Giles, The Economist Special Report on Cyber Security, Remedies: Prevention Is Better Than Cure, <http://www.economist.com/news/special-report/21606424-more-vigilance-and-better-defences-can-make-cyberspace-lot-safer-prevention-better>

Allegation that a domain is not used for legitimate music purposes or otherwise infringes on Policies shall be enforced under the provisions of the .MUSIC Policy & Copyright Infringement Dispute Resolution Process ("MPCIDRP").

The MPCIDRP is not a replacement for alleged violation of the UDRP/URS/PDDRP/RRDRP, which shall be enforced under the provisions contained therein.

The DRP's are required in the registrars' registration agreements with registrants. Proceedings must be brought by interested 3rd-parties in accordance with associated policies and procedures to dispute resolution providers. DotMusic will conduct random compliance checks across all the .MUSIC Policies. Periodically a sample of .MUSIC registrations will be verified for compliance with all established Policies.

If a registrant is found out of compliance with any of the .MUSIC Policies the registrant will be notified that the domain will be placed on registry lock. The registrant will have a reasonable time period to fix the compliance matter or the domain will be terminated. Repeat offenders of Policies will be placed on a special monitoring list that DotMusic will conduct additional compliance checks against. DotMusic holds the right to prohibit repeat offenders from registering .MUSIC domains for a period of time or indefinitely. DotMusic will review all policies and processes on a regular basis with involvement from the .MUSIC Advisory Committee and discussed publicly at Community events. (Application Answer to Question 18b)

Any violation of the .MUSIC Policies will be enforced on a case-by-case, fact-specific basis:

1. Any allegation that a domain is not used for legitimate music purposes or otherwise infringes on the .MUSIC Policies shall be enforced under the provisions of the .MUSIC Policy & Copyright Infringement Dispute Resolution Process ("MPCIDRP") as described in our response to question #28.

2. Any alleged violation of the UDRP shall be enforced under the provisions contained therein, as modified by the URS.

The MPCIDRP, UDRP, and URS are required in the registrars' registration agreements with registrants. Proceedings under the MPCIDRP, UDRP, and URS must be brought by interested third parties in accordance with the associated policies and procedures.

DotMusic will conduct random compliance efforts across all the .MUSIC Policies. Periodically a sample of .MUSIC registrations will be verified for compliance with all established .MUSIC Policies.

If a Registrant is found out of compliance with any of the .MUSIC Policies the registrant will be notified that the domain will be placed on registry lock. The registrant will have a reasonable time period to fix the compliance matter or the domain will be terminated.

Repeat offenders will be placed on a special monitoring list that DotMusic staff will conduct additional compliance checks against. DotMusic holds the right to prohibit repeat offenders from registering .MUSIC domains for a period of time or indefinitely.

DotMusic will review all policies and processes on a regular basis with involvement from the .MUSIC Advisory Committee and will present them publicly to enable Music Community constituents to provide feedback. DotMusic will also conduct registrar and registrant surveys based

on the level of registrant satisfaction concerning .MUSIC usability and how to improve value proposition.

DotMusic reserves the right to deny, cancel or transfer any registration that it deems necessary, in its discretion, to protect the integrity and stability of the registry, to comply with any applicable laws, government rules or requirements, requests of law enforcement, in compliance with any dispute resolution process, or to avoid any liability, civil or criminal, on the part of DotMusic, as well as its affiliates, subsidiaries, officers, directors and employees. DotMusic reserves the right to freeze a domain during resolution of a dispute. DotMusic reserves the right to terminate a domain for failure by the registrant to demonstrate it meets .MUSIC policies. (Application Answer to Question 20e).

DotMusic will implement multiple dispute resolution policies to address dispute over any names not reserved by the above provisions; see response to question #20e and #28 and #29. In particular all domains awarded to registrants are subject to the Uniform Domain Name Dispute Resolution Policy (UDRP), and to any properly-situated court proceeding. DotMusic will ensure appropriate procedures to allow governments, public authorities or IGO's to challenge abuses of names with national or geographic significance at the second level. DotMusic will institute a provision in the registry-registrar agreements and the registrar-registrant agreements, to suspend domains names in the event of a dispute. DotMusic may exercise that right in the case of a dispute over a geographic name. (Application Answer to Question 22)

DotMusic, working with Afiliias, will take the requisite operational and technical steps to promote WHOIS data accuracy, limit domain abuse, remove outdated and inaccurate data, and other security measures to ensure the integrity of the TLD. The specific measures include, but are not limited to:

- Posting a TLD Anti-Abuse Policy that clearly defines abuse, and provide point-of-contact information for reporting suspected abuse;*
- Committing to rapid identification and resolution of abuse, including suspensions;*
- Ensuring completeness of WHOIS information at the time of registration;*
- Performing data validations of WHOIS elements at time of registration and exploring mechanisms for re-evaluation when registrants update such information;*
- Publishing and maintaining procedures for removing orphan glue records for names removed from the zone,*
- Introducing the .MUSIC Policy & Copyright Infringement Dispute Resolution Process ("MPCIDRP") to ensure eligibility requirements, use and naming policies as established in response to question #20e, and;*
- Establishing measures to deter WHOIS abuse, including rate-limiting, determining data syntax validity, and implementing and enforcing requirements from the Registry-Registrar Agreement.*

The Abuse Policy stated below will be enacted under the contractual authority of the registry operator through the Registry-Registrar Agreement, and the obligations will be passed on to and made binding upon registrants. This policy will be posted on the TLD web site along with contact information for registrants or users to report suspected abuse. The policy is designed to address the malicious use of domain names. The registry operator and its registrars will make reasonable attempts to limit significant harm to Internet users. This policy is not intended to take the place of the Uniform Domain Name Dispute Resolution Policy (UDRP) or the Uniform Rapid Suspension System (URS), and it is not to be used as an alternate form of dispute resolution or as a brand protection mechanism. Its intent is not to burden law-abiding or innocent registrants and domain users; rather,

the intent is to deter those who use domain names maliciously by engaging in illegal or fraudulent activity.

Repeat violations of the Abuse policy will result in a case-by-case review of the abuser(s), and the registry operator reserves the right to escalate the issue, with the intent of levying sanctions that are allowed under the TLD anti-abuse policy.

.MUSIC Anti-Abuse Policy:

The following Anti-Abuse Policy is effective upon launch of the TLD. Malicious use of domain names will not be tolerated. The nature of such abuses creates security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. The registry operator definition of abusive use of a domain includes, without limitation, the following:

- Illegal or fraudulent actions;*
- Spam: The use of electronic messaging systems to send unsolicited bulk messages. The term applies to email spam and similar abuses such as instant messaging spam, mobile messaging spam, and the spamming of web sites and Internet forums;*
- Phishing: The use of counterfeit web pages that are designed to trick recipients into divulging sensitive data such as personally identifying information, usernames, passwords, or financial data;*
- Pharming: The redirecting of unknowing users to fraudulent sites or services, typically through, but not limited to, DNS hijacking or poisoning;*
- Willful distribution of malware: The dissemination of software designed to infiltrate or damage a computer system without the owner's informed consent. Examples include, without limitation, computer viruses, worms, keyloggers, and Trojan horses.*
- Malicious fast-flux hosting: Use of fast-flux techniques with a botnet to disguise the location of web sites or other Internet services, or to avoid detection and mitigation efforts, or to host illegal activities.*
- Botnet command and control: Services run on a domain name that are used to control a collection of compromised computers or "zombies," or to direct distributed denial-of-service attacks (DDoS attacks);*
- Illegal Access to Other Computers or Networks: Illegally accessing computers, accounts, or networks belonging to another party, or attempting to penetrate security measures of another individual's system (often known as "hacking"). Also, any activity that might be used as a precursor to an attempted system penetration (e.g. port scan, stealth scan, or other information gathering activity).*

Pursuant to the Registry-Registrar Agreement, registry operator reserves the right at its sole discretion to deny, cancel, or transfer any registration or transaction, or place any domain name(s) on registry lock, hold, or similar status, that it deems necessary:

- 1. to protect the integrity and stability of the registry;*
- 2. to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process;*
- 3. to avoid any liability, civil or criminal, on the part of registry operator, as well as its affiliates, subsidiaries, officers, directors, and employees;*
- 4. per the terms of the registration agreement and this Anti-Abuse Policy, or*
- 5. to correct mistakes made by registry operator or any registrar in connection with a domain name registration. Registry operator also reserves the right to place upon registry lock, hold, or similar status a domain name during resolution of a dispute.*

The policy stated above will be accompanied by notes about how to submit a report to the registry operator's abuse point of contact, and how to report an orphan glue record suspected of being used in connection with malicious conduct (see below).

Abuse point of contact and procedures for handling abuse complaints:

The registry operator will establish an abuse point of contact. This contact will be a role-based e-mail address of the form "abuse@registry.MUSIC". This e-mail address will allow multiple staff members to monitor abuse reports on a 24x7 basis, and then work toward closure of cases as each situation calls for. For tracking purposes, the registry operator will have a ticketing system with which all complaints will be tracked internally. The reporter will be provided with the ticket reference identifier for potential follow-up. Afiliac will integrate its existing ticketing system with the registry operator's to ensure uniform tracking and handling of the complaint. This role-based approach has been used successfully by ISPs, e-mail service providers, and registrars for many years, and is considered a global best practice.

The registry operator's designated abuse handlers will then evaluate complaints received via the abuse system address. They will decide whether a particular issue is of concern, and decide what action, if any, is appropriate.

.MUSIC Community Specific Protections:

In protection of the interests of the Music Community, in line with the .MUSIC mission established in response to question #18, DotMUSIC reserves the right to deny, cancel, transfer and registration that it deems necessary, in its discretion, to protect the integrity and stability of the registry, to comply with any applicable laws, government rules or requirements, requests of law enforcement agencies, in compliance with any dispute resolution process result, or to avoid any liability, civil, or criminal, on the part of the registry operator, its affiliates, subsidiaries, officers, directors, and employees. DotMusic reserves the right to lock a domain name during resolution of a dispute. DotMusic reserves the right to terminate a domain at any time for failure of the registrant to demonstrate that it meets all established requirements under .MUSIC policies.

.MUSIC has established specific protection mechanisms as described in the response to question #20e. As a means to cure any disputes concerning adherence to the .MUSIC requirements and policies, DotMUSIC is establishing the .MUSIC Policy & Copyright Infringement Dispute Resolution Process ("MPCIDRP"). All .MUSIC registrants will be bound by this policy by means of the .MUSIC Registration Agreement.

The MPCIDRP may be invoked by any third party in order to solve a dispute with a registrant over the registration or use of the registration in violation of the .MUSIC policies. A dispute filing can take place with any approved MPCIDRP dispute resolution provider and must specify how the domain name is in violation of the purposes contemplated by the definition and qualification of a .MUSIC. The details of the MPCIDRP will be published prior to the launch of .MUSIC. Details of the process, proceedings, and supplemental rules a complainant must follow will be developed in coordination with respective dispute resolution providers and it will also be published prior to launch of .MUSIC. (Application Answer to Question 28)

According to the DotMusic Application:

“The .MUSIC Mission and Purpose is creating a trusted, safe online haven for music consumption...protecting intellectual property and fighting piracy.” The TLD will be exclusive to the Community and *“will incorporate enhanced safeguards and Use policies to protect creators, intellectual property and rights holders.”* DotMusic has developed *“policies to protect intellectual property, fight piracy and ensure .MUSIC domains are allocated using fair methods so that music consumers and Internet users are assured the highest level of trust and authenticity when they visit a .MUSIC domain.”*

“A Global Protected Marks List (GPML) will reserve all major music brands and established artists, such as RIAA-certified platinum-selling bands. The music-themed domain is built with usage policies that will enable taking down infringing sites, protecting trademarks and help the exploitation of copyrights by providing a safe haven for legal music distribution, consumption and licensing.” (Application Answer to Question 18).

“DotMusic will review all policies and processes on a regular basis with involvement from the .MUSIC Advisory Committee⁶² [PAB].” (Application Answer to Question 20).

DotMusic has a Content and Use registration policy agreement focused on protecting copyright “tailored to solve issues currently related to intellectual property infringement. Registrants that do not accept and abide by the registration agreement are disqualified from domain registrations.” Registrants must:

- iv. “Respect the intellectual property rights of others by posting or submitting only content that is owned, licensed, or otherwise have the right to post or submit;”
- v. “Immediately notify [DotMusic] if there is a security breach, other member incompliance or illegal activity on .MUSIC sites;”
- vi. “Do not register a domain containing an established music brand’s name in bad faith that might be deemed confusing to Internet users and the Music Community.” (Application Answer to Question 20).

Any allegation that a domain is not used for legitimate music purposes or otherwise infringes on the .MUSIC Policies shall be enforced under the provisions of the .MUSIC Policy & Copyright Infringement Dispute Resolution Process (“MPCIDRP”). If a Registrant is found out of compliance with any of the .MUSIC Policies the registrant will be notified that the domain will be placed on registry lock. The registrant will have a reasonable time period to fix the compliance matter or the domain will be terminated. Repeat offenders will be placed on a special monitoring list. DotMusic holds the right to prohibit repeat offenders from registering .MUSIC domains. (Application Answer to Question 20).

“DotMusic reserves the right to deny, cancel or transfer any registration that it deems necessary, in its discretion, to protect the integrity and stability of the registry... DotMusic reserves the right to freeze a domain during resolution of a dispute. DotMusic reserves the right to terminate a domain for failure by the registrant to demonstrate it meets .MUSIC policies.” (Application Answer to Question 20).

DotMusic has incorporated a wide array of appeals mechanisms, whereby registrants have the right to request a review of a decision to revoke their right to hold a domain name and have reasonable time to file an appeal to fix the Registration Policy incompliance:

⁶² DotMusic will be launched under a community-based, multi-stakeholder governance structure of fair representation encompassing all music constituent types. The RIAA will be given a seat on the table with representation on the PAB.

If a Registrant is found out of compliance with any of the .MUSIC Policies the registrant will be notified that the domain will be placed on registry lock. The registrant will have a reasonable time period to fix the compliance matter or the domain will be terminated. (Application Answer to Question 20e).

DotMusic has numerous proactive and reactive Enforcement Policies, which include:

- (i) Random compliance checks on registered domains:

DotMusic will conduct random compliance efforts across all the .MUSIC Policies. Periodically a sample of .MUSIC registrations will be verified for compliance with all established .MUSIC Policies. (Application Answer to Question 20e).

- (ii) Mandates that .music registrants must report any illegal activity or Registrant Policy incompliance using a registrant crowdsourcing and an MCMO trusted sender enforcement model for complaints:

Immediately notify us if there is a security breach, other member incompliance or illegal activity on .MUSIC sites. (Application Answer to Question 20e)

The MPCIDRP may be invoked by any third party in order to solve a dispute with a registrant over the registration or use of the registration in violation of the .MUSIC policies. (Application Answer to Question 28)

The Registrant-powered crowdsourcing enforcement measure will serve the public interest because it is a scalable, proactive and reliable enforcement mechanism for reporting intellectual property infringement, filtering inappropriate content and strengthening Registration Policy compliance and security.

For additional proactive enforcement, DotMusic may also incorporate crawler and music fingerprinting screening technology in addition to the random compliance checks for proactive Enforcement. Using primarily automated digital fingerprinting technology, DotMusic can thwart piracy on .music domains and deter bad actors from spreading copyrighted content by leveraging this proactive and automated screening process. According to the Application:

DotMusic and Afiliias may also engage in proactive screening of its zone for malicious use of the domains in the TLD. (Application Answer to Question 28).

DotMusic has incorporated extensive and specific Enforcement Appeals mechanisms for registrants and 3rd-parties to fix incompliance matters or settle disputes. According to the Application:

.MUSIC Community Specific Protections:

DotMusic reserves the right to lock a domain name during resolution of a dispute. DotMusic reserves the right to terminate a domain at any time for failure of the registrant to demonstrate that it meets all established requirements under .MUSIC policies.

As a means to cure any disputes concerning adherence to the .MUSIC requirements and policies, DotMUSIC is establishing the .MUSIC Policy & Copyright Infringement Dispute Resolution Process ("MPCIDRP"). All .MUSIC registrants will be bound by this policy by means of the .MUSIC Registration Agreement.

The MPCIDRP may be invoked by any third party in order to solve a dispute with a registrant over the registration or use of the registration in violation of the .MUSIC policies. A dispute filing can take place with any approved MPCIDRP dispute resolution provider and must specify how the domain name is in violation of the purposes contemplated by the definition and qualification of a .MUSIC. The details of the MPCIDRP will be published prior to the launch of .MUSIC. Details of the process, proceedings, and supplemental rules a complainant must follow will be developed in coordination with respective dispute resolution providers and it will also be published prior to launch of .MUSIC. (Application Answer to Question 28)

The DotMusic MPCIDRP Dispute Resolution Provider is the National Arbitration Forum. Comprehensive Dispute Resolution Processes and Appeals Mechanisms have been created under the music-tailored MPCIDRP. The MPCIDRP is music-tailored process beyond what is mandated by ICANN for new gTLD registries for challenges pertaining to registrant Registration Policy compliance and intellectual property infringement (which includes both trademark and copyright violations). Appeals mechanisms available under the MPCIDRP include:

i. Reinstatement Reconsideration

- (1) *If a registrant is found out of compliance with any of the .MUSIC Policies the registrant will be notified that the domain will be placed on registry lock. The registrant will have a reasonable time period to fix the compliance matter or the domain will be terminated.*
- (2) *If a domain name registration is found to conflict with an entry on the GPML, the registration will be terminated.*

For a domain name terminated by the Registry, the registrant may appeal the termination with the Registry. If the domain name is not reinstated, the registrant may bring a request for reinstatement reconsideration to the Provider. Reinstatement reconsideration must be brought within 30 days of the Registry's final determination.

ii. Copyright Infringement Appeal

- (1) *Registrant can appeal removal of content that was removed by the Registry*
- (2) *Registrant can appeal registry decision not to remove content*

iii. Music Community Member Organization (MCMO) Eligibility Reconsideration Request

An organization that was denied qualification as a MCMO by the Registry may appeal that determination at the Registry. If the organization is still declined membership, the application organization may bring a request for reinstatement reconsideration to the Provider. A MCMO Eligibility reconsideration request must be brought within 30 days of the Registry's final determination.

iv. Geographic Public Interest Appeal

Governments/public authorities/IGOs may challenge abuses of names with national or geographic significance with the Registry. This Registry determination can be appealed with the National Arbitration Forum dispute resolution provider if the Registry failed to follow Registration Policy procedures. A Geographic Public Interest Appeal must be brought within 90 days of the Registry's final determination.

v. Policy Advisory Board (PAB) Decision Appeal

A majority of the PAB may direct the Registry to take action against a Registrant for registrations that substantially and negatively affect the objectives of the .MUSIC Registry. This PAB determination and Registry implementation can be appealed by a Registrant with the National

Arbitration Forum. A PAB Decision Appeal must be brought within 30 days of the Registry's final determination. (See Appendix F and National Arbitration Forum Dispute Resolution Provider's MPCIDRP page for .music⁶³).

D. Commitment to Innovation and Solving Community Problems to Support the Community

DotMusic will serve the public interest and the global Music Community by offering innovative services that would provide solutions for .music registrants and that would increase music discovery, networking opportunities and an array of options for legal monetization and licensing on a global scale. These purpose-driven innovative services include the Premium Channels and the Music Licensing Song Registry.

According to the Application:

DotMusic will also provide non-registry services and activities which have been established through ongoing outreach efforts. Community members need to be able to distinguish themselves from illegal or unlicensed sites. Ensuring monies flow to rightful owners and the Music Community is critical to the .MUSIC Mission. Purpose-driven services and activities are:

- 1. Development of Music Community Social Network Premium Domain Channels (Channels) sorted by category types, e.g. genres. It will leverage Search Engine Optimization (SEO) best practices to improve .MUSIC website search result rankings. The objective is for .MUSIC domains to signal a badge of trust that enables search engines to provide music consumers more relevant and safer search results while reducing infringing and unlicensed rogue sites. Premium Channel development will also include a global Song Registry*
- 2. Promoting arts and music through sponsorships, events and Music Community activities; Enriching society with artistic and cultural diversity;*
- 3. Advancing music education and the study of music in school curriculum by donating proceeds of domain registrations to relevant causes*
- 4. Re-inventing music discovery and search innovation by leading the way to establish the Industry standard for official music sites to benefit the at-large global Music Community and the Internet*
- 5. Enabling legal music licensing via a global Song Registry akin to the International Music Registry (IMR - www.wipo.int/imr) & Global Repertoire Database (GRD - www.globalrepertoiredatabase.com /International Copyright Enterprise) initiatives.*
(Application Answer to Question 18a)

PREMIUM CHANNELS

DotMusic has conducted an extensive communications outreach campaign and research activities within the Community to identify needs for value-added services beyond .MUSIC domains. It has been affirmed that the Community has a need for

- (i) a faster, easier and simpler way to license songs on a global basis and*

⁶³ National Arbitration Forum (NAF), The .MUSIC Policy & Copyright Infringement Dispute Resolution Process ("MPCIDRP"), <http://domains.adrforum.com/main.aspx?itemID=2195>. Please download the DotMusic MPCIDRP document at <http://domains.adrforum.com/resource.aspx?id=2190> for more detail on DotMusic's specific appeals/reconsideration request mechanisms under the MPCIDRP.

- (ii) differentiated online resources of information about music, containing regional, national and local Community member information, powered by their associated dynamic content, services or products.

Premium Channels will offer opportunities to promote cultural diversity and unique music content. The level of information and content shared in the Premium Channels will be at the sole discretion of registrants. Registrants can promote themselves, their content, share contact information, communicate, network and engage in commerce with music consumers and each other.

Unlike using search engines, the Premium Channels will provide Internet users a quick and intuitive search mechanism through direct navigation discovery. For example, a music consumer searching for “reggae music” can directly visit “www.reggae.music” to find registrants that offer reggae-related music, content, services and products. Premium Channels will:

- *Promote Community members*
- *Increase legal commerce/business/collaboration*
- *Facilitate the sharing of contact information & enable more efficient communication*
- *Provide a quick and intuitive reference to music-related content through direct navigation*
- *Offer networking opportunities & increased exposure*
- *Promote cultural diversity, the arts & music education*
- *Differentiate Community members from each other*
- *Promote interaction, communication & support amongst the Community*
- *Promote music innovation*

The Premium Channels will also include the development of a global Song Registry to facilitate a faster, easier and simpler way to legally license registrant songs. (Application Answer to Question 18a)

DotMusic is the only .music applicant that will incorporate Premium Channels to increase music discovery and opportunities for .music registrants to build their music identities online, connect with other artists, professionals or companies and provide possibilities for business deals or new ventures.

At registration, all .music registrants will be required to choose their classification type sorted based on NAICS codes under these four categories:

- (i) Musicians or (ii) Musical Groups (both these categories will represent a substantial majority of .music registrations. They are classified as *Musical Groups and Artists* under NAICS code 711130 which is equivalent to *Musicians and Musical Groups* under ISIC code 9214 – See Application Answer to Question 20a);
- (iii) Music Professionals (See Application Answer to Question 20a to see to see how these types of music entities are sorted based on corresponding NAICS codes); or
- (iv) Music Companies (See Application Answer to Question 20a to see to see how these types of music entities are sorted based on corresponding NAICS codes)

The Premium Channels will be delineated and organized using .music premium domains. For example, Musicians or Musical Groups will be able to categorize their .music identity beyond their parent classification type based on genre, language and location⁶⁴ e.g. a French rock artist from Paris, France will

⁶⁴ According to the DotMusic Application: *DotMusic will block all country and territory names as registrations under .MUSIC. To accomplish this DotMusic will prior to launch (i) place the names on a reserved list that can solely be released as second-level registrations under .MUSIC by an agreement with the respective country or territory and*

be able to list their .music domain identity in five (5) Premium Channels (using their Community ID number that they will receive after completing registration authentication): www.Artist.music, www.Rock.music, www.Paris.music, and www.France.music (See Appendix G for Premium Channel examples).

Other entity categories include the Music Professionals entity classification (e.g. a music lawyer registrant would be found under the www.lawyer.music Premium Channel) or the Music Companies entity classification (e.g. a record label registrant would be found under the www.recordlabel.music Premium Channel). These Premium Channels will increase .music registrant discovery and achieve better search engine ranking because of improved music-related relevancy and higher quality content.

In addition to Premium Channels, DotMusic will also incorporate a Song Registry consistent with its community-based purpose to create a safe haven for legal music consumption and licensing:

The Premium Channels will also include the development of a global Song Registry to facilitate a faster, easier and simpler way to legally license registrant songs... DotMusic will provide Premium Channels and a Song Registry where the Community and Internet users can network, share information and engage in commerce in a trusted, secure ecosystem – a safe haven for legal music consumption and song licensing ensuring monies flow to the Community not unlicensed sites. (Application Answer to Question 18b i)

STRATEGIC INNOVATION - Fostering open innovation by building Premium Channels and developing a Premium Channel global Song Registry to enable easier, faster and simpler way to license music... Community buy-in is critical to establish these legal standards to facilitate safer, trusted and enhanced commerce on the web while fighting piracy and unlicensed sites. The music-themed domain is built with usage policies that will enable taking down infringing sites, protecting trademarks and help the exploitation of copyrights by providing a safe haven for legal music distribution, consumption and licensing. (Application Answer to Question 18c iii)

Community buy-in is critical to establish these legal standards to facilitate safer, trusted and enhanced commerce on the web while fighting piracy and unlicensed sites. The music-themed domain is built with usage policies that will enable taking down infringing sites, protecting trademarks and help the exploitation of copyrights by providing a safe haven for legal music distribution, consumption and licensing.

The goal is to create a secure Industry standard domain matching Community needs with enhanced safeguards not available in current TLDs. Standards save money and drive productivity. The music-themed TLD will be launched in an intuitive, simple manner to leverage the interoperability, effectiveness and efficiency of the open web and the DNS. By using the same standards communicating data becomes easier and cheaper ensuring more revenue is distributed across the whole digital music supply chain to the rightful entities not rogue sites. The DotMusic Song Registry will also benefit the Community by enabling registrants to legally license their works territorially in a simple, fast and easy way. This way IP can be utilized and commercialized more efficiently to assist the Community to better serve an entire music value chain globally. (Application Answer to Question 18c iii)

with ICANN; and (ii) include in its registration policies that country and territory names are prohibited at lower levels... DotMusic will be working closely with the International Federation of Arts Councils and Culture Agencies, with national members from over 70 countries comprised of governments' Ministries of Culture and Arts Councils covering all continents, to ensure country names protection and the promotion of government-related cultural and music initiatives (Application Answer to Question 22).

DotMusic has submitted public comments to the U.S. Library of Congress pertaining to the need of a comprehensive global Song Registry for music licensing.⁶⁵ According to the U.S. Library of Congress:

*The digital age offers increased possibilities for broadened dissemination of music and sound recordings in ways unimaginable in prior eras. However, technological, institutional, and legal impediments to increased access have created daunting challenges for libraries and archives.*⁶⁶

*An efficient, low-cost or gratis system is needed for licensing to libraries and archives digital files of music content not available in the commercial marketplace at a reasonable rate that would allow them to more effectively perform dissemination services.*⁶⁷

There is a growing need for a global, comprehensive database of information related to music works, which will enable a quick, easy and simple to pay for music in a marketplace that requires efficiency and speed. Global access to complete information about music works does not yet exist. The DotMusic Song Registry could provide a solution since today it is challenge to license music because of the difficulties of locating or identifying who owns specific song rights in order to clear the song for licensing purposes. The DotMusic Song Registry will serve the public interest by providing a comprehensive music licensing registry that provides proper attribution to music works on a global scale.

The Chairman of the Recording Industry Association of America, Cary Sherman, emphasized the need for a micro-licensing platform to make it easier for occasional users of music to get proper licensing at a reasonable rate:

So many uses of music go unlicensed, and it's a lost opportunity in so many ways. It's obviously lost revenue. The fact is that so many businesses and individuals use music to enhance their products, their services, their events, shows music's value. We aren't talking about music-centric businesses -- those are taken care of. We're talking about the app developer who wants to use a clip of music in the background. Or the wedding videographer who wants to include music in his videos. Or the company that wants to use music in presentations at corporate retreats.

*Many of these businesses want licenses, but haven't a clue how to get them. We haven't done a very good job of making it easy for them. Technology now makes it feasible to offer easy-to-get licenses for all our music, for all kinds of uses; and creating a market for that could mean many millions of dollars of new revenue each year. Our collective future is looking brighter. And our future is collective. Never before have the interests of record companies and publishers been more closely aligned. Never before have we been as interdependent as we are right now. We're in this together.*⁶⁸

The DotMusic Song Registry will enable music licensing clearance by providing reliable and updated information on what rights holder owns what rights in what territory. This way, licensees will be able to find the appropriate rights holders to obtain license clearance and to determine terms of use. Such a

⁶⁵ DotMusic's Public Comments to the Library of Congress at http://www.copyright.gov/docs/musiclicensingstudy/comments/Docket2014_3/DotMusic_MLS_2014.pdf. See Library of Congress Music Licensing Study, <http://copyright.gov/docs/musiclicensingstudy>

⁶⁶ Gregory A. Lukow, Library of Congress, http://www.copyright.gov/docs/musiclicensingstudy/comments/Docket2014_3/Library_of_Congress_MLS_2014.pdf, 2014, P.1

⁶⁷ Ibid, P.5

⁶⁸ Ed Christman, *RIAA & NMPA Eyeing Simplified Music Licensing System, Could Unlock 'Millions' in New Revenue*, Billboard (June 13, 2013), <http://www.billboard.com/biz/articles/news/record-labels/1566550/riaa-nmpa-eyeing-simplified-music-licensing-system-could>

comprehensive music registry with a globally-connected database is needed because of the licensing demand that exists in the marketplace to license music repertoires of works in different territories under different media formats. The music registry will include all .music registrant creators associated with a music-related copyright to enable the remuneration and attribution of music rights for efficient compensation by assigning authoritative unique IDs - Globally Unique Identifiers (GUI) - to match rights with works.

Steve Marks, the Chief of Digital Business and General Counsel of the RIAA, emphasizes:

*The musical work licensing systems that were developed for early twentieth century uses are being pressed beyond their limits by new technologies, consumer demands and business models requiring licenses for use of musical works as part of finished music products.*⁶⁹

Today's Domain Name System (DNS), which at its core is a reliable globally-distributed system, can provide this music marketplace licensing solution because the DNS already uses unique IP addresses assigned to each computer that is registered with ICANN. Such a music song registry is essential to meet the demands of the proliferation of music works and User Generated Content related to music. The .MUSIC registry will enable the efficient recording and enumeration of music works so that attribution and compensation is directly tied to rights holders, whether this is to obtain permission for direct licensing or to process a statutory license payment.

The DotMusic Song Registry will serve the public interest because it is dedicated in promoting and protecting the ability of .music registrant creators who seek to earn a living from their creativity. DotMusic's objective is to ensure that authors and creators are entitled to fair compensation for their creative work. DotMusic reaffirms these Public Interest Commitments which are aligned with DotMusic articulated community-based purpose and principles of non-discrimination, collaboration and ensuring fair compensation.

The DotMusic Song Registry will adopt universal standards for the identification of musical works and sound recordings. Currently, the music sector has numerous international standards for the identification of music to facilitate legal music monetization globally:

- The International Standard Music Number (ISMN⁷⁰);
- International Standard Name Identifier (ISNI⁷¹);
- International Standard Musical Work Code (ISWC⁷²);
- International Standard Recording Code (ISRC⁷³); and

⁶⁹ Steven Marks, Recording Industry Association of America (RIAA), http://www.copyright.gov/docs/musiclicensingstudy/comments/Docket2014_3/Recording_Industry_Association_of_America_MLS_2014.pdf, P.6

⁷⁰ The International Standard Music Number (ISMN) is a unique number for the identification of all notated music publications from all over the world. The ISMN is an ISO certified global standard number (ISO 10957:2009). See <http://www.ismn-international.org/whatis.html> and http://www.iso.org/iso/home/store/catalogue_ics/catalogue_detail_ics.htm?csnumber=43173

⁷¹ The International Standard Name Identifier (ISNI) is the ISO certified global standard number (ISO 27729) for identifying the millions of contributors to creative works and those active in their distribution. ISNI holds public records of over 8 million identities and 490,000 organizations. See <http://www.isni.org/> and http://www.iso.org/iso/catalogue_detail?csnumber=44292

⁷² The ISWC (International Standard Musical Work Code) is a unique, permanent and internationally recognized reference number for the identification of musical works. The ISWC has been approved by ISO (International Organization for Standardisation) as a global standard (ISO 15707:2001) and is managed by CISAC. See <http://www.iswc.org/en/faq.html> and http://www.iso.org/iso/catalogue_detail?csnumber=28780

- International Standard Audiovisual Number (ISAN⁷⁴)

The objective of DotMusic's authenticated, verified and trusted community-based .MUSIC domain and its Song Registry is to create new Industry standards for the legal distribution and monetization of music. This will benefit the Music Community by facilitating a more efficient system of trusted data exchange between the Community and prospective licensees. This will help spur legitimate licensing monetization in a safe, credible and effective manner. Such standards (which require the exact matching and identification of music works associated with their corresponding rights holders) will benefit the licensing process by making it easier, more accurate, and more efficient. The objective of DotMusic is for the .music top-level domain to be adopted as a globally-recognized Industry standard for official, trusted and validated music domains (such as in the case of other music-related international standards such as ISMN, ISNI, ISAN, ISRC and ISWC). This adoption will benefit the global Music Community and serve the public interest.

3. Registry Operator agrees to perform following specific public interest commitments, which commitments shall be enforceable by ICANN and through the PICDRP. Registry Operator shall comply with the PICDRP. Registry Operator agrees to implement and adhere to any remedies ICANN imposes (which may include any reasonable remedy, including for the avoidance of doubt, the termination of the Registry Agreement pursuant to Section 4.3(e) of the Registry Agreement) following a determination by any PICDRP panel and to be bound by any such determination.

The DotMusic Application will serve the global public interest and the global Music Community. It does not require any additional commitments beyond what is contained in its Application.

⁷³ The ISRC (International Standard Recording Code) is the international identification system for sound recordings and music video recordings. The ISRC is an ISO certified global standard number (ISO 3901:2001) and is managed by the IFPI. See <http://isrc.ifpi.org>, <https://www.usisrc.org/about/index.html> and http://www.iso.org/iso/catalogue_detail?csnumber=23401

⁷⁴ See <http://www.isan.org/about/> and http://www.iso.org/iso/catalogue_detail?csnumber=28779 and http://www.iso.org/iso/catalogue_detail?csnumber=35581

Appendix A

.music Application Specifications

DotMusic Limited .MUSIC community application overview and policies

	DotMusic Limited
"Also Known As"	.MUSIC™
Application ID	1-1115-14110
Total Top-Level Domain Applications	1 (Focused)
Type of Application	Community (Restricted)
.music-focused Social Media Presence	Extensive
Policy Advisory Board & Constituent Governance Seats	Yes
Community Member Organization Eligibility Requirement	Only during MCMO Launch Phase¹
Community Member Organization Resellers/Partners	Yes
Music Organization Accreditation Requirements	Yes. Eligible organizations get priority in MCMO Phase
Who Can Register (Eligibility)	Entire global Music Community with requisite awareness of community
Phone & Email Two-Step Authentication	Yes
Protect Famous Music Artist/Brand Names	Music Globally Protected Marks List (GPML)
Domain Naming Conditions	Yes. 1. Entity name (or portion of); or 2. Doing Business As; or 3. Acronym (AKA); or 4. Name recognizing entity; or 5. Name describing entity
Use:	
<i>Only Legal Music Activities</i>	Yes. Only legal music activities allowed
<i>Only Music-Related Activity Usage</i>	Yes. Only music usage allowed
<i>Prohibits registering of domain with established artist's/brand's name</i>	Yes
Content:	
<i>Only Music-Related Content</i>	Yes. Only music content allowed
<i>Quality Content Control (Parking Pages)</i>	Yes. Parking pages are not allowed
Enforcement & Appeals Mechanisms	Extensive & coherent set tailored to music
IP, Registration Policy Compliance & Appeals Provider	National Arbitration Forum (NAF)
Music-Focused Registration Policy Dispute Resolution	MPCIDRP
Music-tailored Copyright Protection Provisions	Extensive. Agreed to all RIAA safeguards and provisions.²
Community Definition	Organized & delineated logical alliance of music communities
Community Size	Majority. Considerable millions of members.
No Relevant Opposition*	No relevant opposition. Only applicant without a community objection.
.music-focused Social Media Engagement	Extensive. 5+ million across all media
.music Community TLD Support Petition	1.5+ million signed petition
Public Community Outreach Campaign	200+ public events (2008-Present)
Trademark for .music	Yes. Over 40 countries and regions
Community Premium Channels	Yes. Sorted by Type, Genre, Language, Geography, Keyword.³
Global Legal Song Licensing Registry based on DNS	Yes

¹ DotMusic gives [priority](#) to members of Music Organizations during MCMO Phase. During General Availability [all](#) Community members (including non-MCMO members) can register .MUSIC.

² DotMusic has more enhanced safeguards than all .MUSIC applicants combined. DotMusic has incorporated [all](#) RIAA P protection provisions that include stopping domain hopping, takedown policies, authorizations, permanent blocks, privacy/proxy, true name/address and trusted sender complaint policies.

³ The Premium Channels available to all validated community members are sorted/delineated according to NAICS community type (Musician/Band/Professional/Company), Genre (e.g www Rock music), Language (e.g French music), Geography (e.g London music / France.music) and Keywords (e.g Lyrics.music).

* According to ICANN's Final CPE Guidelines: "The evaluation process will respect the principles of fairness, transparency, avoiding potential conflicts of interest, and non-discrimination." (P.22)
 "To be taken into account as relevant opposition, such objections or comments must be of a reasoned nature. Sources of opposition that are clearly spurious, unsubstantiated, made for a purpose incompatible with competition objectives, or filed for the purpose of obstruction will not be considered relevant." (P.20). "The following principles characterize the EIU evaluation process for gTLD applications:
 All EIU evaluators must ensure that no conflicts of interest exist." (P.22) Any opposition filed by a competitor applicant or a competitor's supporter is a conflict of interest and is not considered relevant.

www.music.us

Appendix B

Community Definition, Community Majority Rationale & Serving Public Interest

List of Music Community Member Organizations (“MCMOs”)*

*MCMO List will be updated as more organizations are expected to become eligible .music-accredited Music Community Member Organizations

MUSIC COMMUNITY DEFINITION, MCMOs AND SERVING PUBLIC INTEREST

Music Community Definition and Global Music Community Representation/Inclusion

The definition of the Community is “a strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music.” (See Application Answer to Question 20a, the “Community”). Supporting music-related organizations of relevance constituting a majority of the Community are referred to in the Application as Music Community Member Organizations (“MCMOs”). MCMOs require .music-accreditation¹ from DotMusic which meet community-based criteria consistent with ICANN Applicant Guidebook’s criteria for Community Establishment.²

Members of MCMOs will be able to register their domains during a priority-based phase. This eligibility launch phase policy serves the public interest because it safeguards music entities that are already established and have a strong presence online. Furthermore, the objective of prioritizing registration for members of recognized MCMOs is to spur music community and industry adoption, while preventing cybersquatting of names. However, since a portion of the Community does not belong to eligible MCMOs, DotMusic will allow community members that do not belong to MCMOs to register domains just as long as they belong and identify themselves to a music community and have a requisite awareness of that community that they identify with. This way DotMusic serves both the global public interest and the music community because its eligibility policies do not discriminate against legitimate community members or exclude a significant portion of the community that would naturally associate itself with the string.

DotMusic’s definition of the Community covers all Community members associated with the string with a requisite awareness of the Community validated through their straight-forward association with a music-related community they identify with. The Music Community’s geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents (Application Answer to Question 20a).

As mentioned in the Application, “registrants will be verified using Community-organized, unified “criteria taken from holistic perspective with due regard of Community particularities” that “invoke a formal membership (Application Answer to Question 20a).” The defined Community represents all music-related entities with a clear and straightforward membership with the Community involved in the legal production, promotion, performance and distribution of music worldwide.

¹.music Accreditation Requirements for Music Community Member Organizations (MCMO), http://music.us/DotMusic_Music_Community_MCMO_Application.pdf, Section 2.0, Pg.2

² Applicant Guidebook, Community Establishment, <http://newgtlds.icann.org/en/applicants/agb/guidebook-full-04jun12-en.pdf>, Pg. 194-196 and CPE Final Guidelines, <http://newgtlds.icann.org/en/applicants/cpe/guidelines-27sep13-en.pdf>, Pg. 3-5

The defined Community and expressions of support serve the public interest because they represent a majority of the overall music community with a clear and straightforward association and the requisite awareness of participation in the Community as defined.

DotMusic's MCMOs collectively represent a majority of the Community. They include, but are not limited to "digital distributors representing most of the music distributed on the leading legal music stores (See Rationale in Application Answer to Question 20f)." These music distributor MCMOs (also known as aggregators) **represent the majority of music produced, marketed, distributed, performed and consumed globally** and are responsible for compensating artists, rights holders and labels after a sale is generated on any of the legal digital music stores, such as iTunes. Some examples include Tunecore (which represents 60% of all new digital music sales. Tunecore is also affiliated with ASCAP, BMI and SESAC and registers songs in over 60 countries³), Reverbnation (the world's largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals), CD Baby (the world's largest online distributor of independent music, with over 400,000 albums and 4 million tracks in its catalog). Another example is the world's leading legal digital lyrics distributor Lyricfind which covers a majority of music lyrics worldwide (Lyricfind tracks, reports, and pays royalties to 2,000 music publishers, including all four majors – EMI Music Publishing, Universal Music Publishing Group, Warner/Chappell Music Publishing, and Sony/ATV Music Publishing). Other organizations include Adev, a network with over 36 billion views annually, which administrates and manages over 6 million music copyrights across 26.5 million music videos for Youtube creators.⁴ Its Content ID services are all-encompassing, from indie artists to major publishers. Adev partners include the world's largest music companies, such as Universal, Sony/ATV, Warner Chappel, BMG and Imagem. Another global music rights administration network is INDmusic, a music community of over 3.9 million network members, over 1900 channel music partners and a network reach of over 3.5 billion monthly network views, covering popular platforms such as Youtube, Soundcloud and Dailymotion.⁵

DotMusic's digital music distributors and supporting organizations (which include overlapping community members that also belong to other music organizations) represent over 90% -- a majority -- of all music distributed and consumed globally. Ingrooves, a DotMusic supporter is associated with Universal Music Group (Universal has 32.8% music market share⁶ and affiliated with Ingrooves⁷). Likewise, TheOrchard, another DotMusic supporter is associated with Sony Music (Sony Music has 29.1% music market share⁸ and affiliated with TheOrchard⁹). Furthermore, the DotMusic supporting organization LyricFind is associated with the music lyrics licensing of 2,000 music publishers, including all four majors – EMI Music Publishing, Universal Music Publishing Group, Warner/Chappell Music

Publishing, and Sony/ATV Music Publishing.¹⁰ William Morris Endeavour (WME), the world's largest entertainment agency, represents artists and songwriters associated with independent and major label as well as major publishers. WME diverse talent includes leading multi-platinum selling artists such as Adele, Alanis Morissette, Aretha Franklin, Backstreet Boys, Barry Manilow, Beastie Boys, Billy Idol, Brian Setzer, Bruno Mars, Calvin Harris, Carly Rae Jepsen, CeeLo, Chris Cornell, Ciara, Deadmau5, Depeche Mode, Drake, Duran Duran, Eddie Vedder, Foo Fighters, Gnarls Barkley, Goo Goo Dolls, Ice Cube, James Blake, Jane's Addiction, Janet Jackson, Josh Groban, Justin Timberlake, The Killers, Lady Gaga, LL Cool J, LMFAO, Lynyrd Skynyrd, Morrissey, Nas, Neil Diamond, Nine Inch Nails, Norah Jones, Pearl Jam, Pet Shop Boys, Pete Dinklage, Peter Dinklage, Peter Dinklage, Peter Dinklage, Pharrell Williams, The Prodigy, Psy, Rage Against The Machine, Red Hot Chili Peppers, Rihanna, Roger Waters, Selena Gomez, Seth McFarlane, Sex Pistols, Sheryl Crow, Slash, Snoop Dogg, Soundgarden, System of a Down, Tom Waits, Tom Petty & The Heartbreakers, Trent Reznor, Usher, Weird Al Yankovic, Yanni, Ziggy Marley and many others.¹¹ This structure of the Community is strictly organized and delineated through diverse symbiotic and overlapping communities related to music.¹²

Other examples include MCMOs representing the global independent music community and a majority of music released internationally. These include the Worldwide Independent Network (WIN)¹³ representing the global independent music community; Merlin (Merlin)¹⁴ a global rights agency representing 20,000 labels in 39 countries; the Association of Independent Music (AIM)¹⁵; the Independent Music Companies Association (Impala)¹⁶ representing over 4,000 international music labels; and the American Association of Independent Music (A2IM)¹⁷ with Label members representing the U.S independent music community and Associate members including Apple iTunes (the world's largest music retailer with 63% global music market share,¹⁸ 37 million songs¹⁹ and a community of 800 million registered member accounts²⁰), Spotify (a music streaming company available in 58 countries with 30 million songs and 50 million members²¹), Pandora (the world's largest internet music radio company with 250 registered members²²), Vevo (the world's leading all-premium music video and entertainment platform with 8 billion monthly views globally²³) and others.

¹⁰ <http://www.lyricfind.com/about-lyricfind/>

¹¹ <http://www.wmeentertainment.com/0/cta/music/>

¹² For example, Lady Gaga – represented by DotMusic supporting organization William Morris Endeavor – is also a member of numerous overlapping music organizations and music communities such as Vevo. Other examples of overlapping communities that Lady Gaga is represented through include a major label, a performance rights organization, a major publisher and numerous collection societies and so forth. DotMusic's community represents a majority of the community taking into consideration these symbiotic, overlapping memberships that illustrate a strictly delineated and organized community based on a logical alliance of communities of similar nature related to music (See definition of the community in Q20a).

The DotMusic Application serves the global public interest because it has at least one entity that is dedicated to the community

According to the Applicant Guidebook: “*With respect to “Delineation” and “Extension,” it should be noted that a community can consist of...a logical alliance of communities (for example, an international federation of national communities of a similar nature... viable as such, provided the requisite awareness and recognition of the community is at hand among the members.*” (AGB, 4-12). The community as defined in the DotMusic application has at least one entity mainly dedicated to the community which has supported DotMusic, which include several “international federation of national communities of a similar nature.”

Dedicated Community: International Federation of Arts Councils and Culture Agencies (IFACCA):

Another example is the only international federation of national communities relating to government culture agencies and arts councils which have an integral association with music globally (See support letter from the International Federation of Arts Councils and Culture Agencies - IFACCA).

The International Federation of Arts Councils and Culture Agencies (IFACCA) is the only international federation that represents government culture agencies and arts councils globally, institutions that play the most pivotal role with respect to music.²⁴ IFACCA’s membership – which has formal membership fees -- covers the majority of music entities globally, regardless whether they are commercial, non-commercial or amateurs. The size of the community represented is in the considerable millions. Government ministry of culture and council agencies related to music cover a majority of the overall community with respect to headcount and geographic reach. The “Size” covered reaches over a hundred million music entities i.e. “considerable size with millions of constituents” per Application Answer to Question 20a. The string “music” falls under the jurisdiction of each country’s Ministry of Culture governmental agency or arts/music council (emphasis added). The degree of power and influence of government ministry of culture and council agencies with respect to music surpasses any organization type since these agencies (i) provide the majority of funding for music-related activities; (ii) regulate copyright law; and (iii) encompass all the music entities that fall under their country, regardless whether these entities are commercial, non-commercial or amateurs. IFACCA is globally recognized by its strategic partners, such as UNESCO, a United Nations agency representing 195 member states and the European Commission.²⁵ The UNESCO strategic partnership²⁶ is relevant, especially since UNESCO founded the International Music Council (the “IMC”) in 1949, which represents over 200 million music constituents from over 150 countries and over 1000 organizations globally.²⁷

For example, government activities in the clearly delineated and organized music community include setting statutory royalty rates. For example, in the United States, mechanical royalties are based on a

²⁴ http://www.ifacca.org/membership/current_members/

²⁵ http://www.ifacca.org/strategic_partners/

²⁶ http://www.ifacca.org/strategic_partners/

²⁷ <http://www.imc-cim.org/about-imc-separator/who-we-are.html>

"statutory rate" set by the U.S. Congress. This rate is increased to follow changes in the economy, usually based on the Consumer Price Index. Currently, the mechanical statutory rate is \$0.091 for songs five minutes or less in length or \$.0175 per minute for songs that are over five minutes long.²⁸

Ministries of culture and arts councils (that comprise IFACCA's membership) support musicians, musical performances, independent music artists, non-commercial musical expression and education in their respective countries. The 165 ministries of culture and arts councils that comprise IFACCA's membership support the "performing arts" and music specifically. Without the financial and logistical support of arts councils and the ministries of culture, the music community would be adversely affected, and in some countries, may not exist in any appreciable manner. For example, the Ministry of Culture 2011 budget for the small country state of Cyprus for culture funding was €34,876,522 with critical support of music activities.²⁹ Other small government Ministries of Culture, such as Albania,³⁰ or government Ministries of Culture and Arts Councils from countries with larger populations, such as India,³¹ all provide critical support and substantial advocacy for music. Such government institutions also collaborate and advocate through their funded country-based pavilion initiatives at Midem, the world's largest music conference.³² Therefore, while it seems quite obvious, out of caution, Objector submits the following evidence to support the direct association, and strong correlation, of IFACCA members with the music community and the string, .MUSIC.

Government ministries and arts councils provide critical support for the music community, including commercial music organizations and a significant portion of the community that Objector asserts Applicant is discriminating against - fans, DIY and independent artists and music bloggers. By way of example, government ministries' and arts councils' substantial connection to and support of "music" is noted in the reports of funding and support for music. Some examples to showcase the degree of power of the IFACCA's membership towards the string and global and national music are music investment and music funding (Annual reports by governments and councils):

- New Zealand Ministry of Culture has funded significant music projects. Some include the REAL New Zealand Music Tour (\$415,000), the New Zealand String Quartet (\$150,000) and New Zealand Music Commission: (\$1,378,000).³³
- The Australian Government/Council For The Arts invested \$51.2 million for the nation's orchestras; \$21.6 million for opera; \$10.8 million for other music artists and organizations; \$13.1 million for multi-platform artists and organizations; and \$4 million in miscellaneous funding, including sector building and audience development initiatives and programs.³⁴

³⁴ 2011 Annual Report for the Australia Council for the Arts, http://www.australiacouncil.gov.au/data/assets/pdf_file/0016/142351/Australia-Council-Annual-Report-201112.pdf, Page 28

- Canada Council for the Arts is Canada’s national, arts funding agency investing \$28 million in its Canada Council Musical Instrument Bank (Page 16) and \$28,156,000 in Music Arts Programs (Page 66).³⁵ The Government of Canada also renewed its annual investment of \$27.6 million over five years in the Canada Music Fund.³⁶
- The United Kingdom Department for Culture and Education (DfE) will fund music education at significant levels: £77 million, £65 million and £60 million will be available in the three years from April 2012.³⁷
- The United States National Endowment of the Arts has awarded more than \$4 billion to support the arts since its inception³⁸ and has a strong focus on music as outlined in its Strategic Plan³⁹ with Congress requested to provide \$154,465,000 for fiscal year 2014.⁴⁰
- The National Arts Council of South Africa invested 2,536,131R in Music and 9,995,000R in Orchestras and has focused strongly on the “Strengthening of live indigenous music and advocating the revival of the live music circuit in South Africa”⁴¹
- The Singapore Arts Council will fund \$10.2 million in the arts under its 2013 Grants Framework, including the Ding Yi Music Company and Siong Leng Musical Association.⁴²
- In 2011, the support for artistic activities by the Arts Council of Finland was €32.4 million of which €4,921,850 was awarded to music.⁴³

Each of IFACCA’s members has a clear association with, and mandate to support the music arts in their countries (in at least 165 member countries). In most countries, their ministry of culture/arts council is the largest funder and marketing supporter of the music arts.

Dedicated Community: The International Federation of Musicians (FIM):

One example is the only international federation of musicians (See support letter from the International Federation of Musicians - FIM) which has official relations with the United Nations Economic and Social Council (ECOSOC)(Ros C); the United Nations Educational, Scientific and Cultural Organization (UNESCO) (Consultative Status); the World Intellectual Property Organization (WIPO) (Permanent Observer Status); and the Organisation internationale de la Francophonie (OIF). FIM is a member of International Music Council (IMC) founded in 1949 by UNESCO, which represents over 200 million

music constituents from over 150 countries and over 1000 organizations.⁴⁴ FIM’s aim is to “protect and elevate the economic, social and artistic status and interests of musicians, both in their role as performers and as producers of the recording of their own performances.”⁴⁵

Dedicated Community: A2IM & Global Independent Music Coalition:

A clear example of an “entity dedicated to the community” with members that cover hundreds of millions of music constituents with formal boundaries is A2IM, the American Association of Independent Music. A2IM has two types of members: U.S independent Label members and Associate members. A2IM membership for Labels and Associates is invoked formally through an application and if accepted would require annual membership dues.⁴⁶

The reach of A2IM Associate⁴⁷ membership covers hundreds of millions of entities (i.e. the reach of A2IM’s total membership “geographic breadth is inclusive of all recognized territories covering regions associated with ISO-3166 codes and 193 United Nations countries with a Community of considerable size with millions of constituents – See Application Answer to Question 20a).

Organized and strictly delineated communities related to music that are members of A2IM include:

- **Apple iTunes**⁴⁸ – iTunes accounts for 63% of global digital music market⁴⁹ - a majority – with a registered community of 800 million registered members⁵⁰ available in 119 countries who abide to strict terms of service and boundaries⁵¹ and have downloaded over 25 billion songs⁵² from iTunes’ catalog of over 43 million songs⁵³ covering a global music community, regardless of genre or whether the community entities are amateur, professional, commercial or non-commercial. To add music to iTunes, all music artists must have a formal membership with iTunes via an Apple ID registration, which includes a current credit card on file.⁵⁴
- **Pandora**⁵⁵ – Pandora is the world’s largest streaming music radio with a community of over 250 million registered members.⁵⁶
- **Spotify**⁵⁷ – Spotify is the world’s largest music streaming community with over 50 million active registered members in 58 countries and over 30 million songs. The music community uploads 20,000 songs every day.⁵⁸

- **Vevo**⁵⁹ – Vevo is the world’s leading all-premium music video community and platform with over 8 billion monthly views globally.⁶⁰
- **Youtube**⁶¹ – Youtube is the world’s largest music video streaming community with millions of music creators -- amateur, professional, commercial or non-commercial -- and over 1 billion registered members covering all regions globally. 6 billion hours of video is watched every month on Youtube,⁶² of which 38.4% is music-related.⁶³
- **Reverbnation**⁶⁴ – Reverbnation⁶⁵ is one of the world’s largest music community and a leading music distributor with over 3.87 million musicians, venues labels and industry professionals covering every country globally. The Reverbnation community grows by over 50,000 artists, bands, labels and industry professionals monthly.
- **BMG**⁶⁶ – BMG is focused on the management of music publishing and recording rights. BMG has an international presence and represents over 2.5 million music rights globally.⁶⁷

A2IM also includes members that are associated with global government agencies which exclusively represent substantial music economies and music members, such as France (BureauExport⁶⁸), China (China Audio Video Association⁶⁹) and Germany (Initiative Musik).⁷⁰

A2IM also has Affiliate⁷¹ associations within the global music community. These include Affiliates such as MusicFirst,⁷² the Copyright Alliance,⁷³ the Worldwide Independent Network (WIN)⁷⁴ and Merlin.⁷⁵ A2IM also represents a Coalition representing the interests of the Global Independent Music Community.⁷⁶ The A2IM Coalition includes Merlin, a global rights agency for the independent label sector, representing over 20,000 labels from 39 countries, Worldwide Independent Network (representing label creators in over 20 countries), Association of Independent Music (representing largest and most respected labels in the world), and IMPALA (Independent Music Companies Association on behalf of over 4,000 independent music companies and national associations across Europe, representing 99% of music actors in Europe which are micro, small and medium sized enterprises).

http://a2im.org/wp-content/uploads/2015/03/A2IM_Independent_Community_Letter_to_ICANN_March_7_2015.pdf

Cumulatively, A2IM's Label and Associate Membership, A2IM's Affiliates and the A2IM's Global Independent Music Community Coalition, covers a majority of the global music community. Its cumulative membership is in the hundreds of millions of entities with formal boundaries belonging to strictly organized and delineated communities related to music as per the Community Definition and Size (See Application answer to Question 20a).

A2IM is a globally-recognized institution and is an important advocate of international music trade activities.⁷⁷ A2IM has a presence of mechanisms for participation in activities, membership and leadership with a strict, clear membership and a formal Board of Directors with voting rights, an institutional purpose related to the benefit of the associated community" including a public and clear Mission Statement and Purpose, "performance of regular activities that benefit the associated community" including international activities and events benefitting members, and "level of formal boundaries around the community" including requiring members to formally apply to become members with eligibility requirements to be closely associated with the clearly delineated community invoked and pay annual membership to remain a member. For example, DotMusic Limited had to apply to become an A2IM member and also has to pay an annual membership fee to remain an A2IM member.

Formal boundaries are in place to facilitate a delineated process in which rights holders are compensated and to eliminate piracy and copyright infringement e.g. A2IM member iTunes formally requires hundreds of millions of music fans to create formal Apple accounts and abide to strict terms of service to consume music and to ensure that royalties are paid using clearly delineated, organized systems that identify rights-holders corresponding to each song sold or streamed to compensate the appropriate music rights holders.

Dedicated global music community coalition supporting the .MUSIC "community" application model, including DotMusic's measures to deter and address copyright infringement:

Another global music community coalition led by the RIAA "on behalf of over 15 national and international trade associations" also expressed its support for .MUSIC to be under a "community" application model, including encouraging statements in support of DotMusic's policies that stated that the coalition "was encouraged to see" that DotMusic "included several measures to deter and address copyright infringement within that TLD." The "coalition members represent the people that write, sing, record, manufacture, distribute and/or license over 80% of the world's music"⁷⁸ – a majority of global music.⁷⁹

Note: DotMusic expects that more MCMOs will be added to the list of .music-accredited MCMOs below, including Music Community organizations with overlapping memberships with the current MCMO list. MCMOs can apply to join by submitting a complete MCMO Application to community@music.us.⁸⁰ For latest list of MCMOs, please visit: <http://music.us>

MUSIC COMMUNITY MEMBER ORGANIZATIONS (MCMOs)

(IN ALPHABETICAL ORDER)

A & R WorldWide

A&R Worldwide is a globally renowned, independent, forward thinking, multi-faceted and all-encompassing platform, specializing in music and its implementation in the global marketplace. Its unprecedented network of international relationships and insider music industry knowledge deliver a one-stop solution for talent discovery, development, consulting and marketing services.

The company's vast subscriber reach of over 12,000 music industry professionals with a vested interest in music, worldwide influence, emerging brands, variety of promotional platforms and extensive track record serve as a central hub between the artist, entertainment industry and the consumer. Over the years A&R Worldwide and its team have assisted with brokering thousands of deals and opportunities, including signings, licensing, synch placements, publishing, booking agents, management, brand tie-ins and key media support, etc.

Some of the artists and/or their representatives that A&R Worldwide's team have supported include: Coldplay, Lady Gaga, Dido, Adele, Katy Perry, Keane, LMFAO, Robyn, Lily Allen, Jessie J, The Temper Trap, La Roux, Ting Tings, Duffy, Faithless, Sia, Muse, Missy Higgins, Bonnie McKee, Fatboy Slim, Avril Lavigne, Sugababes, Bitter:Sweet, Nova Delai, Kate Havenevik, Bloodpit, Just Jack, Ella Rouge, Disco Ensemble, Sam Sparro, Wolfmother, Vassy, Teddybears, Steriogram, Airbourne, Sixpence None The Richer, Frank Turner, Evermore, Laura Izibor, Klaxons, Frou Frou, Imogen Heap, Dead Letter Circus, SoShy, The Dares, Carolina Liar, Jem, Gary Jules, The Noisettes, Pilate Speed, McQueen, Dúné, Pint Shot Riot, Howling Bells, Capra, Skybombers, Mexicolas, Pete & The Pirates, Miss Li, The Crimea, King Blues, Headway, The Rifles, Scouting For Girls, Yoav (formerly known as Y), Swingfly, Linda Kiraly, Tina Dico, Rob Dougan, Corinne Bailey Rae, The Chevin, Makeshift Innocence, and many others.

A&R Worldwide assists artists and/or their support teams, as well as top executives and decision-makers in various arenas, not only through personal consultation, but also by offering access to our vast global Rolodex of relationships and insight with A&R executives, label heads, film/TV/gaming music supervisors, music publishers, artist managers, producers, concert bookers/promoters, broadcast media, trendsetter radio outlets, online/digital/mobile platforms, distribution networks, press/media, advertising agencies, international trade organizations, consumer brands, technology companies and trade fairs/seminars.

In fact, A&R Worldwide also produces and programs its own annual international music, media, technology and entertainment conference: the critically acclaimed MUSEXPO in Los Angeles as well as the events the Worldwide Radio Summit (with our partners AllAccess Media Group), Global Synch and Consumer Brands Summit, and the A&R Expo. In the past, A&R Worldwide has hosted MUSEXPO Europe (London), and One Movement/MUSEXPO (Perth, Australia). These events provide intimate networking opportunities and bring together some of the world's top executive minds, emerging talent, influential figures from the music, media, technology and press realms.

A&R Worldwide has decades of professional music and media industry experiences in both the US and international markets. A&R Worldwide is recognized by many of the most influential music and

entertainment industry executives from around the globe for its ability to discover and develop talent, playing a key role in assisting artists with multiple needs well before their local, regional, national and international successes.

Website: <http://www.anrworldwide.com/mission.php>

Adrev

AdRev is music multi-channel music network providing YouTube music creators the opportunity to improve monetization, discovery, programming, audience growth and production quality for their YouTube music video content. Adrev administrates and manages over 6 million music copyrights across 26.5 million music videos. The Adrev network has over 36 billion views annually.

Founded in 2011, AdRev has grown from humble beginnings as a Content ID admin and digital media licensing service to a multi-channel network generating over 3 billion monthly views. As experts in rights management Adrev understands how to handle 3rd party claims so that its partners can operate within appropriate copyright policy.

Adrev provides artists the opportunity to promote and monetize their YouTube channel and music videos. By partnering with AdRev, artists get immediate access to a suite of benefits including dedicated support with video and channel optimization, unlimited access to a music and sound effect library we've licensed for your YouTube videos, access to all of the YouTube partner features, and more.

Adrev has grown into a multifaceted business that includes a YouTube MCN but also includes Content ID services for everybody from indie artists to major publishers. Partners include the world's largest music companies, such as Universal, Sony, Warner Chappel, BMG and Imagem.

Inc. named AdRev the #2 fastest growing media company in 2014. AdRev handles a broad range of music including the production music libraries of Universal Publishing Production Music, Warner/Chappell Production Music, Extreme Music (Sony/ATV), Selectracks (BMG), 5 Alarm Music (Imagem); master recordings of Universal Pictures Film Music, including Pharrell Williams' "Happy"; songs recorded by bestselling artists Eminem, T.I., Creedence Clearwater Revival, Imagine Dragons, Bob Dylan, Robbie Robertson, The Rolling Stones, The Who, Wu Tang Clan, Two Steps from Hell, Celldweller, Dino Merlin; and YouTube stars Kurt Hugo Schneider, Mack Z and comedian Kat Williams.

Alberta Music Industry Association. Part of the Canadian Music Coalition

The Alberta Music Industry Association is a non-profit, service-based association dedicated to helping professionals in the music industry to succeed in their careers.

The Alberta Recording Arts Foundation was founded in 1980 by Bob McCord from CISN Radio in accordance to the licensing agreement that was required by the CRTC for radio broadcasting. This led to the incorporation of the Alberta Recording Industries Association (ARIA) in 1984 under the Societies Act of Alberta. Its official mandate was to “participate and assist in the overall development and improvement of the Alberta and Canadian recorded music industry, especially as it relates to Alberta.”

The criteria of who was eligible to be a full member changed at that time to consisting of incorporated business members only. Artists were no longer allowed to become members who had voting rights or could hold a position on the Board unless they owned and operated a limited company. Therefore studios, record labels, publishers and distributors made up the majority of the board with the business membership fee priced at \$250.00/yr.

From 1995 to 1999 ARIA collaborated with the music industry associations of Manitoba, Alberta and Saskatchewan and staged independent music festivals and conferences known as the All Indie Weekend. With this common project, these three industry associations worked in tandem toward the shared vision of developing the infrastructure of the independent music industry in Alberta, Saskatchewan, and Manitoba.

After four successful All Indie Weekends, these MIA’s decided to join forces and resources to create a new entity in further promoting prairie music to the world, calling it the Prairie Music Alliance Inc. (May 1999). In 2001 ARIA ratified the by-laws changing the criteria for membership. Full members with voting rights and consideration for Board positions constituted... “those companies and individuals whose principal source of income is earned from the following activities in the Alberta music industry: Artists, songwriters, publicists/promoters, producers, engineers, studios, labels, publishers, distributors, artists managers, public broadcasters.”

The Associate and Sustaining Memberships were introduced at that time as well. The Western Canadian Music Alliance Inc. (January 2003) was formed in late 2002 when the Prairie Music Alliance expanded, inviting the Music Industry Associations of BC and the Yukon to join forces in creating a new entity. The vision of developing the infrastructure of a regional music industry is intact and now shared across these five provinces.

In October of 2007 the members of the Alberta Recording Industries Association voted to change the name to the Alberta Music Industry Association. This was in line with other music industry associations in the country who were striving to be looked upon as an all-inclusive resource for the music industry.

Currently, Alberta Music has a permanent staff of five, with offices in Edmonton and Calgary (January 1). The organization frequently runs information sessions and workshops, provides financial tour support, assistance in attending festival/conferences and produces showcase opportunities for artists at events like Canadian Music Week (Toronto), The Great Escape (Brighton) and Reeperbahn (Hamburg).

The Mission Statement is “Building, connecting and inspiring a dynamic Alberta music industry.”

- The Alberta Music Industry Association is a non-profit, service-based association dedicated to helping professionals in the music industry to succeed in their careers. We are here to build, connect and inspire a dynamic Alberta music industry.

- Member Services – grants, programs, advice, workshops, etc.
- External advocacy work – work with other organizations, government, advocacy, partnerships.
- Maintain the support and growth of the Western Canadian Music Alliance.

The Alberta Music Industry Association serves:

- Bands/Artists, Managers, Publicists, Labels, Studios, Producers, Engineers...well, everyone in the Alberta music industry

Partners include:

- Government (Provincial and Municipal)
- Radio Broadcasters (through Canadian Content Development Programs)
- FACTOR (Foundation to Assist Canadians Talent On Recordings)

Establishment Date: 1980

Community Activities: <http://www.albertamusic.org/about>

Membership Information: <http://www.albertamusic.org/membership>

Altafonte Music Network

Altafonte the #1 music distributor for Spanish independent labels, covering services for all formats from streaming of singles to vinyl albums.

[PIAS] Entertainment Group and Altafonte have formed an alliance in Iberia and Latin America. As part this [PIAS] agreement we: represent [PIAS]'s labels; do physical distribution of CD's, DVD's, and vinyl; direct and carry out marketing and promotion campaigns; administer related rights; and digitally represent some of the artists from their digital catalogue. This alliance has made them the largest independent physical supplier in Spain and Portugal.

Altafonte is also the leading independent digital distribution company in Iberia and Latin America. It has agreements and alliances with leading labels, producers, distributors, management entities, communication companies, and concert/festival promoters. These alliances span countries including Spain, Portugal, Mexico, Cuba, Colombia, Chile, Uruguay and Argentina, among others. Altafonte actively operates in all of these markets while providing professional services throughout the region.

Altafonte also focuses its attention on the music industry in the United States, where the strong presence of Latin music and culture continues to grow.

Altafonte distributes digital and physical music to over 100 platforms worldwide including Apple iTunes, Spotify, Amazon, Google Play, Youtube, Vevo, 7Digital, Rdio, Vodafone, Rhapsody, Shazam, Napster, Deezer, Pandora, Slacker, Ovi, Orange and others.

American Association of Independent Music (A2IM)

A2IM, launched in 2005, helps independent music labels improve business by promoting access and parity through advocacy, education and connection-building with one another and affiliated businesses. The Independent Music Sector has introduced, developed and supported nearly every new musical form which has impacted our society since the beginning of the recording industry. In the present day – perhaps more than ever – the independents are vital to the continued advancement of cultural diversity and innovation in music.

A2IM is a not-for-profit trade organization with over 270 independent Label Members (which include labels for globally top-selling artists such as Adele and Taylor Swift) and over 140 globally-recognized Associate members. A2IM serves the Independent music community as a unified voice representing a sector that, according to Billboard Magazine, comprises over 34.5% of the U.S music industry's market share, as much as 80% of the music industry's releases, a significant portion globally. The organization represents the Independents' interests in the marketplace, in the media, on Capitol Hill, and as part of the global music community.

A2IM also has over 140 Associate Members, such as Apple iTunes that **accounts for 63% of global digital music market** according to Apple Insider with a catalog of over 26 million songs, available in 119 countries. Other Associate A2IM members include Pandora (72.4m active users), Spotify (6m paid subscribers, 24 million active users in 35 countries) and Youtube, the largest video site in the world. Other A2IM Associate members also include entities associated with global governments, such as France (BureauExport), China (China Audio Video Association) and Germany (Initiative Musik), which represent significant economies in the music sector.

Establishment Date: 2005

Community Activities: <http://a2im.org/mission/>

Membership information: <http://a2im.org/about-joining/>

Archive of Contemporary Music (ARC)

The ARChive of Contemporary Music (ARC) is a not-for-profit archive, music library and research center located in New York City since 1985.

ARC contains more than 2.25 million sound recordings (22 + million songs). ARC preserves two copies of each recording, in all known formats, and has electronically catalogued more than 300,000 sound recordings – more than any other public, university or private library. ARC also houses more than three million pieces of attendant support material including photographs, videos, DVDs, books, magazines, press kits, sheet music, ephemera and memorabilia.

The value of ARC's collection is not only in the rareness of many of its recordings, but in the breadth, size and organization of the collection. For every signed and unique copy of an early Rolling Stones LP, there are hundreds of relevant, formative, relatively unknown recordings that contributed to its creation, and thousands that benefit from its existence.

The ARChive collects, preserves and provides information on the popular music of all cultures and races throughout the world from 1950 to the present. The ARC grows daily as hundreds of record companies, publishers, distributors, collectors, artists and music fans from around the world donate new materials to the ARC. In addition to sound recordings the ARChive actively collects all books, magazines, videos, films, photographs, press kits, newspaper clippings, memorabilia and ephemera relating to the history of popular music. ARC also maintains a variety of informational databases other than those on recordings and books, notably its Music Index of 52,000+ people working in the music industry.

The ARChive was established because for decades the recording industry had neglected the preservation of its own heritage, and over the years many irreplaceable recordings and artifacts have been misplaced or destroyed. Even as the new medium of CDs placed many out of print recordings back in circulation, many re-issues have different or truncated material, and many CDs themselves are already out of print. When we began the recording industry was doing little to preserve its own heritage, as the film industry recently did after realizing that nearly half of all films produced before 1950 have been lost. The 21st century heralds the demise of the object in any form; even more reason for the scrupulous preservation of original releases of musical works.

In general libraries and sound archives have also been slow or resistant to preserving emerging popular music. Most considered popular music “commercial” and therefore less worthy of saving—or more able to survive on its own. The ARChive is America's first non-affiliated popular music archive. We believe that all forms of popular music — jazz, be-bop, bluegrass, country, rock, rap, blues, enka, reggae, calypso, zydeco, zouk and countless others — are important culturally. Not only do they entertain, they reveal to the world a great deal about a people and their values.

The ARChive of Contemporary Music was founded by B. George, the current director, and David Wheeler (1957-1997). The collection is maintained by Senior Archivist Fred Patterson. Archivist in charge of our book scanning projects is Quinn MacRorie. Those pesky day to day things are done by volunteers from the community and interns from many different schools and universities. Bill Levay is our newest archivist and tech person.

Mission statement: To collect, preserve and provide information on the popular music of all cultures and races throughout the world, produced from 1945 to the present.

- **Artists:** Are artists AMAEI independent artists still unedited;
- **Associates:** Professional of the surrounding area of independent music, not necessarily linked to issues that want to join the AMAEI. Are, for example, agents or managers with or without corporate structure (SMEs) itself, which primarily work independent artists, agents, PR (PR's), shops with a focus on independent music, websites and platforms to disseminate independent music, *bloggers*, DJs , VJ's, Radios College, etc..
- **Friends of AMAEI:** Friends of St. AMAEI any commercial entities wishing to promote their services or geared to the independent music sector products preferred, directly to the Associates, through a contribution to the funding of the Association or one or more of its specific programs.

Website: <http://amaei.pt/>

Association of Independent Music (AIM)

AIM is a trade body established in 1999 to provide a collective voice for the UK's independent music industry. AIM represents over 800 member companies, from the largest and most respected labels in the World, to small start-ups and individual artists releasing their own music for the first time. AIM promotes this exciting and diverse sector globally and provides a range of services to members, enabling member companies to grow, grasp new opportunities and break into new markets.

The UK's independent music sector produces some of the most exciting and popular music in the World, and makes a huge contribution to the country's economy. AIM's 850+ members span every musical genre and every corner of the UK. They are a vibrant, entrepreneurial and diverse bunch who have one thing in common: the music comes first.

AIM oversees a sector whose artists have claimed six of the last ten Mercury Music Prizes and regularly accounts for 30% of all UK artist album awards (silver, gold, platinum). Artists signed to member labels include: Adele, Amadou and Miriam, Arctic Monkeys, Bon Iver, Bjork, Caro Emerald, Franz Ferdinand, Friendly Fires, Grimes, Netsky, Radiohead, Roots Manuva, Royksopp, The Prodigy, Queens of the Stone Age, The Strokes, The Walkmen, The White Stripes and thousands of others.

BMAT

BMAT provides global music identification that monitors over 16 million songs and growing in over 3000 radios and televisions across more than 60 countries worldwide.

The BMAT Vericast solution provides real time recognition and auditable reporting based on an audio fingerprint that is resistant to signal alterations such as voice over, broadcast mastering or noisy channel degradation.

With continuous and precise tracking, Vericast guarantees accurate emission reports, making it ideal for transparent and efficient royalty distribution.

BMAT's Airplay Monitoring:

- reports title, artist, label, ISRC, ISWC, channel, duration, date and time
- recognition rate >99,9% (90% for background music)
- standard minimum time of recognition: 4 seconds
- content ingestion formats: DDEX, amazon, itunes-XML, ID3-tag, XML, XLS
- broadcast formats: DVB-S, DVB-C, DVB-T, UHF, VHF, AM, FM
- content update feeds from Universal, SONY, EMI, Warner, The Orchard, Ingrooves

BMAT also offers music curation services. BMAT's Ella service provides audio analysis, search and recommendation engine for media services to understand and personalize music.

Ella provides perceptual coherent music browse and discovery through the various fields of knowledge available: context (title, artist, labels, release date, country, language, release date, popularity...), content (mood, voice presence, pitch, key, chord progression, beats per minute...), and user data (buying history, listening behavior, playlist habits...).

BMAT's Music Curation Services include:

- REST-Based Web Service API (XML, JSON, M3U, XSPF)
- support for Debian and Redhat distros
- powered by a constantly growing song database of 16M tracks
- multi-million track capacity in 1 server
- supporting all popular media formats: MP3, OGG, MPEG, WMA, AVI...

BMAT represents clients (see <http://www.bmat.com/clients/>) that include Performing Rights Organizations and Collection Societies such as:

- AADI: a non profit-making organisation that, since 1954, has been responsible for the collection, management and distribution of the performing rights of musicians in Argentina. It is a member of the Federation of Ibero-Latin American Performers.

Canadian Independent Music Association (CIMA)

The Canadian Independent Music Association (CIMA), founded in 1975, is the not-for-profit national trade association representing the English-language, Canadian-owned sector of the music industry. CIMA's membership consists of Canadian-owned companies and representatives of Canadian-owned companies involved in every aspect of the music, sound recording and music-related industries. They are exclusively small businesses which include: record producers, record labels, recording studios, managers, agents, licensors, music video producers and directors, creative content owners, artists and others professionally involved in the sound recording and music video industries.

CIMA's mandate is to develop and advocate policies and services that serve to support a strong and economically stable Canadian independent music and sound recording industry, ensuring the long-term development of the sector and to raise the profile of Canadian independent music both in Canada and around the world.

CIMA continues to take a leadership role in improving the economic viability and well-being of the independent music and sound recording sector in important areas such as cultural industry policies and programs; intellectual property and copyright law; tax laws and tariffs; international export and trade development programs; and professional development.

Canadian Music Industry and Provincial Music Industry Associations Coalition

The Canadian music industry and provincial music industry associations coalition was created to promote music from Canada and all of its provinces. The .MUSIC Initiative will work with the music coalition to ensure the protection of Canadian geographic names consistent with ICANN Government Advisory Committee (GAC) advice and to advance the promotion of Canadian music, culture and the arts internationally.

CIMA has successfully recruited the support of Canada's Provincial Music Industry Associations as active participants in the national coalition to support your .MUSIC initiative. What this means, is through CIMA (a national music trade association) and the provincial and territorial music industry associations (MIAs), the coalition truly represents a coast-to-coast community of music interests, from British Columbia in the west to Nova Scotia in the east. In addition to BC and Nova Scotia, the coalition will also include the provincial MIAs from Saskatchewan, Alberta, Manitoba, Ontario, Newfoundland, Prince Edward Island and New Brunswick.

CIMA and its partners look forward to working with the .MUSIC Initiative and to ensure that Canada's music industry as a whole takes advantage of and benefits from a safe and trusted top-level domain, through your innovative .MUSIC initiative.

Canadian Music Week

Canadian Music Week began in 1981, and has grown to become one of Canada's largest and most influential media and music conferences. It draws top industry professionals to participate in a four-day program of activities. Designed to stimulate the exchange of market intelligence, increase dialogue and provide networking opportunities, Canadian Music Week continues to present the ideal platform for more than 2,000 national and international delegates.

Canadian Music Week is recognized as one of the premier entertainment events in North America focusing on the business of music. We bring together Sound Recording, New Media and Broadcast for one spectacular week of events... Combining informative, intensive conferences, a cutting edge trade exhibition, award shows, film festival, comedy festival and Canada's biggest New Music Festival. The Canadian Music Week festival spans 5 nights of performances, with 1,000 showcasing bands at more than 60 live music venues in downtown Toronto.

CD Baby

CD Baby was founded in 1998. From its humble roots as a late-90's garage startup to their current standing as the biggest online distributor of independent music in the world, CD Baby has established itself as one of the most trusted names in the music business. With a supportive, hands-on approach to artist and label-relations, and a friendly, knowledgeable customer service team (who can actually be reached by phone), CD Baby has built a loyal client base of over 300,000 artists and millions of music-fans around the globe.

CD Baby is the **world's largest online distributor of independent music, with over 400,000 albums and 4 million tracks in its catalog.** CDBaby has paid out over \$250 million to its artists.

Website: CDBaby.com

CMJ Network

CMJ. is a music events/online media company which hosts an annual festival in New York City, the CMJ Music Marathon. At CMJ.com, it publishes top 30 lists sent by stations which subscribe at a cost of a few hundred dollars a year. CMJ formerly published these lists in CMJ New Music Report, it also used to publish CMJ New Music Monthly, which was a magazine with interviews, reviews, and special features. Each monthly magazine came with a mix CD of 15–24 songs by well-established bands, unsigned bands and everything in between. The staff puts together CMJ Music Marathon, a convention and music festival, each autumn, in New York. A second festival: the CMJ Rock Hall Music Fest, took place in Cleveland in 2005 and 2006.

The company was started by Robert Haber in 1978 as the College Media Journal, a bi-weekly trade magazine aimed at college radio programmers and became CMJ New Music Report in 1982. Today, the CMJ Network connects music fans and music industry professionals with the best in new music through interactive media, live events and print. CMJ.com offers a digital music discovery service, information resources and community to new music fans, professionals and artists. CMJ Events produces the legendary CMJ Music Marathon, the largest and longest-running music industry event of its kind, in addition to live events and tours across the US. The weekly music-business trade magazine CMJ New Music Report is the primary source for exclusive charts of non-commercial and college radio. airplay. CMJ Access is an integrated marketing agency specializing in providing its clients unparalleled access to the college and young adult demographic and emerging music world.

Conductors Guild

Throughout its 35-year history the Conductors Guild has served as an advocate for the conducting profession throughout the world. Its membership of over 1,600 represents conductors on a global scale. The Conductors Guild was founded in 1975 at the San Diego Conference of the American Symphony Orchestra League, and it continued for a decade as a subsidiary of that organization. In 1985 the Guild became independent. Since 1985, the Guild has expanded its services and solidified its role as a collective voice for conductors' interests worldwide.

The Guild is concerned with the art and the craft of conducting, with practical problems encountered within the profession, with repertoire, and with the multiple roles that Music Directors must fulfill in orchestras, choruses, opera and ballet companies, wind ensembles, bands, musical theater, and other instrumental and vocal ensembles, whether these are professional or amateur, functioning independently or within the context of colleges, universities, and secondary or primary schools. The Guild's overall goal is to enhance the professionalism of conductors by serving as a clearing house for knowledge and information regarding the art and practice of conducting; further, to support the artistic growth of orchestras, bands, choruses and other conducted ensembles. The Guild has a broader potential role as well: to communicate to the music community the views and opinions of the conducting profession, for which the Guild can serve as a collective voice.

Contemporary Music Services Tasmania (Music Tasmania) – Member of the Australian Coalition

Music Tasmania, formerly Contemporary Music Services Tasmania (CMST), is the peak body for Tasmania's contemporary music community.

Music Tasmania exists to proactively foster a network of support for Tasmanian musicians and music workers across a broad range of genres and business practices. Our objective is to engage with stakeholders to activate infrastructure, disseminate knowledge, and create developmental opportunities for original, contemporary Tasmanian music, to prosper locally, nationally, and internationally.

Music Tasmania's recent deliverables include: a rehearsal facility in Hobart, coordinating Tasmania's annual music showcase *Amplified*, providing educational resources and professional development opportunities, providing advice and referral services to its members, enhancing the profile and communication of Tasmanian music activities to local and national audiences, and advocating for Tasmanian musicians and music workers on issues of local and national significance.

Dashgo

Dashgo provides global music rights administration for 200,000 songs and digital distribution for over 10,000 artists.

Dashgo also provides monetization that is both global and hyper local. DashGo works to maximize the value of music catalogs in partnership with clients and align incentives, reaching over 30 worldwide digital platforms, such as Youtube, Spotify, iTunes, Amazon, Google Play, Beats, Shazam and others. Dashgo prides ourselves with longtime direct relationships and integration with download, streaming & radio services as well as collecting music royalties directly from SoundExchange.

Dashgo also is a YouTube MCN and is fully YouTube Certified with a strong network of creators and partners to help monetize sound recordings, compositions and music videos. The Dashgo music video network includes over 238,000 music videos, 1.2 million members with a reach of over 5.4 billion annual views.

Dashgo provides artists with full control over their music, providing management of music releases from a single platform. Dashgo also collects music royalties monthly, including providing UPCs, ISRCs, encoding and delivery to hundreds of the most popular digital music distributors. Dashgo also gives artists social analytics of their music to help track their performance across many social networks and internet radio stations.

Dashgo also provides labels with a unified, industry-leading dashboard to manage all of its artists' releases with complete encoding, metadata, and content archiving. Dashgo also gives labels comprehensive royalty reporting with complete label, artist, and publisher reporting to fit the label's needs and is Fully Harry Fox Agency reporting compliant.

DiscMakers

Founded in 1946, Disc Makers is the undisputed leader in optical disc manufacturing for independent artists, filmmakers, and businesses. Many of its 400 team members are musicians and filmmakers themselves. The company has pioneered many of the features currently taken for granted in the music and film industry: complete turnkey packages, integrated in-house manufacturing, board packages like jackets and Digipaks, promotional posters and value added promo services, quality unparalleled in the industry, the industry's only money-back guarantee, and turn times no one else can touch.

The company operates the most vertically integrated manufacturing facility in the industry out of its Pennsauken, NJ facility, and produced over 40,000 titles in 2010 and the number is still growing. Disc Makers will furnish from 1 to 1,000 discs (or tens of thousands when ordered). Disc Makers continues to be firmly focused on its mission: helping independents – whether musicians, filmmakers, or small businesses – compete head to head with companies much larger than themselves. In short, Disc Makers empowers artists to do what they love.

Echo Nest / Spotify

Founded in 2005, the Echo Nest is the industry's leading music intelligence company, providing developers with the deepest understanding of music content and music fans. Leading music services (Clear Channel's iHeartradio, MOG, Rdio, SiriusXM, Spotify, Warner Music), editorial, video and social media networks (BBC.com, Foursquare, MTV, Twitter, VEVO, Yahoo!), connected device manufacturers (doubleTwist, Nokia) and big brands (Coca Cola, Intel, Microsoft, Reebok) and a community of about 7,000 independent app developers use the Echo Nest platform and solutions to build smarter music experiences that help fans to better discover, share and interact with the music they love. The Echo Nest's customer base reaches over 100 million music fans every month through more than 400 apps and sites powered by The Echo Nest/ Powered by the world's only machine learning system that actively reads about and listens to music everywhere on the web, The Echo Nest opens up a massive repository of dynamic music data to application developers to re-shape how we all experience music.

The Echo Nest's Dynamic Music Data solution is the most comprehensive, constantly updated, socially connected feed of music information. Every day EchoNest aggregates a real-time feed of the best images, bios, blog posts, news, social conversations, and more -- **across millions of artists and 30 million+ songs**. The Echo Nest's intelligent stream of music data helps customers show their millions of fans what's actually happening in the music world, right now, while eliminating costly dependencies on stale metadata sources.

Flanders Music Centre

Flanders Music Centre is an organization established by the Flemish government to support the professional music sector and to promote Flemish music in Belgium and abroad.

The Flanders Music Centre promotes Flemish performers, composers and the Flemish professional music scene in general. It does this successfully by dividing its attentions between all musical genres, ranging from pop music to contemporary.

The Flanders Music Centre also provides information and advice about the business aspects of the music industry in Flanders. The Music Centre functions, above all, as the spokesperson for the music sector to the government and is continuing its efforts in the further development of the music scene in Flanders.

Website: FlandersMusic.be

France Music Coalition

The French music coalition was created to promote music from France. The .MUSIC Initiative will work with the music coalition to ensure the protection of French geographic names consistent with ICANN Government Advisory Committee (GAC) advice and advance the promotion of music, culture and the arts internationally across all countries.

Coalition members include:

- French Music Export (Bureau Export). Website: French-Music.org
- Believe Européen de Distribution et Services Numériques aux Artistes & Labels Indépendants: Website: Believe.fr
- Carnet De Route, Groupe de Créations Françaises Festives. Website: Groupe-CarnetdeRoute.fr
- Francophonie Diffusion. Website: FrancoDiff.org
- IRMA - Centre d'Information et de Ressources pour les Musiques Actuelles. Website: IRMA.asso.fr
- Music Story. Website: Music-Story.com

Francophonie Diffusion

Created in February 1993, Francophonie Diffusion promotes artists and music from the Francophone area through a worldwide network of more than 1000 medias (radio stations, online media), festivals and music supervisors worldwide located in 100 countries, provinces or territories. Francophonie Diffusion has been involved for 20 years in the promotion of artists from the Francophone area.

In addition to its role in the export of Francophone music, Francophonie Diffusion tends to initiate communication between all Francophone partners (radio broadcasters, online media, festivals, music supervisors, artists, record labels, agents, private and governmental operators) towards a common framework. Francophonie Diffusion constantly expands its international network and sets up exchanges and co-op programs between all partners providing professional tools especially designed for their needs.

Website: FrancoDiff.org

French Music Export (Bureau Export)

French Music Export Office (Bureau Export) is a French non-profit organization and network created in 1993, that helps French and international music professionals work together to develop French-produced music around the world and to promote professional exchange between France and other territories.

BureauExport members include labels, publishers, distributors, promoters, artist management offices or ensembles.

BureauExport is a global network whose mission is to help French music professionals develop their artists internationally, covering all styles of music* (electronic, jazz, pop, rock, world, urban, classical). bureauexport has offices around the world, based in Berlin (for Germany / Austria / Switzerland / Benelux / Eastern Europe), London (for United Kingdom/Ireland), New York (for United States), Tokyo (for Japan), São Paulo (for Brazil), with a central office in Paris (for other territories).

Global Rock Summit

The Global Rock Summit (GRS) is an international rock music conference aimed at bringing together all aspects of the multi-billion dollar global rock music industry in one annual, focused gathering with a view of helping to further stimulate a very buoyant but often much overlooked sector of the music industry.

With many global companies working in the rock sector, the Global Rock Summit encourages these companies to enhance their business and creative activities around the time of the GRS, and in doing so, help draw more business opportunities to all in attendance.

Through a number of forums featuring rock's leading visionaries as well as unparalleled networking opportunities, the GRS brings together global music colleagues vested in all things rock. The event will provide its attendees (artists, managers, labels, publishers, agents, promoters, brands, media, etc. from all of rock music's many sub-genres"), with unique perspectives from around the world as well as the opportunity to further their creative and commercial opportunities.

Website: <http://www.globalrocksummit.com>

Hacate Entertainment Group

Hacate Entertainment Group is a music publishing company based in Oslo, Norway with a sister company in New York City. Hacate represents music of all genres, of the present and the past, from all over the world, to all over the world.

The company provides traditional music publishing representation (with a strong emphasis on synchronization licensing), music business consultation services for artists and companies, rights clearance (music, film/TV clip, logo, name & likeness) and music supervision. HEG is the Norwegian representative of BMG Chrysalis and represents the synch rights in Norway of Mars Music, Misty Music, Playground Music, Scandinavian Songs and Sony Music.

Establishment Date: 1989

IKON Russia

IKON is one of Russia's largest music organizations focusing in management, booking, promotion, events, records and publishing. IKON was founded in 2000 by Vlad Davydov, a Russian businessman, by the time already well known in professional circles in Russia and abroad. In May 2006 IKON was rated by Forbes as Russia's leading entertainment buyer.

In its early stages the company mainly acted as a booking agency in Russia and CIS booking or organizing performances of international pop stars such as Jamiroquai, Ricky Martin, Dannii Minogue, Bond, Benny Benassi, Geri Halliwell, Craig David, Sugababes, Bomfunk MCs, Shakira, Paul Oakenfold, Junkie XL, Asian Dub Foundation, Panjabi MC, Fluke, Duran Duran, UB40, Ten Sharp, Basement Jaxx, Touch and Go and many others. The company's catalog currently works from artists such as: David Guetta (FRA), Paul Oakenfold (UK / USA), Inusa DAWUDA (GER), Vacuum (Sweden), Touch & Go (UK), Ten Sharp (HOL), Gorchitza (UA), Ivan Dorn (UA). On the territory of the Russian Federation, together with partners, IKON manages the rights to the works of a number of other well-known foreign and domestic authors and performers

IKON provides business management, booking, distribution, production and promotion services for foreign artists in Russia and CIS in cooperation with leading Russian TV channels Muz TV, MTV, STS, Channel One, NTV, TV Center, MusicBox, A-One, O2TV; radio stations Europa Plus, DFM, Megapolis FM, Radio Mayak, Love Radio, NRJ, Radio Maximum, Radio Frame, Silver Rain Radio; major international publishing houses and print magazines Axel Springer AG (OK!), Bauer Media Group (Bravo), C-Media (Billboard), Hachette Filipacchi Media (Maxim), Hubert Burda Media (Playboy), Sanoma Magazines (Men's Health), Forward Media Group (Hello!), InStyle Magazine, F5, MK, KP; and popular web portals Mail.ru, PromoDJ.ru, Newsmusic.ru., Rutube.ru, Tata.ru, Muz.ru, Zvuki.ru, Loungemusic.ru, Intremoda.ru.

The company's own communication department, a broad network of partners - venues, promoters, event agencies, entertainment brokers - in total more than 6000 contacts in Russia and the CIS, as well as direct cooperation with major channels of physical and digital distribution are key factors that allow artists signed by IKON to succeed in Russia and CIS. IKON has been working directly with major international brands such as Marlboro, L&M, West, Snickers, Burn, Adrenaline Rush, Coca-Cola, Pepsi, Parliament, Lamborghini, Jaguar, Audi, Volkswagen, Russian Standard, Bacardi, Martini, Martell, Nokia, Motorola, Sony, Samsung developing unique BTL strategies, providing consulting services and artists for communication campaigns, organizing over 1000 public concerts and corporate shows with major international stars in over 10 years.

iMusician Digital

iMusician Digital, founded in 2007, is a digital distribution for independent bands and Musicians (with or without a label), labels and managements, based in Zurich, Berlin and Melbourne. iMusician puts artists' music into nearly 200 online music stores worldwide like iTunes, Amazon, 7Digital, Napster, eMusic or Spotify; available globally from Europe to America to Japan. iMusician also officially registers artists' music to ensure copyright is protected and for the proper monetization of artists' works.

Website: iMusicianDigital.com

Independent Music New Zealand (IMNZ)

Independent Music New Zealand (IMNZ) is a non-profit trade association – the New Zealand voice for independent record labels and distributors. Our members release the bulk of New Zealand music, including commercially successful artists as well as niche music genres. IMNZ started in 2001. These labels and distributors collectively represent the majority of all musical acts in New Zealand, producing the best music on the planet – but hey we're totally biased about that!

Independent Music New Zealand monitors and advocates for our members rights, working to spread their message, and lobbies for any changes to the industry that will benefit local labels and their artists. Some of the issues where it is important to represent the interests of our members include government legislation and the copyright act, quotas, commercial and noncommercial radio, parallel importing, government funding allocation and music policy, online licensing, piracy, synchronisation licensing and many others.

IMNZ is centrally located in Auckland, which provides easy access to our members, the majority of whom are based in the North Island. The IMNZ office is maintained at 7 Great North Road, Ponsonby. IMNZ is funded by member subscriptions and contributions from NZ Music Commission and PPNZ.

IMNZ's Vision: "A thriving independent music industry and culture in New Zealand"

The three IMNZ core objectives are:

1. To advocate the values and interests of our members and the New Zealand independent sector; working with the government, other cultural agencies and music industry bodies;
2. To aid the development and knowledge of our members by providing them all the necessary tools to develop their art and grow their business; and
3. To provide collective group benefits for our members and their businesses.

IMNZ is for New Zealand owned record labels and distributors. Eligibility for IMNZ membership requires a majority of New Zealand ownership of the label/distributor (or parent company) and the majority of your releases must be by New Zealand artists.

International Music Managers Forum (IMMF)

The IMMF is the umbrella Executive Organisation utilising a collaborative network of MMF National Organisations formed in 1992 from over 22 countries comprising of over 1,000 individual entertainment manager members. The IMMF connects music managers around the world to share experiences, opportunities, information and resources.

Music conferences are a very good way keep in touch. In past years the IMMF has been involved in Conference programming, keynote events, breakout sessions specific to managers. IMMF has also 'Showcased' new artists at events at Midem (France), Popkomm (Germany), Reeperbahn Festival (Germany), c/o Pop (Germany), Musikmesse (Germany), In The City (UK), The Great Escape (UK), Go North (UK), Music and Media (Finland), Eurosonic (Netherlands), Festival In (Portugal), Monkey Week (Spain), BIME (Spain), Westway Festival (Portugal), Vienna Waves (Austria), Exit Festival (Serbia), Medimex (Italy), Tallinn Music Week (Latvia), Sonic Visions (Luxembourg), Big Sound (Australia), Musexpo (USA), SXSW (USA), Canadian Music Week (Canada), the World Creators Summit and WOMEX; many others.

The General Assembly of the IMMF is held twice a year at Midem and the Reeperbahn Festival to discuss IMMF Network's international strategies. At the last General Assembly at the Reeperbahn Festival September 2013, MMF representatives from 13 participating countries agreed on bilateral partnership programs among all members. The core aim is to improve cooperation amongst MMF members.

Only organizations which represent groups of individual or corporate entities acting as music managers may directly join as full members of the IMMF: The AAM Australia, MMF Australia, MMF Belgium, MMF Canada, MMF Denmark, MMF Estonia, MMF France, MMF Finland, IMUC Germany, MMF Ireland, MMF Italy, MMF Luxembourg, MMF New Zealand, MMF Netherlands, MMF Norway, MMF Portugal, MMF South Africa, MMF Spain, MMF Sweden, MMF UK, MMF USA and MMF West Africa. The MMF Latin America is in foundation.

Individuals or companies who are music managers outside of the areas covered by existing member organizations may join the MMF nearest them either in geographic, social, cultural, or linguistic terms as International Members. The IMMF has vital relationships with: Council of Authors and Composers of Music / Center of International Arts Management (CIAM) Featured Artists Coalition (FAC) Dachorganisation der Musikschaaffenden (DOMUS) International Federation of Musicians (FIM) Merlin Network International Confederation of Authors and Composers (CISAC).

IRMA

The Center for Information and Resources for Contemporary Music -- Le centre d'Information et de Ressources pour les Musiques Actuelles (IRMA) -- is an organization associated with the French Ministry of Culture and Communication and supported by music industry.

IRMA is an organization open to all constituents involved in contemporary music and provides information, guidance, advice and training. IRMA provides resources connecting all components of the music world, a place of exchange and tools for structuring practices and professions within music. Activities include publications:

- The Irma designs, manufactures and sells [l'Officiel de la Musique](#) as well as many directories, professional guides (collections [Métiers de la musique](#)) or thematic (collections [Musique & société](#)).
- IRMA also distributes many professional books, including those published by professional organizations of music (Adami, Prodiss, SNEP).
- Irma has a specialized library of hundreds of books related to the music sector (legislation, technical, cultural policy and management, musicology).

Building on its expertise and capabilities, IRMA also works with governments, institutions, organizations, leaders and partners in the music industry in the context of collective issues of general interest relating to music.

Establishment Date: 1986

Lithuanian Music Information and Publishing Centre (LMIPC)

Lithuanian Music Information and Publishing Centre (LMIPC) was established in 1995 on the initiative of the Lithuanian Composers' Union. From 2001 LMIPC works as a non-governmental public company, founded by the Lithuanian Composers' Union. From 2006 LMIPC also runs Music Export Lithuania project aiming to maintain close contacts with all relevant parties in the Lithuanian music industry and facilitate exports of the Lithuanian music production in partnership with the Agency of Lithuanian Copyright Protection Association.

The LMIPC's mission statement is to make music created by the Lithuanian artists accessible, to get it performed and heard. In carrying out its role the centre documents, provides access, and actively promotes music by the Lithuanian artists.

Its mission statement is to make music created by the Lithuanian artists accessible, to get it performed and heard. In carrying out its role the centre documents, it provides access, and actively promotes music by the Lithuanian artists. The centre serves the needs of people professionally involved with music.

The LMIPC pursues the active promotion of Lithuanian classical and contemporary music among performers, organizers of music events, broadcasters, journalists, sending and giving out the packages of CDs, scores, catalogues, brochures, and other material, as well as organizes visits to Lithuania for music journalists and other interested parties. The LMIPC also collaborates with the international recording companies, licensing the recordings for release in various markets world-wide.

Luxembourg Export Office

Music:LX / Luxembourg Export Office is a non-profit organization and network created in 2009 with the aim to develop Luxembourg music of all genres around the world and to promote professional exchange between Luxembourg and other territories.

Music:LX helps its artists financially with the promotion of releases outside of Luxembourg and international tours and showcases. Music:LX participates on part of the transport and accommodation costs during a tour and takes in charge the costs of a PR agent to do the promotional work for a release abroad.

music:LX helps establish and consolidate relationships between Luxembourgian artists and international music professionals. We do so through organized meetings in both international territories and Luxembourg, along with networking events at different conferences/fairs including Eurosonic, MaMA, Jazzahead, WOMEX, Printemps de Bourges, CMJ, Sonic Visions and many others.

LyricFind

LyricFind is the world's leader in legal lyric solutions. Founded in 2004, LyricFind exists to fill the void of the most popular music content on the Internet – lyrics. In order to provide a successful lyrics service, LyricFind has not only **amassed licensing from over 2,000 music publishers, including all four majors – EMI Music Publishing, Universal Music Publishing Group, Warner/Chappell Music Publishing, and Sony/ATV Music Publishing** – but has also built a quality-controlled, vetted database of those lyrics available for licensing. Additionally, LyricFind works closely with The Harry Fox Agency to aggregate licensing from publishers.

Behind the scenes, LyricFind tracks, reports, and pays royalties to those publishers on a song-by-song and territory-by-territory basis. Additionally, LyricFind has a customized search solution available to licensees to identify music based on lyrics, and answer that age-old question of “What’s that song?” LyricFind powers lyrics for many brands and over 1,000 different music sites and mobile applications such as Shazam, Bing, Lyrics.com, Cox, Slacker, Virgin, mSpot, Rhapsody and others.

MMNY (Make Music New York)

MMNY is based on France's "[*Fête de la Musique*](#)," a national musical holiday inaugurated in 1982. Ever since, the music festival has become an international phenomenon, celebrated on the same day in more than 726 cities in 108 countries, including Germany, Italy, Greece, Russia, Lebanon, Ivory Coast, Australia, Peru, Colombia, Ecuador, Mexico, Canada, and Japan.

Now in its ninth year, **Make Music New York**, "the largest music event ever to grace Gotham" (*Metro New York*), is a unique festival of 1,000+ free concerts, all on June 21st, the first day of summer. MMNY takes place simultaneously with similar festivities in more than 726 cities around the world — a global celebration of music making.

From 10 in the morning to 10 at night, musicians of all ages, creeds, and musical persuasions — from hip hop to opera, Latin jazz to punk rock — perform on streets, sidewalks, stoops, plazas, cemeteries, parks and gardens. From high school bands to marquee names, MMNY is open to anyone who wants to take part, enjoyed by everyone who wants to attend.

Over 1,000 MMNY concerts have taken place in each of the last five years.

Manitoba Music, Part of the Canadian Music Coalition

Manitoba Music is the hub of Manitoba's vibrant music community.

We are a member-based, not-for-profit industry association representing over 750 members in all facets of the music industry, including artists and bands, studios, agents, managers, songwriters, venues, promoters, producers, and beyond. Manitoba Music serves all genres, from rock to roots, hip-hop to hardcore, country to classical, and everything in between.

Through our programs and services, we provide information, education, communication, advocacy, industry development, and networking opportunities to nurture, develop and promote the growth and sustainability of the Manitoba music industry.

Manitoba Music has a state-of-the art resource centre, a website that overflows with mp3s and profiles, resources and news, a comprehensive series of industry-related workshops, a far-reaching market development program, and the only Aboriginal music program of its kind in the world.

Mission Statement: To develop and sustain the Manitoba music community and industry to their fullest potential.

Vision Statement: Manitoba Music is known worldwide as the hub of Manitoba's vibrant music community.

Our Values and Beliefs:

Manitoba Music believes in and will demonstrate, through its policy and actions, the values of:

- Integrity
- Transparency
- Accountability
- Inclusivity
- Foresight

Manitoba Music believes:

- Music is an integral part of Manitoba's cultural identity and should be recognized as such;
- The music and sound recording industries are significant contributors to economic development in Manitoba;
- The Manitoba music industry is increasing its artistic, creative, technological and competitive presence within the global music industry;
- Fair and equitable compensation for the use of copyrighted creations should be an inherent right of the creator;
- Partnering, community involvement, and cooperative development are essential for the continuing growth of the Manitoba music and sound recording industries;
- Manitoba Music supports, believes in, and will endeavor to reflect the diversity of our society and our industry.

SERVICES :

Members have access to a wealth of information and resources pertaining to all aspects of the music industry locally, nationally, and internationally.

Consultations

Manitoba Music staff is always available to answer questions and provide consultations on just about any topic pertaining to members' careers, including funding applications, assistance with press kit development, assistance with MROC, information on rights and royalties, and advice on career development.

Music Industry Resource Centre

Our Resource Centre houses a library of foundational material, a definitive collection of music by Manitoba artists and labels, library of industry books, contact directories, subscriptions to relevant trade publications, computers, office equipment, and a many additional resources to help our members learn about the business of music.

Professional Development

Throughout the year, Manitoba Music hosts professional development events, including workshops and panels, featuring top industry professionals and songwriters from across Canada and beyond. We also provide mentor sessions, one-on-one training with our staff, as well as informal discussions with successful local artists and industry professionals.

Information

We keep our members informed about variety of topics, including deadlines, funding information, performance opportunities, and important industry developments through our weekly e-newsletter, quarterly printed newsletter, website, social networking sites, and through direct one-on-one contact.

Represent and Promote:

manitobamusic.com

Our popular website is a tool to help promote our members and the Manitoba music scene both here at home and around the globe. Features include comprehensive concert listings, streaming radio, weekly music downloads, a searchable artist and industry directory, profiles for all our members, and a variety of useful resources for music fans, artists, and industry alike. The site routinely gets over 50,000 pageviews per month and has over 11,000 regular users who keep coming back for all the latest news and music. Manitobamusic.com is also a source for music supervisors and talent buyers searching for music for their projects.

Social Networking

Manitoba Music maintains a strong presence on social networking sites, notably Facebook and Twitter, to broadcast information and to direct the public to manitobamusic.com.

Manitoba Music Industry Directory

Manitoba Music publishes an annual Manitoba Music Industry Directory to keep our members, the public, media, and industry stakeholders informed about the Manitoba music industry. The Directory is distributed locally at music businesses and nationally at major music industry conferences including NXNE, CMW, and BreakOut West.

Partnerships

Manitoba Music places a strong focus on the development of partnerships with regional and national organizations as well as members of the local cultural communities. These partnerships allow us to access new communities while strengthening and expanding our own. The partnerships come in many forms, from co-productions of professional development events to showcases and concert presentations to joint

market development initiatives. These relationships are key to further expansion and promotion of our music industry.

Open Mics

Manitoba Music and the Winnipeg Folk Festival co-present a regular series of open mic nights at The Folk Exchange, hosted by a different Manitoba Music member on the third Friday of each month (except June, July, and August).

Live Music Events and Showcases

Manitoba Music presents and co-presents a number of live music events throughout the year. These activities are aimed at increasing the profile of Manitoba Music and local artists within the community at events such as The Ex, Festival du Voyageur, Winnipeg Folk Festival, and public concerts at The Forks. In addition, local artist showcases are produced for visiting industry personnel such as speakers in the Music Works professional development series.

Data Gathering

Manitoba Music is the voice of the Manitoba music industry in communications with government and other stakeholders. We conduct and distribute industry research and gather data on the size, makeup, and economic growth of the industry. We also gather integral information on the accomplishments of our industry, including awards and nominations, showcases, touring, new music releases, film/TV placements, and more.

Positions and Representations

Manitoba Music has representation with the following organizations:

- Foundation Assisting Canadian Talent on Recordings (FACTOR)
- Western Canadian Music Alliance (WCMA)
- Winnipeg Host Committee
- Manitoba Aboriginal Host Committee
- Canadian Council of Music Industry Associations (CCMIA)
- Canadian Academy of Recording Arts & Sciences (CARAS-Juno Awards)
- Cultural Human Resources Council (CHRC), Music Industry Training Development Initiative
- Alliance for Manitoba Sector Councils
- Canadian Folk Music Awards
- Unison Benevolent Fund

Develop Aboriginal Music

The Aboriginal Music Program (AMP) is designed to help Aboriginal people develop sustainable careers in Manitoba's music industry. The program is a first for Canada's music industry and was launched April 1, 2004. It utilizes the organization's established networks, resources and services as a foundation with which to provide additional support and profile for Aboriginal music industry workers in Manitoba.

Aboriginal Music Program Goals

- Raise the profile of Manitoba Aboriginal artists on a local, regional and national level through the creation of marketing materials and showcase opportunities;
- Empower Aboriginal artists to achieve their career objectives through greater exposure to players in the mainstream industry and the Aboriginal music sector;
- Strengthen Aboriginal artists' understanding of the industry through targeted professional development opportunities tied directly to positive experiences at real music industry events;

- Create opportunities for senior and established Aboriginal artists to mentor emerging Aboriginal artists; and,
- Assist in the development new partnerships between Aboriginal artists, industry service providers, and development organizations.

The Aboriginal Music Program also maintains a dedicated website, aboriginalmusic.ca, which hosts artist and industry profiles, concert listings, artist and industry directory, and more.

Export Marketing

Sustainable music industry careers for artists and many industry entrepreneurs are based on the ability to successfully export through touring, releasing recorded music, sub-publishing, and securing media placements in other territories. Manitoba Music works to continually understand and communicate the factors that lead to successful export marketing, tracks the export marketing activities of the local industry, and runs programs and projects to support increased levels of success in export marketing for Manitoba artists and companies.

Market Development

Manitoba Music recognizes the importance in maintaining and increasing the level of connectedness between the Manitoba music industry and the broader industry. This is accomplished by increasing awareness of both Manitoba music (the artists and companies) and Manitoba Music (the brand) locally, nationally, and internationally, and by creating opportunities for the establishment and growth of market penetration and business relationships. Through the Market Development Program, Manitoba Music engages in pan-industry promotion and targeted market development support through trade missions, industry showcases, marketing events, online marketing, and public events and activities.

Market Access

Through the Market Access Program, Manitoba Music supports the travel and marketing expenses for artists and industry personnel who travel to other markets for showcases and business meetings where the goal is to open new markets and develop new business relationships.

Showcases

Manitoba Music promotes local artists at home and at major music conferences and festivals by presenting and supporting showcase performances. Showcases are most often an opportunity for artists to perform for others within the industry including current and future potential business partners and team members, and are an essential step in becoming known within the industry and building a support team.

Membran Entertainment Group

The Membran Entertainment Group and in particular the music production division, is today one of the music industry's leading European independents. Membran produces, sells and distributes its comprehensive media products both independently and through its experienced partners – not only nationally but worldwide. Be it in the traditional retail outlets, the digital world or non-traditional as branded entertainment: Membran not only thinks and adapts in all the directions that the continually evolving world of entertainment demands - but it continues to exploit its potential to the maximum, using a powerful and global distribution network.

Membran's array of “in-house” labels offer productions in all styles and genres of music – ranging from jazz, classical, pop and rock, as well as a wide spectrum of genre and “theme” compilations and special limited edition exclusive boxes. Through its label-management services, Membran offers third party labels, artists or producers a complete service ranging from A to Z to enable the successful marketing, promotion and distribution of music designed for today’s digital age worldwide.

Since its foundation in 1968 the company has expanded, becoming stronger and unique due to the huge numbers of classical music productions; Membran has not only received numerous awards and Media Prizes such as from the Association of German Music Schools, the German Record Critics' Prize, various nominations for the MIDEM Classical Award and more, making Membran a world leader in the Classical world – but the company also devotes its attentions to developments in the modern world of entertainment, continually broadening its horizons in the process. Both national and international acts and signings find their way to Membran, celebrating chart entries and enjoying the attention of both media and public as a result.

Website: Membran.net

Merlin Network

Merlin is the global rights agency for the independent label sector, representing over 20,000 labels from 39 countries representing the interests of the global independent music sector.

Merlin ensures that independents have a vehicle which can protect and enhance the strength, diversity and unique interests of its members and enhance their ability to compete in the ever changing world of digital music; and ensures that digital services have the access to the widest range of independent repertoire possible.

The organisation acts to ensure its members have effective access to new and emerging revenue streams and that their rights are appropriately valued and protected in the digital realm.

Merlin represents clearly the most commercially valuable single basket of rights outside of those held by the three “major” labels.

Merlin offers Digital Services the opportunity to efficiently and globally license - via a single deal, instead of hundreds of individual local deals – the world’s most important and commercially successful music labels. Since its launch Merlin has established itself as a key partner to the world’s leading new-generation digital music services including Google Play, Spotify, Deezer, Beats Music, Sony Music Unlimited, Rdio, rara.com, YouTube and Muve Music.

The independent sector is the fastest growing sector in the music business, representing not only a huge breadth and diversity of local music on a territory-by-territory basis, but also an increasing number of hit, commercial chart acts.

Music Austria (MICA)

MICA - Music Austria is the professional partner for musicians in Austria. Music Information Centre Austria (MICA/Music Austria), funded by the Austrian Federal Ministry for Education, Arts and Culture is the professional partner for musicians in Austria, founded in 1994 as an independent, non-profit association, on the initiative of the Republic of Austria.

Objectives include the support of contemporary musicians living in Austria with advice and information and the distribution of local music through promotion in Austria and abroad. MICA has national and international networks and is a member of EMO (European Music Office), IAMIC (International Association of Music Information Centres), IAML (International Association of Music Libraries, Archives and Documentation Centres) and the IMC (International Music Council).

Website: MusicAustria.at

MusicBrainz

MusicBrainz is the largest community-maintained open source encyclopedia of music information globally. The MusicBrainz music community has nearly 1.3 million members with a database covering nearly 1 million artists and nearly 18 million songs from over 200 countries.

In 2000, Gracenote took over the free CDDB music data project and commercialized it, essentially charging users for access to the very data they had themselves contributed. In response, Robert Kaye founded MusicBrainz. The project has since grown rapidly from a one-man operation to an international music community who appreciate both music and music metadata. Along the way, the scope of the project has expanded from its origins as a mere a CDDB replacement to today, where MusicBrainz has become a true encyclopedia of music.

As an encyclopedia and as a community, MusicBrainz exists solely to collect as much information about music as we can. MusicBrainz does not discriminate or prefer one "type" of music over another though, in fact it collects information about as many different types of music as possible, whether it is published/unpublished, popular/fringe, western/non-western, or human/non-human

Music British Columbia Association (BC), Part of the Canadian Music Coalition

Representing the British Columbia music industry, Music BC is a non-profit society dedicated to providing information, education, funding, advocacy, awareness and networking opportunities to nurture, develop and promote the spirit, growth, and sustainability of the BC Music community. Music BC (formerly known as The Pacific Music Industry Association or PMIA) has been in operation for over 20 years, serving the music industry of British Columbia. Music BC is the only provincial music association that serves all genres, all territories and all participants in the industry from artists, to managers, agents, broadcasters, recording studios, producers and all other industry professionals.

Music BC serves as the regional affiliate for FACTOR, as well as MROC, and is a member of the Western Canadian Music Alliance which produces the Western Canadian Music Awards and BreakOut West Festival. Music BC is the voice of the BC Music industry provincially (lobbying for funding support, tax credits and creators rights), nationally (meeting with Minister of Heritage as part of the Council of Canadian Music Industry Associations, lobbying for sustained funding for the arts and copyright reform), internationally (representing BC artists at the world's music trade shows such as MIDEM in Cannes, France, promoting BC talent through the Canadian consulates world-wide). It has previously participated in a joint federal/Provincial study of the BC Music Industry, which became the focal point of lobbying efforts.

Music BC provides education in many areas concerning the music business: Career Development Series (which has been a cornerstone program for Music BC), an e-Newsletter (which deals with many topical issues concerning the business), a resource library full of reference books, directories and trade magazines dealing with the music industry, and much more. Music BC also provides networking opportunities for members of the music community – its “SchMusic BC” parties have become a very popular way for connecting different players in the industry. It also offers showcasing opportunities at Canadian Music Week in Toronto, with a showcase that has become one of the “must-see” events of the festival. These events are a perfect opportunity for showcasing BC artists, networking between all levels of industry professionals, to celebrate the successes of the music business and to provide education through the international conference.

Music BC helps to fund and support the development of BC artists. We also administer the MITAP Travel Assistance Program of behalf of the Province of British Columbia. Music BC also has developed its own Music Assistance Program which involves travel assistance, demonstration record recording, compilation CD promotion, licensing opportunities and other programs for our members.

Another artist development program administered by Music BC is the PEAK Performance Project, produced in concert with 102.7 The PEAK FM. The PEAK Performance Project is a seven-year, \$5.29 million contest open to all musicians over 18 in British Columbia that incorporates not only significant funding towards participants' musical careers, but an intensive educational component. Music BC also organizes and participates in trade missions for the purpose of export marketing of BC talent. We have planned trade missions to Europe, Japan, Los Angeles and more; in addition to presenting showcases of BC artists at conferences such as MIDEM, CMW, Folk Alliance, BreakOut West and more.

The Music Business Registry

The Music Business Registry is the leading company in global music business contact information providing the music industry's only real-time contact management system and most comprehensive directories focusing on music. It began in 1992 with its first title - The A&R Registry. This exclusive directory is the only international A&R Directory, which covers cities such as Los Angeles, New York, Nashville, Atlanta, Toronto, Vancouver and London. It is updated and reprinted every 8 weeks.

Over the last 18 years, the Music Business Registry has developed 3 additional music-related registries:

- The Film/Television Music Guide which is the Music & Film Industries only directory devoted to listing all of the contacts for the placement of music into Film & Television programming;
- The Music Publisher Registry: A directory of all of the creative executives at the music publishing companies; and
- The Music Attorney, Business & Legal Affairs Registry: An international directory of all of the music business attorneys working in cities that include Los Angeles, New York, Nashville, Atlanta, Toronto, Vancouver, London as well all of the business and legal affairs personnel at the record labels, music publishers and the film studio and television network music departments.

Other resources include the Indie Bible, the only resource that is totally dedicated to musicians and songwriters with access to over 4200 international music publications and 3400 international radio stations that are seeking music content.

Website: <http://www.musicregistry.com>

Music Centre Slovakia

Music Centre Slovakia is a government state-subsidized institution established by the Ministry of Culture of the Slovak Republic. Its mission is to encourage Slovak music culture by organizing concerts, bringing pieces of Slovak composers to the stages, publishing sheet music and music books, documenting the music life in Slovakia and promoting Slovak music culture abroad.

The origins of a State institution involved in organizing music life in Slovakia go back to 1969, the year when the Slovkoncert agency was founded, operating as a guarantor in the field of music festivals and concerts both of "classical" and "popular" music. In 1997, it was integrated in the National Music Centre, while in 1999 the Slovkoncert was turned into the Music Centre consisting of four departments: documentation, publishing, external relations and economy.

Music and Entertainment Industry Educators Association (MEIEA)

The Music and Entertainment Industry Educators Association (MEIEA®) is an international organization that was formed in 1979 to bring together educators with leaders of the music and entertainment industries. The primary goal of MEIEA® is to facilitate an exchange of information between educators and practitioners in order to prepare students for careers in the music and entertainment industries.

In order to seek professional practical knowledge and functional strategies in education, MEIEA® endeavors to:

- Provide resources for the exchange of information and knowledge about all aspects of the music and entertainment industries;
- Foster scholarly research on the music and entertainment industries as well as on music and entertainment industries education;
- Assist institutions with the development of music and entertainment industries programs and curricula;
- Facilitate interaction between the music and entertainment industries and music and entertainment industries' educators and affiliated educational institutions;
- Promote student interests in the music and entertainment industries.

MEIEA is a non-profit organization dedicated to the advancement of education in the music and entertainment industries. Institutional membership is available to institutions of higher education. In order to be considered for membership, the institution must be recognized, licensed, and/or accredited as a post-secondary educational institution. Organizations and business entities interested in supporting the mission and activities of MEIEA are encouraged to become sponsors of MEIEA through charitable support. Sponsor support is greatly appreciated and tax-deductible.

Support of MEIEA activities by companies, institutions, individuals, and organizations that value music and entertainment industry education is greatly appreciated by MEIEA's members.

Music New South Wales (Music NSW) – Member of Australian Coalition

MusicNSW is the Peak Body for Contemporary Music in NSW.

It is not for profit Industry Association set up to represent, promote and develop the contemporary music industry in New South Wales, Australia, in addition to managing a number of Music Development projects. MusicNSW exists to support the creative and economic expansion of the NSW contemporary Music Industry through advocacy, resource assistance, activating growth of industry infrastructure, delivery of tailored initiatives and provision of advice and referrals.

Its objectives are to:

- To ensure that the interests of the NSW contemporary music industry are adequately addressed by the media, government and cultural bodies.
- To empower communities around NSW to retain their musical identity and foster audiences for local material.
- To provide the NSW contemporary music industry with advice and resources and have available systemized information that can be updated regularly and disseminated widely.
- To increase industry professionalism and skills at all levels and sectors of the NSW contemporary music industry through education and training.
- To develop regional, national and international recording and performance opportunities for NSW musicians.
- To provide coordination services between musicians, grass roots music organisations, industry bodies and government bodies.

Advocacy and Representation

MusicNSW continues to grow and develop in its representation and advocacy role.

With increasing demands for assistance from the range of sectors that make up the industry and government at all levels, MusicNSW takes an active role in developing statewide strategies to improve services to contemporary music.

Project Development

MusicNSW continues to develop projects based on identified industry needs. Through our core projects (Indent, Whichway and Sound Summit) MusicNSW develops programs specific to increasing access and opportunities to and within the music industry.

Partners include:

- AMIN (The Australian Music Industry Network)
- Arts NSW
- APRA [Australian Performing Rights Association]
- OCYP [Office of Children and Young People]
- Arts NSW
- Australia Council for the Arts

As a genuine online music encyclopedia, Music Story deals in depth with all the popular music and informs you about recent events.

Website: Music-Story.com

Music Victoria – Member of the Australian Coalition

Music Victoria is the independent voice of the Victorian contemporary music industry.

An independent, not-for-profit, non-Government organisation, Music Victoria represents musicians, venues, music businesses and music lovers across the contemporary music community in Victoria.

Music Victoria provides advocacy on behalf of the music industry, actively supports the development of the Victorian music community, and celebrates and promotes Victorian music.

Music Victoria's mission is: *To champion Victorian music*

Music Victoria exists to support the growth, participation and development of the Victorian contemporary music industry. It aims to be broadly inclusive of the contemporary music industry across all music genres, industry sectors and professions and to be accessible for metropolitan and regional Victoria. In all its activities, it aims to add value to music makers.

Victoria attracts, supports and creates a cultural community that is recognised nationally and internationally as unique and valuable both economically and culturally. We need to protect and develop this.

The recent issues affecting Victoria's live music venues have shown just how important it is for music in this state to have an organisation representing its interests to ensure that talented individuals and businesses in our music community continue to flourish and that the voice of this community is included in the decision making processes of Government and the community at large.

Music Victoria exists to support and represent the Victorian music industry and community.

- Promotion and celebration of Victorian artists, music businesses and the industry as a whole.
- Professional development for Victorian artists and music businesses as well as the development of the industry as a whole, including implementing a program to arm artists with the requisite skills to run their music careers as successful and sustainable small businesses.
- Leading the development of a regional Victoria touring circuit to assist musicians with touring regional area and addressing barriers that regional musicians face trying to break into the capital city markets around Australia.
- Provide programs in partnership with the Sounds Australia music export initiative to develop pathways to put more Victorian musicians on the world stage.
- Advocacy on behalf of the Victorian music industry to all levels of Government and the wider community.

Music Victoria is currently meeting the following industry service needs:

- ***Representation***

Music Victoria is providing a strategic and representative voice for the Victorian music industry at the state and national level to ensure that there is a co-ordinated response to emerging issues faced by the industry as well as responding to other economic and cultural opportunities.

Music Victoria is currently advocating the interests of the industry on critical bodies such the Liquor Control Advisory Council (LCAC), the Australian Music Industry Network (AMIN) and the Arts Industry Council of Victoria. It is also strengthening its relationship with Arts Victoria and developing its relationship with Regional Arts Victoria, Tourism Victoria, the City of Melbourne, and local councils.

- ***Leadership***

The music industry in Victoria is a disparate group engaged in a wide range of activities. They have shared needs but also individual and sometimes conflicting objectives. Music Victoria is currently engaged in reconciling differences and presenting a united voice to Government to contribute to setting the policy agenda now and into the future.

- ***Providing a forum***

As part of the Victorian Music Council, Music Victoria is providing a forum for different members of the music community to discuss and mediate their differences and find consensus on solutions. Sub-committees may also be established to facilitate debate and address issues.

- ***Access to well informed specialists***

In order to ensure that the policy debate within the industry is evidence based, Music Victoria is engaging with specialists who will undertake research, provide commentary and, where appropriate, deliver written reports.

- ***Research, Information and Education***

Music Victoria will undertake its survey of industry trends and needs each year in order to track the development of the industry in Victoria and identify policy and industry development needs. Its research will be specific and issues-based and will not seek to duplicate research already undertaken elsewhere.

- ***Skills and professional development***

Music Victoria will map the industry to identify skills gaps, support industry development initiatives and advocate for programs to equip the industry with the necessary skills to expand their opportunities through professional development and coaching.

- ***Identifying role of music industry in wider social policy challenges***

Music Victoria will develop relationships across Government to identify and promote the role that music can play in addressing wider social issues. This could include, for example, the role of music in promoting mental health.

Music Xray

Music Xray facilitates a more efficient, lower cost, and less risky A&R process. Its growing platform with a community of over 100,000 artists enables the industry to open the doors of opportunity to musicians and songwriters everywhere and to harness the most powerful tools ever built specifically for those who conduct A&R.

As long as there are commercial opportunities for music there will be industry professionals making the decisions regarding which songs and artists are chosen. Those decision makers will use the best tools available to streamline, organize, and optimize their work while reducing the risk of making choices that don't meet their business objectives. Music Xray creates those tools and makes them available online while simultaneously leveling the playing field for musicians, making it less about who you know and more about pure talent, skill, and market appeal.

Music Xray's Fan Targeting campaigns guarantee potential fans listen, which isn't always a given in today's "attention economy" If they hear compelling music they convert from potential fans to direct fans and artists learn which of their songs convert new fans quickly and cost-effectively.

Website: MusicXray.com

National Association of Recording Industry Professionals

The National Association of Recording Industry Professionals(NARIP) promotes education, career advancement and good will among record executives. Established in 1998 and based in Los Angeles, NARIP has chapters in New York, Atlanta, San Francisco, Phoenix, Houston, Las Vegas, Philadelphia and London, and reaches 100,000+ people in the music industries globally. Headquartered in Los Angeles, the entertainment capital of the world, NARIP has chapters in New York, San Francisco, Phoenix, Las Vegas, Houston, Atlanta, Philadelphia and London.

Nimbit

Nimbit, founded in 2002, is the music industry's premier direct-to-fan platform for today's music business. Nimbit provides the easiest solution for self-managed artists, managers, and emerging labels to grow and engage their fanbase, and sell their music and merch online. Thousands of artists use Nimbit every day to get fans excited and to give them more ways to support their careers.

Nimbit has also partnered with ASCAP since 2004, to offer "ASCAP Web Tools" for ASCAP members. Other partners include Jango to offer the "Nimbit Store for Jango" which allows artists to sell music and merchandise directly to new fans who have discovered their music through airplay on Jango internet radio as well as PledgeMusic to create "PledgeStore" which was designed to give PledgeMusic artists the ability sell direct to fans and generate additional funding after their fundraising campaign has ended.

Northern Territory Music Industry Association – Member of Australian Coalition

MusicNT exists to support the growth and development of original contemporary music in the Northern Territory. MusicNT Inc. is the non-profit member based music organisation for the Northern Territory representing, developing and servicing the Territory's original music industry.

As the lead contemporary music development body, MusicNT has a focus on developing and strengthening networks with national music industry representatives as well as strengthening links with regional centres throughout the Territory.

Community Activities: <http://www.musicnt.com.au/about/who-we-are/>

NUE Agency

NUE Agency is an international boutique talent agency which represents music talent. NUE Agency specializes in concerts, tours, endorsements, and content. The NUE Agency sits at the center of music, brands and technology, leading the way into the next chapter of the music industry.

NUE Agency is the parent company of aveNUE Music Partnerships, an operation designed to help distribute and promote artists through brand partnerships that are on the cusp of breaking through in the music industry but want to stay away from potentially restrictive major label deals. NUE Agency also operates SoundCtrl aimed at covering developments in music and technology.

In 2013, INC Magazine awarded NUE Agency the 267th position on INC Magazine's 500 list of the fastest growing privately owned companies in the United States. The NUE Agency was also recently named to INC 500's list as the 3rd fastest growing media company in the United States.

NUE brings together artists and the world's leading brands, such as Spotify, Google Play, Pandora, Myspace, Virgin, Microsoft, Samsung and others.

Establishment Date: 2006

OurStage

Ourstage.com is web and mobile-based music community offering free music streaming, discovery, and editorial content is made up of undiscovered artists interested in exposure, music lovers and industry professionals committed to bringing talent to the masses. It is owned and operated by OurStage Inc., headquartered in Chelmsford, Massachusetts. Founded in 2007, OurStage.com holds monthly sponsored competitions for artists to compete, win prizes, and publicize themselves.

OurStage.com's proprietary judging software allows its users to listen, judge and rank music artists. The site was originally developed as a crowdsourced way to hear new music and raise it up through the charts. OurStage allows streaming music for free to users through its web site or an iPhone app, with 40 styles of music including rock, pop, urban, and country music.

Local, regional, and national competitions award cash prizes or music industry opportunities to winners chosen through fan judging or by industry experts. Competitions have included Guitar Center's Your Next Record with Keith Urban, Drake's Thank Me Later Competition, the Lilith Local Talent Search as part of Lilith Fair 2010, and John Mayer's Side Stage Warfare Competition. OurStage past and present partners and sponsors include Intel and Cakewalk, AOL, CMJ Network, MTV and Clear Channel.

OurStage is quickly becoming the world's central platform for new music discovery and promotion. On OurStage, artists, fans and industry professionals come together to discover, judge, & enjoy the best new music and the best new artists online. OurStage has grown every quarter since going live in 2007 and currently has over 200,000 artists using our platform and 4.5million registered users.

Planetary Group

Planetary Group is an artist development firm founded in 1996. Over the past 15 years Planetary has worked with a variety of musicians from all genres, signed and unsigned, self-released, indie and major labels.

Planetary helps create a solid foundation for new artists, and take all artists to new levels. The radio department structures a campaign that targets college radio, AAA, non-commercial, and commercial-specialty shows. The stations are solicited for airplay and feedback regarding the release. In addition, radio interviews and in-studio performances are coordinated in touring markets wherever possible. Planetary's radio and tour support can provide the necessary groundwork that would ensure advance exposure in music artists' pending tour markets.

In addition to airplay, increased public interest and awareness comes about through features, interviews, reviews, previews, and anything else that attracts people in the digital world. The digital marketing side of Planetary offers national campaigns for record releases, tour press to alert local media to shows, and a smaller tastemaker campaigns geared towards blogs. Planetary digital marketing focuses on online media exclusively, and at online & print with tour press. Planetary digital marketing provides a network for music to be heard via working relationships with writers, freelancers, bloggers, and site owners. Planetary strives to get music listened to, and then facilitates the writers' work by providing what they need to cover the music.

Planetary Design compliments these promotional efforts by creating everything an artist needs to build their brand. Simply put, the Planetary Group creates beautifully simple websites that embody their client's aesthetic built with a sturdy foundation of the latest web standards. With a strong focus on content distribution and social media integration, the Planetary Group implores the end user to engage in an interactive community wherein website content is shared and eventually spread to the world at large.

Website: PlanetaryOnTheWeb.com

PledgeMusic

PledgeMusic is global direct-to-fan platform that provides artists and labels with the tools needed to get fans to engage early. PledgeMusic has staff internationally in New York, Los Angeles, Boston, Nashville, London, and Germany. With an arsenal of tools including PledgeMusic's website, preordering system, iPhone app, email marketing, social media dashboard, data collection widgets, and more, artists and labels can let fans become partners in the creative process. PledgeMusic invites fans to go behind the scenes with one of a kind exclusives and bonus content.

Content creators retain 100% of all ownership rights, so PledgeMusic is able to operate as a standalone platform or work in conjunction with traditional record deals and marketing. In a nutshell, it's everything an artist or label needs to fund, pre-sell, sell, and release their music while connecting directly with fans.

Once a project is given the green-light, it can be linked to social networks (Facebook, Twitter, YouTube, etc.) and our app will track the project's progress, while fans can add badges to their own sites and pages. For direct-to-fan campaigns, PledgeMusic releases the funds in three payments (on funding, release, and fulfillment). For pre-order campaigns, we disburse money immediately when the campaign is released and fulfilled.

PledgeMusic also maintains partnerships with major players in the digital and physical music spheres, and provides numerous options to help record, produce, manufacture, market, and distribute your music, merchandise, and tickets. Finally, PledgeMusic provides artists the option to raise money for the charity of their choosing.

PledgeMusic offers two distinct options for campaigns:

1. A PledgeMusic direct-to-fan campaign offers all-or-nothing fundraising. This is our traditional campaign type, and allows fans to pledge without any transfer of money until a specific fundraising goal is met. This type of campaign is perfect for independent artists, and those wishing to raise money to record or set up an album release, tour, or video.
2. A PledgeMusic preorder campaign is similar to other e-commerce preorder campaigns, but bundles in all the communication and marketing tools that make PledgeMusic great. These tools allow artists to connect and market directly to their core fans, and spread the word beyond. For this type of campaign, fans are charged immediately upon pledging. This type of campaign is designed for labels and artists who have already completed a recording, and are looking for a strategic way to pre-sell and market it.

Queensland Music Network – Member of the Australian Coalition

QMusic is Queensland's music industry development association, and is focused on promoting the artistic value, cultural worth and commercial potential of Queensland music.

In 1994, QMusic received its first round of funding, and has been running solidly since 1995.

QMusic has become first point of contact and interface for emerging artists and industry workers within the wider music industry. QMusic is an active voice for the Queensland music industry on a national and international level. QMusic is a member of AMIN (Australian Music Industry Network) which is a network of state based music organisations that provides a national voice for policy development and advocacy issues for the music industry.

Signature events such as BIGSOUND and the Queensland Music Awards promote networking and collaboration that contributes to building the profile of the Queensland music industry.

Situated in Brisbane's Fortitude Valley, Australia's only dedicated entertainment precinct, QMusic provides a physical and virtual base from which music industry professionals from all sectors and regions can establish networks, create partnerships and share the information that will drive the next generation of Australian music.

QMusic is incorporated under the Associations Incorporation Act and is governed by a management committee representing the diverse needs of the industry and the sector. The founding goals of the organisation still remain - to establish a state-wide music industry network for the sharing of knowledge and information.

QMusic acknowledges that Aboriginal and Torres Strait Islanders are the custodians of the land and recognise the disadvantage caused by colonisation and dispossession.

QMusic acknowledges the importance of music in Aboriginal and Torres Strait Islander cultures and the critical role it plays in the broader Australian music context and Australian culture overall.

QMusic is committed to building opportunities for Aboriginal and Torres Strait Islander artists and music businesses.

Vision

QMusic develops, services, and represents all sectors of Queensland music as a creative and economic powerhouse within the national and international arena.

Strategic Intent

QMusic is dedicated to building a dynamic environment that progresses a sustainable music industry and generates creative and economic returns to artists.

Values

- The cultural, economic and social importance of music
- Learning and innovation

- Partnerships
- Music and social diversity
- Knowledge and commitment of our people
- Professional practice
- Possibilities

Goals

1. Enhance industry capacity (service artists)
2. Expand Queensland music profile
3. Deliver signature events and build public participation
4. Increase internal capability

Redeye Distribution

Redeye Distribution is an independent music distribution company founded in 1996 in Chapel Hill, North Carolina. In addition, Redeye has two in-house labels: Yep Roc Records and Eleven Thirty Records. Redeye has won the National Association of Recording Merchandisers (NARM) Distributor of the Year Award (Small Division) seven times (2000, 2002–2007) and were redesignated as a Medium Division distributor by NARM in 2008.

Based in Haw River, NC (near Raleigh/Durham/Chapel Hill), Redeye began in 1996 by focusing on the rich independent music of the southeast and providing the artists that made up the scene with a distribution option to give them access to all retail accounts located in their region. Since then, Redeye has charted a course of steady, sustainable growth by developing a strong physical and digital distribution network both nationally and internationally and providing a multitude of services to our partners.

Redeye's 5000-plus title catalog is representative of a wide range of the best independent music available. Regardless of genre, the unifying element of the catalog is an overall commitment to quality. Its network of international partners includes the finest retail partners from around the globe, touching every territory worldwide. They distribute music to chain stores such as Best Buy as well as every domestic one-stop distributor in the United States. Redeye is also a major distributor on the digital front, servicing all major DSPs such as iTunes, Spotify, YouTube and more.

SF Music Tech

The SF MusicTech Summit brings together visionaries in the evolving music/business/technology ecosystem, along with the best and brightest developers, entrepreneurs, investors, service providers, journalists, musicians, and organizations who work with them at the convergence of culture and commerce. We meet to do business and discuss, in a proactive, conducive to dealmaking environment. The SF MusicTech Fund invests in early stage internet music and technology companies discovered at the SF MusicTech Summit.

Website: <http://sfmusictech.com>

SonicBids

Sonicbids, founded in 2001, enables artists to book gigs and market themselves online. It connects more than 400,000 artists with 30,000 promoters and brands from over 100 different countries and 100 million music fans. Additionally, the company's recently launched Social Music Marketing™ product suite enables brand marketers to reach and engage music fans and consumers using rich music-oriented content.

Sonicbids has been the launching pad for many of today's hottest artists and has many exclusive partnerships with premier events like South By Southwest (SXSW), Bonnaroo Music and Arts Festival, CMJ Music Marathon, Spain's Primavera Pro and Canada's North By Northeast (NXNE). Consumer brand customers include Renaissance Hotels, Anheuser Busch and Diesel Industry.

Tommy Boy / New Music Seminar

Tommy Boy is an independent record label started in 1981 by Tom Silverman. The label is widely recognized for significant contribution to the development of hip hop music, dance music, and electronica.

Website: TommyBoy.com

The New Music Seminar (NMS) is the ultimate destination founded by Tom Silverman where artists, industry players, and companies are provided the knowledge, tools, and connections they need to succeed and build the New Music Business. The mission of the New Music Seminar is to grow a sustainable and better music business to allow creators the best opportunity to succeed. The NMS strives to enable more artists to achieve success and encourages new levels of investment in music and artists. In its 15-year run, the first series of seminars annually attracted more than 8,000 participants from 35 countries, and was considered one of the most influential Music Business Conferences in the World.

Website: <http://newmusicseminar.com>

Trigger Creative Conference

Trigger Creative Conference is a music industry event which takes place simultaneously with the Peace & Love-festival: a meeting place for Swedish and the world's biggest artist, branche elite and more than 40.000 happy festival visitors. Trigger works together with Swedish largest music festival – and takes place in the heart of the festival area. Trigger Creative Conference is Sweden's leading innovative conference for the music industry. Participants from all branches of the popular music community gather to share fresh and constructive thinking through discussions, debates and new working methods on how to help the future of the industry.

Website: Triggercc.com

TuneCore

TuneCore is the **world's leading digital distributor for online music and video**. Founded in 2005, TuneCore offers musicians and other rights-holders the opportunity to place their music into online retailers such as iTunes, GooglePlay, AmazonMP3, Zune Marketplace, Rhapsody, eMusic, Spotify, and others for sale. TuneCore distributes between 15,000 - 20,000 newly recorded releases a month, this is more music being distributed monthly than all the major labels combined in 100 years. Tunecore registers musicians' songs worldwide in over 60 countries and is affiliated with ASCAP, BMI and SESAC. Tunecore partnered with INDMUSIC, YouTube's largest independent music network, to monetize both music compositions and sound recordings for maximum YouTube earnings potential.

The TuneCore artist community has made over \$405.6 million in revenue and sold over 6.1 billion total downloads and streams, since TuneCore launched in 2006, **representing over 60% of all new music sales**. TuneCore is a partner with hundreds of thousands of artists and labels, ranging from indie artists to high profile performers, including: Drake, The Civil Wars, Sonic Youth, Beck, Jay-Z, Aretha Franklin, Keith Richards, Blood On The Dance Floor, Public Enemy, Willie Nelson, They Might Be Giants, Donna Summer, MGM Studios, Moby, Girl Talk & Brian Eno. This market share continues to grow significantly quarterly. In addition, many of TuneCore's artist customers dominate the iTunes, Amazon and other music retail charts outselling and out earning well over 98% of major label releases.

Website: TuneCore.com

Virtual Label

Virtual Label provides direct access to all the major and secondary worldwide digital service providers. It provides significant value for its artists and labels by not only identifying new services but by actively marketing to existing services and being at the forefront of all emerging services worldwide.

Virtual Label is successful in securing significant visibility for new releases and catalog on iTunes, Amazon MP3, eMusic, Spotify, Rdio, Google Play and more. Virtual Label utilizes a proprietary content management system to quickly and easily deliver over 30,000 songs from its catalog worldwide to new and existing services.

Virtual Label has digital partnerships with

- 24-7

World Independent Network (WIN)

The Worldwide Independent Music Industry Network (WIN) supports independent music trade associations globally. WIN is a global forum that represents the independent music industry globally. It was launched in 2006 in response to business, creative and market access issues faced by the independent sector everywhere. For independent music companies and their national trade associations worldwide, WIN is a collective voice. It also acts as an advocate, instigator and facilitator for its membership.

WIN exists to support the independent music community through interaction with representative trade organisations and groups, and working directly with international music industry bodies on issues of global significance.

For independent music companies and their national trade associations worldwide, WIN is a collective voice and platform. When appropriate it also acts as an advocate, instigator and facilitator for its continually growing membership. WIN is also a focal point for collecting and sharing knowledge about the indie sector at national and international levels. WIN takes its direction from the WIN Council of leading independent music company heads from all the key markets around the world.

WIN's membership stretches across every continent, with trade associations in all the well-developed legitimate music markets taking a particularly active role – including AIM (UK), A2IM (USA), AIR (Australia), CIMA (Canada), VUT (Germany), IMNZ (New Zealand), AIRCO (South Africa), UFI (Spain); APROFIP (Peru); ABMI (Brazil) – and Impala representing the whole of Europe.

WIN's priorities are set by the global membership, and included the creation of Merlin, the world's first independent global new media rights licensing agency.

Some key issues on WIN's agenda include:

- Monitoring the policies and effectiveness of collective rights management and licensing organisations for independent rights holders
- Working directly with collecting societies to ensure independent rights holders' interests are properly represented internationally
- Providing legal and commercial support to independent trade associations
- Development of independent trade associations and representative groups in countries where they do not yet exist
- Supporting member trade associations in national copyright, legislative and related issues
- Future protection and development of independent music companies in a rapidly changing market.

WIN members include:

- American Association of Independent Music (USA)
- Associacao Brasileira da Musica Independente (Brazil)
- Association Quebecoise de l'industrie du disque, du spectacle et de la video (Quebec)
- Peruvian Association of Independent Phonographic Producers (Peru)
- Association of Independent Music (UK)

- Australian Independent Record Labels Association (Australia)
- South African Association of Independent Record Companies (South Africa) -
- Associao de Musicos Artistas e Editoras Independentes (Portugal)
- Belgian Independent Music Association (Belgium)
- Association for French Record Companies (France)
- Canadian Independent Music Association (Canada)
- Danish Independent Record Association (Denmark)
- Federation of Music Producers Japan (Japan)
- Association for Norwegian Record Companies (Norway)
- Independent Music Coppanies Association (Europe)
- Independent Music New Zealand (New Zealand)
- Finnish indie labels and producers association (Finland)
- Independent Label Council of Japan (Japan)
- Record Labels Industry Association of Korea (South Korea)
- Svenska Oberoende Musikproducenter (Sweden)
- Stichting onafhankelijke muziek producenten (Netherlands)
- Union Fonografica Independiente (Spain)
- Union des Producteurs Phonographiques Francais Independants (France)
- Austrian Association of Independent Music (Austria)
- German Association of Independent Music Companies (Germany)

YouLicense

YouLicense is an online music licensing marketplace. YouLicense's platform enables artists and those seeking musical content to conduct business directly with one another in a safe and secure environment. Its unique search engine and standardized contracts allow for a quick and easy process.

YouLicense provides licensing for independent artists, labels, publishers and other content owners for music, film, television, advertising, and video games. Additionally, YouLicense aims to lead the global music industry in developing and monetizing the emerging field of long-tail music licensing, consisting of "media pro-sumers" (producer consumers) seeking music licenses for a range of digital and non-commercial usages such as wedding DVDs, live events, in-store music, photo slideshows, videos, presentations and many other uses.

YouLicense provides an open online licensing marketplace for independent artists and companies, including record labels and publishers. YouLicense currently hosts over 20,000 music licensing stores, and 350,000 music recordings.

YouLicense provides a marketplace to license music for Film & Television, Advertising Campaigns, Music on Hold, Mobile Phone Content, Web Content and Audio Projects.

The world of music licensing is known to be complex, exclusive and expensive. It is often the case that those seeking to license music have great difficulty obtaining what they need and that only a small percentage of artists and composers have the means to offer their music for licensing.

The aim of YouLicense is to break down these limitations and simplify the process.

YouLicense is non-exclusive and welcomes anyone with musical content to upload music and offer licenses for sale. This allows for a large range of musical content; from ringtones to sheet music to songs and beats; and is combined with a unique search engine to increase the chances of finding the much needed musical content.

YouLicense makes music license and copyright trade a simpler and more direct process, offering a service which is inexpensive and secure.

Establishment Date: 2007

Appendix C

MCMO Application &
Eligibility Requirements

COMMUNITY APPLICATION: .MUSIC ACCREDITATION FOR MUSIC COMMUNITY MEMBER ORGANIZATIONS (MCMOs)

<p>.music MCMO Application Information</p> <p>The global music Community is defined as a “strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities of similar nature that relate to music.” Priority MCMO Launch Phase .music registrations are only restricted to members of .music-accredited MCMOs.</p>	<p>Questions: community@music.us</p> <p>For DotMusic Use Only: <input type="checkbox"/> Accepted <input type="checkbox"/> Rejected</p>
<p>NOTE: This Application Form is developed in A4 size and available in both PDF and fillable DOC formats. Please scale to print on Letter size paper if necessary.</p>	
<p>Hard Copy Submission: .MUSIC™ (DotMusic™) 950 S. Flower St #1404 Los Angeles, CA 90015 United States</p>	<p>Email Submission: community@music.us</p> <p>Applicant MUST include the words: “.music Community MCMO” in the Subject of the Email.</p>
<p>Applicants are reminded that you MUST accept and agree to be bound by the Terms and Conditions upon the submission of your Application to DotMusic. Applications that do not comply with the requirements to become an MCMO and be part of the .MUSIC Community will be disqualified at the sole discretion of DotMusic per its .MUSIC Application’s policies.</p>	

1.0	MusicCommunityMemberOrganization (MCMO) Application Form for .music Community
1.1	<p>Please indicate your organization's name</p> <div style="border: 1px solid black; height: 40px; width: 100%;"></div>
1.2	<p>Please provide details about your organizations's music community-related activities</p> <div style="border: 1px solid black; height: 100px; width: 100%; padding: 5px;"> <p>Website:</p> <p>Establishment Date:</p> <p>Activities:</p> </div>
1.3	<p>Please provide details why and how you qualify as a .MUSIC-Accredited Music Community Member Organization</p> <div style="border: 1px solid black; height: 150px; width: 100%;"></div>

2.0 .MUSIC-Accreditation Requirements for a Music Community Member Organization (MCMO)

2.1 Does your music organization fulfill the following .MUSIC Accreditation Requirements for MCMOs?

1. Clear delineation: The Community organization must have clear and straightforward membership and the requisite awareness and recognition from those members. The following non-exhaustive list denotes elements of straightforward membership definitions: fees, skill and/or accreditation-requirements, privileges or benefits entitled to members, certifications aligned with community goals etc
2. Organized: The Community organization must administer its members with documented evidence of community activities
3. Community organization must relate to music in a non-tangential or non-peripheral manner.
4. Membership aligns with the Nexus of the Community and the String, which is explicitly relevant to music. Any tangential or implicit associations with the Nexus of the Community and the String will not be regarded as a delineated membership since it would be considered unclear, dispersed or unbound. Such an unclear, dispersed or unbound tangential relationship would not constitute a qualifying membership of an accredited MCMO and would be ineligible for registration.
5. Community organization activities are aligned with the .MUSIC Mission and Purpose.
6. Membership is of non-negligible size.
7. Membership geographic dispersion is either international or national (i.e. organizations with merely local memberships do not qualify).
8. Forward-looking longevity: Membership pursuits are of a lasting, non-transient nature (i.e. will continue to exist in the future).
9. Membership activities must be involved in the legal production and/or the distribution and/or the promotion of music (i.e. related to music).
10. The Community organization's functions must legally comply with the string's regulated sector in relation to copyright and clearly abide to the sector's clearly, delineated systems to ensure fair compensation and proper allocation of royalties to Community rights holders.

YES:

--

4.0 Terms and Conditions

Acknowledgement and Acceptance of Terms and Conditions

The terms ".MUSIC" and "DotMusic herein refer to DotMusic Limited, the community applicant for the .MUSIC gTLD.

DotMusic is the global registry community applicant for the .MUSIC top level domain. Upon successful delegation of .MUSIC after contention resolution, DotMusic will enter into an agreement with the Internet Corporation for Assigned Names and Numbers ("ICANN") as the Registry Operator for the .MUSIC" community-based top-level domain. DotMusic Limited is incorporated in Cyprus.

Under DotMusic's agreement with ICANN, DotMusic's delegated authority includes creating policies and procedures to ensure Eligibility criteria are met by registrants. The MCMO domain allocation method is designed to allocate domain names based on Eligibility criteria which mandate that registrations during the MCMO Launch Phase are restricted to only Community members of MCMOs.

The terms "Applicant" or "MCMO Applicant" as used herein refer to all music entities who have submitted an Application to us for consideration to become a .MUSIC-accredited Music Community Member Organization (MCMO).

DotMusic's MCMO Eligibility criteria, subject to the following Terms and Conditions, may be updated and revised by us from time to time by posting the revised version at the DotMusic's Websites if required to meet our Application's requirements.

You accept and agree to be bound by the Terms and Conditions upon your submission of your Application to us. If you have any questions about the Terms and Conditions, or about the MCMO Application, please contact us at community@music.us

I hereby accept and agree to be bound by the Terms and Conditions upon the submission of this MCMO Application to DotMusic.

You must check the above box to acknowledge and accept these Terms and Conditions to complete this Application Form.

5.0 Disclaimer of Liability

Disclaimer of Liability and Indemnity

In no event shall DotMusic be liable for any direct, indirect, incidental, special, consequential, or exemplary damages resulting from or relating to the Community MCMO Application nor shall DotMusic be liable for the cost of procurement of substitute services.

Without limiting the foregoing, DotMusic expressly disclaims any liability resulting from: the conduct of or Applicant's participation in the Application process; data non-delivery between the Applicant and DotMusic; processing and/or consideration of Applicant's Proposal; ruling of a court or tribunal from competent jurisdictions; errors, omissions or misstatements; and/or natural or unnatural events beyond DotMusic's control.

Indemnity

The Applicant agrees to indemnify, to the maximum extent permitted by law, defend and hold harmless DotMusic and its directors, officers, employees and agents from and against any and all claims, damages, liabilities, costs and expenses, including reasonable legal fees and expenses, arising out of or relating to the Applicant's Community MCMO Application.

Arbitration

Any claim arising out of or relating to the Community MCMO process shall be resolved through Arbitration with the National Arbitration Forum (NAF).

6.0 Applicant's Certification

By signing below, the Applicant's .MUSIC-Accreditation Application Form shall be deemed an express representation and certification by the Applicant that:

- The Applicant has read and understands the Terms and Conditions of MCMO Eligibility, investigated all aspects of the Terms and Conditions, and is aware of the applicable facts pertaining to the MCMO Application, its procedures, and its requirements;
- The Applicant has read and understands the Application and the Application Form and investigated all aspects of the Application, and is aware of the applicable facts pertaining to the Application, its representations, procedures, and its requirements;
- All information and representations provided by the Applicant to DotMusic, including all information and representations set forth in the Application, are current, complete, reliable, and accurate;
- The Applicant will update its Application in the event that it discovers any errors or that material changes

6.0 Applicant's Certification

occur affecting the completeness, reliability or accuracy of information contained within;

- The Applicant acknowledges and agrees to all terms, conditions, and requirements contained in these Terms and Conditions and the Application Form;
- The Applicant is able to deliver the services and products as specified in the Application; and,
- The Applicant understands and acknowledges that, if its Application is approved and opts to become a reseller, it must agree to and sign an approved ICANN-accredited Reseller Contract before DotMusic will advance the Applicant to be an authorized reseller
- The Applicant understands and acknowledges that it will not be able to transfer the MCMO qualification to a third-party without the expressed written consent of DotMusic.

**.MUSIC Policy & Copyright Infringement
Dispute Resolution Process
("MPCIDRP")**

Appeals & Dispute Resolution Process

By DRP National Arbitration Forum (NAF)

.MUSIC Policy & Copyright Infringement Dispute Resolution Process ("MPCIDRP")

Background

This .MUSIC Policy & Copyright Infringement Dispute Resolution Process (the "MPCIDRP") is incorporated by reference into the Registration Agreement for each domain name registered in the .MUSIC top-level domain ("TLD"). This MPCIDRP shall become effective as of April 1st, 2014 and remain in effect as long as the Registry Operator maintains the eligibility criteria or restrictions. This MPCIDRP may be invoked by filing an appeal or a formal complaint with the National Arbitration Forum. The Rules governing the MPCIDRP process may be found at: <http://domains.adrforum.com>.

Registration policies are bound by the .MUSIC Policy and Copyright Infringement Dispute Resolution Process ("MPCIDRP"). The .MUSIC Registry's MPCIDRP measures outline the conditions that need to be met when registering a .MUSIC domain name. These conditions include registrant compliance with:

Eligibility Criteria;

Validation or Verification;

Name Selection Rules;

Content and Use Restrictions; and

Enforcement Measures.

By way of example, Registrants must belong to a strictly delineated and organized music organization with clear and straightforward membership (defined as a Music Community Member Organization (MCMO)). The "Music Community" is further recognized as the "*strictly delineated and organized community of individuals, organizations and business, a logical alliance of communities (MCMOs) of similar nature that relate to music.*" Entities will be denied registration if they only have a tangential relationship with the Music Community as it is defined, because such entity would not have the requisite awareness and recognition of the Community and would not invoke any formal membership with the Music Community. Likewise, .MUSIC Eligibility Requirements and Policies, provide that such an entity does not qualify as a Music Community Member because there would be a misalignment between the Music Community definition and the .MUSIC string. All of the following requirements and qualifications must be met by a MCMO:

- i. Clear delineation: The Community organization must have clear and straightforward membership and the requisite awareness and recognition from those members.
- ii. Organized: The Community organization must administer the community members and have membership rules (e.g. Terms of Service or Membership Code of Conduct).
- iii. Community organization must relate to music in a non-tangential or non-peripheral manner.
- iv. Membership aligns with the Nexus of the Community and the String, which is explicitly relevant to music. Any tangential or implicit associations with the Nexus of the Community and the String will not be regarded as delineated memberships since they would be considered unclear, dispersed or unbound. Such unclear, dispersed or unbound tangential relationships would not constitute a qualifying membership of an accredited MCMO and would be ineligible for registration.
- v. Community organization activities are aligned with the .MUSIC Mission and Purpose.
- vi. Membership is of non-negligible size.
- vii. Membership geographic dispersion is either international or national (i.e. organizations with merely local memberships do not qualify).
- viii. Forward-looking longevity: Membership pursuits are of a lasting, non-transient nature (i.e. will continue to exist in the future).
- ix. Membership activities must be involved in the legal production and/or the distribution and/or the promotion of music (i.e. of the same nature).
- x. The Community organization's functions must legally comply with the string's regulated sector in relation to copyright and clearly abide to the sector's clearly, delineated systems to ensure fair compensation and proper allocation of royalties to Community rights holders.

The Community as defined is comprised of clearly delineated and organized MCMOs which were identified by the Registry to meet the Community-defined qualifications. A music organization can also apply to become a .MUSIC-accredited MCMO and must prove it fulfills MCMO qualification requirements. The .MUSIC MCMO Accreditation Application and Eligibility Requirements can be found at <http://music.us/DotMusic Music Community MCMO Application.pdf>.

The MPCIDRP includes mitigation measures, such as investigation of non-compliance with the .MUSIC policies, including rules pertaining to domain name registrations (eligibility and name selection restrictions), rules on content and use (such as abuse and copyright infringement rules) and appropriate dispute resolution appeals mechanisms.

Registrants who do not prevail in a MPCIDRP Dispute Resolution will have a one-time opportunity to file a Re-consideration Request Appeal around the Policy decision. The Re-consideration appeal will be conducted by the Dispute Resolution Provider (DRP) and the Registry and must include a stated reason for request of re-consideration.

Any Registrant taken down or suspended for a Registry-related violation will also have the option to submit an Appeal for Re-Instatement if they remedy the non-compliance issue to comply with the .MUSIC policies.

DotMusic reserves the right to terminate a domain for failure by the registrant to demonstrate it meets established rules and requirements under .MUSIC Policies through this Appeals process.

When a domain name is terminated it is placed on hold under the Redemption Grace Period. During this period, a domain name is placed in the Pending Delete Restorable status. The domain name can remain in this state for up to 30 days and will not be included in the zone file.

The Appeal Process is a method that the original registrant can use at this stage to re-activate the domain name before it is released into the pool of available domains. During this period any requests to modify or otherwise update the domain will be rejected. If the registrant is successful in their Appeal the domain will be restored and it is moved into Pending Restore status and then OK status. If after 30 days there is no Appeal filed by the registrant then the domain is moved into Pending Delete Scheduled For Release status before the domain is released back into the pool of available domains. During the Pending Delete stage, a domain name is placed in Pending Delete Scheduled For Release status for 5 days, and all Internet services associated with the domain will remain disabled without any possibility of the domain to be restored. After 5 days the domain is released back into the pool of available domains.

1. Purpose

Domain names in the TLD can be registered or reserved subject to eligibility or restriction requirements. This MPCIDRP describes standards that will be applied to resolve challenges to names registered in the TLD on the basis of failure to meet or maintain the eligibility or restriction criteria required by the Registry. This MPCIDRP will not be applied to Registry-reserved names in the TLD.

2. Applicable Disputes

A registered domain name in the TLD will be subject to an administrative proceeding upon submission of a complaint showing by a preponderance of the evidence that the registration was improper under one or more of the circumstances in this section.

The Registry may, through an Annex to this Policy, denote what evidence must be submitted to the Panel and/or a limiting date by which claims may be submitted pursuant to this MPCIDRP, for a specified TLD.

a. Community “Eligibility” Restrictions for Registrants and MCMOs

A complaint under this section shall be required to show that a registered domain name in the TLD does not comply with the provisions of the Registry’s Registration Eligibility criteria. The complaint must show:

- (i) At the time the challenged domain name was registered, the Registry’s registration “Eligibility” criteria were not met, including requirements for

maintaining the registration, naming conditions and restrictions on domain transfers to third parties that otherwise fail to meet the Registration Policy requirements. The complainant must show that the Registrant is not a bona-fide member of the Music Community and does not have a formally, invoked membership with a .MUSIC-accredited Music Community Member Organization (referred to as “MCMOs”) as per the Registry’s definition of Community. The definition of the Community is a “clearly delineated and organized logical alliance of communities (referred to as “MCMOs”) of the same nature related to music.”

The Complainant shall submit a copy of the Registry’s Eligibility criteria and show the absence of a clear and straightforward membership with the Registry’s defined Community with a Complaint based on MPCIDRP para. 2(a).

b. “Name Selection” and “Globally Protected Marks List” (“GPML”) Restrictions

A complaint under this section shall be required to show that a registered domain name in the TLD does not comply with the provisions of the Registry’s Name Selection Restrictions, including restrictions pertaining to famous music names under the music Globally Protected Marks List (GPML). The complaint may show:

After the challenged domain name was registered, the registrant failed to comply with the Registry’s Name Selection requirements and naming conditions for registration consistent with the Registry’s articulated community-based mission pertaining to increase trust, protect intellectual property, prevent user-confusion and eliminate malicious abuse. The Complainant shall submit a copy of the Registry’s Name Selection criteria with a Complaint based on MPCIDRP para. 2(b).

c. Community “Content and Use” restrictions

A complaint under this section shall be required to show that a registered domain name in the TLD does not comply with the provisions of the Registry’s “Content and Use” criteria. The complaint must show either:

- i. At the time the challenged domain name was registered, the Registry’s “Content and Use” criteria were not met; or
- ii. After the challenged domain name was registered, the registrant failed to continue to comply with the Registry’s ongoing “Content and Use” restrictions or requirements for maintaining the registration.

The Complainant shall submit a copy of the Registry’s “Content and Use” criteria, including evidence regarding any requirement for the registrant to maintain the “Content and Use” restrictions, with a Complaint based on MPCIDRP para. 2(c).

Registrants may not license, sub-delegate or otherwise transfer .music domain names to third parties that otherwise fail to meet the Registration Policy requirements.

3. Appeal Processes

Applicants and others may appeal (or request reconsiderations of) various decisions made by the Registry under the .music Registration Policies. Appeals and requests for reconsideration must be made following the relevant provider Rules and must be made within the time period specified. Requests for appeal or reconsideration must specify the error made by the Registry. The decisions available for appeal to the Provider are:

The Appeals available under this MPCIDRP include:

i. **Reinstatement Reconsideration**

- (1) If a registrant is found out of compliance with any of the .MUSIC Policies the registrant will be notified that the domain will be placed on registry lock. The registrant will have a reasonable time period to fix the compliance matter or the domain will be terminated.
- (2) If a domain name registration is found to conflict with an entry on the GPML, the registration will be terminated.

For a domain name terminated by the Registry, the registrant may appeal the termination with the Registry. If the domain name is not reinstated, the registrant may bring a request for reinstatement reconsideration to the Provider. A reinstatement reconsideration must be brought within 30 days of the Registry's final determination.

ii. **Copyright Infringement Appeal**

- (1) Registrant can appeal removal of content that was removed by the Registry
- (2) Registrant can appeal registry decision not to remove content

iii. **Music Community Member Organization (MCMO) Eligibility Reconsideration Request**

An organization that was denied qualification as a MCMO by the Registry may appeal that determination at the Registry. If the organization is still declined membership, the application organization may bring a request for reinstatement reconsideration to the Provider. A MCMO Eligibility reconsideration request must be brought within 30 days of the Registry's final determination.

iv. **Geographic Public Interest Appeal**

Governments/public authorities/IGOs may challenge abuses of names with national or geographic significance with the Registry. This Registry determination can be appealed with the National Arbitration Forum dispute resolution provider if the Registry failed to follow Registration Policy procedures. A Geographic Public Interest Appeal must be brought within 90 days of the Registry's final determination.

v. **Policy Advisory Board (PAB) Decision Appeal**

A majority of the PAB may direct the Registry to take action against a Registrant for registrations that substantially and negatively affect the objectives of the .MUSIC Registry. This PAB determination and Registry implementation can be appealed by a

Registrant with the National Arbitration Forum. A PAB Decision Appeal must be brought within 30 days of the Registry's final determination.

- vi. A **Civil Court Action** filed in civil court. Any legal decision by such a court supersedes any MPCIDRP Appeal or UDRP or URS decision. No further action will be taken until the Registry receives (1) satisfactory evidence of a resolution or settlement between the parties; (2) satisfactory evidence that the lawsuit has been dismissed or withdrawn; or (3) a copy of an order from such court dismissing the lawsuit or stating that the domain name holder does not have the right to continue to use the domain name. ICANN-accredited domain name registrars, which have agreed to abide by UDRP and MPCIDRP decisions, must implement a decision after a period of ten days, unless the decision is appealed in court in that time. The panel decisions are mandatory in the sense that accredited registrars are bound to take the necessary steps to enforce a decision, such as transferring the name concerned. However, under the UDRP and MPCIDRP, either party retains the option to take the dispute to a court of competent jurisdiction for independent resolution.

4. Remedies

The remedies available to a complainant for a proceeding under this MPCIDRP shall be:

a. Ineligible at Registration

If the Panel finds that the domain name was ineligible for registration under MPCIDRP 2(a) and MPCIDRP 2(c)(i), the sole remedy shall be cancellation of the registration and return of the cancelled domain name to the pool of available names available for registration in the TLD. If the Complainant independently qualifies to register the domain name, such application may be made via the standard registration process.

b. Improper Maintenance of Eligibility

The remedies for a Complaint filed under MPCIDRP 2(b) and MPCIDRP 2(c) (ii) are either:

- i. The Panel may allow the Respondent up to 14 days to bring the registration into compliance and submit proof of compliance and ongoing eligibility; and/or
- ii. The Panel may order cancellation of the registration and return of the cancelled domain name to the pool of available names available for registration in the TLD. If the Complainant independently qualifies to register the domain name, such application may be made via the standard Registration process.

c. Appeals and Requests for Reconsideration

For appeals and reconsideration requests brought under Section 3(i, iii ,iv, and v), the sole remedy available shall be a decision directing the Registry to perform the requested reinstatement, membership acceptance, or geographic name termination.

5. Procedure

a. Dispute Resolution Provider / Selection of Procedure

A Complaint under this MPCIDRP shall be submitted to the National Arbitration Forum (“Provider”) by submitting the complaint directly to that Provider. The Provider will administer the proceeding and select a qualified and eligible Panel (“Panel”). The Provider shall establish Rules, setting forth a fee schedule and other technical and process requirements for a dispute under this MPCIDRP (“Rules”). The proceedings under this MPCIDRP will be conducted according to this MPCIDRP and the applicable Rules of the Provider.

b. Registry’s or Registrar’s Involvement

(1) Neither the Registry nor registrar will participate in the administration or conduct of any proceeding before a Panel, except to the extent that Registry decisions may be reconsidered by the Provider in certain cases (see section 3) and the Registry may provide to the Panel reasons for its decision. In any event, neither the Registry nor the registrar is or will be liable as a result of any decisions rendered by the Panel. Any domain names in the TLD involved in a MPCIDRP proceeding will be locked against transfer to another domain name holder or another registrar during the course of a proceeding. The contact details of the holder of a registered domain name in the TLD will be provided to the Provider by the registrar’s publicly available Whois database record for the relevant registrant. The Registry and the applicable registrar will comply with any Panel decision and make all appropriate changes to the status of the domain name registration(s) in their Whois databases.

(2) Decisions made by the Provider under this Policy may be reviewed by the .MUSIC Registry upon request, on the grounds that the Provider failed to follow the Policy or Rules. In no event is the substantive decision by the Panel subject to review by the Registry. If the Provider is found by the Registry to have deviated from the Policy or Rules, the Provider shall rehear the case in accordance with the Policy and Rules before a new Panelist; the rehearing shall be done without additional charges to the Parties.

c. Parties

The registrant of a registered domain name in the TLD or the Registry, in case of a Reconsideration or Appeal, shall be promptly notified by the Provider of the commencement of a dispute under this MPCIDRP, and shall have thirty (30) days in which it may contest the allegations of the complaint or show other cause why the complaint should not be granted in accordance with this MPCIDRP or the conditions under which the domain name in the TLD has been registered or used. In all cases, the burden of proof shall be on the complainant, and default or other failure of the holder of the registered name shall not constitute an admission to any allegation of the complaint. The Provider shall promptly notify all named parties in the dispute, as well as the registrar and the Registry of any decision made by a Panel.

d. Decisions

- (i) The Panel may state the basis on which the decision is issued in summary format and may include such commentary or guidance as the Panel deems appropriate;
- (ii) the decision shall state whether a registered name in the TLD is to be cancelled or the status quo maintained; and
- (iii) decisions made under this MPCIDRP will be publicly published by the Provider on its website.

e. Implementation

If a Panel's decision requires a change to the status of a registered name, the registrar and/or Registry will wait ten (10) business days after communication of the decision before implementing that decision, unless the registrant submits to the Registry (with a copy to the Provider) during that ten (10) day period official documentation (such as a copy of a complaint, file-stamped by the clerk of the court) that the registrant has commenced a lawsuit to preserve its claimed rights in a court of competent jurisdiction over the parties and the domain name. If such documentation is received no further action shall be taken until the Registry receives (i) evidence satisfactory to the Registry of an agreed resolution between the parties; (ii) evidence satisfactory to Registry that registrant's lawsuit has been dismissed or withdrawn; or (iii) a copy of an order from such court dismissing such lawsuit or otherwise directing disposition of the domain name.

f. Representations and Warranties Parties to a dispute under this MPCIDRP shall warrant that all factual allegations made in the course thereof are true and correct to the best of their knowledge, shall remain subject to all representations and warranties made in the course of registration of a disputed domain name.

6. Maintaining the Status Quo

During a proceeding under the MPCIDRP, the domain name shall be locked against transfers between registrants and/or registrars. In the event the domain name(s) is due to expire during a proceeding, the name shall proceed to a temporarily reserved status if it is not renewed by the registrant; the MPCIDRP proceeding, in that case, shall be terminated.

7. Indemnification / Hold Harmless The parties shall hold the registrar, the Registry, the Provider, and the Panel harmless from any claim arising from operation of the MPCIDRP. Neither party may name the registrar, the Registry, the Provider, or the Panel as a party or otherwise include the registrar, the Registry, the Provider, or the Panel in any judicial proceeding relating to the dispute or the administration of the MPCIDRP policy. The parties shall indemnify, defend and hold harmless the registrar, the Registry, the Provider, the Panel and their respective employees, contractors, agents and service providers from any claim arising from the conduct or result of a proceeding under this MPCIDRP. Neither the registrar, the Registry, Provider, the Panel and their respective employees, contractors, agents and service providers shall be liable to a party for any act or omission in connection with any administrative

proceeding under this MPCIDRP or the corresponding Rules. The complainant shall be directly and solely liable to the registrant in the event the complaint is granted in circumstances where the registrant is lawfully entitled to registration and use of the domain name(s) in the TLD.

8. Relation To Other Dispute Resolution Policies This MPCIDRP is in addition to and complementary with the Uniform Domain Name Dispute Resolution Policy (“UDRP”), the Uniform Rapid Suspension System (“URS”) and any Charter, Nexus, or Eligibility Dispute Policies adopted by ICANN or the Registry. The conditions herein may constitute lack of legitimate interests and/or bad faith as appropriate under the UDRP or URS in relation to domain names in the TLD.

9. Effect of Other Proceedings The administrative proceeding under the MPCIDRP shall not prevent either party from submitting a dispute concerning the domain name in the TLD to concurrent administrative proceedings or to a court of competent jurisdiction for independent resolution during a pending MPCIDRP administrative proceeding or after such proceeding is concluded. Upon notice of such other proceeding, the MPCIDRP proceeding will be suspended or terminated (in the sole discretion of the Panel) in deference to the outcome of such other proceeding. If a domain name in the TLD is subject to a UDRP proceeding, the factors set forth in the MPCIDRP may be alleged in such proceeding as applicable terms of legitimate rights or registration and use under the UDRP in addition to any allegations or defenses available.

10. MPCIDRP Modifications The Registry reserves the right to modify this MPCIDRP at any time subject to the terms of its Memorandum of Understanding with the Forum or if it is deemed that any Rules could likely compromise the Registry's operations, security and technical stability. Such revised MPCIDRP shall be posted on the Registry website at least ten (10) calendar days before it becomes effective; unless this MPCIDRP has already been invoked by the submission of a complaint, in which event the version of the MPCIDRP in effect at the time it was invoked will apply until the dispute is concluded, all such changes will be binding with respect to any dispute, whether the dispute arose before, on or after the effective date of the change. In the event that registrant objects to a change in this MPCIDRP, the sole remedy is to cancel the registration, provided that registrant will not be entitled to a refund of any fees paid in connection with such registration.

It's the sort of story that scriptwriters would get laughed out of conference rooms for entering. The sort of story that illustrates perfect synchronicity between hunger, passion and time. The sort of story that only happens every 30-odd years. And the sort of story that would approximately 500 pages to do it true justice. Metallica. A household name. The 7th biggest selling act in American history. Who'd have thought it when, on October 28th, 1981, drummer Lars Ulrich made guitar player/singer James Hetfield an offer he couldn't refuse. 'I've got a track, saved for my band on Brian Slagel's new Metal Blade label.'

The truth is, Lars didn't have a band at that time, but he did that day when James joined him. The two recorded their first track on a cheap recorder with James performing singing duties, rhythm guitar duties and bass guitar duties. Lars dutifully pounded the drums, helped with musical arrangements and acted as manager. Hetfield's friend and housemate Ron McGovney was eventually talked into taking up bass and Dave Mustaine took lead guitar duties.

The band adopted the moniker Metallica after a suggestion from Bay Area friend Ron Quintana, and they quickly began gigging in the Los Angeles area opening for bands like Saxon. Eventually recording a fully-fledged demo called No Life Till Leather, Metallica quickly saw the tape whistle around the metal tape-trading underground and become a hot commodity, with San Francisco and New York particularly receptive.

Coldplay are an English alternative rock band formed in 1996 by lead vocalist Chris Martin and lead guitarist Jonny Buckland at University College London. After forming Pectoralz, Guy Berryman joined the group as a bassist and they changed their name to Starfish. Will Champion joined as a drummer, backing vocalist, and multi-instrumentalist, completing the lineup. Manager Phil Harvey is often considered an unofficial fifth member. The band renamed themselves "Coldplay" in 1998, before recording and releasing three EPs: Safety in 1998, Brothers & Sisters as a single in 1999 and The Blue Room in the same year. The latter was their first release on a major label, after signing to Parlophone.

Coldplay's early material was compared to acts such as Radiohead, Jeff Buckley, U2, and Travis. They achieved worldwide fame with the release of the single "Yellow" in 2000, followed by their debut album released in the same year, Parachutes, which was nominated for the Mercury Prize. The band's second album, A Rush of Blood to the Head (2002), won multiple awards, including NME's Album of the Year. Their next release, X&Y, received a slightly less enthusiastic yet still generally positive reception upon its release in 2005. The band's fourth studio album, Viva la Vida or Death and All His Friends (2008), was produced by Brian Eno and released again to largely favourable reviews, earning several Grammy nominations and wins.

Wikipedia "Music Community"

Music Community. In Wikipedia. Retrieved
November 26, 2014, from
https://en.wikipedia.org/wiki/Music_community

Music community

Music community is defined as a logical alliance of interdependent communities that are related to music, which include commercial participants, such as record labels, operating within what is commonly-known as the music industry, and non-commercial participants, such as amateur musicians. It comprises of “networks of musicians, promoters, and interested people”,^{[1][2]} and consists of an “ensemble of practices and institutions that make possible and regulate the production, distribution and consumption of music.”^[3]

UNESCO identifies the music community as a “community of identity”, implying common identifiable characteristics and cohesive attributes such as sharing a music culture, norms and subscribing to common ideals related to music.^[4] The music community is not defined as much by demographic indicators such as race, gender, and income level, as it is by common values, cohesive norms and interconnected structures to build a community identity.^[5] It refers to music-related individuals and organizations in a shared environment with shared understandings and practices, modes of production and distribution.^[6] The shared organisation of collective musical activities, identity and community value is created as result of infrastructure and a shared set of common values.^[7]

Many studies outline the historical, cultural, and spatial significance of the music community, including how its identity is formed through musical practices.^{[8][9]} The music community shares a cohesive and interconnected structure of artistic expression, with diverse subcultures and socio-economic interactions between music creators, their value chain, distribution channel and fans subscribing to common ideals. Under such structured context music consumption becomes possible regardless whether the transaction is commercial and non-commercial. Music performances give people in the music community an opportunity to voice their emotions, values, lifestyle, and economic and social conditions through sound, rhythm, and community.^[10]

In the place of the continued commercialism of music, the quest for identity and meaning has been rekindled with music both musicians and audiences.^[11] How music is consumed in a space can affect the cultural meaning of places and people’s interactions in places.^[12] With new frameworks for music consumption, communication, distribution and reception being adopted, many elements have been re-negotiated and re-modified, often altering our traditional understandings of music audiences and their role in these practices. The popularity of social me-

dia and online communities in particular brought forth a number of online explorations of music audience and fan behavior.^[13]

(1) DotMusic gives priority to members of Music Organizations during MCMO Phase. During General Availability all Community members (including non-MCMO members) can register a .MUSIC domain.

(2) DotMusic has more enhanced safeguards than all .MUSIC applicants combined. DotMusic has incorporated all IFPI/RIAA IP protection provisions that include stopping domain hopping, takedown policies, authorizations, permanent blocks, privacy/proxy, true name/address and trusted sender complaint policies.

(3) DotMusic addressed all concerns/comments raised by the Music Community and filed the PIC which clarifies how the Application serves the Community and the public interest. According to the ICANN New gTLD Program Applicant Guidebook: "To be taken into account as relevant opposition, such objections or comments must be of a reasoned nature. Sources of opposition that are clearly spurious, unsubstantiated, made for a purpose incompatible with competition objectives, or filed for the purpose of obstruction will not be considered relevant." (Community Priority Evaluation Guidelines, P.20)

(4) By filing these Public Interest Commitments with ICANN, DotMusic commits to serve the Music Community and Public Interest as clarified and may be held accountable via the PICDRP.

(5) The Premium Channels available to all validated community members are sorted/delineated according to NAICS community type (Musician/Band/Professional/Company), Genre (e.g. www.Rock.music), Language (e.g. French.music), Geography (e.g London.music / France.music) and Keywords (e.g Lyrics.music).

“URGENT REFORM” NEEDED TO NOTICE AND TAKEDOWN AS REMOVAL OF 200 MILLIONTH ILLEGAL SEARCH RESULT FROM GOOGLE APPROACHES

London, 24th March 2016 – for immediate release: The BPI, the record labels' organisation which promotes British music, has spearheaded a major drive in recent years to support the growth of the legal music market by disrupting the activities of illegal music sites.

Concerted efforts by the wider music community to build a healthy digital market have been held back by search engines and other intermediaries continuing to direct users and revenues towards sites that defraud artists and labels. The BPI has repeatedly called on Google and others to do more to ensure that consumers searching for recorded music are referred to legal services in preference to illegal sites, many of which pose risks from viruses, trojans or other harmful or inappropriate content.

As part of a range of measures to protect its members' content¹, the BPI notifies Google and others whenever its automated content protection system identifies links in search results that point to illegal copies of music, and requests these are taken down. This weekend will see the BPI pass the milestone of 200 million infringing URLs sent to Google for removal from search results since its first notice in July 2011.

This high-volume take-down helps to limit the amount of illegal content being promoted, giving legal music services such as Amazon, Apple, Spotify and Deezer a better chance of appearing at the top of search results when fans are looking for music online². While this approach has contributed to some improved visibility of legal services, illegal results that are taken down by Google are frequently replaced by other illegal links, which means that legal services continue to be overshadowed by infringing sites in the very top search results. This damaging situation can only be remedied by Google themselves changing strategy and pro-actively pursuing a “notice and stay down” approach, so that once a piece of content has been notified for removal by the BPI, it isn't indexed again for the same site and stays removed.

The Government has set up a round table to try to reach voluntary agreement to fulfil its manifesto commitment to “work to ensure that search engines do not link to the worst offending sites”. The BPI has called for a series of measures as part of that process: *A lower threshold* for the number of notices required to de-rank an illegal site and *transparency* over that threshold; *improved discoverability* of genuine sites to help consumers towards legal content; *automatic de-listing* of sites that have been ruled illegal by the High Court; action to *prevent illegal sites avoiding demotion* by swapping domain; and “*notice and stay down*” – once a piece of content has been notified for removal, it should not be indexed again for the same site.

Geoff Taylor, Chief Executive BPI & BRIT Awards, comments: “*The BPI believes that people who make music or other entertainment deserve to be rewarded for their work and creativity. Only when*

consumers support legitimate sites can labels, studios and broadcasters consistently invest in the best talent to make high quality entertainment we can all enjoy.

"The notice and take-down system, as currently structured, cannot represent an effective response to piracy and requires urgent reform. Internet intermediaries like search engines clearly need to take more active responsibility to stop directing business to the black market.

"We are calling on Google and Bing to show their undiluted commitment to artists and the creative process by implementing a more pro-active solution to illegal sites appearing in search results. This will avoid the cost for both of us in dealing with hundreds of repeated notices for the same content on the same illegal sites".

Notes to Editors

The BPI's content protection work

¹Alongside its programme of take-down notices to Google and other search engines, the BPI has obtained court orders requiring Internet Service Providers (ISPs) to block UK access to 63 websites offering infringing content as well as hundreds of proxy sites. The BPI also works with The City of London Police's PIPCU operation (Police Intellectual Property Crime Unit) and with advertisers and financial services to choke off the revenues on which illegal sites feed, and is a partner in the Creative Content UK *Get It Right From A Genuine Site* awareness campaign, which aims to encourage consumers to value content and to source it from legal sites.

The importance of Search - research

²Research data consistently shows that search placement plays an important role in determining where consumers go to acquire music and other entertainment. A 2014 study by the Technology Policy Institute highlighted that "changing the prominence of pirate and legal links has a strong impact on user choices: users are more likely to consume legally (and less likely to infringe copyright) when legal content is more prominent in search results". The study also found that users whose initial search terms indicate an intention to consume pirated content are more likely to use legal channels when pirated content is harder to find in search results. <https://techpolicyinstitute.org/2014/09/15/search-impact-on-piracy/>

About The BPI

The BPI was formed in 1973 and is a representative voice of the UK recorded music business. It promotes recorded music in the UK and worldwide and champions the rights of the music community. Its membership is made up of hundreds of independent music labels and the UK's three major record companies, which collectively account for around 85 per cent of the recorded music consumed in the UK – the world's fourth largest music market.

Using Search Results to Fight Piracy (<https://techpolicyinstitute.org/2014/09/15/search-impact-on-piracy/>)

by [Michael D. Smith \(https://techpolicyinstitute.org/author/michael-d-smith/\)](https://techpolicyinstitute.org/author/michael-d-smith/) | Tags:
| Comments: 0 (<https://techpolicyinstitute.org/2014/09/15/search-impact-on-piracy/#respond>)
September 15, 2014

With the growing consensus in the empirical literature that piracy harms sales (<http://www.digitopoly.org/2012/09/13/piracy-harm/>), and emerging evidence that increased piracy can affect both the quantity and quality of content produced (here (<https://www.techpolicyinstitute.org/blog/2014/09/does-piracy-undermine-product-creation/>) and here (<http://www.digitopoly.org/2014/08/22/piracy-undermining-content-creation-loch-ness-monster-or-black-swan/>) for example), governments and industry partners are exploring a variety of ways to reduce the harm caused by intellectual property theft. In addition to graduated response efforts and site shutdowns, Internet intermediaries such as Internet Service Providers, hosting companies, and web search engines are increasingly being asked play a role in limiting the availability of pirated content to consumers.

However, for this to be a viable strategy, it must first be the case that these sorts of efforts influence consumers' decisions to consume legally. Surprisingly, there is very little empirical evidence one way or the other on this question.

In a recent paper (<http://ssrn.com/abstract=2495591>), my colleagues Liron Sivan, Rahul Telang and I used a field experiment to address one aspect of this question: Does the prominence of pirate and legal sites in search results impact consumers' choices for infringing versus legal content? Our results

suggest that reducing the prominence of pirate links in search results can reduce copyright infringement.

To conduct our study, we first developed a custom search engine that allows us to experimentally manipulate what results are shown in response to user search queries. We then studied how changing what sites are listed in search results impacted the consumption behavior of a panel of users drawn from a general population, and a separate panel of only college aged participants.

In our experiments, we first randomly assigned users to one of three groups: a control group of users who are shown the same search results they would receive from a major search engine, and two treatment groups where pirate sites are artificially promoted and artificially demoted in the displayed search results. We then asked users to obtain a movie they are interested in watching, and to use our search engine instead of the search engine they would normally use. We observe what queries each set of users issued to search for their chosen movie, and surveyed them regarding what site they used to obtain the movie.

Our results suggest that changing the prominence of pirate and legal links has a strong impact on user choices: Relative to the control condition, users are more likely to consume legally (and less likely to infringe copyright) when legal content is more prominent in search results, and user are more likely to consume pirate content when pirate content is more prominent in search results.

By analyzing users' initial search terms we find that these results hold even among users with an apparent predisposition to pirate: users whose initial search terms indicate an intention to consume pirated content are more likely to use legal channels when pirated content is harder to find in search results.

Our results suggest that reducing the prominence of pirate links in search results can reduce copyright infringement. We also note that there is both precedent and available data for this sort of response. In terms of precedent, search engines are already required to block a variety of information, including content from non-FDA approved pharmacies in the U.S. and content that violates an individual's "right to be forgotten" in a variety of EU countries. Likewise, the websites listed in DMCA notices give search engines some of the raw data necessary to determine which sites are most likely to host infringing content.

Thus, while more research and analysis is needed to craft effective policy, we believe that our experimental results provide important initial evidence that users' choices for legal versus infringing content can be influenced by what information they are shown, and thus that search engines can play a role in the ongoing fight against intellectual property theft.

Google now receives more than 2 million piracy takedown requests a day

That's 1,500 takedown requests a minute

By [James Vincent](#) on November 23, 2015 09:32 am [@jjvincent](#)

It's been a while since we checked in with Google's Transparency Report, the company's blog that keeps tabs on search result takedowns and related issues, but it seems the war on piracy has only been **getting more frantic**. As *TorrentFreak* pointed out in a **recent post**, Google now receives just over 1,500 requests every minute to remove URLs from its search results. That's 25 requests a second or around 2,160,000 a day — double the amount of requests the

company was receiving over the same time period last year.

Last month's takedown requests came from 5,492 copyright owners and pertained to 72,207 specific domains, meaning that each domain, on average, was the subject of around 900 takedown requests. However, this stat doesn't paint a totally accurate picture, as the top five domains (including Spanish-language MP3 download site flowxd.me and Polish file locker chomikuj.pl) were the target of more than half a million reports each.

*LAST
MONTH'S
MOST
PROLIFIC
DOMAINS
WERE THE
TARGET OF
HALF A
MILLION
REQUESTS*

It's also worth remembering that these statistics include multiple takedown requests for the same URLs (which Google says it includes as doing so "paints a more complete picture of the removals activity"). Still, though, these are staggering numbers and show that despite Google's attempts to limit access to pirating sites (as of 2012 it's been **feeding this data** into its search algorithms to make frequently-infringing domains less visible), the takedown request is still one of the main weapons used by copyright holders against pirates.

Business Matters: Legal MP3 Sites Are Still Buried by Google Search Results

By Glenn Peoples | November 05, 2012 7:07 PM EST

If most people simply want to do the right thing when it comes to downloading, the upcoming Copyright Alert System could help more than searching at Google. Over three months after Google implemented a system to lower the search ranking of domains based on the number of DMCA takedown requests received, Billboard.biz finds legal options are still buried in the search results for many popular artists.

Billboard.biz took a sample of 30 popular artists and used a standard query of the artist name plus the term "MP3" in Google's search engine to gauge where legal and illegal sites ranked in the search results. For two artists, Ke\$ha and P!nk, alternative spellings were also used. In all, 32 searches were conducted.

The average rank of the first legal result of any kind was 7.9 - which would place the average item near the bottom of the first page. The first legal result was almost always a YouTube video. Occasionally it was an embedded stream, such as a SoundCloud widget in a music blog.

The average rank of the first legal MP3 store listed was 11.75. That would place the first MP3 store returned in the average search result near the top of the second page. (There were almost always 10 search results per page. Occasionally there were fewer than 10 because links had been removed due to content owners' takedown requests.) Amazon was the first legal MP3 site in the search results in 31 out of 32 instances. 7digital was the top legal MP3 site once.

One illegal download site, MP3skull, was the top search result 31 out of 32 times; MP3skull was also the top illegal search result 28 out of 32 times. The domain has received the 23rd-most removal requests from content owners over the last 12 months, according to the Google Transparency Report. Billboard.biz calculates MP3skull has accounted for 3.6% of the 14.07 million URLs removed from Google's search listings over the last 12 months.

Some domains that were frequently seen in search results are near the top of the list of

targeted offenders. One was beemp3.com. It has accounted for 5.1% of all URLs removed over the last 12 months, making it the 11th most targeted domain over that time span. Another was MP3bear.com. Content owners have requested that 106,050 URLs -- 0.7% of the total -- be removed from MP3bear.com domains. Nevertheless, the site is the fourth result returned for a search for Kanye West MP3s. The first three are MP3skull URLs.

Country and rock artists had a better tendency to have a legal MP3 site on the first page of search results (although one should note this is a small sample). Amazon MP3 was the first result for the Lumineers and Little Big Town, the second for Adele and Taylor Swift, the third for Carrie Underwood and Mumford and Sons and the fourth for Neon Trees and Jason Aldean. For artists other than the Lumineers and Little Big Town, the Amazon MP3 link was the first legal link returned in the search result.

Results varied by genre, however. Pop, R&B and hip-hop artists were more likely to have legal sites buried further in the search results. Justin Bieber's first legal result, a YouTube video, was #13 and his first legal MP3 site was #17. Kanye West's first legal result and first legal MP3 site was #16. Big Sean's first legal result was #14 and first legal MP3 site was an astounding #93.

Some domains commonly seen in the search results have accounted for a good portion of takedown requests. Beemp3.com, for example, has accounted for 5.1% of all URLs removed over the last 12 months. Although seen less frequently, 4shared.com has accounted for 6.2% of removed URLs over the last 12 months. The domain targeted most often by rights holders, filestube.com, was rarely spotted.

Five major US broadband companies will soon begin receiving infringement notices from copyright holders under the Copyright Alert System they negotiated with the RIAA and MPAA. Infringers will be pointed to a list of legal options at the website of the Center for Copyright Information. The combination of increased awareness and better education could have a positive impact. If the average person wants to do the right thing but doesn't know what legal options are available, Google search is not always a good avenue to find out.

Business ▶ Government

French scream *sacré bleu!* as US govt gives up the internet to ICANN

Oh non - ceci donnera Amazon et Google trop de pouvoir

24 Mar 2016 at 21:25, [Kieren McCarthy](#)

30

24

The French government has slammed the agreement to move the domain name system out from under US control and hand it to Californian non-profit [ICANN](#).

The French believe the move hands too much control to internet giants like Google and Amazon.

Speaking to leading French newspaper *Le Monde*, French government officials **said** that the [transition plan](#) will lead to the "privatization of ICANN, not its internationalization."

Axelle Lemaire, minister for the digital economy, put out a statement on Thursday which complained: "Despite the continued efforts of civil society and many governments to reach a balanced compromise, elements of this reform project will marginalize States in the decision-making processes of ICANN, especially compared to the role of the private sector."

Unnamed foreign ministry officials also told *Le Monde* they were unhappy with the end result, saying: "This is an unsatisfactory condition. The consensus requirement only produces warm water. And that does not put the GAC [ICANN's Governmental Advisory Committee] on the same footing as the other committees of ICANN."

At the heart of the concerns are [last-minute compromises](#) reached at ICANN's meeting in Marrakesh earlier this month regarding how much influence governments should collectively have over ICANN's decision-making process.

One of the main conditions that the US government put on the transition of the critical contract to run [IANA](#) was that its role would not be replaced with "a government-led or intergovernmental organization."

Some governments feel that pre-condition led to the internet community unduly restricting the role of governments as a group and, by extension, giving too much power to "GAFA" – Google, Apple, Facebook and Amazon.

Unusual role of GAC

Moi

lca

lar

Mos

Spo

Governments, through the **Governmental Advisory Committee** (GAC), have always had an unusual role within ICANN. They remain an advisory body only and do not have a vote. They are also not on the committee which elects a significant number of the board members. As such, governments' influence on the body that makes the final judgments is strictly limited.

That said, following a decade of international conferences where the world's governments have discussed taking more control of the internet's naming and addressing systems, ICANN has agreed that GAC "advice" comes with the expectation that it will be followed unless the board holds a specific vote otherwise.

The board is also obligated to explain its reasoning if it does reject that advice, and to embark on a mediation process with the GAC in an effort to resolve the issue.

During the IANA transition process, however, the internet community played around with both what constituted "advice" from the GAC (it decided: an agreement with no objections), and the size of the vote required at the ICANN board level to reject it.

What the internet community feels was a fair balance, however, the French government (and a number of others including Brazil, Argentina and some African countries) felt was a dangerous watering-down of their influence.

Ultimately, with a deadline hard on their heels, the GAC as a whole agreed not to block the plan, while noting that a number of members were not able to approve it.

Scaremongering

The French government is unhappy with how that process played out, claiming in the article that the US government wrongly pressured other governments into agreeing to the plan by over-emphasizing the risk that authoritarian governments like China and Russia would pose if the GAC did not agree to a reduced role.

It also noted that the US government still retains significant control over ICANN, since it remains a non-profit organization based in California under US law, as opposed to an international organization like the United Nations or Red Cross, which operate under international law.

As to the plan itself, the US government has selected Harvard University's Berkman Center for Internet & Society to carry out an assessment of it and report back. A [contract](#) shows the Center being engaged for five months to do the job.

The Berkman Center has a good working knowledge of ICANN, having been one of the original groups that helped set it up back in 1999 and having been selected to carry out an accountability [review](#) into ICANN in 2010.

It is worth noting that the main ICANN staff member in charge of that review was caught trying to block the selection of the Berkman Center. Its [final report](#) [PDF] highlighted and reflected many of the long-standing problems with ICANN as an organization, but recommendations that built on its observations have still yet to be fully implemented six years later. ®

Paris dénonce une « privatisation » de la gouvernance d'Internet

LE MONDE ECONOMIE | 24.03.2016 à 15h25 • Mis à jour le 25.03.2016 à 10h15 | Par Zeliha Chaffin

Lors d'une réunion de l'Icann à Londres en 2012. ANDREW COWIE / AFP

La réforme se voulait historique. Deux semaines après la validation, lors de la réunion de Marrakech, du plan de transition de l'Internet Corporation for Assigned Names and Numbers (Icann – la société pour l'attribution des noms de domaine et des numéros sur Internet) censé mettre fin à la tutelle des Etats-Unis sur ses activités, les premières fissures apparaissent. Le Quai d'Orsay se dit aujourd'hui déçu par les modalités de la future organisation et dénonce notamment la mainmise des géants américains du Net, Google et Amazon en tête, sur la gouvernance d'Internet.

En cause, le poids des lobbys des « GAFA » (Google, Apple, Facebook, Amazon) lors des discussions sur la réforme. Ces derniers sont ainsi parvenus à réduire l'influence des Etats au sein de l'organisation. « Les intérêts privés vont maintenant écraser les intérêts représentés par les gouvernements », commentait-on mercredi 23 mars au ministère des affaires étrangères.

Depuis 1998, date de sa création, l'Icann administre le réseau Internet, gérant notamment l'attribution des noms de domaine à travers le monde. C'est grâce à lui que les internautes accèdent à une adresse Internet en tapant des noms de domaines plutôt qu'une longue série de chiffres (adresse IP).

« Les Etats-Unis reprennent d'une main ce qu'ils donnent de l'autre »

Peu connue du grand public, cette organisation a fait parler d'elle en 2014 lorsque la secrétaire d'Etat française chargée du numérique, Axelle Lemaire, avait menacé à grands cris de la quitter après que celle-ci avait mis en vente les extensions «.vin » et «.wine ». A l'époque, déjà, la question de l'indépendance de l'Icann agitaient les gouvernements. Car l'organisation, implantée à Los Angeles et qui relève du droit californien, est sous la supervision du département du commerce américain. « Cela signifie concrètement que pour les paramètres du “.fr”, il faut l'accord du gouvernement américain », souligne-t-on au Quai d'Orsay.

La réforme a mis du temps à [voir](#) le jour. C'est le scandale des écoutes de la NSA, révélé par Edouard Snowden en juin 2013, qui a déclenché le processus. Face à la perte de confiance des utilisateurs dans le réseau des réseaux, et sous la pression du président de l'Icann de l'époque, Fadi Chehadé, les Etats-Unis se sont finalement déclarés prêts, en mars 2014, à [abandonner](#) leur rôle central dans l'organisation au profit d'une gouvernance mondiale. Une décision saluée en son temps par la [France](#) .

Lire aussi : [Vers la fin de la tutelle américaine sur l'Icann, le gestionnaire des adresses Internet ?](#) ([\(pixels/article/2015/04/16/vers-la-fin-de-la-tutelle-americaine-sur-l-icann-le-gestionnaire-des-adresses-internet-4617487-4408996.html\)](#))

Deux ans plus tard, la transition entamée pour se [défaire](#) de la tutelle américaine est sur le point de se [conclure](#) , mais Paris se sent floué. « *On est dans la privatisation de l'Icann, pas dans son internationalisation. Les Etats-Unis reprennent d'une main ce qu'ils donnent de l'autre* », selon l'analyse du Quai d'Orsay. Pour la France, l'un des problèmes majeurs de la future organisation tient aux modalités relatives au GAC (pour Governmental Advisory Committee), le comité consultatif des gouvernements, un organe de l'Icann qui réunit les représentants des Etats du [monde](#) entier. Désormais, ce dernier devra se [prononcer](#) à l'unanimité. « *C'est une condition insatisfaisante. L'obligation de consensus ne produit que de l'eau tiède.* »

Spectre d'une prise de contrôle d'Etats non-démocratiques

Une position partagée par la secrétaire d'Etat au numérique. « *Certains éléments de ce [projet](#) de réforme auront pour conséquence de [marginaliser](#) les Etats dans les processus de décision de l'Icann, notamment en comparaison du rôle accordé au secteur privé* », a-t-elle précisé dans un communiqué jeudi 24 mars.

Pour [justifier](#) cette décision, les Etats-Unis invoquent le spectre d'une prise de contrôle d'Etats non démocratiques sur l'Internet. Dans sa ligne de mire : la [Russie](#) et la [Chine](#) . Le candidat républicain à la présidentielle américaine, [Ted Cruz](#) , soutient notamment cette thèse. Un non-sens d'après le Quai d'Orsay : « *Ces pays ont joué le rôle d'épouvantail. D'autant que le GAC [dont font partie la Russie et la Chine] n'a pas de voix délibérative. Il ne fait que [produire](#) un avis.* »

Si la France a pu [bénéficier](#) du soutien d'une majorité des pays d'Amérique latine, comme le [Brésil](#) ou l'[Argentine](#) , et des pays africains, les opinions étaient cependant plus tranchées en [Europe](#) . Le [Royaume-Uni](#) et les pays nordiques, comme la [Suède](#) et le [Danemark](#) , ont ainsi préféré se [rallier](#) à la position américaine, illustrant le manque d'unité européenne sur la question. Avant d'être effective, cette réforme de la gouvernance d'Internet devra d'abord [être](#) adoptée par le Congrès américain, une probable formalité. L'Icann devrait ainsi officiellement quitter le giron américain à la fin septembre pour [devenir](#) un bien commun mondial.

AXELLE LEMAIRE
SECRETARE D'ETAT AU NUMERIQUE,
AUPRES DU MINISTRE DE L'ECONOMIE, DE L'INDUSTRIE ET DU NUMERIQUE

Communiqué de presse

Communiqué de presse

www.economie.gouv.fr

Paris, le 24 mars 2016
N°1282

Réaction d'Axelle LEMAIRE à la conclusion de la 55^{ème} réunion de l'ICANN

La 55^e réunion de l'ICANN*, qui s'est achevée à Marrakech, a examiné un projet de réforme de la gouvernance de cette organisation en charge de la gestion du système des noms de domaine au niveau mondial.

La France plaide depuis de nombreuses années pour l'internationalisation de l'ICANN et pour son émancipation de la tutelle américaine. Elle a donc naturellement salué la démarche engagée par le Département du Commerce américain en mars 2014, visant à transférer à la communauté internet la tutelle qu'il a jusqu'à présent exercé sur cette société de droit californien.

Soutien de longue date de l'approche multi-acteurs, la France s'est pleinement investie dans les groupes de travail multipartites qui ont travaillé pendant un an et demi à l'élaboration de ce projet de réforme. Elle est particulièrement satisfaite des propositions consistant à renforcer les mécanismes d'appel face aux décisions du conseil d'administration de l'ICANN (IRP, *Independent Review Process*).

Cependant, malgré les efforts continus de la société civile et de nombreux gouvernements pour arriver à un compromis équilibré, certains éléments de ce projet de réforme auront pour conséquence de marginaliser les Etats dans les processus de décision de l'ICANN, notamment en comparaison du rôle accordé au secteur privé.

En effet, la mise en œuvre de ce projet de réforme limitera la capacité du Comité Consultatif des Gouvernements (GAC, *Governmental Advisory Committee*) à faire valoir ses positions en imposant des conditions particulières à la prise en compte de ses avis par le conseil d'administration de l'ICANN – c'est l'objet de la 11^{ème} recommandation. Par ailleurs, les Etats ne se voient pas reconnaître les mêmes droits que les autres parties prenantes dans l'exercice des nouveaux mécanismes de recours contre les décisions du conseil d'administration de l'ICANN – c'est l'objet des limites imposées dans les deux premières recommandations.

C'est pourquoi le GAC, sans pour autant objecter à la poursuite de l'émancipation de la tutelle américaine, n'a pas été en mesure d'approuver dans son intégralité le projet de réforme examiné lors de la réunion de Marrakech. La France salue cette décision, qui s'inscrit dans la continuité des positions exprimées par la France depuis plusieurs mois. Il s'agit d'un signal fort adressé à l'ICANN et à son conseil d'administration, dont la légitimité dépendra désormais largement de la relation de confiance qu'il devra établir avec les parties prenantes du monde entier, et en particulier les Etats.

La France appelle l'administration américaine, qui doit désormais examiner ce projet de réforme, à accorder la plus grande attention aux préoccupations exprimées par de nombreux Etats. Elle sera par ailleurs particulièrement attentive à la poursuite des travaux visant à améliorer la redevabilité de l'ICANN dans le cadre du « *Work Stream 2* », notamment concernant le renforcement de la diversité géographique et la lutte contre les conflits d'intérêts.

Internet étant désormais un bien commun mondial, il est essentiel que ses instances de gouvernance deviennent réellement internationales, transparentes et démocratiques, comme l'a rappelé l'Assemblée générale des nations unies lors de la réunion de haut niveau pour la revue après 10 ans du Sommet mondial pour la société de l'information le 16 décembre 2015.

New Generic Top-Level Domains

— About the Program

The New generic Top-Level Domain Program was developed to increase competition and choice in the domain name space.

A gTLD is a domain name extension such as the familiar .com, .net, or .org. There are roughly two dozen now, but soon, there could be hundreds.

ABOUT THE PROGRAM

The Internet Corporation for Assigned Names and Numbers, founded in 1998, has as its mission to ensure a stable and unified global Internet. One of its key responsibilities is introducing and promoting competition in the registration of domain names, while ensuring the security and stability of the domain name system (DNS).

In 2005, ICANN's Generic Names Supporting Organization (GNSO) began a policy development process to consider the introduction of new gTLDs, based on the results of trial rounds conducted in 2000 and 2003. The GNSO is the main policy-making body for generic top-level domains, and encourages global participation in the technical management of the Internet.

The two-year policy development process included detailed and lengthy consultations with the many constituencies of ICANN's global Internet community, including governments, civil society, business and intellectual property stakeholders, and technologists.

In 2008, the ICANN Board adopted 19 specific GNSO policy recommendations for implementing new gTLDs, with certain allocation criteria and contractual conditions.

After approval of the policy, ICANN undertook an open, inclusive, and transparent implementation process to address stakeholder concerns, such as the protection of intellectual property and community interests, consumer protection, and DNS stability. This work included public consultations, review, and input on multiple draft versions of the Applicant Guidebook.

In June 2011, ICANN's Board of Directors approved the Guidebook and authorized the launch of the New gTLD Program. The program's goals include enhancing competition and consumer choice, and enabling the benefits of innovation via the introduction of new gTLDs, including both new ASCII and internationalized domain name (IDN) top-level domains.

The application window opened on 12 January 2012, and ICANN received 1,930 applications for new gTLDs. On 17 December 2012, ICANN held a prioritization draw to determine the order in which applications would be processed during Initial Evaluation and subsequent phases of the program. These applications were processed by ICANN staff and evaluated by expert, independent third-party evaluators according to priority numbers.

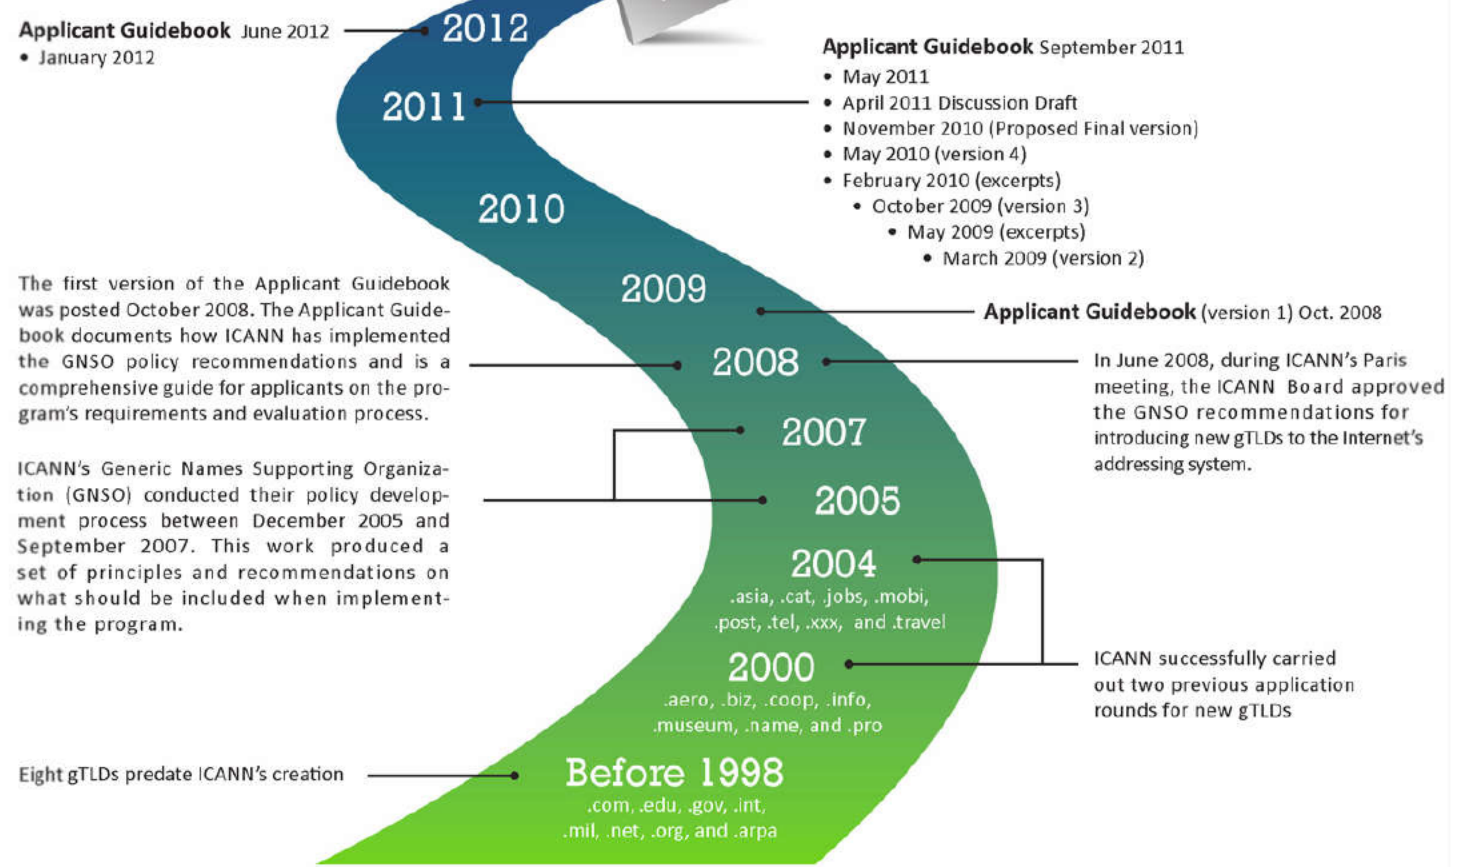

On 22 March 2013, ICANN released the first set of Initial Evaluation results to applicants and the public. ICANN anticipates that Initial Evaluation results for all applications will be published by the end of August 2013.

Applications that pass Initial Evaluation (and that do not face any objections or string contention) will be eligible to proceed to contracting. It is anticipated that contracting will begin in mid 2013, and the first new gTLDs will be delegated soon afterwards.

[New gTLD Fast Facts \(/en/announcements-and-media/infographics\)](/en/announcements-and-media/infographics)

History

The Applicant Guidebook has gone through several iterations in draft form and is the result of years of careful implementation of GNSO policy recommendations and thoughtful review and feedback from the ICANN stakeholder community. Each version of the Applicant Guidebook was posted for public comment. More than one thousand public comments have been reviewed and considered, making the program what it is today.

SUMMARY -- PRINCIPLES, RECOMMENDATIONS & IMPLEMENTATION GUIDELINES

1. This section sets out, in table form, the set of Principles, proposed Policy Recommendations and Guidelines that the Committee has derived through its work. The addition of new gTLDs will be done in accordance with ICANN's primary mission which is to ensure the security and stability of the DNS and, in particular, the Internet's root server system[\[24\]](#).
2. The Principles are a combination of GNSO Committee priorities, ICANN staff implementation principles developed in tandem with the Committee and the March 2007 GAC Public Policy Principles on New Top-Level Domains. The Principles are supported by all GNSO Constituencies.[\[25\]](#)
3. ICANN's Mission and Core Values were key reference points for the development of the Committee's Principles, Recommendations and Implementation Guidelines. These are referenced in the right-hand column of the tables below.
4. The Principles have support from all GNSO Constituencies.

	PRINCIPLES	MISSION & CORE VALUES
A	New generic top-level domains (gTLDs) must be introduced in an orderly, timely and predictable way.	M1 & CV1 & 2, 4-10
B	Some new generic top-level domains should be internationalised domain names (IDNs) subject to the approval of IDNs being available in the root.	M1-3 & CV 1, 4 & 6
C	The reasons for introducing new top-level domains include that there is demand from potential applicants for new top-level domains in both ASCII and IDN formats. In addition the introduction of new top-level domain application process has the potential to promote competition in the provision of registry services, to add to consumer choice, market differentiation and geographical and service-provider diversity.	M3 & CV 4-10
D	A set of technical criteria must be used for assessing a new gTLD registry applicant to minimise the risk of harming the operational stability, security and global interoperability of the Internet.	M1-3 & CV 1
E	A set of capability criteria for a new gTLD registry applicant must be used to provide an assurance that an applicant has the capability to meets its obligations under the terms of ICANN's registry agreement.	M1-3 & CV 1
F	A set of operational criteria must be set out in contractual conditions in the registry agreement to ensure compliance with ICANN policies.	M1-3 & CV 1
G	The string evaluation process must not infringe the applicant's freedom of expression rights that are protected under internationally recognized principles of law.	

	RECOMMENDATIONS [26]	MISSION & CORE VALUES
1	<p>ICANN must implement a process that allows the introduction of new top-level domains.</p> <p>The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination.</p> <p>All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.</p>	M1-3 & CV1-11
2	Strings must not be confusingly similar to an existing top-level domain or a Reserved Name.	M1-3 & C1-6-11
3	<p>Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law.</p> <p>Examples of these legal rights that are internationally recognized include, but are not limited to, rights defined in the Paris Convention for the Protection of Industry Property (in particular trademark rights), the Universal Declaration of Human Rights (UDHR) and the International Covenant on Civil and Political Rights (ICCPR) (in particular freedom of expression rights).</p>	CV3
4	Strings must not cause any technical instability.	M1-3 & CV 1
5	Strings must not be a Reserved Word [27] .	M1-3 & CV 1 & 3

6*	<p>Strings must not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law.</p> <p>Examples of such principles of law include, but are not limited to, the Universal Declaration of Human Rights (UDHR), the International Covenant on Civil and Political Rights (ICCPR), the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) and the International Convention on the Elimination of All Forms of Racial Discrimination, intellectual property treaties administered by the World Intellectual Property Organisation (WIPO) and the WTO Agreement on Trade-Related Aspects of Intellectual Property (TRIPS).</p>	M3 & CV 4
7	Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.	M1-3 & CV1
8	Applicants must be able to demonstrate their financial and organisational operational capability.	M1-3 & CV1
9	There must be a clear and pre-published application process using objective and measurable criteria.	M3 & CV6-9
10	There must be a base contract provided to applicants at the beginning of the application process.	CV7-9
11	[Replaced with Recommendation 20 and Implementation Guideline P and inserted into Term of Reference 3 Allocation Methods section]	
12	Dispute resolution and challenge processes must be established prior to the start of the process.	CV7-9
13	Applications must initially be assessed in rounds until the scale of demand is clear.	CV7-9

14	The initial registry agreement term must be of a commercially reasonable length.	CV5-9
15	There must be renewal expectancy.	CV5-9
16	Registries must apply existing Consensus Policies and adopt new Consensus Policies as they are approved.	CV5-9
17	A clear compliance and sanctions process must be set out in the base contract which could lead to contract termination.	M1 & CV1
18	If an applicant offers an IDN service, then ICANN's IDN guidelines[28] must be followed.	M1 & CV1
19	Registries must use only ICANN accredited registrars in registering domain names and may not discriminate among such accredited registrars.	M1 & CV1
20*	An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted.	

* The NCUC submitted Minority Statements on Recommendations 6 and 20. The remainder of the Recommendations have support from all GNSO Constituencies.

	IMPLEMENTATION GUIDELINES	MISSION & CORE VALUES
IG A	The application process will provide a pre-defined roadmap for applicants that encourages the submission of applications for new top-level domains.	CV 2, 5, 6, 8 & 9
IG B	Application fees will be designed to ensure that adequate resources exist to cover the total cost to administer the new gTLD process.	CV 5, 6, 8 & 9

	Application fees may differ for applicants.	
IG C	ICANN will provide frequent communications with applicants and the public including comment forums.	CV 9 & 10
IG D	A first come first served processing schedule within the application round will be implemented and will continue for an ongoing process, if necessary. Applications will be time and date stamped on receipt.	CV 8-10
IG E	The application submission date will be at least four months after the issue of the Request for Proposal and ICANN will promote the opening of the application round.	CV 9 & 10
IG F*	If there is contention for strings, applicants may ^[29] : i) resolve contention between them within a pre-established timeframe ii) if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and; iii) the ICANN Board may be used to make a final decision, using advice from staff and expert panels.	CV 7-10
IG H*	Where an applicant lays any claim that the TLD is intended to support a particular community such as a sponsored TLD, or any other TLD intended for a specified community, that claim will be taken on trust with the following exceptions: (i) the claim relates to a string that is also subject to another application and the claim to support a community is being used to gain priority for the application; and (ii) a formal objection process is initiated. Under these exceptions, Staff Evaluators will devise criteria and	CV 7 - 10

	<p>procedures to investigate the claim.</p> <p>Under exception (ii), an expert panel will apply the process, guidelines, and definitions set forth in IG P.</p>	
IG H	External dispute providers will give decisions on objections.	CV 10
IG I	An applicant granted a TLD string must use it within a fixed timeframe which will be specified in the application process.	CV 10
IG J	The base contract should balance market certainty and flexibility for ICANN to accommodate a rapidly changing market place.	CV 4-10
IG K	ICANN should take a consistent approach to the establishment of registry fees.	CV 5
IG L	The use of personal data must be limited to the purpose for which it is collected.	CV 8
IG M	ICANN may establish a capacity building and support mechanism aiming at facilitating effective communication on important and technical Internet governance functions in a way that no longer requires all participants in the conversation to be able to read and write English ^[30] .	CV 3 - 7
IG N	ICANN may put in place a fee reduction scheme for gTLD applicants from economies classified by the UN as least developed.	CV 3 - 7
IG O	ICANN may put in place systems that could provide information about the gTLD process in major languages other than English, for example, in the six working languages of the United Nations.	CV 8 -10
IG P*	<p>The following process, definitions and guidelines refer to Recommendation 20.</p> <p>Process</p> <p>Opposition must be objection based.</p> <p>Determination will be made by a dispute resolution panel constituted for the purpose.</p> <p>The objector must provide verifiable evidence that it is an established institution of the community (perhaps like the RSTEP pool of panelists</p>	

from which a small panel would be constituted for each objection).

Guidelines

The task of the panel is the determination of substantial opposition.

- a) **substantial** – in determining substantial the panel will assess the following: signification portion, community, explicitly targeting, implicitly targeting, established institution, formal existence, detriment
- b) **significant portion** – in determining significant portion the panel will assess the balance between the level of objection submitted by one or more established institutions and the level of support provided in the application from one or more established institutions. The panel will assess significance proportionate to the explicit or implicit targeting.
- c) **community** – community should be interpreted broadly and will include, for example, an economic sector, a cultural community, or a linguistic community. It may be a closely related community which believes it is impacted.
- d) **explicitly targeting** – explicitly targeting means there is a description of the intended use of the TLD in the application.
- e) **implicitly targeting** – implicitly targeting means that the objector makes an assumption of targeting or that the objector believes there may be confusion by users over its intended use.
- f) **established institution** – an institution that has been in formal existence for at least 5 years. In exceptional cases, standing may be granted to an institution that has been in existence for

	<p>fewer than 5 years.</p> <p>Exceptional circumstances include but are not limited to a re-organization, merger or an inherently younger community.</p> <p>The following ICANN organizations are defined as established institutions: GAC, ALAC, GNSO, ccNSO, ASO.</p> <p>g) formal existence – formal existence may be demonstrated by appropriate public registration, public historical evidence, validation by a government, intergovernmental organization, international treaty organization or similar.</p> <p>h) detriment – the objector must provide sufficient evidence to allow the panel to determine that there would be a likelihood of detriment to the rights or legitimate interests of the community or to users more widely.</p>	
IG Q	ICANN staff will provide an automatic reply to all those who submit public comments that will explain the objection procedure.	
IG R	Once formal objections or disputes are accepted for review there will be a cooling off period to allow parties to resolve the dispute or objection before review by the panel is initiated.	

* The NCUC submitted Minority Statements on Implementation Guidelines F, H & P. The remainder of the Implementation Guidelines have support from all GNSO Constituencies.

1. This set of implementation guidelines is the result of detailed discussion, particularly with respect to the two *ICANN Staff Discussion Points*[\[31\]](#) documents that were prepared to facilitate consultation with the GNSO Committee about the implementation impacts of the proposed policy Recommendations. The Implementation Guidelines will be used to inform the final Implementation Plan which is approved by the ICANN Board

2. The *Discussion Points* documents contain draft flowcharts which have been developed by the Implementation Team and which will be updated, based on the final vote of the GNSO Council and the direction of the ICANN Board. The *Discussion Points* documents have been used in the ongoing internal implementation discussions that have focused on ensuring that draft recommendations proposed by the Committee are implementable in an efficient and transparent manner^[32]. The flowchart setting out the proposed Contention Evaluation Process is a more detailed component within the Application Evaluation Process and will be amended to take into account the inputs from Recommendation 20 and its related Implementation Guidelines.

3. This policy development process has been designed to produce a systemised and ongoing mechanism for applicants to propose new top-level domains. The Request for Proposals (RFP) for the first round will include scheduling information for the subsequent rounds to occur within one year. After the first round of new applications, the application system will be evaluated by ICANN's TLDs Project Office to assess the effectiveness of the application system. Success metrics will be developed and any necessary adjustments made to the process for subsequent rounds.

4. The following sections set out in detail the explanation for the Committee's recommendations for each Term of Reference.

Final Report - Introduction of New Generic Top-Level Domains

Date: 8 August 2007

ICANN Generic Names Supporting Organisation**Final Report****Introduction of New Generic Top-Level Domains****8 August 2007****Part A: Final Report****Introduction of New Generic Top-Level Domains**[ABSTRACT](#)[BACKGROUND](#)[SUMMARY -- PRINCIPLES, RECOMMENDATIONS & IMPLEMENTATION GUIDELINES](#)[TERM OF REFERENCE ONE -- WHETHER TO INTRODUCE NEW TOP-LEVEL DOMAINS](#)[TERM OF REFERENCE -- SELECTION CRITERIA](#)[TERM OF REFERENCE THREE -- ALLOCATION METHODS](#)[TERM OF REFERENCE FOUR -- CONTRACTUAL CONDITIONS](#)[NEXT STEPS](#)[Annex A – NCUC Minority Statement: Recommendation 6](#)[Annex B – Nominating Committee Appointee Avri Doria: Individual Comments](#)[Annex C – NCUC Minority Statement: Recommendation 20 and Implementation Guidelines F, H & P](#)[REFERENCE MATERIAL -- GLOSSARY](#)**FINAL REPORT: PART B****ABSTRACT**

This is the Generic Names Supporting Organization's Final Report on the Introduction of New Top-Level Domains. The Report is in two parts. Part A contains the substantive discussion of the Principles, Policy Recommendations and Implementation Guidelines and Part B contains a range of supplementary materials that have been used by the Committee during the course of the Policy Development Process.

The GNSO Committee on New Top-Level Domains consisted of all GNSO Council members. All meetings were open to a wide range of interested stakeholders and observers. A set of participation data is found in Part B.

Many of the terms found here have specific meaning within the context of ICANN and new top-level domains discussion. A full glossary of terms is available in the Reference Material section at the end of Part A.

BACKGROUND

1. The Internet Corporation for Assigned Names and Numbers (ICANN) is responsible for the overall coordination of "the global Internet's system of unique identifiers" and ensuring the "stable and secure operation of the Internet's unique identifier systems. In particular, ICANN coordinates the "allocation and assignment of the three sets of unique identifiers for the Internet". These are "domain names"(forming a system called the DNS); Internet protocol (IP) addresses and autonomous system (AS) numbers and Protocol port and parameter numbers". ICANN is also responsible for the "operation and evolution of the DNS root name server system and policy development reasonably and appropriately related to these technical functions". These elements are all contained in ICANN's Mission and Core Values[1] in addition to provisions which enable policy development work that, once approved by the ICANN Board, become binding on the organization. The results of the policy development process found here relate to the introduction of new generic top-level domains.

2. This document is the *Final Report* of the Generic Names Supporting Organisation's (GNSO) Policy Development Process (PDP) that has been conducted using ICANN's Bylaws and policy development guidelines that relate to the work of the GNSO. This *Report* reflects a comprehensive examination of four Terms of Reference designed to establish a stable and ongoing process that facilitates the introduction of new top-level domains. The policy development process (PDP) is part of the Generic Names Supporting Organisation's (GNSO) mandate within the ICANN structure. However, close consultation with other ICANN Supporting Organisations and Advisory Committees has been an integral part of the process. The consultations and negotiations have also included a wide range of interested stakeholders from within and outside the ICANN community[2].

3. The *Final Report* is in two parts. This document is Part A and contains the full explanation of each of the Principles, Recommendations and Implementation Guidelines that the Committee has developed since December 2005[3]. Part B of the *Report* contains a wide range of supplementary materials which have been used in the policy development process including Constituency Impact Statements (CIS), a series of Working Group Reports on important sub-elements of the Committee's deliberations, a collection of external reference materials, and the procedural documentation of the policy development process[4].

4. The finalisation of the policy for the introduction of new top-level domains is part of a long series of events that have dramatically changed the nature of the Internet. The 1969 ARPANET diagram shows the initial design of a network that is now global in its reach and an integral part of many lives and businesses. The policy recommendations found here illustrate the complexity of the Internet of 2007 and, as a package, propose a system to add new top-level domains in an orderly and transparent way. The ICANN Staff Implementation Team, consisting of policy, operational and legal staff members, has worked closely with the Committee on all aspects of the policy development process[5]. The ICANN Board has received regular information and updates about the process and the substantive results of the Committee's work.

5. The majority of the early work on the introduction of new top-level domains is found in the IETF's Request for Comment series. RFC 1034[6] is a fundamental resource that explains key concepts of the naming system. Read in conjunction with RFC920[7], an historical picture emerges of how and why the domain name system hierarchy has been organised. Postel & Reynolds set out in their RFC920 introduction about the "General Purpose Domains" that "...While the initial domain name "ARPA" arises from the history of the development of this system and environment, in the future most of the top level names will be very general categories like "government", "education", or "commercial". The motivation is to provide an organization name that is free of undesirable semantics."

6. In 2007, the Internet is multi-dimensional and its development is driven by widespread access to inexpensive communications technologies in many parts of the world. In addition, global travel is now relatively inexpensive, efficient and readily available to a diverse range of travellers. As a consequence, citizens no longer automatically associate themselves with countries but with international communities of linguistic, cultural or professional interests independent of physical location. Many people now exercise multiple citizenship rights, speak many different languages and quite often live far from where they were born or educated. The 2007 OECD *Factbook*[8] provides comprehensive statistics about the impact of migration on OECD member countries. In essence, many populations are fluid and changing due in part to easing labour movement restrictions but also because technology enables workers to live in one place and work in another relatively easily. As a result, companies and organizations are now global and operate across many geographic borders and jurisdictions. The following illustration[9] shows how rapidly the number of domain names under registration has increased and one could expect that trend to continue with the introduction of new top-level domains.

7. A key driver of change has been the introduction of competition in the registration of domain names through ICANN Accredited Registrars[10]. In June 2007, there were more than 800 accredited registrars who register names for end users with ongoing downward pressure on the prices end-users pay for domain name registration.

8. ICANN's work on the introduction of new top-level domains has been underway since 1999. By mid-1999, Working Group C[11] had quickly reached consensus on two issues, namely that "...ICANN should add new gTLDs to the root. The second is that ICANN should begin the deployment of new gTLDs with an initial rollout of six to ten new gTLDs, followed by an evaluation period". This work was undertaken throughout 2000 and saw the introduction of, for example, .coop, .aero and .biz.

9. After an evaluation period, a further round of sponsored TLDs was introduced during 2003 and 2004 which included, amongst others, .mobi and .travel[12].

10. The July 2007 zone file survey statistics from www.registrarstats.com[13] shows that there are slightly more than 96,000,000 top level domains registered across a selection of seven top-level domains including .com, .net and .info. Evidence from potential new applicants provides more impetus to implement a system that enables the ongoing introduction of new top level domains[14]. In addition, interest from Internet users who could use Internationalised Domain Names (IDNs) in a wide variety of scripts beyond ASCII is growing rapidly.

11. To arrive at the full set of policy recommendations which are found here, the Committee considered the responses to a Call for Expert Papers issued at the beginning of the policy development process[15], and which was augmented by a full set of GNSO Constituency Statements[16]. These are all found in Part B of the *Final Report* and should be read in conjunction with this document. In addition, the Committee received detailed responses from the Implementation Team about proposed policy recommendations and the implementation of the recommendations package as an on-line application process that could be used by a wide array of potential applicants.

12. The Committee reviewed and analysed a wide variety of materials including Working Group C's findings, the evaluation reports from the 2003 & 2004 round of sponsored top-level domains and a full range of other historic materials[17].

13. In the past, a number of different approaches to new top level domains have been considered including the formulation of a structured taxonomy[18] of names, for example, .auto, .books, .travel and .music. The Committee has opted to enable potential applicants to self-select strings that are either the most appropriate for their customers or potentially the most marketable. It is expected that applicants will apply for targeted community strings such as .travel for the travel industry and .cat for the Catalan community as well as some generic strings. The Committee identified five key drivers for the introduction of new top-level domains.

- (i) It is consistent with the reasons articulated in 1999 when the first proof-of-concept round was initiated
- (ii) There are no technical impediments to the introduction of new top-level domains as evidenced by the two previous rounds
- (iii) Expanding the domain name space to accommodate the introduction of both new ASCII and internationalised domain name (IDN) top-level domains will give end users more choice about the nature of their presence on the Internet. In addition, users will be able to use domain names in their language of choice.
- (iv) There is demand for additional top-level domains as a business opportunity. The GNSO Committee expects that this business opportunity will stimulate competition at the registry service level which is consistent with ICANN's Core Value 6.

(v) No compelling reason has been articulated to not proceed with accepting applications for new top-level domains.

14. The remainder of his Report is structured around the four *Terms of Reference*. This includes an explanation of the Principles that have guided the work taking into account the Governmental Advisory Committee's March 2007 *Public Policy Principles for New gTLDs*[19]; a comprehensive set of Recommendations which has majority Committee support and a set of Implementation Guidelines which has been discussed in great detail with the ICANN Staff Implementation Team. The Implementation Team has released two *ICANN Staff Discussion Points* documents (in November 2006 and June 2007). Version 2 provides detailed analysis of the proposed recommendations from an implementation standpoint and provides suggestions about the way in which the implementation plan may come together. The ICANN Board will make the final decision about the actual structure of the application and evaluation process.

15. In each of the sections below the Committee's recommendations are discussed in more detail with an explanation of the rationale for the decisions. The recommendations have been the subject of numerous public comment periods and intensive discussion across a range of stakeholders including ICANN's GNSO Constituencies, ICANN Supporting Organisations and Advisory Committees and members of the broader Internet-using public that is interested in ICANN's work[20]. In particular, detailed work has been conducted through the Internationalised Domain Names Working Group (IDN-WG)[21], the Reserved Names Working Group (RN-WG)[22] and the Protecting the Rights of Others Working Group (PRO-WG) [23]. The Working Group Reports are found in full in Part B of the *Final Report* along with the March 2007 GAC Public Policy Principles for New Top-Level Domains, Constituency Impact Statements. A minority statement from the NCUC about Recommendations 6 & 20 are found Annexes for this document along with individual comments from Nominating Committee appointee Ms Avri Doria.

SUMMARY -- PRINCIPLES, RECOMMENDATIONS & IMPLEMENTATION GUIDELINES

1. This section sets out, in table form, the set of Principles, proposed Policy Recommendations and Guidelines that the Committee has derived through its work. The addition of new gTLDs will be done in accordance with ICANN's primary mission which is to ensure the security and stability of the DNS and, in particular, the Internet's root server system[24].
2. The Principles are a combination of GNSO Committee priorities, ICANN staff implementation principles developed in tandem with the Committee and the March 2007 GAC Public Policy Principles on New Top-Level Domains. The Principles are supported by all GNSO Constituencies.[25]
3. ICANN's Mission and Core Values were key reference points for the development of the Committee's Principles, Recommendations and Implementation Guidelines. These are referenced in the right-hand column of the tables below.
4. The Principles have support from all GNSO Constituencies.

	PRINCIPLES	MISSION & CORE VALUES
A	New generic top-level domains (gTLDs) must be introduced in an orderly, timely and predictable way.	M1 & CV1 & 2, 4-10
B	Some new generic top-level domains should be internationalised domain names (IDNs) subject to the approval of IDNs being available in the root.	M1-3 & CV 1, 4 & 6
C	The reasons for introducing new top-level domains include that there is demand from potential applicants for new top-level domains in both ASCII and IDN formats. In addition the introduction of new top-level domain application process has the potential to promote competition in the provision of registry services, to add to consumer choice, market differentiation and geographical and service-provider diversity.	M3 & CV 4-10
D	A set of technical criteria must be used for assessing a new gTLD registry applicant to minimise the risk of harming the operational stability, security and global interoperability of the Internet.	M1-3 & CV 1
E	A set of capability criteria for a new gTLD registry applicant must be used to provide an assurance that an applicant has the capability to meet its obligations under the terms of ICANN's registry agreement.	M1-3 & CV 1
F	A set of operational criteria must be set out in contractual conditions in the registry agreement to ensure compliance with ICANN policies.	M1-3 & CV 1
G	The string evaluation process must not infringe the applicant's freedom of expression rights that are protected under internationally recognized principles of law.	

	RECOMMENDATIONS[26]	MISSION & CORE VALUES
1	<p>ICANN must implement a process that allows the introduction of new top-level domains.</p> <p>The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination.</p> <p>All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process.</p>	M1-3 & CV1-11

2	Strings must not be confusingly similar to an existing top-level domain or a Reserved Name.	M1-3 & C1-6-11
3	Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law. Examples of these legal rights that are internationally recognized include, but are not limited to, rights defined in the Paris Convention for the Protection of Industry Property (in particular trademark rights), the Universal Declaration of Human Rights (UDHR) and the International Covenant on Civil and Political Rights (ICCPR) (in particular freedom of expression rights).	CV3
4	Strings must not cause any technical instability.	M1-3 & CV 1
5	Strings must not be a Reserved Word[27].	M1-3 & CV 1 & 3
6*	Strings must not be contrary to generally accepted legal norms relating to morality and public order that are recognized under international principles of law. Examples of such principles of law include, but are not limited to, the Universal Declaration of Human Rights (UDHR), the International Covenant on Civil and Political Rights (ICCPR), the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) and the International Convention on the Elimination of All Forms of Racial Discrimination, intellectual property treaties administered by the World Intellectual Property Organisation (WIPO) and the WTO Agreement on Trade-Related Aspects of Intellectual Property (TRIPS).	M3 & CV 4
7	Applicants must be able to demonstrate their technical capability to run a registry operation for the purpose that the applicant sets out.	M1-3 & CV1
8	Applicants must be able to demonstrate their financial and organisational operational capability.	M1-3 & CV1
9	There must be a clear and pre-published application process using objective and measurable criteria.	M3 & CV6-9
10	There must be a base contract provided to applicants at the beginning of the application process.	CV7-9
11	[Replaced with Recommendation 20 and Implementation Guideline P and inserted into Term of Reference 3 Allocation Methods section]	
12	Dispute resolution and challenge processes must be established prior to the start of the process.	CV7-9
13	Applications must initially be assessed in rounds until the scale of demand is clear.	CV7-9
14	The initial registry agreement term must be of a commercially reasonable length.	CV5-9
15	There must be renewal expectancy.	CV5-9
16	Registries must apply existing Consensus Policies and adopt new Consensus Policies as they are approved.	CV5-9
17	A clear compliance and sanctions process must be set out in the base contract which could lead to contract termination.	M1 & CV1
18	If an applicant offers an IDN service, then ICANN's IDN guidelines[28] must be followed.	M1 & CV1
19	Registries must use only ICANN accredited registrars in registering domain names and may not discriminate among such accredited registrars.	M1 & CV1
20*	An application will be rejected if an expert panel determines that there is substantial opposition to it from a significant portion of the community to which the string may be explicitly or implicitly targeted.	

* The NCUC submitted Minority Statements on Recommendations 6 and 20. The remainder of the Recommendations have support from all GNSO Constituencies.

	IMPLEMENTATION GUIDELINES	MISSION & CORE VALUES
IG A	The application process will provide a pre-defined roadmap for applicants that encourages the submission of applications for new top-level domains.	CV 2, 5, 6, 8 & 9
IG B	Application fees will be designed to ensure that adequate resources exist to cover the total cost to administer the new gTLD process. Application fees may differ for applicants.	CV 5, 6, 8 & 9

IG C	ICANN will provide frequent communications with applicants and the public including comment forums.	CV 9 & 10
IG D	A first come first served processing schedule within the application round will be implemented and will continue for an ongoing process, if necessary. Applications will be time and date stamped on receipt.	CV 8-10
IG E	The application submission date will be at least four months after the issue of the Request for Proposal and ICANN will promote the opening of the application round.	CV 9 & 10
IG F*	If there is contention for strings, applicants may[29]: i) resolve contention between them within a pre-established timeframe ii) if there is no mutual agreement, a claim to support a community by one party will be a reason to award priority to that application. If there is no such claim, and no mutual agreement a process will be put in place to enable efficient resolution of contention and; iii) the ICANN Board may be used to make a final decision, using advice from staff and expert panels.	CV 7-10
IG H*	Where an applicant lays any claim that the TLD is intended to support a particular community such as a sponsored TLD, or any other TLD intended for a specified community, that claim will be taken on trust with the following exceptions: (i) the claim relates to a string that is also subject to another application and the claim to support a community is being used to gain priority for the application; and (ii) a formal objection process is initiated. Under these exceptions, Staff Evaluators will devise criteria and procedures to investigate the claim. Under exception (ii), an expert panel will apply the process, guidelines, and definitions set forth in IG P.	CV 7 - 10
IG H	External dispute providers will give decisions on objections.	CV 10
IG I	An applicant granted a TLD string must use it within a fixed timeframe which will be specified in the application process.	CV 10
IG J	The base contract should balance market certainty and flexibility for ICANN to accommodate a rapidly changing market place.	CV 4-10
IG K	ICANN should take a consistent approach to the establishment of registry fees.	CV 5
IG L	The use of personal data must be limited to the purpose for which it is collected.	CV 8
IG M	ICANN may establish a capacity building and support mechanism aiming at facilitating effective communication on important and technical Internet governance functions in a way that no longer requires all participants in the conversation to be able to read and write English[30].	CV 3 - 7
IG N	ICANN may put in place a fee reduction scheme for gTLD applicants from economies classified by the UN as least developed.	CV 3 - 7
IG O	ICANN may put in place systems that could provide information about the gTLD process in major languages other than English, for example, in the six working languages of the United Nations.	CV 8 -10
IG P*	The following process, definitions and guidelines refer to Recommendation 20. Process Opposition must be objection based. Determination will be made by a dispute resolution panel constituted for the purpose. The objector must provide verifiable evidence that it is an established institution of the community (perhaps like the RSTEP pool of panelists from which a small panel would be constituted for each objection). Guidelines The task of the panel is the determination of substantial opposition. a) substantial – in determining substantial the panel will assess the following: significant portion, community, explicitly targeting, implicitly targeting, established institution, formal existence, detriment b) significant portion – in determining significant portion the panel will assess the balance between the level of objection submitted by one or more established institutions and the level of support provided in the application from one or more established institutions. The panel will assess significance proportionate to the explicit	

	<p>or implicit targeting.</p> <p>c) community – community should be interpreted broadly and will include, for example, an economic sector, a cultural community, or a linguistic community. It may be a closely related community which believes it is impacted.</p> <p>d) explicitly targeting – explicitly targeting means there is a description of the intended use of the TLD in the application.</p> <p>e) implicitly targeting – implicitly targeting means that the objector makes an assumption of targeting or that the objector believes there may be confusion by users over its intended use.</p> <p>f) established institution – an institution that has been in formal existence for at least 5 years. In exceptional cases, standing may be granted to an institution that has been in existence for fewer than 5 years.</p> <p>Exceptional circumstances include but are not limited to a re-organization, merger or an inherently younger community.</p> <p>The following ICANN organizations are defined as established institutions: GAC, ALAC, GNSO, ccNSO, ASO.</p> <p>g) formal existence – formal existence may be demonstrated by appropriate public registration, public historical evidence, validation by a government, intergovernmental organization, international treaty organization or similar.</p> <p>h) detriment – the objector must provide sufficient evidence to allow the panel to determine that there would be a likelihood of detriment to the rights or legitimate interests of the community or to users more widely.</p>	
IG Q	ICANN staff will provide an automatic reply to all those who submit public comments that will explain the objection procedure.	
IG R	Once formal objections or disputes are accepted for review there will be a cooling off period to allow parties to resolve the dispute or objection before review by the panel is initiated.	

* The NCUC submitted Minority Statements on Implementation Guidelines F, H & P. The remainder of the Implementation Guidelines have support from all GNSO Constituencies.

1. This set of implementation guidelines is the result of detailed discussion, particularly with respect to the two *ICANN Staff Discussion Points*[31] documents that were prepared to facilitate consultation with the GNSO Committee about the implementation impacts of the proposed policy Recommendations. The Implementation Guidelines will be used to inform the final Implementation Plan which is approved by the ICANN Board.
2. The *Discussion Points* documents contain draft flowcharts which have been developed by the Implementation Team and which will be updated, based on the final vote of the GNSO Council and the direction of the ICANN Board. The *Discussion Points* documents have been used in the ongoing internal implementation discussions that have focused on ensuring that draft recommendations proposed by the Committee are implementable in an efficient and transparent manner[32]. The flowchart setting out the proposed Contention Evaluation Process is a more detailed component within the Application Evaluation Process and will be amended to take into account the inputs from Recommendation 20 and its related Implementation Guidelines.
3. This policy development process has been designed to produce a systemised and ongoing mechanism for applicants to propose new top-level domains. The Request for Proposals (RFP) for the first round will include scheduling information for the subsequent rounds to occur within one year. After the first round of new applications, the application system will be evaluated by ICANN's TLDs Project Office to assess the effectiveness of the application system. Success metrics will be developed and any necessary adjustments made to the process for subsequent rounds.
4. The following sections set out in detail the explanation for the Committee's recommendations for each Term of Reference.

TERM OF REFERENCE ONE -- WHETHER TO INTRODUCE NEW TOP-LEVEL DOMAINS

1. **Recommendation 1 Discussion – All GNSO Constituencies supported the introduction of new top-level domains.**
2. The GNSO Committee was asked to address the question of whether to introduce new top-level domains. The Committee recommends that ICANN should implement a process that allows the introduction of new top level domains and that work should proceed to develop policies that will enable the introduction of new generic top-level domains, taking into account the recommendations found in the latter sections of the *Report* concerning Selection Criteria (Term of Reference 2), Allocation Methods (Term of Reference 3) and Policies for Contractual Conditions (Term of Reference 4).
3. ICANN's work on the introduction of new top-level domains has been ongoing since 1999. The early work included the 2000 Working Group C Report[33] that also asked the question of "whether there should be new TLDs". By mid-1999, the Working Group had quickly reached consensus on two issues, namely that "...ICANN should add new gTLDs to the root. The second is that ICANN should begin the deployment of new gTLDs with an initial rollout of six to ten new gTLDs,

followed by an evaluation period". This work was undertaken throughout 2000 and saw the introduction of, for example, .coop, .aero and .biz.

4. After an evaluation period, a further round of sponsored TLDs was introduced during 2003 and 2004 which included, amongst others, .mobi and .travel.
5. In addressing Term of Reference One, the Committee arrived at its recommendation by reviewing and analysing a wide variety of materials including Working Group C's findings; the evaluation reports from the 2003-2004 round of sponsored top-level domains and full range of other historic materials which are posted at <http://gns0.icann.org/issues/new-gtlds/>
6. In addition, the Committee considered the responses to a Call for Expert Papers issued at the beginning of the policy development process[34]. These papers augmented a full set of GNSO Constituency Statements[35] and a set of Constituency Impact Statements[36] that addressed specific elements of the Principles, Recommendations and Implementation Guidelines.
7. The Committee was asked, at its February 2007 Los Angeles meeting, to confirm its rationale for recommending that ICANN introduce new top-level domains. In summary, there are five threads which have emerged:
 - (i) It is consistent with the reasons articulated in 1999 when the first proof-of-concept round was initiated
 - (ii) There are no technical impediments to the introduction of new top-level domains as evidenced by the two previous rounds
 - (iii) It is hoped that expanding the domain name space to accommodate the introduction of both new ASCII and internationalised domain name (IDN) top-level domains will give end users more choice about the nature of their presence on the Internet. In addition, users will be able to use domain names in their language of choice.
 - (iv) In addition, the introduction of a new top-level domain application process has the potential to promote competition in the provision of registry services, and to add to consumer choice, market differentiation and geographic and service-provider diversity which is consistent with ICANN's Core Value 6.
 - (v) No compelling reason has been articulated to not proceed with accepting applications for new top-level domains.
8. Article X, Part 7, Section E of the GNSO's Policy Development Process requires the submission of "constituency impact statements" which reflect the potential implementation impact of policy recommendations. By 4 July 2007 all GNSO Constituencies had submitted Constituency Impact Statements (CIS) to the gTLD-council mailing list[37]. Each of those statements is referred to throughout the next sections[38] and are found in full in Part B of the Report. The NCUIC submitted Minority Statements on Recommendations 6 & 20 and on Implementation Guidelines F, H & P. These statements are found in full here in Annex A & C, respectively, as they relate specifically to the finalised text of those two recommendations. GNSO Committee Chair and Nominating Committee appointee Ms Avri Doria also submitted individual comments on the recommendation package. Her comments are found in Annex B here.
9. All Constituencies support the introduction of new TLDs particularly if the application process is transparent and objective. For example, the ISPCP said that, "...the ISPCP is highly supportive of the principles defined in this section, especially with regards to the statement in [principle A] (A): New generic top-level domains must be introduced in an orderly, timely and predictable way. Network operators and ISPs must ensure their customers do not encounter problems in addressing their emails, and in their web searching and access activities, since this can cause customer dissatisfaction and overload help-desk complaints. Hence this principle is a vital component of any addition sequence to the gTLD namespace. The various criteria as defined in D, E and F, are also of great importance in contributing to minimise the risk of moving forward with any new gTLDs, and our constituency urges ICANN to ensure they are scrupulously observed during the applications evaluation process". The Business Constituency's (BC) CIS said that "...If the outcome is the best possible there will be a beneficial impact on business users from: a reduction in the competitive concentration in the Registry sector; increased choice of domain names; lower fees for registration and ownership; increased opportunities for innovative on-line business models." The Registrar Constituency (RC) agreed with this view stating that "...new gTLDs present an opportunity to Registrars in the form of additional products and associated services to offer to its customers. However, that opportunity comes with the costs of implementing the new gTLDs as well as the efforts required to do the appropriate business analysis to determine which of the new gTLDs are appropriate for its particular business model."
10. The Registry Constituency (RyC) said that "...Regarding increased competition, the RyC has consistently supported the introduction of new gTLDs because we believe that: there is a clear demand for new TLDs; competition creates more choices for potential registrants; introducing new TLDs with different purposes increases the public benefit; new gTLDs will result in creativity and differentiation in the domain name industry; the total market for all TLDs, new and old, will be expanded." In summary, the Committee recommended, "ICANN must implement a process that allows the introduction of new top-level domains. The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. Normally, therefore, no subsequent additional selection criteria should be used in the selection process". Given that this recommendation has support from all Constituencies, the following sections set out the other Terms of Reference recommendations.

TERM OF REFERENCE -- SELECTION CRITERIA

1. Recommendation 2 Discussion -- Strings must not be confusingly similar to an existing top-level domain.

- i) This recommendation has support from all the GNSO Constituencies. Ms Doria accepted the recommendation with the concern expressed below[39].
- ii) The list of existing top-level domains is maintained by IANA and is listed in full on ICANN's website[40]. Naturally,

as the application process enables the operation of new top-level domains this list will get much longer and the test more complex. The RyC, in its Impact Statement, said that "...This recommendation is especially important to the RyC. ... It is of prime concern for the RyC that the introduction of new gTLDs results in a ubiquitous experience for Internet users that minimizes user confusion. gTLD registries will be impacted operationally and financially if new gTLDs are introduced that create confusion with currently existing gTLD strings or with strings that are introduced in the future. There is a strong possibility of significant impact on gTLD registries if IDN versions of existing ASCII gTLDs are introduced by registries different than the ASCII gTLD registries. Not only could there be user confusion in both email and web applications, but dispute resolution processes could be greatly complicated." The ISPCP also stated that this recommendation was "especially important in the avoidance of any negative impact on network activities." The RC stated that "...Registrars would likely be hesitant to offer confusingly similar gTLDs due to customer demand and support concerns. On the other hand, applying the concept too broadly would inhibit gTLD applicants and ultimately limit choice to Registrars and their customers".

- iii) There are two other key concepts within this recommendation. The first is the issue of "confusingly similar" [41] and the second "likelihood of confusion". There is extensive experience within the Committee with respect to trademark law and the issues found below have been discussed at length, both within the Committee and amongst the Implementation Team.
- iv) The Committee used a wide variety of existing law[42], international treaty agreements and covenants to arrive at a common understanding that strings should not be confusingly similar either to existing top-level domains like .com and .net or to existing trademarks[43]. For example, the Committee considered the World Trade Organisation's TRIPS agreement, in particular Article 16 which discusses the rights which are conferred to a trademark owner [44] In particular, the Committee agreed upon an expectation that strings must avoid increasing opportunities for entities or individuals, who operate in bad faith and who wish to defraud consumers. The Committee also considered the Universal Declaration of Human Rights[45] and the International Covenant on Civil and Political Rights which address the "freedom of expression" element of the Committee's deliberations.
- v) The Committee also benefited from the work of the Protecting the Rights of Others Working Group (PRO-WG). The PRO-WG presented its *Final Report*[46] to the Committee at the June 2007 San Juan meeting. The Committee agreed that the Working Group could develop some reference implementation guidelines on rights protection mechanisms that may inform potential new TLD applicants during the application process. A small ad-hoc group of interested volunteers are preparing those materials for consideration by the Council by mid-October 2007.
- vi) The Committee had access to a wide range of differing approaches to rights holder protection mechanisms including the United Kingdom, the USA, Jordan, Egypt and Australia[47].
- vii) In addition, the Committee referred to the 1883 *Paris Convention on the Protection of Industrial Property*[48]. It describes the notion of confusion and describes creating confusion as "to create confusion by any means whatever" {Article 10bis (3) (1)} and, further, being "liable to mislead the public" {Article 10bis (3) (3)}. The treatment of confusingly similar is also contained in European Union law (currently covering twenty-seven countries) and is structured as follows. "...because of its identity with or similarity to... there exists a likelihood of confusion on the part of the public...; the likelihood of confusion includes the likelihood of association..." {Article 4 (1) (b) of the 1988 EU Trade Mark directive 89/104/EEC}. Article 8 (1) (b) of the 1993 European Union Trade Mark regulation 40/94 is also relevant.
- viii) In the United States, existing trade mark law requires applicants for trademark registration to state under penalty of perjury that "...to the best of the verifier's knowledge and belief, no other person has the right to use such mark in commerce either in the identical form thereof or in such near resemblance thereto as to be likely, when used on or in connection with the goods of such other person, to cause confusion, or to cause mistake, or to deceive..." which is contained in Section 1051 (3) (d) of the US Trademark Act 2005 (found at <http://www.billlaw.com/source/15usc/1051.html>.)[49]
- ix) In Australia, the Australian Trade Marks Act 1995 Section 10 says that "...For the purposes of this Act, a trade mark is taken to be deceptively similar to another trade mark if it so nearly resembles that other trade mark that it is likely to deceive or cause confusion" (found at http://www.ipaustralia.gov.au/resources/legislation_index.shtml)
- x) A number of different trademark offices provide guidance on how to interpret confusion. For example, the European Union Trade Mark Office provides guidance on how to interpret confusion. "...confusion may be visual, phonetic or conceptual. A mere aural similarity may create a likelihood of confusion. A mere visual similarity may create a likelihood of confusion. Confusion is based on the fact that the relevant public does not tend to analyse a word in detail but pays more attention to the distinctive and dominant components. Similarities are more significant than dissimilarities. The visual comparison is based on an analysis of the number and sequence of the letters, the number of words and the structure of the signs. Further particularities may be of relevance, such as the existence of special letters or accents that may be perceived as an indication of a specific language. For words, the visual comparison coincides with the phonetic comparison unless in the relevant language the word is not pronounced as it is written. It should be assumed that the relevant public is either unfamiliar with that foreign language, or even if it understands the meaning in that foreign language, will still tend to pronounce it in accordance with the phonetic rules of their native language. The length of a name may influence the effect of differences. The shorter a name, the more easily the public is able to perceive all its single elements. Thus, small differences may frequently lead in short words to a different overall impression. In contrast, the public is less aware of differences between long names. The overall phonetic impression is particularly influenced by the number and sequence of syllables." (found at <http://oami.europa.eu/en/mark/marque/direct.htm>).
- xi) An extract from the United Kingdom's Trade Mark Office's Examiner's Guidance Manual is useful in explaining further the Committee's approach to developing its Recommendation. "For likelihood of confusion to exist, it must be probable, not merely possible that confusion will arise in the mind of the average consumer. Likelihood of association is not an alternative to likelihood of confusion, "but serves to define its scope". Mere association, in the sense that the later mark brings the earlier mark to mind is insufficient to find a likelihood of confusion, unless the average consumer, in bringing the earlier mark to mind, is led to expect the goods or services of both marks to be under the control of one single trade source. "The risk that the public might believe that the

goods/services in question come from the same undertaking or, as the case may be, from economically-linked undertakings, constitutes a likelihood of confusion..." (found at <http://www.patent.gov.uk/tm/t-decisionmaking/t-law/t-law-manual.htm>)

- xii) The Committee also looked in detail at the existing provisions of ICANN's Registrar Accreditation Agreement, particularly Section 3.7.7.9[50] which says that "...The Registered Name Holder shall represent that, to the best of the Registered Name Holder's knowledge and belief, neither the registration of the Registered Name nor the manner in which it is directly or indirectly used infringes the legal rights of any third party."
- xiii) The implications of the introduction of Internationalised Domain Names (IDNs) are, in the main, the same as for ASCII top-level domains. On 22 March 2007 the IDN-WG released its *Outcomes Report*[51] that the Working Group presented to the GNSO Committee. The Working Group's exploration of IDN-specific issues confirmed that the new TLD recommendations are valid for IDN TLDs. The full IDN WG Report is found in Part B of the *Report*.
- xiv) The technical testing for IDNs at the top-level is not yet completed although strong progress is being made. Given this and the other work that is taking place around the introduction of IDNs at the top-level, there are some critical factors that may impede the immediate acceptance of new IDN TLD applications. The conditions under which those applications would be assessed would remain the same as for ASCII TLDs.
- xv) Detailed work continues on the preparation of an Implementation Plan that reflects both the Principles and the Recommendations. The proposed Implementation Plan deals with a comprehensive range of potentially controversial (for whatever reason) string applications which balances the need for reasonable protection of existing legal rights and the capacity to innovate with new uses for top level domains that may be attractive to a wide range of users[52].
- xvi) The draft Implementation Plan (included in the *Discussion Points* document), illustrates the flow of the application and evaluation process and includes a detailed dispute resolution and extended evaluation tracks designed to resolve objections to applicants or applications.
- xvii) There is tension between those on the Committee who are concerned about the protection of existing TLD strings and those concerned with the protection of trademark and other rights as compared to those who wish, as far as possible, to preserve freedom of expression and creativity. The *Implementation Plan* sets out a series of tests to apply the recommendation during the application evaluation process.

2. Recommendation 3 Discussion -- Strings must not infringe the existing legal rights of others that are recognized or enforceable under generally accepted and internationally recognized principles of law. Examples of these legal rights that are internationally recognized include, but are not limited to, rights defined in the Paris Convention for the Protection of Industry Property (in particular trademark rights), the Universal Declaration of Human Rights (UDHR) and the International Covenant on Civil and Political Rights (ICCPR) (in particular freedom of expression rights).

- i. This recommendation has support from all GNSO Constituencies. Ms Doria supported the recommendation with concern expressed below[53].
- ii. This recommendation was discussed in detail in the lead up to the Committee's 7 June 2007 conference call and it was agreed that further work would be beneficial. That work was conducted through a series of teleconferences and email exchanges. The Committee decided to leave the recommendation text as it had been drafted and insert a new Principle G that reads "...The string evaluation process must not infringe the applicant's freedom of expression rights that are protected under internationally recognized principles of law."
- iii. Prior to this, the Committee engaged in comprehensive discussion about this recommendation and took advice from a number of experts within the group[54]. The original text of the recommendation has been modified to recognise that an applicant would be bound by the laws of the country where they are located and an applicant may be bound by another country that has jurisdiction over them. In addition, the original formulation that included "freedom of speech" was modified to read the more generally applicable "freedom of expression".
- iv. Before reaching agreement on the final text, the IPC and the NCUC, in their respective Constituency Impact Statements (CIS), had differing views. The NCUC argued that "... here is no recognition that trade marks (and other legal rights have legal limits and *defenses*." The IPC says "agreed [to the recommendation], and, as stated before, appropriate mechanisms must be in place to address conflicts that may arise between any proposed new string and the IP rights of others."

3. Recommendation 4 Discussion -- Strings must not cause any technical instability.

- i. This recommendation is supported by all GNSO Constituencies and Ms Doria.
- ii. It was agreed by the Committee that the string should not cause any technical issues that threatened the stability and security of the Internet.
- iii. In its CIS, the ISPCP stated that "...this is especially important in the avoidance of any negative impact on network activities...The ISPCP considers recommendations 7 and 8 to be fundamental. The technical, financial, organizational and operational capability of the applicant are the evaluators' instruments for preventing potential negative impact on a new string on the activities of our sector (and indeed of many other sectors)." The IPC also agreed that "technical and operational stability are imperative to any new gTLD introduction." The RC said "...This is important to Registrars in that unstable registry and/or zone operations would have a serious and costly impact on its operations and customer service and support."
- iv. The Security and Stability Advisory Committee (SSAC) has been involved in general discussions about new top level domains and will be consulted formally to confirm that the implementation of the recommendations will not cause

any technical instability.

v. A reserved word list, which includes strings which are reserved for technical reasons, has been recommended by the RN-WG. This table is found in the section below.

4. Recommendation 5 Discussion -- Strings must not be a Reserved Word.[55]

- i. This recommendation is supported by all GNSO Constituencies. Ms Doria supported the recommendation but expressed some concerns outlined in the footnote below.[56]
- ii. The RN WG developed a definition of "reserved word" in the context of new TLDs which said "... depending on the specific reserved name category as well as the type (ASCII or IDN), the reserved name requirements recommended may apply in any one or more of the following levels as indicated:
 1. At the top level regarding gTLD string restrictions
 2. At the second-level as contractual conditions
 3. At the third-level as contractual conditions for any new gTLDs that offer domain name registrations at the third-level.
- iii. The notion of "reserved words" has a specific meaning within the ICANN context. Each of the existing ICANN registry contracts has provisions within it that govern the use of reserved words. Some of these recommendations will become part of the contractual conditions for new registry operators.
- iv. The Reserved Names Working Group (RN-WG) developed a series of recommendations across a broad spectrum of reserved words. The Working Group's *Final Report*[57] was reviewed and the recommendations updated by the Committee at ICANN's Puerto Rico meeting and, with respect to the recommendations relating to IDNs, with IDN experts. The final recommendations are included in the following table.

	Reserved Name Category	Domain Name Level(s)	Recommendation
1	ICANN & IANA	All ASCII	The names listed as ICANN and IANA names will be reserved at all levels.
2	ICANN & IANA	Top level, IDN	Any names that appear in the IDN evaluation facility[58] which consist exclusively of translations of 'example' or 'test' that appear in the document at http://www.icann.org/topics/idn/idn-evaluation-plan-v2%209.pdf shall be reserved.
3	ICANN & IANA	2 nd & 3 rd levels, IDN	Any names that appear in the IDN evaluation facility which consist exclusively of translations of 'example' or 'test' that appear in the document at http://www.icann.org/topics/idn/idn-evaluation-plan-v2%209.pdf shall be reserved.
4	Symbols	All	We recommend that the current practice be maintained, so that no symbols other than the '-' [hyphen] be considered for use, with further allowance for any equivalent marks that may explicitly be made available in future revisions of the IDNA protocol.
5	Single and Two Character IDNs	IDNA-valid strings at all levels	Single and two-character U-labels on the top level and second level of a domain name should not be restricted in general. At the top level, requested strings should be analyzed on a case-by-case basis in the new gTLD process depending on the script and language used in order to determine whether the string should be granted for allocation in the DNS with particular caution applied to U-labels in Latin script (see Recommendation 10 below). Single and two character labels at the second level and the third level if applicable should be available for registration, provided they are consistent with the IDN Guidelines.
6	Single Letters	Top Level	We recommend reservation of single letters at the top level based on technical questions raised. If sufficient research at a later date demonstrates that the technical issues and concerns are addressed, the topic of releasing reservation status can be reconsidered.
7	Single Letters and Digits	2 nd Level	In future gTLDs we recommend that single letters and single digits be available at the second (and third level if applicable).
8	Single and Two Digits	Top Level	A top-level label must not be a plausible component of an IPv4 or IPv6 address. (e.g., .3, .99, .123, .1035, .0xAF, .1578234)
9	Single Letter, Single Digit Combinations	Top Level	Applications may be considered for single letter, single digit combinations at the top level in accordance with the terms set forth in the new gTLD process. Examples include .3F, .A1, .u7.
10	Two Letters	Top Level	We recommend that the current practice of allowing two letter names at the top level, only for ccTLDs, remains at this time.[59] Examples include .AU, .DE, .UK.
11	Any combination of Two Letters, Digits	2 nd Level	Registries may propose release provided that measures to avoid confusion with any corresponding country codes are implemented.[60] Examples include ba.aero, ub.cat, 53.com, 3M.com, e8.org.
12	Tagged Names	Top Level ASCII	In the absence of standardization activity and appropriate IANA registration, all labels with hyphens in both the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n") must be reserved at the top-level [61]
13	N/A	Top Level IDN	For each IDN gTLD proposed, applicant must provide both the "ASCII compatible encoding" ("A-label") and the "Unicode display form" ("U-label")[62] For example: <ul style="list-style-type: none"> • If the Chinese word for 'Beijing' is proposed as a new gTLD, the applicant would be required to provide the A-label (xn--1q90i) and the U-label (北京). • If the Japanese word for 'Tokyo' is proposed as a new gTLD, the applicant would be required to provide the A-label (xn--1qs71d) and the U-label (東京).

	Reserved Name Category	Domain Name Level(s)	Recommendation
14	Tagged Names	2 nd Level ASCII	The current reservation requirement be reworded to say, " <i>In the absence of standardization activity and appropriate IANA registration</i> , all labels with hyphens in both the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n") must be reserved in ASCII at the second (2 nd) level.[63] – added words in <i>italics</i> . (Note that names starting with "xn--" may only be used if the current ICANN IDN Guidelines are followed by a gTLD registry.)
15	Tagged Names	3 rd Level ASCII	All labels with hyphens in both the third and fourth character positions (e.g., "bq--1k2n4h4b" or "xn--ndk061n") must be reserved in ASCII at the third (3 rd) level) for gTLD registries that register names at the third level."[64] – added words in <i>italics</i> . (Note that names starting with "xn--" may only be used if the current ICANN IDN Guidelines are followed by a gTLD registry)
16	NIC, WHOIS, WWW	Top ASCII	The following names must be reserved: nic, whois, www.
